Title of report 2: Finding Words for Physics—Writing Better Scientific Papers

Reporter: Dr. Matteo Rini

Abstract:: Scientists have a responsibility to share the meaning and implications of their work, but receive little training in communication, and often feel unprepared to present their work through scientific papers and talks. In this seminar, I will present some thoughts on writing and presenting research work, focusing on developing a structured approach to preparing a high-impact physics article. I will also share some general thoughts on science communication from my experience as a writer, editor, press officer and scientific consultant to policy makers.
