结果 981 例入组病例中，M 蛋白组 84 例，占 8.6%，M 蛋白组患者与非 M 蛋白组患者间比较，Crea 以及 eGFR 检测结果差异均无统计学意义。以 KAP 型轻链表达为主的 M 蛋白组，KAP/LAM 比值高于非 M 蛋白组；以 LAM 型轻链表达为主的 M 蛋白组 KAP/LAM 比值低于非 M 蛋白组(P<0.01)。比较不同 M 蛋白类型间的肾功能指标，IgG 组、IgA 组和 IgM 组间没有统计学差异（P>0.05），单纯轻链组与 IgG 组、IgA 组和 IgM 组比较，Crea、u-mALB/Crea 增高，而 eGFR 降低（P<0.05）。897 例非 M 蛋白组中不同原因引起的肾脏疾病其肾功能指标（Crea、eGFR、u-mALB/Crea）差异显著。而血、尿 KAP/LAM 比值差异没有统计学意义，且各组比值与正常范围相比较，差异也没有统计学意义。

结论 尿 KAP/LAM 比值用于初步筛查以肾脏损伤为首发症状的老年 MM 患者有较好的特异性，可以反应单克隆增殖程度，且留样便捷无创，易于被患者接受，适合用于体检或疑似 MM 患者的初步筛查。

PU-2086

GATA-4/HCC-1 途径对内皮细胞衰老和动脉粥样硬化的影响及机制研究

黄瑞莹
南方医科大学南方医院

研究背景与目的 年龄增长引起的血管内皮细胞衰老是动脉粥样硬化的独立危险因素，内皮细胞衰老在 AS 早期起着重要作用。有研究发现，GATA-4 对人成纤维细胞的衰老过程起着重要的调控作用，而血液滤过 CC 趋化因子 1（HCC-1）可通过影响炎症过程参与各种疾病的发生发展，但能否影响内皮细胞的衰老过程和 AS 尚不清楚。本研究通过探究 GATA-4 对内皮细胞衰老及动脉粥样硬化的影响，观察细胞衰老对动脉粥样硬化的影响及相关机制。
方法 通过小鼠主动脉瓣组织免疫组化染色观察 GATA-4 在 AS 斑块中的表达情况；通过构建 GATA-4 小干扰片段转染原代人脐静脉内皮细胞（HUVEC）敲减 GATA-4，通过细胞衰老相关 β 半乳糖苷酶化学染色探究 GATA-4 对内皮细胞衰老的影响；通过单核巨噬细胞粘附实验探究 GATA-4 对细胞粘附能力的影响，通过 WB 实验进行初步机制研究，最后收集不同年龄层 AS 患者及健康体检者的血清样本，探究 HCC-1 在血清中的表达量和其与 AS 临床指标的相关性，分析 HCC-1 作为临床风险预测指标的可能性。
结果 1、与正常小鼠主动脉瓣组织相比，在小鼠主动脉瓣 AS 斑块中，GATA-4 表达上调。
2、si-GATA4 可显著抑制 H2O2 诱导的原代 HUVEC 衰老。
3、si-GATA-4 可下调细胞表面粘附能力
4、敲减 GATA-4 后，可显著下调 HCC-1 及 p16 表达，而使用 HCC-1 重组蛋白处理 HUVEC 后可上调 p16 表达，且同时敲减 GATA-4 后，HCC-1 可回复部分 GATA-4 对 p16 上调作用。
5、HCC-1 在 AS 及衰老患者血清中显著高表达。
结论 1、在小鼠主动脉瓣 AS 斑块中，GATA-4 表达显著上调。
2、GATA-4 可促进原代 HUVEC 衰老级单核巨噬细胞粘附原代 HUVEC。
3、HCC-1 可能介导 GATA-4 促进 p16 表达，进而促进内皮细胞衰老。
4、HCC-1 有作为年龄相关性 AS 的新的风险预测指标的潜能。

PU-2087

探讨检测孕中期血清 β-HCG、ACA 和孕后期尿酸浓度对先兆子痫的预测价值

张懿
南方医科大学珠江医院

目的 通过比较先兆子痫患者和正常孕妇孕中期 β-HCG、抗心磷抗体 ACA 和孕后期尿酸的浓度变化，探讨这三项指标对该疾病的预测价值。
方法 回顾性分析 2012.1-2016.8 在南方医科大学珠江医院接受孕中期筛查并成功随访直至分娩的 65 例单胎妊娠孕妇，其中 30 例经诊断为子痫前期患者，对照组有 35 例血压正常的孕妇。比较两组孕妇的 BMI 指数，孕中期（15-20 周）血清的 β-HCG 浓度，β-HCG MoM 值和抗心磷脂抗体 ACA 水平，以及孕妇孕后期（20 周以后）尿酸浓度，分析这些指标与孕妇发生子痫前期的相关性。

结果（1）子痫前期组孕妇 BMI 指数、β-HCG MoM 值、尿酸均显著高于正常对照组(P<0．05)。(2)多因素 Logistic 回归分析显示 BMI 指数、血清尿酸浓度都是子痫前期的预测指标，其中尿酸水平的预测能力最强 ,BMI 次之。
结论 抗心磷脂抗体 ACA 对孕妇患子痫前期的预测意义不明显，先兆子痫患者组的 BMI 值、尿酸水平均显著高于正常对照组，与疾病具有一定的相关性。子痫前期患者孕中期的 β-HCG 水平显著升高，可作为预测子痫前期的一个指标，经修正的 β-HCG MoM 值诊断效能更强。

PU-2088

探究颈动脉粥样硬化患者血清中 sdLDL-C/ LDL-C、hs-CRP 表达水平的变化

闵媛婷、杨婕、刘曼舒、林文源
宜昌市第二人民医院

目的 探讨颈动脉粥样硬化(CAS)患者血清中小而密低密度脂蛋白胆固醇/低密度脂蛋白胆固醇（sdLDL-C/ LDL-C）、超敏感 C 反应蛋白（hs-CRP）表达水平的变化，分析其与 CAS 病变程度的相关性。
方法 选取行颈血管彩超检查的患者 279 例，根据颈动脉内中膜厚度(IMT)将患者分为斑块组（118 例）、内膜增厚组（48 例）、正常组（113 例）。测定各组间 sdLDL-C/ LDL-C、hs-CRP 水平，以 Pearson 相关性分析、多因素 Logistic 回归分析等统计学方法探讨 sdLDL-C、sdLDL-C/ LDL-C、hs-CRP 与颈动脉粥样硬化程度的相关性及其诊断价值。
结果 斑块组血清 sdLDL-C、LDL-C、sdLDL-C/ LDL-C、hs-CRP 表达水平较正常组升高（P<0.05），与内膜增厚组相比无统计学意义（P>0.05）。Pearson 相关性分析提示 hs-CRP 与 sdLDL-C（r=0.3043）、sdLDL-C/ LDL-C（r=0.3804）呈正相关（P<0.05），与 LDL-C 不具有相关性（P>0.05）；IMT 与 sdLDL-C（r= 0.4142）、sdLDL-C/ LDL-C（r=0.4915）、hs-CRP（r= 0.4528）呈正相关（P<0.05），与 LDL-C 不具有相关性（P>0.05）。多因素 Logistic 回归分析提示 sdLDL-C、hs-CRP 可能为患者产生颈动脉粥样硬化斑块的独立影响因素。
结论 随着 CAS 疾病的进展，sdLDL-C、LDL-C、sdLDL-C/ LDL-C、hs-CRP 表达水平升高。sdLDL-C、sdLDL-C/ LDL-C、hs-CRP 与颈动脉粥样硬化斑块大小呈正相关，sdLDL-C、hs-CRP 可能相互作用，共同促进 CAS 的发展。

PU-2089

自建检测系统检测风湿三项的性能评价

来金欣、陈杰荣、周茂华、甘慧泉
广东省人民医院（广东省医学科学院） 检验科

目的 评估自建检测系统检测风湿三项的分析性能。
方法 应用美国临床和实验室标准化协会（CLSI)EP5-A2、EP15-A2、EP6-A、EP17-A、C28-A2 方法评价自建检测系统检测风湿三项试剂即抗链球菌溶血素 O(ASO)、类风湿因子（RF）、C 反应蛋白（CRP）的精密度、准确度、分析测量范围、临床可报告范围、生物参考区间。自建检测系统(1-3)由罗氏 cobas c702 生化分析仪、第三方检测试剂、校准品和质控品组成。
结果 自建检测系统的批内精密度小于 1/4 TEa，批间精密度≤1/3TEa，符合《医学实验室质量和能力认可准则在临床化学检验领域的应用说明》中对分析性能的要求；对卫生部室间质控品进行检测，测定结果与统计的靶值进行比对，偏差符合要求；线性范围与厂商提供的性能指标相符；可报告范围符合临床需求；生物参考区间验证显示：本研究选择的参考个体水平符合厂家试剂说明书给定参考区间。

结论 自建检测系统的精密度、准确度、线性范围（可报告范围）、生物参考区间在可接受范围内，可满足临床需求。

PU-2090

肝酶、平均血小板体积和红细胞分布宽度值对于预测妊娠期糖尿病发生发展的临床应用价值

杨璐、蒋叶
江苏省人民医院（南京医科大学第一附属医院）

目的 探讨测定肝酶、红细胞分布宽度(RDW)和平均血小板体积(MPV)数值对于预测妊娠期糖尿病(GDM)发生发展的临床应用价值。
方法 收集 368 例 2016 年 1 月至 2016 年 12 月在江苏省妇幼保健院确诊为妊娠期糖尿病孕妇的病例资料，记录相关实验室检查参数结果。同时收集同期 368 例健康体检者作为对照组，比较不同组间所有参数差异。
结果 在所有参数中，GDM 组的血小板分布宽度(PDW)、转氨酶(ALT)和 γ-glutamyl 转移酶（GGT）明显高于健康对照组（P＜0.05）；GDM 组的血小板压积 (PCT)水平显著降低(P＜0.01)；而在平均血小板体积（MPV）、红细胞分布宽度（RDW）、血小板计数（PLT）和天冬氨酸转氨酶（AST）水平上，组间无显著差异。
结论 我们的研究结果表明，ALT、GGT、PCT 和 PDW 可以作为预测 GDM 发展的预测指标，为临床诊断妊娠期糖尿病开拓了新的思路。

PU-2091

Roche 电化学发光 E602 检测白介素 6 的方法学评价

卫丽[1]、刁晓艳[1]、梁涯[2]
1. 青海省人民医院
2. 广州市中医医院同德围分院

目的 验证和评价罗氏 E602 模块定量检测白介素 6（IL-6）的分析性能。
方法 对罗氏 E602 分析仪定量检测 IL-6 的准确度、精密度、线性进行验证、交叉污染率评估实验，
结果 准确度、精密度均符合罗氏 E602 性能标准；IL-6 检测呈一次线性（R^2=0.99996 ,p<0.05），罗氏 E602 分析仪交叉污染率为 0.077%。
结论 罗氏 E602 检测 IL-6 的主要分析性能验证结果与厂商声明的基本一致，符合质量目标要求，可应用于临床标本检测。

PU-2092

血清酶类指标联合血清总胆汁酸检测分析肝脏功能的临床意义

周觅
山东大学第二医院

目的 研究血清酶类指标联合血清总胆汁酸(TBA)检测分析肝脏功能的临床意义,为临床提供参考.
方法 选择我院 2011 年 9 月~2012 年 9 月 89 例肝病患者作为观察组,对其进行血清酶类指标联合血清总胆汁酸检测,同时选择同期 89 例健康体检者作为对照组,作相同项目的检查,比较两组患者 TBA

与血清酶类指标天门冬氨酸转移酶(AST)、γ-谷氨酰转肽酶(γ-GT)、丙氨酸氨基转移酶(ALT)、碱性磷酸酶(AKP).
结果 89 例患者按肝病类型分组,其中急性肝炎 29 例,慢性活动性肝炎 22 例,肝硬化 22 例、肝癌 16 例,所有肝病患者血清酶类指标与 TBA 值均显著高于对照组,其中以急性肝炎组 TBA 升高最明显,其次是肝硬化、肝癌和慢性活动性肝炎;肝癌组 γ-GT、AKP、ALT 值明显高于对照组及其它肝病组,组间比较差异具有统计学意义,P＜0.05.
结论 血清总胆汁酸与血清酶类指标联合检测在肝脏性疾病中有显著的临床意义.

PU-2093

陕西省 2020 年 21861 例儿童血铅的检测结果分析

郑金磊
西安金域医学检验所有限公司

目的 铅是一种严重危害人体健康的重金属元素，会对儿童造成神经系统、造血系统、免疫系统等的损害，影响儿童智力和体格发育。本研究讨论 2020 年陕西省≤12 岁儿童血铅的超标率，为预防儿童慢性铅中毒提供数据支持及指导。
方法 选取 2020 年西安金域检测的 21861 例≤12 岁儿童的血铅检测数据，按照年龄分为 3 组：分别为 0-3 岁共 10884 例、3-6 岁共 6308 例、6-12 岁共 4669 例。按照性别分为 2 组：分别为男童 12311 例、女童 9550 例。样品采集：用肝素抗凝管采取空腹静脉全血 1-2ml 或加有肝素抗凝的 EP 管采取末梢血 100μl。试剂与仪器：采用 0.1%TritonX-100 和 0.1%HNO3 对样本稀释 20 倍混匀后，使用电感耦合等离子体质谱法(ICP－MS)直接测定血铅的含量，数据采用 SPSS22.0 统计学软件分析，以 P＜0.05 为差异有统计学意义。
结果 1、以 1991 年美国 CDC 的分级标准作为参考，儿童血铅的整体超标率为 0.33%，分析不同年龄段儿童血铅的超标率差异显著，具有统计学意义(P＜0.05)；2、分析不同性别儿童间的差异无统计学意义(P>0.05)；3、其中 0-3 岁血铅的超标率为 0.48%，3-6 岁血铅的超标率为 0.21%，6-12 岁血铅的超标率为 0.13%，其中 1 例复查血铅的含量≥700μg/L。
结论 0-3 岁儿童血铅超标率远高于其他年龄段儿童，此年龄段儿童应作为重点筛查对象，定时监测儿童血铅的含量预防慢性铅中毒，铅污染来源除了工业污染外，有很大一部分来自于生活污染，儿童主要通过消化道吸收铅，应对儿童及其监护人开展健康教育，教导儿童勤洗手，避免儿童啃咬手指、玩具、文具等经常接触或含铅量较高的物品，降低儿童高含铅量食物的摄入。

PU-2094

脂代谢异常与胰腺炎的诊断及预后评估

李伯宣
昆明医科大学第二附属医院

目的 急性胰腺炎是常见的消化系统疾病之一,我国的发病率约 1%,而 20～30%的 AP 可发展成为重症急性胰腺炎(severe acute pancreatitis，SAP),常出现局部和全身并发症,预后差 1，2。淀粉酶脂肪酶相关性不高，所以通过研究脂代谢变化来探究与 AP 的诊断和预后的评估相关。
方法 回顾性分析 2020 年 9 月至 2021 年 6 月期间昆明医科大学第二附属医院收治的胰腺炎患者 80 例临床资料，根据血脂水平、并发症、临床分为正常、轻度、中度、重度和临床结果的比较。将患者分为轻度组、中度组、重度组、慢性组、正常组（对照组）。收集患者一般资料、病死率、病情严重程度及并发症情况。不符合正态分布的计量资料多组间比较采用 Kruskal-Wallis H 检验，进一步两两比较采用 Dunn -Bonferroni 检验。计数资料无序分类变量多组间及两两比较采用 χ2 检验，有序多分类变量多组间比较采用 Kruskal-Wallis H 检验，进一步两两比较采用 Mann-Whitney U 秩

和检验。患者发生脂代谢异常影响因素采用多因素 logistic 回归分析。绘制 ROC 曲线评价不同指标对 AP 的预测价值。
结果 根据 ROC 曲线得出脂肪酶诊断效能最高，其次是 TG、淀粉酶、NONHDL、LDL。表明在脂代谢中相关度最高的指标是 NONHDL。
结论 胰腺炎与脂代谢存在一定相关性，两者互相影响。对于胰腺炎诊断及预后来说可以在胰腺功能测定中增加胆固醇项目。在治疗疾病时应积极控制血脂水平，降低疾病严重程度。

PU-2095

血清胆红素组分对梗阻性黄疸的鉴别及预后判断的价值

白艳
昆明医科大学第二附属医院

目的 探讨血清胆红素组分在梗阻性黄疸鉴别及预后判断中的临床价值。
方法 测定 133 例梗阻性黄疸患者治疗前后的血清 Tbil、ALT、AST、GGT，根据诊断将患者分为梗阻性黄疸组，分析血清胆红素组分对梗阻性黄疸良恶性的鉴别意义。
结果 ①DBil、IBil、IB/DB、ALT、GGT 可鉴别梗阻性黄疸与其他两类黄疸，但对于溶血性黄疸与肝细胞性黄疸的鉴别中无明显统计学差异。在梗阻性黄疸良恶性鉴别中，TB、DB、DB/TB 的曲线下面积（AUC）的值都很显著。

PU-2096

环形 RNA circRNA_0036167 促进心肌肥厚作用机制研究

李晖
广东省人民医院

目的 环形 RNA circRNA_0036167 在心肌肥厚中的作用及其机制。
方法 1、通过 RT-qPCR 检测 Ang-Ⅱ诱导心肌肥厚模型小鼠 circRNA_0036167 的表达水平；
2、利用腺病毒介导在小鼠原代心肌细胞中过表达 circRNA_0036167，并通过鬼笔环肽染色、RT-qPCR 和 Western blot 检测 circRNA_0036167 在体外对心肌细胞肥大表型的影响；
3、利用心肌特异过表达 circRNA_0036167 转基因小鼠（Tg-circ36167），建立 Ang-Ⅱ诱导的心肌肥厚模型，并通过超声心动图、WGA 染色、RT-qPCR 和 Western blot 检测过表达 circRNA_0036167 对心肌肥厚表型的影响；
4、通过 RT-qPCR 检测心力衰竭患者心肌组织和外周血浆中 circRNA_0036167 的表达水平。
结果 1、circRNA_0036167 在肥厚的小鼠心肌和心力衰竭患者心肌组织中表达均明显升高；
2、在原代小鼠心肌细胞中过表达 circRNA_0036167，心肌细胞明显肥大、肥厚相关基因 β-MHC 和 ANP 的表达显著增加；
3、Ang-Ⅱ诱导 Tg-circ36167 小鼠心肌肥厚模型，Tg-circ36167 小鼠心功能明显降低、心肌细胞明显肥大、β-MHC 和 ANP 水平显著增加；
4、circRNA_0036167 在心力衰竭患者心肌组织和血浆中表达均明显升高。
结论 circRNA_0036167 可在体内外发挥促进心肌肥厚作用，并作为心力衰竭新型循环标志物。

PU-2097

单核细胞/高密度脂蛋白胆固醇比值与合并高同型半胱氨酸血症的冠心病患者的冠脉狭窄程度的关系研究

邓倩昀[1]、陈科[2]、顾兵[1]
1. 广东省人民医院
2. 广州医科大学

目的 分析单核细胞与高密度脂蛋白胆固醇比值（MHR）在冠心病合并高同型半胱氨酸血症患者中的变化，并探讨其与冠状动脉狭窄程度的关系。
方法 选取 2020 年 7 月-2021 年 1 月于广东省人民医院经冠状动脉造影确诊冠心病 285 例，根据同型半胱氨酸（HCY）水平分为同型半胱氨酸正常组（223 例）和高同型半胱氨酸血症组（62 例）；根据冠状动脉造影的结果分为轻度狭窄组（97 例）、中度狭窄组（97 例）和重度狭窄组（91 例）。选取同期于本院健康查体 254 例正常人为对照；分别比较对照组与同型半胱氨酸正常组和高同型半胱氨酸血症组以及与轻度狭窄组、中度狭窄组和重度狭窄组受试者一般资料和实验室检查指标。
结果 对照组、HCY 正常组和 HHCY 组受试者中性粒细胞/淋巴细胞比值（NLR）、MHR 比较，差异有统计学意义（P<0.05）；同型半胱氨酸正常组（HCY 正常组）和高同型半胱氨酸血症组（HHCY 组）患者年龄和高血压史比较，存在差异有统计学意义（P<0.05）。其中对照组受试者 MHR、NLR 低于 HCY 正常组和 HHCY 组，差异有统计学意义（P<0.05）；HCY 正常组患者 MHR 低于 HHCY 组，差异有统计学意义（P<0.01）；对照组、轻度狭窄组和中度狭窄组受试者 HCY、NLR 及 MHR 比较，差异有统计学意义（P<0.05）。对照受试者 HCY、NLR 及 MHR 低于轻度狭窄组、中度狭窄组和重度狭窄组，差异有统计学意义（P<0.05）。
结论 MHR 在冠心病合并高同型半胱氨酸血症患者中显著升高，与冠心病患者冠状动脉狭窄程度呈正相关。

一步法制备双功能碳纳米管用于 AFP 电化学免疫分析

陈梦园[2]、宁振强[1]、沈艳飞[1,3,4]
1. 东南大学医学院
2. 东南大学医学院
3. 东南大学中大医院，临床检验医学中心
4. 东南大学江苏省重症重点实验室

功能性碳纳米材料，例如多壁碳纳米管（MWCNT），因其独特的光、电、热和力学性能使其在生物传感领域受到极大的关注[1-2]。在基于 MWCNT 电化学生物传感器的制备过程中，生物分子的界面偶联和电化学探针的附着是影响传感性能的两大关键因素。由于两者反应条件不同，一般只能通过分步实现。然而由于 MWCNT 的反应活性低，要想在连续反应条件下精确控制两种改性剂在 MWCNT 表面的用量仍具有较大的挑战性。为此，我们课题组以自由基聚合为基础开发了一步电接枝法，该法以乙烯基二茂铁（VFc）和 N-羟基琥珀酰亚胺丙烯酸酯(NSA)分别作为电化学探针和生物分子偶联剂，二者因反应类型相似，可以一步电接枝到 MWCNT 上，增强二茂铁和琥珀酰亚胺基团的附着，促进氧化还原信号和抗体捕获，解决了影响此类生物传感灵敏度的两大关键问题。在此过程中，调节两种修饰剂的比例来平衡电化学信号强度和生物分子连接程度，对传感器性能的提高起着至关重要的作用。我们将此方法成功运用到以甲胎蛋白(AFP)作为模型分析物的定量检测上。通过实验条件优化，基于双功能化 MWCNT 的生物传感器显示出 10 $ng \cdot mL^{-1}$ 到 50 $\mu g \cdot mL^{-1}$ 的检测范围，能较好满足肝癌诊断的实际需要。本工作为生物传感和临床诊断领域构建具有信号放大增强作用的电化学生物传感器开辟了新途径。

PU-2099

高糖环境下 GATA4 通过调节 RUNX2 影响成骨细胞增殖分化的研究

陈妍汶
绵阳市中心医院

目的 探讨高糖环境下 GATA 锌指转录因子蛋白 4（GATA4）对成骨细胞增殖分化的影响，及对转录因子蛋白 2（Runx2）的调控作用。
方法 取 MC3T3-E1 成骨细胞，在高糖（25mmoL/L）的条件下分别培养 1、4、7、14d，免疫印迹法（Western blot）法检测 GATA4、Runx2 蛋白表达水平。将 MC3T3-E1 成骨细胞分为空白对照组、高糖诱导组、GATA4 过表达腺病毒（Ad-GATA4）组、GATA4 空载腺病毒组（Ad-eGFP）组，CCK-8 法检测各组细胞的存活率，碱性磷酸酶（ALP）染色法及茜素红染色法检测细胞分化能力；Western blot 法检测各组细胞 GATA4、Runx2、成骨细胞特异性转录因子(OSX)、骨唾液蛋白（BSP）蛋白表达水平。共转染 Ad-GATA4 及 Runx2 干扰腺病毒（Ad-si-Runx2），将 MC3T3-E1 成骨细胞分为 Ad-GATA4-si-Runx2 组、Ad-GATA4-eGFP2 组、Ad-eGFP-si-Runx2 组、Ad-eGFP-eGFP2 组及未转染组（高糖组），高糖条件下培养 7d 后检测 GATA4、Runx2、OSX、BSP 蛋白表达水平。
结果 随着高糖培养时间延长，细胞中 GATA4、Runx2 蛋白表达持续降低，在第 7d 降低至最低，选取高糖培养 7d 为后续培养条件。转染 Ad-GATA4 后，与空白对照组比较，高糖诱导组细胞矿化结节形成较少，细胞存活率、ALP 活性、GATA4、Runx2 蛋白表达、OSX、BSP 蛋白表达降低（P<0.05）；与高糖组相比，Ad-GATA4 组细胞矿化结节形成较多，细胞存活率、ALP 活性、GATA4、Runx2 蛋白表达、OSX、BSP 蛋白表达升高（P<0.05），Ad-eGFP 组与高糖诱导组相比上述指标差异无统计学意义（P>0.05）。Ad-GATA4 与 Ad-si-Runx2 共转染后，与高糖诱导组相比，Ad-GATA4-eGFP2 组细胞 GATA4、Runx2、OSX 及 BSP 蛋白表达升高（P<0.05）；Ad-eGFP-si-Runx2 细胞 Runx2、OSX 及 BSP 蛋白表达降低（P<0.05），GATA4 蛋白表达变化差异无统计学意义（P>0.05）。与 Ad-GATA4-eGFP2 组比较，Ad-GATA4-si-Runx2 细胞 Runx2、OSX 及 BSP 蛋白表达降低（P<0.05），GATA4 蛋白表达变化差异无统计学意义（P>0.05）。
结论 高糖可抑制成骨细胞增殖分化，伴随 GATA4、Runx2 蛋白表达降低，过表达 GATA4 则可促进成骨细胞在高糖环境中的增殖、分化，其可能与激活 Runx2 表达有关。

PU-2100

四氮唑蓝法检测血清果糖胺及其临床应用

王永松[2]、林穗雄[1]、李建华[1]、邓穗德[2]、吕灼荣[1]、陈爱贤[2]、李晓莹[2]
1. 广州市从化区妇幼保健院
2. 广州金域医学检验中心

目的 建立四氮唑蓝法检测血清果糖胺的方法，并初步应用于临床。
方法 根据血清中果糖胺在碱性条件下能还原四氮唑蓝为甲臜，与经过同样处理的果糖胺校准品进行比较，即可计算出样本中果糖胺含量的方法，同时作方法学评价，并临床检测与分析 20 例糖尿病患者血清中果糖胺水平。
结果 批内及批间变异系数 1.77%和 2.46%，回收率为 98.7%，不同浓度的测定值与理论值比较，线性范围：R2=0.9994＞0.95，b=1.0297，25 份标本与另一三甲医院结果比对，回归方程为 Y=0.03835+1.0225X，糖尿病患者血清中的果糖胺浓度显著高于对照组（P ＜0.01）。
结论 此法简单、快速，适用于自动生化分析仪，线性范围能满足需要，在标准操作下，可在临床中推广应用。

PU-2101

清热利湿方对脂肪肝细胞磷脂肌醇-3 激酶/肾上腺受体激酶表达的调节作用研究

张巍、邵明亮、苗同国、侯桂英、戴二黑
河北医科大学附属石家庄第五医院

目的 观察清热利湿方对氧化损伤脂肪肝大鼠磷脂肌醇-3 激酶(PI3K) /肾上腺受体激酶(ARK)通路调节作用。
方法 选取大鼠 60 只，分为正常对照组、高脂模型组、多烯磷脂酰胆碱组及清热利湿方高、中、低剂量组 6 组，采用高脂饲料复制大鼠脂肪肝实验动物模型，从第 6 周开始，清热利湿高、中、低剂量组分别给予 0. 3、0. 1、0. 05 g/(100 g·d)清热利湿方汤剂灌胃，多烯磷脂酰胆碱组给予 25 mg/(100 g·d)灌胃，12 周后取材。病理检查各组脂肪肝程度，ELISA 检测血清高敏 C 反应蛋白(hs-CRP)含量及三磷酸腺苷酶(ATPase)活性，生化分析仪检测各实验组血脂及肝功能指标。Western blot 检测脂肪变肝细胞 PI3K/ARK 表达。
结果 高脂模型组 hs-CRP 明显升高，与清热高剂量组比较差异具有统计学意义(P =0. 0331)。各实验组 ATPase 呈现不同程度降低，清热高剂量组血清 ATPase 水平明显提高，与高脂模型组比较差异具有统计学意义(P =0. 0401); western blot 实验结果可见，各实验组大鼠肝细胞 PI3K/ARK 表达存在明显差异，清热利湿方治疗后，PI3K/ARK 水平明显降低。
结论 清热利湿方通过调节 ATPase、hs-CRP、PI3K/ARK 而降低肝细胞氧化应激炎症介质，改善肝细胞由于脂类代谢异常形成的过氧化损伤，促进肝细胞功能的恢复，具有一定的改善脂肪变性效果。

PU-2102

清热利湿方对脂肪肝细胞 PI3K/Ark 表达调节研究

张巍、邵明亮、苗同国、侯桂英、戴二黑
河北医科大学附属石家庄第五医院

目的观察清热利湿方对脂肪肝细胞酸肌醇 3-激酶（PI3K/Ark）通路调节作用。
方法 选取大鼠 60 只，随机数字表法将大鼠分为 6 组：正常对照组、高脂模型组、多烯磷脂酰胆碱组、清热高剂量组、清热中剂量组、清热低剂量组，采用高脂饲料复制大鼠脂肪肝实验动物模型，6 周开始清热利湿组分别给与给予 0.3 g/ （100 g·d）（清热高剂量组）0.1 g/ （100 g·d）（清热中剂量组），0.05 g/ （100 g·d）（清热低剂量组）灌胃，多烯组给予 25 mg/ （100 g·d）灌胃，12 周后取材。 病理检查各组脂肪肝程度，ELISA 检测血清急性时相反应蛋白（hs-CRP）含量及 ATP 酶活性，生化分析仪检测脂肪肝各实验组血脂（TC/TG）、肝功能（ALT/AST/GGT）。Western-blot 检测脂肪变肝细胞磷脂酰肌醇-3 激酶（PI3K）/Ark 表达。
结果 高脂模型组 hs-CRP 明显升高，与清热高剂量组比较具有明显差异（P<0.05）。 各实验组 ATPase 呈现不同程度降低，清热高剂量组血清 ATPase 水平与高脂模型组比较具有明显差异（P<0.05）；Western blot 实验结果可见，各实验组大鼠肝细胞 PI3K/Ark 表达存在明显差异，清热利湿方治疗后，明显降低表达 PI3K/Ark 水平。
结论 清热利湿方通过调节 ATPase、hs-CRP、PI3K/Ark 肝细胞氧化应激炎症介质，改善肝细胞由于脂类代谢异常形成的过氧化损伤，促进肝细胞功能的恢复，具备一定的改善脂肪变性效果。

PU-2103

血清 α-羟基丁酸脱氢酶表达水平与卵巢癌辅助诊断的相关性研究

陆昭锦
滨州医学院烟台附属医院

目的 分析卵巢癌患者的血清 α-羟基丁酸脱氢酶（α-HBDH）的水平，为临床诊断提供参考。
方法 回顾性收集 2017 年 1 月至 2019 年 12 月在本院确诊治疗的卵巢癌病人 28 名作为 A 组,同时选取在本院确诊治疗的卵巢良性病变病人 29 名作为 B 组,还有正常健康查体 35 名女性为 C 组。统计并且分析所有研究对象血清中的 α-羟基丁酸脱氢酶和糖类抗原 125(CA125)的表达水平。方法学：采用 SPSS17.0 统计处理数据，率的比较采用 X2 检验，数据为偏态分布，采用中位数（四分位数间距）[M(P25~P75)]表示，多组间比较采用 Kruskal-Wallis H 检验，以 P<0.05 为差异有统计学意义。
结果 A 组血清 α-HBDH 中位数为 172.63U/L， B 组为 151.33U/L， C 组为 110.35U/L。A 组高于 B 组，B 组高于 C 组，三组间差异有统计学意义；A 组血清 α-HBDH，CA125 及联合检测阳性率都高于 B 组和 C 组，三组间差异有统计学意义。
结论 血清 α-HBDH 和 CA125 水平在卵巢癌患者中表达都升高，其两者的联合检测对于卵巢癌的诊断具有参考意义。

PU-2104

血清脂蛋白（a）检测在肾脏疾病诊断中的应用

杨翌明
滨州医学院烟台附属医院

目的 诊断肾疾病的应用价值时，研究与血清脂蛋白(a)的水平的关系。
方法 制定病例组和健康组两组，在健康组的存在下，对比罗氏 702 全自动生化分析仪上测量出病例组患者的结果，最后得出结论。对象为在乳山市人民医院住院的肾脏疾病患者，共选取肾脏疾病病例 102 例，其中用 30 例肾病综合征组，40 例肾早期损害组以及 32 例尿毒症组作为研究的对象，另外选取 50 名经过健康查体的健康人作对照组与之对照。采用免疫透射比浊的方法进行检测血清脂蛋白(a)水平，分析肾脏疾病的病变程度和不同肾疾病患者血液中的 LP(a)水平的关系和 LP（a)在临床里的应用价值。
结果 肾病综合征组，尿毒症组和肾早期损害组的病人，与健康对照组的相比,他们血液里的 LP(a)水平升高,差异有统计学意义(P< 0.05);肾病综合征组的结果和尿毒症组测出的 LP(a)明显高于肾早期损害组，差异有统计学意义(P< 0.05)。
结论 检测脂蛋白(a)的水平在观察肾疾病患者病程发展上有重大意义，它水平可以作为肾脏疾病病变程度诊断的一项有效指标之一。

PU-2105

血清Ⅳ型胶原水平在结直肠癌肝转移中的应用价值

李佳、高佳、崔婵娟、崔巍
中国医学科学院肿瘤医院

目的 通过检测结直肠癌患者血清中Ⅳ型胶原的水平，探讨血清Ⅳ型胶原水平在结直肠癌肝转移中的应用价值。

方法 收集在中国医学科学院肿瘤医院就诊的 220 例结直肠癌患者(其中发生肝转移的 145 例，未发生肝转移的 75 例)以及 80 例健康体检人群的血清样本，检测血清中Ⅳ型胶原的水平，检测方法为乳胶免疫比浊法。

结果 结直肠癌组血清Ⅳ型胶原水平明显高于健康对照组($p<0.05$)，结直肠癌肝转移组血清Ⅳ型胶原水平明显高于结直肠癌组($p<0.05$)和健康对照组($p<0.05$)。结直肠癌肝转移组治疗前血清Ⅳ型胶原水平明显高于结直肠癌组($p<0.05$)。结直肠癌肝转移组治疗后患者与治疗前患者相比，血清Ⅳ型胶原水平明显降低($p<0.05$)。经历肝转移瘤切除术的结直肠癌肝转移患者，术后 30 天内的血清Ⅳ型胶原水平明显高于术后 30 天以上($p<0.05$)。

结论 血清Ⅳ型胶原水平在结直肠癌肝转移患者的辅助诊断及治疗监测方面具有一定的应用价值，可以作为结直肠癌患者治疗监测的检测指标之一。

血浆 D-二聚体、血清 LDL-C、Non-HDL-C、HDL-C、TG、TC 的联合检测在 2 型糖尿病患者合并冠状动脉粥样硬化性心脏病时的临床价值

李丽莉、邓德耀、薛云松、李宜铮、顾津伊
云南大学附属医院

目的 对 2 型糖尿病患者合并冠状动脉粥样硬化性心脏病时进行 D-二聚体、LDL-C、Non-HDL-C、HDL-C、TG、TC 等指标检测，分析检测结果的临床价值，为临床诊疗提供客观依据。

方法 收集我院 2017 年 3 月至 2020 年 9 月心血管内科收治住院的 180 名 2 型糖尿病合并冠状动脉粥样硬化性心脏病的患者为观察组，根据糖化血红蛋白结果分为Ⅰ组（HbA1c<7.0%）86 例，Ⅱ组（HbA1c>7.0%）94 例，再择同期健康体检人群 80 例作为对照组。比较观察组、对照组、以及观察组中组间的 D-二聚体、LDL-C、Non-HDL-C、HDL-C、TG、TC 等各项指标检测结果。

结果 观察组 D-二聚体、LDL-C、Non-HDL-C、TG、TC 等检测指标结果均高于对照组（P<0.05），而 HDL-C 结果则低于对照组（P<0.05），差异有统计学意义；观察组组间比较 D-二聚体、LDL-C、Non-HDL-C、TG、TC 等检测指标结果，Ⅱ组高于Ⅰ组（P<0.05），而 HDL-C 结果则是Ⅰ组高于Ⅱ组（P<0.05），差异有统计学意义。

结论 2 型糖尿病患者合并冠状动脉粥样硬化性心脏病时可联合检测 D-二聚体、LDL-C、Non-HDL-C、HDL-C、TG、TC 等指标，对临床诊疗有重要价值。

PU-2107

Identification of the miRNA signature and key genes in colorectal cancer lymph node metastasis

Haifang Zhang、Hong Du
Department of Clinical Laboratory, The Second Affiliated Hospital of Soochow University, Suzhou, Jiangsu, 215004, China.

Background Because its metastasis to the lymph nodes are closely related to poor prognosis, miRNAs and mRNAs can serve as biomarkers for the diagnosis, prognosis, and therapy of colorectal cancer (CRC). This study aimed to identify novel gene signatures in the lymph node metastasis of CRC.

Methods GSE56350, GSE70574 and GSE95109 datasets were downloaded from the Gene Expression Omnibus (GEO) database, while data from 569 colorectal cancer cases were also downloaded from The Cancer Genome Atlas (TCGA) database. Differentially expressed miRNAs (DE-miRNAs) were calculated using R, while gene ontology and enrichment analysis of target mRNAs were performed using FunRich. Furthermore, the mRNA-miRNA network was constructed using Cytoscape. Gene expression levels were verified using the GEO datasets. Similarly, quantitative real-time PCR (qPCR) was used to examine expression profiles from 40 paired non-metastatic and metastatic lymph node tissue samples obtained from patients with CRC.
Results In total, five DE-miRNAs were selected, and 34 mRNAs were identified after filtering the Results Moreover, two key miRNAs (hsa-miR-99a, has-miR-100) and one gene (heparan sulfate-glucosamine 3-sulfotransferase 2 [HS3ST2]). The GEO datasets analysis and qPCR results showed that the expression of key miRNA and genes were consistent with that obtained from the bioinformatic analysis. A novel miRNA-mRNA network capable of predicting the prognosis and confirmed experimentally, hsa-miR-99a-HS3ST2-has-miR-100, was found after expression analysis in metastasized lymph node tissue from CRC samples.
Conclusions In summary, miRNAs and genes with potential as biomarkers were found and a novel miRNA-mRNA network was established for CRC lymph node metastasis by systematic bioinformatic analysis and experimental validation. This network may be used as a potential biomarker in the development of lymph node metastatic CRC.

PU-2108

肾病综合征患者血清 25 羟基维生素 D 的测定及相关因素分析

龚慧、林冰纯、李一凡、杜冀晖、罗迪贤
华中科技大学协和深圳医院

目的 分析肾病综合征（Nephrotic Syndrome，NS）患者血清 25 羟维生素 D（ 25-hydroxyvitamin D，25 (OH) D ）的水平及其与相关临床检验指标、NS 病理分型之间相关性，以探究 25 羟维生素 D 在肾病综合征发生发展和治疗过程中的临床意义。
方法 收集患者临床资料及相关临床检验指标（其中健康对照者 80 例，初次确诊为 NS 患者 155 例）。应用 SPSS19.0 统计软件回顾性分析比较两组间 25 羟维生素 D 均值的差异性。分析 25 羟维生素 D 与相关临床检验指标的相关性，再以 25 羟维生素 D 水平的中位数划分为高值组和低值组，分析两组间相关指标差异，并分析不同病理类型及临床分期的患者 25 羟维生素 D 水平的差异。
结果 NS 患者的平均 25 羟维生素 D 水平显著低于健康组患者（P<0.05）。25 羟维生素 D 与血清总蛋白、白蛋白、估算肾小球滤过率均呈正相关，与 24 小时尿蛋白、血清肌酐、甘油三酯均呈负相关。25 羟维生素 D 低值组的总蛋白、白蛋白、估算肾小球滤过率均显著低于高值组，24 小时尿蛋白显著高于高值组。四种不同 NS 病理类型患者的 25 羟维生素 D 水平比较并无统计学差异（P>0.05）。而在膜性肾病不同分期中，相对于Ⅰ期患者，Ⅱ、Ⅲ期患者的 25 羟维生素 D 显著下降（P<0.05）。
结论 25 羟维生素 D 水平与肾病综合征密切相关，25 羟维生素 D 有望用于肾病综合征患者的病情监测、预后评估和临床治疗。

VITROS 5600 全自动生化免疫分析仪性能验证

王参军
东南大学附属中大医院

目的 从准确度、精密度、线性范围、临床可报告范围及比对试验对奥森多 VITROS 5600 全自动生化免疫分析仪检测的 20 个项目进行性能验证。
方法 依据 CNAS-CL02：2012《医学实验室质量和能力认可准则》和 CNAS-GL037：2019《临床化学定量检验程序性能验证指南》,使用奥森多 VITROS 5600 全自动生化免疫分析仪原装配套试剂及校准品，从准确度、精密度、线性范围、临床可报告范围及比对试验对 20 个项目进行性能验证。
结果 奥森多 VITROS 5600 全自动生化免疫分析仪检测 20 个生化项目的 2 个质控水平的准确度验证偏倚均小于 1/2TEa，表明该仪器检测结果准确。批内精密度均小于 1/4TEa，批间精密度均小于 1/3TEa，表明仪器检测结果重复性良好。20 个生化项目的回归方程 a 值均在 1.00±0.05 范围内，相关系数 r≥0.975，表明仪器线性范围良好。本研究针对临床不同项目高值的需要，选用仪器线性范围内的高值患者标本及其相应的稀释液进行不同稀释倍数的验证。临床可报告范围可报告范围验证结果 20 个生化项目的 R＜1/2TEa，表明该仪器稀释后的结果准确可靠。选择 20 份体检合格的健康人标本,在检测系统上进行测定,对结果进行统计并对仪器说明书提供的参考区间进行验证,结果显示参考区间验证通过率均≥90%,验证通过;比对试验中各项目相对偏倚小于实验室允许的偏倚或相对偏倚验证值,比对试验通过。
结论 奥森多 VITROS 5600 全自动生化免疫分析仪检测项目的准确度、精密度、线性范围、临床可报告范围及比对试验均验证通过，完全能够满足临床应用的需求。

PU-2110

The association between hyperuricemia and obesity phenotypes in Chinese General Population: A retrospective analysis

Haoneng Tang、Xiaojing Feng、Huiqi Xie、Yanyi Yang、Lingli Tang
Department of Laboratory Medicine，The Second Xiangya Hospital，Central South University

Purpose Obesity has been related to many chronic metabolic diseases, and may be influenced by several inflammation factors, including uric acid. This retrospective study investigated relationship between serum uric acid and the metabolic phenotypes of obesity.
Methods The demographic, hematological and biochemical data were collected for 11,922 patients undergoing routine physical examination and 7463 participants were enrolled in our study. Participants were classified into four obesity phenotypes according to their BMI and the presence of metabolic syndrome: metabolically healthy overweighted/obese (MHOO), metabolically healthy and normal weighted (MHNW), metabolically abnormal overweighted/obese (MAOO) and metabolically abnormal but normal weighted (MANW). Univariate and multivariate linear regression analyses, stratified analyses and interaction analyses, and multiple logistic regression were conducted to analyze the relationship between serum uric acid and obesity phenotypes.
Results The prevalence of MAOO and MHOO phenotype were significantly higher ($p<0.001$) among hyperuricemia subjects (41.39% vs 18.66%; 22.81% vs 17.39%, $p<0.001$), while the percentage of MHNW were significantly lower(22.23% vs 50.20%, $p<0.001$). However, the prevalence of MANW phenotype was similar between subjects with hyperuricemia and those with normal uric acid level. Multivariable logistic regression analysis showed that hyperuricemia was positively associated with MHOO, MANW and MAOO phenotype relative to MANW. After

adjusting for the co-variants, the odds ratios (OR) for individuals with hyperuricemia to be MHOO, MANW and MAOO phenotype were 2.14(1.71-2.67), 1.63 (1.23-2.15) and 3.19(2.54-4.01) respectively. The ORs for having MHOO, MANW and MAOO increases 6% [OR: 1.06(1.05-1.08), P<0.0001], 4% [OR:1.04(1.02-1.05), P<0.0001] and 10%[OR:1.10(1.09-1.12), P<0.0001] for each 10 unit of increase in serum uric acid level. Stratification analysis as well as interaction test showed that sex and age did not interfere with the association of hyperuricemia and each obesity phenotype.Among the components of metabolic syndrome, hyperuricemia was positively associated with increased BMI [OR: 1.84 (1.55–2.19), P <0.0001]. After adjusting for other co-variants hyperuricemia had no significant association with hyperglycemia and decreased HDL-C (all P >0.05) while hypertension [OR: 1.20 (1.02-1.41), P=0.0023] and hypertriglyceride[OR: 1.41 (1.11-1.80), P=0.0052] was positively associated with hyperuricemia.

Conclusions In our study, we discovered that hyperuricemia was positively associated with MHOO, MANW and MAOO phenotypes. The increase in serum uric acid level also positively correlated with these obesity phenotypes. Sex and age did not significantly modify this relationship. To sum up, our research provided evidence on the important role of uric acid for the different metabolic status among both obese and non-obese subjects.

PU-2111

双胎妊娠合并甲状腺功能减退症的研究进展

韦金伶
柳州市妇幼保健院

妊娠期合并甲状腺功能减退症会增加母体及不良妊娠结局风险，如贫血、妊娠期高血压、妊娠期糖尿病、流产、早产、胎儿生长发育迟缓、死胎和新生儿神经发育畸形等。目前的研究多是单胎妊娠合并甲减，关于双胎妊娠合并甲减的相对较少。随着国内辅助生殖技术的不断提高，双胎妊娠的发生率逐年上升。通过检索涉及双胎妊娠合并甲状腺功能减退症的病因及发病机制、母婴结局、甲状腺功能指标参考区间的建立等相关文献，综合分析后，得出结论双胎妊娠孕妇有较高的甲减发生率，主要病因有桥本氏甲状腺炎、糖尿病等。妊娠期甲状腺功能减退会影响妊娠结局与新生儿预后，增加产科并发症的发生率。双胎妊娠孕妇的促甲状腺激素（TSH）孕期变化趋势与单胎相同，但双胎孕妇 TSH 水平更低以及持续时间更长。若使用基于单胎孕妇所建立的甲状腺功能参考范围来评估双胎孕妇的甲状腺功能状态，会增加甲减的漏诊率。建立双胎孕妇各妊娠期甲状腺功能筛查指标的参考范围显得尤为重要，以期能早期筛查出双胎妊娠孕妇甲状腺功能减退症患者，及时控制孕妇甲状腺激素水平，改善母婴结局。

PU-2112

Structural basis for the recognition of MucA by MucB and AlgU in Pseudomonas aeruginosa

Shanshan Li
The First Affiliated Hospital of Zhengzhou University

Alginate production in Pseudomonas aeruginosa is regulated by the alter-nater factor AlgU,which in turn is regulated by the MucABCD system.The anti-sigma factor MucA binds AlgU in the cytoplasm and prevents AlgU from binding to the RNA polymerase for transcription.MucB binds MucA in the periplasm and inhibits proteolysis of MucA and subsequent release of AlgU.In this work,we report crystal structures of MucA incomplex with AlgU and MucB. A structure of MucB alone reveals the structural changes required for MucA recognition. A unique disulfide bond is identi-fied in MucB, and mutation of this disulfide bond results in a shift from monomer to MucB dimers or tetramers. As MucB tetramers have previ- ously been shown to be unable to bind

MucA, this suggests a redox-sensi-tive stress response mechanism in MucB.The AlgU–MucA structure reveals a conserved sigma factor/anti-sigma factor complex, but AlgU lacks a disul-fide bond conserved in many other sigma factors. Our structures reveal the molecular basis for MucA recognition by MucB in the periplasm and AlgU in the cytoplasm,thus providing an important step in understanding the mechanisms that regulate a key signal transduction pathway involved in P.aeruginosa pathogenesis.

PU-2113

脂血对生化检验结果的影响研究

王永涛
山东大学第二医院

目的 研究脂血对生化检验结果的影响，透彻分析不同程度脂血对常用生化检测指标（谷丙转氨酶、谷草转氨酶、总蛋白、白蛋白、前白蛋白、钾离子、钠离子）的干扰情况，以此发现生化检测的常见问题，对此进行分析以指导临床诊疗工作。
方法 脂血前后的标本至少 15 份，通过生化检测进行对比分析。使用本实验室罗氏 e702 全自动化分析仪进行检测。
结果 通过检测结果得出由于乳糜颗粒增多而引起脂浊脂血是对生化检测结果产生影响的关键因素，脂浊会干扰到生化检测常用的比色（谷丙转氨酶、谷草转氨酶、总蛋白、白蛋白）或比浊方法（前白蛋白）。另一方面，脂浊还会造成光线散射的问题，使血清的透光度降低，吸光度增加，最终使检测结果高于正常值。但对于离子选择性电极法检测的钾、钠离子的结果没有影响。
结论 脂血对部分生化检验结果影响有较大的影响，要想提高生化检测结果的准确率，就必须减少因人为原因而造成的影响。

PU-2114

为缩短标本 TAT 时间的实验室工作流程的研究

王永涛
山东大学第二医院

目的 通过从各方面优化生化流水线来缩短病人标本的 TAT 时间和减少标本采集的数量。
方法 随着实验室信息化和自动化的快速发展，对于大型医院来说，自动化流水线已经从“花瓶”转变为“实用品”和“必需品”。自动化流水线能够有效整合资源、加快检测速度、节省人力、缩短 TAT、减少生物危险、减少实验室差错等优点已经深入人心，越来越多的实验室即将或者已经购置了流水线系统，对它充满期望。然而，天下没有免费的午餐，要充分挖掘流水线的功能，使它发挥最大的功效，需要我们付出时间和努力。本文就山东大学第二医院临床生化科的生化免疫检测的优化进行简单阐述，并通过样本在实验室的 TAT 时间的缩短来证明优化的效果。1.检测项目的合理组合。2.实验室流程的改进。3.辅助设备的使用问题及解决。4.非线上仪器的使用。5.信息系统的问题及改进。6.多台仪器间标本的分配问题。7.线上离心和线下离心的合理搭配和使用。8.自动审核功能的建立和使用。比较优化前后实验室内的 TAT 时间和平均病人采血管数量。
结果 经过优化后，实验室内的 TAT 时间较大幅度的缩短，平均病人采血管数量也有所减少。
结论 检验科各类流水线越来越多，只有通过合理的优化，才能充分发挥其功能，从而更好地服务于临床和病人。

PU-2115

外周血白细胞参数及高敏 CRP 与非高龄妊娠晚期 GDM 孕妇发生不良妊娠结局的相关性研究

梅宇峰
武汉大学人民医院

目的 探讨外周血白细胞参数:白细胞总数 WBC、中性粒细胞数 NEU、淋巴细胞数 LYM、单核细胞数 MONO、中性粒淋巴细胞比值 NLR，及高敏 C 反应蛋白（hsCRP）与孕晚期妊娠糖尿病（GDM）发生不良妊娠结局相关性。
方法 选取 2017 年 8 月至 2020 年 9 月武汉大学附属人民医院确诊的 198 例非高龄妊娠糖尿病患者为实验对象，根据有无不良妊娠结局分为合并不良妊娠结局 GDM 组(GDM 组)和无不良妊娠结局 GDM 组（NGDM 组），用 logistic 回归模型评价指标与 GDM 不良妊娠结局的相关性。
结果 GDM 组外周血白细胞参数 WBC[8.42±0.23x109 比 8.73(7.03,10) x109]、NEU[6.15±0.21x109 比 6.43(5.1,7.33)x109]、LYM[1.51（1.19，1.74）x109 比 1.5（1.25，1.79）x109]、MONO[0.59±0.02x109 比 0.6±0.02x109]、NLR[4.07(3.14,5.14) 比 4.14(3.24,5.49)] 与 NGDM 组无明显差异，差异无统计学意义（P>0.05）; GDM 组 hsCRP[5.35(2.99,10.33)mg/L 比 2.51(1.3,4.59)mg/L]高于 NGDM 组，差异有统计学意义（P<0.05）。对 hsCRP 进行 logistic 回归结果显示：标准误:0.054，P 值<0.01，优势比（OR）：1.282，OR 的 95%CI：1.154~1.424。当 hsCRP 临界值为 3.39mg/L 时，约登指数最大 （95%CI ：0.680~0.816，标准误：0.035，P<0.01），此时 ROC 曲线下面积为 0.748，特异度为 0.656，灵敏度为 0.713。
结论 血清中高敏 CRP 与非高龄晚期 GDM 孕妇发生不良妊娠结局存在相关性，hsCRP 升高可能提示有不良妊娠结局。

PU-2116

糖化血红蛋白和空腹血糖筛查体检人群血糖状态的差异性分析

唐浩能、冯晓晶、杨燕贻、唐玲丽
中南大学湘雅二医院

目的 探讨糖化血红蛋白（HbA1c）和空腹血糖（FPG）在体检人群中筛查糖代谢异常的一致性并分析导致两种指标定义血糖状态不一致的影响因素。
方法 本研究为横断面研究，收集 2019 年 1 月至 12 月在中南大学湘雅二医院健康管理中心进行健康体检的 11 922 名体检者的一般资料、血常规、肝肾功能、糖代谢和脂代谢等指标。根据 HbA1c 和 FPG 两种指标，对其血糖状态进行分类，通过多因素 logistic 回归模型分析影响筛查结果不一致的主要因素。
结果 采用 HbA1c 筛查糖尿病和糖尿病前期的人群比例（分别为 8.13%，34.79%）均明显高于 FPG（分别为 4.70%，8.97%）（χ^2 值=2635.940；P<0.001），两种指标筛查糖代谢异常不一致的人群比例为 35.65%，并主要集中于 HbA1c 为 5.7%~6.0%且 FPG<5.6mmol/L 的人群，其次为 HbA1c 为 6.1%~6.4%且 FPG <5.6mmol/L 的人群,不一致人群比例在男性和女性中均随年龄的增加而增加。导致不一致现象的主要因素包括年长、超重或肥胖、低白蛋白血症、血脂紊乱和高尿酸血症等，其中 45 岁以上人群（OR=3.525, 95%CI: 3.216~3.863, P<0.001）相比 45 岁以下人群，超重（OR=1.474, 95%CI: 1.341~1.620, P<0.001）或肥胖人群（OR=1.856, 95%CI: 1.633~2.110, P<0.001）相比于体重正常人群，均更容易出现筛查不一致的现象。
结论 本研究表明采用 HbA1c 和 FPG 两种指标筛查体检人群糖代谢紊乱时存在差异，主要集中于 HbA1c 定义的糖尿病前期人群，且受到年龄、肥胖等多种因素影响。

Circular RNA circRNA_000203 aggravates cardiac hypertrophy and its role as novel circulating biomarker for heart failure

Hui Li
Guangdong Provincial People's Hospital

Objectives The present study aimed to investigate the effect of circRNA_000203 in cardiac hypertrophy and the potential clinical value involved.
Methods 1. The expression of circRNA_000203 in the Ang-II-induced myocardial hypertrophy mice and neonatal mouse ventricular cardiomyocytes (NMVCs) and its characteristics.
2. Study on the biological function of circRNA_000203 in cardiac hypertrophy in vitro and in vivo.
3. Clinical value of CircRNA_000203 as novel circulating biomarker for heart failure.
Results 1. Up-regulation of circRNA_000203 in the Ang-II-induced myocardial hypertrophy mice and NMVCs.
2. CircRNA_000203 enhances hypertrophy of NMVCs. Enforced expression of circRNA_000203 enhances cell size and expression of atrial natriuretic peptide (ANP) and β-myosin heavy chain (β-MHC) in NMVCs.
3. Overexpression of circRNA_000203 exacerbates Ang-II-induced cardiac hypertrophy in vivo.
In vivo, heart function was impaired and cardiac hypertrophy was aggravated in Ang-II-infused myocardium-specific circRNA_000203 transgenic mice (Tg-circ36167).
4. Up-regulation of circRNA_000203 in the cardiac tissue and peripheral blood plasma of patients with heart failure.
Conclusions Our data demonstrated that circRNA_000203 exacerbates cardiac hypertrophy and the clinical translational value of circRNA_000203 as biomarkers for early diagnosis and prognosis of heart failure.

2 型糖尿病患者估算肾小球滤过率与糖尿病视网膜病变的相关性研究

陶俊
武汉大学人民医院

目的 探讨 2 型糖尿病患者估算肾小球滤过率（eGFR）与糖尿病视网膜病变(DR)的相关性。
方法 2018 年 10 月至 2019 年 4 月在武汉大学人民医院收治的 204 例 2 型糖尿病患者，根据其是否并发糖尿病视网膜病变，将其分为无视网膜病变（NDR）组 88 例，视网膜病变（DR）组 116

例。比较分析各组间预估肾小球滤过率（eGFR）、糖化血红蛋白（HbA1c）、空腹血糖（FPG）、谷丙转氨酶（ALT）、谷草转氨酶（AST）、碱性磷酸酶（ALP）、总蛋白（TP）、白蛋白(ALB)、尿素（urea）、肌酐（Scr）、尿酸(UA)、总胆固醇（TC）、甘油三酯（TG）、低密度脂蛋白胆固醇（LDL-C）、高密度脂蛋白胆固醇（HDL-C）、收缩压（SBP）、舒张压（DBP）水平的差异以及 eGFR 与上述指标的相关性。
结果 与 NDR 组比较，DR 组 HbA1c、urea、Scr、UA、SBP 水平显著升高，ALB、eGFR 水平显著降低，差异均有统计学意义（P<0.05）。Spearman 相关性分析显示，eGFR 与年龄(rs=-0.422)、HbA1c(rs=-0.336)、urea(rs=-0.441)、Scr(rs=-0.733)、UA(rs=-0.348)、SBP(rs=-01.90)呈显著的负相关（P<0.05）。多因素非条件 Logistic 回归分析显示 eGFR、HbA1c、ALB、urea、UA 是 DR 发生的危险因素（P<0.05）。
结论 DR 患者 eGFR 水平显著降低。

PU-2120

2 型糖尿病患者血清糖化白蛋白/白蛋白与肝功、肾功、血糖、血脂、血压的相关性分析

陶俊、李艳
武汉大学人民医院

目的 探讨 2 型糖尿病患者血清糖化白蛋白与肝功、肾功、血脂、血糖的相关性。
方法 2019 年 3 月至 2019 年 7 月在武汉大学人民医院收治的 193 例 2 型糖尿病患者，按其糖化白蛋白/白蛋白（GA/ALB）是否高于 0.17 分为组分为 GA 异常组 135 例和正常组 58 例，。比较分析两组间空腹血糖（FPG）、糖化血红蛋白（HbA1c）、C 肽（CP）、谷丙转氨酶（ALT）、谷草转氨酶（AST）、碱性磷酸酶（ALP）、总蛋白（TP）、尿素（urea）、肌酐（Scr）、尿酸(UA)、预估肾小球滤过率（eGFR）、总胆固醇（TC）、甘油三酯（TG）、低密度脂蛋白胆固醇（LDL-C）、高密度脂蛋白胆固醇（HDL-C）、收缩压（SBP）、舒张压（DBP）水平的差异以及 GA/ALB 与上述指标的相关性。
结果 GA 异常组 FPG、HbA1c、ALP 水平显著高于 GA 正常组，CP、TP、UA 水平显著低于 GA 正常组，两组间差异有统计学意义（P<0.05）。相关性分析显示，GA/ALB 与 FPG、HbA1c、ALP 呈显著的正相关（P<0.01）,与 CP、UA 呈显著的负相关（P<0.01）。
结论 2 型糖尿病患者 GA/ALB 异常者血清 FPG、HbA1c、ALP 水平增高，CP、TP、 UA 水平降低。

PU-2121

血清胆碱酯酶、总胆汁酸检测在肝脏疾病诊断中的作用分析

周宏
昆明市中医医院

目的 观察血清胆碱酯酶、总胆汁酸检测在肝脏疾病诊断中的作用。
方法 我院 2019 年 2 月-2020 年 2 月收治的 32 例肝脏疾病确诊患者（即为观察组）以及同期入院行常规体检的 62 例个体（即为对照组）为本次研究对象，比较两组血清胆碱酯酶、总胆汁酸检测结果。
结果 观察组血清胆碱酯酶低于对照组、总胆汁酸检测结果高于对照组,数据差异明显（P<0.05）。
结论 肝脏疾病患者肝功能可出现不同程度的损伤，血清胆碱酯酶显著低于正常水平、总胆汁酸显著高于正常水平。

PU-2122

1454 名体检者血脂检测分析

赵若莲
昆明市中医医院

目的 调查区域内一般人群的血脂水平及其特点，为相关人群的血脂异常防治打下一定基础。
方法 对 1454 名体检者血脂水平进行检测，按性别和年龄分组进行分析。
结果 男性组 TG、TC、LDL 均高于女性组（P<0.01）。中老年组 TC、LDL_C 水平高于青年组（P<0.05）。
结论 本区域一般人群血脂水平逐年升高，男性高于女性，中老年高于青年，需加强重点人群的监测及健康指导。

PU-2123

减重手术前后患者肝肾功能和血脂水平变化研究

宋为娟
江苏省人民医院（南京医科大学第一附属医院）

目的 探讨肥胖患者减重手术后一年内血清肝肾功能指标和血脂水平的变化。
方法 对江苏省人民医院 119 例实行减重手术的患者进行回顾性分析。采集患者术前、术后即刻及 1、3、6、12 个月静脉血，分别进行血清肝肾功能指标和血脂水平检测。
结果 术前血清 ALT、AST、ALP、GGT、TG 和 UA 水平与 BMI 呈正相关（r 值分别为 0.289、0.309、0.285、0.245、0.125 和 0.360，P < 0.05），HDL 水平与 BMI 呈负相关（r = -0.284，P < 0.05）。血清 ALT、AST、GGT、TG、UA 水平分别于术后不同时间显著下降（ALT：3 个月；AST：6 个月；GGT、TG、UA：1 个月），至术后 1 年，水平均明显低于术前（P < 0.0001）。HDL 水平于术后逐渐升高，6 个月时显著升高（P = 0.002）。
结论 BS 可在短期内改变多数生化指标，有效改善肥胖患者肝功能和降低血脂。

PU-2124

标本放置时间对凝血测定结果的影响

孙函丽
昆明市中医医院

目的 观察标本放置时间对凝血指标测定结果的影响。
方法 采集 10 例血液标本即时测定凝血指标，分别 2 h 和 4 h 后再测定凝血指标，与即时测定结果进行比较。
结果 室温 2 h 或 4 h 后测定结果与即时测定结果进行比较，凝血酶原时间结果缩短，而活化部分凝血活酶时间测定结果延长。
结论 为避免放置时间对测定结果的影响，凝血指标测定应在采血后 2 h 内完成。

PU-2125

用糖化血红蛋白作为糖尿病前期筛查指标的探讨

刘荣均
昆明市中医医院

对 2433 例糖化血红蛋白 HbA1c 检测结果进行回顾性分析，共检出糖尿病前期（PDM）病例共 471 例。其中以单纯糖耐量受损（IGT）占比最高，其次为空腹血糖受损（IFG）合并糖耐量受损，空腹血糖受损（IFG）占比最低。各类型糖尿病前期病例糖化血红蛋白均不同程度升高，尤其以空腹血糖受损合并糖耐量受损病例升高更为明显。糖化血红蛋白作为一种快速简便的检测项目，代替餐后 2 小时血糖作为对糖尿病的筛查指标，可提高糖尿病前期病例的诊断率，对糖尿病的防治有较大意义。

PU-2126

探讨重度脂血的凝血酶原时间检测的影响

李紫春
昆明市中医医院

目的 探讨重度脂血对凝血酶原时间的检测是否存在影响。
方法 从 2020 年 1 月至 2020 年 10 月中记录 10 列，因第一次采血未对饮食进行控制造成脂血，在检测凝血酶原时间时因结果异常导致需进行第二次采血复查，并在同一仪器 sysmes CS-5100 全自动血凝仪和相同试剂的条件下进行凝血酶原时间检测的患者结果进行分析对比。
结论 轻度脂血对凝血酶原时间的检测无太明显影响,而重度脂血对凝血酶原时间的检测存在明显的影响。

PU-2127

凝血检测前的质量控制

李曦
昆明市中医医院

目的 探讨凝血检测前对检验结果的影响因素。
方法 收集我院三个院区（东风院区、呈贡院区、关上院区）从检验科退回的溶血标本 20 份、血量不足标本 26 份、有凝块样本 12 份、认为有问题的标本 10 份, 对以上标本均进行患者的再次采血, 并将两组标本的检测结果进行比较。
结果 溶血、血量不足、已凝固等问题标本与重新采血后标本的 凝血酶原时间 PT、凝血酶时间 TT、活化部分凝血酶时间 APTT 检测结果均有统计学差异($P<0.05$) 。
结论 凝血检测项目对采血技术要求比较高, 应严格规范操作方法; 如出现溶血、血量不足、有凝块等样本, 均应及时重新采血, 以保证检测结果的准确性和可靠性。

PU-2128

肺心病患者测定血浆 B 型钠尿肽中的临床应用

李伟
昆明市中医医院

目的 探讨血浆中 B 型钠尿肽在肺心病患者中的应用。
方法 利用双抗体夹心法测定 57 例肺心病患者血浆中的 B 型钠尿肽的浓度，同时测定 50 例健康体检者为对照组。
结果 肺心病组的 B 型钠尿肽为 2435.33 ± 197.32ng/ml，正常对照组为 68.71 ±23. 11 ng/ 。肺心病组和对照组相比有显著性差异。
结论 B 型钠尿肽浓度的检测对肺心病的病情判断、疗效、以及预后具有重要的价值。

PU-2129

血清同型半胱氨酸、高密度脂蛋白胆固醇与失眠中医证型的关系

黄亚玫
昆明市中医医院

目的 探讨血清同型半胱氨酸（HCY）、高密度脂蛋白胆固醇（HDL-C）与失眠中医症型的关系。
方法 选择 2019 年 1 月 1 日至 2020 年 3 月 1 日昆明市中医医院治未病专科就诊的失眠患者 80 例，根据患者一般资料进行辨证分型。检测血清 HCY 和 HDL-C 水平。
结果 失眠常见的中医证型有痰热内扰证，阴虚火旺证，心脾两虚证，肝郁化火证。不同证型失眠患者血清 HCY、HDL-C 水平比较差异有统计学意义（P<0.05）。心脾两虚、肝郁化火型患者血清 HCY 水平高于阴虚火旺（P<0.05），痰热内扰型高于心脾两虚、肝郁化火型（P<0.05），痰热内扰型患者血清 HDL-C 水平低于阴火虚旺、肝郁化火组（P<0.05）心脾两虚组。失眠中医证型与 HCY，HDL-C 水平具有相关性。
结论 不同证型失眠患者血清 HCY、HDL-C 水平存在差异。

PU-2130

吸入性糖皮质激素药物布地奈德治疗 AECOPD 的研究进展

张毅、陈剑、周利、张继华
玉溪市人民医院医学检验科（昆明医科大学第六附属医院医学检验科）

慢性阻塞性肺疾病（Chronic Obstructive Pulmonary Disease，COPD）是一种临床常见的呼吸系统多发病，其主要特征是持续的气道受限，且不完全可逆和持续性进行，因其高患病率和病死率受到世界各国的普遍重视[1]。COPD 急性加重（AECOPD）是一种以患者的呼吸道症状急性加重为特征的临床事件，需改变药物治疗方案[2]。AECOPD 是 COPD 的重要组成部分，COPD 患者长期反复的急性加重可导致病情进展，肺功能及生活质量的不断下降[3]。一项前瞻性研究证实了 AECOPD 患者的高住院费用、高病死率及高复发率[4]。而吸入糖皮质激素治疗 AECOPD 患者能有效缓解患者临床表现，改善检测指标[5,6]。该文综述了糖皮质激素在 COPD 急性加重时的应用进展，以期为 AECOPD 患者寻找安全有效的治疗方法提供理论依据。

PU-2131

蛋白酶与抗蛋白酶失衡在 COPD 中的研究进展

张毅、陈剑、周利、张继华
玉溪市人民医院医学检验科（昆明医科大学第六附属医院医学检验科）

COPD 的主要特征为肺血管、肺实质、气道慢性炎症性病变。大量研究表明，引起 COPD 的致病因素主要有氧化应激和炎症，而蛋白酶与抗蛋白酶失衡也是其重要的发病机制。早有学术假说指出，蛋白酶（巨噬细胞与中细粒细胞生成）和抗蛋白酶（从血浆渗出）失衡能够造成 COPD 组织损伤，而且在 COPD 急性加重期还会表现出更加严重的失衡。蛋白酶能够将弹性蛋白以及其他蛋白结构（肺泡壁上）消化，其中，MMPs（matrix metallo proteinases）基质金属蛋白酶、NE（Neutrophil Elastase）中性粒细胞弹性蛋白酶等都比较重要；蛋白酶的这种作用会受到抗蛋白酶系统的对抗，其中，SLPI（secretory leucocyte protease inhibitor）分泌性白细胞蛋白酶抑制物、α1-AT（alpha-1 antitrypsin deficiency）α1 抗胰蛋白酶、TIMPs（tissue inhibitor of metallo proteinases）组织金属蛋白酶抑制物等比较重要。本文着重对 COPD 中蛋白酶与抗蛋白酶以及二者失衡相关的研究情况进行论述。

PU-2132

IL-35 通过诱导乳腺肿瘤微环境中淋巴细胞的转化促进肿瘤进展

刘佳、李宁
山东大学第二医院

乳腺肿瘤细胞及乳腺肿瘤微环境（Tumor microenvironment，TME）中的 Treg 均可表达和分泌免疫抑制性细胞因子 IL-35。乳腺肿瘤细胞分泌的 IL-35 可通过介导 T 细胞向 iTR35 细胞的转化。另一方面，IL-35 也可抑制 B 细胞的增殖，并介导 B 细胞转化为可分泌 IL-10 和 IL-35 的 Breg 细胞亚群，即 IL-35+Breg。本研究通过建立小鼠荷瘤模型，模拟高 IL-35 的肿瘤微环境，通过体内实验探索 IL-35 对乳腺 TME 中浸润淋巴细胞分化的诱导作用，以及 IL-35 对 TME 血管生成、肿瘤局部进展及远处转移的影响。结果显示，IL-35 可通过直接刺激肿瘤细胞增殖、诱导肿瘤局部免疫抑制性淋巴细胞的转化,以及间接促进肿瘤血管的生成,形成有利于肿瘤生长的微环境,为肿瘤细胞的发展和转移创造有利条件。

PU-2133

南京地区体检人群血糖水平分析

马亮、黎青
江苏省人民医院（南京医科大学第一附属医院）

目的 调查南京地区体检人群血糖水平的性别和年龄分布特征，了解本地区人群血糖水平的变化趋势，为糖尿病的防治提供参考。
方法 对 2021 年 1 至 4 月间前往本院进行常规体检的 8466 例体检者（男 6620 例，女 1846 例），通过己糖激酶法测得的空腹血糖结果进行分析。
结果 8466 名体检者空腹血糖均值为（5.41±1.45）mmol/L，结果不符合正态分布。男女均值分别为（5.48±1.52）mmol/L 和（5.14±1.09）mmol/L。高血糖（≥7.0mmol/L）检出率 6.7%，低血糖（＜3.9mmol/L） 检出率 0.38%。男性空腹血糖水平高于女性，差异有统计学意义（P＜0.05）。不同年龄组之间，小于 45 岁人群空腹血糖均值为（5.06±0.95）mmol/L，高血糖检出率 1.96%；45 至 60 岁人群空腹血糖均值为（5.74±1.74）mmol/L，高血糖检出率 11.08%；大于 60 岁人群空

腹血糖均值为（5.92±1.81）mmol/L，高血糖检出率 14.78%。大于 45 岁人群与小于 45 岁人群的空腹血糖水平间的差异有统计学意义（P＜0.05）。

结论 空腹血糖水平随年龄的增长呈升高趋势，高血糖的检出率也随年龄增加。建议定期检测血糖水平，并向不同年龄段人群有针对性的加强宣传教育，预防糖尿病的发生。

PU-2134

肌酐白蛋白比对重症急性胰腺炎的预后价值

陈颖、马亮
江苏省人民医院（南京医科大学第一附属医院）

目的 探讨 CREA / ALB 对急性重症胰腺炎患者的预后价值。

方法 回顾性分析 2015 年 1 月至 2019 年 12 月南京医科大学附属第一医院 ICU 收治的 167 位急性重症胰腺炎患者。根据 30 天的预后，将急性重症胰腺炎患者分为 135 例生存组和 32 例院内死亡组。从生化结果中计算 CREA / ALB。记录两组急性生理和慢性健康评估 II（APACHE II）评分和顺序器官衰竭评估（SOFA）评分和 CREA / ALB 并进行比较。构建特征曲线（ROC），并绘制生存曲线以研究 CREA / ALB 对 SAP 患者的预后价值。

结果 生存组和院内死亡组之间的基线参数相当。院内死亡组的肌酐白蛋白比率， APACHE II 评分和 SOFA 评分显着高于存活组（P <0.05）。 CREA / ALB 分别与 APACHE II 评分和 SOFA 评分显着相关。CREA / ALB 的 ROC 曲线下面积（AUC）均大于 APACHE II 得分和 SOFA 得分。结果表明，CREA / ALB 对预测急性重症胰腺炎患者的死亡率具有更好的预后价值。曲线表明，CREA / ALB 预测非存活组患者的敏感性为 70.1％，特异性为 88.2％（AUC，0.831； 95％CI 0.658–0.843）。在多元逻辑回归分析中，CREA / ALB 可作为独立的危险因素来预测 SAP 患者的死亡率。此外，Kaplan–Meier 生存分析表示，当 CREA / ALB> 2.476 时，院内死亡率更高（p = 0.001）。

结论 院内死亡组 SAP 患者的 CREA / ALB 比存活组患者高。 CREA / ALB 与 APACHE II 和 SOFA 得分显着相关。 CREA / ALB 对 SAP 患者的预后价值高于 APACHE II 和 SOFA 评分，临床医生可以将其用于治疗 SAP 患者。

PU-2135

AMY、NLR、GP-2α 在急性胰腺炎病情评估中的价值及对预后的影响

陈印宜
南华大学附属第一医院

目的 探讨淀粉酶（AMY）、中性粒细胞/淋巴细胞比值（NLR）、糖蛋白-2α（GP-2α）在急性胰腺炎病情评估中的价值及对预后的影响。

方法 选取 92 例 AP 患者作为研究对象，根据严重程度不同分为 MAP 组（n=44）、MSAP 组（n=30）和 SAP 组（n=18）；同期选取 50 例健康体检者作为对照组，对比各组 AMY、NLR 和 GP-2α 差异，用 Pearson 相关分析 AMY 与 NLR 和 GP-2α 之间的关系；绘制受试者工作曲线（ROC）探讨 AMY、NLR 和 GP-2α 各单项指标及联合指标在 AP 病情评估中价值；用 COX 回归分析探讨 AMY、NLR 和 GP-2α 对 SAP 预后的影响。

结果 对照组、MAP 组、MSAP 组和 SAP 组四组 NLR、AMY 和 GP-2α 比较，差异有统计学意义（P<0.05）；其中 SAP 组高于 MSAP 组（P<0.05），MSAP 组高于 MAP 组（P<0.05），MAP 组高于对照组（P<0.05）。经 Pearson 相关分析，AMY 与 NLR 和 GP-2α 均呈明显正相关（P<0.001）。绘制 ROC 曲线发现，NLR 和 AMY 单项指标在鉴别 MAP 组、MSAP 组和 SAP 组时差异无统计学意义（P>0.05），而 GP-2α 单项指标可鉴别 MAP 组、MSAP 组和 SAP 组

（P<0.05）；联合检测均可鉴别 MAP 组、MSAP 组和 SAP 组（P<0.05），以 AMY+NLR+GP-2α 效果最佳，其灵敏度和特异度分别为 86.3%和 82.5%。经 COX 回归分析，AMY、NLR 和 GP-2α 升高，SAP 死亡风险增加(P<0.05)。
结论 AMY、NLR、GP-2α 在评估 AP 病情严重程度中具有一定价值，且可影响 SAP 患者预后。

PU-2136

“全时段采血”在妊娠早期甲状腺疾病诊断中的应用评价

宋宏庆、刘栋、周莉莉
陕西省铜川市人民医院

目的 评价“全时段采血”是否适用于本地区妊娠早期甲状腺疾病的筛查与诊断。
方法 选取铜川市人民医院 2017 年 6 月 1 日至 2020 年 10 月 31 日门诊检测甲状腺功能的妊娠早期女性共 6761 例。从 LIS 中根据采血时间排序分为 6 组：A 组（6:00-8:00）628 例、B 组（8:00-10:00）1722 例、C 组（10:00-12:00）1428 例、D 组（12:00-14:00）953 例、E 组（14:00-16:00）1399 例和 F 组（16:00-18:00）631 例，比较每组三碘甲状腺原氨酸(Triiodothyronine，T3)、甲状腺素（Tetraiodothyronine，T4）、游离三碘甲状腺原氨酸(Free triiodothyronine，FT3)、游离甲状腺素(Free thyroxine，FT4)和促甲状腺激素(Thyroid-stimulating hormone ，TSH)水平；比较每组妊娠期低甲状腺素血症、亚临床甲状腺功能减退、临床甲状腺功能减退和妊娠期甲状腺毒症的检出率。
结果 各组间 T3，T4，FT3，FT4 和 TSH 水平差异有统计学意义，P 均<0.05；各组间妊娠期单纯低甲状腺素血症和妊娠期亚临床甲减检出率差异有统计学意义，P 均<0.05；妊娠期临床甲减和妊娠期甲状腺毒症各组检出率无统计学差异（χ2 值分别为 5.447 和 0.741，P 均>0.05）。
结论 “全时段采血”模式不宜用于本地区妊娠早期甲状腺疾病的筛查与诊断。

PU-2137

血清铁蛋白影响新发 2 型糖尿病患者肾功能早期变化的研究

叶桂云
福建省南平市第一医院

目的 探讨血清铁蛋白(SF)水平影响新发 2 型糖尿病(T2DM)患者肾功能的早期变化。
方法 入选 2019 年 8 月至 2020 年 5 月就诊的新发 T2DM 患者 340 例，另选取同期体检的正常体检者 95 例为对照组。研究对象均进行一般情况调查，测量颈动脉内膜中层厚度(IMT)，检测血糖、糖化血红蛋白(HbA1c)、血清铁蛋白(SF)、载脂蛋白 B(ApoB)、载脂蛋白 A1(ApoA1)、尿白蛋白、肌酐(Crea)以及脂类项目等，计算 ApoB/A1、尿白蛋白/肌酐比值(UACR)。Pearson 相关分析法分析 SF 与各指标的相关性；多元逐步回归法分析 UACR 的主要影响因素。
结果 T2DM 的三酰甘油(TG)、高密度脂蛋白胆固醇(HDL-C)、ApoB/A1、空腹血糖(FPG)、餐后 2 小时血糖(2hPG)、HbA1c、IMT、SF、UACR 均显著高于正常对照组(P＜0.05)；Pearson 相关分析显示，SF 与 TG、HDL-C、FPG、2hPG、HbA1c、IMT、ApoB/A1、UACR 相关(P＜0.05)；多元逐步回归分析得出 SF 是 UACR 最强影响因素；治疗后的降糖药联合升铁调素药组 SF、UACR 均明显低于降糖药组(P＜0.05)。
结论 新发 T2DM 中 SF 水平影响肾功能的早期变化，是糖尿病并发症监测的重要项目。

PU-2138

同型半胱氨酸水平与动脉粥样硬化性心血管疾病的分析

王永辉
宝鸡高新医院

目的 探讨同型半胱氨酸水平检测在临床动脉粥样硬化诊断中的价值，以及同型半胱氨酸水平在不同类型动脉粥样硬化疾病中的差异。
方法 选取宝鸡高新人民医院心血管内科、外科 2019 年 1 月 1 日——2019 年 12 月 31 日，已出院确诊的动脉粥样硬化性心血管疾病患者 110 例，将其作为病例组，其中稳定型心绞痛 17 例，不稳定型心绞痛 39 例，心肌梗死 54 例。另外随机选取同时期来我院做健康体检的 110 例作为对照组。
结果 病例组和对照组在性别方面无统计学差异（P>0.05）；病例组与对照组在年龄方面具有统计学差异（P<0.05）；病例组较对照组同型半胱氨酸水平升高，差异有统计学意义（P<0.05）；心肌梗死组同型半胱氨酸水平高于不稳定型心绞痛（P<0.05），差异具有统计学意义；不稳定型心绞痛同型半胱氨酸水平高于稳定型心绞痛（P<0.05），差异具有统计学意义。
结论 同型半胱氨酸水平检测对临床动脉粥样硬化诊断具有一定的价值。高同型半胱氨酸水平对于动脉粥样硬化性心血管疾病的分类判别具有重要参考价值。

PU-2139

尿微量白蛋白与肌酐比值在 2 型糖尿病早期肾损伤中的临床意义

赵多祥
宝鸡高新医院

目的 探讨尿微量白蛋白与肌酐比值在诊断糖尿病早期肾损伤的临床意义。
方法 选取 2019 年 1 月-12 月宝鸡高新人民医院内分泌科 2 型糖尿病患者 95 例，按照尿蛋白定性分为尿蛋白阳性组和尿蛋白阴性组，同期健康体检者 30 例做为对照组，应用日立 LABOSPECT 008AS 型全自动生化分析仪测定其尿微量白蛋白（Malb）与肌酐（Cr），并计算尿微量白蛋白与肌酐比值（Malb/Cr），进行统计学处理。
结果 糖尿病患者 Malb/Cr 的值明显高于健康人群，尿蛋白阳性组的 Malb/Cr 的值也高于尿蛋白阴性组的值，三组分别比较差异均具有统计学意义（P<0.001）。
结论 Malb/Cr 的升高提示早期肾损伤，可以作为发现尿蛋白阴性的早期糖尿病肾病患者的一项敏感而可靠地诊断指标，值得临床推广应用。

PU-2140

用霍乱弧菌二核苷酸环化酶高效制备克级别的 c-di-AMP

吕云、孙启超
山东大学趵突泉校区

Purpose prepare c-di-AMP on a gram scale with Vibrio cholerae dinucleotide cyclase DncV
Methods The method mainly includes four steps: preparation of DncV-immobilized resin, enzymatic synthesis of c-di-AMP, purification using macroporous absorption resin SP207, and desiccation using rotary evaporation and lyophilization.
Results After purification, up to 1 g of the diammonium salt of c-di-AMP with weight purity of ≥98% was obtained as white powder.
Conclusion we report a practical and economical enzymatic method for gram-scale preparation of c-di-AMP using an immobilized Vibrio cholerae dinucleotide cyclase DncV.

PU-2141

福建省糖化血红蛋白一致性计划研究

戴婉如、黄建刚、陈发林
福建省立医院

目的 本文旨在福建省糖化血红蛋白室间质评的基础上，提升福建省参加实验室 HbA1c 检测结果的一致性。

方法 选定 1 家 NGSP Level Ⅰ级实验室（福建省立医院）和 2 家 SHGHP Level Ⅱ级实验室（福建医科大学附属协和医院；福建医科大学附属第一医院）组成定值检测系统，向参加实验室分发赋值的新鲜全血样本和校准品，比对各临床实验室 HbA1c 检测结果的一致性。

结果 三家定值实验室高水平和低水平全血标本的 HbA1c 检测结果总 CV 值分别为 0.59%和 1.06%；参加实验室校准前平均 CV 值为 2.24%，校准后平均 CV 值为 1.63%；FJGHP 通过率 2020 年和 2021 年分别为 81.58%和 89.74%；全血质控品的平均 CV 为 2.15%，干粉质控品的平均 CV 为 2.81%。

结论 该计划通过应用新鲜全血标本，进行不同检测系统的校准和比对，有效提高了福建省糖化血红蛋白 HbA1c 检测结果的一致性，提高了各实验室检测结果的可比性。

PU-2142

不同厂家试剂检测同型半胱氨酸的结果分析

彭晓建、缪丽华、黄颖琪、杨红英
昆明金域医学检验所有限公司

目的 探讨分析不同厂家试剂在同型半胱氨酸检测中的应用,并对检测结果进行比较。

方法 2021 年 1 月随机挑选样本 70 例，分别以罗氏和迈克试剂对同型半胱氨酸进行检测，比较分析不同检测方法以及不同年龄标本所获得检测结果的差异。

结果 罗氏和迈克对血清同型半胱氨酸检测结果差异无统计学意义(P＞0.05)，但对于年龄大于 60 岁的受检者，两个厂家的参考值有所不同，其血清同型半胱氨酸水平的差异具有统计学意义(P＜0.05)。

结论 不同厂家试剂对同型半胱氨酸的检测结果无明显影响。但对年龄大于 60 岁的受检者其检测结果的阴阳性判断不同，罗氏试剂应制定相应的参考值。

PU-2143

冠心病患者血清同型半胱氨酸和脂蛋白相关磷脂酶 A2 的水平变化及临床意义

王参军
东南大学附属中大医院

目的 探讨血清同型半胱氨酸（Hcy）、脂蛋白相关磷脂酶 A2（LP-PLA2）检测对冠心病的诊断价值。

方法 选择 2018 年 01 月～2020 年 12 月本院收治的冠心病患者 240 例为观察组,其中 98 例急性心肌梗死患者（A 组）,75 例稳定型心绞痛患者（B 组）,67 例不稳定型心绞痛患者（C 组）;同时选取同期住院的无冠心病患者 160 例为对照组。分别检测各组患者的血清 Hcy、LP-PLA2 水平,并进行比较;对比单项指标与联合检测的阳性率,同时比较各组血清 Hcy、LP-PLA2 指标测定值范围。

结果 A、B、C 组单纯血清 Hcy、LP-PLA2 检测及联合检测阳性率均高于对照组,差异有统计学意义（P<0.05）;A、C 组单纯血清 Hcy、LP-PLA2 检测及联合检测阳性率高于 B 组,差异有统计学意义（P<0.05）;A、B、C 组血清 Hcy、LP-PLA2 联合检测阳性率高于单纯血清 Hcy、LP-PLA2 检测,差异有统计学意义（P<0.05）;A 组血清 Hcy 水平高于 B 组、对照组,差异有统计学意义（P<0.05）;A、B、C 组 LP-PLA2 水平均高于对照组,差异有统计学意义（P<0.05）;B、C 组的 LP-PLA2 水平存在明显界线。Logistic 回归分析显示 Lp-PLA2>197 ng/ml、Hcy>17.5 μmol/L 是急性缺血性脑卒中发生的独立风险因素（P<0.05）。
结论 血清 Hcy、LP-PLA2 水平联合检测对冠心病诊断具有应用价值。

Assessment of serum a-hydroxybutyrate as an indicator of insulin resistance in patients with type 2 diabetes mellitus and non-alcoholic fatty liver disease

Ming Zong[1]、ZHONGGAN JIN[2]、SHANSHAN YU[1]、QI TAN[1]、LIEYING FAN[1]
1. Shanghai east hospital
2. 上海市临床检验中心

Objective Numerous studies have shown that insulin resistance (IR) is involved in the pathophysiology of metabolic disorders such as non-alcoholic fatty liver disease (NAFLD) and Type 2 Diabetes (T2DM). The a-hydroxybutyrate (α-HB) molecule is thought to be the most sensitive biological indicator that could distinguish IR subjects from insulin-sensitive subjects. The purpose of this study was to establish an ultra-high-performance liquid chromatography-tandem mass spectrometry (UHPLC-MS/MS) method for detecting α-HB in serum and to investigate its association with IR in T2DM and NAFLD.
Method Electrospray ionization (ESI) negative ion mode and multiple reaction monitoring (MRM) were used to detect serum α-HB. We evaluated the linearity, low limits of quantification, precision, and recovery of UHPLC-MS/MS. Serum samples were collected from 50 healthy controls, 72 T2DM subjects, and 100 NAFLD patients. Serum levels of α-HB, fasting serum insulin, and others were measured; a homeostasis model assessed insulin resistance (HOMA-IR).
Results The UHPLC-MS/MS method for measuring α-HB was performed with a run time of 4 min. It had a good linear relationship from 0.5 to 40 μg/mL (r = 0.9994); the limit of quantification was 0.5 μg/mL, and the within and between run precision values were less than 4.1% and 6.3%, respectively. The recovery ranged between 95.8% and 103.8%. We found that the serum α-HB levels in T2DM and NAFLD patients were significantly higher (P< 0.001) than the control group. For α-HB, the area under curve (AUC) was 0.737 with a 95% confidence interval (0.655, 0.819) in the diagnosis of NAFLD. The levels of serum α-HB were significantly different between patients with severity of NAFLD.
Conclusion A serum α-HB UHPLC-MS/MS detection method was established in this study. This simple and rapid method meets the needs of clinical detection and can evaluate IR in T2DM and NAFLD. Although additional studies are needed, our data suggest that the analysis of α-HB can be useful in the differentiation of NAFLD severity.

PU-2145

Externalized Histone H4: A Novel Target that Orchestrates Chronic Inflammation by Inducing Lytic Cell Death

Yao Zhang
The First People's Hospital of Changde City

Cardiovascular diseases (CVDs) such as hypertension, coronary artery disease (CAD), and atherosclerosis (AS), are characterized by lipid deposits (atheromatous plaque), thrombosis, inflammatory response, and smooth muscle cell (SMC) activation and death. Despite the common use of lipid-lowering medications, CVDs remain a serious global health issue due to the high mortality and morbidity rates. AS, one of the most frequent causes of cardiovascular morbidity, involves extensive inflammatory activity and remodeling of the vascular endothelium. Chronic inflammation is found to be an important patho-physiological factor in the global medical burden, possibly caused by non-programmed cell death. Chronic inflammation induces monocytes to adhere to activated endothelial cells, infiltrate into the subendothelial space of the arterial wall, and transform into macrophages. Foamy macrophages secrete various inflammatory cytokines that stimulate SMC proliferation and migration, thus leading to plaque rupture, forming atherosclerotic plaque.

PU-2146

Neu-P11 Reduces Rat's Intraocular Pressure in the Hypertensive Condition

Yao Zhang
The First People's Hospital of Changde City

In the search for new compounds to reduce intraocular pressure (IOP), with fewer side effects, we have found that Piromelatine (Neu-P11), a novel melatonin agonist, can reduce IOP being, therefore, interesting for the treatment of ocular hypertension and glaucoma. The objective of this study was to investigate effects of Neu-P11 on IOP in high intraocular pressure rats. Hypertension model was established by Trendelenburg position(prone -80° head down). Vehicle or different concentrations of Neu-P11or melatonin was administrated by local or systemic method for a week. IOP raised to 302.9% compared to normols in a hypertensive condition ($p<0.05$). The results showed that Neu-P11 was able to reduce IOP in a hypertensive condition by local and intraperitoneal administration. On local administration, Neu-P11 (100μM and 200μM) and melatonin(100μM) had no effect on MDA level, SOD and GSH-Px activities. However, on intraperitoneal administration, Neu-P11 (20mg/kg and 50mg/kg) as well as melatonin(10mg/kg) produced a decrease on MDA level and a increase on SOD and GSH-Px activities ($P<0.01$; Neu-P11 or Mel vs. control). Neu-P11 could effectively improve oxidative stress to reduce IOP on intraperitoneal administration. These results may suggest the use of this novel melatonin agonist for the treatment of those ocular conditions, which involve an abnormal raise of intraocular pressure.

PU-2147

Neu-P11 对眼内压的影响

张瑶
常德市第一人民医院

目的 研究 Neu-P11 对急性高眼压大鼠眼内压的影响及其相关机制。
方法 采用 Trendelenburg 卧位（头低脚高 80°位置）建立急性高眼压模型。建模后用不同浓度 Neu-P11/Mel 进行局部或全身给药。给药后水平位置休息 2 h，再次置于 Trendelenburg 卧位 45 min，放于平面后每小时测量一次眼内压，连续监测 6 小时，重复实验一周。连续给药一周后注射过量戊巴比妥处死 SD 大鼠，心脏取血检测急性高眼压大鼠血清中 MDA 含量、SOD 和 GSH-Px 活性；留取各组大鼠眼球常规组织学切片观察 SD 大鼠视网膜形态学变化；免疫组化检测 SD 大鼠视网膜 AQP4、GFAP 和 TNF-α 表达水平的变化。
结果 通过 Trendelenburg 卧位法，我们成功建立 SD 大鼠急性高眼压模型，与正常组相比，模型组大鼠眼内压值升高了约 202.9%（P < 0.01），且视网膜增厚，层次不清，相关蛋白 AQP4、GFAP 和 TNF-α 的表达呈强阳性。而经 Neu-P11/Mel 局部或腹腔注射治疗后，各项指标均有不同程度的改善。另外，Trendelenburg 卧位诱导大鼠氧化应激水平升高，经 Neu-P11/Mel 全身治疗可显著降低 SD 大鼠 MDA 含量，增加 SOD 和 GSH-Px 酶活性，而局部治疗无明显疗效。
结论 Neu-P11 有降低高眼压大鼠眼内压的作用，其机制可能与降低相关蛋白 AQP4、GFAP 和 TNF-α 的表达和抑制机体氧化应激水相关。

PU-2148

血清 TSH、超声与增强 CT 对甲状腺乳头癌及淋巴结转移的诊断价值

岳潇潇
中国医科大学附属盛京医院

目的 探讨血清 TSH 联合超声与增强 CT 对甲状腺乳头状癌，及其淋巴结转移的诊断价值，为甲状腺结节的治疗方案提供依据。
方法 调查 2018 年 1 月至 2020 年 10 月就诊于中国医科大学附属盛京医院并在普通外科病房进行甲状腺手术治疗的患者，收集患者的性别、年龄、病程等数据及术前甲状腺功能血清检测指标（包括 FT3、FT4、TSH、anti-TPO、anti-Tg）、甲状腺超声、颈部增强 CT 和术后病理等结果，排除不合格数据后得到良性结节 30 例和甲状腺乳头状癌 122 例，根据癌灶直径是否大于 1cm 及是否伴淋巴结转移，将乳头状癌病例细分为微小癌组（65 例）、非微小癌组（57 例）、淋巴结转移组（76 例）、非淋巴结转移组（46 例）。对数据进行整理，进行正态性检验后，再分析各组数据特征有无差别，将相关因素（P＜0.05）纳入 logistic 回归模型。并通过绘制 ROC 曲线比较 TSH、超声、增强 CT 单独应用及联合诊断的诊断效果。
结果 组间比较中，TSH、超声 TR 分级、超声最大淋巴结直径以及超声提示淋巴结异常为甲状腺乳头状癌的危险因素；超声最大结节直径的差异在非微小癌和微小癌中有统计学意义（P＜0.05）。结节数量、超声提示甲状腺异常是甲状腺乳头状癌转移的独立危险因素（P＜0.05）。超声、增强 CT 与它们联合诊断有无甲状腺癌淋巴结转移时 AUC 分别为 0.666、0.590、0.637、0.612，其中只有单独增强 CT 诊断时 P >0.05。
结论 TSH、超声 TR 分级对于判断结节性质有较好的诊断价值，但它们联合并不能增加诊断效果；甲状腺功能检测指标的水平与甲状腺乳头状癌病灶大小不相关,但超声最大结节直径可用于判断甲状腺乳头状癌病灶大小。甲状腺功能检测指标的水平与甲状腺乳头状癌是否有淋巴结转移不相关；

PU-2149

肾综合征出血热患者 α-淀粉酶、脂肪酶变换分析

郑秀丽
齐齐哈尔市第七医院(原:齐齐哈尔市传染病防治院)

目的 观察肾综合征出血热患者血清 α-淀粉酶、脂肪酶变化
方法 回顾性分析 2020 年 1 月 1 日至 2021 年 5 月 31 日确诊的 51 例肾综合征出血热住院病人检验数据。
样本 血清样本，避免溶血。
原理 汉坦病毒检测采用胶体金免疫层析技术，在玻璃纤维纸上预包被胶体金标记的汉坦病毒重组抗原（Au-NP-Ag），在硝酸纤维膜的检测线和对照线处分别包被抗人 IgGγ 链单克隆抗体、抗人 IgMμ 链单克隆抗体和兔抗汉坦病毒抗体。检测阳性标本时，血清中汉坦病毒抗体（IgG 或 IgM）与 Au-NP-Ag 结合形成复合物，由于层析作用复合物沿纸条向前移动，经过检测线时与预包被的抗人 IgGγ 链单克隆抗体或抗人 IgMμ 链单克隆抗体形成“Au-NP-Ag-汉坦病毒抗体-抗人 IgGγ（或抗人 IgMμ）-固相材料”夹心物而凝聚显色，游离金标抗原则在对照线处与兔抗汉坦病毒抗体结合显色。阴性标本仅对照线处显色。
α-淀粉酶与 α-葡萄糖苷酶偶联，水解特异性底物 4,6-亚乙基-4-硝基苯酚-α-庚糖，产生对-硝基苯酚，对-硝基苯酚生成速率与 α-淀粉酶的活性成正比，在 405nm 波长下用速率法检测。
1,2-邻-二月桂宗甘油-3-戊二酸-（6´-甲基试卤灵）-酯在脂肪酶/OH^-作用下生成 1,2-邻-二月桂宗甘油、戊二酸和 6´-甲基试卤灵，在 570nm 波长下，根据产物红色的甲基试卤灵生成速率测定脂肪酶的活性。
结果 住院肾综合征出血热 51 例患者 α-淀粉酶、脂肪酶均出现不同程度增高，通过每日检测血清样本，发现 α-淀粉酶、脂肪酶逐步增高，有的甚至可达到正常参考范围的 10 倍以上，经过对症治疗，再逐步下降直至正常。
结论 通过回顾性分析，肾综合征出血热患者随着病情进展，α-淀粉酶、脂肪酶出现增高现象，α-淀粉酶、脂肪酶是胰腺疾病监测的重要项目，监测 α-淀粉酶、脂肪酶可以及时发现肾综合征出血热病人是否合并胰腺疾病，及时进行有效治疗。

PU-2150

UPLC-MS-MS 同时检测人血清中 5-羟色胺和褪黑素水平及性能验证

戴锦娜
中国医科大学附属第一医院

目的 5-羟色胺和褪黑素作为人体内重要的吲哚胺类神经递质，具有调节生物节律、情绪、认知、清除自由基、促进炎信号传导等多种生物活性，同时还对骨代谢有着重要的影响。本研究采用 UPLC-MS/MS 法建立人血清中 5-羟色胺和褪黑素的定量检测方法并进行方法学验证，为考察人体中 5-羟色胺和褪黑素水平与骨质疏松症状的相关性奠定基础。。
方法 以 5-羟色胺-d4 和褪黑素-d4 为内标，采用 SCIEX 6500 QTRAP 超高效液相色谱串联质谱仪建立血清中 5-羟色胺和褪黑素的 LC-MS/MS 方法，采用 Waters BEH C18 (2.1×100 mm, 1.7μm) 色谱柱，柱温 40℃，梯度洗脱，进样量为 2 微升，前处理采用液液萃取法，并自制高、中、低质控品进行方法学验证，包括特异性、基质效应、精密度、准确度、分析测量范围等。
结果 5-羟色胺和褪黑素的分析测量范围分别为：1ng/ml~500ng/ml、0.001ng/ml~0.5ng/ml，线性关系良好；采用加标回收率试验评估方法的准确性，结果显示，5-羟色胺和褪黑素的加标回收率在

97.45%-108.06%之间，其批内、批间精密度分别为 0.75%~3.00%、1.57%~2.86%。收集了绝经期骨质酥松妇女患者 80 例，对其血清 5-羟色胺和褪黑素进行检测。
结论 本研究建立了 ID-UPLC-MS/MS 同时测定人体血清中 5-羟色胺和褪黑素的方法。血清用量少（仅需 200 μL），前处理简单，且一针分析多种物质只需 3.5 分钟，简单快速。利用超高效液相色谱串联质谱技术检测血清中 5-羟色胺和褪黑素浓度，可以通过外周 5-羟色胺和褪黑素水平来反应人体骨量和骨结构变化，为临床诊治提供科学依据。

PU-2151

转录因子 Twist 1 和 PPARγ 在 3T3-L1 脂肪细胞中可能的基因调控关系

任瑞
山东大学第二医院

背景 过氧化物酶体增殖物激活受体 γ（PPARγ）是调节机体脂肪细胞功能的重要基因。因此，研究 PPARγ 的分子调控机制有助于了解脂肪组织功能。Twist 1 是脂肪组织中另一个重要的功能基因，数百个基因受 Twist 1 调控。本研究的目的是探讨的 Twist 1 和 PPARγ 在 3T3-L1 脂肪细胞表达调控。
方法 体外诱导 3T3-L1 前脂肪细胞分化，检测 Twist 1 和 PPARγ 的表达变化。用 PPARγ 激动剂吡格列酮和 PPARγ 拮抗剂 T0070907 研究 PPARγ 对 Twist 1 表达的影响。此外，利用逆转录病毒干扰和过表达的 Twist 1 观察 Twist 1 对 PPARγ 表达的影响。
结果 在 3T3-L1 脂肪细胞诱导分化过程中，Twist 1 和 PPARγ 表达。PPARγ 激动剂（吡格列酮）或拮抗剂（T0070907）可影响 Twist 1 的表达，吡格列酮（1μm，24 h）作用下 Twist 1 上调，T0070907（100μM，24h）时 Twist 1 下调。此外，逆转录病毒干扰 Twist 1 下调 PPARγ 的蛋白质和 mRNA 的表达水平，而过表达 Twist 1 有截然相反效果。
结论 在 3T3-L1 脂肪细胞中，Twist 1 和 PPARγ 之间可能存在的调控关系。这调节联系增强 PPARγ 的调节，可能是 Twist 1 调节脂肪细胞生理病理的功能机制。

PU-2152

HPLC 法测定非那西丁和扑热息痛浓度评估肝脏储备功能

任瑞
山东大学第二医院

目的 对非那西丁和扑热息痛含量分析进行方法学研究，并进行应用性验证，以评估肝脏储备功能。
方法 建立高效液相色谱技术（HPLC）测定非那西丁与扑热息痛含量，进行标准曲线建立、精密度试验及方法回收率试验，并用健康血浆进行应用性验证。
结果 非那西丁与扑热息痛在浓度 0.8-40μg/ml 的范围内均呈现良好的线性关系；在 5、15、25μg/ml 的样品浓度下，非那西丁测定的日内精密度分别为 0.84、1.09 和 0.53，日间精密度分别为 1.51、1.10 和 1.38，回收率分别为 99.81%、100.09%和 99.75%。扑热息痛测定的日内精密度分别为 0.76、0.89 和 0.67，日间精密度分别为 1.02、1.46 和 1.21，回收率分别为 100.76%、99.19%和 100.97%。
结论 HPLC 分析方法简便快捷、灵敏度和准确度高，为评估肝脏储备功能提供了一种快捷、准确的方法。

PU-2153

Cystatin C level is associated with the recovery of renal function in cancer patients after onset of acute kidney injury

Rui Li
Laboratory of the Fifth People's Hospital of Shenyang

Purpose The objectiveis to study the prognostic value of cystatin C (Cys C) in cancer patients with AKI.
Methods According to the inclusion and exclusion criteria, cancer patients diagnosed and treated in the oncology department of Shenyang fifth hospital from April 2014 to March 2019 were included. The relationship between the baseline level of Cys C and the occurrence of AKI and the changes of renal function during the follow-up period after AKI was analyzed. The cancer patients with AKI were divided into two groups according to the changes of renal function during the follow-up period, the renal function recovery group and the non recovery group. The differences of baseline data between the two groups were compared, and the risk factors related to the non recovery of renal function were analyzed by logistic single factor and multi factor regression.
Results A total of 3127 patients were included. Among them, 659 cases (21.1%) had AKI and 2468 cases had no AKI. Among the patients with AKI, 473 cases recovered, 186 cases did not. Univariate and multivariate logistic regression analysis showed that age (or = 1.133, 95% CI: 1.064-1.219), diabetes mellitus (or = 1.226, 95% CI: 1.093-1.385), chronic kidney disease (or = 1.347, 95% CI: 1.108-1.624), hematological malignancy (or = 1.174, 95% CI: 1.063-1.311), chemotherapy (or = 1.119, 95% CI: 1.055-1.304), systolic blood pressure (or = 1.108, 95% CI: 1.062-1.267), serum creatinine (or = 1.262, 95% CI: 1.063-1.311), chemotherapy (or = 1.119, 95% CI: 1.055-1.304), 95% CI: 1.105-1.446) and CysC (or = 1.416, 95% CI: 1.251-1.739) were associated with renal failure after AKI.
Conclusion Baseline CysC is associated with AKI in cancer patients, and with no recovery of renal function during follow-up.

PU-2154

住院病人低钙血症的病因分析

童开、张莹、虢瑾、刘家云
空军军医大学西京医院

目的 研究住院病人发生低钙血症的原因，为临床诊断和治疗提供依据。
方法 回顾性分析 2020 年 1 月至 2020 年 12 月空军军医大学第一附属医院住院患者中血钙水平小于 1.6mmol/L 患者的临床资料，共 342 例，分析患者的相关实验室指标，分析每位患者发生高钙血症的病因，按病因进行分类分析。
结果 342 例有低钙血症的住院患者中，肾功能衰竭 119 例（占 34%），甲状旁腺功能减退 43 例（占 12%），吸收不良维生素 D 代谢障碍 63 例（占 18%），恶性肿瘤 21 例（占 7%），其他 96 例（占 29%）各病因的患者间血钙水平比较，差异无统计学意义。
结论 低钙血症的主要原因为肾功能衰竭、甲状旁腺功能减退、维生素 D 缺乏、恶性肿瘤等。临床中应结合病史具体分析并采取正确的治疗方案。

PU-2155

西北地区健康人群胆固醇参考区间的初步探讨

童开、张莹、杨小云、虢瑾、刘家云
空军军医大学西京医院

目的 建立西北地区健康人群血清胆固醇(CHOL)的参考区间。
方法 参照 IFCC 多中心酶学研究参考人群筛选标准，募集 18－79 岁健康参考人群 722 人，其中男性 357 人和女性 365 人，分别用和光试剂检测系统和罗氏试剂检测系统建立西安地区健康人群胆固醇的参考区间。
结果 两个系统间检测结果无统计学意义（P=0.483>0.05）。农村与城市人群检测结果无差异（P=0.398>0.05）。各年龄段间结果有明显差异，18-29 岁与 30-39 岁两组检测结果间有显著差异（P=0）；30-39 岁与 40-49 岁两组检测结果间有显著差异（P=0）；40-49 岁与 50-59 岁两组检测结果间有显著差异（P=0）；50-59 岁与 60-79 岁两组检测结果间无统计学差异（P=0.116>0.05）。各年龄段间男性和女性结果无差异。
结论 西北地区健康人群胆固醇检测结果在两种检测方法间无显著差异，城市人群和农村人群间检测结果也无明显差异，不同年龄段间检测结果存在显著差异，男性和女性检测结果无差异。随着年龄的增长，胆固醇的检测结果逐渐增大。本次研究表明，西北地区胆固醇参考区间有所提高，本文实验结果高于目前我们临床所用的参考区间，高于我国血脂异常防治建议提出的合适水平。

PU-2156

西安地区健康人群胆碱酯酶参考区间的建立

童开、张莹、杨小云、刘家云
空军军医大学西京医院

目的 建立西安地区健康人群血清胆碱酯酶实验室参考区间。
方法 采用日立 7600 全自动生化分析仪进行检测，选择西安地区 1017 例健康体检人群，男 540 例、女 477 例，按照年龄及性别将健康人群分为男、女青年（18-39 岁）组，男、女中年（40-59 岁）组和男、女老年(60-79 岁)组。采用 SPSS18.0 统计软件对数据进行分析，绘制胆碱酯酶直方图，应用线性回归分析，计量资料组间比较采用 t 检验，对偏态分布数据用百分位数得出双侧 95%置信区间作为正常参考范围。
结果 西安地区健康人群胆碱酯酶参考值，按照性别分组为男性胆碱酯酶参考值 5500-13500 U/L；女性胆碱酯酶参考值 5500-12500 U/L。按照性别和年龄分组为男性青年 5500-13500 U/L、男性中年 6500-13500 U/L、男性老年 4500-10500 U/L；女性青年 5500-12500 U/L、女性中年 4500-12500 U/L、女性老年 4500-10500 U/L。
结论 西安市地区健康人群胆碱酯酶正常参考值为 5500-13500 U/L，男性和女性胆碱酯酶正常参考值分别为 5500-13500 U/L 和 5500-12500 U/L。每个地区的人群特点不同应建立适合本地区人群的正常参考值范围。

青年职业女性无症状高尿酸血症合并代谢性疾病的现状分析

单梦雅、蒋理
江苏省人民医院（南京医科大学第一附属医院）

目的 分析高尿酸血症（HUA）与血糖、血脂等代谢性共病及肾功能之间的关系，发现易患高尿酸及其相关的代谢性共病和肾功能异常的人群，讨论其控制血尿酸水平的重要性。
方法 选取 2020 年 5 月至 2021 年 4 月在我院参加体检的 20-44 岁青年职业女性共 29987 人，比较不同年龄段的高尿酸血症患病率；根据尿酸水平分组，比较不同等级尿酸水平者空腹血糖、总胆固醇、三酰甘油，高密度脂蛋白胆固醇（HDL-C）、低密度脂蛋白胆固醇（LDL-C）、血肌酐、血尿素异常的比例。
结果 无症状 HUA 总体患病率为 7.69%，20-24 岁年龄段患病率为 9.35%，25-29 岁年龄段患病率为 9.03%，30-34 岁年龄段患病率为 7.93%，35-39 岁年龄段患病率为 7.40%，40-44 岁年龄段患病率为 5.78%；在所有研究对象中随着尿酸水平升高，其合并空腹血糖、总胆固醇、三酰甘油、高密度脂蛋白胆固醇（HDL-C）、低密度脂蛋白胆固醇（IDL-C）、血肌酐、血尿素异常的比例增高。
结论 高尿酸血症 20-24 岁年龄段高尿酸血症患病率最高。在所有研究对象中随着血尿酸水平升高，其各分析指标异常比例升高，且其合并异常指标的组成成分越多，异常程度越严重；不仅是患有高尿酸血症的人需要提高警惕，血尿酸水平高于平均水平未达诊断 HUA 标准的人同样要足够重视其代谢异常及肾功能的风险已大大增加

PU-2158

血清神经丝轻链蛋白 NfL 在急性缺血性脑卒中诊疗中的临床应用价值

权文强、王旭、常文婧、孙祖俊、李冬
上海市同济医院(同济大学附属同济医院)

目的 检测急性缺血性脑卒中患者（Acute ischemic stroke，AIS)血清神经丝轻链蛋白 NfL（Neurofilament light，NfL）水平，探究其与血清总胆固醇（Total cholesterol，TC），甘油三酯（Triglyceride，TG），同型半胱氨酸（Homocysteine，HCY），葡萄糖（Glucose，GLU），降钙素原（Procalcitonin，PCT），C-反应蛋白（C-reaction protein，CRP）等指标的相关性，明确 NfL 在 AIS 诊疗中的临床价值。
方法 收集同济大学附属同济医院神经内科经明确诊断的急性缺血性脑卒中患者 111 例，同期健康体检者 50 例作为对照组。ELISA 法检测 AIS 患者和健康体检者血清 NfL 水平，比较两组间差异；检测患者 TC、TG、HCY、GLU、PCT、CRP 等血清学指标水平，观察血清 NfL 与血清学指标之间的相关性。比较不同严重程度（NIHSS 评分）分级的 AIS 患者血清 NfL 水平，同时绘制受试者工作特征曲线（ROC 曲线）评价其诊断效能。
结果 相对于健康对照组，AIS 患者组血清 NfL 水平明显升高，且差异具有统计学意义（$p<0.001$)；血清 NfL 水平与血清 PCT 和 CRP 水平呈明显正相关（$r=0.537$，$p<0.001$ 和 $r=0.376$，$p<0.001$），与血清 TC 水平呈轻度正相关（$r=0.265$，$p<0.01$）；不同严重程度的急性缺血性脑卒中患者中血清 NfL 表达水平存在明显差异（单因素 ANOVA；$F=8.467$，$p<0.001$）；血清 NfL 对于急性缺血性脑卒中诊断 ROC 曲线下面积（AUC）为 0.840，特异性和敏感度均优于 PCT（AUC=0.666）和 CRP（AUC=0.591）。
结论 血清 NfL 是较好的急性缺血性脑卒中的诊断标志物，且与 AIS 的严重程度相关，具有一定的临床诊疗应用前景。

心肌型脂肪酸结合蛋白的临床应用进展

任真、凌芸
江苏省人民医院（南京医科大学第一附属医院）

心肌型脂肪酸结合蛋白（H-FABP）是一种低分子量的可溶性蛋白，主要存在于心肌细胞胞浆中，具有组织特异度。H-FABP 作为诊断早期心肌缺血性疾病特别是急性心肌梗死（AMI）的生化标志物，近年来受到广泛关注。在这篇综述中，我们介绍了 H-FABP 的生物学特性、常用检测方法，以及 H-FABP 在急性冠脉综合征(ACS)、缺血再灌注损伤（ISI）、严重脓毒血症中的应用。

多种肿瘤标志物联合检测在肺癌诊断中的价值研究

季孝
丽水市中心医院

目的 探讨血清糖类抗原 125（CA125）、癌胚抗原（CEA）、细胞角蛋白 19（CYFRA21-1）、铁蛋白（FER）、神经元特异性烯醇化酶（NSE）、胃泌素释放前体（ProGRP）、鳞状细胞癌抗原（SCCA）联合检测在肺癌诊断中的价值。
方法 选择 2020 年 4 月-2021 年 4 月在我院住院的肺癌患者（肺癌组）283 例、同期肺部良性病变患者（良性对照组）306 例、健康体检者（健康组）37 例为研究对象，所有受拭者均行 CA125、CEA 、CYFRA21-1、FER 、NSE ProGRP、SCCA 电化学发光法检测，比较各组之间肿瘤标志物水平差异。用 Logistic 回归分析确定肺癌的独立预测因素，并组建联合检测组合。运用受试者工作特征曲线（ROC）及曲线下面积（AUC）评价单一肿瘤标志物及联合检测的诊断价值。
结果 ①肺癌组 CA125、CEA、CYFRA21-1、FER、NSE、SCCA 水平显著高于其它各组（均 P<0.05），Logistic 回归分析 CA125、CEA、CYFRA21-1、FER 是肺癌的独立预测指标。②4 种肿瘤生物标志物联合检测（CA125+CEA+CYFRA21-1+FER）诊断肺癌的 AUC 为 0.863，显著高于 CA125、CEA、CYFRA21-1、FER 单独诊断肺癌时的 AUC(分别为 0.703、0.739、0.742、0.778）（均 P<0.01）。③联合检测（CA125+CEA+CYFRA21-1+FER）诊断肺癌的敏感度、特异度（分别为 81.6、80.1)，均优于单一肿瘤标志物。
结论 CA125、CEA、CYFRA21-1、FER 可独立预测诊断肺癌,（CA125+CEA+CYFRA21-1+FER）联合检测可以有效提高对肺癌的诊断效能，对临床确立治疗方案有积极意义。

六西格玛质量管理方法在医学实验室中应用

牛爱军
山东大学第二医院

六西格玛（6σ）质量管理方法最早起源于美国摩托罗拉公司，之后广泛应用于企业管理中，并取得令人瞩目成绩，Nevalainen 等于二十世纪九十年代首次将六西格玛质量管理引入到实验室质量管理中，我国在 2000 年左右开始在医院管理领域进行应用，近年来随着 ISO15189 实验室认可工作的逐渐展开，越来越多的国内临床实验室将六西格玛管理方法应用到实验室的质量管理体系中，本研究应用六西格玛质量管理方法对我实验室中临床化学检测项目进行质量评价，计算各项目的西

格玛水平及质量目标指数，指导实验室的质量改进，为六西格玛质量管理方法在临床实验室的逐步推广应用提供实验数据支持。

PU-2162

生化危急值结果复检的符合性及必要性探讨

牛爱军
山东大学第二医院

目的 探讨生化危急值结果复检的符合性及必要性。
方法 对 330 份生化危急值标本的钾、钠、钙、葡萄糖等危急值结果进行复检，并计算复检结果与初检结果的偏倚及复检符合率，以偏倚（%）≤1/2 CLIA'88 或国家卫健委临检中心室间质评最大允许误差，作为判断危急值复检结果与初检结果是否一致的标准。
结果 330 份危急值标本中满足判断标准，即复检结果与初检结果一致的标本为 303 份，整体复检符合率为 91.8%，复检不一致标本为 27 份，均为低于危急值下限的极低值结果。
结论 生化危急值不符合结果主要集中在一些项目的极低值结果上，而极低值复检结果的存在的偏倚并不影响临床决策和治疗效果，因此复检并不能有效提高检测准确性，危急值结果复检并不都是必要的。

PU-2163

肿瘤标志物在不同检测系统间的应用现状及建议

牛爱军
山东大学第二医院

化学发光免疫分析（chemiluminescence immunoassay, CLIA ）是目前国内肿瘤标志物检测的主流方法，但由于不同检测系统间在针对抗原位点、抗体来源、包被方式以及发光原理等方面存在差异，导致肿瘤标志物在不同系统间的检测结果不尽相同。如何正确评价哪一种品牌设备更具有优势，目前尚缺乏统一判断标准，单纯将国产设备检测结果数值与进口品牌进行比对并不科学，也不客观。本文就目前主要进口设备及国产设备检测肿瘤标志物的现状及在不同检测系统间的方法学比对建议做一综述。

PU-2164

临床血脂生化检验中运用分级检验方法的检验效果观察

黄瑶楠
空军军医大学西京医院

目的 分级检验方法应用在血脂生化检验过程中，观察该种检验方法效果。
方法 将我科 2020 年 4 月--2020 年 8 月的血脂生化检验者 102 例作为观察对象，并且分成试验组与常规组，分别采用分级检验法和拉网式检验法，观察两种检验方法效果。
结果 （1）试验组和常规组 TC、TG、HDL-C 阳性率中，试验组分别是 54.90%、37.25%、14.70%，常规组分别是 53.92%、38.23%、15.68%，（x2=0.348,p=0.661），结果有差异。（2）试验组和常规组 LDL-C、Apo AI、Apo B 阳性率对照中，试验组分别是 75.49%、4.90%、48.03%，常规组分别是 50.00%、0.98%、19.60%，（x2=22.627,p=0.023），结果有差异。
结论 分级检验方法应用在血脂生化检验过程中效果优良，该方法值得在临床上推广。

PU-2165

液相色谱串联质谱衍生化法与电化学发光法检测 25-羟基维生素 D 的比较

胡玉皎、张莹、胡娟娟、冯玉洁、和昱辰、王昊、刘家云
空军军医大学西京医院

目的 通过比较血清维生素 D(Vitamin D,VD)电化学发光(ECLI)法和高效液相色谱-串联质谱(LC-MS/MS)法的相关性，并探讨体内 25-羟基维生素 D2 和固醇类物质对二者结果的影响，评估 ECLI 和 LC-MS/MS 法检测 VD 的应用价值。
方法 回顾性分析 ECLI 法和 LC-MS/MS 法测定血清 VD 的相关性，并分析总胆固醇(Total cholesterol, TCho)、高密度脂蛋白胆固醇（High density liptein cholesterol，HDL-C）、低密度脂蛋白胆固醇（Low density lipoprotein cholesterol，LDL-C）、总胆汁酸（Total bile acid，TBA）、孕酮（Progesterone, P）、睾酮（Testosterone, T）、雌二醇(Estradiol， E2)对检测方法的影响。
结果 不同年龄段、性别 LC-MS/MS 法测定血清 25-OHD 平均值分布存在差异，VD 缺乏症和不足发生率不同，P<0.01；ECLI 法和 LC-MS/MS 法测定血清 25-OHD 结果具有相关性，ECLI 法较 LC-MS/MS 法结果偏高（2.04±18.43）ng/mL，P<0.01；ECLI 法结果与 LC-MS/MS 法相关性随 25-OHD2 水平升高而降低，P<0.01；ECLI 法结果受 TCho、HDL-C、LDL-C、TBA、P、T、E2 水平影响，调整后 R2 为 0.846，且与 LDL-C、TBA、P、E2 水平相关，P<0.05。
结论 ECLI 法与 LC-MS/MS 法检测 25-OHD 结果差异大，随 25-OHD2 水平升高相关性降低，且受体内 LDL-C、TBA、P、E2 水平影响，查体筛检及疾病诊疗监测中应合理结合 ECLI 和 LC-MS/MS 法的特点做到科学配置医疗资源。

PU-2166

多项实验指标检测在早期诊断多发性骨髓瘤中的综合研究

胡娟娟
空军军医大学西京医院

目的 分析血清蛋白电泳、游离轻链 κ、λ 及其比值和免疫球蛋白系列联合检测在早期诊断多发性骨髓瘤（MM）中的临床价值。
方法 对空军军医大学第一附属医院 784 例 MM 患者的血清、蛋白电泳、游离轻链 κ、λ 及其比值和免疫球蛋白系列的检测结果进行回顾性分析。
结果 血清蛋白电泳显示,784 例 MM 患者中有 673 例检出 M 带，阳性检出率为 85.84%。游离轻链 κ、λ 及其 κ/λ 显示,740 例游离轻链有不同程度的升高或者比值异常，阳性检出率为 94.39%，与对照组比差异具有统计学意义（P<0.05)。免疫球蛋白系列结果显示, 各型 MM 患者中有 603 例结果异常,阳性检出率为 76.92%，与正常组比差异具有统计学意义（P<0.05)。通过对三种方法单独和联合检测数据做 ROC 曲线，血清蛋白电泳曲线下面积 AUC=0.867，游离轻链比值曲线下面积 AUC=0.940，免疫球蛋白系列曲线下面积 AUC=0.737，联合检测曲线下面积 AUC=0.987，联合检测是大于三个指标单独检测，可见联合诊断效果更佳。
结论 血清蛋白电泳、游离轻链 κ、λ 及其 κ/λ 和免疫球蛋白系列联合检测对 MM 早期诊断有重要临床价值。

PU-2167

血清一氧化氮水平检测在肝脏疾病诊断中的临床意义

和昱辰
空军军医大学西京医院

目的 探讨一氧化氮（NO）在不同肝脏疾病中的动态变化规律及其临床意义。
方法 检测对象为临床诊断为肝损伤的 42 例、肝硬化 41 例、病毒性肝炎 48 例、免疫性肝病 33 例、肝癌 46 例和无肝脏疾病的健康对照 42 例，总计 252 例。对上述各组的血清 NO 水平进行检测，同时检测血清丙氨酸氨基转移酶（ALT）、天门冬氨酸氨基转移酶（AST）、谷氨酰转肽酶(GGT)。
结果 肝损伤组与健康对照组有显著差异（P <0.01）；病毒性肝炎组与健康对照组有显著差异（P <0.05）；肝硬化组与健康对照组有显著差异（P <0.01）；肝癌组与健康对照组有显著差异（P <0.05）。肝硬化组血清 NO 水平与 ALT 呈显著正相关(r=0.594，P<0.01);与 AST 呈正相关(r=0.389，P<0.05)；与 GGT 呈显著正相关(r=0.578，P<0.01)病毒性肝炎组血清 NO 水平与 ALT 呈正相关(r=0.301，P<0.05)；与 AST 呈正相关(r=0.326，P<0.05)；与 GGT 呈正相关(r=0.367，P<0.05)。**结论** 病毒性肝炎、肝硬化、肝癌时血清 NO 浓度的变化与肝内炎症程度、肝病严重程度及病程的演变方向密切相关，同时也是反映肝脏疾病的一个敏感指标。
结论 血清 NO 水平与肝脏疾病严重程度及病程的演变有关。

PU-2168

不同疾病类型所引起低血糖与白细胞数量之间的相关性研究

虢瑾、张莹、肖鹏涛、童开
空军军医大学西京医院

目的 分析我院门急诊和住院病人低血糖发生情况，探讨其不同的疾病类型导致的低血糖和白细胞数量之间的统计学意义。
方法 选取我院 2019 年 1 月到 2020 年 12 月血糖测定值<2.8mmol/L 的 449 例病例作为研究对象，根据临床诊断分为糖尿病与内分泌疾病组、胰腺病变组、肝病组、营养不良与恶病质组、胃相关疾病组和其他疾病组。分析其与白细胞数量之间的统计学关系。
结果 在 449 例血糖危急值中，糖尿病与内分泌疾病组 47 例（10.5％ ）白细胞计数大于 10 的 5 例占比 10.86%，胰腺病变组 34 例（8％ ）白细胞计数大于 10 的 17 例占比 50%，肝病组 66 例（14.7％ ）白细胞计数大于 10 的 35 例占比 53%，营养不良和恶病质组 59 例（13.14％ ）白细胞计数大于 10 的 44 例占比 73%，胃相关疾病组 57 例（12.69％ ）白细胞计数大于 10 的 32 例占比 55.17%，其他病组 183 例（40.76％ ）白细胞计数大于 10 的 94 例占比 51.37%。通过 SPSS23 数据分析，除外糖尿病所导致的低血糖外，其他类疾病与白细胞数量升高具有有统计学意义（P<0.05）。
结论 遇到低血糖危急值时，有部分疾病导致的低血糖与白细胞计数的升高具有直接关系。从而可以判断其是否为真实的低血糖血症。

PU-2169

基于患者样品不确定度应用的探索

冯玉洁、张莹、胡玉皎、胡娟娟、王昊、刘家云
空军军医大学西京医院

目的 使用多浓度患者样品，评估 4 项实验室常规生化项目测量不 50 份患者样本确定度的应用。
方法 采用速率法测定碱性磷酸酶（ALP）、谷氨酰转肽酶（GGT）、丙氨酸转氨酶（ALT）和天门冬氨酸转氨酶（AST）水平；每个项目的 50 份患者样本分为 5 个水平，重复检测两遍后合成 A 类不确定度，使用校准品引入的分量作为 B 类不确定度最终评估相对不确定度和绝对不确定度在临床中的异同。
结果 以待检样本的浓度为横坐标，合成不确定度为纵坐标绘制曲线图，每个图中都出现一个交点。在此交点上，小于这个浓度使用绝对不确定度大于这个浓度用相对不确定度。
结论 目前评估不确定度大多使用质控作为 A 类的分量，由于只有两浓度水平，有一定的局限性。若使用多浓度患者的样本绘制多浓度曲线作为不确定度的一种评估，有助于最大程度的减少误差，确定合理的检测不确定度范围。

PU-2170

动脉硬化相关因子在亚临床甲状腺功能减退患者血中的表达及临床意义

周萱军
山东大学第二医院

目的 亚临床甲状腺功能减退症是指无症状或者症状轻微，血清促甲状腺激素水平高于参考值上限，而血清游离甲状腺激素水平以及血清游离三碘甲状腺原氨酸水平处在参考范围内为特点的甲状腺功能紊乱。亚临床甲状腺功能减退对动脉硬化的影响一直存在争议。本研究旨在通过检测动脉硬化相关因子在亚临床甲状腺功能减退患者血中的表达，多角度探讨亚临床甲状腺功能减退与动脉硬化的相关性，为亚临床甲状腺功能减退患者的防治工作提供理论依据。
方法 选取新近诊断为亚临床甲状腺功能减退患者 100 例作为观察组，同期健康志愿者 100 例作为对照组，两组研究对象之间性别年龄无显著差异。分别测定并比较两组研究对象的甲状腺功能，血脂，血白介素-6 ，C 反应蛋白，血沉以及颈动脉内膜中层厚度。
结果 1. 观察组血清促甲状腺激素水平(TSH)显著高于对照组(P<0.05)，而两组间血清游离甲状腺激素(FT4)以及游离三碘甲状腺原氨酸(FT3)水平无显著差异(P 均>0.05)。
2. 观察组血总胆固醇(TC)、甘油三酯(TG)、低密度脂蛋白胆固醇(LDL-C)、血白介素-6 ，C 反应蛋白以及血沉水平均显著高于对照组(P 均<0.05)，而血高密度脂蛋白胆固醇(HDL-C)水平显著低于对照组(P <0.05)。观察组颈动脉内膜中层增厚程度显著高于对照组(P <0.05)。
3. 血总胆固醇(TC)、甘油三酯(TG)以及低密度脂蛋白胆固醇(LDL-C) 、血白介素-6 ，C 反应蛋白以及血沉水平与促甲状腺激素水平(TSH)水平呈正相关。血总胆固醇(TC)、甘油三酯(TG)以及低密度脂蛋白胆固醇(LDL-C)水平与颈动脉内膜中层厚度呈正相关。
结论 亚临床甲状腺功能减退患者血中动脉硬化危险因素水平显著升高，增加了患者发生动脉硬化甚至发展成心血管疾病的机率，有必要对亚临床甲状腺功能减退患者采取适当的干预措施或者定期随访以减少心血管事件发生的危险。

PU-2171

一个同时检测尿草酸、枸橼酸的超高效液相色谱-串联质谱方法

李霖[2]、传良敏[1]、蒋黎[1]
1. 电子科技大学附属医院·四川省人民医院
2. 电子科技大学附属医院·四川省人民医院

目的 草酸、枸橼酸是亚洲人群尿路结石的主要成分，当尿草酸、枸橼酸盐的排泄增加，可使尿草酸钙、枸橼酸钙过饱和，从而导致结晶聚集、尿石病和/或肾钙沉着病。同时这些结晶也可沉积于肾间质和肾小管细胞内，反复的尿石病可以导致肾实质炎症及纤维化，如果持续存在，还可以导致终末期肾病。因此，本研究的目的是开发一个同时检测尿草酸、枸橼酸的超高效液相色谱-串联质谱方法。
方法 校准液及尿液样本（50 μL）与混合内标液（草酸-13C2、枸橼酸-d4）及 5%甲酸水溶液混合后经 Waters OASIS WAX 固相萃取柱，使用 5%NH3 甲醇溶液洗脱，洗脱液复溶于 100μL 超纯水进样到质谱系统。质谱采用 Waters Acquity H-class 串联 Xevo TQD 系统，采用 ESI 负模式扫描，草酸、枸橼酸及其对应内标的 MRM 检测离子对分别为 m/z 88.6/60.5、m/z 90.5/61.5；m/z 191.1/110.9、m/z 195.1/112/9。色谱分离在 Waters HSS T3（2.1 × 100 mm，1.8 μm）色谱柱上进行，0.1%甲酸水和 0.1%甲酸乙腈为流动相，流速为 0.4 mL/min。
结果 在优化的色谱条件下，草酸和枸橼酸的保留时间分别为 0.35 min、0.67 min。草酸和枸橼酸的平均回收率分别为 95.6%、102.5%，最低定量限分别为 45.00 μmol/L、40.00 μmol/L。草酸的线性范围为 45.00-1500.00 μmol/L，枸橼酸的线性范围为 40.00-4000.00 μmol/L。草酸和枸橼酸检测的日间精密度均小于 10%。
结论 我们建立了一个新的可同时快速测定尿液中草酸和枸橼酸的超高效液相色谱-串联质谱方法。

PU-2172

Development of an ultra-high performance liquid chromatography-mass spectrometry method for the rapid quantification of serum total homocysteine, folate and vitamin B12 levels in senile cataract patient

Lin Li[2]、Wenna Liu[1]、Honglang Huang[1]、Kecheng Li[1]、Liangmin Chuan[1]、Li Jiang[1]
1. Sichuan Academy of Medical Sciences & Sichuan Provincial People's Hospital
2. 电子科技大学附属医院·四川省人民医院

Objective Senile cataract is a multifactorial disease which affect more than one hundred million people with age over 60 years-old in China. It was reported that elevated homocysteine (Hcy) is involved in the pathogenesis of cataract, while folate (VB9) and vitamin B12 (VB12) are involved in the metabolism of Hcy. The objective of this study was to develop a rapid ultra-high performance liquid chromatography-mass spectrometry (UPLC-MS/MS) method for the quantification of serum Hcy, VB9 and VB12 levels in senile cataract patient.
Methods A Waters Acquity H-class UPLC coupled with Xevo TQD MS/MS system was used for the method development. All MS investigations were carried out with electron spray ionization source operated in positive mode under multiple reaction monitoring (MRM) conditions. MRM transitions of m/z 136.1/90.1 and m/z 140.1/94.1, m/z 460.1/313.1 and m/z 464.2/317.2, as well as m/z 678.4/147.2 were monitored for Hcy, Hcy-d4, VB9, VB9-d4, and VB12, respectively. The chromatographic separation was carried out on a reversed-phase C18 column (Phenomenex, Kinetex C18, 100×4.6 mm, 2.6 μm).The mobile phases were 0.1% formic acid in H2O (A) and 0.1% formic acid in methanol (B). The gradient elution program were as follows: 0-3.0 min, 3%B; 3.0-4.5 min, 90%B; 4.5-5.5 min, 3%B.

Results The assays were linear within the concentration ranges of 4.0-800.0 ng/mL for Hcy, 5.0-500.0 ng/mL for VB9 and 5.0-200.0 ng/mL for VB12, respectively. The recovery was between 94.42% and 108.05%. The intra-assay coefficient of variations (CVs) ranged from 2.6% to 7.3% (n=20), and the inter-assay CVs ranged from 3.7% to 10.6% (n=20). Reference intervals were established and verified (n=125). The serum Hcy, VB9 and VB12 levels of 415 senile cataract patients were successfully confirmed.
Conclusion A rapid and sensitive UPLC/MS/MS method was successfully developed for the simultaneous quantification of serum Hcy, VB9 and VB12 in senile cataract patients.

PU-2173

汉藏人群维生素 D 水平、血清钙水平和骨密度的相关性研究

李霖[2]、李科成[1]、黄红浪[1]、宋天歌[1]、张婷[1]、蒋黎[1]
1. 电子科技大学附属医院·四川省人民医院
2. 电子科技大学附属医院·四川省人民医院

目的 维生素 D 是一种重要的类固醇激素，在肝脏中可被羟化形成稳定的 25(OH)D 形式，随后在肾脏中转化为生物活性代谢物 1,25-二羟基维生素 D (1,25(OH)2D)。1,25(OH)2D 在钙磷代谢中起着重要作用，而钙磷代谢被认为是骨密度的影响因素。在前期研究中，我们发现汉藏人群的 25(OH)D 水平存在显著差异。因此，我们进行了横断面研究，探讨汉藏人群的血清钙和骨密度是否存在差异。
方法 我们于 2019 年 9 月至 2020 年 12 月在阿坝藏族羌族自治州人民医院招募了 40 名汉族成年人和 80 名藏族成年人，年龄在 18-43 岁之间。空腹时从肘部前静脉抽 4 mL 血。LC-MS/MS 检测血清 25(OH)D2、25(OH)D3、1α、25(OH)2D3 水平。采用酶联免疫吸附法测定游离维生素 D。免疫分析法检测血清 PTH、P1NP 和 β-CTX。分光光度法测定血清钙、磷含量。采用双能 X 线骨密度仪测量骨密度。采用学生 t 检验和非参数检验探讨汉藏成人差异。
结果 汉族人群维生素 D3 浓度显著高于藏族人群(26.20 ng/ml vs. 16.99 ng/ml, P < 0.001)，藏族人群 1α，25(OH)2D3 浓度略低于汉族人群(36.73 pg/ml vs. 43.55 pg/ml, P = 0.06)。然而，与维生素 D 水平相反，藏族人群血清钙浓度显著高于汉族人群(3.12 mmol/L vs. 2.59 mmol/L, P < 0.001)。此外，藏族人群股骨骨干和第四腰椎关节的骨密度显著高于汉族人群(P = 0.031 和 P = 0.029)。
结论 我们的研究结果表明，维生素 D 代谢和钙代谢在汉藏人群中存在潜在的差异。为揭示汉藏人群维生素 D 代谢和钙代谢的分子机制差异，有必要开展进一步的遗传流行病学研究和功能研究。

PU-2174

A Protein Standard Addition Method for Absolute Quantitation of Cystatin C in human serum by LC-MS/MS

Hewei Sun、qing li、gan jin
上海市临床检验中心

Objective To established an LC-MS/MS approach based on the standard addition method for the absolute quantification of Cys C in human serum.
Methods In Sample preparation, we used the streamlined method without the use of chemical denaturants, reduction, and alkylation. Due to reduce of preparation steps, it can avoid the loss of protein before proteolysis. Varying concentrations of recombinant Human Cys C in PBS was added to serum for calibrations, and the same volume of PBS solution was added to the serum samples, so that the calibrations and samples were digested in the same matrix to achieve the same digestion efficiency. Peptides labeled in 13C and 15N atoms (A [13C615N] LDFAVGEYNK)

served as an internal standard are added to the serum samples just before proteolysis. After SPE steps of purification, the sample is measured by selected reaction monitoring using LC–MS/MS.
Results The calibration range was from 0.7 mg/L to 14 mg/L with LLOQ of 0.15 mg/L and LOD of 0.05mg/L, respectively. The certified reference material (ERM-DA471) was determined at 5.43 mg/L with bias of -0.9%. Imprecision was assessed by analyzing three replicates of each QC level on five different days (Table 1): the intra assay imprecision values ranged from 0.8% to 2.8% (QC1), from 0.8% to 2.1% (QC2), and from 1.5% to 2.5% (QC3); the inter assay imprecision values were 2.8% (QC1), 3.3% (QC2), 3.8% (QC3). Reference Material ERM®-DA471/IFCC (certified value 5.48±0.15 mg/mL) was used to validate the accuracy of the assay with three replicates on each day for five days (Table 1). The reference material was determined at 5.43 mg/L with a bias of -0.9%
Conclusion This work established an ID-LC-MS/MS procedure for the absolute quantification of Cys C in human serum samples which using protein standard addition method coupled with streamlining sample preparation. The design of such method aims to create a calibration system which has a matrix as similar as possible to the testable samples in serum Cys C quantification. In summary, this method demonstrates excellent accuracy and imprecision, may be used in the development of reference measurement procedures for serum Cys C.

PU-2175

Metabolomic Analysis of Synovial Fluids from Rheumatoid Arthritis Patients Using Quasi-Targeted Liquid Chromatography-Mass Spectrometry/Mass Spectrometry

Hongxing Wang
Qilu Hospital, Shandong University

Objectives Synovial fluid (SF) accumulates extensively in joints of individuals with rheumatoid arthritis (RA), which reflects the pathological state of the synovium and disease activity. This study applied quasi-targeted liquid chromatography-mass spectrometry/mass spectrometry, an advanced metabolomics technique, to find characteristic metabolism in RA.
Methods SF samples from the patients (n=20) were collected and examined using the metabolomic technique. SF samples from patients with osteoarthritis (OA) (n=20) were used as controls.
Results Four hundred seventy nine variable metabolites were detected, and 250 of these metabolites were identified by searching the Human Metabolome Database (HMDB) and a self-constructed information list of possible metabolites. S-plot and volcano plot analysis detected 22 metabolites with differential levels in RA SF compared with those in OA SF. With these 22 candidate metabolites, pathway analysis using the Kyoto Encyclopedia of Genes and Genomes (KEGG) pathway database detected upregulation of pyrimidine metabolism and purine metabolism, and downregulation of fatty acid biosynthesis and unsaturated fatty acid biosynthesis in RA SF. Receiver operating characteristic (ROC) analysis and logistic regression models detected increased levels of guaiacol, naringenin, phenylpropanolamine and vanillylmandelic acid in RA SF. Furthermore, the naringenin level showed positive correlation with rheumatic factor (RF) and anti-cyclic citrillinated peptides (anti-CCP) levels.
Discussion Our study suggests disturbed pyrimidine metabolism, purine metabolism, fatty acid biosynthesis and unsaturated fatty acid biosynthesis as well as increased naringenin level are characteristic metabolism in RA.

PU-2176

Polymorphism and plasma levels of apolipoprotein E and the risk of aneurysmal subarachnoid hemorrhage in a Chinese population: a case-control study

Xiaofeng Liu、Qishui Ou
Department of Laboratory Medicine, The First Affiliated Hospital of Fujian Medical University, Fuzhou 350005, China

Background Aneurysmal subarachnoid hemorrhage (aSAH) is the most common types of subarachnoid hemorrhage, which is a critical clinical problem with high morbidity, mortality, and economic impact. Recent studies have shown that APOE was a genetic risk factor of aSAH, however, the studies lack consistent conclusions and the evidence from Chinese Han population is rare.
Objective To determine the relationship between APOE polymorphism and the incidence of aSAH in Chinese Fujian Han population and explore the possible mechanism of ApoE in the pathogenesis of aSAH.
Methods A total of 131 patients newly diagnosed with aSAH were selected as aSAH group and 137 healthy subjects were selected as the control group. All the samples were analyzed for blood lipids and serum ApoE levels, and ApoE genotype was determined by a commercial chip and further confirmed with Sanger sequencing. An adjusted multivariate logistic regression analysis was carried out to estimate the effects of APOE polymorphism on the risk of aSAH.
Results Compared with the controls, the serum TC, HDL-C and ApoA1 levels in aSAH were significantly lower: TC (4.52 ± 1.38 vs. 5.11 ± 0.86 mmol/L, P < 0.001), HDL-C (1.23 ± 0.46 vs. 1.44 ± 0.32 mmol/L, P < 0.001) and ApoA1 (1.20 ± 0.32 vs. 1.38 ± 0.25 g/L, P < 0.001). The distribution of ε2/ε3 genotype (19.08% vs. 9.49%, P = 0.038) and ε2 allele frequency (11.07% vs. 5.84%, P = 0.039) was significantly higher in aSAH than the healthy controls. The multivariate logistic regression identified that ApoE ε2 allele was independently associated with aSAH (OR = 2.083; and 95% CI = 1.045-4.153, P = 0.037). The serum ApoE in aSAH were significantly higher than controls (53.03 ± 24.64 vs. 45.06 ± 12.84 mg/L, P = 0.010).
Conclusion APOE polymorphism might be associated with the incidence of aSAH in Chinese Fujian Han population. ApoE ε2 may be a risk factor for the incidence of aSAH, which may be related with the impacts of ApoE genotypes for the serum lipids, especially for the plasma levels of ApoE.

PU-2177

血清内毒素水平与各级肾脏疾病肌酐水平的相关性研究

王彩娥
西安市第一医院

目的 探讨血清内毒素水平与不同严重程度肾脏病患者肌酐水平的关系。
方法 根据肌酐水平选取四级肾脏病患者各 40 例，选取 40 例健康者作为正常对照组，检测受试者的血清内毒素，对比各组血清内毒素水平差异进行水平相关性分析。
结果 不同分级肾脏病患者的血清内毒素水平较正常对照组均明显升高,且组间两两比较差异均有统计学意义（P＜0.05）。
结论 慢性肾脏病患者存在高内毒素血症，高内毒素水平可能是慢性肾脏病发生发展的影响因素。

PU-2178

Prognostic value of prealbumin in liver cancer: A systematic review and meta-analysis

Weizhou Qiao、Feng Leng、Tong Liu、Yueying Wang、Dongjie Chen、Jinlong Wei
Dalian Municipal Central Hospital

Accumulated studies have reported the prognostic significance of prealbumin in liver cancer, but the results were not conclusive. The aim of this study was to evaluate the association between pretreatment serum prealbumin and clinical outcome of liver cancer patients through a meta-analysis. We comprehensively searched EMBASE, PubMed, Web of Science and the Cochrane library to identify eligible studies. The pooled hazard ratios (HRs) and their 95% confidence intervals (CIs) were utilized to evaluate the prognostic value of pretreatment serum prealbumin in overall survival (OS) and recurrence-free survival (RFS) of liver cancer patients. A total of 3470 patients from 10 eligible studies were finally included for analysis. The combined effects of prealbumin on liver cancer patients' OS and RFS were HR = 1.83, 95% CI: 1.46–2.30, p =0.000 and HR = 1.62; HR=1.47, 95%CI: 1.01–2.14, p =0.045 respectively. Sensitivity and subgroup analysis showed that the pooled HR of prealbumin on liver cancer patients' OS was stable. Since potential publication bias was identified in the OS studies, the trim-and-fill method therefore was performed to explore publication bias, and the results showed reliability. This meta-analysis shows that low pretreatment serum prealbumin is significantly associated with poor prognosis of liver cancer patients.

PU-2179

The short-term prognostic value of lactic dehydrogenase toalbumin ratio in patients with heart failure

Yiling Huang 、Jun Zhou
The First Affiliated Hospital of Nanjing Medical University

Purpose Heart failure (HF) has a worldwide diffusion.Heart failure is not a separate disease, but an end stage in the development of heart disease .Heart failure is a syndrome with symptoms and signs caused by cardiac dysfunction, resulting in reduced longevity. The aim of this study was to assess the value of lactic dehydrogenase toalbumin ratio(LAR) in patients with heart failure.
MethodsA total of 156 patients with heart failure were included in this retrospective investigation from January 2017 to December 2019. Admission blood routine parameters and biochemical data were gathered and LAR was computed.Independent prognostic factors were determined by multivariate Cox regression analysis.
ResultsThe average levels of serum LAR were significant lower in survivor group than those in non-survivor group (19.64±17.94 vs8.54±6.35, p<0.001) and serum LAR was an independent factor associated with in-hospital mortality (odds ratio(OR): 8.91; 95% confidence interval (CI):4.01-19.77; p<0.001). The area under the ROC curve (AUC) was 0.768 (95% CI 0.675–0.861, p<0.001).
ConclusionThese results show that the LAR at admission is associated with in-hospital mortality among patients.Thus, admission serum LAR can be used as an independent predictor of in-hospital mortality in patients with heart failure.

串联质谱法检测胆汁酸谱的性能评估及孕妇参考区间建立

陈辰、陈亚军
南京市妇幼保健院

目的 建立基于串联质谱(LC-MS/MS)技术检测胆汁酸谱的方法并进行性能评估；建立适用于本地区孕妇的胆汁酸亚型参考区间。
方法 用 LC-MS／MS 方法检测孕中期孕妇血清 15 种胆汁酸亚型，根据（CLSI）C62-A 和 FDA 的生物分析方法验证导则标准从定量检出限、准确度、精密度、线性、携带污染率等几个方面进行性能评估，并根据（CLSI）EP28-A3c 推荐的方法和程序建立本地区孕妇孕中期 15 种胆汁酸亚型的参考区间，用小样本验证法（20 例）对新建立的参考区间进行验证。
结果 1. LC-MS／MS 方法可同时检测孕妇血清中 15 种胆汁酸亚组分，最低定量限（LLMI）为标准曲线最低浓度点（S1）的浓度，最低检测限（LoD）为 1/4S1；2. 各亚型均呈现良好线性关系，相关系数 r2 均大于 0.99；3.准确度：各亚型加标回收试验回收率均在 80%-120%之间，偏倚<15%；4.批内精密度和批间精密度 CV 均小于 15%；5.携带污染率小于最低定量限的 25%。6.以石胆酸（LCA）为例，新的参考区间为：0.07-13.46ng/ml，验证结果 95%落于新的参考区间内。
结论 1.该方法可以精准快速地检测胆汁酸谱 15 种亚型，评估结果符合性能验证各项要求。2.新建立的胆汁酸谱 15 种亚型的参考区间适用于本地区孕中期孕妇。

PU-2181

脂蛋白相关磷脂酶 A2 增加无症状高尿酸血症风险

马琳琳[1]、杨琼[2]、龚美亮[3]、于金星[2]、周洲[2]、蔺亚晖[2]、丛玉隆[3]
1. 北华大学附属医院
2. 中国医学科学院阜外医院
3. 解放军总医院第二医学中心

目的 探寻脂蛋白相关磷脂酶 A2(Lp-PLA2)与无症状高尿酸血症两者之间的相关性。
方法 回顾性分析中国医学科学院阜外医院就诊的 174 例表观健康老年患者的年龄、性别、体重指数（BMI）等一般资料，以及血常规、尿酸、肌酐、尿素氮、血脂、Lp-PLA2 等实验室资料。高尿酸血症（hyperuricemia，HUA）是指正常饮食状态下，不同时间 2 次空腹血尿酸水平男性>420 μmol/L (7 mg/dl)， 女性>360 μmol/L(6 mg/dl)。当不伴有痛风、尿结石或肾病等症状时，称为无症状高尿酸血症。依据高尿酸血症（HUA）诊断标准将患者分为尿酸正常组和高尿酸组，进行病例对照研究。通过回归分析探究无症状高尿酸血症的独立危险因素。
结果 所有研究对象中男：女=1：1，平均年龄（63.76±8.48）岁，高尿酸组患者的体重指数（BMI）、甘油三酯（TG）、低密度脂蛋白胆固醇（LDL-C）、Lp-PLA2 及高血压发病率明显高于尿酸正常组患者。女性 HUA 的发病率高于男性。Lp-PLA2 的升高可独立导致血尿酸水平升高，对 Lp-PLA2 浓度进行三分位分组后，与低浓度相比高浓度 Lp-PLA2 组增加无症状高尿酸血症风险的 OR 值为 4.61(95%CI:1.807~11.76；P<0.05)。
结论 脂蛋白相关磷脂酶 A2 是无症状高尿酸血症的独立危险因素。

PU-2182

乳酸在结直肠癌患者外周血清中的表达及其临床应用价值

孙祖俊
上海市同济医院(同济大学附属同济医院)

目的 探讨乳酸在结直肠癌患者外周血清中的表达水平及其对结直肠癌早期诊断的临床应用价值，为结直肠癌的早期临床诊断及治疗决策提供依据。
方法 回顾性分析 2019 年 1 月至 2021 年 4 月期间收治的 120 例结直肠癌患者的临床资料，另选取 120 例肠息肉或其他良性消化道疾病患者作为疾病对照组和 100 例健康体检人群作为正常对照组。采用干式生化检测血清中乳酸表达水平并使用 ROC 曲线评估其在结直肠癌早期诊断中的价值。另外，将乳酸与目前临床常用结直肠癌诊断血清学标志物 CEA 和 CA19-9 进行比较及联合分析，综合评估其临床应用价值。
结果 与正常对照组和消化道良性疾病患者组比较，结直肠癌组患者血清乳酸水平均显著升高（P<0.001）；血清乳酸与 CEA、CA19-9 联合检测诊断结直肠癌的灵敏度和诊断符合率均显著高于单项检测，ROC 曲线下面积最大为 0.767，其灵敏度为 88%，特异度为 70%；血清乳酸与 CEA、CA19-9 联合检测鉴别诊断结直肠癌的灵敏度和诊断符合率均显著高于单项检测，ROC 曲线下面积最大为 0.729，其灵敏度为 70%，特异度为 66%。
结论 血清乳酸水平增高可能是结直肠肿瘤发生的一个早期事件，乳酸、CEA 和 CA19-9 联合检测可明显提高结直肠癌检出灵敏度和诊断符合率，有助于结直肠癌的早期诊断和鉴别诊断，让临床尽早采取最佳治疗方案，从而提高患者的生存率和预后生活质量。

PU-2183

过程能力指数在临床实验室质量控制评估中的应用

董苹[1]、陶然[2,3]、李会[1]、彭德志[1]、王佳佳[1]、邓小燕[2,3]、程雅婷[2,3]
1. 济南金域医学检验中心有限公司
2. 广州金域医学检验中心有限公司
3. 广州医科大学金域检验学院

目的 通过不同实验室间质控数据过程能力指数的对比分析，帮助实验室监控项目分析性能。
方法 统计 2020 年 5 月 25 家实验室 23 个项目的最小 *Cp* 和 *Cpk*，与绝对标准进行对比分析。同时以本组自上而下排名第 20%实验室的结果为相对标准，两者结合可确定项目需改善的重点（精密度还是正确度）及原因。
结果 共获得 575 组质控数据，绝对标准分析：*Cp* 优秀 305 个（53.0%）、良好 202 个（35.1%）、一般 55 个（9.6%）、较差 13 个（2.3%）。*Cpk* 优秀 256 个（44.5%）、良好 220 个（38.3%）、一般 72 个（12.5%）、较差 27 个（4.7%）。所有实验室 *Cp* 和 *Cpk* 结果均表现为优秀或良好的项目分别有 6 项和 4 项。济南金域项目分析：孕酮（P）和 N 端-B 型钠尿肽前体(NT-proBNP)分别表现为个别改善精密度和个别改善正确度，其余项目均为稳定。
结论 使用过程能力指数进行质控数据分析，可从精密度和正确度两个方面帮助实验室发现质控隐患，并提供各项目的性能改进建议，确保报告结果的准确可靠。

PU-2184

探讨肝脏疾病患者凝血功能指标与肝脏损伤严重程度的相关性及临床意义

贺元
电子科技大学附属医院•四川省人民医院临床医学检验中心

目的 肝脏疾病患者凝血功能大多会出现明显异常，而不同肝脏疾病患者出现的凝血功能紊乱各有差异。本研究的目的是探讨各肝脏疾病患者凝血功能指标与肝脏损伤严重程度的相关性及临床意义。
方法 随机抽取 2019 年在本院体检的健康人群 100 例为对照组及被诊断患有肝脏疾病的住院患者 100 例为实验组。使用全自动凝血功能分析仪（SYSMEX CS5100）及其配套校准品、质控品及试剂检测两组的凝血指标（PT、APTT、FIB、TT）并对其结果进行 t 检验统计学分析。
结果 肝硬化组、肝癌组和肝炎组的 PT 检测值分别为 15.29±1.99、15.93±2.70、15.69±3.51，P<0.05；APTT 检测值分别为 44.47±6.29、 42.43±11.13、 46.97±14.21，P<0.05；FIB 检测值分别为 1.73±0.61 、 2.76±1.01、 1.74±0.58 ，P<0.05；TT 检测值分别为 18.72±2.25 、17.39±1.48、20.22±3.20，P<0.05。PT 和 APTT 值在肝脏疾病患者中较健康人水平普遍偏高，且 PT 和 APTT 值同健康人群相比有显著性差异。肝癌患者 FIB 值同健康人群检测结果相比基本无差异，而肝硬化和肝炎患者的 FIB 值同健康人群检测水平相比有显著性差异；TT 检测结果与健康人群相比仅有肝炎患者差异明显，肝癌和肝硬化患者虽存在差异但均不是特别显著。
结论 肝脏疾病患者出现的凝血功能损伤程度各有不同，其损伤程度与肝脏损伤严重程度成正相关。凝血功能检测可辅助临床对肝病严重程度的判断与治疗，肝病越严重患者凝血功能越差。凝血功能检测对临床加强预防肝病患者出血有重大意义。

PU-2185

血清 PCT、CRP 和 WBC 对感染性心内膜炎患者的临床意义

于晓洁
吉林大学第一医院

目的 探讨降钙素原（PCT）、C 反应蛋白（CRP）及白细胞（WBC）联合检测在感染性心内膜炎诊治中的应用价值。
方法 研究对象为我院 2019 年 5 月至 2021 年 5 月诊治的 20 名感染性心内膜炎患者（观察组）以及同期健康体检的 20 例健康者（对照组）。比较两组 PCT、CRP 及 WBC 的检测结果、三者指标单独检测与联合检测的阳性率以及评价它们的灵敏度和特异度。
结果 观察组患者的 PCT、CRP 及 WBC 的检测结果均高于对照组（P<0.05）;观察组中 PCT、CRP 及 WBC 三项联合检测阳性率、灵敏度以及特异度比单独检测高（P<0.05）；观察组患者行赘生物清除术后，规律应用抗生素治疗 7d 后,PCT 及 WBC 结果均与对照组无明显的差异（P>0.05），CRP 高于对照组（P<0.05），但低于术前（P<0.05）。
结论 PCT、CRP 及 WBC 联合检测能提升早期辅助诊断感染性心内膜炎的阳性率,以及其有较高的灵敏度和特异度,同时对于治疗效果的判断有一定的指导意义。

PU-2186

Normal Reference Intervals of Prognostic Nutritional Index in Healthy Adults: A Large Multi-center Observational Study from Western China

guishu yang、huaichao luo
Sichuan Cancer Hospital & Institute, Sichuan Cancer Center, School of Medicine, University of Electronic Science and Technology of China

Background It has been widely reported that the prognostic nutritional index (PNI) played a pivotal role in nutritional assessment of surgical patients and tumor prognosis. In order to improve the accuracy of evaluation in western China, we established reference intervals (RIs) of PNI in healthy controls.
Methods A retrospective cohort study on healthy ethnic Han adults (18-79 years) was conducted to explore the influences of age, gender, study centers, and instruments on PNI and to establish RIs. The data came from a healthy routine examination center database and laboratory information system (LIS) of four centers in western China, and there were 200 persons selected randomly for verification of RIs.
Results 5,839 healthy candidates were enrolled. PNI showed a marked gender dependence, and males had significantly higher PNI than females across all ages (P<0.01). We found that PNI is significantly different between age groups (P<0.01), the value of PNI tended to decrease with age increasing. There is also an obvious influence of centers and instruments on PNI (P<0.01).
Conclusions We established reference intervals of PNI in healthy Han Chinese population in Western China, and validated successfully. Further established RIs will lead to better standardizations of PNI for clinical applications.

PU-2187

老年骨质疏松伴病理性骨折患者血清铁蛋白与炎症因子的水平变化及相关性分析

钟剑
杭州余杭邦尔医院

目的 分析老年骨质疏松伴病理性骨折患者血清铁蛋白与炎症因子的水平变化及相关性。
方法 选取 2017 年 9 月 1 日～2021 年 1 月 31 日期间杭州余杭邦尔医院骨质疏松伴病理性骨折患者（81 例）及健康体检者（30 例）作为实验组及对照组,分别检测骨密度（BMD）、FERR、血清淀粉样蛋白 A（SAA）、超敏 C 反应蛋白（h-CRP）、白细胞介素 6（IL-6）、免疫球蛋白 IgA（IgA）、白细胞计数（WBC）、中性粒细胞百分比（Neu%）、淋巴细胞百分比（Lym%），比较两组检测结果并对血清铁蛋白水平与炎症因子等检测指标进行 spearman 相关性分析。
结果 实验组 BMD、Lym%低于对照组，差异有统计学意义（P<0.05)，实验组 FERR、SAA、h-CRP、IL-6、IgA、Neu%高于对照组，差异有统计学意义（P<0.05)；实验组 FERR 水平与骨密度呈负相关（r=-0.406,P<0.05)，与 SAA、h-CRP、IL-6、IgA 等炎症因子呈正相关(r=0.331,r=0.385,r=0.371,r=0.288，P<0.05)。
结论 老年骨质疏松伴病理性骨折患者血清 FERR 水平与 SAA、h-CRP、IL-6、IgA 等炎症因子水平有正相关关系，对该病的预防、诊断及治疗有一定临床参考价值。

PU-2188

长链非编码 RNA AC020891.2 在结直肠癌中的功能及临床价值研究

孔雪、王传新
山东大学第二医院

目的 结直肠癌（CRC）是世界上最常见的肿瘤之一。越来越多的研究表明，长链非编码 RNA（lncRNA）在结直肠癌的发生发展中发挥着至关重要的作用。本研究旨在探讨 lncRNA AC020891.2 在结直肠癌中的功能及临床价值。
方法 运用 TCGA 数据库评估 lncRNA AC020891.2 在结直肠癌中的预后价值，并利用 qRT-PCR 技术检测 AC020891.2 在结直肠癌细胞系及血清样本中的表达水平。通过 CCK8 增殖试验检测 AC020891.2 对结直肠癌细胞增殖能力的影响。采用受试者工作曲线（ROC）分析血清 AC020891.2 对结直肠癌的诊断效能。
结果 lncRNA AC020891.2 在结直肠癌样本中的表达高于癌旁正常组织，并且其高表达与结直肠癌患者的不良预后显著相关。qRT-PCR 结果显示，结直肠癌细胞株 AC020891.2 的表达水平明显高于正常结直肠上皮细胞。在结直肠癌细胞系 HCT116 中敲低 AC020891.2，细胞增殖能力明显减弱。另外，与健康对照相比，结直肠癌患者血清中 AC020891.2 的表达显著升高，ROC 曲线曲线下面积 AUC=0.767，表明其对乳腺癌具有较好的诊断价值。
结论 研究表明 lncRNA AC020891.2 在结直肠癌中高表达并可促进结直肠癌的增殖，且与患者预后不良相关，可作为结直肠癌患者潜在预后及诊断的分子标志物。
关键词：结直肠癌，长链非编码 RNA，标志物，增殖

PU-2189

A novel long non-coding RNA AC073352.1 promotes breast cancer metastasis by YBX1

Xue Kong、Juan Li、Chuanxin Wang
The second hospital of Shandong university

Purpose Breast cancer (BC) is the most common malignancy and the second leading cause of cancer death in women worldwide. Long non-coding RNAs (lncRNAs) have been found to play a crucial role in the development of BC. The purpose of this study was to investigate the functions and molecular mechanisms of lncRNA AC073352.1 in BC.
Method The lncRNA microarray and TCGA database analysis were used to screen the target lncRNA AC073352.1, and its expression levels and clinical features were further investigated in a cohort of BC in situ hybridzation. We detected its expression in BC cell lines and normal breast cell by qRT-PCR. The stable knockdown or overexpressed BC cell lines of AC073352.1 were built by Lentivirus infection techniques, and the effects of lncRNA AC073352.1 on migration and invasion were determined by in vitro and in vivo experiments. The regulatory mechanism of AC073352.1 was studied by Western blot, RNA pull-down, mass spectrometry (MS) and RIP analysis. Co-culture and exsome labeling experiments were performed to assess exosomal AC073352.1 transfer from BC cells to endothelial cells. The role of exosomal AC073352.1 in angiogenesis was further investigated in vitro.
Results The expression of AC073352.1 in the BC tissues was significantly upregulated, and high expression of AC073352.1 was associated with a poorer overall survival and lymph node (LN) metastasis. Knockdown of AC073352.1 inhibited cells migration and invasion in MDA-MB-468 and MCF-7, and overexpression of AC073352.1 promoted cells migration and invasion in MDA-MB-231 and BT549. And knockdown of AC073352.1 decreased pulmonary metastases of BC in vivo. And interestingly, RNA pull-down, MS, RIP and subsequent Western blot experiments

showed that AC073352.1 directly binds to YBX1. Rescue experiments confirmed that AC073352.1 regulated BC metastasis by YBX1. Furthermore,we found BC-derived exosomes transferred AC073352.1 to human umbilical vein endothelial cells (HUVECs) to promote in vitro angiogenesis.
Conclusions Taken together, the results suggest that the expression level of lncRNA AC073352.1 is closely related to the prognosis of BC patients, and it acts as an oncogene in BC, which can promote the ability of metastasis by binding to YBX1.

脂浊对西门子 ADVIA2400 免疫透射比浊法测定血清前白蛋白等 6 个项目的干扰及纠正分析

倪莉、池嘉豪、徐晓杰、朱丽丹
温州医科大学附属第二医院（温州医科大学附属育英儿童医院）

目的 研究脂浊对免疫透射比浊法测定血清前白蛋白等 6 个项目的干扰。
方法 按照 NCCLS 推荐的 EP7-A2 和 EP9-A2 方案，选取 40 份无脂浊、无溶血、无黄疸患者血清样本，分别以低速离心(3500 r/min*7min)与高速离心（16000 r/min*10min）测定血清前白蛋白（PA）、脂蛋白 a(Lp(a))、载脂蛋白 A1(Apo AI)、载脂蛋白 B(Apo B）、胱抑素 C（CysC)、超敏 C 反应蛋白(hsCRP）；再选取 40 份不同脂浊指数（脂浊指数分别为+、++、+++和++++各 10 份）患者血清样本，分别以高速与低速离心获得血清，低速离心后的血清分为三份，其中一份不做处理、另外两份分别用生理盐水进行 2 倍稀释与 3 倍稀释后与高速离心后的血清同时测定 PA 、Lp(a)、Apo AI、Apo B、CysC、hsCRP 6 个项目。
结果 无脂浊血清标本 PA、Lp(a)、Apo AI、Apo B、CysC、hsCRP 低速与高速离心检测结果均无显著性差别（P＞0.05）；不同程度脂浊标本低速离心后 LPa、APOA1、APOB、Cys-C、hsCRP 检测结果与高速离心后的检测结果均无明显偏倚；脂浊指数＜55.8 时，对 PA 检测无明显干扰，当脂浊指数≥55.8 时，低速离心检测 PA 存在明显负干扰；脂浊指数≥63.9 时，标本二倍稀释 PA 还存在负干扰；脂浊指数≥93.3 时，标本三倍稀释 PA 也还存在负干扰。
结论 脂浊对免疫透射比浊法测定血清 LPa、APOA1、APOB、Cys-C、hsCRP 无明显干扰；轻度脂浊对透射比浊法测定 PA 无明显干扰，当脂浊指数≥55.8 时，对 PA 测定存在明显负干扰，需经高速离心后重新检测或标本稀释后再检测。

高敏心肌肌钙蛋白在急性冠脉综合征诊断中的应用价值

乔理华、贾玉芝、娄加陶
上海市胸科医院

随着日常生活和工作压力的不断升高，以及作息和饮食习惯的改变，心血管疾病的发病率和死亡率呈不断上升趋势，且正朝着年轻化的趋势发展。在我国，冠状动脉疾病也已成为城市人群的主要疾病和死亡原因之一。急性冠脉综合征(ACS)作为心血管内科发病率较高的疾病之一，具有发病较急且病情变化快，同时临床表现较复杂的特点，若得不到早期精准的诊断常会致死，该疾病目前正严重威胁人类的生命健康。随着医学水平的快速进步，血浆肌钙蛋白凭借其组织特异性强、灵敏度高的优势，成为诊断 ACS 的重要指标，经过不断地更新换代，高敏心肌肌钙蛋白检测法(hs-cTn)横空出世，较普通肌钙蛋白检测灵敏度、精密度更高，并已被广泛应用于临床。本文就 hs-cTn 在 ACS 中的诊断应用与价值进行综述。

肿瘤标志物 D-2-羟基戊二酸的快速灵敏检测

张文
山东大学第二医院

近年来在急性髓细胞样白血病、神经胶质瘤、肉瘤等多种肿瘤中检测到异柠檬酸脱氢酶（IDH）突变，IDH 突变可导致该蛋白产生催化 2-酮戊二酸还原生成 D-2-羟基戊二酸（D-2-HG）的活力，造成 D-2-HG 积累。D-2-HG 是 IDH 突变肿瘤的发生诱因及小分子标志物，在急性髓性细胞白血病、胶质瘤中作为诊断、预后及治疗监测性指标等，具有较大的临床应用价值。目前主要通过质谱等进行检测。本文旨在建立一种 D-2-HG 酶学检测方法。基于前期发现的无色杆菌来源的 D-2-羟基戊二酸脱氢酶（D2HGDH）专一性催化 D-2-HG 并能直接传递电子给刃天青的特性，研究者构建了一步法检测方案，通过荧光酶标仪进行检测。反应体系仅包含 PBS 缓冲液、D2HGDH 及刃天青。通过优化，实现定量限 0.1μM 级别，检测比较稳定。血清、尿液、脑脊液等样本经过去蛋白处理后可应用此方案。该检测方法组成成分更加简单，干扰小，成本更低，操作更为简便快速，易于构建试剂盒。

PU-2193

白介素-6 与慢阻肺急性加重期患者病情及预后存在相关性的研究

李露
郴州市第一人民医院中心医院

目的 探讨某院 2018-2019 年因慢性阻塞性肺疾病急性加重期入住我院呼吸与危重病科-1 的患者其静脉血血清中白介素-6 水平与其病情及预后的相关性分析。
方法 随机收取 2018 到 2019 年由于慢阻肺疾病急性加重期入住我院呼吸与危重病科-1 的 100 例病例。同时随机收集由于普通慢阻肺疾病入住我院呼吸与危重病科-2 的 100 例病例。及同期于我院耳鼻喉科检查但非炎症的 100 例病例。且将收集到的慢性阻塞性肺疾病急性加重期 100 例患者中经临床干预治疗后转变为普通慢性阻塞性肺疾病或其他轻症肺部疾病或痊愈等好转情况的 25 例病例。收集的共 300 例病例的患者在入院时都抽取外周静脉血离心后用血清标本采用双抗体夹心免疫层析法，在上转发光免疫分析仪检测白介素-6 水平，经治疗后有好转的 25 例病例患者转归后也应用上述方法进行了血清白介素-6 水平的检测。
对加重期实验组，普通对照组，健康对照组和预后判断前后组共五组数据分别进行正态性检验，其均完全符合正态性分布，用直方图描述，后进行方差齐性分布检验，如果方差齐；随后将前三组数据进行单因素方差分析，比较两两样本间的均数，有差异是 $P<0.05$，具有统计学意义。在急性加重期患者经过治疗后其前后两次白介素水平之间对两两数据进行比较，使用独立的样本 t 进行检验，有差异是 $P<0.05$，具有统计学意义。以上数据是在 SPSS23.0 统计软件进行处理及分析的。
结果 普通慢阻肺疾病对照组和健康对照组其血清中白介素-6 水平明显低于慢性阻塞性肺疾病急性加重期实验组，三者间具有差异表明具有统计学意义（$F=49.41,P<0.01$）。
在慢性阻塞性肺疾病急性加重患者中，经过临床干预治疗后其前后两次白介素水平之间比较，治疗前白介素-6 水平明显高于治疗后水平，具有差异有统计学意义（$t=4.11,P<0.01$）。
结论 慢阻肺急性加重患者的病情及预后与外周静脉血血清中白介素-6 水平具有相关性。

PU-2194

恶性肿瘤患者血清 Hcy 检测的临床意义

李亚琴、丁世凯
甘肃省肿瘤医院

目的 检测恶性肿瘤患者、健康体检者血清同型半胱氨酸，对比分析血清同型半胱氨酸检测与恶性肿瘤相关性。
方法 选取我院 2020 年 1 月-12 月住院乳腺癌、胃癌（81 例）为病例组，同时间段健康体检者（71 例）为对照组，检测两组血清同型半胱氨酸。
结果 病例组血清同型半胱氨酸平均浓度（9.35-27.41umol/L）显著高于对照组（6.41-15.71umol/L），两组差异有统计学意义。
结论 乳腺癌、胃癌患者检测血清同型半胱氨酸有临床意义。

PU-2195

子痫前期 ACR 与 24 小时尿蛋白定量的相关性研究

王兰芳、张倩
安徽省妇幼保健院

目的 探讨子痫前期孕妇尿微量白蛋白/肌酐（ACR）与 24 h 尿蛋白定量的关系，子痫前期（preeclampsia，PE）是怀孕 20 周以后，孕妇尿液中出现少量蛋白、水肿和血压升高三联症状，如不及时治疗会发展为子痫。
方法 收集子痫前期 72 例孕妇尿液，从早上 8：00 到第二天早上 8:00 的 24 小时尿液，加二甲苯防腐剂。随机留取中段尿作为尿微量白蛋白/肌酐的标本。年龄在 22-44 岁，孕 35-42 周，根据病情分重度组 44 例，轻度组 28 例；同期抽取 20 名正常孕妇作为对照组，两组孕妇的年龄、胎次和入院时孕周等一般资料无明显差异（p>0.05），所有孕妇孕前无肾脏疾病，实验前未服用任何药物。24 小时尿蛋白采用贝克曼生化仪检测，使用原装配套试剂；尿微量白蛋白/肌酐使用的是自动尿液微量白蛋白肌酐分析仪，采用免疫比浊法，定量检测尿液微量白蛋白(mALB)和尿肌酐(Cr)的浓度并计算出二者的比值(ACR)，用配套试剂检测。参考范围随机尿样的 ACR<30mg/mmol 正常，ACR30-300mg/mmol 为微量白蛋白尿，ACR>300mg/mmol 为临床白蛋白尿。
结果 实验组与对照组比较 ACR 及 24 h 尿蛋白定量有明显的差异（P＜0.05）；子痫前期组和正常对照组单一比较中 ACR 及 24 h 尿蛋白定量呈线性升高；在轻度组及重度组间比较 ACR 及 24 h 尿蛋白定量有明显的差异（P＜0.05）；轻度组及重度组 ACR 及 24 h 尿蛋白定量单一比较呈线性关系。
结论 ACR 与 24h 尿蛋白定量在判断子痫前期的严重程度上有高度相关性，对子痫前期孕妇检测尿白蛋白/肌酐（ACR）比检测 24h 尿蛋白定量更具有优越性。ACR 的检测方便快速，随机尿即可检验，它的检测结果不论是在产前子痫、妊娠高血压，还是在糖尿病肾病等的诊断方面都有很高的临床价值，将来会比 24 小时尿蛋白定量更受临床医生的青睐。

PU-2196

重氮法和钒酸盐法检测胆红素结果比对分析

解春宝
电子科技大学附属医院•四川省人民医院

目的 探讨某实验室重氮法和钒酸盐法检测胆红素结果的可比性，为实现胆红素测定结果的一致性提供依据。
方法 以 Abbott C16000 全自动生化分析仪及重氮法试剂组成的检测系统为参比系统（X），以 Olympus AU 5800 全自动生化分析仪及钒酸盐法试剂组成的检测系统为待评系统（Y）。测定患者新鲜血清中总胆红素（TBIL）和直接胆红素（DBIL）的准确度和精密度。对 X 和 Y 两种系统的胆红素结果进行比较并进行计算其相对偏差（SE%）。以《WS/T 403-2012 临床生物化学检验常规项目分析质量指标》文件规定的允许误差或根据生物学变异确定的偏倚为判断依据，研究两套系统测定胆红素结果的可比性和一致性。
结果 Olympus AU 5800 和 Abbott C16000 全自动生化分析仪测定 TBIL、DBIL 结果的准确度和精密度符合要求，参比系统和待评系统间的误差或相对偏差在临床可接受水平内。
结论 两套生化分析仪检测胆红素结果具有较好的可比性和一致性，可满足临床需求。

PU-2197

肝指数与肝癌侵袭性指数

江秀娟、杨银芳、苏海翔
甘肃省肿瘤医院

目的 寻找肝脏指数与肝癌侵袭性指数的关系。
方法 优化建立肝细胞癌（HCC）侵袭性指数，包括最大肿瘤的大小、多灶性、门静脉血栓和血甲胎蛋白水平 4 个临床参数总分。选择与肝癌侵袭性相关的具有最高危险比的血液总胆红素、γ-谷氨酰转肽酶、白蛋白和血小板水平 4 个参数构成肝脏指数。
结果 肝脏指数得分与肝细胞癌患者的生存率显著相关，也与侵袭性指数及其单个参数显著相关。
结论 肝脏功能不仅是肝癌患者重要的预后因素，而且可能与肝癌的生物学和侵袭性有关。血总胆红素、γ-谷氨酰转肽酶、白蛋白和血小板水平是可以被用来构建与 HCC 侵袭性参数显著相关的肝脏指数。

PU-2198

An LC/MS/MS method for analyzing the steroid metabolome with high accuracy and from small serum samples

tengfei yuan、yan li
Department of Clinical Laboratory, Renmin Hospital, Wuhan University

n and liquid-liquid extraction. The organic phase was dried by evaporation, and isonicotinoyl chloride was added for steroid derivatization, followed by evaporation under nitrogen and redissolution in 50% methanol. Chromatographic separation was performed on a reverse-phase PFP column, and analytes were detected on a triple quadrupole mass spectrometer with ESI. The lower limits of quantification ranged from 0.005 ng/ml for estradiol to 1 ng/ml for cortisol. Apparent recoveries of steroids at high, medium, and low concentrations in quality control samples were between 86.4% and 115.0%. There were limited biases (10.7% to 10.5%) between the

measured values and the authentic values, indicating that the method has excellent reliability. An analysis of the steroid metabolome in pregnant women highlighted the applicability of the method in clinical serum samples. We conclude that the LC/MS/MS method reported here enables steroid metabolome analysis with high accuracy and reduced serum consumption, indicating that it may be a useful tool in both clinical and scientific laboratory research.

PU-2199

Steroid profile analysis by liquid chromatography-tandem mass spectrometry in second-trimester pregnant women for trisomy 21 screening

tengfei yuan、yan li
Department of Clinical Laboratory, Renmin Hospital, Wuhan University

Background Trisomy 21 is a serious chromosome abnormality. The conventional Down's screening test is the most widely used for trisomy 21 screening. However, this method could lead to a higher false positive rate. Therefore, we aim to analyze steroid profile in second-trimester pregnant women and identify novel serum biomarkers of trisomy 21.
Methods We employed an LC–MS/MS method to measure the steroid profile. The concentrations and product-to-substrate ratios in 71 second-trimester pregnant women were determined and statistically analyzed to identify novel biomarkers for trisomy 21 screening.
Results We found that there were significant differences in levels of E3, 11-deoxycortisol, and 11deoxycortisol /17-hydroxyprogesterone between two groups. The OPLS-DA plots revealed obvious separation between two groups. Combining VIP analysis (VIP > 1.0) with volcano plot (P < 0.05 and fold change >1.2 or < 0.83), 11-deoxycortisol was identified as a novel biomarker for trisomy 21. After controlling for confounders, we found 11-deoxycortisol was associated with trisomy 21 (adjusted P = 0.009), and the fully adjusted OR (95 % CI) was 0.098 (0.016−0.593) in highest quartile versus lowest quartile of 11-deoxycortisol (P = 0.011).
Conclusions Steroid profile analysis for the first time showed that steroid hormones perturbations occurred in pregnant women carrying a fetus affected by trisomy 21 and decreased 11-deoxycortisol levels were associated with trisomy 21.

PU-2200

血清簇集蛋白、肽素与抵抗素联合检测对 2 型糖尿病急性脑梗死临床治疗的指导意义

陈良
郑州人民医院

目的 评价 2 型糖尿病急性脑梗死患者应用血清簇集蛋白、肽素与抵抗素联合检测临床价值以及对其产生的指导意义。
方法 病例选取时间为 2019 年 11 月至 2020 年 11 月，对本医院收治的 47 例 2 型糖尿病急性脑梗死患者作为 A 组，另选取同时期接收的 47 例 2 型糖尿病患者以及 47 例急性脑梗死患者分为分为 B 组和 C 组。对比各组之间和肽素、血清簇集蛋白、抵抗素检测结果以及对预后所产生的影响。

PU-2201

Prognostic value of platelet to platelet distribution width ratio in postoperative patients with type A acute aortic dissection

Yaman Wang、jun zhou
Jiangsu Provincial People's Hospital (First Affiliated Hospital of Nanjing Medical University)

Objective Acute type A aortic dissection is a serious life-threatening cardiovascular emergency with high in-hospital mortality without aggressive clinical treatment. The study aims to evaluate the relationship between platelets (PLT) to platelet distribution width (PDW) ratio (PPR) with in-hospital mortality in postoperative patients with type A acute aortic dissection (AAD).
Methods 171 type A AAD patients were recruited in this retrospective study from January 2017 to December 2019. Receiver operating characteristics (ROC) were used to determine the optimal cut-off values for PPR, then patients were divided into low-PPR group and high-PPR group by the optimal cut-off value of PPR. Finally, univariate and multivariate analysis were performed to analyze the prognostic value of PPR.
Results The cut-off value of PPR was 9.76 and the mortality was statistically higher in low-PPR group than that in high-PPR group (29.1% vs 6.0%, p<0.01). The area under the ROC curve (AUC) of PPR was 0.724 (95% CI, 0.633-0.815; p <0.001) with a 56.4% sensitivity and 80.6% specificity. Multivariate analysis showed that serum PPR was an independent factor associated with in-hospital mortality (hazard ratio (HR): 1.151; 95% confidence interval (CI): 1.035-1.297; p=0.010).
Conclusion Serum PPR can be used as an independent predictor of in-hospital mortality in postoperative patients with type A AAD.

PU-2202

尿总蛋白与肌酐的比值可用于判断尿蛋白异常的初筛

贾宇
郑州大学第一附属医院

目的 比较尿总蛋白与肌酐的比值（TCR）与 24h 尿总蛋白结果的一致性及差异性。
方法 回顾性分析 803 名患者尿蛋白数据，患者同时进行了 24h 尿蛋白量及尿 TCR 检测且检测时间不超过 24h。根据尿蛋白含量值（g）分为六组：≤0.15、0.151-0.20、0.21-1.5、1.51-2.0、2.01-3.5、>3.5。采用 Kappa 分析比较两种方法结果的一致性，配对秩和检验比较两组定量结果的差异性，并评价 TCR 法的敏感度、特异性、阳性预测值（PVP）、阴性预测值（PVN）。
结果 按照阴阳性分组，Kappa=0.483，一致性中等；按照阳性程度分组，Kappa=0.345，一致性一般。根据均值±标准差，TCR 及 24h 尿蛋白量分别为 1.99±2.76g 及 3.10±3.82g，两组差异有显著性意义（p=0.000）。结果显示 TCR 小于 24h 尿蛋白量有 671 例（其中相差≥1 倍有 341 例，占 50.82%），TCR 大于 24h 尿蛋白量有 124 例（其中相差≥1 倍有 31 例，占 25%），两者相差≥1 倍共计 372 例，占总例数的 46.32%。此外，TCR 的灵敏度及特异性分别为 87.2%和 85.1%，PVP 及 PVN 分别为 98.3%和 40.4%。
结论 1. TCR 可用于判断尿蛋白异常的初筛；2. TCR 无法替代 24h 尿蛋白量进行尿蛋白含量的评估；3. TCR 用于患者尿蛋白含量评估，可能会低估患者的病情。

PU-2203

Meta-analysis: Association of homocysteine with recurrent spontaneous abortion

juan li[1]、danqin feng[2]、shiwei he[3]、qichang wu[4]、zhiying su[5]、huiming ye[6]
1. Women and Children's Hospital, School of Medicine, Xiamen University
2. Women and Children's Hospital, School of Medicine, Xiamen University
3. School of Public Health, Xiamen University
4. Women and Children's Hospital, School of Medicine, Xiamen University
5. Women and Children's Hospital, School of Medicine, Xiamen University
6. Women and Children's Hospital, School of Medicine, Xiamen University

Objectives The differences in serum homocysteine (Hcy) levels in patients with a history of recurrent spontaneous abortion (RSA) and those who had not experienced pregnancy-related complications were assessed through a meta-analysis, which provided a reference for the diagnosis and treatment of recurrent abortion.
Methods Literature and data on recurrent spontaneous abortion and homocysteine levels that were published before September 2019 were retrieved from the PubMed, EMBASE, CNKI, and Wanfang databases. The quality of the included literature was assessed using the Newcastle Ottawa Scale (NOS), using Stata 12.0 for the combined statistical analysis of data.
Results Patients with recurrent spontaneous abortion had higher Hcy levels than the controls, with statistically significant difference ($p < 0.05$).
Conclusion Hcy levels in patients with recurrent spontaneous abortion were significantly higher than those in healthy controls were. High homocysteine levels may be an important risk factor for recurrent spontaneous abortion, which may be a non-invasive marker for the diagnosis of recurrent abortion.

PU-2204

乙肝表面抗原(0.01-0.05) IU/ml 存疑区间的复查分析

孙宁
沈阳金域医学检验所有限公司

目的 随着对 HBV 研究的逐渐深入，为了加大预防肝癌的力度，进行 HBsAg 的检测需求已经逐渐遍布于各行各业。检测量的日益加大，介于 0.05IU/ml 及以下的、不便判读的检测结果也引起了检测者足够的重视。为确定其真实检测值选取 10 日内的目标样本再一次进行了复查，通过对复查结果分析，探究导致结果介于(0.01-0.05) IU/ml 存疑区间的原因。
方法 记录标本初始数据，再运用控制变量法用高速离心机对标本离心复查，记录数据并与初始数据比对。观察标本是否存在黄疸、溶血、脂血并标注。回忆实验过程中那些操作可能导致标本出现误差并分析初次检测与复查不想符合的原因，得出结论，并结合生化肝功及两对半的结果对结论进行验证。
结果 在 200 例 10 日内 HBsAg 检测结果介于(0.01-0.05) IU/ml 区间标本中，初始数据和此次初查数值与复查数值有细微差值的为 139 例(占 69.5%)，完全一致的为 81 例(40.5%）。
回忆实验过程中那些操作可能导致标本出现误差，并分析原因，得出结果
根据变量（离心速度）的改变，导致了两次检测结果的微小差异。高速离心排除了血细胞、纤维蛋白原和其他蛋白的干扰，使表面抗原的检测更为准确。
通过生化肝功及两对半的检测，也确实证明了两次复查均接近 0.05IU/ml 确实存在肝脏检测项目的异常，而初次检测为 0.05-0.04IU/ml 复查结果与初查不一致且为阴性的，是受到血清中异常细胞和蛋白的干扰所致，其肝功项目数值相对正常。

结论 面临 HBsAg 检测结果介于(0.01-0.05) IU/ml 区间时，高速离心复查能排除血细胞、纤维蛋白原和其他蛋白的干扰，使表面抗原的检测更为准确。再结合标本的历史结果、生化肝功和两对半等进行多方面佐证，再发出报告。

PU-2205

血液透析患者实验室生化发光相关检测指标的分析

苏圣
沈阳金域医学检验所有限公司

目的 血液透析（ hemodialysis）患者的实验室生化指标变化情况，为监测患者的病程进展提供实验室依据。
方法 收集 2021 年 1 月至 2021 年 3 月 沈阳金域医学检验所有限公司接收血液透析患者检测者共 186 例(男 116 例，女 70 例)，测定患者血液透析前相关实验室指标，采用非参数检验及 Pearson 相关分析对尿素（BUN）、血肌酐 (Scr)、血钙(Ca)、血磷(P)、甲状旁腺激素、等指标进行统计。
结果 93.2%的患者甲状旁腺激素(PTH)高于 500pg/mL，PTH 与血清无机磷 （P）的升高呈显著正相关(r=0.362,P<0.001)。56%患者呈现低钙(Ca)血症， 尿素(BUN)与肌酐(Scr)呈显著正相关(r=0.538,P<0.001)
结论 血液透析患者存在不同程度的继发性甲状旁腺功能亢进、低钙血症，等慢性并发症，实验室检测指标对于评估血液透析患者的整体状况具有重要意义。

PU-2206

糖化血红蛋白与血清 C 肽联合检测在糖尿病诊断中的应用价值

闫悦闻
沈阳金域医学检验所有限公司

目的 探讨糖化血红蛋白与血清 C 肽联合检测在糖尿病诊断中的应用价值。
方法 选取 2020 年经我公司检测的 100 例 2 型糖尿病（T2DM）患者作为研究对象，其中轻症 58 例，重症 42 例，选取同期健康体检者 100 例为对照组。分别采用己糖激酶法检测其空腹血糖值和餐后 2 小时血糖值，电化学发光法检测其空腹血清 C 肽和餐后 2 小时血清 C 肽水平，高效液相色谱法检测其糖化血红蛋白结果，比较 3 组各指标之间的差异，并进行相关性分析。纳入标准：（1）研究组患者诊断均符合世界卫生组织制定的 2 型糖尿病诊断标准，其中按糖化血红蛋白检测结果将糖化血红蛋白≤10%者纳入轻症组，糖化血红蛋白>10%者纳入重症组。对照组均为我公司健康体检者。排除标准：（1）合并肝肾功能不全、自身免疫性疫病或急慢性感染疾病患者；（2）近期服用可能影响血糖相关指标药物的患者。采用 SPSS20.0 进行统计学数据处理，计量资料采用 t 检验，计数资料采用卡方检验，相关性采用 Person 相关分析。
结果 糖尿病重症患者空腹血糖值、餐后 2 小时血糖值、糖化血红蛋白值水平显著高于轻症组（P<0.05），且二者均显著高于健康对照组（P<0.05）；轻症组患者空腹血清 C 肽和餐后 2 小时血清 C 肽水平显著高于健康对照组和重症组（P<0.05）。其中轻症组、健康对照组的糖化血红蛋白与血清 C 肽呈显著正相关（r=0.835，r=0.798，P 均<0.05），而重症组、健康对照组的糖化血红蛋白与血清 C 肽呈显著负相关（r=-0.804，r=-0.746，P 均<0.05）.
结论 糖化血红蛋白与血清 C 肽联合检测可对糖尿病诊断提供可靠数据，并反映糖尿病患者血糖水平及病情严重程度，值得推广。

PU-2207

时间、溶血对神经元烯醇化酶（NSE）影响的探究

苏圣
沈阳金域医学检验所有限公司

目的 排除时间、溶血对神经元烯醇化酶（NSE）影响，给予临床准确可靠的结果，在肺癌领域能够更好的结合其他标志物更精确的分析病情。
方法 收集 2021 年 4 月至 2021 年 5 月 沈阳金域医学检验所有限公司接收 NSE 在 0-16ng/ml 范围内未见溶血血液样本，258。在相同温度、相同仪器上，进行两组实验，第一组（原管组）将带有血细胞的原管震荡搅匀（使其溶血）离心上机检测，根据肉眼观测可分为：溶血“+/-”66 例、溶血“1+”131 例、溶血“2+”49、未溶血 12 例；第二组（分血组）将血液标本离心后上机检测。
将第二组样本，室温放置 4 小时，放置 8 小时，分别进行检测。
结果 当样本溶血时溶血程度与检测结果呈正相关；当样本未见溶血时，放置时间与检测结果成正相关，时间越长检测结果越高。
结论 NSE 测定会因溶血、测定时间的延长的增加而使结果偏高。

PU-2208

溶血血标本对血钾值的影响及其相应措施

郝广运
沈阳金域医学检验所有限公司

目的 探讨溶血血标本对于血钾值的影响及相应措施，为临床提供应用价值。
方法 本人通过日常在工作中随机选取了 10 例低血钾麻痹病人患者部分溶血和非溶血标本，还有 15 例慢性肾功能不全病人部分溶血与非溶血标本，通过诊断学标准确诊后，又及时采集了一份非溶血标本送检过来并通过离子选择电极法检测并作比较。
结果 非溶血标本血钾值小于 3.5mmol/L 为低血钾症；血钾值介于 3.5mmol/L~5.5mmol/L 之间为体内平衡；血钾值大于 5.5mmol/L 时为高血钾症。部分溶血者血标本值均比同时送检的非溶血血钾值明显偏高。
结论 标本溶血测得的血钾值会显著增高，这是由于红细胞内钾的含量大大高于血清中的含量，约为血清中血钾含量的 20 倍。标本放置时间过长，也会使测得的血清钾结果偏高，这是因为标本放置过久，血清与血细胞凝块接触，钾离子从血细胞内向血清转移，从而使得测得的结果偏高。造成标本溶血的原因有:抽血速度过快；试管针管潮湿不干燥；抽血部位皮肤消毒液不干；向试管内注血过猛，注入泡沫血；采集好的血标本剧烈震荡，采集后标本放置过久等。具体相关措施如下：1、加强责任心，端正采血态度，尊重患者要对每一个患者负责。2、应用一次性针管，并保证试管针管务必干燥，注意待皮肤消毒液干燥后采血。3、注血时不要只求速度，应该拔掉针头缓慢匀速沿试管壁注入，以免红细胞破裂影响检测结果。4、注血前应将注射器内空气排空，注入后切勿剧烈震荡。

PU-2209

镁检测试剂盒的性能评价

王晓
沈阳金域医学检验所有限公司

目的 对使用终点比色法测定的镁检测试剂盒进行实验室验证和评价,以确定该试剂盒分析性能的可靠性,评价其是否符合临床应用需要。
方法 取接近厂家线性的低值和高值标本各一例，按照低值、低值与高值 4：1、3:2、2:3、1:4、高值配比成 6 例标本，重复测定三次，通过 SPSS 软件计算得出最适方程，同时计算测定浓度均值并与理论值进行相关性分析，计算出 r 值及均值偏差，要求 r≥0.98，均值|偏倚＜2.50%。经 SPSS 软件计算得出最适方程为 y=1.932x+0.080 不精密度：1.05%
结果 血镁（Mg）浓度在 0.08-2.02mmol/L 范围内相关性良好，定值准确，测定浓值与理论值|偏倚|＜2.50%，相关系数 r=0.9998，与理论值呈显著的相关性，故本次线性验证判定为通过。厂家提供的线性范围是 0.10-2.00mmol/L，实验室验证范围小于厂家提供的线性范围。经验证血镁（Mg）在 0.08-2.02mmol/L 范围内呈线性。
结论 该试验使用的镁检测试剂盒在准确度、精密度、可报告范围、参考区间等方面分析性能可靠,能满足临床应用需要。

PU-2210

梗阻性黄疸患者脂蛋白代谢异常的原因及临床意义

旋瑀
沈阳金域医学检验所有限公司

目的 部分梗阻性黄疸患者的脂蛋白代谢存在异常，本次实验探讨这类患者的实验室指标特点及临床意义。
方法 以 2020 年我公司检测的 200 例梗阻性黄疸患者作为研究对象，检测肝功、肾功、血糖、血脂等实验室指标，筛选出（HDL-c+LDL-c）/TC 小于参考范围的 120 例患者。分析梗阻性黄疸伴（HDL-c+LDL-c）/TC 异常组（n=120），单纯性梗阻性黄疸组（n=80）和正常对照组（n=100）肝功、肾功、血糖、血脂等实验室指标的差异，分析梗阻性黄疸伴（HDL-c+LDL-c）/TC 异常组（HDL-c+LDL-c）/TC 比值与其他指标的相关性。
结果 部分梗阻性黄疸患者的（HDL-c+LDL-c）/TC 比值存在异常，表现为极低浓度的高密度脂蛋白胆固醇和低密度脂蛋白胆固醇，（高密度脂蛋白胆固醇+低密度脂蛋白胆固醇）/总胆固醇比值降低，载脂蛋白 B（ApoB）浓度与低密度脂蛋白胆固醇（LDL-c）浓度不匹配。梗阻性黄疸伴（HDL-c+LDL-c）/TC 异常患者的各项肝功能指标如总胆红素（TBIL）、直接胆红素（DBIL）、丙氨酸氨基转移酶（ALT）、天冬氨酸氨基转移酶（AST）、碱性磷酸酶（ALP）、γ-谷氨酰转肽酶（GGT）高于健康对照组与单纯性梗阻性黄疸患者（P<0.05），而总蛋白（TP）和白蛋白（ALB）)低于健康对照组与单纯性梗阻性黄疸患者（P<0.05）。梗阻性黄疸伴（HDL-c+LDL-c）/TC 异常患者（HDL-c+LDL-c）/TC 比值与总胆红素（TBIL）、直接胆红素（DBIL）呈负相关，相关系数为-0.621 和-0.659（P<0.05）。
结论 部分梗阻性黄疸患者的高密度脂蛋白胆固醇和低密度脂蛋白胆固醇浓度极低，造成（高密度脂蛋白胆固醇+低密度脂蛋白胆固醇）/总胆固醇比值显著降低，该比值降低可能与肝功能异常有关，提示这类患者病情加重的可能。

PU-2211

电化学发光分析仪测定促甲状腺激素的分析性能评价

王明然
沈阳金域医学检验所有限公司

目的 对在罗氏 Cobas 8000 e602 电化学发光分析仪上用电化学发光免疫分析法检测促甲状腺激素[TSH]的分析性能进行评价，判断其是否能满足实验室及临床需求。
方法 参考国家卫健委、美国临床和实验室标准化协会（CLSI）发布的行业标准和相关文件，结合工作实际从精密度、线性、正确度、临床可报告范围、以及生物参考区间几个方面进行评价。
结果 TSH 重复性不精密度 CV（%）、中间精密度 CV（%）两个水平均小于室间质评允许总误差的要求。取接近厂家线性的低值和高值标本各一例，按照低值、低值与高值 4:1、3:2、2:3、1:4、高值配比成 6 例标本，重复测定三次，通过 SPSS 软件计算得出最适方程，同时计算测定浓度均值并与理论值进行相关性分析，计算出 r 值及均值偏差，要求 r≥0.98,均值|偏倚<12.5%，最适方程为 y=0.261x+100.472，不精密度：1.19%，回归线相关系数 r=1.0051，r^2=0.9997
回归线斜率 b=1.0051，回归线截距 a=0.2281，测定浓值与理论值|偏倚|<12.5%，相关系数 r=1.0051，与理论值呈显著的相关性。最大稀释倍数为 10 倍，临床可报告范围是 0.005-996.90μIU/mL。胆红素 41mg/dL 以下、溶血 1000mg/dL 以下、脂血 1500mg/dL 以下对 TSH 测定结果检测干扰的偏移量都小于等于 10%。以健康人群 20 例样本验证实验室引用的参考区间，1/3 规则无离群值，不需补充数据，无超出情况，均在正态-95%置信区间内。
结论 根据以上方法精密度、线性范围、临床可报告范围、参考区间验证等，以此对促甲状腺激素[TSH]检测项目作出方法性能评价，在此次评价过程中未发现性能不可接受的状况，说明该检测方法的分析性能被接受，满足我室临床标本检测的要求。

PU-2212

Current understanding and management of plasma cell mastitis: Can we benefit from what we know?

Jiexin Zhang、Shichang Zhang
Department of Laboratory Medicine, The First Affiliated Hospital of Nanjing Medical University

Background Plasma cell mastitis (PCM), also known as mammary duct ectasia, is a chronic nonbacterial breast inflammation characterized by duct expansion and plasma cell infiltration. The severe and intense clinical manifestations profoundly affect the quality of life of female patients. Although the pathological process of PCM is known to include four stages (duct dilatation, inflammation, abscess and fistula), there is still lack of imaging techniques and serum markers with high specificity in clinical practice. Due to recurrent acute attacks and the prolonged healing process of the disease, most patients choose to accept mastectomy.
Methods We searched for studies, reports and reviews referring to PCM in the past 20 years; more than half of the results were related to animal studies, and little attention has been paid to human beings, which may explain the frequent misdiagnosis of PCM as breast cancer and the limited treatment options.
Results This review focuses on the current diagnostic Methods and markers for PCM and hierarchically discusses the typical clinical features, etiological causes and relevant molecular mechanisms of PCM.
Conclusion We herein highlight the urgent need to develop more specific and sensitive biomarkers in clinical laboratory. It will help to establish a standardized flowchart for the diagnosis and treatment of PCM in order to improve recovery for female patients.

PU-2213

碱性磷酸酶、同型半胱氨酸和游离脂肪酸在急性脑梗死预后评估中的应用价值

李齐光、梁雅茹
广州医科大学附属第六医院/清远市人民医院

目的 探讨碱性磷酸酶、同型半胱氨酸和游离脂肪酸对急性脑梗死患者预后的评估价值.
方法 选取 435 例急性脑梗死患者作为研究对象,根据患者脑梗死发作后第 30 天 Rankin 量表评分的结果将患者分为预后良好组和预后不良组,比较分析两组患者的临床资料和各项实验室指标.
结果 多变量 Logistic 模型得出碱性磷酸酶(alkaline phosphatase,ALP)、同型半胱氨酸(homocysteine,Hcy)、游离脂肪酸(free fatty acid,FFA)与急性脑梗死患者的预后不良密切相关,3 种指标的优势比和 95%的可信区间分别为:ALP(1.091;1.058～1.124),Hcy(0.923:0.872～0.978),FFA(0.930,0.889～0.974).
结论 碱性磷酸酶、同型半胱氨酸和游离脂肪酸的检测对急性脑梗死的预后评估有重要意义,值得临床参考应用.

PU-2214

血清同型半胱氨酸、超敏 C 反应蛋白及血脂相关指标在下肢动脉硬化闭塞症患者中的临床意义

薛枭
吉林大学第一医院

目的 探讨血清同型半胱氨酸（HCY）、超敏 C 反应蛋白（CRP）及血脂相关指标在下肢动脉硬化闭塞症（ASO）患者中的临床应用价值。
方法 收集本院 100 例 ASO 患者作为实验组，其中男 62 例，女 38 例；选取同期健康体检者 80 例作为正常对照组，其中男 46 例，女 34 例。检测所有受试对象空腹血的 HCY、CRP、总胆固醇（TC）、甘油三酯（TG）、高密度脂蛋白胆固醇（HDL-C）、低密度脂蛋白胆固醇（LDL-C）水平；HCY 采用循环酶法，CRP 采用免疫比浊法，TC 采用 CHOD-PAP 法，TG 采用采用 GPO-PAP 法，HDL-C 和 LDL-C 采用直接法-过氧化物酶清除法；采用统计学方法分析比较 ASO 组和对照组各指标之间的水平差异。
结果 ASO 组血清 HCY、CRP、TC、TG 和 LDL-C 的水平均高于对照组，差异有统计学意义（P<0.05）。
结论 HCY、CRP 等指标在下肢动脉硬化闭塞症的诊断中有一定的临床价值。

PU-2215

餐后血糖代谢过程动力学建模与体外血糖调控优化设计

张婉
中日友好医院

目的 本项研究通过给予大鼠三种不同的膳食研究，探究不同营养成分食物摄入后在体内的代谢及胰岛素和胰高血糖素分泌的互作模式，建立合适的数据公式模型，模拟体外血糖调节的规律，为 1 型糖尿病治疗提供新的可参考方案。

方法 将实验大鼠随机平均分配，设计三种膳食所含能量总量相同的不同营养成分的膳食，包括高碳水化合物饮食、高蛋白饮食和高脂饮食，按照制定的技术路线进行饲养，饲养结束后受试采集血液标本进行血糖，胰岛素，胰高血糖素及 c 肽检测，根据实验数据模拟体外血糖分泌及抑制规律，实现 1 型糖尿病血糖的体外调节。
结果 大鼠摄入相同碳水化合物含量但不同营养成分比例的食物餐后血浆葡萄糖、胰岛素、胰高糖素浓度时间序列与基于动态葡萄糖监控传感器的血糖测量数据序列相比有一定相关性，体外建立血浆胰岛素和胰高糖素浓度随血浆葡萄糖浓度和时间变化的动态生理学模型具有可行性。
结论 根据体外建立大鼠摄入不同餐食模型，采集基础数据，利用驱动建模方法建立描述皮下葡萄糖浓度、血浆胰岛素和胰高糖素浓度间动态耦合关系的状态空间模型可以为 1 型糖尿病体外精准控制血糖提供参考依据。

PU-2216

血清脂蛋白(a)与同型半胱氨酸联合检测在冠状动脉粥样硬化性心脏病诊断中的应用

陈则金、龚嫄圆、魏建威
福建省第二人民医院

目的 总结血清脂蛋白(a)与同型半胱氨酸联合检测方法在冠状动脉粥样硬化心脏病诊断中的可行性。
方法 选择我院于 2018 年 12 月—2020 年 7 月间收治的 130 例患者，并选择同一时期的 130 例健康体检者，分别对两组受试者进行血清脂蛋白(a)、同型半胱氨酸检测，比较两组受试者的临床指标差异，并总结单一指标检测与联合检测方法的临床价值。
结果 比较两组受试者的血清脂蛋白(a)与同型半胱氨酸水平，冠状动脉粥样硬化性心脏病组分别为（319.52±19.53）mg/L、（18.56±3.19）μmol/L，显著高于健康体检者，数据差异具有统计学意义（P＜0.05）。比较单一指标与联合检测在诊断冠状动脉粥样硬化性心脏病中的敏感度、特异度、准确率等数据，联合检测方法显著高于血清脂蛋白(a)与同型半胱氨酸的单一检测，数据差异具有统计学意义（P＜0.05）。比较联合检测方法与冠状动脉造影检查结果的数据差异，数据差异不显著（P＞0.05）。
结论 在本病症临床诊断，血清脂蛋白(a)与同型半胱氨酸联合检测方法能够取得更满意效果，与单一诊断方法相比具有更高检出率，因此应该成为临床诊断的首选方法。

PU-2217

估计白蛋白排泄率指标与尿白蛋白/肌酐相比是否能提高对肾脏病患者 24h 尿微量白蛋白量的评估能力？

贾宇、张弓达
郑州大学第一附属医院

目的 探讨估计白蛋白排泄率（Estimated Albumin Excretion Rate, eAER）与尿白蛋白/肌酐（ACR）相比较是否能提高评估肾脏患者 24h 尿微量白蛋白含量的准确度。
方法 回顾性分析 1721 例肾脏病患者的 24h 尿微量白蛋白定量及 ACR 的结果，其中男性 1027 例，年龄 10-86（44.12±16.08）岁；女性 694 例，年龄 9-93（46.19±15.60）岁。两种方法检测结果的间隔时间不超过 24h，且 ACR 均为晨尿。根据患者的年龄和性别计算出各自的尿肌酐排泄率，通过尿肌酐排泄率计算出每位患者的 eAER 值。以 24h 尿微量白蛋白量为金标准，分析 ACR 和 eAER 的结果，通过偏倚及四分位间距来评价两种方法的准确度，若 eAER 偏倚程度比 ACR 超出 5%及以上视为准确度提高无效，反之有效。

结果 对于评估肾脏病患者 24h 尿微量白蛋白的含量，eAER 指标比 ACR 的准确度更高。在 1721 例患者中，采用 eAER 指标计算后可有效提高的患者为 1221 例，占 70.95%。对有效提高的患者组进行分析可得，ACR 的偏倚结果在 15%及 30%以内的分别占 6.63%及 20.48%，而 eAER 的偏倚结果得到明显提升，分别为 25.39%及 48.89%。ACR 的偏倚中位数为 48.40%，而 eAER 的偏倚中位数为-26.31%。
结论 eAER 可能是一个有效提高临床评估尿微量白蛋白能力的指标。

PU-2218

糖化血红蛋白年个体内变异对糖尿病诊断的价值

张世昌
江苏省人民医院（南京医科大学第一附属医院）

目的 探讨糖化血红蛋白(HbA1c)浓度的长期个体内生物学变异特征对糖尿病诊断的价值。
方法 收集 2011 年至 2015 年连续 5 年在本院进行健康体检的 1075 名志愿者的静脉血，进行 HbA1c 浓度测定。根据第 1 年 HbA1c 浓度分为正常组（< 5.7%）641 例、糖尿病前期组（5.7%-6.5%）310 例、糖尿病组（> 6.5%）124 例。分析不同人群 HbA1c 浓度的个体内变异。
结果 HbA1c 正常组、糖尿病前期组、糖尿病组的 HbA1c 浓度均值在男性与女性之间无显著差异（P > 0.05）；三组 2015 年 HbA1c 浓度均显著高于 2011 年（P < 0.05）; HbA1c 浓度个体内变异在糖尿病前期组中男性与女性之间均有显著差异（P < 0.05）; HbA1c 正常组、糖尿病前期组、糖尿病组的 HbA1c 浓度个体内变异分别为 3.44%、4.08%、7.40%，有统计学意义（P < 0.05）。
结论 HbA1c 浓度随着年龄增加而逐渐上升，个体内变异能更准确反映血糖控制效果，有助于糖尿病的诊断与治疗。

PU-2219

ICP-MS 法测定陕西省儿童微量元素锌的检测结果分析

郑金磊
西安金域医学检验所有限公司

目的 锌是人体内不可或缺的微量元素之一，对于儿童身体生长发育有重要作用，锌还有维持人体正常食欲、增强人体免疫力等功能。本研究讨论本地区 2020 年陕西省儿童微量元素锌的缺乏情况并更好的提供营养指导。
方法 选取 2020 年西安金域检测的 16576 例≤6 岁儿童的微量元素锌检测数据，按照年龄分为 3 组：分别为＜6 个月共 1281 例、6 个月-2 岁共 6275 例，2-6 岁共 9020 例。样品采集：用肝素抗凝管采取空腹静脉全血 1-2ml 或加有肝素抗凝的 EP 管采取末梢血 100μl。试剂与仪器：采用 0.1%TritonX-100 和 0.1%HNO3 对样本稀释 20 倍混匀后，使用电感耦合等离子体质谱法(ICP－MS)直接测定微量元素锌的含量，数据采用 SPSS22.0 统计学软件分析，以 P＜0.05 为差异有统计学意义。
结果 1、对比参考标准值，儿童微量元素锌的整体缺乏率为 30.47%，分析不同年龄段儿童微量元素锌的含量，发现不同年龄段儿童微量元素锌的平均值之间差异显著，且有统计学意义(P＜0.05)；2、其中＜6 个月微量元素锌的缺乏率为 83.61%，且平均值过低，6 个月-2 岁微量元素锌的缺乏率为 48.40%，2-6 岁微量元素锌的缺乏率为 10.45%；3、在不同性别儿童间的差异无统计学意义（P>0.05）。
结论 在儿童生长发育过程中，不同年龄段的儿童消耗微量元素锌的水平不同，＜6 个月的儿童微量元素锌的缺乏情况十分严峻，6 个月-2 岁儿童的微量元素锌的缺乏情况也十分明显，应当引起家长

和社会的重视，在各个年龄阶段都需要定期监测体内微量元素锌的含量，合理应用膳食来补充微量元素锌，维持人体内微量元素锌的平衡，以保证身体的正常生长发育。

Evaluation of the effect of haemolysis on quantitative chemiluminescent immunoassay results for 10 analytes

Xuejun Qin
The Affiliated People's Hospital of Fujian University of Traditional Chinese Medicine

BACKGROUND To evaluate the effect of haemolysis on the quantitative chemiluminescent immunoassay results of 10 analytes and to provide a basis for formulating specific sample rejection criteria and reviewing report Results
METHODS Haemolysis based on the clinical haemolysis index, haemolysis 1+, 2+ and 3+ samples and matched normal samples were collected. The quantitative chemiluminescent immunoassay results of 10 analytes from the two samples (haemolysis and normal) were determined and differences between the results obtained from samples with different degrees of haemolysis and those obtained from normal samples were evaluated.
RESULTS A total of 34 pairs of samples were collected, including 10 pairs of 1+ haemolysis samples, 10 pairs of 2+ haemolysis samples and 14 pairs of 3+ haemolysis samples. The quantitative chemiluminescence immunoassay detection results for the 10 analytes showed that regardless of the degree of haemolysis, the differences in Alpha fetoprotein(AFP), Carcinoembryonic antigen(CEA), Carbohydrate antigen(CA19-9), Luteinizing hormone(LH), Follicle-stimulating hormone(FSH), Ferritin(FER) between the haemolysis and normal samples were all lower than the total allowable error (TEa) based on biological variation; there were no statistically significant differences between the samples. However, the results for Insulin (INS) began to decrease significantly at a haemolytic index of 1+; Folic acid (FOL) showed an increase at a haemolytic index of 2+ and there was a significant difference at a haemolytic index of 3+.
CONCLUSIONS This research identified the analytes that are susceptible to haemolysis interference in chemiluminescent immunoassays. The influence of haemolysis on Haemolytclinical laboratory tests was closely related to the assay system used; thus, laboratories should evaluate the effect of haemolysis on their own analysis systems and define assay-specific haemolysis warning indices.

PU-2221

可溶性 ST2 的临床评估与心力衰竭的关联

陈禾惠、郭玮、王蓓丽
复旦大学附属中山医院

目的 研究可溶性 ST2 的临床评估及其与心力衰竭的关联。
方法 围绕可溶性 ST2 的生物学特性、目前主要检测手段及其在急、慢性心力衰竭诊断与预后评估中的作用作一综述。
结果 心力衰竭作为心脏疾病发展的终末阶段，具有可进展性、高发病率及病死率的特点。可溶性 ST2 作为心脏肥大、心肌纤维化的标志物，其不受年龄、性别、体重等生理学因素的影响，对心力衰竭的危险分层与预后评估都具有一定价值，尚不能替代 N 末端 B 型利钠肽原和 B 型利钠肽对心力衰竭的诊断作用，但与两者结合使用时对心衰患者发生不良心血管事件具有较高的预测价值。
结论 可溶性 ST2 对心力衰竭的诊断缺乏特异性，但其对心衰患者的危险分层及预后评估都有较好的应用前景，与传统心衰标志物联合应用能更有效地在心力衰竭患者诊断、分层、预后判断与疗效检测中起作用。

半定量干化学法测尿白蛋白/肌酐比值的检测性能和临床应用评价

张水检[1]、周琰[2]、邵文琦[2]、张春燕[1,2]、潘柏申[2]、王蓓丽[2]、郭玮[2]
1. 复旦大学附属中山医院厦门医院
2. 复旦大学附属中山医院

目的 对 Sysmex UC-3500 全自动尿液分析仪半定量干化学方法检测尿白蛋白/肌酐比值（ACR）的检测性能进行验证，并探讨其在肾脏疾病诊断中的应用价值。
方法 选取 2020 年 5 月-8 月，复旦大学附属中山医院厦门医院就诊的不同 ACR 等级（半定量结果 1 级-5 级）的患者新鲜尿液 170 份，分别通过全自动生化分析仪和半定量试纸条法检测尿白蛋白和肌酐，通过仪器设定计算 ACR，比较两种方法检测结果一致性。参照厂商和相关文件的验证要求，对半定量干化学法测尿 ACR 的正确度、精密度、检测下限和参考范围进行验证。同时收集 40 例表观健康者（对照组）和 40 例肾脏病患者（实验组），分别检测两组血清肌酐、尿素、尿 N-乙酰-β-D-葡萄糖苷酶、尿转铁蛋白、尿 β2-微球蛋白、尿免疫球蛋白 G、尿 α1-微球蛋白和尿 ACR，比较两组间各项参数结果是否有差异。
结果 半定量干化学法检测尿 ACR 的正确度验证均在标示浓度范围内（低值：半定量结果 1 级；高值：半定量结果 4 级-5 级）；批内 CV 为 0%，批间 CV 为 5.6%，均符合厂家声明的要求（CV < 10%）；待测标本均在参考范围内；重复检测 20 次 ACR 半定量结果为 1 级的标本，20 次测试均全部检出，且结果符合厂家声明的检测限（半定量结果 1 级）；实验组血清肌酐、尿素、尿 N-乙酰-β-D-葡萄糖苷酶、尿转铁蛋白、尿 β2-微球蛋白、尿免疫球蛋白 G、尿 α1-微球蛋白、尿 ACR 值均高于对照组，差异有统计学意义（P < 0.05）。Pearson 检验相关性分析显示，半定量试纸条检测尿 ACR 与全自动生化分析仪定量检测尿 ACR 结果具有良好相关性（r=0.943，P < 0.01）。
结论 采用半定量干化学法检测尿白蛋白/肌酐比值（ACR）检测性能可靠，可用作为对肾脏疾病诊断、筛查的有效补充，值得推广普及。

PU-2223

CKMBmass/CK 比值在心血管疾病的诊断价值探讨

田亚玲、张维贞
永州市中心医院

目的 通过检测血清肌酸激酶（CK），肌酸激酶同工酶质量（CKMBmass）水平及 CKMBmass/CK 比值，探讨 CKMBmass/CK 比值在心血管疾病中的诊断价值。
方法 选择 2019 年 8 月~2020 年 9 月在永州市中心医院住院的急性冠脉综合征（ACS）和心力衰竭患者，其中 ACS 组分为不稳定性心绞痛组 60 例、急性心肌梗死组 60 例；心力衰竭组分别为急性心衰组 60 例、慢性心衰组 66 例；对照组 60 例，检测各组患者 CKMBmass、CK 的血清学水平，并计算 CKMBmass/CK 比值，分别绘制 ROC 曲线，计算敏感性、特异性，评估其对心血管疾病的诊断价值。
结果 ACS 组血清 CK 水平、CKMBmass 水平以及 CKMBmass/CK 比值明显高于对照组以及心力衰竭组，差异有统计学意义（P<0.05）；心力衰竭组与对照组在 CK 水平上无统计学差异（P>0.05），而 CKMBmass 水平以及 CKMBmass/CK 比值与对照组相比，差异有统计学意义（P<0.05）。病例组各亚组中不稳定心绞痛组、急性心肌梗死组与对照组相比，各生化指标均有统计学差异（P<0.05）；而急性心衰组、慢性心衰组与对照组进行比较，其中除急性心衰组与对照组的 CKMBmass、CK 水平及 CKMBmass/CK 比值、慢性心衰组与对照组血清 CK 水平无统计学意义外（P>0.05），其余各组间比较均有统计学差异（P<0.05）。CKMBmass/CK 比值诊断心

血管疾病的 ROC 曲线下面积、灵敏度、特异度分别为 0.918、81.7%、96.7%，均高于 CKMBmass(0.807、79.2%、75.0%)。
结论 CKMBmass/CK 比值在心血管疾病中有一定的诊断价值，其敏感度和特异度相对较高。

PU-2224

血清 HE4、CA125 和 ROMA 指数对盆腔妇科恶性肿瘤的风险评估

罗盈
广东省人民

目的 探讨血清 HE4、CA125 和 ROMA 指数对盆腔妇科恶性肿瘤的风险评估。
方法 收集 2018 年 11 月-2019 年 8 月在广东省人民医院的妇科病区住院女性患者 495 例，根据最终病理学结果分为卵巢癌组、宫颈癌组、子宫内膜癌组、卵巢良性肿瘤组、宫颈良性肿瘤组、子宫良性疾病组。并把卵巢癌组根据不同组织学分类、FIGO 分期。选择健康体检人群 121 例为对照组。采用电化学发光法检测对照组以及不同组间的血清中 HE4、CA125 的水平，并联合患者的绝经状态计算 ROMA 值。
结果（1）卵巢癌组血清 HE4 水平和 ROMA 指数显著高于除子宫内膜癌组的其他各组（P<0.01），差异有统计学意义；（2）卵巢良性肿瘤组血清 HE4 水平和 ROMA 指数与对照组相比（P>0.05），差异并无统计学意义；（3）子宫内膜癌组血清 HE4 水平和 ROMA 指数显著高于卵巢良性肿瘤组、子宫良性疾病组、对照组，有统计学意义。（4）卵巢癌诊断效能依次为，ROMA（0.929）>HE4（0.916）>CA125（0.839），子宫内膜癌诊断效能依次为，ROMA（0.808）>HE4（0.750）>CA125（0.653）。（5）将卵巢癌组按组织学分类，上皮性癌与恶性生殖细胞肿瘤的血清 HE4 和 ROMA 比较差异有统计学意义。（6）将卵巢癌组按 FIGO 分期分组统计，患者血清 CA125、HE4 水平和 ROMA 指数在四个分期之间的差异无统计学意义，进一步分为早期（I、Ⅱ）和晚期（III、IV），两两比较，差异有统计学意义，表明 HE4 水平和 ROMA 指数与 FIGO 分期呈正相关关系。
结论 血清 HE4 水平和 ROMA 指数对卵巢癌和子宫内膜癌有较高的诊断价值，且其鉴别诊断效能高于 CA125；ROMA 指数的引入有助于提高血清 HE4 水平对卵巢癌和子宫内膜癌的诊断效能。而且，HE4、ROMA 与卵巢癌的组织学分类和临床分期显著相关，随着病情进展而水平升高。

PU-2225

Beckman Coulter AU5800 全自动生化分析仪检测血管紧张素转化酶的性能验证分析

王参军
东南大学附属中大医院

目的 对 ACE 试剂盒在 AU5800 全自动生化分析仪上的检测性能进行评价。
方法 1.正确度：参考 WS/T492-2016，选用室间质评质控品为参考物质，选择 2 个浓度水平，每批次重复测定 10 次，计算均值、SD 及偏倚，判断偏倚是否<1/2Tea。2.精密度：参考 WS/T492-2016，取配套高、中、低水平质控品各 1 支（1）批内精密度：分别连续检测 20 次，计算检测结果的均值、SD 和 CV。（2）批间精密度：每天检测 1 次，连续测定 20 天，计算均值、SD 与 CV，是否<1/3Tea。3.线性范围：参考 WS/T420-2013，取接近线性范围上限的高值血清 H（252.87），低值样本 L（去离子水）,分 L、4L+H、3L+2H、2L+3H、L+4H、H 六个浓度梯度，依次测定，重复 3 次，将实测均值与理论值进行线性回归分析，计算线性相关系数（r）。4.临床可报告范围：用

接近线性范围上限的高值血清（250U/L），按 1、1:1、1:2、1:4、1:8、1:16 稀释成 5 个稀释度，每个稀释水平分别检测 3 次，计算测定均值与理论测量值之间的偏离程度 R。以 R 在 80%~120%之间为可接受限。5.参考区间：依据 WS/T420-2013，选择体检健康者新鲜血清标本 20 例进行验证，检测结果在厂家说明书规定的参考值范围 20~68U/L 的符合率应>90%。

结果 ACE 的高、低水平的正确度的 CV 分别为 2.75%、0.78%。ACE 的高、中、低水平质控品的批内、批间精密度的 CV 分别为 5.44%、5.21%、3.73%，5.68%、5.53%、3.84%，均满足厂家说明书的要求。线性范围区间为 5~250U/L，其 R2=0.995。临床可报告范围为 5~4000U/L。参考区间为 20~68U/L,20 份标本中有 1 份标本超出范围，符合要求。

结论 ACE 试剂盒在 AU5800 生化分析仪上准确度好、重复性好，结果可靠，能满足临床工作。

PU-2226

Gender differences in the efficacy of pioglitazone treatment in nonalcoholic fatty liver disease patients with abnormal glucose metabolism

Weiyun Wu、HONG-MEI YAN
Department of Laboratory Medicine, Zhongshan Hospital, Fudan University

Background Pioglitazone is a promising therapeutic method for nonalcoholic fatty liver disease (NAFLD) patients with or without type 2 diabetes. However, there is remarkable variability in treatment response. We analyzed our previous randomized controlled trial to examine the effects of gender and other factors on the efficacy of pioglitazone in treating Chinese nonalcoholic fatty liver disease (NAFLD) patients with abnormal glucose metabolism.

Methods This is a post hoc analysis of a previous randomized, parallel controlled, open-label clinical trial (RCT) with an original purpose of evaluating the efficacy of berberine and pioglitazone on NAFLD. The total population (n = 185) was randomly divided into three groups: lifestyle intervention (LSI), LSI + pioglitazone (PGZ) 15 mg qd, and LSI + berberine (BBR) 0.5 g tid, respectively, for 16 weeks. The study used proton magnetic resonance spectroscopy (1HMRS) to assess liver fat content.

Results As compared with LSI, PGZ + LSI treatment further decreased liver fat content in women (- 15.24% ± 14.54% vs. - 8.76% ± 13.49%, p = 0.025), but less decreased liver fat content in men (- 9.95% ± 15.18% vs. - 12.64% ± 17.78%, p = 0.046). There was a significant interaction between gender and efficacy of pioglitazone before and after adjustment for age, smoking, drinking, baseline BMI, BMI change, treatment adherence, baseline liver fat content, and glucose metabolism.

Conclusion The study recommends pioglitazone plus lifestyle intervention for Chinese NAFLD female patients with abnormal glucose metabolism.

PU-2227

重组人 PD-L1 全长蛋白在巴斯德毕赤酵母中的分泌表达

战映璇、王清
青岛大学附属医院

目的 利用酵母表达系统获得重组 PD-L1,并对其生物活性进行验证。

方法 参照巴斯德毕赤酵母表达系统的密码子偏好对 PD-L1 基因序列进行优化并人工合成，构建 pPIC9k-PDL1 质粒并利用电转化方法将其插入毕赤酵母基因组中，经无组氨酸的 MD 平板初筛、不同浓度梯度的遗传霉素（G418）筛选多拷贝后，利用甲醇诱导阳性重组酵母表达，通过 SDS-PAGE 和 western blot 检测表达产物及其生物活性。

结果 成功获得稳定表达 PD-L1 的多拷贝酵母菌株，其表达的 PD-L1 相对分子质量约为 46kDa。
结论 成功获得有生物学活性的重组人 PD-L1 蛋白，可用于进一步研究。

PU-2228

免疫球蛋白及补体在矽肺中的含量及作用分析

贺腊姑
湖南省职业病防治院

目的 研究矽肺患者血清中的免疫球蛋白及补体的含量变化，为矽肺病的诊断、分期以及防治工作提供帮助。
方法 根据《职业性尘肺病的诊断》(GBZ70－2015)诊断标准选取湖南省职业病防治院 300 例不同期别的矽肺病人以及职业健康体检者 100 例,检测血清中的免疫球蛋白和补体的含量。
结果 矽肺病人组与对照组相比，矽肺患者血清中的免疫球蛋白增高，尤其是 IgG 和 IgA 的含量升高最明显，且 IgG 和 IgA 随着矽肺分期的增高而增高，而补体 C4 含量下降，差异均有统计学意义(P ＜0.05)。IgG 和 IgA 含量与患病时间呈正相关，补体含量与患病时间呈负相关(P ＜0.05)。
结论 矽肺患者血清中免疫球蛋白含量升高及补体含量下降，尤其是 IgG 和 IgA 的含量升高及补体 C4 含量下降对矽肺患者临床诊断、分期、预后以及矽肺病发病机制的探讨有一定的意义。

PU-2229

TOSOH HLC-723 G11 高效液相色谱法检测糖化血红蛋白的性能评价

黄亚萍、黎春宝、徐玉兵
上海金域医学检验所有限公司

目的 对 TOSOH HLC-723 G11 高效液相色谱法检测糖化血红蛋白的性能进行验证，评价其性能是否满足实验室质量及临床诊疗的要求。
方法 按 CNAS-GL037:2019 文件的方法对糖化血红蛋白进行正确度、精密度和线性验证；按 WS/T 402 2012 的方法对参考区间进行验证；携带污染采用连续进样高、低值样本各三次的方法进行验证，计算携带污染率。
结果 与参考仪器（TOSOH HLC-723 G8）20 例样本的比对结果偏差不超过 0.2，正确度验证通过；糖化血红蛋白浓度为 5.05%的实验室重复性精密度标准差为 0.035，期间精密度标准差为 0.05，批内 CV 为 0.69%，总 CV 为 1.06%，糖化血红蛋白浓度为 10.34%的实验室重复性精密度标准差为 0.035，期间精密度标准差为 0.05，批内 CV 为 0.34%，总 CV 为 0.51%，均小于厂家声明的精密度，精密度验证通过；糖化血红蛋白线性校准品的实测值和目标值的线性回归方程为 Y = 1.0011X +0.0228，相关系数指数 r 2 为 0.9998，线性良好；20 份健康成人标本的 糖化血红蛋白检测结果均落在生物参考区间 4.0%~6.0%范围内，参考区间验证通过；无携带污染（k =0）。
结论 TOSOH HLC-723 G11 精密度高，正确度、线性良好，携带污染率低，可用于临床检测糖化血红蛋白。

PU-2230

类固醇激素 LC-MS/MS 检测用于亚临床库欣综合征患者早期筛查研究

彭颖斐、王蓓丽、潘柏申、郭玮
复旦大学附属中山医院

目的 亚临床库欣综合征(subclinical Cushing's syndrome，SCS) 是肾上腺意外瘤中最常见的一种内分泌综合征，因缺乏典型的库欣综合征临床表现而常被漏诊和误诊。研究表明 SCS 的发生发展与类固醇激素代谢异常所导致的内分泌紊乱密切相关。
方法 采用基于前期开发的液相色谱串联质谱的靶向类固醇激素定量技术，对孕烯醇酮及其下游的 20 项类固醇激素包括孕激素、盐皮质激素、糖皮质激素、雄激素和雌激素进行系统检测。
结果 定量结果明确了 SCS 患者的血浆类固醇激素动态变化规律。17-羟孕烯醇酮（17-hydroxypregnenolone， 17-OH-PR ）、睾酮（ Testosterone， T ）和二氢睾酮（Dihydrotestosterone， DHT）等类固醇激素水平在 SCS 患者中中存在显著差异。
结论 SCS 患者外周血中 17-OH-PR/T/DHT 通路活性异常，是导致 SCS 发病的一个潜在因素。基于质谱技术的类固醇激素检测是 SCS 早期诊断和预后评估的一条新途径，并为研发治疗 SCS 新药提供理论指导。

PU-2231

20 项类固醇激素在多囊卵巢综合征患者中的差异性表达

程子韵、王蓓丽、潘柏申、郭玮
复旦大学附属中山医院

目的 通过液相色谱串联质谱(Liquid chromatography tandem mass spectrometry, LC-MS/MS)检测多囊卵巢综合征(Polycystic Ovarian Syndrome, PCOS)患者体内 20 项类固醇激素表达情况，探讨类固醇激素检测对提高 PCOS 诊断准确性的意义。
方法 选取 2019 年 1 月至 2019 年 12 月于复旦大学附属中山医院确诊的 PCOS 患者 34 例，另外选取 80 例健康女性作为对照。PCOS 患者的诊断依据 2018 年中国多囊卵巢综合征诊疗指南中的相关标准。采用 LC-MS/MS 对受试者血清中的 T、DHEA-S、DHT、A4 和 17α-OHP 等 20 项类固醇激素进行测定及分析。
结果 LC-MS/MS 法检测 PCOS 组患者的 T、DHEA-S 和 A4 水平较对照组升高，差异存在统计学意义。对比两组患者间的 DHT、17α-OHP、17α-OHPR、孕酮及孕烯醇酮水平无统计学差异。绘制 ROC 曲线并计算曲线下面积，发现 T 和 DHEAS 两项指标诊断生化高雄激素血症的价值较高，曲线下面积分别为 0.812 和 0.785。
结论 PCOS 患者存在类固醇激素合成异常，采用 LC-MS/MS 法检测的 T 和 DHEAS 对诊断生化高雄激素血症具有一定价值。

PU-2232

慢性完全堵塞患者外周血脂质代谢标志物 LC-MS/MS 临床检测方法的建立

王真昕、王蓓丽、潘柏申、郭玮
复旦大学附属中山医院

目的 慢性完全冠状动脉堵塞(CTO)的发生发展与脂质代谢异常所导致的脂质沉积密切相关。我们在前期研究中已阐明，CTO 患者外周血中的二酰基甘油激酶/二酰基甘油/磷脂酸（DGK/DAG/PA）通路活性异常，是导致 CTO 发病的一个潜在因素。
方法 基于非靶向脂质组学和靶向脂质组学策略相结合，系统描述 CTO 患者的脂质代谢动态变化。
结果 CTO 患者外周血磷脂酸如 PA 28:1 等生成异常，致使下游产物二酰甘油如 DAG34：5 等显著下调并最终诱发脂质代谢紊乱。
结论 为开发基于组学技术定量脂质分子用于 CTO 早期诊断和预后评估提供一条新途径。同时，该成果也为研发治疗 CTO 新药提供理论指导。

PU-2233

液相色谱-串联质谱检测血浆血管紧张素 II 方法的建立

秦嘉倩、胡玉懿、王真昕、王蓓丽、潘柏申、郭玮
复旦大学附属中山医院

目的 建立液相色谱-串联质谱（Liquid chromatography-tandem mass spectrometry，LC-MS/MS）检测高血压患者血浆血管紧张素 II（Angiotensin II）浓度的检测方法，用于辅助临床医生进行高血压分型在诊断及高血压严重程度评估。
方法 13C15N 标记的血管紧张素 II 作为内标，采用 Phenomenex Kinetex C18（2.6μm，100mm×3mm）色谱柱进行分离。分离色谱柱温 55℃，流动相为 0.2%甲醇水溶液和 0.2%甲酸甲醇溶液，流速为 0.5mL/min 梯度洗脱。对该检测方法进行预验证，内容包括：特异性和选择性、基质效应、携带污染、重复性。预验证结果满足条件后，对该检测方法进行性能验证，内容包括：定量下限（lower limit of measuring interval，LLMI）、线性、精密度、回收率、稀释一致性和血浆标本稳定性等。采用液相色谱-串联质谱检测方法对 279 名表面健康人群（男性 146 名，女性 133 名，平均年龄 46 岁）的血浆血管紧张素 II 浓度进行检测。采用 SPSS17.0 软件进行检测结果的统计学分析。
结果 该检测方法通过了特异性和选择性、基质效应、携带污染、重复性的预验证性能评价。血管紧张素 II 的 LLMI 为 2.83pg/mL，血管紧张素 II 的检测线性范围为 2.83 pg/mL-1000 pg/mL。日间和批内不精密度的变异系数（coefficient of variation，CV）均符合要求小于 15%，准确度偏差均小于 15%，回收率结果为 94.24%-108.15%。建立的血浆血管紧张素 II 生物参考区间为 4.42 pg/mL-45.52 pg/mL。
结论 我们建立了准确检测血浆血管紧张素 II 浓度的液相色谱-串联质谱的检测方法，可用于辅助临床医生进行高血压分型诊断及高血压严重程度评估。

PU-2234

液相色谱-串联质谱检测血浆 17- 羟基孕酮在先天性肾上腺增生疾病中的应用

彭颖斐、秦嘉倩、陈方俊、王蓓丽、潘柏申、郭玮
复旦大学附属中山医院

目的 建立一种稳定的血浆 17-a 羟基孕酮的液相色谱-串联质谱（LC-MS/MS）检测方法，并应用于先天性肾上腺增生疾病。
方法 使用 Waters 公司 UPLC XevoTQs 液质联用仪建立方法，并对该方法的定量下限、线性范围、准确度、干扰、稀释一致性、精密度和稳定性进行评价。并与免疫法进行比对。
结果 以同位素氘 8 作为内标，采用 BEH C8 色谱柱进行分离。流动相为 NH4F 和甲醇，梯度洗脱；柱温为 35℃。LC-MS/MS 检测 17-a 羟基孕酮的线性范围为 0.025～25ng/mL，定量检出限为 0.0125pg/mL，天间和批间 CV 均＜4%，回收率为 100.83%～106.8%。与免疫法进行比对，相关性较差，结合临床案例，质谱检测方法能更好的对疾病进行诊断。
结论 建立了可靠的检测 17-a 羟基孕酮的 LC-MS/MS 方法，能够灵敏、准确地检测血浆 17-a 羟基孕酮水平，并将其应用于先天性肾上腺增生疾病。

PU-2235

高效液相色谱-质谱联用法同时检测血浆中 8 种抗癫痫药物血药浓度及其在治疗药物监测中的应用

秦嘉倩、胡玉懿、王真昕、王蓓丽、潘柏申、郭玮
复旦大学附属中山医院

背景 癫痫是一种具有多种危险因素的综合性疾病，具有很强的遗传易感性。抗癫痫药治疗浓度监测的广泛运用可以达到最佳治疗效果并且避免不良反应。
方法 通过用含有内标的溶液稀释血浆样品进行样品制备。使用三重四极杆质谱仪在具有质谱检测的超高压液相系统上完成分离。该方法已根据临床和实验室标准协会的 C62-A 进行了生物分析方法验证并通过《中国液相色谱和质谱法临床指南》的验证。
结果 所有分析物在 3.5 分钟内分离并定量。该方法已通过线性验证（八种分析物的 r2 > 0.9），定量检测下限均为 50ng / ml，除了丙戊酸和奥卡西平的定量检测下限分别为 500ng / ml 和 1ng / ml。八种分析物的变异系数为 4.34％至 6.69％。批内和批间不精度均低于 15％，符合指南的要求。通过回收实验来评估准确性发现所有偏差均在目标值的±15％以内。背景峰面积/ 定量检测下限峰面积与背景峰面积/内标峰面积之比在 1％以内，表明该方法具有优异的特异性。黄疸，溶血和血脂对样品检测没有影响。
结论 我们开发了一种灵敏且稳定的方法，可以同时定量检测 8 种抗癫痫药，并将其成功应用于临床实践中。

PU-2236

缺血修饰蛋白对急性心肌梗死早期诊断的 Meta 分析

廖生俊
武汉大学中南医院

目的 采用 meta 分析系统评价缺血修饰蛋白在胸痛发生 6h 内对急性心肌梗死诊断的临床价值。
方法 检索 PubMed、Embase、中国知网、万方等中英文数据库，筛选建库以来至 2020 年 2 月关于缺血修饰蛋白在 AMI 早期诊断中的研究，采用 STATA 14.0 软件进行分析。
结果 13 个研究，共 1463 例受试者纳入 meta 分析。结果显示血清缺血修饰蛋白检测诊断 AMI 的灵敏度为 85%(95CI:0.82-0.88)，特异度为 86%(95CI:0.79-0.92)，阳性似然比为 6.3(95CI:3.9-10.1)，阴性似然比为 0.17(95 CI:0.13-0.22)，诊断比值比为 37(95CI:20-68)，SROC 曲线下的面积(AUC)为 0.90。
结论 缺血修饰蛋白对 AMI 的具有较高的诊断性能，可作为临床上早期诊断 AMI 的重要指标。

PU-2237

肝纤四项联合细胞因子在肝脏疾病中的诊断意义

周逸雯、朱晶、邵文琦、王蓓丽、郭玮
复旦大学附属中山医院

目的 本研究旨在从 AFP、PIVKA-II、AFP-L3、AFU、肝纤四项、细胞因子筛选出 HCC 早期诊断特异性的血清标志物，并创建和验证出最佳的诊断计算模型以预测 HCC 患者。
方法 本研究选取了复旦大学附属中山医院 2019 年 9 月-2020 年 9 月住院患者中 100 例乙肝并发肝癌、20 例慢性乙型肝炎、20 例乙肝相关肝硬化和 20 例良性肝肿瘤患者；同时入组 100 例健康对照组。收集了基础的流行病学资料并对其术前血清异常凝血酶原、甲胎蛋白、甲胎蛋白异质体和 a-L-岩藻糖苷酶、肝纤维四项（透明质酸、层粘连蛋白、III 型胶原、IV 型胶原）以及细胞因子等指标采用逐步 logistic 回归法评估进行回顾性分析。
结果 结果显示除 B、C 期肝癌无显著性差异外，血清 PIVKA-II 和肝纤四项水平随 BCLC 分期显著升高（P<0.05），而 AFP 水平无明显升高、细胞因子随 BCLC 分期无显著升高。血清 PIVKA-II 水平联合肝纤维四项可作为 HCC 患者预测微血管侵犯的独立风险因子。
结论 HBV-HCC 组患者血清血清 PIVKA-II 水平、肝纤四项水平明显高于良性疾病组和健康对照组患者。二者联合可作为 HCC 患者预测微血管侵犯的独立风险因子。

PU-2238

急诊实验室不合格标本原因分析及对策

杨静、周佳烨、周琰、邵文琦、朱晶、王扣琼、郭玮、王蓓丽
复旦大学附属中山医院

目的 分析急诊不合格标本产生的原因并制定相应对策，提高急诊标本分析前环节的标本质量。
方法 回顾性分析复旦大学附属中山医院急诊实验室 2018 年 1 月 1 日至 12 月 31 日记录的所有不合格标本共 501 份。根据 WS/T496-2017 中国卫生行业标准-临床实验室质量指标中的检验前质量指标进行急诊标本不合格率的统计，并分别对病人类型、日间夜间不合格情况进行统计分析，以了解急诊不合格主要原因、病人类型和采血时间对不合格原因的影响。

结果 2018 年急诊实验室标本不合格率为 6.67/万标本，其中 66%来自住院患者，22%为急诊患者，12%为监护室患者。在病区不合格标本中有 77%来自内科病房，23%来自外科病房。不合格标本最多的三种标本类型分别是血常规（EDTA 抗凝管）标本、出凝血标本（枸橼酸钠抗凝管）和生化标本（促凝胶管），分别占所有不合格标本的 31.5%、27.5%和 21.56%；其中血常规和出凝血标本的共同主要不合格原因为抗凝标本有凝块，分别占 47.1%和 47.8%，其次是标本量少，分别占 11.6%和 4.5%。生化标本最主要的不合格原因是溶血，占 21.56%。日间标本不合格标本量（占 71%）高于夜间（占 29%）。
结论 通过对不合格标本的记录和分析，积极主动与护理部和临床部门进行沟通，一同寻找原因并制定改进措施，同时我们要不断提高分析前自动化程度，希望以此能降低标本不合格率，提高急诊实验室的整体质量管理水平，保证病人诊疗安全。

PU-2239

血清一氧化氮检测与在判断血管健康状况中的应用价值

沈逸枫、邵文琦、王蓓丽、郭玮
复旦大学附属中山医院

目的 本研究旨在探讨血清一氧化氮检测在判断血管健康状况中的价值。
方法 本研究收集了临床诊断高血压患者 224 例，冠心病 PCI 术后患者 56 例，糖尿病周围血管病变患者 272 例，以及表面健康人群 60 例。收集基础的流行病学资料并采集空腹血清样本进行一氧化氮检测。比较疾病组与健康对照组的血清一氧化氮水平。根据试剂盒给定的参考范围对三个疾病组的患者进行划分，统计其人数及所占该疾病组的百分比。
结果 疾病组的血清一氧化氮水平均值（18.4μmol/L）低于健康对照组（42.7μmol/L）（P<0.05）。高血压组中有 67%（150 例）的患者 NO 低于参考范围，冠心病组中有 67.8%（56 例）的患者 NO 低于参考范围，糖尿病组中有 69.9%（190 例）的患者 NO 低于参考范围，健康对照组 NO 水平全部在参考范围内或高于参考范围。
结论 一氧化氮偏低可能提示血管内皮受损。

PU-2240

谷胱甘肽还原酶在原发性肝癌中临床应用评估

张爱伦、邵文琦、王蓓丽、郭玮
复旦大学附属中山医院

目的 对紫外酶法检测谷胱甘肽还原酶（GR）的分析性能进行评价，并探讨其在肝病中的临床应用价值。
方法 收集 120 例表观健康标本、70 例乙肝肝炎患者标本、70 例肝硬化患者标本及 70 例原发性肝癌患者标本，检测血清 GR 活性水平及其他肝功能标志物水平。对紫外酶法检测谷胱甘肽还原酶的性能（正确度、精密度、线性范围、临床可报告范围和参考区间）进行验证。采用组间单因素分析、多重线性回归分析和受试者工作特征曲线分析评估 GR 活性水平与肝损伤的相关性。
结果 紫外酶法检测 GR 定值校准品的相对偏移为-3.28%~0.51%，低于厂商声明的偏移（<10.0%）。批内变异系数（CV）为 0.93%～1.13%、批间 CV 为 0.92%～1.69%，均符合厂商声明的要求（<5%）。线性范围为 0～157.12 U/L。20 名表观健康者的血清 GR 检测结果均落在厂商声明的参考区间（33~73 U/L）内，参考区间验证通过。临床可报告范围为 0~1472U/L。对照组、肝炎患者、肝硬化患者以及肝癌患者的 GR 水平分别为 51、67、70、89U/L，差异存在统计学意义（P<0.001)。TNM 分期为 III~IV 期的原发性肝癌患者 GR 水平显著高于 I~II 期患者(P<0.01)。多因素线性回归分析结果显示，肝损伤患者 GR 活性水平与年龄、丙氨酸氨基转移酶（ALT）、天门

冬氨酸氨基转移酶（AST）和碱性磷酸酶（AKP）、透明质酸（HA）均呈正相关（r=0.095、0.335、0.370、0.356，P<0.001）。血清 GR 活性水平对慢性乙肝患者、肝硬化患者及肝癌患者的诊断切点分别为 61.4、57.8、80.8U/L，曲线下面积（AUC）分别为 0.881、0.812、0.991（P<0.001)。

结论 血清 GR 活性水平升高是肝损伤的独立危险因子，可作为临床诊断、评估肝损伤的辅助指标。

PU-2241

纤维连接蛋白在结直肠癌中的应用评估

张祎弛、邵文琦、王蓓丽、郭玮
复旦大学附属中山医院

目的 评估九强金斯尔的纤维连接蛋白(FN)试剂盒日立 HITACHI 7600 化学发光分析仪的性能。

方法 根据美国临床实验室标准化研究所(CLSI)系列文件(EP15-A2、EP6-A2、C28-A2)，对 FN 试剂盒在 HITACHI 7600 化学发光分析仪上性能进行验证。

结果 FN 批内精密度低水平为 0.74％；高水平为 0.65％。批间精密度低水平为 1.39％；高水平为 2.49％。FN 检测值与 CAP 目标值的相关系数≥0.99，FN 线性方程为 y = 1.00354x - 3.86230，r2=0.982。FN 的参考范围符合率为 100％。

结论 FN 试剂盒在日立 HITACHI 7600 化学发光分析仪上性能符合临床要求。

PU-2242

2018-2019 年血清蛋白电泳数据分析回顾

邵文琦、朱丽娜、王蓓丽、郭玮
复旦大学附属中山医院

目的 本研究对复旦大学附属中山医院 2018-2019 年所有血清蛋白电泳数据进行回顾性分析，旨在研究不同人群血清蛋白电泳区间与异常条带的分布规律，以及比较电泳法与溴甲酚绿法对白蛋白的检测性能。

方法 本研究选取复旦大学附属中山医院 2018-2019 年所有血清蛋白电泳数据，使用统计学方法，分析血清蛋白电泳各区间以及异常条带在不同性别、不同年龄人群中的分布差异情况，以及比较电泳法与溴甲酚绿法检测白蛋白结果的相关性。

结果 除 β1 区间外，其余各区间占比均存在性别差异：男性的白蛋白、α1、α2、β2 区间占比均高于女性，而女性的 γ 区间所占比例比男性更高；按照年龄以 10 岁间隔为一组进行分组，统计学结果表示各区间占比在年龄组之间均有差异：其中白蛋白区间占比随年龄的增长呈下降趋势；α1、α2、β2 以及 γ 区间占比随年龄的增长呈上升趋势，而 β1 区间随年龄变化差异未呈明显趋势；随着年龄的上升，异常条带出现的频率增高，且男性高于女性。电泳法与溴甲酚绿法检测白蛋白结果有差异，且有显著相关性。

结论 血清蛋白电泳可以根据人群的性别与年龄建立不同的参考区间，而电泳法与溴甲酚绿法检测白蛋白具有显著相关性，进一步证明了血清蛋白电泳价格低廉却在临床诊断中有不小的价值。

PU-2243

经皮冠状动脉介入治疗术后脂联素临床应用评估

倪铭晨、邵文琦、朱晶、王蓓丽、郭玮
复旦大学附属中山医院

目的 对脂联素测定试剂盒进行评价，研究经皮冠状动脉介入术（PCI）手术患者血清脂联素的浓度水平变化。
方法 评估脂联素试剂盒的基础性能指标（精密度、正确度、线性范围、参考区间、最大稀释比）；选取药物洗脱支架置入术的冠心病患者和 PCI 术的急性心肌梗死患者各 50 名，分别测定术前及术后的血清脂联素，并与 CK、CK-MB、cTnT、BNP 等指标分析相关性。
结果 试剂盒性能符合要求；冠心病患者 PCI 术前术后的脂联素水平变化不显著，急性心肌梗死患者 PCI 术后脂联素水平显著降低，与 cTnT、BNP 呈负相关（P＜0.05），与 CK、CKMB 不相关（P＞0.05）。
结论 脂联素的浓度水平变化可反映急性心梗患者 PCI 手术的心肌损伤及预后情况。

PU-2244

经皮冠状动脉介入治疗术后 AST、m-AST、m-AST/AST 的临床应用评估

邵文琦、张茜林、沈逸枫、朱晶、王蓓丽、郭玮
复旦大学附属中山医院

目的 对血清天冬氨酸氨基转移酶线粒体同工酶（m-AST）测定试剂盒进行评价，研究经皮冠状动脉介入术（PCI）手术患者血清天冬氨酸氨基转移酶（AST）、m-AST、m-AST/AST 等的变化。
方法 对 m-AST 测定试剂盒的性能（精密度、正确度、线性范围、参考区间、最大稀释比）进行评估；选取进行药物洗脱支架置入术的冠心病患者和 PCI 术的急性心肌梗死患者各 44 例，分别测定术前及术后的血清 AST、m-AST 等水平，计算 m-AST/AST 的比值，并分析与 Gensini 积分的相关性。
结果 精密度、正确度、线性范围、参考区间均通过验证，最大稀释比为 1:10；冠心病患者 PCI 术前术后血清 AST、m-AST 水平和 m-AST/AST 比值无变化，与 Gensini 积分不相关；急性心肌梗死患者 PCI 术后 AST、m-AST 水平显著升高，m-AST/AST 比值显著下降，与 Gensini 积分不相关。
结论 m-AST 测定试剂盒性能验证通过，血清 AST、m-AST 水平和 m-AST/AST 比值的变化可反映急性心肌梗死患者 PCI 手术的心肌损伤及恢复。

PU-2245

尿 NAG、NGAL 及血清 CysC 联合检测在肾病急性肾损伤诊断中的价值

董宝军[1]、曹海南[2]、王毅[1]
1. 天津市天津医院
2. 天津医科大学 医学检验学院

目的 评价尿 NAG、NGAL 及血清 CysC 联合检测在肾病急性肾损伤（AKI）诊断中的价值。
方法 选择天津医院 2020 年 5 月至 2021 年 2 月期间收治的肾病患者发生 AKI 者为研究组，总患者 100 例，其中男性 51 例，女性 49 例；另选同期非 AKI 肾病患者作为对照组，总患者 40 例，其中

男性 22 例，女性 18 例，采用 ADVIA ®2400 全自动生化仪检测所有受试者的尿 NAG、NGAL 和血清 CysC 的含量，采用 ROC 曲线比较 uNAG、uNGAL 和血清 CysC 对肾病急性肾损伤的诊断效能。

结果 ①肾病急性肾损伤组的尿 NAG、NGAL 和血清 CysC 水平明显高于肾病非急性肾损伤组（P 值均小于 0.05）。②尿 NAG、NGAL 和血清 CysC 对肾病急性肾损伤诊断的灵敏度分别为 76%、83%和 86%，三种指标联合检测的灵敏度为 93%；尿 NAG、NGAL 和血清 CysC 对肾病急性肾损伤诊断的特异性分别为 70%、80%和 82.5%，三种指标联合检测的特异性为 67.5%。uNAG、uNGAL 和血清 CysC 对肾病急性肾损伤诊断的 ROC 曲线下面积分别是 0.833、0.908 和 0.931，三种指标联合检测时 ROC 曲线下面积为 0.960。

结论 血清胱抑素 C（CysC）对肾病急性肾损伤诊断灵敏度最高，其与尿 NAG 和 NGAL 联合检测，可提高对肾病早期肾损伤的阳性诊断率，有利于患者及时的诊断和治疗。

PU-2246

不同生化检测系统丙氨酸氨基转移酶检测结果的差异评估及其临床价值

张世昌、梁婷婷
江苏省人民医院（南京医科大学第一附属医院）

目的 对比分析 2 种生化检测系统检测丙氨酸氨基转移酶(ALT)结果的差异，并明确造成结果差异的原因和探讨其潜在的临床应用价值。

方法 收集健康对照组和肾功能衰竭患者血清各 25 例，标本中添加磷酸吡哆醛(PLP) 浓度至 0.1 mmol/L，分别采用贝克曼库尔特 AU5800(试剂中不含 PLP)和强生 Vitros 5600(试剂中含 PLP)全自动生化分析仪检测各组血清中 ALT 浓度。

结果 分析仪 Vitros 5600 和 AU5800 检测质控品 ALT 结果分别为 36.9±1.7 U/L vs 33.6±1.9 U/L 和 102.9±3.0 U/L vs 100.2±3.7 U/L，相对 Vitros 5600 分析仪的检测结果偏倚分别为 8.9%和 2.6%;对照组中分析仪 Vitros 5600 与 AU5800 检测 ALT 结果无显著差异，相对偏倚为 7.7±2.2%；肾功能衰竭组中分析仪 Vitros 5600 检测 ALT 结果显著高于 AU5800 检测结果($P < 0.01$)，相对偏倚为 58.5±14.6%；添加 PLP 可显著提高肾功能衰竭组 AU5800 的 ALT 检测结果，将相对偏倚降低至 5.1±3.6%，但对 Vitros 5600 检测结果无显著影响。

结论 在健康人群中 2 种生化检测系统的 ALT 检测结果有较好的一致性，在肾功能衰竭患者中 2 种检测系统 ALT 检测结果的差异性是 PLP 缺乏造成，可用于初步判断患者维生素 B6 缺乏程度。

PU-2247

Recent advancements of human iPSC derived cardiomyocytes in drug screening and tissue regeneration

Ting Wang
The First Affiliated Hospital of Nanjing Medical University

Myocardial infarction together with subsequent heart failures are among the main reasons for death related to cardiovascular diseases (CVD). Restoring cardiac function and replacing scar tissue with healthy regenerated cardiomyocytes (CMs) is a hopeful therapy for heart failure. Human-induced pluripotent stem cell (hiPSC) derived CMs (hiPSC-CMs) offer the advantages of not having significant ethical issues and having negligible immunological rejection compared to other myocardial regeneration Methods hiPSCs can also produce an unlimited number of human CMs, another advantage they have compared with other cell sources for cardiac regeneration.

Numerous researchers have focused their work on promoting the functional maturity of hiPSC-CMs, as well as finding out the precise regulatory mechanisms of each differentiation stage together with the economical and practical Methods of acquisition and purification. However, the clinical applications of hiPSC-CMs in drug discovery and cardiac regeneration therapy have yet to be achieved. In this review, we present an overview of various Methods for improving the differentiation efficiency of hiPSC-CMs and discuss the differences of electrophysiological characteristics between hiPSC-CMs and matured native CMs. We also introduce approaches for obtaining a large quantity of iPSC-CMs, which are needed to achieve biomanufacturing strategies for building biomimetic three-dimensional tissue constructs using combinations of biomaterials and advanced microfabrication techniques. Recent advances in specific iPSC technology-based drug screening platforms and regeneration therapies can suggest future directions for personalized medicine in biomedical applications.

移植患者 25 羟基维生素 D 水平检测及维生素 D 营养状态

潘永圣、蒲丹、汪佳婕、孟国艳、徐宏忍、许小靓
昆明市第一人民医院

目的 维生素 D 除促进骨骼和肌肉发育外，还具有免疫调节作用。了解移植患者血清 25 羟基维生素 D [25（OH）D]水平及营养状态，为移植患者合理补充维生素 D 提供科学依据。
方法 选取昆明市第一人民医院 148 例移植患者为研究对象，采用吖啶酯化学发光法检测血清 25（OH）D 水平，分析移植患者血清 25（OH）D 水平及营养状态。
结果 148 例移植患者血清 25（OH）D 水平为 22.10±8.32 ng/ml。血清 25（OH）D 缺乏率为 43.92%（65/148），不足率为 40.54%（60/148），充足率为 15.54%（23/148）。男性患者血清 25（OH）D 水平高于女性，不同性别血清 25（OH）D 水平差异有统计学意义（t=3.314，P<0.01）；女性患者的缺乏率（52.86%）高于男性（35.90%），血清 25（OH）D 的缺乏、不足和充足率在男女性患者间差异有统计学意义（χ^2=10.694，P<0.01）。
结论 移植患者维生素 D 充足率仅为 15%左右，维生素 D 作为移植术后预后指标之一，应确定移植患者补充维生素 D 的有效和安全剂量，并给予补充。

PU-2249

ICP-MS 法检测微量元素内标元素的选择应用解析

陈振朋
西安金域医学检验所有限公司

目的 电感耦合等离子体质谱仪（ICP-MS）是无机元素分析的尖端仪器之一。ICP-MS 法在应用过程中，为了减少样液的基体效应，使 ICP-MS 法的测定结果准确，通常会使用内标法。内标的工作原理是以假定分析元素与内标元素在等离子体中的行为相似为前提的，因此选择合理的内标非常重要。
方法 内标的确定一般从以下两个方面考虑：
1.内标元素选择原则：1)待检样本中不含该元素；2）通过质量数选择，一般内标元素质量数应与待测元素接近；3）依据电离能的匹配性进行选择，如高电离能一般匹配高电离能的内标元素；4）化学性质相近。
2. 内标元素浓度的确定：内标的浓度是由基体的复杂性决定的，一般基体的 TDS 越大，内标的浓度应越大，如干净的机体（TDS＜0.01%）时基体基本不会存在污染，内标浓度在 1-10ppb，中度基体（TDS＜0.1%），基体存在轻微污染，内标浓度在（10-50ppb），对于更高的 TDS 基体，根据实际情况选择更高浓度的内标。在考虑基体 TDS 外，内标浓度落在标准品中间浓度附近为宜。

结果 内标不仅可以矫正检测结果，每天还可以根据内标的响应值来判断仪器的状态，内标回收率要求在 70%-130%。若发现内标响应不在范围内，考虑检测系统污染、内标引入问题、内标溶液问题、样品机体影响以及样本中含有内标元素等；内标 RSD 过大时应考虑进样管否破损、进样管松弛无法提升样品、泵管夹松紧程度是否合适、管路中是否有气泡。排除以上问题后可能是仪器预热时间不够引起，可重新定标。
结论 使用 ICP-MS 检测微量元素，选择合适的内标元素不仅可以提高检测的准确性，同时还可通过内标回收率、内标 RSD 的变化监测仪器的状态。

PU-2250

β2 微球蛋白、胱抑素 C 及尿微量白蛋白联合检测在糖尿病肾病诊断中的应用价值

崔思洋
吉林金域医学检验所有限公司

目的 探讨 β2 微球蛋白，胱抑素 C 及尿微量白蛋白联合检测在糖尿病肾病诊断中的应用价值。
方法 选取 2020 年-2021 年确诊为糖尿病肾病患者 180 例，其中单纯糖尿病患者 60 例为对照组，早期糖尿病肾病患者 60 例为 A 组，中晚期糖尿病肾病患者 60 例为 B 组，这三组均使用罗氏 cobas c702 全自动生化分析仪及其原装试剂对 β2 微球蛋白，胱抑素 C 及尿微量白蛋白进行检测，对这三组 β2 微球蛋白，胱抑素 C 及尿微量白蛋白的结果及其阳性率进行比对，并行相关性分析。
结果 B 组 β2 微球蛋白，胱抑素 C 及尿微量白蛋白的结果明显高于对照组与 A 组，A 组 β2 微球蛋白，胱抑素 C 及尿微量白蛋白的结果明显高于对照组，差异均具有统计学意义（P＜0.05），三者联合检测各组患者阳性率均高于 β2 微球蛋白，胱抑素 C 及尿微量白蛋白单独检测，差异具有统计学意义（P＜0.05），经分析，β2 微球蛋白，胱抑素 C 及尿微量白蛋白水平与糖尿病肾病发展进程呈正相关。
结论 β2 微球蛋白，胱抑素 C 及尿微量白蛋白三者联合检测可提高糖尿病肾病的阳性检出率，有助于诊断早期糖尿病肾病，为治疗方案的确定提供参考依据。

PU-2251

慢性乙肝患者 Q-HBsAg、HBV-DNA（内标法）与 ALT 联合的临床价值

陈敏静
广东省人民医院

目的 回顾性分析慢性乙型肝炎（CHB）患者乙肝表面抗原定量监测（HBsAg quant，Q-HBsAg）、乙肝病毒核酸检测 HBVDNA（内标法）、乙肝 e 抗原（HBeAg）和丙氨酸氨基转移酶（ALT）的相关性及其应用价值。
方法 收集 89 例慢性乙型肝炎患者的 Q-HBsAg、HBeAg、HBVDNA（内标法）和 ALT 共 4 个检测指标，根据 HBeAg 结果其分为 HBeAg 阳性组和 HBeAg 阴性组。采用 Spearman 秩相关分析对 Q-HBsAg、HBVDNA（内标法）和 ALT 进行相关性分析；采用 Wilcoxon 秩和检验对 HBeAg 阳性组和 HBeAg 阴性组的 Q-HBsAg、HBVDNA（内标法）和 ALT 进行对比分析；再将 HBeAg 阳性组的 HBVDNA（内标法）数据分为 HBVDNA＜20000IU/ml 和 HBVDNA≥20000IU/ml，HBeAg 阴性组的 HBVDNA（内标法）数据分为 HBVDNA＜2000IU/ml 和 HBVDNA≥2000IU/ml 进行比较，并作 ROC 曲线进行分析。

结果 通过分析得出 Q-HBsAg、HBVDNA（内标法）和 ALT 之间存在正相关性；在 HBeAg 分组比较中只有 Q-HBsAg 在 HBeAg 阳性和阴性组中有显著差异，其余无显著差异；而 HBeAg 阳性组的 ALT 在 HBVDNA 分组比较中有显著差异，HBeAg 阴性组的 Q-HBsAg 在 HBVDNA 分组比较中有显著差异。

结论 CHB 患者的 Q-HBsAg、HBVDNA（内标法）和 ALT 均有一定的相关性，在 HBeAg 阳性的患者中，ALT 能一定程度反映 HBVDNA 载量，适用于无核酸检测时，对患者病情的判断。Q-HbsAg 对判断 HBeAg 阴性的患者 HBVDNA 的载量会相对准确。

PU-2252

Electrochemical detection of methotrexate in serum sample based on the modified acetylene black sensor

Ziwen Deng、Hui Li、Qingwu Tian、Yusun Zhou、Xiaomin Yang、Yang Yu、Bing Jiang、Yinghua Xu、Tingting Zhou
The Affiliated Hospital of Qingdao University

A novel acetylene black (AB) sensor modified with stearyltrimethylammoniumbromide (STAB) was fabricated and applied to the determination of methotrexate (MTX) in serum. For the strong adsorption of STAB and the high catalytic capacity of AB, the prepared sensor performed better adsorption and electrochemical catalysis capacity compared with acetylene black paste electrode (ABPE). Several factors affecting the performance of the sensor, such as the construction of the sensor and the parameters affect the electrochemical catalysis were optimized carefully on sequences in this study. The prepared sensor showed favorable performance in the determination of MTX with the linear range of 0.005 μM to 7.0 μM and the detection limit of 3.07 nM. Furthermore, the fabricated sensor exhibited good stability and repeatability, which was of importance in the electrochemical detection. Finally, the established electrode was employed in the detection of MTX in real sample of serum, which demonstrated the reliable and accurate of the prepared method. It is obvious that the prepared sensor existed great potential in the determination of MTX, which could provide a new approach for the fast and low-coat detection for MTX.

PU-2253

Comparison of MPL-ANN and PLS-DA models for predicting the severity of patients with acute pancreatitis: an exploratory study

Xinrui Jin[1]、Zixuan Ding[1]、Tao Li[1]、Jie Xiong[2,3]、Gang Tian[1]、Jinbo Liu[1]
1. Affiliated Hospital of Southwest Medical University
2. 西南医科大学
3. 成都军区总医院

Objective Acute pancreatitis (AP) is a common inflammatory disorder that may develop into severe AP (SAP), resulting in life-threatening complications and even death. The purpose of this study was to explore two different machine learning models of multilayer perception-artificial neural network (MPL-ANN) and partial least squares-discrimination (PLS-DA) to diagnose and predict AP patients' severity.

Methods The MPL-ANN and PLS-DA models were established using candidate markers from 15 blood routine parameters and five serum biochemical indexes of 133 mild acute pancreatitis (MAP) patients, 167 SAP (including 88 moderately SAP) patients, and 69 healthy controls (HCs). The independent parameters and combined model's diagnostic efficiency in AP severity

differentiation were analyzed using the area under the receiver operating characteristic curve (AUC).
Results The neutrophil to lymphocyte ratio (NLR) is the most useful marker in 20 parameters for screening AP patients [AUC = 0.990, 95% confidence interval (CI): 0.984–0.997, sensitivity 94.3%, specificity 98.6%]. The MPL-ANN model based on six optimal parameters exhibited better diagnostic and predict performance (AUC = 0.984, 95% CI: 0.960–1.00, sensitivity 92.7%, specificity 93.3%, accuracy 93.0%) than the PLS-DA model based on five optimal parameters (AUC = 0.912, 95% CI: 0.853–0.971, sensitivity 87.8%, specificity 84.4%, accuracy 84.8%) in discriminating MAP patients from SAP patients.
Conclusion The results demonstrated that the MPL-ANN model based on routine blood and serum biochemical indexes provides a reliable and straightforward daily clinical practice tool to predict AP patients' severity.

PU-2254

79 例 2 型糖尿病新发患者检测 HbA1c 和血脂四项水平分析

黄继伟
自贡市第一人民医院

目的 探究糖化血红蛋白（HbA1c）联合血脂四项检测水平，在 2 型糖尿病（T2DM）新发患者病情评估中的应用价值。
方法 选取四川省自贡市第一人民医院在 2020 年 1 月～12 月治疗住院的 79 例 T2DM 新发患者（实验组），以及 79 例同期在本院体检的健康志愿者（对照组）作为研究对象。两组均予以 HbA1c 和血脂四项检测，采用独立样本 t 检验比较组间差异，Pearson 双变量回归分析实验组 HbA1c 与血脂四项指标的相关性，并计算单独与联合检测的阳性率。
结果 实验组 HbA1C、CHOL、TG 和 LDL-C 检测水平均高于对照组，HDL-C 检测水平低于对照组，组间差异均有有统计学意义（P＜0.05）。CHOL、TG 和 LDL-C 检测水平与 HbA1C 检测水平呈正相关（r 值分别为 0.65，0.72，0.49，P 值分别为 0.027，0.011，0.039），HDL-C 检测水平与 HbA1C 检测水平呈负相关（r 值为-0.51，P 值为 0.032）。单独检测 HbA1C 和血脂四项的阳性率分别为 69.62%（55/79）和 60.76%（48/79），均低于 HbA1c 联合血脂四项检测的阳性率 94.94%（75/79）,比较差异有统计学意义（P＜0.05）。
结论 T2DM 新发患者显示出 HbA1c 和血脂四项血清水平的改变。T2DM 患者中 HbAlc 水平与血脂各项指标具有一定的相关性。联合检测 T2DM 新发患者的 HbAlc 及血脂四项水平，对 T2DM 患者的病情诊断和控制、疗效观察等方面、临床诊治方案的制定提供可靠支持依据，具有非常重要的意义。

PU-2255

一例异常微量元素铜检测结果分析

陈振朋
西安金域医学检验所有限公司

目的 铜是人体必需微量元素之一，其主要的生物学功能为将肠上皮细胞吸收的二价铁转化为三价铁，从而实现铁在血液里的运输。但是，体内铜含量过高也会对机体产生危害，甚至危及生命。因此监测体内铜含量，尤其是铜相关行业从业人员体内铜含量，及时发现及时干预非常重要。
方法 本患者送检样本为全血五元素(包括铜、锌、钙、镁、铁)，使用检测方法为电感耦合等离子体质谱法。
结果 结果显示该患者铜含量为 20000ug/L（参考范围：720-1750ug/L），其他元素未见异常。患者年龄 55 岁，性别男性。对原样本进行复查后，结果符合。与临床沟通，该患者从事铜冶炼工作

30 年，临床表现有肺部造影，神经炎，神经衰弱，咯绿色痰，轻微发热，细菌培养未检出致病菌。首先患者有肺部造影，可以判断患者体内过多的铜是通过呼吸道吸收，若是胃肠道，则有胃肠道表现，比如食欲不振、腹痛腹泻，同时大量的铜从肠上皮细胞被动扩散进入体内，会导致肠上皮破坏，其他元素吸收障碍，含量减低。其次金属元素经呼吸道吸收时会有类流感样发热表现，称之为金属热。结合以上分析结果及患者从事行业，判断该患者为慢性职业性铜中毒。

结论 慢性职业性铜中毒因患者呼吸道铜屏障已破坏，因此治疗前首先需脱离目前从事行业。服用铜螯合剂治疗，同时可使用可的松加速肾对铜的清楚。另外金属元素中毒时，在治疗之前，首先需要确定中毒的来源，只要及时脱离污染源，治疗方可有效。

福州地区人群血清游离脂肪酸参考区间的建立

石安然
福建医科大学附属协和医院

目的 建立福州地区人群血清游离脂肪酸的参考区间，并比较不同性别之间、不同年龄层之间血清游离脂肪酸浓度有无差异性。

方法 收集选取 2016 年 1～9 月于福建医科大学附属协和医院检验科体检中心体检的健康人群血清游离脂肪酸浓度资料共 1212 例进行统计分析。

结果 福州地区健康人群血清游离脂肪酸 95%参考区间为 0.12～0.80mmol/L,性别因素对于血清游离脂肪酸浓度差异有统计学意义（$p<0.05$），男性 95%参考区间为 0.10～0.80mmol/L，女性 95%参考区间为 0.14～0.83mmol/L，女性血清游离脂肪酸浓度较男性高；而年龄层分布在男性或者女性皆对血清游离脂肪酸浓度差异没有统计学意义（$p>0.05$）。

结论 已建立福州地区血清游离脂肪酸浓度参考区间。本研究表明性别因素对于血清游离脂肪酸浓度差异有统计学意义，而年龄层分布在男性或者女性皆对血清游离脂肪酸浓度差异没有统计学意义。

PU-2257

POCT 血糖仪与全自动生化分析仪检测血糖结果的比对分析

刘杭敏
福建医科大学附属协和医院

目的 通过福建医科大学附属协和医院各个病区 POCT 血糖仪和全自动生化分析仪检测血糖浓度的差异，以评估临床 POCT 血糖仪的可靠性以及纵向分析近三年血糖仪比对结果从而明晰床旁检验管理制度的完善程度。

方法 2018 年 3 月 7 日及 2018 年 4 月 4 号利用医院 LIS 系统收集五份 EDTA 抗凝全血（分别覆盖高、中、低三个浓度水平）用 40 台 POCT 血糖仪测定其浓度，设为试验组，随后用全自动生化分析仪测定其血糖浓度，为对照组。用 SPSS 软件比较两种测定血糖方法的差异。

结果 各个病区 POCT 血糖仪和全自动生化分析仪检测结果相关性良好，部分结果略低，二者比较的结果差异有统计学意义，但符合 ISO15179:2013 比对要求。

结论 临床各个病区 POCT 血糖仪和全自动生化分析仪相关性较好，可用于临床血糖监测和糖尿病患者筛查，但不可完全替代全自动生化分析仪对血糖的检测；近四年临床 POCT 血糖仪管理呈现出较大的上下波动形势，提示临床 POCT 血糖仪规范化管理有待加强。

PU-2258

New Method for the Diagnosis of Pheochromocytomas and Paragangliomas by Spot Urinary Free Metanephrines and 3-Methoxytyramine with Internal Reference Correction

Haoran Wang
Suzhou Dushu Lake Hospital
重庆医科大学

Background Quantification of urinary free normetanephrine (NMN), metanephrine (MN) and 3-methoxytyramine (3-MT) could be used to diagnose pheochromocytomas and paragangliomas (PPGLs). Our aim is to develop a simple and specific method for the detection of spot urinary free NMN, MN and 3-MT and its application in the diagnosis of PPGLs.
Methods Spot urinary free normetanephrine (NMN), metanephrine (MN), 3-methoxytyramine (3-MT) were detected by HPLC with fluorescence and combined with simultaneous detection creatinine (Cr) by ultraviolet detection. This assay enrolled 37 patients with PPGLs and 164 control subjects without PPGLs. The peak area ratios of NMN, MN, and 3-MT to Cr were established innovatively in the diagnosis of PPGLs. The chromatograms of spot urine sample from a patient with PPGLs and a healthy volunteer are shown in Figure 1.
Results The intra-day and inter-day coefficient variations for the spot urinary analytes were within 4.5% and 5.8%, respectively. The results are summarized in Table 1. For all analytes, the average recoveries were in the range of 90.7–118.0% with CVs ranging from 1.9% to 4.9%, as shown in Table 2. Using peak area ratios in the diagnosis of PPGLs, the sensitivities of NMN/Cr, MN/Cr and 3-MT/Cr were 94.6%, 91.9% and 86.5%, and the specificities were 96.3%, 93.9% and 82.3%, respectively. ROC curves are shown in Figure 2.
Conclusions The novel method using peak area ratios of spot urinary free NMN, MN and 3-MT to Cr is simple, sensitive and specific for the diagnosis of PPGLs.

PU-2259

Combination of serum biochemical indices for predicting early renal injury in patients with T2DM

Zhenqiang Huang[1]、Chunsheng Qu[1]、Wei Wang[1]、Haiya Zheng[1]、Yaping Ma[2]
1. Department of Clinical Laboratory, the Sixth Affiliated Hospital, Wenzhou Medical University, Zhejiang Province, China
2. 丽水市疾控中心

Aims Diabetic nephropathy (DN) is a common long-term microvascular complication in type 2 diabetes mellitus (T2DM) patients, and is easily ignored because of inconspicuous clinical symptoms, leading to irreversible renal function failure. Individual urine/serum marker has limitations and some combinational models have been proposed in recent years to predict early renal injury of T2DM patients. This study aims to find a new model based on serum biochemical indices for predicting early renal injury in T2DM.
Materials and Methods 588 T2DM patients were recruited in the present study and were divided into two groups based on urinary albumin/creatinine ratio (UACR): 294 T2DM patients had normal-dose albuminuria (Normal group, UACR<30mg/g) and the others had micro-dose albuminuria (Micro group, 30mg/g≤UACR≤300mg/g). The two groups had similar age- and gender- distribution. Serum biochemical indices were measured with AU5800 automated bio-analyzer. In addition, 142 T2DM patients (89 cases for Normal group and 53 cases for Micro group) were enrolled for further diagnostic test.
Results GLB (serum globulin), TP (serum total protein), TG (triglycerides), BUN (blood urea nitrogen), Scr (serum creatinine), ADA (adenosine deaminase) and MAO (monoamine oxidase)

were significantly increased in Micro group compared with that of Normal group, but ALT (alanine transaminase) and GPDA (glycylproline dipeptidyl aminopeptidase) were statistically decreased. GLB (r=0.278, p<0.001), TP (r=0.175, p<0.001), TG (r=0.094, p=0.022), BUN (r=0.099, p=0.016), Scr (r=0.115, p=0.005) and ADA (r=0.221, p<0.001) had positive correlations with UACR, and GPDA (r=-0.116, p=0.005) had a negative relationship, however, MAO (p=0.181) and ALT (p=0.061) had no statistical significant correlations. Binary logistic regression showed that the predictive probability of early renal injury (P) could be calculated by the regression equation Ln (P/(1-P)) = -4.403 + 0.113 GLB + 0.023 Scr + 0.083 ADA - 0.018 GPDA. The AUC of the equation was 0.715 (p<0.001, 95% CI: 0.674-0.756), and the optimal critical value of that was 0.454, with 72.7% predictive sensitivity and 60.5% predictive specificity, showing highest AUC and the optimal sensitivity and specificity, compared with individual serum biochemical markers. This optimal critical value got 71.7% actual sensitivity and 59.6% actual specificity for the equation with diagnostic test.
Conclusions The new model could be used for predicting early renal injury of T2DM patients to prevent clinicians from misdiagnosis.

PU-2260

Relationships between TyG and liver enzymes in MAFLD: a retrospective cross-sectional study

Zhi Liu、He He、Yuzhao Dai、Lidan Yang、Shenling Liao、Zhenmei An、Shuangqing Li
West China Hospital of Sichuan University

Background The triglyceride and glucose index (TyG) was a new combination of fasting plasma glucose (FPG) and triglyceride (TG), which was found to be a substitude marker of insulin resistance. We aimed to investigate the relationship between TyG and liver enzymes in order to recognize individuals at risk for MAFLD and better diagnose it.
Methods A retrospective cross-sectional study was carried out in West China hospital of Sichuan University and 248 people (109 Metabolic-Associated Fatty Liver Disease (MAFLD) and 139 Non-MAFLD) were included. Biochemical indexes from blood were measured. MAFLD was diagnosed by Ultrasound.
Results Serum ALT, AST, GGT and TyG were higher in MAFLD group than Non-MAFLD. The correlation coefficients of TyG and ALT, AST, GGT were 0.556, 0.509 and 0.555 respectively (all p<0.01). Through binary logistics regression analysis, the odds ratio of ALT and TyG were 1.146 (95%CI: 1.090-1.205) and 17.389 (95% CI: 4.133-73.158) after adjusting age and gender. In addition, the combination of age, gender, BMI, ALT and TyG had a greater diagnostic efficiency for MAFLD. MAFLD with diabetes mellitus (DM) or Hyperlipidemia (HPL) expressed a higher level of TyG than MAFLD alone, both of them differed from the control group in TyG.
Conclusions TyG has moderate relationship with liver enzymes and is a potential risk factor for MAFLD. The combination of age, gender, BMI, ALT and TyG improves the diagnostic capability of MAFLD.

PU-2261

高海拔地区居民红细胞代谢相关血清学指标分析

刘治娟[2]、邹雨桶[1]、刘小星[3]、田丽萍[4]、李洪雷[1]、侯立安[1]、马超超[1]、王丹晨[1]、羊红燕[2]、邱玲[1]
1. 中国医学科学院北京协和医院检验科
2. 西藏自治区人民医院检验科
3. 西藏阿里地区人民医院检验科
4. 西藏林芝地区妇幼医院检验科

目的 探讨西藏地区居民红细胞代谢相关血清学指标分布及主要的影响因素，建立西藏地区相关指标的参考区间。
方法 2016 年 9 月至 2018 年 8 月，采用标准调查问卷整群随机抽取西藏阿里地区、拉萨市、日喀则市和林芝市人群 1615 名，测定血常规、血清铁(Serum Iron ,SI)、未饱和铁(Unsaturated iron binding capacity,UIBC)、铁蛋白(Ferritin, FER)、转铁蛋白(Transferrin ,TRF)、叶酸(folic acid ,FA)、维生素 B12(Vitamin B12,Vit B12)，换算转铁蛋白饱和度(Transferrin saturation, TSAT)等指标。
结果 西藏地区男性 SI、TSAT、FER 水平显著高于女性，而 TRF、FA、,UIBC 水平则显著低于女性。SI、TRF、FER 和 Vit B12 呈现随海拔降低而降低的趋势，TRF 和 UIBC 在拉萨和日喀则地区中呈现最高分布水平。TRF 和 UIBC 呈现出随年龄升高而降低的趋势，而 FER 则呈现随年龄升高而升高的趋势，Vit B12 在 30-39 岁的年龄组中呈现最高分布水平。FA、Vit B12 和 SI 的分布与饮食密切相关。与行业标准相比，西藏地区男性 SI 的参考区间明显偏低，女性 SI 的参考区间分布更宽。
结论 高海拔地区居民铁代谢指标存在生理性差异，与平原地区分布也存在不同，应针对西藏地区建立铁代谢指标的参考区间。

PU-2262

血脂与糖化血红蛋白检测应用于糖尿病诊断的意义研究

吴萍萍
上海迪安医学检验所有限公司

目的 对糖尿病诊断中的血脂与糖化血红蛋白检测应用价值进行分析，为糖尿病的临床诊断实践提供参考。
方法 对 2019 年 1 月到 2019 年 12 月期间的 60 例糖尿病患者及 60 例健康体检人群的血液样本进行血脂与糖化血红蛋白检测，对比两组人群的血脂与糖化血红蛋白检测结果。
结果 与健康体检人群相比较，糖尿病患者的糖化血红蛋白及甘油三脂、血清总胆固醇、低密度脂蛋白胆固醇明显更高，而高密度脂蛋白胆固醇则显著更低，各项指标对比差异均具有统计学意义。
结论 在糖尿病的诊断中，血脂与糖化血红蛋白联合检测具有较高的应用价值，能够辅助准确筛查、诊断糖尿病患者，值得加强推广。

PU-2263

大庆市 603 例孕妇血清维生素 A 与 25- 羟基维生素 D 水平调查分析

谢曙光、李玲
广州金域医学检验中心

目的 分析大庆市孕妇血清维生素 A（VitA）、 25- 羟基维生素 D（25-OH-D）水平，为大庆地区孕妇孕期合理补充维生素提供科学依据。
方法 通过分析 2019 年 1 月-12 月大庆市 603 例孕妇血清样本送往本中心实验室用质谱方法检测维生素 A、25- 羟基维生素 D（25-OH-D）的实验数据。
结果 603 例调查对象中，维生素 A、D 在不同年龄、不同孕期、不同季节均有不足及缺乏。VitA 在 30 岁以下与 30 岁以上两组平均水平差异有统计学意义（P=0.003），其中 30 岁以下 VitA 不足及缺乏占比 19.94%，30 岁以上不足及缺乏占比 2.83%。VitA 在孕早期、孕中期、孕晚期进行两两比较，孕中期与孕晚期孕妇 VitA 平均水平差异有统计学意义（P=0.032），在孕晚期平均水平最低，其他组间无差异。VitA 不同季节进行比较，组间差异无统计学意义（P＞0.05），夏季 VitA 平均水平最低，冬季平均水平最高；25-OH-D 平均水平在 30 岁以下与 30 岁以上两组差异无统计学意义（P＞0.05），不同年龄组 25-OH-D 不足及缺乏差异无统计学意义（P＞0.05）。不同孕期 25-OH-D 平均水平进行比较，组间差异均有统计学意义(P＜0.05)，其中孕早期平均水平（11.21±5.81ng/mL）最低，孕中期平均水（19.65±10.07ng/mL）平其次，孕晚期平均水平（23.22±10.78ng/mL）最高。25-OH-D 平均水平在不同季节进行比较，春季与秋季组间差异有统计学意义（P＜0.05），春季平均水平（16.64±10.33ng/mL）最低，秋季平均水平（21.02±17.96ng/mL）最高，其他组间差异无统计学意义（P＞0.05）。
结论 大庆市孕妇维生素 A、D 平均水平存在不同程度的缺乏，应加强对维生素 A、D 的监测，合理补充维生素 A、D。

帕金森病血清标志物的研究进展

胡元慧
武汉大学人民医院

帕金森病(Parkinson’s disease，PD)是一种复杂的神经退行性疾病，目前无治愈手段。该病面临无法早期诊断和难以预测疾病进展等困难。目前为 PD 早期诊断和治疗寻找可靠生物标志物受到人们关注，本文就 PD 生物标志物综述最新进展。

PU-2265

基于随机森林的空腹血糖受损诊断模型建立及验证

李迪
武汉大学人民医院

目的 构建并验证糖尿病预测模型。
方法 收集信息化数据库中空腹血糖小于 7.00 mmol/L 的患者，排除信息不全或 BMI 极度异常(BMI<15 kg/m2 或 >55 kg/m2) 的患者。最终纳入训练集 9045 例，同时纳入临床特征与之匹配的验证集 3562 例。用随机森林在训练集数据中对变量进行重要性排序，筛选变量并构建糖尿病预测模型同时进行验证。

结果 训练集与验证集的临床特征中各个变量均匹配良好（P>0.05）。训练集中，随访时间跨度为2.00-5.71 年，随访期间糖尿病共发生 61 例（6.74‰）；验证集中，随访时间跨度为 2.00-5.65 年，随访期间糖尿病共发生 20 例(5.61‰)。根据平均准确度下降程度（Mean Decrease Accuracy）对自变量重要性进行排序，用赤池信息量(AIC)准则和贝叶斯信息量(BIC)准则对模型进行筛选得出模型包含是 Change in FPG, FPG 和 Age 三个变量。在内部验证中，模型的 C 指数为 0.921，Brier Score 为 0.006，十折交叉验证平均 AUC 为 0.915；在外部验证中，模型总 C 指数为 0.921，按照预测概率分组后随着样本量下降 C 指数有所降低，但总体上仍较高。模型的 Brier Score 为 0.005。十折交叉验证平均 AUC 为 0.960。反应了本研究模型有极高的准确性。
结论 本研究建立的预测模型对糖尿病患病风险有很好的预测能力。

PU-2266

老年脓毒症患者血清降钙素原、前白蛋白和乳酸检测及临床价值

胡元慧
武汉大学人民医院

目的 探讨降钙素原（PCT）、前白蛋白（PA）和乳酸（Lac）对老年脓毒症的临床价值。
方法 回顾性研究 2019 年 1 月 1 日至 2019 年 11 月 1 日在武汉大学人民医院诊治的脓毒症患者共 81 例，按照疾病程度分为脓毒症组（28 例），严重脓毒症组（35 例）及脓毒症休克组（18 例），和同期 67 例健康人做对照，分别测定 PCT、PA 和 Lac 水平，对其临床价值进行分析。计量资料采用单样本 Kolmogorov-Smirnov 法检验各组数据是否符合正态性，正态资料多组间比较采用方差分析，进一步两两比较采用 LSD-t 检验；非正态分布资料多组间比较采用 Kruskal-Wallis H 检验，两两比较采用 Mann-Whitney U 检验。
结果 脓毒症组 PCT 和 Lac 组检测结果水平明显高于对照组，脓毒症组 PA 检测水平明显低于对照组；脓毒症组 PCT、PA 和 Lac 水平和对照组相比，差异具有显著统计意义（P<0.05）；不同指标 PCT、PA 和 Lac 水平变化情况相关性分析，PCT 和 Lac 水平与 PA 水平均呈负相关（r=-0.666、-0.489），PCT 和 Lac 水平成正相关（r=0.492）；严重脓毒症及脓毒症休克组 PCT、Lac 水平高于脓毒症组，差异有统计学意义（P<0.05）；严重脓毒症及脓毒症休克组 PA 水平低于脓毒症组，差异有统计学意义（P<0.05）。
结论 PCT、PA 和 Lac 水平有助于评估脓毒症病情危重程度。

PU-2267

酒精性肝病患者血睾酮和雌二醇水平的变化观察

谭扬
宜宾市第一人民医院

目的 观察酒精性肝病（alcoholic liver disease ALD）患者血清中睾酮（testosterone，T）和雌二醇（estradiol，E2）水平的变化。
方法 对长期嗜酒者、正常健康者进血清睾酮（T）和雌二醇（E2）、丙氨酸氨基转移酶(ALT)、天门冬氨酸氨基转移酶(AST)、γ-谷氨酰转肽酶(GGT)、外周血白细胞（WBC）和红细胞平均体积(MCV)进行检测。
结果 在 269 例嗜酒者中符合诊断 ALD（A 组）者 75 例，占 27.9%；其余者为嗜酒组（B 组）。A 组的血清 T（12.8±6.57 ）较 B 组（23.8±9.62 ）和对照组的 T（29.7±10.52 ）都降低（p＜0.001）；B 组的血清 T（23.8±9.62 ）较对照组的 T（29.7±10.52 ）水平低(p＜0.001）。A 组的血清 E2 水平（237.4±109.46）较 B 组的血清 E2 水平（133.5±66.15）和对照组的 E2 水平（128.30±54.77）明显增高(p＜0.001），B 组的 E2 水平高于对照组（p＞0.05）。

结论 嗜酒者和酒精性肝病患者血清睾酮（T）均水平降低，而在酒精性肝病患者中血清雌二醇（E2）水平增加高，嗜酒者和对照组血清雌二醇（E2）水平变化无显著差异，说明慢性酒精中毒对男性睾丸功能有一定的影响。

PU-2268

急性呼吸窘迫综合征伴严重乳酸酸中毒 1 例并文献复习

路尧、刘辰庚、王培昌
首都医科大学宣武医院

急性呼吸窘迫综合征（ARDS）和严重乳酸酸中毒（LA）都是临床上较常见的极危重症，病死率为 35%~50%[1-2]。ARDS 一旦合并 LA，其病死率将成倍增加，且预后与乳酸水平呈负相关[3]。乳酸酸中毒多数被报道为糖尿病的并发症，病死率高。国内关于 ARDS 合并 LA 的病例报道比较罕见，本例患者是本院收治的一位无既往糖尿病史，ARDS 合并 LA 的急重症患者。

PU-2269

一例使用体外膜肺氧合的重症肺炎患者乳酸变化的分析

褚怡铭、刘辰庚、王培昌
首都医科大学宣武医院检验科

在我国重症肺炎（severe pneumonia，SP）和是临床上比较常见的及危重症[1]。血乳酸是血气分析的一个重要指标，乳酸持续升高与病死率有明显的相关性。国内关于重症肺炎合并乳酸酸中毒的病例报道较少，本文分析我院一例使用体外膜肺氧合的重症肺炎合并乳酸酸中毒患者的乳酸变化情况。肌肉溶解使乳酸升高，抑制糖异生，减少肝和肌肉对乳酸的摄取，减少胃排酸功能，而减少乳酸的去路，因而乳酸堆积[5]；pO2 和 O2Sat 两个指标下降，提示机体处于低氧状态，组织细胞糖酵解增强，导致乳酸浓度升高 [6] ；体外膜肺氧合（extracorporeal membrane oxygenation，ECMO）的介入可使血气分析结果中仅 pO2 和乳酸结果异常，应予以重视。
本病例提示，使用 ECMO 的重症肺炎患者可因肌肉溶解、组织细胞糖酵解等原因出现乳酸酸中毒。ECMO 在肌溶解时纠正乳酸酸中毒的效果有限，临床应结合病情作合理的判断与处理。

PU-2270

High Level of ACE in Serum May be an Indicator for Abnormal Glucose Metabolism and Diabetic Nephropathy Progression

Kangkang Huang、Yunlai Liang、Yating Ma、jiahui Wu、Bin Yi
中南大学湘雅医院检验科

Aim Diabetic nephropathy (DN) is one of the most common complication of type 2 diabetes mellitus (T2DM), renin-angiotensin-aldosterone system (RAAS) plays a vital role in the development of DN. Moreover, AngiotensinⅡ is the most functional material of RAAS and angiotensin converting enzyme (ACE) is the key enzyme in the process from AngiotensinI to AngiotensinⅡ. Therefore, we were interested in the variation of ACE concentration in DN patients' plasma.

Methods A total of 155 participators were enrolled in this study, including 44 T2DM patients and 75 DN patients and 36 normal glycogen metabolism individuals in Xiangya Hospital of Central South University from August 2018 to February 2019. Serum levels of ACE, glycosylated hemoglobinA1c (HbA1c) and other indexes were detected with corresponding kits, and the data was analyzed with appropriate statistical Methods

Results ACE level in DN patients were significantly higher than T2DM patients and control. ACE also significantly correlates with Urine microalbumin (UmALB), blood urea nitrogen (BUN), HbA1c, urinary albumin-to-creatinine ratio (uACR), albumin (ALB), estimated glomerular filtration rate (eGFR). Meanwhile, BUN, HbA1c, UmALB, gender, ALB, eGFR were introduced into regression equation Y=2.839+0.648X1+2.001X2+0.003X3-6.637X4+0.416X5-0.134X6 (X1: BUN; X2: HbA1c; X3: UmALB; X4: gender; X5: ALB, X6: eGFR, R2=0.655). When divided DN group into subgroup, we found ACE level of advanced-stage DN patients elevated compared with early-stage DN patients.

Conclusion Higher serum ACE level could partly reflect abnormal glucose metabolism and renal dysfunction. Furthermore, high ACE serum level of T2DM patients may be an indicator for diabetic nephropathy progression.

PU-2271

Characterization of the chromatin accessibility in mouse Alzheimer's models

Yaqi Wang、Xiaomin zhang、Qiao Song、Yuli Hou、Jing Liu、Yu Sun、Peichang Wang
Xuanwu Hospital，Capital Medicine University

Background Previous studies showed that the pathological hallmarks of Alzheimer's disease (AD) are characterized by β-amyloid (Aβ) deposition, neurofibrillary tangles induced by phosphorylation of tau protein, the upregulation of inflammation and neuronal apoptosis, which involves the alteration of numerous genes. However, the molecular mechanisms of most genes participated in the pathways above remained unclear. Gene expression is associated with the transcriptional level which is decided by the chromatin accessibility. In this study, the landscape of chromatin accessibility was described to disclose the outline of the transcriptions of AD-associated metabolism and gene expression in an AD model mice.

Methods The assay for transposase-accessible chromatin by sequencing (ATAC-seq) was utilized to investigate the AD-associated chromatin reshaping in APPswe/PS1dE9 AD mouse model. The ATAC-seq data in the hippocampus of 8-month-old APP/PS1 mice was generated and the relationship between the chromatin accessibility and the gene expressions was analyzed in combination with RNA-seq. Gene ontology (GO) analysis was applied to facilitate elucidating the alteration of biological process and signaling pathways. In addition, critical transcription factors were identified and, the alteration of the chromatin accessibility was further confirmed using ChIP assays.

Results 1690 AD-associated chromatin accessible regions in the hippocampal tissues of APP/PS1 mice were identified. These regions were enriched in the signaling pathways included PI3K-Akt signaling pathway, Hippo signaling pathway, TGF-β signaling pathway and Jak-Stat signaling pathway which play essential roles in regulating of cell proliferation, cell apoptosis and inflammatory. GO analysis showed that many AD-associated biological processes declined including cellular response to hyperoxia and insulin stimulus, synaptic transmission, and positive regulation of autophagy. 1090 genes were found to be up-regulated, and 1081 genes were found to be down-regulated in the hippocampus of the AD model mice. Interestingly, enhanced ATAC-seq signal were found around 740 genes, of which 43 genes exhibited up-regulated mRNA level. Several most significantly increased genes were also identified, including Sele, Clec7a, Cst7 and Ccr6 which critically involved in the development of AD. In addition, numerous of transcription factors, including Olig2, NeuroD1, TCF4, NeuroG2 were found to enrich in the AD-associated accessible chromatin regions. Besides, the transcription-activating marks of H3K4me3 and

H3K27ac were increased in the promoters of Sele, Clec7a, Cst7 and Ccr6 gene. These results above indicated that the mechanism for the up-regulation genes could attribute to the enrichment of open chromatin regions by transcription factors and histone marks H3K4me3 and H3K27ac.
Conclusion Altogether, our study reveals that the alterations of chromatin accessibility might be an initial mechanism in AD pathogenesis.

PU-2272

脂毒性应激诱导 Bcl-2 蛋白失调致胰岛 β 细胞凋亡作用的研究

丘创华、钟丽红、彭紫元
深圳市第二人民医院

目的 探究脂毒性应激诱导 Bcl-2 蛋白失调致胰岛 β 细胞凋亡作用机制。
方法 利用 C57BL/6 小鼠构建 PUMA-/-（p53 upregulated modulator of apoptosis）小鼠，喂食高脂肪饮食。使用胶原酶 P 分离朗格汉斯小鼠胰岛，MIN6 细胞在补充有 10%FCS 的 DMEM 培养基中培养。将小鼠胰岛和 MIN6 细胞进行 FFA 或 MG132 处理，随后检测蛋白酶体活性，实时定量 PCR 和 Western Blot 检测 ATF4，Bip，Chop，Bcl-2，Bcl-XL 和 Mcl-1 表达水平，流式细胞术检测细胞死亡。
结果 FFA 棕榈酸酯可阻断泛素-蛋白酶体系统（UPS），并通过诱导 ER 应激和 Bcl-2 蛋白失调进而引起 β 细胞凋亡。棕榈酸酯和蛋白酶体抑制剂 MG132 在 β 细胞中诱导内质网应激，从而导致生存蛋白 Bcl-2，Mcl-1 和 Bcl-XL 的表达降低，且前体仅 BH3 的蛋白 PUMA 上调；萝卜硫素对 UPS 的药理作用减轻了 ER 的压力，上调了 Bcl-2 生存蛋白，保护 β 细胞免于 FFA 诱导的细胞死亡。
结论 靶向 UPS 和 Bcl-2 蛋白表达能有效预防 2 型糖尿病中 β 细胞死亡。

PU-2273

SAA 联合 CRP 在幼儿呼吸道感染疾病辅助诊断中的应用与分析

唐春进[1]、杨淑雅[2]、杨宇[3]
1. 靖江市妇幼保健院
2. 靖江市中医院
3. 常州市新北区三井人民医院

目的 分析 SAA 和 CRP 水平与幼儿呼吸道感染性疾病的相关性，探讨其在幼儿呼吸道感染性疾病诊断中的价值。
方法 选取靖江市中医院 2020 年 1 月~2020 年 12 月诊治的 134 例呼吸道感染患儿为研究对象，按照感染类型的不同将患儿分为细菌感染组（60 例）和病毒感染组（74 例）；选择 40 例健康儿童为对照组。检测并对比三组研究对象 SAA 和 CRP 的水平，分析其与幼儿呼吸道感染性疾病的相关性。
结果 细菌感染组 SAA 水平为 235.47±23.72、CRP 水平为 22.33±5.08、两者比值为 10.05±2.28；病毒感染组 SAA 水平为 298.63±29.88、CRP 水平为 10.97±1.37、两者比值为 27.21±5.36；非感染组 SAA 水平为 5.01±0.39、CRP 水平为 6.52±1.058、两者比值为 0.83±0.12。三组研究对象 SAA、CRP 水平及两者比值比较 ，细菌感染组和病毒感染组水平显著高于非感染组（$P<0.05$），数据差异具有统计学意义；病毒感染组的 SAA 水平及两者比值水平高于细菌感染组（$P<0.05$），数据差异具有统计学意义。
结论 SAA、CRP 水平及两者比值水平在幼儿呼吸道感染性疾病的鉴别诊断中具有重要的价值。

PU-2274

2000 例成年女性全血微量元素铁和铜结果分析

陈振朋、张维
西安金域医学检验所有限公司

目的 铜和铁同为人体必需微量元素，在维持人体健康方面发挥着无可替代的作用，了解人体内铜和铁的含量水平，为微量元素缺乏的补充提供重要依据。
方法 统计了 2000 例成年女性的微量元素铜和铁的结果，年龄段在 17 岁-40 岁之间，并对统计结果进行分类分析。
结果 2000 例成年女性其中，处于孕期的女性为 880 例，占比为 44.4%，非孕期的女性为 1120 例，占比为 56%。通过计算，处于孕期女性铁结果均值为 451.45mg/L，铜结果均值为 1225.52μg/L。处于非孕期女性铁结果均值为 483.97mg/L，铜结果均值为 897.35mh/L。处于孕期的女性铁元素结果明显低于非孕期女性，而铜元素明显高于非孕期女性。血液中，铁主要存在红细胞内，组成血红蛋白，参与氧气和二氧化碳的运输。在女性孕期，血容量增加，随着孕期延长，血容量呈递增式变化，最多时可增加总血容量的 20%，而血液红细胞增加无法与之匹配，导致单位体积内红细胞数减少，机体处于相对贫血状态。此时机体通过负反馈调节一方面刺激铁的吸收，促进骨髓造血，同时加强体内铁的运输。肠粘膜上皮细胞吸收的铁为二价铁，在血液中被转运必须转化为三价铁，而铜蓝蛋白是人体内唯一的亚铁氧化酶，可将二价铁氧化为三价铁，进而转运至骨髓造血，铜是铜蓝蛋白的功能成分。因此孕期女性铁水平相对降低，而铜水平相对偏高。
结论当机体铁缺乏时，在进行铁元素补充时，还应适当的增加铜元素的补充，以增强体内铁元素的转化运输作用。

PU-2275

血清 GP73、CXCL13 与肝纤维化指标联合检测对原发性肝癌的诊断价值

李章勇
郴州市第一人民医院

目的 探讨血清高尔基体蛋白 73（GP73）、趋化因子 13（CXCL13）与肝纤维化指标联合检测在原发性肝癌疾病诊断中的意义。
方法 选择 2018 年 1 月至 2019 年 12 月在我院接受肝胆外科手术治疗的 79 例原发性肝癌患者作为观察组，选择 70 例同期在本院体检中心接受体检的健康人群为对照组。检测并比较两组患者的血清 GP73、CXCL13 和肝纤维化指标，并使用 ROC 曲线确定各指标对肝癌诊断的临界值。
结果 观察组患者血清 GP73、CXCL13、III 型前胶原（PCIII）、层粘蛋白（LN）、IV 型胶原（IV-C）及透明质酸（HA）水平均明显高于对照组，差异有统计学意义（P＜0.05）。血清 GP73、CXCL13 对原发性肝癌诊断的临界值分别为 64 ng/ml 和 124.02 pg/ml。血清 PCIII、LN、IV-C、和 HA 对原发性肝癌诊断的临界值分别为 103.4 μg/L、121.8μg/L、97.9μg/L、和 105.2μg/L。联合检测血清 GP73、CXCL13 与肝纤维化指标（PCIII、LN、IV-C、和 HA）对早期原发性肝癌诊断的敏感度、特异度、准确率分别为 0.978、0.851 和 0.969。
结论 联合检测血清 GP73、CXCL13 与肝纤维化指标对早期原发性肝癌诊断的敏感度、特异度和准确度率均较高，具有较好的临床应用价值。

微量元素在弥漫性系统硬化症患者中的变化研究

刘征[2]、李霞[1]、王秀娟[2]、李锦[2]、刘姗姗[1]
1. 桂林医学院附属医院检验科
2. 桂林医学院

Objective The current study measure the serum K, Na, Cl, Ca, P, Fe, Cu, and Mg in patients with diffuse systemic sclerosis (dSSc).
Methods 51 dSSc patients were enrolled in this study, and healthy 106 participants with similar age and gender were used as control. We examined the serum trace elements in dSSc patients with or without pulmonary fibrosis.
Results The results demonstrated that serum K, Ca, P, and Mg were significantly increased in dSSc patients, while Cu was decreased. Serum Cu in dSSc patients with pulmonary fibrosis was significantly lower than that without pulmonary fibrosis.
Conclusion Our study provided evidence that serum K, Ca, P, Cu, and Mg were changed significantly in dSSc patients, and lower Cu was associated with patients with pulmonary fibrosis.

PU-2277

ICP-MS 检测全血硒元素的方法学建立与评价

陈振朋、赵婷
西安金域医学检验所有限公司

目的 本研究拟利用电感耦合等离子体质谱建立全血硒元素的精确检测方法，并对该方法进行多方面评价，以保证该方法的可行性与检测结果的准确性，为临床诊疗提供客观准确的依据。
方法 本研究所用样本来自金域医学检验中心，共 20 例样本。应用校准品为国家有色金属及电子材料分析中心硒单元素标准品。采用 Agilent ICP-MS7900 对硒元素进行分析。Agilent ICP-MS79 检测硒元素的方法有外标法和标准加入法两种方法。
结果 外标法验证硒重复性精密度时发现，重复性精密度 CV＞22.3％，检测回收率小于 70％，对仪器性能参数进行调整，未见改善。而采用标准加入法，即在配制标准溶液时，标准溶液中引入一定本底的全血样本，仪器性能参数同外标法，测试重复性精密度，CV＜3.33％。 使用加标回收法测试该方法的正确度，回收率可达到：99.68%，满足定量项目要求的 85％-115％；携带污染：分别选取一份高值和一份低值病人样本进行检测，求出所有低-低值的标准差 SD1，平均值 X1 以及所有高-低值平均值 X2，结果为 X2-X1＜3SD1，即携带污染不予考虑。检测限：空白样本连续测量 21 次，计算均值和标准差，以 3 倍的标准差和 10 倍的标准差作为该项目的检出限和检测低限，分别为 0.24 ug/L 和 0.81ug/L，检测的全血样本是经 20 倍稀释后测试，故将标准曲线最高浓度点作为该项目的检测上限，其检测限为 0.81-800 ug/L，满足临床需求。
结论 综上所述，硒元素测试不稳定，全血样本基质复杂，产生的基质效应对检测结果的准确性影响较大，使用标准加入法在标准溶液内引入一定体积的全血，可消除基质效应带来的影响，提高检测结果准确性。通过对建立的标准加入法方法学评价可知，该方法的准确度、精密度、检测限及携带污染均满足要求，表明本研究建立的全血硒检测方法具有优良的全血硒检测性能，可在临床硒元素的检测中大范围推广。

简述糖化血红蛋白检测的临床影响因素

岳耀玲
莘县第三人民医院

我国糖尿病发病率逐年增高。HbAlc 的水平与糖尿病的血糖控制情况及并发症有着密切的关系，是糖尿病监检测的重要指标。检测 HbAlc 的结果能够对糖尿病患者检测前 3 个月的血糖情况进一步了解，能够为糖尿病的诊断提供一定的数据参考及指导临床医师应用降糖药物。HbAlc 在糖尿病的诊断、治疗以及病情监测中起着不容忽视的作用。通过临床观察和查阅相关文献，对糖化血红蛋白检测的影响因素和临床探究进行分析，简述如下。

PU-2279

中枢性尿崩症合并高渗高血糖综合征病例的实验室分析

郭迎雪
吉林大学第二医院

目的 研究探讨中枢性尿崩症合并高渗高血糖综合征的临床特点，并与单纯的高渗高血糖综合征进行对比。
方法 回顾性分析我院 2018 年 9 月到 2019 年 9 月收治的单纯性高渗高血糖综合征的患者 12 例作为单纯组，分析中枢性尿崩症合并高渗高血糖综合征的患者 4 例作为合并组，分析两组患者的血压、年龄、性别及 BMI 等一般资料，分析比较两组患者治疗前后的血钠、血糖、渗透压及尿比重等指标。
结果 两组患者的性别、BMI、血 BUN/Cr、收缩压及舒张压等比较，差异无统计学意义（P＞0.05），单纯组患者的年龄显著高于合并组患者，差异具有统计学意义（P＜0.05）。两组患者治疗前，血糖、血钠、尿比重、血渗透压以及尿渗透压等比较，差异无统计学意义（P＞0.05）。经过扩容等对症治疗后，两组患者的血渗透压、血糖及尿渗透压均得到一定程度的改善，显著优于治疗前，差异具有统计学意义（P＜0.05），但是合并组患者的尿渗透压及尿比重显著低于单纯组患者，差异具有统计学意义（P＜0.05），合并组患者的血渗透压及血钠显著高于单纯组患者，差异具有统计学意义（P＜0.05）。
结论 中枢性尿崩症与高渗高血糖综合征在实验室检查以及临床表现上存在相似之处，但是高渗高血糖综合征的患者经过降血糖等治疗后，高血钠未被及时纠正，应该考虑高渗高血糖综合征合并中枢性尿崩症的可能。

中性粒细胞/淋巴细胞比值与 CysC、mAlb 联合检测对 2 型糖尿病肾病的诊断价值

程霏
徐州医科大学附属医院

目的 研究中性粒细胞与淋巴细胞的比值(NLR)在 2 型糖尿病肾病(T2DN)中的变化,探讨 NLR 与 T2DN 之间的关系。
方法 选择 2017 年 3 月至 2017 年 6 月在徐州医科大学附属医院就诊的 113 例 2 型糖尿病患者进行回顾性分析，按临床诊断分为单纯 2 型糖尿病组(DM)51 例，2 型糖尿病肾病组(DN）62 例，选取

同期健康体检者 22 例作为对照组，检测各组的中性粒细胞，淋巴细胞，NLR、尿微量白蛋白（mAlb）、血清胱抑素 C（CysC）。
结果 DM 组和 DN 组淋巴细胞水平低于对照组(P<0.01)，NLR、mAlb、CysC 水平明显高于对照组(P<0.01)；DN 组 NLR、mAlb、CysC 水平明显高于 DM 组(P<0.05)。
结论 中性粒细胞与淋巴细胞的比值可作为糖尿病肾病的参考指标，与 CysC、mAlb 联合检测对 2 型糖尿病肾病的诊断具有重要临床意义。

PU-2281

FOXC2 Attenuates LPS-Induced Cell Adhesion via Suppression of ICAM-1 Expression in HUVECs

Pan Li
Laboratory Medicine Center, Nanfang Hospital, Southern Medical University, Guangzhou, Guangdong, China.

Atherosclerosis is a chronic vascular inflammatory disease that involves diverse cell types and circulating regulatory factors, including intercellular adhesion molecule (ICAM)-1, a proinflammatory cytokine. Lipopolysaccharides (LPS) increase ICAM-1 expression and promote cell adhesion, but the mechanism is not clear. We found that LPS induced time- and dose-regulated upregulation of ICAM-1 expression and downregulation of forkhead box protein C2 (Foxc2) expression in human umbilical vein endothelial cells (HUVECs). Overexpression of Foxc2 significantly inhibited both LPS-induced ICAM-1 expression in HUVECs and LPS-induced adhesion of THP-1 cells to HUVECs. Foxc2 siRNA dramatically increased both LPS-induced ICAM-1 expression and LPS-induced adhesion of THP-1 human monocytes cells to HUVECs. We conclude that Foxc2 inhibited LPS-induced adhesion of THP-1 cells to HUVECs by suppressing ICAM-1 expression in HUVECs.

PU-2282

PIVKA-II Serves as a Potential Biomarker that Complements AFP for the Diagnosis of Hepatocellular Carcinoma

Honglei Feng、Ze Li、Qian Wei、Li Ren
Tianjin Medical University Cancer Institute and Hospital

Background Hepatocellular carcinoma (HCC) is one of the most common malignant tumors of the digestive system and has high morbidity and mortality rates. It is essential to search new biomarkers to improve the accuracy of early HCC diagnosis. Therefore, we evaluated the diagnostic value of prothrombin induced by vitamin K deficiency or antagonist- II (PIVKA-II) as a potential biomarker that complements α-fetoprotein (AFP) in HCC by detecting the serum PIVKA-II levels.
Methods Serum PIVKA-II levels were compared in 168 HCC patients, 150 benign liver disease patients and 153 healthy controls to investigate the PIVKA-II potential to be a HCC biomarker. Receiver operating characteristic curve (ROC) analysis was used to evaluate the value of PIVKA-II in the diagnosis of HCC and its complementary role of AFP. The correlation between serum PIVKA-II levels and clinicopathological characteristics was analyzed to study the value of PIVKA-II in assessing HCC progression and prognosis. Finally, the ability of PIVKA-II in assessing the surgical treatment effects of HCC was studied by comparing the pre- and post-operative serum PIVKA-II levels in 89 HCC patients.
Results Serum PIVKA-II levels in HCC patients were significantly higher than that in patients with benign liver disease and healthy controls. The PIVKA-II performance in the diagnosing HCC as

an individual biomarker was remarkable. The combined detection of PIVKA-II and AFP improved the diagnostic efficiency of HCC. PIVKA-II retained significant diagnosis capabilities for AFP-negative HCC patients. Significant correlations were found between PIVKA-II expression levels and some clinicopathological characteristics, including tumor size, tumor stage, tumor metastasis, differentiation degree and complications. PIVKA-II expression obviously decreased after surgical resection.
Conclusions PIVKA-II is a promising serum biomarker for the HCC diagnosis that can be used as a supplement for AFP. The combined diagnosis of the two markers greatly improved the diagnostic efficiency of HCC. The PIVKA-II levels in HCC patients were widely associated with clinicopathological characteristics representing tumor cell dissemination and/or poor prognosis. PIVKA-II can be used to evaluate the curative effects of HCC resection.

探索脂肪肝新型诊断标志物

赵艳华、夏君香、干伟
四川大学华西医院

目的 探索脂肪肝的危险因素，评价其作为脂肪肝新型诊断标志物的价值。
方法 纳入四川大学华西医院 2016 年 5 月至 2020 年 5 月期间明确诊断为脂肪肝的患者 2900 例，同期间健康对照患者 2700 例。收集患者一般资料、临床病理信息、血常规与生化等实验室检查结果。并计算 TG/HDL-C、RC（残余胆固醇）、Non-HDL-C、NLR(中性淋巴比）、PLR（血小板淋巴比）、LMR（淋巴单核比）、MHR（单核高密脂蛋白比）。采用两样本 Mann-Whitney U 检验、二元 logistic 回归分析 TG/HDL-C、MHR、NLR、PLR、LMR 比值与脂肪关系，利用 ROC 曲线评价作为脂肪肝新型诊断标准物的价值。
结果 脂肪肝患者 BMI 指数、ALT、AST、ALB、WBC、PLT 等实验指标与健康对照有显著差异（P＜0.05）。在调整性别、年龄、BMI 等混杂因素后，两组之间 TG/HDL-C、LMR 有明显差异（P＜0.001）；单多因素分析发现 TG/HDL-C、LMR 是脂肪肝的危险因素，OR 值分别为 3.375（3.002，3.795）、1.225（1.176，1.275）。ROC 曲线分析 TG/HDL-C、MHR、NLR、PLR、LMR 联合诊断脂肪肝的 AUC 面积为 90%。
结论 TG/HDL-C、LMR 是脂肪肝的独立危险因素，联合指标 TG/HDL-C、MHR、NLR、PLR、LMR 可作为脂肪肝新型诊断标准物。

PU-2284

外周血 SAA、Hs-CRP、CD64 指数联合检测在感染性疾病中的诊断价值

曾磊
南方医科大学珠江医院

目的 探讨联合血清淀粉样蛋白（SAA）、超敏 C 反应蛋白（HsCRP）和外周血中性粒细胞 CD64 指数检测在感染性疾病中的意义。
方法 选取 2019 年 1 月-5 月份，广州市珠江医院门诊和病房诊断为感染性疾病的患者，依据病原体不同分为病毒性感染感染（30 例），细菌性感染（30 例），选取同期健康体检人群作为对照组（30 例），分别检测各组的 SAA、HsCRP、CD64 指数的水平，分析在感染性疾病患者中 3 项指标水平变化及其在诊断感染性疾病中的效率。
结果 显示研究组患者 CD64 指数，SAA,hs-CRP 均明显高于对照组。

结论 1.CD64 指数、CRP、SAA 联合联测对细菌感染有良好的临床诊断价值，对诊断病毒感染的准确性低。2.SAA 和 hs-CRP 一起可以诊断细菌感染，但 SAA 在病毒感染时会升高，CD64 诊断细菌感染的特异性比其它两个指标好，但是敏感性欠佳，因此，以上三个指标联合检测，可以更好地辅助诊断感染性疾病。

PU-2285

毛细管电泳 HbA1c 检测系统在 HbE 病中的应用

林子沛
南方医科大学珠江医院

目的 探讨毛细管电泳与高效液相色谱法 HbA1c 系统相比的优势以及对诊断 HbE 病的应用价值。
方法 选取正常健康人静脉血标本 20 例，作为正常组。HbE 患者静脉血样本 10 例作为异常组。分别用毛细管电泳仪和高效液相色谱仪进行血红蛋白检测，记录数据并进行分析，运用统计学方法处理数据。
结果 正常组毛细管电泳法和高效液相色谱对于 HbA1c 检测相关性良好。异常组检测 HbA1c 两种方法存在差异，毛细管电泳法结果与实际血糖相符。毛细管电泳法能将 HbE 分离并定量。
结论 毛细管电泳不仅能满足日常糖化血红蛋白的检测，且与高效液相色谱法相比具有一定的优势，前者不受血红蛋白变异体的干扰，HbA1c 结果能与临床诊断相符，并且对 HbE 的诊断有一定的价值。

PU-2286

纯水机反渗透膜更换对生化结果的检测影响研究

梁少聪
南方医科大学珠江医院

目的 探究纯水机中反渗透膜更换对生化项目检测结果的影响
方法 在本院纯水机反渗透膜更换前后进行电阻率的记录，进行两个浓度生化质控物检测，分析电阻率的变化及生化项目检测是否受到影响。
结果 反渗透膜更换前后电阻率差异无统计学意义（$p>0.05$）。生化项目在更换反渗透膜前后的结果除外甘油三脂，均符合实验室质量目标。其中更换反渗透膜后甘油三脂结果升高，经分析与新反渗透膜携带干扰性物质相关。
结论 纯水机反渗透膜更换后应先进行持续制水排水，减少干扰性物质对检测结果的影响。

PU-2287

床旁即时检测 C 反应蛋白与特定蛋白检测比较及影响因素分析

欧锦霞、谢晓灵、陈恩中、吕亚梅、周韶松、潘沅
南方医科大学珠江医院

目的 评估床旁即时检测(Point of Care Testing，POCT)的 QR-1000 免疫比浊仪测定全血 C 反应蛋白（C-reactiveprotein,CRP）的可靠性，与常规方法全自动特定蛋白分析仪 BN ProSpec 检测血清比较，为 POCT 检测 CRP 质控提供依据。
方法 参照 EP15-A2、EP9-A2 文件，测定 QR-1000 仪（POCT）检测精密度；收集同时送检全血（POCT）和血清（常规方法）检测 CRP 的患者资料，比较两系统检测的差别、对临床判断的影响以及红细胞压积（HCT）、CRP 浓度及标本放置时间的影响。

结果 对于模拟样本，POCT 全血检测 CRP 精密度较血清差，CV 值随 CRP 浓度升高而降低；POCT 和常规方法测定血清 CRP 相关性好（r2=0.9844, P <0.001），结果具可比性；对于患者实测数据，HCT 为 0.42～0.46 时全血（POCT）与血清（常规方法）CRP 测定无显著性差异，患者 HCT 越接近设定值，两系统测定值越相近，校正后更具可比性；无论校正与否，POCT 法与常规法测定值均相关，但结果有显著性差异，且超出临床允许误差，POCT 高于常规**方法** (P<0.05)，结果不具可比性；如果用于临床炎症定性，两系统一致率较好（Kappa 值均≥0.75)，用于心血管事件风险定性评估，两系统临床判断一致率一般（0.4≤Kappa<0.75）。标本放置时间、CRP 浓度对结果影响小。

结论 POCT 全血与常规方法血清检测 CRP 结果不具可比性，当 HCT 偏离最佳理论值时 POCT 全血测定值必须校正；POCT 全血检测 CRP 适于临床炎症定性；POCT 全血 CRP 检测应严格遵循操作规程，建议与常规方法定期比对。

PU-2288

脑心清片对急性心肌梗死患者血清炎性因子水平影响

吕亚梅
南方医科大学珠江医院

目的 观察脑心清片对急性心肌梗死（AMI）后患者血清高敏 C 反应蛋白（hs-CRP）、肿瘤坏死因子-α（TNF-α）和白细胞介素 6（IL-6）的影响。

方法 将 66 例急性心肌梗死患者随机分为治疗组和对照组各 33 例，2 组均经常规治疗，治疗组在此基础上给予脑心清片治疗，1 个月后观察 2 组治疗前后血清 hs-CRP、TNF-α、IL-6 的水平。

结果 经过治疗后，治疗组可明显降低血清 hs-CRP 、TNF-α、IL-6 水平，差异有统计学意义（P<0.05）。

结论 在常规治疗基础上加用脑心清片治疗急性心肌梗死可以使血清 hs-CRP、TNF-α、IL-6 的水平显著降低，炎症反应减轻，从而改善心功能。

PU-2289

血清淀粉样蛋白 A 及 C 反应蛋白在痛风性关节炎中的临床价值

赖伟波
南方医科大学珠江医院

目的 探讨血清淀粉样蛋白 A 及 C 反应蛋白浓度在痛风性关节炎中的临床价值。

方法 选取 2018 年 9 月至 2019 年 2 月间住院风湿免疫科患者 90 例，其中 21 例诊断为类风湿性关节炎患者，14 例诊断为痛风性关节炎，13 例诊断为风湿性关节炎患者，22 例诊断为系统性红斑狼疮患者。比较各组患者血清 SAA、CRP 的浓度，并分析两项指标对该疾病诊断的相关性，对其疾病活动程度进行评估并比较其相关性。采用便利抽样法选取年龄性别成组匹配的健康体检成人 20 例作为对照组。

结果 急性期中，痛风组血清 SAA、CRP 表达水平显著高于对照组，且二者在活动期痛风组的水平均显著高于风湿组和 SLE 组；类风湿组中 SAA 和 CRP 水平虽高于对照组但低于痛风组，SAA 联合 CRP 的检测结果的灵敏度会高于单一项血清 SAA 或 CRP 检测的结果。

结论 1）痛风组血清 SAA、CRP 表达水平显著高于高于风湿组和 SLE 组；2），SAA 联合 CRP 的检测结果的灵敏度会高于单一项血清 SAA 或 CRP 检测的结果；3）SAA 联合 CRP 的检测表达水平可作为痛风性关节炎和类风湿性关节炎临床上的灵敏的检测指标

PU-2290

新型衰老标志物的发现及其与相关疾病的关联研究

韦钊
山东大学齐鲁医院

目的 目前的细胞衰老标志物均存在或多或少的局限性，这些衰老标志物虽然可以一定程度上指示衰老发生，但并不具有指示所有细胞衰老模式的普遍性和只存在于衰老细胞中的特异性。此外，可作为常规检测的衰老标志物更是匮乏。探索血液体液中的衰老标志物并研究其与衰老相关疾病的联系可为衰老相关疾病的检测和治疗提供新的思路和依据。
方法 有文献报导小鼠体内存在某一因子可激活 Wnt 信号通路并促进衰老相关表型。而人类中是否存在血液或体液中便于检测的类似指标有待我们进一步研究。我们将利用健康年轻个体及年老个体的血液或体液进行相关检测。
结果 我们发现多种细胞类型的复制衰老模式中存在共同上调的基因，通过对人体组织基因表达数据库的分析证实该基因在人体皮肤和皮下脂肪组织中的表达随年龄增长也显著升高。我们将进一步检测其在血液中是否表达并且与个体老化或某种衰老相关疾病是否存在相关性。与此同时，我们将对人类血液进行 RNA-Seq 检测，探索更多可能的检测指标。
结论 可能存在某些基因与个体老化或某种衰老相关疾病存在密切相关性。通过分析验证发现血液中的衰老标志物并研究其与衰老相关疾病的联系，将为老年性疾病提供尽早发现并提前缓解的可能性，将为人类生存质量的提高提供更好的理论基础及实际应用价值。

PU-2291

E3 泛素连接酶 CUL4B 减缓细胞早衰的机制研究

韦钊
山东大学齐鲁医院

目的 细胞衰老对于个体健康而言是一把双刃剑，既有利也有弊。活性氧（ROS）在多种类型的衰老模式中广泛上调，并促进细胞衰老进程，揭示细胞衰老进程中 ROS 的调控机制对于细胞衰老相关疾病的治疗具有重要潜在价值。我们的前期研究论证了 CUL4B 对 ROS 的调控作用，以及 CUL4B 减缓压力诱导细胞衰老的作用机制。进一步研究揭示细胞早衰进程中 CUL4B 的上游调控机制以及其中存在的反馈环仍非常重要。
方法 我们用 NHF 细胞构建衰老模型，通过病毒包装技术构建低表达和过表达 CUL4B 的细胞系，并使用多种细胞系进一步验证。检测 CUL4B 对 p53 蛋白及其靶基因的调控作用；通过 IP 检测 CUL4B 与 p53 蛋白的结合。预测 CUL4B 上游调控元件，通过 RT-PCR 初步验证上游调控元件是否影响 CUL4B 的转录水平，并通过 ChIP 实验以及荧光素酶报告基因实验验证上游转录因子对 CUL4B 的转录结合。
结果 CUL4B 在压力诱导的细胞衰老中显著下调。CUL4B 低表达强化压力诱导的细胞衰老，且该过程依赖于 ROS 水平的升高。压力刺激下，CUL4B 低表达促进 p53 磷酸化和靶基因表达。压力刺激后 CUL4B 与 p53 蛋白相互结合，并且 CUL4B 低表达减少了 p53 的泛素化。预测到有重要转录因子结合在 CUL4B 转录起始区域，并进一步验证了表达相关性。可能存在 p53-CUL4B 负反馈环。CUL4B 调控一系列 ROS 相关基因，这种调控的具体机制仍有待研究。
结论 前期研究已证实压力刺激后 CUL4B 介导 p53 泛素化，促进 p53 蛋白降解。进一步研究结果表明，CUL4B 受重要转录因子调控，且两者间存在重要反馈环。CUL4B 调控一系列抗氧化基因及促氧化基因的转录水平，预测存在共同的靶点，CUL4B 通过调控这一靶点影响一系列 ROS 相关基因。

PU-2292

胃泌素释放肽前体对小细胞肺癌的诊断效率

丁新
南方医学科大学珠江医院

目的 研究胃泌素释放肽前体(ProGRP) 在小细胞肺癌患者中辅助诊断、疗效评价和预测复发的价值。
方法 选择 50 例肺部良性病变患者，68 例非小细胞肺癌患者，74 例小细胞肺癌患者。收集所有患者血清胃泌素释放肽前体 (ProGRP)、鳞状细胞癌抗原(SCC-Ag)、神经元特异性烯醇化酶(NSE)、癌胚抗原(CEA)、细胞角蛋白 19 片段(CYFRA21-1)的测定结果。同时查阅所有患者病情变化情况，分析针对小细胞肺癌早期诊断、疗效评断以及预测复发的最佳指标。
结果 小细胞肺癌与肺部良性疾病血清 ProGRP 水平差异有统计学意义(P＜ 0.05) ,小细胞肺癌与非小细胞肺癌血清 ProGRP 水平差异有统计学意义（P＜ 0.05）。 ProGRP 在诊断小细胞肺癌中的 ROC 曲线下面积为 0.872 ，在疗效判断与预测复发方面，血清 ProGRP 水平与影像学检查结果提示病情变化相符率为 74.29%。
结论 血清 proGRP 水平对于小细胞肺癌辅助诊断、疗效评价和预测复发有重要意义。

PU-2293

中性粒细胞明胶酶相关脂质运载蛋白（NGAL）项目在 Cobas C702 生化分析仪的性能验证

邹梦雪
南方医科大学珠江医院检验医学部

目的 利用罗氏 Roche Cobas C702 全自动生化分析仪对中性粒细胞明胶酶相关脂质运载蛋白（NGAL）的性能指标进行验证。
方法 参考 CNAS-GL：2019，CNAS-GL037：2019 等文件，使用北京世纪沃德试剂，校准品及质控品对中性粒细胞明胶酶相关脂质运载蛋白的精密度，正确度，线性范围，参考区间，可报告范围进行数据统计分析验证。
结果 中性粒细胞明胶酶相关脂质运载蛋白（NGAL）两个水平精密度检测结果的批内变异系数与批间变异系数均低于 5%，精密度通过验证；正确度通过与外院奥林巴斯 AU5821 进行比对，两系统间结果偏倚小于声明的偏倚，偏倚可接受；线性通过验证，最大稀释倍数可稀释至 10 倍。
结论 罗氏 Cobas C702 全自动生化分析仪对中性粒细胞明胶酶相关脂质运载蛋白（NGAL）项目检测的精密度、正确度、参考区间及可报告等性能验证评价良好，符合临床需求。

PU-2294

探讨血清 CRP 和 CER 在肝癌和肝硬化鉴别诊断中的价值

蔡桂君
南方医科大学珠江医院

目的 比较肝硬化和肝癌患者的血清 CER,CRP 含量的差异，观察这些指标对疾病的诊断和鉴别诊断是否具有临床意义。
方法 选取标本来自 2016 年 10 月~12 月间门诊及住院的肝癌与肝硬化患者，对其进行超敏反应蛋白及铜蓝蛋白的检测。

结果 血清中铜蓝蛋白浓度的比较中肝癌组明显高于肝硬化组和健康对照组(P<0.05)，但肝硬化组和正常对照组之间无显著性差异（P=0.785）。血清中 C 反应蛋白浓度的比较中肝癌组和肝硬化组均明显高于正常对照组(P<0.05)而肝癌与肝硬化组之间则无显著差异(P=0.272)。其中两项指标同时增高中，肝癌组中比例为 73%，远大于肝硬化组 47%。只有 C 反应蛋白增高，铜蓝蛋白无明显增高的样本，肝硬化组占 22%。远大于肝癌组 4%。
结论 当两项指标均显著升高时，应该多考虑患肝癌的可能性，而只有 C 反应蛋白升高，铜蓝蛋白无明显升高时，则患肝硬化的几率增加。两项指标在肝癌和肝硬化中升高程度不同，有互补性。

PU-2295

罗氏 cobas E801 全自动免疫分析仪检测甲胎蛋白的性能验证

吴华仙
南方医科大学珠江医院

目的 验证罗氏 E801 全自动免疫分析仪电化学发光法检测血清甲胎蛋白的性能验证。
方法 参考美国临床和实验室标准化协会（NCCLS）系列文件和相关的国内行业标准等要求对 AFP 的精密度、正确度、分析测量范围和参考区间进行验证及评价。
结果 甲胎蛋白在浓度为 11.4μg/L 的批内和批间精密度分别为 0.75%和 0.97%，在浓度为 135μg/L 的批内和批间精密度分别为 0.6%和 0.1%，均小于标准要求；正确度验证达到行标文件要求，线性范围在 1.17-1132μg/L，a 值为 0.993 在 0.97-1.03 内，R2=0.9998;生物参考区间复合要求。
结论 罗氏 E801 全自动免疫分析仪电化学发光法检测 AFP 分析性能符合标准，适用于临床。

PU-2296

成都地区表面健康藏族人群N末端脑钠肽前体（NT-proBNP）水平调查

宋昊岚[1]、向生平[2]、潘柯宇[1]、李贵星[1]、秦莉[1]
1. 四川大学华西医院
2. 西藏自治区人民政府驻成都办事处医院（四川大学华西医院西藏成办分院）

目的 调查成都地区表面健康藏族体检人群 N 末端脑钠肽前体(NT-proBNP)水平。
方法 以 2019 年 9 月至 12 月成都市表面健康藏族体检者 425 名，汉族体检者 422 名为研究对象，应用秩和检验比较[1] 不同性别、年龄的藏汉两族人群 NT-proBNP 水平，并分析其影响因素。
结果 NT-proBNP 在人群中呈偏态分布，①表面健康藏族人群 NT-proBNP 水平为 65.23ng/L(35.39,118.6)，显著高于表面健康汉族人群 NT-proBNP 水平 26.52ng/L（10.44,52.85)，差异有统计学意义（P＜0.05）；[2] [SH3] ②成都地区表面健康藏族女性 NT-proBNP 水平显著高于男性，分别为 86.13ng/L（53.04，155.7），及 45.21 ng/L（22.21，75.92），差异有统计学意义（P＜0.05）。
结论 成都地区表面健康藏族人群 NT-proBNP 水平明显高于汉族人群，女性水平高于男性。建议对此特殊人群建立合适的参考区间，如使用厂家推荐参考区间评估心脏功能时，应注意结合其临床表现及影像学资料。
应该出统计学分析的方法
两组受试者年龄有统计学差异，这样比出来的结果不能说明问题 [SH3]补充对照组（汉族体检者）数据后，两组年龄无差异

PU-2297

肾素、醛固酮化学发光免疫法的性能验证及筛查原发性醛固酮增多症的价值

刘稚、任艳、陈涛、高洪蛟、何訸、阿衣李桂、刘英、安振梅、张玫
四川大学华西医院

目的 验证化学发光免疫法（CLIA）检测肾素、醛固酮的性能及筛查原发性醛固酮增多症（原醛症）的价值。
方法 根据美国临床实验室标准化协会相关文件验证 CLIA 检测肾素、醛固酮的精密度、线性范围和携带污染率。纳入 115 例疑似原醛症的患者，均采用 CLIA、放射免疫法（RIA）检测肾素和醛固酮，比较两种方法的相关性和对原醛症的筛查价值。
结果 CLIA 法检测肾素、醛固酮的精密度、线性范围和携带污染率均符合要求。在疑似原醛症患者中，CLIA 法和 RIA 法检测肾素、醛固酮和醛固酮/肾素（ARR）的相关系数分别为 0.904、0.858、0.845（P 均<0.001）。患者立位状态，ARR 为 5.635（ng/dL）/（ng/L）时，CLIA 法筛查原醛症灵敏度为 78.8%，特异度为 94.4%；ARR 为 14.085（ng/dL）/[ng/（mL·h）]时，RIA 法 ARR 灵敏度为 90.4%，特异度为 81.5%。卧位状态，ARR 为 5.64（ng/dL）/（ng/L）时，CLIA 法筛查原醛症灵敏度为 96.1%，特异度为 82.8%；ARR 为 38.976（ng/dL）/[ng/（mL· h）]时，RIA 法灵敏度为 92.2%，特异度为 75.9%。
结论 CLIA 法检测肾素、醛固酮的性能均满足临床要求，立位 ARR 初筛原醛症的特异性相比卧位 ARR 更高，敏感性较低。

PU-2298

降钙素原在儿童急性淋巴细胞白血病化疗后感染中的应用价值

周泽杰
南方医科大学珠江医院

目的 研究降钙素原（PCT）在儿童急性淋巴细胞白血病化疗后感染的诊断价值。
方法 选取在南方医科大学珠江医院出院诊断为急性淋巴细胞白血病（ALL）的儿童 113 例，分为 3 组，分别为重症细菌感染组 27 例、局部细菌感染组 69 例，非细菌感染组 17 例为对照组。采用固相免疫层析技术测定各组降钙素原（PCT）水平。
结果 重症细菌感染组、局部细菌感染组及非细菌感染组之间患儿降钙素原不全相等，具有统计学意义（P<0.05）。根据尤登指数， PCT>0.19 时为早期细菌感染的最佳诊断阈值，敏感度 62.5%, 特异度 100%。
结论 在儿童急性淋巴细胞白血病化疗后细菌感染诊断中，降钙素原较 CRP 特异度高，是一种具有较高特异性新型诊断指标；严重细菌感染时，降钙素原水平异常升高，且与感染的严重程度及预后有关。

PU-2299

基于激活型核酸适体探针用于外泌体的无标记检测

陈娟、邢金芳、石瑛、张琳琳、袁恩武
郑州大学第三附属医院（河南省妇幼保健院）

外泌体作为细胞外囊泡的一个重要亚群，携带蛋白质、脂质、核酸等重要的生物分子。同时其在细胞间信息交流中发挥着重要作用，并与肿瘤的发生和发展密切相关。因此，高灵敏、高选择性

的检测外泌体对肿瘤的早期诊断及治疗具有重要的指导意义。基于核酸适体对外泌体膜蛋白的特异性识别能力和 DNA 链置换反应，本文构建了一种构型转换的可激活核酸探针用于外泌体的无标记检测。在优化的实验条件下，线性范围为 5×10^5 到 5×10^7 particles/μL，最低检测限为 3.4×10^5 particles/μL。最后，该探针成功用于实际血液样品中外泌体的高灵敏和高选择性检测。

PU-2300

估算的肾小球滤过率在痛风分型中的诊断价值

苏镜
广州中医药大学第三附属医院

目的 探讨估算的肾小球滤过率（eGFR）在痛风分型中的诊断价值。
方法 根据纳入标准和排除标准选取原发性痛风性关节炎患者尿酸排泄减少型 204 例、尿酸生成增多型 80 例、尿酸代谢混合型 106 例、尿酸代谢其他型 32 例及健康对照组 107 例，收集其临床资料、实验室检查指标、血清标本及 24 小时尿液标本，AU5800 全自动生化分析仪检测患者的生化指标。方差分析 eGFR 在痛风分型组间差异，Pearson 回归分析 eGFR 与临床资料、生化指标关联性，线性相关分析 eGFR 与痛风分型诊断指标相关性，ROC 分析 eGFR 在痛风分型中的诊断价值。
结果 ①方差分析发现 eGFR 在尿酸排泄减少型组及尿酸代谢其他型组明显低于正常对照组，在尿酸代谢混合型中明显高于正常对照组；eGFR 在尿酸代谢混合型组、尿酸生成增多型组、尿酸排泄减少型组、尿酸代谢其他型组呈依次减低趋势。②Pearson 回归分析发现 eGFR 与 UUE 呈正相关性。③线性相关分析发现尿酸代谢混合型组、尿酸生成增多型组、尿酸排泄减少型组、尿酸代谢其他型组中 eGFR 与 UUE 呈正相关。④ROC 分析发现尿酸排泄减少型组与正常对照组 eGFR（AUC 为 0.606）；尿酸代谢混合型组与正常对照组 eGFR（AUC 为 0.755）；尿酸代谢其他型组与正常对照组 eGFR（AUC 为 0.890）。尿酸排泄减少型组与尿酸生成增多型组 eGFR（AUC 为 0.625）；尿酸排泄减少型组与尿酸代谢混合型组 eGFR（AUC 为 0.878）；尿酸排泄减少型组与尿酸代谢其他型组 eGFR（AUC 为 0.891）；尿酸生成增多型组与尿酸代谢混合型 eGFR（AUC 为 0.727）；尿酸生成增多型组与尿酸代谢其他型组 eGFR（AUC 为 0.901）；尿酸代谢混合型组与尿酸代谢其他型组 eGFR（AUC 为 0.978）。
结论 eGFR 可以作为痛风分型的辅助诊断指标，可以提高痛风分型诊断准确率，有效的减少痛风分型归类错误概率。

PU-2301

血糖与尿糖相关性分析

周芳宇
吉林金域医学检验所有限公司

目的 血糖指的是血液中葡萄糖的浓度，尿糖是指尿液中葡萄糖的含量。本文旨在研究血糖与尿糖的相关性。
方法 选取 2021 年 3 月 1 日到 2021 年 3 月 7 日同时检测血糖及尿糖的患者结果数据进行研究。血糖检测采用罗氏全自动生化分析仪 C702，尿糖检测采用迪瑞尿液分析仪 H-800。筛选出所有血糖阳性的患者，分为三组，A 组为当血糖>10mmol/L，B 组为当血糖为<10mmol/L 且>9mmol/L，C 组为低于肾糖阈且血糖>6.11mmol/L；观察每组患者的尿糖是否为阳性且阳性程度的情况。

结果 其中在 A 组，83%的尿糖为两个加号(++)，少部分会出现一个加号(+)甚至阴性(-)；B 组，80%的尿糖为一个加号(+)，少部分为两个加号(++)或阴性(-)；C 组尿糖为阳性几乎不存在，大约为 1%。最终显示血糖和尿糖的阳性符合率占血糖阳性的 83.3%。
结论 当血浆葡萄糖浓度超过 8.96～10.08mmol/L 时，近端小管对葡萄糖的重吸收达到极限，尿中开始出现葡萄糖，此时的血糖浓度即为肾糖阈。由于肾糖域的存在且每个人的肾糖域随个人体质的波动，血糖和尿糖没有达到 100%的符合率，因此在疾病诊断时要综合患者的个人情况选择对糖的检测方法，以及对结果的分析。

PU-2302

血流感染患者肝功能指标相关分析

刘武征、徐东江
北京积水潭医院

目的 本研究的目的是评估常规肝功能生化检测作为血流感染诊断的潜在指标。
方法 我们收集了 115 例血培养阳性并实验室证实的血流感染患者(实验组)和 120 例血培养阴性并细菌感染患者(对照组)。两组患者均无潜在肝胆疾病。对于实验组的患者，我们分析了第一次血培养阳性当天的肝功能检查结果。对于对照组，在两对血培养瓶阴性血培养的第一天获得相同的数据。分别收集两组的肝功能指标 ALT、AST、TBIL、DBIL、γ-GT、ALP、ChE 及感染指标 CRP 并比较两组数据的相关性。
结果 经 t 检验，实验组血清 ALT、AST、TBIL、DBIL、γ-GT、ALP 水平显著高于对照组，而 ChE 水平显著低于对照组（P<0.05），作为感染指标的 CRP 两组却没明显差异（P >0.05）。多变量分析发现 ChE 是一个独立的因素,血清胆碱酯酶在 ROC 曲线下的面积（AUC）为 0.748，而 ALT、AST、TBIL、DBIL、γ-GT、ALP 在 ROC 曲线下的面积（AUC）分别为：0.59、0.67、0.71、0.72、0.69、0.63。当血流感染时血清 ALT、AST、TBIL、DBIL、 γ-GT、ALP、ChE 水平变化明显比非血流感染患者更快。
结论 血流感染患者的 ChE 活性水平明显降低。我们的结果表明，ChE 活性可用于诊断血流感染。有必要进行长期的随访研究，以确定其在临床实践中的确切作用。

PU-2303

尿碘水平检测与甲状腺癌的相关性研究

高海锋
陕西省宝鸡市中心医院

目的 探讨尿碘水平检测与甲状腺癌的相关性，为甲状腺癌的诊断提供实验室依据。
方法 选取 2019 年 4 月至 2020 年 8 月宝鸡市中心医院内分泌科收治的 323 例甲状腺结节患者为研究对象，后经 B 超及组织病理确诊为甲状腺癌患者 114 例，甲状腺良性结节患者 209 例，同时选择同期体检健康者 100 例作为对照组。采用比色法测定尿碘水平，并对结果进行统计学分析。
结果 甲状腺癌组、甲状腺良性结节组和对照组尿碘水平存在显著性差异（H=21.140，P=0.000），且随着疾病进展，尿碘水平逐渐升高；甲状腺癌组中碘缺乏、碘超量和碘过量的比率显著高于其它组（c2=5.614，P=0.022）；各组 TSH、TT3、TT4、TGAb 和 TPOAb 存在显著性差异（FTSH=7.83,P=0.012；FTT3=5.41，P=0.038；FTT4=4.93，P=0.032；FTGAb=14.127，P=0.001；FTPOAb=13.262，P=0.001）；尿碘水平与各组的 TSH 水平均具有相关性，而尿碘水平只与甲状腺癌组的 TGAb 和 TPOAb 具有相关性，与甲状腺良性结节组和对照组无明显相关性，尿碘水平与各组的 TT3 和 TT4 均无明显的相关性。

结论 尿碘水平检测对甲状腺癌的诊断具有很高的临床诊断价值，可能成为诊断甲状腺癌的一种快速、无创的检查手段，值得在临床上推广。

万万没想到，这种疾病竟会导致玻片“变蓝”？

何永建[1]、庄鸿鑫[2]
1. 南方医科大学南方医院
2. 南方医科大学

多发性骨髓瘤（multiple myeloma, MM）是由于单克隆浆细胞在骨髓内异常增生并产生大量单克隆 M 蛋白，引起溶骨性骨质破坏、贫血、肾功能损害等临床特征的一类恶性血液系统肿瘤性疾病。作为全球第二大血液系统恶性肿瘤，该疾病在临床上并不罕见，但该疾病引起血涂片异常蓝染的现象在临床上易于被忽视。本病例报道的是 1 例以血涂片染色异常为特点的 MM 患者的诊断过程，并结合文献复习，对该疾病相关临床和实验室诊断特点进行探讨分析。

PU-2305

胃癌淋巴结转移 mRNAs 预后分子标志物的识别

史爽、王传新
山东大学第二医院

目的 绘制胃癌淋巴结转移 mRNAs 差异表达图谱，并鉴定预后相关 mRNA 分子标志物，用于胃癌患者淋巴结转移的预测与患者预后评估。
方法 下载 TCGA-STAD 数据集，使用 R 语言 limma 软件包对数据集中发生淋巴结转移与未发生淋巴结转移的 mRNA 测序结果进行差异分析，以|log2 fold change|＞1 为标准，筛选差异表达的 mRNAs 分子。使用 R 语言 Survival 软件包对差异 mRNAs 分子进行预后分析，并绘制其 Kaplan-Meier 生存曲线。
结果 以|log2 fold change|＞1 为标准，共识别 480 个淋巴结转移中差异表达的 mRNAs 分子，其中 217 个 mRNAs 分子特征性上调，263 个 mRNA 分子特征性下调。单因素 Cox 回归分析和 Kaplan-Meier 生存曲线结果显示，480 个差异 mRNAs 分子中，共有 23 个 mRNAs 表达量与患者预后存在显著相关性。
结论 本研究识别了胃癌淋巴结转移相关 mRNAs，及胃癌患者预后相关 mRNAs，揭示了胃癌淋巴结转移与预后潜在分子标志物，有助于改善胃癌患者的长期预后。

PU-2306

p62 promotes lipid accumulation by regulating the mTOR-ULK1 autophagy pathway in macrophage foam cells

Ling Ding、Xiaochen Yu、Dan Liu、Hongyun Jing、Fei Yu、Xiuru Guan*
First Affiliated Hospital of Harbin Medical University

p62, a multifunctional polyubiquitin-containing protein which is the center of the intracellular signaling and degraded by autophagy, can regulate the autophagy pathway associated with mTOR to affect the proliferation and differentiation of cells. And the accumulated p62 has been found in the macrophages treated by high concentration of ox-LDL. However, the correlation of p62 with the lipid accumulation in macrophages remains obscure. Herein, we mapped that

silencing p62 with the small interference RNA (siRNA) could palliate the accumulated lipids and reduce the secretion of inflammatory cytokines IL-1β. Mechanistically, p62-silencing could downregulate the expression of mTOR and then upregulate the expression of ULK1 to promote autophagy. These results proved that macrophage foam cells play a key role in atherosclerotic plaque rupture, p62 effectively aggravates the accumulation of lipids through mTOR-ULK1 autophagy pathway, indicating p62 should be considered as a new therapeutic target to treat atherosclerosis.

PU-2307

肥厚型心肌病的分子遗传学研究进展

徐婧[1]、刘向东[2]
1. 东南大学附属中大医院
2. 东南大学生命科学研究院

目的 肥厚型心肌病（HCM）是一种常见的遗传性心脏病，有高度遗传异质性。已有研究表明肌节基因突变是导致 HCM 的最主要原因，但是仍有约 30%的 HCM 病例致病原因未明。该部分研究在遗传背景未知的 sHCM 群体中引进了大规模测序方法。结合多种最新的公共数据库和数据分析方法，从不同角度探索了 HCM 新的可能的致病基因和突变，探讨 HCM 的致病机理。
方法 本研究基于前期大规模的 HCM 患者筛查，选取了 74 位 sHCM 患者，这些患者在 8 个常见 HCM 致病肌节基因上并未发现携带有突变。应用 WES 技术，设计 WES 二代测序数据分析流程和突变筛选流程鉴定突变。再根据已知 HCM 致病基因和 HCM 风险基因之间的结构功能相似性，进行数据库挖掘和相关文献调研，探讨 HCM 新候选致病基因可能的致病机制。另外，调用相关基因的相互作用数据，构建蛋白质-蛋白质相互作用网络（PPI）。
结果 在 7/74（9.5%）的患者中鉴定出共 7 个已知 HCM 致病基因上 EMs。比较 sHCM 患者人群和中国汉族人群的 WES 突变数据，进一步分析预测出 10 个具有高优先级的 HCM 新候选致病基因，包括 TTN、RYR2、NEB、OBSCN、CMYA5、PLAC4、NES、CAP1、CFLAR 和 MYH15。组织表达谱分析显示其中 7 个基因在心血管系统中呈相对高表达。动物模型分析显示 6 个基因的斑马鱼或小鼠模型中显示出心血管系统异常表型。进一步的文献调研也揭示了其中 7 个基因与各类型心脏病致病的重要联系。这些研究结果表明预测出的 HCM 新候选致病基因在心血管系统中可能存在着重要功能，可能和 HCM 致病相关。PPI 网络还揭示了泛素蛋白酶复合体系统在 HCM 疾病调控中的重要地位，为 HCM 遗传基础的进一步研究提供了新方向。
结论 结合多种最新的公共数据库和数据分析方法，从不同角度探索了 HCM 新的可能的致病基因，探讨 HCM 的致病机制，为 HCM 的基础和临床研究提供了新的参考。

PU-2308

新城疫病毒 F 糖蛋白 HRB 连接区氨基酸突变分析

谢文艳[1]、王志玉[2]
1. 山东省千佛山医院
2. 山东大学 公共卫生学院 病毒研究室

目的 为了弄清人副流感病毒 3 型（human parainfluenza virus type 3，HPIV3）F 糖蛋白 HRB 连接区对膜融合活性的影响，探讨 HRB 连接区影响膜融合功能的机制。
方法 采用定点突变和体内同源重组相结合的方法将该连接区内的 T429、E432、I443 和 N446 位氨基酸进行单点突变，测序确定构建成功后将它们在真核瞬时表达系统内进行蛋白表达。采用吉姆萨染色法、指示基因法、染料转移法定性和定量检测各突变体蛋白对膜融合功能的影响。采用流式细胞术来检测各突变体 F 蛋白在细胞表面的表达效率。

结果 各突变株蛋白细胞表面蛋白表达效率与野毒株蛋白相比没有统计学差异，而突变株细胞融合活性表现为两种情形，E432A、I443A 和 N446S 表现为融合活性轻微升高，其中 N446S 融合活性达到野毒株的 118.6％；T429A、T429L 和 N446A 表现为融合活性的降低，其中 N446A 的融合功能只有野毒株的 15.2％。HRB 连接区的氨基酸突变对膜融合活性有重要影响，其中第 446 位天冬酰胺（N）为关键氨基酸。
结论 HPIV3 F 糖蛋白 HRB 连接区对膜融合功能有重要影响，其中第 446 位天冬酰胺（N）为关键氨基酸位点。

一例心脏瓣膜置换术后嗜酸性粒细胞升高的病例探讨

高倩
空军军医大学西京医院

嗜酸性粒细胞是白细胞的组成部分，来源于骨髓造血干细胞，具有杀伤细菌、寄生虫的功能，也是免疫反应和过敏反应过程中极为重要的细胞。嗜酸性粒细胞可以释放颗粒中的内容物，引起组织损伤，促进炎症进展。嗜酸性粒细胞增多一般见于寄生虫感染、变态反应、血管炎或肿瘤等疾病中，出现多系统、多器官损害的临床表现。

PU-2310

双原发肿瘤合并慢性淋巴细胞白血病一例报道

孙学青
东营市人民医院

恶性肿瘤严重危害人们的健康，实体肿瘤多见全身器官或组织转移，双原发肿瘤合并慢性淋巴细胞白血病较为少见，我们遇到一例报道如下：
结合病史、多次复查血常规血象异常、骨髓形态学检查、骨髓流式细胞学，目前诊断慢性淋巴细胞白血病明确。

PU-2311

门诊抽血处存在的常见问题及解决策略

伏广丽、史沛芹
连云港市第一人民医院

目的 三甲医院门诊抽血处是门诊检验血项目分析前质量控制的关键场所，是医院院感检查的重点科室，也是医患容易产生矛盾的地方，探讨其存在的常见问题及解决策略。
方法 建立符合医院实际的规章制度，重视抽血医务人员业务及心理伦理培训，实行人文管理。在 ISO15189 及《医院感染管理条例》要求下，规范操作程序，抽血过程无菌及消毒隔离，做好手卫生；医疗废物医疗垃圾统一处理，净化抽血处室内环境与卫生，体现人文关怀；必要的应急预设抢救措施。
结果 三甲医院门诊抽血处存在的常见问题及策略：一，LIS 数字化条码系统高效项目管理，第一时间追踪血标本抽血流程，具体环节中某个步骤，保障检验血项目分析前质量控制 ；二，抽血人员加强业务的熟练操作及心理伦理培训，对病患同理心，同时人性化管理，弹性工作时间，调动医务人员的工作热情，形成良好的医患关系。三 ，抽血处环境狭小拥挤，医疗垃圾的不当处理是医院感染问题多的主要原因：改善环境，营造舒适宽敞的空间，抽血电子叫号系统，报告单提醒系统

LED 显示屏，遵循医学伦理设置黄线隔板等尊重患者隐私。生活垃圾与医疗垃圾严格分开医院统一处理。等候区视频播放系统，免费早餐热水供应，儿童座椅等人文关怀；四，对婴幼儿和血管条件差的患者，安排专人（在新生儿病区轮转，业务娴熟心理素质好者）专门抽血通道，对行动不便的患者预约上门抽血服务等。配备必要的应急预设抢救措施，对于体弱晕针者，突发急症者，给予及时救助。

结论 抽血处每天承担门诊病人的抽血工作，是医院对外服务的“窗口”责任大工作量重，患儿哭闹环境嘈杂，从心理上容易烦躁，医患双方容易发生矛盾，对工作人员业务及心理素质和工作场所都要求非常高，所以管理上要重视细化，人文管理。抽血处的门诊标本准确及时高效的运行是检验科标本周转时间（TAT）的第一保障，也是门诊患者满意度的重要体现，应重视抽血处的日常工作，提升医院服务质量和医院综合实力。

PU-2312

1,25-(OH)2D3 protects pancreatic beta cells against H2O2-induced apoptosis through inhibiting the PERK-ATF4-CHOP Pathway

Cong Hu[2]、Xinhua Wang[1]、Xiaobo Hu[3]
1. Yi Yang Central Hospital
2. Yiyang Central Hospital
3. Hengyang Medical School, University of South China

Endoplasmic reticulum (ER) stress plays a critical role in pancreatic β cell destruction which leads to the pathogenesis of type 1 diabetes mellitus (T1DM). Vitamin D (VD) has been reported to reduce the risk of T1DM; however, it remains unknown whether VD affects ER stress in pancreatic β cells. In this study, we investigated the role of the active form of VD, 1,25-dihydroxyvitamin D3 (1,25-(OH)2D3), in ER stress-induced β cell apoptosis and explored its potential mechanism in mouse insulinoma cell line mouse insulinoma 6 (MIN6). The results of cell counting kit-8 (CCK8) and flow cytometric analyses showed that 1,25-(OH)2D3 caused a significant increase in the viability of MIN6 cells injured by H2O2. The protein kinase like ER kinase (PERK) signal pathway, one of the most conserved branches of ER stress, was found to be involved in this process. H2O2 activated the phosphorylation of PERK, upregulated the activating transcription factor 4 (ATF4) and C/EBP homologous protein (CHOP) expression, and subsequently initiated cell apoptosis, which were significantly reversed by 1,25-(OH)2D3 pretreatment. In addition, GSK2606414, a specific inhibitor of PERK, suppressed PERK phosphorylation and reduced the expressions of ATF4 and CHOP, leading to a significant decrease in β cell apoptosis induced by H2O2. Taken together, the present findings firstly demonstrated that 1,25-(OH)2D3 could prevent MIN6 cells against ER stress-associated apoptosis by inhibiting the PERK-ATF4-CHOP pathway. Therefore, our results suggested that 1,25-(OH)2D3 might serve as a potential therapeutic target for preventing pancreatic β cell destruction in T1DM.

PU-2313

ELISA 法与胶体金法联合检测乙肝表面抗原的临床应用分析

江婷、高安琦、沈竹莲、李亚楠
杭州迪安医学检验中心有限公司

目的 ELISA 法（酶联免疫吸附试验）在乙肝表面抗原（HBsAg）的检测过程中的影响因素多，探讨联合胶体金法检测 HBsAg 的临床应用分析。
方法 对本室 2020 年 12 月乙肝表面抗原 ELISA 法检测结果为阳性的 2512 例标本用胶体金法进行复检，记录不同范围 S/CO 值下两者阳性结果检测情况。
结果 2512 例 ELISA 法检测 HBsAg 阳性的标本中，胶体金法检测阳性例数为 2289，检测阴性例数 223，胶体金的阳性检出率为 91.1%。ELISA 法阳性中真阴性有 43 例，其假阳性率为 1.7%。
结论 胶体金法的阳性检测率随着 S/CO 值的增加而增加，并且用 ELISA 检测 HBsAg 存在一定的假阳性，在 S/CO 低值时假阳性的概率会逐步增高。用胶体金法复检可以减少 HBsAg 假阳性报告的发出，结合两种方法检测可以提高 HBsAg 检测的准确度。

PU-2314

卵巢癌细胞生长环境中 CD4+ Treg 细胞和 CD4+ Teff 细胞的糖代谢特征初探

吴茗[2]、徐睿[1]、刘书娜[1]、王芳[1]
1. 南京医科大学第一附属医院江苏省人民医院
2. 南京医科大学第一附属医院江苏省人民医院

目的 探究 CD4+Treg 细胞（CD4+CD25+CD127low 调节性 T 细胞）和 CD4+Teff 细胞（CD4+CD25-CD127+ 效应性 T 细胞）在卵巢癌细胞生长环境中的糖代谢特征。
方法 FACS 分选和扩增 CD4+Treg 细胞和 CD4+ Teff 细胞，建立两种细胞与 SKOV3 细胞的共培养体系，采用 RT-PCR 和 Western blot 检测 CD4+ Treg、Teff 细胞糖摄取和糖酵解水平。
结果 卵巢癌细胞生长环境中的人外周血 CD4+Treg 细胞糖代谢水平高于 CD4+ Teff 细胞，卵巢癌细胞可以促进人外周血 CD4+Treg 细胞糖代谢相关蛋白和基因表达水平上调。
讨论 研究结果发现，将 CD4+Treg 与卵巢癌细胞 SKOV3 共培养后，其糖摄取、糖酵解相关基因和蛋白表达水平均高于对照组。当细胞处于肿瘤微环境中，卵巢癌细胞的生长导致静止的 T 细胞被激活，Glut 表达的增高促进 CD4+Treg 细胞和 CD4+Teff 细胞的糖摄取，耗氧量增加，而且 T 细胞必须大量增殖以产生足够的效应细胞来对抗肿瘤，同时需要和增殖水平极快的肿瘤细胞进行营养竞争，这时细胞的代谢需求明显增加。同时研究结果发现卵巢癌细胞生长环境中 CD4 Treg 细胞的糖摄取与糖酵解水平显著高于 Teff 细胞，说明在 SKOV3 生长环境中，CD4+Treg 细胞代谢特征与效应细胞相比会消耗更多能量，抑制效应细胞发挥功能，促进肿瘤生长，这些结果都证明了肿瘤细胞的生长影响了肿瘤微环境中免疫细胞的代谢, 对抑制免疫细胞、促进肿瘤的进展具有重要的意义。因此深入理解 T 细胞尤其是 Treg 细胞糖代谢的表型、调控机制、及其动态变化将为自身免疫、肿瘤等免疫相关疾病的防治提供有效的分子靶点和潜在临床治疗新方法、新工具。

PU-2315

肝内胆管癌患者术后预后模型的建立与应用

王琳
江苏省人民医院（南京医科大学第一附属医院）

目的 建立肝内胆管癌(ICC)患者接受肝切除术后的预后模型并对其进行评估。
方法 回顾性分析 2017 年 1 月至 2020 年 1 月在南京医科大学第一附属医院确诊的 134 例 ICC 患者的资料，采用单因素和多因素 Cox 比例风险模型分析实验组的独立危险因素，建立基于术前实验室常规指标的总生存率（OS）预测模型。使用一致性指数（C-index）和校准图对模型的区分度和校准度进行评价。
结果 实验组中，中位生存期 30.2 个月，5 年生存率 36.4%。糖类抗原 199（HR=1.230，95%CI 1.059-1.334）、癌胚抗原（HR=1.156，95%CI 1.047-1.254），中性粒细胞与淋巴细胞比率（HR=1.010，95%CI 1.054-1.136）、血小板计数（PLT）（HR=1.011，95%CI 1.002-1.019），白蛋白（HR=0.767，95%CI 0.613-0.917）是与 ICC 患者术后预后相关的独立危险因素。实验组和验证组的一致性指数（C-index）分别为 0.740（95%CI：0.715-0.768）和 0.744（95%CI：0.716-0.785），校准图中校准曲线拟合良好。
结论 本研究成功建立了 ICC 患者术后预后评估模型，该模型可为临床术前决策提供依据。

PU-2316

41 例新型冠状病毒肺炎患者血清抗体检测分析

余珊
南华大学附属南华医院

目的 比较新型冠状病毒肺炎（corona virus disease 2019, COVID-19）不同临床分型患者血清中新冠病毒（SARS-CoV-2）特异性 IgM 和 IgG 抗体的差异和不同时期的浓度变化,并以抗体水平变化判断核酸复阳是否为二次感染。
方法 选取 2020 年 2—3 月南华大学附属南华医院收治的 41 例 COVID-19 患者,共收集其患病 15-65 天血清标本 126 份;作为对照,同时选取 91 例发热门诊核酸检测阴性患者采集血清各 1 份。采用化学发光免疫分析法（chemiluminescence immunoassay, CLIA）检测血清中新冠病毒 IgM 和 IgG 抗体水平,经组间 t 检验和 Mann-Whitney U 检验对抗体浓度变化进行统计学分析。
结果 无症状感染者 IgM 和 IgG 抗体平均浓度高于阴性对照组,低于普通型和重型患者,差异均具有统计学意义（P<0.05）;普通型患者 IgM 和 IgG 抗体浓度均低于重型患者,IgM 抗体差异有统计学意义（P<0.05）,但 IgG 抗体差异没有统计学意义（P=0.06）;COVID-19 患者急性期的 IgM 和 IgG 抗体浓度均高于康复期,差异均有统计学意义（P<0.05）。复阳后,患者体内 IgM 和 IgG 抗体浓度没有增加,持续下降。
结论 COVID-19 患者的 SARS-CoV-2 IgM 和 IgG 抗体浓度,依无症状感染、普通型、重症型患者临床类型逐次升高,康复期逐渐降低,但大部分体内仍存在较高水平的 IgG 抗体。核酸复阳之后的 SARS-CoV-2 IgM 和 IgG 抗体浓度并未增高,说明未发生二次感染。

PU-2317

血浆同型半胱氨酸和胱抑素 C 水平与糖尿病患者早期肾损害的关系研究

乔慧
长治医学院附属和平医院

目的 探讨血浆同型半胱氨酸（Hcy）及胱抑素 C（CYC）在 2 型糖尿病患者中的表达及与早期肾损害的关系。
方法 选取 2018 年 8 月~2020 年 11 月收治的 2 型糖尿病患者 80 例为观察组，其中肾功能正常（尿白蛋白肌酐比≤30mg/g）45 例，肾功能异常（30mg/g＜尿白蛋白肌酐比＜300mg/g）35 例，另选同期体检健康人员 77 例为对照组。所有对象均对血浆 Hcy、CYC 及其他相关生化指标予以检测，并采用 Pearson 相关性分析对血浆 Hcy、CYC 与肾功能指标的关系予以分析。
结果 观察组血浆 Hcy、CYC、FBG、UAER、Scr 水平与对照组比较，均明显较高，Hb 水平与对照组比较，明显较低，差异有统计学意义（P＜0.05）；肾功能正常组患者 Hcy、CYC、FBG、UAER、Scr 水平与肾功能异常组患者比较，均明显较低，Hb 水平与肾功能异常组患者比较，显著较高，差异有统计学意义（P＜0.05）；相关性分析显示，血浆 Hcy 与 UAER 水平呈正相关性（P＜0.05），与 Scr 水平呈正相关性（P＜0.05），与 Hb 水平呈负相关性（P＜0.05）；血浆 UA 与 UAER 水平呈正相关性（P＜0.05），与 Scr 水平呈正相关性（P＜0.05），与 Hb 水平呈负相关性（P＜0.05）。
结论 2 型糖尿病患者血浆 Hcy、CYC 表达均存在明显异常，且与早期肾损害有相关性，对血浆 Hcy、CYC 水平予以监测，可为 2 型糖尿病患者肾功能评估提供指导。

PU-2318

7 例遗传性凝血因子 XI 缺陷症患者的基因型与临床表型分析

翁妙珊
潮州市中心医院

目的 分析 7 例遗传性凝血因子 XI（FXI）缺陷症患者的基因突变类型与临床表型。
方法 采用一期法检测患者 FXI 活性（FXI：C），免疫火箭电泳法检测 FXI 抗原（FXI：Ag）水平，并抽提患者外周血 DNA，PCR 扩增患者 FXI 基因所有的外显子及其侧翼序列，DNA 直接测序进行基因分析。
结果 在 7 例遗传性 FXI 缺陷症患者中共发现 5 种基因突变，包括 3 种无义突变（p.Lys327X、p.Tyr351X、p.Gln263X），1 种移码突变（p.Leu424fsX10）和 1 种剪接位点突变（c.326-1G>A）；除患者 7 为单杂合突变，FXI：C 为 56.7%，FXI：Ag59.2%，其余患者 FXI：C 和 FXI：Ag 均明显降低（<2% 和<1%），基因型为纯合突变或复合杂合突变；患者临床出血表现轻重不一，患者 1、2 均有术后出血不止的表现，而患者 5 则无术后出血表现。
结论 所发现的 5 种基因突变是导致 7 例遗传性 FXI 缺陷症患者的分子发病机制，其中 p.Gln263X 较常见，p.Lys327X 为新发现的 FXI 基因突变类型，而 FXI：C 与患者的临床表型之间无明显相关性。

PU-2319

浅谈检验科危急值报告制度的建立

王赵梅
昆明市中医医院

不同医务人员认识和重视程度参差不齐，不能准确判定是否为假阳性危急值，危急值报告项目和范围管理缺失之处，这些因素决定了建立医学检验危急值报告制度的必要性和重要意义。所以，要加强危急值报告登记制度，建立完善的医学检验危急值文件，根据病种病因不同界定不同危急值范围，加强检验人员和医护人员的沟通，加强危急值的监督管理，及时发现、核实和处理医学检验危急值，提高报告的准确性，确保医疗质量和医疗安全。

2017 年-2020 年中国郴州儿童下呼吸道感染的流行病学调查

周杰英
郴州市第一人民医院

Objective This study aimed to explore the epidemiology of pathogens in children who were hospitalized with acute lower respiratory tract infections (ALRTIs) .
Methods Children aged less than 13 years who were hospitalized with ALRTIs were enrolled from January 2017 to December 2020. Respiratory specimens were collected for the detection of common respiratory viruses, atypical bacteria and other bacteria using current laboratory diagnostic tests. The epidemiological characteristics of the respiratory pathogens were analyzed by spss 20.0.
Results A median age of 12 months, 10849 (63.61%) were positive for at least 1 pathogen. Mycoplasma pneumoniae(M.pneumoniae) was the most commonly detected pathogen in the 17054 specimens (4504, 26.41%), followed by RSV (3263,19.13%), PIV (1411, 8.27%). FLU and RSV detected more often in winter. MP was the most prevalent pathogen among children ≥5 years , whereas RSV was the most common pathogen in very young children aged less than 6 months. Co-infections were found in 17.28 % of patients. Of these co-infections, viral-bacterial coinfections was the most common.
Conclusions The most common pathogens causing acute respiratory infection among children in Chenzhou of China were MP and RSV. The detection rates for pathogens displayed specifific seasonal, gender and age group variations. Coinfections with multiple respiratory pathogens were common.

探讨试剂耗材信息化管理的价值

黄鑫鑫
山东省千佛山医院

目的 探讨二维码和 LIS 系统联合使用对试剂耗材信息化管理的价值。
方法 引进二维码技术与 LIS 系统结合对试剂耗材进行信息化管理，并对其进行全程实时监控。
成果 试剂耗材的信息化管理，提高了管理小组的工作效率，降低了工作强度，并可对试剂耗材的有效信息及时分析判断，对近有效期的试剂耗材进行优先管理消耗，对出现的问题及时处理并采取相应措施达到持续改进的效果，保证检验质量。

结论 该方法的建立提高了试剂耗材的管理水平和工作效率，确保了试剂耗材有效性以及对供应商和生产厂家的可追溯性，降低了科室耗占比，杜绝试剂耗材的失效浪费。

PU-2322

醋甲唑胺对动脉粥样硬化血管钙化治疗作用的研究

袁琳
山东省千佛山医院

目的 本研究计划探究碳酸酐酶 1（carbonic anhydrase 1,CA1）在动脉粥样硬化（atherosclerosis，AS）血管钙化中的作用和机制以及 CA 抑制剂醋甲唑胺（methazolamide，MTZ）对 AS 的治疗作用。
方法 本研究分两部分，第一部分检测 CA1 在人主动脉 AS 组织中的表达情况，观察 CA1 表达水平与 AS 病变的关系。该研究也计划建立 ApoE-/-小鼠 AS 模型，检测 CA1 在模型小鼠主动脉组织中的表达情况，通过观察 CA1 的表达与钙盐沉积及 AS 斑块的关系，进一步探究 CA1 与 AS 钙化的相关性。同时，本研究对 AS 模型小鼠应用 CA 抑制剂 MTZ，观察 MTZ 对 AS 斑块形成的影响和对 AS 的治疗作用。血管平滑肌细胞是血管钙化的核心场所，血管平滑肌细胞向成骨细胞表型转化是血管钙化的核心环节，CA1 如何调控血管钙化尚不明确。所以本研究第二部分选择血管平滑肌细胞作为实验对象，研究 CA1 在血管平滑肌细胞钙化中的作用。通过体外诱导大鼠血管平滑肌细胞（rat VSMCs）钙化，观察细胞钙化后 CA1 的表达情况。同时，应用 anti-CA1 siRNA 和 CA 抑制剂 AZ 处理 VSMCs，抑制 CA1 的表达，分析确定 CA1 在 VSMCs 钙化中的作用。同时也通过干扰 CA1 的表达，观察 VSMCs 增殖、迁移和凋亡能力的变化情况。醋甲唑胺片是一种临床药品，但是没有无菌状态可用于细胞培养实验的 MTZ。用于细胞培养实验的无菌 AZ 可商用获得。所以本研究选择 MTZ 用于第一部分的动物实验，AZ 用于第二部分的 VSMCs 细胞实验。
结果 CA1 在人主动脉 AS 组织和 AS 模型小鼠的主动脉组织中高表达，高表达的 CA1 刺激 AS 血管钙化过程。醋甲唑胺可能通过抑制 CA1 表达及其所调控的钙化过程对 AS 发挥治疗作用。抑制 CA1 调节的钙化可能是治疗动脉粥样硬化的关键点。
结论 醋甲唑胺有望成为治疗动脉粥样硬化血管钙化的辅助药物。

PU-2323

两种荧光 RT-PCR 试剂检测肠道病毒通用型、EV71、CA16 核酸的比较

凌永基
南方医科大学珠江医院

目的 比较两种市售荧光定量 PCR 试剂（深圳太太基因公司和中大达安基因公司）检测肠道病毒 71 型(EV71)和柯萨奇病毒 A 组 16 型(CA16)特异性及通用型(EV)核酸的性能，有无差别及差别对临床诊断有无影响。
方法 收集临床疑似手足口病患儿的肛拭子标本 43 例，采用相同的方法提取核酸后分别用两种试剂同时测定 EV、EV71、CA16 核酸，配对 χ2 检验比较两者检出率；采用培养的 EV71 病毒上清液 10 倍倍比稀释后用上述方法提取核酸，分别用两种试剂检测，比较两者检测灵敏度。
结果 检出率结果太太基因公司：EV 通用型核酸检出率 58.1% (25/43)，EV71 检出率 51.2% (22/43），CA16 检出率 4.3%（1/23）；达安基因公司：EV 核酸检出率 32.6% (14/43)，EV71 检出率 16.3%（7/43），CA16 检出率 0.0%（0/23）。两种试剂 EV 通用型核酸（P=0.00）、EV71 核酸（P=0.00）、CA16 核酸（P=0.043）检出率均有显著性差异，检出率太太试剂均高于达安试剂。

灵敏度结果太太基因公司检测 10 7 、10 8 倍稀释 EV 核酸均阳性（Ct：27.5 和 31.8），达安基因公司检测 10 7 倍稀释 EV 核酸阳性（Ct：32.5），10 8 倍稀释 EV 核酸阴性；太太基因公司检测 10 7 、10 8 倍稀释 EV71 核酸均阳性（Ct：25.6 和 29.9），达安基因公司检测 10 7 、10 8 倍稀释 EV71 核酸均阴性。太太基因公司相比达安基因公司，检测 EV 通用型和 EV71 核酸的灵敏度更高。

结论 两种试剂检测临床标本结果有显著差异。实验室必须选择质量好且符合自己实验室要求、与本实验室仪器相匹配的试剂以保证检验质量。

PU-2324

Impact of COVID-19 Outbreak on the Gynecological HPV Infection Rate in Wuhan, China: a retrospective observational study

Hang Liu、yan li
Renming Hospital of wuhan university

Background The outbreak of SARS-CoV-2 has caused millions of people deaths and greatly influenced other diseases' timely diagnosis and treatment. Nevertheless, the Background of the pandemic dramatically reduced the prevalence of several sexually transmitted infections. However, the impact of this pandemic on the HPV infection has not been well investigated.
Materials and Methods We retrospectively gathered the HPV and cervical cancer screening data of outpatients in gynecological clinics from December 1, 2018 to December 31, 2020. Based on the timeline of the SARS-CoV-2 pandemic in Wuhan, we divided this period into four relatively independent stages to compare the HPV screening visit numbers and infection rates.
Results The HPV screening visits and HPV infection rates decreased dramatically during the pandemic. After the pandemic, the HPV infection rates remain lower than the baseline before the outbreak, but the HPV screening visits returned to the baseline before the outbreak.
Conclusion HPV infection rate greatly influent by the outbreak of SARS-CoV-2 in a short time. The efficient HPV and cervical screening program should immediately reinforce to prevent transmission of HPV and cervical cancer progression.

PU-2325

第三方医检联合疾控共同助力新冠病毒大筛查

陈玉辉、刘静、许友强
新疆金域医学检验所有限公司

目的 2019 年底爆发的新冠肺炎疫情是中国及世界所有国家历史以来遇到的爆发速度最快、波及范围最广、防疫难度最大的一次突发公共卫生事件，对全球每个国家而言，在救治检测服务上无疑都是一场严峻的挑战。面对前所未有的大规模人群、物表的核酸检测任务，公共医检资源有限，医检人员数量、技术水平有限，为弥补政府及医疗卫生单位检测能力短板，也为实现区域医疗诊断资源的集约化，助力政府核酸病毒检测大筛查快速、有效的完成。
方法 根据新疆各级卫健委有关文件要求，新疆金域医学检验所有限公司积极落实国家政策、响应政府号召，携手当地疾控部门联合共建核酸检测中心实验室，积极开展新冠核酸的检测工作，并承接政府委派核酸检测任务。新疆金域充分利用自身在质量管理、服务流程、医学领域专家资源、市场高效便捷的物流网络体系等方面优势，协助当地疾控中心高标准、高质量管理运行核酸检测实验室。

结果 利用社会资本和政府资源,依托 PCR 检验中心的强大的检测服务能力，该实验室目前核酸检测能力已达 10000 管/日,有效辐射了当地周边医疗机构，快速、准确地完成送检样本的检测，为当地卫健部门做好疫情防控部署，及时提供了准确有效的参考数据，并起到积极作用。
结论 此次合作共建实现了优质医疗资源的共享，促进 了当地公共卫生事业健康发展。在抗击新冠疫情、全面核酸病毒大筛查的过程中，第三方医检平台在当地打赢疫情防控阻击战中发挥了“主力军”的作用。

PU-2326

达雷妥尤单抗干扰复发性/难治性多发性骨髓瘤病实验诊断病例分析

安云飞、严琳、李壹、蔡蓓
四川大学华西医院

目的 多发性骨髓瘤(multiple myeloma，MM)是一种恶性浆细胞疾病。以浆细胞肿瘤性增殖，并产生单克隆免疫球蛋白为特征。该病不可治愈，约占血液系统恶性肿瘤死亡病例的 20%。大部分患者通过实验诊断手段均能识别与诊断疾病。
多发性骨髓瘤在疾病进程中都会出现疾病进展。其中一部分患者会发展为复发性或难治性多发性骨髓瘤。疾病的进展通常与实验诊断指标的变化同步。所以在识别患者疾病进展的方法中，实验诊断的持续性监测则显得十分重要。针对于复发性或难治性多发性骨髓瘤患者，虽然目前的治疗方案选择越来越丰富，但是大部分患者会经历多次复发，所以准确有效的识别每次复发则显得特别重要。目前越来越多的生物制剂不断的应用于临床，给患者带来了更多的治疗选择和更好的治疗效果。达雷妥尤单抗是一种人源化、抗 CD38 IgG1、kappa 型单克隆抗体，主要应用于复发和难治性多发性骨髓瘤患者。这一药物的应用对我们以免疫学方法为基础的检测提出了挑战。目前已有数据表明单克隆抗体药物将显著影响实验诊断结果，导致假阳性的结果判读。而我国引入这一类药物时间较短，我们仍未产生较为清晰的认识和认知。
方法 回顾性分析 2020 年 1 月至 6 月送检免疫固定电泳患者用药信息。通过回顾分析患者实验诊断数据和图形，判断实验诊断报告是否存在单抗药物应用的干扰。
结果 回顾性分析 2020 年 1 月至 6 月送检免疫固定电泳的临床住院患者信息。共识别出 3 例住院患者明确确认应用达雷妥尤单抗。这 3 例患者的报告均出现了一定程度的结果的错误判读和解读。影响实验诊断报告的质量以及 TAT 时间。
结论 目前随着越来越多的生物制剂应用于临床，对基于免疫学方法的实验诊断迎来了更大的挑战，提出了更高的要求。针对于复发性/难治性多发性骨髓瘤患者的动态监测和随访，患者信息的纳入不仅停留于实验诊断数据本身，还要涵盖患者的完整治疗方案。这样才能更好的提供高质量的实验诊断服务。

PU-2327

2015-2019 天津地区儿童肺炎支原体呼吸道感染的流行情况及其与环境因素的关系探讨

娜仁、沈永明
天津市儿童医院

目的 了解天津地区儿童肺炎支原体呼吸道感染的流行情况，并探讨其与环境因素的相关性。
方法 收集 2015 年 6 月至 2019 年 2 月天津市儿童医院呼吸道感染住院患儿资料共 63821 例，挑选肺炎支原体检出阳性的患儿进行病例回顾性分析，总结肺炎支原体的流行情况。同时收集同期环境

因素资料，采用 SPSS 19.0 软件进行相关性分析，探讨肺炎支原体呼吸道感染与环境因素的相关性。
结果 2015 年 6 月至 2019 年 2 月肺炎支原体总检出率为 23.62%，各季节肺炎支原体检出率分别为 22.89%（2891 / 12628）、21.55%（3295 / 15288）、25.32%(4001 / 15799)、24.31%(4888 / 20106)，比较差异有统计学意义。住院呼吸道感染患儿例数与气温、NO2 、CO、O3 呈中度相关（rs = -0.647、0.681、0.530、-0.514，P<0.05），与 AQI 指数、PM2.5、PM10、SO2 呈低度相关（rs = 0.395、0.401、0.317、0.473，P<0.05）；肺炎支原体检出率与文中分析的所有环境因素指标均无相关性。
结论 2015 年 6 月至 2019 年 2 月，住院呼吸道感染患儿中肺炎支原体总检出率为 23.62%。儿童肺炎支原体呼吸道感染全年高发，秋冬季更为常见。住院呼吸道感染患儿例数与气温、NO2 、CO、O3 呈中度相关，与 AQI 指数、PM2.5、PM10、SO2 呈低度相关；肺炎支原体检出率与文中分析的所有环境因素指标没有相关性。

PU-2328

青海省血细胞分析各项指标参考区间调查与分析

韩启福
青海省人民医院

目的 调查我省二级以上公立医院医学实验室血细胞分析项目参考区间行业标准实施情况。
方法 实验室通过基于 WEB 方式的室间质量评价(EQA)软件上报参考区间相关信息，包括参考区间上下限、来源、是否验证、分组规则等，后台将回报数据另存为 Microsoft Excel 2007 文档，对已颁布参考区间行业标准的血常规项目参考区间行业标准实施情况和适用性进行分析。
结果 参考区间来源于试剂说明书的实验室占 26.27-35.56%、来源于仪器厂家说明书的实验室占 13.87-16.91%、 来源于教科书或操作规程的实验室占 22.20-40.80%、实验室自己确定的占 3.65-8.89%、来源于行业标准的实验室占 6.4-8.64%，参考区间引用行业标准的实验室占比较少，引用与未引用行业标准实验室的参考区间上下限大部分项目差异有统计学意义(P＜0.05)，调查发现仅有少部分实验室对引用的参考区间进行了验证，且 Hb、RBC、HCT、MCV 等项目的参考区间对高海拔地区实验室不适用。
结论 血细胞分析检验项目参考区间行业标准的实施情况并不乐观，只有少部分实验室引用行业标准，且有相当一部分实验室未对参考区间进行验证，为解决我省高海拔地区医学实验室使用血细胞分析参考区间的适宜性，还需要做大量人群的统计研究。

PU-2329

1000 例女性人乳头瘤病毒筛查结果分析

姜坤宏
联勤保障部队第 970 医院

目的 近年来，宫颈癌的发病率逐年升高，成为仅次于乳腺癌的中国妇科好发恶性肿瘤的第 2 位，逐渐成为威胁女性健康最为严重的疾病之一。当代许多研究表明人乳头瘤病毒（human papilloma virus,HPV)与子宫颈癌的发生有密切的关系。为此分析了解来某医院就诊女性人乳头瘤病毒的感染情况，为临床诊疗及宫颈癌的防治提供依据。
方法 使用实时荧光 PCR 法，采用人乳头瘤病毒（HPV）核酸检测试剂盒对女性宫颈样本中 HPV-DNA 进行检测，统计 2020 年 8-10 月筛查检测的 1000 例标本结果，分析来该医院就诊女性 HPV 感染情况，统计 HPV 感染总体阳性率，高危型占比，阳性率较高的亚型，以及≤25、26-35、36-45、46-55、≥56 五个年龄组感染情况。

结果 1000 例中共有阳性 170 例，阳性率 17.0%，其中高危型 147 例（含混合感染），仅感染高危型的 134 例，所占比例为 91.16%；阳性率最高的亚型为 HPV52 型，占比 13.99%，其次为 16 型（9.88%）、58 型（8.64%）、33 型（5.76%）；1000 例标本中小于等于 25 岁女性标本数为 146 例，占比例为 14.6%，在各年龄组中阳性率最高为 29.45%，其次大于等于 56 岁阳性率为 22.54%，不同年龄段阳性率比较，差异有统计学意义（c2=69.05，P<0.05)。
结论从以上数据可以看出，HPV 在女性人群中的感染率较高，而感染人群中，高危型占有很高的比例，需密切关注有无相应的临床症状，从各年龄组比较中看出，HPV 感染有年轻化的趋势。因此早期诊断有重要意义，可定期进行妇科体检早期发现，也建议人群能够根据自己的年龄情况接种疫苗，做好个人预防。

PU-2330

两种不同检测系统肿瘤标志物参考区间的建立与分析

张磊
重庆医科大学附属第一医院

目的 应用直接法和间接法建立两种不同检测系统的血清癌胚抗原（CEA）、甲胎蛋白（AFP）、细胞角蛋白 19 片段（CYFRA21-1）、糖类抗原 19-9（CA19-9）、糖类抗原 15-3（CA15-3）、糖类抗原 125（CA125）、游离前列腺特异性抗原（fPSA）、总前列腺特异性抗原（tPSA）的参考区间并加以分析。
方法 间接法：收集 2019 年 1 月至 2020 年 6 月罗氏 E602 和 2020 年 6 月至 2021 年 3 月雅培 I2000 所做体检成人血清 CEA、AFP、CYFRA21-1、CA19-9、CA15-3、CA125、fPSA、tPSA 的检测结果，在剔除部分信息缺失样本后得到 E602 上 CEA 17968 例、AFP 18366 例、CYFRA21-1 6220 例、CA19-9 8235 例、CA15-3 3139 例、CA125 6533 例、fPSA 4747 例、tPSA 9572 例，和 I2000 上 CEA 43429 例、AFP 43638 例、CYFRA21-1 6150 例、CA19-9 9055 例、CA15-3 7020 例、CA125 11344 例、fPSA 4954 例、tPSA 21012 例。剔除各个项目离群值后，再建立各个项目参考区间。直接法：收集健康志愿者标本（不少于 120 例）作为参考个体，建立各项目参考区间。
结果 用间接法建立了 E602 和 I2000 两种不同检测系统 CEA、AFP、CYFRA21-1、CA19-9 不同性别和年龄、女性 CA15-3、CA125 不同年龄以及男性 fPSA、tPSA 不同年龄的参考区间，用直接法建立了两检测系统各项目参考区间。
结论 通过间接法和直接法建立的两种不同检测系统肿瘤标志物的参考区间，具有较好的临床应用价值，为临床对患者的诊断和治疗提供了更加准确、客观的参考依据。

PU-2331

AZD8055 Ameliorates Experimental Autoimmune Encephalomyelitis by Suppressing NLRP3-mediated Pyroptosis through mTOR/NLRP3 Pathway

Miao He
the First affliated hospital of Chengdu medical college

Objective Experimental autoimmune encephalomyelitis (EAE), a mouse model of a chronic inflammatory autoimmune disease called multiple sclerosis (MS) that has limited conventional treatments, is characterized by immune-mediated demyelination and neurodegeneration. There are multiple inflammatory demyelinating plaques in the white matter of CNS in the acute active stage, and the patients are characterized by multiple lesions, remission and recurrent course of disease. Previous studies have shown that the activation of NOD-like receptor protein 3 (NLRP3)

inflammasome can aggravate the spinal cord inflammation of EAE and affect its occurrence and development. NLRP3 inflammasome can induce a type of proinflammatory programmed cell death called pyroptosis, which is characterized by the swelling of cells when their membranes burst, large amounts of inflammatory cytokines are released and leading to dangerous inflammatory cascades. In MS, excessive inflammation can cause demyelinating lesions and axonal injuries; hence, blocking the NLRP3-mediated-pyroptosis is expected to alleviate neuroinflammation and postpone disease progression. Autophagy is a pivotal metabolic mechanism ensure cellular survival following various inflammatory injuries. Recently, it has been thought to be associated with the relief of widespread inflammation, including EAE. However, the effect of autophagy on NLRP3 in EAE and its mechanism are still unclear. In this study, we examined whether the autophagy activator AZD8055 can alleviate signs and symptoms of EAE by activating autophagy to inhibit NLRP3 activation.

Methods (1) Construction of EAE model and detection of autophagy and scorch death: the mouse model of multiple sclerosis was established, and the construction of EAE model was evaluated in terms of symptoms and body weight changes. (2) the role of AZD-8055 in reducing neuroinflammation: the changes of disease indexes related to multiple sclerosis were evaluated in terms of symptoms and body weight by intraperitoneal injection of AZD-8055, at the same time of constructing EAE model. On this model, HE staining was used to evaluate the occurrence of brain and spinal cord inflammation, LBF staining was used to evaluate spinal cord demyelination, ELISA was used to detect the secretion of IL-1 β and IL-18, and Western Blotting was used to detect inflammatory factors such as IL-6 and IL-8. (3) to detect the level of autophagy and scorch death in the model: Western Blotting, immunohistochemistry and immunofluorescence were used to detect the expression of proteins related to autophagy and scorch death, such as mTOR, LC3II / I, beclin-1, NLRP3, Caspase1 and so on.

Results The results showed that after AZD8055 treatment, the score of clinical behavior abnormality decreased and the body weight increased in EAE model mice, and the histological examination showed that the degree of inflammatory infiltration and demyelination of spinal cord was mild. At the same time, AZD8055 successfully inhibited mTOR, and the autophagy-related proteins were up-regulated, such as beclin-1,LC3 Ⅱ / Ⅰ and so on. In addition, in the EAE group treated with AZD8055, the proteins expression of NLRP3-mediated pyroptosis, such as NLRP3,Caspase-1, was decreased, and the co-localized expression of LC3 and NLRP3 was detected.

Conclusion Our research found that AZD8055 could ameliorate autoimmune myelitis in MOG-induced EAE mice by alleviating the demyelination and inflammation of spinal cord, reducing scores of clinical behaviors, and improving function behaviors. Furthermore, AZD8055 could activate autophagy and increase the co-localization of LC3 and NLRP3 in EAE mice in order to repress NLRP3-mediated pyroptosis by mTOR/NLRP3 pathway. These results revealed the relationship between autophagy and pyroptosis, and provided a new direction for the treatment of MS and the study of its pathogenesis.

PU-2332

一例 5p15.2-pter 缺失及 20p12.2-pter 重复胎儿的产前诊断

詹福寿
宁夏医科大学总医院

目的 探讨单核苷酸多态性芯片(single nucleotide polymorphisms array，SNP-array)技术在胎儿 5p15.2-pter 缺失及 20p12.2-pter 重复诊断中的应用。

方法 抽取孕妇及其丈夫外周血行常规染色体 G 显带核型分析，在 B 超引导下行羊膜腔穿刺术，抽取羊水常规细胞培养，收获、制片，G 显带处理，对胎儿进行染色体 G 显带核型分析，并采用 SNP-array 技术对胎儿全基因组拷贝数变异(copy number variants，CNVs)进行检测。

结果 胎儿及其双亲染色体 G 显带核型分析未见明显异常。胎儿 SNP-Array 检测结果为 arr[hg19] 5p15.33p15.2(113,576-13,376,497)x1,20p13p12.2(61,661-9,838,776)x3。
结论 SNP-array 技术可以诊断染色体 G 显带核型分析不能辨别的胎儿 5p15.2-pter 缺失及 20p12.2-pter 重复，并可精确定位，为基因型和表型的关联分析积累数据。

PU-2333

以机器学习算法建立 IgA 肾病与非 IgA 肾病的鉴别诊断模型

杨晗、刘记宏、张慧、刘子杰
昆明医科大学第一附属医院

目的 基于患者的流行病学资料和临床实验室常规检测结果，用机器学习算法建立 IgA 肾病与非 IgA 肾病鉴别诊断模型。
方法 本研究共纳入经肾穿刺活检确诊的患者 260 例，其中 IgA 肾病 130 例，非 IgA 肾病 130 例。收集患者的流行病学资料和临床实验室常规检测结果。将 260 例数据分为训练集(70%，182 例)和测试集(30%，78 例)。分别使用决策树、随机森林、支持向量机(SVM)、XGBOOST 算法建立鉴别诊断模型。并使用混淆矩阵，ROC 曲线评估模型效能。
结果 与决策树、随机森林和支持向量机相比，XGBOOST 模型性能最佳，其准确率为 83.33%，ROC 曲线下面积为 0.84，诊断为 IgA 肾病的敏感度、特异度、阳性预测值、阴性预测值分别为 89%、79%、78%、89%。
结论 采用 XGBOOST 方法建立的 IgA 肾病与非 IgA 肾病鉴别诊断模型具有较好的临床性能。

PU-2334

智慧标本管理与流程监控系统的建立及运行初探

张崇唯
四川大学华西医院

目的 为解决临床中由于运输和储存方式不当，引起的血液标本质量问题，规范标本送检过程，实现标本运输的实时监控。
方法 设计研发集标本储存、运输和管理为一体的智慧标本管理与流程监控系统。通过合适的内部环境、安全的运输过程，可视化的送检流程，减少标本检验前问题，增加标本可接受性，实现归责到人，提高医疗机构人力物力资源的使用效率。通过建立微信小程序、云开发程序，其特点具有学习成本小、开发门槛低、开发效率高等优点，将小程序与血液标本管理和运输有机结合，符合了移动医疗背景下的创新理念。
结果 开发标本运输及管理系统，实现了二维码生成、新标本信息生成、运输、查询、个人信息模块。而客户端小程序界面前端系统处理流程包括如下：首先，在首页可以通过点击扫一扫，扫描二维码查询获取运输信息；然后，可以点击下方导航栏进行不同页面之间的切换：中间的导航栏用于创建新的运输订单，右边导航栏用于登录以及查看用户自身的信息和系统相关信息等。后端信息管理使用了微信小程序自带的云开发服务提供的数据库。
结论 本项目针对目前我国医院中存在的血液标本质量不合格和送检不及时等问题，设计了一种可以优化标本储存环境、确保安全运输、把控送检流程的智能血液标本管理与流程监控系统，在技术支持下，实现标本运输流程可控性和透明化，合理配置医疗资源，提高医疗服务质量，促进医院信息化建设。

PU-2335

上海市宝山区 18501 例健康儿童末梢血白细胞计数及其分类参考区间的建立

张宇亮、徐灵、崔邦铨、李仁杰、董成林、吴成志
上海中冶医院

目的 建立实验室 2-6 岁健康儿童白细胞计数及其分类正常值的参考区间。
方法 选取 18501 例 2019 年 4 月至 8 月在我院进行幼托体检的 2-6 岁健康儿童白细胞计数及其分类数据按年龄段分成 5 组进行统计分析。
结果 同年龄组男女间结果比较，除白细胞计数和中性粒细胞百分率外，其他参数 P 值均＜0.05，具有统计学意义，其中淋巴细胞百分率女性明显高于男性，单核细胞百分率和嗜酸性粒细胞百分率男性明显高于女性；不同年龄组间结果比较，白细胞计数及其五分类参数间差异均有统计学意义（P＜0.05），其中中性粒细胞百分率随着年龄的增长而增长，淋巴细胞百分率随着年龄的增长而下降；
结论 实验室应根据自身的检测系统，在充分考虑性别、年龄和临床需求的基础上，建立适应自己医院临床诊断需求的白细胞计数及其分类的参考区间。

PU-2336

含冷凝集素患者输注血制品采用输液加温器必要性的探讨

吴成志、李仁杰、张宇亮、徐灵、董成林
上海中冶医院

目的 健康人或某些疾病的患者均可含有一定滴度的冷凝集素，为了防止输注血制品时因低温导致冷凝集素激活而引起输血不良反应，有必要采用输液加温器输注法。
方法 选择 64 例冷凝集素滴度为 1:16～1:32 血制品输注患者分成两组，32 例采用常规不加温输注悬浮红细胞≥2 单位，同时对输前和输后 24h 的血标本作补体 C3 浓度的测定并进行结果比对。32 例输注悬浮红细胞时采用输液加温器，输注悬浮红细胞的量也为≥2 单位，对输前和输后 24h 的血标本作补体 C3 浓度的测定并进行结果比对。另外对一例含有 1:16 效价的冷凝集素的标本做冷凝集素试验时同时加豚鼠血清，观察红细胞的形态变化情况。
结果 输悬浮红细胞时未使用输液加温器组，输注悬浮红细胞 24h 后的补体 C3 浓度低于输注前（P<0.001）。而采用输液加温器组，输注悬浮红细胞 24h 后的补体 C3 浓度与输注悬浮红细胞前无明显变化（P>0.05）。
结论 大部分人群均含有一定量的冷凝集素，某些疾病如冷凝集素综合征、非典型肺炎、支原体肺炎等冷凝集素滴度可高达 1:1024，因此输冷藏的悬浮红细胞时采用输液加温器可防止由于冷凝集素而导致的输血不良反应的发生。

PU-2337

长三角三级医疗机构输血科建设情况分析

刘志刚[1]、谢杰锋[2]、范刚[3]、王学锋[1]、张睿[4]
1. 上海交通大学医学院附属瑞金医院
2. 成都市血液中心
3. 上海市血液中心
4. 国家卫生健康委医政医管局

目的 通过对长三角三级医疗机构临床用血和输血科专职专业技术人员情况的调查、分析，为卫生健康行政部门和医疗机构对临床输血管理决策与输血科规范化建设提供依据。
方法 依据《临床用血质量控制指标（2019 年版）》， 选取长三角三级医疗机构共 435 家，进行统计分析。
结果 长三角三级医疗机构输血科组织机构与人才队伍建设有待加强与完善。
结论 加强输血科规范化建设，提高临床科学合理用血水平。

PU-2338

新型冠状病毒肺炎患者血液炎性相关标志物水平表达研究

刘婷、刘佳星、石玉如、王云、刘杨、谷妍、戚应杰
安徽省立医院感染病院

目的 探讨血液炎性相关标志物表达水平在诊断新型冠状病毒肺炎（Corona- virus Disease 2019，COVID-19）中的应用价值。
方法 回顾性分析 2020 年 1 月到 2020 年 3 月我院收治的 82 名 COVID-19 确诊病例和 89 例非 COVID-19 疑似病例的血液炎性相关标志物的检测结果和临床资料，分析其炎性相关标志物水平的表达差异及临床诊断效能。
结果 （1）COVID-19 组的淀粉样蛋白 A（SAA）、白介素 6（IL-6）中位数水平高于非 COVID-19 组，差异具有统计学意义（P<0.05）。COVID-19 组的淋巴细胞计数（L#）中位数水平低于非 COVID-19 组，差异具有统计学意义（P<0.05）。COVID-19 组的 WBC、N#、L#、SAA、CRP、IL-6 异常率分别为 20.73、26.83、35.37、89.02、65.85、26.83，均高于非 COVID-19 组。（2）重型和危重型组的白细胞计数（WBC）、中性粒细胞计数（N#）、C-反应蛋白（CRP）中位数水平高于普通型组，差异具有统计学意义（P<0.05）。重型组的降钙素原（PCT）、SAA、IL-6 中位数水平高于普通型组，差异具有统计学意义（P<0.05）。重型和危重型组的 L#中位数水平低于普通型组，差异具有统计学意义（P<0.05）。重型和危重型组的 WBC、L#、M#、CRP、IL-6 异常率均高于普通型组，危重型组 PCT、SAA 异常率高于普通型组。（3）ROC 曲线分析显示，L#、IL-6、SAA 诊断 COVID-19 的 AUC 分别为 0.779、0.790、0.823（P<0.05）。取最佳临界值时，敏感度和特异度最高的指标都是 SAA。L#联合 IL-6 的 AUC 为 0.779，L#联合 SAA 的 AUC 为 0.867，SAA 联合 IL-6 的 AUC 为 0.823，3 项指标联合检测的 AUC 均为 0.868。
结论 血液炎性相关标志物的表达水平对新型冠状病毒肺炎患者的诊断以及临床分型有重要的参考价值，其中 SAA 对 COVID-19 诊断的敏感度和特异度最高。L#、IL-6、SAA 三项指标联合检测对 COVID-19 的诊断比单项检测更准确，提供更高的价值。

PU-2339

Biochemical and Molecular characteristics of Citrin Deficiency in South China

Yanna Cai、Mizhi Peng、Yongxian Shao、Zhikun Lu、Wen Zhang
Guangzhou Women and Children's Medical Center

Objectives Neonatal intrahepatic cholestasis caused by citrin deficiency (NICCD) shows diverse metabolic abnormalities and suppressed gluconeogenesis.
Methods Here, we investigated the mutational spectrum and biochemical characteristics of NICCD patients. The genetic results and biochemical data were retrospectively analyzed.
Results A total of 174 NICCD patients were included. These patients all had abnormally high levels of liver function parameters (alanine aminotransferasese, asparlateaminotransferase, alkaline phosphatase, γ-glutamyhranspepti dase), prothrombin time, and activated partial thromboplastin time, as well as low levels of glucose, total protein, albumin, globulin, prealbumin, fibrinogen. In addition, these NICCD patients had elevation of proteinogenic amino acids, except for alanine and tryptophan, which were decreased compared with normal controls. Furthermore, the levels of methionine showed positive correlation with age. Significant correlation between genotype and some biochemical parameters was observed.
Conclusions This study showed that, some biochemical markers in c.851_854del group of NICCD patients were lower than other gene types. Patients, who had the ratio of AST/ALT>2 and decrease level of total protein and prothrombin time should be suspected with NICCD, and the elevated citrulline, methionine, threonine and tyrosine further convinced the possibility of NICCD. The NICCD children generally did not resolve at 6 to 12 months of age. Identification of the NICCD patients when they are under one years, early genetic testing would be of value.

PU-2340

143 例 Citrin 缺陷导致婴儿肝内胆汁淤积症血浆氨基酸谱分析

梅慧芬
广州市妇女儿童医疗中心

目的 本研究拟分析 Citrin 缺陷导致的婴儿肝内胆汁淤积症（NICCD）患儿血浆氨基酸谱特点，以及氨基酸谱与基因型的相关性。
方法 1.2004 年至 2019 年间在我院确诊的 143 例 NICCD 患儿，与 56 例正常对照儿童组、49 例不明原因肝内胆汁淤积症(INH)组患儿的氨基酸谱进行比较；并对上述数值进行受试者工作特征(ROC)曲线分析。2.NICCD 病人分为小于 6 个月组、6 个月至 12 月组和正常对照儿童组的血浆瓜氨酸、蛋氨酸、组氨酸、缬氨酸、亮氨酸、异亮氨酸水平比较。3.NICCD 患儿按 SLC25A13 基因突变类型分为复合杂合突变组与纯合突变组进行比较。
结果 与正常对照组、INH 组比较，NICCD 患儿血浆中天冬酰胺、组氨酸、瓜氨酸、蛋氨酸、苏氨酸、酪氨酸、甘氨酸、苯丙氨酸、鸟氨酸、赖氨酸、精氨酸、丝氨酸水平显著升高，差异均有统计学意义；谷氨酰胺和色氨酸水平显著降低，差异均有统计学意义。NICCD 组瓜氨酸、蛋氨酸、苏氨酸、酪氨酸 ROC 曲线下面积分别是 0.986[95％可信区间（CI）]：0.974－0.998、0.850 (95％CI：0.786－0.915)、0.899(95％CI：0.849－0.949)、0.700(95％CI：0.620－0.781)。NICCD 组 R 瓜氨酸/丝氨酸，R 瓜氨酸/（亮氨酸和异亮氨酸），R 苏氨酸/丝氨酸 ROC 曲线下面积分别是 0.968（95％CI：0.946－0.991）、0.984 (95％CI：0.970－0.998)、0.896 (95％CI：0.833－0.960)。NICCD 患儿纯合突变组的天冬氨酸、谷氨酸水平比复合杂合突变组高。NICCD 病人的瓜氨酸、蛋氨酸、苏氨酸、组氨酸浓度随年龄而变化。

结论 血浆氨基酸谱分析是筛查和诊断 NICCD 的一种灵敏快速的方法。最为敏感的诊断指标为瓜氨酸升高结合 R 瓜氨酸/（亮氨酸和异亮氨酸）升高，可对 95.1%的患者进行诊断。NICCD 患儿瓜氨酸浓度变化与年龄有关。

PU-2341

中性粒细胞/淋巴细胞比值及中性粒细胞群落参数在类风湿关节炎诊断中的作用

李美美[2]、殷睿映[1]
1. 郑州大学第一附属医院
2. 郑州大学第一附属医院

目的 探讨类风湿关节炎患者的外周血中性粒细胞/淋巴细胞比值（NLR）及中性粒细胞群落参数的变化及临床意义。
方法 选取郑州大学第一附属医院 2020 年 6 月至 2020 年 9 月就诊的已确诊类风湿关节炎的患者 125 例，以及 137 例健康体检者，分别为病例组和正常对照组。记录两组的性别、年龄等临床资料；使用迈瑞 BC-6800 血细胞分析仪进行全血细胞计数，收集常规报告参数和中性粒细胞群落研究参，并计算 NLR、PLR。比较两组的白细胞计数、中性粒细胞绝对值、淋巴细胞绝对值、血小板计数、NLR、PLR 及中性粒细胞群落参数（Neu-X, Neu-Y, Neu-Z）之间的差异；逐步回归分析对类风湿关节炎有显著贡献的指标，并制作 ROC 曲线分析这些指标对类风湿关节炎诊断的价值。
结果 两组的白细胞计数、中性粒细胞绝对值、淋巴细胞绝对值、血小板计数、NLR、PLR 及中性粒细胞群落参数中的 Neu-X、Neu-Z 之间都存在显著的统计学差异（$p<0.05$）。淋巴细胞绝对值和 Neu-Z 在类风湿关节炎组中显著低于正常对照组；其余指标均在类风湿关节炎组中显著增高。回归分析显示 NLR、Neu-X、Neu-Z 对区分类风湿关节炎具有显著贡献；NLR、Neu-X、Neu-Z 对类风湿关节炎诊断的曲线下面积分别为 0.678，0.592，0.614，三者联合的曲线下面积达 0.765。
结论 类风湿关节炎患者外周血 NLR、Neu-X、Neu-Z 发生显著变化，且对类风湿关节炎的临床诊断具有一定指导意义。

PU-2342

锁骨骨折切开复位内固定术后与骨不连相关的因素

王榕榕[1]、晁宝婷[1]、刘芸[1]、王勇[1]、王大伟[2]、卢志明[1]、白晓卉[1]
1. 山东第一医科大学附属省立医院临床医学检验部
2. 山东第一医科大学附属省立医院骨科

目的 切开复位内固定术后的骨不连是常见的术后并发症。本研究的目的是确定锁骨骨折切开复位内固定术后与骨不连相关的因素。
方法 我们回顾性地确认了 2010 年 1 月至 2019 年 5 月在山东省立医院接受切开复位内固定术治疗的 251 例锁骨骨折患者。所有患者接受至少一年的随访。在本研究中，我们使用了组间比较、单变量分析和多变量分析等方法来确定与切开复位内固定术后骨不连相关的因素。
结果 本研究共纳入了 251 名锁骨骨折患者，其中正常愈合的 237 名，不愈合 14 名，骨不连率为 5.6%。本研究包括男性患者 180 名，占 71.71%；女性患者 71 名，占 28.29%。251 名患者平均年龄 43.97±14.72 岁。单因素分析结果显示，受伤到手术时间、血清纤维蛋白原浓度、白细胞计数、淋巴细胞绝对值与骨不连有关($P < 0.05$)，其他变量无显著差异。将单因素分析中 $P<0.05$ 的结果纳入多变量回归分析，结果显示受伤到手术时间 ($OR = 1.25$；$P = 0.005$)、血清纤维蛋白原浓度($OR = 2.11$；$P = 0.002$)、白细胞计数 ($OR= 0.72$；$P = 0.031$)、淋巴细胞绝对值($OR = 0.29$；$P = 0.022$)与骨不连的发生独立相关。

结论 锁骨骨折患者经切开复位内固定术治疗后发生骨不连的概率为5.6%，单因素和多因素分析后显示受伤到手术时间、血清纤维蛋白原浓度、白细胞计数以及淋巴细胞绝对值与锁骨骨折切开复位内固定术后骨不连有关。这些结果对于术后骨不连有预测意义，并为临床医生及时采取措施改善患者预后提供了重要指导。

PU-2343

区分抗原抗体 HIV 检测策略的临床应用

李潇涵、罗岚、邓杰伦、王远芳、陶传敏、李冬冬
四川大学华西医院

目的 中国疾病预防控制中心于 2020 年发布最新版《全国艾滋病检测技术规范》[1]，该规范中包含了使用区分抗原抗体 HIV 检测试剂时的检测流程，本研究旨在分析 Elecsys HIV Duo 检测试剂使用过程中区分抗原抗体检测策略的临床应用情况。
方法 回顾分析我院 2020 年 HIV 确证样本的筛查试验（以 Elecsys HIV Duo 检测试剂和胶体金免疫层析试剂构成的筛查程序）结果、补充试验（HIV 抗体确证试验以及 HIV-RNA 检测）结果以及临床随访信息。
结果 我院 2020 年共检测 HIV 抗体确证样本 399 例，男性 282 例，女性 117 例；确证阳性共计 248 例，阳性率为 62.15%（248/399），抗体不确定 35 例，阴性 116 例；其中男性确证阳性 191 例，阳性率为 67.73%（191/282），女性确证阳性 57 例，阳性率为 48.71%（57/117），男女阳性比为 3.35：1；Elecsys HIV Duo 筛查结果中仅抗体阳性而胶体金复检阴性 87 例，经随访和核酸检测共确诊 2 例感染；此外 Elecsys HIV Duo 筛查结果仅抗原阳性送检确证样本 42 例，约占总确证样本数的 10%（42/399）。
结论 Elecsys HIV Duo 作为初筛试剂，当筛查结果为抗体阳性而抗原为阴性时，使用胶体金试剂复检两次均为阴性时出具 HIV 抗体阴性，HIV-1p24 抗原阴性的报告存在漏检风险，建议仍出具 HIV 感染待确定，通知患者进行 HIV-RNA 检测或随访，并结合临床表现进行诊断；同时我们还需要加强临床交流，强调 HIV 核酸检测对于急性感染的重要性，提高 HIV 核酸在可疑急性感染发生时的送检率，才能及时检出、及时治疗。

PU-2344

儿童难治性肺炎支原体肺炎发生塑型性支气管炎的临床特征及高危因素预测

崔小健
天津市儿童医院

目的 分析难治性肺炎支原体肺炎（RMPP）发生塑型性支气管炎患儿的临床特点，探讨 RMPP 患儿形成塑型性支气管炎的高危因素。
方法 回顾性分析 2019 年 1 月至 12 月在天津市儿童医院住院诊断符合 RMPP 并行纤维支气管镜治疗的 399 例患儿的临床资料,依据镜下表现分为塑型性支气管炎(PB)患儿 142 例、非塑型性支气管炎(非 PB)患儿 257 例,比较两组临床特征、实验室检查指标、影像学表现的差异,将组间存在统计学差异的指标行受试者工作特征(ROC)曲线和多因素逐步 logistic 回归分析，预测儿童 RMPP 发生塑型性支气管炎的高危因素。
结果 PB 组较非 PB 组，高热、低氧血症、肺外表现人数多，发热天数与住院天数更长，差异具有统计学意义(P<0.05)。实验室指标中，PB 组 NEUT%、LYMP%、PLT、CRP、PCT、IL-6 、AST、 ALT 、LDH、CK 、D-D 水平较非 PB 组高，差异有统计学意义(均 P<0.05)。 ROC 曲线和

多因素分析显示：最高体温＞39.8℃、肺不张、NEUT%＞72.9%、IL-6＞26.65 pg/mL、AST＞49.5 U/L 是 RMPP 发生 PB 的独立危险因素。

结论 最高体温＞39.8℃、肺不张、NEUT%＞72.9%、IL-6＞26.65 pg/mL、AST＞49.5 U/L 可能是儿童 RMPP 发生 PB 的重要预测指标，有助于早期诊断。

PU-2345

耐碳青霉烯类抗菌药物肠杆菌科细菌分布特征及耐药性分析

谢强
安徽省滁州市第一人民医院

目的 探讨耐碳青霉烯类抗菌药物肠杆菌科细菌(CRE) 的分离率、标本来源、病区分布以及耐药情况，为临床抗感染治疗提供依据。

方法 回顾性分析 2017－2019 年滁州市第一人民医院分离的 332 株 CRE 菌株，对其药物敏感实验结果、科室分布等数据进行系统分析。

结果 2017－2019 年本院共分离肠杆菌科细菌 5499 株，其中 CRE 332 株，检出率为 6.0％，近三年 CRE 的分离率呈递增趋势，排名前 3 位的分别是肺炎克雷伯菌（196 株，59.0％），大肠埃希菌（35 株，10.5％）和阴沟肠杆菌（23 株，6.9％ ）；标本来源前 3 位的分别为呼吸道标本（211 株，63.6％）、尿液标本（77 株，23.2％）和分泌物标本（17 株，5.1％）。CRE 菌株对替加环素的耐药率最低，为 9.3％，其次为阿米卡星（38.6%）、复方新诺明（46.7%）和庆大霉素（53.9%），对其余监测的抗菌药物的耐药率均大于 80%。近三年 CRE 菌株对所监测的抗菌药物（除替加环素外）的耐药率呈上升趋势。

结论 本院 CRE 菌株的分离率较低，但近三年检出率有均有增加的趋势，应引起临床的足够重视。

PU-2346

体检人群 AFP 检测情况调查与分析

王海
东南大学附属中大医院

目的 探究体检人群血浆甲胎蛋白（AFP）的年龄，性别分布情况，并进行不同年龄段和性别间 AFP 含量差异分析

方法 回顾性分析 2016 年 1 月~2021 年 5 月期间东南大学附属中大医院健康管理中心 166068 名≥17 岁体检人群中血浆 AFP 含量，采用卡方检验比较不同性别、年龄段（<60 岁和≥60 岁）AFP 阳性（>10ng/mL）发生率。

结果 166068 名检测了血浆 AFP 含量的人群的平均年龄为 44.2 岁，范围为 17~99 岁，其中年龄≥60 岁的有 27570 人（16.6%），<60 岁的有 138498 人（83.4%）；男性共 99656 人（60%），女性共 66412 人（40%）。166068 人中，AFP 均值为 2.68±14.98 ng/mL，范围为 0 ~ 4708.63 ng/mL，共 1021 人检测 AFP 阳性（>10 ng/mL）。男性 AFP 阳性发生率显著低于女性（0.4% vs 0.9%，P<0.001）；≥60 岁人群 AFP 阳性发生率显著低于<60 岁人群（0.4% vs 0.7%，P<0.001），且 AFP 阳性组平均年龄显著低于非阳性组（43.06 vs 44.43，P=0.002）。

结论 体检中心检测血浆 AFP 含量人群主要集中在 60 岁以下，且≥60 岁人群 AFP 阳性发生率显著低于<60 岁人群；男性 AFP 阳性发生率显著低于女性。

PU-2347

2017-2019 年滁州市第一人民医院医院细菌耐药性监测

谢强
安徽省滁州市第一人民医院

目的 了解 2017-2019 年滁州市第一人民医院临床分离菌对抗菌药物的耐药性。
方法 使用 VITEK2-Compact 对临床分离菌进行鉴定和药敏实验，补充药敏实验采用纸片扩散法，使用 WHONET5.6 软件对药敏结果进行统计分析。
结果 3 年共分离细菌 11540 株，其中革兰阳性菌 3025 株（26.2%），革兰阴性菌 8515 株（73.8%）。金黄色葡萄球菌和凝固酶阴性葡萄球菌中甲氧西林耐药株（MRSA 和 MRCNS）的检出率分别为 44.1%和 80.9%，三年里 MRSA 的检出率呈逐年下降趋势，MRCNS 的检出率呈逐年上升趋势。MRSA 和 MRCNS 对监测的多种抗菌药物的耐药率明显高于甲氧西林敏感株（MSSA 和 MSCNS），未见万古霉素和利奈唑胺耐药的葡萄球菌。肠球菌中粪肠球菌对所有监测药物（除四环素和高浓度的链霉素外）耐药率明显低于屎肠球菌。三年里检出的成人和儿童非脑膜炎肺炎链球菌对青霉素保持全敏感。肠杆菌科细菌对碳青霉烯类抗菌药物仍然保持较高的敏感性，耐药率均小于 15%，耐碳青霉烯类的肠杆菌科细菌（CRE）的检出率为 6.0%，其中耐碳青霉烯类抗菌药物的肺炎克雷伯菌的检出率为 11.5%。铜绿假单胞菌对所监测的抗菌药物的耐药率均不大于 25%。三年里不动杆菌属（鲍曼不动杆菌占 84.9%）对所监测的抗菌药物的耐药率呈下降趋势（除哌拉西林外），对亚胺培南和美罗培南的耐药率由 2017 年的 63.9%和 50.3%下降到 2019 年的 38.4%和 36.7%。
结论 近三年多重耐药情况仍然严重，尤其是耐碳青霉烯类的肺炎克雷伯菌检出率仍然较高，但不动杆菌属细菌对碳青霉烯类抗菌药物的耐药率呈下降趋势，应继续做好细菌耐药性监测，同时加强实验室与临床的沟通，以发挥细菌耐药监测的价值。

PU-2348

PCT 联合 CRP 和 ESR 水平检测对肺结核患者合并肺部细菌感染的诊断价值分析

刘璐
保山市人民医院

目的 探讨血清降钙素原(PCT)联合 C-反应蛋白(CRP)和红细胞沉降率(ESR)检测对肺结核(PTB)患者合并肺部细菌感染的诊断价值。
方法 2019 年 04 月—2021 年 04 月，选择我院接收的肺结核患者合并肺部细菌感染 50 例作为研究对象，分别行 PCT、CRP 和 ESR 检测，观察对比 CRP 和 ESR 检测与 PCT 联合 CRP 和 ESR 检测的特异性和差异性，同时纳入同期接收的未合并肺部细菌感染患者，采用 SPSS16.0 软件对两组资料进行统计分析，观察对比两组患者 PCT、CRP 和 ESR 水平差异和 ESR 检。
结果 PCT 联合 CRP 和 ESR 检测的敏感性和特异性分别为 94.12%、88.89%明显高于 CRP 和 ESR 检测 76.34%、54.35%，P＜0.05，差异有统计学意义；未合并肺部细菌感染患者 PCT、CRP 和 ESR 水平均明显低于合并肺部细菌感染患者，P＜0.05，差异有统计学意义。
结论 肺结核患者合并肺部细菌感染情况较多，且临床诊断难度加大，PCT 联合 CRP 和 ESR 检测诊有一定价值，具有较高的敏感性和特异性，值得广泛推广。

PU-2349

应用风险管理对某酶免分析一体机检测过程控制持续改进初探

段友斌、姚丽菊
云南昆明血液中心

目的 应用风险管理对设备使用情况进行分析，持续改进酶免分析一体机检测过程管理措施，保证血液安全。
方法 统计 2019 年 1 月 1 日-2019 年 12 月 31 日某酶免分析一体机检测情况和失效失控率，分析失效失控原因，根据统计结果，针对该设备使用过程中特有的风险点进行风险管理，制定应对措施，降低该设备使用过程中的风险。
结果 2019 年 1 月 1 日-2019 年 12 月 31 日共进行 2088 板次检测，失效失控 42 次，失效失控率 2.01%，失效失控的原因主要为仪器设备和人为因素，占 42.86%、33.33%。通过风险管理，识别和评价了 12 个设备特有的风险增加和风险不可接受的风险点，进行风险应对后，9 个风险点为可接受风险，3 个风险点从风险不可接受下降为风险增加，检测过程风险下降。
结论 使用风险管理，对某酶免分析一体机使用过程进行管理，能够有效分析处理设备潜在隐患，杜绝事故的发生，能够对设备使用过程质量管理体系进行持续改进，保障血液安全。

PU-2350

血站血液筛查实验室检测过程风险管理实施细则的验证

段友斌、杜霞、杨洪岗、张珺珂、何清、苏品璨
云南昆明血液中心

目的 应用新建的检测过程风险管理实施细则，对采供血机构血液筛查实验室 2 种 ELISA 复验标本检测方案的检测过程进行风险管理，验证采供血机构血液筛查实验室检测过程风险管理实施细则的有效性。
方法 根据血液筛查实验室质量管理特点建立血液筛查实验室检测过程风险等级表和管理措施可行性等级表，作为风险管理实施细则，对 2 种通常认为有差别的复验标本检测方案的检测过程进行风险评估、风险应对和应对措施可行性分析。对风险评估结果和管理措施可行性分析结果进行统计学分析。
结果 通过风险评估，2 种复验标本检测方案均有 8 项检测过程风险，2 种方案风险等级评分有统计学差别（$P<0.05$）。根据风险等级和应对原则各制定 15 项和 12 项管理措施，2 种方案可行性分析有统计学差别（$P<0.05$）。采用的检测过程风险管理实施细则能够对检测过程进行有效风险管理。
结论 检测过程风险管理实施细则，能够有效帮助对 2 种复验标本检测过程进行有效风险管理，为血站血液筛查实验室质量体系中的过程管理提供一种充分有效可行的方法。

PU-2351

通过生化免疫分析流水线布局改造提高标本处理效率

张丽军、覃俊龙
深圳市罗湖医院集团医学检验实验室

目的 通过实验室罗氏自动化流水线上三台 cobas 8000 生化免疫分析平台（以下简称 cobas 8000）的模块调整及优化检测项目配置，提高流水线上 cobas p612 标本前处理系统（简称 p612）以及 cobas 8000 标本处理效率。

方法 实验室于 2021 年 3 月 26 日对罗氏流水线上三台 cobas 8000 进行布局调整，增加 2 台生化分析模块，以 A 代表 C702 生化分析模块，B 代表 E602 免疫分析模块，调整前三台 cobas 8000 配置为：AAA、BBB、BBB，调整后配置为：AABB、AABB、ABB，调整后对模块中项目进行设置，前两台 AABB 开展相同的项目，第三台开展量较大的组合项目。收集分析数据：罗氏流水线模块布局调整前 7 天（3 月 10 日至 3 月 16 日）标本 16384 支，调整后 7 天（4 月 19 日至 4 月 25 日）标本 18147 支，进行数据对比分析。（1）比较 p612 调整前后标本分管率。（2）通过每支标本进入 p612 时间和进入 cobas 8000 时间计算 p612 平均处理时长，了解调整前后 p612 对标本的处理时间变化情况。（3）通过标本送达实验室时间和检验报告发送时间计算检验中 TAT，评估调整前后检验中 TAT 是否缩短。（4）按照第（1）条分管率，当标本量相同时，计算调整前后分管所带来的耗材成本对比。

结果（1）调整前 7 天标本总数 16384 支，分管 3272 支，分管率 19.97%；调整后标本总数 18147 支，分管 1437 支，分管率 7.92%，分管率下降 12.05%。（2）计算调整前后各 7 天中所有标本，从进入 p612 至进入 cobas 8000 时长，调整前平均处理时间 24.6 分钟，调整后平均处理时间 15 分钟，p612 平均处理时间缩短 9.6 分钟。（3）调整前检验中 TAT 平均为 2 小时 07 分钟，调整后检验中 TAT 平均为 1 小时 36 分钟，检验中 TAT 缩短 30 分钟。（4）按照前面调整前后的标本分管率，以每个月 8 万支标本计算，每月可少分管 10703 支，每分管一支消耗试管、吸头、后处理试管盖等耗材费用 1.11 元，每月可节省耗材费用 1 万元。

结论 实验室通过罗氏自动化流水线上三台 cobas 8000 生化和免疫模块调整及检测项目重新配置，一支标本在一台 cobas 8000 中即可完成检测，从而减少 p612 前处理系统对标本分管的可能，提高 p612 处理效率，缩短检验中 TAT 时间。分管情况减少也减少分管耗材的使用，带来经济效益，后处理系统因分管少降低了冰箱空间占有率，从而能储存更多样本。调整后有两台 cobas 8000 拥有相同的检测项目，可以实现双机备份，防止因一台 cobas 8000 故障而影响检验结果发放。

PU-2352

The associations between fasting plasma glucose levels and mortality of SFTS in patients

Yin Zhang、Yuanhong Xu、Ying Huang
Department of Clinical Laboratory, The First Affiliated Hospital of Anhui Medical University

Objective To identify the correlation between the level of at-admission fasting plasma glucose (FPG) with poor outcomes in hospitalized patients suffering from severe fever with thrombocytopenia syndrome (SFTS).

Methods Between April 1 and December 1, 2020, the list of hospitalized patients affected with SFTS infection was provided by the Infectious Disease Department at First Affiliated Hospital of Anhui Medical University, followed by the collection of information I.e., gender, age, diabetic history and the level of FPG on admission.

Results In this study, a total of 77 patients were included and were categorized into three groups (<5.6, 5.6–6.9, and ≥7.0 mmol/l) on the basis of their glucose level in the blood. The obtained results revealed that among three groups considerable variations were observed in leukocytes, FPG, D-Dimer, aspartate aminotransferase (AST), tumor necrosis factor-α (TNF-α), fibrin degradation products (FDP), and interleukin (IL)-10 level. Correlation analysis indicated a linear negative correlation between PLT and FPG ($r = -0.28$, $P = 0.01$), however, a linear positive correlation was observed between AST, IL10, D-Dimer, and FDP levels and FPG (P-value < 0.05). Multivariate statistical analysis results show that there was significant difference between group comparison ($F=17.01$, $P<0.001$) and interaction between group and time ($F=8.48$, $P<0.05$); but there was no significant difference between time point comparison ($F=0.04$, $P=0.96$). With the prolongation of time, the changes of FBG were different between survivor group and non-survivor group. The FBG in survival group shown a downward trend; The non-survivor group shown an upward trend.

Conclusions Elevated level of FPG has been correlated with hypercoagulability, inflammation, and lower PLT in SFTS patients. The measurement of FPG level can help in evaluating the inflammatory process, hypercoagulability, and prognosis of patients suffering from SFTS. FBG can predict the prognosis of SFTS. It is necessary to pay attention to the role of FBG in the process of treatment in patients with SFTS.

PU-2353

支原体培养及鉴定室间质量评价结果分析

张敏敏
上海市临床检验中心

目的 通过开展支原体培养及鉴定室间质量评价活动（简称室间质评），了解上海及部分其它地区医疗机构近两年支原体培养及鉴定项目的检测质量。
方法 收集 2019~2020 年参加上海市临床检验中心（SCCL)支原体培养及鉴定室间质评项目的反馈结果，并对鉴定符合率进行统计分析。
结果 2019~2020 年参加 SCCL 开展的支原体培养及鉴定室间质评活动的实验室数由 60+增加至 100+。其中，人型支原体项目由 60 个实验室增至 96 个实验室，合格率由 93%增加到 100%；解脲支原体项目由 65 个实验室增至 104 个实验室，合格率由 43%增加到 99%。
结论 人型支原体和解脲支原体培养及鉴定室间质评计划，是保证各临床实验室检测质量的重要手段，可以考察参评实验室对临床微生物项目的检测水平。上海及部分其它地区开展的支原体培养及鉴定室间质量评价活动，鉴定上总体检测能力和准确率较高，但个别实验室检测能力有待提高，临床实验室的质量控制对于保证检测结果的准确性具者十分重要的作用。相信随着该项的不断广泛化、检测试剂方法的不断优化、室内质量控制的不断加强、相关管理制度的不断落实、检测质量会越来高。

杭州迪安医学检验中心有限公司

智慧医疗将大数据、人工智能和物联网等先进技术融合，实现患者与医务人员、医疗机构、医疗设备之间的信息无缝传递和有效使用。近年来，我国独立医学实验室行业在信息化、智能化和连锁化方面发展迅速，在检验前阶段，有冷链物流系统为患者样品和检测试剂保驾护航；在检验中阶

段，统一的检测系统和质控平台促进了室内质控室间化，助力实验室间检测结果互认；在检验后阶段，智能审核系统极大提升了报告审核速度，远程病理平台解决了基层医疗机构缺乏优质病理诊断资源的难题。另外，通过互联网，直接向消费者提供上门样本检测服务；以及通过对独立实验室检验大数据的深入分析，可建立多个常规医学检验项目与临床疾病的发生发展的相关性，从而指导临床决策；另外，还可通过大数据分析验证和建立实验室生物参考区间等，充分展示了智慧医疗在独立实验室领域发展的无限可能性。

异常凝血酶原(PIVKA-II)—肝癌检测新指标

段又心
西昌路昆明医科大学第一附属医院

肝细胞癌（Hepatocellular carcinoma，HCC）是世界范围内发病率居第五，死亡率居第二的恶性肿瘤。对 HCC 进行准确、灵敏的早期诊断是提高患者疗效和存活率的关键。异常凝血酶原也称为维生素 K 缺乏诱导的蛋白质（Protein Induced by Vitamin K Absence,PIVKA-Ⅱ），作为一种新的肿瘤标志物，对于 HCC 的诊断、治疗效果评估、预后判断及肿瘤复发监测均具有较好的临床应用价值，本文就 PIVKA-II 的生物学特性和临床应用作综述。

PU-2357

输血后基因型改变一例

王凯、冯飞雪、马艳侠
陕西中医药大学附属医院

本病例输血对患者 MTHFR-C677T 基因分型产生了影响，患者实际基因型为 MTHFR-677 CT 符合临床表现。输血后相关基因检测需结合临床综合分析结果，对可疑结果应进行后续复查。由于患者曾短时间内大量输血，且自身呈骨髓危象，后不足 48H 采血，血液中含有受血者基因成分，造成结果 MTHFR-C677T CC 分型异常。

PU-2358

输血传播感染性疾病实验室检测室内质控的研究进展

王远芳、邓杰伦、李潇涵、罗岚、李冬冬、谢轶
四川大学华西医院

室内质量控制是保证实验室结果正确的常用手段，在输血传播感染性疾病（Transfusion-Transmissible Infections，TTI）中广泛使用。随着 TTI 检测手段由定性向半定量发展，对其质量控制的要求也从判断是否符合阴/阳性预设结果，转变成在 Westgard 规则为基础的质量规则体系下，使用不同水平的质控品，判断结果是否在要求的规则范围。但由于 TTI 检测方法特点、质控品的局限性、批号更换引起的质控结果偏移等原因，现行的质控方案在 TTI 检测中的应用受到了较多的限制。针对这个问题，许多研究在更改质控规则、增加样本质控和控制批号更换等方面做了尝试性的探索。

TTI 检测的室内质量控制，目前参照现有技术水平，以定量项目的质控规范为基础建立。但由于其自身的特点，这样的质控规范对于 TTI 检测的质量控制还有各种不足，造成假失控过高，引起不必要的临床处理，且有可能忽略真正引起患者结果错误的严重失控。目前，不论是对质控规则的

更改，还是加入患者样本的质量控制，都无法较好解决这个问题。质量控制的量化评价，对于 TTI 检测的质量控制发展十分重要，还需要更多深入的研究进行完善。

PU-2359

血液病患者血培养检出蜡样芽孢杆菌，污染菌还是致病菌的案例分析一例

辛娜
西安医学院第一附属医院

蜡样芽孢杆菌是革兰阳性需氧芽孢杆菌，广泛分布于自然环境并可长期存在于 医 院 环 境 中。蜡样芽孢杆菌可引起不同程度的感染，如食物中毒、局部感染、菌血症等。尽管血标本中芽孢杆菌的分离经常考虑为污染，但蜡样芽孢杆菌对于血液病患者往往为血流感染的病原菌，甚至可伴发严重的并发症，即颅内感染，病死率高达 4 2 %。我国恶性血液病伴中性粒细胞缺乏患者中由该菌引起的菌血症报道并不多见，当血液病患者血培养检出蜡样芽孢杆菌后，临床医生往往缺乏足够的重视。本文对某院一例恶性血液病患者在粒细胞缺乏期合并蜡样芽孢杆菌菌血症病例进行总结分析如下。

PU-2360

西安市不同年龄健康儿童甲状腺功能指标正常参考范围的建立

徐晓丽、刁艳君、刘家云、何娟、胡恩亮、颜楠、荆晶
空军军医大学西京医院

目的 建立西安市不同年龄健康儿童甲状腺功能指标：促甲状腺素激素(TSH)、总三碘甲状腺原氨酸(TT3)、总甲状腺素(TT4)、游离三碘甲状腺原氨酸(FT3)、游离甲状腺素(FT4)的正常参考范围，为临床诊断、治疗提供数据支持。
方法 随机选取 2019 年 01 月—2020 年 12 月西安市 0-16 岁健康儿童 1500 名(男 750 名，女 750 名)。使用全自动化学发光免疫分析仪检测血清甲状腺功能 7 项相关指标，比较不同性别年龄段 7 组甲状腺激素水平。
结果 按不同年龄段划分参考范围为：1 组 1~28 d（含)：TSH 0.55~13.02 μIU/mL,TT3 0.70~2.78 nmol/L,TT4 66.52~167.64 nmol/L,FT3 2.35~5.77 pmol/L，FT4 9.71~24.84 pmol/L。（因字符限制，其余分组具体结果详见摘要附件）。不同性别组间 TSH、TT3、TT4、FT3、FT4 水平比较，差异无统计学意义（P>0.05)；不同年龄组间 TSH、TT3、FT3、FT4 水平比较差异有统计学意义（P<0.05)，TT4 比较差异无统计学意义（P＞0.05)。
结论 建立本市儿童甲状腺激素正常参考范围数据，为甲状腺激素测定规范化、标准化和临床应用提供了依据，为临床诊断儿童甲状腺疾病及合理用药提供了数据支持。

PU-2361

尿微量白蛋白免疫比浊法勾状效应的解决方法

马飞
天水市第四人民医院

目的 探讨尿微量白蛋白免疫比浊法定量检测时出现勾状效应的解决方法。

方法 收集我院肾病科 2018 年 4 月至 2021 年 3 月尿常规检测尿蛋白分别为+-、+、++、+++病人尿液各 50 例，按尿常规试纸条说明书提供的蛋白浓度用生理盐水稀释、对尿常规检测尿蛋白++++尿液用尿蛋白阴性尿液进行稀释；使稀释结果在线性范围 0-200mg/L 内，然后在贝克曼 AU5800 全自动生化分析上进行尿微量白蛋白免疫比浊法的定量测定。
结果 尿蛋白干化为+-尿液尿微量白蛋白最大值为 181mg/L、最小值为 101mg/L、均值为 132mg/L、中位数为 108mg/L，稀释倍数为原倍；尿蛋白干化为+尿液尿微量白蛋白最大值为 331mg/L、最小值为 121mg/L、均值为 202mg/L、中位数为 198mg/L，稀释倍数为 2 倍；尿蛋白干化为++尿液尿微量白蛋白最大值为 899mg/L、最小值为 336mg/L、均值为 660mg/L、中位数为 598mg/L，稀释倍数为 6 倍；尿蛋白干化为+++的尿液尿微量白蛋白最大值为 2601mg/L、最小值为 1331mg/L、均值为 2232mg/L、中位数为 1998mg/L，稀释倍数为 20 倍；尿蛋白干化为++++尿液尿微量白蛋白最大值为 20301mg/L、最小值为 3311mg/L、均值为 12021mg/L、中位数为 13008mg/L，稀释倍数为 130 倍。
结论 尿微量白蛋白的免疫比浊法测定出现的钩状效应可根据尿常规蛋白定性的结果对其进行盐水或者尿液进行相应倍数的稀释。

PU-2362

健康成人 NLR、PLR、SII RI、PNI 的正常参考区间研究

何林波
宜宾市第一人民医院

目的 调查健康成人 NLR、PLR、SII RI、PNI 的正常参考区间。
方法 采用回顾性队列研究方法，从健康体检中心数据库和实验室信息系统中检索 18 岁至 79 岁的健康汉族人群资料。通过遵循临床和实验室标准协会（CLSI），建立和验证每个参数的 RI。
结果 2380 名健康受试者被纳入分析。结果发现，个体性别对 PLR、PNI、SII 有显著影响（均 P<0.05），对 NLR 无显著影响（P>0.05）。令人惊讶的是，我们还发现，随着年龄的增长，PLR、PNI 和 SI 趋于降低，而 NLR 保持稳定。青年(18～64 岁)PLR、PNI、SII 值显著高于老年(65～79 岁)(P<0.001)。NLR、PLR(成人)、PLR(老年人)、PNI、SII 的 RI 分别为 0.88-4.0、49-198、42-187、2.63-9.9、142×109/L-804×109/L。
结论 本研究针对四川西部地区健康汉族成人 NLR、PLR、SII RI、PNI 的可能变异，建立共识，有助于实验设计的相关研究，让 RI 在临床中的应用更加标准化。

PU-2363

河南省儿童铁蛋白水平及检测铁蛋白的重要性

王亚龙
郑州金域临床检验中心

血清铁蛋白是体内含铁最丰富的蛋白，在铁的代谢方面起着重要的作用。血清铁蛋白广泛存在于其他组织细胞中，当人体某一系统出现疾病时，血清铁蛋白可出现异常改变。血清铁蛋白能够反应体内铁存储量及肌体的营养状态，是判断体内铁缺乏及超负荷的有效指标。

目的本文就河南省儿童检测血清铁蛋白数据的统计，来展示河南省儿童血清铁蛋白的水平，讨论儿童检测血清铁蛋白的必要性。

PU-2364

Severe fever with thrombocytopenia syndrome in Hefei: Clinical features, risk factors, and ribavirin therapeutic efficacy

Yin Zhang、Yuanhong Xu、Ying Huang
Department of Clinical Laboratory, The First Affiliated Hospital of Anhui Medical

Objectives This study described the clinical features, risk factors, factors affecting the outcome of this disease, and ribavirin therapeutic efficacy for severe fever with thrombocytopenia syndrome (SFTS) patients in Hefei.
Methods Between April 2020 and July 2020, 62 cases admitted to the First Affiliated Hospital of Anhui Medical University were included in this study. Serum samples were collected from all patients, after which diagnosis was made via reverse transcription-polymerase chain reaction and via the use of a colloidal gold immunochromatography assay approach.
Results In multivariate analysis, the following factors were determined as risk factors for SFTS: Being a farmer (odds ratio [OR], 3.033), working in areas with weeds and shrubs (OR, 2.807), and being bitten by a tick (OR, 6.64). The rates of confusion, neck stiffness, viral encephalopathy, and the presence of liver damage were higher in the patients who died than that in the surviving ones. Additionally, the median of alanine aminotransferase, aspartate aminotransferase, lactate dehy_x0002_drogenase, creatine phosphokinase, activated partial thromboplastin time, D-dimer, fibrinogen degradation products, creatinine, and urea was also higher in the patients who died. One of the 15 patients treated with ribavirin in the early stage could not survive (6.7%), whereas 11 of the 35 patients treated with ribavirin in the late stage could not survive (31.4%); this difference was statistically significant. However, there was no significant difference in mortality between the untreated group and the other two groups (i.e., patients who started antiviral treatment <5 days from the onset and those who started antiviral treatment ≥5 days from the onset). Moreover, there was no positive effect determined on clinical or laboratory parameters in SFTS patients treated with ribavirin. Also, it was observed that leukocyte levels and platelet levels took longer to return to normal.
Conclusions In Hefei, clinical features, prognostic factors, and risk factors asso_x0002_ciated with SFTS are similar to those in other areas. Patients who were given ribavirin did not have better survival rates than patients who were not given ribavirin.

PU-2365

尿蛋白不同检测方法在健康体检中的应用研究

张云
中国人民解放军总医院第六医学中心

目的 比较干化学试带法、尿总蛋白尿肌酐比值（Urinary Protein to Creatinine Ratio, PCR）和尿白蛋白尿肌酐比值（Urinary Albumin to Creatinine Ratio, ACR）三种尿蛋白筛查方法一致性，并研究其在健康体检人群的应用价值。
方法 盲法选取 2020 年 8 月 11～30 日解放军总医院第六医学中心征兵体检数据管理中心某部所有健康体检人群 936 例新鲜晨尿标本，分别进行尿蛋白试带法定性/半定量测定，尿总蛋白、尿微量白蛋白和尿肌酐定量测定，研究干化学试带法、PCR 与 ACR 的检测结果符合率，干化学试带法少量蛋白尿与 ACR 微量白蛋白尿的一致性，尿蛋白阳性样本回顾性或跟踪分析等。
结果 ACR＜30 mg/g 时，PCR 符合率 97.6%、干化学法符合率 98.9%，一致性较高；ACR 在 30～300 mg/g 之间时，PCR 假阴性占 28.7%,干化学法假阴性占 78.3%，符合性较差；ACR＞300

mg/g 时，PCR 符合率 100%，干化学法符合率 84.6%，其中 2 例假阴性均因高尿酸口服碳酸氢钠所致。36 例干化学试带法 1+（半定量 250～749 mg/L）时对应尿微量白蛋白在此区间内仅 10 例，符合率 27.8%，与研究人群年龄和代谢状态相关。118 例三种检测方法结果不一致样本，运用回顾性分析、跟踪研究、咨询经治医生等方式了解其临床特征，8 例干化学法阳性、PCR 和 ACR 均阴性样本中，临床特征包括糖尿病 3 例和高血压/高血脂 4 例，尿肌酐均＞2.5mmol/L。110 例干化学阴性、ACR 和（或）PCR 阳性样本中， 检验显示，干化学法假阴性率 67.4%，假阳性率 0.3%；ACR 假阴性率 16.2%，假阳性率 1.8%；PCR 假阴性率 20.6%，假阳性率 0.8%。
结论 尿蛋白检测应针对不同对象选择不同检测方法和评价方式，尿蛋白结果的解读应纳入患者近期饮食、口服药物和代谢状态。

PU-2366

全自动血细胞分析仪 XN20(A1)性能评价

任方芳
电子科技大学附属医院•四川省人民医院

目的 对 Sysmex XN20(A1) 全自动血细胞分析仪进行性能评价。
方法 对 Sysmex XN20(A1)全自动血细胞分析仪的本底计数、携带污染率、批内及批间精密度、线性、正确度、准确度以及仪器间的比对进行评价。
结果 Sysmex XN20（A1)全自动血细胞分析仪的批内精密度和批间精密度小于美国临床实验室改进修正法规 '88（CLIA'88）规定的总允许误差的 1/4，仪器精密度良好。携带污染率最高为 0.03%，符合厂家要求≤ 1.00%。仪器检测线性范围：WBC 为 0.03～163.64×109/L，RBC 为 0.01～8.65×1012/L，HGB 为 0.0～263 g/L，HCT 为 0.1%～77.3%，PLT 为 3～1018×109/L。本底计数均符合厂家要求。比对试验符合原卫生部关于《临床血液学检验常规项目的分析质量要求》2012 版规定的偏差范围，同时也符合 1/2 CLIA'88 要求的偏差范围。
结论 XN9000-20A1 精密度良好，携带污染率极低，空白干扰极低，线性范围宽广，正确度及准确度较高，其检测结果准确可靠，能够满足绝大多数临床实验室的工作需求。

PU-2367

绵阳地区中老年尿液阿尔茨海默相关神经丝蛋白水平及相关因素分析

张玉蓉、方堃、王芳、刘阳、杨平、吴燕、李磊、赵园宇、蔡志龙、杨佳、袁丹
四川省科学城医院

目的 探讨尿液阿尔茨海默相关神经丝蛋白（Alzheimer- associated neuronal thread protein, AD7c-NTP）在体检人群的分布及常见代谢性指标与其含量的相关性。
方法 选取四川省科学城医院体检者 1150 例，采用酶联免疫吸附法检测尿 AD7c-NTP，常规方法测定血生化指标。收集体检者人口学指标和神经系统相关检查。
结果 体检者尿液 AD7c-NTP 浓度中位值 0.60 (0.30,1.20) ng/ml，男 0.84 ng/ml，女 1.04 ng/ml，最高 9.10 ng/ml，女性高于男性，有显著性差异（z =4.202，P<0.001）。＜1.5ng/ml 者 956 例，中位值 0.50(0.30,0.90)；≥1.5ng/ml 者 194 例，中位值 2.10(1.70,2.10)；尿液 AD7c-NTP 浓度除与年龄（r=0.184, P<0.001，Y=-0.1871+0.01663X）外，与其它人口学指标及相关神经系统疾病等无相关性；AD7c-NTP 正常组和升高组的血糖 (t/z =3.506， P< 0.001)、血尿酸 (u=2.574, P<0.05)、血尿素氮 (t/z =2.891, P<0.05)、总胆红素(t/z =3.936, P< 0.001)、谷草转氨酶(t/z =0.969, P< 0.05)、总胆固醇（t=3.956, P<0.001）、低密度脂蛋白（t/z =-5.678, P<0.001）有显著差别；女性

（n=556）尿 AD7c-NTP 与血 UA 值相关性具统计学意义（r=0.148，P<0.001，Y=0.09313+0.003098X），男性未观察到。
结论 尿 AD7c-NTP 值与年龄相关，女性尿 AD7c-NTP 值和血尿酸水平相关，预防认知功能障碍，早发现阿尔茨海默病，需加强血尿酸值监控。

PU-2368

我院 2015 年~2019 年肺炎克雷伯菌临床分布特点及耐药性变迁

邓文平、罗国霞、张国欢、许涛
重庆市涪陵中心医院（重庆市微创外科研究所）

目的 分析临床标本中肺炎克雷伯菌的科室分布与耐药情况，为临床合理使用抗菌药物、降低细菌耐药率及控制医院感染提供指导依据。
方法 回顾分析 2015 年~2019 年我院临床各种标本分离出的 2296 株肺炎克雷伯菌的临床科室分布、标本来源以及耐药情况。
结果 获取非重复分离的肺炎克雷伯菌 2296 株，主要标本为痰 1697 株（73.9%）、血液 161 株（7.0%）、尿液 161 株（7.0%）、脓和分泌物 115 株（5.0%）；科室分布主要在神经外科 360 株（15.7%）、重症医学科 330 株（14.4%）、儿科 313 株（13.6%）、新生儿科 261 株（11.4%）、肝胆科 126 株（5.5%）、呼吸科 122 株（5.3%）；肺炎克雷伯菌对头孢他啶、头孢噻肟、头孢吡肟、哌拉西林、氨苄西林/舒巴坦、氨曲南、四环素等在 2015 年~2019 年各年中的最低耐药率分别为 26.51%、32.15%、28.81%、34.44%、30.89%、28.81%、23.77%，并且亚胺培南、美罗培南的耐药率逐年显著升高，2015 年为 0.98%、0.98%，2019 年为 8.14%、6.88%，重症医学科为 17.02%、14.90%，呼吸科为 30.77%、30.77%。
结论 我院肺炎克雷伯菌耐药严重并且碳青霉烯类的耐药率逐年明显上升，医院需加强对肺炎克雷伯菌感染者的目标性监测，指导临床正确且合理使用抗菌药物，有效的预防和控制耐药菌的蔓延。

PU-2369

利用电子表格设计基于风险管理指数的统计质量控制策略

张裕[1,2]、邹国英[2]、余启华[1,2]
1. 湖南省临床检验中心
2. 湖南省第二人民医院

临床实验室质量控制的新指南 CLSI C24-Ed4 结合了 EP23-A 中提出的风险管理的概念和原理，强调了实验室应评估室内质量控制策略的有效性，以最大程度地减少因检测过程中的不稳定性而产生的错误结果，导致不恰当的临床决策和医疗行动对患者造成伤害的风险。C24-Ed4 文件制定委员会主席 Parvin 为此提出了一个指标：风险管理指数（RMI），即报告的错误结果对患者伤害的预期概率与可接受的患者伤害概率之比，来确定患者伤害风险是否得到有效控制，并开发出配套的风险防控软件，但该软件不能免费使用，现有的文献中也没有简单的工具可以计算。本研究旨在梳理 RMI 计算原理，通过使用常见的办公软件 EXCEL 编辑函数，利用实例计算风险管理指数水平，并绘制示意图，在一定程度上帮助实验室进行基于风险管理指数的统计质量控制策略设计。

PU-2370

RDW、LNR 与血清 CA125 联合检测在子宫内膜癌中的应用价值

李颖[1]、蓝婷[2]
1. 徐州医科大学附属医院
2. 徐州医科大学

目的 探讨红细胞分布宽度（Red blood cell distribution width，RDW）、中性粒细胞/淋巴细胞比值（Neutrophil/lymphocyte ratio，NLR）及血清糖类抗原 125（Cancer Antigen 125，CA125）联合检测在子宫内膜癌诊断中的价值。
方法 选取 2018 年 1 月至 2021 年 5 月在徐州医科大学附属医院收治的初诊为子宫内膜癌患者 91 例作为研究组，选取同时期健康体检者 91 例作为对照组。回顾分析两组患者的 RDW、NLR 及 CA125 水平，绘制 ROC 曲线，分析 RDW、NLR 及 CA125 在子宫内膜癌患者中的诊断效能。
结果 研究组 RDW、NLR 及 CA125 水平均高于对照组（$p<0.01$），术前 RDW 水平与子宫内膜癌患者临床分期呈正相关；研究组中，患者术前 RDW、NLR 及 CA125 水平均高于术后；RDW、NLR 及 CA125 三者联合诊断子宫内膜癌的 AUC 值最大，灵敏度和特异度最高，高于单一指标检测或任意两种指标联合检测。
结论 RDW、NLR 及 CA125 三者联合检测可获得较高的诊断效能，辅助临床诊疗。

PU-2371

COPD 稳定期患者 CRP/Alb 比值、NLR、WBC 对急性加重的早期评估效能分析

黄义、黄友军、颜彦
郴州市第一人民医院

慢性阻塞性肺病（COPD）是一种常见的慢性阻塞性肺病呼吸系统疾病，一般是暴露于有毒颗粒或气体引发的气道和/或肺泡异常导致，是死亡率在全世界所有疾病居中位居第四位疾病。COPD 可分为急性加重期和稳定期，其中加重其患者的咳嗽和咳痰症状轻微且稳定，病情基本恢复到急性加重前状态，而 COPD 急性加重是疾病进展及其发病的重要事件，随着急性加重发生次数的增加，患者的病情加重，可增加相关不良预后的发生风险，影响患者的生活质量，加速疾病进展过程，增加住院率和再住院率。COPD 急性加重是疾病进展及其发病的重要事件，其频率和严重程度与患者预后密切相关。COPD 的发生发展涉及到炎症细胞和多种炎症指标。NLR 反应体内中性粒细胞和淋巴细胞水平平衡状态，较单一指标更能反应全身炎症状态，可作为 AECOPD 患者的病情评估及预后的指标。WBC 是传统的炎症标志物，与 COPD 的急性加重有关。CRP/Alb 比值结合血清炎症因子 CRP 和 Alb 浓度，已被证实与脓毒症以及肺炎等密切相关，但其与 COPD 及其急性加重关系的研究缺乏。可能通过联合检测更准确进行 COPD 稳定期患者急性加重的早期评估，但目前相关研究缺乏，因此，本项目首次分析 COPD 稳定期患者 CRP/Alb 比值、NLR、WBC 对急性加重的早期评估效能，从而指导 COPD 稳定期患者急性加重的有效防治，减少 COPD 稳定期患者急性加重的发生及其相关病情不良影响、经济支出及医疗负担，改善 COPD 预后和患者生存质量。

PU-2372

339 家实验室血清葡萄糖室内质控图基本信息完整性调查分析

张裕[1,2]、邹国英[2]、彭爱红[1,2]
1. 湖南省临床检验中心
2. 湖南省第二人民医院

目的 利用室内质控图基本信息指标，了解实验室室内质控图基本信息指标录入完整性情况，分析存在的问题。
方法 参照 CNAS-CL02-A003 中关于质控图基本信息的 17 项指标，对收集到的 339 家实验室血清葡萄糖纸张室内质控图每个指标的录入情况以及录入途径进行统计。
结果 17 项基本信息指标中，“项目名称”和“中心线和控制界线”录入率最高，达 100%；“试剂批号”、“仪器唯一标识”、“校准物批号”、“数据点时间”录入率最低，均低于 6%；只有 5 项指标达到 3σ 以上水平；无一家实验室信息录入完整率为 100%，录入了 10 项指标的实验室数量最多，占 28%。在录入途径方面，“有录入空位但未录入”的情况中，“试剂批号”、“校准物批号”、“方法学名称”占比最高，在“无录入空位但手工补录”的情况中，“质控物批号”、“质控物名称”、“仪器名称”占比最高。10 家已获得 ISO 15189 认可的实验室普遍缺失 3-7 项指标。常规化学专业室间质量评价得分随着录入指标数量的增加有上升趋势。
结论 室内质控图基本信息缺失现象比较普遍，基本信息的缺失不利于失控状态原因分析以及质控数据的回顾性分析，实验室人员应加强室内质控意识，主动记录室内质控相关基本信息，并积极完善 LIS 系统或质控软件功能。

PU-2373

同型半胱氨酸、D-二聚体与急性胰腺炎严重程度的相关性研究

曾昭伟
天津市中西医结合医院·南开医院

目的 探讨同型半胱氨酸（Hcy）、D-二聚体（D-dimer）与急性胰腺炎（AP）严重程度的相关性。
方法 选取 2018 年 10 月—2020 年 7 月天津市南开医院住院和门诊收治的 AP 患者 87 例，根据病情严重程度分为轻度 AP48 例、重度 AP 组 39 例；选取同期健康体检者 50 例为对照组，检测各组的血清 Hcy 和 D-dimer 水平并进行比较，采用受试者工作特征曲线（ROC 曲线）分析 Hcy、D-dimer 对 AP 病情严重程度的预测价值。
结果 AP 组患者的血清 Hcy、D-dmier 水平明显高与对照组，差异有统计学意义（P<0.01），87 例 AP 患者的血清 Hcy 和 D-dmier 的阳性率为 71.26%、58.62%。AP 组患者血清 Hcy、D-dimer 阳性率高于 CON 组，差异有统计学意义（P<0.001）。SAP 组与 MAP 组患者的血清 Hcy、D-dmier 阳性率差异无统计学意义。Hcy、D-dmier 的受试者工作特征曲线下面积（AUC）分别为 0.956、0.722，差异有统计学意义，Hcy 诊断 AP 的敏感度为 92.0%，特异度为 92.0%，分别高于 D-dmier 的 78.2%及 68.2%，差异有统计学意义（P<0.01）。Hcy 检测对 AP 早期预测及严重程度评估的价值优于 D-dmier 检测。
结论 AP 患者 Hcy 和 D-dmier 水平高于对照组，且随着疾病严重程度的加深而增高，Hcy 检测诊断 AP 的临床价值优于 D-dmier 检测。

PU-2374

A 7-year Retrospective Analysis of Fungal Keratitis at a University Hospital in Shandong Province, China

Xiaoli Zhang
Shandong University Qilu hospital

Background and Purpose Early diagnosis of mycotic keratitis is challenging. This retrospective study aims to analyze the demographics, risk factors, microbiology at a tertiary hospital.
Methods We reviewed medical records and microbiology reports of 96 patients of clinically suspected fungal keratitis from January 2013 to December 2019. The data included patients' history, age, gender, demographics, risk factors, seasonal variation, in vivo confocal microscopic examination and laboratory findings.
Results 67.7% of patients were males and 32.3% were females. Mean age was 54±26 years (range 7-87 years). Most of corneal scrape samples were from age group 51-60 years (30.2%). Total fungal culture positivity was 42.7%. Fusarium species (63.4%) were the most common isolates, followed by Aspergillus species (19.5%), Alternaria (9.8%), Penicillium (4.9%), and Exophiala (2.4%).
Conclusions Mycotic keratitis is the leading cause of ocular blindness. Our study investigated the spectrum and epidemiology of fungal keratitis in the southwest of Shandong province. Direct microscopic examination of corneal scrape smear is a rapid and simple diagnostic method. The use of MALDI-TOF MS with fungal culture is proved to be a fast identification approach of fungi at the species level for successful management of mycotic keratitis.

一项念珠菌血症的回顾性研究

张晓丽
山东大学齐鲁医院

目的 随着医学技术的不断进步，实体器官移植的发展，免疫抑制病人的增多等，临床真菌感染日益严重，逐渐出现了多重耐药的真菌菌株，威胁着广大病人的身体健康。本研究旨在分析调查既往患有念珠菌血症的病人临床特点，微生物学特征，为念珠菌血症的临床治疗提供帮助。
方法 通过回顾性研究分析 2013 年至 2019 年间的念珠菌血症的患者病例资料和实验室微生物学报告，了解最近 7 年间住院患者血流感染的念珠菌分布情况，危险因素，临床特征，抗真菌药物敏感性情况。
结果 本次研究共纳入了 123 例念珠菌血症患者，同时包含 123 株念珠菌，其中，近平滑念珠菌是念珠菌血症的最主要的分离菌株，占 31.7%，光滑念珠菌次之，占 21.1%，而白色念珠菌占念珠菌血症的 18.7%，热带念珠菌占 17.9%，而葡萄牙念珠菌、季也蒙念珠菌、克柔念珠菌分别占 4.0%，3.3%，3.3%。绝大部分分离的酵母菌属对抗真菌药物敏感。
结论 我们的研究证实非白色念珠菌导致的血流感染占了 80%，这与以往白色念珠菌感染是念珠菌血症感染的主要致病菌的结论不同，说明近些年来念珠菌血症的病原菌谱发生了改变，可为临床诊疗提供依据。

PU-2376

2 型糖尿病视网膜病变与血清 non-HDL-c、CysC 相关性分析

王前明
厦门大学附属第一医院检验科

糖尿病视网膜病变（diabetic retinopathy，DR）是糖尿病最常见的微血管并发症之一, 严重时可导致失明，因此早发现，早诊断，早治疗尤为重要。非高密度脂蛋白（non-high density lipoprotein cholesterol cholesterol，non-HDL-c）是除高密度脂蛋白胆固醇（high density lipoprotein cholesterol，HDL-c）外的其他胆固醇的总和，其在 DR 中的变化仍鲜有报道。血清胱抑素 C（Cystatin C，CysC）是肾功能损伤的早期标志物，与 DR 关系的相关报道仍较少，本研究拟分析 CysC、HbA1c 及 non-HDL-c 等血脂指标在 DR 的变化规律，为 DR 的早期诊断提供新的依据。

目的 探讨 2 型糖尿病(T2DM)患者血清非高密度脂蛋白胆固醇(non-high density lipoprotein cholesterol ,non-HDL-c)、胱抑素 C(Cystatin C ,CysC)与视网膜病变发病风险的相关性。

方法 收集 144 例 T2DM 患者的临床资料，根据眼底拍照结果分成视网膜病变组（DR 组）和单纯糖尿病组(DM 组)，比较两组 non-HDL-c 、CysC 等指标的差异并分析其与 DR 的相关性；

结果 DR 组患者病程、CysC 、CHO、HDL、LDL，ApoA、ApoB、HbA1c 和 non-HDL-c 与 DM 组比较，差异有统计学意义（P＜0.05）；Pearson 相关分析结果显示 DR 分级与 CysC 、CHO、HDL-c、LDL-c、non-HDL-c、ApoA、ApoB、HbA1c 呈正相关（P＜0.01）；多元 Logistic 回归分析显示，CysC、HbA1c、ApoA、病程为 DR 的影响因素（P＜0.05）；

结论 non-HDL-c、CysC、HbA1c 对 DR 诊断有重要价值，联合检测 non-HDL-c、CysC、HbA1c 等指标,对于 DR 的早期风险评估有重要意义。

PU-2377

山东地区健康成人超氧化物歧化酶参考区间的初步建立

曹修娥、张倡誌、潘璐、栾芳
山东第一医科大学附属省立医院

目的 分析山东地区健康成人超氧化物歧化酶（SOD）的血清含量，初步建立成人 SOD 的参考区间，并分析 SOD 与其他常用生化指标的相关性。

方法 选取 2019 年 3 月至 2020 年 10 月在山东大学附属省立医院健康体检中心体检的健康成人为研究对象，最终共纳入 2559 例，其中男 1293 例，女 1266 例，收集其血清标本，采用比色法检测血清 SOD 浓度水平，依据美国临床和实验室标准协会（CLSI）C28-A2 的要求，以非参数法建立基于性别和年龄的 SOD 参考区间。

结果 血清 SOD 水平在研究对象中呈非正态分布，男性 SOD 为 181.30（172.00～189.45）U/ml，略高于女性[174.45（165.60～184.33）U/ml]（Z= -9.67，P<0.001）。相关性分析结果显示，血清 SOD 与白蛋白（ALB）、丙氨酸氨基转移酶（ALT）、天门冬氨酸氨基转移酶（AST）、尿素氮（BUN）、肌酐（CR）、总胆红素（TBIL）、直接胆红素（DBIL）、γ-谷氨酰基转移酶（GGT）、甘油三酯（TG）、总蛋白（TP）、尿酸（UA）和肾小球滤过率（eGFR）呈正相关，与年龄和高密度脂蛋白胆固醇（HDL-C）呈负相关，与碱性磷酸酶（ALP）、胆固醇（CH）和低密度脂蛋白胆固醇（LDL-C）无相关性。男性 18～40 岁年龄组血清 SOD 水平显著高于 41～50 岁和≥51 岁年龄组，因此分为 18～40 岁、41～50 岁和≥51 岁三组；女性 18～40 岁年龄组血清 SOD 水平显著高于 41～60 岁和≥61 岁年龄组，因此分为 18～40 岁、41～60 岁和≥61 岁三组。采用百分位数法得出山东地区健康成人血清 SOD 的参考区间为男性 152.48～206.32U/ml（18～40 岁）、147.92～205.77 U/ml（41～50 岁）和 144.84～199.71 U/ml（≥51 岁），女性 142.60～

201.75 U/ml（18～40 岁）、139.86～197.65 U/ml（41～60 岁）和 135.78～190.34 U/ml（≥61 岁）。

结论 初步建立了山东地区健康成人血清 SOD 的参考区间，且血清 SOD 水平存在性别、年龄差异，更好的为 SOD 的临床应用提供依据。

PU-2378

Meta-analysis of the trend of Varicella Zoster virus seroprevalence with age in China

Xin Wang、Li Wang
The First Affiliated Hospital of Xi'an Medical University

Background Varicella-Zoster Virus (VZV) is the pathogen of human varicella and herpes zoster, its prevalence is related with the host's immune response and the seropositivity rate of VZV-immunoglobulin G (IgG) antibodies in the general population. The aim of this meta-analysis was pooled on the comprehensive information of the epidemiology of VZV infection and analyzed the seropositivity of VZV-IgG antibodies in different age groups, gender, and regions in China, so as to arouse people's attention on VZV.
Methods We performed a systematic review by searching both English and Chinese literature databases. Random or fixed effects models were used to summarize the prevalence of VZV according to statistical tests forheterogeneity. Subgroup, sensitivity, and meta-regression analyses were performed to address heterogeneity. Publication bias was evaluated using Egger's test. Results 2035 literatures were obtained by searching keywords "seroprevalence", "varicella zoster virus" and "VZV-IgG antibodies". Literatures were screened according to the inclusion criteria and 10 studies from 1997 to 2019 with a total of 9166 individuals were included. According to the results of heterogeneity test, random effect model and fixed effect model were used for system analysis. The heterogeneity was calculated using I-square statistics.
Results The overall VZV seroprevalence in the Chinese population was 57.1% (95% CI: 45.3% - 68.5%), and the peak prevalence was 93.37% (95% CI: 90.7% - 95.7%) in the age 36-45 while the VZV seroprevalence rate (84.7%, 95% CI: 48.8% - 100%) was not increased in individuals of 45 and older.
Conclusion The prevalence of VZV increases with age, and there was no significant difference between different genders or regions. This results can provide epidemiological evidence for the prevention and treatment of VZV.

PU-2379

实验室指标对于骨质破坏、腰椎压缩性骨折、多发性骨髓瘤致腰椎压缩性骨折的诊断价值

赵晓彤
石河子大学医学院第一附属医院

目的 收集并分析三种病因导致骨痛的患者的实验室检查结果，提高首发症状为腰痛、而影像学表现为骨质破坏，腰椎压缩性骨折的多发性骨髓瘤疾病与骨科疾病单纯骨质破坏、腰椎压缩性骨折疾病的诊断效率，从而进一步指导临床诊断，降低误诊率。
方法 回顾 2016 年 8 月至 2021 年 6 月石河子大学医学院第一附属医院诊治的多发性骨髓瘤 76 例，收集以腰痛为主诉的多发性骨髓瘤病例 16 例，骨科单纯骨质破坏病例 16 例，腰椎压缩性骨折病例 17 例，健康查体正常人 17 例的实验室检查指标。实验室检查观察指标：生化（总蛋白、白蛋白、球蛋白、胱抑素 C、电解质）、血凝、血常规，临床特点观察指标：性别、年龄。组间符合正态分

布、方差齐的指标采用独立样本 t 检验，不符合正态分布的指标采用独立样本秩和检验进行比较。
结果 多发性骨髓瘤组的生化检查（总蛋白、球蛋白、胱抑素 C）、血凝检查（凝血酶原时间、凝血酶时间）高于骨质破坏组、腰椎压缩性骨折组和体检组，P<0.05,差异有统计学意义；多发性骨髓瘤组的生化检查（白蛋白）、血常规检查（血红蛋白、红细胞计数、红细胞压积）、低于骨质破坏组和腰椎压缩性骨折组，P<0.05,差异有统计学意义；而多发性骨髓瘤组的血凝检查（活化部分凝血酶时间）高于腰椎压缩性骨折组，P<0.05,差异有统计学意义。
结论 对于腰痛为主诉但实验室检查生化检查（总蛋白、球蛋白、胱抑素 C）、血凝检查（凝血酶原时间、凝血酶时间、活化部分凝血酶时间）偏高；生化检查（白蛋白）、血常规检查（血红蛋白、红细胞计数、红细胞压积）偏低的骨科就诊患者，应进一步行免疫球蛋白、免疫固定电泳、血尿轻链、骨髓穿刺、免疫组化检查明确诊断，降低误诊的可能性，让病人尽早接受血液科化疗治疗，从而得到更好的预后。

PU-2380

Evaluation of a novel laboratory candiduria screening protocol in the intensive care unit

Zhengxin He 、Chang Su、Yuwang Bi、Yan Cheng、Daxin Lei、Fukun Wang
Bethune International Peace Hospital of PLA

Objectives Since the urine cultures are only guaranteed for patients with obvious urinary symptoms in most cases, most of candiduria episodes are ignored in clinic. This study aimed to design a screening protocol to improve the candiduria identifying efficiency, and to provide information of Candida species and drug susceptibility.
Methods All patients admitted to the intensive care unit (ICU) of our hospital during December 1, 2018 and October 1, 2019 were enrolled. Urinalysis was performed every three days for each subject from the first day of ICU admission. Urine samples were applied to fungal culture when: (1) yeast like cell counting (YLCC) ≥ 200; (2) positive YLCCs were observed in two consecutive tests, and at least one YLCC ≥ 100.
Results The screening protocol greatly enhanced the candiduria diagnostic efficiency by which the diagnosed ICU candiduria incidence rate was improved from 2.28% to 17.27%. However, compared to the historical control, the screening protocol has no time-saving advantage in candiduria diagnosing. Higher percentage of C. albicans in screening protocol-identified candiduria patients was observed, although there was no statistical difference. Female gender, pneumonia, diabetes and infarction/hemorrhage patients were more prone to develop candiduria. Non-candiduria patients showed a better tendency for survival and shorter ICU stay length. Multisite colonization was very common in candiduria patients we identified, and up to 70.83% of them had Candida positive cultures in sputum.
Conclusions The screening protocol established in the study was an easy and practical tool for early warning and management of candiduria and invasive candidiasis.

PU-2381

自然流产与孕妇 TORCH 感染关系的荟萃分析

王馨、王莉
西安医学院第一附属医院

目的 通过 Meta 分析评价孕妇感染 TORCH 与自然流产的相关性，为孕妇优生优育和临床治疗提供支持。

方法 利用关键词检索 CNKI、WANFANG、PubMed 等数据库获得文献 4180 篇，根据纳入标准进行筛选，纳入研究 25 篇，观察组孕妇 5852 例，对照组孕妇 19944 例。
结果 Meta 分析发现观察组（有自然流产史的孕妇）TORCH-IgM 抗阳性率分别为 TOX-IgM 14.54%、RV-IgM 8.83%、CMV-IgM 15.60%、HSV-IgM 15.70%；对照组（无自然流产史的孕妇）TORCH-IgM 抗阳性率分别为 TOX-IgM 0.58%、RV-IgM 0.59%、CMV-IgM 1.03%、HSV-IgM 0.49%。观察组 TORCH-IgM 抗阳性率显著高于对照组，p<0.00001，差异具有统计学意义。
结论 有自然流产史的孕妇 TORCH 感染率较正常孕妇高，HSV 的感染率更高一些，此结果可以为 TORCH 感染的预防和治疗提供流行病学依据，引起育龄妇女和孕妇关注和预防 TORCH 感染。

结核分枝杆菌检测方法的系统综述

高灿
石河子大学医学院第一附属医院

目的 目前针对结核分枝杆菌的检测方法有多种，本文旨在对结核分枝杆菌的检测方法做一个概况总结。
方法 通过检索中国学术期刊网全文数据库，输入篇名“核分枝杆菌的检测方法”进行了精确匹配搜索，共搜索到 427 条结果，然后通过选择主题词“检测方法”共检测到 170 条结果，然后通过阅读篇名、摘要和关键词选择了 33 篇文献，最后通过限定时间范围 2017-2021 年最终选择了 26 篇文献。
结果 择选出的 26 篇文献中对自己有参考价值的有 14 篇。
结论 通过对最终选出的 14 篇文献作出了总结，PCR 技术能够监测出结核分枝杆菌和非结核分枝杆菌，具有较强的敏感性和特异性，并且简单快速、不易污染，可作为实验室辅助检测结核杆菌的方法。

PU-2383

联合监测炎症因子在手术部位感染中的诊断价值

吴伶俐
东南大学附属中大医院

目的 探讨某教学医院肛肠外科手术部位感染的炎症监测指标水平，为术后感染的预防提供循证依据。
方法 回顾性分析 2017 年 1 月-2019 年 12 月肛肠外科手术患者资料 2995 份，根据患者术后是否发生手术部位感染分为感染组和未感染组，分析肛肠特征以及患者白细胞(WBC）、降钙素原(PCT）和 C-反应蛋白（CRP）水平。采用 Logistic 回归分析手术部位感染的相关危险因素，从而制定有效的预防对策。
结果 肛肠外科手术部位感染者 WBC、PCT 和 CRP 的平均水平明显高于非感染者。
结论 针对病原菌特征和独立危险因素，应加强炎症指标监测和采取积极有效的干预措施，从术前、术中、术后严格把关，降低肛肠术后病原菌感染的发生率。

PU-2384

新型冠状病毒肺炎疫情期间应急实验室标本检测管理及感染防控经验分享

苏杨
四川省医学科学院·四川省人民医院

目的 四川省人民医院检验科于 2020 年专门成立了新型冠状病毒肺炎应急实验室，旨在确保发热门诊和应急隔离病房标本的分流与高效检测。最大程度降低疑似及确诊病例患者标本可能包含病毒的气溶胶及接触性传播途径，阻断病毒在医院内的传播，以保证医患安全。笔者结合应急实验室工作经验和检验科对于疑似新冠病毒肺炎检测标本的接收、处理、检测流程，提出检验科应对疑似含有新冠病毒标本的管理及感染防控措施。
方法 制定应急实验室设立基本原则，包括研究和制定新冠肺炎疫情期间检验科标本检测相关制度、流程及预案，确保各项工作措施落实到位。按照国家标准《实验室生物安全通用要求》GB19489-2008 有关规定，建立符合生物安全防护水平为二级的医学检验实验室。应急实验室筹建及成立后，先后组织科室骨干成员及应急实验室工作人员和科室全员进行医院内部及科室内部新冠肺炎感染及防控政策、措施的相关知识培训和考核。要求全员必须熟悉及掌握疫情防控相关政策、制度及流程。依照《医疗机构内新型冠状病毒感染预防与控制技术指南（第一版）》（国卫办医函〔2020〕65 号）中的分级防护，及其他相关医疗机构的分级防护，针对本院检验科应急实验室实际情况，制定了四川省人民医院检验科医疗防护分级，并加强监督执行及管理。明确规定并实施实验室医务工作人员标本运送过程、检测前、检测中、检测后操作及防护流程。
结果 应急实验室符合医学生物安全二级实验室要求，并验收合格。科室骨干成员及应急实验室工作人员和科室全员熟练掌握手卫生流程、隔离防护用品穿戴及消毒方法和防护分级等相关知识，相关知识培训和考核均完成良好。熟悉及掌握疫情防控相关政策、制度及流程。
结论 四川省人民医院检验科作为四川省级新型冠状病毒肺炎定点诊疗医院的一线科室在疫情期间严格执行感控政策措施，做到无一名医务人员及患者发生医院内感染的好成绩。

PU-2385

Molecular epidemiology, antifungal susceptibility, and virulence evaluation of Candida isolates causing invasive infection in a tertiary care teaching hospital

Lingbing Zeng
The First Affiliated Hospital of Nanchang University

Background Despite the increasing incidence of invasive candidiasis, the epidemiology, antifungal susceptibility, and virulence of Candida spp. in most hospitals remain unclear. This study aimed to evaluate invasive candidiasis in a tertiary care hospital in Nanchang City, China.
Methods MALDI-TOF and 18s rDNA ITS sequencing were used to identify Candida strains. Randomly amplified polymorphic DNA analysis (RAPD) was used for molecular typing, and biofilm production, caseinase, and hemolysin activity were used to evaluate virulence. The SensititreTM YeastOne YO10 panel was used to examine antifungal susceptibility.
Results We obtained 110 Candida strains, which included 40 Candida albicans (36.36%), 37 C. parapsilosis (33.64%), 21 C. tropicalis (19.09%), 9 C. glabrata (8.18%), 2 C. rugose (1.82%), and 1 C. haemulonii (0.91%) isolate. RAPD was used for molecular typing. At a limiting point of 0.80, C. albicans isolates could be grouped into five clusters, C. parapsilosis and C. tropicalis into seven clusters, and C. glabrata into only one cluster that consisted of six strains. Comparison of selected virulence factors that are detectable in a laboratory environment, such as biofilm production and caseinase and hemolysin production, showed that 98.2% of Candida isolates

were caseinase and hemolysin producers with strong activity (Pz values of <0.69). Furthermore, C. parapsilosis had more total biomass (average Abs620 = 0.712) than C. albicans (average Abs620 = 0.214, $p < 0.01$) or C. tropicalis (average Abs620 = 0.450, $p < 0.05$), but all C. glabrata strains were either low- or no-biofilm formers. Antifungal susceptibility testing revealed that the isolates showed the greatest overall resistance against fluconazole (6.36%), followed by voriconazole (4.55%). All C. albicans and C. parapsilosis isolates exhibited 100% susceptibility to echinocandins (anidulafungin, caspofungin, and micafungin), whereas one strain of C. glabrata isolate was resistant to echinocandins.
Conclusion This study provides vital information on the epidemiology, pathogenicity, and antifungal susceptibility of Candida species among patients admitted to Nanchang City Hospital.

PU-2386

“5＋1”S 管理法在医学实验室中的应用

李华丽
西安医学院第一附属医院

目的 探讨“5＋1”S 管理法在医学实验室中的应用效果。
方法 自 2020 年 4 月至 2021 年 4 月在“5＋1”S 质量检查中以医技科室“5＋1”S 管理考核标准对实验室进行考核，按照检查成绩分为“5＋1”S 管理法示范实验室及“5＋1”S 管理法非示范实验室作为对比。
结果 “5＋1”S 管理法示范实验室比“5＋1”S 管理法非示范实验室“5＋1”S 管理考核标准检查成绩高出 9.4 分。
结论 “5＋1”S 管理是提升实验室管理水平不可多得的良方,同时也是改善个人工作生活素质的秘诀,这也正切合人文素质教育的发展方向，值得推广。关键词：“5＋1”S 管理法 “5＋1”S 管理考核标准 “5＋1”S 管理法示范实验室

PU-2387

维生素 D 营养状态及缺乏的研究进展

潘永圣、肖芳、蒲丹、汪佳婕
昆明市第一人民医院

维生素 D 是身体发育过程中所必需的一种脂溶性维生素，其主要生理作用是促进肠道内钙和磷的吸收。机体在缺乏维生素 D 的状态下，仅有 10~15%的膳食钙和约 60%的磷被吸收。目前维生素 D 缺乏最为普遍，全球近 10 亿人处于维生素 D 不足或缺乏状态。近年来研究发现维生素 D 除了促进骨骼和肌肉发育外，还与癌症、传染病、心血管疾病、糖尿病、自身免疫性疾病和精神系统疾病等的发生密切相关。而且维生素 D 还具有免疫调节作用，可以保护同种异体肾，维生素 D 充足可以提高肾移植术后患者移植肾的长期存活率，且使用活性维生素 D 能改善移植物预后、减少移植物丢失、防止排斥反应发生，并使人类白细胞抗原 DR 等位基因（HLA-DR）、CD28、CD86、CD40 表达均出现不同程度的下降。本综述就近几年维生素 D 缺乏或不足与相关疾病的研究进行论述。

PU-2388

小而密低密度脂蛋白与其它血脂指标的相关性研究

冯都都
长治医学院附属和平医院

目的 探讨小而密低密度脂蛋白 sd-LDL 与其它血脂指标（甘油三酯 TG、总胆固醇 TCH、低密度脂蛋白 LDL、高密度脂蛋白 HDL）的相关性。
方法 收集于本院接诊的血脂异常患者 147 例，根据血脂异常分类指标将其分为高甘油三脂组（高 TG 组）36 例、高胆固醇组（高 TCH 组）38 例、混合高血脂组（混合组）37 例、低高密度脂蛋白组（低 HDL 组）36 例，同时选取 39 例血脂正常患者作为对照组，分析 sd-LDL 的血脂水平差异及 sd-LDL 与其它血脂指标的相关性。
结果 高 TG 组、高 TCH 组、混合组、低 HDL 组的 sd-LDL 的浓度分别为（0.86±0.18）mmol/L、（1.08±0.32）mmol/L、（1.47±0.44）mmol/L、（0.67±0.26）mmol/L，均高于对照组[(0.50±0.22) mmol/L ,P<0.05)；高甘油三脂组、高胆固醇组、混合高血脂组的 sd-LDL/LDL 的比值分别为 0.30±0.04、0.28±0.07、0.33±0.08 ,均高于对照组(0.24±0.07，P<0.05)，低高密度脂蛋白组（0.27±0.06）与对照组无差异（P>0.05）；混合组、高 TCH 组的 sd-LDL、sd-LDL/LDL 均与 HDL 成负相关（P＜0.05），低 HDL 组的 sd-LDL、sd-LDL/LDL 均与 HDL 无显著相关性（P＞0.05）；混合组、高 TG 组、低 HDL 组、对照组仅 sd-LDL 均与 TCH 具有正相关（P＜0.05），高胆固醇组的 sd-LDL、sd-LDL/LDL 均与 TCH 无相关性（P＞0.05）；混合组、高 TCH 组、低 HDL 组、对照组的 sd-LDL、sd-LDL/LDL 与 TG 均成正相关（P＜0.05），高 TG 组的 sd-LDL、sd-LDL/LDL 均与 TG 无相关性（P＞0.05）；混合组、高 TCH 组、低 HDL 组、对照组、高 TG 组仅 sd-LDL 与 LDL 成正相关（P＜0.05）。
结论 sd-LDL、sd-LDL/LDL 与 HDL 成负相关；sd-LDL 均与 TCH、TG、LDL 成正相关，且仅有 TG 与 sd-LDL/LDL 成正相关。

PU-2389

外泌体在心血管疾病中的研究进展

曾灵
中南大学湘雅二医院

外泌体是直径 40-160 纳米之间的脂质双分子层囊泡，其内携带蛋白质、脂质、miRNA、crcRNA、mRNA、DNA 等信息分子。近年来，外泌体在细胞间信息交流中的作用引起关注。外泌体在机体生理稳态的维持和免疫系统的稳定等方面具有重要作用，参与多种疾病的发生发展，例如神经系统疾病、免疫系统疾病、心血管疾病等。全世界每年死于心脑血管疾病的人数高达 1500 万人。心脑血管疾病是一种 50 岁以上中老年人健康的常见病，居各种死因首位，具有高患病率、高致残率和高死亡率的特点，即使应用目前最先进、完善的治疗手段，仍可有 50%以上的脑血管意外幸存者生活不能完全自理。目前全球心血管疾病的死亡率和发病率升高，严重影响人们生活质量，是全球医疗卫生行业难题。外泌体广泛存在于机体的血液、尿液、唾液中,针对体液中外泌体的检测可以对疾病起到潜在的诊断作用；且因其具有低免疫原性和人体相容性，且具备脂质体所不具备的特性，外泌体现已成为了药物靶向治疗的良好载体；且病理生理情况下外泌体内含物成分、含量的差异可提供有益于疾病监测方面信息。外泌体在心血管疾病的研究引起广泛关注。随着外泌体分离、提纯、鉴定与检测技术日益发展，外泌体研究助力精准医学，具有较好前景。本文主要阐述外泌体在肺动脉高压、急性心肌梗死、动脉粥样硬化、心力衰竭等心血管疾病中的风险评估、疾病监测的作用，及其临床治疗潜能，为心血管疾病的诊断、治疗、预后提供新思路。

江西儿童地中海贫血患儿致病基因分析

刘发娣、武文韬、周红平、卢娟、柯江维
江西省儿童医院

目的 探讨江西地区 α-与 β-地中海贫血患儿的基因突变类型、频率与分布概况，为该地区地中海贫血疾病的遗传咨询与儿童未来婚育指导提供依据。
方法 纳入 2016 年 8 月 1 日至 2019 年 7 月 31 日就诊于江西省儿童医院的疑似地中海贫血患儿 1765 例，运用 PCR-反向斑点杂交法进行常规 α 和 β 地中海贫血基因检测，分析样本中地中海贫血患儿的基因类型、频率及分布特点。斑点杂交提示存在罕见突变者采用 Gap-PCR 和基因测序进行检测。
结果 共检出 932 例地中海贫血患儿，检出率为 52.80%；β-地贫共 555 例占 59.55%，含杂合子 505 例，双重杂合子和纯合子 50 例（9.01%）；α-地贫 357 例占 38.30%，含 290 例杂合子地贫患儿，65 例 HbH 病患儿；αβ-复合型地贫 20 例，占 2.15%；在 β-地贫中，IVS-II-654 位点突变是最常见的等位基因，占 50.41%，其次是 CD41-42（占 22.81%）与 CD17（占 10.41%）；α-地中海贫血突变频率最高的突变类型为--SEA，占 72.88%，其次是-α3.7（20.52%）；检出一患儿携带罕见型突变-α27.6，基因型为-α27.6/--SEA。
结论 江西地区儿童地中海贫血发病主要以 β-地中海贫血主，占 59.55%；重型 β 地贫的检出率仍然较高；地贫的防控形势仍不乐观，需要加强地贫知识的宣传和遗传咨询工作，进一步推进优生优育，提升人口质量。

红细胞分布宽度的升高为慢性髓细胞白血病患者的预后不良因素

李涛、方洋洋、郑晓群
温州医科大学附属第二医院

目的 红细胞分布宽度（Red blood cell Distribution Width，RDW）被认为药物治疗效果评估或各种恶性肿瘤患者预后潜在生物标志物。大多数慢性髓细胞白血病（Chronic Myelocytic Leukemia，CML）患者初次发病时处于慢性期，但仍有部分患者初发或随访阶段诊断为加速期或急变期（进展期）。但是，RDW 在 CML 中的临床价值仍处于探索阶段。
资料与方法 本研究通过收集温州医科大学附属第二医院 168 例健康成人和 153 例确诊 CML 患者资料（训练集 n=106；验证集 n=37），进一步探讨 RDW 在 CML 中的临床意义。
结果 本研究根据疾病不同阶段得出 CML 患者预后不佳的 RDW 阈值（RDW=16.8%）且该阈值与患者 OS 有明显的相关性。进一步验证该阈值临床实用性发现慢性期 CML 患者中，RDW 与患者的 OS（p=0.0008）和 EFS（p=0.0221）显著相关，但与患者 TFS 无关（p=0.0821）。此外，本研究表明 RDW 水平的下降与接受酪氨酸激酶抑制剂治疗患者的效果评估密切相关，尤其是接受治疗后的 6 月和 12 月。多因素分析表明患者年龄（OR, 1.081; 95CI％1.039~1,125; p<0.001）和初次入院时 RDW（OR, 1.469; 95CI％1.121~1.925; p=0.005）为疾病进展期的独立危险因素。
结论 对于慢性期 CML 患者，较高水平的 RDW 可作为其潜在的临床预后生物标志物。

PU-2392

痰培养样本合格性分析

陈乐
西安医学院第一附属医院

目的 探讨合格痰培养标本在诊疗中的重要性，为临床合理使用药物提供科学依据。
方法 对 200 例呼吸道疾病的痰标本进行培养，并对可疑菌株采用法国梅里埃公司的全自动微生物分析系统进行鉴定及药敏实验。
结果 痰培养合格标本的阳性率（11%）低于不合格标本的阳性率（17%）；痰培养合格标本的阳性结果与临床诊断符合率（90%)远远高于不合格标本的阳性培养结果与临床的诊断符合率（6%），两组经统计学分析（p<0.01），有显著差异，具有统计学意义；痰培养合格标本的阳性结果与临床治疗符合率（80%）远远高于不合格标本的阳性培养结果与临床的治疗符合率（3%）,两组经统计学分析（p<0.01），有显著差异，具有统计学意义。
结论 痰液合格标本的阳性培养结果能客观真实反映患者的病理状态，为临床合理使用抗菌药物提供科学依据，从而减少医疗资源浪费，减轻患者的经济负担，减少由于抗生素选择性压力的作用而产生的耐药菌株，保护微生态环境。

PU-2393

希森美康全自动血细胞分析仪不确定度评估

苏杨
四川省医学科学院·四川省人民医院

目的 评估实验室内多台 Sysmex 血细胞分析仪在量值溯源性建立之后的不确定度
方法 以配套校准物校准 Sysmex XE-2100（LJ-24）血细胞分析仪手动进样模式，建立规范操作检测系统。规范操作检测系统对一健康人新鲜全血进行定值，以定值新鲜全血对 Sysmex XE-2100（LJ-12）校准。对 Sysmex XE-2100（LJ-12）血细胞分析仪测定 WBC,RBC,HGB,HCT,PLT 的结果进行溯源，每溯源一步就产生一个不确定度分量，对各个不确定度分量进行评估，然后计算合成不确定度和扩展不确定度。
结果 实验室内 Sysmex XE-2100（LJ-12）建立了溯源性后正确评估了该仪器的不确定度。 取包含因子 k=2，该五个项目在中值质控水平上的扩展不确定度分别为 Urel（WBC 中）=0.44×10^9/L；Ure（RBC 中）=0.178×10^12；Urel（HGB 中）=2.72g/L，；Urel(HCT 中)=1.96%；Urel（PLT 中）=18.88×10^9/L。
结论 两台仪器建立溯源性后，我们通过分析寻找各项因素及运用数理统计方法，对 Sysmex XE-2100（LJ-12）血细胞分析仪测定 RBC,WBC,HB,HCT,PLT 的测量不确定度进行了较为全面和合理的评定。

PU-2394

基于能量代谢探讨蒙药三味檀香散对缺血性记忆障碍的保护作用机制

赵东[1]、何静波[2]、贾培飞[1]、雷红华[3]
1. 包头医学院第二附属医院
2. 包头医学院
3. 内蒙古科技大学包头医学院第二附属医院

目的 探讨蒙药三味檀香散是否对血管性痴呆大鼠神经功能具有保护作用，并研究其作用机制是否与调控线粒体能量代谢有关。
方法 将 72 只 SD 大鼠随机分为假手术组、缺血模型组、阳性对照组、三味檀香散大剂量组、三味檀香散中剂量组、三味檀香散小剂量组，共 6 组，12 只/组。给予普通饲料适应性喂养 1 周后，按照改良结扎颈总动脉方法建立缺血性痴呆模型，以双盲法对神经功能缺损评分，以同侧出现 Horner 征以及评分>1 分者为栓塞成功，否则被剔除。然后给予药物。连续给药 27d 后进行水迷宫实验，记录其空间记忆能力。水迷宫实验结束后，以 3%戊巴比妥钠将大鼠麻醉，腹主动脉取血后，每组中一半大鼠进行甲醛灌注后取脑组织，另一半直接断头取脑。灌注后脑组织进行切片，染色，对海马 CA1 区病理学改变进行分级，未灌注脑组织匀浆，检测脑组织中 ATP、ADP、AMP 含量，ELISA 法检测 TchE、LDH、LD 和 ATP 酶活力。
结果 与模型组比较，三味檀香散给药各组大鼠神经功能评分显著降低（P<0.05）；各剂量组均可明显改善脑缺血大鼠学习记忆能力，缩短大鼠逃避潜伏期(P ＜0. 05)，增加大鼠穿越平台次数(P ＜0. 05)，显著升高脑缺血大鼠脑组织内 ADP、ATP、ADP 含量，并使 AMP 含量下降；TchE、LDH、LD 和 ATP 酶活力明显提高；其中，三味檀香散高剂量组最为显著 (P ＜0. 05) ，三味檀香散中、低剂量组之间无显著差异(P＞0. 05)。
结论 三味檀香散可以通过调节体能量代谢从而起到神经保护作用。

PU-2395

胆道感染病原菌与药敏结果分析

张炯
四川省医学科学院·四川省人民医院

目的 了解我院胆道感染的常见病原菌及指导临床有效合理使用抗生素，也为经验用药提供依据。
方法 对我院 2 年来送检的 102 例胆汁标本有氧培养出的 53 例阳性结果进行细菌谱和药敏的回顾性分析。
结果 鉴定出的肠杆菌科细菌占 69.8%，其中以大肠埃希菌为主；非发酵菌占 13.2%；革兰阳性球菌占 17%，肠杆菌科细菌对亚胺培南，美诺培南无耐药菌株，对阿米卡星耐药率也很低。非发酵菌对阿米卡星和哌拉西林耐药率相对较低。革兰阳性球菌未发现对万古霉素耐药菌株。
结论 胆道感染以肠杆菌科细菌感染为主，并且对多种抗生素表现出耐药，胆道感染患者可能感染不同病原菌，临床应根据细菌鉴定和药敏结果，结合感染部位药物浓度及毒副作用合理用药以缩短患者病程。

PU-2396

浅谈后疫情时代医学检验管理

林花
吉林大学第一医院

质量是医学检验生存的基础、核心。后疫情时代作为一门交叉学科的医学检验，不仅更加提高应急管理能力，同时更加把控质量管理，以全新的检验理念、现代化检验技术、职业道德及业务技能，充分发挥检验医学其独特的价值。应对这次突发公共卫生事件，实验室 24 小时运转，检验人争分夺秒地准确检测新冠肺炎核酸和部分抗体的检测，在控制疫情过程中起巨大的作用。在此事件的推动下医学检验也备受关注，检验工作者也从之前的幕后工作搬到了台前，检验人精准的检测技术推动了整个医疗行业的进步。核酸检测技术、微生物检测技术、质谱技术、免疫化学技术、分子生物学技术、细胞生物学技术、各类床旁检测技术、数据信息化管理等在临床工作中发挥了越来越重要的作用。后疫情时代检验人仍然面临巨大挑战，需要完善应急管理、生物安全管理、信息管理、质量控制，同时要及时与临床有效沟通。质量是认可和权威性、检验结果的准确性以及检验与临床的科学对接。检验前质量控制直接影响到检验结果的准确性；检验中质量控制保证检测的精准；检验后质量控制直接影响到临床合理选择药物。检验工作者与临床医护人员共同配合，一切从患者利益出发，保证诊疗质量、科学管理，更好地为患者服务，共同推动医疗事业的发展

PU-2397

简析临床检验分析前质量管理

张炯
四川省医学科学院·四川省人民医院

检验科的质量目标是能否及时向临床提供准确高效可靠的高质量检验报告，使检验结果更好地符合患者的实际情况，得到患者和临床的信赖和认可［1］。自 2002 年 4 月 1 日起开始实施的《最高人民法院若干民事诉讼证据的若干规定》中，明确指出“因医疗行为引起的侵权诉讼，由医疗机构就医疗行为与损害结果之间不存在因果关系承担举证责任”，这一规定被简称为“举证倒置”，即一旦发生医疗纠纷，由患者投诉，医疗机构要拿出证据证明在诊治工作中一切医疗行为是正确无误的。检验科为达到这一报告准确的目的，进行全面质量管理，包括分析前质量管理、分析中质量管理和分析后质量管理。分析中质量管理和分析后质量管理在临床检验中心组织开展的室内质评活动、室间质评活动中，经多年的努力使报告结果的检验准确性越来越高。有关单位统计临床有关检验质量的意见，一半以上是与检测标本本身的不合格有关。

分析前阶段是指从临床医师开出医嘱起始，按时间顺序的步骤，包括提出检验要求，患者的准备，原始标本的采集，运送到实验室并在实验室内传送，至分析检验程序启动，此期终止［2］。这一环节的执行涉及面较广，包括检验科人员、临床科室医师、护士、护工以及受检者本人，任一环节的疏漏和不规范均可导致检验结果的误差。以下浅析加强检验分析前的质量管理。

PU-2398

化学发光微粒子免疫测定法检测丙型肝炎抗体的临床效果分析

苏志琳
厦门大学附属第一医院

目的 研究在检测丙型肝炎抗中应用化学发光微粒子免疫测定法的临床效果。

方法 回顾性分析我院自 2019 年 5 月至 2019 年 9 月期间收治的 63 例输血病人所有资料，选取发光免疫分析法与酶免疫测定法开展丙型肝炎抗体检查，对比两种检测的结果。
结果 对本次分析的 63 例输血病人进行丙型肝炎抗体检查，经化学发光微粒子免疫测定法与酶免疫测定法的诊断之后，阳性检出例数都为 7 例，阳性率为 11.11%。检验化学发光微粒子免疫测定法与酶免疫测定法诊断符合率之间差异不显著且 P＞0.05，无统计学意义。高值组与低值组阳性标本检出率对比差异显著且 P＜0.05，统计学意义存在。
结论 近年来丙型肝炎抗体检查中酶免疫测定法、化学发光微粒子免疫测定法都是比较常用的技术，虽然化学发光微粒子免疫测定法存在更高价值，但需要依据实际情况选择有效的诊断技术。

PU-2399

移植后感染病例分析

施丽娟
昆明市第一人民医院

目的 对一特殊的单核细胞异常增高（71%）的移植后感染病例的病例分析，来了解移植后感染的一种特殊情况。
方法 回顾分析一例经确诊移植后感染病例的各项检查和治疗。患儿，陈 XX，男，2 岁 9 个月。肝移植史，长期服用他克莫司（FK506）。患儿因”发热 4 天，右眼红肿 2 天” 患儿间断发热，最高体温 38.3℃。停用免疫抑制剂，抗感染，局部点眼等支持治疗。9 月 4 日实验室检查：血细胞分析：白细胞 6.59 x109/L，中性粒细胞 占 4 %, 单核细胞 占 71%，淋巴细胞 占 24.3%；感染标记物：超敏 C 反应蛋白 180.1mg/L，降钙素原 5.89 ng /dl。
结果 经抗感染相关治疗后，9 月 9 日 血细胞分析：白细胞 9.07 x 109/L ,中性粒细胞 占 47.2%,单核细胞 占 4.1%，淋巴细胞占 46.4%；超敏 C 反应蛋白 3.58mg/L。9 月 10 日分泌物培养结果显示铜绿假单胞菌，药敏结果哌拉西林等敏感，停用万古霉素改用哌拉西林舒巴坦抗感染治疗。9 月 14 日患儿无发热，右眼红肿消退，无肿胀，眼部相关体格检查已恢复正常，病情基本好转，复查分泌物培养阴性，达到出院标准，巩固治疗后予出院。
结论 该患者在使用免疫抑制剂后，T 细胞功能受到明显抑制，机体免疫力明显降低，导致其在病程中出现多种机会性感染，临床上对此须高度重视。 在抗感染治疗中，根据病人情况停用免疫抑制剂是合理的，注意合理应用抗菌药物，避免盲目使用大量广谱抗菌药物，以降低耐药率。

PU-2400

恶性肿瘤患者 T 淋巴细胞亚群变化及其临床意义

李石
四川省肿瘤医院

目的 探讨恶性肿瘤（肝癌、肺癌、消化道肿瘤、女性生殖系统肿瘤）患者外周血 T 淋巴细胞亚群的变化及其临床意义。
方法 应用 BD FACSCanto Ⅱ流式细胞仪对上述疾病患者外周血总 TT（CD3＋）、Th（CD4＋）、Ts（CD8＋）、Th/Ts（CD4＋/CD8＋）进行检测，同时检测健康者标本 30 例作为健康对照组，进行统计分析。
结果 肝癌患者和肺癌患者总 TT(CD3+) 细胞明显低于健康对照组(P<0.05)。四种疾病肿瘤患者 Th(CD4+)细胞、Th/Ts（CD4＋/CD8＋）均明显低于健康对照组(P<0.05)。肺癌患者和女性生殖系统肿瘤患者 Ts(CD8+)细胞高于健康对照组(P<0.05)。
结论 外周血 T 淋巴细胞亚群的检测可以作为恶性肿瘤患者临床免疫功能的初步诊断指标，辅助疾病治疗和病情观察。

PU-2401

运用品管圈构建 ISO15189 医学实验室质量管理体系

朱星成、王宁、白志瑶、高晶、施春玲
曲靖市第二人民医院

目的 探讨运用课题研究型品管圈手法构建 ISO15189 医学实验室质量管理体系。
方法 按照 QCC 活动步骤从人员、设备、设施环境、信息、检验前、检验中、检验后素等多个维度把握实验室现状水平，对攻坚点进行分析、挖掘和合并，整合为三大方策群组并加以实施：质量管理体系文件的构建；加强人员培训及管理；完善检验过程的质量管理；
结果 通过方策群组的实施，我们进行效果确认，条款知晓率提高了 50.2%、标本标签不合格率降低 6.1%、标本类型错误率降低 3.15‰、标本容器错误率降低 3.26‰、标本溶血率降低 1.1%、室内质控项目开展率提高 17%、室内质控达标率提高 15%、室间质评项目不合格率降低 4%、患者满意度提高 15%、医护满意度提高 15%。
结论 采用品管圈管理方式能够构建实验室质量管理体系，提高圈员们运用 QCC 工具解决检验科实际问题的能力。

PU-2402

Development and application of electronic document management system for clinical laboratory

Xinyuan Han
Medical Laboratory of Shenzhen Luohu Hospital Group

Objective To develop and clinically apply an information document management system based on the ISO15189 system.
Methods Browser/Server (B/S) mode and information technology such as Java and database software were used to build a Web platform. An intelligent document management system was built based on platform functions and related requirements of ISO15189. We distributed questionnaires to 184 employees in the laboratory and collected relevant results to evaluate clinical practicability.
Results An inspection knowledge base covering more than 400 external documents and more than 2,200 internal documents were established to meet the daily learning needs of staff. All internal files in the system have a unified format and unique identification code, ensuring that all files can be uniquely identified. The multi-process control mode is adopted to authorize specialized personnel to compile, review, approve and publish documents according to their types and attributes. After the file is updated and revised, the old file is automatically archived to the obsolete folder. The system automatically reminds the relevant persons in charge of the process at all levels to complete the tasks that need to be performed according to the data summary on the day, and automatically forms a complete and detailed electronic record after the operation is completed, which fully guarantees the uniqueness, traceability and security of the file. Users can access various types of files online through computers or mobile phones, and form a learning log. The system has search function, and users can quickly find the target file through fuzzy search. The recovery rate of the questionnaire reached 100%. More than 95% of the employees believed that the time for document review, revision, and approval were greatly shortened, 82.61% of the employees believed that the system was easy to operate, and 36.41% of the employees thought that the file search function needed to be improved, 7.61 % Of employees said that the speed of file update needs to be improved.
Conclusion The system fully meets the requirements of ISO15189 on document management, and realizes the Intelligent management. It is necessary to formulate detailed improvement

measures in the search and update of documents, and gradually upgrade the system to make it more convenient for employees to use.

PU-2403

Can AMH tell us more?

Taichang Tan
Department of Laboratory Medicine, Sichuan Provincial People's Hospital, University of Electronic Science and Technology of China, Chengdu, China.

A 37-year-old Tibetan woman with infertility was referred to the outpatient clinic of the obstetrics and gynecology department of our hospital. She had experienced with a dizziness and weakness for three years. The patient said that she had sporadic menstruation and hypomenorrhea. She took no medications and had no known allergies. Now the patient lived with her husband in a mountain farm. Her mother had conceived her easily. The patient's father and two sisters were healthy; both of her sister had their own children.

On examination, the weight was 60.1 kg, the height 160.8 cm, and the body-mass index (the weight in kilograms divided by the square of the height in meters) 23.2. And she has normal female external genitalia and breast development, with sparse pubic hair and axillary hair. The remainder of the physical examination was normal. Ultrasound and pelvic computed tomography (CT) scan showed normal female external genitalia and absence of cervix and uterus with a blind vaginal; presence of dense symmetric, homogeneous enhancement of gonads structure sized 2.3×1.4 cm and 3.2×1.7 cm located in the anterior pelvis.

On the basis of the medical history and results on examination, the most likely diagnosis in this case is either mullerian aplasia or complete androgen insensitivity syndrome.

Several days later, chromosomal analysis on the peripheral blood lymphocytes revealed a 46,XY karyotype. Serum hormone measurement showed elevated levels of testosterone (17.23 nmol/L; reference range for women: 0.38–1.97 nmol/L) and anti-mullerian hormone (AMH) (695.88 ng/ml; reference range for women: 0.24–11.78 ng/ml), and inhibin B (275.49 pg/ml; reference range, <139 in premenopausal women during the follicular phase, <92 in premenopausal women during the luteal phase). These results were consistent with the diagnosis of complete androgen insensitivity syndrome. Then the patient has determined to identify her specific androgen-receptor mutation. Sequences generated from patients were compared with the published AR complementary DNA (cDNA) reference sequences from the National Center for Bio-technology Information (http://www.ncbi.nlm.nih.gov/; GenBank accession number: NM_000044.4). The gene sequencing results showed that a DNA-binding domain site mutation (c.1730G > T), resulting in a cystine to valine substitution and a histidine to phenylalanine substitution.

After four weeks of iron treatment, there were significant effects on hemoglobin, and the patient's fatigue disappeared. We recommended surgical removal of the intraabdominal gonads due to the risk of testicular cancer. But the patient would not to undergo further treatment.

Serum anti-Müllerian hormone (AMH) is a biomarker of ovarian reserve. It can be guessed from our research that AMH may provide valuable diagnostic clues, it is important to pay more attention to patients with extremely high level of AMH.

PU-2404

METTL3 介导的 CYP2B6 的 m6A 甲基化在非酒精性脂肪性肝病中的作用研究

李永清[2]、逯素梅[2]、张丹彤[2]、马万山[1,2]
1. 山东大学附属千佛山医院
2. 山东第一医科大学第一附属医院(山东省千佛山医院)

实验目的 非酒精性脂肪性肝病（Non-alcoholic fatty liver disease, NAFLD）是指除外酒精和其他明确的肝损害因素所致的、以弥漫性肝细胞大泡性脂肪变为主要特征的临床病理综合征，是一种慢性代谢性疾病。CYP2B6 基因是核受体家族成员孕烷 X 受体(pregnant X receptor, PXR)和组成型雄甾烷受体(constitutive androstane receptor, CAR)的靶基因，在糖异生、脂类代谢中扮演着重要的角色。有研究表明高脂饮食的小鼠体内，PXR 和 CAR 受体被激活，会导致其靶基因 Cyp2b10 与对照组相比表达增高，可能与 NAFLD 的产生有关。本研究探讨 CYP2B6 基因 m6A 甲基化修饰在 NAFLD 中的作用。
实验方法 构建小鼠的肝脏脂肪变模型，将肝脏组织利用基因芯片技术筛选出发生 m6A 甲基化的目的基因 Cyp2b10，检测该基因在脂肪肝中的表达情况。将人类正常肝细胞 LO2 进行脂肪酸的诱导，构建体外细胞模型，检测 CYP2B6 和甲基化酶 METTL3 的表达情况。借助 MeRIP-qPCR 技术确定 METTL3 对 CYP2B6 的 m6A 甲基化修饰作用。干扰 METTL3 或 CYP2B6 以后，用油红 O 染色，油红半定量检测 LO2 脂肪变的效果，并检测胰岛素信号通路的表达变化。
实验结果 基因芯片的结果显示小鼠肝组织中 Cyp2b10 的 m6A 甲基化水平比对照组高了 2.72 倍（$p<0.05$）。Cyp2b10 和 Mettl3 在脂肪变的小鼠肝脏中明显升高，在脂肪变的 LO2 中也显著升高。MeRIP-qPCR 的结果显示，CYP2B6 的甲基化水平受到 METTL3 的调控。但是干扰 METTL3 或 CYP2B6，LO2 的脂肪变效果和胰岛素信号通路未发生明显的变化。
实验结论 CYP2B6 的 m6A 甲基化受到甲基化酶 METTL3 的调控，但在 LO2 的脂肪变和胰岛素信号通路程中未发挥关键调控作用。

肝硬化门静脉高压症肝癌外科切除全程评估和管理的进展

洪源
昆明医科大学第一附属医院

我国肝硬化的发病率呈增长趋势，肝硬化所导致的门静脉高压症在我国非常常见。肝硬化和门静脉高压症患者因原发性或转移性肝癌而需要进行肝切除。然而，这类患者行扩大范围肝切除的围手术期并发症发病率，术中管理及术后效果对现代医学而言仍然是挑战。巴塞罗那临床肝癌分期建议将肝硬化肝癌患者的手术切除限定在肝硬化呈现门静脉高压症的初期。但是随着术前肝功能评估手段的增加和全面化，围手术期肝病管理的规范化，术后重症监护和肝切除技术的发展，使得肝硬化伴门静脉高压症患者行扩大范围肝切除的成为可能。因此，我们对肝硬化门静脉高压症患者行扩大范围肝切除的术前风险评估，围手术期发病率及死亡率和术后管理等进行文献综述。

PU-2406

Dietary inflammatory index and pancreatic cancer risk: a systematic review and dose–response meta-analysis

Yuan Hong
The First Affiliated Hospital of Kunming Medical University

Objective The meta-analysis was conducted to test the link between pancreatic cancer (PC) risk and dietary inflammatory index (DII®) score. Design: Systematic review and meta-analysis. Setting: We searched PubMed, Embase, Web of Science and the Cochrane Library up to 22 November 2020 to identify the relevant studies. Studies that reported the risk estimates and the corresponding 95 % CI for the DII category and PC risk were included. The effect sizes were pooled using the random-effects model. Dose– response analysis was conducted where possible. Participants: Two prospective cohort studies of 634 705 participants (3152 inci_x0002_dent cases), and four case–control studies of 2737 cases and 4861 controls.
Results Overall, the pooled risk ratio (RR) indicated that individuals in the highest category compared with the lowest category had an increased PC risk (RR = 1·45; 95 % CI 1·11, 1·90; P = 0·006). Meanwhile, significant heterogeneity was also revealed. The dose–response meta-analysis indicated that a 1-unit increase in the DII score was associated with the PC risk (RR = 1·08; 95 % CI 1·002, 1·166; P = 0·045; I2 = 94·1 %, P < 0·001). Nonlinear result showed an increased risk of moving from fewer to more inflammatory borders with increasing DII score (Pnonlinearity = 0·003; I2 = 76·5 %, P < 0·001). Subgroup analyses found that signifi_x0002_cant positive association between PC risk and DII score appeared to be in case– control studies (RR = 1·70; 95 % CI 1·16, 2·50; P = 0·007) and studies with ≤ 31 DII components (RR = 1·76; 95 % CI 1·14, 2·72; P = 0·011).
Conclusion These findings suggested dietary habits with high inflammatory fea_x0002_tures (high DII score) might increase PC risk.

6S 在样本前处理中的应用

陈韵同、于俊杰、陈思宇、王福权
杭州迪安医学检验中心有限公司

通过改变员工的工作习惯，提高工作素养等，来达到降本增效，质量安全保证的目的。样本前处理是样本检验的基础，样本的及时准确处理是保证患者检验结果准确性和可靠性的基础。6S 管理法的主要对象为人、事、物。实施的原则是为了提高工作效率，人性化全员遵守，管理理念适合现场管理，展示让人舒适的工作环境。

临床中越来越多的样本转送至第三方检验中心，样本的增多则需要对样本前处理进行有效的管理，保证样本检验前质量。根据 6S 内容指定相关标准，推行相关准则并实施，针对 6S 管理法的制定全员参与，制定制度和目标，明确 6S 管理中的权、责。日常针对 6S 工作进行监督、检查及效果评比。实行定期或不定期检查、考核、评定的管理模式，对评比结果进行评比，增加员工参与度。

在制度实施后用时明显减少，改进了报告时间及改善了因人员操作造成的报告发布不及时等情况，且员工对工作环境满意度上升，增加了工作积极性。对样本前处理开展 6S 管理，不仅员工本身习惯品质素养得到很大的改善，同时对患者而言也能更加及时有效的取得相关报告，有更好的就医体验；良好的工作环境，提高了员工的工作效率及工作质量；且做到降本增效，杜绝浪费， 减少公司支出成本，提高竞争力 ；确保医疗安全，降低医疗事故风险，利于和谐医患关系的构建[2]。

The Diagnostic Value of T-SPOT.TB and ADA in Pleural Effusion for Tuberculous Pleurisy: A Systematic Review and Meta-Analysis

xiaomei zhang
Shangrao People's Hospital, Shangrao, China.

Background Tuberculous infection of T cell spot test (T-SPOT.TB) and adenosine deaminase (ADA) have a high diagnostic value in pleural effusion for tuberculous pleurisy. However, there were major differences in existing research in regard to the clinical application of the two trials. Therefore, we conducted a meta-analysis to systematically evaluate the diagnostic value of T-SPOT.TB and ADA.
Methods Pubmed, Web of Science, EMbase, CNKI and WanFang databases were searched to compare diagnosis of tuberculous pleurisy by T-SPOT.TB and ADA. The search period was from inception to December 31, 2020. Statistical analyses were performed using Meta-disc 1.4,Revman5.4 and Stata 16.0. Pooled sensitivity, specificity, positive likelihood ratio (PLR), negative likelihood ratio (NLR), and diagnostic odds ratio (DOR) were determined. Summary receiver operating characteristic (SROC) curves and the area under the curve (AUC) were used to summarize overall diagnostic performance.
Results 17 qualified original research studies were included, of which 9 were in English and 8 in Chinese, with a total of 2453 patients. The pooled estimates of diagnostic accuracy of T-SPOT.TB were as follows: sensitivity, 0.92 (95% CI: 0.91-0.93; I2 = 87.8%); specificity, 0.76 (95% CI: 0.73-0.79; I2 = 92.1%); PLR, 4.61 (95% CI: 2.95-7.20; I2 = 92.4%); NLR, 0.11 (95% CI: 0.06-0.20; I2 = 92.3%), DOR, 53.39 (95% CI: 20.96-136.03; I2 = 88.2%). The AUC for SROC was 0.9443 (95% CI: 0.9043-0.9843). The pooled estimates of diagnostic accuracy of ADA were as follows: sensitivity, 0.60 (95% CI: 0.58-0.63; I2 = 96.2%); specificity, 0.90 (95% CI: 0.87-0.92; I2 = 69.5%); PLR, 5.77 (95% CI: 4.00-8.31; I2 = 65.1%); NLR, 0.35 (95% CI: 0.20-0.62; I2 = 98.9%), DOR, 17.75 (95% CI: 10.39-30.34; I2 = 72.6%). The AUC for SROC was 0.8916 (95% CI: 0.8382-0.9450).
Conclusion Both T-SPOT.TB and ADA had high value in the diagnosis of tuberculous pleurisy. The sensitivity of T-SPOT.TB was higher than ADA, but the specificity of ADA was higher than T-SPOT.TB. The diagnostic accuracy of T-SPOT.TB was higher than ADA, but there was no significant difference between them.

PU-2409

一例新发 DNAH1 基因移码突变分析

张慧、黄吴键、陈国勇、梅晓妍、兰风华、张朵
第 900 医院

目的 对 2 例临床表现为严重弱精子症、精子鞭毛形态多发异常（Multiple Morphological Abnormalities of the Flagella，MMAF）的原发性不育患者进行致病基因分析，探讨 DNAH1 基因新的突变位点在精子尾部多发畸形发生中的致病作用。
方法 抽取两名患者的外周血进行全外显子组测序，由于该两名患者为兄弟，父母为表亲关系，发现可疑致病位点后，在该家系内部及 100 名健康个体中针对该突变位点进行 PCR 扩增、Sanger 测序进行验证分析，利用 Mutation Taster 等软件对突变位点进行蛋白功能危害性分析。
结果 全外显子组测序结果发现该 2 名患者存在同一个纯合突变，为轴丝动力蛋白重链 1(在该家系内部及 50 名健康个体中针对该突变位点进行 PCR 扩增、Sanger 测序进行验证分析，利用 Mutation Taster 等软件对突变位点进行蛋白功能危害性分析。Dynein Axonemal Heavy Chain1，

DNAH1)第 31 号外显子上的移码突变：c. 5093delA（p.Lys1698Argfs*9），其父母、奶奶都被确定为该突变的杂合子携带者，在 100 名健康个体中未检测到上述突变。该突变位点查阅相关文献及突变数据库，未见报道。运用 Mutation Taster 对其进行预测，该突变可能造成终止密码子提前，翻译提前终止，产生截短蛋白，或其所转录的 mRNA 被无义密码子介导的 mRNA 降解机制（NMD）所降解，从而无法发挥正常功能而最终致病性。

结论 MMAF 是一种由遗传因素导致的精子严重畸形症，临床表现为男性不育，本研究通过全外显子组测序发现一个 DNAH1 基因新发可疑致病突变位点，有待后续功能分析进一步验证其致病性。

医学检验科门诊采血和谐医患关系的探索

黎七绮
重庆医科大学附属第一医院

医学检验科门诊采血窗口作为医院对外形象的窗口，直接为临床一线服务，不仅患者人数多、病情复杂、涉及病种多、患者停留时间短、随机性强、难以建立和谐的护患关系。患者停留在门诊采血的时间较短，而短时间的接触很有可能因为采血者的态度、言语等细微问题引起纠纷，因此，积极探讨医学检验科采血医患关系的原因并采取积极主动的预防措施十分重要且必须。医患沟通不仅应贯穿于医学教育的全程，更应积极落实于医疗服务实践中。医患沟通是提高医患交流水平的直接影响因素，同时间接地影响着医疗结果的质量和效率。静脉采血是一种常见的医疗项目，患者常因对静脉采血的认识不足和自身心理素质较差而对采血有一定的消极态度并产生不利采血顺利进行的反应。因此，医护人员要本着以人为本的沟通信念与患者进行合理的心理沟通，为患者普及基本医学常识，使采血工作顺利进行。

不同肾功能指标在精神疾病患者血锂浓度监测中的适用性

翟媛媛、马瑾、屈秋侠
西安市第十医院西安市精神卫生中心

目的 通过对服用碳酸锂的精神科患者血锂浓度及肾功能相关指标的测定，研究不同血锂浓度与肾小球滤过率及肾功能指标的关系，从而选择可作为个体锂盐代谢能力的指标。

方法 回顾性分析 2021 年 1 月至 2021 年 5 月在西安市精神卫生中心的就诊的 118 例服用碳酸锂缓释片 3 天以上的精神科患者的血锂浓度及肾功能相关指标，分别基于血肌酐及血胱抑素 C 估算肾小球滤过率（eGFR1；eGFR2）。采用 SPSS17.0 软件对患者的血锂浓度与各指标之间进行单因素 Pearson 相关分析。

结果 入组患者的稳态血锂浓度为 0.21-1.15 mmol/L，平均（0.64±0.23）mmol/L。

单因素 Person 相关性分析结果显示，血锂浓度与 eGFR2 显著负相关（r=0.247,P=0.01），与胱抑素 C 呈现显著的正相关（r=-0.313、,P=0.001），未发现血锂浓度与 eGFR1、尿酸、肌酐、尿素氮之间的相关性(P>0.05)。

结论 本研究结果显示血锂浓度与基于胱抑素 C 的 eGFR2 呈负相关，推测肾小球滤过功能可影响碳酸锂的代谢,。临床上可采用 eGFR2 和胱抑素 C 判断锂盐的代谢能力，有助于早期识别容易锂盐中毒的高危患者，避免锂盐中毒的发生。

PU-2412

沙黎族自治县新海南省白生儿 G6PD 缺乏症基因特征分析

晋艳婷、王洁
海南省妇女儿童医学中心

目的 寻找海南省白沙黎族自治县新生儿 G6PD 缺乏症发病情况和基因特征。
方法 以新生儿干血斑为样本，筛查使用荧光分析法，筛查阳性疑似病例使用 G6PD 基因试剂盒（PCR+导流杂交法）进行基因分型，提示有新突变的样本外送测序家系验证。
结果 ①在 2970 例新生儿当中初筛阳性样本 366 例，G6PD 缺乏症初筛阳性率约为 12.3%（366/2970）。男性阳性率 15.1%（247/1632），女性阳性率 8.9%（119/1338），男女之间疑似患病（ 2=9.610，p=0.002）有统计学意义。366 例疑似病例干血斑样本经基因分析确诊 279 例，G6PD 发病率为 9.4%（279/2970），男女之间发病（x2=6.145，p=0.013）有统计学意义。②本次确诊黎族患者 170 例，黎族发病率 9.8%（170/1742），其他民族确诊患儿 109 例，发病率 8.9%（109/1228），经统计学分析（x2=0.188，p=0.664）没有统计学差异。③基因检测到 12 种突变类型：c.1376 G>T、 c.1388 G>A、c.95 A>G、c.1311C>T、c.871 G>A、c.1024 G>T、c.392G>T、c.1360C>T、c.517T>C、c.592C>T、c.487G>A 和 c.383T>C，发现一例未知突变，经家系基因测序分析发现 c.1007C>A 新突变。
结论 海南省白沙黎族自治县新生儿 G6PD 发病率高。基因突变主要以 c.1376G>T、c.1388G>A 和 c.95 A>G 突变为主，三者突变合计 87.4%。

PU-2413

临床微生物实验室规范化管理

刘旭
郑州大学第一附属医院

研究目的 临床微生物实验室工作人员在日常工作中会密切接触患者的血液、体液及排泄物等传染源。医务工作者存在在日常工作中被锐器刺伤和传染源喷溅的事件发生，且经常进行搅拌、震荡、离心、敲打及超声波破碎等操作，这些操作均可产生大量的气溶胶播散实验室，如果管理不当，有可能引起实验室感染。因此制定科学合理的临床微生物实验室管理办法，保证医护人员安全，医疗环境安全以及实验室长期安全稳定运行的前提保证。
方法 通过对《病原微生物实验室安全管理条例》和《中华人民共和国国家操作实验室生物安全通用要求》以及《CNAS-CL02:2012 医学实验室质量和能力认可准则》和《CNAS-CL02-A005 医学实验室质量和能力认可准则在临床微生物学检验领域的应用说明》等临床微生物实验室建设管理的重要指导性文件的研究，构建实验室相应的生物安全防护工作制度、岗位职责、质量标准、安全防护、操作考核及制度差错事故登记制度等，并予以落实，保证内部生物安全，形成有效的生物安全管理体系。
结果 临床微生物实验室管理的影响因素包含了：健全的安全规章制度、良好的生物安全工作环境、发生职业暴露的紧急处理以及人员健康档案的构建以及计划免疫等。其中最重要的影响因素是人员的管理，人员管理是落实检验科全面质量管理体系的重要组成部分，也是保证实验室生物安全管理的主导者，应该有完善的准入体系，定岗定责。
结论 人员管理临床微生物学实验室最重要的组成部分，也是保证实验室生物安全管理的主导者，应该有完善的准入体系，定岗定责。面对不同的人群应有相对的管理方法，并及时开展临床微生物安全的相关宣教工作，把临床微生物实验室的规范落实到每一项工作当中，才能真正实现临床微生物实验室规范化管理。

PU-2414

ACL-TOP700CTS 全自动凝血分析仪检测系统性能验证

逯世林
山西医科大学第二医院（山西红十字医院）

目的 对沃芬公司 ACL-TOP700CTS 型全自动凝血分析仪检测系统的主要分析性能进行验证。
方法 参照美国临床与实验室标准化委员会（CLSI）制定的性能验证相关评价方案为标准进行评价，通过对该仪器主要检测项目的三项参数凝血酶原时间（PT）、活化部分凝血活酶时间（APTT）、纤维蛋白原（FIB）进行性能验证，熟悉掌握其精密度、线性范围、正确度、可比性、携带污染率（CR）及参考区间等主要性能。
结果 ACL-TOP700CTS 全自动凝血分析仪的精密度、正确度、携带污染率均符合要求。ACL-TOP700CTS 全自动凝血分析仪与对照仪器的结果相比，各检测项目测定结果比对有良好的一致性，相对偏差符合率>80%。FIB 线性验证过程中，其实测值与理论值呈线性关系，斜率 a 在（1±0.05）范围内，相关系数 r≥0.975。参考区间验证通过。
结论 本研究 PT、APTT、FIB 三个参数试验结果显示，批内精密度为 0.70%~1.92%，日间精密度为 1.50% ~6.70%，远小于 CLSI EP15-A2 判断标准，表明 ACL-TOP700CTS 全自动凝血分析仪精密度良好。
FIB 的 5 个水平实测均值与理论值之间线性关系良好，线性范围为 0.73~5.74g/L，覆盖了厂家申明的线性范围（0.80~5.0g/L），a 值为 0.9849，r 为 0.9966，表明该仪器检测参数 FIB 线性良好。
ACL-TOP700CTS 全自动凝血分析仪正确度评价是以 ACL-TOP700 全自动凝血分析仪为靶机，分别在 ACL-TOP700CTS 全自动凝血分析仪上测定并计算 PT、APTT、FIB 三项的偏倚，偏倚为-1.44%~2.93%，均满足临床血液学检验常规项目分析的质量要求。 ACL-TOP700CTS 全自动凝血分析仪的可比性验证和参考区间验证均符合判断标准要求，样本浓度污染率和项目携带污染率验证结果分别为 1.56%、2.04%，说明该仪器 PT、APTT、FIB 携带污染率极低，在测定各项目高值血浆标本时，对低值血浆标本无明显携带污染。
综合上述各项验证试验，结果表明 ACLTOP700CTS 全自动凝血分析仪精密度、正确度、线形及携带污染率评价、参考区间验证、检测系统间比对等均达到检测要求，符合 ISO 15189 的质量要求，该机性能稳定良好，检测性能适用于临床需要。

PU-2415

sST2 与 CD4+T 细胞在多器官衰竭中的相关性研究

吕宏祥、谢垚、彭启松
南京市江宁医院

目的 探讨 sST2 与 CD4+T 在组织衰竭患者疾病发展进程中的作用。
方法 纳入器官衰竭患者 100 例外周血血清标本，并收集健康体检者外周血血清标本 20 例设为对照组。采用免疫荧光干式定量法检测血清中 sST2 的表达水平，并对器官衰竭组与对照组进行比较；流式细胞仪检测 $CD4^+T$ 细胞比例；分析血清 sST2 的表达量与 $CD4^+T$ 细胞在器官衰竭患者发展进程中的相关性。
结果 器官衰竭患者外周血血清 sST2 的表达高于对照组；器官衰竭患者外周血 $CD4^+T$ 细胞比例明显低于对照组；器官衰竭患者血清 sST2 表达量与 $CD4^+T$ 细胞比例具有相关性。
结论 sST2 与 $CD4^+T$ 呈现负相关可能提示组织器官发生衰竭。

PU-2416

检验智能信息系统的设计开发与应用分析

徐宏忍
昆明市第一人民医院

目的 本研究旨在探讨临床检验智能信息系统的设计与应用分析。
方法 将检验科的工作划分为检验前，检验中，检验后，设计临床检验智能信息系统对上述三个流程所包含的工作进行模块化智能集成，探讨临床检验智能信息系统在医院的应用。
结果 临床检验智能信息系统已经实现采血叫号功能，标本容器智能识别，医嘱与采集容器关联，取报告凭证打印，标本交接功能，智能编号功能，标本检验管理，标本周转时间监控，仪器通信管理，报告智能审核，自助报告机管理。
结论 临床检验智能信息系统有效地解决了检验业务持续增长带来的排队时间过长和患者隐私保护的问题，降低了交叉感染的风险。从多个方面改善了检验科的质量指标，提高了工作效率，节约人力和时间成本，更好地服务患者。

PU-2417

自动审核在缩短患者等待时间提高报告正确率方面的应用分析

徐宏忍
昆明市第一人民医院

目的 运用自动审核，缩短生化标本的患者等待时间，提高报告正确率。
方法 对 2016 年（生化自动审核验证阶段），2017 年（生化自动审核改进阶段），2018 年（生化自动审核稳定运行阶段），总计三年的 90 余万份报告，按照急诊、平诊、门诊、住院，四个维度来分析标本的结果完整传输到 LIS 至报告审核的 50%位数和 90%位数，同时分析错误报告率。
结果 2016 年至 2018 年，生化标本量增加了 76%，标本的结果完整传输到 LIS 至报告审核的 50%位数由 3 分钟缩短至 1 分钟，标本的结果完整传输到 LIS 至报告审核的 90%位数由 40 分钟缩短至 17 分钟，错误报告由 1541 份减少至 325 份，
结论 运用自动审核缩短了生化标本的患者等待时间，提高了报告正确率。

PU-2418

转化生长因子-β 信号通路与纤维化

王晓玲
山西省中医院

转化生长因子-β (TGF-β)是一组结构相关的细胞因子超家族，在发育过程、组织稳态和疾病期间基本细胞事件中发挥着普遍作用。TGF-β 超家族由 33 个成员组成，包括 TGF-β 1-TGF-β5 亚家族、骨形态发生蛋白(BMP)亚家族、Nodal、Activins、Mullerian inhibitors (MIS)、胶质细胞系来源的神经营养因子(GDNF)亚家族等。TGF-β 信号通路在不同的时间、组织特异性模式下表达，在不同细胞过程的调节中发挥重要作用，包括增殖、分化、迁移或细胞死亡，这些过程对组织和器官的稳态至关重要，与自身免疫、炎症、肿瘤密切相关。许多结果表明，由于 TGF-β 功能的多样性和多效性，其通路的去调控导致了人类疾病，广泛靶向 TGF-β 抗纤维化策略并不可行。因此，本文综述了 TGF 各种生物学效应以及在器官纤维化的研究进展，旨在为开辟新的治疗策略提供参考。

PU-2419

血清残余脂蛋白胆固醇在冠心病中的研究进展

张壶涵、段勇
昆明医科大学第一附属医院

自 2000 年起，无论是城市居民还是农村居民，心血管病死亡率始终位于总死亡原因首位，尽管 PCI 和冠心病二级预防策略已减少和改善了冠心病患者的死亡率和预后，然而，冠心病患者出院后不良心血管事件的发生情况仍然有待改善。众所周知，LDL-C 是冠心病的独立危险因素，然而近年来的研究显示，在冠心病患者 LDL-C 治疗达标情况下仍有再次发生心血管事件的残留风险。研究表明，血清残余脂蛋白胆固醇（RLP-C） 能解释这种风险。通过回顾 RLP-C 相关的研究，从 RLP-C 的定义、分布特征、代谢及检测方法，RLP-C 与冠状动脉粥样硬化性心脏病的相关研究以及药物治疗方面做一综述。

PU-2420

Inhibition of Hepatic Fibrosis by regulating hepatic stellate cell β-catenin/TCF/FoxO1

Xiaoling Wang
Shanxi Academy of Traditional Chinese Medicine, Shanxi Traditional Chinese Medicine Hospital

Liver fibrosis is a leading and growing cause of mortality worldwide. Hepatic stellate cells (HSCs), residing in the space of Disse between the sinusoidal endothelial cells and hepatocytes, as the major fibrogenic cell type in the injured liver, exert a dominant role in liver fibrosis. Transforming growth factor Beta（TGF-β）released by multiple cell types will induce activation of HSCs during an inflammatory reaction in the liver. It is hypothesized that to redirect β-catenin/TCF and β-catenin/FoxO1 could reduce liver fibrosis by inhibiting the activation of HSC in this study. We detected the different outcomes of HSC in vitro by interfering with the transcription factor complexes β-catenin/TCF and β-catenin/Foxo1, then in the liver fibrosis models of common bile duct ligation (BDL). The results showed that the inhibition ofβ-catenin/TCF mediated transcription using ICG-001, redirected to promote β-catenin/FoxO1, resulted in cell cycle arrest, enhanced antioxidant capacity, weakened HSC activation, and reversal of liver fibrosis. In addition, we found that fibrosis levels were associated with transcription factor complexes β-catenin/TCF and β-catenin/Foxo1 in liver fibrosis tissue samples of children with congenital biliary atresia at different stages.

PU-2421

河南地区 26249 例丙型肝炎病毒五种常见亚型分布分析研究

胡正川、李利娟、任伟丹
郑州金域临床检验中心有限公司

目的 统计河南各地区丙型肝炎病毒（HCV）感染者 HCV 基因分型检测结果，分析该地区丙型肝炎患者病毒亚型分布特征，为临床用药指导以及疗效评估提供数据支持。
方法 收集 2017-2020 年郑州金域临床检验中心有限公司实验室检测的丙型肝炎病毒（HCV）基因分型 26249 例临床样本进行结果统计分析。26249 例临床样本通过 PCR-荧光探针法或基因测序法（突变和重组亚型）检测 1b、2a、3a、3b 和 6a 五种常见型别。
结果 26249 例丙型肝炎病毒分型检测结果显示，1b 亚型占比 61.63%，2a 亚型占比 34.73%，3a 亚型占比 2.01%，3b 亚型占比 1.24%，6a 亚型占比 0.39%。

结论 河南地区丙型肝炎病毒（HCV）感染者 HCV 基因分型主要以 1b 亚型和 2a 亚型为主，对临床用疗效评估和用药指导具有重要意义。

1630 例河南省儿童铁蛋白水平调查

贾全胜、陈明、王亚南
郑州金域临床检验中心有限公司

血清铁蛋白是体内含铁最丰富的蛋白，在铁的代谢方面起着重要的作用。血清铁蛋白广泛存在于其他组织细胞中，当人体某一系统出现疾病时，血清铁蛋白可出现异常改变。血清铁蛋白能够反应体内铁存储量及肌体的营养状态，是判断体内铁缺乏及超负荷的有效指标。

目的本文就河南省儿童检测血清铁蛋白数据的统计，来展示河南省儿童血清铁蛋白的水平，讨论儿童检测血清铁蛋白的必要性。

4 种国产新型冠状病毒核酸检测试剂第三方质控品检测结果分析

王晓玲[1]、任建平[2]
1. 山西省中医院
2. 山西省中医药研究院（山西省中医院）

目的 针对现有 4 种国产新冠病毒核酸检测试剂采用可溯源的第三方质控品检测结果进行分析，探讨不同检测试剂质量是否与 SARS-CoV-2 核酸检测假阴性相关。

方法 采用第三方质控品浓度梯度稀释作为待测标本，磁珠法提取核酸，选取 4 种新冠核酸检测试剂进行平行实验，初步分析不同试剂的检测结果。

结果 A 试剂 ORF1ab 基因位点检出比例（84.38%） 与 B 试剂（87.50%）相当，N 基因位点检出比例（65.63%）高于 B 试剂（50.00%）；C 试剂 N 基因位点检出比例 18.75%（6/32），E 基因位点检出比例 9.38%（3/32）；D 试剂 N 基因位点检出比例高于 C 试剂，E 基因位点检出比例低于 C 试剂。A 试剂、B 试剂对弱阳性标本检出比例高于 C 试剂和 D 试剂，A 试剂批内批间精密度优于其它试剂。

结论 4 种 SARS-CoV-2 核酸检测试剂对于可溯源的第三方质控品不同浓度梯度的检出比例、精密度有差异。

PU-2425

细胞学检查联合人乳头状瘤病毒(HPV)检测对子宫颈癌前病变筛查的重要意义

经晶
吉林金域检验医学检验所有限公司

目的 宫颈癌是我国女性常见的恶性肿瘤之一，而宫颈癌是目前可以通过筛查提前发现、提前预防的癌症之一，故宫颈癌前病变筛查的重要手段对预防宫颈癌有着重要意义，本文探讨了细胞学检查联合人乳头状瘤病毒(HPV)检测对宫颈癌前病变筛查的意义，为临床提供参考依据。
方法 选取 2020 年 1 月至 2020 年 12 月送检我公司的宫颈癌筛查样本 982 例，年龄为 19~70 岁，有性生活史的患者病例。所有样本均接受宫颈液基细胞学检查、HPV 检查及病理学检查,以病理学检查结果作为确诊标准,分别对单纯宫颈液基细胞学检查、单纯 HPV 检查以及宫颈液基细胞学联合人乳头瘤病毒（HPV）检测的诊断价值进行结果分析。
结果 982 例患者中，179 例患者 HPV 检测为阳性，阳性率为 18.2%，81 例患者细胞学为 ASCUS 及以上病变，其中 ASCUS 为 48 例，宫颈上皮内瘤变(CIN)Ⅰ级 21 例,CIN Ⅱ 及 CINⅢ 8 例,宫颈浸润癌 1 例,非典型腺细胞 3 例，子宫颈腺癌 0 例，子宫内膜癌 0 例，细胞学阳性率总体为 8.2%，39 例患者组织学为阳性病变，组织学宫颈上皮内瘤变(CIN)Ⅰ级 17 例,CIN Ⅱ 9 例,CIN Ⅲ 8 例,宫颈浸润癌 4 例,子宫颈腺癌 1 例。而人乳头状瘤病毒(HPV)检测、细胞学检查均为阳性者共 73 例，结合组织学对照阳性率高达 90.1%。
结论 联合宫颈液基细胞学及 HPV 检查的诊断灵敏度、特异性、准确率均明显高于单纯宫颈液基细胞学检查及单纯 HPV 检测，其辅助诊断是一种十分简便易行、经济有效、便于随诊观察、患者又无痛苦且诊断性高的宫颈癌诊断方法，对女性宫颈癌防治有重要意义。因此宫颈细胞学检查联合人乳头状瘤病毒(HPV)检测对子宫颈癌前病变有着重要的诊断意义。

PU-2426

结肠癌干细胞标志物和信号通路的研究进展

马苏红
山东大学第二医院

结肠癌是一种最常见的消化道恶性肿瘤，世界范围内 其发病率位列第三。大部分的结肠癌患者死 亡由肿瘤的复发转 移和耐药性所致，而这些过程都有肿瘤干细胞的参与。因此，靶 向肿瘤干细胞将成为未 来根治结肠癌的重要研究方向，而结肠 癌干细胞标志物的发现则为其提供了新思路。同时，因结肠癌干 细 胞的生长依赖多种信号通路的作用，故其相关信号通路靶向 药物的研究也将是一大发展方向。现阶段主要的结肠癌干细胞标志物包括 CD133、 CD44、CD166、 EpCAM、CD24、CD26、ITGB1、 Lgr5、ALDH1、Oct4、Sox2 和 Nanog 等， 通 常 可 用于鉴定和分离 CCSC (表 1)[3-15]。其中， CD133、CD44、CD166、EpCAM、CD24、Lgr5、ALDH1、Sox2 和 Nanog 还可能在预测病理分期、癌症诊断 方面具有作用。CD24、CD26 和 CD29 是参与细胞间黏附的膜表面糖蛋白，并可能与肿瘤的扩散 转移有关 ；而 Oct4、Sox2 和 Nanog 是维持胚胎干细 胞特性 的转录因子，并参与肿瘤的形成过程。此外，miRNA 作为 CCSC 生物标记物的潜力也被证明，而且标志物之间的联 合检测有利于结肠癌的诊断及治疗。可用于探索新 型的靶向治疗方法。

PU-2427

滤泡辅助性 T 细胞在疫苗研究中的作用

谢婷、黄民成、陈建设、覃艳玲
邵阳市中心医院

T 滤泡辅助细胞（T follicular helper，Tfh）是一类辅助性 CD4 T 细胞，在生发中心中可诱导 B 细胞增殖，抗体类别转换和体细胞突变，从而诱导长寿命浆细胞和记忆性 B 细胞的产生。大多数成功的疫苗如抗乙型肝炎，黄热病和天花等通过诱导持久的中和抗体来清除病原体并防止靶细胞感染。在大多数疫苗研究中，Tfh 细胞频率的增加与保护性体液免疫的诱导相关。有研究表明循环 Tfh 细胞的比例，特别是具有活化表型的细胞，可以正向预测疫苗接种后抗原特异性应答水平，包括针对流感和肺炎链球菌的疫苗、活化的 cTfh 频率也可预测口服疫苗引起的粘膜抗体反应。而在 HIV、乙型肝炎病毒、流感病毒、HPV 等疫苗接种后，Tfh 细胞表型、功能及活化状态变化对保护性抗体应答的产生起重要作用。因而在病原体感染过程中，Tfh 细胞的频率、表型及功能改变可作为血液中有用的生物标志物。本文就 Tfh 细胞及其亚群在疫苗接种后，对抗体应答的产生中的作用进行总结，旨在为疫苗的研究提供新见解。

PU-2428

牙克石地区健康成年男性人群血清甘油三酯（TG）水平的调查报告

陈吉兴
牙克石市人民医院

目的 调查牙克石地区表观健康成人男性血清甘油三脂水平年龄分布特征并分析其相关危险因素。血清甘油三脂（TG）升高可能成为动脉样硬化性心血管疾病的危险因素。[1]
方法 选取 2019 年 3 月至 2019 年 8 月在我科进行健康体检的 1392 例成人男性血清甘油三脂检测数据进行统计分析。
结果 一、不同年龄人群 TG 水平情况：1392 例男性血清甘油三酯（TG）平均水平为：2.58mmol/l，分布区间：0.31-22.57mmol/l。其中，20-30 岁血清甘油三酯（TG）平均水平为：1.82mmol/l，分布区间:0.35-6.55mmol/l；31-40 岁血清甘油三酯（TG）平均水平为：2.64mmol/l，分布区间:0.42-15.59mmol/l；41-50 岁血清甘油三酯（TG）平均水平为：3.02mmol/l，分布区间:0.31-22.57mmol/l；51-60 岁血清甘油三酯（TG）平均水平为：2.3mmol/l，分布区间:0.54-14.13mmol/l。二、不同 TG 水平人群分布情况：小于 1.7mmol/l 人数为：541 人，占比 38.87%；1.7-2.25mmol/l 人数为：278 人，占比 19.97%；2.26-5.65mmol/l 人数为：475 人，占比 34.12%；大于 5.65mmol/l 人数为：98 人，占比 7.04%。
《中国成人血脂异常防治指南》（2016 修订版）意见是 TG 合适水平小于 1.7mmol/l，边缘升高：1.7-2.3mmol/l，升高：大于 2.3mmol/l。[2] 美国 NCEP-ATP-III 报告建议的血清甘油三酯（TG）评价水平：正常水平：小于 1.7mmol/l；边缘增高：1.7-2.25mmol/l；增高水平：2.26-5.65mmol/l；极高水平：大于 5.65mmol/l。[3]
结论 1、我市男性血清甘油三酯（TG）平均水平为 2.58mmol/l，明显高于《中国成人血脂异常防治指南》（2016 修订版）意见的合适水平，合适水平人群仅占 38.87%。2、我市男性血清甘油三酯（TG）水平随年龄增加而增高，41-50 岁人群组达峰值。
降低甘油三酯的方法有哪些？一是合理饮食，控制脂肪的摄入，增加膳食纤维，多吃蔬菜及保证蛋白质的摄入；二是适量运动，有规律的运动可以直接到达降低甘油三酯的效果；三是戒烟限酒，饮酒也是造成甘油三酯升高比较常见的原因，甘油三酯超过极高水平的人群应禁酒。美国 IAS 指南中

对血脂异常人群生活方式的干预应优先于药物干预[4]。当空腹甘油三酯大于等于 5.6mmol/l 时，考虑使用药物来降低甘油三酯。

PU-2429

高危型 HPV 及液基细胞学（LCT）在宫颈病变筛查的检出率比较

张鸿
吉林金域检验医学检验所有限公司

目的 高危型 HPV 及液基细胞学（LCT）在宫颈病变筛查的检出率比较
方法 选取 2019 年至 2020 年送检吉林金域医学检验所的患者各 500 例为研究对象，分别于沉降式液基细胞学（LCT）检测、HPV 病毒检测及组织病理活检，对三者结果进行比对分析。
结果 500 例宫颈沉降式液基细胞学（LCT）标本中，阳性标本共有 41 例，占 8.2%，阴性标本 459 例，占 91.8%，与宫颈活检阳性符合率为 85.3%；500 例高危型 HPV 标本中，阳性标本例 44 例，占比 8.8%，阴性 556 例，占比 91.2%，与宫颈活检阳性符合率为 79.2%；同时做高危型 HPV 及液基细胞学标本中，阳性 61 例，占 12.2%，共同阳性 43 例，占比 8.6%，与宫颈活检阳性符合率为 95.7%。宫颈癌是妇科常见的肿瘤之一，近些年来发病率日趋年轻化，严重威胁女性健康。高危型 HPV 病毒感染与宫颈上皮内病变具有关联性。高危型 HPV 检测方便快捷，特异度、灵敏度较高，符合率稍低；液基细胞的优点有特异度、敏感度较高，符合率少高等，主观判断性较强，同时因宫颈癌筛查人群多为健康妇女，随访难度大。所以高危型 HPV 及液基细胞联合筛查检出率高，二者同时阳性时与宫颈活检阳性符合率高，从而降低宫颈癌发病率。
结论 高危型 HPV 及液基细胞学联合筛查检出率较高，且二者同时阳性时与宫颈活检阳性符合率高，因此二者联合筛查是比较经济实用、有效的方法。

PU-2430

2020 年深圳市某三甲医院医学检验科员工满意度调查分析

许晓清、李佳瑜
深圳市罗湖医院集团

目的 通过员工满意度调查，获取员工工作建议和需求，评估并合理实施这些建议，促进实验室管理层与员工进行有效沟通。
方法 通过微信问卷星形式，向所有检验科员工发送电子问卷，分析 2020 年深圳市罗湖区人民医院医学检验科员工的满意度调查结果，根据 Iso15189 要求，结合检验科质量指标管理程序文件，以科室管理，管理层表现，科研、教育关注度，实验室工作环境、人员、设施配制，工作岗位安排，实验室工作流程，休假与工资待遇 7 个方向共 35 项调查问题，分析总结调查结果。
结果 调查表中各调查内容的评价意见分为“满意”、“较满意”、“一般”、“较不满意”、“不满意”共 5 个级别，各级别赋值分别为 5 分、4 分、3 分、2 分、1 分。员工满意度(%)=问卷得分/总有效问卷分数×100。经统计后深圳市罗湖区人民医院检验科共有员工 119 名，共收到 119 份问卷，员工问卷总得分为 19399 分，总有效问卷分数为 20825 分，员工满意度为:93.15%，同时筛选出有代表性的有效整改意见共 20 条，主要涉及科室文化建设，科室职能细化，个人职业发展支持，薪资休假制度改善，员工轮岗制度完善，与临床加强沟通等几个方面 。
结论 通过员工满意度调查表，逐步完善科室制度，解决员工工作需求，可提高员工的工作积极性，持续改进实验室服务和检验质量；问卷星是员工满意度调查的一种方便快捷方式。

PU-2431

检验医学中的人工智能伦理:原则与实践

马苏红
山东大学第二医院

越来越多的人工智能应用正在开发和应用于实验室医学。这些技术带来的风险和好处必须通过道德的角度进行评估和管理。人工智能(AI)正在改变社会和医疗保健。计算能力的扩大和大型数字数据集为技术和商业创新创造了工业革命以来从未见过的理想条件。人们对这些人工智能工具在改变和改善医疗保健方面的潜力抱有极大的热情这反映在检验医学专业人员努力加强检验医学的实践，并基于我们生成的数据推进医学知识。人工智能包括广泛的机器学习(ML)，深度学习，和其他分析工具从统计和计算机科学。在大多数情况下，AI 应用程序开发人员使用真实数据集来“训练”他们的应用程序生成所需的输出。理想情况下，应用程序使用独立的真实数据集进行验证，以评估 AI 输出的准确性和通用性。例如，在病理 AI 中，训练或验证数据集可能由数字化的显微镜图像以及由人类病理学专家评估的相关诊断组成。病理学家和其他实验室专业人员提供关于病理学和检验医学中医疗 AI 应用的伦理发展、验证和实施的指导。这包括但不限于以下内容:管理病人资料；软件应用程序的开发；临床应用的验证；人工智能应用的科学研究和出版；制定体制政策和程序；对外业务关系的管理。希望为与人工智能相关的组织政策和程序的发展提供信息，包括与外部业务合作伙伴有关的政策和程序。并对监管机构在考虑对这些技术进行法律监督的新方法时有用。工智能是一套日益强大的技术，有潜力推进诊断实验室医学为患者的利益。然而，人工智能带来了收益、风险和成本的复杂组合。最大化利益同时最小化风险和成本需要在道德框架内管理技术。病理学家和实验室专业人员，以及他们的临床和学术组织以及潜在的行业合作伙伴，都有义务在他们自己的组织和外部合作伙伴中促进伦理人工智能的开发、验证和实施。

PU-2432

急性血管内溶血病例分析一例

张玲
泰安市中心医院

病案经过：患者**，女，72 岁，查体发现肝大入院，既往有乳腺恶性肿瘤、高血压病史。停阿司匹林一周后拟行剖腹探查术。术前麻醉满意，开腹后患者血压骤降，休克表现，立即停止手术并进行缝合，给与输血补液等抗休克治疗血管内凝血，后转入 ICU。后患者出现刀口渗血，引流夜及尿液均为酱油色，积极治疗后效果不接，并血液循环障碍、代谢障碍，心脏骤停后死亡。

目的 分析患者死亡原因，学习急性血管内溶血，弥散性血管内凝血的病因，生理病理机制，以及探讨检验诊断在临床实际运用中的思路。

方法 研究病历，学习急性血内溶血、弥散性血管内溶血的理论知识，查阅相关文献，与临床沟通等。

结果 笔者于患者转入 ICU 后接收到其血液和尿液标本，，发现血液标本离心后血清呈酱油色，尿液亦是如此，首先考虑血管内溶血，并与临床沟通，了解病情，考虑患者出现了围手术期麻醉药物过敏，进而发生了急性血管内溶血，并极有可能进展为急性弥散性血管内凝血，建议加做 3P、乙醇胶试验，结果为阳性，结合患者症状，确证为 DIC，并立即给与抗凝、大量输注凝血因子、血浆、血小板等对症治疗，但由于患者病情进展迅速，后出现了血液循环障碍，代谢障碍，最终发生心脏骤停后死亡

结论 围术期过敏反应是一种在接触过敏原后突然出现的，严重的、危及生命的、系统性过敏反应，病死率高达 3%～9%。急性血管内溶血是指红细胞某些诱因下于血管内发生自溶，血红蛋白直接进入血浆后引起的急性反应，多表现为高热、寒战、血红蛋白降低、酱油色尿等，进展迅速极易诱发弥散性血管内凝血（DIC）。DIC 是由于在原发病基础上，致病因素损害微血管体系，导致凝血活

化，全身微血管血栓形成、凝血因子大量消化并继发纤溶亢进，引起以出血及微循环衰竭为特征的临床综合征。实验室支撑项目有 PT、APTT、Fig、D-二聚体，3P、乙醇胶试验，血常规、肝肾功、LDH 和 ADAMTS13、外周血图片镜检等，临床检验工作人员在发现疑似 DIC 的检验诊断时，要及替代支持治疗；必要时时与临床沟通，以免贻误病情；同时 DIC 病情进展迅速，治疗上关键是对基础疾病进行治疗，再有出血表现或风险时给与抗凝和抗纤溶治疗。

PU-2433

HIV 感染者/AIDS 患者合并梅毒感染对 CD4+淋巴细胞影响的研究

徐丽萍、黄山、吕松琴、施金丽、聂磊、李晓非
昆明市第三人民医院

目的 研究分析 HIV 感染者/AIDS 患者合并梅毒感染对 CD4+淋巴细胞的影响，为艾滋病的诊疗提供一定数据基础。
方法 收集 2019 年 1 月-12 月昆明市第三人医院收治的 1052 例 HIV 感染者/AIDS 患者血清样本，进行梅毒抗体和 CD4+绝对计数检测。
结果 1052 例 HIV 感染者/AIDS 患者中，梅毒感染率为 8.84％(93/1052)，合并梅毒感染患者中男性占比为 83.87%(78/93)远远高于女性 16.13%(15/93)，CD4+绝对计数小于 100 个/ml 占比 50.50%（47/93）远高于 100-500 个/ml 28.00%（26/93）和>500 个/ml21.51%（20/93），差异有统计学意义（c2=，c2=，c2=，P<0.001）。
结论 云南地区 HIV 感染者/AIDS 患者合并感染梅毒占比不低，50%的合并感染患者 CD4+绝对计数大多数低于 100 个/ml。

PU-2434

标本类型、储存时间和温度对促肾上腺皮质激素测定的影响评价

尹建洁
吉林大学第一医院

促肾上腺皮质激素测定结果随时间延长，温度的升高、测量值逐渐降低。血清和血浆在室温条件下促肾上腺皮质激素浓度测量值较 4 ℃条件下下降显著，差异有统计学意义(P<0.01)；在室温保存条件下血浆促肾上腺皮质激素浓度分别立即检测、放置 4 小时、24 小时小时检测，（4 小时、24 小时小时结果偏倚分别为-3.1 和-18.3)。血浆促肾上腺皮质激素在 4 ℃冰箱保存（4 小时、24 小时小时检测偏倚分别为-0.86 和-3.49）。

PU-2435

抗凝标本可接受样本量分析

周利艳[1,2]、陆丹[1,2]、吴晓宁[1,2]、郭宇妮[1,2]、何秋媛[1,2]
1. 广西医科大学第二附属医院
2. 广西医科大学第二临床医学院

目的 为减轻临床工作和患者采血压力，探讨抗凝标本让步标本血量范围。
方法 （1）血常规管：选择我院接受健康体检的志愿者，其中成人 44 例，婴幼儿 10 例。使用含 EDTA 二甲盐的真空采血管抽取全血，成人组以 1mL，1.5mL，2.5mL 为实验组，标准组为同个志

愿者 2mL 的血量，婴幼儿组以 1mL 为实验组，标准组为同个婴幼儿 2mL 的血量。在相同条件下，将上述标本在贝克曼库尔特血球分析仪进行全血细胞计数检测，比较不同采血量全血细胞计数结果的差异。（2）凝血功能检测管：选取成人 22 例，使用含 0.5mL 3.2%柠檬酸钠真空管抽取全血，以 1.5mL，2.5mL 为实验组，标准组为同个志愿者 2mL 采血量。在相同条件下，利用沃芬全自动凝血分析仪进行凝血四项检测，比较不同采血量凝血四项结果的差异。

结果（1）全血细胞计数方面，成人与婴幼儿实验组与标准组的全血细胞计数结果差异无统计学意义（p>0.05）,其相对偏差符合率在临床可接受范围内。（2）凝血方面，实验组与标准组的部分活化凝血酶原时间（APTT）存在统计学差异（p<0.05），凝血酶时间（TT）、纤维蛋白原（FIb）、凝血酶原时间（PT）结果无统计学差异。APTT、Fib、TT 相对偏差符合率分别为 20%、50%、80%。

讨论（1）成人全血细胞分析可接受样本量为 1-2.5mL。（2）婴幼儿采血相对困难，对低容量采血量有较高需求，本研究表明，3 婴幼儿全血细胞分析可接受样本量为 1-2mL，但值得注意的是，在实验过程中，婴幼儿低容量血量易造成白细胞难以分类，因此临床上仍推荐在可执行的情况下，选择 2mL 采血量。（3）凝血项目受血量影响较大，不可接受让步，应严格按照 2mL±10%采血。

PU-2436

运用 FOCUS-PDCA 改善门诊采血等候时间

李华丽
西安医学院第一附属医院

目的 通过科学的管理方法，分析门诊采血等候时间过长的原因，提出不断持续改进的措施，改善门诊采血等候时间，保障患者满意度。

方法 按照 FOCUS-PDCA 程序，对门诊患者采血等候时间过长存在的问题进行分析、制定改进措施，完善管理制度，不断规范采血流程，对采血等候时间持续进行对比，实现持续改进。

结果 通过 FOCUS-PDCA 的应用，采血平均等候时间从 2020 年 1 月份的 37 分钟降低至 2020 年 9 月份的 13.9 分钟；改善了门诊患者采血等候时间，提高了工作人员的工作效率，增加了患者的满意度，确保标本能够安全、及时、准确的服务于临床工作。

结论 FOCUS-PDCA 对于改善门诊采血等候时间起到良好效果，对实现医疗质量、患者满意度和安全持续改进有着重要的作用，值得推广。

PU-2437

探讨如何解决大规模新型冠状病毒核酸筛查中待检人群的资料信息问题

魏琦、都伟杰、李志强、袁征、毛源
合肥金域医学检验实验室有限公司

目的 为了解决大规模新冠病毒核酸筛查时待检人员的资料信息登记问题，提高采样环节的工作效率，并且减少居民排队等待检测的感染风险。

方法 2021 年 5 月安徽省六安市新冠疫情第一轮筛查期间，在当地相关部门的带领下，我司采用传统纸质登记待检人员的信息。从第二轮筛查开始，我司采样了集团开发的新冠信息采集小程序，该小程序深入街道、社区、学校，采用无纸化信息登入，一键扫码获取个人身份信息，在保障个人信息安全的同时，确保信息登记准确无误，方便后续工作的流程顺畅。

结果 第一轮大筛查（持续 2 天），我司配合相关部门完成 10 万居民采样工作；第二轮筛查（持续 2 天）, 我司配合相关部门完成 18 万居民采样工作，第三轮完成 25 万居民采样工作。

结论 新冠信息采集小程序极大提高样本前处理时信息录入的效率，成功应对大规模社区采样和核酸筛查，为助力政府保质保量推动疫情防控工作开展贡献科技应用的力量。

PU-2438

新型冠状病毒肺炎疫情期间方舱实验室的应急建设与管理

魏琦、都伟杰、李志强、毛源
合肥金域医学检验实验室有限公司

目的 为应对 2021 年 5 月六安市突发新型冠状病毒肺炎疫情，尽快配合相关部门完成主城区及重点区域全员核酸检测工作，本实验室迅速启动方舱实验室建设。
方法 从总部调集两辆方舱实验室和一辆移动检测车，成立方舱实验室应急团队，团队包括应急管理组和检测组，并配置相应的仪器设备。管理组对接当地疾控，了解相关政策，并为检测组提供后勤保障；检测组根据方舱实验室的结构与分区、压力参数、新风系统、机器人运行环境、污水排放等编写 SOP、开展方法学性能验证（包括试剂的符合率、检出限、交叉反应、精密度和抗干扰能力进行验证及评价），并接受当地临检中心的验收考核。
结果 经过各种资源调配，两个方舱实验室顺利通过验收，形成标准、规范的新型冠状病毒核酸检测实验室，具有每日 10000 管标本的检测能力。
结论 实践证明，方舱实验室具有快速、标准、有效、适用等特点，是出现大规模人群核酸筛查应急状态下的一种应对措施。同时，快速建立新型冠状病毒核酸检测实验室及扩大核酸检测能力成为当今群防群控不容忽视的问题。

PU-2439

真菌（1-3）-β-D 葡聚糖光度法在诊断 AIDS 合并真菌感染中应用价值分析

许宝妹、黄山、吕松琴、段洪芬、李晓非
昆明市第三人民医院

目的 探讨真菌（1-3）-β-D 葡聚糖光度法在诊断 AIDS 合并真菌感染中的应用价值
方法 收集 2020 年 1 月至 2020 年 12 月在云南省昆明市第三人民医院感染 1 科住院的 ＨＩＶ 患者 172 例，男性 126 例，女性 46 例，分别进行常规真菌培养鉴定和真菌（1-3）-β-D 葡聚糖光度法检测。
结果 172 例 AIDS 患者中有 30 例患者为合并真菌感染，真菌培养和真菌（1-3）-β-D 葡聚糖光度法的阳性率分别为 16％和 60％，以临床诊断为金标准，真菌（1-3）-β-D 葡聚糖光度法的特异性、敏感性、阳性及阴性预测率都高于传统真菌培养鉴定，差异无统计学意义。
结论 真菌（1-3）-β-D 葡聚糖光度法具备操作简便、快速等优点，阳性率、特异性敏感性、阳性及阴性预测率都高于传统真菌培养鉴定，连续监测更有助于提高艾滋病合并真菌感染诊断效率，可以用于早期诊断艾滋病合并真菌感染。

PU-2440

PDCA 循环在大规模人群新冠病毒核酸筛查中的应用

魏琦、都伟杰、李志强、毛源
合肥金域医学检验实验室有限公司

目的 应用 PDCA 循环提升实验室新型冠状病毒核酸检测能力，应对大规模人群新型冠状病毒核酸筛查。
方法 近期安徽六安新冠疫情期间，为应对检测需求和保证发单时间及质量，实验室应用 PDCA 循环的四个阶段，Plan(P)：制订计划；Do (D)：落实整改；Check (C)：监督评估；Action (A)：使流程标准化并优化排班制度，将常规检测流程优化为流水线作业方式。前处理组持续进行接收分发和排序，并及时调配其他岗位人员补充前处理组；检测组负责提取，为在确保质量前提下提升效率，组内确认主操作人员、试剂配置人员和辅助人员，大批量操作用 96 孔板代替八连管，使用排枪加样后封膜传给报告组上机；报告组负责扩增与结果解读，使用自行开发的“自动审核系统”辅助报告。
结果 经过 PDCA 循环后，实验室新冠核酸检测能力从 1 万/天，到 2.5 万，最终提升到 4 万/天。
结论 应用 PDCA 循环大大提升了检测能力，高效、有序的完成大筛查样本检测。

PU-2441

大规模人群新冠病毒核酸筛查检测质量现场考核结果分析

魏琦、都伟杰、李志强、毛源
合肥金域医学检验实验室有限公司

目的 为保证检测结果,了解各实验室检测能力以及检测试剂的质量状况，此次大规模筛查期间六安市临检中心对本实验室进行了 3 次技术考核。
方法 考核只针对样品检测，包括核酸提取、扩增体系、人员操作、室内质控等因素，即检验中的质量管理。分别收到 3 批考核品，每批各 5 支，包括阴性、弱阳性和阳性样本。本实验室严格按照《新型冠状病毒感染的肺炎实验室检测技术指南（第八版）》和《国家卫生健康委办公厅关于印发新型冠状病毒实验室生物安全指南（第二版）的通知》相关文件进行生物安全防护和实验操作，并严格按照试剂说明书进行 RNA 提取和扩增，记录 CT 值、上报结果。
结果 本实验室在规定时间内上报结果，临检中心反馈检测结果总符合率 100%，其中阳性样品符合率、阴性样品符合率均为 100%。三次考核，共涉及 2 个厂家试剂，各试剂检出率均为 100%。
结论 本实验室在六安市大规模人群新型冠状病毒核酸筛查中，检测能力和试剂质量均符合要求。

PU-2442

肺部细菌感染患者低分子肝素抗感染效果初探

杨悦林[1]、尹宁娜[2]、钱净[1]
1. 昆明市第一人民医院
2. 昆明学院医学检验技术系

目的 应用感染标志物对 LMWH 在肺部细菌感染患者抗感染治疗前后浓度水平的变化，探讨 LMWH 在抗感染机制方面的临床效果。
方法 1.收集 2020 年 1 月至 12 月肺部细菌感染患者资料，其中常规抗感染合并 LMWH 治疗（治疗方案 1）患者 100 例作为研究组、常规抗感染但未用 LMWH 治疗患者（治疗方案 2）100 例作为对照组，统计上述两组人群在治疗前后感染标志物（PCT、IL-6、CRP-U、WBC、MPV、D-D）结果

并行 t 检验；2.依据细菌涂片结果，将研究组和对照组进一步分组为 G+感染研究组和对照组与 G-感染究组和对照组，对不同分组中治疗前后感染标志物结果行 t 检验。
结果 1.研究组和对照组治疗前感染指标浓度水平比较无统计学差异（P>0.05），研究组和对照组治疗后 CRP-U 和 D-D 具有统计学差异（P<0.05），其余感染标志物无统计学差异（P>0.05）；2.研究组和对照组 G+感染者感染标志物治疗前后浓度水平变化除 D-D 外均无统计学差异（P>0.05）。3.研究组和对照组 G-感染者感染标志物治疗前后浓度水平变化除 D-D 外均无统计学差异（P>0.05）。
结论 本研究中 LMWH 在肺部细菌感染患者中的抗感染效果与预期不符，LMWH 在抗感染机制中的作用有待进一步研究。

PU-2443

临床检验危急值的统计分析及重要性

廖铭心
襄阳市第一人民医院

目的 了解 2021 年 1~5 月襄阳市第一人民医院西院区医院检验科危急值的报告率以及危急值在各个科室的分布情况，并根据统计分析结果合理制定危急值范围，做好临床沟通协调，提高全员医护人员对危急值的重视，及时尽力的挽救患者的生命。
方法 收集并对襄阳市第一人民医院西院区 2021 年 1~5 月期间报告的检验项目危急值及其在各科室的分布情况进行统计分析。
结果（1）统计襄阳市第一人民医院西院区 2021 年 1~5 月期间报告的检验项目危急值总数，2 月危急值报送总数明显低于其他月份，除 2 月的其余月份危急值总数变化无显著性差异。（2）2021 年 1 月危急值回复超时现象高于其余 4 个月，最高达到 7 例。（3）通过统计 2021 年 1~5 月期间报告的检验项目危急值发现，中班（12:00~14:30）期间以及夜班（17:00~次日 8:00）期间，临床科室危急值接收及回复超时情况严重，超时未回复案例明显高于正常上班时段。（4）统计 2021 年 1~5 月报告的检验项目危急值在各科室的分布情况发现，每月占据危急值报送量前四位的科室均为肿瘤科、ICU、呼吸内科和心内科。
结论 （1）各项目危急值报告率及其在各科室的分布情况均有差异，危急值报告率高的项目和科室尤其要引起重视。（2）2 月危急值报送量的减少，推测是由于春节原因，春节前大量病患出院准备过节，假期入院量也显著降低。（3）目前临床工作中贯彻落实危急值报告制度的情况不容乐观，新进低年资护理人员对临床检验危急值重要性的认知度仍需提高，医院管理者应组织医护人员共同学习,统一认识;护理管理部门应从多方面着手改善条件,以保证危急值报告制度的实施和改进。（4）定期对临床检验危急值进行分析评估、不断总结、持续改进,使检验危急值报告工作规范化、制度化,这样有助于挽救患者的生命,提高检验科的服务意识和临床医生的诊疗水平。

PU-2444

2019 年云南地区 HIV 感染者/AIDS 患者合并梅毒感染现状分析

徐丽萍、黄山、吕松琴、聂磊、李晓非
昆明市第三人民医院

目的 调查分析 2019 年云南地区 HIV 感染者/AIDS 患者合并梅毒感染现状，为云南省艾滋病防治提供一定数据基础。
方法 收集 2019 年 1 月-12 月昆明市第三人医院收治的 1052 例 HIV 感染者/AIDS 患者血清样本，进行梅毒抗体和 CD4+绝对计数实验室检测。

结果 1052 例 HIV 感染者/AIDS 患者中，梅毒感染率为 8.84％(93/1052)，感染患者中男性占比为 83.87%(78/93)远远高于女性 16.13%(15/93)，CD4+绝对计数小于 100 个/ml 占比 50.50%（47/93）远高于 100-500 个/ml 28.00%（26/93）和>500 个/ml21.51%（20/93），差异有统计学意义（P<0.001）。
结论 2019 年云南省 HIV 感染者/AIDS 患者合并感染梅毒占比不低，50%的合并感染患者 CD4+绝对计数大多数低于 100 个/ml。

PU-2445

红细胞与血小板参数在儿童骨髓增生异常综合征中的相关研究

贾茜、邵雪君
苏州大学附属儿童医院

目的 探讨儿童骨髓增生异常综合征患者外周血红细胞参数、血小板参数的水平变化及临床意义。
方法 采取回顾性研究方法，选取 2016 年 1 月至 2020 年 12 月收治的 60 例骨髓增生异常综合征(MDS)患儿的临床资料。同时选取同期于本院体检的健康对照 60 例。通过日本 Symex XN 全自动模式血液分析检测所有研究对象入院时红细胞参数、血小板参数，包括血红蛋白（Hb）、平均红细胞体积（MCV）、平均红细胞血红蛋白含量（MCH）、平均血红蛋白浓度（MCHC）、红细胞分布宽度（RDW）、血小板计数（PLT），血小板平均体积（MPV）、血小板分布宽度（PDW）、血小板比容（PCT）。利用非参数检验分析比较各组间检测指标的差异。
结果 60 例患儿男 40 例、女 20 例，平均年龄（7.53±0.42）岁。健康对照组男 31 例，女 19 例，平均年龄（5.57±0.12）岁。MDS 组与健康组红细胞参数水平比较，Hb（91.23±2.89g/L vs 125.6±0.79g/L）、MCV（95.44±0.98fl vs 81.59±0.35fl）和 RDW（15.21±0.31 vs 12.26±0.06）显著升高，差异有统计学意义（见表 1）。MDS 组与健康组红细胞参数水平比较，MCH（31.80±0.37pg vs 27.73±0.14 pg）、MCHC（333.6±1.50 g/L vs 339.1±0.99 g/L）有明显下降，差异有统计学意义（见表 1）。 MDS 组与 ITP 组血小板参数水平比较，PLT、PCT 低于健康组，MPV、PDW 高于健康组，差异均有统计学意义（P＜0.05）（见表 1）。
结论 常规检测项目血常规在 MDS 的诊断中发挥越来越重要作用，本研究提示联合血小板参数、红细胞参数对 MDS 诊断有一定指导意义。

PU-2446

乳腺癌和甲状腺癌合并患病率的 Meta 分析

鲜黎
成都市第三人民医院

目的 对乳腺癌和甲状腺癌合并患病率进行荟萃分析，为两者间进一步机制的研究提供线索，为临床的诊断治疗及随访提供依据。
研究方法 通过电子数据库（Pubmed, Embase,考克兰数据库（Cochrane Library）,中国知网(CNKI),万方数据库,维普数据库）全文检索了相关文献，用 R 3.5.2 软件和 STATA12.0 软件对检索的 70 余篇英文文献进行综合定量分析。
结果 乳腺癌合并甲状腺癌的患病率为 0.12%(95%CI：0.10-0.15)，在各研究因素中,绝经前（<50）与绝经后（≥50）（0.09% VS 0.04%）；放疗与未放疗（0.12% VS 0.17%）；2010-2019 年乳腺癌合并甲状腺癌的患病率为 0.27%，其次分别为 1990-1999 年（0.15%），2000-2009 年和 1971-1989 年（均为 0.08%）。甲状腺癌合并乳腺癌的患病率为 1.52%(95%CI：1.28-1.84)，在各研究因素中，女性与男性（1.90% VS 0.00%）；甲状腺癌病理分型中，乳头状癌、滤泡状癌、髓样癌及其它（1.85% VS 2.25% VS 1.65% VS 1.76%）；RAI 与未 RAI 治疗（1.37% VS 1.67%）；

131I 和未 131I 治疗（1.08% VS 2.59%）。在甲状腺癌合并乳腺癌的亚组分析中，未接受 131I 治疗尚不能认为与合并患病率有关，差异无统计学意义（P>0.1），余因素尚且认为与患病率有关，差异有统计学意义（P<0.1）。

结论 乳腺癌合并甲状腺癌的患病率为 0.12%，甲状腺癌合并乳腺癌患病率为 1.56%，且后者患病率远超过前者，这不能仅用基因来解释，还可能与激素、治疗方式、病理过程等因素有关。此外甲状腺滤泡状癌合并乳腺癌风险较其它甲状腺癌病理类型高。临床医生应该对有乳腺癌或甲状腺癌病史的患者提高警惕，尤其是绝经前女性。

143 例 HIV 感染待确定样本 快速检测替代策略试验结果分析

吕松琴、黄山、李光敏、许宝妹、黄岗、徐丽萍、张娟、李晓非
昆明市第三人民医院

目的 探讨 HIV 抗体确证试验快速检测替代策略的适用性及可行性。

方法 收集 2019 年 5 月 1 日至 2019 年 12 月 30 日昆明市第三人民医院检验科艾滋病确证实验室 143 例 HIV 感染待确定样本。采用快速检测替代策略（至少 2 种进口快速试剂和任意 2 种国产试剂）进行 HIV 抗体确证试验，满足 4 种快速检测试剂强阳性，报告“HIV-1 抗体阳性”；若出现其中 1 种快速检测试剂弱阳性或者阴性，用免疫印迹法(WB)进行抗体补充试验。同时检测 143 例样本血清 HIV 抗体 S/CO 值，抗凝血 CD4+T 淋巴细胞绝对计数及血浆 HIV 病毒载量。

结果 143 例 HIV 感染待确定样本中 107 例样本快速检测替代策略结果阳性（替代阳性组）；36 例出现 1 种或以上快速检测试剂弱阳性及阴性，其中的 30 例试验结果为 3 种快速检测试剂阳性 1 种弱阳性，占比高达 90.91%（30/33），用 WB 进行抗体补充试验，33 例结果阳性（WB 阳性组），3 例结果为不确定，快速检测替代策略不确定而 WB 阳性的 33 例选用的 4 种快速检测试剂阳性率麦美华（90.91）和硒标（87.88）远远高于 SD（57.58）和万孚（60.61），差异有统计学意义（ =9.587， =8.250，P<0.01）。替代阳性组与 WB 阳性组的 S/CO 值、HIV 病毒载量和 CD4+T 淋巴细胞绝对计数，差异均无统计学意义（Z=0.238，Z=0.403，Z=0.518，P<0.001）。

结论 我们的研究显示最终确诊的阳性样本中约有 1/5 在快速检测替代策略中检测结果不确定而二次采用 WB 试验才确诊，而这 1/5 的样本快速检测替代策略 3 种阳性 1 种弱阳性的不确定结果占比很高，主要由于不同的快速检测试剂敏感性之间差异大，造成这样二次试验，这种情况发生浪费了大量的人力、物力也极大的拖延了检测时长，我们建议采用快速检测替代策略时，在快速检测试剂的选择上应根据自身实践及文献研究综合选择一些敏感性、特异性及性价比更佳的试剂。

PU-2448

NLR、MPV 在终末期肾病患者冠状动脉疾病的程度预测价值的研究

张加勤、洪国斋
厦门大学附属第一医院

目的 目前关于这些传统血液学参数与终末期肾病患者冠状动脉粥样硬化的存在和严重程度之间关系的研究尚不多见。因此，在本研究旨在探讨 NLR、MPV 和 RDW 与 CKD 患者是否合并冠状动脉粥样硬化的存在及其严重程度的关系，并建立统计学模型，为临床上应用提供实验依据。

方法 本研究回顾性分析 249 例 CKD 患者，其中 157 例（63.1%）患者为女性，研究人群平均年龄为 53.4±12.1 岁，糖尿病 80 例(32.1%)，高血压 113 例(45。4%)，高脂血症 56 例(22,5%)，CAD 家族史 58 例(23.3%)，和 249 例健康对照者外周血血细胞计数、分类及部分生化指标。根据冠脉造影计算 Gensini 分数，计算方法为“严重程度评分×节段位置乘因子”，并按患者 Gensini 评分四分

位间距分为 Q1、Q2、Q3、Q4 组。应用 SPSS 22.0 软件包进行统计学分析，计量资料进行正态和方差齐性检验后，用`χ± s 表示，两组间比较采用 t 检验，三组间比较采用单因素方差分析（One-Way ANOVA），多组样本两两比较采用最小显著差（the least significant difference，LSD） t 检验，计数资料比较采用 χ2 检验，相关性分析采用单因素及多因素回归分析，P< 0.05 为差异有统计学意义。

结果 各组间钙磷乘积(CaxP)、CRP 水平、中性粒细胞、NLR、MPV 值差异有统计学意义（P<0.05）。Q4 组 CaxP 乘积值显著高于 Q1 组(P<0.05)。与 Q4 组相比，Q1 组 CRP 水平显著降低(P<0.05)。与 Q3 和 Q4 组相比，Q1 组的中性粒细胞水平也显著降低(P<0.05)。Q4 组 NLR 显著高于 Q1 组和 Q2 组(P<0.05)。Q1 组患者 MPV 最低，且 MPV 明显低于 Q4 组(P<0.05)。Gensini 评分与年龄、透析时间、NLR、和 c 反应蛋白 CRP 水平显著相关，与左心室射血分数负相关。多因素回归分析显示年龄、透析时间、NLR、MPV 是 CKD 患者冠心病程度相关的独立因素。

结论 NLR 和 MPV 与 CKD 患者 CAD 程度密切相关，可作为动脉粥样硬化的标志物，联合利用这些简单、常见的指标来评估 CKD 患者 CAD 患病风险，识别出长期预后较好的低风险人群及预后较差的高风险人群，并进行早期干预，可能使高危人群受益。由于实验对象数量有限，并且可能存在选择偏移，需要进行更大、更广泛的随机对照试验来阐明这些血液学参数对 ESRD 患者 CAD 程度的影响。

PU-2449

糖化白蛋白与糖尿病肾病血液透析患者预后关系的研究

张加勤、洪国斧
厦门大学附属第一医院

目的 定期检测患者血液中糖化血红蛋白的百分比(HbA1c)被认为监测糖尿病患者血糖控制的标准方法。有研究证实，HbA1c 不仅是平均时间葡萄糖的生物标志物，而与血液透析糖尿病患者的死亡率呈正相关。然而部分学者质疑 HbA1c 在预测血液透析糖尿病患者死亡率的价值。因为肾病和贫血之间存在关联，肾衰竭患者往往贫血，依赖促红细胞生成素治疗，导致红细胞寿命不可预测的变化；红细胞动力学的这些变化反过来又会导致不依赖于葡萄糖的糖化血红蛋白的比例变化。糖化血清白蛋白(GA)不受肾性贫血或促红细胞生成素治疗的影响，去除了平均血糖和糖化血红蛋白值与肾脏疾病的混杂效，因此可能会对肾脏疾病患者和其他影响红细胞寿命的疾病患者提供更准确的血糖控制评估，但关于 GA 与长期糖尿病肾病血液透析患者预后关系的研究尚不多见，为此，本研究在本研究旨在分析 GA 与长期糖尿病肾病血液透析患者死亡率之间关系，探讨 GA 作为长期糖尿病肾病血液透析患者预后指标的可行性。

方法 本研究共纳入 80 例行长期血液透析的糖尿病肾病患者，收集患者 GA、糖化血红蛋白和全因死亡率资料，根据患者 GA 基线四分位间距分组，应用 SPSS 22.0 软件包进行统计学分析，计量资料进行正态和方差齐性检验后，用`χ± s 表示，组间比较采用 t 检验，并用 Cox 比例风险模型分析长期血液透析的糖尿病肾病患者预后的危险因素。

结果 高基线 GA 患者(Q4)的 4 年死亡率比 Q1 组患者高 40.2% (HR 1.45；95% CI, 1.09 -1.89，P< 0.05)。第一年中对 GA 的重复测量也表明，Q4 组患者的 4 年死亡率较其他三组高，约为 38.3% (HR 1.32；95% CI，1.03-1.76，P< 0.05)。而运用 HbA1c 含量四分位间距进行分组比较各组之间的死亡率时，结果就不那么稳定了，HbA1c 含量 Q3 组患者死亡率明显 Q1(HR 1.37；95% CI，1.05-1.70，P< 0.05)，但在 Q2 或 Q4 风险没有显著增加。

结论 本研究结果证实 GA 作为血液透析糖尿病患者血糖控制的指标优于 HbA1c，是血液透析糖尿病患者预后的危险因素。对血液透析糖尿病患者定期监测并进行有效的血糖干预有利于降低患者心血管疾病和死亡的风险。

心包积液检出红斑狼疮细胞的病例报告

沙晓雯
西安医学院第一附属医院

患者，女，47 岁，因活动后胸闷 4 月余入我院心内科。之前，在当地医院查彩超有大量心包积液，住院予心包穿刺抽得淡红色血性液体 400ml，查脱落细胞、抗酸杆菌阴性，予以抗感染、抗结核治疗无效。即往史：否认高血压、糖尿病，无乙肝、结核的传染病史，无药物、食物过敏史。查体：心尖搏动位于第五肋间左锁骨中线外侧处，心前区无隆起，心界向两侧扩大，移动性浊音阳性，心率 90 次/分，律齐、心音弱，心尖区可闻及收缩期 1 级吹风样杂音，其他系统未见异常。影像学检查： 心脏彩超示心包上部略强回声团块，拌大量心包积液（心包穿刺前后共抽出血性心包液 1720ml），考虑恶性肿瘤心包转移；胸片见纵隔向两侧增宽、侧位见前纵隔内肿块影，结和病史特征可除外胸骨后甲状腺可能，因此高度怀疑“心包肿瘤或胸腺肿瘤”；胸部 MRI 提示心包恶性肿瘤、心包大量积液、左侧胸腔少量积液。实验室检查：血、尿、肝肾功能、结核抗体、电解质、肿瘤标志物等均未见明显异常。心包积液检验未见肿瘤细胞，查见 LE 细胞（但未报告给临床，因标本只申请找肿瘤细胞）。该患者疑诊为心包积液（肿瘤性）。先后请妇科、普外科、胸外科、放疗科、肿瘤科会诊，均未能明确诊断。经放疗科会诊后认为可行 1 疗程治疗，后因考虑家庭经济因素，患者及家属要求出院在门诊继续放疗治疗（以后病情不详）。此患者后经回顾病史和查阅大量相关文献，发现此病例可能存在误诊，其可能是 SLE 。

PU-2451

新冠病毒 COVID-19 疫情对我院住院未成年患者副流感病毒流行特征的影响

毕昊、石祖亮、吴春晨、夏剑波
湖北省妇幼保健院

目的 了解新冠病毒 COVID-19 疫情对我院 0-17 岁住院患者 3 种副流感病毒 (PIV1、PIV2、PIV3) 的流行特征的影响。
方法 收集 2018.1.1 至 2020.12.31 我院 0-17 岁住院患者中的 PIV1、PIV2、PIV3 的直接免疫荧光检测数据。以 2020.1.23 武汉宣布封城、2020.4.8 宣布解封作为时间节点，比较疫情前、中、后 PIV1、PIV2 、PIV3 的阳性率变化，并按年龄、性别、时间进行分组分析。
结果 在共 41169 的 0-17 岁住院患者中检出 PIV1 阳性 1155 位，阳性率为 2.81 %；PIV2 阳性 789 位，阳性率为 1.92% ；PIV3 阳性 907 位，阳性率为 4.62 %。2018 至 2020 年的 PIV1 阳性率分别为 2.6 % 、2.28 %、4.5 %； PIV2 阳性率分别为 1.84 %、2.42 %、0.94%； PIV3 阳性率为 4.74 %、 5.55 %、2.18%；如按月份分组发现 PIV1 与 PIV2 在封城后至 5 月处于 0 感染，6 月出现个小反弹峰，从 9 月至 11 月反弹出现大峰，11 月后开始下降； PIV3 在封城后一直到 8 月份处于 0 感染，从 9 月至 11 月反弹出现大峰，11 月后开始下降。按性别分组，各年份中的男女均未见明显差异。PIV1 在 2018 年与 2019 年阳性率，均为 0-2 岁>3-11y 岁>12-17 岁，但在 2020 年为 3-11y 岁>0-2 岁岁>12-17 岁；PIV2 与 PIV3 在各年份均为 0-2 岁>3-11y 岁>12-17 岁。
结论 COVID-19 疫情爆发后武汉采取的封城措施对 PIV 的流行特征产生了明显影响，除 PIV1 的感染率在 2020 年增高，其余 PIV 在 2020 年出现下降；在封城期 3 种 PIV 均为 0 感染率，但值得注意的是，3 种 PIV 在解除封城后均出现明显反弹，尤以 PIV1 反弹最为剧烈。这种流行特征的变化值得医护人员高度关注。

PU-2452

医疗机构内 POCT 血糖仪结果一致性评价体系的探讨

刘琴、张弢
复旦大学附属华山医院

目的 随着 POCT 在各个临床科室的广泛应用，相关质量问题随之凸显，尤其是医疗机构内部 POCT 检测结果一致性问题，目前尚无较好解决办法。如何保证 POCT 仪器检测结果在医院内部的可参考性，建立一致性评价体系并进行相关实践，从整体水平提高 POCT 检测质量至关重要。
方法 参考检验科多套检测系统比对的做法并结合 POCT 仪器的特点，保证一个医院内部同时使用的多台 POCT 仪器之间结果一致性，首先应建立医疗机构内 POCT 结果一致性评价体系。为确保医院内部不同实验室间 POCT 仪器之间（以使用率最高的血糖仪为代表）的一致性，华山医院采用包含经灭活、清洗和固定处理后红细胞组份的质控液，进行多地点多品牌血糖 POCT 监测系统一致性评价。在实际使用中根据评价需要，配置不同葡萄糖浓度和不同 HCT 浓度的质控液用于一致性评价和医院内仪器使用风险控制程序。
结果 目前可实现质控液有效期（10 天）内血细胞稳定（完整性>85%）、葡萄糖含量稳定（<2%衰减，减少使用时二次赋值）。配置正常 HCT 范围（如 42%）质控液，可同时适用于不同检测方法（脱氢酶法或氧化酶法）和有无 HCT 校正的 POCT 血糖监测一致性评价。在实际产品一致性比对应用中发现以往的一致性评价方法中的靶机出现偏倚值情况。
结论 以血糖仪为代表的使用分割样本或实验室自行配置的互通性较好的质控物进行医疗机构内结果的一致性评价，并根据不同项目规定相应的允许偏倚，可以得到满意结果。这样的经验可以推广至全国医疗机构应用，同时建议在 POCT 其他领域进行尝试。

PU-2453

探讨血小板数量增多对缺铁性贫血患者的临床意义

王娟
昆明医科大学第一附属医院

目的 探讨血小板增多对缺铁性贫血患者的临床意义。
方法 本研究收集了 128 例行骨髓细胞学检查明确诊断为缺铁性贫血患者的血常规、铁蛋白、及治疗后血常规等相关指标，以治疗前血小板 300X109/L 为界，把患者分为血小板增高组（n=70）和非增高组(n=58)，比较组间治疗前后血红蛋白及网织红细胞变化等指标；比较不同贫血程度间的血小板差异；比较血小板增高组和非增高组的红细胞、血小板相关参数；并做血小板或巨核细胞数量与其他相关指标间的相关分析。
结果 在所有贫血患者中，血小板增多的占 55%。血小板增高组的平均红细胞体积(MCV)和平均血红蛋白量(MCH)低于血小板非增高组(p＜0.05)，血小板增高组的血小板平均体积(MPV)、血小板分布宽度(PDW)、大血小板比例(P-LCR)和血小板压积(PCT)值高于血小板非增高组(p＜0.05)。血小板数量与 MCV、MCH 呈负相关(r=-0.296、-0.254，P 均＜0.05)，与 PCT、MPV、PDW、P-LCR 呈正相关(r=0.712、0.031、0.23、0.295，P 均＜0.05)，巨核细胞的数量与网织红细胞的数量呈正相关（r=0.176，P＜0.05）。
结论 缺铁性贫血患者中血小板越高的患者骨髓红系和巨核系增生反应越活跃，血小板增高是骨髓高反应的指标。

实验室危险性废物正确处理办法

李文瑛
西安金域医学检验所有限公司

近年来生态环保局逐渐重视对于实验室的环保监管力度，加大治理实验室废液污染环境的力度，根据多个地区及实验室交流经验，各级实验室对于实验室危险性废物的认知大部分停留在感染性弃物、损伤性废物、化学品废物等五大废弃物的阶段，对于逐年来不断被新认识的危险性废物及处置办法尚有不明确，故提出实验室危险性废物正确处理办法作为交流建议。

PU-2455

机会性致病真菌解脂耶氏酵母研究进展

郁谨菡
中国医学科学院北京协和医院

解脂耶氏酵母（Yarrowia lipolytica）是非常规酵母中最具代表性的一种二型性酵母，属于子囊菌门、半子囊菌纲、酵母亚门耶氏属。曾其无性状态分类为念珠菌属，命名为解脂念珠菌（Candida lipolytica）。目前认为酵母亚门芽生酵母（Budding Saccharomycotina yeasts）即为念珠菌属，广义来讲也可称之解脂念珠菌。该菌因具有独特的理化性质、代谢特点且被美国食品药品监督管理局（FDA）列为公认安全（generally regarded as safe，GRAS）微生物，在现代生物医学和生物技术领域有着广泛的应用前景，现已普遍应用于污染物或污水处理，生产生物脂质及柠檬酸。然而，其在自然环境中广泛存在，自然栖息地未知，常发现于海洋等高盐环境，也可从冷藏肉制品，乳制品，发酵食品，土壤和煤油污染环境中分离。研究表明，它属于人类正常菌群，可定殖于皮肤、呼吸道、消化道、阴道，糖尿病患者尤甚。中国医院侵袭性真菌监测网（CHIF-NET）对侵袭性念珠菌病的监测结果显示，2009 年 8 月 1 日至 2014 年 7 月 31 日，65 家三级医院 8829 株念珠菌中解脂耶氏酵母占比 0.4%，而法国 2002 年至 2014 年临床罕见念珠菌血症中占比 0.17%。近年来不断有散发病例和医院感染的报道，尤其是免疫缺陷或危重患者导管相关性化脓性血栓静脉炎和真菌血症。本文旨在强调作为工业明星菌种的解脂耶氏酵母是一种新兴罕见的机会性病原体，讨论其流行病学、致病性以及其体外抗真菌药物敏感性。

PU-2456

皮肤骨膜增厚症伴低钾血症 1 例

胡家伦
复旦大学附属华山医院

肥大性骨关节病是由于骨周围软组织增厚，广泛性骨膜新骨形成而导致的综合征，以杵状指和长骨骨膜增生为特征，分为原发性和继发性两类。原发性肥厚性骨关节病（PHO），又称厚皮骨膜增生症，占肥大性骨关节病的 5%，是一种累积骨骼皮肤的遗传性疾病。PHO 属于自限性疾病，一般治疗后预后较好，且多数患者于成年后进入无症状的稳定期。但是 PHO 易引发一系列如胃肠道疾病、贫血、低蛋白血症等并发症。现讨论 PHO 伴低钾血症 1 例。

PU-2457

健康妊娠妇女血清甲胎蛋白水平的变化及其参考区间的建立

项忠元、靳新桐
中南大学湘雅二医院

目的 检测健康妊娠妇女孕期血清甲胎蛋白水平，探讨其变化并建立不同孕期各自的参考区间。
方法 分别选取 2021 年 03 月至 2021 年 06 月期间在湘雅二医院进行产检的健康妊娠妇女早孕期 44 例，中孕期 49 例，晚孕期 50 例。并筛选 49 例育龄期健康非妊娠女性作为健康对照。采用 Roche Cobas E801 电化学发光仪检测其血清甲胎蛋白水平。对检测结果进行分析，比较健康非妊娠妇女及健康妊娠妇女各孕期之间甲胎蛋白水平的差异，并建立不同孕期血清甲胎蛋白相应的参考区间。
结果 比较健康非孕对照，早孕，中孕，晚孕各组血清甲胎蛋白水平，差异均有统计学意义（P<0.05）。本研究建立的早孕期妊娠妇女血清 AFP 水平参考区间为 1.71~54.26ng/ml，中孕期妊娠妇女血清 AFP 水平参考区间为 21.93~227.50ng/ml，晚孕期妊娠妇女血清 AFP 水平参考区间为 58.49~512.18ng/ml。
结论 妊娠妇女较健康非妊娠妇女血清甲胎蛋白水平显著升高，且大体上随着孕期增长而上升，本研究成功建立了健康妊娠妇女孕期血清甲胎蛋白的参考区间，为临床决策提供依据。

PU-2458

肿瘤睾丸相关抗原 LDH-C4 在鼻咽癌中的表达及其功能研究

罗晓莉、陈燕
福建省肿瘤医院

目的 研究乳酸脱氢酶 C4（LDH-C4）蛋白在鼻咽癌癌组织中的表达情况以及在临床诊疗过程中的价值。明确 LDHC 基因过表达在 CNE2 鼻咽癌细胞的生物学作用，并初步探讨相关分子机制。
方法 通过免疫组化染色方法检测高通量鼻咽癌组织芯片中 LDH-C4 蛋白的表达量，根据染色的结果进行评分，分析鼻咽癌患者的临床和病理分期、转移、复发及预后等临床病理特征和 LDH-C4 蛋白表达的高低的相关性。通过慢病毒载体将外源性 LDHC 基因导入 CNE2 鼻咽癌细胞，并采用稀释法结合绿荧光表达情况筛选出单克隆化且 LDH-C4 表达阳性的细胞系。通过 CCK-8 比色、平板克隆形成、划痕修复实验、Transwell 小室等实验，研究 LDH-C4 表达上调后，CNE2 鼻咽癌细胞在体外增殖能力、迁移和侵袭能力的改变；通过 Western blot 检测 AKT/mTOR 信号转导通路相关蛋白的表达改变。
结果 129 例高通量鼻咽癌组织标本结果显示：LDH-C4 主要表达于鼻咽癌细胞的细胞质中，阳性率为 88.4%（114/129）；Spearman 相关性分析结果表明，鼻咽癌的临床分期、颈部淋巴结转移均与 LDH-C4 的表达水平呈正相关（P＜0.05）；Kaplan-Meier 生存分析表明，LDH-C4 低水平患者预后明显优于高水平患者（P＜0.05）。CCK-8 比色实验、克隆形成、划痕实验、基质胶 Transwell 小室等一系列实验，证明 LDH-C4 过表达可增强 CNE2 鼻咽癌细胞的生长增殖、克隆形成以及侵袭和迁移能力；Western blot 结果证实，LDH-C4 在 CNE2 细胞中过表达可上调 AKT、mTOR 等蛋白的表达。
结论 LDH-C4 蛋白在鼻咽癌癌组织中的表达量明显增高，并与患者的临床分期、颈部淋巴结转移呈现正相关关系；LDH-C4 可作为鼻咽癌预后监测的一项重要指标，其高表达提示患者临床预后不良。上调 LDH-C4 可明显增强 CNE2 细胞体外增殖、侵袭及迁移能力，可能通过激活 AKT/mTOR 信号通路起作用。

PU-2459

乳腺癌合并甲状腺癌患者的临床病理特征分析

彭伟、陈燕
福建省肿瘤医院

目的 通过分析乳腺癌合并甲状腺癌的临床病理特征，探讨甲状腺癌、甲状腺激素功能及甲状腺相关抗原抗体在乳腺癌发生发展的作用。
方法 回顾性分析福建省肿瘤医院 2001 年 1 月-2017 年 12 月期间收治的乳腺癌合并甲状腺癌患者 76 例（合并癌组），并随机收集同期收治的单纯乳腺癌患者（对照组）116 例，同时收集患者治疗前甲状腺激素（T3、T4、FT3、FT4、TSH）、甲状腺自身抗原和抗体 (TG 、TPOAb、TGAb)、临床病理（TNM 分期、临床分期、淋巴转移、原发结节大小）和乳腺癌免疫组化指标（ER、PR、HER-2、Ki-67）等；通过 SPSS 25.0 软件统计分析合并癌组和对照组各临床病理和免疫组化指标，进一步探讨甲状腺癌在乳腺癌发生发展中的作用。
结果 合并癌组的淋巴受累率高于对照组（60.9% VS 37.7%），具有统计学差异（$p<0.05$）；甲状腺的功能状态：合并癌组与对照组 T3（1.74 VS 1.68）和 TSH（2.19 VS 10.27）具有统计学差异（$p<0.05$）；甲状腺相关抗原抗体：合并癌组与对照组 TPOAb（3.693 VS 12.3)和 TG（10.71 VS 2.77）的表达水平具有统计学差异（$p<0.05$）；其它病理特征：合并癌组与对照组在 ER、PR、HER-2、Ki-67 和 TNM 分期等免疫组化和病理特征上不具有统计学意义（$p>0.05$）。
结论 乳腺癌合并甲状腺癌组的淋巴受累率明显高于对照组（60.9% VS 37.7%）；同时发现乳腺癌合并甲状腺癌组 T3 和 TG 表达水平高于对照组，TSH 和 TPOAb 表达水平低于对照组，提示甲状腺癌在乳腺癌的发生发展中起作用，其机制可能与 T3 和 TG 的升高和 TSH 和 TPOAb 降低有关。

PU-2460

乳酸脱氢酶 C4 在乳腺癌中的表达及其对乳腺癌细胞生物学功能的影响

崔兆磊、陈燕
福建省肿瘤医院/福建医科大学附属肿瘤医院

目的 研究乳酸脱氢酶 C4（LDH-C4）在乳腺癌组织中的表达，探讨 LDH-C4 对乳腺癌预后判断的价值；探讨 LDH-C4 表达上调对 MCF-7 乳腺癌细胞中的生物学影响及分子机制。
方法 通过免疫组织化学分析 158 例乳腺癌石蜡组织中 LDH-C4 蛋白在的表达情况。分析乳腺癌不同临床病理参数与 LDH-C4 蛋白表达的相关性。对随访资料进行 Cox 回归模型，研究 LDH-C4 蛋白在乳腺癌预后判断的临床价值。通过慢病毒载体将外源 LDHC 基因导入 MCF-7 乳腺癌细胞中，通过稀释法结合绿荧光蛋白表达筛选 LDH-C4 阳性表达的单克隆细胞系。通过平板克隆、CCK-8 细胞增殖、细胞划痕、Transwell 小室等细胞生物学实验，研究 LDH-C4 表达上调对 MCF-7 细胞生物学行为的影响；Western blot 法检测 PI3K/AKT/mTOR 信号通路相关分子，探讨 LDHC 基因上调对乳腺癌 MCF-7 细胞生物学影响的可能机制。
结果 158 例乳腺癌石蜡组织切片免疫组化染色，LDH-C4 蛋白染色集中在细胞质中，呈淡棕色到深棕色，阳性率为 91.8%（145/158），其中低表达（-/+）和高表达（++/+++）分别为 41.8%（66/158）、58.2%（92/158）。经卡方检验，乳腺癌临床分期晚、腋窝淋巴结转移率高，患病年龄低者 LDH-C4 呈高表达（$P<0.05$）；Kaplan-Meier 法进行生存分析并经 Log-rank 检验结果显示，乳腺癌 LDH-C4 高表达者预后差（$P=0.035$）；Cox 回归分析显示临床分期（$P=0.000$）和 LDH-C4 表达水平（$P=0.002$）是乳腺癌预后的独立因素。2. 通过慢病毒感染成功筛选 LDH-C4 过表达的单克隆化的乳腺癌 MCF-7 细胞系；细胞学实验结果显示，LDH-C4 蛋白过表达可增强乳腺癌

MCF-7 侵袭和迁移能力，而对细胞生长增殖无显著影响；免疫印迹法初步显示，过表达 LDH-C4 蛋白可上调乳腺癌 MCF-7 细胞中 AKT 和 mTOR 蛋白的表达。
结论 LDH-C4 在乳腺癌组织中具有很高的表达阳性率，其表达与临床分期、腋窝淋巴结转移相关；高 LDH-C4 蛋白水平预示乳腺癌不良预后。过表达 LDH-C4 可增强 MCF-7 细胞增殖、侵袭和迁移能力，其机制可能与 AKT/mTOR 细胞信号通路的激活有关。

PU-2461

乳酸脱氢酶 C4 在乳腺癌中的表达及临床意义

崔兆磊、陈燕
福建省肿瘤医院/福建医科大学附属肿瘤医院

目的 检测 LDH-C4 在乳腺癌中的表达，明确其表达阳性率，分析 LDH-C4 表达与乳腺癌临床病理特征和预后的关系。
方法 基于高通量乳腺癌组织芯片 HBre-Duc140Su02，通过免疫组化技术检测 LDH-C4 蛋白在乳腺癌细胞中的表达水平。基于 HBreD145Su02 高通量组织芯片已建立的临床资料和随访数据库，分析 LDH-C4 表达与肿瘤组织分化程度、淋巴结转移、肿瘤大小、临床分期等临床病理特征的关系，应用 Kaplan–Meier 法绘制生存曲线，估计生存率，分析 LDH-C4 表达与乳腺癌预后的关系。采用 COX 比例风险模型进行多因素风险分析。
结果 LDH-C4 在乳腺癌细胞中的表达率为 91.5%，其阳性表达与患者年龄、肿瘤大小、临床分期、病理分级、淋巴结是否转移均无关（P 均>0.05），LDH-C4 阳性患者的十年生存率显著低于 LDH-C4 阴性表达患者（P<0.05）。
结论 LDH-C4 表达与乳腺癌预后相关，可作为乳腺癌预后判断的一项重要指标。

PU-2462

乳酸脱氢酶 C4 在骨肉瘤中的表达与生物学功能研究

叶倩、陈燕
福建肿瘤医院

目的 通过分析乳酸脱氢酶 C4（LDH-C4）在骨肉瘤（OS）组织中的表达情况，探讨其表达水平与骨肉瘤患者临床病理资料之间的相关性，明确 LDH-C4 表达上调后对骨肉瘤细胞 MG63 生物学行为能力的影响及相关分子机制。
方法 采用免疫组织化学染色方法对高通量骨肉瘤组织芯片进行检测，分析骨肉瘤组织中 LDH-C4 蛋白的表达水平与骨肉瘤患者临床病理特征的相关性。构建 LDHC 慢病毒过表达载体并感染骨肉瘤细胞 MG63，采用不同感染复数（MOI）和嘌呤霉素浓度筛选稳定感染的 MG63 细胞系。采用 RT-PCR 方法检测各组骨肉瘤细胞蛋白和 LDHC mRNA 表达情况。通过 CCK-8 实验、平板克隆形成实验、划痕修复实验以及 Transwell 细胞迁移、侵袭实验，检测上调 LDH-C4 后对骨肉瘤细胞 MG63 增殖和迁移侵袭等能力的影响。通过比色法检测乳酸和丙酮酸表达水平,葡萄糖氧化酶法检测葡萄糖消耗量。通过 Western blot，分析 LDH-C4 过表达对 AKT/mTOR 信号转导通路相关蛋白表达的影响。
结果 LDH-C4 蛋白主要表达于骨肉瘤细胞的细胞质中，软骨肉瘤表达在细胞核中，低表达/阴性表达占 54.29%（38/70），相关性分析结果显示，在骨肉瘤患者中临床分期和肿块直径与 LDH-C4 的表达水平呈负相关关系（P<0.05）。过表达 LDH-C4 在 CCK-8 实验、平板克隆实验、细胞划痕实验和 Transwell 小室迁移侵袭实验显示感染组 MG63 细胞的增殖能力、克隆能力、迁移能力和侵袭能力可被明显抑制。3.能量代谢实验结果显示感染组骨肉瘤细胞 MG63 葡萄糖摄取率降低，乳酸

生成减少，丙酮酸生成增多。Western blot 实验发现过表达 LDH-C4 后，下调了感染组 PI3K、AKT、mTOR 蛋白表达，HIF-1a 蛋白无明显变化。
结论 在骨肉瘤组织中 LDH-C4 为中低表达状态，并与骨肉瘤患者临床分期及瘤体直径相关。上调 LDH-C4 可明显降低 MG63 骨肉瘤细胞体外的生长增殖、克隆形成以及侵袭和迁移能力。LDHC 过表达抑制细胞正常氧化耗能，通过抑制糖酵解和负向调控 PI3K/AKT/mTOR 信号通路发挥其生物学功能。

PU-2463

乳酸脱氢酶 C4 在肝癌中的表达及其生物学功能研究

崔兆磊、陈燕
福建省肿瘤医院/福建医科大学附属肿瘤医院

目的 通过分析乳酸脱氢酶 C4(LDH-C4)在(HCC)中的表达及其与 HCC 患者的临床病理特征及其预后的关系,明确 LDH-C4 过表达对 HCC 细胞 Bel-7402 的细胞生物学行为能力的影响，并探讨相关分子机制。
方法 基于高通量肝癌组织芯片，采用免疫组化染色技术检测 HCC 癌组织中 LDH-C4 蛋白的表达水平，分析 LDH-C4 表达情况与肝癌患者临床病理特征的关系。荧光显微镜观察 GV492-LDHC 病毒感染后的 Bel-7402HCC 细胞中 EGFP 表达情况，筛选 LDH-C4 表达呈阳性的细胞系。通过 RT-qPCR 鉴定 LDH-C4 mRNA 过表达的效果。通过 CCK-8 实验、划痕修复实验及 Transwell 小室等实验分别检测 LDH-C4 对 HCC 细胞 Bel-7402 在体外的增殖、迁移及侵袭能力的影响。基于建立的 LDH-C4 稳定过表达的 Bel-7402 细胞系基础上，对各组细胞中乳酸、丙酮酸等细胞能量代谢产物含量进行检测，同时检测各组肿瘤细胞中葡萄糖消耗水平，探究 LDH-C4 过表达对 Bel-7402HCC 细胞能量代谢的影响；通过 Western blot 实验检测 AKT/mTOR 信号通路中相关蛋白表达水平受 LDH-C4 过表达的影响。
结果 HCC 中的 LDH-C4 呈现高表达状态，主要表达于 HCC 细胞的细胞质中，且 LDH-C4 的表达水平与 HCC 患者的 T 分期、临床分期及瘤体大小明显相关（$P<0.05$）；生存分析结果提示：LDH-C4 高表达患者的预后较低表达者更差（$P<0.05$）。CCK-8 实验、划痕修复实验及 Transwell 小室实验检测结果提示：LDH-C4 过表达可提升 Bel-7402HCC 细胞在体外的迁移侵袭能力，但对生长增殖无明显影响。3.能量代谢实验结果显示：Bel-7402 细胞中 LDH-C4 过表达可提高乳酸产生含量，降低丙酮酸含量，提高细胞对葡萄糖的利用；Western blot 结果提示：过表达 LDH-C4 可上调 AKT/mTOR 信号通路中 AKT 蛋白及 mTOR 蛋白的表达。
结论 HCC 组织中 LDH-C4 呈现较高表达状态，与 HCC 患者的肿瘤大小、T 分期以及临床分期呈现明显正相关；LDH-C4 可作为 HCC 患者预后监测的一项重要参考指标。Bel-7402HCC 细胞中 LDH-C4 过表达可促进该细胞在体外的迁移和侵袭能力,促进 Bel-7402HCC 细胞的能量代谢水平，可能与 AKT/mTOR 信号通路的激活有关。

PU-2464

乳酸脱氢酶 C4 在肺腺癌中的表达及意义

彭伟、陈燕
福建省肿瘤医院

目的 探讨 LDH-C4（lactate dehydrogenase C4）在肺腺癌中的表达及其与患者预后的关系。
方法 基于高通量肺腺癌组织芯片 HLugA180Su05，通过免疫组化技术检测 92 例肺腺癌患者癌组织及对应癌旁组织中 LDH-C4 蛋白的表达水平，分析 LDH-C4 蛋白在肺腺癌中的表达量及其与临床病理特征和预后的关系。

结果 LDH-C4 在癌组织中阳性表达率为 96.7%（89/92），明显高于癌旁组织 22.6%（19/84）（P<0.001），癌组织中 LDH-C4 阳性表达与患者年龄、性别、肿瘤大小、淋巴结转移、临床分期、表皮生长因子受体基因（EGFR）突变无关（均 P>0.05）。LDH-C4 高表达组患者中位生存时间（OS）为（35 个月），显著低于低表达组（62 个月）（P<0.05）；LDH-C4 高表达组患者 5 年生存率为（24.0%）显著低于低表达组（53.3%），进一步 COX 多因素回归分析显示 LDH-C4 高表达是肺腺癌患者总 OS 的独立因素，LDH-C4 高表达是低表达患者死亡风险的 3.619 倍。
结论 LDH-C4 在肺腺癌中的表达水平升高，LDH-C4 高表达肺腺患者的预后负相关，可成为肺腺患者潜在的治疗靶点。

PU-2465

HPV 病毒检测联合细胞学（TCT）对宫颈癌筛查的作用及价值

张雪娇
吉林金域检验医学检验所有限公司

目的 HPV 病毒检测联合细胞学（TCT）对宫颈癌筛查的重要性及价值
方法 选择 2018 年至 2020 年送检于我所在的检测中心检查的患者 300 例为研究对象，分别于 HPV 病毒检测、细胞学（TCT）检测及组织病理活检，将患者检测的 HPV 结果与细胞学（TCT）及组织活检结果进行对比分析，同时结合患者的临床资料进行分析。
结果 300 例患者中组织病理活检阳性患者 117 例，其中 HPV 阳性占 133 例，细胞学（TCT）阳性检出 119 例，两者联合检出阳性病例 106 例，阳性检出率为 90.56%。HPV 联合细胞学（TCT）检查的灵敏度最高。宫颈癌是第一个被明确病因的癌症，即 HPV 感染。尽管 HPV 感染普遍存在，宫颈癌确相对少见。几乎所有的宫颈癌患者都有 HPV 感染，但是通常大多数 HPV 感染并不引起任何疾病，多数人感染 HPV 却从不知道自己已经感染过，HPV 感染在女性可导致宫颈、外阴、阴道和肛门部位的癌变。HPV 感染是否一定并发宫颈细胞学异常，并不是，多数 HPV 感染并没有细胞学异常，大约 30%的 HPV 感染会产生相应的细胞病理学改变，通常非典型的变化，多数 HPV 感染在两年内消失。因超薄液基（TCT）可以保存患者被刷取下来的细胞学形态，且创伤小，经过细胞制片技术的处理，在显微镜下可以直观的观察到细胞的病变情况，再结合 HPV 的检测结果，如二者均为阳性，其组织活检结果多数为阳性。HPV 联合细胞学（TCT）不仅能检测癌细胞，更重要的意义在于能提前发现临床上毫不怀疑和毫无症状患者隐藏性的癌症。对针对早期防治及治疗宫颈癌有很大的帮助。所以二者联合筛查意义更大一些。
结论 HPV 病毒检测联合细胞学（TCT）对宫颈癌筛查具有重要价值及意义。

PU-2466

基于全外显子组测序探讨一例遗传代谢病患者的分子发病机制

马少杰
西安金域医学检验所

目的 对一个疑似遗传代谢病的新生儿进行基因突变检测，进行分子诊断，明确其发病机制。
方法 通过血串联质谱、尿有机酸分析等技术，1 新生儿高度怀疑遗传代谢病，于是采集先证者及其父母共 3 人的外周血，均进行全外显子组测序（whole exome sequencing，WES），对单核苷酸变异（（single nucleotide variation，SNV）及拷贝数变异（copy number variation，CNV）进行分析评估与致病性分类，对患儿进行辅助诊断。
结果 先证者存在可能致病的 CNV，定位于 chrXp11.4 区域发生约 30Kb 片段重复，其中涉及 OTC 基因 1-2 号外显子。而在其父母均未发现相同变异，推测其为新发变异，但也不能完全排除其母亲为嵌合体的可能性。同时对该结果进行半定量 PCR 验证，确认了该变异的存在。

结论 该遗传性代谢病的患儿存在可能致病性的拷贝数变异（CNV）,涉及 OTC 基因 1-2 号外显子的重复，且为新发突变。该结果能很好的解释患儿的症状及其发病机制。同时需要进一步思考的是，先证者不存在与表型相关的 SNVs，若选择做仅有高通量二代测序技术的遗传代谢病相关的 panel，因其没有覆盖到 CNVs，可能存在假阴性的结果。而 WES 虽然以前也常规聚焦于 SNVs，但随着生信分析的进步与优化，目前 WES 也可以对 CNV 进行相应的检测。所以 WES 覆盖面更广，能检出的变异类型更多，检出阳性率更高，在临床特别是新生儿期，怀疑遗传代谢病时，WES 能更好的助力于临床的早期诊断、早期干预和精准医疗。

PU-2467

Lactate Dehydrogenase C4 is associated with breast cancer prognosis and affects cancer cell proliferation and invasion

Zhaolei Cui 、Yan Chen
Fujian Cancer Hospital

Objective Human lactate dehydrogenase C4 (LDH-C4) is a known cancer/testis antigen (CTA). Nevertheless, its clinical effects and molecular role remains unclear in breast cancer (BC).
Methods Expression of LDH-C4 in BC tissue, paired adjacent normal tissue, and cell lines were quantified by qRT-PCR, western blotting and immunohistochemistry. Additionally, we assessed the clinical and prognostic significance of LDH-C4 in BC by Kaplan-Meier method. Cell proliferation, migration and invasion, and cell apoptosis were measured by means of a cell counting kit-8, clone forming, Transwell assay, and TUMMEL, respectively. Invio an
Results Expression levels of LDH-C4 were markedly upregualted in BC cells and tumor tissues but not expressed in normal BC tissue. Furthermore, survival showed that high LDH-C4 expression conferred reduced survival rates ($P < 0.05$). Functional analyses revealed that LDH-C4 overexpression and down-regulation attenuated cell proliferation, invasion, and migration as well as energy metabolism in BC cells. LDH-C4 could affect mTOR activity.
Conclusions Expression of LDH-C4 in BC may serve as a potential indicator for poor prognosis. LDH-C4 displays tumor suppressive behavior, warranting future investigations into its therapeutic potential in the treatment of BC.

PU-2468

ARA55 基因在 CNE2 鼻咽癌细胞中的功能研究

崔兆磊、陈燕
福建省肿瘤医院/福建医科大学附属肿瘤医院

目的 研究 ARA55 过表达对 CNE2 鼻咽癌细胞生物学特性的影响，明确 ARA55 在 TGFβ1 介导的 CNE2 细胞上皮间质转化及侵袭、迁移中的作用。
方法 构建 pCMV-ARA55-EGFP 真核表达载体，经 ZLip2000 转染至 CNE2 鼻咽癌细胞，荧光显微镜和免疫印迹检测 ARA55-EGFP 融合蛋白的表达；通过 CCK-8 比色、划痕修复实验、Transwell 小室、Annexin V-PE/7-AAD 双荧光染色、DNA 梯状电泳等实验，探讨 ARA55 过表达对 CNE2 鼻咽癌细胞生物学特性的影响。一定浓度的 TGFβ1 诱导 CNE2 细胞株中 ARA55 的表达，免疫印迹检测 ARA55 蛋白及 EMT 相关标志物 N-cadherin、Claudin-1 等的表达变化；采用 ARA55 的 siRNA 质粒，经 X-treme GENE siRNA 转染至 CNE2 细胞株；通过 CCK-8 比色、划痕修复、Transwell 侵袭迁移等实验，研究 TGFβ1 介导的 ARA55 表达上调及沉默以 ARA55 表达对 CNE2 鼻咽癌细胞 EMT 及侵袭迁移的影响。

结果 DNA 测序及双酶切分析显示 pCMV-ARA55-EGFP 重组载体构建成功。pCMV-ARA55-EGFP 组细胞生长增殖、侵袭迁移能力明显低于 pCMV-C-EGFP 空载体组和/或空白对照组（P＜0.05 或 0.01）；Annexin V-PE/7-AAD 双荧光染色及 DNA 梯状电泳结果可见，pCMV-ARA55-EGFP 组细胞产生凋亡，且凋亡率明显高于 pCMV-C-EGFP 空载体组（P＜0.05）；免疫印迹显示 pCMV-ARA55-EGFP 组细胞 Bcl-2 表达下调，Cytochrome C 表达上调，同时伴有 Caspase-9 和 Caspase-3 的激活。TGFβ1 诱导后，免疫印迹显示 ARA55 在 CNE2 细胞中的表达上调；ARA55 诱导组细胞发生间质样改变，N-cadherin 的表达上升，Claudin-1 表达下降，同时细胞的生长增殖及侵袭迁移能力明显高于对照组（P＜0.05 或 0.01）；诱导表达的 ARA55 通过 siRNA 下调后，siRNA-ARA55 组细胞生长增殖及侵袭迁移能力下降（P＜0.05 或 0.01）。
结论 成功构建 pCMV-ARA55-EGFP 重组载体； ARA55 过表达可抑制 CNE2 鼻咽癌细胞生长增殖，诱导凋亡；3. ARA55 参与了 TGFβ1 介导的 CNE2 细胞 EMT 及侵袭迁移过程。

PU-2469

Diagnostic potential for circular RNAs in gastric carcinoma: A meta-analysis

Yingfeng Lin、Zhaolei Cui、Yan Chen
Fujian Cancer Hospital

Background Circular RNAs (circRNAs) are potential, novel biomarkers for the early diagnosis of gastric carcinoma. Herein, a meta-analysis was conducted to assess the diagnostic potential for circRNAs in gastric carcinoma.
Methods Online databases were searched for eligible studies. Study quality was judged using the Quality Assessment for Studies of Diagnostic Accuracy (QUADAS) checklist-II tool. STATA 12.0 and Meta-Disc 1.4 software were used for statistical analysis.
Results Twelve studies consisting of 1278 patients and 1250 paired controls were considered for meta-analysis. The pooled sensitivity and specificity of circRNAs for gastric carcinoma was compared to normal controls and found to be 0.68 (95%CI: 0.66 - 0.71) and 0.70 (95%CI: 0.68 - 0.73), respectively. A corresponding area under the receiver operating characteristic curve of 0.78 was identified. Moreover, stratified analysis demonstrated an improved diagnostic value for circRNAs when tissue and plasma specimens were combined.
Conclusions This meta-analysis demonstrates that circRNAs are promising biomarkers for gastric carcinoma.

PU-2470

Diagnostic and prognostic value of the cancer-testis antigen LDH-C4 in breast cancer

Zhaolei Cui 、Yan Chen
Fujian Cancer Hospital

Objective Lactate dehydrogenase C4 (LDH-C4) is a cancer/testis antigen (CTA) that is expressed abnormally in certain malignant tumors. However, the expression and clinical significance of LDH-C4 in breast cancer (BC) have not been determined.
Methods Quantitative reverse transcription-polymerase chain reaction (RT-PCR) was adopted to investigate the expression of LDHC mRNA in the serum or serum-derived exosomes of patients with BC. The expression of LDH-C4 protein in BC tissues was also evaluated by using high-throughput tissue microarray analysis and immunohistochemistry.
Results The results showed that LDHC mRNA was highly expressed in the serum and serum-derived exosomes of BC patients. The area under the curve (AUC) of serum and exosome LDHC

in distinguishing BC from healthy individuals was estimiated to be 0.9587 and 0.9464, respectively. The LDHC level in the serum-derived exosomes of patients with BC was significantly associated with tumor size and positively correlated with the expression of HER2 and Ki-67 (all with P<0.05). Serum and exosome LDHC levels in BC patients were negatively correlated with medical treatment and positively correlated with recurrence. Survival analysis showed that LDH-C4 expression was negatively associated with BC prognosis.
Conclusion Serum and serum-derived exosome LDHC may be an effective indicator for diagnosis and therapeutic efficacy, as well as a predictor for the recurrence of BC. LDH-C4 may be a biomarker to determine the prognosis of BC.

宫腔镜联合子宫内膜病理检查在子宫内膜病变中的诊断价值

姚晖
昆明市中医医院

目的 分析宫腔镜检查基础上联合子宫内膜病理检查诊断子宫内膜病变的价值。
方法 以 2018 年 1 月-10 约为研究时限，纳入 45 例疑似子宫内膜病变患者，先以宫腔镜检查，然后予以子宫内膜病理检查，并以手术证实结果为准，将宫腔镜检查结果与宫腔镜检查联合子宫内膜病理检查结果进行对照分析，探究在宫腔镜检查基础上联合子宫内膜病理检查的价值。
结果 经手术证实 45 例患者均有子宫内膜病变，其中 26 例为子宫内膜增生，11 例为子宫内膜息肉，8 例为子宫内膜癌。以手术证实结果为依据，宫腔镜联合病理检查的诊断符合率、灵敏度（100.00%、100.00%）明显高于宫腔镜检查（86.67%、86.67%），约登指数（2.22%）明显低于宫腔镜检查（13.33%），对比差异鲜明（P＜0.05）。
结论 宫腔镜联合子宫内膜病理检查诊断子宫内膜病变有助于提升诊断符合率、灵敏度，价值可靠。

PU-2473

SARI 蛋白在乳腺癌中的表达及其临床意义

林莺莺、崔兆磊、陈燕
福建省肿瘤医院

目的 探讨 SARI 蛋白在乳腺癌中的表达及其临床意义。
方法 采用免疫组化技术检测 SARI 蛋白在乳腺癌及其癌旁组织中的表达，探讨 SARI 蛋白表达水平与乳腺癌的临床病理特征及预后的关系。
结果 基于高通量的乳腺癌组织芯片免疫组化分析显示，在 87 例乳腺癌石蜡标本中，93.1%（81/87）的组织中 SARI 蛋白低呈现低表达或不表达，其中 80 例（98.8％）SARI 无表达，1 例（1.2%）SARI 蛋白低表达，6 例(6.9%)BATF2 高表达。SARI 蛋白在乳腺癌组织及旁组织表达差

异无相关性（P=0.950）。SARI 的表达水平与乳腺癌的临床病理分级密切相关（P=0.000），患者年龄是影响乳腺癌预后的独立因素（P=0.027）。
结论 SARI 蛋白在乳腺癌中存在低表达，可能发挥肿瘤抑癌因子的作用，其临床意义有待于进一步被证实。

PU-2474

SARI 过表达对 CNE2 鼻咽癌细胞生物学活性的影响及其机制研究

林莺莺、陈燕
福建省肿瘤医院

目的 构建 SARI 基因过表达真核表达载体并完成鉴定。研究 SARI 基因过表达对 CNE2 鼻咽癌细胞的生物学特性的影响并初步探讨相关分子机制。
方法 钓取并克隆 SARI 基因的全长 cDNA 序列，纯化后用 Bgl II 和 Xba I 进行双酶切消化，经 T4 DNA 连接酶作用，连接至 pDsRed2-C-RFP 真核表达载体，连接产物经转化、挑取克隆、扩增培养后，提取小量质粒，进行 DNA 测序鉴定，并用 Bgl II 和 Xba I 内切酶消化酶消化连接产物，琼脂糖凝胶电泳鉴定。重组质粒转染 SARI 阴性表达的 CNE2 细胞，荧光显微镜观察 SARI-RFP 融合蛋白的表达。Western blot 检测转染后 SARI-RFP 融合蛋白的表达。pDsRed2-SARI-RFP 真核表达载体转染至 CNE2 细胞，通过 CCK-8 比色绘制生长曲线、Transwell 小室侵袭实验、划痕修复实验、Caspase-3 活性检测、DNA 片段电泳检测等实验，探讨 SARI 过表达对 CNE2 鼻咽癌细胞生长增殖、凋亡等生物学特性的影响。Western blot 检测内源性线粒体凋亡途径相关蛋白的表达变化，探讨 SARI 过表达对 CNE2 细胞增殖、凋亡影响的分子机制。
结果 DNA 测序结果表明，SARI 全长 cDNA 序列已正确连接至 pDsRed2-C-RFP 载体。双酶切鉴定结果显示，pDsRed2-SARI-RFP 真核表达载体的构建成功。重组质粒转染至 CNE2 细胞后可表达 SARI-RFP 融合蛋白。CCK-8 比色、Transwell 小室侵袭、划痕修复实验结果显示 SARI 过表达组细胞生长增殖、侵袭迁移能力显著低于空载体对照组和空白对照组（P＜0.05）；Caspase-3 活性及 DNA 梯状电泳结果显示，SARI 过表达诱导 CNE2 细胞产生凋亡，明显高于空载体对照组和空白对照组（P＜0.05）。Western blot 检测显示 SARI 过表达组 CNE2 细胞较空载体对照组和空白对照组 Bcl-2 表达下调，Bax、Cytochrome C 表达上调，同时伴有凋亡途径相关蛋白 Caspase-3 和 Caspase-9 剪接激活以及 PARP 的表达上调。
结论 成功构建 pDsRed2-SARI-RFP 真核表达载体； SARI 过表达可明显抑制鼻咽癌 CNE2 细胞增殖和侵袭迁移能力，诱导细胞凋亡； SARI 可能通过激活线粒体内源性凋亡途径诱导 CNE2 鼻咽癌细胞凋亡，发挥抑癌作用。

PU-2475

妊娠期生殖道感染对妊娠结局影响的分析

项忠元、曹骆
中南大学湘雅二医院

目的 探究妊娠期妇女生殖道感染对妊娠结局的影响，并分析其影响因素。
方法 选取 2018 年 1 月至 2020 年 12 月中南大学湘雅二医院产科收治的 227 例无妊娠并发症生殖道感染产妇进行分析。根据是否接受了治疗，将生殖道感染产妇分为接受治疗组 85 例和未接受治疗组 142 例。另选取无妊娠合并症、无生殖道感染产妇 200 例。分析产妇的生殖道感染类型及构成比情况，比较生殖道感染组和无生殖道感染组、接受治疗组和未接受治疗组妊娠结局是否存在差异。

结果 本课题中生殖道感染种类及构成比：念珠菌属、支原体、大肠埃希菌、粪肠球菌、克雷伯氏菌属、无乳链球菌及其他病原微生物，构成比分别为 34.80%、27.75%、15.86%、7.93%、5.29%、4.41%和 3.96%。生殖道感染组发生不良妊娠结局的概率为 23.79%，无生殖道感染组为 7.00％，感染组显著高于无感染组，差异有统计学意义（P<0.05）。生殖道感染未接受治疗组发生不良妊娠结局的概率为 33.10%，显著高于发生率为 8.23%的接受治疗组，差异有统计学意义（P<0.05）。
结论 妊娠期生殖道感染以念珠菌和支原体较多见，妊娠期生殖道病原微生物感染会增加不良妊娠结局发生的风险，对此临床上应该努力做到积极防治、早发现、早治疗，以更好地保障母婴安全。

PU-2476

坏死性筋膜炎 16 例实验检查及临床分析

陈世东
厦门大学附属第一医院

目的 探讨实验室检查，包括血常规、生化检验、凝血四项、降钙素原（PCT）及 C 反应蛋白（CRP）等辅助坏死性筋膜炎(NF)临床诊断。
方法 回顾性分析作者单位 2018 年 1 月至 2020 年 12 月诊治的 16 例坏死性筋膜炎病患的临床资料，包括患病年龄、性别、坏死部位、住院时间、手术次数及实验室检查结果等，同时利用实验室指标危险预测系统对 16 例 NF 患者的危险等级进行评估。
结果 患者男女比例 4：1，多为中老年患者，其中 50-70 岁患者占 62.5%；研究显示发病患者男性比女性多，以中老年为主，50-70 岁患者占比 62.5%。62.5%发病部位位于肢体，37.5%位于肛周及会阴；平均住院时间 35.9 天，主要就诊科室为普外科，烧伤整形外科，重症医学科。伴有基础疾病占 75%，糖尿病占 58.3%；93.75%患者 C 反应蛋白升高，62.50%患者白细胞升高，100%患者低蛋白血症，50%患者血糖升高，约 70%患者出现贫血，约 10%患者电解质紊乱；实验室指标危险预测，75%患者低危，6.25%患者中危，18.75%患者高危；16 例患者中 9 例细菌鉴定及血培养结果为大肠埃希菌感染所致，6 例为混合细菌感染，1 例为溶血性链球菌感染。
结论 坏死性筋膜炎(NF) 进展迅速且容易误诊导致严重后果，患者性别、合并症、微生物等方面具有一定特征，C 反应蛋白升高，白细胞升高，低蛋白血症，血糖升高贫血，电解质紊乱等辅助 NF 的诊断。坏死性筋膜炎主要临床特征为多发生于老年人、糖尿病等有基础疾病的男性患者，主要生于肢体，大部分患者低蛋白血症，C 反应蛋白升高，白细胞升高，单一细菌感染多见，早期及时清创治疗效果良好。

PU-2477

Endogenous SARI induced cell apoptosis in nasopharyngeal carcinoma by targeting the intrinsic apoptotic pathway

Yingying Lin、Zhaolei Cui、Yan Chen
Fujian Cancer Hospital & Fujian Medical University Cancer Hospital

The SARI (suppressor of AP-1, regulated by IFN) gene, also named as BATF2, is associated with the risk of several kinds of cancers, and loss of SARI expression is frequently detected in aggressive and metastatic cancer. Nevertheless, the functional of SARI in nasopharyngeal carcinoma (NPC) remains exclusive. In this study, we discovered that knock-down of SARI expression suppressed cell growth and colony formation, inhibited invasion, promoted apoptosis, and induced G0/G1 and G2/M arrest in human CNE2 nasopharyngeal carcinoma cells. Of note, SARI restoration could trigger the mitochondrial pathway in CNE2 cells. Our data provide

evidence that SARI exerts a role as a tumor suppressor gene in leukemia, possibly by inhibiting proliferation and promoting apoptosis via the mitochondrial pathway.

PU-2478

自噬及其相关标志物在肿瘤中的研究进展

吴嘉慧、吴琼、罗惠丹、易斌
中南大学湘雅医院

自噬为一种生物机制，是细胞将不必要的或者损坏的蛋白质和细胞器等运送至溶酶体进行降解，以维持细胞的自我稳定。在肿瘤研究过程中，自噬被认为有促瘤和抑瘤的双重作用，大量的研究分析自噬功能在肿瘤的增殖、转移和耐药等过程中的作用。同时自噬相关标志物的应用也成为了肿瘤研究中的重点。如自噬相关蛋白微管相关蛋白 1 轻链 3（Microtubule-associated protein 1 light chain 3 ,LC3B）是自噬小体形成的自噬标志物，p62 (Sequestosome－1,SQSTM1)是选择性自噬底物，两者在肿瘤中常表达上调。除此两种标志物外，还有许多的自噬相关标志物如 Beclin-1、ATG5、LAMP 等在肿瘤细胞增殖、转移等活动中发挥了重要的作用。本综述主要就自噬相关标志物在肿瘤中的表达及应用进行讨论。

PU-2479

新型微流控芯片的设计与外泌体捕获效率的研究

陈雨晴、杜鲁涛
山东大学第二医院

目的 外泌体（Exosomes）是一种脂质膜包裹的纳米颗粒（30-150nm），携带和传递着重要的生物信号，与细胞通讯、免疫反应调节、肿瘤发生与转移等生物过程息息相关。传统提取方法过程易造成外泌体的流失。本研究旨在通过微流控提高外泌体捕获效率、克服样品试剂消耗量大等问题。
方法 将分析纯氯化钠放入球磨机，经研磨后加入 PDMS 混匀涂抹至对称型 PDMS 基片特定位置，制备微流控芯片，通过扫描电子显微镜进行表征。采用 NTA、酶标仪等检测外泌体的捕获效率。
结果 成功制备 PDMS 微流控芯片，扫描电镜显示芯片内通道具有密集的不规则立体结构。进行外泌体捕获效率实验，用 PKH67 试剂盒进行外泌体染色，将 CD9 抗体通入芯片后孵育 2 h，随后用 PBS 进行冲洗，再将染色后的外泌体通入芯片，用微量注射泵每隔 20 分钟取出口液体进行显微镜、酶标仪及 NTA 信号检测。结果显示，由荧光图像可观察到芯片表面富集了大量荧光标记的外泌体；计算进出口浓度差与初始浓度比值，芯片捕获效率可以维持在 80%左右。
结论 将微流控技术与免疫亲和法相结合，极大减少了制作成本和制作时间，并且可批量制备、更加小型化，适用于临床大规模分离富集外泌体。

PU-2480

血清淀粉样蛋白 A 与类风湿关节炎疾病活动度的关系研究

聂婷
宁夏医科大学总医院

类风湿关节炎（RA）是一种病因未明，以进行性、侵袭性关节炎为主要临床表现的慢性炎症性疾病，该疾病治疗目标主要是降低疾病活动度或者是缓解临床症状，因此，评估患者疾病活动度，对治疗、预后、疗效评估均具有十分重要的意义。血清淀粉样蛋白（SAA）是一种急性时相反应蛋

白，是一类多基因编码的多形态蛋白家族，SAA 与高密度脂蛋白具有较高亲和力，其与后者结合后发挥生物学作用。
目的 探讨血清淀粉样蛋白 A（SAA）与类风湿关节炎（RA）疾病活动度的关系以及临床意义。
方法 收集 31 例类风湿关节炎患者，16 例系统性红斑狼疮患者，10 例结缔组织疾病患者以及正常健康体检人群 30 例的临床相关信息和实验室检测数据。采用胶乳增强免疫比浊法测定血清中 SAA 的浓度，免疫散射比浊法测定血清中超敏 CRP 的浓度，魏氏法测定红细胞沉降率。
结果 31 例类风湿关节炎患者 SAA 水平均高于系统性红斑狼疮组、结缔组织疾病组及正常体检健康人群对照组，差异具有统计学意义。另血清 SAA 与超敏 CRP 和红细胞沉降率水平呈正相关关系。
结论 血清淀粉样蛋白 A 可用作评估类风湿关节炎活动度的有效参考指标。

PU-2481

偶发分枝杆菌感染引起脾肿大 1 例

丁耀东、蒋晓飞、胡越凯、张弢
复旦大学附属华山医院

非结核分枝杆菌（noutuberculous mycobacterium,NTM）在土壤、水、尘土等自然环境中广泛存在，可导致肺部、淋巴结炎、皮肤和软组织等感染[1]。偶发分枝杆菌属于非结核分枝杆菌分类中的 IV 组，即快速生长分枝杆菌，接种在培养基上 3~5 天内有肉眼可见的菌落，多数在 1 周内即生长旺盛[2]。在一般情况下，此类细菌可从尘埃、土壤、水或正常人的唾液、痰中分离出来，其致病力弱，为条件致病菌，只有当局部或全身抵抗力降低时，存在于机体内外的分枝杆菌才可繁殖致病[3,4]。下面我们以探讨偶发分枝杆菌感染引起脾肿大的临床病例 1 例，来加强该类疾病认识和及时为临床提供信息以助于临床及时诊断和治疗。

PU-2482

血红蛋白、胆红素、乳糜、羟苯磺酸钙对三种干湿生化检测系统的影响研究

欧元祝、龚敬凯、虞啸炫
上海市临床检验中心

目的 本研究系统的比较和评价了内源性干扰物质血红蛋白、胆红素、乳糜微粒及外源性干扰物质羟苯磺酸钙在三个干湿生化分析系统对临床化学项目检测的干扰影响。
方法 根据 EP7-A2 指南建议采用高、低两个浓度水平的血清或血浆基础样本，与干扰物质配制成不同浓度梯度的血红蛋白、胆红素 F、乳糜及羟苯磺酸钙干扰样本，模拟轻、中、重度干扰。分别在奥森多 Vitros 5600 检测系统、罗氏 c501 检测系统及日立-迈克系统进行分析，计算与基础对照样本检测结果的相对偏倚（%）或绝对偏倚值（umol/L）。
结果 在血红蛋白的干扰试验中，在 Ortho/Vitros 5600 检测系统 13 个分析项目中 5 个项目受到明显干扰影响，在罗氏 c501 检测系统 13 个分析项目中 6 个项目受到了干扰，在 Maker-Hitachi 分析系统 11 个项目中 6 个项目受到明显干扰。在胆红素的干扰试验中，11 个分析项目中罗氏 c501 检测系统有 4 个项目受到了胆红素的干扰影响，在 Ortho/Vitros 检测系统仅一个项目受到干扰影响，在迈克-日立检测系统 9 个分析项目有 1 个项目受到干扰影响。在乳糜的干扰试验中，12 个分析项目中罗氏 c501 检测系统 3 个项目受到了乳糜的干扰影响，在 Ortho/Vitros5600 检测系统仅 1 个受到干扰影响，在迈克-日立检测系统 10 个项目中 2 个项目受到干扰影响。羟苯磺酸钙在三个检测系统对 CREA 项目均有明显干扰影响，但 Ortho/Vitros 5600 检测系统的干扰影响要小于其他两个系统。
结论 在常规化学分析项目的检测中，干化学检测系统整体抗干扰能力强于两个湿化学检测系统。

PU-2483

我院近三年检出细菌的临床分布及耐药性分析

丁耀东
复旦大学附属华山医院

目的 了解我院检出细菌的分布特点及对临床常用抗菌药物耐药率的差异及变化，为临床合理用药、院内感染控制提供依据。
方法 收集我院 2018—2020 年临床分离的 17957 株细菌，对其标本来源分布和耐药性进行分析。
结果 我院这 3 年共分离出细菌 17957 株，标本类型主要来源于呼吸道分泌物（41.7%）和尿液（28.5%）；全院及其中住院病人分离菌株中排名前五细菌分别为肺炎克雷伯杆菌、大肠埃希菌、铜绿假单胞菌、鲍曼不动杆菌、金黄色葡糖球菌，门诊病人大肠为首，屎肠球菌排名第三；葡萄球菌属对抗菌药物的耐药率分析中耐碳青霉希类葡糖球菌对大环内酯、氨基糖苷类抗生素耐药率较高，红霉素近两年有下降趋势，左氧氟沙星耐药性在升高，非耐碳青霉希类葡糖球菌，除青霉素 G、红霉素外几乎对其他药物均敏感；屎肠球菌左氧氟沙星和氨苄西林耐药率极高，呋喃妥因和高浓度庆大霉素中等程度耐药；粪肠球菌左氧氟沙星和高浓度庆大霉素中等程度耐药，余抗菌药物均较敏感；大肠埃希菌对一二代头孢菌素、喹诺酮类药物耐药率较高，三代头孢及庆大霉素次之，耐碳青霉烯类大肠埃希菌近三年有上升趋势；肺炎克雷伯杆菌对头孢类、喹诺酮类、磺胺类和呋喃妥因药物耐药率为 50%偏上，并近一半耐碳青霉烯酶，且近三年微呈上升趋势，对阿米卡星也有 30%以上的耐药性；嗜麦芽窄食单胞菌对头孢他啶、哌拉西林/他唑巴坦耐药率极高，其中对头孢他啶耐药率呈上升趋势，洋葱伯克霍尔德菌对头孢他啶、哌拉西林/他唑巴坦、美罗培南、左氧氟沙星及复方新诺明药物敏感性较强，耐药细菌少见。
结论 加强耐药监测，微生物室严格按 CLSI 药敏分级报告，依据药敏结果合理使用抗菌药物，做好消毒隔离工作，预防和减少院内肺炎克雷伯菌、鲍曼不动杆菌等多重耐药细菌的产生和传播。

PU-2484

多发性骨髓瘤患者 IgA 检测假性降低 1 例

刘琴
复旦大学附属华山医院

多发性骨髓瘤（MM）是源于浆细胞的恶性克隆性疾病，可浸润骨髓、骨质和髓外组织产生溶骨病变，并可合成和分泌大量单克隆免疫球蛋白或其轻链，常见的症状包括骨髓瘤相关器官功能损伤的表现，即“CRAB”症状（血钙增高，肾功能损害，贫血，骨病），以及淀粉样变性等靶器官损害等相关表现。骨骼疼痛、骨折、反复感染、贫血、肾功能异常等临床表现。多发性骨髓瘤的诊断与监测相关检查主要有免疫球蛋白定量、血或尿轻链定量、血和(或)尿免疫固定电泳、骨髓穿刺涂片、扁骨摄片等。其中免疫球蛋白定量检测操作简单、能直接反应疾病的情况。在多发性骨髓瘤诊断与监测中应用最为广泛，但在检测中发现有多发性骨髓瘤的病例 IgA 结果重复性差，多次检测结果波动大，与病情不符，对其原因进行研究分析。

PU-2485

急性暴发性蜡样芽孢杆菌败血症死亡 1 例

刘琴
复旦大学附属华山医院

蜡样芽孢杆菌是革兰阳性杆菌，其分布广泛，常见于土壤、灰尘和污水中，在植物性食品和许多生熟食品中也常见。是引起食物中毒的一种病原体。进食含有蜡样芽孢杆菌或其产生的肠毒素可导致急性胃肠不适症状，主要表现为恶心、呕吐、腹痛、腹泻等。症状一般较轻，常为自限性疾病。以前有研究报道蜡样芽孢杆菌在婴儿、静脉注射吸毒者、恶性肿瘤患者和免疫缺陷患者是重要致病因子，引起暴发性败血症。我们在此描述一名患有急性白血病的患者突然死亡，死亡原因分析为蜡样芽孢杆菌暴发性败血症引起的脑出血。

PU-2486

肝炎相关再生障碍性贫血（HAAA）1 例

刘琴
复旦大学附属华山医院

肝炎相关再生障碍性贫血(Hepatitis associated aplastic anaemia，HAAA)由 Lorenz 和 Quaiser 于 1955 年首次报道[1]，多为发生于非甲非乙非丙型肝炎后 6 个月内的再生障碍性贫血(AA)。通常 HAAA 好发于急性肝炎恢复期，与肝炎严重程度无显著相关。肝炎可为急性、甚至爆发性，亦可为慢性或自限性。其临床特征和 T 细胞免疫系统的严重失衡以及对免疫抑制剂的良好反应都提示 HAAA 由免疫机制介导。另外，端粒酶的变异和遗传易感性也是 HAAA 发生的原因。该病多发于青少年男性，较之特发性 AA(IAA)，HAAA 通常病程更短、疾病进展更快、伴发严重感染及出血更为多见。预后较差，早期感染死亡率高，行异基因造血干细胞移植(allo-HSCT)和／或免疫抑制治疗(IST)前，其平均存活期仅为 2-5 个月。

PU-2487

POCT 便携式血糖仪质量管理及效果评价

安婧、颜鸣、汪佳婕、尹利民、潘永圣
昆明市第一人民医院甘美医院

目的 构建即时检验 POCT 便携式血糖仪质量管理规范，运行及评价全面质量管理的应用。
方法 针对 POCT 便携式血糖仪建立一个明确的组织构架，为落实质量管理掌握仪器与试剂管理、人员管理、质量管理和信息化管理四个方面的现状，针对现状在规章制度的要求下结合实际情况推进改善质量管理模式。
结果 POCT 医护人员培训考核人次从 304 人次普及到 854 人次，合格率从 80.59%改善至 96.72%，持证上岗达到 100%；生化比对参与率 100%,初次比对不合格率从 33.3%下降至 1.67%。
结论 持续探索合适的管理模式，落实全面质量控制提升了医务人员专业能力，保障了 POCT 便携式血氧仪检测结果的精密度和准确性，更高效的服务于患者。

PU-2488

影响羊水细胞培养成功率的原因分析及改良方法

朱瑞琪
襄阳市第一人民医院

目的 分析影响羊水细胞培养成功率的相关因素并建立一种能稳定提高羊水细胞培养成功率的制备方法。
方法 收集 2018 年 1 月—2021 年 3 月于我院就诊的具有产前诊断指征的孕妇羊水病例，对孕妇年龄、孕周、外周血中性粒细胞计数与羊水培养成功率进行 logistic 回归分析，对异常标本进行新旧方法平行处理，比较两种方法核分裂相，评估妊娠结局。
结果 孕妇年龄是羊水培养相关因素，在培养 342 例羊水中，不合格标本 13 例，成功收获 339 例，成功率 99.1%，新方法对不合格标本处理后可分析核分裂相数远较传统方法差异有统计学意义（P＜0.05）。
结论 正确处理不同状态的羊水标本，及时调整和控制影响羊水细胞生长的各个环节，准确判断收获时机，建立适合本实验室的规范操作、有序培养，可提高羊水细胞培养的成功率。

PU-2489

健康骨髓供者骨髓细胞分类计数调查及应用

武焕玲[1]、张冠军[1,2]、李远[1]、张健[1]、张树霞[3]、张之芬[1]
1. 山东第一医科大学附属省立医院
2. 山东省东明县人民医院
3. 章丘市人民医院

目的 调查健康骨髓供者骨髓细胞分类计数的范围，探讨此骨髓细胞分类计数的方法和结果用于骨髓细胞分类正常参考范围确定的价值。
方法 选取我院 82 名健康成人造血干细胞供者作为研究对象，对其骨髓细胞进行分类计数并作统计学分析，探讨其计数范围与目前使用的骨髓细胞分类计数的参考范围的不同。
结果 本研究中骨髓细胞分类计数结果用 ±1.96SD 表示，原粒细胞、早幼粒细胞、中性中幼粒细胞、中性晚幼粒细胞、中性杆状核粒细胞、中性分叶核粒细胞、原红细胞、早幼红细胞、中幼红细胞、晚幼红细胞、淋巴细胞、单核细胞、巨核细胞的计数范围分别是 0.32±0.39、1.20±0.87、9.90±3.93、9.67±3.23、14.98±4.68、16.03±6.86、0.29±0.22、1.25±1.09、10.71±4.73、11.65±4.87、19.48±6.53、2.07±1.91、68±19，与目前我们国内和部分医疗机构使用的骨髓细胞分类参考范围结果有一定差异。
结论 标准化的健康骨髓供者骨髓细胞分类计数的方法，可以运用到骨髓细胞分类计数的正常参考范围确定过程中; 由于健康骨髓供者群体的年龄、性别和移植位点选择的局限性，此群体的分类结果可以作为骨髓细胞分类的正常参考范围的调查应用，多中心合作、加大样本量是否能够代表健康成人骨髓细胞分类的正常参考范围还需进一步验证。

PU-2490

突发新冠疫情下移动方舱实验室的快速部署和应用探索

栾艺、丁睿、古文深、邓雅文、张小凡、房绮梅、段朝晖*
中山大学孙逸仙纪念医院 检验科

在此番广佛乃至广东地区新冠肺炎疫情反扑的特殊时期下，各级政府与医疗机构迅速响应，快速部署，从“控制感染源，切断传播途径，追踪易感人群”入手，重点区域重点人群实时追踪，部分区域全员开展核酸检测，贯彻落实“应检尽检”、“愿检尽检”原则，全面拉开防疫战线。

目的 面对数几千万人口的大规模新冠病毒核酸筛查工作，各级医疗机构和三方实验室的核酸检测能力扩容问题凸显，结合我院工作实际，总结移动方舱实验室快速部署的经验与不足，进一步探索其应用规范，推而广之，以期更好地应对各类突发性事件中紧急医疗卫生工作。

方法 结合我院在佛山岭南明珠体院馆快速部署方舱实验室的工作实例，从选址、周围环境布局、物资准备、人员及组织架构、实验室运行管理、生物安全、心理疏导等各方面总结经验及不足，汇总分析。

结果 方舱实验室具有建设周期短，搭建灵活，移动作业等独特优势，在做好人员安全、环境安全、检测安全的基础上，能够遵照国务院印发的《医疗机构新型冠状病毒核酸检测工作手册（试行 第二版）》要求完成检测。

结论 部署移动方舱是新冠肺炎核酸检测能力迅速扩容的重要途径，在大规模新冠病毒核酸筛查工作中使用方舱实验室可以实现 “就地采样、就地检测”，极大地提高核酸检测效率。

PU-2491

凝血流水线助力止凝血检测工作及使用经验分享

安倍莹、翟宏
吉林大学第一医院

目的及方法 本实验室全自动凝血流水线系统由西门子 Aptio 流水线系统、离心机、纯水供应系统和 Sysmex CS-5100 全自动凝血分析仪“一拖五”模式组成，软件系统包括 ADM（Atellica Data Manager）、DMS（Data Manager System)及 vVC 流水线数据管理软件、实验室信息系统（LIS）和 Sysmex Laboman 软件系统。根据本实验室样本量较大等实际工作情况，不断优化流水线设置、改进和增加 LIS 功能，使得该流水线在保证原有基础功能外，设定符合本实验室标本特点的异常标本区、增加 TAT 监控、设定自动审核功能等功能，节约了人力，提高了工作效率和检测质量，明显缩短了 TAT，为今后实现智能化实验室奠定坚实的基础。

结果（1）LIS 界面功能按钮的增加：本实验室将 Aptio 中的一些功能，如“delivery”安装到 LIS 界面中，在 LIS 界面中实现调标本功能，同时在 LIS 界面中设定对话框来锁定该标本归档位置等功能，避免操作老师在多个操作系统中切换。

（2）凝血复检规则的建立：在流水线软件中设定本实验室凝血常规复检规则，触犯规则的标本一部分可通过流水线实现自动复测功能，而另有一些标本则通过流水线将其归档在特殊区域，以方便检验人员的快速锁定标本进行后续的复检。

（3）自动审核规则的建立：本实验室通过在 LIS 系统及 laboman 软件中分别设定自动审核规则，大大缩短了 TAT 时间，实现流水线自动化及智能化。

（4）TAT 时间监控：在 LIS 软件中通过颜色提示对急诊和普诊标本 TAT 进行监控及优化程序。

结论 通过一年多凝血流水线的使用，不断探索及优化流水线设置、开发 LIS 功能、设定自动审核规则及复检规则，从而保证了本实验室每日检测在 1800-2000 人份，并且大部分都是急诊标本（门急诊凝血常规占 86.31%）的高强度工作量下，凝血常规 TAT 中位数平均在 25.6min，而在未安装流水线时 TAT 中位数平均在 50min，大大地缩短了门急诊 TAT 时间，同时保证了报告审核的质量。全自动凝血流水线的使用极大地加速了智能化血栓与止血实验室建设的进程。

PU-2492

血液学指标在福建地区β地中海贫血筛查中的价值

谢屿平
福建医科大学附属协和医院

目的 通过分析福建省各个地区之间 β-地中海贫血主要存在的基因突变的类型与构成比，再比较其对应的常规血液学指标，从而探讨出血常规指标之中的两项平均红细胞指数血红蛋白量（MCH）、平均红细胞体积（MCV），两项红细胞参数红细胞计数（RBC）、血红蛋白量（Hb）对该特定地区筛查β地中海贫血的价值。
方法 检测 β 地中海贫血使用聚合酶链式扩增法，并使用反向点杂交的方法检测其基因点突变位点（PCR-RDB），对 β 地贫相关的基因类型做进一步的具体分型确定，并分析确诊的 β 地贫患者相应的血常规指标，利用 ROC 曲线获得本地区可供临床筛查β地贫的最佳截断值。
结果 本次实验共收集β地中海贫血患者 629 例，共发现 14 种不同的突变基因类型（复合型基因突变未计），其中以 283 例 IVS 型点突变最多见（44.9%）。与健康对照组相比较，同性别不同分型的 β 地贫血液学指标中 MCV 和 MCH 的均值都具有极显著的统计学意义；与此同时患者组和对照组的 Hb 之间的均值存在的差异也具有良好的统计学意义，但因男女性别的不同，所获得的截断值差异较大。根据本次研究结果，当选取 MCV<81.2 fl、MCH<27.2pg、Hb $_{男性}$<132.5 g/L， Hb $_{女性}$<116.5 g/L 时诊断疾病具有较高的敏感性与特异性，故可用作本地区临床筛查β地中海贫血。
结论 由于各个区域流行病学存在的差异性以及各个医院的检测设备和检测环境在客观条件上的区别，不同地区临床实验室应建立适宜本地的 β 地中海贫血初筛截断值。今后本次研究所处实验室可以选择 MCV<81.2fl、MCH<27.2pg、Hb $_{男性}$<132.5g/L、Hb $_{女性}$<116.5g/L 作为临床上筛查福建地区β地中海贫血的初筛截断值。

PU-2493

四例新冠核酸检测乌龙事件回顾性分析

陈相
南通市第一人民医院

目的 通过回顾南通市四例新冠核酸假阳性事件，找出导致假阳性的原因，规范核酸阳性上报流程，杜绝此事件的再次发生。
方法 收集南通市四例新冠核酸假阳性资料，包括患者就医原因，流行病学史，实验室核酸检测的仪器、试剂、耗材、方法学等；新冠核酸检测流程以及复检流程，当出现新冠核酸检测阳性时上报流程等。
结果 4 家单位新冠核酸初检阳性，复检结果未出来之前上报单位领导，单位领导感觉责任重大，随即上报了市疫情防控指挥部，指挥部随即启动了应急机制，之后复检结果都为阴性。四起乌龙事件引起市领导的高度重视，去年 7 月至今年 5 月连续发生了四起，都是因为复检结果没出来就上报假阳性结果，这不但扰乱了医院正常就诊次序，增加了就诊患者的心理负担，还给社会带来一些负面影响，医院的公信度在哪里？医院检测结果的准确性让人担忧。调查发现，2 家单位上报初检结果之前未对患者做流行病学调查，2 家单位做了流行病学调查，都是门诊患者，1 个从河北返通，没有任何不适，自愿检测，另一患者有两次出省轨迹，有低热等症状。4 家单位的仪器设备，检测试剂和耗材都符合要求，其中有 1 家只有初检试剂没有复检试剂；4 家都未定期对核酸提取仪磁棒用酒精进行消毒，未进行环评检测，未做弱阳性室内质控。
结论 4 家单位都存在核酸检测流程问题，操作欠规范，未遵守复检规则，未定期对提取仪、扩增仪进行消毒，工作责任心不够，领导胆小怕事，这些综合因素导致了新冠核酸检测乌龙事件的发生。

PU-2494

肌钙蛋白 I 与氨基末端 B 型钠尿肽前体联合检测在急性心肌梗死诊断中的临床价值

李岚岚、叶涛、侯小洪
重庆市人民医院

目的 探讨血清肌钙蛋白 I(cTNI)与氨基末端 B 型钠尿肽前体（NT-proBNP）联合检测在急性心肌梗死诊断中的临床价值。
方法 选取 2018 年 5 月至 2019 年 11 月收治的 62 例急性心肌梗死确诊患者作为试验组，另选取同期 69 例非急性心肌梗死患者作为对照组，分别使用化学发光法和免疫荧光法检测两组受试者血清中的 cTNI 与 NT-proBNP 水平，并进行比较。
结果 试验组 cTNI 和 NT-proBNP 水平显著高于对照组，且差异有统计学意义（P<0.05）；cTNI 和 NT-proBNP 联合检测的诊断敏感性为 90.32%，特异度为 93.47%， ROC 曲线下面积（AUC）为 0.84，均高于各个指标单项检测（P<0.05）。
结论 肌钙蛋白 I 与氨基末端 B 型钠尿肽前体联合检测用于急性心肌梗死的诊断有更好的诊断性能，敏感度和特异度都较检测单项指标更为理想。

PU-2495

一例 8q24.13q24.23 微重复患儿的临床及遗传学分析

邱惠国
厦门大学附属第一医院

目的 明确 1 例 8q24.138q24.23 微重复胎儿的遗传学病因及其来源，并对该胎儿做产前诊断。
方法 采集夫妻双方外周血及胎儿羊水细胞行染色体 G 显带分析；孕妇外周血行无创产前筛查；胎儿羊水细胞行染色体微阵列分析。
结果 父亲染色体核型正常，母亲和胎儿染色体核型 46，XX，dup(8)（8q24.13q24.23）；孕妇无创产前筛查：8 号染色体长臂 8q24.13～8q24.23 存在 13.10Mb 的重复。(chr8:g.126215101～139315100dup)。染色体微阵列分析：arr[GRCh37]8q24.13q24.23(126646442_137947833)x3。
结论 8q24.13q24.23 微重复为偏良性的 CNV，建议孕妇继续妊娠。

PU-2496

细胞因子检测在临床诊疗中的应用

孙昭辉、冯一民、王芳
山东大学第二医院

目的 细胞因子（cytokine, CK）是由免疫系统细胞以及其他类型细胞主动分泌的一类小分子量的可溶性蛋白质，参与细胞生长分化、免疫功能调节、参与炎症发生等。本文拟通过检测细胞因子水平，探讨细胞因子在相关疾病发生、发展过程中的作用。
方法 收集本院诊断为银屑病、尿毒症、肺癌的住院患者标本 120 例，其中，肺炎患者 30 例，银屑病患者 20 例，尿毒症患者 37 例，肺部肿瘤患者 33 例，采用流式细胞仪测定肺炎、银屑病、尿毒症、肺癌等患者血浆中细胞因子（IL-2、IL4、IL6、IL10、IL17A、TNF-α、IFN-γ）水平。
结 果 肺 炎 IL-2(2.86±2.88)pg/ml ， IL-4(2.85±1.78)pg/ml ， IL-6(77.18±97.90)pg/ml ， IL-10(4.16±4.24)pg/ml ， TNF-α(5.59±6.77)pg/ml ， IFN-γ （ 8.64±15.88 ） pg/ml ， IL-17A（25.00±28.87）pg/ml，银屑病 IL-2(1.95±0.72)pg/ml，IL-4(2.33±1.09)pg/ml，IL-6（8.37±7.93）

pg/ml， IL-10(3.36±0.89)pg/ml， TNF-α(2.49±0.89)pg/ml， IFN-γ（2.61±0.60）pg/ml， IL-17A（7.61±0.98）pg/ml，尿毒症 IL-2(2.67±2.43)pg/ml，IL-4(2.31±0.95)pg/ml，IL-6（41.80±107.22）pg/ml， IL-10(6.82±4.22)pg/ml， TNF-α(2.44±1.27)pg/ml， IFN-γ（3.08±1.87）pg/ml， IL-17A（5.26±4.91）pg/ml， 胸部肿瘤 IL-2(1.68±0.35)pg/ml， IL-4(2.08±0.69)pg/ml， IL-6（134.51±167.31）pg/ml，IL-10(6.38±3.19)pg/ml，TNF-α(2.04±1.11)pg/ml，IFN-γ（2.37±1.01）pg/ml，IL-17A（5.35±5.06）pg/ml，经统计学分析，上述四种疾病患者的 IL-6、IL-10 与健康人群比较，具有统计学意义分别为 P＜0.01，P＜0.05，银屑病患者、尿毒症患者 TNF-α 有统计学意义（P＜0.05），IL-2、IL-4、IL-17A、IFN-γ 没有统计学意义（P＞0.05）。

结论 细胞因子检测可作为患者炎症感染程度的判别指标，亦可作为肿瘤患者肿瘤微环境炎性变化指标。

PU-2497

疫情防控措施对临床检验标本 TAT 的影响分析

孙昭辉、孟静
山东大学第二医院

目的 临床检验标本的转运时间（turn-around time,TAT）是实验室的重要质量质量指标之一，它的及时性是影响临床决策的重要因素。通过分析比较医院采取新冠疫情防控措施前后，检验样本检测流程及样本周转时间等变化，探讨疫情防控形势对 TAT 的影响及对策。

方法 收集 2020 年 1 至 5 月及 2021 年 1 至 5 月急诊、门诊、住院部检验项目检验前、检验中周转时间的运行数据，对医嘱申请检验项目、标本采集确认、标本接收、标本处理、报告审核签发等五个时间节点开展回顾性研究。（1）比较疫情防控前后，检验样本转运方式及其流程的变化。（2）统计分析疫情前后检验样本周转时间变化及分布情况。（3）分别对疫情前后检验样本检测过程进行生物安全风险评估，分析疫情对检验生物安全控制的影响。

结果（1）适当延长标本检验前处理时间，降低标本气溶胶发生的风险。（2）两个时间段不同患者标本的 TAT 时间变化不一。急诊患者血常规 TAT 90 分位数由分别由疫情前的 29 min 及 21min 延长到 39 min 及 34 min；住院患者钾离子检验前与检验中 TAT 90 分位数变化率为 3.55%和 10.19%，无显著统计学意义。（3）检验前标本处理时间延长降低了检验样本检测过程中发生生物安全事件的风险，尤其是降低了接触样品气溶胶的风险。

结论 实验室标本处理流程的严格规范适当延长了标本 TAT，降低了发生生物安全事件的风险。

PU-2498

阴道分泌物全自动检测仪性能验证

罗中兰
中国人民解放军陆军特色医学中心

目的 验证珠海丽拓 V800 全自动细菌性阴道病检测仪的性能，以满足临床工作的需求。

方法 参照仪器说明书和相关行业标准对仪器的重复性，携带污染，干化学检出限，干化学检测项目的阴性和阳性符合率，全自动仪器镜检跟传统方法的符合性进行验证。

结果 细菌性阴道病全自动检测仪，霉菌，滴虫，清洁度，线索细胞，及干化学指标重复性满足要求，携带污染：经验证，阳性和阴性标本不会影响下一个空白标本；干化学检出限:β-N-乙酰氨基葡萄糖苷酶（NAG），阳性检出限为 6.0U/L，弱阳在（5.5~6.0）U/L；唾液酸苷酶（SNA），阳性检出限为 7.0U/L，弱阳在（6.5~7.0）U/L； 白细胞酯酶（LE），阳性检出限为 9.0U/L，弱阳在（8.5~9.0）U/L； 过氧化氢（H2O2），阳性检出限为 1.8μmol/L，弱阳在（1.8~3.0）μmol/L.全自动仪器镜检识别率跟传统方法符合性比较：滴虫总符合率：96%，全自动仪器法假阳性率 25%；

霉菌符合率 94%，假阳性率 12.2%；清洁度符合率 100%，全自动仪器法假阳性率 0%；线索细胞符合率 94%，假阳性率 13，6%。
结论 珠海丽拓 V800 阴道分泌物五联检仪器霉菌、滴虫，线索细胞结果假阳性率高，不能取代显微镜镜检；而干化学项目过氧化氢、白细胞酯酶、唾液酸苷酶评价良好，仪器无交叉污染，重复性满足要求，携带污染率满足要求，跟传统镜检结果结合综合报告，可以满足基层医院临床使用要求，更好的服务临床。

PU-2499

三种不同新冠病毒抗体试剂检测结果分析

孙昭辉
山东大学第二医院

2019 年发生的新型冠状病毒（2019 Novel Corona virus，2019-nCoV）)爆发已经一年多来，已在全球多个国家和地区流行,由于疫情突发。在党中央的坚强领导下，全民同心勠力取得了阶段性胜利，国内疫情得到有效防控。但周边疫情形势依然十分严峻。为更好快速检测人群的抗体反应，国内厂家研发多种抗体检测试剂，新冠病毒抗体检测试剂经研发注册后投入临床使用，但缺少足够的有效性和安全性等性能验证，这可能导致出现与临床诊断不符的假阴性结果或假阳性结果，为临床诊断和疫情防控带来困惑或干扰。由于新冠肺炎(Corona Virus Disease 2019，COVID-19)治疗主要通过中西医结合治疗，尚无特效治疗药物。早发现、早诊断、早治疗是当前主要防控措施。本文通过对比两种不同厂家的发光检测抗体试剂盒和一种胶体金法快速检测试剂盒，探讨不同方法的优缺点，为优化 SARS-CoV-2 感染诊断提供参考。
目的 通过对三种国产新型冠状病毒（Corona Virus Disease 2019，COVID-19）肺炎抗体 IgG/IgM 的应用，比较国产发光试剂盒和胶体金快速检测试剂盒的有效性，探讨新冠肺炎抗体检测在体检人群中的应用价值。
方法 收集应检尽检、住院患者必检和体检人群 300 例血清标本，鼻咽拭子核酸检测全部为阴性。采用两种化学发光抗体检测试剂同时检测 IgG、IgM，结果判读：S/Co 值大于 1.0 为阳性。对抗体检测阳性标本采用胶体金快速检测试剂复检。
结果 300 例标本检测出 3 例阳性标本，其中试剂 A 分别检测出 IgG、IgM 阳性各 1 例，试剂检测出 IgM 阳性 1 例。同时采用胶体金法复检 3 例标本均为阴性。
结论；由于免疫检测方法中不确定干扰因素影响检测结果的判读，抗体检测不宜直接作为诊疗的筛查指标。

PU-2500

质谱在临床微生物检验领域的应用

苏迎迎
东南大学附属中大医院

目的介绍质谱技术的检测原理及其在临床微生物检验中的相关应用。质谱仪基是通过激光轰击待测样本与基质与形成的晶体，使基质与样本间发生电荷转移产生分子电离，离子在电场作用下加速飞过飞行管道，根据飞行时间与离子的质荷比成正比，可计算可测出质荷比，再通过软件处理得到病原菌特征性的图谱。质谱在微生物检验中的应用目前主要包括微生物鉴定、细菌药敏分析、细菌耐药性检测、细菌分型和同源性分析等。质谱技术不仅可以对纯培养的细菌、真菌、霉菌快速鉴定，还可以直接检测尿液、阳性血培养标本等临床样本的病原微生物，在微生物鉴定方面突破了传统微生物鉴定对细菌种类、标本类型、检测时效等局限性；质谱技术通过检测比对微生物的保守蛋白峰实现细菌种内分型和同源性分析；通过检测抗生素修饰或水解状况鉴定细菌产酶情况等。综上

所述，质谱的发展和应用极大改变了传统临床微生物检测方法，弥补了原有细菌鉴定仪器的不足，进一步提高细菌鉴定的准确性和灵敏度。质谱具有菌种对照库大，检测速度快通量高等优点，提高了微生物鉴定和感染性疾病的诊断水平。此外，质谱在临床应用的过程中也是一个菌种数据库的不断更新扩大的过程，在一定程度上推动了微生物检验的发展。

PU-2501

肾脏结石成分与尿液理化性质和尿液蛋白之间的相关性分析

杨志鹏
山东大学第二医院

目的 了解本地肾脏结石的主要成分及所占比例，探讨结石成分与尿液理化性质和蛋白构成之间的关系。
方法 纳入 20---19 年 3 月—2020 年 11 月期间在我院住院治疗的 355 例肾脏结石患者和 30 例同期非泌尿系统疾病住院患者 30 例（对照组），对结石成分分析，根据结石主要成分划分为草酸盐组、磷酸盐组、尿酸组和感染组，并对患者 24h 尿液理化性质和蛋白构成进行检测分析。
结果 355 例结石样本，以混合性结石为主共 222 例，占 62.5%，这其中又以草酸盐结石为主 169 例，占 76.1%，单纯性结石 133 例，占 37.5%，其中以草酸盐结石为主 75 例，占 56.4%；与对照组比较，草酸盐组尿液 pH（5.33±0.32）明显降低，尿钙和尿酸（7.68±0.35、3.48±0.23 mmol/24h）水平明显升高，尿镁（3.02±0.29 mmol/24h）明显降低（P<0.05）；磷酸盐组尿液 pH（6.98±0.77）升高，尿镁（10.55±0.63 mmol/24h）水平降低，尿钙（7.96±0.569 mmol/24h）水平升高（P<0.05），伴有高尿钙症的结石患者高达 69.6%；尿酸组尿液 pH 水平低至（4.97±0.48），且 80.3%的患者伴有尿液过度酸化，尿酸含量（4.14±0.37 mmol/24h）明显升高（P<0.05），伴有高尿酸尿症的患者占 50.8%；感染组尿液 pH（6.86±0.68）升高（P<0.05）；此外，草酸组尿半胱氨酸蛋白酶抑制剂 C（0.653±0.148 mg/L）、尿 α1 微球蛋白（1.53±0.56 mg/dl）和尿 β2 微球蛋白（0.585±0.088 mg/L）水平明显升高（P<0.05）。
结论 我们的研究结果表明，肾脏结石成分和相应尿液代谢变化之间具有相关性，这可以为肾脏结石的治疗和预防提供科学依据，同时也有助于我们对肾脏结石形成机制的探索。

实验室生物安全管理探讨

詹莉芳、学万华
德州市人民医院

近年来，流行性传染病处于高发阶段，各类细菌和病毒发展流行。临床实验室作为高危场所，工作人员每天接收大量的生物标本，极易发生污染，使实验室内存在安全隐患。杜绝医源性感染，需要加强临床实验室生物安全管理，增强人员的安全防护意识，是目前所有临床实验室亟需解决的问题。

PU-2503

重庆农村地区成年人钩虫感染调查与现状分析

刘孝波
陆军军医大学第二附属医院（新桥医院）

目的 探讨重庆农村地区成年人钩虫感染情况，为制定防治策略提供科学依据。
方法 回顾性选取陆军军医大学第二附属医院来自重庆农村的健康体检者（体检组）和来自农村的就诊患者（临床组，其中分为有无症状组和有症状组），按年龄分为青年组和中老年组。分别对各组测定的粪便钩虫卵检查结果进行统计分析。
结果（1）各组性别差异无统计学意义（P >0.05），中老年组钩虫卵检出率明显高于青年组，差异有统计学意义（P <0.05）。（2）体检组与临床组钩虫卵检出率差异无统计学意义（P >0.05）。（3）无症状组和有症状组钩虫卵差异有统计学意义（P <0.05）。（4）钩虫感染地区分布差异无统计学意义（P >0.05）。
结论 重庆农村地区钩虫感染以中老年患者为主，患者不以钩虫感染的主要症状而入院。当出现明显症状时，阳性率明显升高。各区县农村地区广泛存在，无明显聚集性分布。为科学防治钩虫病，定期体检和入院诊疗时检查粪便寄生虫是必不可少的。

PU-2504

Construction of a drugcarrier loaded with siRNA GLI1 on K562 cells

张嫄
郑州大学第一附属医院

Leukemia stem cells (LSCs) are considered responsible for leukemia initiation, relapse and resistance to chemotherapy. In order to completely eradicate leukemia cells, therapies should in principle necessarily target LSCs. The hedgehog pathway regulates GLI1 abnormal activation, leading to drug resistance of leukemia stem cells. Target nano-carriers can target specific cells with specific cell marker, with high drug loading capacity, low drug side effects. MSNs nano-drugcarrier was constructed and modified with anti CD34. In the K562 stem cells, the internalization of FITC labeled MSNs@Antibody was observed by confocal laser scanning microscopy. The inhibition effect of MSNs@siRNAGLI1@Antibody on GLI1 was tested by qPCR and western blot assay. The siRNAGLI1 were loaded on MSNs nano-drugcarriers, and the results showed that after treated by MSNs@siRNAGLI1@Antibody for 48h, the mRNA and protein expression level of GLI1 was significantly inhibited. We successfully constructed the MSNs nano-drugcarrier loaded with siRNAGLI1, which could be used for further study.

PU-2505

结核耐药分析

霍慧霞
石河子大学医学院第一附属医院

异烟肼是结核病化疗的基石，目前仍是治疗结核病的主要药物，乙硫异烟胺（ethionamide，Eto）/丙硫异烟胺 （ethionamide，Pto）是异烟肼的类似物，属于二线抗结核药物，是耐多药结核病化疗方案的重要组成药物。异烟肼和 Eto/Pto 均 抑制分枝菌酸的合成，两药存在部分交叉耐药机

制，了解其抗结核作用机制尤其是分子学耐药机制，有助于正确选择抗结核药 物，并将促靶标的抗分枝杆菌药物的开发。本文重点讨论结核分枝杆菌对异烟肼和 Eto/Pto 耐药机制的研究进展。

PU-2506

探讨如何进一步完善 PCR 移动检测车的设计与工作流程

周媛、许建成、王晓明、安倍莹、柴剑男、孙璐璐、宋佳星
吉林大学第一医院

目的 通过比较在 PCR 实验室与移动检测车上开展新冠病毒核酸检测实验工作的流程与体会，探讨如何进一步完善 PCR 移动检测车的设计与工作流程。
方法 2021 年初，吉林省通化市爆发了新冠病毒肺炎疫情，吉林省启用了移动检测车协助通化当地开展大规模新冠病毒核酸筛查工作，这是国内首次使用移动检测车参与新冠病毒核酸筛查工作，因此负责此次任务的新冠病毒核酸检测队伍积累了丰富的实践经验和教训，通过总结这些体会，与在普通 PCR 实验室中新冠病毒核酸检测工作相比较，提出对移动检测车的设计与如何开展工作等方面的进一步改良措施。
结果 新冠病毒核酸检测工作在移动检测车上进行与在 PCR 实验室中进行相比较，虽然检测工作的内容相同，但由于场地、设施及外界环境的不同，在车体设计与工作流程方面都需要更多的完善。移动车的整体空间布局需要安装更多的固定装置，如可以存放并防止样本倾斜散落的支架或储藏柜、每一个岗位的工作人员都能触手可及的感应消毒设施等。为使移动车上三个工作区之间及与外界之间的联系更加方便，除固定对讲系统以外还应配有移动对讲机。由于检测车上三个工作区域内的防护等级并不一致，应有各自的空调控温系统。受移动车检测车空间所限，建议三至四辆移动车就应配备一辆专门负责高压消毒医用垃圾的消毒车。在工作流程方面，建议在检测车附近设立更衣区，如可搭设临时帐篷。三个工作区域的工作人员在交接班前应及时报告本区工作情况，以给接班人员预留足够的时间补充试剂与耗材。在寒冷的冬天，尤其是北方，应注意保证试剂的储存条件，如常温储存的试剂应避免结冻，在工作人员脱下防护服后从检测车撤出时也应有足够的保暖措施，
结论 PCR 移动检测车因其机动灵活高效的特点在大规模新冠病毒核酸检测工作中可以起到至关重要的作用，它可以在筛查地附近就地建立起一个 24 小时不停运转的 PCR 实验室，但它在车体设计上和工作流程方面尚待进一步完善。

PU-2507

三种第三方质控品用于 SysmexSC5100 装载 Sysmex Siemens 凝血试剂

林子琪、董轲
中国人民解放军空军军医大学第二附属医院

目的 为检出一般实验室使用的试剂配套质控品可能存在无法检测出批间差或因校准品批号改变而带来的变化，而配套质控品本身也可能存在一定偏倚而无法准确评估试剂情况。探讨稳定性好，范围覆盖广的凝血第三方质控品。
方法 用三种第三方质控在 SysmexSC5100 仪器装载 Sysmex Siemens 凝血试剂，使用伯乐 1，2，3 水平；郎道 1，3 水平；积水 1，2 水平在同一仪器——Sysmex CS5100 上连续 20d 测定，分别得到 20 个质控项目 PT ，INR，APTT，FIB，TT 结果分别计算出 20d 三种质控品在不同项目中的平均数（X），标准差（S）,变异系数（CV）。
结果 PT 中伯乐，朗道，积水各水平平均 CV（%）分别 2.48，2.17，1.615。INR 中伯乐，朗道各水平平均 CV（%）分别为 3.813，1.632。APTT 中伯乐，朗道，积水各水平平均 CV（%）分别

2.3，2.62，4.64。FIB 中伯乐，朗道，积水各水平平均 CV（%）分别 3.09，2.285，4.68。TT 中伯乐，朗道，积水各水平平均 CV（%）分别 3.33，1.695，1.95。
结论 不同厂家的各个平水平均符合中国人民共和国卫生行业标准《临床血液学检验城轨项目分析质量要求 WS/T406—2012》。实验室应根据具体情况选择质控水平，合适的覆盖范围。

PU-2508

应用新鲜血比对方案完善血液分析仪日常室内质量控制

郑翠玲、王力、程焱、崔巍
中国医学科学院肿瘤医院

目的 建立新鲜血比对方案，以保证临床标本的检测结果具有可比性和一致性，并完善血液分析仪日常室内质量控制（IQC）。
方法 在每日用配套质控品完成 IQC 后，抽取检测结果在参考范围内且血量约为 2ml 的新鲜血标本。选择性能良好的血液分析仪作为靶机，其余仪器作为比对仪器。新鲜血标本在靶机中测定的结果作为靶值，比对仪器的测定结果作为测定值。将靶值和测定值进行比较，计算白细胞计数（WBC）、红细胞计数（RBC）、血红蛋白（Hb）、红细胞比容（Hct）、血小板计数（PLT）项目的相对偏差。仪器间相对偏差标准为 1988 年美国临床实验室改进法案(CLIA'88)允许误差的 1/2，而血液分析仪运行过程中的相对偏差标准为允许误差的 1/3。根据偏差标准对相对偏差进行评价。
结果 比对仪器与参比仪器间的比对数据的相对偏差符合 1/2CLIA'88 偏差范围的要求，表明仪器间检测结果的准确性，并具有可比性。全细胞分析仪运行过程的比对数据的相对偏差符合 1/3CLIA'88 偏差范围的要求，表明仪器运行稳定。
结论 新鲜血比对方案既能保证血细胞分析仪间检测结果的可比性及仪器运行过程中的稳定性，又能对血液分析仪进行方便、经济、有效的日常室内质量控制。

PU-2509

有无添加稳定剂对胃泌素 17 血清标本测定的影响

蒋建、冯晓敏、李卫滨、张胜行
中国人民解放军联勤保障部队第九〇〇医院

目的 探讨胃泌素-17 血清标本在有无稳定剂保存的条件下对 ELISA 法测定其结果的影响，以及确定本实验室 G-17 标本的适宜保存方案。
方法 随机选取 20 例就诊于联勤保障部队第九〇〇医院患者的 G-17 样本，经离心后分离血清，进行 ELISA 法检测，测定结果作为原始值；设置添加稳定剂组和不添加稳定剂组，将血清分装后保存于 4～8℃冰箱中，于第二天、第三天、第四天进行胃泌素-17 浓度的测定。通过计算实验数据的降解率、符合率指标分析血清胃泌素-17 检测结果与有无添加稳定剂、保存天数的关系。
结果 随着保存天数的增加，无添加稳定剂组血清样本中 G-17 浓度第二天平均降解率为 32.24%，第三天平均降解率为 44.46%，第四天平均降解率为 59.28%。按降解率还原后与第一天的符合率分别为 106.77%、116.99%、139.23%；添加稳定剂组血清样本中 G-17 浓度第二天平均降解率为 26.47%，第三天平均降解率为 35.69%，第四天平均降解率为 45.64%。按降解率还原后与第一天的符合率分别为 105.89%、114.24%、125.84%。
结论 添加稳定剂能够使胃泌素-17 的降解速率减慢，本实验室的 G-17 血清样本应在当天完成检测。

PU-2510

精益管理理论在检验科文件表格管理中的应用

刘春梅、刘义庆
山东第一医科大学附属省立医院

近年来，精益管理越来越普遍被应用于医疗行业。我院从引入精益管理的方式后，对科室的文件管理按照精益管理模式进行了改造，提高了工作效率。

方法 1.建立操作流程 具体的操作流程为：年初制定好相应的质量与技术记录表格，分电子版类及手工填写类，后者包括每天、每周、每月和不定时填写类。每月初上传电子版并打印所需的纸质版表格，分配到各实验区域，同时对工作人员进行相应的培训，工作中对文件表格及工作人员填写情况进行观察；定期对填写完毕的记录表格进行回收交主任审核并分类归档。2.5s 管理 ⑴整理（sort）：改善前，记录表格放置混乱易丢失。通过增加文件夹和文件盒来增加文件存放空间，并准备专门的档案柜，分门别类的存放文件，改善环境。⑵整顿（simplify）：①根据工作中实际情况编制表格，使工作流程及工作记录完整化。②配备一名文件管理员，负责对本室文件进行管理，对本室工作人员填写表格文件进行相应的培训并监督。③各表格都予以相应的分类编号。④科室实施不定期检查，及时发现不符合项。⑶清扫（sweep）：①对于与工作情况违背或者不适用的表格予以停止使用并撤离现场，②工作人员要维护好记录表格的整洁卫生，防止血渍或污水污染。⑷标准化（standardize）：工作中已经形成的表格填写、整理、放置、维护等方法组员要严格履行，文件管理员对于执行情况要不断检查，及时发现问题并进行整改，使管理制度规范化、标准化。⑸自律（self discipline）：工作人员要严格要求自己，养成良好的习惯，严格执行操作流程，并积极进行自查，出现问题要主动改正。

实施精益管理后，我室的文件填写缺陷率和保存缺陷率明显下降。这表示实施精益管理后，有了完整的管理体系和操作流程，工作人员都接受了完整的学习、培训，这有助于提高本室的表格文件的完成率和完好性，满意度也有了相应的提高。精益管理理论在文件表格管理过程中有很好的应用价值。

PU-2511

常规检验与生化检验在临床糖尿病诊断中的检出率比较分析

徐健
四川省人民医院东院

目的 比较分析常规检验与生化检验在临床糖尿病诊断中的检出率及应用价值。
方法 随机选择 2020 年 1 月~2021 年 6 月研究时间段内于本院就诊 2 型糖尿病患者 40 例（男 20 例，女 20 例，年龄区间 35~80 岁，均为原发 2 型糖尿病确诊者）及同期入院健康体检者 40 例（男 20 例，女 20 例，年龄 35~82 岁，无糖尿病史及血糖代谢功能异常）行临床对比研究。两组基线资料对比结果无差异性（P＞0.05），研究结果可比。研究纳入者均接受常规检验、生化检验。常规检验取受检者次日入院时晨间空腹中段尿行尿糖阳性检验，生化检验取受检者晨间空腹外周中心静脉血行血糖、糖耐量检验。统计检验结果及临床检出率差异。
结果（1）检验结果差异分析：2 型糖尿病患者尿常规检验所得尿糖阳性检出率（97.50%）、血生化检验所得 PBG（8.16±0.57）mmol/L、2hFBG（13.25±2.05）mmol/L 及糖耐量（12.26±5.31）mmol/L 均高于健康体检者，差异有统计学意义，P＜0.05。（2）临床检出率对比：经分析 2 型糖尿病患者检验结果后可知血生化检验所得糖尿病阳性检出率（100.00%）、诊断敏感度（100.00%）及诊断符合率（100.00%）均高于尿常规检验，差异有统计学意义，P＜0.05。

结论 尿常规在糖尿病临床检查中仅有显著筛查指向价值，对于糖尿病的准确诊断则需以血生化检验中所得完善检验结果为依据，实现准确诊断。

PU-2512

淋巴细胞亚群在儿童原发性肾病综合征中的变化及应用价值探讨

黄靖彤、褚帅
南方医科大学南方医院

目的 分析儿童原发性肾病综合征（primary nephrotic syndrome，PNS）发生发展过程中淋巴细胞亚群的变化并探讨其在治疗和预防感染中的临床应用价值。
方法 选取南方医科大学南方医院 2019 年 9 月至 2021 年 4 月收治的 PNS 患儿 89 例，其中根据疗效分组可分为活动组 40 例，部分缓解组 30 例、完全缓解组 19 例，另外 PNS 无感染组与合并感染组分别有 56 例及 33 例。19 例健康儿童纳入健康对照组。各组的淋巴细胞亚群水平使用流式细胞仪进行检测。比较健康儿童与 PNS 患儿的各淋巴细胞亚群数量和比值的差异及其与治疗疗效的关系，并与疾病相关生化指标做相关性分析，同时分析 PNS 合并感染患儿的淋巴细胞亚群水平。
结果 1.与健康对照组相比，活动组和完全缓解组的 T 细胞百分数、活动组和部分缓解组的 CD8+ T 细胞百分数和效应/记忆 CD4+ T 细胞的百分数和绝对计数均升高，活动组的 CD4+/CD8+比值和初始 CD4+ T 细胞/记忆 CD4+ T 细胞比值下降，PNS 三组的淋巴细胞总数、T 细胞与 CD8+ T 细胞的绝对计数、Tc 细胞的百分数和绝对计数以及 Tc/Ts 比值均升高而 NK 细胞的百分数和绝对计数均降低；完全缓解组患儿的初始 CD4+ T 细胞百分数与活动组患儿相比较显著增加，而与活动组和部分缓解组患儿相比较，效应/记忆 CD4+ T 细胞百分数和绝对计数显著降低，初始 CD4+ T 细胞/记忆 CD4+ T 细胞比值回升，其余淋巴细胞亚群各组间无显著性差异； 2.效应/记忆 CD4+ T 细胞百分数和绝对计数与 ALB 水平均呈负相关以及其百分数与 CHOL 水平呈正相关，而淋巴细胞总数、CD4+ T 细胞及 Treg 细胞绝对计数与 Scr 水平之间均具有负相关性，其他淋巴细胞亚群与疾病相关生化指标间均未发现显著相关性； 3.与无感染组相比，合并感染组患儿的 T 细胞和初始 CD4+ T 细胞的百分数、CD4+ T 细胞的百分数和绝对计数以及 Treg 细胞绝对计数均减少及其 CD4+/CD8+比值也明显下降，而且我们发现 CD4+ T 细胞绝对计数＜850 个/μL 是儿童 PNS 合并感染的危险因素。
结论 NK 细胞、Tc 细胞和效应/记忆 CD4+ T 细胞数量或功能的异常可能与儿童 PNS 的发病具有密切关系。淋巴细胞亚群水平能在一定程度上反映儿童 PNS 的治疗疗效和肾功能状态，其中初始 CD4+ T 细胞和效应/记忆 CD4+ T 细胞的数量和比值可能是判断儿童 PNS 病情进展与缓解的潜在指标。CD4+ T 细胞、初始 CD4+ T 细胞和 Treg 细胞数量的减少与感染的发生有关，CD4+ T 细胞绝对计数＜850 个/μL 是儿童 PNS 合并感染的危险因素。

PU-2513

Anti- psoriatic effect and underlying mechanisms of Periplogenin

Wenjing Zhang
The First Affiliated Hospital of Zhengzhou University

Propose Psoriasis is a multifactorial skin disease and it brings a lot of inconvenient in patients' life. Considering the side effects and drug resistance of the current therapy, it is urgent to discover more effective and safer anti-psoriatic drugs. We undertook experiments in an attempt to elucidate the vivo and vitro effects of Periplogenin in Psoriasis.
Methods By using a cultured human HaCaT keratinocytes as an in vitro psoriasis-relevant model, we screened over 250 traditional Chinese medicine compounds for their cell viability-inhibitory action. We undertook further experiments in an attempt to elucidate the vivo effect studies of

pepriplogenin on the psoriasis-like murine models of 12-O-tetradecanoylphorbol 13-acetate (TPA)–induced hyperplasia and imiquimod (IMQ)-induced skin inflammation.
Results Periplogenin was found to be highly significant in inhibiting the viability of HaCaT cells. periplogenin induced necroptotic cell death rather than apoptosis or autophagy. Moreover, periplogenin ameliorated skin lesions and inflammation in the murine models of TPA-induced epidermal hyperplasia and IMQ-induced skin inflammation.
Conclusion In conclusion, periplogenin exhibited selective cytoxicity against HaCaT cells in vitro and played the anti-psoriatic effect as a topical agent on psoriasis animal models in vivo.

PU-2514

间接免疫荧光法检测抗核抗体室内质控品的制备和性能验证

高雪丹、苏真珍、黄卓春、胡静、王丽、杨滨
四川大学华西医院

目的 建立抗核抗体（ANA）室内质控品自制和性能验证规范化程序，以有效监测实验室间接免疫荧光法检测 ANA 的质量，保证其检测一致性和准确性。
方法 收集 ANA 高滴度强荧光（滴度 1:3200~1:10000）单一荧光核型（均质型）临床血清样本，将其与混合阴性 ANA 血清按 1:30 比例混合制备成 1:100~1:320 滴度的弱阳性质控品，收集阴性血清作为阴性质控品。将质控品灭活后采用间接免疫荧光法检测并以人工判读和荧光判读仪判读（荧光强度值）同时进行均匀性和稳定性验证，并用自制质控品进行仪器重复性和一致性性能验证。
结果 自制弱阳性和阴性 ANA 质控均有较好的均匀性和稳定性，其荧光强度值变异系数基本在 10%以内，以自制质控品验证仪器也具有较好的重复性和一致性。
结论 采用荧光强度值可基本实现定量监测 ANA 质控品的检测结果，且本实验室自制 ANA 质控品有良好的性能，可满足临床需求并可为其他实验室制备和验证质控品提供参考。

PU-2515

Hp 感染、低氧诱导因子-1α 蛋白表达与胃癌发生及进展的关系分析

黄红娟
郴州市第一人民医院

目的 分析 Hp 感染、低氧诱导因子-1α 蛋白表达与胃癌发生及进展的关系。
方法 以 2020 年 1 月-2020 年 12 月 50 例确诊胃癌患者为胃癌组，另外选取确诊慢性胃炎患者 40 例为胃炎组，均检测 Hp 感染率、低氧诱导因子-1α 蛋白表达。
结果 胃癌组 HP 感染阳性率为 64.00%，明显低于胃炎组 HP 感染阳性率 87.50%（P＜0.05）。胃癌组低氧诱导因子-1α 蛋白表达阴性率、弱阳性率低于胃炎组，阳性率、强阳性率均高于胃炎组（P＜0.05）。胃癌组中早期患者低氧诱导因子-1α 蛋白表达阳性率低于中晚期患者（P＜0.05）；低分化患者低氧诱导因子-1α 蛋白表达阳性率明显高于中分化与高分化患者，且中分化高于高分化患者（P＜0.05）。诱导 HP 感染 MGC-803 细胞 12 小时开始低氧诱导因子-1α 蛋白表达显著增加，相较 12 小时前的结果有统计学差异（P＜0.05）。
结论 低氧诱导因子-1α 蛋白在胃癌中呈高表达，且胃癌分期越高的患者低氧诱导因子-1α 蛋白表达水平越高，胃癌分化越差的患者低氧诱导因子-1α 蛋白表达水平越高，且 Hp 感染时形成的低氧环境能对低氧诱导因子-1α 蛋白的表达形成诱导，两者具有明显相关性。

PU-2516

18-60 岁成年男性痛风患者血清生化指标分析

练明建[1,2]、兰小英[1,2]
1. 厦门大学附属第一医院检验科
2. 厦门市基因检测重点实验室

目的 近年来，痛风的发病率升高，严重地影响患者的生活。除了疼痛带来的影响，还发现痛风患者常伴随其他疾病。本研究分析 18-60 岁成年男性痛风患者的血清生化指标的特点，为痛风患者的诊治提供依据。
方法 收集 2020 年 1 月至 2021 年 4 月就诊于厦门大学附属第一医院 18-60 岁的 473 例男性痛风患者及同期就诊的 400 健康体检者的一般资料以及血清生化检查结果，分析血尿酸与各生化指标的相关性，比较两组指标的差异。比较痛风患者肾功能正常组和损害组以及<40 岁组和 40-60 岁组各指标的差异。
结果 对于所有研究对象，尿酸（UA）与谷氨酸氨基转移酶（ALT）、天门冬氨酸氨基转移酶（AST）、血糖（GLU）、肌酐（CREA）、总胆固醇（TC）、甘油三酯（TG）和低密度脂蛋白胆固醇（LDL）呈正相关（P<0.05），而与高密度脂蛋白胆固醇（HDL）和肾小球滤过率（eGFR）呈负相关（P<0.05）。痛风组的 ALT、AST、GLU、CREA、UA 、TC 、TG 和 LDL-C 均高于健康对照组，而 HDL-C 和 eGFR 低于健康对照组。比较高 TC、高 TG、低 HDL-C、高 LDL-C、高脂血症以及低 eGFR 的比例，痛风组均高于健康对照组，差异有统计学意义。痛风患者中肾功能异常组的 CREA 和 TC 高于正常组，且高 TC 的比例高于正常组。<40 岁组的 ALT、UA 和低 HDL-C 的比例高于 40-60 岁组，而病程和低 eGFR 的比例低于 40-60 岁组。
结论 痛风患者更易引起肝功能损伤、高脂血症、高血糖、肾功能损伤，肾功能的损伤可能与 TC 水平相关，年轻的患者可能更易导致肝功能受损，随着年龄的增加更易发生肾脏损伤。

PU-2517

180 例小儿甲流病毒、腺病毒感染的血常规、血清淀粉样蛋白 A 及 C 反应蛋白水平分析

杨晓平
中国人民解放军联勤保障部队第 970 医院

目的 分析 180 例于我院就诊的感染甲型 H1N1 流感病毒的患儿和感染腺病毒 7 型的患儿的血常规、血清淀粉样蛋白 A（SAA）以及 C 反应蛋白（CRP）的水平，为临床诊断以及早期治疗提供帮助。
方法 收集 2018 年 1 月至 2019 年 12 月在本院确诊感染甲型 H1N1 流感患儿 93 名，腺病毒感染患儿 87 名，并以健康查体的 80 名幼儿为正常组，统计分析三组人群的白细胞总数、中性粒细胞百分比、淋巴细胞百分比、单核细胞百分比、血小板计数、全血 CRP 和 SAA 的水平。百分率的比较采用 X^2检验；三组间水平除 SAA、CRP 数据外均符合正态分布，采用 LSD-t 检验； SAA、CRP 数据均为偏态分布，以中位数[m(P25，P75)]表示，三组间采用非参数分析的 Kruskal-Wallis H 检验，两组间采用 Mann-Whitney U 检验。
结果 甲流病毒和腺病毒患儿的白细胞和血小板多为正常；Mo%可升高，也可正常或者降低；腺病毒患儿的 Neu%多为正常，两组数据 Neu%存在显著差异；甲流病毒患儿的 Ly%多为降低，且两组间数据存在较大差异；两类患儿的 CRP 和 SAA 多为升高。皆具有统计学意义；甲流病毒组和腺病毒组两组间中性粒细胞、淋巴细胞、PLT 和 SAA 也具有显著差异。甲流组的中性粒细胞高于正常值且高于正常范围，腺病毒组中性粒高于正常值但在正常范围内；甲流组淋巴细胞低于正常值且低于正常范围，腺病毒组同样低于正常值但在正常范围内；两组间单核细胞高于正常值但在正常范围内，且两组间数据无统计学意义；两组间 PLT 低于正常值，但在正常范围内，但两组间有统计学

意义，甲流病毒组的 PLT 数值要更低；两组间 CRP 显著高于正常值，但两者之间无统计学意义；两组间 SAA 数值同样显著高于正常值，但是甲流病毒组的 SAA 更高于腺病毒组。
结论 甲流病毒、腺病毒组的 CRP、SAA、PLT、淋巴细胞百分比与正常幼儿组数据的比较存在着统计学的差异，可以引作为诊断甲流、腺病毒的初筛指标；而 SAA 和淋巴细胞百分比对初步鉴别感染甲流或腺病毒有价值。

PU-2518

15 年耳部感染性疾病分离病原菌及药物敏感性分析

刘春红、吉建、陈惠雯、曹文俊
复旦大学附属眼耳鼻喉科医院

目的 探索耳部分离病原菌的类型、药物敏感特征。
方法 收集复旦大学附属眼耳鼻喉科医院 2005 年 1 月～2019 年 12 月经临床诊断为耳部感染性疾病患者中耳及外耳分泌物标本中分离出的病原菌，分析病原菌菌谱及药敏变化，利用 SPSS 卡方检验分析进行统计学分析。
结果 共分离出病原菌 2097 株，其中 39.0 %(818) 为革兰阳性菌， 革兰阴性菌为 24.7 %(519)，36.2 %(760)是真菌。其中金黄色葡萄球菌和铜绿假单胞菌为最常见病原体。革兰阳性菌对万古霉素的敏感率为 100%。对其他药物的敏感率:复方新诺明(84.5 %)，氯霉素 (79.2 %)，左氧氟沙星(57.0%)及环丙沙星(47.5%)。革兰阴性菌对美罗培南敏感率 96.1 %，其他药物敏感性为阿米卡星 91.9 %，头孢他啶 87.3 %，妥布霉素 59.1 %，环丙沙星 46.5 %。2005-2019 年耳部分离的病原菌对左氧氟沙星、头孢他啶和哌拉西林的药物敏感率变化具有统计学意义。
结论 金黄色葡萄球菌和铜绿假单胞菌是耳部分离的常见致病菌。革兰阳性菌对复方新诺明，氯霉素敏感率高。革兰阴性菌对头孢他啶和阿米卡星的敏感性高。2005-2019 年耳部分离的病原菌对头孢他啶和哌拉西林的敏感性有升高趋势，而对左氧氟沙星敏感性有降低趋势。

PU-2519

IL-27 在炎症性疾病中的诊断作用研究进展

刘双
重庆市人民医院

白细胞介素-27（Interleukin-27，IL-27）由 EBI-3 和 p28 组成，是 IL-12 家族的新成员，主要来源于抗原提呈细胞(antigen presenting cell,APC)的分泌。之前有研究表明 IL-27 在促进 Thl 型免疫反应中起重要作用，而随后的研究也证明 IL-27 对一些 T 细胞亚群以及诱导型调节性 T 细胞具有广泛抑制作用，除此之外也可影响中性粒细胞、巨噬细胞的免疫功能。由此可见 IL-27 是一种在感染和免疫方面有着多效性的细胞因子。流感诱导产生的 IL-27 可通过损害宿主抵抗细菌感染的固有免疫力，从而促进了流感后肺炎球菌性肺炎的发展。脓毒症诱导产生的 IL-27 也可增加宿主肺部对铜绿假单胞菌感染的易感性。但是，在肠道免疫中，IL-27 可以抵抗艰难梭菌的感染。尽管 IL-27R$^{-/-}$缺陷型小鼠在念珠菌引起的血流感染中表现出对近平滑念珠菌的清除率提高，但它们并未表现出对白色念珠菌的清除率提高。因此，这些结果突出了 IL-27 在炎症性疾病的复杂作用。就 IL-27 的临床检验诊断意义而言，已有研究表明其可以在一定程度上为脓毒症的早期诊断及判断预后提供检验价值，不仅如此，IL-27 作为诊断指标与 ADA 的联合可提高结核性胸腔积液的准确性，在虫媒病毒疾病基孔肯雅病毒病(CHIKVD)中，研究人员通过分析血清细胞因子的水平及其与 CHIKVD 患者临床表现的相关性，提示其可能作为该疾病的长期标志物。因此更详细地了解 IL-27 的生物学特性并揭示不同疾病环境下 IL-27 的免疫作用，将对其日后应用于各种炎症性疾病的诊断提供新的思路。

PU-2520

厦门市某三甲医院横纹肌溶解症的临床和实验室特点

练明建[1,2]、王前明[1,2]
1. 厦门大学附属第一医院检验科
2. 厦门市基因检测重点实验室

目的 横纹肌溶解症是一种相对少见的疾病，目前尚无相关的治疗指南。本研究旨在收集分析近四年收治的横纹肌溶解症患者的临床资料从而为其诊治提供更多的依据。
方法 收集和分析 2018 年 1 月至 2020 年 12 月就诊于厦门大学附属第一医院的横纹肌溶解症患者的临床资料，包括性别、年龄、症状、病因、实验室检查结果等。横纹肌溶解症的诊断应满足肌酸激酶（CK）峰值>1000U/L 且有相应的症状或相关的病因。
结果 近四年，共诊治 98 例横纹肌溶解症患者，中位年龄为 29 岁（范围：8-88 岁），66（67.35%）为男性，2017 年-2020 年分别包含 15、24、31 和 28 例，夏秋季病例多于冬春季。剧烈运动和食用小龙虾是最常见的两个病因，分别包括 59 例（60.20%）和 9 例（9.18%）。不同病因患者的性别构成比存在差异。最常见的症状为肌肉酸疼。绝大部分患者的 CK、肌酸激酶同工酶 MB 亚型、乳酸脱氢酶肌红蛋白、丙氨酸氨基转移酶、天门冬氨酸氨基转移酶都升高。低钾血症是最常见的电解质紊乱。尿素、肌酐和尿酸升高的比例分别占 15.31% （15/98）、17.35%（17/98）和 46.94%（46/98）。白细胞、纤维蛋白原、D 二聚体和纤维蛋白降解产物升高的比例分别占 42.22%（38/90）、 22.97% （17/74）, 53.03%（35/66）和 26.67%（8/30）。85 例患者进行尿液分析，尿酮体、尿潜血和尿蛋白阳性分别占 25.88% （22/85）, 71.76% （61/85）和 63.53%（54/85）。整体的预后良好，未出现死亡病例。
结论 夏秋季节应该避免剧烈运动和慎食小龙虾。横纹肌溶解症患者的许多实验室检查指标异常，应予以重视。

PU-2521

大数据时代检验医学的变革之路

欧阳维富
广东省人民医院(广东省医学科学院）

20 世纪中叶以来，信息技术革命广泛而深刻地改变人们的生产和生活方式；当今，大数据正在以磅礴气势驱动新一轮科技革命和社会变革。作为检验医学工作者，我们需研究大数据对医学发展的影响；并研判大数据时代背景下，检验医学在未来医疗卫生价值链中的角色和定位，进而探索检验医学的高质量发展的方向和路径。

过去，得益于信息技术的发展，检验医学实验室可以对检测样本的采集、运输、检测到审核进行实时监控和记录，实现检测样本全流程的跟踪管理。当今，随着检测技术的发展，质谱分析技术、二代测序技术等高新技术正逐步进入检验医学实验室，蛋白质组、微生物组、宏基因组等组学正辅助临床医学实现精准医疗；芯片技术、微流控技术、多参数流式细胞技术正开拓检验医学的新领域；基于卷积神经网络的图像识别系统正为细胞形态学检查与鉴定提供多维信息；随着检验技术代际更迭周期的缩短，各类检验数据呈现几何级的增长。如何挖掘这些检验数据，提炼出更具价值的医学信息，辅助临床决策，这是检验医学发展过程中亟待解决的问题。

大数据时代，一种新的认识和改造世界的方法，用数据化思维和云计算的处理方式探索海量数据之间的联系和变化趋势。人工神经网络模型和数据挖掘等信息技术可实现对检验数据的集成、储存、挖掘和预测，揭示检验数据与健康状况间的逻辑关系。检验分析前，可以依据电子病历记录和患者的症状描述等信息，进行大数据挖掘和预测，优化多指标联合诊断方案，为临床医生推荐合理、有效且经济的检验项目，最大限度地提升诊断效能，最大限度地节约医疗卫生资源。检验分析后，基于大数据的临床决策支持系统的应用，实现检验数据与临床数据有效的整合，对多维数据进行系

统分析，有助于我们更加深入地认识疾病本质，为临床决策提供检验数据、解释性报告、诊断建议及诊断概率、进一步检查意见等诊断信息，实现检验医学报告模式从数据型检验报告到数字化诊断报告的转化。以基因组、蛋白质组、微生物组及常规生物学数据为基础建立的疾病预警系统，对检验数据深度挖掘、建立疾病预测模型，提升对疾病发生发展的风险预测能力，实现对疾病的早期诊断和预后判断。

大数据时代，一切皆可量化，一切皆可分析，检验数据的深度挖掘和二次利用蕴含着提升检验医学学科建设的良好机遇和空间。检验医学工作者应顺应大数据时代潮流，把握时代机遇，推进检验医学的变革，构建大数据驱动的检验医学新发展格局。

PU-2522

1 例全身网状色素异常症患者的分子诊断

余秀蓉、王志红
联勤保障部队第九〇〇医院

目的 对一例临床表现为全身网状色素异常，伴有复发性中耳炎和支气管扩张症的男性患者进行分子诊断。
方法 取患者腹部皮肤切除标本行 HE、刚果红染色及免疫组化检测。分别采集患者及其父母（表型正常）的 EDTA 抗凝外周血各 2 ml，通过家系三人全外显子组测序（Trio-WES）寻找可疑的致病变异，并用 Sanger 测序验证可疑致病变异，并进行致病性分析。
结果 腹部皮肤切除标本 HE 染色：淀粉样变；刚果红：+++；免疫组化：Kappa +，Lambda +。Trio-WES 及 Sanger 测序检出先证者 POLA1 基因 c.1375-354(IVS13)A>G 半合子变异，父亲为野生型，母亲携带杂合变异。该变异已有文献报道，功能研究表明该变异有害。生物学致病性分析：根据 ACMG 遗传变异分类标准与指南，该变异符合 PS3+PM2，判断为可疑致病性变异。此外，该变异先证者为半合子，符合 X 染色体隐性遗传（XR）疾病发病机制，先证者及其家系成员符合表型及基因型的共分离。POLA1 基因变异导致的 X-连锁网状色素异常症主要表现为：反复肺炎，角化过度，腹股沟疝，角膜瘢痕形成，视力丧失，畏光，少汗，结肠炎，胃肠道复发性感染，广泛性网状褐色色素沉着，角膜基质混浊，淀粉样变性等。以上结果提示先证者 POLA1 基因变异与先证者的临床表型相关。
结论 综合分析患者的临床表型、皮肤病理以及 Trio-WES 检测结果，该男性患者为 POLA1 基因 c.1375-354A>G 半合子变异导致的 X-连锁网状色素异常症。

PU-2523

资阳市老年人血脂异常情况统计分析

李军、郑鑫
四川金域医学检验中心有限公司

目的 通过对资阳市公卫体检老年人血脂结果统计分析，了解四川省资阳市不同性别老年人血脂异常发生的概率。
方法 统计 2021 年 3 月至 2021 年 4 月本检测中心检测的年龄在 60 岁以上的资阳市公卫体检人员的血脂结果，参照 2007 年我国《中国成人血脂异常防治建议》：血清甘油三酯（TG）≧1.70mmol/L、胆固醇（TC）≧5.18mmol/L、低密度脂蛋白（LDL）≧3.37mmol/L，高密度脂蛋白（HDL）≤1.04mmol/L,以上有任一血脂指标异常即为血脂异常。
结果 统计人数共计 62465 例，其中男性 28779 例，女性 33686 例。男性 TC 异常 14847 例（51.59%）、TG 异常 5892 例（20.47%）、HDL 异常 2529 例（8.79%）、LDL 异常 9184 例

（31.91%）；女性 TC 异常 23294 例（69.15%）、TG 异常 10467 例（31.07%）、HDL 异常 1585 例（4.71 例）、LDL 异常 14720 例（43.70%）。检测结果显示女性 TC、TG、LDL 异常明显高于男性，男性 HDL 异常明显高于女性，TC、LDL 异常发生率随着年龄的增加而降低。
结论 随着人们物质生活水平的提高，血脂异常在老年人群中普遍存在，已成为影响老年人身体健康的重要因素之一。血脂异常与高血糖、高血压一样，对脏器有缓慢不利的影响，又因为血脂异常不会引起明显的临床症状，常常容易被人们忽视。血脂异常作为引起心脑血管病的重要诱因，需要引起人们的足够认识。关爱老年人的身体健康，应该加大对血脂异常知识的宣传和教育，以此加强老年人自我保健意识。

PU-2524

SMN1 基因的 c.683T>A 及 c.844C>T 突变可触发无义介导的 mRNA 降解

张梦雅
联勤保障部队第九〇〇医院

目的 通过设计 SMN1 小基因，构建野生型及三种无义突变型表达质粒，在转录水平分析其 mRNA 表达量的变化，探究 NMD 在 SMA 中的作用机制。
方法 首先，在 NCBI 上查找 SMN1 基因组序列，选择 HGMD 数据库中记载的位于 SMN1 基因第 1、5、7 外显子的无义突变点（分别对应 c.43C>T、c.683T>A 、c.844C>T），设计包含三种拟突变点的 SMN1 小基因。其次，将其与表达载体 pcDNA3.1(-)/myc-His A 连接，构建野生型表达质粒 PcMV-Mini-SMN-WT；利用突变试剂盒及突变引物得到三种无义突变型表达质粒（E1，E5，E7）。最后，将四种质粒转染 HeLa 细胞，通过 qRT-PCR 分析质粒正常转录本的表达水平；并通过翻译抑制剂放线菌酮的处理，观察药物处理前后 mRNA 表达量的变化，从而明确 NMD 在 SMA 中的作用。
结果 实验数据显示野生型表达质粒发生正确剪接；qRT-PCR 结果显示其中两种突变型质粒（E5，E7）的正常转录本表达水平与野生型相比明显下降；而 E1 突变体与野生型质粒的 mRNA 表达量无明显差异。此外，在放线菌酮处理后，E5 和 E7 突变型质粒的 mRNA 表达量明显升高。而野生型及 E1 质粒的 mRNA 表达量无明显变化。
结论 本研究通过构建 SMN1 小基因体外模型及 NMD 体外实验发现无义突变 c.683T>A 及 c.844C>T 发生了 NMD，而无义突变 c.43C>T 未触发 NMD，提示其发生了 NMD 逃逸。这为 NMD 在 SMA 发病机制中的作用提供了线索。

PU-2525

免疫球蛋白与 hsCRP 在膝骨关节炎中的相关性分析

甘苓伶
绵阳市中心医院

目的 探讨免疫球蛋白与超敏 C 反应蛋白（high-sensitivity C reactive protein， hsCRP）在膝骨关节炎（knee osteoarthritis, KOA）中的相关性。
方法 回归性收集绵阳市中心医院 2019 年 1 月-2021 年 3 月诊断为 KOA 的患者 112 例（KOA 组）及健康体检者 89 例（HC 组），比较两组的 hsCRP、免疫球蛋白(immunoglobulin, Ig)和补体(complement, C)水平有无差异。分别根据 hsCRP 和 Kellgren-Lawrence (K-L)分级将 KOA 患者分为不同的组，并比较上述免疫指标的差异。分析 hsCRP、K-L 分级与免疫指标之间的相关关系。
结果 与对照组相比，KOA 患者血清中 hsCRP 和 IgE 升高，而 IgG 和 IgM 降低（P<0.05）。hsCRP>3g/L 的 KOA 患者 IgA 和 C4 水平较 hsCRP≤3g/L 的高（*P*<0.05）。在不同的 K-L 分级中，

显示Ⅰ和Ⅲ组间 IgA 和Ⅰ，Ⅳ组间 IgE 有统计学差异（*P*<0.05）。相关性分析显示，hsCRP 与 C3、C4 呈正相关（*r* 分别为 0.275，0.255，*P* 均<0.001），K-L 分级与 IgA 和 IgE 呈正相关(*r* 分别为 0.270，0.240，*P* 均<0.05)。

结论 免疫球蛋白的表达失衡与膝骨关节炎的炎症过程相关，可能对进一步认识骨关节炎的发病机制和临床抗炎治疗有一定的应用价值。

PU-2526

男男性行为者 HIV 辅助伴侣告知与伴侣检测：一项随机对照研究

胡清海、徐俊杰、姜拥军
中国医科大学附属第一医院

背景 辅助伴侣告知（PN）是提高异性性传播途径 HIV 感染者伴侣检测 HIV 的有效方法，但其在男男性行为人群（MSM）中的实施效果研究较少。

方法 我们在辽宁省沈阳市开展了一项随机对照试验，目的是在新诊断 HIV 阳性的 MSM 中比较被动 PN 与辅助 PN 推动伴侣 HIV 检测的效果。在采用传统伴侣告知策略的被动 PN 组（对照组）中，我们鼓励研究对象（索引病例）向其伴侣披露自身 HIV 感染状况，并推动其伴侣接受 HIV 检测。在辅助 PN 组（干预组）中，我们向索引病例提供 HIV 自检包（HIVST），由他们传递给伴侣进行 HIV 检测；或者在索引病例知情同意后，由 MSM 社区服务组织（CBO）的工作人员以匿名帮助联系并推动其伴侣接受 HIV 检测（含金钱激励）。研究的主要结局事件为在随机分组并实施干预后的四个月内索引病例推动伴侣接受 HIV 检测的比例是否有差异。该研究已在 chictr.org.cn（ChiCTR1800017813）预注册。

结果 2017 年 8 月至 2019 年 1 月，共招募了 187 名新诊断 HIV 阳性的 MSM。索引病例被随机分配到被动 PN 组（90 人）或辅助 PN 组（97 人）。在干预后四个月的随访中，被动 PN 组的每个索引病例的伴侣人数，披露/推荐伴侣检测人数，伴侣检测人数和 HIV 阳性人数分别为 3.2、0.7、0.2、0.03 个，而辅助 PN 组分别为 4.0、1.0、0.5 和 0.11 个。辅助 PN 组中有 35%的索引病例推动其伴侣进行了 HIV 检测，而被动 PN 组仅为 17% (P = 0·004)。辅助 PN 组被告知的伴侣中有 49%接受了 HIV 检测，而被动 PN 组仅为 28% (P = 0·007)。

结论 HIV 自我检测和 CBO 外展服务相结合的辅助伴侣告知策略可以显著增加 HIV 阳性 MSM 伴侣的 HIV 检测率。

PU-2527

免疫球蛋白与超敏 C 反应蛋白在膝骨关节炎中的相关性分析

甘苓伶
电子科技大学附属医学院绵阳市中心医院

目的 探讨免疫球蛋白与超敏 C 反应蛋白（high-sensitivity C reactive protein， hsCRP）在膝骨关节炎（knee osteoarthritis, KOA）中的相关性。

方法 回归性收集绵阳市中心医院 2019 年 1 月-2021 年 3 月诊断为 KOA 的患者 112 例（KOA 组）及健康体检者 89 例（HC 组），比较两组的 hsCRP、免疫球蛋白(immunoglobulin, Ig)和补体(complement, C)水平有无差异。分别根据 hsCRP 和 Kellgren-Lawrence (K-L)分级将 KOA 患者分为不同的组，并比较上述免疫指标的差异。分析 hsCRP、K-L 分级与免疫指标之间的相关关系。

结果 与对照组相比，KOA 患者血清中 hsCRP 和 IgE 升高，而 IgG 和 IgM 降低（P<0.05）。hsCRP>3g/L 的 KOA 患者 IgA 和 C4 水平较 hsCRP≤3g/L 的高（P<0.05）。在不同的 K-L 分级中，显示Ⅰ和Ⅲ组间 IgA 和Ⅰ，Ⅳ组间 IgE 有统计学差异（P<0.05）。相关性分析显示，hsCRP 与 C3、

C4 呈正相关（*r* 分别为 0.275，0.255，*P* 均<0.001），K-L 分级与 IgA 和 IgE 呈正相关(*r* 分别为 0.270，0.240，*P* 均<0.05)。
结论 免疫球蛋白的表达失衡与膝骨关节炎的炎症过程相关，可能对进一步认识骨关节炎的发病机制和临床抗炎治疗有一定的应用价值。

PU-2528

2 例粪类圆线虫感染病例的分析讨论

郭江梅
江西省人民医院

目的 通过粪类圆线虫感染病例诊治过程分析，提高对粪类圆线虫病的综合认识，为有效防治提供依据。
方法 针对 2 例粪类圆线虫感染病例，1 例为肾移植术后 7 个月，正在接受免疫抑制剂治疗；另 1 例是 2 月之前曾使用激素时长 7 个月的患者。查阅两患者既往史、用药史、临床症状、实验室检测等资料，分析感染粪类圆线虫的高危因素，探讨感染后的控制及治疗措施。
结果 免疫力低下、长期使用激素、免疫抑制剂及基础疾病较多的患者是感染粪类圆线虫的高风险人群。对于肾移植术后感染粪类圆线虫的患者，会面临驱虫用药时间较长，而免疫抑制剂也不能停用的两难境地。文中两例，阿苯达唑日用量不同，已停用激素的患者，阿苯达唑 400mg/d,药用时长 13 天；肾移植术后患者阿苯达唑 200mg/d，药用时长超过 60 天，期间抗排异药物未变。治疗上都获得了理想效果。
结论 粪类圆线虫在不同人群中感染率不同，感染后致病作用差异大，医务人员要区别对待，并予以重视。阿苯达唑驱虫药，日用量可视病情而异，早期、足程治疗可避免引发播散性超度感染的严重后果。

临床实验室标准化管理体系

陈淑婧
武城县人民医院

随着“以患者为中心，以提高医疗服务质量为核心”的医院管理活动在全国深入展开，为临床实验室的进一步发展提供了机会。根据《医疗机构临床实验室管理方法》的要求，结合我国临床实际工作，对医学实验室进行科学化、规范化、标准化管理。

PU-2530

抗 Jo-1 抗体与疾病诊断相关性的回顾性分析

杨懿祺、李欣
南方医科大学南方医院

目的 探究抗 Jo-1 抗体联合患者临床症状在疾病诊断上的意义，为该指标的临床应用提供参考和依据。
方法 将 2019-2020 年南方医院临床资料完整的 122 例抗 Jo-1 抗体阳性患者作为阳性组（观察组），以 244 例抗 Jo-1 抗体阴性、抗核抗体（antinuclear antibody, ANA）阳性患者作为阴性组（对照组）。收集两组患者的一般资料，疾病诊断，临床症状，对两组资料进行统计学分析。

结果 观察组患者男女比例为 1:1.39，平均年龄为 50（39，58.25）岁，两组患者性别、年龄组成差异均无统计学意义（P>0.05）。在临床症状方面，阳性组肌痛发生率（18.85%）高于阴性组（4.51%）（P<0.05）。在疾病诊断上，阳性组患者多发性肌炎/皮肌炎（polymyositis/dermatomyositis, PM/DM）发生率（29.51%）高于阴性组（2.87%）（P<0.05），且阳性组患者发生 PM/DM 的风险约为阴性组患者的 14 倍；糖尿病发生率阳性组（19.67%）高于阴性组（10.66%）且差异有统计学意义（P<0.05），两组糖尿病分类比例相近，均以 2 型糖尿病居多；间质性肺部病变（interstitial lung disease, ILD）以阳性组发生率较高，但两组比较无统计学差异（P=0.055）；恶性肿瘤以阴性组患者发生率略高，但差异无统计学意义（P=0.203）。
结论 抗 Jo-1 抗体阳性患者以中老年女性为主，临床症状以肌痛发生率高，疾病诊断以 PM/DM 及糖尿病，尤其是 2 型糖尿病，发生率高，提示抗 Jo-1 抗体联合临床症状对疾病诊断有重要意义。

PU-2531

肠道菌群与甲状腺相关疾病的研究进展和思考

李营
德州市人民医院

肠道菌群是人体内最大的共生菌群，与人体构成一个动态平衡的微生态系统，在促进人体健康发育方面有着重要作用。当生态失衡时，便可能诱发内分泌及免疫相关疾病、炎症、肿瘤等，这已在糖尿病、炎症性肠病、结直肠癌、肝癌、乳腺癌的研究中得到证实。甲状腺作为机体重要的内分泌腺, 其分泌的甲状腺激素在新陈代谢、生长发育等方面起关键作用。越来越多的证据表明,肠道菌群在肠-甲状腺轴功能反应中起了十分重要的作用,由此衍生出肠道菌群-肠-甲状腺轴这一新的概念。肠道菌群可以通过肠-甲状腺轴影响免疫系统，进而对甲状腺功能产生影响。健康的肠道菌群不仅对免疫系统活性有益，而且对甲状腺功能也有益。甲状腺和肠道疾病普遍并存，桥本氏甲状腺炎（HT）和 Graves 病是最常见的自身免疫性甲状腺疾病（autoimmune thyroid diseases ,AITD）。研究发现 AITD 和甲状腺癌都存在肠道菌群失调，发现致癌性和炎症性菌株数量增加。机制可能涉及到以下几个方面：（1）肠道菌群通过促进炎症反应和降低免疫耐受来改变免疫应答，破坏肠膜，导致肠通透性增加，导致局部炎症。（2）肠道菌群在营养物质、药物和激素的代谢中发挥至关重要的作用，包括外源性和内源性碘甲状腺原氨酸和涉及甲状腺体内平衡的微量营养元素，包括碘、硒、锌和铁。（3）肠道菌群紊乱可能导致甲状腺素吸收不良。动物研究表明益生菌对甲状腺疾病有益，可作为甲状腺疾病的辅助疗法，但仍需要人体研究来进一步阐明肠道-甲状腺轴的重要性和干预的可能性。考虑到上述肠道菌群和微量营养元素对甲状腺功能和药物的潜在影响，提示可以根据患者的肠道细菌组成做出更具体更精准的多元素预防策略，诊断方法，评估方案和治疗方案。未来有必要进行充分的人类研究来评估肠道微生物群对甲状腺功能和疾病的影响。

PU-2532

DSA 在肾移植术方面的研究与进展

赵云平
昆明市第一人民医院甘美医院

目前在临床中，肾移植是治疗肾衰竭最有效的治疗方法之一。 而即便在开展进行肾移植术后，移植物在受者体内依然面临着诸多挑战。抗体介导的排斥反应（AMR）的发生就是导致移植肾失去功能的主要原因，而 AMR 主要是由受者体内存在的 DSA 介导的，研究发现，患者体内的供者特异性抗体无论是预存 DSA 还是新生 DSA 都对移植物的存活产生着极其不利的影响。DSA 的检测及后期动态监测对肾移植术后受者体内移植物的存活及正常功能都有着极其重要的意义。因此针对 DSA 的来源、检测 DSA 的方法和技术的进步就变得非常重要。

PU-2533

区域检验中心的建设和前景

王晓
武城县人民医院

建设区域检验中心为了配合医共体的建设，实现本区域内的检验资源共享,增加经济收入,提升检验人员自身业务水平,为患者就诊的检验质量提供保障,使患者在基层医院也可以享受到更专业更高水平的检验技术,以“一切为了病人”为宗旨，区域检验中心的前景不可限量。

PU-2534

甲型肝炎病毒 2C 蛋白的解旋活性研究

程振云
郑州大学第一附属医院

将甲型肝炎病毒（HAV）编码的 2C 蛋白与同属小 RNA 病毒目的其它几种病毒的氨基酸序列进行同源比对后，发现该蛋白的氨基酸序列中含有三个比较保守的氨基酸基序，根据同源比对的结果设计了 2C 基因的特异性扩增引物，并在引物中引入适当的酶切位点（XbaI 和 KpnI），通过 RT-PCR 方法扩增获得 HAV 非结构蛋白 2C 的基因片段，回收该目的片段并与 T 载体进行连接后，转化到 DH5α 的感受态细胞中，挑选阳性克隆并提取其质粒，将测序正确的质粒和 pFastBacTMHTA-MBP 载体进行双酶切并回收目的片段，连接后转化到 DH10BacTMEcoli 感受态细胞中获得重组穿梭载体，经转染和感染昆虫细胞 Sf9 后，获得重组蛋白 MBP-2C，通过 SDS-PAGE 和 western-blot 分析，检测到 2C 蛋白成功表达，并确定了 2C 蛋白的解旋功能。

PU-2535

临床医学检验质量控制影响因素的探讨

马春苗
山东第一医科大学第一附属医院（山东省千佛山医院）

目的 分析和探讨临床医学检验质量控制的影响因素，以便采取针对性控制与管理措施，提升检验质量。
方法 选取在本院进行临床医学检验的患者 300 例作为研究对象，所有患者均严格按照临床规范要求，进行检验准备、样本采集及处理和分析，当结果与预期不符、样本丢失或污染、结果差异较大等，均视为检验失误。采用 SPSS20.0 统计学软件对数据进行处理，以 P＜0.05 为差异有统计学意义，分析患者出现检验质量问题原因及质量影响因素。
结果 经过对比分析发现，在 300 例患者 812 例次检验中，失误为 36 例，占比 4.43%，且在准备阶段失误或误差概率最高，其中以患者未进行良好检验前准备为主要影响因素，与其他阶段相比，差异有统计学意义（P＜0.05）。
结论 临床检验工作开展进行时，需要充分考虑到影响因素及质量控制关键点所在，根据以上分析结果来看，尤其在检验准备阶段，受患者综合影响及采集等影响，导致最终检验质量出现问题影响因素相对较多。而患者对检验配合程度及重视程度不够，则会影响到相关检验结果准确性。针对这一特点，就临床实际工作情况来看，需要加强与完善准备阶段、采集阶段及检验阶段三个阶段的质量管控措施，做好健康宣教，提前检查标本采集器皿、部位等，相关专业人员做好专业学习及控制工作。临床医学检验过程中，不同阶段所存在影响质量因素具备着一定差异，要明确常见质量危险因素，采取针对性控制与管理措施，提升检验质量。

PU-2536

肝移植患者术后 ALT、AST 和 TBIL 的变化分析

顾怡[1]、周景艺[1]、沈薇[2]
1. 上海交通大学医学院附属仁济医院
2. 上海交通大学医学院附属仁济医院

目的 通过分析肝移植术后 ALT、AST 和 TBIL 变化规律，协助临床医生综合判断手术效果。
方法 观察分析 96 例 2020 年我院肝移植患者术前及术后 1 天，2 天，4 天和 7 天的丙氨酸氨基转移酶（ALT），天门冬氨酸氨基转移酶（AST），总胆红素（TBIL）的变化规律。
结果 96 例患者根据原发病，分为重肝组（N=24 例）和肝硬化组（N=72 例），术前及术后 1 天，2 天，4 天和 7 天 ALT 的均值分别为 78U/L 和 27.5U/L，289 U/L 和 482.5U/L，270.5 U/L 和 351.5U/L，158 U/L 和 190U/L，102.5 U/L 和 98U/L，AST 的均值分别为 106.5U/L 和 43U/L，422 U/L 和 947U/L，197 U/L 和 283U/L，55U/L 和 66.5，42.5U/L39U/L，TBIL 的均值分别为 485.7μmol/L 和 37.1μmol/L，260.5μmol/L 和 78μmol/L，138.6μmol/L 和 50.6μmol/L，93.5μmol/L 和 32.25μmol/L，62.6μmol/L 和 26.45μmol/L。
结论 重肝组 ALT 和 AST 术后先增高，再逐步恢复正常，ALT 的增幅明显小于肝硬化组，说明重肝组的缺血再灌注损伤较小，术后 AST 比 ALT 升的快，降得也快，变化更敏感。重肝组术前总胆红素明显高于肝硬化组，术后总胆红素逐步下降，肝硬化组术后略升高，然后逐步下降。

PU-2537

检验科预防医患纠纷的策略分析

邢银婷、白晶玲
哈尔滨医科大学附属第一医院

目的 本文旨在分析并提出检验科预防医疗纠纷的策略。
方法 通过临床实践工作，总结近期医患纠纷恶性事件，分析检验科工作人员在面对医疗纠纷中应采取哪些策略，能有效预防及处理面临的医疗纠纷，避免伤医事件的发生，同时维护患者的利益不受侵犯。
结果 提高检验科工作人员的检验知识及临床思维，综合素质、对患者的利益维护的责任感，建立检验监管保障体系，逐步推广医院检验的信息化、透明化操作，可以作为各级医院检验科预防医患纠纷的策略。
结论 上诉措施已证明有助于建立融洽的医患关系，降低医疗纠纷发生率，值得推广应用。

PU-2538

尿液检验、生化检验在糖尿病诊断中的对比

徐燕、黄婷、汤伟明、鲍微、俞小飞
溧阳市人民医院

目的 对比分析尿液检验与生化检验对糖尿病的诊断价值。
方法 以我院收治的糖尿病患者 50 例为研究对象，即生化组，研究时段选取范围 2019 年 1 月～2019 年 10 月，随机选取同期体检者 50 例为对照组，两组都进行生化检验及尿液检验，以患者检验有效率、检验满意度、血糖指标、血脂指标为观察指标，并统计对比观察结果。
结果 生化组进行血糖检测的有效率为 100%、检验满意度为 98.00%，显著高于生化组进行的尿糖检测（P＜0.05）。生化组空腹血糖（FPG）、糖化血红蛋白（HbA1c）分别为（7.86±1.32）

mmol/L、（8.91±1.26）%，均显著高于对照组（P＜0.05）。生化组总胆固醇（CHOL）、甘油三酯（TG）、低密度脂蛋白胆固醇（LDL-C）、高密度脂蛋白胆固醇（HDL-C）分别为（6.41±0.52）mmol/L、（2.89±0.36）mmol/L、（3.92±0.31）mmol/L、（1.09±0.20）mmol/L，与对照组比较具有显著差异（P＜0.05）。

结论 在糖尿病诊断中，生化检验有效性显著高于尿液检验，两者结合起来更有利于临床诊断与治疗。

PU-2539

疫情背景下接收多单位送检新型冠状病毒核酸标本管理方式探讨

陈曦妍、罗立权
乐山市市中区人民医院

目的 确保外单位送检新型冠状病毒核酸标本分析前质量，高效准确完成实验室内标本处理流程，即时反馈报告并上传国家平台。

方法 外单位与实验室利用信息化平台进行数据交换，包括被检人信息录入、标本核收、报告出具、信息上报等流程，同时构建网络沟通平台，实时交流传递信息；实验室制定可操作性强的标准操作程序（SOP）文件及工作手册；外包物流系统至第三方，专业转运标本。

结果 新冠病毒核酸标本保质保时送达实验室，实验室按既定流程快速处理标本。每日平均检测500（237，684）份核酸标本情况下，外单位标本到达实验室后出具报告平均时间为 3 小时 16 分钟（2 小时 1 分钟，5 小时 16 分钟）。

结论 网络实时互通与信息化平台在多单位合作中不可或缺，多部门规范一致的操作流程为实验室分析前、中质量控制保驾护航，此疫情背景下分子实验室接收多单位送检标本模式亦为日后区域医学检验中心管理方式提供参考。

PU-2540

甲状腺细针穿刺脱落细胞学检查在临床中的应用价值

韩静颖
山东第一医科大学附属省立医院

目的 探讨甲状腺细针穿刺细胞学在临床中的应用价值。

方法 2017 年至 2018 年 5 月选择在本院诊治的 51 例甲状腺结节患者作为研究对象，所有患者都给予甲状腺细针穿刺，并同时送检脱落细胞学检查及病理分析。经过脱落细胞学检查下分析后，与病理结果比对。

结果 在 52 例患者中，甲状腺细针穿刺脱落细胞学检查中阳性 21 例，阴性 26 例,+/-4 例。病理诊断阳性 23 例阴性 28 例，符合率达 82%。

结论 甲状腺细针穿刺脱落细胞学检查是一项准确可靠、简单、经济的术前诊断方法，有很好的临床应用价值。

PU-2541

免疫学检验联合检测在诊断类风湿关节炎诊断中的应用效果观察

李诗达
荣县人民医院

目的 探讨免疫学检验联合检测在诊断类风湿关节炎诊断中的应用效果。
方法 选取我院 2020 年 1 月-2021 年 1 月收治的 30 例类风湿关节炎作为本次研究对象，并将其设置为观察组；同一时期入院检查的 30 例健康体检患者作为本次对照组，两组分别进行免疫学检验联合检测，对比两组诊断效果。
结果 观察组的 RF 与抗 CCP 指标检测阳性率较对照组高，且患者的免疫球蛋白 G 水平高于对照组，（$p<0.05$）。
结论 免疫学检验联合检测诊断类风湿关节炎有极好的效果，能够提升患者的阳性检出率，值得推广。

PU-2542

检验科噪音污染现状及应对策略

邢银婷、白晶玲
哈尔滨医科大学附属第一医院

目的 本实验通过检测检验科声音分贝值，对比国家环境保护局提出的医院噪音标准，判断检验科噪音污染严重程度，并探讨解决措施。
方法 选择 SMART SENSOR AS824 数字分贝检测仪检测检验科共计 8 台大型检验分析仪及相应审核报告处作为主要研究对象，选择办公室及窗边较安静 2 处进行对照。
结果 所有分析仪及相应结果审核发放处均出现严重的噪音污染，仪器旁平均分贝值为 72.13dBA，超出医院噪音标准的 44.25%；结果发放处平均分贝值为 68.29dBA，超出医院噪音标准的 36.57%。
结论 检验科噪音污染的原因清晰，因噪音污染对医务人员健康损害较大，应在声源、传播媒介及接受者等 3 个方面采取措施，来降低噪音污染导致的职业损害。

PU-2543

D -二聚体 纤维蛋白原与 C 反应蛋白水平检测对早期诊断尘肺的价值分析

李明[1]、王雯茜[2]、张新静[1]
1. 新乡市职业病防治研究所，职业病科
2. 新乡市中心医院

目的 探讨 D-二聚体（DD）、纤维蛋白原（Fib）与 C 反应蛋白（CRP）水平检测对早期诊断尘肺的价值。
方法 选取 2018 年 8 月至 2020 年 8 月我院收治的 70 例尘肺患者作为研究组，按是否合并肺心病分为 2 个亚组，即研究 1 组（14 例，合并肺心病）、研究 2 组（56 例，单纯尘肺）。另外选取同期 40 名健康体检者作为对照组，检测 2 组患者血浆 DD、Fib 及 CRP 水平，并对比研究组不同分期患者血浆 DD、Fib 及 CRP 水平。
结果 研究组患者血浆 DD、Fib 及 CRP 水平均高于对照组，差异有统计学意义（$P<0.05$）。研究 1 组患者血浆 DD、Fib 及 CRP 水平均高于研究组、研究 2 组，差异有统计学意义（$P<0.05$）。研究组不同分期患者血浆 DD、Fib 及 CRP 水平相比，差异无统计学意义（$P>0.05$）。

结论 尘肺患者血浆 DD、Fib 与 CRP 水平均高于健康人群，检查其水平对早期诊断尘肺具有重要意义。

PU-2544

四川省资阳市雁江区老年人 ALT 检测结果分析

郑鑫、李军
四川金域检验医学检验有限公司

目的 通过对四川省资阳市雁江区老年人群的丙氨酸氨基转移酶结果分析，了解四川省资阳市雁江区 60-90 岁老年人群肝功能情况以及 ALT 上升的比例关系。
方法 回顾性分析 2021 年 3 月至 2021 年 5 月的 61308 例四川省资阳市雁江区老年人丙氨酸氨基转移酶结果检测，并按不同性别、年龄对检测结果进行统计、比较、分析。
结果 2021 年 3 月-5 月共有 61308 名 60-90 岁资阳市雁江区老年人参与健康体检 ALT 项目检测，60-70 岁男性 ALT 升高共 686 例，比例为 5.56%；女性共 1215 例，比例为 7.76%。71-80 岁男性 ALT 升高共 455 例，比例为 3.54%；女性共 736 例，比例为 5.31%。81-90 岁男性 ALT 升高共 63 例，比例为 2.05%；女性共 118 例，比例为 3.35%。数据显示，女性老年人 ALT 异常率明显高于男性老年人年龄段，并且在 60-90 岁中男性和女性都随着年龄段的增长，ALT 升高比例在降低。
结论 丙氨酸氨基转移酶（ALT），ALT 主要存在于肝、肾、心肌、骨骼肌、胰腺、脾、肺、红细胞等组织细胞中，同时也存在于正常体液如：血浆、胆汁、脑脊液及唾液中，但不存在于尿液中，除非有肾脏损害发生。当富含 ALT 的上述组织细胞受损时，ALT 从细胞中释放增加，进入血液后导致 ALT 活性上升。当除了病理性因素导致的 ALT 上升，也有许多非病理性因素导致的 ALT 上升，比如生活压力、体重指数、疲劳、服用药物等等。通过对 ALT 上升率进行分析发现，60-90 岁随年龄段的段的增加 ALT 升高比例在降低，可能老年人随着年龄的增加，儿女的长大随即肩负起的家庭重任，生活压力越来越小有关。而女性老年人 ALT 异常率明显高于男性老年人年龄段，可能在 60 岁以后，女性体质比男性体质易胖，由于老年人女性基础代谢率会下降，平均每 10 年下降 5%，特别是绝经以后的妇女。中老年以后如果摄取食物的能量和往常一样，就会因为基础代谢率的下降而变胖。所以我们在日常生活中应该合理的控制饮食，注意休息，多关注自己及家人的身体健康。当然当 ALT 检测升高时，应增加检测项目，查出具体 ATL 异常的原因。

PU-2545

检验科危急值报告现状分析

张倩
德州市人民医院

目的 危急值 （Critical Values）是指某项或某类检验异常结果，而当这种检验异常结果出现时，表明患者可能正处于有生命危险的边缘状态，临床医生需要及时得到检验信息，迅速给予患者有效的干预措施或治疗，就可能挽救患者生命，否则就有可能出现严重后果，失去最佳抢救机会。“危急值”报告制度的制定与实施，能有效增强医技工作人员的主动性和责任心，提高医技工作人员的理论水平，增强医技人员主动参与临床诊断的服务意识，促进临床、医技科室之间的有效沟通与合作。检验科及时准确的检查、检验报告可为临床医生的诊断和治疗提供可靠依据，能更好地为患者提供安全、有效、及时的诊疗服务。
方法 利用瑞美实验室信息系统（LIS）统计检验科 2020 年 1 月至 2020 年 12 月发生的 10602 例危急值，对危急值项目的上报率、及时率、科室分布、时间分布、标本类型等进行分析，并提出持续改进意见。

结果 医院 2020 年危急值上报率为 98.86% ，及时率为 95.51%，危急值排名前五位的项目分别是：B 型钠尿肽（BNP）、高敏心肌肌钙蛋白 I（hs-cTnI）、尿素（UREA）、血清总二氧化碳（TCO2）和钾（K）。发生危急值最多的科室是心内科、ICU、肾内科、急诊科和呼吸内科。一天中危急值发生高峰时段为 9:00 至 15:00，低峰时段为凌晨 1:00 至 7:00。一周中分布规律为周一至周五较多，周六、周日相对较少。从标本类型分：住院危急值最多，门诊危急值最少，生化危急值最多，其次为血液分析。
结论 危急值的管理需要检验科、 临床科室、 医务部、护理部等多部门沟通合作，过程复杂、涉及人员较多，应加强重视对危急值的管理，并将其作为医疗质量考核的一个重要的内容。实验室需要定期对危急值报告制度进行评估和分析，不断完善危急值项目和范围，解决危急值报告的影响因素，保证快速、高效的将危急值结果报告。作为临床患者的桥梁，检验科定期回顾分析危急值报告数据，修订危急值报告制度，为患者提供更好的服务。

PU-2546

缺氧与类风湿关节炎

李山山
哈尔滨医科大学第一附属医院

类风湿性关节炎（RA）是一种自身免疫性疾病，其特征在于炎症性滑膜增生，关节僵硬，进行性骨侵蚀和软骨破坏。RA 会导致血管密度的改变，新血管形成增加，进而形成慢性炎症和骨骼破坏。涉及多种细胞，其中成纤维样滑膜细胞（FLSs）被认为是导致疾病发生发展的主要细胞，其他免疫细胞大量涌入（如 T 淋巴细胞和巨噬细胞/单核细胞），起到维持炎症的作用。近年来发现缺氧与其密切相关，在此过程中，缺氧是炎症介质的主要调节剂。本文重点探讨了对缺氧和 RA 关系的最新进展。

PU-2547

资阳市地区临床检验危急值管理现状调查

魏铃程
资阳市第一人民医院

目的 调查资阳市范围内各级医院共 166 家医疗机构临床检验危急值管理制度的制订、实施、质量控制和效果评估，并基于实际存在的问题，结合文献资料和专家意见提出建议。
方法 采用网络问卷调查和电话问卷的方式向资阳市各级医院实验室发出问卷，使用专用统计软件对数据进行分析。
结果 有 158 家实验室提交信息，以公立医院、二级和三级综合医院为主。所有的实验室均制订了危急值报告制度，98.10%的实验室有危急值项目清单。有 57.14%的实验室是与临床共同制订了危急值项目；有 35.71%是借鉴其他医院，7.14%是实验室内部制订。仅有 15.58%的实验室针对不同科室设置了个性化的危急值。除血气外，有 74.68%的实验室将血清钾、血糖、白细胞计数、血红蛋白、血小板计数、凝血酶原时间、活化部分凝血活酶时间设为危急值项目。72.73%的实验室规定危急值报告时限在 30 min 内，但 7.79%的实验室对危急值报告时限没有要求。
结论 资阳市医疗机构危急值报告制度在危急值制度的实施过程、危急项目和界限的制订中还存在较大问题，各级医疗机构实验室需根据自身情况，并采纳临床医生的意见综合考虑并结合 2020 年 1 月《急诊检验能力建设和规范中国专家共识》中急诊检验危急值管理，制订出合适的危急值管理体系。

PU-2548

区域血细胞分析（CBC 项目）结果互认体系的构建及应用

王华国
资阳市第一人民医院

目的 为了落实国家卫健委构建三级质量体系的要求以及区域血细胞检验结果互认的需要，进行区域内的血细胞 CBC 项目的互认体系的构建及应用,最终达到区域内检验结果的同质化及一致性。
方法 根据卫生行业标准 WS/T406-2012 及 CLIA'88 能力比对检验的分析质量要求文件的要求，以市检验质控中心为平台，通过培训及进行二级及以上医疗机构实验室结果比对，在比对的实验室满足质量要求后，进而县、区各质控工作站向更多辖区内的医疗机构实验室进行结果互认的辐射。
结果 市质控中心实验室血液细胞分析质量符合要求，与上级临检中心比 CBC 项目达到＜1/4TEa、＜1/5 TEa 及＜1/3 TEa，持续与区域内实验室进行结果比对 CBC 项目达到＜1/3TEa。进行检验结果互认体系的构建及应用后，资阳市 40 余家医疗机构实验室 CBC 项目均符合行业标准要求。
结论 虽然各医院间的检测系统不同，质量标准也有所差异，但通过建立检验结果互认的体系，进行结果互认体系的运用，将区域内实验室检验结果控制在了允许范围内，为实现血细胞分析检验结果互认打下了良好的基础。

PU-2549

根本原因分析法在临床实验室室间质评管理中的应用

冯倩、邓德耀、周林华、薛云松
云南大学附属医院

目的 探讨应用根本原因分析法的管理方式查找室间质评不合格原因，提升检验质量的效果。
方法 云南省第二人民医院检验科运用根本原因分析法的理论和方法，建立质量改进小组，按照根本原因分析法的步骤，对室间质评不合格项目开展调查，分析导致出现不合格的根本原因，并逐条进行针对性改善，制定核查指标，对比改进前后室间质评合格情况。
结果 开展改进小组活动后，国家卫健委临床检验中心全国干化学室间质量评价的成绩由改进前的 35%，上升到改进效果追踪的 1 年中历次成绩分别为 97%、100%、98%，目标达成率为 100%。并且科室人员采用科学的手段进行质量管理的能力有所提高，解决问题的能力提高了 11%、沟通协调能力提高了 27%、自信心提高了 35%、团队凝聚力提高了 11%、工具运用能力提高了 55%、创新能力提高了 15%。
结论 采用根本原因分析法管理方式能够实际有效的解决室间质评不合格的问题，提高工作人员们运用管理工具解决检验科实际问题的能力。

PU-2550

双向 LIS 系统优化尿常规标本检验周转时间的探讨

李阳
郑州大学第一附属医院

目的 统计门诊化验室在使用双向 LIS 信息系统处理尿常规标本检测前后对尿常规标本检验周转时间的影响。
方法 利用医院的 LIS 系统统计门诊化验室使用双向 LIS 系统检测标本前后的的尿常规检验周转时间，计算 TAT 时间合格率。

结果 门诊检验尿常规检验周转时间目标值是 30min，使用双向 LIS 传输之前两个月的合格率分别为：84.53%和 83.31%。使用双向 LIS 传输之后的两个月的合格率分别为：91.23%和 94.69%
结论 双向 LIS 系统传输可有效提高尿常规检测的检验周转时间，增加尿常规检测的准确性。

PU-2551

297 例肺结核患者结核菌耐药性分析

汤新乐[1]、安嘉俊[2]
1. 新疆医科大学第六附属医院
2. 新疆医科大学第八附属医院

目的 对 297 例肺结核患者行结核耐药性检测并分析。
方法 搜集 2021.3-2021.6 月新疆医科大学第八附属医院根据《wS2882017 肺结核诊断》确诊的 297 例患者的痰培养标本及患者信息，利用结核分枝杆菌利福平耐药突变检测试剂盒、结核分枝杆菌异烟肼耐药突变检测试剂盒、结核分枝杆菌氟喹诺酮耐药突变检测试剂盒、结核分枝杆菌乙胺丁醇耐药突变检测试剂盒，分别对利福平（RFP）、异烟肼（INH）、氟喹诺酮类、乙胺丁醇（EMB）进行耐药性检测。
结果 总耐药率为 32.32%，耐多药率为 11.45%，多耐药率为 1.01%，任一耐药率分别是 INH（22.90%）、RFP（12.79%）、EMB（8.08%）、氟喹诺酮（5.39%），EMB、INH、RFP 均出现单耐药。
结论 297 株结核分枝杆菌总耐药率和耐多药率与全国第五次结核病流行病学抽样调查报告相比，总耐药率低而耐多药率高；一线抗结核药物均出现单耐药，除 EMB 外，单耐药率＞5%；多耐药率为 1.01%。耐药情况仍不容忽视，需持续进行耐药性监测和提升临床医师使用抗结核药物的正确意识。

PU-2552

血清免疫球蛋白、补体和同型半胱氨酸在儿童肾病综合征诊断中的潜在价值分析

王晔
江西省儿童医院

目的 探究血清免疫球蛋白、补体和同型半胱氨酸在儿童肾病综合征中的含量与同时期体检的相同年龄段的正常儿童的异同，建立区分标准，分析其检测价值及临床意义，并推测导致其差异存在的可能机制。
方法 收集江西省儿童医院自 2019 年 12 月至 2020 年 1 月确诊为肾病综合征的患儿 25 例作为观察组，收集同时期体检的相同年龄段的正常儿童 30 例作为对照组，检测其血清免疫球蛋白、补体和同型半胱氨酸的水平，使用 SPSS 软件分析单个研究指标诊断肾病综合征患儿的最佳截断值，分析上述部分指标联合检测区分肾病综合征患儿与正常儿童的潜在价值。
结果 与对照组健康儿童相比，原发性肾病综合征患儿血清中的 IgG 和补体 C3 水平下降，差异有统计学意义（P<0.05）；IgA、IgM、IgE 水平和同型半胱氨酸水平显著升高（P<0.01）。肾病综合征患者的补体 C4 水平与对照组健康儿童相比有所下降, 但差异没有统计学意义（P>0.05）。区分肾病综合征患儿与健康儿童相关研究指标的最佳截断值为：HCY 为 10.5g/L；IgA 为 1.06 g/L；IgM 为 1.02 g/L；IgE 为 103.15 IU/mL；IgG 为 6.72 g/L。
结论 原发性肾病综合征患儿的血清 IgG、IgA、IgM、IgE、补体 C3 和同型半胱氨酸水平与正常儿童相比存在差异，尤其是 IgA、IgM、IgE 水平和同型半胱氨酸水平显著升高，对肾病综合征早期诊断或疗效评估有一定的价值。

PU-2553

婴儿肝炎综合征患儿谷胱甘肽还原酶检测的临床意义

李卫明
江西省儿童医院

目的 探讨谷胱甘肽还原酶检测在婴儿肝炎综合征中的临床意义
方法 本实验收集自 2018 年 7 月至 2019 年 1 月就诊于江西省儿童医院并确诊的 HIS 患者共 70 例，以及正常体检者 30 例。记录患者年龄、性别、诊断、肝功能指标等。统计学处理采用 SPSS22.0 统计软件，如果数据符合正态分布，则用 表示计量数据，两组间比较采用 t 检验，符合正态分布的计量数据采用 Mann-Whitney U 秩和检验。正态分布的计量资料之间的相关性分析采用 Pearson[xb21cn1]，非正态分布的资料相关性分析采用 Spearman 相关分析。临界值用 ROC 曲线分析，P＜0.05 为有差异，认为具有统计学意义。
结果 本实验共纳入 HIS 患者 70 例，其中女性患者 35 例，男性患者 35 例，HIS 患者血清 GR 平均水平为 95.54（53.5，248.2）U/ml，正常组血清 GR 平均水平为 60.03（42.3，77.9）U/ml，HIS 患者血清 GR 平均水平显著高于正常者，组间对比存在明显差异（Z=-6.491，P=0.000）。采用 ROC 曲线分析确诊 HIS 的最佳 GR 血清浓度的临界值，结果显示确诊 HIS 的血清 GR 的最佳临界值为 72.55U/L，敏感度与特异性分别为 77.1%、93.3%，曲线下面积（AU）为 0.911。早期血清 GR 水平与 ALT、AST 水平呈负相关。
结论 血清 GR 是诊断 HIS 的重要血清学标志物，可以用于对 HIS 的早期发现。

PU-2554

海南省东方、陵水区域的育龄夫妇葡萄糖-6-磷酸脱氢酶缺乏症的检出率的筛查调查

王炜钰、陈积辉、徐春丽、陈美才
海南金域医学检验中心有限公司

目的 筛查两地葡萄糖-6-磷酸脱氢酶缺乏症患者并了解他们的患病情况，以此对他们的生活和临床用药进行一定的干预。
方法 对于这 12110 名育龄夫妇，采用葡萄糖-6-磷酸脱氢酶（G6PD）和 6-磷酸葡萄糖酸脱氢酶（6PGD）测定他们红细胞中葡萄糖-6-磷酸脱氢酶的含量。
结果 在 12110 名育龄夫妇中，检测到患有葡萄糖-6-磷酸脱氢酶缺乏症的人一共有 798 例，发病率为 6.59％。在东方市检查的 3485 例中，检出葡萄糖-6-磷酸脱氢酶缺乏症的男性和女性患者数差不多，分别为 96 例和 94 例，男性和女性的发病率分别为 5.53％和 5.42％。陵水县受检人数为 8626 人。共检出 350 名男性患者，发病率为 4.05％；共检出女性患者 258 人，发病率为 3.00％。
结论 海南省是属于葡萄糖-6-磷酸脱氢酶（G6PD）缺乏症检出率较高的地区之一，东方市和陵水地区的发病率远远高于海南省的平均发病率（3.17％）[1]。应加强对孕期夫妇的宣传教育，以促进他们了解更详细的有关于葡萄糖-6-磷酸脱氢酶缺乏症的知识，让他们对自己日常生活中的饮食进行调节，另一方面也可以使临床医生给予关注以避免严重的溶血性贫血、高胆红素血症[2]等疾病的发生。

PU-2555

Targeting the IDO-BCL2A1-cytochrome c pathway promotes apoptosis in oral squamous cell carcinoma

Qiaoping Zheng[2]、Guifang Gan[2]、Xianfu Gao[1]、Qingqiong Luo[2]、Fuxiang Chen[2]
1. Shanghai Profleader Biotech Co., Ltd
2. Ninth People's Hospital, Shanghai Jiao Tong University School of Medicine

Purpose Indolamine 2,3-dioxygenase (IDO) is the rate limiting enzyme of tryptophan degradation and plays an important role in the progress of several cancers.This research aimed to explore the role of IDO in the growth of oral squamous cell carcinoma (OSCC) cells.
Methods IDO expression in OSCC tissues was analyzed by Oncomine database and immunohistochemistry.Kaplan-Meier Plotter survival analysis was used toidentify the correlation between IDO expression and OSCC prognosis. Tryptophan (TRP) and kynurenine (KYN) content in serum samples of OSCC patients and healthy controls were determined by ultra performance liquid chromatography tandem mass spectrometry. Cell counting kit-8assay, cell proliferation assays and flow cytometerywere used to assess the effect of IDO inhibition on OSCC growth using shRNA or IDO inhibitor in vitro. Mechanistically, an apoptosis-related genes PCR array was used to explore the underlying mechanism involved in IDO-regulated apoptosis in OSCC cells. An OSCC xenograft mouse model was established to verify the predicted function of IDO inhibition and related mechanism in vivo.
Results IDO expression in OSCC tissues was upregulated. The KYN/TRP ratio in serum samples of OSCC patients was higher than that of healthy controls, indicating that IDO activity was much higher in OSCC.IDO expression was negatively correlated with OSCC prognosis. Lentivirus-mediated IDO knockdown and IDO inhibitor significantly reduced viability and promoted apoptosis of OSCC cellsin vitro andin vivowith no effect on the proliferation of OSCC cells. IDO inhibition down-regulated BCL2A1 expression and increased release of cytochrome c (Cyto C), which ultimately promoted apoptosis of OSCC cells.
Conclusion Theoverexpression of IDO promotes the growth of OSCC cells directly in vitroand in vivo. The underlying mechanism may relate to the regulation of the BCL2A1-Cyto C signal axis. IDO may be a therapeutic target for the treatment of OSCC.

PU-2556

血清标志物联合应用诊断乳腺癌的研究进展

杜纯怡
呼和浩特金域医学检验所有限公司

乳腺癌(BC)是乳腺上皮细胞在多种致癌因子的作用下，发生增殖失控的现象。它是一种类似于高血压、心脑血管病的慢性病，可在肺、肝、骨、脑等器官发生转移，并破坏其正常组织，受环境、饮食、压力等因素影响，是致女性死亡主要疾病之一。该疾病发病率仍趋于上升，目前临床对于该病的治疗手段较多，包括中药、化疗、靶向治疗、手术等[1]。随着对肿瘤疾病的深入研究，人体正常细胞在癌变的过程中部分脂类、糖蛋白会发生改变，相关抗原表达升高，处于疾病状态时该抗原会出现在血液中，且其水平随着病情进展而上升，因此临床可将脱落至体液中的抗原作为血清肿瘤标志物，通过检测标志物水平诊断疾病[2]。肿瘤标志物是一种反映肿瘤存在的化学类物质，早期诊断、早期治疗是提高生存率的关键。乳腺癌的发生与多基因损伤有关，仅通过单一指标检测的灵敏度较低，无法有效判断疾病情况，易造成漏检，因而联合检测与乳腺癌有相关性的肿瘤标志物来提高诊断效率，故本研究旨在分析这些血清指标联合检测用于乳腺癌诊断中的价值，为今后乳腺癌的诊断提供参考。

PU-2557

血清同型半胱氨酸、维生素 B12、叶酸与急性心肌梗死的相关性研究发展

杜纯怡
呼和浩特金域医学检验所有限公司

急性心肌梗死（acute myocardial infarction,AMI）是冠心病最为严重的类型。近年来，随着生活习惯的改变，急性心肌梗死的发病率逐年升高并有年轻化的趋势。普遍情况认为，老年人是 AMI 的主要发病人群，但是随着近年来经济的发展、人们生活方式的改变、社会压力的增加，近期的研究报道显示[1]AMI 的发病有越来越年轻化的趋势，再加上青年人群对 AMI 无较高的认识和警惕，容易忽视早期症状，这可能与青年人群 AMI 患病率、发病率升高密切相关。AMI 作为冠心病的急危重症，具有相当高的死亡率和致残率，不仅严重威胁人类健康和生命，而且给社会该来沉重的经济负担。血清同型半胱氨酸（homocysteine,Hcy）以及维生素 B12，叶酸等与心脑血管疾病有着密切的联系，甚至在动脉粥样硬化的发病机制中，高 Hcy 血症是一种独立危险因素[2]。故本文结合近几年来国内外相关研究，对 Hcy、维生素 B12、叶酸与急性心肌梗死的相关性作一综述。

PU-2558

探究高盐饮食促进酒精性脂肪肝疾病发展的机制

程绍民、高秀莲、许桂荣、王倩、李新、张真
禹城市人民医院

酒精是引起酒精性脂肪肝（AFLD）的明确原因，且 AFLD 的发展进程受到多种因素的影响，尤其是饮食因素。近期有研究表明，高盐饮食与脂肪细胞增大和肝损伤密切相关，本研究探究高盐饮食对 AFLD 的影响。以 8 周龄 C57BL/6J 雄性小鼠为研究对象，分别进行正常饮食（ND）、高盐饮食（HSD，4% NaCl）、酒精摄入（CE）和高盐饮食+酒精摄入（HSDE）四种处理方式干预。1 个月后，对小鼠的血清生化指标、肝脏损伤程度进行测定。

结果显示，与 ND 组相比，HSD 组、CE 组和 HSDE 组小鼠血清中天冬氨酸转氨酶（AST）、丙氨酸转氨酶（ALT）和碱性磷酸酶（ALP）的活性显著升高以及肝脏组织中的甘油三酯（TG）和丙二醛（MDA）含量显著升高，尤其是 HSDE 组显著高于 CE 组和 HSD 组，表明三组实验组小鼠肝脏均产生脂肪变，且 HSDE 组肝脏损伤程度显著高于另外两组。因此，高盐饮食可促进 AFLD 的发展进程。

PU-2559

日常样品检测结果对仪器和试剂质量监控的评估

钟政荣
上海交通大学医学院附属第九人民医院

目的 通过分析术前八项日常样品的阳性检测率能否实现对仪器和试剂的质量监控。
方法 收集 2018 年 8 月至 2019 年 1 月共 6 个月在 HISCL 5000 化学发光仪上术前八项（包括 HBsAg、HBsAb、HBcAb、HBeAg、HBeAb、HCVAb、HIVAg+Ab、TPAb）检测结果，按照月份和试剂批号进行分组，分别计算各组各指标的（初筛）阳性率以及变异系数，分析不同月份和不同批号之间结果的一致性。
结果 HBsAg、HBsAb、HBcAb、HBeAg、HBeAb、HCVAb、HIVAg+Ab、TPAb 所有月份平均阳性率（%）分别为 8.81±1.01、44.94±3.69、46.24±2.29、1.68±0.48、23.82±3.12、1.33±0.44、

0.34±0.31、2.65±0.29，变异系数（CV，%）分别为 11.44、8.20、4.95、28.47、13.10、33.40、91.59、10.48；术前八项所有批号的平均阳性率（%）分别为 8.46±0.50、43.09±5.08、47.29±2.00、1.95±0.76、25.08±2.68、1.32±0.48、0.48±0.22、2.54±0.25，CV（%）分别为 5.90、11.78、4.23、39.01、10.7、36.68、46.39、10.04；CV 小于 15%的项目有 HBsAg、HBsAb、HBcAb、HBeAb、TPAb。

结论 对于阳性率高的项目，日常样品每月和每批试剂的阳性检测率可以动态监测对仪器和试剂的质量控制。

PU-2560

胃泌素 17 和胃蛋白酶原在胃癌以及萎缩性胃炎的诊断价值

石媛媛
黑龙江金域医学检验实验室有限公司

目的 胃泌素 17 和血清胃蛋白酶原Ⅰ/ⅠⅠ在胃癌以及萎缩性胃炎中的诊断价值，

方法 本文采取的数据是来自北京平谷区中医医院胃镜室２０１９年１月到２０１９年１２月胃镜患者检查２３２例，其中１６５例为良性病例，８５例为萎缩性胃炎患者，８０例为非萎缩性胃炎患者，其中女性患者７６例，男性患者占８９例，还有６７例确诊为胃癌，空腹抽取患者血清进行胃泌素１７ PGI、PGII 的检测，并将胃蛋白酶两项的值计算出来，对上面的指标与萎缩性胃炎和胃癌中的诊断价值进行评估和对比，

结果 关于 PGI 水平胃癌组下降最明显，PGII 萎缩性胃炎组，胃癌组，和非萎缩性胃炎组有明显的降低，G17 水平萎缩性胃炎以及非萎缩性胃炎组无明显变化，但是胃癌组显著升高

结论 PGI，PGII ，两者比值，G17 在胃病良性与恶性的诊断中可以起到非常有意义的价值和一定的鉴别能力，G17 指标在胃窦胃体胃癌初步诊断具有一定意义 ，PGI，PGII 在胃癌诊断有诊断价值，临床意义：PGI/PGII 是胃蛋白酶原的比值，如果胃蛋白酶原比值下降，可能是由慢性萎缩性胃炎引起，慢性萎缩性胃炎会导致胃黏膜和腺体萎缩，需要进行胃镜检查，可以看到维体是否有病变，根据检查后的结果进行治疗。胃黏膜萎缩患者会有异常胃酸分泌，可能出现消化不良的症状，患者可以适当吃酸味食物，可促进胃消化。如果胃蛋白酶原的比值大，一般作为疾病检查的参考。如果患者比例增加明显，可能是由胃蛋白酶原 I 分泌增多引起，但是主要是由患者的胃黏膜损伤，损伤的严重程度，消化性溃疡等多方面引起，需要进一步胃镜检查，因为胃镜检查能准确检查出患者胃黏膜哪个部位具体病变，此外还需要做幽门螺杆菌检查，两者一起检查，结果会更准确些。

PU-2561

基于载脂蛋白谱的急性胰腺炎重症预警模型研究

童学东、江天、邓昆
重庆医科大学附属第三医院

目的 急性胰腺炎的早期诊断和分级有利于临床及时诊断、预测和治疗相关并发症，现有急性胰腺炎诊断指标如淀粉酶（AMY）、脂肪酶（LPS）敏感性和特异性较差。高密度脂蛋白胆固醇(HDL-C)、低密度脂蛋白胆固醇(LDL-C)、载脂蛋白如 apoA1、apoB 等在急性重症胰腺炎的发病过程中具有重要作用。本研究将通过载脂蛋白谱建立诊断模型用于急性胰腺炎的早期诊断。

方法 纳入 2020 年 10 月至 2021 年 3 月我院 62 例经临床明确诊断为急性胰腺炎的患者，同时纳入因其它原因急腹症（如胃炎、阑尾炎、肠炎等）入院的病例 127 例作为对照。分别检测各组 AMY、LPS、甘油三酯(TG)、HDL-C、LDL-C、ApoA-1、ApoB 等指标，通过 logistic 回归计算诊断预测概率，绘制 ROC 曲线并计算 AUC。

结果 与其它原因急腹症患者比较，急性胰腺炎患者早期 ApoA-1 从 1-2 天显著下降（P<0.001），HDL-C 在 3 天以后显著降低（P<0.001），LDL-C 与 ApoB 在 3 天后显著升高（P<0.001）。HDL-C、LDL-C、ApoA-1、ApoB 联合诊断胰腺炎 AUC 0.87。
结论 HDL-C、LDL-C、ApoA-1、ApoB 联合可用于急性胰腺炎早期诊断。

PU-2562

1 例肺炎克雷伯菌重症感染引起骨髓抑制的案例分析

闫荔
山西省心血管疾病医院

目的 通过对一例肺炎克雷伯菌重症感染引起骨髓抑制从而导致三系减低的病例进行临床病理特征及主要原因的分析，从而使临床医生能够快速做出判断，并及时准确的为患者提供正确有效的治疗，提高患者的生存率。
方法 对我院一例肺炎克雷伯菌重症感染引起白细胞，血小板急剧降低的病例进行回顾性分析，此患者白细胞 2020.11.26 做痰培养检测出肺炎克雷伯菌，白细胞于 11 月 26 日一天内从 11.35×10^9/L 降至 2.94 $\times10^9$/L，并与 28 日逐渐回升；血小板于 27 日开始降低并于三天内从 170 $\times10^9$/L 逐步降至 38×10^9/L，血红蛋白于 12 月 1 日开始降低, 从 120 g/L 降至 98 g/L。研究该患者的临床病理特征并对其主要原因进行分析。
结果 该患者三系减低符合骨髓抑制 2 级，并且白细胞、血小板、血红蛋白依次下降，下降的先后时间顺序符合血细胞的生存时间。其病理机制可能与白细胞附壁，非免疫性血小板破坏以及促红细胞生成素（EPO）水平降低等原因有关。
结论 肺炎克雷伯菌重症感染可以引起骨髓抑制并导致三系减低，甚至会达到危急生命值，因此该病例可以为临床医生提高意识，遇到重症感染引起的骨髓抑制可以迅速判断，并采取针对性的治疗措施，改善患者的病情，降低患者的死亡率，提高患者的生命安全。

PU-2563

糖尿病的危害及常见患病因素

张文龙
黑龙江金域医学检验实验室有限公司

据国际糖尿病联盟数据，全球约 4.25 亿成人患糖尿病，中国占 1.14 亿，这意味着全世界有 1/4 的糖尿病患者都在中国，糖尿病人数占全球第一。糖尿病已成为日趋严峻的全球问题。中国 18 岁及以上的成人糖尿病患病率已高达 11.6%，糖尿病前期的患病率更是达到了惊人的 50.1%。

常见患病因素: 1.遗传和体质因素:流行病学研究发现：糖尿病发病具有种族和家族遗传易感性。若双亲都是糖尿病患者，其子二代中约有 5%会患糖尿病;若双亲中只有一个患糖尿病，则子一代得糖尿病的机会更少，且常常是隔代相传。
2.饮食与肥胖因素:糖尿病患者尤其是 2 型糖尿病患者，与长期高糖、高脂肪饮食，体力活动少，身体肥胖有关。人若肥胖，脂肪在细胞积聚，降低了组织细胞对胰岛素的敏感性，使血糖升高。
3.病毒感染和自身免疫因素:包括肠道病毒、柯萨奇 B4 病毒、流行性腮腺炎、脑炎、心肌炎等都会破坏人的胰岛细胞，使人体免疫失控，引起胰岛 B 细胞功能减低，导致糖尿病。
4.情绪与精神神经因素:现代医学认为：精神紧张，情绪激动，心理压力大以及突然遭受心灵创伤等，会引起一系列胰岛素对抗激素的分泌，使血糖升高。
5.酒色因素与化学药物:饮酒是发生糖尿病的危险因素。色欲过度则会伤人肾精。滥服温燥壮阳药，以致机体紊乱，燥热内生，阴津亏损，引起消渴。酒、色对防治糖尿病都十分不利。另外，长期服

用糖皮质激素类、利尿药、降压药、苯妥英钠、兴奋药等化学药物，引起葡萄糖的不耐受性，也会导致糖尿病。
6.胰岛疾病 胰腺炎、胰腺瘤、胰腺全切除或半切除引起胰岛素相对不足而导致糖尿病。
7.妊娠 妇女妊娠时，由于生理变化，身体对胰岛素需要量增加，产生相对性胰岛素不足，可造成糖尿病。
结论 建议糖尿病患者及时去医院就诊。注意饮食，少吃含糖量高的食品和饮料。多运动，多吃水果。

PU-2564

大肠埃希菌的临床分布及耐药性分析

柴小飞[1]、乔飞飞[2]
1. 陕西省府谷县人民医院
2. 陕西省府谷县中医医院

目的 了解大肠埃希菌的临床分布特点以及抗生素耐药情况，为临床合理使用抗生素提供正确依据。
方法 回顾性分析 2020.01.01-2020.12.31 共检出 181 株大肠埃希菌进行抗生素耐药性分析。
结果 2020.01.01-2020. 12.31 共检出 181 株大肠埃希菌，其中女性感染 132 株（72.93%）明显高于男性感染 49 株（27.07%）。感染部位以尿路感染为主 123 株(67.96%)，其次血液 25 株（13.81%），脓液 22 株（12.15%）等。科室主要分布在肾内科 70 株（38.67%），其次普外科 34 株（18.79%），内分泌科 31 株（17.13%）等。阿莫西林/克拉维酸、氨苄西林、氨苄西林/舒巴坦、氨曲南、环丙沙星、莫西沙星、哌拉西林、头孢吡肟、头孢噻肟、头孢他啶、左氧氟沙星 11 种抗生素的耐药率产 ESBLs 菌明显高于非产 ESBLs 菌有显著性差异（P<0.05）。阿米卡星、复方新诺明、哌拉西林/他唑巴坦、庆大霉素、四环素 5 种抗生素耐药率产 ESBLs 菌和非产 ESBLs 菌无显著性差异（P>0.05）。产 ESBLs 菌和非产 ESBLs 菌均未发现对多粘菌素 B、美洛培南、亚胺培南 3 种抗生素耐药。
结论 大肠埃希菌中产 ESBLs 菌 75 例（41.44%）检出率高，且为多重耐药。碳青霉烯类抗生素和多粘菌素 B 是目前治疗产 ESBLs 菌感染的有效抗生素，在临床实践中，应充分参考细菌培养及药敏试验结果，结合患者实际情况进行抗生素的选择，从而降低产 ESBLs 菌，提高临床治疗具有重要意义。

尿镜检法在尿液检测中的重要性

多佳
黑龙江金域医学检验实验室有限公司

目的 探讨尿镜检法在尿液检测中的重要性
方法 选取我合作单位验科于 2019 年 11 月-2019 年 12 月间收治的 400 份合格尿液标本,均采用尿液镜和干化学尿液分析仪进行分别检验,并对于检测结果进行对比。
结果 在所选的 400 例尿液标本中,将红、白细胞两项用两种不同的方法进行比较,结果对比显示,白细胞:干化学法阳性人数为 50 例,阳性率为 12.5%,镜检法阳性人数为 70 例,阳性率为 17.5%。红细胞:干化学法阳性人数为 71 例,阳性率为 17.75%,镜检法阳性人数为 53 例,阳性率为 13.25%。结论 两种方法检测尿液结果有一定的差异,由于许多其他因素的干扰,故应将两种方法结合起来,以提高检出率。 尿液镜和干化学尿液分析仪检测结果有着一定的差别,主要表现在干化学尿液分析仪检测结果会产生个别假阳性、假阴性,引发检测缺陷,诊断准确率不高。

结论 尿液分析是医学检验方法的一种,在临床上许多疾病都需要尿液分析的结果来提供诊断和治疗的依据,尤其是对于泌尿系统疾病更是有着决定性的作用。随着尿液分析仪的逐渐普及,在带来便利的同时也使得许多工作人员产生了惰性,忽略了对于尿沉渣进行镜检的过程,容易导致尿液出现假性诊断。尿镜检能够有效的发现红细胞、白细胞以及病理结晶等具有较高诊断价值的成分,所以尿沉渣的镜检是检查工作中必不可缺的部分。在尿常规检查中,尿液镜检是一个重要的环节, 而尿液镜配合检测则能有效避免误诊或漏诊问题，值得临床推广应用。

PU-2566

慢性粒单核细胞白血病累及淋巴结 1 例实验室检查结果分析并文献复习

敬敏、黄林林
四川金域医学检验中心有限公司

目的 探讨慢性粒单核细胞白血病（CMML）累及淋巴结的实验室检查结果特征分析、鉴别诊断及预后。
方法 本次研究对象是广西医科大学第一附属医院血液内科一名 67 岁男性患者，初诊为 CMML，治疗后病情未见好转，并出现肝、脾肿大，颌下、锁骨上、双侧腋窝及腹股沟多发淋巴结肿大，直径最大约 1cm，手术切除左侧腋窝淋巴结送病理检查，通过临床表现、病理形态、免疫组化及分子检测等进行诊断及鉴别诊断，并结合文献复习总结临床病理特征。
结果 淋巴结结构破坏，中等大小母细胞样细胞呈片状浸润，免疫组化染色示上述细胞 MPO、CD15 均为阳性，Ki-67 约 80%阳性，CD20、PAX-5、CD3、CD5、CD30、CD163 均为阴性，CD34、TdT 少数弱阳性。髓系血液疾病 67 种基因突变分析：查见 ASXL1、CSF3R、TET-2、U2AF1 基因突变阳性。FISH 检测：BCR/ABL 融合基因阴性。
结论 骨髓增生异常/骨髓增殖性肿瘤（MDS/MPN）是重叠有骨髓增生异常综合征（MDS）和骨髓增殖性肿瘤（MPN）的临床及实验室表现的一类髓系肿瘤，具有较强的异质性，慢性粒单核细胞白血病（CMML）是其中最常见的一种亚型，好发年龄以老年人为主，且常有伴随疾病，是最具侵袭性的慢性白血病之一，确诊需依赖外周血分类计数、细胞形态学、流式细胞术、免疫组织化学、髓系血液疾病基因检测并结合临床表现。CMML 需与急性白血病、急性粒-单核细胞白血病、慢性粒细胞白血病伴单核细胞增多以及 MDS/MPN 中其他类型的血液肿瘤鉴别。此类疾病肝大和脾大都可存在，但淋巴结肿大少见，一旦出现淋巴结肿大，提示有急性转化的可能。慢性粒单核细胞白血病（CMML）的生存时间在各文献报道中相差甚大，短者仅 1 个月，长者可 100 个月，但中位生存时间多为 20-40 个月，约 15%-30%的患者可进展为急性白血病。

PU-2567

贵州地区血清肿瘤标志物甲胎蛋白、癌胚抗原和 CA19-9 参考区间的初步建立

陈国敏、刘婷、龙贵萍、彭朝燕、付正乾、苏蒙
贵州金域医学检验中心有限公司

目的 建立贵州地区健康成人血清 AFP(安图)、CEA(安图)和 CA199(迈瑞)的参考区间。
方法 对 2020 年 5 月至 2021 年 4 月送检本机构的贵州地区健康体检人群，共 10618 例，年龄 20-69 岁，其中使用安图全自动化学发光仪 A2000plus 进行 AFP 检测 10618 例，CEA 检测 10531 例，使用深圳迈瑞全自动化学发光仪 CL-6000i 进行 CA19-9 检测 10366 例的结果进行不同性别、不同年龄组间系统性地回顾性分析研究。

结果 AFP 有 10618 例，数据呈正态分布，男女组都表现出随着年龄的增长 AFP 含量随之略微增高，其中男性组 5991 例各年龄组（20-69 岁）检测 AFP 结果之间无统计学意义（P> 0.05 ），女性组 20-39 岁组（2356 例）和 40-69 岁组（2356 例）检测 AFP 结果之间有统计学意义（P< 0.05 ）；CEA 有 10531 例，数据呈正态分布，男女组都表现出随着年龄的增长 CEA 含量随之增高，CEA 含量与年龄呈显著相关性，39 岁前后变化明显，其中男、女组各 20-39 岁(男性组：2154 例，女性组：2359 例)，40-69 岁(男性组：3751 例，女性组：2266 例)检测 CEA 结果之间有统计学意义（P< 0.05 ）；CA19-9 有 10366 例，数据呈正态分布，男性组表现出随着年龄的增长 CA19-9 的含量随之增高，CA19-9 含量与年龄呈显著相关性，男性组 49 岁前后变化明显，男组各年龄组 20-39 岁（2135 例），40-69 岁（3698 例）检测 CA19-9 结果之间有统计学意义（P< 0.05 ），而女性组随着年龄的增长，血清中 CA19-9 的含量变化不明显，女性组(4533 例)各年龄组检测 CA19-9 结果之间无统计学意义（P>0.05 ），采用单侧 95%位数表示为 AFP(安图)、CEA(安图)和 CA199(迈瑞)在贵州地区参考区间。
结论 各地区健康人群血清中 AFP、CEA 和 CA19-9 含量会因为年龄、性别、检测方法和检测设备的不同，而有所变化，应建立适合本地实验室的参考区间。

PU-2568

乌鲁木齐市 4408 名体检人群幽门螺杆菌感染与血脂异常的相关性分析

刘涛、邹媛、杨晓萍、王淑霞、陈兆云、张峰波
新疆医科大学第一附属医院

目的 分析乌鲁木齐某三家医院 4408 名健康体检人群幽门螺杆(Helicobacter pylori,Hp)感染状况，并探讨与血脂异常的相关性。
方法 采用 13C-尿素呼气试验法检测幽门螺杆菌的感染状况，同时收集研究对象的人口学资料和血脂四项指标结果，比较 HP 阳性组和 HP 阴性组血脂异常的差异及在不同分层分析中血脂异常率的差异，并行二分类 logistic 回归分析，探讨 HP 感染与血脂异常的关系。
结果 乌鲁木齐市 4408 名健康体检人群 HP 的感染率为 35.62%，在年龄分组中发现 HP 感染率随年龄逐渐增加而增高，在性别分组中，男性组 HP 感染率大于女性，差异有统计学意义（P<0.05）。分层分析发现，男女性别组中 HP 感染组血脂异常率均高于 HP 未感染组，差异有统计学意义（P<0.05）；而在年龄分层中，51 岁至 60 岁组别中，血脂异常率在 HP 感染和 HP 未感染组有统计学差异（P<0.05）；在体质指数分组中，超重组和肥胖人群中 HP 感染组的血脂异常率均显著高于 HP 未感染组，且具有统计学差异（P<0.05）。进行 logistic 回归分析模型显示，HDL-C 可能是 Hp 感染的保护因素，而总胆固醇异常是 HP 感染的危险因素。
结论 HP 感染与年龄和性别有关，并且可能影响血脂异常的发生率。

PU-2569

自动化技术在 25-羟基维生素 D 质谱法检测前处理环节的应用

赵蓓蓓[1,2]、余木俊[1]、董衡[1,2]、李卓阳[1,2]、林清娜[1]、佘旭辉[1,2]
1. 广州金域医学检验中心有限公司
2. 广州医科大学金域检验学院

目的 色谱质谱技术具有高灵敏度、高特异性、可同时检测多种化合物，方法开发灵活等优势，但由于其技术高度复杂，对人员专业能力要求高，多数操作需要手工处理，前处理操作步骤繁琐,自动化程度低，限制了该技术在临床实验室中的应用与推广。本研究以液相色谱串联质谱法（LC-

MS/MS）检测 25-羟基维生素 D2 和 25-羟基维生素 D3 为例，通过在前处理环节引入自动化技术，减少操作步骤，提升检测通量，降低其临床应用的难度和挑战。

方法 ①通过引入自动化扫码取样设备，优化吸液参数，替代人工加样环节；②在标本预处理环节，以自动化移液设备为基础，搭建包括蛋白沉淀、液液萃取和复溶震荡的处理程序；③收集签署知情同意书的 50 例临床样本，分别采用自动化法和手工法进行前处理操作；④经过两种方法前处理后的临床样本进行 LC-MS/MS 检测，采用 Passing & Bablok regression 对测定结果进行统计分析。

结果 ①自动化法取样设备可将取样效率从 150 例/小时提升到 300 例/小时，且自动化取样误差在±1.5%以内；②在标本预处理环节，自动化移液可将操作步骤从 15 项减少到 7 项，人均检测效率从 130 例/天提升到 400 例/天；③对于 25-羟基维生素 D2，50 例临床标本浓度分布范围为 3.4ng/mL 到 54.2ng/mL，Passing & Bablok regression 检验的线性回归方程为 y =-0.0490654+1.074883x，Cusum 检验证实线性无显著性偏差(P=0.89)。对于 25-羟基维生素 D3，50 例临床标本浓度分布范围为 9.0ng/mL 到 47.3ng/mL，Passing & Bablok regression 检验的线性回归方程为 y =-0.466120+1.027322x，Cusum 检验证实线性无显著性偏差(P=0.89)。

结论 本研究通过对取样和预处理环节引入自动化技术，简化 25-羟基维生素 D 质谱法检测前处理操作步骤、降低操作误差、整体检测效率提升至少 65%。自动化法与手工法的结果相关性高，结果差异无统计学意义。

PU-2570

小而密低密度脂蛋白胆固醇在中国人群冠心病中的预测价值

张娜
山西医科大学第二医院

The ability of small dense low-density lipoprotein (sdLDL) alone to sufficiently predict CHD risk in the Chinese population was evaluated.

Methods Patients with CHD (139) and healthy controls (58) were included in this study. Serum sdLDL was measured using the peroxidase method. Other lipid parameters were also determined.

Results The sdLDL level in the CHD group was significantly higher than that in the control group ($p < 0.001$). Logistic regression analysis revealed that sdLDL was an independent risk factor for CHD. Based on the receiver operating characteristic curves, the area under the curve (AUC) of sdLDL alone for CHD was0.722.The AUC of triglycerides (TG), high-density lipoprotein (HDL),and sdLDL combined was 0.763, which was larger than that of the independent ones or combinations of any two; however, the value was not significant.

Conclusions sdLDL alone can predict CHD risk efficiently similar to the combination of TG, HDL, and sdLDL. This finding suggests that sdLDL can be considered as an ideal parameter for the preliminary diagnosis of CHD in Chinese people.

PU-2571

血清 IGF1 在黑色素瘤靶向治疗耐药监测的临床应用价值

罗娅
陆军军医大学第二附属医院检验科

目的 探讨肿瘤耐药标志物 IGF1 在监测黑色素瘤靶向治疗耐药的临床应用价值。

方法 采用细胞共培养等方式在细胞水平和动物模型中研究肿瘤源性 IGF1 对肿瘤相关成纤维细胞（CAFs）功能的影响，探讨 IGF1 介导的肿瘤细胞与 CAFs 交互作用导致耐药的分子机制；收集 20 例黑色素瘤肿瘤病人以及 20 例正常健康人的血清，分析血清 IGF1 在临床治疗监测的意义。

结果 CAFs 表面表达 IGF1R，IGF1 可能以旁分泌方式作用于 CAFs，并介导 CAFs 膜表面 IFN-γR 下调，进而影响 CAFs 功能，促进肿瘤耐药。血清 IGF1 水平与肿瘤病人分期成正相关，与病人治疗效果有一定的相关性。
结论 肿瘤细胞分泌的 IGF1 以旁分泌的方式影响 CAFs 进而促进肿瘤耐药；血清 IGF1 水平可作为肿瘤病人分期和治疗效果的提示指标，IGF1 在监测肿瘤耐药具有一定的指导意义。

PU-2572

血液检验红细胞参数在贫血鉴别诊断的检验价值

高霏
复旦大学附属中山医院青浦分院（上海市青浦区中心医院）

目的 剖析血液检验红细胞参数在贫血鉴别诊断的检验价值。
方法 实验的研究时段为：2020 年 1 月至 2020 年 7 月，研究对象为：此时段本院接治的 42 例贫血患者（实验组），该时段本院进行体检的 42 例健康人群（对照组）。所有研究对象均进行血液检验，比较分析两组的各项红细胞参数。
结果 在 42 例贫血患者中包含 31 例中巨幼细胞性贫血，其余 11 例为缺铁性贫血。血液检验结果显示，有 28 例巨幼细胞性贫血，14 例缺铁性贫血，3 例误诊，误诊率为 7.14%，诊断准确率为 92.86%。比较两组的红细胞各项数据，对照组和实验组之间有显著差异，且 P＜0.05。
结论 针对贫血患者，应用血液检验红细胞参数可以帮助患者尽快确诊，并了解贫血患者的血液浓度变化，对贫血类型进行有效鉴别，为临床治疗提供依据，值得推广和应用。

PU-2573

联合检测 M 蛋白对多发性骨髓瘤的诊断价值

王晗、向莉莉
天津金域医学检验实验室有限公司

目的 M 蛋白与多发性骨髓瘤的发病机制有着密切的关系，本研究旨在探讨三种方法联合检测 M 蛋白对多发性骨髓瘤的诊断价值，提高多发性骨髓瘤的检出率，降低其误诊、漏诊的几率。
方法 本论文的研究数据来源于多发性骨髓瘤患者筛查 M 蛋白的 50 份标本，其中预后样本 17 例，初诊样本 33 例。采用血清蛋白电泳，以证实 M 蛋白的存在，然后进行血清免疫固定电泳和血清游离轻链，做进一步的定量分析和分型鉴定。比较三种单项检测及三项联合检测 M 蛋白对多发性骨髓瘤的诊断价值。
结果 血清蛋白电泳图谱中发现 M 蛋白条带 21 例，检出率为 63.6%；血清免疫固定电泳发现异常克隆条带 29 例，检出率 87.9%,血清游离轻链检出阳性 29 例,检出率为 90.9%；联合总检出 50 例，检出率为 100%。结果三种方法联合检测 M 蛋白的检出率高于单项检测的检出率，有显著统计学差异(P<0.01)。
结论 血清蛋白电泳、血清免疫固定电泳、血清游离轻链联合检测 M 蛋白对多发性骨髓瘤的诊断有意义,检出率高，可为临床早期干预治疗提供准确依据,从而及早干预，最终有助于改善患者预后。

PU-2574

COPD 患者呼吸道分离的黏液罗氏菌相关研究

陈钰静
南方医科大学珠江医院

目的 分析 COPD 患者的病原谱，了解黏液罗氏菌的流行率、耐药情况及临床相关因素分析。
方法 从广州呼吸疾病研究所收集 2018 年 1 月至 2019 年 4 月共 132 例 COPD 病患标本，其中分离出黏液罗氏菌的有 19 例（实验组）；并在南方医科大学附属第一医院、广州呼吸疾病研究所招募的 33 例合格志愿者中随机抽取 21 例（对照组）。用安图生物的质谱分析仪 Autof MS1000 对细菌进行鉴定，用法国 bioMerieux VITEK 2 全自动微生物鉴定及药敏分析系统对黏液罗氏菌进行药敏分析，分析吸烟、激素、合并感染对黏液罗氏菌的检出率的影响。
结果 COPD 患者呼吸道标本中分离出的病原菌以革兰阴性菌为主，前三名依次是肺炎克雷伯菌、铜绿假单胞菌、嗜麦芽窄食单胞菌。132 例 COPD 患者中，罗氏菌属检出率为 21.97%，黏液罗氏菌最高，占 14.39%，其次是龋齿罗氏菌、气罗氏菌。影响黏液罗氏菌检出率的相关因素有使用激素、吸烟具有统计学意义（P<0.05），是否合并其他病原菌感染不具有统计学意义（P>0.05）。COPD 患者呼吸道标本分离出的黏液罗氏菌对左氧氟沙星、莫西沙星、环丙沙星耐药率较高，对替考拉宁、万古霉素、利福平、复方新诺明、头孢唑啉、头孢曲松、头孢吡肟、厄它培南、丁胺卡那霉素、亚胺培南、氨苄西林、氯霉素、四环素大多敏感。
结论 对于免疫力低下的 COPD 患者，罗氏菌属于一种重要的机会致病菌属，特别是黏液罗氏菌，随着越来越多的耐药细菌出现，建议临床要常与微生物室保持紧密联系，密切监视 COPD 患者的正常菌群的组成变化，关注有无产生耐药细菌。根据药敏结果合理选用抗生素，以减少机会性感染的发生。

PU-2575

重庆市健康体检人群体内维生素 D 含量研究

李丽、舒黎
重庆市人民医院

目的 了解重庆市人群体内维生素 D 营养状态，为重庆市人群合理补充维生素 D 提供科学依据。
方法 采集 2018 年 1 月至 2019 年 10 月来该院进行健康体检的人群空腹静脉血，用电化学发光法检测其血清中 25-羟基维生素 D（25(OH)D）水平，对结果分别按性别、检测时间进行分组分析。
结果 调查了 2018 年 1 月至 2019 年 10 月重庆市 4653 名健康体检人群血清中 25(OH)D 水平。其血清中 25(OH)D 水平充足（30 ng/mL≤25(OH)D<100 ng/mL）者 316 例，占比 6.79%；水平不足（20 ng/mL≤血清 25(OH)D<30 ng/mL）者 1178 例，占比 25.32%；水平缺乏（10 ng/mL≤血清 25(OH)D<20 ng/mL）者 2451 例，占比 52.68%；严重缺乏（25(OH)D<10 ng/mL）者 708 例，占比 15.22%。男性 196 例，血清 25(OH)D 平均水平为 20.32±10.12 ng/mL；女性 4457 例，血清 25(OH)D 平均水平为 17.26±7.44 ng/mL，差异有统计学意义（P<0.05）。男性人群中维生素 D 充足者占比 18.88%，女性充足者占比 6.26%，明显低于男性（P<0.05）；男性缺乏者占比 36.73%，明显低于女性的 53.38%（P<0.05）；男性不足者 30.61%，女性不足者 25.08%，男性严重缺乏者 13.78%，女性 15.28%，差异无统计学意义（P>0.05）。春季（3-5 月）人群血清 25(OH)D 水平为 17.87±7.45 ng/mL，夏季（6-8 月）水平为 20.64±8.00 ng/mL，秋季（9-11 月）水平为 16.46±7.04 ng/mL，冬季（12-2 月）水平为 14.52±6.42 ng/mL，冬季明显低于夏季（P<0.05）。
结论 重庆市健康人群维生素 D 含量总体偏低，其中女性尤其明显，冬季平均水平明显低于夏季，在冬季应加强维生素 D 的补充，女性应更加重视。

PU-2576

我院 2017 年-2020 年铜绿假单胞菌的临床分布和耐药性分析

朱海兵
湖南株洲市三三一医院

目的 分析 2017 年-2020 年株洲市三三一医院铜绿假单胞菌的临床分布和耐药性，为临床合理使用抗菌药物和院内感染控制提供依据。
方法 对本院临床标本分离的 1036 株铜绿假单胞菌的临床分布特点和药敏结果进行回顾性分析。
结果 铜绿假单胞菌感染主要集中在呼吸内科、ICU、老年消化内科，分别占 25.4%、34.6%、15.7%。铜绿假单胞菌菌株主要来源于痰液标本，占 75.9%；其次为尿液标本，占 6.3%。铜绿假单胞菌多黏霉素 B 耐药率最低，其次是阿米卡星；耐药性最高的是亚胺培南。头孢哌酮/舒巴坦、头孢他啶、左氧氟沙星三种抗菌药物的耐药率四年有所下降，其中头孢他啶和左氧氟沙星耐药率下降明显（P<0.05），差别具有统计学意义。
结论 铜绿假单胞菌感染以上呼吸道为主，同时可引起多部位感染，其耐药性现状严重，应加强对铜绿假单胞菌感染的管理，规范临床用药，同时加强铜绿假单胞菌耐药性监测，减少耐药的发生。

线粒体 DNA 单倍型遗传背景下长寿机制的初步研究

马琳
郑州大学第一附属医院

前期研究结果表明，在中国人群中线粒体 D4a 与 B4a、N9 分别是长寿人群高频、低频单倍型。我们构建细胞核相同线粒体 DNA 单倍型不同的融合细胞模型，开展相关的线粒体功能实验，以初步探究线粒体 DNA 单倍型遗传背景下长寿的相关机制。

PU-2578

2020 年吉林地区超薄液基细胞妇科（TCT）标本结果分析

刘新宇
吉林金域医学检验所有限公司

目的 宫颈癌的发病率在女性生殖系统肿瘤中仅次于乳腺癌，居第二位。本文分析吉林地区超薄液基细胞妇科病变类型及其占比，为科普两癌筛查提供参考依据。
方法 选取 2020 年 1 月至 2020 年 12 月送检我公司的 184551 例超薄液基细胞妇科样本，使用杭州海世嘉国产耗材采样，应用杭州海世嘉震荡仪震荡，震荡时间 10min、离心机转速 800 转，离心时间 3min，使用徕卡染封一体机染色（染色试剂为广州微米提供成品液）、封片，副高及以上职称医生阅片，排除不满意及细胞量少标本共 408 例后，选取合格样本 184143 例，对以上标本进行 HSIL、LSIL、ASC-H、ASCUS 及 AGUS 阳性病例数量及占比分析。
结果 184143 例标本中，鳞状上皮内高度病变（HSIL）共 231 例，占比 0.125%；非典型鳞状细胞，不除外高度病变（ASC-H）共 607 例，占比 0.330%；鳞状上皮内低度病变（LSIL）(CIN1)共 1721 例，占比 0.935%；非典型鳞状细胞(ASCUS)共 5257 例，占比 2.855%；非典型腺细胞（AGUS）共 128 例，占比 0.070%；HSIL、LSIL、ASC-H、ASCUS 及 AGUS 阳性病例共 7944 例，占比 4.314%。
结论 实验表明，2020 年吉林地区超薄液基细胞妇科标本中，HSIL、LSIL、ASC-H、ASCUS 及 AGUS 占总标本的 4.314%，略低于省内整体阳性率，考虑为第三方医检实验室样本来源较复杂，

以体检为主，故阳性率低于省内整体数值。目前，宫颈癌作为最常见的妇科恶性肿瘤之一，其检出率逐年上升，要引起社会各界的重视。而超薄液基细胞妇科（TCT）技术是一项可以大大提高宫颈上皮病变细胞检出率的良好技术，尤其是对恶性病变的早期发现，可达到早期诊断和早期治疗的目的。

PU-2579

促红细胞生成素、血清铁蛋白、叶酸、维生素 B12 检测在贫血中的应用研究

付杰
陆军军医大学第二附属医院检验科

目的 探讨血清铁蛋白（serum ferritin，SF）、促红细胞生成素(Erythropoietin，EPO)、叶酸（folic acid，FOL）、维生素 B12(Vitamin B12，VB12)检测在贫血诊治中的应用。
方法 回顾 2020 年 1-12 月我院就诊贫血患者 522 例为实验组，随机非贫血患者 51 例为对照组，并根据血红蛋白浓度，将观察组分为轻度贫血组，中度贫血组，重度贫血组，极重度贫血组，分析实验组与对照组，各实验组亚组患者 SF、EPO、FOL、VB12 含量差异，评估联合检测对贫血的诊：断率。
结果 ①实验组 EPO 明显高于对照组，差异有统计学意义（P<0.05），实验组 SF、FOL、VB12 与对照组差异无统计学意义（P>0.05）②各实验亚组，随贫血程度增加，EPO 含量增加，差异有统计学意义（P<0.05），实验亚组 SF、FOL、VB12 间差异无统计学意义（P>0.05）
结论 在贫血诊断中和贫血程度分型中，EPO 发挥重要作用，SF、FOL、VB12 作用不强。

PU-2580

常用临床实验室检验项目在 SLE 患者活动性评估中的应用评价

蒋兴宇
陆军军医大学第二附属医院检验科

目的 讨论系统性红斑狼疮实验室检查项目的应用价值，并筛选出有价值的检测项目。
方法 收集 2021 年 1 月至 2021 年 3 月期间于陆军军医大学第二附属医院就诊的 SLE 患者病历资料共计 104 人次。通过纳入和排除标准筛选后共纳入研究对象 49 人次；收集研究对象的血常规检测（23 项）、尿干化学检测（8 项）、抗核抗体核型与滴度（Antinuclear antibody,ANA）、抗可溶性抗原抗体（Extractable nuclear antigens，ENAs）检测（15 项）、免疫球蛋白 Igs（4 项）、补体 C3 和 C4 以及常用于评价各器官损伤的常用生化项目共计 82 项指标。
结果 对 82 项指标进行特征筛选（特征的单一唯一值、特征间共线性以及特征的重要性），最后选取了 12 项指标，分别为 ANA 核型, ALT, ALP, ALB, CREA, HBDH, RBC, LYM#, MCHC, MPV, IGA, IGG 进行后续的建模评价。挑选出上述 12 项指标的统计学检验结果，项目 ANA 核型，ALP，MCHC，MPV 差异无统计学意义；RBC，ALB，CREA，HBDH，LYM#，IGA，IGG，ALT，差异有统计学意义。
结论 通过绘制 ROC 曲线，发现除了 DT，剩下的建模方法 LR，SVC，RF，XGB 得到的 AUC>0.8，认为 ANA 核型, ALT, ALP, ALB, CREA, HBDH, RBC, LYM#, MCHC, MPV, IGA, IGG 这 12 项检验项目具有较好的应用价值。

PU-2581

血清 IgG4 及 IgG4/IgG 用于 IgG4 相关疾病诊断的价值研究

王海、王春玲、李丽
东南大学附属中大医院

目的 在 IgG4 检测阳性患者中，探讨并比较血清 IgG4 水平和 IgG4/IgG 比值对于 IgG4 相关疾病（IgG4-RD）的诊断价值。
方法 回顾性分析 2017 年 1 月~2021 年 1 月东南大学附属中大医院 549 例血清 IgG4 检测阳性（IgG4>2.01g/L）患者的临床数据，采用独立样本 t 检验法比较 IgG4-RD 组和非 IgG4-RD 组的血清 IgG4 和 IgG4/IgG 水平差异，并绘制 IgG4 和 IgG4/IgG 比值用于诊断 IgG4-RD 的 ROC 曲线。
结果 549 例血清 IgG4 检测阳性患者的平均年龄为 62.1 岁（9~93 岁），其中 17 例（3.1%）确诊为 IgG4-RD，15 例为男性（15/351），2 例为女性（2/198），男性发生率显著高于女性（4.2% vs 1.0%，P<0.05）；且 IgG4-RD 组患者年龄显著高于非 IgG4-RD 组（68.4±10.3 vs 61.9±17.9，P<0.05）。IgG4-RD 组血清 IgG4 浓度(10.09±8.17 g/L vs 3.71±3.42 g/L, P<0.05)和 IgG4/IgG（0.47±0.24 vs 0.23±0.17, P<0.05）均显著高于非 IgG4-RD 组。血清 IgG4 浓度和 IgG4/IgG 用于区分 IgG4-RD 和非 IgG4-RD 患者的最佳截断值分别为 4.035g/L 和 0.30；IgG4 取最优截断值时，敏感性为 0.727，特异性为 0.818，曲线下面积为 0.802；IgG4/IgG 取最优截断值时，敏感性为 0.818，特异性为 0.862，曲线下面积为 0.843。
结论 男性 IgG4-RD 发病率高于女性，且 IgG4-RD 患者年龄高于非 IgG4-RD。血清高 IgG4 水平和 IgG4/IgG 比值对于临床 IgG4 检测阳性患者中 IgG4-RD 的诊断具有一定价值。

PU-2582

采用室内质量控制和室间质量评价评定甲功内分泌指标的测量不确定度

赵婕、王苗
天津金域医学检验实验室有限公司

目的 利用室内质量控制和室间质量评价综合评定的方法，简单快捷地进行甲功内分泌指标的测量不确定度的评估，以提高检测结果质量，帮助实验室和临床更好地理解、认识和解释检测结果，并恰当地应用于临床诊断和医疗。
方法 依据中国合格评定国家认可委员会（CNAS）技术报告《医学实验室-测量不确定度的评定与表达》,采用"自上而下（top-down）"方法,收集 2020 年室内质量控制（IQC）数据以及 2019-2020 年参加卫生部临床检验中心室间质评（EQA）数据,计算甲状腺激素（T4）、游离甲状腺激素（FT4）、三碘甲腺原氨酸 （T3）、游离三碘甲腺原氨酸 （FT3）、促甲状腺激素（TSH）共 5 个检验项目的相对合成标准不确定度和扩展不确定度,并与卫生部临床检验中心 EQA 计划中的允许总误差（TEa）及生物学变异推导出的 TEa 进行比较,以观察甲功内分泌指标的检测质量。
结果 本实验室 5 项甲功内分泌项目的相对扩展不确定度分别是 T4（7.823％/9.350％）、FT4（11.901％/10.772％）、T3（10.871％/9.555％）、FT3（8.073％/7.089％）TSH（9.662％/10.018％），5 项检验指标均符合卫生部临床检验中心室间质量评价和基于生物学变异最佳的 TEa 质量规范要求。
结论 采用室内质量控制和室间质量评价综合评定的方法评估测量不确定度，操作简易方便,可作为定期评定测量不确定度的方法，具有良好的临床应用前景。

PU-2583

TCT 检测联合 HPV E6/E7 在宫颈癌筛查中的应用价值

杨琳
山东第一医科大学附属省立医院

目的 分析液基薄层细胞（TCT）联合 HPV E6/E7 在宫颈癌筛查中的临床应用。宫颈癌是一种妇科恶性肿瘤，其发病与高危型人乳头瘤病毒（HPV）持续感染密切相关，大部分患者伴有高危型 HPV 感染。目前，临床上普遍使用宫颈癌的筛查方法有 HPV 的检测、液基薄层细胞学检查（TCT）及阴道镜组织活检等。阴道镜组织活检目前是诊断宫颈癌前病变最有效的手段，但是此方法有一定伤害。HPV 和 TCT 检测作为筛查宫颈癌前病变的联合手段，具有一定的阳性提高诊断率。
方法 选取 2018 年 12 月至 2019 年 12 月在山东省立医院妇科门诊行宫颈癌联合筛查的女性 1223 例,其中接受 TCT 及高危 HPV 分型者纳入对照组(n=784),接受 TCT 及 E6/E7 mRNA 检测者纳入观察组(n=439),以组织病理学为基础, Bethesda 分类、不同病理分型中 HPV 和 E6/E7 mRNA 阳性率及患者满意度,分析 HPV DNA 及 HPV E6/E7 mRNA 分别合 TCT 的筛查价值。
结果 观察组 HPV E6/E7 mRNA 初筛阳性率为 30.01%,较低于对照组高危 HPV 初筛阳性率 35.16%。Bethesda 分类中,NILM 及鳞状上皮内低度病变(LSIL)、鳞状上皮内高度病变(HSIL)病患的 HPV DNA 阳性率高于 E6/E7 mRNA 阳性率);根据病理分级的增加,E6/E7 mRNA 阳性率、HPV DNA 的阳性率拷贝数上升,而 DNA 拷贝数比较差异无统计学意义,(CIN)1 级、 CIN2 级、CIN3 级患者中 HPV DNA、HPV E6/E7 mRNA 阳性率比较差异无统计学意义; TCT 及 E6/E7 mRNA 筛查评估高级别宫颈上皮内瘤变 (CIN 分 级 2 ~ 3 级)及宫颈癌的特异度、灵敏度、准确度高于 TCT 及 HPV DNA 联合筛查。
结论 与 TCT 联合 HPV DNA 筛查相比,TCT 联合 HPV E6/E7 mRNA 筛查应用在宫颈癌筛查中,特异度、灵敏度更高。

PU-2584

2665 例急性上呼吸道感染患儿的病原学及临床特征

丁细霞
南方医科大学珠江医院

目的 分析急性上呼吸道感染儿童患者的病原学及临床特征。
方法 以南方医科大学珠江医院 2009 年 11 月-2015 年 9 月收治的 2665 例急性上呼吸道感染儿童为研究对象，采用 qRT-PCR 方法检测临床上常见的 8 种（流感病毒，呼吸道合胞病毒，副流感病毒，腺病毒，人类博卡病毒、人类冠状病毒、人类偏肺病毒、鼻病毒）呼吸道病毒。
结果 共检测患儿标本 2665 份，其中阳性标本 1566 份，总阳性率为 58.8％。四个季节中 8 种呼吸道病毒检出率存在明显差异（P＜0.0001），并以春季最高，夏冬季次之，秋季最低。儿童呼吸道病毒感染率随着年龄增加而逐渐降低（P＜0.0001），并以 0-1 岁婴幼儿病毒检出率最高 64.5%。男童呼吸道病毒感染率明显高于女童（P < 0.05），住院患儿呼吸道病毒检出率明显高于门诊患儿（P＜0.0001）。混合感染标本 260 份，占阳性标本数的 16.6%，主要集中于 0-3 岁儿童患者标本中，并因季节而异，秋冬季节较少，而春夏季节较为普遍。咳嗽为呼吸道病毒感染的主要临床症状，咳痰和流涕次之，各种临床症状在 8 种呼吸道病毒感染患儿中存在差异（P＜0.0001）。
结论 本调查增加了我们对急性上呼吸道感染患儿中 8 种常见呼吸道病毒的病原学及临床特征的了解，为指导临床治疗及防控提供相关数据。

PU-2585

铜绿假单胞菌的临床分布及耐药趋势分析

丁健生
郑州大学第一附属医院

目的 了解铜绿假单胞菌的分布特点及耐药性情况，为临床合理使用抗菌药物及防治铜绿假单胞菌感染提供参考依据。
方法 收集郑州大学第一附属医院 2020 年 5 月至 2021 年 3 月期间临床标本分离的铜绿假单胞菌，利用全自动微生物鉴定仪对其进行菌种鉴定及抗菌药物敏感性试验，采用 WHONET 软件和 SPSS 统计软件进行数据分析。
结果 共分离出铜绿假单胞菌 579 株，其中标本类型主要为深部痰液标本、尿液和血液，三者占比分别为 69.97%、18.73%和 9.14%，来源科室分布则主要为呼吸与重症科、ICU 及神经内科。药敏试验结果显示，铜绿假单胞菌对 β-内酰胺类抗生素的耐药率均较高，而对头孢三代/四代类、喹诺酮类、氨基糖苷类、碳青霉烯类等抗生素耐药率较低，对哌拉西林/他唑巴坦、庆大霉素及阿米卡星等抗生素较为敏感。
结论 铜绿假单胞菌是该院感染的主要致病菌之一，主要存在于侵入性操作较多、应用抗菌药物广泛且住院周期较长的临床科室，患者来源以呼吸道感染为主，应积极防控院内感染，同时加强细菌耐药监测，提高抗菌药物的临床管理水平，避免耐药菌在医院流行和播散。

PU-2586

WNT 信号通路在白血病干细胞治疗中的作用

李惠
德州市人民医院

急性髓细胞白血病是由造血干细胞和骨髓祖细胞的致癌转化诱导的严重的血液恶性肿瘤。它导致骨髓衰竭和相关的并发症，包括感染，贫血或出血。尽管大多数患者在最初的化学治疗后达到缓解，但复发频繁。研究表明癌症干细胞在肿瘤的复发，转移，耐药性和人类癌症胡其他恶性表型中起重要作用，在许多癌症类型中，难以完全消除癌症干细胞并且通常导致癌症的复发。研究发现急性髓细胞白血病中也存在白血病干细胞。已经证明靶向白血病的常规化学治疗药物难以完全根除白血病干细胞，因此找到靶向治疗白血病干细胞的治疗靶点对急性髓细胞白血病的愈后将其着重要作用。据报道，活化的 Wnt/bwta-catenin 信号传导对人类急性白血病干细胞的自我更新能力和耐药性起着重要作用，导致患者生存率低下，Dickkopf(DKK)蛋白家族可通过竞争性结合 WNT 共同受体 LRP5/6 来抑制 Wnt/bwta-catenin 信号传导。有人提出 DKK1 可能通过诱导 LRP6 内化或通过跨膜 Kermen(Krm)蛋白降解来抑制 WNT 信号传导。已经证明 IL-3a(CD123) 是人类急性髓性白血病干细胞的独特标志物。本研究旨在探讨 Wnt/bwta-catenin 信号通路和 IL-3a 链受体在人类急性髓细胞白血病中的相互作用，从而为急性髓性白血病的治疗寻找新的靶点。

PU-2587

分析前因素导致 DD 二聚体异常升高一例

张桦挺
复旦大学附属华山医院

D-二聚体（D-Dimer）是交朕纤维蛋白（Fb）在纤溶酶的作用下水解产生的特异性降解产物，其水平的升高反映高凝状态和继发纤溶亢进，D-二聚体的含量变化可以作为体内高凝状态和纤溶亢

进的标志性物质 1。D-二聚体检测以简便、快捷、经济、安全、无创伤性为特点，其高度的敏感性和阴性预示能力，在深静脉血栓和肺栓塞的排除，DIC 的诊断及溶栓治疗监测等方面具有良好的应用价值。本文将从 DD 二聚体检测不一致的临床病例入手，回顾 DD 二聚体检测的干扰因素以及排查方法，注重临床与实验室检查相结合以避免错误诊断与治疗。

PU-2588

甲状腺激素假性升高一例

张桦挺
复旦大学附属华山医院

甲状腺疾病是内分泌科的常见病。实验室检测在甲状腺疾病的功能诊断中发挥了重要参考作用。本文将从一个甲状腺功能检测不一致的临床病例入手，回顾甲状腺激素检测的干扰因素以及排查方法，注重临床与实验室检查相结合以避免错误诊断与治疗。

PU-2589

吉林地区丙型病毒性肝炎结果统计

邵阿敏
吉林金域医学检验所有限公司

目的 由于丙型病毒性肝炎呈全球性流行，不同性别、年龄、种族人群均对丙型肝炎病毒易感。加上我国丙肝检测和监测体系不够完善，公众对丙肝认识较低等现状，因此丙肝筛查非常重要。通过分析吉林地区近 5 年丙肝检测情况，为流行病学调查提供参考依据。
方法 选取送检我公司的丙型肝炎病毒抗体 IgG 样本，检测方法为 ELISA 法。分析 2017 年 1 月 1 日到 2021 年 6 月 1 日的检测结果，统计其阳性率及变化趋势。
结果 2017 年共收取标本 1999 例，阳性结果为 57 例，阳性率为 2.85%，2018 年共收取标本 6453 例，阳性结果为 127 例，阳性率为 1.97%，2019 年共收取标本 6694 例，阳性结果为 199 例，阳性率为 2.97%，2020 年共收取标本 4771 例，阳性结果为 213 例，阳性率为 4.46%，2021 年共收取标本 2476 例，阳性结果为 101 例，阳性率为 4.08%.统计结果显示吉林地区丙肝阳性率较高，过去五年有增高的趋势。
结论 目前丙型肝炎病毒还没有有效的疫苗，缺乏足够有效的预防措施，主要是阻断传播途径和传染源，避免与他人共用刮胡刀，避免去无正规资格的机构进行纹身、洗牙等。当出现乏力、食欲减退、腹胀、肝区痛等可疑症状时，一定要及时就医检查诊断并治疗。丙型病毒性肝炎一部分患者经过急性期积极治疗后就可痊愈；还有一大部分患者会转为慢性丙型肝炎，经过近 20 年的发展部分患者会发生肝硬化，甚至转化为肝癌而致命。丙型病毒性肝炎患者大多因肝硬化或肝癌而死亡。因此尽可能将丙型肝炎检测纳入健康体检范畴。

PU-2590

重庆地区血小板聚集率检测对复发性流产患者的诊断价值

殷勤
陆军特色医学中心（大坪医院） 检验科

目的 分析血小板聚集率检测在复发性流产（RSA）患者中的应用价值.
方法 1）收集 2017 年 1 月至 2021 年 5 月源于陆军军医大学第三附属医院的患者样本，选取 96 例 RSA 患者作为试验组，同时选取 81 例非孕期且无流产史的健康女性作为健康对照组，对两组血小

板聚集率进行比较。均采用静脉全血检测，EDTA-K2 抗凝。2）运用光学比浊法对样本进行血小板聚集率检测。3）应用 t 检验进行病例组与健康对照组组间差异分析，运用单因素方差非参数分析进行病例组不同诱导剂间差异分析。
结果 病例组不同诱导剂亚组之间：ADP-COLL 比较结果没有显著差异（P=0.413）。ADP-EPI 比较结果没有显著差异（P=0.398）。ADP-AA 比较结果具有显著差异（P=0.01）。COLL-EPI 比较结果没有显著差异（P=0.979）。COLL-AA 比较结果具有显著差异(P=0.015)。EPI-AA 比较结果具有显著差异(P=0.017)。病例组与健康对照组之间均有显著性差异。
结论 RSA 患者血小板聚集率明显增高。对 RSA 患者进行血小板聚集率检测具有重要的临床诊断价值。

PU-2591

MCV 对不同水平原始细胞比例初诊成人骨髓异常增生综合征患者的预后影响

李凤龙
东南大学附属中大医院

目的 分析平均红细胞体积（MCV）对不同水平原始细胞比例骨髓异常增生综合征（MDS）患者预后的影响。
方法 收集 2012 年 6 月-2016 年 5 月于我院血液科初诊治疗的原发 MDS 患者 242 例，按照 MCV 水 平分为 HMCV 组（≥100fl）和 LMCV 组（<100fl），按照不同水平原始细胞比 例将入组患者分为 H 亚组（≥5%）和 L 亚组（<5%），比较不同 MCV 水平患者 总生存期差异；单因素及多因素分析 MCV 对所有患者及 L 亚组患者总生存期影 响；比较 L 亚组不同水平 MCV 患者临床指标差异。
结果 HMCV 组 OS 较 LMCV 组显著延长（P<0.05）；单因素分析结果显示，HGB、MCV、原始细胞比例、 染色体核型及基因突变数目与入组患者 OS 密切相关（均 P<0.05）；多因素分析 结果显示，原始细胞比例、染色体核型及基因突变数目与入组患者 OS 独立相关 （均 P<0.05），MCV 与入组患者 OS 非独立相关（P>0.05）。L 亚组中，HMCV2 组 OS 较 LMCV2 组显著延长（P<0.05）；单因素分析结果显示，年龄、HGB、 MCV、染色体核型、等位基因突变数量与 L 亚组患者 OS 密切相关（均 P<0.05）； 多因素分析结果显示，HGB、MCV 及基因突变数目均与 L 亚组患者 OS 独立相 关（均 P<0.05）。L 亚组临床指标中，LMCV2 组患者染色体核型差、IPSS-R 高 危及等位基因突变数量高的比例较 HMCV2 组患者显著升高，差异均有统计学意义（均 P<0.05）。2 组患者各单等位基因突变频率均未见明显统计学差异（均 P>0.05）。
结论 低水平 MCV 为低水平原始细胞比例 MDS 患者的独立不良预后影响因素，可能与染色体核型、IPSS-R 预后及基因突变数目密切相关。

PU-2592

生化检验全程质量控制管理的应用研究

熊飞良
宁乡人民医院

目的 研究全程生化检验中应用质量控制管理的效果。
方法 研究时段 2017.6-2019.5，研究对象是我院接收的 200 例生化检验患者，采纳生化检验先后顺序分观察组（质量控制管理）与对照组（常规控制管理）各 100 例，比较两组管理效果。
结果 与对照组比较，观察组生化检验准确率高，重现性及时效性高，误差值低；观察组医师满意率（95.00%）高于对照组 70.00%，P＜0.05。
结论 质量控制管理应用在全程生化检验能规范生化检验操作，提高检验工作质量。

PU-2593

利用 Syncthing 软件实现检验信息系统数据局域网远程自动备份

何增品
昆明医科大学第一附属医院

目的 随着科学技术的发展医学检验科的工作已经全面迈入了自动化、电子化、无纸化时代，随之产生的大量数据有效保存工作，就成为我们工作的重点。
方法 通过利用 syncthing 软件实现单机版检验报告系统数据的远程自动数据同步备份方案，来做好检验科信息系统安全工作，能有效保护检验数据。
结果 远程备份系统的搭建，能使数据实现同步备份。
结论 当电脑发生故障或意外，发生数据丢失，恢复工作就显得尤为重要，此时数据备份工作就是决定数据恢复成败的关键因素，所以远程自动备份方案的建设刻不容缓。

PU-2594

BMP9 对共培养体系中人乳腺癌 MDA-MB-231 细胞迁移和侵袭的影响及其机制探讨

王林
西安市第一医院

目的 采用体外细胞共培养技术模拟骨微环境，探讨人骨形态发生蛋白 9 (bone morphogenetic protein 9，BMP9) 对人乳腺癌 MDA-MB-231 细胞迁移和侵袭的影响，并探讨其机制。
方法 实验分为对照组和 BMP9 处理组，骨髓基质细胞 HS-5 与 MDA-MB-231 细胞在 Transwell 共培养体系中分别加入 PBS 和重组 BMP9 蛋白(100ng/ml)，培养 2 天后，细胞划痕实验检测 MDA-MB-231 细胞迁移能力的改变；TranswellTM 细胞侵袭实验检测 MDA-MB-231 细胞侵袭能力的改变；Western blot 法及明胶酶谱法分别检测 MDA-MB-231 细胞基质金属蛋白酶（MMP-9、MMP-2）蛋白表达及相对活性的改变； Western blot 法检测 HS-5 和 MDA-MB-231 两种细胞中基质细胞衍生因子-1(SDF-1)及 MDA-MB-231 细胞中趋化因子受体 CXCR4 和细胞信号通路 P-Akt 表达的变化。
结果 在共培养体系中加入 BMP9 后，划痕实验结果显示实验组和对照组 MDA-MB-231 细胞的平均愈合率分别为 84.28%±2.54%、44.49%±4.86%，TranswellTM 实验结果显示穿模 MDA-MB-231 细胞数分别为 481±22、121±11，表明 BMP9 对共培养体系中 MDA-MB-231 细胞的迁移和侵袭有明显的抑制作用（P<0.05）；MDA-MB-231 细胞 MMP9、MMP2 的蛋白表达实验组分别为 0.10±0.01、0.11±0.03，较对照组 0.79±0.03、0.82±0.05 显著下调（P<0.05），相对活性实验组分别为 0.14±0.03、0.12±0.02，较对照组 0.90±0.07、1.04±0.14 也均显著下降（P<0.05）；MDA- MB-231 细胞中 CXCR4 受体及其配体 SDF-1 的蛋白表达实验组分别为 0.08±0.01、0.06±0.02，和对照组 0.07±0.01、0.05±0.01 差异无统计学意义（P>0.05）；p-Akt 蛋白表达实验组（0.09±0.01）较对照组（0.48±0.07）显著降低（P<0.05）；HS-5 细胞中 SDF-1 的蛋白表达实验组（0.14±0.01）较对照组（0.42±0.06）显著降低（P<0.05）。
结论 在模拟骨微环境的共培养体系中，BMP9 可能通过 SDF1/CXCR4-PI3K/Akt 信号通路抑制人乳腺癌 MDA-MB-231 细胞的迁移和侵袭。

PU-2595

一例 18 号染色体嵌合异常的细胞遗传学分析

耿丹、杜荷香、吕喆、栗二娇、任孝慧
太原金域临床检验所有限公司

目的 通过对一例发育迟缓，高度近视的患者进行染色体核型分析，明确发病原因，并探究临床表现与染色体变异的相关性，同时评估染色体核型分析技术在临床中的应用价值。
方法 采集 10 岁女患者的肝素钠抗凝全血，进行外周血染色体 G 显带核型分析。
结果 患者传统染色体核型分析结果为：46,XX,del(18)(p11.2)[50]/46,XX,i(18)(q10)[10]。此核型符合嵌合体核型，其中一种核型为 18 号染色体短臂部分缺失，即 18 号染色体部分单体；另一种核型为等长臂 18 号染色体，即 18 号染色体部分三体；二者嵌合比例为 50/10。
结论 该患者发育迟缓、高度近视可能是由 18 号染色体部分单体与 18 号染色体部分三体两种核型共同作用所致，但患者未表现出严重的出生缺陷，这可能与嵌合体核型及嵌合比例有关。染色体核型分析利用 G 显带技术清晰地显示了染色体的具体形态，是目前较成熟的遗传学诊断技术之一，在出生缺陷领域颇具临床意义。

PU-2596

17 例主次侧交叉配血不合患者输血疗效分析

王钰箐、王学锋、蔡晓红
上海交通大学医学院附属瑞金医院

目的 回顾比较主次侧交叉配血不合患者，输注 ABO 同型去白细胞悬浮红细胞或洗涤红细胞后的输血效果。
方法 检测患者输血前后血红蛋白及总胆红素，应用 IBM SPSS Statistics 22.0 软件进行统计分析。
结果 17 例主次侧交叉配血不合患者合计输血次数 34 次，输注 ABO 同型的去白细胞悬浮红细胞或洗涤红细胞均使 Hb 水平明显升高（P=0.000<0.001），输血疗效无显著性差异（P=0.484>0.05），均未使 TBIL 水平上升（P=0.472>0.05）。
结论 对于有明确输血需求的主次侧交叉配血不合患者，应及时给予红细胞输注，且优先考虑去白细胞悬浮红细胞，最大限度避免输血延迟。

PU-2597

培训和考核对提高检验标本合格率的影响

陈景章、游柠彰
益阳市第一中医医院

目的 通过全面检验标本正确采集及运送的培训和考核，提高检验标本合格率。
方法 通过护理部、质控科、医务部、检验科相互合作，重点培训临床医师、护士、运送标本护工，内容包括病人检验前准备、标本正确采集、标本运送等重点工作。编制详细检验标本采集、运送工作考核制度，细化考核内容，每月及时考核通报。根据改进情况，重点人群再培训指导。
结果 通过三个月的持续培训、考核和改进，标本不合格率由 2.03%下降到 0.95%，其中标本类型错误、标本容器错误、标本量不足的问题得到了明显提升。
结论 严格的培训和考核可明显提高检验标本合格率。

PU-2598

乙醇-琼脂法在细胞蜡块制作中的应用

刘秀生、程梦月、高俊美
合肥金域医学检验实验室有限公司

目的 避免细胞丢失，提高肿瘤细胞检出率。
方法 收集合肥金域医学实验室有限公司病理中心 2019-2020 年体外培养细胞标本 20 例。细胞经固定、脱水后，加入琼脂，使琼脂溶液充分包裹细胞，凝集成块后进行包埋、脱水、切片、染色等实验步骤。
结果 琼脂对标本处理无任何影响，可将细胞集中，可以连续切片，制成的细胞蜡块可长期保存。制作的细胞蜡块 HE 染色清晰透亮，红蓝对比明显；免疫组化染色定位准确，细胞集中，染色清晰无背景。
结论 此方法对于送检极少量体外培养细胞处理很有优势，细胞量基本不会丢失，可以大大提高阳性率，制成细胞蜡块可长期保存。为后续免疫组化染色、分子检测提供充分的材料。满足病理诊断和科研实验室的需求。

PU-2599

检验科优质服务流程应用效果评价

王潘
资阳市中医院

目的 评价在检验科应用优质服务流程的效果。
方法 选取 66 例自 2019 年 2 月-2019 年 5 月来检验科进行检测的患者，将其划分为常规组(33 例)和优质组(33 例)。常规组实施常规检验流程，优质组实施优质服务流程。比较两种流程标本检验等待的时间。
结果 优质组标本检验等待的时间要少于常规组，差异有统计学意义($P<0.05$)。
结论 在检验科实施优质服务流程能缩短患者样本检验等待的时间，值得推广。

PU-2600

通过下发室内质控品对四川省妇幼医院实验室血常规室内质控体系进行的调查与评价

张鸽
四川大学华西第二医院

目的 通过下发血常规室内质控品的方式对四川省妇幼医院检验科血常规室内质控的运行情况进行调查以及评价。
方法 四川省妇幼检验质量控制中心作为组织方，随机抽选 40 家四川省妇幼系统医院检验科，下发血常规室内质控品，要求参与调查检验科使用下发质控品进行至少 20 天的室内质控并反馈每日室内质控结果，失控处理以及定期的质控评价等数据，通过对回报数据进行评价，分析四川地区妇幼系统的室内质控体系建立情况。
结果 40 家参与调查单位均能够自行累积室内质控靶值，40%的单位使用了只能显示一个浓度质控数据的质控图；15%的单位质控允许限设置不合理，超出行业标准的允许范围；10%的单位未对单个项目进行质控月分析；20%的单位有室内质控失控处理不当。

结论 四川省妇幼检验系统的血常规室内质控体系建设水平亟需改善，需从质控允许范围制定，失控处理原则，质控定期评估要求等方面加强理论培训，并对实验室的质控软件进行优化。

PU-2601

医学检验质量控制分析

王潘
资阳市雁江区中医医院

由于时代取得了飞速的进步，从而推动了现阶段医学的持续发展，而医学检验技术也因此更加先进，在对疾病进行诊治与预后环节，都应该凭借医学检验结果进行参考，可以说，医学检验在医学临床工作实施中扮演着至关重要的角色，其结果也给患者的疾病诊断发挥着关键的影响，为了进一步确保医学检验的质量，进行相应的质量控制十分关键。本文主要分析了医学检验质量的控制对策，以期提供一定的参考作用。

NLR 与 PLR 联合检测与冠脉病变严重程度相关性研究

崔文浩
广东省人民医院

目的 分析 NLR 与 PLR 联合检测与冠脉病变严重程度的相关性。
方法 采用回顾性的研究方法，以 Gensini 积分 30 分为界划分低分组和高分组，另收集同期健康者 153 例的 NLR 和 PLR 值作为健康对照。
结果 健康组、低分组、高分组的 NLR 检测水平分别为 1.50(0.67)、2.24(0.86)、2.07(1.55)，三组两两之间差异具有统计学意义，PLR 水平在三组两两之间的差异不具有统计学意义。
结论 NLR 对冠脉病变严重程度具有一定的预测价值，PLR 对于 Gensini 评分积分＞30 分的冠心病患者有一定的预测价值。NLR 与 PLR 联合检测对于冠脉病变严重程度无明显预测价值。

PU-2603

浅析提高临床医学基础检验技术的措施

王潘
资阳市雁江区中医医院

目的 由于现代化医疗水平的持续优化，所规定的临床医学基础检验技术标准也在不断提升，需要更加精准、快速的在医疗工作中进行检验，给患者提供更高的治疗水平。
方法 临床医学检验技术重点包括了充分合理的收集与测试临床标本，并根据及时准确的检测报告，给临床疾病的诊断、治疗和预防提供一定的依据。
结果 所以在我国专门开放了临床医学检验的课程，目的是为了培养出更多具备医学检验技术的人才。
结论 目前临床医学检验技术中的不足，并对提高检验技术的措施展开了一定的分析，以推动临床医学检验技术的完善优化。

Prevalence and Genotype Distribution of High-risk HPV Infection among Women in Beijing, China

Xiaoyan Zhu、yaxuan wang、zhi lv、jianrong su
Beijing Friendship Hospital, Capital Medical University

Cervical cancer is highly associated with high-risk human papillomavirus (HPV) infection and genotype distribution of high-risk HPV(HR-HPV) infection varies greatly in different regions. Clinical specimens were collected from 46365 patients at Beijing Friendship Hospital, Capital Medical University from January 2017 to December 2020. HPV DNA genotype testing was performed using Real-time PCR. The infection rates based on disease group were compared using the chi-square test. The linear-by-linear association test and gamma value were used to assess the changes in HPV prevalence over calendar year and age group. A total of 10514 women were infected with HR-HPV, with an overall positive rate of 22.7%. The most prevalence HR-HPV types were HPV 52, 58, 16, 51 and 66 and HPV 59 had a higher prevalence except for HPV16, 58 and 52 in cervical cancer group. Single infection of HR-HPV was dominant among different diseases groups. The infection rate of HR-HPV decreased first and then increased from below 20 years old to over 60 years old. There were significant differences in the HR-HPV infection rates among the age and disease groups. Our findings demonstrate that the genotype distribution of HR-HPV varied with age and diseases. The HR-HPV genotypes prevalence were found to be directly useful for local governments to promote HPV targeted vaccination in the study region.

PU-2605

临床医学检验中影响血液细胞检测质量的有关因素及其控制方法探讨

王潘
资阳市雁江区中医医院

目的 探讨临床医学检验中血细胞检测质量的相关因素及控制方法。
方法 2018 年 1 月至 2019 年 12 月，选取我院 150 例血型和血细胞检测条件相同的患者为研究对象。通过设置不同的检测条件，分析了影响血细胞检测质量的因素。
结果 稀释倍数为 1 的血细胞检测结果稀释比为 1 时，可提高 10000 倍： 两者差异有统计学意义（P<0.05）。不同室温保存时间的血液检测结果有显著性差异（P<0.05）。低温环境下不同保存时间血液检测结果差异有显著性（P<0.05）。同时，室温与低温血液检测结果有显著性差异（P<0.05）。
结论 在血细胞检测过程中，血液稀释率、血样放置时间和温度会影响检测结果。在今后的临床医学检测工作中，要严格控制血细胞检测的各个环节，尽量避免不利因素对检测结果的影响，保证检测结果的准确性。

PU-2606

男性不育症患者外周血染色体核型分析的临床应用分析

田维娟
云南大学附属医院

目的 分析男性不育症患者精液分析与外周血染色体核型的关系。
方法 收集云南大学附属医院从 2019 年 1 月至 2021 年 3 月到生殖医学科就诊男性共 194 例，用外周血染色体 G 显带操作方法进行外周血染色体核型分析；同时留取精液进行精液常规检验。
结果 194 例男性患者中，正常精液组有 83 例，异常染色体有 3 例，异常检出率为 3.61%，有 2 例为染色体多态性;有 95 例弱精症患者，染色体异常共 8 例，异常率为 8.42%，有 1 例为染色体多态性;有 16 例为弱精症患者，染色体异常有 3 例，异常率为 18.75%。以上三组染色体异常差异具有统计学意义(P＜0.05)。194 例男性患者中发现染色体异常有 11 例，异常检出率为 7.2%。其中有 2 例患者为染色体数目异常患者，其检出率为 1.03%；有 9 例患者为染色体结构异常，其检出率为 4.64%。而且发现 46,XXY 是最常见的染色体数目异常，即克氏综合征且为非嵌合型；染色体倒位和相互易位是最常见的结构异常，本组数据中还出现了罗伯逊易位，而且还检出 3 例染色体多态性，检出率为 1.55%。
结论 男性不育症患者中染色体异常率较高，染色体异常是导致男性不育症的重要遗传因素之一，导致男性不育的临床表现分别表现为弱精症、无精子症等。对于患有男性不育症的患者进行外周血染色体检查，有助于发现病因和辅助诊断。

PU-2607

长沙地区女性抗缪勒氏管激素水平与年龄的相关性分析

袁璐
中南大学湘雅三医院

目的 通过分析长沙地区 AMH 水平在不同年龄阶段女性体内的变化，探究 AMH 水平检测对临床评估卵巢储备功能的应用价值，从而帮助女性进行有效备孕。
方法 回顾性分析 2019 年 4 月～2021 年 4 月湖南省长沙市中南大学湘雅三医院参与健康体检的 1985 例女性的血清检查结果。按照年龄将被检者分为 7 组，A 组：20～25 岁，共 88 例；B 组：26～30 岁，共 316 例；C 组：31～35 岁，共 385 例；D 组：36～40 岁，共 411 例；E 组：41～45 岁，共 420 例；F 组：46～50 岁，共 285 例；G 组：＞50 岁，共 80 例。采用磁微粒吖啶酯化学发光法检测被检者血清 AMH 的含量，分析其与年龄的相关性。
结果 （1）B 组血清 AMH 水平稍微高于 A 组，但差异不具有统计学意义(p＞0.05)；B 组与 C 组、C 组与 D 组、D 组与 E 组、E 组与 F 组、F 组与 G 组进行组间两两比较，发现血清 AMH 水平依次下降，且各组间差异均具有统计学意义(p＜0.05)。（2）30 岁左右血清 AMH 含量相对最高，随后，AMH 水平随年龄增长逐渐下降。
结论 30 岁左右是女性怀孕的最佳年龄阶段；随后，女性卵巢储备功能下降，提示怀孕几率减小。随着年龄的增长，30 岁以后，女性血清 AMH 水平逐渐下降，临床中可以恰当的进行 AMH 检测为判断生育能力提供临床指导作用,以帮助女性进行有效备孕。

探讨如何应对新冠病毒大规模筛查结果快速分区上报

卞林翠
合肥金域医学检验实验室有限公司

面对六安突发疫情，大规模筛查迫在眉睫，大量样本集中送达合肥金域医学检验实验室有限公司。随同样本一同到达的还有被采样人员信息，不同区域相关采样信息表中，包含不同市区、不同社区、不同小区，但不同区域的筛查结果需分别上报至相应区政府。在大筛查样本涌入实验室后需快速进行灭活、提取、检测、结果分析、上报。为提高灭活及检测速度，样本在整理灭活过程中，不同区域相互混合，但在结果上报中区域被打乱，不能分区快速上报检测结果；且资料分析小组在采样信息表资料录入、区域划分中任务量较大，可能需要涉及与前端采样人员或物流人员确认样本来源区域，造成人力及沟通成本的提高。因此需标本到达实验室前做好采样信息表中每个区域所填信息完整并做好特有标记，在大量样本信息混合中有特有标识，可进行区域筛选；在小程序采样信息录入中也应对不同区域有特有标识。检测分析结果出来后，资料分析小组即可根据录入的特有采样信息标识，将不同样本人员筛选分配至相应区域，完成结果上报中区域的划分。节省后期分区域时间，可更高效将实验结果上报至各区政府。

PU-2609

不同年龄和性别的消化道出血病人血栓弹力图参数比较与临床意义

欧淳
南华大学附属南华医院

目的 分析不同性别和年龄对消化道出血病人血栓弹力图各项参数的差异及临床指导意义。
方法 选取 2020 年 1 月至 2020 年 11 月南华大学附属南华医院收治的 165 例消化道出血患者作为研究对象，检测其凝血功能与血栓弹力图（TEG）的 5 项主要指标：R 值（反映凝血因子活性）、K 值（反映纤维蛋白原功能）、MA 值（反映血小板功能）、CI 值（反映凝血综合指数）、α 角（反映血块形成速度）。分别按照年龄和性别进行分组，分析性别和年龄对 TEG 各参数的影响。
结果 165 名消化道出血病人 TEG 的 R 值、K 值、MA 值、CI 值和 α 角在不同的性别组中均无统计学差异（$P>0.05$）。不同年龄组中，MA 值、CI 值和 α 角差异均具有统计学意义（$P<0.05$）。在男性组中，低龄组与高龄组比较仅 CI 值的差异有具有统计学意义（$P<0.05$）。在女性组中，低龄组与高龄组比较 K 值、MA 值、CI 值和 α 角的差异均具有统计学意义（$P<0.05$）。低龄组中，男性 MA 值与女性比较仅有 MA 差异具有统计学意义（$P<0.05$）。高龄组中，男性与女性的 R 值、K 值、MA 值、CI 值和 α 角均无统计学意义（$P>0.05$）。
结论 消化道出血病人中，性别对 TEG 参数影响不明显，年龄对 TEG 参数有一定的影响。各实验室应根据实际情况建立合适的 TEG 参考区间。

PU-2610

临床生化质控自动化的设计与应用

汤涛
陆军军医大学第二附属医院

目的 开发一套适用于临床生化多项目的室内质控自动化系统，实现临床生化类项目的室内质控自动化，并对该系统进行临床应用价值评估。

方法 参考 WS/T 641-2018《临床检验定量测定室内质量控制》室内质量控制指南，依靠 Beckman Coulter 公司的 Power Processor 自动化流水线的中间体软件 Data Manager 2（DM2）为工具整合实验室 LIS 系统，针对 69 项临床生化检验定量项目编写规则给出指令将质控品从储存冰箱获取、轨道等待复温、进入仪器检测、失控重测等，并对临床生化血液定量室内质控项目进行验证，比较了室内质控自动化与手工项目平均值、变异系数、离散程度、西格玛值、失控检出率、样本上线平均时间、报告平均 Tturnaround Time（TAT）等参数关键指标。
结果 2020 年 1 月到 6 月使用室内质控自动化系统期间，自动化室内质控与传统手工质控图极其相似。其中自动化质控与手工质控平均值比较差别无明显统计学意义（P>0.05）；变异系数比较差别无明显统计学意义（P>0.05）；离散程度比较差别无明显统计学意义（P>0.05）；失控检出率比较差别无明显统计学意义（P>0.05）；西格玛值差别无明显统计学意义（P>0.05）。检测时间方面，第一批样本上线平均时间提前了 38min（P<0.05），门诊样本平均 TAT 下降了 28min（P<0.05）；住院样本平均 TAT 下降了 26min（P<0.05）；急诊样本平均 TAT 下降了 24min（P<0.05）。
结论 本研究开发了一套适用于多个定量项目的临床生化室内质控自动化系统，能够满足日常临床工作需求，可以极大缓解第一批样本上线时间，降低 TAT 和提高检验质量，能高度做到人机协调融合模式，其应用价值具有一定的推广性。

PU-2611

一个新的 ABO*A 等位基因导致的 AwB 亚型及其分子机制研究

周璐[1]、雷航[2]、洪叶[1]、金爽[1]、董永勤[2]、王学锋[2]、蔡晓红[2]
1. 上海交通大学医学院附属瑞金医院舟山分院
2. 上海交通大学医学院附属瑞金医院

目的 以一个血型 AwB 亚型家系为研究对象，进行血清学鉴定及分子机制研究。
方法 ABO 血清学定型使用标准血清学实验方法；对 ABO 基因 7 个外显子及其侧翼序列做 PCR 扩增、基因克隆和测序分析；采用 Chimera 软件进行 N-乙酰半乳糖胺基转移酶（GTA）突变体构建,PyMOL 软件作图并进行分析。
结果 家系的血清学鉴定结果先证者为 A_wB 亚型，家系其他 2 名成员为 B 型。DNA 克隆和测序分析显示先证者为 *A/B* 基因型，其他成员为 *B/O* 基因型。先证者的 A 等位基因上 *A1.02* 基础上发生 c.838C>T 错义突变，导致 GTA 发生 p.L280F 氨基酸置换。通过对 GTA 空间结构的分析，认为 p.L280F 未导致 GTA 蛋白整体结构的改变，但改变了 GTA280 位氨基酸与周围氨基酸残基的氢键网络，导致局部构象的改变。
结论 p.L280F 突变可能通过改变邻近氨基酸间的作用力导致 A 酶活性减弱，在与 B 等位基因共表达时形成 A_wB 亚型。

PU-2612

中老年慢性肾脏病凝血纤溶指标水平变化与临床指标相关性研究

张玲、刘华伟、龚蓉
成都市第三人民医院

目的 观察分析中老年慢性肾脏病患者凝血纤溶指标变化，探讨 D 二聚体、抗凝血酶 III 与临床指标的的相关性。
方法 收集我院 2020 年 1 月～2020 年 11 月我院住院的中老年 CKD 患者。根据有无肾病综合征表现分为肾病综合征（NS））组 79 例，非肾病综合征组 89 例，同期健康体检者 30 例作为对照组。

比较健康对照、NS 组与非 NS 组凝血纤溶指标变化，用相关分析、回归分析及 ROC 曲线分析中老年慢性肾病凝血纤溶指标与相关实验室指标及血栓事件的关系。

结果 ①NS 组与非 NS 组 ATII 水平均低于健康对照组(P<0.05),D-D、FIB 水平均高于健康对照组(P<0.05），NS 组与非 NS 组 D-D、AT-III 统计学显示有显著差异(P<0.05）。②相关分析显示 D-D 水平与血清 ALB 负相关，与尿蛋白、尿蛋白/ALB 比值正相关，AT-III 水平与血清 ALB、CHOL、HDL-C、LDL-C 正相关。③回归分析显示血清 ALB 是 AT-III 与 D-D 水平的独立影响因素。④对血栓事件的诊断 D-D 检测价值优于血浆 ALB，血浆白蛋白优于 AT-III。

结论 中老年慢性肾脏病患者存在凝血功能异常，血清 ALB 是 D-D 及 ATII 水平的独立影响因素，D-D、血清 ALB、ATII 水平对中老年 CKD 血凝状态和血栓事件具诊断价值。

PU-2613

Possibility of EDTA anti-coagulated plasma instead of serum for insulin detection in hemolytic specimens

娄鉴芳
江苏省人民医院（南京医科大学第一附属医院）

The aim of this study was to determine the interference of hemolysis on insulin (INS) determination in serum and EDTA anti-coagulated plasma by electrochemiluminescence immunoassay (ECLIA) method and the possibility of using plasma for INS determination. Serum/EDTA anti-coagulated plasma with/without hemolysis were detected by ECLIA for INS determination and the results were then compared.1. INS levels between non-hemolytic serum and EDTA anti-coagulated plasma showed no significant difference (P> 0.05). 2. INS levels in light hemolysis (A group) showed no significant difference after 0.5, 1h compared with non-hemolytic serum (P> 0.05) but decreased significantly after 2, 4h (P<0.05). INS levels in moderate to severe hemolysis (B/C/D group)showed significant decrease after 0.5h. 3.Plasma INS levels of A (mild hemolysis), B (mild hemolysis), C (moderate hemolysis) group showed no significant difference with time compared with non-hemolytic plasma except only that of D (severe hemolysis) group showed a significant decrease(P<0.05).

PU-2614

提高 POCT 血气分析检验质量的管理实践研究

潘婕
南京大学医学院附属鼓楼医院

目的 应用质量管理方法提高 POCT 血气分析检验质量并评估其实施效果。

方法 纳入 3 个使用雅培 i-STAT1 手持式血气分析仪病区，建立针对性的 POCT 血气分析质量管理方案。将 POCT 血气分析质量管理前、管理后 6 个月、管理后 12 个月共 3 组室间比对进行分析，比较 3 个组的项目得分、项目平均偏倚（%）及检测合格率（%），并对管理后的室内质控变异系数进行分析评价。

结果 A 病区 PO2、PCO2、Na＋和 Ca2＋管理后 6 个月、管理后 12 个月较管理前项目得分提高。pH 和 K＋3 个组项目得分均为 100。pH、PCO2、Na＋、Ca2＋管理后 6 个月较管理前平均偏倚减小（P<0.05）。pH、PO2、PCO2、Na＋、K＋和 Ca2＋管理后 12 个月较管理后 6 个月平均偏倚减小（P<0.05）。A 病区管理后 6 个月、管理后 12 个月室间比对检测合格率均为 100%，较管理前（50%）均有增高。B 病区 pH、PO2、PCO2、Na 和 Ca2＋管理后 6 个月、管理后 12 个月较管理前项目得分提高。K＋3 个组项目得分均为 100。PO2、PCO2、Na＋、K＋和 Ca2＋管理后

6 个月较管理前平均偏倚减小（P<0.05）；pH、PO2、PCO2、Na＋、K＋和 Ca2＋管理后 12 个月较管理后 6 个月平均偏倚减小（P<0.05）。B 病区管理后 6 个月、管理后 12 个月室间比对检测合格率分别为 83%和 100%，较管理前（67%）增高。C 病区 pH、PO2、PCO2 和 K＋管理后 6 个月较管理前项目得分提高；pH、PO2、PCO2、Na＋和 K＋管理后 12 个月较管理前项目得分亦提高。Ca2＋3 组室间比对项目得分均为 100。pH、PO2、PCO2、K+和 Ca2+管理后 6 个月较管理前平均偏倚减小（P<0.05）。PCO2、Na＋和 K＋管理后 12 个月较管理后 6 个月平均偏倚减小（P<0.05），但 pH、PO2 和 Ca2+管理后 12 个月较管理后 6 个月平均偏倚增大（P<0.05）。C 病区管理后 6 个月、管理后 12 个月室间比对检测合格率均为 100%，较管理前（33%）提高。除 PO2 外，3 个病区在 POCT 统一质量管理后血气分析各项目的室内质控变异系数均在允许不精密度范围内。

结论 建立并施行针对性的 POCT 血气分析质量管理，可提升 POCT 血气分析的检验质量。

miRNA 在类风湿关节炎中的表达及意义

周韶松
南方医科大学珠江医院

小 RNA（miRNA）是小分子非编码 RNA，负调控基因表达后的转录水平。目前，有 939 成熟的人类小 RNA 序列 Sanger 小 RNA 的注册表更新。预计人类基因组可能有大约 1500 的小 RNA 在控制我们三分之一基因的表达。在细胞中通过控制合成目标蛋白的，这些调控 RNA 分子，参与多种生理网络和主要职能，他们的管制已经牵连严重的人类疾病的发病机制，如癌症和感染。

PU-2616

HDAC 抑制剂通过下调内质网蛋白 RCN1 逆转肺癌耐药及增加药物敏感性的作用机制研究

张璐
山东大学第二医院

肺癌是全世界高发病率、高死亡率的恶性肿瘤，放化疗、免疫治疗是转移性肺癌的主要治疗手段，和其它肿瘤一样，治疗失败的重要原因之一是耐药性的产生。由于化疗依然是肺癌的一线治疗手段，对其耐药的机制也较为深入，目前克服肺癌化疗耐药的策略主要有：１）研究耐药机制，发现新的逆转药物，例如，药泵蛋白 P-gp 高表达是多西他赛（docetaxel, Doc）的耐药机制之一，而卡巴他赛（Cabazitaxel）P-gp 的亲和力低，可作为治疗方案用于对 Doc 耐药患者；2）选择新的治疗方案，例如，一线化疗失败后采用免疫治疗，这也是新型的逆转方法；３），选择无交叉耐药的联合化疗方案，例如，在以铂类药物为主的一线化疗失败后，可采用多西他赛进行治疗，而且二者进行交叉治疗的肺癌患者生存期得到延长等。

本研究论文发现内质网蛋白 reticulocalbin-1 (RCN1)在肺癌中高表达，而且 RCN1 在多种肿瘤耐药细胞中的表达显著升高、与肿瘤细胞耐药性密切相关。因此我们重点探讨 RCN1 在肺癌耐药中的作用，并通过筛选降低 RCN1 的药物，发现 HDAC 抑制剂能显著降低 RCN1 的表达、且能增加耐药细胞对化疗药物、特别对多柔比星的敏感性，降低其毒性的作用，并对 HDAC 抑制剂能显著降低 RCN1 表达的机制进行初步探讨。RCN1 作为内质网蛋白，其生理病理功能研究不多，主要集中于肿瘤中的表达，本论文通过研究 RCN1 与肿瘤多药耐药中的关联以及对化疗药物的影响，为耐药肺癌患者的临床用药提供新的依据。

PU-2617

基于机器学习算法建立的 IgA 肾病与非 IgA 肾病鉴别诊断模型

杨晗、刘记宏、张慧、刘子杰
昆明医科大学第一附属医院

目的 基于患者的流行病学资料和临床实验室常规检测结果，用机器学习算法建立 IgA 肾病与非 IgA 肾病鉴别诊断模型。
方法 本研究共纳入经肾穿刺活检确诊的患者 260 例，其中 IgA 肾病 130 例，非 IgA 肾病 130 例。收集患者的流行病学资料和临床实验室常规检测结果。将 260 例数据分为训练集(70%，182 例)和测试集(30%，78 例)。分别使用决策树、随机森林、支持向量机(SVM)、极限梯度提升算法（XGBOOST）建立鉴别诊断模型。并使用混淆矩阵，ROC 曲线评估模型效能。
结果 与决策树、随机森林和支持向量机相比，XGBOOST 模型性能最佳，其准确率为 83.33%，ROC 曲线下面积为 0.83，诊断为 IgA 肾病的敏感度、特异度分别为 89%、79%。
结论 采用 XGBOOST 方法建立的 IgA 肾病与非 IgA 肾病鉴别诊断模型具有较好的临床性能。

PU-2618

A novel long non-coding RNA RNF144A-AS1 promotes bladder cancer metastasis through mediating epithelial-mesenchymal transition

Yifan Wang
The Second Hospital, Cheeloo College of Medicine, Shandong University

Long non-coding RNAs (lncRNAs) play critical roles in tumor initiation and progression. However, little is known about the functional role of lncRNAs in the tumor metastasis Here, through lncRNA-expression and functional mining computational framework of primary bladder cancer (BC) tumor and adjacent non-tumor tissues from The Cancer Genome Atlas database, we discovered a highly expressed lncRNA RNF144A-AAS1, which involved in extracellular matrix organization. Gain-of-function assays demonstrated that RNF144A-AAS1 promotes BC cells migration and invasion in vitro. Mechanistically, Knocking down RNF144A-AS1 significantly inhibited the epithelial-mesenchymal transition (EMT) by inducing the expression of epithelial markers (E-cadherin and ZO-1) and suppressing the expression of mesenchymal markers (N-cadherin and Vimentin). In conclusion, this study highlighted that positive role of RNF144A-AS1 in BC metastasis via the activation of multiple EMT regulators, suggesting its great potential to serve as effective therapeutic target for patients with BC.

PU-2619

流式细胞术法检测白介素-6、白介素-10 在脓毒症患者中的诊断价值

吴春香
四川省人民医院东院

目的 脓毒症是由感染引起的不平衡炎症反应综合征，细胞因子参与脓毒症的免疫反应。流式细胞术法检测血浆各细胞因子在脓毒症诊断效力的优劣比较还不明确，本文旨在比较流式细胞术法检测血浆细胞因子在诊断脓毒症的效力，并探讨 IL-6、IL-10 在成人脓毒症患者早期诊断中的应用价值。

方法 分析 2020 年 1 月至 2021 年 1 月期间四川省人民医院收治的成人脓毒症患者 122 例为实验组，以同期年龄、性别相匹配的 99 例健康体检者作为对照组。收集入组人群的相关资料：患者临床资料，流式细胞术法检测血浆 IL-2、IL-4、IL-6、IL-10、TNF-α、IFN-γ 的水平，患者 PCT 及 CRP 等水平，并记录患者 APACHEII、SOFA 评分。对各指标执行受试者工作曲线（ROC）及相关性分析，评估并比较各细胞因子对脓毒症早期诊断的应用价值。
结果 脓毒症患者血浆 IL-6、IL-10、TNF-α、IFN-γ、IL-2 等水平显著高于对照组(P<0.05)，而血浆 IL-4 在脓毒症患者与正常组之间无统计学差异（P=0.320，P=0.168）。执行 ROC 曲线各指标的 ROC 曲线下面积(AUC)分别为：IL-2 为 0.58[P=0.03，95% confidence interval(CI)，0.51-0.66]，IL-4 为 0.53（P=0.45, 95% CI,0.45-0.61），IL-6 为 0.97 (P<0.0001, 95% CI, 0.95-0.99)，IL-10 为 0.94 (P<0.0001, 95% CI, 0.90-0.97)，TNF-α 为 0.64(P=0.0003,95% CI，0.57-0.71)和 IFN-γ 为 0.66(<0.0001,95% CI，0.59-0.73)。IL-6 和 IL-10 对脓毒症的诊断价值尤为突出，TNF-a 与 IFN-γ 诊断价值相当，次于 IL-6 和 IL-10,而 IL-2 与 IL-4 在脓毒症早期诊断中的价值不明显。Spearman 相关性分析结果显示,脓毒症患者血清 IL-6 和 IL-10 呈正相关，r=0.57（P<0.0001, 95% CI ，0.43-0.68）。
结论 流式细胞术检测各细胞因子在预测脓毒症方面效力各不相同，IL-6、IL-10 对脓毒症患者的早期诊断价值尤为突出，可为临床脓毒症早期诊治提供依据。

妊娠中期血清 β-HCG 和血脂预测妊娠高血压综合症发生的价值研究

司马小可[1]、牛和平[2]、司马晓朋[1]
1. 郑州金域临床检验中心有限公司
2. 新密市妇幼保健院

目的 探讨妊娠中期血清 β-HCG 和血脂预测妊娠高血压综合症发生的价值。
方法 本研究对送往我中心的 120 名妊娠患者进行了前瞻性研究。 所有患者在妊娠中期（14-20 周）接受血清 β-HCG 和血脂的筛查，并随访至分娩。 本研究将血压正常组（I 组）和妊娠高血压组（Ⅱ组）的血清 β-HCG 和血脂进行了比较。
结果 发生 PIH 的女性（组 II）的 TG，总胆固醇，VLDL 和 LDL 值显著高于血压正常组（I 组）的患者，p 值<0.05，具有统计学意义。 组 II 的 HDL 和 β-HCG 值不高于组 I，p 值>0.05，差异无统计学意义。
结论 妊娠血质检测对于中期妊娠的孕妇是一项很好的非侵入性的检查，可用于临床前期妊娠高血压的预测。 而孕妇血清 β-HCG 与妊娠高血压无明显相关性。

PU-2621

对 372 例性染色体异常患者的统计学分析

司马小可、张美玲、张磊、张丽敏、李红敏
郑州金域临床检验中心有限公司

目的 探讨河南地区性染色体异常患者的临床表现及类型，并对其进行统计学分析。
方法 对 2018 来我中心做外周血染色体核型分析的 13235 例患者采用外周血进行染色体培养，常规 G 显带徕卡自动扫片仪扫片并进行核型分析。
结果 在 13235 例外周血染色体核型分析标本中，共检出性染色体异常患者 372 例，检出率为 2.81%， 其中女性 123 例，占 33.06%；男性 249 例，占 66.94%。在 372 例性染色体异常核型中

Y 多态性 130 例，占 34.94%；Klinefelter 综合征 95 例，占 25.54%；Tuner 综合征 88 例，占 23.66%；性反转 27 例，占 7.25%，其中女性性反转 15 例，占 4.03%；男性性反转 12 例，占 3.22%；超雌综合征 11 例，占 2.96%；超雄综合征 7 例，占 1.88%； 48,XXYY 综合征 1 例，占 0.27%；两性畸形 1 例，占 0.27%；其他异常 12 例，占 3.23%。
结论 性染色体异常最常见的是 Y 染色体多态性，其次依次为 Klinefelter 综合征、Tuner 综合征、性反转、超雌综合征、超雄综合征等，是导致第二性征发育不良、不孕不育、流产的重要原因，对具有明显临床表现的患者，要进行外周血染色体检查，有助于临床诊断和治疗。

PU-2622

结核患者 T-SPOT 结果与结核患者疾病进展的相关性研究

杨舒婷
新疆维吾尔自治区人民医院

目的 探究结核患者 T-SPOT 结果与肺结核患者疾病进展的相关性。
方法 收集 2020 年 6 月至 2021 年 6 月在新疆某三甲医院就诊并诊断为结核病的患者共 60 人，年龄中位数 59.5 岁。其中男性 30 人，女性 30 人。共收集继发性肺结核 14 例；继发性肺结核（浸润型）8 例；陈旧性肺结核 24 例；结核瘤 1 例；腰椎结核 2 例；肾结核 1 例；结核性胸膜炎 2 例；原发性肺结核 4 例；浸润型肺结核 4 例。对患者病史、T-SPOT、血沉、痰涂片、结核杆菌基因检测以及肺部 CT 结果进行分析。为方便研究，将患者肺部 CT 结果赋值处理。肺部出现斑片影、实变影、树芽征、结节、空洞、条索、肺门淋巴结肿大均赋值为 1。一方面，按照 T-SPOT 数值将病例分为两组（T-SPOT 结果≥16 以及 T-SPOT 结果≤4），分别计算两组中痰涂片阳性率、结核杆菌基因检测阳性率。另一方面，计算 T-SPOT 结果与血沉、肺部 CT 结果的相关性。
结果 痰涂片阳性率在 T-SPOT 结果≥16 以及≤4 的分组中分别是 9.09%，0%；结核杆菌基因检测阳性率在 T-SPOT 结果≥16 以及≤4 的分组中分别是 31.8%，40%。结核患者 T-SPOT 检测结果同血沉结果、赋值后的 CT 结果做相关性分析显示二者并无相关性。
结论 现有研究表明 TB 患者外周血中 Th2 细胞比例显著升高，Th1 细胞比例变化不明。INF-γ 主要由 Th1 细胞分泌，是一种高效的抗病毒生物活性物质，又是一种具有广泛免疫调节作用的淋巴因子。有研究表明肺结核病灶中 INF-γ 表达显著高于正常组。T-SPOT 是 γ 干扰素释放试验的一种，因此 T-SPOT 的检测值可能与结核患者病情相关。本研究结果提示结核杆菌基因检测阳性率在 T-SPOT 数值高组中阳性率低，结核患者 T-SPOT 检测结果同血沉结果、赋值后的 CT 结果做相关性分析显示二者并无相关性。考虑是由于纳入病例数较少，后期研究可以扩大纳入病例数量，同时检测外周血 INF-γ 水平与 T-SPOT 结果对照研究。

PU-2623

双区法质控图在化学发光测定 HBsAg 室内质控的效能分析

陈新瑞
中南大学湘雅二医院

目的 评价双区法质控图(由 Levey-Jennings 定量控制图和 cutoff 定性控制图绘制成一张质控图的图表)，对化学发光测定 HBsAg 室内质控的控制效能。
方法 运用 SPSS26 统计软件的质控图功能，回顾分析 2020 年 3 月至 2021 年 4 月我院采用微粒子化学发光测定 HBsAg 的室内质控数据 ，比较在双区法质控图与单值-移动极值图的控制效能。
结果 HBsAg 低、中二种水平的室内质控物中，低值阴性水平的质控物，其数据表现为以 0 为趋势的偏态对数分布，在双区定性质控图上，不出现失控状态，不能反映低值阴性水平的质控状态；在单值-移动极值图上能较好的反映低值阴性水平的质控状态。而中值水平质控物，其数据基本呈正

态分布，双区法中的 Levey-Jennings 控制图和单值-移动极值图都能较好的反映中值水平的质控状态。
结论 定量定性双区法在化学发光测定 HBsAg 室内质控中，对低值阴性水平质控物控制效能低下，应采用单值-移动极值图才能较好的反映低值阴性水平的质控状态。

PU-2624

天津地区 1670 例湿疹、荨麻疹患儿过敏原特异性 IgE 定量测定结果分析

娜仁、沈永明
天津市儿童医院

目的 分析天津地区湿疹、荨麻疹患儿的过敏原特异性免疫球蛋白 E（sIgE）定量检测结果，为临床诊疗提供参考。
方法 采用酶联免疫捕获法，对 2019 年 8 月到 2020 年 3 月就诊于天津市儿童医院的 1023 例湿疹及 647 例荨麻疹患儿进行吸入及食物过敏原 sIgE 检测，并对检测结果进行统计分析。
结果 1670 例患儿中，共 1254 例检出过敏原 sIgE 阳性，检出率为 75.09%；1185 例检出食物过敏原 sIgE 阳性，检出率 70.96%；739 例检出吸入过敏原 sIgE 阳性，检出率 44.25%。食物过敏原 sIgE 检出前三位依次为鸡蛋白 蛋黄（943 例，56.47%）、牛奶（533 例，31.92%）、小麦面粉（336 例，20.12%），吸入过敏原 sIgE 检出前三位依次为屋尘（561 例，33.59%）、交链孢霉（182 例，10.90%）、粉尘螨（127 例，7.60%）。男女过敏原 sIgE 检出率无明显差异，鸡蛋白蛋黄、屋尘、牛奶、小麦面粉在 1-3 岁组检出率最高，而交链孢霉与粉尘螨分别在 4-6 岁组与>6 岁组检出率最高。荨麻疹患儿屋尘 sIgE 检出率高于湿疹患儿，其余几种过敏原 sIgE 检出率在湿疹及荨麻疹患儿中无明显差异。
结论 本研究能够在一定程度上反映湿疹、荨麻疹患儿的过敏原 sIgE 流行特征，有助于疾病的防治和诊断。

PU-2625

应用 CPG-寡脱氧核苷酸 DSP30 和白介素 2 提高慢性淋巴细胞白血病的细胞遗传学异常检出率

李建伟[1]、毛翠[2]
1. 天津金域医学检验实验室有限公司
2. 广州金域医学检验中心有限公司

目的 验证 CpG-寡脱氧核苷酸(CpG-olig0deoxynucleotide,CpG-ODN)免疫刺激是否能提高慢性淋巴细胞白血病(chronic lymphocytic leukemia,CLL)的细胞遗传学异常检出率。
方法对 150 例 CLL 患者的骨髓液标本，并行进行培养: 24 小时未刺激，CPG-寡脱氧核苷酸联合 IL-2 刺激培养 72 h，常规收获细胞制备染色体并进行 G 显带分析。
结果 在 CLL 中，24 小时未刺激组和 CpG-寡脱氧核苷酸联合 IL-2 组染色体分析成功率(可分析分裂象≥20 个)分别为 82.67％ 和 96.67％ ，异常核型检出率分别为 57.63％和 0％。异常核型检出率显著高于未加刺激剂组(x2=103.562，P =0)。
结论 应用 CPG-寡脱氧核苷酸 DSP30 和白介素 2 能有效提高慢性淋巴细胞白血病的细胞遗传学异常检出率。

PU-2626

Analysis of lipid distribution characteristics in a health examination population in Chengdu (2009–2017)

Shanshan Liang、Guixing Li
四川大学华西医院实验医学科

Background The prevalence of cardiovascular disease is rapidly increasing in the recent years. Dyslipidemia associated atherosclerosis and other complications are posing a serious threat to human health. The present study aimed to analyze the blood lipids distribution characteristics within a large size of health examination population of Sichuan province, China.
Method This was a retrospective study conducted in 888,143 subjects (495,599 males and 392,544 females) aged more than 18 years old from the Health Examination Center at West China Hospital, Sichuan University during 2009 to 2017. The blood lipids levels were compared in different age groups and different years.
Result The blood lipids levels were significantly increased in recent years. The percentage of cases with high lipids levels was significantly higher in males than that in females since 2009 to 2017. Moreover, the blood lipids levels and the percentage of dyslipidemia in aged 51-60 individuals were significantly higher than those in other population every year.
Conclusion The health examination population showed increased percentage of blood lipids levels, and so regular physical examination and lipids control are highly important in aged population.

PU-2627

昆明地区妇女 HPV 感染的流行病学特征

黄松苓、赵滢
昆明医科大学第一附属医院

目的 探讨昆明地区妇女宫颈人乳头状瘤病毒（human papillomavirus，HPV）感染的分子流行病学特征及其近三年变化趋势。
方法 收集昆明医科大学第一附属医院 2016 年 1 月—2019 年 1 月在妇科门诊和住院的进行 HPV 分型检测的患者 36304 例，统计分析感染分型特征。
结果 HPV 感染率为 7.98%，其中高危型 HPV 感染占 93.81%。HPV 感染以单一感染（67.30%）为主，HPV52、58、16 型最常见，而在多重感染中，70.32%为二重感染，以 52 型合并其他高危型（58、16、53 型）感染最常见。不同年龄组的 HPV 感染率差异有统计学意义（P＜0.001），其中 21~30 岁年龄组 HPV 感染者占比（9.92%）最高，其次为 31~40 岁年龄组（9.64%）和 41~50 年龄组（9.29%）。2016~2018 年 HPV 感染率由 2.57%上升至 14.67%。
结论 与国内已报道地区相比昆明地区 HPV 感染率较低，但是近三年增长较快。感染年龄分布集中于中年，基因分型分布有明显的地区特异性。研究结果对研制适合昆明地区妇女的特异性 HPV 疫苗，以及宫颈癌的筛查与防治具有参考价值。

PU-2628

烟台某医院 2018-2020 年血培养病原菌分布及耐药性分析

尹潇[1]、徐勤辉[2]
1. 联勤保障部队第 970 医院
2. 滨州医学院

目的 了解该院血培养阳性住院患者检出菌的分布以及耐药性分析,为临床抗生素的使用提供科学的指导，同时也能一定程度上增加该地区患者对抗生素的选择。
方法 收集该院 2018-2020 年血培养数据，对血培养阳性标本做阳性率、主要检出菌占比、阳性标本的患者科室分布情况及耐药性等分析。
结果 2018-2020 年间全院共采集了 8077 分血培养标本，其中有 441 分标本检测出病原菌，阳性率为 5.46%。在这些病原菌中，革兰氏阴性菌有 248 株，占总检出数的 56.23%;革兰氏阳性菌 180 株，占比 40.82%;真菌 13 株，占总检出数的 2.95%。阳性标本主要来自肝胆外科 85 份(占比 19.27%)、重症医学科(ICU)38 份(占比 8.62%)、肾内科 35 份(占比 7.94%)、胃肠外科 31 份（占比 7.03%）、神经内科 28 份（占比 6.35%）。大肠埃希菌数量在总检出菌中占比最大，为 22.0%，其次为肺炎克雷伯菌肺炎亚种、金黄色葡萄球菌，分别占比 16.1%、6.8%。在耐药性方面，革兰氏阳性菌中，葡萄球菌对替加环素和万古霉素耐药全部敏感；链球菌对左氧氟沙星，万古霉素全敏感。革兰氏阴性菌中，97 株大肠埃希菌对检测的抗生素中氨苄西林的耐药率最高，为 77.11%，其次为复方新诺明和氨苄西林/舒巴坦，耐药率分别为 54.32%和 50%。肺炎克雷伯菌肺炎亚种对检测的抗菌药物耐药率均较低，均小于 30%。14 株阴沟肠杆复合菌同肺炎克雷伯菌肺炎亚种类似，对所测抗菌药物耐药率均较低，均不超过 30%。产 ESBLs 的大肠埃希菌和肺炎克雷伯菌肺炎亚种的检出率分别为 29.9%（29/97）和 15.5%。
结论 2018-2020 年该院血流感染以 G-为主，临床应及时对疑似血流感染患者进行血培养检测，并加强对血流感染致病菌耐药性监测，对合理使用抗生素有重大意义。

PU-2629

简易操作卡在医学实验室的作用

韩亚荣、齐利明
西安金域医学检验所

目的 通过简易操作卡在医学实验室中新员工入职后实验操作中的作用，来分析简易操作卡在提高实验操作效率中的作用。
方法 实验室制作仪器及项目的简易操作卡，作为作业指导书的附录，简易操作卡采用实际工作中仪器及项目的全流程图片，可以清晰的看到实验操作中的每一步骤，包括试剂的复温，试剂瓶的颜色，加样的步骤，加样量，孵育的时间，温度，洗板次数及方法，读取吸光度，结果判读与处理；仪器的开关机，使用维护保养，报警处理等，在关键步骤图片旁备注注意事项，让实验室新员工进入实验室后，对照简易操作卡可以快速掌握项目及仪器的全操作流程，且此简易操作卡严格按照作业指导书以图片的形式呈现，可以确保所有员工操作的一致性，减少人员之间的差异。
结果 实验室新员工对照简易操作卡，可以独立完成项目及仪器的全流程操作，减少了由于不同人员带教导致的操作差异性。
结论 简易操作卡在医学实验室新员工入职后实验操作中有很强的指导性，可以快速提高实验工作效率，可广泛应用于医学实验室作为作业指导书的附录使用，更直观的展现全操作流程，为医学实验室带教提供了更直观有效的方式。

PU-2630

耐碳青霉烯类肺炎克雷伯菌临床分布特征及耐药分析

张伟[1,2]、王娜[1]、陈新飞[2]、王瑶[2]
1. 河北北方学院附属第一医院
2. 中国医学科学院北京协和医院

目的 分析河北省耐碳青霉烯类肺炎克雷伯菌（Carbapenem Resistant Klebsiella Pneumoniae，CRKP）临床分布特征及耐药情况；
方法 收集河北省 2017～2019 年 CRKP6328 株，采用全自动药物敏感性分析仪器 MIC 法及纸片扩散法（K-B）对其进行药物敏感性试验，用 WHONET5.6 软件对实验数据进行统计分析；
结果 河北省 2017-2019 CRKP 的检出率逐年上升，分别为 13.4%、14.5%、14.6%，其中男女比例约为 2:1，老年人 53.6%，成年人 39%，未成年人 4.8%，新生儿 2.5%；CRKP 对碳青霉烯类抗菌药物耐药率呈上升趋势耐药率呈上升趋势，耐药率普遍>90%；对氨基糖苷类药物耐药率逐年下降，降至 50%左右；主要分离自痰液，占 70.9%。CRKP 对碳青霉烯类及其他 β－内酰胺类抗菌药物对喹诺酮类药物耐药率基本保持在 80%左右；对各类抗生素的 MIC50/MIC90 值均大于相对应的耐药折点；
结论 2017-2019 年河北省 CRKP 对多种抗菌药物的耐药率均较高，对 β－内酰胺类抗生素的耐药率呈逐年升高的趋势。

PU-2631

2017—2019 年河北省 CR-ECO 病原菌分布特征研究

张伟[1,2]、詹明华[1]、陈新飞[2]、徐英春[2]
1. 河北北方学院附属第一医院
2. 中国医学科学院北京协和医院

目的 探究 2017-2019 年河北省碳青霉烯类耐药大肠埃希菌病原菌(CR-ECO)分布的情况
方法 分析 2017—2019 年河北省 CR-ECO 耐药情况，收集河北省 CR-ECO 1439 株，采用全自动药物敏感性分析仪器 MIC 法及 K-B 纸片扩散法对其进行药物敏感性试验，用 WHONET5.6 软件对数据进行统计分析。
结果 2017—2019 年河北省共分离大肠杆菌 54377 株，其中 CR-ECO1439 株（2.65%）；从尿液中分离出的占比最多，且近 3 年检出率呈现缓慢上升趋势；河北省内 CR-ECO 的检出率存在地域性差异，石家庄位居首位。河北省 2017—2019 年 CRECO 感染患者男女比例为 1.5:1，老年人和成年人分别占约 59.6%和 30.8%，新生儿和未成年人分别占 4.7%和 4.9%。2017—2019 年，对于 CR-ECO，亚胺培南，美罗培南耐药率逐年上升、多粘菌素基本不变，其他抗菌药物的耐药率呈逐年上升趋势。
结论 2017—2019 年河北省 CRECO 分离率保持稳定，但耐药率呈上升趋势。

PU-2632

2018-2020 年河南省 275 家医院布鲁菌血清学检测结果分析

史彩琴
郑州金域临床检验中心有限公司

布鲁菌病是由布鲁氏菌属的细菌侵入机体，引起变态反应性的疾病， 我国布鲁菌病发病率呈逐年上升趋势，本研究通过对河南省 275 家医院送检的 20360 例布鲁菌试管凝集试验（SAT）检

测结果的分析，以 WS269-2019《布鲁氏菌病诊断》为方法依据，通过对样本阳性率、年龄组、性别、季节分布的分析，并与全国及其他地区的数据进行比较，为布鲁菌病的防治提供参考依据。

PU-2633

中药洗液治疗宫颈锥切术后高危型人乳头瘤病毒持续感染的临床疗效研究

荆哲
吉林大学第一医院

目的 评价宫颈高级别鳞状上皮内病变（ high-grade squamous intraepithelial lesion ，HSIL）锥切术后(冷刀／LEEP 锥切)高危型人乳头瘤病毒(high-risk human papillomavirus，HR-HPV)持续感染，派特灵治疗的临床疗效。
方法 选取 2019 年 3 月-2020 年 3 月锥切术后 4-6 个月复查 HR-HPV 阳性符合纳入标准的 101 例患者，采用随机对照方法，48 例患者做为观察组，53 例患者为对照组。观察组 48 例患者采用派特灵治疗，对照组 53 例患者不采用任何药物治疗。观察组于用药结束后第 3-4 个月进行 HR-HPV 检测，对照组也按相同时间间隔检测，分析两组患者 HR-HPV 感染的转阴情况。
结果 观察组 48 例患者中，脱落 3 例，HR-HPV 感染的转阴率为 77.8％(35／45)；对照组 53 例患者中，2 例脱落，HR-HPV 转阴率为 25.5％(13／51)。两组患者转阴率比较，差异具有统计学意义(P<0．05)。治疗过程中，1 例患者出现经间期少量阴道流血；1 例分泌物增多；3 例下腹部胀痛；以上症状均未影响患正常生活，停药后上述症状消失。
结论 中成药洗液对宫颈 HSIL 锥切术后 HR-HPV 持续感染的治疗有效。

PU-2634

非小细胞肺癌中的 LncRNA

张栩晟
昆明医科大学第一附属医院

肺癌是一种高发病、高死亡和差预后的疾病，其中非小细胞肺癌占了肺癌的 85%。长链非编码 RNA(Long non-coding RNAs,LncRNAs)是长度超过 200 个核苷酸的非编码 RNA 分子，在基因表达和信号通路中发挥着重要作用。最近，lncRNA 被发现与癌症有关，在癌症中，lncRNA 的表达被异常调节，导致异常的功能。

LncRNA 的功能主要体现在其亚细胞定位上，核 LncRNA 主要在转录过程中发挥作用，而胞质 LncRNA 则往往在转录后发挥作用，并影响信号级联。LncRNA 可以通过与不同的 RNA 靶标相互作用，在基因表达中发挥作用。LncRNA 还可以通过促进蛋白复合物的组装，破坏蛋白质的相互作用，影响其细胞定位来调控蛋白功能。

对于 NSCLC 中的 LncRNA，除了调节 NSCLC 增殖，还参与抑制细胞凋亡。LncRNA 还可以通过调控通路激活和关键信号成分来调控控制生长、增殖、凋亡和转移的致癌信号通路。

由于 NSCLC 中的 LncRNAs 出现了失调，就提示了我们 LncRNA 在 NSCLC 的治疗中存在着潜力。首先是与传统活检相比，基于 LncRNA 的生物标志物可能更好地为患者所接受，并且微创；其次是随着 NSCLC 对化疗和靶向治疗的耐药性增加，需要探索新的方法，而许多 LncRNAs 与增强的化疗耐药性有关，因此，它们的靶向性也可能恢复癌细胞对化疗药物的敏感性；最后，LncRNA 虽然优点众多，但与蛋白质不同，LncRNAs 的三维结构在很大程度上仍然未知，缺乏保守结构域可能会阻碍小分子抑制剂的设计。缺乏对 NSCLC 中许多 NSCLC 相关基因的机制和调控网络的全面了解也可能限制了 LncRNA 的使用和特异性靶向。

PU-2635

苏州地区不同类型过敏原对哮喘患儿肺功能的影响分析

高媛媛、李阳、沈佳
苏州市苏州大学附属儿童医院

目的 探讨苏州地区不同类型过敏原对哮喘患儿肺功能的影响，以及哮喘患儿的过敏原阳性率、免疫球蛋白水平、肺炎支原体感染情况。

方法 随机选取 2018 年 02 月至 2021 年 02 月在苏州大学附属儿童医院确诊的 144 例哮喘患儿作为研究对象。根据过敏原检测结果分为多重致敏组、单一致敏组和无致敏组，观察三组患儿的过敏原阳性率和分布情况、肺功能指标：FEV_1、FVC、FEV_1/FVC、PEF、$MMEF_{75/25}$ 水平，以及总 IgE 水平和肺炎支原体感染情况。

结果 苏州地区多重致敏组的哮喘患儿占 59.0%（85/144），单一致敏组和无致敏组的哮喘患儿分别占 22.2%（32/144）和 18.8%（27/144）。哮喘患儿的吸入性过敏原主要为尘螨组合（屋尘螨/粉尘螨）47.2%（68/144），其他包括屋尘 22.9%（33/144）、霉菌组合（点青霉/分枝孢霉/烟曲霉/交链孢霉）9.0%（13/144）等；食入性过敏原主要为鸡蛋白 35.4%（51/144）和牛奶 18.8%（27/144），其他包括牛肉 11.1%（16/144）、蟹 11.1%（16/144）、黄豆 10.4%（15/144）等。男性哮喘患儿在多重致敏组中占 69.4%（59/85）、单一致敏组中占 81.3%（26/32）、无致敏组中占 60.3%（16/27）；多重致敏组 FEV_1、FVC 以及 $MMEF_{75/25}$ 水平均低于无致敏组，有统计学差异（P_{FEV1}=0.0134；P_{FVC}=0.0285；$P_{MMEF75/25}$=0.0423），而 FEV_1/FVC 水平无统计学意义（$P_{FEV1/FVC}$=0.2018）；单一致敏组与无致敏组之间的肺功能比较，无明显统计学差异（P_{FEV1}=0.1680；P_{FVC}=0.3811；$P_{FEV1/FVC}$=0.6683；$P_{MMEF75/25}$=0.1285）；三组哮喘患儿之间 PEF 值相比，无明显统计学差异（$P_{多重致敏组/单一致敏组}$=0.8982；$P_{多重致敏组/无致敏组}$=0.0586；$P_{单一致敏组/无致敏组}$=0.0582）。多重致敏组总 IgE 水平明显高于单一致敏组和无致敏组，差异具有统计学意义（$P_{多重致敏组/单一致敏组}$=0.0064；$P_{多重致敏组/无致敏组}$=0.0028）。多重致敏组患儿肺炎支原体 IgG 抗体的检测结果较单一致敏组高，有统计学差异（P=0.0457）。

结论 过敏相关性哮喘在苏州地区发病率较高，且多数为多重致敏的哮喘患儿，其通气功能改变主要为小气道阻塞性通气功能障碍，免疫功能改变主要为变态过敏性反应，多重致敏的哮喘患儿多存在肺炎支原体感染史。

PU-2636

青岛地区 652 例尖锐湿疣患者流行病学分析和人乳头瘤病毒基因型检测

李海艳[1]、于海洋[2]
1. 青岛市海慈医疗集团
2. 青岛市市立医院

目的 对青岛地区 652 例尖锐湿疣患者进行人乳头瘤病毒基因型检测和流行病学分析，为有效防治该病提供可靠的科学依据。

方法 采用调查表的方式对确诊患者进行一般情况、生活方式及性行为等情况调查，根据调查结果将患者分为两组：A 组为性接触所致 CA 患者，B 组为疑似非性接触患者。同时采用基因分型试剂盒检测 21 种 HPV 基因型。

结果 652 例尖锐湿疣患者中 A 组占 81.7%，B 组占 18.3%，A 组、B 组年龄构成比有差异，B 组发病人群以以非性活跃人群为主，病程偏长。B 组女性较多（$\chi2$=10.57，P＜0.05）。B 组合并系统疾病和肛周疾病的发病率明显高于 A 组（$\chi2$=39.34，P＜0.05；$\chi2$=35.85，P＜0.05）。两组 HPV

分型均以 6 和 11 型等低危型为主，高危型主要为 16 和 31 型。CA 患者 HPV 感染以单一型别为主，且单一高危型仅存在 A 组，B 组单一型均为低危型，差异具有统计学意义。
结论 非性接触也是感染尖锐湿疣的一种重要途径，非性接触患者发病可能与机体免疫力下降及局部皮肤屏障功能破坏有关，为减少 CA 的发病率和复发率应该积极治疗合并疾病。HPV 亚型以 6 型和 11 型等低危型为主。对性接触导致尖锐湿疣患者应重点随访，积极治疗，降低远期肿瘤发生率。

PU-2637

基于 LC-MS 的慢性胰腺炎血清代谢组学研究

吴玲、谭超超、卢婉莹、黄湘平
湖南省人民医院

目的 本研究运用高效液相色谱-质谱联用技术对正常人血清与慢性胰腺炎患者血清进行组分对比分析，筛选出两者之间有显著差异的血清小分子代谢物及其相关代谢通路，筛选有助于慢性胰腺炎诊断的血清生物标记物，从代谢组学的层面上为慢性胰腺炎的诊疗提供新思路。
方法 收集湖南省人民医院 2020 年 9 月—2021 年 1 月经确诊的慢性胰腺炎患者血清样本 32 例及正常人血清 31 例。采用高效液相色谱-四级杆飞行时间串联质谱联用技术（HPLC-Q-TOF-MS/MS）对所收样本进行代谢物分析。用 Metaboscape 3.0 软件对获得的原始数据进行峰提取、降噪、标准化等预处理。在 MetaboAnalysis 5.0 平台上对数据进一步进行主成分析（PCA）、偏最小二乘法判别分析（PLS-DA）和正交偏最小二乘法判别分析（OPLS-DA）等分析，以 t 检验（$p<0.05$）、差异性倍数（FC＞1.5）和变量权重值（VIP＞1）的标准筛选慢性胰腺炎和正常人间的差异性代谢物。最后进行代谢物通路分析，寻找与慢性胰腺炎相关的代谢通路。
结果 本研究基于 LC-MS 技术平台成功构建 PCA、PLS-DA、OPLS-DA 等模型，结果说明正常人和慢性胰腺炎患者存在血清代谢组学上的显著差异，并成功筛选出 56 种差异性代谢物（FC＞1.5、$p<0.05$ 且 VIP＞1.0）。与正常人相比，在慢性胰腺炎患者中，血清中 3-磷酸甘油、苹果酸、3-羟基马尿酸、雌酮、氢尿酸、磷酸胆碱、葡萄糖醛酸乙酯、卵磷脂、半乳糖醇、鞘氨醇、羟戊烯醇等 30 种代谢物呈增多趋势；5-脱氧腺嘌呤核苷、褪黑素、黄尿酸、雌二醇、胱氨酸、6-甲基巯基嘌呤、1-水杨酸葡糖苷酸、L-组氨酸、脱氧皮质酮等 26 种代谢物呈减少趋势。并根据差异代谢物筛选出了 5 条代谢通路，包括苯丙氨酸、酪氨酸和色氨酸的生物合成、甘油磷脂代谢、鞘脂代谢、类固醇激素生物合成、组氨酸代谢通路。
结论 本次研究发现了慢性胰腺炎患者与正常人血清代谢物轮廓存在明显的差异，说明可以通过 LC-MS 技术识别血清代谢差异进行慢性胰腺炎和正常人之间的区分；本次实验成功筛选出 56 种差异代谢物和 5 条异常代谢通路。

PU-2638

检验实验室管理

闫妁
山东大学第二医院

检验科室虽然只是一个辅助科室，但它发挥的作用是巨大的，由于目前临床诊断大部分需要检验指标来辅助，以及明确治疗效果，所以加强检验实验室管理是非常重要的。

检验分为免疫室、细胞室、体液门诊等，由于试剂管理、标本保存等需要的条件不同，这就需要我们把检验科室更加细化，对不同要求进行不同管理，这样才可以更加精准检验样本。就拿我们医院的体液门诊来说，门诊主要对尿液、粪便进行检验，我们有非常先进的机器，先对样本进行质控，调整参数，随后可以很快速的对样本进行一轮检验，随后检验师们进行结果审核，对异常的样本行显微镜下观察；由于技术引进，减少我们检验师工作量，极大提高工作效率，但是我认为每个

地区的人由于各种因素影响正常参考范围会发生变化，所以当技术引入后，需要对该地区的正常人进行统计，判断出每一项指标的正常参考范围，将各种影响因素考虑进去，才可以更加精确反应人体的身体状况，便于临床医生的明确诊断。检验异常粪便，需要涂片、显微镜下检查，镜检过程中不能有风，否则会减慢工作效率，尤其夏天，气候炎热，实验室较封闭，使工作环境及其难受，我觉得是否可以改进显微镜，在防止玻片位置可以增加一些材料，来防止外来空气影响，使检验实验室可以既不影响检验结果，又优化检验环境。

PU-2639

不同核酸检测方法在 SARS-CoV-2 核酸检测中的比较

张世慧
山东大学第二医院

新型冠状病毒 2（SARS-CoV-2）肺炎的爆发给全球带来了严峻挑战，目前核酸检测仍然是检测病毒感染的金标准，快速检测出病毒的感染者有利于病情的诊断以及指导后续的治疗，提高预后，同时有利于疫情的防控，因此迫切需要快速且敏感性和特异性都较高的检测方法。目前采用实时荧光逆转录聚合酶链反应（RT-PCR）是临床常用的检测方法，但此方法需要专业的技术人员，且试剂和设备的获取不足减缓了疾病检测速度，CRISPR-Cas（Clustered regularly interspaced short palindromic repeats，CRISPR）系统是一种高效、实用的基因编辑工具，被广泛应用于基因组编辑和调控机制研究，目前发现的 Cas 系列核酸酶工具为开发用于各种目的的不同类型核酸检测，具有广阔的应用前景。CRISPR-Cas 系统的高灵敏度和高特异性，使其在病原体检测、单核苷酸多态性（SNP）分析以及基因突变检测等发挥了极其重要的作用；另外，CRISPR-Cas 系统在核酸检测领域的精确、高效性，间接推动了基础生物学和应用生物学研究的进展。本研究拟比较 RT-PCR 和基于 CRISPR/Cas 系统的核酸检测技术对新型冠状病毒 2（SARS-CoV-2）核酸检测结果的符合率、重复性及检出限,优选出提取效率高、耗时短、成本低的核酸检测方法。方法采用同一种核酸提取方法的商品化核酸提取试剂,分别对阴性样本、阳性样本及不同浓度的 SARSCoV-2 RNA 标准品进行 RNA 提取，然后分别以实时荧光逆转录聚合酶链反应（RT-PCR）及检测,以 Ct 值评价不同核酸检测方法的性能。结果 2 种核酸提取试剂的阴性和阳性样本结果符合率均为 100%。结论基于 CRISPR 的检测平台是准确检测和治疗 SARS-CoV-2 的新方法。

PU-2640

造成血液样本异常状态的常见原因分析

陶明雨
黑龙江金域医学检验实验室有限公司

目的 血液样本是目前临床检验中最普遍的样本之一，临床检验中涉及到血液样本的检测项目也是非常之多的。通过对血液样本的检验能够为患者病情的监测、药物的选择以及预后的评估提供可靠的依据。但在临床检验中往往会有很多样本在检验人员进行检测时发现样本处于异常状态，比如：溶血、脂血、黄疸等。造成血液样本异常状态的影响因素有很多，现对造成血液样本异常状态的常见原因进性分析探讨。
方法 选取某医院 2020 年的异常状态的血液样本进行研究分析，找出造成其异常状态的原因并分析。
结果 一.造成血液样本异常状态的常见原因
1.脂血：首先是被采血患者自身患有高脂血类疾病，这种情况是人为无法不避免，遇到这种情况时，医务人员首先应事先询问患者是否有过类似病史。其次可能是由于患者在采血前一天食用大量高血脂的食物，如肥肉、动物内脏，油炸食物等都会造成脂血样本。

2.溶血：首先也是考虑患者自身患有此类疾病导致样本溶血，其次就是考虑患者是否服用某些药物导致溶血。或者是采血后样本被用力晃动碰撞，储存温度过低等都会导致样本溶血。
3.黄疸：黄疸样本一般在婴儿的血液样本中发现居多，主要分为生理性和病理性两种，生理性是由于胆红素含量过高，未能及时排除，一般可自行缓解；病理性则是由于婴儿发生肝炎或者是感染性疾病，胆道堵塞，新生儿溶血等疾病。以上两种情况均会导致患者血液样本出现异常状态。
结论 由此可见造成血液样本异常状态的因素复杂多样，这就需要医务人员在工作时格外认真细心，及时沟通询问患者病史，正确进行采血，规避人为原因导致的血液样本异常状态，避免影响临床医生的做出正确判断，耽误病人的治疗和用药。

PU-2641

乙型肝炎病毒两对半方法的临床应用及分析

李坤
黑龙江金域医学检验实验室有限公司

目的 探讨该分析方法在临床乙肝病毒患者确证过程中的实用性，并对数据进行分析，提高临床防治的有效性。
方法 收集受乙肝病毒性肝炎（下称乙肝）检测的体检者的体检数据 300 例，采用用的是酶联免疫吸附试验(ELISA)来检测乙肝两对半五项的数据，然后将数据收集进行统计，来查看乙肝各项数据的阳性率。
结果 收集的这 300 份体检者数据中，经过统计大三阳的阳性率为 4%（12/300），小三阳的阳性率为 7.7%（23/300），双项的阳性率为 2%（6/300），试验中存在误差，影响实验结果的因素可能有实验样本的采集和样本是否符合正常标准，血样如果出现溶血、脂血、黄疸的情况下会对实验结果产生影响，试剂如果存放不规范也会造成结果不稳定，人为操作也会对结果的准确性产生影响，尽量避免这些因素让结果更加可靠。
结论 乙肝病毒在我国是一种具有较高感染率的病毒，对我国人民造成了巨大的困扰，是一种严重危害国民健康的传染病，酶联免疫吸附实验(ELISA)拥有简便、快捷、特异性高的特点，成为了现在乙肝检测的主要方法，但是酶联免疫吸附法的测定影响因素很多，容易出现假阳性和假阴性的情况，所以进行实验操作时要严格规范操作，尽量避免误差提高结果的准确性。
目前，临床上常用的检测乙肝病毒型肝炎感染的方法是两对半检测法，其能够将患者是否感染乙肝，以及其具体感染情况来进行一个初步判断，并且能够将大、小三阳区分出来。与此同时，其还能够将体内抗原以及抗体的携带模式反映出来，将机体在不同条件时的免疫情况检测出来，为临床防治提供有效的证据支持。

PU-2642

浅谈临床医学检验的质量控制

王芃开
黑龙江金域医学检验实验室有限公司

目的 分析临床医学检验质量控制的主要措施，从而为医生的治疗提供准确的数据依据。从实验前，实验中，试验后等诸多环节的质量控制进行分析，进一步加强医学检验重要环节的质量控制，对保证检验结果的起到了非常重要的作用。
方法 针对实验前、实验中、试验后等环节可能对检验结果造成影响的因素进行分析
结果 1、实验前的质量控制：
（1）患者样本的要求：对于要求空腹抽血进行检测的项目，坚持空腹抽血；对体位有要求的检测项目，要坚持正确的体位进行采集；输液前后进行标本采集时，要根据检查项目选择标本采集时间；

采集标本时，患者应该处于静止运动的状态，而不是刚刚运动完成之后进行标本采集；避免脂血、溶血、黄疸等异常状态样本；同时，加强标本送测时间的管理同样非常重要。
（2）实验设备的质量控制：应使用经具有相应资质校准机构校准合格的实验设备。
2、加强检验过程中的质量控制：
（1）应有一套完整的工作制度，检验人员应有明确的岗位和职责分工。
（2）要做好实验室的质量控制，确保检测结果的准确性和及时性。
（3）对于检测技术人员要加强理论和操作技巧培训，并且制定相应的操作规范和标准。
3、试验后的质量控制：
应对检测后的样本进行一个妥善的保存，以便有需要时对样本进行复检和及时的清理；对于一些危重患者以及对时间有要求的项目，也应注意结果报告的及时性。
结论 总之，加强临床医学检验的重要环节的质量控制，对于提升检验数据的精确性，及时性和可靠性都具有极为重要的作用。

PU-2643

病理会诊切片常见问题及其处理

王庆泽
黑龙江金域医学检验实验室有限公司

病理会诊的病例在各大医院呈明显上升趋势，病理会诊切片质量的优劣直接影响病理医师进行病理诊断的及时性和准确性。随着《医疗事故处理条例》的实施,医疗风险不断增大,医疗纠纷逐年增多,病理会诊切片在医疗纠纷中的作用引起了病理医师更多的关注,也得到人们的重视。在实际工作中,经常遇到会诊切片出现各种问题：会诊切片上常会出现组织部分掉片、皱褶、破碎,细胞核与细胞质染色对比不清晰、透明度不好等现象。造成切片质量差的原因很多,主要有标本的前期处理不当如标本固定不及时,脱水浸蜡不充分;切片刀不锋利,导致切片时自行卷起或皱起;染色试剂使用时间过长影响等因素。

尽管各单位采取交押金等办理借片手续,但仍然存在患者或家属持片不归的现象;同时,借用方在保存或使用时不当,造成切片破损。患者或其家属没有意识到切片及时归档的重要性,有时因路途遥远放弃归还;也有因保管不当,致切片破损或切片丢失,无法归档;抑或患者为了方便以后的会诊诊断治疗需要而留用切片。

处理方法

为了确保外借切片的质量,在平时工作时,技术人员应严格遵守病理临床技术操作规范,注意带教工作,对年轻的技术人员进行规范化培训,多学习,多实践,互相切磋切片的心得。每天进行抽查切片,发现不合格切片及时重切。对一些特殊组织如淋巴结、皮肤、骨髓等请有经验的老师传授心得体会和注意事项。

当患者及其家属借病理切片去外单位会诊时,病理科工作人员有责任告知借片者了解切片的重要性,让他们从思想上重视会诊切片等资料,知晓病理切片对患者以后的疾病诊断、治疗很有帮助,使其在应用时注意保护切片,妥善保管,防止切片破损并及时归还。对于外借路途遥远者,适当提高借片押金,以督促其及时还片,以防切片逾期不归。

PU-2644

乙肝五项与乙型肝炎病毒核酸检测的比对分析

张雪娇
黑龙江金域医学检验实验室有限公司

目的 乙型肝炎（简称乙肝）是目前最为常见的传染病之一，据调查统计全球约有 4 亿人感染乙肝病毒，约为艾滋病毒感染人数的 8 倍，据 2006 年乙肝流行病学调查统计中国乙型肝炎病毒携带率为 7.18%，可以推算出中国的慢性乙型肝炎病毒感染者约为 9300 万，由此可以看出中国在乙肝防治上形势非常严峻。
方法 乙肝五项常见的检测方法为酶联免疫，乙型肝炎病毒核酸检测方法为实时荧光定量 PCR 法。
结果 乙肝五项仅能反映机体内的抗原、抗体携带模式，检测在一定条件下机体的免疫情况，同时可为乙肝病毒感染提供间接证据，是用来排查机体是否存在乙肝病毒的感染，对于乙肝传染性强弱不能作出准确的判断，也不能作为判断乙肝病毒是否存在复制。乙型肝炎病毒核酸定量检测是用来检查乙肝患者体内的病毒含量，能够精确的判断出乙肝病毒在体内的复制、传染强弱情况，是证实乙肝病毒存在的直接证据，是临床诊断的有力依据。HBV-DNA 检测通过扩增乙肝病毒核酸使对体内低水平乙肝病毒敏感，此方法是判断病毒复制的常用手段。
结论 乙肝五项和乙型肝炎病毒核酸检测联合检测可对疑似乙肝患者进行较好的临床诊断，既能判断该患者是否感染乙肝病毒又能判断该患者处于乙肝病程发展的某个时期，为临床提供一定的诊断依据

PU-2645

叶酸检测的必要性

解春岩
黑龙江金域医学检验实验室有限公司

目的 叶酸参与氨基酸和核苷酸代谢，参与细胞生长和组织修复，是胚胎发育过程中不可缺少的营养素。叶酸不足会导致新生儿出现神经管畸形，唐氏综合征，唇腭裂或先心病，同时还可能使孕妇妊娠高血压，先兆子痫和婴儿早产及习惯性流产等。若叶酸过量，则会掩盖维生素 B12 缺乏，而导致的其引起的神经损害进行性发展；会干扰锌的代谢，使胎儿发育迟缓，还能增加儿童期哮喘风险。
方法 叶酸代谢能力基因检测首先采用从人外周血细胞中提取的基因组 DNA，而后准备 PCR 扩增液，将待检测的 DNA 样本进行配制，完成后开始在 PCR 扩增，结束后再用检测卡进行检测试验，最后进行结果判读。
结果 以阳性对照液为模板进行 PCR 反应，对 PCR 产物进行检测，检测线有条带出现，作为阳性对照；以阴性对照液为模板进行 PCR 反应，对 PCR 产物进行检测，检测线无条带出现，为阴性对照。MTHFR 1298AA 表示正常野生型;MTHFR 1298CC 即为纯合突;MTHFR 1298AC 即为杂合突变；若质控线无条带或质控线与检测线均无条带，即为无效检测。
结论 叶酸代谢能力基因检测可检测与叶酸代谢相关的基因是否发生异常，及早发现个体对叶酸德吸收利用水平，从而筛查出容易引起叶酸缺乏的高危人群，实现个性化增补叶酸
从而增加叶酸补充依从性，降低新生儿出生缺陷风险。为了达到个体健康化，叶酸代谢能力的检测对特定人群是非常有必要性的，当受检者清楚和明确自己的叶酸利用水平后，最终才能真正实现科学增补叶酸。

PU-2646

新型冠状病毒核酸筛查工作的快速开展

谢滨姣、祖爽、卢润章、张俊涛
黑龙江金域医学检验实验室有限公司

目的 全球各地疫情反复出现，金域医学近两年一直抗战在抗疫的最前线，各地检验实验室均在政府进行新冠核酸筛查工作中承担着重要的工作任务。为了对疫区人口进行快速的感染情况摸底调查，如何检测快速、结果准确的开展新型冠状病毒核酸筛查工作变得尤为重要。
方法 要快速完成全面核酸筛查工作，实验室产能必须及时快速跟上。在金域医学集团一盘棋的调度下，通过场地利用、流程梳理、人员调配、资源匹配、后勤保障等多方面举措，快速提升产能。为了提高标本收集的效率，同时满足实验室 96 孔板检测的排板特点，设计了新型的 96 孔采样管摆放架，每个摆放架出场时即配有唯一序列号供识别。外部配有 3 层包装系统，使其符合防水、防破损、防外泄、耐高温、耐高压的要求。第一孔不摆标本，每架采集 90 管标本，样本采集时可随机空余 5 个孔位，用于实验室的阴阳性质控品（三阴、一阳、一弱阳）的摆放。
结果 通过匹配中心实验室、移动方舱实验室，以及整合地方医院实验室三种方式，集团内部调拨设备、人员等方式，快速将产能提升至日检 5 万管标本，帮助政府尽快完成全员筛查任务，落实疫情防控工作。
样本管摆放架的应用大大提高了标本采集后交接的工作效率，节省了大量清点标本、拆卸标本包装的时间，省去了标本接收上架的步骤，只需一个序列号即可对整架标本进行识别及溯源，为快速开展全民核酸筛查工作提供了便利的工作方法。
结论 通过集团一盘棋的一体化管理，可以实现快速建立高产能的检测能力；通过创新设计，大大提高了标本收集、接收、检测的工作效率，基本实现了一体化操作流程。

PU-2647

新型冠状病毒核酸检测实验室防污染措施

徐梦尧
黑龙江金域医学检验实验室有限公司

目的 核酸检测在疫情防控中起到非常重要的作用，实验室污染会导致结果假阳性，降低实验室污染，保证结果的准确性至关重要。
方法 1.实验前：新冠核酸检测实验前应对试剂准备区、样本制备区、扩增和扩增产物分析区用 2000mg/L 含氯消毒剂对实验台面、地面、生物安全柜柜内、超净工作台柜内进行彻底的擦拭，含氯消毒剂应现用现配，配置使用时间不得超过 24 小时。2.实验中：实验中应严格遵循 pcr 实验室操作要求，加样时技术员手臂不应拿出生物安全柜以外，若需离开生物安全柜，需要用酒精喷洒消毒手臂在拿出。如有样本或质控品泄漏情况发生，应立即用吸水纸覆盖并喷洒 5500mg/L 含氯消毒剂。3.实验后：实验结束后应对实验台面地面用 2000mg/L 含氯消毒剂进行彻底擦拭，移液器等设备也应用 75%酒精进行擦拭，生物安全柜内废弃物应放入医疗垃圾袋中，表面喷洒 75%酒精后转运至高压间高压灭菌。实验室消杀结束人员离开前应开启移动紫外车及固定紫外灯照射 2 小时。如遇实验室严重污染时，还可使用核酸清除剂进行彻底清除。
结果 通过上述方法进行后，对新冠核酸检测环境进行检测，对生物安全柜（台面、按键、防护窗、表面等）、核酸提取仪（表面、按键等）、扩增仪（仪器表面、电脑表面、鼠标按键、键盘、仪器内侧等）、移液器、实验台面、地面等进行采样检测，核酸检测结果均为阴性。
结论 新冠 pcr 实验室核酸污染是导致结果假阳性的重要原因之一。

PU-2648

大肠癌早期筛查方法比对分析

马丽娜
黑龙江金域医学检验实验室有限公司

目的 大肠癌是源于大肠腺上皮的恶性肿瘤，又称结直肠癌。可发生在各段大肠，70％发生于左侧，尤以乙状结肠和直肠最多。目前病因尚不清楚，流行病学调查发现，大肠癌的发病主要与人们的生活方式、环境和饮食结构、某些化学致癌物质等因素有关。全球发病率有明显地域分布差异，北美、西欧、澳大利亚和日本发病率较高，非洲及大部分亚洲地区发病率较低。在中国，50%以上的肠癌患者是直肠癌，国内经济发达的城市，大肠癌发病率均有明显上升。对于 40 岁以上中老年人，进行定期体检非常有必要，一旦体检中发现便隐血试验阳性都需要在医生的指导下进一步检查，但是仅仅依靠患者自己在日常生活中发现或者体检中的隐血试验阳性，很难在早期就能发现大肠癌。
方法 目前肠癌的检测方法众多，本文主要通过对目前肠癌检测及早期筛查的方法，肠镜、粪便隐血、粪便中大肠癌相关基因标志物的检测、血样中大肠癌相关基因标志物的检测等方法进行详细的对比分析，给出不同群体不同时期大肠癌检测的推荐方式。
结果 粪便中大肠癌相关基因标志物的检测不仅能够早发现大肠癌，而且对患者来说无痛苦，但是目前该方法尚部非常成熟，灵敏度和准确度都不是非常理想，必要时仍需借助肠镜的检查。
结论 肠镜目前仍然是大肠癌检测的金标准，但是由于其检测的特殊性，导致很多人望而却步，甚至很多人肠镜发现时为时已晚；粪便隐血试验没有痛苦但是灵敏度低，影响大肠癌的检出率；DNA 的异常甲基化可为非侵袭性检测结大肠癌提供一种新的策略，通过对无症状人群进行筛查或对有大肠癌家族史或确诊有癌前病变的患者进行监测是发现早期癌的重要途径。

PU-2649

糖尿病视网膜病变 AI 筛查

谢滨姣、赵冬梅、董蔓莉、卢润章
黑龙江金域医学检验实验室有限公司

目的 近年来，人工智能在各领域内发展迅速，目前也在逐步深入医疗诊断器械产品中，为多种疾病的诊断、慢性病的监测与管理提供了更为高效的技术手段。如用于对癌症、心脑血管、骨折、眼科等疾病的监测、诊断与检验。
我国约有 1 亿多糖尿病患者，其中 2 千万以上患有糖尿病视网膜病变（俗称糖网），患病率高于 20%，这种疾病是由慢性高血糖引起，损害视网膜中的血管，最终导致视力失真或丧失，已成为工作年龄人群排名第一位的致盲性眼病。
方法 II 型糖尿病患者每年进行 1 次眼底筛查，可使失明风险降低 94.4%，因为在早期阶段，患者通常没有症状，但是在此阶段损害是可以逆转的，因此定期筛查对糖尿病患者而言非常重要。通过有效的筛查途径早期发现，可以有效控制血糖和血压对糖尿病视网膜病变进行早期干预。目前由于我国眼科医生人数少、缺乏便捷的诊断设备等原因，全国的医疗机构对于眼底疾病的筛查还未能普及，导致门诊糖尿病患者眼底筛查率不足 10%；目前全国很多偏远地区或社区医院、体检中心等相对来说没有较强的医生资源，能掌握眼底阅片的医生更是数量甚少。人工智能应用与糖网筛查可以很大程度上改观目前状态。
结果 人工智能糖网筛查方法为给出已收集患者数据的状态分类（糖网 0 期~VI 期）数据。通过多分类混淆矩阵测算评估本人工智能算法的灵敏度、特异性、准确率参数，从而确定本算法的性能及对糖网筛查的适用性。在确认人工智能性能后，采取人工智能与常用的临床检查对比的方式进行临床性能验证，结果证明，通过散瞳检查、FFA、OCT 结合的检查结果与 AI 筛查结果基本一直，可确认此人工智能可有效辨别糖尿病患者的视网膜病变程度。

其应用过程为，服务器通过自适应算法，对眼底照相机获得的眼底彩色图像进行识别，判断视网膜病变及其程度，并由软件自动给出结果，轻度及以上糖网、未检测出糖网、因图片质量不符无法判断结果。其适用的人群为已确诊糖尿病患者。
结论 此糖网筛查 AI 仅为医疗诊断领域的一个基础应用。当下，在医学诊断数据不断积累、AI 技术不断发展过程中，人工智能对疾病的诊断应用会不断增多，为人类健康提供更有力的支撑。

PU-2650

如何降低核酸检测过程中扩增试剂的损耗的探讨

吴丽
黑龙江金域医学检验实验室有限公司

目的 新型冠状病毒核酸检测大筛查期间，样本量剧增。检验人员在扩增试剂的配置是用排枪分装到八连管中使用。最后做试剂盘点及试剂损耗计算时，发现扩增试剂损耗严重，已达到 13.72%。本文旨在根据本实验室的实际情况，提高试剂使用情况，降低试剂损耗.
方法 为了提高试剂使用情况，降低试剂损耗，采取以下几点措施：1.不再使用排枪分装试剂，改用单枪分装；2.分装完的试剂瓶，再用掌上离心机瞬离后还会有残留在瓶壁的液体到底部；3.试剂不再倒在加样槽中，也减少了试剂残留在加样槽中；4.强化人员培训，减少不必要的复查；5.强化维护的工作，与工程师有良好的沟通和配合，保证日常维护工作的规范操作，减少设备故障的发生。
结果 本实验室运用此方法后，大大提高试剂的利用率。
结论 试剂的分装，良好的设备运行状态，加强检验人员的培训，提高操作者的责任心和实验技能，都是提高试剂利用率，降低损耗的环节。掌握如何降低试剂分装过程中产生的损耗，能分辨设备的运行状态，提高了试剂利用率，降低了试剂的损耗，为公司的降本增效做出了贡献。

PU-2651

溶血对神经元特异性烯醇化酶（NSE）检测结果的影响

于跃
黑龙江金域医学检验实验室有限公司

神经元特异性烯醇化酶(NSE)为糖酵解关键酶,在临床上应用非常广泛,可作为神经元损伤的标志物,也可作为肿瘤标志物用于神经母细胞瘤、小细胞肺癌、垂体腺瘤等疾病的诊断。由于血小板和红细胞中存在其同工酶，因而标本溶血，红细胞中可释放大量的神经元特异性烯醇化酶（NSE），因此溶血可导致结果偏高，严重影响检测结果的真实性和可靠性。本文重点验证不同溶血标本对神经元特异性烯醇化酶（NSE）检测的影响程度，从而给临床医生很好的判断和依据
目的 探讨溶血程度对血清检测神经元特异性烯醇化酶（NSE）的影响程度。
方法 采用罗氏 cobas 6000 e601 全自动电化学发光免疫分析仪，检测正常人血清标本及不同溶血程度的血清标本的神经元特异性烯醇化酶（NSE）含量，溶血（+-++++）的溶血各选择 5 个标本进行检测，其工作原理是电化学发光免疫分析的方法。
结果 当血清标本无异常，结果正常，标本出现溶血，就会使神经元特异性烯醇化酶（NSE）结果偏高出现假阳性情况，且溶血程度越高，神经元特异性烯醇化酶（NSE）结果越高。
结论 溶血对血清检测神经元特异性烯醇化酶（NSE）存在严重影响，神经元特异性烯醇化酶（NSE）含量随溶血程度的增加而增加，临床检测神经元特异性烯醇化酶（NSE）要杜绝溶血标本。

PU-2652

Role of mesenchymal stem cell in metastasis of ErbB2-positive bladder cancer

Zhuolin Li[1,2]、Ruxue Jia[1,2]、Yating Wu[1,2]、Xiaoming Huang[1,2]、Huimin Niu[1,2]、Jin Chen[1,2]、Shenghang Zhang[1,2]、Shuiliang Wang[1,2]
1. 厦门大学附属东方医院福建省适配体技术重点实验室
2. 联勤保障部队第九〇〇医院检验科

Objective Tumor progression towards metastasis is often depicted as a multistage process. Each stage of metastasis is closely related to the genetic and epigenetic changes of tumor cells and the regulation of many factors in the microenvironment. In recent years, studies have shown that mesenchymal stem cells (MSC), as an important cell component of tumor microenvironment, are closely related to tumor metastasis. Our study focused on the role of MSC in the metastasis of ErbB2-positive bladder cancer.
Methods ErbB3 overexpression ErbB2-positive bladder cancer cell line was constructed by lentiviral transfection; Transwell migration and invasion assay was used to detect the effect of MSC on the metastasis and invasive growth of ErbB2 positive bladder cancer and its ErbB3 overexpression subline; Western blot assay was used to detect the expression and activation of related proteins after co-culture with MSC; In the animal experiment, the xenograft tumor model of bladder cancer was established by injecting the above two cell lines through the tail vein of nude mice, and the ability of MSC to form metastatic tumor of ErbB2 positive bladder cancer cells in vivo was explored by injecting mesenchymal stem cells.
Results At the cellular level, MSC could promote the metastasis of ErbB2-positive bladder cancer cells and ErbB3 overexpression ErbB2-positive bladder cancer cells, and the promotion effect was more significant in ErbB3 overexpression cell lines. In addition, Western blot analysis showed that the expression of MMP2 and MMP9 was up-regulated after co-culture with MSC. The results of animal experiment were consistent with that of cell experiment, that is, MSC could promote the formation of metastatic tumor in ErbB2-positive bladder cancer cells in vivo, and this effect was more significant in the model of ErbB3 overexpression.
Conclusion Our data suggest that MSC can promote the metastasis of ErbB2- positive bladder cancer cells, and this effect may be achieved by activating ErbB2/ ErbB3 and its downstream signaling pathway.

PU-2653

溶血标本不同时间对同型半胱氨酸（HCY）的影响

赵日晖
黑龙江金域医学检验实验室有限公司

目的 观察溶血标本不同时间对同型半胱氨酸（HCY）的影响。近年来研究资料表明，同型半胱氨酸（HCY）是心脑血管疾病的独立危险因素，因此，准确测定 HCY 非常重要。溶血是检测项目结果影响较大的一个因素，但是不同时间溶血对 HCY 的是否有影响还缺少报道，本实验进行探讨，现报道如下。
方法 5 例溶血标本，使用罗氏 cobas 8000 c702 全自动生化分析仪用酶循环法分别检测新鲜标本、放置 1 小时的样本、放置 2 小时的样本、放置 4 小时的样本、放置 8 小时的样本，查看同型半胱氨酸不同时间对结果的影响程度，将五例标本结果进行比较。
结果 测试了五例标本，同型半胱氨酸（HCY）的浓度依次降低，结果相差较大。
结论 本研究结果表明，溶血标本不同时间会对同型半胱氨酸（HCY）检测结果有显著影响，标本检验结果的可靠性和真实性直接关系到临床诊断的准确性，在工作中一旦发现溶血 HCY 标本，应主动与临床联系，结合临床首先排除体内溶血的可能，若不是体内溶血，建议重新采集标本。随着

全自动生化分析仪的普及使用，检查血清标本外观是否溶血已成为试验过程中的重要一环节，正确处理溶血，才能得出准确的结果，更好地把握检验工作质量并为临床提供优质服务。

PU-2654

霍乱弧菌不再是漏网之鱼

邹雪
新化县人民医院

目的 我们如何才能在微生物日常工作中不漏掉罕见的细菌呢。下面以霍乱弧菌为例。霍乱是我国法定管理的甲类烈性肠道传染病，但是随着现代污水和饮用水的处理，在我国，这些年很少有霍乱的流行。所以微生物检验人员特别是基层工作人员在日常工作中很难去发现这个古老的生物。霍乱弧菌分为 200 多个血清群，其中只有 O1 和 O139 可以引起霍乱（但其他血清群也可能导致严重腹泻），由于它的传染特性，我们依然不能对霍乱放松警惕，需要对 O1 和 O139 病人和病原携带者及时隔离和治疗，所以使得在日常实验室工作中对它们的不漏检至关重要。
方法 1.微生物工作是离不开临床的。
2.微生物实验室工作。如何在实验室工作中去发现它，显得至关重要。
3.血清学分型：如果发生凝集（应做盐水对照），是 O1 或 O139 群，须立即报告给主治医生，因为霍乱会引起严重脱水。还应该报 CDC，并将分离株和病人原始标本送到 CDC 进行确认和毒素检测。
结果 实验室鉴定要点有悬滴动力试验和制动试验，菌落形态，格兰染色，tcbs，碱性蛋白胨水，血清学分型。条件允许还可以借助质谱仪或者全自动生化仪。最终的确认还是需要 CDC 做进一步检测。
结论 所有的实验室鉴定等都离不开临床，所有脱离临床的检验工作都是耍流氓。大便细菌生态环境比较复杂，我们微生物工作中最重要的是从复杂多样化生长的平板上发现致病的细菌。就需要我们在日常工作中多积累临床经验多与临床沟通互相促进。

PU-2655

人类 SDC2 甲基化检测结果与年龄相关性分析

张雪娇
黑龙江金域医学检验实验室有限公司

目的 目前结直肠癌是较为常见的肿瘤之一，每年发病率和致死率有上升趋势且年轻化。本文根据黑龙江金域 2021 年 3 月份 229 例人类 SDC2 基因甲基化检测结果，探讨其检测结果与年龄的相关性。
方法 SDC2 基因相对于正常组织，在大肠癌和腺瘤组织中呈现高水平的甲基化现象，并且 SDC2 基因在大肠癌和腺癌组织中的表达也显著高于正常组织，SDC2 基因在大肠癌不同分期中也呈现高度的甲基化。通过对 229 例筛查人员粪便样本中 SDC2 基因甲基化检测，发现在特异性为 90.9% 时，大肠癌的检测灵敏性为 90.0%。这一结果证明其作为大肠癌早期标志物具有较高的临床应用价值。
结果 本次筛查共计 229 例，平均年龄为 51.07 岁，阳性总数为 15 例，阳性患者平均年龄为 52 岁，阳性率为 6.55%。以下用 N 表示年龄，N≤40 岁共计送检 47 例，其中阳性 0 例，阳性率为 0；40＜N≤50 共计送检 56 例，其中阳性 4 例，阳性率为 7.14%；50＜N≤60 共计送检 86 例，其中阳性 7 例，阳性率为 8.14%；60＜N≤70 共计送检 27 例，其中阳性 2 例，阳性率为 7.41%；N＞70 共计送检 11 例，其中阳性 2 例，阳性率为 18.18%。

结论 大肠癌的发生与年龄关系密切，40 岁以上阳性率明显增高，进一步证实了该年龄段以上人群早期粪便 SDC2 基因甲基化筛查的必要性，明确了 SDC2 基因检测对大肠癌早期筛查和早期预防的重要作用，该研究为大肠癌的早期筛查提供一定的佐证和支持，未来将持续进行粪便 SDC2 基因甲基化对于大肠癌早期筛查的临床应用与研究，不断辅助临床提高患者生活质量和延长患者生存期。

PU-2656

略论金域医学东北大区核酸实验室如何加快新冠检测速度

马晓影
黑龙江金域医学检验实验室有限公司

目的 研究在新冠疫情筛查时金域医学东北大区作为第三方检测机构如何在保证质量和安全的情况下加快检测速度。
方法 疫情稳定时金域医学检测机构各子公司参与核酸检测的主干人员进行汇总经验，经由子公司实验室负责人员通过线上会议的形式进行经验的交流与总结。
结果 新冠疫情筛查期间各子公司人员及时相应，对于支援人员及时带教熟悉工作环境，当班结束后及时汇总反馈问题发现不足实时进行改正，使临时组建的团队发挥最大的产能。检测设备方面各子公司提前联系支援设备的厂家型号及数量，提前安排出设备存放的位置，使分析工作有条不紊。对于试剂配置方面专人专用，与检测人员沟通所需要检测试剂的数量，做到在标本数量多时也不造成试剂的浪费。创新方面筛查期间在加样过程中产生创新点，检测人员发明了裂解液精准定位加样辅助器，已进行专利的申报。在新冠筛查期间沈阳子公司历时 16 天完成 504292 标本检测数，吉林子公司历时 30 天完成 673885 标本检测数，黑龙江子公司历时 45 天完成 835678 标本检测数。
结论 在疫情爆发标本量剧增的情况下，通过各子公司抗疫筛查的经验总结交流与分享能够更加优化新冠筛查期间的检测流程，提高检测速度。

PU-2657

结直肠癌肿瘤标志物研究进展

张世慧
山东大学第二医院

结直肠癌是常见的消化道肿瘤之一，在目前世界范围内的致死性肿瘤中排名第四，每年约有 90 万人死于结直肠癌，且结直肠癌易发生肝转移，远期生存率差，因此早期诊断结直肠癌具有重要意义。目前临床常应用糖类抗原（ＣＡ）１９9 和癌胚抗原（CEA）检测结直肠癌，但特异度较低，因此，迫切需要找到灵敏度高的最佳标志物。液体活检技术是近年来肿瘤诊断领域的一大突破性技术，通过捕获和分析外泌体、核酸、蛋白质及细胞等肿瘤衍生物质来解读癌细胞生物学进程，主要包括对体液中外泌体、血液的循环肿瘤细胞（CTCs）和循环肿瘤 DNA（ctDNA）的检测。该项技术在结直肠癌中的研究进展有利于发现结直肠癌的潜在标志物，有利于结直肠癌的早期诊断，对于患者的早期临床治疗及预后评估也具有重要意义。目前对外泌体的研究仍处于初始阶段，存在诸多不足，如针对外泌体的分离及保存等尚存在诸多争议，需进一步改进，但随着蛋白质组学、高通量测序等技 术的飞速发展及应用，外泌体终将成为 CRC 研究领域的新曙光，进而实现巨大的临床及科研价值。CTCs 检测对复发、转移性 ＣＲＣ 具有更重要的意义，与传统诊断手段相比，在 ＣＲＣ 的早期诊断中还需更多的临床数据支持， 目前大部分 CTCs 研究局限在转移性癌中，对于早期癌特别是非转移性 ＣＲＣ 中的 CTCs 研究相对较少。除临床试验之外，没有临床 有效性或临床效用的证据表明 ctDNA 测定可用于 癌症筛查。ctDNA 在结直肠癌诊断的应用仍需 要进一步研究。

目前液体活检仍面临巨大困难，首先，应该寻找灵敏性和特异性更高的检测 方式；其次应规范检测流程，包括样本取材方式，运输及保存方式以及检测方式。最后还需要更多大样本、多中心、

大规模前瞻性临床研究证实液体活检对临床诊疗的作用。相信在不久的将来，液体活检能够广泛应用于临床，为患者提供更加及时、精准的个体化治疗方案。

PU-2658

检验分学科诊疗

闫妁
山东大学第二医院

随着社会不断发展、人民生活水平不断提高，各种棘手疾病也随之而来，这对医生来说是一个极大的挑战，对我们检验人员来说也发出了一个急需进步的信号。目前疑难杂症呈现的问题：1.临床症状并不典型，2、存在多学科疾病，3、各科室间缺乏交流等，下面我就临床科室与检验科室间交流展开阐述。

临床疾病纵横交错，病人初步就诊医院，一般就现阶段最明显症状就诊于相应科室，为明确诊断住院治疗，住院第一步就是完善“相关”辅助检查，所谓“相关”就是与本科室疾病相关检查，以便佐证诊断，这时候我们辅助科室就发挥巨大的作用；由于人体是一个整体，多种疾病可能会引起相同的指标异常，这个检验指标用来引导医生诊断，由于检验人员对病人病史及体征缺乏了解，与临床医生缺乏交流，仅通过检验技术检出结果，并不能完全反映病人的病情，所以我认为应该实行检验分学科诊疗。 我认为可以将检验部门可以分级诊疗，向临床医生靠拢，每个临床科室可以有相应的检验人员，了解病人情况，与临床医生充分交流，针对不同病人情况，采取不同技术行相关检验指标，当然还应设有体检部门，专门针对健康查体人群；我们可以用实验验证一下，以血液科室病人作为研究对象；选出能力、知识、经验等相一致检验人员，将他们分别于不同临床科室对应，然后对他们进行对血液内科理论学习及针对相关疾病检验方法；同时选出同一批病人，就诊于同一个医生，判断那种方式可以更快、更准确明确诊断。我实验的主要目的是检验分学科诊疗，可以提高疾病诊断速度及准确性，使检验部门起到更好的引导作用。

PU-2659

两种化学发光仪对于铁蛋白（FER）检测结果的比较

林迪
黑龙江金域医学检验实验室有限公司

目的 近年来随着检验行业的迅猛发展，化学发光分析法作为一种灵敏度高，检测时间短，检测范围宽，分析方法简便快速，安全性好及使用期长的痕量分析方法，不断深入到临床检验、药物、食检、环境、生命和材料科学等各个领域。化学发光具有荧光的特异性，同时不需要激发光，避免了荧光分析中激发光杂散光的影响从而提高了灵敏度，并且避免了放射分析造成的环境污染和健康危害，是一种非常优秀的定量分析方法。由于化学发光分析的发光体系日益增多，本文介绍了使用雅培品牌的免疫分析仪和迈瑞品牌的免疫分析仪分别检测铁蛋白（FER），探讨不同免疫分析系统以及不同化学发光方法对于结果的可比性和准确性。
方法 使用雅培 i2000SR 全自动发光免疫分析仪和迈瑞 CL-6000i 全自动化学发光免疫分析仪分别检测铁蛋白（FER），雅培和迈瑞两个品牌的检测方法采用的均是双抗体夹心法，雅培采用两步法，迈瑞采用一步法。雅培为样本中的铁蛋白与铁蛋白抗体包被的微粒子结合，冲洗后，加入吖啶酯标记的铁蛋白抗体结合物形成反应混合物。迈瑞为样本与包被着抗 FEER 抗体的超顺磁性磁珠以及抗 FEER 抗体-碱性磷酸酶标记物添加到反应管中，经过孵育反应完成后，磁场吸附磁珠，洗去未结合的物质。
结果 进行了样本比对，同一标本不同检测系统 95%在相似的参考区间里阴阳性符合。

结论 对比的两个品牌的两个方法的具有高度的一致性同时稳定性良好。解决了我们在工作中关于不同的检测平台对于结果一致性解读的困扰。也成为我们对临床服务强有力的后盾。

PU-2660

基于 GEO 数据库的在线 SCLC 差异表达基因分析

谢雨彤
黑龙江金域医学检验实验室有限公司

目的 挖掘与小细胞肺癌（small cell lung cancer, SCLC）发生发展显著相关的基因，探索 SCLC 的发病机制，为 SCLC 临床鉴别诊断、评估潜在的靶向治疗选择及寻找新的治疗策略提供理论基础。
方法 本研究选取 2013 年发表在 Scientific Reports 上的论文（Gene repression with H3K27me3 modification in human small cell lung cancer）的中的 65 例样本，包括实验组的 23 例 SCLC 样本和对照组的 42 例正常组织样本。通过挖掘其 GEO 数据库中 SCLC 癌组织及正常组织的微阵列基因表达(Microarray gene expression)的原始数据（GEO Series GSE43346），利用 NetworkAnalyst 平台进行差异表达基因筛选（|log-foldchange|>2，Adjusted P<0.01）。并使用 Functional Annotation Tool 平台对选取出的前 250 个显著上调和下调基因进行 GO 分析、KEGG 信号通路分析和蛋白质互相作用网络分析。
结果 质检结果的箱体图（Box plot）和主成分分析（PCA plot）结果皆显示 65 个样本中存在基因表达差异，limma 统计法对实验组和对照组的比较总共筛选出与 SCLC 显著相关的基因 5000 个，这与 GEO2R 分析结果相符。在前 250 个表达差异显著的基因中，上调基因 46 个，下调基因 204 个。GO 富集分析得出 51 个条目（FDR<0.01），显示这些基因的分子功能主要集中在蛋白质结合和细胞核功能。KEGG 通路分析得出这些基因涉及 12 个通路（P<0.01），主要富集在 DNA 修复，姊妹染色单体粘着、细胞分裂等信号通路上。蛋白质互作网络分析结果提示处于网络中心节点的蛋白有：淀粉样 β 前体蛋白（APP）、瘤蛋白 p53（TP53）、X 射线修复交叉互补蛋白 6（XRCC6）、赖氨酸去甲基化酶（KDM1A）、增殖细胞核抗原（PCNA）和 DNA 修复相关蛋白（BRCA1）等。
结论 通过生物信息学对 SCLC 相关基因的分析，发现 SCLC 的发生发展可能与 APP 、TP53 、XRCC6 、KDM1A、PCNA 和 BRCA1 等基因结构和表达异常有关。

PU-2661

全自动血培养仪阳性报警时间（TTP）对分离细菌多重耐药性的预测价值探讨

曹啟新
内蒙古自治区内蒙古人民医院

目的 监测血培养分离菌的临床分布及探讨阳性报警时间（TTP）对细菌多重耐药性的预测价值。
方法 对内蒙古自治区人民医院 2017-2020 年期间 534 株血培养分离菌进行回顾性分析，采用 SPSS 22.0 软件对细菌 TTP 值进行统计比较，受试者工作曲线（ROC）分析 TTP 值对细菌多重耐药性的预测价值。
结果 534 株血培养阳性菌株中，以肠杆菌科（49.5%），葡萄球菌属（29.2%）和肠球菌属（5.2%）为主。主要病区分布为 ICU（25.1%），普外科病房（15.4%）和肾内科病房（7.3%）及其他病房（52.2%）。根据药敏结果将细菌分为多重耐药组与非多重耐药组，将二者之间的 TTP 值进行统计比较，发现除肺炎克雷伯菌外细菌多重耐药组的 TTP 值均高于非多重耐药组，且差异有统计学意义(P<0.05)；ROC 曲线分析 TTP 值预测大肠埃希菌、耐甲氧西林的金黄色葡萄球菌（MRSA）、耐甲氧西林凝固酶阴性葡萄球菌（MRCNS）、肠球菌属、链球菌属、鲍曼不动杆菌和阴沟肠杆菌

多重耐药的最佳截断值为 TTP≧0.69d，TTP≧1.0d，TTP≧1.07d, TTP≧075d，TTP≧0.69d, TTP≧0.69d 和 TTP≧0.59d，曲线下面积分别为 0.87，0.71，0.64, 0.76, 0.84, 0.75 和 0.86，准确度均为中度。

结论 血流感染患者病原菌及其分布复杂，细菌多重耐药性不断增强，实验室可以通过监测血培养分离菌的分布为临床治疗提供相关依据，以及通过 TTP 值的大小对细菌多重耐药性提示预警，指导临床早期合理用药。

PU-2662

火焰原子吸收和 ICP-MS 测定全血中 5 种元素的比较

赵式樱
黑龙江金域医学检验实验室有限公司

目的 微量元素与人的健息息相关，它们的摄入过量或缺乏都会不同程度地引起人体生理的异常或发生疾病，准确、快速、方便地测定人体内微量元素的含量成为急需解决的问题。火焰原子吸收法（FAAS 法）是从光源辐射出具有待测元素特征谱线的光，通过试样蒸气时被蒸气中待测元素基态原子所吸收，由辐射特征谱线光被减弱的程度来测定试样中待测元素的含量。具有灵敏度高、抗干扰能力强、精密度高、选择性好、仪器简单、操作方便的特点。随着技术的发展，电感耦合等离子体质谱法（ICP-MS 法）越来越普及，可分性痕量及超痕量元素，具有快速且多元素同时测定、精密度高、准确性好、检出限低等优点，可以达到快速检测人体内多种元素含量的要求。本文对 FAAS 法和 ICP-MS 法测定全血中铜、锌、钙、镁、铁含量进行了对比，找到更高效的分析方法。

方法 本文同时建立了 FAAS 法和 ICP-MS 法检测全血中 12 种元素的方法。从检出限、准确度和精密度三个方面对两种检测技术进行了对比。

结果 经验证，ICP-MS 法测定全血中 5 中元素的线性范围 R>0.9950，偏倚在 0.16%-7.81%之间、精密度在 0.80-2.10%之间，定量限为微克级。FAAS 法测定全血中 5 中元素的线性范围 R>0.9950，偏倚在 0.11%-12.43%之间、精密度在 0.88-4.30%之间，定量限为微克级。

结论 ICP-MS 法和 FAAS 法在测定全血中铜、锌、钙、镁、铁的含量对比中，ICP-MS 法和 FAAS 法的定量限均为毫克级，但 ICP-MS 法的定量限较低。准确度和精密度 ICP-MS 法均优于 FAAS 法。对比结果表明对于全血中铜、锌、钙、镁、铁的测定 ICP-MS 法更具优势。

PU-2663

不同类型采血管对叶酸项目影响

祝晓捷
黑龙江金域医学检验实验室有限公司

目的 为缩短分析前样品处理的时间，提高检验速度，越来越多的临床实验室选择采用肝素锂凝管或分离胶促凝管来分离血样。由于市场的需要近年来我国的采血管厂家也开始大量的生产分离胶采血管，并被大量实验室采用，一些类型的采血管在制造过程中添加了一些物质并且试管中的一些物质有潜在的吸收被分析物或者释放可能影响化学物质分析的干扰物，直接影响检测结果。因此采血管可能成为实验室分析前误差的主要来源。由于各种类型采血管日益增多并被应用，本文评估不同类型的采血管用化学发光免疫分析技术测定叶酸结果之间的差异。

方法 采集同一志愿者肘正中静脉血分别至普通采血管、血清分离胶管、肝素锂血浆分离管、玻璃采集管 4 种采血管中，分离血清后使用雅培 i2000SR 化学发光法测定叶酸指标。叶酸项目采用两步法免疫检测，经过两部预处理后样本中的叶酸结合到 FBP 包被的微粒子上。冲洗后加入吖啶酯标记的蝶酸结合物，并结合到 FBP 包被的微粒子的空位点上。随后向反应混合物中加入预激发液

和激发液测量产生的化学发光反应以相对发光单位表示。样本中的叶酸含量与雅培光学系统检测到的发光单位成反比。以普通采血管作为对照评估他们之间的差异。
结果 血清分离胶管、肝素锂血浆分离管、玻璃采集管与普通采血管进行评估，被评估的采血管与对照管的差异小于 10%。
结论 应用真空采血管前，必须要对其不同类型进行综合评估，择取对叶酸检验结果影响较小的真空采血管，可提高实验结果精准性。

PU-2664

巨噬细胞 M1/M2 转化在急性肺损伤病理生理中的研究进展

黄湘平、谭超超
湖南省人民医院

急性肺损伤是由多种因素引起的危急重症，病情恶化会导致患者死亡。巨噬细胞参与了急性肺损伤的不同病理阶段，包括渗出期、恢复期、纤维化期，其中 M1 巨噬细胞主导促炎作用，M2 巨噬细胞主导抑炎反应和组织修复的作用。在急性肺损伤的发病过程中，巨噬细胞通过向 M1/M2 转化参与了肺组织的损伤与恢复。本文将对急性肺损伤 ALI 不同时期 M1/M2 的转化方向及机制进行归纳总结，为急性肺损伤的探索研究提供思路

PU-2665

利用现代管理工具助力提高医学实验室质量管理水平

周博、吉阳涛、赵敏
中国医科大学附属第一医院

目的 在新冠疫情背景下，我国医学实验室进入到了大发展的阶段。有相当数量的实验室已经在此前通过了国际质量管理体系 ISO15189（CNAS CL-02）认可或美国病理家学会（CAP）认证，但管理水平的提高需要时间和经验的积累，各级医院的管理水平仍然参差不齐，未通过认证认可的实验室管理水平更加难以保证。本文旨在探讨如何利用现代企业的管理工具，快速帮助实验室精简管理流程，提高管理水平。
方法 充分分析提炼 ISO15189 认可指南中的核心内容，编制管理体系基准调查表，全面覆盖实验室管理体系各个要素，评价实验室现行管理状况，并分析指出存在缺陷。根据认可自查表提炼各要素必需的管理流程及记录，制定个性化检查表，使有缺陷的工作一目了然。利用 RACI 项目责任管理工具，记录管理各项工作进展，责任到人，并专人审核，且保证相关人员全部知悉项目进展。利用 6S 管理工具优化实验室管理流程，减少八大浪费，提高生产效率和安全性。
结果 将各种管理工具合理应用在实验室中，可有效提高实验室对于质量管理的认知，为实验室提供简单、有效的管理思路，并保证不遗漏任何重要要求。节约了实验室的学习时间和试错成本，提供了清晰的管理路线，清楚的管理职责。
结论 在实验室高速发展变化的今天，质量管理的核心职责不能改变，医学实验室一切应以病人为中心，为患者和医护服务，以保证结果的质量为己任。在这种背景下，适当引进科学的现代管理工具，将极大的帮助实验室提高整体管理水平。

PU-2666

sST2 联合 hs-CRP、RDW-CV、hs-TnT 和 NT-proBNP 检测 在慢心力衰竭中的临床价值探讨

黄蔚[1]、彭瀚霆[2]
1. 广东省人民医院
2. 中山大学南方学院

目的 探索 sST2 联合 hs-CRP、RDW-CV、hs-TnT 和 NT-proBNP 在慢性心力衰竭的临床诊断价值以及其预后价值。
方法 选择 2019 年 9 月到 2020 年 12 月在广州市广东省人民医院心内科收治的心力衰竭患者 82 例（其中 22 例为心血管不良事件发生组 N 组，60 例为无心血管不良事件发生组 P 组）作为实验组，对照组为非心衰患者 64 例。分别检测 sST2、hs-CRP、hs-TnT 和 NT-proBNP、RDW-CV，同时，通过门诊随访调查患者预后并进行相关性分析以及预测价值评价。
结果 实验组 sST2、NT-proBNP、hs-TnT、RDW-CV 水平显著高于对照组，差异均具有统计学意义（P＜0.05）；Spearman 直线相关分析显示，实验组 sST2 水平与 NT-proBNP（r=0.268，P=0.015）、hs-TnT（r=0.385，P=0.000）、hs-CRP（r=0.391，P=0.000）、RDW-CV（r=0.275,P=0.013）呈正相关；发生心血管不良事件患者与无心血管不良事件患者比较，除 NT-proBNP 显著升高（P<0.01）外,sST2、hs-cTnT、hs-CRP、RDW-CV 差异均无统计学上意义（P＞0.05）；另外，NT-proBNP 为心力衰竭心血管不良事件发生情况的独立预测因子，OR 值为 1.000；同时,NT-proBNP 在 ROC 曲线下的面积为 0.310（95%CI：0.170-0.450，P＜0.05），联合 sST2 和 NT-proBNP 为 0.690（95%CI：0.601-0.778，P＜0.05）。
结论 1、sST2 水平在心衰患者中呈上升趋势，且与 hs-CRP、RDW-CV、hs-TnT 和 NT-proBNP 联合检测具有正相关性，sST2 可以作为心力衰竭的病程进展的一个监测指标和预后判断的相关指标；2、NT-proBNP 虽然是心衰患者再次发生心血管事件风险的独立预测因子，对慢性心衰的预后评估起主要作用，但是 sST2 的敏感度比 NT-proBNP 要高，因此 sST2 联合 NT-proBNP 检测可以提高慢性心衰预后评估的敏感度和特异性。

PU-2667

新型冠状病毒肺炎疫情下医共体 PCR 实验室生物安全管理探讨

张示渊[2]、刘晓聪[1]
1. 新疆维吾尔自治区石河子市人民医院
2. 新疆维吾尔自治区石河子市人民医院

目的 总结新型冠状病毒肺炎疫情下石河子市总院医共体下 PCR 实验室的防控教训和经验，并探讨如何做好检验科的生物安全防护，对其六家新冠 PCR 实验室的建立和运行做一全面的梳理，以供大家探讨和借鉴。
方法 新型冠状病毒肺炎疫情已成为全球公共卫生的重大威胁，核酸检测是检测病毒最重要的手段之一。2020 年石河子总院在团场医共体内新建 5 所 PCR 实验室，用于应对新型冠状病毒的检测工作，在疫情当前保证一线操作人员的身体健康与环境安全，实验室生物安全管理工作成为了重中之重。针对团场基层医院自身认识不足，缺乏风险管理意识、流程优化不足、制度落实不到位等情况，生物安全存在诸多影响实验室安全规范运行的现实问题或隐患，因此需要采取行之有效的管理手段避免标本送检、检测、废弃物处理等环节中可能出现的医院感染，总院根据国家发布的医务人员防护指南等相应要求制定了一系列措施，制定了核酸检测的详细流程；梳理了各环节的风险点以及各环节参与人员的责权范围，将标准统一下达医共体团场 5 家实验室，并要求严格落实各项规章制度并加强监督执行；同时，为了解团场五家团场实验室软硬件条件现状、改进方向等情况，不定期下团场指导、梳理，不断优化生物安全流程，以问题为导向实行了扁平化管理，与此同时还加强了对

所有员工进行健康监测，如有异常及时上报。采用 PDCA 管理对石河子市总医院六家 PCR 实验室生物安全管理进行监控与分析。

结果 石河子市总医院医共体成员 6 家 PCR 实验室严格遵守国家制定的管理规定，做好每日生物安全工作，防控工作也得到了安全有序的开展；通过工作团队的不懈努力，为石河子市总院所有 PCR 实验室感染管控和避免人员感染等方面取得了阶段性成果，从未发生医务人员感染事件，也为下一步有关工作探索出进一步的努力方向。

结论 检验科实验室生物安全防护措施对防止医务人员感染有良好的预防和控制效果,可以为新冠病毒肺炎期间做好 PCR 室的生物安全防护以及病毒检测的有序开展提供参考作用。

PU-2668

Efficacy of anti-inflammatory and lipid-lowering activities of Costunolide and Dehydrocostuslactone in vitro

Wanyi Li[1,2]、Honglin Li[1]、Xi Chen[1]、Tao Hu[1]、Huaqiang ZHU[1]
1. Departmant of Clinical Laboratory, Mianyang Central Hospital, School of Medicine, University of Electronic Science and Technology of China
2. 广东医科大学

Purpose Costunolide(CE) and dehydrocostus lactone(DCE) are two natural sesquiterpene lactones, which have been extensively investigated for a wide range of biological activities. Multiple lines of preclinical studies have reported these compounds possesse antioxidative, anti-inflammatory and anticancer properties. In this study, we investigated the effects of anti-inflammatory and lipid-lowering activities of costunolide and dehydrocostus lactone, which have been isolated from Saussurea lappa using activity-guided isolation on phorbolmyristateacetate(PMA) treated THP-1 macrophages. And we will facilitate the development of CE and DCE with therapeutic applications in atherosclerosis-related cardiovascular diseases.

Methods Macrophage foam cells were prepared by loading THP-1macrophages with acetylated low-density lipoprotein(ac-LDL)and apolipoprotein A-1(apoA-1) ,and inflammatory cells were prepared by loading macrophages with lipopolysaccharide(LPS). Cell viability were respectively assessed by CCK-8 assay under different concentrations of DCE and CE. To analyse the anti-inflammatory activity of CE and DCE, the experiment was setted up the blank group, control group , CE group and DCE group. Griess method was employed to detect Nitric Oxide(NO) on inflammatory cells , which were based on the chemical diazotization reaction that was originally described by Griess in 1879, which uses sulfanilamide and N-1-napthylethylenediamine dihydrochloride (NED) under acidic (phosphoric acid) conditions.The THP-1 inflammatory cell culture supernatant was collected, and the productions of tumor necrosis factor-α(TNF-α) were measured by enzyme-linked immunosorbent assay(ELISA). To analyse the lipid-lowering activity of CE and DCE, the experiment was setted up the LDL group, apoA-1 group , CE group and DCE group. The liquid scintillation counting was used to detect the cholesterol efflorescence rate in macrophage foam cells. The expression of ABCA1 protein in macrophage foam cells was detected by Western Blot.

Result We established the Macrophage-derived foam cell and inflammatory cell model of THP-1 cell line. CCK8 assays indicated that treatment with below 20 μmol/L CE and DCE had no toxic reaction on THP-1 macrophage induced by PMA.

The concentration of NO released by inflammatory cells treated with 20 μmol/L DCE and 20 μmol/L CE was (0.124±0.002) μmol/L and (0.290±0.003) μmol/L, respectively, which were lower than LPS group (6.144±0.005) μmol/L,and the difference was statistically significant($P<0.001$). The concentration of TNF-α released by inflammatory cells treated with 20 μmol/L DCE and 20 μmol/L CE was (0.192±0.001) pg/mL and (0.225±0.001) pg/mL, respectively, which were lower than LPS group (0.425±0.021), and the difference was statistically significant ($P<0.001$).

The cholesterol efflorescence rates in macrophage foam cells treated with 20 μmol/L DCE and 20 μmol/L CE were (15.393±0.763) % and (12.285±0.219) %, respectively, which were higher than apoA-1 group (12.227±0.290) %, the difference was statistically significant only in DCE group (P <0.001). The analysis of Western Blot results show that compared with apoA-1 group, the expression of ABCA1 protein in macrophage foam cells treated with 20 μmol/L DCE and 20 μmol/L CE was up-regulated by 2.52 times and 0.17 times, and the difference was statistically significant only in DCE group (P <0.001).
Conclusion In this experiment,we investigated that both CE and DCE may have superior anti-inflammatory activity in vitro, and DCE has better anti-inflammatory activity than CE. Only DCE has superior lipid-loweringactivity in vitro, no better lipid-lowering activity of CE has been found yet.

PU-2669

职业道德建设是军队医院检验科全面建设的前提和基础

陈黔、贾雄飞、王 珂
中国人民解放军联勤保障部队第九二〇医院

目的 探讨职业道德建设在军队医院检验科全面建设中的现实地位、作用和意义，以及职业道德建设的具体制度、方法和措施。
方法 运用军队卫生事业管理学的相关原理和方法。
结果和结论 职业道德建设是“改革强军、军民融合”大环境下确保检验安全、保证检验质量的基础和前提，是军队医院检验科全面建设的关键和保证。只有建立、健全和完善一整套职业道德建设的制度和机制，才能保证检验人员的政治站位和综合素质，以及工作安全的整体确保、检验质量的全面提高。军队医院检验人员的职业道德建设是一项长期、艰巨而复杂的系统工程，军队医院检验科领导必须依据军队改革、市场经济的客观变化和形势要求，及时调整教育内容、保证教育常抓不懈。

基于 Web 的临床试验 EDC 系统的设计与构建

许克[1]、朱放[2]
1. 上海交通大学医学院附属瑞金医院
2. 上海交通大学医学院附属儿童医学中心

目的 本文的目标是开发一款网页端的临床试验电子采集系统,该系统在 EDC 理论框架的基础上,依托 Web 实现,具备 eCRF 设计、录入数据、SDV、数据质疑、核查留痕、用户权限管理和数据导出等 EDC 系统常用功能,且符合具体法律法规和相关行业标准。
方法 本文通过对目前国内外的几大 EDC 网站的功能及业务流程的了解分析,并结合《临床试验数据管理工作技术指南》等相关法律法规和 CDISC 标准等行业标准,从可行性、功能、角色和非功能四个方面进行需求分析,然后对系统的整体架构、功能模块、数据库结构和工作流程进行详细设计和清晰的图表说明。之后对系统各板块的具体功能进行代码分析与实现。最后进行系统的测试。系统开发采用 Thinkphp 框架,将系统的整体结构架构分为两层:即视图层和控制层。视图层主要负责前端 UI 界面内容的展示,实现与用户的交互;控制层负责数据的处理,并控制用户界面数据显示。此外,Layui 框架作为系统的前端 UI 框架,可实现模块化的开发形式,简化了开发的过程。该系统采用 Mysql 数据库,来存储临床试验数据,保证数据的安全。
结果 该系统包含 9 个模块:管理员管理、权限管理、eCRF 设计、病例采集、稽查痕迹、数据 SDV、数据清理、数据导出、系统设置等常用模块，通过了用户界面、功能、浏览器兼容、性能、安全性试等五个方面的测试。

结论 该系统是一款基本完整的,交互友好的轻量级 EDC 系统,相较于其他 EDC 网站,具有低成本、易配置、开发周期短等优势,在后期功能扩展与维护方面也有很大优势。

独立医学实验室医学伦理的工作建设思考

孙维娜、杨勇、张宏磊、赵雪粉、朱佳丹
甘肃金域医学检验所有限公司

本文主要通过目前在医学检验实验室建设伦理委员会的工作制度中出现的情况如：制度建设的实用性和全员培训中的效果评估，探讨甘肃金域医学检验所在《金域医学伦理委员会章程》和《金域伦理评估管理程序》基准之上，建立的《甘肃金域伦理评估管理程序》文件。管理程序中定义伦理审查和伦理评估的内容，这两项工作由伦理委员会在伦理原则的基础上，依据伦理评估流程发挥职能进行评估。正文中第一部分按照目前医学检验业务内容将审查范围分为：常规临床检验样本、科研检验样本、特殊检验项目的生物信息三部分中涉及的医学伦理问题进行分析；第二部分介绍甘肃金域医学检验所伦理委员会的审查体系建立；第三部分思考内部对于医学伦理学认识的匮乏和外界对于医学检验和医学伦理学关联认识的片面性。对医学检验实验室伦理委员会建设的重要性和必要性，伦理委员会的工作建设内容，伦理委员会制度的颁布和落实，结合内部、外部对于医学检验中涉及医学伦理学的认识等方面，思考独立医学实验室的医学伦理审查情况。

综述 CTRP9 在动脉粥样硬化性疾病中的作用

赵海燕、关秀茹、王超
哈尔滨医科大学附属第一医院

补体 C1q 肿瘤坏死因子相关蛋白 9(C1q/TNF－related protein9，CTRP9)，是 CTRP 超家族成员之一，主要由脂肪组织分泌，是与脂联素高度同源的脂肪因子[1]。大量研究表明，CTRP9 具有稳定动脉粥样硬化斑块和保护心脏的作用[2]， 而且 CTRP9 表达水平的降低已被证明可作为冠心病的独立危险因素[3]。由此可见 CTRP9 或可在未来缓解冠状动脉粥样硬化性疾病中发挥巨大潜力。本文就近几年对 CTRP9 及其与心脑血管疾病之间关系的研究做一归纳综述，以用作后期研究的背景支持。

PU-2673

急性脑梗死早期白细胞计数与中性粒细胞计数检测的临床意义

刘瑜佳
西安医学院第一附属医院

目的 探讨在 acute cerebral infarction)患者早期血常规白细胞计数与中性粒细胞检测的临床意义。
方法 回顾性收集西安交通大学第一附属医院 2017 年 1～12 月 129 例急性脑梗死患者的一般资料及入院 24 小时内血常规检查结果以及同期在该院体检的 105 例健康体检者血常规检查结果。收集并整理性别、年龄、白细胞、淋巴细胞、单核细胞、中性粒细胞以及中性粒细胞与淋巴细胞比值等数据。所得数据采用统计学软件 SPSS17.0 进行分析。
结果 急性脑梗死组 WBC、L、M、N、NLR 均不同程度高于健康对照组，差异有统计学意义（P<0.05)；急性脑梗死组性别间比较，无统计学差异（P>0.05）；急性脑梗死组按不同年龄段分

组比较，N、NLR 随年龄增长而增高，差异具有统计学意义（P<0.05），WBC、L、M 的变化无统计学差异（P>0.05)。
结论 急性脑梗死患者血常规检测中 WBC、L、M、N、NLR 在早期均有不同程度的升高，且随着年龄的增长，N 和 NLR 的变化也愈加明显，可预估急性脑梗死发病，为诊断提供参考依据。

PU-2674

六西格玛质量管理在全血细胞分析室内质量控制中的应用

刘慧敏、刘春燕、张艳、葛若卿、陈硕、刘爽、邓朝晖
新疆生产建设兵团医院

目的 采用六西格玛(6σ)理论对迈瑞 BC-6800 全自动血细胞分析系统检测项目进行性能评价，选择合适的质控方案，指导质量改进。
方法 收集 2017 年度本院全血细胞计数 8 个检测项目(WBC、RBC、Hb、Hct、PLT、MCV、MCH、MCHC)的室内质量控制及室间质量评价数据。依据中华人民共和国卫生行业标准 W S/T 406-2012 制定的允许总误差(TEa)标准，计算各项目的 σ 值、绘制标准化 6σ 方法性能决定图、计算项目的质量目标指数(QGI)，评价项目检验性能及设计质量控制方案，并采用质量改进措施后的质控方案回顾性分析 2017 年室内质控数据。
结果 8 个检测项目中，3 个(HCT、MCHC 和 MCV)项目的 σ 值>6σ，3 个(MCH、RBC 和 HB)项目的 σ 值在 5σ～6σ，1 个(WBC)项目的 σ 值在 4σ～5σ。1 个(PLT)项目的 σ 值在<4σ。σ 值<6σ 的 5 个项目中，WBC、RBC 和 HB 项目需要优先改进精密度，PLT 和 MCH 项目需要优先改进准确度。WBC 和 MCH 需采用 13.5s(N=3，R=2)质量控制规则；HCT、MCHC 和 MCV 需采用 15s(N=3，R=2)质量控制规则；RBC 和 HB 需采用 14s(N=3，R=2)质量控制规则；PLT 需采用 13s 和(2 of 3)2s(N=3，R=2)质量控制规则。回顾性分析 2017 年室内质控数据，失控率由 0.56%降至 0.04%，警告率由 0.70%降至 0%。
结论 6σ 质量管理方法可以有效地应用于血细胞分析仪的质量管理，降低假失控率，并指导实验室质量的持续改进。

Predominant Frequency of HLA-B*2704 in patients with Ankylosing Spondylitis in Southeastern China

Jiaojiao Lu、Jing Yang、Wenxu Dong、Baojia Tang、Luoyuan Cao、Xianguo Fu
Ningde Hospital Affiliated to Ningde Normal University

Objectives This study was to investigate the polymorphism and distribution of alleles of HLA-B*27 in patients with ankylosing spondylitis in Han population of southeastern China.
Methods A total of 89 peripheral blood samples from southeastern Chinese Han patients with AS that diagnosed according to Modified New York criteria were subtyped using the high-resolution PCR-SSP.Exon 2-3 of HLA-B*27 gene was amplified and sequenced to further confirm the HLA-B*27 subtype.
Results The frequency of HLA-B*27 was 99.87% in AS patients.Three subtypes, B*2704, B*2705 and B*2706,were identified.The frequencies for these three alleles were B*2704 in 84/88(95.46%),HLA-B*2705 in 3/88(3.41%) and HLA-B*2706 in 1/88 (1.13%) of the B*27 positive patients,respectively.
Conclusions Our study shows that B*2704 has an overwhelming frequency in southeastern Chinese Han AS patients.A combined analysis including previous studies of B*27-subtype distributions in Chinese Han populations showed that HLA-B*2704 and B*2705 were the predominant subtypes in Chinese Han AS patients.The frequency of HLA-B*2704 subtypes are

increasing from north to south,while B*2705 has a decreasing North-South gradient.The results show that B*2704 may originate from the southern Han and then migrate and spread to the northern areas,and B*2705 show the opposite result. One AS patient was identified as the B*2706 subtype which was previously widely recognized as a protective subtype.It suggests that other than genetic background,many pathogenic factors could be associated with AS.

检验 TAT 调查分析与改进措施

山德生、柏魏、徐文波、赵冠程
玉溪市人民医院医学检验科（昆明医科大学第六附属医院医学检验科）

目的 通过对检验 TAT 的调查分析，了解影响 TAT 的关键因素，制定整改措施并实施改进，力求满足评审要求，满足临床诊疗需求。
方法 建立检验 TAT 监控表，嵌入 LIS 系统，调试成功后，调阅 2020 年 7 月监控表单删除无效数据后对采样与实验室验收时间、验收与检测时间、检测与报告时间及报告与临床打印时间等进行时间分析，进行分析。
结果 2020 年 7 月检测样本 120461 份，全部采样－报告时间 11 小时 01 分。
结论 TAT 未达到要求。

PU-2677

Forskolin Enhances Antitumor Effect of Oncolytic Measles Virus by Promoting Rab27a Dependent Vesicular Transport System

Mao Xia
Drum Tower Hospital, Medical School of Nanjing University

Measles vaccine strain viruses (MV-Edm) are an ideal platform for developing safe and effective oncolytic vectors. However, despite promising pre-clinical data, understanding of determinants of efficacy and, thus, the interplay between oncolytic virus and particular agents remain limited. We investigated the potency of Forskolin enhancing the antitumor effect of oncolytic measles virus by promoting Rab27a dependent vesicular transport system. Cells were infected with MV-Edm and the vesicles were observed by TEM. The oncolytic effects of MV-Edm/Forskolin were investigated in vitro. Herein we demonstrated that the MV-Edm infection and spread in tumor, which are indispensable processes for the viral oncolysis, depending on vesicular transport system of tumor cells. On the contrary, the tumor cells displayed a responsive mechanism to restrain the MV-Edm spread by down-regulating the expression of Rab27a, which is a key member of the vesicle transport system. Over-expression of Rab27a promoted the oncolytic efficacy of MV-Edm towards A549 tumor cells. Finally, we found a Rab27a agonist Forskolin that is capable of promoting the oncolytic effect of MV-Edm in vitro. Our study revealed the important role of vesicle transporter Rab27a in the whole MV-Edm mediated oncolysis pathway. We also provide a combined strategy for Forskolin and MV-Edm that may exert a synergistic anti-tumor effect for clinical treatment of patients with tumors.

XN-9000 全自动血细胞分析流水线室内质控品使用体会

朱江贤、沈华仙、张兴锋、杨美兰
玉溪市人民医院医学检验科（昆明医科大学第六附属医院医学检验科）

由日本 sysmex 公司生产的 XN-9000 全自动血细胞分析流水线是目前最先进的血细胞分析仪器之一。该流水线采用流式细胞荧光染色激光技术和电阻抗原理对血液中的细胞进行检测分析，它具有自动化程度高、支持双向通讯、结果准确、精密度好、操作简单、检测速度快、可大批量进样、检测参数全、可根据复检规则自动进行复检和推片染色读片等优势。在日常工作中，为了监测 XN-9000 流水线工作状态是否正常，每天开机后需要用质控品做室内质量控制，室内质控在控说明仪器工作状态正常，才可以开始检测患者样本。我们采用 XN-9000 流水线配套的质控品 XN-check Level 1、Level 2、Level 3 三个水平做室内质控，在长期做室内质量控制的过程中，我们发现要用质控品做好室内质量控制应注意一些细节问题。

带状疱疹神经痛合并晚期胰腺癌癌痛一例临床分析

陈剑、张大莲、周利、徐文波、毛星星、朱莹、冯磊
玉溪市人民医院医学检验科（昆明医科大学第六附属医院医学检验科）

带状疱疹(herpes zoster, HZ)是由水痘-带状疱疹病毒引起的一种急性感染性皮肤病，带状疱疹病毒具有亲神经性，受侵犯的神经和皮肤产生强烈的炎症，并伴有剧烈的疼痛，年龄越大，神经疼痛越剧烈。而胰腺癌是一种预后极差的恶性肿瘤，近年来该病在我国的发病率呈不断上升的趋势。胰腺癌疼痛是导致胰腺癌患者生活质量降低和影响寿命的主要原因之一，超过 50%的患者伴有疼痛。晚期患者的疼痛 VAS 评分甚至可以达到 10 分。回顾分析一例带状疱疹的剧烈疼痛与晚期胰腺癌疼痛混合难以区分。

PU-2681

Increased endogenous PKG I activity attenuates EGF-induced proliferation and migration of epithelial ovarian cancer via the MAPK/ERK pathway

Ying Li[1]、ting lan[2]、ping ma[1]、yue wang[2]、lan luo[2]
1. Affiliated Hospital of Xuzhou Medical University
2. 徐州医科大学

Rationale The overexpression of epidermal growth factor receptor (EGFR) is linked to poor epithelial ovarian cancer (EOC) outcomes. The type I cGMP-dependent protein kinase (PKG I) is recognized as a tumor suppressor, but its role in EGFR regulated EOC progression remains unclear.
Methods We first assessed the expressions of EGFR and PKG I in EOC tissues and cell lines (SKOV3 and A2780). We then evaluated the in vivo and in vitro effects of activated PKG I in EGF-induced EOC cell proliferation, migration, and invasion. And the underlying mechanisms were elucidated using molecular and biochemical Methods
Results The expressions of EGFR and PKG I were elevated, but the activated PKG I was decreased in EOC tissues and cells. The supplement of 8-Br-cGMP, a specific PKG I activator, attenuated the EGF-induced EOC cell proliferation, migration, and invasion in vitro. Such effects were abolished by Rp-8-Br-cGMPS (antagonist of 8-Br-cGMP). In an EOC xenograft nude mouse model, activated PKG I also attenuated EOC progression in vivo. Activated PKG I interacted with EGFR, leading its threonine 693 site phosphorylation, and decreased tyrosine phosphorylation of EGFR, resulting in disrupted EGFR-SOS1-Grb2 combination. Subsequently, the downstream signal pathway proteins, including the cytoplasmic phosphorylation of c-Raf, MEK1/2, and ERK1/2 were declined, impeding the phosphorylated ERK1/2's nucleus translocation. Also, the reduction of phosphorylated tyrosine EGFR and ERK1/2 induced by the activated PKG I were also abolished by its inhibitor Rp-8-Br-cGMPS.
Conclusions Our results suggest that the activation of PKG I attenuates EGF-induced EOC progression, and the 8-Br-cGMP-PKG I-EGFR/MEK/ERK axis is a potential target for EOC therapy.

PU-2682

PDCD4 Deficiency Aggravated Colitis and Colitis-associated Colorectal Cancer Via Promoting IL-6/STAT3 Pathway in Mice.

Liyang Wang
Qilu Hospital of Shandong University

OBJECTIVE Although programmed cell death (PDCD) 4 is generally considered to be a tumor suppressor, the consequence of Pdcd4 deficiency in tumorigenesis is not well established. The role of PDCD4 in colitis-associated colorectal carcinoma (CRC) remains unknown.
METHODS Experimental colitis and CRC were induced by dextran sodium sulfate and dextran sodium sulfate with azoxymethane, respectively, in wild type and Pdcd4 knockout (Pdcd4-/-) mice and were evaluated by clinical examination and histopathology. Levels of cytokines were detected by enzyme-linked immunosorbent assay. Changes in signaling pathways were examined by Western blot and immunofluorescent staining. Cell proliferation was determined by BrdU incorporation and Cell Counting Kit-8 staining.
RESULTS Pdcd4 deficiency not only aggravated the dextran sodium sulfate-induced acute colitis but also promoted the development of colitis-induced CRC. Mechanically, Pdcd4 deficiency

accelerated epithelial cell proliferation during tumorigenesis, markedly up-regulated the expression of proinflammatory cytokines, such as interleukin (IL)-6, and enhanced the activation of signal transducer and activator of transcription (STAT3), a IL-6 downstream effector. Using purified cells, we found that Pdcd4 deficiency increased IL-6 expression in vitro and the susceptibility to IL-6/STAT3 pathway-mediated cell proliferation significantly. Furthermore, blockade of IL-6/STAT3 pathway through sgp130Fc reversed the promoting effect of Pdcd4 deficiency on colonic epithelial cell proliferation in vivo.
CONCLUSION The Pdcd4 deficiency accelerates colitis and colitis-associated CRC presumably through up-regulating IL-6/STAT3 pathway, suggesting that PDCD4 plays a protective role in inflammation-associated carcinoma and might be a potential target for the treatment of CRC.

PU-2683

LC-MS/MS 方法研究白术茯苓汤中多种有效成分在大鼠体内的药动学

季彬
中国医科大学附属第一医院

目的 白术茯苓汤由白术，茯苓两位中药组成，在临床上主要用于心脑血管疾病的治疗。虽然白术茯苓汤在临床上已经应用多年，但是其药效物质基础尚不明确，复方中药中多成分药代动力学可通过揭示中药成分能否被机体有效利用来帮助发现可成为药效物质基础的中药成分。为此，本研究开展了同时测定白术茯苓汤中白术内酯 I，白术内酯 II，白术内酯 III，土莫酸，去氢土莫酸，猪苓酸 C 的 UPLC-MS/MS 方法。
方法 以五味子醇甲为内标，血浆样品采用乙酸乙酯进行液-液萃取处理制备。使用 C18（2.1mm×100mm，1.9μm）柱进行梯度洗脱，进行反相色谱，用于血浆样品分离。在 MRM 模式中使用正离子测定分析物和内标。 日间和日间精度和准确度的结果均在可接受的范围内。 矩阵效应很小。该方法中所有分析物的回收率为 80.7％至 96.7％。 稳定性测定表明，所有分析物在所有加工和储存条件下都是稳定的。该方法成功应用于研究白术茯苓汤口服后多种化合物在大鼠血浆中的药代动力学。

PU-2684

Changes of blood pressure in patients with acute ischemic stroke

Liping Jing、xuewei zhuang
Shandong Provincial Third Hospital

Objective To study the blood pressure of ischemic stroke patients during 72 h of admission, and to explore the influencing factors, so as to provide clinical evidences for the management of blood pressure during the acute phase of stroke and to guide the treatment and prognosis prediction of the disease.
Methods The blood pressure of the ischemic stroke patients was measured at admission and was monitored for 72 h following admission, and the influencing factors were studied. The correlations of the neurological deficits and the level of consciousness with the blood pressure were observed.
Results (1) About 86.2% of ischemic stroke patients had hypertension in the acute phase.
(2) The history of hypertension, age, high-salt diet, level of consciousness, and severity of neurological deficits were important influencing factors for elevated blood pressure in stroke patients ($P<0.05$).

(3) The blood pressure of most acute ischemic stroke patients decreased spontaneously to a stable level within 72 h of admission (not given antihypertensive drug treatment). The systolic blood pressure (SBP) decreased rapidly during the first 12 h of admission, while diastolic blood pressure (DBP) decreased rapidly within 24 h of admission, suggesting that the blood pressure mostly fluctuates within 12 h after the onset of the disease (P<0.05).
(4) In TOAST classification, the incidence of large-artery atherosclerosis was the highest, followed by stroke of undetermined etiology and stroke of other determined etiology.
Conclusion The blood pressure spontaneously decreased with time. Age, the history of hypertension, the level of consciousness, the severity of neurological deficits, and high-salt diet were important influencing factors for elevated blood pressure in ischemic stroke patients.

rhEGF 对受损的人子宫内膜间质细胞的修复作用

杨菁、金文芳、陈良玉、曹罗元、林婷婷、富显果、陈惠华
宁德师范学院附属宁德市医院

目的 研究 rhEGF 对受损的人子宫内膜间质细胞（ESCs）的作用，为子宫内膜损伤的临床治疗提供新思路。

方法 选择手术切除的子宫内膜，用 1%Ⅰ型胶原酶消化过滤后，分离纯化 ESCs，用免疫荧光法鉴定细胞。采用不同浓度米非司酮损伤 ESCs，以正常细胞为对照组；设置不同损伤时间，用 MTS 法检测细胞活性，确定最佳的损伤浓度和时间。用不同浓度的 rhEGF 与受损的 ESCs 共培养 24h，检测细胞活性，明确 rhEGF 对受损的 ESCs 是否有修复作用。通过划痕实验，观察 24h 细胞迁移情况，计算愈合比，验证 rhEGF 对受损的 ESCs 迁移能力的影响。

结果 ESCs 分离 24h 即可贴壁，刚开始呈三角形，单个分布，随后生长成为呈现有成纤维细胞形态的梭形细胞，通过鉴定间质细胞的纯度可达 95% 以上。米非司酮对 ESCs 的损伤呈时间-剂量效应，作用时间超过 48h ，ESCs 活性急剧下降（P<0.05），选择 48h 作为最适损伤时间。米非司酮浓度超过 60μmol/L 时，ESCs 活性显著下降（P<0.05），选择 60μmol/L 作为损伤最适浓度。rhEGF 与受损的 ESCs 共培养 24h，高剂量 rhEGF 能够显著提高损伤 ESCs 活性（P<0.05）。划痕实验中，细胞迁移速度随 rhEGF 剂量增大而提高，100 ng/mL rhEGF 以上的剂量组愈合比具有统计学意义（P<0.05）。

结论 rhEGF 与米非司酮损伤的 ESCs 共培养后，细胞活性和迁移能力能够显著提高，rhEGF 对其具有明显的修复作用。

PU-2686

Pdcd4 对巨噬细胞自噬及其相关动脉粥样硬化的影响

王璨旸
山东大学齐鲁医院

目的 巨噬细胞泡沫化对于动脉粥样硬化的发生发展具有重要的作用。脂自噬是自噬的一种重要形式，能够将细胞内的脂质通过自噬降解，从而调节动脉粥样硬化。前期研究证实抑癌基因 Pdcd4 对于自噬和动脉粥样硬化均有一定的调节作用，本研究旨在研究 Pdcd4 在巨噬细胞脂自噬及其相关动脉粥样硬化中的作用。

方法 使用氧化低密度脂蛋白刺激野生型小鼠及 Pdcd4-/-小鼠腹腔巨噬细胞，通过 Western-blot、免疫荧光染色、油红“O”染色等多种方式检测巨噬细胞自噬及泡沫化程度，通过 Real-time PCR 检测脂质流出相关基因的表达。并利用高脂饮食在 Apoe-/-小鼠和 Apoe-/-Pdcd4-/-（DKO）小鼠中建立动脉粥样硬化模型，通过免疫荧光染色、免疫组化染色及油红“O”染色检测小鼠动脉粥样硬化斑

块局部自噬相关指标、免疫细胞浸润及动脉粥样硬化斑块面积。并通过骨髓移植模型确定免疫细胞在这一过程中的作用。

结果 小鼠巨噬细胞中 Pdcd4 基因的缺失能够明显促进自噬，并能够显著改善氧化低密度脂蛋白导致的自噬流受阻情况。Pdcd4 基因缺失能够显著促进脂质流出相关基因的表达。小鼠腹腔巨噬细胞中 Pdcd4 基因的缺失能够通过促进自噬从而显著抑制巨噬细胞泡沫化。同时，在小鼠动脉粥样硬化斑块局部，Pdcd4 基因缺失能够显著促进巨噬细胞自噬，减小动脉粥样硬化斑块的面积，减轻脂质堆积，降低免疫细胞浸润的程度。骨髓移植模型的结果进一步证实，Pdcd4 对脂自噬及动脉粥样硬化的调控作用是通过影响巨噬细胞的功能实现的。

结论 Pdcd4 基因的缺失能够通过促进巨噬细胞脂自噬加速胆固醇流出从而抑制动脉粥样硬化的发生发展。

无创呼吸机治疗阻塞性睡眠呼吸暂停低通气综合症疗效观察

陈剑、周利、张毅、冯磊
玉溪市人民医院医学检验科（昆明医科大学第六附属医院医学检验科）

目的 探讨无创呼吸机用于治疗阻塞性睡眠呼吸暂停低通气综合症的临床应用价值。

方法 选取 2016-2020 年玉溪市人民医院收治的阻塞性睡眠呼吸暂停低通气综合症 102 例，按是否进行呼吸机无创通气治疗分为实验组（n=28）和对照组（n=74）。实验组持续长时间（超过 3 个月）坚持使用无创呼吸机通气治疗，对照组仅进行健康知识教育，多加强运动，减肥，积极防治并发症。比较二组患者 3 个月后的 PSG 结果、OSAHS 的病情分度和治疗有效率，观察无创呼吸机的治疗效果。

结果 实验组 PSG 较治疗前有明显改善（P<0.05），治疗后，对照组疾病分度改善 9 例，不变 65 例，实验组疾病分度改善 26 例，不变 2 例。实验组治疗有效率为 96.4%，远远高于对照组的 16.2%，差异有统计学意义（P<0.05）。

结论 无创呼吸机用于长期治疗阻塞性睡眠呼吸暂停低通气综合症疗效显著，非常值得临床推广运用。

第三方检验机构与医院合作存在问题的分析与对策

袁方方
西安金域医学检验所有限公司

目的 通过分析第三方检验机构各部门与医院合作中所出现的问题,加强机构与医院的合作，开展更多适合临床诊断的项目。

方法 利用我公司各部门近年来与医院沟通工作中发现的问题进行分析。

结果 通过与合作医院各部门的沟通，对现存在的问题进行整理。①物流部门收取标本及运送的及时性不够;②实验室某些项目检验报告的时效过长;③对特殊检验项目的报告解读不清楚。

结论 加强检验机构各部门与医院的沟通，提高各部门员工的知识技能水平及责任心，缩短项目的报告时间，安排专职人员对特殊项目的报告进行解读，有助于更好地达成公司与医院的双赢合作，切实帮助临床医生进行诊断，推广更多有助于临床治疗的项目，推动检验行业的发展。

ELISA 法检测试剂混用确认程序的建立

符俊超、方伟
广东省人民医院

目的 ISO15189 技术要求的 5.3.2.3 条款，明确指出在工作中 ELISA 法检测试剂混用的情况有无对检验质量的影响，建立的确认程序。
方法 根据不同项目（13 个）各留 60 例样本，分阴性 20 份，弱阳性 20 份，阳性 20 份。检测从第 1 天开始测不混用试剂，到第 3 天混用、第 5 天混用、第 7 天混用、第 10 天混用、第 14 天混用。分别和第 1 天不混用试剂做比较，对比分析结果。
结果 根据每个项目到第几天和第一天的符合率不是 100%而确定混用试剂的天数（有效期）。
结论 ELISA 法检测试剂混用要进行混用方法的确认才可以应用于临床样本的检测，避免试剂混用造成的质量变化对检验结果的影响。

肉桂酰雷公藤内酯醇通过抑制核因子 κB（NF-κB）通路下调小鼠肾小球系膜细胞 IP-10 表达并抑制其增殖

林婷
福建中医药大学附属人民医院

目的 探讨肉桂酰雷公藤内酯醇（T32）对 γ 干扰素诱导蛋白-10（IP-10）在小鼠肾小球系膜细胞（SV40MES13）表达及促增殖作用的影响，为 T32 应用于临床治疗狼疮肾炎奠定理论基础、提供实验依据。
方法 利用 CCK-8 法检测 T32 和 IP-10 对 SV40MES13 细胞生存率的影响，通过实时荧光定量 PCR 法及酶联免疫吸附试验（ELISA）检测 SV40MES13 细胞及培养上清液中 IP-10 mRNA 相对表达量和 IP-10 蛋白分泌量，应用蛋白质印迹法（Western blot）检测 SV40MES13 细胞 NF-κB 信号通路相关蛋白 NF-κBp65、IκBα 及其磷酸化蛋白 p-NF-κBp65、p-IκBα 的表达情况。
结果 （1） γ 干扰素（IFN-γ）刺激可促进 SV40MES13 细胞 IP-10 mRNA 和蛋白表达增加（P 均＜0.01），NF-κBp65、IκBα 蛋白的磷酸化水平与空白组相比明显增加（PNF-κBp65＜0.05、PIκBα＜0.01）。（2）NF-κB 信号通路经特异性抑制剂 PDTC 阻断后，SV40MES13 细胞 IP-10 mRNA 和蛋白表达与 IFN-γ 刺激组相比明显降低（P 均＜0.05），NF-κBp65、IκBα 蛋白磷酸化水平下降（PNF-κBp65＜0.05、PIκBα＜0.01)。（3）经不同浓度（2 ng/mL～20 ng/mL）T32 干预

后，SV40MES13 细胞 IP-10 mRNA 和蛋白表达与 IFN-γ 刺激组相比明显降低（P＜0.05 或 P＜0.01），NF-κBp65、IκBα 蛋白磷酸化水平分别下降 44.03%和 48.68%（P 均＜0.05）。（4）不同浓度（1 ng/mL~500 ng/mL）IP-10 与 SV40MES13 细胞共同孵育 24 h 后细胞生存率提高，IP-10 浓度为 10 ng/mL 时细胞生存率为 119.83%（P＜0.01），随后进入平台期；经 4 ng/mL～20 ng/mL T32 干预后，细胞生存率与 10 ng/mL IP-10 刺激组相比明显降低（P 均＜0.01）。
结论 肉桂酰雷公藤内酯醇不仅能通过阻断 NF-κB 信号通路下调 IFN-γ 诱导的 SV40MES13 细胞表达 IP-10，还能抑制 IP-10 促增殖作用。

PU-2692

Periostin contributes to adventitial remodeling of arteriosclerosis by activating adventitial fibroblasts

Tan Tan、Xiaomei Lei、Yingfen Wang、Wei Zhang、fen Li、Qiaotu Liu
CHENZHOU hospitol

Objective In order to study the effect of adventitial remodeling of arteriosclerosis by periostin.
Methods We examined the effect of periostin by Immunofluorescence cell staining and collagen gel contraction assay.
Results Our data indicated that periostin is highly expressed in adventitia of atherosclerotic arteries. And TGF-β1 induced the expression of periostin in fibroblasts of adventitia. While periostin can promote activation and enhance the contractility of adventitial fibroblasts. Periostin also induces adventitial fibroblasts to produce collagen I and TGF-β1 and activate FAK and Src phosphorylation. These results suggest that periostin contributes to adventitial remodeling of arteriosclerosis by activating adventitial fibroblasts.
Conclusion These results suggest that periostin contributes to adventitial remodeling of arteriosclerosis by activating adventitial fibroblasts.

PU-2693

耐碳青霉烯铜绿假单胞菌临床感染特征及危险因素研究

李从雅、童学东
重庆医科大学附属第三医院

目的 系统评估 2019-2020 重庆某三甲医院耐碳青霉烯铜绿假单胞菌(CRPA)的临床感染特点以及危险因素，为临床诊断、治疗、监测 CRPA 提供参考依据。
方法 回顾性分析 2019-2020 分离的 337 例铜绿假单胞菌感染患者病历资料及药敏结果，根据分离菌株对碳青霉烯类抗生素的药敏值，分为碳青霉烯耐药铜绿假单胞菌组（CRPA）和碳青霉烯敏感铜绿假单胞菌组（CSPA）。通过病例对照研究的方法分析 CRPA 的临床感染特点以及相关危险因素。
结果 本院 2019-2020 共分离铜绿假单胞菌 337 株，其中 CRPA 共计 51 株（15.1%）；CRPA 标本来源以呼吸道为主（56.9%），其次为分泌物（13.7%）和尿液（9.8%）；科室分布以神经疾病中心为主（21.6%），其次为重症监护室（17.6%）、呼吸疾病中心（17.6%）和肝胆胰外科（17.6%）；对阿米卡星耐药率最低（15.4%），其次为庆大霉素（21.6%）；CRPA 除对碳青霉烯类抗生素耐药，对临床其他类别抗生素的耐药率也显著高于 CSPA；多因素 logistic 回归分析表明转院、留置引流管、分离病原菌前使用碳青霉烯类药物是 CRPA 感染的主要危险因素。
结论 本研究表明定期分析院内 CRPA 的临床感染特征以及药敏情况可指导临床合理使用抗生素，同时针对病原菌感染发生的主要危险因素进行提前干预以有效控制感染散播。

新冠病毒核酸检测阳性质控品污染原因分析及解决办法

龚文娟、陈宝荣、孙慧颖、郑燕华
北京金域医学检验实验室有限公司

新冠核酸检测为新冠疫情的防控起到了重要作用。在新冠核酸检测过程中，实验室防污染是个备受重视的质量问题，是保证新冠核酸检测质量的重要因素。核酸扩增实验室的污染源有多种，其中因阳性质控品造成的污染是个不可忽视的问题。本文针对新冠病毒核酸检测过程中可能存在的质控品污染从污染途径、发生原因、去污染措施、效果监测等方面进行详细的分析和讨论，从质控品污染角度为相关实验室提供一些实验室防污染的措施及应对办法。

Samotolisib attenuates acute liver injury through inhibiting caspase-11-mediated pyroptosis via regulating E3 ubiquitin ligase Nedd4

Yangyang Zhao
成都医学院第一附属医院

Objective Acute liver injury (ALI) occurs at any stage of sepsis and is an independent risk factor for sepsis-induced death. Sepsis is characterised by life-threatening organ dysfunction caused by a dysregulated host response to infection. It is a common cause of death in intensive care units. Inflammation is the main feature of sepsis, and the liver, as a lymphatic organ, plays an important role in inflammation. Clinical and experimental data suggest that liver dysfunction is an early sign of sepsis, and early hepatic dysfunction in patients with sepsis is a specific and independent risk factor for poor outcomes. Attenuating liver injury and restoring the balance of pro- and anti-inflammatory responses in the liver will lower sepsis morbidity and mortality rates by regulating systemic immune responses and protecting organs from injury . However, there is no specific therapy for sepsis-induced liver injury. Recent studies have shown that cytosolic Lipopolysaccharide (LPS)-mediated pyroptosis is the main driver of endotoxic shock. LPS promotes caspase-4/5/11 activation, leading to pyroptosis, a major sepsis driver. Caspases-11/4/5 play an essential role in defending against intracellular bacterial infection upstream of the canonical NLRP3 inflammasome. However, currently, few known drugs can control caspase-11 activation. Inhibition of caspase-11 may be a new way to prevent sepsis caused by gram-negative bacteria. This study aimed to identify novel drugs that can control hepatocyte caspase-4/5/11 activation during sepsis.
Method In vitro experiments were performed using LPS-induced caspase-11 activation and pyroptosis in RAW 264.7 cells lacking ASC expression, and the model of ALI was established using LPS-treated mice. In the current study, we screened 441 small molecule compounds with known targets in RAW264.7 cells. Six compounds with inhibitory effects were identified following the primary and secondary screenings, of which ST had the best effect on py-roptosis suppression. Subsequently, in vivo experiments confirmed that ST showed significant liver protection against LPS-induced acute liver damage. We employed lactic acid dehydrogenase (LDH) release and CCK-8 assay, Flow cytometry, quantitative reverse transcriptase-polymerase chain reaction (qRT-PCR), western blotting, immunofluorescence(IF) and immunohistochemical(IHC) staining, Glycogen Periodic Acid Schiff (PAS) and Hematoxylin and Eosin (H&E) Staining to evaluate the effect of Samotolisib (ST).
Result In the current study We identified ST, a promising new dual inhibitor of phosphoinositide 3-kinase (PI3K) and mammalian target of rapamycin (mTOR), screened a library of 441 Pyroptosis Compounds with known targets.ST dose-dependently inhibited Caspase-11 activation

and generation of N-terminal fragment of gasdermin D (GSDMD-NT) leading to reduced pyroptosis in RAW 264.7 cells. In the LPS-induced acute liver injury mouse model showed that ST preconditioning improved survival ,attenuated LPS-induced the serum ALT and AST activity, inhibit the incidences of severe liver inflammation. Additionally, the liver histological evaluation revealed that ST protects against LPS-induced liver damage. Importantly, our data show that ST treatment could activate the E3 ubiquitin ligase Nedd4 in liver. Nedd4 directly interacts with caspase-11 and mediates ubiquitination and subsequent degradation of caspase-11, and its inhibitory action on caspase-11 activation was largely abrogated by PI3K activator IGF-1. We demonstrated that ST ameliorated LPS-induced hepatotoxicity by inhibiting pyroptosis the Caspase-11/ GSDMD-NT signaling pathway via regulating the PI3K/AKT/mTOR/Nedd4 signaling pathway.
Conclusion The above results demonstrate that ST may play a key role in prevention of liver injury in sepsis patients.

PU-2696

黄绿青霉素对神经细胞 PC-12 损伤作用的研究

杨菁、曹罗元、董文婿、富显果
宁德师范学院附属宁德市医院

目的 研究黄绿青霉素（Citreoviridin，CIT）诱导神经细胞 PC-12 的损伤作用。
方法 CIT 处理组分为三组，终浓度分别为 2.5 μmol/L、5 μmol/L、10 μmol/L，设 DMSO 为空白对照组。药物处理细胞 24 h 后，观察细胞形态的变化，CCK-8 法测细胞活性，流式细胞仪测 ROS 荧光值；取细胞培养液测 LDH 释放率、NO 含量及 MDA；细胞裂解液检测 GSH 含量及 SOD 活力。
结果 PC-12 与 CIT 共培养后，细胞成团，出现空斑。与对照组比较，CIT 组的细胞活力显著降低（$P<0.01$），LDH 释放率显著升高（$P<0.01$）；NO 含量明显下降（$P<0.05$），呈剂量效应关系；氧化应激相关指标 MDA 含量显著升高（$P<0.01$）；ROS 含量在低、中、高剂量组中均显著升高（$P<0.01$，$P<0.05$）；GSH 含量呈下降趋势，10 μmol/L 组效果显著（$P<0.05$）；SOD 活力显著升高（$P<0.01$）。
结论 黄绿青霉素对神经细胞 PC-12 有明显的损伤作用，可能与氧化应激机制有关。

PU-2697

第三方实验室安全指标考核的建立

冯媛媛、吴晓玲
西安金域医学检验所

目的 建立一套适合实验室个人安全考核指标体系
方法 安全考核是安全管理的表现形式，主要为安全理论考核，场景模拟考核，以及日常操作中观察个人的安全意识。 考核培训方法 A-阅读相关文件；B-由合格人员进行示范或演示；C-在合格的带教人员监督下执行操作；D-其他：包括自学、讨论、上课等。
培训效果评估： 优秀(90 分-100 分)；满意(80 分-89 分)；基本合格(60 分-79 分)；不合格(60 分以下)。
评估方法 A-设备操作；B-安全知识考核；C-日常观察；D-评估解决问题的能力，对口头提出的相关的问题的反应； E-回顾关键要素的记录。
结果 安全考核作为实验室管理的有效方法，对于提高实验室整体水平，提升实验室人员安全意识具有重要意义。
结论 通过对员工安全各项指标的考评，提升了员工的安全意识，特别是新入职员工，预防和减少安全事故的发生，从而为实验室人员的安全提供保障。

外周血中性粒细胞与淋巴细胞比值结合 C-反应蛋白在不同程度急性胰腺炎诊断中的应用价值

刘偲媛
荣县人民医院

目的 急性胰腺炎（AP）是一种临床常见的急腹症，致死率极高。而外周血中性粒细胞和淋巴细胞数值是反应系统性炎症反应的定量指标之一。本文拟探讨血常规中性粒细胞/淋巴细胞比值（NLR）及 C-反应蛋白（CRP）在不同程度急性胰腺炎中的情况，评估二者与病情严重程度的相关性。
方法 选取 2020 年 6 月-2021 年 3 月间本院收治的 100 例急性胰腺炎患者作为研究对象,设置为实验组。同时选取同期本院健康体检者 50 例作为对照组。其中将实验组分为重度急性胰腺炎（SAP）65 例（SAP 组），轻度急性胰腺炎（MAP）35 例（MAP 组），收集所有研究对象入院 24h 内 NLR 和 CRP 的数值，并通过绘制受试者工作特征曲线（ROC），评估各指标和胰腺炎病情严重的相关性。
结果 实验组 NLR、CRP 明显高于对照组（P<0.05），SAP 组与 MAP 组比较，NLR，CRP 更高，差异具有统计学意义（P<0.05）。通过绘制 ROC 曲线可知，NLR、CRP 对 SAP 和 MAP 鉴别的曲线下面积（AUC）分别为 0.689、0.603，此两项联合鉴别诊断的 AUC 为 0.723。
结论 急性胰腺炎患者发病时 NLR、CRP 会明显升高，同时与病情严重程度相关，均是帮助诊断 AP 的理想实验指标。而二者联合检测在预测 AP 方面诊断价值更高。同时 NLR 和 CRP 均随急性胰腺炎患者病情严重程度的升高而上升，能较好预测 SAP。

PU-2699

不同标本处理时间和标本放置时间对特异性神经元烯醇化酶测定结果的影响

高琦、张凤、于淼、丁洁
山东第一医科大学附属省立医院

目的 探讨不同标本处理时间和标本放置时间对特异性神经元烯醇化酶测定结果的影响。
方法 征集健康志愿者 30 人，空腹，用 BD SST 惰性分离胶促凝真空采血管采集静脉血样本 3ml，室温分别放置 15min，30min，1h 和 2h 后离心，离心后用罗氏 cobas 8000 e801 电化学发光免疫法对特异性神经元烯醇化酶进行测定，结果显示标本于室温放置 15min 检测结果与放置 1h 的检测结果差异显著（15min V.S. 1h: 10.65 ± 0.31 v.s. 12.12 ± 0.38，P<0.005），放置 2h 后进行离心的检测结果较放置 15min 后进行离心的结果明显升高（15min V.S. 2h: 10.65 ± 0.31 v.s. 14.29 ± 0.69，P<0.001）。室温放置 15min 后检测结果与放置 30min 后的检测结果无明显差异。故我们选择室温放置 30min 后进行离心的标本，分别于离心后立即、放置 1h、2h、4h 进行 NSE 检测，结果发现离心后的标本于室温放置不同时间，检测结果无明显的差异。
结论 标本不同处理时间对 NSE 检测结果有明显的影响，这就要求我们采集标本凝固后尽早离心分析血清，进行测定，分离血清对 NSE 检测结果影响不大，这对指导临床标本采集送检规范性及提高检测结果的准确性有非常重要的临床意义。

PU-2700

Tspan5 通过促进肝癌转移影响患者预后

谢谦
广东省人民医院（广东省医学科学院）

目的 1.阐述 Tspan5 的表达与肝癌病理分型、患者预后的关系。
2.明确 Tspan5 与肝癌细胞转移的关系。
方法 1.利用肝癌临床芯片样本和生物信息学数据库，分析 Tspan5 在肝癌组织和癌旁正常组织中的表达情况，以及 Tspan5 表达和肝癌患者临床病理特征、预后的关系。
2.用慢病毒感染肝癌细胞，构建高表达和干扰 Tspan5 的重组肝癌细胞株，并用 qRT-PCR 和 Western Blotting 进行鉴定。
3.用划痕实验和 Transwell 实验检测 Tspan5 在体外对肝癌细胞迁移的影响；用裸鼠尾静脉转移模型检测 Tspan5 在体内对肝癌细胞转移的影响。
结果 1.利用肝癌临床芯片样本和生物信息学数据库，发现 Tspan5 在肝癌组织和癌旁正常组织中的表达有差异，并且 Tspan5 的表达随肝癌患者病程进展而升高，与患者预后负相关。
2.慢病毒感染肝癌细胞后，用 qRT-PCR 和 Western Blotting 进行鉴定，显示高表达和干扰 Tspan5 的重组细胞株构建成功。
3.划痕实验和 Transwell 实验结果显示 Tspan5 在体外可提高肝癌细胞的迁移能力；裸鼠尾静脉转移模型结果显示 Tspan5 在体内可促进肝癌细胞的转移过程。
结论 综上所述，我们研究发现 Tspan5 在肝癌组织和癌旁正常组织中的表达有差异，并且 Tspan5 表达随肝癌患者病程进展而升高，与其预后负相关。Tspan5 在体外可提高肝癌细胞的迁移能力；在体内可促进肝癌细胞的转移过程。因此，我们初步认为，Tspan5 可以通过影响肝癌细胞的转移过程，从而进一步影响肝癌患者的进展和预后。

PU-2701

不同程度的溶血标本对叶酸项目的影响

白凯嘉
黑龙江金域医学检验实验室有限公司

目的 叶酸（Folic Acid）也称为维生素 B9，是一种水溶性维生素，属于维生素 B。叶酸是人体在利用糖分和氨基酸时的必要物质，是机体细胞生长和繁殖所必需的物质，与维生素 B12 共同促进红细胞的生成和成熟，是制造红血球不可缺少的物质。叶酸也作为干酪乳杆菌（Lactobacillus casei）及其它微生物的促进增殖因子而起作用。叶酸是胎儿生长发育不可缺少的营养素。孕妇缺乏叶酸有可能导致胎儿出生时出现低体重、唇腭裂、心脏缺陷等，叶酸可用于治疗由叶酸缺乏症引起的贫血，也是孕妇的营养补充品。在新生儿的神经管缺损病例中，有超过一半认为是因为怀孕初期叶酸不足所造成。有超过 50 个国家利用加入叶酸的营养强化食品来减少神经管缺损的比例。所以叶酸的检测结果在临床应用中就显得异常重要，本文旨在探讨溶血标本不同时间对化学发光微粒子免疫检测法测定叶酸结果的影响。
方法 采集同一志愿者肘正中静脉血用普通采血管分离血清后使用雅培 i2000SR 化学发光法测定叶酸指标分别以离心后立即检测，12:00，16:00,20：00,00:00 分别检测叶酸的含量，并对结果进行比较和分析。
结果 对于叶酸检测的分析前，分析中的质量对结果有一定程度的影响，溶血标本随着时间推移对化学发光微粒子免疫检测法测定叶酸结果有干扰。
结论 随着时间的推移，叶酸测定结果有不同程度升高。溶血标本随着时间推移与叶酸结果呈正相关。一个合格的标本可提高实验结果精准性和对于临床叶酸的监测也起着至关重要的作用。

PU-2702

双氢青蒿素作为肿瘤治疗增敏剂的研究进展

李青容
川北医学院

目的 恶性肿瘤是威胁人类健康的主要疾病之一。尽管几十年来人类一直在与癌症作斗争，但目前治疗大多数肿瘤的疗效仍不理想。双氢青蒿素（Dihydroartemisinin，DHA）是我国自主研发的抗疟疾一线药物青蒿素的衍生物，同时还具有显著的抗癌活性，但其对正常细胞无明显毒性。本文通过对双氢青蒿素增敏抗癌药物及分子机制进行系统深入的研究，为双氢青蒿素作为抗癌增敏剂应用于临床提供依据。
方法 以双氢青蒿素（DHA）作为研究对象，通过查阅 2000-2020 年间发表的 77 篇关于双氢青蒿素抗肿瘤治疗的文献，系统的分析了 DHA 抗肿瘤治疗的机制及作为抗癌药物的增敏剂的具体作用及分子机制，为 DHA 作为抗癌增敏剂应用于临床提供指导依据。
结果 1、DHA 可通过诱导细胞周期、细胞凋亡、抑制肿瘤血管的生成、抑制肿瘤侵袭转移、与其他抗肿瘤药物联合杀伤肿瘤细胞。
2、DHA 抗肿瘤和抗疟疾的主要作用机制是通过分子内部“过氧化桥”与细胞内亚铁离子相互作用后产生过量的 ROS，从而产生细胞毒作用。
3、DHA 可增强肿瘤放化疗及分子靶向治疗疗效。在化疗药物方面，DHA 和吉西他滨(gemcitabine, GEM)联合应用时，细胞凋亡率较二者单独应用时明显增加；且在卵巢癌异种移植瘤模型中，DHA 与 GEM 联合治疗组中，肿瘤在第 14 天时完全消失。DHA 联合吉非替尼以时间依赖的方式显著抑制肺腺癌细胞 A549 的增殖和迁移，并阻滞细胞周期于 G0/G1 期。此外，DHA 联合放疗可显著降低人肺癌细胞 S 期细胞比例，增加 G0/G1 期细胞比例，并诱导细胞凋亡增加；同时，DHA 对肺癌 GLC-82 移植瘤裸鼠具有较高的抑瘤作用和放射增敏作用。
结论 双氢青蒿素可具有抗肿瘤作用，且可作为抗肿瘤治疗的增敏剂。

PU-2703

HIV 自检试剂发放促进 MSM 安全性行为的逐步阶梯随机对照研究

楚振兴[1]、陆天意[2]、徐俊杰[1]
1. 中国医科大学附属第一医院
2. 浙江大学医学院附属邵逸夫医院

背景 COVID-19 流行让男男性接触者(MSM)参加基于场所的艾滋病自愿咨询检测(VCT)受阻，线上的 VCT 模式与线下 VCT 相比，具有更好的定位高危性行为 MSM 和促进 HIV 检测的能力，然而线上 VCT 对 MSM 性行为影响缺乏评估。
目的 明确线上咨询与 HIV 自检试剂发放干预对 HIV 阴性 MSM 的安全性行为影响作用。
方法 2018 年 8 月至 2019 年 12 月，通过微信公众号在全国招募 MSM 参与逐步阶梯随机对照(Randomized Controlled Trial,RCT)研究，入组标准为≥18 周岁且近六个月与男性发生过肛交或口交的 HIV 阴性 MSM。工作人员将合格的调查对象随机分配到(A，B，C，D)四个研究组，采用逐步阶梯 RCT 的方法开展为期一年的前瞻性在线干预和调查，研究人员在研究对象分别入组后 0、3、6、9 个月，依次为 A-D 组 MSM 开展干预。干预措施包括：在线 HIV 检测前后咨询和邮寄 HIVST 试剂（2-4 份/3 个月）。线上收集近三个月相关信息。NCCAI 的定义为不知性伴感染状况或感染状况不一致且发生无套肛交。血清学配对的定义：已知自己的 HIV 感染状况后，仅与自己 HIV 感染状况一致的人发生性行为。采用广义估计方程（GEE）评价干预对研究结局的影响作用（多因素模型矫正年龄和文化程度）。

结果 2018 年 8 月-2019 年 12 月，560 名符合条件的 MSM 被纳入 RCT 研究，每组研究对象均为 140 人。研究对象年龄为 26.1±5.6 岁，83.2%(466/560)具有大专及以上学历，至少参加一次前瞻性随访的研究对象有 465 名(83.0%)。在研究期间申请 HIVST 试剂者 74.4%(346/465)，累计邮寄 HIVST 试剂 1556 人份。GEE 模型分析显示干预阶段显著高于对照阶段的行为有安全套使用 (68.6% VS. 62.9%，P=0.012)，血清学配对 (55.0% VS. 45.2%，P= 0.001)， HIV 检测率（84.5% VS. 37.1%；P＜0.001），HIVST 使用率（81.4% VS. 22.9%；P＜0.001）；干预后显著降低的行为有 NCCAI (21.7% VS. 16.7%， P=0.013) ，多性伴（34.4% VS. 26.1%； P=0.001）和群交（11.0%VS. 7.7%；P=0.025）。

结论 在线 HIV 咨询和 HIV 发放检测，可有效促进 MSM 安全性行为和 HIV 检测。在新冠疫情仍然影响出行的背景下，社区组织和疾控中心可以通过在线的检测咨询改变 HIV 关键人群的高危性行为和 HIV 检测现状，从而控制 MSM 群体的 HIV 疫情感染扩散。

PU-2704

Inhibitory of Berberine Hydrochloride Against Candida albicans and the Role of the HOG-MAPK Pathway

li yan
Chengdu University of Traditional Chinese Medicine

Purpose Berberine hydrochloride (BH), an active component of Coptis chinensis and other plant taxa, has broad antimicrobial activity and may be useful for the treatment of Candida infections. In this study, the mechanisms underlying the inhibitory effect of BH against Candida albicans was evaluated, with a focus on the high-osmolarity glycerol mitogen-activated protein kinase (HOG-MAPK) pathway, which regulates multiple physiological functions.

Methods The minimum inhibitory concentration (MIC) of berberine hydrochloride and fluconazole in inhibiting the growth of Candida albicans was determined by using the microdilution method. determine The intervention concentration of berberine hydrochloride in this study were used as 4MIC, MIC, 1/4MIC while the intervention concentration of fluconazole was 4MIC.The intracellular glycerol content of Candida albicans was measured by Trinder method, the level of reactive oxygen species (ROS) was determined by DCFH-DA fluorescence probe, the content of ATP was determined by chemiluminescence, and the levels of chitin and β-1,3-glucan of cell wall in Candida albicans cells were measured by fluorescent dye method. The intracellular ROS level, hypha formation and bud tube formation rate of Candida albicans were observed by inverted fluorescence microscope, and the exposure of cell wall chitin was observed by laser confocal microscope (CLSM). Real-time fluorescence quantitative PCR (RT-qPCR) was used to detect the expression of key genes of HOG-MAPK central signaling pathway after the intervention of berberine hydrochloride, and the expression level of HOG1 protein in Candida albicans was detected by Western Blot.

Results BH had good antifungal activity against ATCC10231 with a MIC of 64 μg /ml. In further analyses, BH at 4 × MIC, MIC, and ¼ × MIC were evaluated, using fluconazole (4 × MIC), currently one of the most effective drugs available for Candida albicans infection, as a positive drug control 1 μg/mL. BH (256μg/mL and 64 μg/mL) significantly increased intracellular glycerol and ROS levels in Candida albicans, inhibited germ tube and hyphal formation, and increased chitin and β-1,3-glucan exposure on the cell wall. The inhibitory effect of BH was positively correlated with its concentration, and the inhibitory effect of 256μg/mL BH was greater than that of 4 μg/mL fluconazole. As determined by RT-PCR, 256μg/mL and 64 μg/mLBH altered the HOG-MAPK pathway in Candida albicans. In particular, the upregulation of the core genes SLN1, SSK2, HOG1, and PBS2 may affect the expression of key downstream factors related to glycerol synthesis and osmotic pressure (GPD1), ROS accumulation (ATP11 and SOD2), germ tube and hyphal formation (HWP1), and cell wall integrity (CHS3 and GSC1). Compared with levels in the control group, HOG1 protein levels in the 256 μg/ ml BH group were significantly higher (P <

0.05); HOG1 was slightly upregulated in the 64 μg/ ml and 16 μg/ ml BH groups but the differences were not statistically significant (P > 0.05).
Conclusion BH has multiple antimicrobial pathways and targets, making the development of drug resistance more difficult. Although we evaluated core genes in the HOG-MAPK central signaling pathway and downstream effector genes, interactions between these genes need to be studied further. This study provides a reference for the application of BH to inhibit Candida albicans, and contributes to the development of new antifungal agents and the clinical treatment of Candida albicans infection.

PU-2705

遗传代谢病血片采样流程异常对结果的影响分析

廖倩、余羊羊
重庆金域医学检验所有限公司

遗传代谢病（Inherited Metabolic Disorders，IMD）是因维持机体正常代谢所必需的某些酶、受体、载体及膜泵等生物合成发生缺陷而导致的疾病。IMD 病种繁多，已发现超过 5000 种，而唐氏患儿发生率为 1/750。采用串联质谱检测干血滤纸片中的氨基酸和酰基肉碱谱，对 IMD 进行筛查和诊断。王晶晶等人调查了 IMD 血片不合格的情况，其检测结果会导致假阳性和假阴性发生，引起疾病误诊、漏诊。血片采集是新生儿遗传代谢病筛查技术流程中的首个重要环节，标本合格与否直接影响实验室检测结果和临床诊断。

PU-2706

Enhanced histone H3 acetylation of the PDL1 promoter via the COP1/c-Jun/HDAC3 axis is required for PD-L1 expression in drug-resistant cancer cells

Haifang Wang
Nanfang Hospital, Southern Medical University

Background Drug resistance is a major obstacle to treating cancers because it desensitizes cancer cells to chemotherapy. Recently, attention has been focused on changes in the tumor immune landscape after the acquisition of drug resistance. Programmed death-ligand-1 (PD-L1) is an immune suppressor that inhibits T cell-based immunity. Evidence has shown that acquired chemoresistance is associated with increased PD-L1 expression in cancer cells. However, the underlying mechanism is still largely unknown.
Methods PD-L1 expression in three drug-resistant A549/CDDP, MCF7/ADR and HepG2/ADR cell lines was detected by qRT-PCR, western blotting and flow cytometry, and a T cell proliferation assay was performed to test its functional significance. Then, the potential roles of JNK/c-Jun, histone H3 acetylation, histone deacetylase 3 (HDAC3) and the E3 ligase COP1 in the PD-L1 increase were explored through ChIP assays and gain- and loss-of-function gene studies. Furthermore, murine xenograft tumor models were used to verify the role of JNK/c-Jun and HDAC3 in PD-L1 expression in A549/CDDP cells in vivo. Finally, the correlations of PD-L1, c-Jun and HDAC3 expression in clinical cisplatin-sensitive and cisplatin-resistant non-small cell lung cancer (NSCLC) tissues were analyzed by immunohistochemistry and Pearson’s correlation coefficient.
Results PD-L1 expression was significantly increased in A549/CDDP, MCF7/ADR and HepG2/ADR cells and was attributed mainly to enhanced JNK/c-Jun signaling activation. Mechanistically, decreased COP1 increased c-Jun accumulation, which subsequently inhibited HDAC3 expression and thereby enhanced histone H3 acetylation of the PD-L1 promoter.

Furthermore, PD-L1 expression could be inhibited by JNK/c-Jun inhibition or HDAC3 overexpression in vivo, which could largely reverse inhibited CD3+ T cell proliferation in vitro. PD-L1 expression was significantly increased in the cisplatin-resistant clinical NSCLC samples and positively correlated with c-Jun expression but negatively correlated with HDAC3 expression.
Conclusions Enhanced histone H3 acetylation of the PD-L1 promoter via the COP1/c-Jun/HDAC3 axis was crucial for the PD-L1 increase in drug-resistant cancer cells. Our study reveals a novel regulatory network for the PD-L1 increase in drug-resistant cancer cells and that combined PD-L1-targeting strategies could improve T cell-based immunity in drug-resistant cancers.

PU-2707

HAX-1 overexpression in multiple myeloma is associated with poor survival

Xiaoli Feng
Clinical laboratory center of the second hospital of Shandong university

HAX-1 has been shown to be involved in multiple cellular processes, including apoptosis, calcium homeostasis and cell migration，Multiple myeloma (MM) is a late B cell/ plasma cell malignancy characterized by the accumulation of monoclonal plasma cells in the bone marrow, increased monoclonal immunoglobulin in serum and lytic bone destruction。 To elucidate the potential role of HAX-1 in MM，the current study suggests that high expression of HAX-1, a protein implicated in cell survival and cell migration, is associated with poor survival in MM patients, and we provide evidence that HAX-1 regulates MM cell migration, thus making HAX-1 a potentially important target for therapeutic intervention.

PU-2708

血清球蛋白和 β2 微球蛋白与 2 型糖尿病合并冠心病的关系

李海霞、魏静、李萍、贾彩霞、严辰媛、马菲菲、魏书瑶、冯珊珊、哈小琴
中国人民解放军联勤保障部队第九四〇医院

目的 探讨 2 型糖尿病合并冠心病（T2DM 合并 CHD）患者的血清球蛋白（G）以及 β2 微球蛋白（β2-MG）的变化，并分析其与 T2DM 合并 CHD 的关系。
方法 回顾性收集兰州市某三甲医院 2019 年 1 月-2020 年 6 月在心血管内科和内分泌科住院的 2 型糖尿病（T2DM）患者 416 例，将其是否合并冠心病（CHD）分为 T2DM 组和 T2DM 合并 CHD 组，分析两组患者血清学指标的变化，采用 Logistic 回归分析血清 G 和 β2-MG 与 T2DM 合并 CHD 的关系，以 P<0.05 为差异具有统计学意义。
结果 T2DM 组患者 212 例，其中男 157 例、女 55 例；T2DM 合并 CHD 组患者 204 例，男 153 例、女 51 例，经统计检验发现，两组患者性别分布差异无统计学意义（P>0.05）。与 T2DM 患者比较，T2DM 合并 CHD 患者的白蛋白（ALB）、白球蛋白比值（A/G）、超氧化物歧化酶（SOD）、前白蛋白（PA）和糖化血清蛋白（GSP）水平降低，球蛋白 G 和 β2-MG 水平升高，差异具有统计学意义。将 T2DM 患者是否合并 CHD 为因变量进行二元 Logistic 回归显示，年龄（OR=1.116，95%CI：1.085~1.148，P<0.001）、糖尿病家族史（OR=4.165，95%CI：1.935~8.965，P<0.001）、G（OR=1.086，95%CI：1.022~1.153，P=0.008）和 β2-MG（OR=2.199，95%CI：1.464~3.304，P<0.001）是 T2DM 合并 CHD 的危险因素，P（OR=0.067，95%CI：0.016~0.277，P<0.001）是 T2DM 合并 CHD 的保护因素。
结论 年龄、糖尿病家族史、G 和 β2-MG 是 T2DM 合并 CHD 的危险因素，可能对 T2DM 合并 CHD 的诊断具有一定参考价值。

PU-2709

上海地区病毒性肝炎血清学标志物室间质量评价

赵晓君、陆银华、朱宇清
上海市临床检验中心

目的 通过开展室间质量评价（简称室间质评），对上海地区医疗机构实验室病毒性肝炎血清学标志物检测质量进行评价，为检验结果互认提供依据。
方法 收集 2018-2020 年上海地区医疗机构实验室 HAV-IgM、HBsAg、HBsAb、HBeAg、HBeAb、HBcAb、抗 HCV、HBcAb-IgM、HEV-IgM、HEV-IgG 项目室间质评回报数据，按照试剂厂家进行分组，以组内普遍值作为靶值进行评价。
结果 HAV-IgM 项目，2018 年度两次室间质评合格率为 98.25%和 100%，2019 年度均为 100%，2020 年度分别为 99.22%及 98.45%；HBsAg 项目 2018 年度合格率为 98.71%和 97.88%，2019 年度均为 98.25%，2020 年度分别为 97.27%及 99.12%；HBsAb 项目 2018 年度合格率均为 100%，2019 年度分别为 100%和 99.54%，2020 年度分别为 99.59%及 99.60%；HBeAg 项目三年合格率均为 100%；HBeAb 项目 2018 和 2019 年度合格率均为 100%，2020 年度分别为 100%及 99.60%；HBcAb 项目 2018 年度合格率分别为 99.10%和 98.68%，2019 年度为 99.54%和 100%，2020 年度均为 100%；抗 HCV 项目 2018 年度为 98.96%和 99.48%，2019 年度分别为 99.48%和 100%，2020 年度均为 100%；HBcAb-IgM 项目 2018 年度合格率分别为 100%和 98.21%，2019 年度均为 100%，2020 年度分别为 98.70%及 100%；HEV-IgM 项目 2018、2019 年合格率均为 100%，2020 年度分别为 99.07%及 100%；HEV-IgG 项目 2018-2020 年度均为 100%。
结论 上海地区病毒性肝炎血清学标志物室间质评结果良好，为病毒性肝炎检验项目结果互认提供依据。

PU-2710

Sestrin2 和血栓四项在角叉菜胶诱导的 2 型糖尿病血栓大鼠中的表达

李萍、贾彩霞、严辰媛、马菲菲、魏静、李海霞、魏书瑶、何斯、李香影、冯珊珊、刚乔建、哈小琴
中国人民解放军联勤保障部队第九四〇医院

目的 分析 2 型糖尿病血栓模型大鼠体内 Sestrin2 蛋白和血栓四项指标的水平及之间的相关性，为 2 型糖尿病及血栓的研究提供参考。
方法 采用高脂高糖联合链脲佐菌素的方法建立 2 型糖尿病大鼠模型，采用角叉菜胶诱导形成血栓；用双抗体夹心法酶联免疫试验测定血液中 Sestrin2 蛋白和血栓四项（TM、TAT、PIC、t-PAIC）的水平；用方差分析比较各组间研究指标的差异性，用线性相关分析指标间的相关性。
结果 四组间在 WBC、NEU、MON、PLT、MPV、PDW 和 SESN2、TM、TAT、t-PAIC 之间的差异具有统计学意义（$P<0.05$）。SESN2 与其他指标间的相关性分析发现，NC 组内 SESN2 与 MCV 呈负相关（$r=-0.692$，$P<0.05$），T2DM 组内 SESN2 与 MPV 成负相关（$r=-0.659$，$P<0.05$），T 组内 SESN2 未见与其他指标间有相关性（$P>0.05$），T2DM+T 组内 SESN2 与 WBC 和 TAT 呈正相关（$r=0.618/0.623$，$P<0.05$），总体来看，SESN2 与 FPG、GSP、MPV 和 PDW 呈负相关，与 TM 呈正相关（$P<0.05$）。
结论 Sestrin2 和血栓四项参与了 2 型糖尿病血栓的形成，且指标间密切相关，有望进步探讨其在 2 型糖尿病血栓形成中的机制。

PU-2711

2 型糖尿病各血管并发症患者凝血六项指标水平的临床意义

李萍、魏静、李海霞、贾彩霞、严辰媛、马菲菲、魏书瑶、冯珊珊、何斯、李香影、刚乔建、哈小琴
中国人民解放军联勤保障部队第九四〇医院

目的 探讨凝血六项（APTT、PT、TT、FIB、FDP 和 D-Dimer）指标在 2 型糖尿病各血管并发症中的水平及与其他临床检测指标的相关性，为临床 2 型糖尿病血管并发症的防治提供参考。
方法 回顾性分析 2 型糖尿病无血管并发症组（A 组，n=153），2 型糖尿病微血管并发症组（B 组，n=156），2 型糖尿病大血管并发症组（C 组，n=161）和 2 型糖尿病微+大血管并发症组（D 组，n=160）的基本信息，凝血 6 项及相关临床实验室指标在组间的差异性及关联性并寻找疾病影响因素。
结果 以 A 组做为参考，logistics 回归分析发现 B 组的影响因素是病程、HCY、APTT、MCV 和 PT；C 组中年龄、HCT、TG、APTT、MCV 和 D-Dimer 是其影响因素；D 组年龄、病程、合并高血压、HbA1c、APTT 和 PT 是其影响因素。各组共同的危险因素是 APTT。相关性分析中发现，APTT 与 FPG、HbA1c、TG、TC、HDL-C 和 LDL-C 负相关，与其他指标间未显示有统计学相关；PT 与 FINS、WBC、NEU、MON 和 HCY 正相关，与 HbA1c、RBC、HGB、HCT、MCV、PLT、TG、TC、HDL-C、LDL-C 和 SOD 负相关；TT 与 NEU 负相关，与 RBC、HGB、HCT、TG、TC 和 SOD 正相关；FIB 与 FPG、FINS、HOMA-IR、HbA1c、WBC、NEU、MON 和 PLT 正相关，与 RBC、HGB、HCT、MPV 和 SOD 负相关；FDP 与 NEU、MON 和 HCY 正相关，与 RBC、HGB、HCT、MCV、PDW、TG 和 SOD 负相关；D-Dimer 与 WBC、NEU、MON 和 HCY 正相关，与 RBC、HGB、HCT、MCV、TG 和 SOD 负相关。
结论 T2DM 各血管并发症者存在不同程度的凝血异常，这种异常与血糖、血细胞、血脂等因素密切相关，及时监测凝血等指标有助于早期防治和延缓 T2DM 并发症的进展。

PU-2712

信息时代下的实验室质量管理

何秋蓉、唐宇帆
四川大学华西公共卫生学院/华西第四医院

目的 实验室质量管理涉及“人、机、料、法、环”。很多三甲医院实验室或检测中心引进实验室质量管理系统，但不适用于一般级别医院，并且经济成本和维护成本高。在信息时代下，充分运用现有实验室信息系统（LIS），开发实用的质量管理模块十分必要。
方法 基于质量管理的 5 个环节，LIS 系统采用 C/S 架构，全面支撑各类功能扩展，逐步建立多个质量管理模块。实验室内部增设人员管理、设备管理、耗材管理权限等。人事管理员维护人员档案类别，每人依据类别上传个人信息，含：学历、继续教育、培训及考核、科研、教学等，定期自主更新，人事管理员审核；建立设备管理路径，设备管理员设计设备使用及维护模板，各专业组上传设备基本信息，含：安装报告、校准及验证记录、标准操作程序、培训记录、使用记录及维护记录、仪器比对、设备不良事件报告等；通过对接院内物资管理系统，设备科作为一级库，检验科作为二级库，科室各专业组作为三级库，实现检验科试剂分级管理，运用试剂条形码识别系统完成试剂使用全流程的信息化，扫码实现出入库省去人工录入操作，并且在原有试剂管理的模式下增加了请购审批功能、试剂批号更换提醒、入库效期提醒、临期试剂报警等。利用仪器质控管理模块支撑 SOP 文档管理、科室内部通知管理、交接班管理、实验室日志管理等，在 LIS 中增加多维度管理模块。
结果 通过对 LIS 的开发，实现实验室质量管理信息化及高效化。从人、机、料三个维度完善实验室人员、设备及耗材各类相关记录，通过 LIS 存档，实现无纸化。工作人员充分利用工作碎片化时

间在实验室工作区即可完成文档整理，提高工作效率，在培训与学习随机随需的基础上实现了 LIS 统一管理。
结论 实验室质量管理必须借助信息化手段，充分调用 LIS 功能，帮助管理者提升检验质量，为实验室认可做准备。下一步从 LIS 中提取各节点信息进行质量指标统计，实现“法、环”的高效管理，实现全面全流程信息化实验室质量管理模式。

PU-2713

产前诊断发现孕妇自身 22q11.2 缺失综合征一例

谢梅花、龚燕飞、李博洁
岳阳市一人民医院

目的 对 1 例无创产前检测提示 22q11.21 存在 2.4 Mb 缺失的胎儿进行产前诊断，确定缺失来源，为其家系提供遗传咨询。
方法 行羊水穿刺术后，通过常规染色体核型分析和基因组拷贝数变异测序技术（CNV-Seq）对胎儿进行产前诊断，应用 CNV-Seq 对母亲外周血进行比对分析。以明确无创提示的高风险的来源。
结果 无创补充报告提示 22q11.2 缺失综合征高风险；胎儿羊水染色体核型：46,XN,21Ph+，胎儿羊水全基因组拷贝数变异测序（CNV-Seq）结果 Seq(1-22)x2,(X,N)x1；孕妇外周血全基因组拷贝数变异测序（CNV-Seq）结果 seq[hg19]22q11.21(18,954,452- 21,449,606)x1，即母亲 22q11.21 区域存在片段大小约 2.4Mb 的拷贝数缺失，为致病性 CNV。考虑之前无创结果 22q11.2 缺失综合征高风险是因为母亲本身为该疾病的患者。
结论 无创提示 22q11.2 缺失综合征高风险为母亲本身为该疾病的患者，胎儿未遗传。

PU-2714

多发性骨髓瘤患者外周血 Tregs/Th17 细胞在多治疗方案中的变化研究

刘博
中国医科大学附属第一医院

目的 探究不同分期多发性骨髓瘤患者体内调节性 T 细胞 Tregs、辅助性 T 细胞 17、Tregs/Th17 细胞水平及其在不同治疗方案中 Tregs 细胞变化，探讨其与病程分期和化疗药物的相关性。
方法 采用流式细胞术检测体检健康者和多发性骨髓瘤患者 Tregs、Th17、Tregs/Th17 细胞水平，应用 SPSS 26.0 统计学分析软件，Student’s test 比较分析均值差异，进行对比分析。
结果 通过检测多发性骨髓瘤患者与体检健康者体内的 Tregs 细胞与 Th17 细胞，可以发现与体检健康者相比，多发性骨髓瘤患者体内的 Tregs 细胞明显升高（P＞0.05）且 DS I 期和 DS III 期 Treg 细胞绝对值均明显升高 ，而 DS II 期组 Treg 细胞绝对值未见明显变化；而且观察组 DS 分期三组间 Treg 细胞百分含量无明显差异。多发性骨髓瘤患者与体检健康者的 Th17 细胞无明显差异；与健康者相比，多发性骨髓瘤患者的 Tregs 细胞与 Th17 细胞的比值显著升高（P＞0.05）。经过三种化疗方案治疗的多发性骨髓瘤患者，Tregs 细胞百分含量均明显增加，VAD 化疗方案和其他化疗方案分组中多发性骨髓瘤患者 Treg 细胞绝对值明显增加，而 BD 化疗方案组中多发性骨髓瘤患者 Treg 细胞绝对值未有明显改变。
结论 1.多发性骨髓瘤患者外周血的 Tregs 细胞显著升高、Th17 细胞与健康者无明显差异、多发性骨髓瘤患者体内的 Tregs/Th17 细胞比值升高。2.多发性骨髓瘤患者外周血的 Tregs 细胞与病程、治疗用药有关。

PU-2715

MicroRNA-29a affects the drug sensitivity and transcriptome of breast cancer cells

Qian Zhou
Nanfang Hospital, Southern Medical University

MiR-29a is related to DNA methylation and drug sensitivity in cancers. This study aims to explore the effect of miR-29a on the sensitivity of DNA methyltransferase (DNMT) inhibitors and anti-estrogen drugs in breast cancer cells. The miR-29a-overexpressing and -knockdown cell lines were constructed to detect the proliferation and the sensitivity of breast cancer cells to DNMT inhibitors (decitabine) and anti-estrogens (fulvestrant, tamoxifen). High-throughput sequencing was performed to explore the underlying mechanism of miR-29a on affecting drug sensitivity in breast cancer. Bioinformatics analyses were also conducted on the differentially expressed mRNAs and lncRNAs, including methylation analysis, transcription factor analysis, PPI network, GO and KEGG analyses. Finally, we found that miR-29a was hyper-methylated and down-regulated in breast tumor tissues and it inhibited the proliferation of breast cancer cells. Additionally, miR-29a decreased the sensitivity of MCF-7 cell line to decitabine and increased the sensitivity of MCF-7 to fulvestrant and tamoxifen. In miR-29a overexpressing MCF-7 cell line compared with negative control, there were 165 differentially expressed mRNAs and 613 differentially expressed lncRNAs. Differentially expressed mRNAs (FZD5, JUN, CHAC1, C15orf41, SLITRK5, FBXL17, etc.) were primarily related to transcription factors like ESR1, CTCF, ESR2, etc. and involved in biological adhesion, chemo-attractant activity, AMPK signaling pathway and PPAR signaling pathway, etc. In conclusion, miR-29a functions as a tumor suppressor miRNA and could silenced by the methylation of miR-29a CpG island thus causing breast carcinogenesis. The decreasing effect of miR-29a on the sensitivity of breast cancer cells to DNMT inhibitors may because the dysregulation and methylation of miR-29a and its target genes affected the binding between DNMT and DNMT inhibitors. Also, miR-29a increased the sensitivity of breast cancer cells to antiestrogens through affecting the binding between by negatively regulating the expression of JUN, or changing the ERα activity or expression.

PU-2716

从腺病毒流行性分析角度浅谈呼吸道病原传播途径控制的重要意义

李玲锦、代冰、唐春燕、张青、唐笑
长沙金域医学检验实验室有限公司

目的 据研究资料表明，腺病毒是我国重点防控的呼吸道病原体之一。多年监测数据表明，仅靠流调分析与数据统计结果报告，对腺病毒防控的作用效果有限。2021 年，呼吸道病毒相关项目，特别是腺病毒的阳性率明显降低。因此，对比 2019 年与 2021 年的送检长沙金域医学检验实验室的监测数据分析，找出控制呼吸道疾病感染与传播因素，为呼吸道疾病防控做出贡献。
研究对象与方法 研究对象来源于 2019 年，2021 年湖南省 14 个地级市送检长沙金域医学检验实验室的 10 周岁以下人群的临床样本，检测方式是直接免疫荧光法检测鼻咽拭子中的抗原。
结果 2019 年腺病毒在湖南省全年整体阳性率为 4.58%，主要感染流行月份是 4-7 月，最高感染月在 6 月，达 10.20%，与之前 2016 年湖南省腺病毒主要流行季节在春季有差异，与相关报道湖南省腺病毒夏季感染率在不断上升报道一致。腺病毒感染有男女差异，P<0.05。2021 年 1-4 月，整体腺病毒阳性率为 1.00%，相较于 2019 年同期阳性率下降 71%，4 月同期降幅达 93.50%，与 2019 年同期阳性率对比有显著的统计学差异，P<0.05，2021 年 1 月至 2021 年 4 月腺病毒感染无

明显线性相关上升趋势，4 月整体阳性率出现统计周期内最低值，4 月腺病毒感染阳性率为为 0.33%。

结论 每年流行性监测是预防和控制腺病毒爆发的主要手段，多年的监控，并无降低腺病毒在孩童中的的感染率。在 2020 年新冠疫情爆发下，我们从呼吸道腺病毒的流行统计数据得出，在政府的领导下，全民共同参与呼吸道病毒防控，自觉做到清洁消毒工作是最有效的控制手段。

PU-2717

G 蛋白偶联雌激素受体与孤独症谱系障碍的相关性分析

赵艳玲、肖鸽飞
珠海市妇幼保健院

目的 通过研究 G 蛋白偶联雌激素受体（GPER）与孤独症谱系障碍（ASD）儿童相关性，寻找新的能够早期筛查该病的血清标志物。

方法 选取 2017-2018 年珠海市妇幼保健院就诊的 ASD 患儿 79 例，年龄、性别相匹配的正常对照组儿童 88 例，诊断标准参照美国《精神障碍诊断与统计手册第 5 版》（DSM-5），GPER 浓度测定采用酶联免疫法，并对 GPER 基因编码区进行 Sanger 测序，比较病例组与正常对照组间的 GPER 浓度差异和基因多态性的影响。

结果 在控制性别因素后，正常对照组儿童的年龄与 GPER 水平经偏相关分析呈正相关（r=0.259，P＜0.05）。GPER 结果经独立样本 t 检验分析，ASD 组的 GPER 水平显著低于对照组，结果分别为（3.62±4.28）ng/L 和（6.42±7.37）ng/L（t=-3.342，P＜0.05），差异有统计学意义。伴或不伴精神发育迟滞的 ASD 患儿血清 GPER 水平分别为（2.69±3.14）ng/L 和（4.06±5.44）ng/L，差异未见统计学意义（t=1.411，P＞0.05）。GPER 基因编码区的 c.-9T＞C 和 c.789G＞A 两个多态位点同组等位基因型的 GPER 水平经单因素方差分析及两两比较 t 检验分析，结果的差异均未见统计学意义（P＞0.05）。

结论 GPER 在神经系统功能中发挥重要作用，GPER 基因编码区虽然未找到与 ASD 有关的多态性位点，但该基因表达的 GPER 蛋白水平与 ASD 呈显著相关，提示此因子有可能成为 ASD 早期筛查的潜在血清标志物。

PU-2718

蛋白酶体抑制剂 PS-341 增强化疗药物紫杉醇和依托泊苷对人骨肉瘤 U2-OS 细胞的抑制作用

冯少婷
天津医科大学肿瘤医院

目的探讨蛋白酶体抑制剂硼替佐米(ps-341)单独或联合化疗药物紫杉醇(Ptx)和依托泊苷(Vp 16)对人骨肉瘤 u2-os 细胞生长及生物学机制的抑制作用。培养的 U2-OS 细胞分别用不同浓度的 PS-341、4μmol/L PTX、20ug/ml VP16 及其联合作用。MTT 法检测细胞增殖率，流式细胞仪分析细胞周期分布，AnnexinV-FITC/PI 双染法检测细胞凋亡率，Western blot 检测细胞核 NF-κB、Bcl2、Bax、CyclinB1 和 CDK1 的蛋白表达。PS-341 单独对 U2-OS 细胞有生长抑制和诱导凋亡作用，且呈剂量依赖性。蛋白酶体抑制剂联合化疗药物(PTX 和 VP16)可促进化疗药物对 U2-OS 细胞的抑制作用，G2/M 期阻滞显示。核内 NF-κB 蛋白表达明显降低，凋亡基因 bax 表达上调，bcl-2 表达下调，细胞周期蛋白 cyclinB1 和细胞周期蛋白依赖性激酶 1 表达降低。蛋白酶体抑制剂 PS-34 1 可进一步促进化疗药物 PTx 和 VP16 降低 NF-κB、CyclinB1、CDK1 和 Bcl2 的表达，上调 Bax 的表达，从而增强化疗药物 PTx 和 VP16 对人骨肉瘤 U2-OS 细胞的抑制作用。

PU-2719

胶质瘤微环境中 CCL2 通过诱导上皮间质样变降低肿瘤替莫唑胺的敏感性

张琳
山东大学齐鲁医院

背景 胶质瘤是脑内最常见的原发性恶性肿瘤，虽然以手术为主的综合治疗在胶质瘤的治疗方面取得了一些进展，但胶质母细胞瘤患者的中位生存时间仍然仅有 14.6 个月。目前认为，胶质母细胞瘤对化学药物的抗性是导致肿瘤复发和患者生存期短的主要因素之一。寻找逆转胶质母细胞瘤抗药性或者提高化疗敏感性的新方案对于改善患者的预后具有重要的临床意义。已知肿瘤微环境与肿瘤的恶性生物学行为密切相关。
目的 探讨胶质瘤微环境中 CCL2 对肿瘤药物耐药的影响以及相关的作用机制。
方法 利用网络基因芯片数据库，分析 CCL2 在胶质瘤中的表达情况。采用 Westren Blot、侵袭、迁移以及免疫荧光，检测胶质瘤的上皮间质样变。利用流式细胞仪检测肿瘤细胞的药物敏感性。利用荷瘤小鼠体内检测 CCL2 对肿瘤细胞药物敏感性的影响。
结果 在本课题中，我们通过分析胶质瘤网络基因芯片数据库，发现 CCL2 在肿瘤微环境中高表达且与肿瘤病理级别呈正相关，与患者的预后成负相关。体外研究发现，重组人源 CCL2（rhCCL2）可诱导胶质瘤细胞上皮-间质转化（EMT）及相关蛋白表达。我们进一步在胶质瘤组织中证实了 CCL2 与 Twist1 的表达具有相关性。同时，rhCCL2 可以明显降低胶质瘤细胞对替莫唑胺（TMZ）的敏感性，而敲除 Twist1 可以消除 rhCCL2 介导的药物敏感性降低。此外，体内实验表明，抗 CCL2 抗体与 TMZ 联合治疗可以延长 U87 荷瘤裸鼠的生存时间。
结论 总之，我们的研究结果表明，CCL2 在胶质瘤微环境中可以通过 Twist1 降低肿瘤细胞对 TMZ 的敏感性，靶向肿瘤微环境中的 CCL2 可能是一个改善胶质母细胞瘤患者预后的新策略。

PU-2720

2020 年晋东南某医院细菌耐药性监测分析

白杨、纪爱芳、弓艳娥、李晖
长治医学院附属和平医院

目的 了解 2020 年晋东南某医院临床分离菌株的分布及耐药情况。
方法 收集该院 2020 年 1 月 1 日至 12 月 31 日临床分离的非重复菌株，采用纸片扩散法或自动化仪器法进行药敏试验，依据 2020 年 CLSI 药敏试验执行标准判断药敏结果，采用 WHONET 5.6 进行统计分析。
结果 2 992 株非重复菌株中革兰阳性菌占 34.4%(1 029 株)，革兰阴性菌占 65.6%(1 963 株)。MRSA 和 MRCNS 在各自菌种中的检出率分别为 29.3%(77/263)和 75.9%(195/257)。葡萄球菌和肠球菌中未发现万古霉素和利奈唑胺耐药的菌株。大肠埃希菌、肺炎克雷伯菌、阴沟肠杆菌、产酸克雷伯菌以及奇异变形杆菌的菌株数依次位列肠杆菌科前 5 位。碳青霉烯类抗生素耐药的肠杆菌科细菌比例为 1.3%(18/1 379)。鲍曼不动杆菌和铜绿假单胞菌对亚胺培南的耐药率分别为 77.3 %(150/194)和 7.5 %(19/252)。流感嗜血杆菌 β 内酰胺酶阳性率为 38.2%。
结论 2020 年我院细菌耐药情况整体低于全国上年水平，但仍不容乐观，应继续做好细菌耐药性监测工作，了解本院细菌的耐药性变迁，为医院感染控制及抗生素合理应用提供科学依据。

PU-2721

耐碳青霉烯类鲍曼不动杆菌耐药机制研究

李代碧、伏改芬
昆明市第一人民医院

鲍曼不动杆菌(Acinetobacter baumannii，AB)，是引起医院感染最常见的条件致病 菌之一，耐药性及其耐药机制的研究已经成为全球关注的热点问题之一。其广泛地存在于自 然界和人体表面。近几年，临床分离率呈上升趋势，居非发酵菌的第二位，仅次于铜绿假单 胞菌，耐药率性也日趋严峻，出现了多重耐药的鲍曼不动杆菌，而且已在全球范围内出现播 散现象，有些地区甚至造成了爆发性流行。碳青霉烯类药物是治疗鲍曼不动杆菌重症感染的 首选药物，近几年，随着碳青霉烯类药物的广泛的使用，出现了碳青霉烯类耐药的鲍曼不动 杆菌（Resistance to carbon and resistant strains of Bauman acinetobacter CRAB）。 其产生耐药主要包括碳青霉烯酶的产生、青霉素结合位点、外膜通透性改变和外排泵增强等 因素有关，一旦耐药菌感染病死率极高，因此对于耐碳青霉烯类鲍曼不动杆菌（CRAB）感染 的预防及控制尤为重要。本文就主要的碳青霉烯酶和耐药机制加以概述。

PU-2722

Comprehensive analysis of 65 brucellosis cases between 2010-2019 in Guangdong province to promote clinical and public awareness

Honglin Gao
Guangdong provincial hospital

Background Human brucellosis is a kind of prevalent zoonotic diseases and becoming a major public health issue. Clinical features of patients with brucellosis are intricate and diverse. The aim of this single-center, retrospective study was to promote awareness of brucellosis by anatomizing epidemiology, clinical characteristics and laboratory findings.
Method Clinical data of brucellosis cases was collected retrospectively through electronic medical records in Guangdong Provincial People's Hospital between January 1, 2010 and December 1, 2019. Demographic, clinical features, laboratory findings and treatment protocols were analyzed in this research.
Finding We totally gathered 65 brucellosis cases, from the specimens of whom brucella were isolated. 60 valid cases (36 males, 24 females) were obtained for missing electronic records of 4 emergency cases and 1 inpatient case. The median age of brucellosis cases was 51.5 (41.75-60). Half (n=30) had no underlying diseases. Risk factors related to infection were close contact with animals (20%), ingestion of animal products (11.7%) and intimate contact with brucellosis (5%). There was a high peak from March to August. Fever (80%) was the most common clinical manifestation, following with chilly/ague (43.3%), weight loss (38.3%), fatigue (35%), cough (25%), headache/dizziness (23.3%) and sweating (20%). Different kinds of musculoskeletal pains were always accompanying brucellosis cases, among which arthralgia (41.7%) and lumbar ache (30%) came top. Higher level of ESR (81.6%), CRP (80%) and lower level of ALB (70%), HGB (65%) were the most typical laboratory findings. Two-drug therapy combining DOX and RIF was the most common medication methods, the proportion of which was 50% (n=30).
Interpretation Clinical diagnosis of brucellosis needs a high degree of suspicion and valid inspection including effective laboratory examination and elaborate inquiry of exposure risk factors for the variety and non-specificity of clinical presentation.

cobas E801 全自动免疫分析仪检测甲胎蛋白的性能验证

吴华仙
南方医科大学珠江医院

目的 验证罗氏 E801 全自动免疫分析仪电化学发光法检测血清甲胎蛋白的性能验证。
方法 参考美国临床和实验室标准化协会（NCCLS）系列文件和相关的国内行业标准等要求对 AFP 的精密度、正确度、分析测量范围和参考区间进行验证及评价。
结果 甲胎蛋白在浓度为 11.4μg/L 的批内和批间精密度分别为 0.75%和 0.97%，在浓度为 135μg/L 的批内和批间精密度分别为 0.6%和 0.1%，均小于标准要求；正确度验证达到行标文件要求，线性范围在 1.17-1132μg/L，a 值为 0.993 在 0.97-1.03 内，R2=0.9998;生物参考区间复合要求。
结论 罗氏 E801 全自动免疫分析仪电化学发光法检测 AFP 分析性能符合标准，适用于临床。

PU-2724

基于双位点催化发夹自组装技术对肿瘤细胞检测的方法学研究

江秀娟
南方医科大学南方医院

循环肿瘤细胞从实体肿瘤组织中脱落下来并进入患者循环系统，其随着血液循环播散到远处组织形成转移灶，从而加速癌症患者的死亡。目前已经有相当多的文献报道，稀有肿瘤细胞的检测在肿瘤的早期诊断以及预后评估方面具有重要的意义。与已知的传统的肿瘤诊断方法相比，对肿瘤细胞进行检测的方法具有无创、简便、可重复取样检测、方便动态监测等优势。所以说，建立一种迅速、精确、简易的肿瘤细胞检测方法是具有巨大的发展潜力的。然而，由于临床血液标本中肿瘤细胞的浓度相对较低，因此检测血液中极低丰度的循环肿瘤细胞具有很大的挑战性。

我们提出了基于双位点催化发夹组装技术的循环肿瘤细胞检测方法，这一方法能选择性识别靶肿瘤细胞并产生相应信号，最佳反应条件下，其在 10~1000 个细胞/毫升检测范围内具有良好的线性，线性方程为：y=0.831+0.215log10C，通过统计分析，检测限为 4 个细胞/毫升。除此之外，该细胞传感器能优秀地区分靶肿瘤细胞与非靶细胞（包括靶蛋白表达量不同的乳腺癌细胞、正常细胞和白细胞）。而且，这一方法在对不同浓度的靶肿瘤细胞进行检测时，无论是在缓冲液中，还是在复杂基质中，得到的检测结果相差无几。最后通过对健康者以及乳腺癌患者的全血标本进行检测，最终的结果是该传感器可以实现乳腺癌患者和健康者之间的区分（AUC：0.955，灵敏度达到 85%，特异度达到 100%）。

总的来说，我们建立了一种基于双位点催化发夹自组装技术的肿瘤细胞传感平台，整个平台无需酶参与，操作简便，并且可以通过改变不同适体即可检测不同来源的循环肿瘤细胞。该平台也在临床标本中得到初步验证。该检测方法的通用性和简便性将会使其能更广泛地应用于临床诊断、即时检验及生物医学研究。

PU-2725

免疫功能监测在脓毒症患者治疗中的临床意义

朱杰、王娇
大连医科大学附属第二医院

目的 (1)探究脓毒症患者外周血淋巴细胞亚群及各细胞因子水平与预后水平是否相关。(2）追踪患者病情发展过程中淋巴细胞亚群及各细胞因子水平变化情况。

方法 (1)选择 2019 年 1 月-2020 年 12 月大连医科大学附属第二医院收治的 38 名脓毒症患者和 20 例健康人作为研究对象，分别设为患病组与健康组，用流式细胞仪检测淋巴细胞亚群（T 淋巴细胞计数、B 淋巴细胞计数、辅助 T 细胞计数、细胞毒 T 细胞计数、NK 细胞计数）及细胞因子水平（TNF-α、IL-6、IL-10），进行病例对照研究。(2)将脓毒症患者根据预后情况分为缓解组、姑息组、死亡组。检测脓毒症患者各组淋巴细胞亚群及细胞因子水平。两两比较判断以上淋巴细胞亚群及细胞因子水平。(3)选择收集的病例中有多次监测的患者，将其分为好转组与恶化组。选取入院第一次和最后一次检验结果进行比较分析，监测研究对象相关指标，记录其波动情况并探索临床意义。
结果 (1)在患病组与健康组的对照中，发现 T 淋巴细胞计数、辅助 T 细胞计数、细胞毒 T 细胞计数、NK 细胞计数、IL-6 具有统计学意义，。 B 淋巴细胞计数、TNF-α、IL-10 无统计学意义。(2)不同预后组两两比较：在缓解与死亡的 T 检验中 IL-6 具有统计学意义。在缓解与姑息的 T 检验中各指标含量无统计学意义。在姑息与死亡的独立样本 T 检验中 CD4/CD8、NK 细胞计数具有统计学意义。(3)追踪病程：好转组和恶化组细胞毒 T 细胞计数、NK 细胞计数改具有统计学意义。
结论 (1)患病组 T 淋巴细胞计数、辅助 T 细胞计数、细胞毒 T 细胞计数、NK 细胞计数均小于对照组，提示患者免疫功能受损，患病组 IL-6 水平远高于健康组，提示患者可能存在炎症因子风暴风险。(2)可根据 IL-6 水平判断患者预后。(3)脓毒症患者 NK 细胞计数计数、细胞毒 T 细胞计数计数波动水平可作为监测病人病情及判断预后情况的一个重要指标。

PU-2726

绞股蓝总苷抑制角蛋白 17 改善银屑病样皮肤损伤

李丹丹
复旦大学附属华山医院

目的 探讨绞股蓝总苷（gypenosides，GP）对咪喹莫特（Imiquimod，IMQ）诱导的小鼠银屑病样皮肤损伤的改善作用及其作用机制。
方法 将 20 只 BALB/C 小鼠编号后随机等分为 4 组：对照组、GP 组、模型（IMQ）组、GP 治疗（IMQ+GP）组，每组 5 只。所有小鼠背部剃毛后，空白组小鼠涂抹 62.5 mg 凡士林（Vaseline），模型组小鼠涂抹 62.5 mg 的 5%咪喹莫特乳膏，绞股蓝治疗组涂抹 62.5 mg 的 5%咪喹莫特乳膏同时使用 40mg/kg 绞股蓝总苷灌胃。连续 6 d。第 6 天处死所有小鼠。每日记录小鼠背部皮损严重程度指数（Psoriasis area and severity index, PASI），取背部皮肤进行 HE 染色。取脾脏及皮肤获取单细胞悬液，进行流式细胞检测。实时荧光定量（qRT-PCR）检测组织角蛋白 17（K17）、IL-17A、IL-19 及 IL-23 mRNA 表达；Western blotting 检测 K17、STAT3、P-STAT3 蛋白表达。
结果 在第 6 天处死时，IMQ 组银屑病样皮损典型，PASI 评分最高，为（10.50±0.56）。与模型组比较，GP 治疗组小鼠红斑面积明显减少，表皮鳞屑减少，皮肤厚度显著降低；HE 染色结果表明，GP 治疗组背部组织表皮厚度明显减轻，炎细胞浸润减少；与对照组比较，模型组 K17、IL-17A、IL-19 及 IL-23 mRNA 水平、K17 蛋白表达明显升高，GP 治疗后 K17、IL-17A、IL-19 mRNA 水平、K17 蛋白表达显著降低。
结论 绞股蓝总苷通过抑制 K17 及炎症分子表达，改善 IMQ 诱导的银屑病样皮肤损伤。

PU-2727

基于咖啡环效应的尿液中微量白蛋白和白细胞的同步定量检测新方法

关淑娟
南方医科大学南方医院

慢性肾脏病已成为全球重大的公共卫生健康问题之一，早期诊断可最大限度 地减少慢性肾脏疾病所造成的损害及负担。然而，目前仍缺乏简单有效的慢性肾 脏病筛查方法。本研究介绍了一种可在 20 分钟内对尿液中的微量白蛋白和白细 胞实现同步敏感定量的检测新方法。本研究开发了一种具有聚集诱导发光特性的 智能探针，其可以同时标记尿液中的微量白蛋白和白细胞。在咖啡环效应作用下， 液滴中的白蛋白在蒸发过程中聚集于液滴接触线边缘并形成环状结构，而白细胞则均匀分布在接触面中央。通过分析环状结构的荧光强度和接触面中央荧光散点 的数目可以确定液滴中白蛋白和白细胞的浓度，检出下限分别达 9.375 mg/L 和 2/μL。该方法无需精密的仪器设备和复杂的技术操作，可为慢性肾脏病的日常预 防、筛查和动态监测提供一种简单、低成本、有效的工具。

PU-2728

柔性电化学传感器检测汗液中的葡萄糖和乳酸

余梦珂
湖北省中西医结合医院（湖北省职业病医院）

目的 在柔性基板上镀上金膜，分别滴涂葡萄糖氧化酶和乳酸氧化酶溶液，使用金纳米松针（AuNNs）作为信号放大策略来检测汗液中的葡萄糖和乳酸。
方法 首先使用光刻在聚萘二甲酸乙二醇酯（PEN）基底上对金电极进行构图。然后使用电子束蒸发器沉积 Ti（5 nm）/ Au（60 nm）层。然后使用光刻法对 Ag 电极进行构图，然后使用电子束蒸发器沉积 200 nm 的 Ag 层。另外，为了制造 Ag / AgCl 参比电极，通过计时电位法将涂有 Ag 的电极浸入 3M KCl 溶液中进行氯化。为了将准备好的传感器与电化学工作站相连，使用导电银胶将每个电极的底端与铜线连接，然后将绝缘的指甲油（环氧树脂）涂在接头部分上。然后通过将电极浸入 3 mg ml-1 HAuCl4 溶液中 20 分钟进行电化学沉积获得金纳米松针。然后，将上述制备好的电极浸入 0.1Mβ-巯基乙胺溶液中 24 小时，用去离子水冲洗并用氮气干燥后，再将 5μL 的 BSA / PEGDE /葡萄糖氧化酶溶液的液滴滴涂到 AuNNs / Au 电极上来获得葡萄糖传感器。将 5μL 的 BSA / PEGDE /乳酸氧化酶溶液的液滴滴涂到 AuNNs / Au 电极上来获得乳酸传感器。然后将传感器在 55℃的烘箱中干燥 2 小时，然后在 4℃的冰箱中保存过夜。
结果 制备的电极可以在标准葡萄糖溶液和标准乳酸溶液中产生很好的信号响应，并且不会被汗液中的其他物质所干扰。对实际汗液样本也进行了测试，和分光光度法测试的结果具有很好的相关性。
结论 我们制备的柔性电化学传感器可以很好地检测汗液中的葡萄糖和乳酸，并且由于 PEN 的良好柔性和可弯曲性，将来有望进一步设计成为可穿戴式传感器来无创实时地监测人体健康。

PU-2729

维生素 D 检测技术及临床应用

蒋洁
重庆金域医学检验所有限公司

1、维生素 D：维生素 D 是类固醇衍生物，主要包括维生素 D2（麦角钙化醇）和维生素 D3（胆钙化醇）。维生素 D3 可由 7-脱氢胆固醇在人体皮肤和脂肪组织中经阳光照射后合成，亦可通过从食物中摄取，主要存在于奶类、乳制品类、深海鱼类以及动物肝脏中。维生素 D2 不能由人体自身合成，只能从外界摄取，多含于植物性食物中，由植物的麦角固醇经阳光照射合成。维生素 D 的主要生理作用是调节钙的代谢，从而维持骨骼健康。此外，维生素 D 可通过噬菌作用而增强免疫力，在抗肿瘤活性和免疫功能调节方面发挥着重要作用。最新的研究指出，除骨质疏松、龋齿、儿童佝偻病等“经典”维生素 D 缺乏病外，多种慢性病（如动脉硬化、高血压、冠心病、糖尿病、乳腺癌、结肠癌、前列腺癌，慢性感染性疾病、自身免疫病等）的发生均与维生素 D 缺乏有关。

PU-2730

miR-33 对线粒体、糖脂代谢关键基因的调控作用

景伟[1]、袁二凤[2]
1. 郑州大学第一附属医院
2. 郑州大学第三附属医院

miRNA 是一段长度约为 18～25 个核苷酸的核内单链非编码微小 RNA，可与靶 mRNA 的 3’UTR 区特异性结合在转录后水平直接降解靶 mRNA 或抑制蛋白质翻译从而抑制靶基因表达。miRNA-33a/b 是定位于 SREBP 基因内含子的 miRNA，其可通过抑制线粒体功能相关基因 PPARGC1、PDK4 等的表达以实现对细胞内线粒体呼吸供能状态的调控。此外，miRNA-33a/b 还可以靶向作用于糖脂代谢关键基因 G6PC、PCK1、ABCA1、CPT1A、CROT 等在体内糖脂代谢的调控中发挥重要作用。异常的 miRNA-33a/b 表达水平可能与代谢类疾病发生有重要关系。

COVID-19 with bronchogram – a potential indication of prolonged treatment

xu jing
The Second Hospital of Shandong University

Novel coronavirus disease-19(COVID-19) has widely spread all over the world and seriously threatened people's health. This disease is currently diagnosed by clinical features, chest computed tomography (CT) scan, and nucleic acid test of severe acute respiratory syndrome coronavirus (SARS-CoV-2). Recently, some studies have suggested parenchymal consolidation and air bronchogram in severe cases. However, the effective treatment for COVID-19 patients with bronchogram has not been discussed. Herein, we report a case of 47-year-old woman who suffered from COVID-19 with bronchogram. These findings revealed that the body temperature and clinical laboratory test all returned to normal after this patient received a prolonged treatment. Furthermore, chest CT showed the bronchogram and consolidation resolved and nucleic acid retest of SARSCoV-2 was also negative. These results provide an important reference for treatment option of COVID-19 with bronchogram.

PU-2733

标本送检时间对支原体培养结果的影响和解决方法

何文燕、陈春竹
重庆金域医学检验所有限公司

目的 分析泌尿生殖道分泌物在检测支原体培养项目送检时间和采样要求对培养结果产生的影响及其原因，为临床送检解脲脲原体和人型支原体培养时采样要求提供数据支持并保证项目开展的质量。
方法 收集重庆金域医学检验所有限公司 2020 年全年支原体培养数据和 2021 年 3 月份及 4 月份泌尿生殖道分泌物支原体培养数据，计算 2020 年全年生长解脲脲原体阳性率、生长人型支原体阳性率及同时生长解脲脲原体和人型支原体阳性率；同时统计科室近期即 2021 年 3 月份相应数据以及 2020 年 3 月份相应数据。分析 将 2021 年 3 月科室接收到的支原体项目的培养结果与 2020 年全年培养结果以及 2020 年 3 月培养结果进行比较分析。
结果 2021 年 3 月科室检测支原体培养阳性率降低。
结论 支原体培养在其他条件不变的情况下，支原体培养结果阳性率与送检时间有关。

PU-2734

浅谈第三方独立医学实验室仪器维护保养的重要性

柳文章、江再菊、张小莲
杭州迪安医学检验中心有限公司

目的 现在人们生活质量水平越来越高，做的体检越来越多，导致医院及第三方实验室日检量激增，这就需要实验室引进和添加先进的仪器以满足检测需要。为了减少仪器出现的各种故障，检验人员需及时发现问题并妥善解决，按照仪器性能的相关要求，及时维护保养仪器，使仪器设备处于良好的状态，便于随时使用，充分发挥最佳效益。
方法 从仪器开始投入使用前，先必须熟读使用说明书，按要求检查自有保护装置，控制环境温度、湿度、连续工作时间、电源电压等，注意防潮、防尘、防腐。要精通设备的各项性能及操作规范，

建立设备管理档案，妥善保管设备的技术资料及使用说明书。定期对实验室仪器设备进行通电检查，注意用电安全，发现有异常时，要立即关机，防止因短路损坏仪器，延长仪器的使用寿命。定期对实验室仪器设备进行维护保养，及时排除仪器故障，如罗氏 c701、罗氏 c513 等仪器可根据实际损耗一个月或两个月更换比色杯和卤钨灯，做好维护保养记录，设备每次实验结束后还需进行每日的日常保养，大保养至少每年一次。每台仪器还得在校准有效期前让厂家工程师对其进行校准，避免由于机械磨损、灰尘、性能和实验频次等引起的各种实验误差，导致实验结果不准确。实验室设备管理员也应提高自身的维护、保养水平，平时多和厂家工程师沟通，不懂就问，积极参加实验室仪器维保等培训活动。

结果 通过定期对仪器进行维护与保养，能降低仪器的故障率，提高工作效率，能大大延长仪器的使用寿命。

结论 第三方实验室由于其本身的性质就决定着必须每天出具大量的实验报告，而只有实验仪器正常高效的运行，才能确保其实验结果及时、准确的被病人拿到手中。在日常工作中，严格按照仪器性能的相关要求，定期做好仪器的保养维护工作并做好记录，仪器设备才具有良好的运行状态，才能保质保量的完成工作。

PU-2735

尿微量白蛋白定量检测联合尿蛋白电泳在早期肾损伤中的作用

岳嘉波、丁少君、周紫燕
杭州迪安医学检验中心有限公司

目的 本实验主要研究尿微量白蛋白定量检测联合尿蛋白电泳在预判早期肾损伤中的作用。

方法 通过罗氏 c8000 全自动生化仪检测尿微量白蛋白的含量，采用法国希比亚半自动电泳仪对患者非浓缩尿液中的尿蛋白成分进行分析，与前者检测结果联合推断得出相关结论。

结果 两项联合检测可以弥补检测其中一项的所带来的不足。

结论 尿微量白蛋白定量检测与尿蛋白电泳联合检测对肾脏早期损伤的判断意义十分重要，是检测早期肾损伤的敏感指标，并能对损伤部位和损伤程度进行判断。

PU-2736

外泌体在胶质瘤微环境中的研究进展与应用

刘小柳
深圳市第五人民医院深圳市罗湖人民医院

外泌体(Extracellular Vesicles，EVs)是由活细胞主动向胞外分泌的囊泡样小体，直径 30-150nm。EVs 作为众多信号分子的运载体，它可调控受体细胞的信号通路及基因表达，在介导肿瘤干细胞及其微环境中其他细胞间通讯和物质交流中扮演重要角色。胶质瘤肿瘤干细胞在神经胶质瘤的发生发展，包括恶性增值、迁移、侵袭和肿瘤血管生成等均可发挥其作用，是导致肿瘤治疗失败和复发的重要原因。因此探究外泌体在肿瘤干细胞微环境中的作用，有助于研究者将进一步深入了解胶质瘤发生和发展过程。本文对 EVs 在胶质瘤微环境中的作用进行综述，为胶质瘤的靶向及综合治疗提供临床参考。

PU-2737

体检人群中一例 CA242 检测结果假阳性案例报道

江再菊、韩文、杨丽红、董咏翠、冉金波
杭州迪安医学检验中心有限公司

目的 探讨 CA242 检测结果假阳性的影响因素和解决方法。
方法 本文报道了 1 例 64 岁的女性体检个体，在 2020 年企退体检中发现 CA242 结果 62.56U/mL（参考区间：≤15.00U/mL），遂去当地三甲医院进行进一步检查，重新抽血检测 CA242，结果为阴性，于是怀疑我方检测结果不准。接到这一临床反馈，我方立即就此事成立了专门的调查小组，找出原始标本核对信息无误，发布结果与原始结果一致，当天质控在控，再次复查 CA242 结果与当初报告吻合。我们又对这个标本用生理盐水 1:1 稀释后再次进行检测，计算回收率为 96.5%，排除非特异性干扰。同时检测消化系统相关肿瘤指标 CA199、CA50，结果均为阴性。为了进一步排查试验操作上的问题，我们将该患者样本寄去试剂供应商实验室进行检测，其检测结果测值为 63.3U/mL，和我们报告结果吻合。在此同时，我们又将标本外送某三甲医院使用不同厂家试剂检测，检测结果为 1.4KU/L（阴性）。为了弄清楚结果不一致的原因，我们又与我方试剂供应商讨论并对此样本进行了不同阻断剂分析试验，加入不同阻断剂测值均没有明显变化。
结果 1.通过加入不同阻断剂及样本回收率试验，说明我方检测的阳性结果，不是常见的内源性物质干扰引起。2.因 CA242 作为糖链抗原结构复杂，存在多个抗体结合位点，分析测值结果的差异可能是由于不同厂家使用抗体原料的结合位点不同导致。3.厂家将通过改进试剂原料成分配比等办法实施改进，用以规避这一风险。
结论 CA242 假阳性案例少见，介于目前肿标检测方法存在假阳性以及厂家众多等情况，所以在遇到一些可疑的阳性结果时，应通过与临床的沟通，必要时可通过与使用不同试剂的实验室进行结果比较，这样可以更好的为客户提供服务，保证临床检验结果的准确性和可靠性。

PU-2738

ISO 15189 与临床实验室管理要素定期评审

任亚萍
中南大学湘雅二医院检验科

国际标准化组织(International Standard for Organization， ISO) 15189: 2012 是目前国际最权威、全球通行的医学实验室认可规范，涵盖管理体系、质量体系、流程控制、服务评价、持续改进等。ISO15189: 2012 管理要素中要求为了确保质量管理体系的持续改进需要进行定期评审。我院检验科是集医疗、教学、科研、社会服务于一体的湖南省规模最大的综合性临床医学实验室,于 2015 年以优异成绩顺利通过了中国合格评定国家认可委员会(CNAS)认可。本文结合 ISO 15189: 2012、本检验科在实验室认可过程中的经验以及实验室管理的相关文献，主要从文件评审、服务协议的评审、外部服务机构和供应商的评审、申请、程序和样品要求适宜性的定期评审、用户反馈的评审、质量指标的评审、管理评审等方面着手，每个评审按照评审前准备、评审实施、评审后续、体会和建议等进行介绍。总结在准备认可的过程中的体会并提出一点改进建议，希望对临床实验室的定期评审提供帮助。

PU-2739

一例血管内 NK/T 细胞淋巴瘤临床病理、分子学特征并文献复习

董清蓉、杨友谊、敬敏、王彩容、唐梅、陈虹、黄林林
四川金域医学检验中心有限公司

目的 探讨发生于血管内 NK/T 细胞淋巴瘤的临床病理、免疫组化及分子学特征。
方法 本次研究对象是一名 66 岁的男性患者，右侧鼻腔新生物，手术切取鼻腔新生物送病理检查，通过临床表现、组织形态、免疫组化及分子检测等进行诊断及鉴别诊断，并结合文献复习总结临床病理特点。
结果 粘膜上皮下血管扩张，血管腔内充满中等偏大的异型细胞，胞质中等，淡染，个别细胞胞浆嗜酸性，核呈卵圆形及不规则形，染色质粗，核仁明显，可见病理性核分裂，局灶血管腔内见纤维素样坏死，血管腔外未见异型细胞。免疫组化染色示异型细胞 CD3、CD56、GrB 阳性，Ki67 高增殖活性，约 90％阳性表达，CD5 丢失，阴性，CD20、PAX-5、BCL-6、CD10、MUM-1、MPO、CD34、CD31、S-100、PCK 均为阴性。EBV 原位杂交（EBER）检测：异型细胞弥漫阳性。患者转上级医院治疗，复查外周血及骨髓检查，排除了侵袭性 NK 细胞白血病。综合上述改变，病理诊断为：血管内 NK/T 细胞淋巴瘤。
结论 血管内 NK/T 细胞淋巴瘤是一种高度侵袭性的罕见淋巴瘤，临床表现多样，缺乏特异性，多发于亚洲人群。其病理特点是肿瘤细胞选择性在血管内浸润生长，免疫组化表达 NK/T 细胞表型，结合文献复习， EBV 原位杂交：EBER 肿瘤细胞均阳性，TCR 基因重排发现均为胚系，提示 NK 细胞来源。该肿瘤需与侵袭性 NK 细胞白血病、血管内大 B 细胞淋巴瘤、血管肉瘤、转移性癌、粘膜恶性黑色素瘤等进行鉴别，避免误诊，在肿瘤未广泛累及多器官之前进行早期治疗，能有效改善患者预后。该肿瘤进展快、预后差，治疗以 CHOP 及改良 CHOP 方案为主的化疗，文献中显示有 2 例接受干细胞移植治疗，但是疗效不满意，肿瘤的预后相关因素及治疗方案尚待更多病例积累观察。

PU-2740

TLR-9 介导吗啡诱导的巨噬细胞凋亡及药物依赖

冯一民
山东大学第二医院

目的 探讨 TLR-9 在吗啡诱导的巨噬细胞凋亡及吗啡依赖中的作用及机制，为吗啡的戒断治疗及免疫抑制的改善提供潜在的靶点。
方法 1.体外及体内分析吗啡对 TLR-9 表达的影响：分别用吗啡处理小鼠巨噬细胞系 RAW264.7 及分离获得的腹腔巨噬细胞及吗啡腹腔注射 BALB/C 小鼠后，实时定量 PCR 检测相关细胞及组织中 TLR-9 的表达水平。2，体内及体外分析 miR-146a 在吗啡诱导细胞凋亡中的作用：体外利用 TLR-9 的模拟物及抑制剂处理细胞，TUNEL 分析及流式细胞术检测 TLR-9 对吗啡诱导的巨噬细胞凋亡的影响。体内实验用 TLR-9 敲基因小鼠进行吗啡腹腔注射，检测对细胞凋亡的影响。3.小鼠模型分析 miR-146a 在吗啡的药物依赖中的作用：分别在野生型及 TLR-9 敲基因小鼠中，通过剂量递增法腹腔注射建立小鼠吗啡成瘾模型，采用吗啡受体抑制剂纳洛酮催瘾造小鼠吗啡成瘾戒断模型，观察戒断模型小鼠的跳高、西狗样甩动、体重减轻指数、爪子震颤及腹泻等症状。
结果 1.体内及体外实验均表明，吗啡能够时间及剂量依赖性地上调 TLR-9 的表达水平。2.TLR-9 激活下游信号通路介导吗啡诱导的巨噬细胞凋亡。3.小鼠吗啡成瘾-戒断模型中，TLR-9 介导吗啡诱导的药物依赖。
结论 TLR-9 通过下游信号通路介导吗啡诱导的细胞凋亡及药物依赖，为进一步解释吗啡滥用所导致的免疫系统破坏及神经系统药物依赖及成瘾提供了理论依据。

日立 7600 生化分析仪常见故障分析

楚亚东
联勤保障部队第九〇三医院

在临床生化分析仪的使用过程中，需要不断的积累经验，要根据不同的仪器，试剂和医院特点等对仪器进行调整维护，使仪器能够更好地满足临床诊断的需要，更好地服务于临床， 提高医院的诊疗水平。通过长期使用这台日立 7600 生化分析仪，我们体会到要对仪器进行规范化的维护保养，每日，每周，每月，每年都应按照仪器说明书认真执行相关的维护保养，其中每日保养是仪器运行的基础，仪器每日开关机时应认真执行杯子清洗，针清洁，管路冲洗，杯空白，光学检查等常规维护保养程序，只有科学合理的对全自动生化分析仪进行管理，才能发挥仪器的最大效能，服务临床，服务社会。

PU-2742

64 岁类风湿关节炎女患者合并钩虫感染 1 例

樊春红、康蕊、张凤、王辉*
北京大学人民医院

患者：黎 XX，女，64 岁，汉族，四川，农民，已婚。2019-2021 年平均每 6 个月住院 1 次，因严重贫血输血 4 次。2 年内在 3 家三甲医院就诊。2021.5.11 因“多关节肿痛 3 年余，发现三系减少 1 年半余，下肢水肿半年。”收入北大人民医院风湿科。入院检查：白细胞计数 6.20×10^9/L，血红蛋白含量 59→65→88→93g/L↓，血小板计数 232×10^9/L。γ 谷氨酰转肽酶 84U/L↑，总蛋白 56.9g/L↓，白蛋白：31.4g/L↓。球蛋白 19.2%↑，补体 3：0.714g/L↓，补体 4：0.125g/L↓，RF 1040.0IU/mL↑，抗 CCP 抗体 207.02U/mL↑，ANA 1:80 均质型, 免疫球蛋白 E：1395 IU/mL↑。其他检查均在参考区间 。进行肺灌洗液涂片，骨髓涂片、活检，血管彩超，支气管镜等一系列检查。该病例考虑合并 felty 综合征，有贫血的症状，按类风湿关节炎治疗，2021.5.24 胃镜检查时发现十二指肠异物，为肉红色或粉红色约 1CM，样本送检验科鉴定结果十二指肠钩虫成虫，是临床确诊的直接依据。给予患者阿苯哒唑（肠虫清）400mg QD *3 天治疗，第二天出院。

结论 该患者类风湿关节炎合并钩虫感染，两种疾病都有进行性血红蛋白降低是延误诊断原因之一。在临床上寄生虫感染比较少见，便查虫卵易漏检，成虫很少人认识，也是造成延误诊断的原因。寄生虫感染患者除看嗜酸细胞外，还要关注 IgE，其升高提示寄生虫感染或过敏，检测寄生虫感染除便查虫卵还可以用酶免法，免疫印迹、胶体金、PCR 等方法检测。寄生虫感染一般病程长，反复发作，久治不愈，疑难杂症时医务工作者一定要加以重视，提高对寄生虫病的认识，加强临床与检验科沟通，开拓自己的诊疗思路，做好鉴别诊断。

PU-2743

Dynamic changes of throat swabs RNA and serum antibodies for SARS-CoV-2 and their diagnostic performances in patients with COVID-19

Xueping Qiu、Yang Xiang、Yirong Li、Fang Zheng
Zhongnan Hospital of Wuhan University

Dynamic changes of RNA and antibodies in SARS-CoV-2 infected patients remain largely unknown, and influence factors for antibody production have not been fully clarified. In this study,

consecutive throat swabs specimens (n=1875) from 187 patients were collected to analyse the dynamic changes of RNA. Moreover, 162 serial serum samples from 31 patients were tested for seroconversion of IgM and IgG. Meanwhile, IgM and IgG were also detected in 409 COVID-19 patients and 389 controls. Additionally, the logistic regression analysis was executed to identify the possible influence factors for antibody production. The median positive conversion time for RNA was day 7 (IQR, 3-11), and the positive rate was the highest in day 1-5 (74.59 %) and then gradually decreased. The median time of seroconversion for IgM and IgG were both day 12 (IQR, 10-15). The sensitivity and specificity for IgM (or IgG) was 87.04 % and 96.92 %, respectively. Multivariate logistic regression indicated that reduced lymphocytes and short positive conversion time for SARS-CoV-2 RNA were independent factors for negative results of IgM and IgG tests. In conclusion, RNA and antibodies should be combined for COVID-19 diagnosis, and delayed seroconversion could be influenced by the decreased lymphocytes and short positive conversion time for RNA.

杭州地区 CA724 医学参考范围的确立

王磊
联勤保障部队第 903 医院

目的 通过对 2015 至 2021 年之间杭州地区健康体检人群的 CA724 结果的回顾性分析建立一个适合本地区的 CA724 参考范围。
方法 用化学发光方法检测健康体检人群血清，对不同性别及不同年龄段的 CA724 结果的比较，分析 CA724 结果在不同性别及不同年龄段之间的差异。
结果 杭州地区健康体检人群的 CA724 结果在男女之间存在显著性差异，且随着年龄的增高，CA724 的结果存在升高的趋势。
结论 现有的参考范围不适合杭州地区，应按不同性别及不同年龄设定合适的参考范围。

PU-2745

糖尿病的分型及药物治疗机理

郑悦
雅安市人民医院

糖尿病是一种慢性进行性疾病，主要表现为高血糖或糖尿，持续高血糖会导致许多并发症的产生，如视网膜、肾脏、神经系统病变及血管并发症。I 型 DM 的研究方向是开发给药方便，II 型 DM 应以改善胰岛素抵抗 IR 和保护胰岛 β 细胞功能为主，除胰岛素外临床常用药物有双胍类、磺酰脲类、列耐类、噻唑烷二酮类等。近年来，随着对糖尿病基础理论的深入和分子生物学的进展，人们对糖尿病的发病机制有了新的认识，并研发了众多糖尿病新型药物，为糖尿病的治疗提供了更多的选择。

PU-2746

应用医疗失效模式与效应分析提高尿液常规检查的质量

李欢
昆明医科大学第一附属医院

目的 通过运用医疗失效模式与效应(Healthcare Failure Mode and Effect Analysis, HFMEA) 分析现代管理工具对尿液常规检查流程中影响检验质量的高风险因素，针对性的进行整改，从而提高尿液常规检查的质量。
方法 成立 HFMEA 小组，对尿液常规检查全流程进行分析找出高风险因素，得出各个因素的 RPN 风险值，针对风险系数最高的前 5 个潜在高风险因素制定针对性的整改措施并实施。实施六个月后，再次统计流程中潜在风险最高的 5 个高风险因素来评估措施的有效性。并且对整改前后的检验报告的准确率和及时率进行比较以评价实施效果。
结果 运用 HFMEA 方法分析并实施六个月后，尿液常规检查潜在高风险因素的 RPN 得分下降，检验报告的准确率和及时率显著上升（P<0.01）。
结论 运用 HFMEA 对尿液常规检查流程中的各个环节进行防范性的风险管理，可有效的提高尿液常规检查的质量，提升医疗服务质量。

PU-2747

Sysmex CA-7000 全自动血凝分析系统检测项目 PT、APTT、FIB 性能验证实验分析

王玉霞
新疆生产建设兵团第四师医院

目的 Sysmex CA-7000 全自动血凝分析系统检测血浆凝血酶原时间（PT）、活化部分凝血活酶时间（APTT）、纤维蛋白原（FIB）等项目的性能验证。
方法 依据实验室及临床标准，观察、验证 Sysmex CA-7000 全自动血凝分析系统检测 PT、APTT、FIB 等项目的批内精密度、批间精密度、正确性以及厂家说明书中提供的相关参考区间的有效性。
结果 Sysmex CA-7000 全自动血凝分析系统检测 PT、APTT、FIB 等项目的批内精密度均低于 1/4CLIA’88Tea，批间精密度均低于 1/3CLIA’88Tea，正确性均符合 1/2CLIA’88Tea，参考区间均与厂家提供的参考区间相符。
结论 Sysmex CA-7000 全自动血凝分析系统检测 PT、APTT、FIB 等项目在批内精密度、批间精密度、正确性及参考区间等方面均符合质控要求及厂家提供的分析性能。关键词：血凝分析系统、性能验证、质量管理

PU-2748

Apelin-13 在小鼠脊髓上水平痛觉调控中的作用研究

许宁
山东大学第二医院

目的 探究 apelin-13 在脊髓上水平痛觉调控的作用及其机制。
方法 1. 选取热甩尾实验作为实验模型，研究侧脑室注射不同剂量 apelin-13 对痛觉的影响。
2．侧脑室注射 APJ 受体抑制剂 apelin13(F13A)，观察对 apelin-13 引起的镇痛作用的影响。
3．侧脑室注射不同亚型阿片受体抑制剂，观察对 apelin-13 引起的镇痛作用的影响。
4、侧脑室同时注射 apelin-13 及吗啡，观察 apelin-13 对吗啡引起的镇痛作用的影响。

结果 1. 侧脑室注射 apelin-13 产生剂量及时间依赖的镇痛效应。
2. APJ 受体抑制剂 apelin13(F13A)阻断 apelin-13 引起的镇痛效应，表明 APJ 受体介导 apelin-13 引起的镇痛作用。
3. 纳洛酮，β-FNA 及 naloxonazione 完全阻断 apelin-13 的镇痛作用；而 NTI 及 nor-BNI 对 apelin-13 的镇痛作用没有影响，表明 u 阿片受体介导 apelin-13 引起的镇痛作用。
4. 侧脑室注射 apelin-13 能增强吗啡引起的镇痛作用，并且这一作用能被纳洛酮逆转。
结论 1.神经肽 apelin-13 在脊髓上痛觉调控中发挥镇痛作用。
2. Apelin-13 的镇痛作用是通过激活 APJ 受体及内源性阿片系统介导的。

PU-2749

Wnt 分子在小鼠抑郁行为中作用研究

许宁
山东大学第二医院

目的 探究 Wnt 分子在束缚应激引起的抑郁样行为中作用及其机制。
方法 1. 选取慢性束缚应激(CRS) 作为实验模型，研究小鼠海马脑区 Wnt 分子在抑郁行为中作用。
2．通过 Real-time PCR 及 Western blot 分别检测 CRS 后小鼠海马脑区不同 Wnt 分子 mRNA 及蛋白的表达变化特征。
3．通过慢病毒特异性敲除海马脑区 Wnt2 或 Wnt3，观察 Wnt/β-catenin 信号通路，神经再生及抑郁样行为的改变。
4、通过慢病毒过表达 Wnt2 或 Wnt3，观察对 CRS 引起的抑郁样行为的影响。
5、注射抗抑郁药盐酸氟西汀，观察对 Wnt2 或 Wnt3 分子的影响；特异性敲除 Wnt2 或 Wnt3 后注射盐酸氟西汀，观察抑郁样行为的变化。
结果 1. CRS 训练引起小鼠腹侧海马而非背侧海马脑区 Wnt2 及 Wnt3 特异性表达减少。
2. 基础状态下，慢病毒特异性干扰腹侧海马脑区 Wnt2 或 Wnt3 引起 Wnt/β-catenin 信号通路及神经再生的损伤，并导致抑郁样行为的产生。
3. 慢病毒过表达 Wnt2 或 Wnt3 能纠正 CRS 引起的抑郁样行为。
4. Wnt2 和 Wnt3 能引起 CREB 的激活；Wnt3 与 Wnt3 之间存在 CREB 依赖的正反馈。
5. 注射盐酸氟西汀能引起 Wnt2 与 Wnt3 表达的升高；敲除 Wnt2 或 Wnt3 阻断盐酸氟西汀的抗抑郁作用。
结论 腹侧海马脑区 Wnt2 和 Wnt3 在 CRS 引起的抑郁样行为中发挥抗抑郁作用。

PU-2750

小鼠脑内 Wnt 分子对记忆调控的研究

许宁
山东大学第二医院

目的 探究小鼠海马脑区 Wnt 分子在恐惧记忆中的作用及其机制。
方法 1. 选取场景性恐惧记忆(CFC) 作为实验模型，研究小鼠海马脑区 Wnt 在学习记忆中作用。
2．通过 Real-time PCR 及 Western blot 分别检测 CFC 训练后不同时间点 Wnt mRNA 及蛋白的表达变化特征。
3．通过 Western blot 检测 Wnt/β-catenin 与 Wnt/Ca2+通路的激活情况。
4. 通过脑内埋管技术实现特异性向海马脑区注射干预药物，观察小鼠行为的改变情况。
5.通过 Lentivirus 载体系统构建，过表达持续激活型 β-catenin，并观察其在记忆形成中的作用。
结果 1. CFC 训练引起小鼠背侧海马脑区 Wnt3a 特异性表达增加。

2. CFC 训练引起 Wnt3a 依赖的 Wnt/β-catenin 及 Wnt/Ca2+通路的激活。
3. 训练前向海马脑区注射 Wnt3a 抗体损伤 CFC 记忆的获得。
4. 训练后向海马脑区立即注射 Wnt3a 抗体损伤 CFC 记忆的整合。
5. Wnt/Ca2+及 Wnt/β-catenin 信号通路分别参与 CFC 记忆的获得及整合。
6. 海马脑区注射重组 Wnt3a 增强 CFC 记忆的形成。
7. β-catenin 作为 Wnt3a 的下游分子增强 CFC 记忆的整合。
结论 1. CFC 学习记忆训练能诱导小鼠海马脑区中 Wnt3a 特异性表达增加。
2. CFC 训练能引起 Wnt3a 下游信号通路 Wnt/Ca2+及 Wnt/β-catenin 信号通路的激活。
3. Wnt3a 是 CFC 记忆形成的必要且充分条件。
4. Wnt/Ca2+及 Wnt/β-catenin 信号通路分别参与 CFC 记忆的获得及整合过程。
5. 在海马脑区内过表达激活型 β-catenin 能特异性纠正 Wnt3a 抗体引起的 CFC 记忆整合的缺陷，而对 CFC 记忆的获得没有影响。

PU-2751

抗-M 引起 ABO 血型正反定型不符一例

张正康
东南大学附属中大医院

患者入院后采用微注凝胶法检测患者 ABO、Rh(D)血型发现正反定型不符，采用微注凝胶法检测患者不规则抗体发现抗体筛查阳性，随后进行不规则抗体的鉴定。
血型卡显示的结果正定型为 B+，反定型为 O+
不规则抗体筛查显示的结果 2 号孔为阳性，阳性程度 4+
不规则抗体的鉴定：患者血清与 M 抗原阳性的 1、3、4、5、7、8、9、10 号谱细胞的盐水试验和抗球蛋白试验均凝集，与 M 抗原阴性的 2 号、6 号谱细胞的盐水试验和抗球蛋白试验均阴性。反应格局说明该患者血清中存在盐水反应性抗-M 抗体。
经 DTT 处理后：抗筛阴性 正反定型相符，均为 B+

该患者正定型检测结果为 B 型，红细胞上含有 B 抗原；反定型检测结果为 O 型，患者血清与 A、B、O 细胞均为阳性反应，结合不规则抗体筛查结果为阳性，提示血清中有不规则抗体的存在，通过不规则抗体检测试剂（人血红细胞）抗原谱的对比，以及与相应的不规则抗体鉴定细胞的阳性反应，可以确定该患者血清中含有抗 M 抗体。在人类血清中，抗 M 抗体通常以 IgM 形式存在。而抗 A 抗 B 抗 D 以 IgG 形式存在。将患者血清用 DTT 处理后，可以有效灭活 IgM 型抗体的活性，而不影响 IgG 型抗体的活性，所以经过 DTT 处理后的血清，反定型检测结果为 B+，抗筛结果为阴性。能够明确地判断出患者血清中含有 IgM 性质抗 M 抗体，配血时有目的的寻找无 M 抗原的血液与其进行配合。

抗-M 抗体是 MN 血型系统中常见的抗体，是一种不规则抗体，可以引起血型定型困难以及交叉配血不合。通过试验证明血型的正反定型检测以及不规则抗体的筛查试验是十分必要的，能够及时发现问题以及确保安全输血，可以有效避免和减少输血不良反应的发生。

PU-2752

多发性骨髓瘤引起 ABO 血型正反定型不符一例

张正康
东南大学附属中大医院

男性，64 岁，因“确诊多发性骨髓瘤 1 年余，再治疗”入院，查血常规：血红蛋白:72g/L↓;查 M 蛋白分析:检出 λ 型 IgG 单克隆免疫球蛋白抗体。体液免疫特定蛋白检测：免疫球蛋白

G:49.6g/L↑;LAM 轻链:16.8g/L↑;血清 β2 微球蛋白 8.81g/L↑；24h 尿蛋白:1.271g/24h↑;肾脏穿刺病理考虑淀粉样变性；骨髓穿刺示：骨髓中浆细胞占 30%；FISH：13q-（22%）、+1q21（39%）。患者血样经微注凝胶卡式法检测结果为正定型为 A+，反定型为 AB+。同一份样本经抗体增强法检测结果与 3 个单人份的 B 细胞反应结果分别为 1+，2+，2+；与 3 个单人份的 O 细胞反应结果均为阴性。

该患者正定型检测结果为 A 型，红细胞上含有 A 抗原；反定型检测结果为 AB 型，多发性骨髓瘤患者由于蛋白异常导致抗体减弱是非常常见的。通过抗体增强完以后发现与 3 个 B 细胞均发生较弱阳性反应，与 3 个 O 细胞均发生阴性反应，可以确定该患者为 A 型伴抗 B 减弱。多发性骨髓瘤患者血型鉴定异常的原因主要是抗体减弱，其次是抗体缺失、白球比倒置、抗原减弱。不同原因导致的血型异常需要结合患者病史和实验室检查结果，采用不同的实验方法，必要时采用分子生物学技术辅助鉴定血型，确保输血安全。

PU-2753

新型血清生物标志物对急性心肌梗死早期诊断的意义

于颖
哈尔滨医科大学附属第一医院

The blood transcriptome reflects the status of the disease, and characteristic molecular markers provide a new direction for gene expression before acute coronary events. Our goal is to identify molecular markers of acute coronary syndrome (ACS) based on blood transcriptome, and to identify new serum biomarkers of early myocardial infarction. Many noncoding RNAs are differentially expressed in patients with acute coronary syndrome (ACS), but the expression of miR-30a-5p in ACS patients has not been studied accurately. The goal for our current study is to investigate whether the miR-30a-5p with clinical indicators would have the potential to predict the occurrence of ACS.

基于岗位能力评估开展住院医师分层递进培训实践探索

羊建、田甜、岳菲、陈吉惠、任平、陈卉
雅安市人民医院

为探索提高住院医师规范化培训质量的方法，在一个基层国家住院医师规范化培训基地医院，按照住院医师规范化培训大纲要求，开展基于住院医师岗位能力评估进行临床工作权限授权的分层递进培训实践探索，希望为住院医师分层递进培训标准制定积累经验。

PU-2755

抗 TNF-a 抗体通过抑制下丘脑中 Erk 的活化削弱蛛网膜下腔出血诱导的神经元凋亡

马玲[1]、张旭华[1]、毛海婷[2]
1. 山东大学第二医院
2. 山东大学

目的 蛛网膜下腔出血能够诱导多个脑区出血神经元凋亡，比如：皮层和海马。极少有关于蛛网膜下腔出血后下丘脑中凋亡的研究。虽然已有大量关于蛛网膜下腔出血后抗凋亡的研究，比如 TNF-a

抗体，然而其分子机制目前仍不明确。因此，我们的目的是探讨蛛网膜下腔出血能否诱导下丘脑神经元凋亡及其作用机制。
材料方法 大鼠蛛网膜下腔出血造模前 30min 前，左侧侧脑室微量注射 TNF-a 抗体或 Erk 抑制剂 U0126。RT-PCR、WB 和免疫组化用于检测 caspase-3,bax,bcl-2,p-Erk 和 Erk。最终，矿场实验用于检测大鼠焦虑样行为。
结果 蛛网膜下腔出血后下丘脑中 caspase-3、bax 和 bcl-2 表达升高，提示蛛网膜下腔出血诱导该脑区发生凋亡。有趣的是，我们发现微量注射抗 TNF-a 抗体能选择性的阻断 bax 的升高，提示抗 TNF-a 抗体能够抑制蛛网膜下腔出血导致的下丘脑中的凋亡。另外，我们发现 Erk 的活化对于蛛网膜下腔出血后的凋亡是必须的，且抗 TNF-a 抗体能够通过抑制 Erk 磷酸化抑制神经元凋亡。最后，我们的研究表明，抗 TNF-a 抗体能够改善焦虑样行为。
结论 我们的研究表明抗 TNF-a 抗体能够通过抑制 Erk 磷酸化阻断蛛网膜下腔出血后诱导的下丘脑神经元凋亡。

PU-2756

CTA 记忆消退诱导岛叶中 BDNF 分泌并抑制神经元凋亡

马玲、张旭华、毛海婷
山东大学第二医院

目的 记忆消退与多种精神疾病密切相关。BDNF 合成和分泌通过激活 TrkB 参与多种记忆的过程。然而，不同脑区 BDNF 分泌和合成早记忆消退中的作用目前仍不明确。本项研究的目的是探讨岛叶中 BDNF 分泌和合成在 CTA 记忆消退中的作用。
材料方法 大鼠经过 CTA 消退训练。CTA 消退测试完毕后立即在大鼠岛叶微量注射 BDNF 抗体或等体积溶剂。RT-PCR 和原位杂交用于检测 BDNF、NGF 和 NT4mRNA 的变化。BDNF Elians 用于检测 BDNF 蛋白的变化。另外，免疫沉淀和 WB 用于检测磷酸化 TrkB 和 TrkB。WB 用于检测 c-Fos,总 Erk、磷酸化 Erk 和 caspase-3。
结果 我们发现阻断岛叶中 BDNF 信号通路能够抑制 CTA 消退，表明岛叶中 BDNF 信号通路参与 CTA 消退。岛叶中 c-fos 表达增加提示 CTA 消退能够激活神经元。另外，CTA 消退能够诱导岛叶中 BDNF 基因和蛋白表达水平升高。同时，我们还发现在 BDNF 表达增加前，磷酸化 TrkB 升高，提示 CTA 消退能够诱导岛叶中活性依赖的 BDNF 分泌增加。最后，我们发现 CTA 消退后导致岛叶中 caspase-3 表达降低。
结论 CTA 消退诱导岛叶中 BDNF 分泌及合成，并抑制神经元凋亡。

PU-2757

应用 PDCA 管理方法降低动脉血气标本不合格率

孟静
山东大学第二医院

目的 加强临床沟通，降低动脉血气标本采集不合格率。
方法 利用 PDCA 全面质量管理工具，以实验室信息系统统计的质量指标为依据，分析比较 PDCA 实施前后住院患者动脉血气标本采集合格率的变化。
结果 运用 PDCA 管理工具进行人机料法环各方面的改进后，住院患者动脉血气标本采集不合格率显著下降，由原来的 12.0%降低至 2.1%，差异有统计学意义（P<0.05）。建立了《动脉血标本采集流程》规范并通知到临床，进一步完善了检验医学中心《标本采集临床检验手册》。
结论 应用 PDCA 的管理理念和方法可持续改善检验服务临床的质量，提高临床满意度，更好地保障患者安全。

PU-2758

联合检测血清自身抗体和 IL-17 在类风湿关节炎中的临床意义

贾颖
泰安市中心医院

目的 类风湿关节炎是一种慢性系统性自身免疫炎症性疾病，主要引起软骨和骨组织的不可逆性破坏，造成患者运动功能丧失和生活质量下降。RA 患者血清中存在多种与其发病机制相关的自身抗原和抗体，其中，类风湿因子、抗环瓜氨酸肽抗体和葡萄糖-6-磷酸异构酶已应用于临床检测，但文献报道其诊断 RA 的敏感性或特异性不尽一致。近期研究发现，由 CD4+ T 细胞产生的前炎症因子白细胞介素-17 与 RA 的病情密切相关。本研究通过检测 RF、抗 CCP 抗体、GPI 和 IL-17 在 RA 患者中的表达情况，研究 RF、抗 CCP 抗体、GPI 联合检测以及 IL-17 的辅助检测对类风湿关节炎的诊断价值和临床意义。
方法 收集 40 例类风湿关节炎患者（RA 组），40 例其他自身免疫性疾病患者（非 RA 组）以及 20 例健康体检者（正常对照组）血清，采用速率散射比浊法检测血清 RF，采用酶联免疫吸附法（ELISA）检测血清抗 CCP 抗体、GPI 和 IL-17，并进行相关统计分析。
结果 RF、抗 CCP 抗体和 GPI 在 RA 组血清中的阳性率明显高于非 RA 组和正常对照组($P<0.01$)；RF 诊断 RA 的敏感性高于抗 CCP 抗体和 GPI，而抗 CCP 抗体和 GPI 对 RA 的特异性显著高于 RF；RF、抗 CCP 抗体和 GPI 两两联合检测或三者联合检测其敏感性和特异性均明显增高；RA 组血清 IL-17 水平高于非 RA 组($P>0.05$)和正常对照组($P<0.05$)，且与 RF 呈正相关($P<0.05$)，与抗 CCP 抗体和 GPI 无明显的相关性($P>0.05$)。
结论 RF、抗 CCP 抗体、GPI 和 IL-17 的联合检测可显著提高 RA 的临床诊断和病情治疗监测。

县级医院检验科检验结果质量控制能力要求

公衍文
山东大学第二医院

目的 探讨建立适合县级医院检验科检验结果质量控制能力的基本要求和推荐要求。
方法 ISO15189 虽已等同转化为国家标准 GB/T 22576-2018,部分三级医院和二级医院已经通过 ISO15189 医学实验室质量和能力认可，但鉴于我国地域广阔发展很不均衡，多数县级医院并未启动实验室认可工作，我们参照 GB/T 22576-2018 并结合《临床实验室管理办法》、二级综合医院

评审标准（2015 版）、《县医院医疗服务能力基本标准和推荐标准》等，尝试制定适合县级医院检验科检验结果质量控制能力的基本要求和推荐要求。

结果 实验室应在规定条件下进行检验，并采取必要的质量保证措施，包括室内质控、能力验证和/或室间质评, 实验室间比对等方式以保证每一项检验结果的准确性，达到质量控制目标。实验室不应编造结果。包括开展室内质控 基本要求 10 项、推荐要求 9 项；参加室间质评或能力验证计划 基本要求 5 项、推荐要求 5 项；检验结果的可比性 推荐要求 2 项； POCT 项目的质量控制基本要求 2 项、推荐要求 4 项；委托检验的质量保证 基本要求 6 项、推荐要求 3 项；以及检验结果互认的基本要求等。

结论 根据县级医院检验科发展的基本情况，提出适合其能力建设，包括检验结果质量控制能力建设的基本要求和推荐要求，有助于明确其能力建设的重点和发展方向，促进检验质量提高。

PU-2761

67 例噬血细胞淋巴组织细胞增生症患者回顾性临床分析

李林燕
昆明医科大学第一附属医院

目的 回顾性分析 67 例 HLH 患者的临床特点、实验室检查特征、转归及治疗方法。为。。。。。

方法 选取昆明医科大学第一附属医院 2017 年 1 月到 2020 年 12 月住院治疗的 67 例 HLH 患者，回顾性分析 67 例患者的临床特点、实验室检查特征、转归及治疗方法。

结果 67 例 HLH 患者均有发热，超过 40℃总的有 22 例（占 32.83%），持续时间中位数 14 天；肝、脾大 37 例（55.22%），血细胞两系减少 48 例（占 71.64%），其中全血减少 23 例(占 47.91%)；高甘油三脂血症或低纤维蛋原血症 25 例（占 37.31%）；骨髓检查发生嗜血现象 57 例（占 85.1%）；血清铁蛋白均高于 500ug/L,其中高于 10000ug/L 者 13 例（占 19.4%）；NK 细胞活性降低 16/23（占 69.57）；可溶性 IL-2 受体（scd25）升高 9/11（占 81.82%）。研究该 67 例 HLH 患者的实验室的 ESR、NSE、ACE、CRP、PCT 的均值或中位数均高于参考范围，其中 ESR、CRP、PCT 的中位数或均值明显高于参考范围；Ca 的中位数低于参考范围 。住院期间死亡 3 例，可能死于多器官功能衰竭、全身炎症反应综合征及严重脓毒血症。EBV 病毒感染相关 HLH 与其他相关 HLH 的临床特征比较，两组在 FIB（P=0.027）、CRP(P=0.009)的差异有统计学意义（P 值<0.05）,EBV 感染相关 HLH 更易发生低纤维蛋白原血症；而其他相关 HLH 更易发生感染。

结论 患者出现不明原因的发热，肝脾肿大并伴有实验室检查血细胞两系或两系以上的血细胞减少、低蛋白血症或高甘油三酯血症，血清铁蛋白升高时，应高度重视 HLH，需做相关检查明确诊断，以达到早诊断、早治疗、降低死亡率。

PU-2762

Calponin 3 Promotes Human Vascular Smooth Muscle Cells Migration and Proliferation via Upregulating β-catenin Expression

Changmeng Wu
Laboratory Medicine Center, Nanfang Hospital, Southern Medical University, Guangzhou, Guangdong 510515, China.

AIMS Atherosclerosis is a highly progressive and complex pathophysiological process occurring in large and medium arteries walls that has a poor prognosis. Accumulating evidence indicates that calponin 3 (CNN3) may perform critical roles in the development and progression of stomach cancer, colorectal cancer and epilepsy etc., but the underlying molecular mechanisms remain

largely unknown. The purpose of the present study was to explore the role of CNN3 in atherosclerosis, as well as the underlying mechanism.
METHODS AND RESULTS In this project, immunohistochemistry staining showed that CNN3 was predominantly expressed in atherosclerotic plaque compared with normal arterial intima tissue. In addition, the level of CNN3 in serum of patients with coronary artery heart disease (CHD) were detected by enzyme linked immunosorbent assay (ELISA), these results shown that a significant rise in serum level of CNN3 in CHD patients compared with healthy people, and the correlation analysis between the level of CNN3 and the degree of coronary stenosis in patients with CHD was conducted. Functionally, a transwell, wound healing assay, 5-ethynyl-2′-deoxyuridine incorporation assay (EdU), and a cell counting kit-8 assay (CCK8) were performed to determine cell migration and proliferation in VSMCs, respectively. Overexpression of CNN3 significantly upregulated migration-related molecules expression of MMP3, MMP7 and MMP10, and promoted proliferation-related molecules expression of CDK4 and CDK6, downregulated P21, P16 and P53 at the level of protein, assessed by western blot analyses, respectively. Mechanistically, immunofluorescent staining and western blotting of cytoplasmic and nuclear extracts found that in VSMCs overexpression CNN3, β-catenin expression increased in the cytoplasmic and nuclear, which may possibly be associated with CNN3 targeting β-catenin. Furthermore, knockdown of β-catenin expression substantially attenuates CNN3-induced increasing of CDK4, CDK6, MMP3, MMP7 and MMP10 expression, and inhibition of P16, P21 and P53 expression.
CONCLUSIONS Our results revealed that CNN3 was dramatically upregulated in atherosclerotic plaque compared with normal arterial intima tissue, and highly expressed in serum of patients with CHD. CNN3 is thought to play pro-atherosclerosis roles in activation of β-catenin signaling molecules related to the migration and proliferation of VSMCs. Thus, therapeutic interventions targeting the CNN3/β-catenin signaling pathway may provide a new approach for anti-atherosclerosis treatment.

PU-2763

医院内疑似丙型肝炎病毒感染患者管理之检验科的贡献

公衍文
山东大学第二医院

目的 发挥抗-HCV 抗体筛选试验价值，提高丙型肝炎病毒感染患者检出率。
方法 丙型肝炎病毒（HCV）在国内的感染率约为 0.7%，早期发现、早期治疗可有效避免发展为肝硬化甚至肝癌。如何让更多的疑似丙肝病毒感染患者（抗-HCV 阳性）得到确诊是医院内疑似丙型肝炎病毒感染患者管理的重要环节。为此，我们统计了 2021 年 3、4 月住院和门诊患者抗-HCV 抗体检测情况，以及抗体阳性人群丙肝病毒 RNA 检测情况。以期了解临床和患者对 HCV 相关检测的了解情况，提出提高 HCV 感染患者确诊率的管理措施。
结果 2021.3-4 月检测抗 HCV-Ab 的患者达 6922 人，抗 HCV-Ab 阳性者 93 人（1.34%），但进一步做丙肝病毒 RNA 检测的只有 57 人（占 61.29%）。为此，实验室在报告单上增加备注：抗-HCV S/CO 介于 1-5 之间的，备注“需持续关注，必要时做丙肝病毒 RNA 检测并请肝病科会诊”；S/CO>5 的，备注“建议做丙肝病毒 RNA 检测并请肝病科会诊”；丙肝病毒 RNA 检测阳性的非肝病科患者，备注“建议请肝病科会诊”。
结论 非感染科或肝病科医生对 HCV 感染筛查和确诊试验了解不够，对 HCV 感染患者早期发现、早期治疗的价值和方法认识不足，有必要完善管理流程，提高其检出率和治愈率。

PU-2764

检验科不合格标本的原因分析和改进措施有效性探讨

孙昌瑞
四川省医学科学院·四川省人民医院

目的 分析四川省人民医院检验科标本不合格的原因，探讨针对这些导致标本不合格的原因进行的改进措施的有效性，为标本采集质量的持续提高提供策略支持，保障分析前质量控制。
方法 统计四川省人民医院检验科 2018 年 9 月-2020 年 12 月住院患者不合格标本数量并进行原因分析；2021 年 1 月-2021 年 6 月针对不同原因及重点高发科室采取干预措施，通过统计不合格标本发生率来分析干预措施的有效性，制订有效的改进措施。
结果 四川省人民医院住院患者标本不合格的原因主要为临床工作人员标本采集操作不规范、临床新员工（特别是参加住院医师规范化培训的学员）未经过有效采血培训、部分临床工作人员责任心不强及未有效告知患者标本采集注意事项，不合格原因主要有抗凝标本凝集、标本溶血、标本量不足、采集容器错误、送检时机不对等；不合格标本高发科室主要为 ICU、EICU、心内科、儿科、新生儿科；采取干预措施后，不合格标本总体发生率都有下降趋势，重点干预科室不合格标本发生率大部分有下降趋势。
结论 检验科应建立有效的与临床医护人员的沟通途径，保证及时、密切与临床医护人员、标本运输人员进行沟通，实施质量改进方案，对关键环节进行有针对性的持续改进，从而使标本采集、标本运输的质量得到有效指导和监督，使检验科不合格标本出现的概率降低，使分析前的质量得到有效控制。检验科应建立完善的检验前质量管理体系，管理体系应包含分析前质量指标、评价方法及标准、实施方案等，发现可以改进的环节及时采取有效的干预措施，降低不合格标本的发生率，从而提高检验质量。

PU-2765

原发性肝癌患者血清 25-羟基维生素 D 及总胆汁酸水平调查

肖玲[1]、徐玉兵[1]、张蜀豫[2]、程雅婷[3]、黎春宝[1]
1. 上海金域医学检验所有限公司
2. 东方肝胆外科医院肝外四科
3. 广州金域医学检验中心有限公司

目的 调查原发性肝癌患者血清 25-羟基维生素 D(25OHD)水平、总胆汁酸(TBA)水平。
方法 选取东方肝胆外科医院就诊的 204 例肝细胞癌患者（HCC 组）和 167 例胆管细胞癌患者（ICC 组）共 371 例为研究对象组，371 例健康体检者为对照组，采用高效液相色谱-串联质谱法检测血清 25OHD 水平， 采用酶循环法检测血清 TBA 水平，对肝癌患者与健康体检人群的维生素 D 营养状况和胆汁酸代谢状况进行比较分析。
结果 HCC 组和 ICC 组血清 25OHD 水平均低于对照组， 差异有统计学意义（P<0.05），HCC 组和 ICC 组血清 25OHD 水平比较，差异无统计学意义（P >0.05）； 从维生素 D 营养状况来看，HCC 组严重缺乏率最高, 达 19.12%，ICC 组 15.57%，均显著高于对照组 4.04%，组间差异有统计学意义（$\chi2$=51.223, P<0.05）；HCC 组和 ICC 组血清 TBA 水平均高于对照组，差异有统计学意义（P<0.05），HCC 组和 ICC 组血清 TBA 水平比较，差异有统计学意义（P<0.05）；HCC 组和 ICC 组血清 TBA 异常率显著高于对照组，组间差异有统计学意义（$\chi2$=14.190, P<0.05）。
结论 肝癌患者血清维生素 D 严重缺乏率显著高于健康体检人群，血清 TBA 异常率显著高于健康体检人群。

PU-2766

妊娠期高血压疾病病因学的研究进展

宁晓姝、杨晓东、杨华
三峡大学附属仁和医院

妊娠期高血压疾病(HDCP)是妊娠与血压升高并存的一组疾病，发生率为 5%~12%，包括妊娠期高血压、子痫前期、子痫、以及慢性高血压并发子痫前期。 迄今为止其病因不明，因该病在胎盘娩出后常很快缓解或可治愈，有学者称之为“胎盘病”， 但很多学者认为是由母体，胎盘，胎儿等众多因素引起。 找出相关的病因和高危因素， 加强产前筛查，及时预防和对症处理，可减少并发症的发生。以下对近年对妊娠高血压疾病的病因的探讨和研究进行总结和综述。

PU-2767

采用行业标准 WS/T224-2018 评价四种类型真空采血管

张艳
新疆生产建设兵团医院

目的 评价本院四种类型采血管的性能指标，确保采血管质量的可靠。
方法 参照中华人民共和国卫生行业标准 WS/T224-2018 对我院使用的 EDTA-K2 抗凝采血管（批号 20180401）、3.2%柠檬酸钠抗凝采血管（批号 20180821）、3.8%柠檬酸钠抗凝采血管（批号 1811327）、分离胶真空采血管（批号 1806336）的外观、抽吸量、管体强度、纤维蛋白挂壁、溶血、抗凝管凝血、无菌测试及结果可比性进行评价。
结果 四种类型采血管外观均为透明、无异物、无变形或破损、标识清楚、管盖无脱落，分离胶采血管内的分离胶胶体呈 凝胶状。EDTA-K2 抗凝采血管、3.2%柠檬酸钠抗凝采血管和 3.8%柠檬酸钠抗凝采血管的抽吸量与公称液体容量的相对偏差分别为-2.5%、-2.0%和 8.7%，均符合要求。四种类型采血管充装水离心后，外壁均未破裂且无液体渗漏，管体强度符合要求；采血离心后均未发生溶血现象。分离胶真空采血管采血离心后无纤维蛋白挂壁情况。三种类型抗凝采血管采血混匀后，显微镜下均未出现凝块。将含有供试液的四种类型采血管放置生化培养箱 48h 后，均无细菌生长。分离胶真空采血管不同项目比对结果的相对偏倚符合分析质量指标的要求。
结论 四种类型采血管的性能良好，可以满足临床血液标本采集、转运、分析及储存的要求。

PU-2768

急诊留观病房老年患者血培养病原菌分布及耐药性和影响因素分析

徐宁
云南省第一人民医院

目的 分析患者感染的多重耐药菌的来源，并对培养阳性和阴性患者进行临床和实验室特征比较，并同时分析特殊用药史及存在基础疾病是否是血流感染的独立危险因素。并对细菌耐药性进行分析，为急诊科有效控制老年患者血流感染的预防和经验治疗提供实验室依据。
方法 回顾性分析 2020 年 1 月—2020 年 12 月云南省第一人民医院急诊科年龄≥65 岁急诊科患者血培养数据及其临床资料，应用 WHONET 5.6 软件对数据进行统计。
结果 不重复患者的 2890 份血标本检出病原菌 456 株，其中革兰阴性菌 58.99％、革兰阳性菌 38.82％、真菌分别占 2.19％。居前五位的病原菌依次为大肠埃希菌、肺炎克雷伯菌、表皮葡萄球菌、鲍曼不动杆菌、金黄色葡萄球菌。革兰阴性菌患者 28 天病死率(46．4％VS．22．8％，

1=0．018)和住院病死率(53．6％VS．26．6％，P=0．009)均高于革兰阳性菌患者。大肠埃希菌、肺炎克雷伯菌对亚胺培南的耐药率分别为 0、11.32％，对阿米卡星的耐药率 ＜5％；鲍曼不动杆菌对亚胺培南的耐药率达 82.93％，对大多数抗生素高度耐药。耐甲氧西林金黄色葡萄球菌（MRSA）检出率为 43.78％，耐甲氧西林凝固酶阴性葡萄球菌（MRCNS）检出率高于 MRSA，屎肠球菌对万古霉素和利奈唑胺的耐药率分别为 14.29％和 4.76％。

结论 老年患者血培养病原菌以革兰阴性菌为主，耐碳青霉烯肺炎克雷伯菌增长较快，未发现耐替加环素和多粘菌素菌株。未发现对万古霉素和利奈唑胺耐药的葡萄球菌属细菌；鲍曼不动杆菌耐药率最高，临床应给予足够的重视，采取针对性的预防与控制措施，根据药敏结果合理使用抗生素，减少抗生素压力。

PU-2769

六西格玛理论对血凝项目分析质量的应用

马瑜婷
西安医学院第一附属医院

目的 应用六西格理论对血凝检测项目的质量水平进行评价，加强实验室质量评价的科学管理。

方法 收集 2019 年实验室室内质控的变异系数（CV）作为不精密度，采用 2019 年国家卫生部临床检验中心室间质量评价回馈数据中的偏移（Bias ）;美国临床实验室改进修正案（the Clinical Laboratory Improvement Amendment of 1988， CLIA’88）制定的允许总误差（TEa）为标准。根据公式 σ=(TEa- |Bias|)/CV，QGI=Bais/（1.5×CV）计算测凝血酶原时间 （PT),部分凝血酶原时间（APTT),凝血酶时间（TT),纤维蛋白原（FIB), 纤维蛋白原降解 产物（FDP)与 D-二聚体（DD)的 σ 值和质量目标指数(QGI)。为实验室的检测能力的改进提供方案。

结果 APTT 的 σ 值大于 6，达到世界一流水平；PT 为优秀；DD 为良好；FIB 和 FDP 为临界；而 TT 欠佳。根据质量目标指数结果显示：FIB 与 PT 优先需要改进的方向为精密度；FDP 为正确度；TT 和 DD 两个方向均需改进。

结论 六西格玛理论有利于临床实验室血凝项目质量控制的评价，提高了实验室质量评价的科学管理。

PU-2770

单人份心肌高敏肌钙蛋白 I 性能评价

黄睿
新疆维吾尔自治区人民医院

目的 对心肌肌钙蛋白 I 进行试剂性能验证评价。

方法 参考 CNAS-CL02 ：《医学实验室质量和能力认可准则》（ISO 15189:2012）对医学实验室检测系统性能评价的相关要求对医学实验室检测系统性能评价的相关要求,对 Perkinelmer(以下简称 PKD)公司生产的 cTnI 试剂，进行精密度，第 99 百分位，正准度（方法学比对），检测范围，以及同源血相关性进行验证与评价。

结果 PKD 生产的 cTnI 试剂的精密度，正确度，检测范围，第 99 百分位的建立，以及同源性相关性均符合说明书申明要求。两个浓度的商品质控物的重复性和中间精密度分别是 1.51%和 2.71%、1.65%和 2.41%；第 99 百分位 cTnI 值男性为 0.027ng/ml,女性为 0.024ng/ml，健康人群为 0.0256ng/ml，与说明书申明的 0.03ng/ml 比较接近；通过 Beckman DXI800 试剂的方法学比对，两种试剂盒检测相关性分析 r=0.9559，一致性检验阴性符合率 99.17%，阳性符合率 97%，总符合率 98.66%；EDTA 血浆结果与肝素锂血浆相关性 r=0.999， EDTA 血浆结果与 EDTA 全血相关性 r=0.998 。

结论 PKD 公司生产的 cTnI 的主要分析性能验证结果与厂商说明书提供的分析性能一致，适合床旁辅助诊断以及连续性跟踪并对早期诊断具有重大的意义。

PU-2771

微生物检验不合格样本原因及质量改进对策回顾性分析

苏迎迎
东南大学附属中大医院

目的 分析微生物检验中存在的不合格样本原因并探讨改进对策。
方法 使用 LIS 系统统计 2020 年 1 月至 2020 年 12 月微生物实验室核收的不合格样本的资料，统计不合格样本数量并对不合格原因进行分析。
结果 据统计 2020 年 1 月至 2020 年 12 月微生物实验室共核收不合格样本 756 例。不合格原因主要有医嘱原因和标本原因。医嘱原因包括医嘱取消（21%）和医嘱错误（30%）等，标本原因包括患者未遵循检验规定采样导致标本污染(17%)、采样容器错误（8%），此外收到未完成采样的空管（2%）。
讨论 本文中医嘱原因是影响微生物检验样本及时检验的一大原因，其次患者未遵循检验规定、采样容器不合格和标本采集部位、时间错误等均是微生物检验不合格标本存在的主要因素。微生物标本的检验合格率可直接影响患者的诊断及治疗方案，检验样本质量改进至关重要。因此加强临床检验人员检验能力的培养，降低检验过程失误概率，以提高临床检验准确性。加强临床检验人员对临床样本质量监督，定期统计并反馈临床；加强临床与检验科的交流，使临床及时准确了解检验项目相关信息。规范样本留取运送及检验相关步骤，逐步降低样本不合格率。

PU-2772

新冠疫苗犹豫及影响因素和应对策略

王娜、张利霞
内蒙古科技大学包头医学院第一附属医院

目的 疫苗接种是预防传染病最经济有效的措施，但是近年来世界范围内拒绝或延迟接种现象凸显，世界卫生组织已将疫苗犹豫列为“2019 年全球卫生面临的十项威胁之一”。新冠疫苗犹豫可能成为全世界尽快彻底控制疫情的最大绊脚石之一，必须引起高度关注，鉴于此，本文将疫苗犹豫的现状、影响因素及应对策略进行综述。
方法 1.通过文献查阅了解国内外新冠疫苗的犹豫现状及原因。2.通过参与疫苗犹豫调查问卷的分析总结，了解新冠疫苗的犹豫现状及原因，探讨解决策略。
结果 1.、新冠疫苗犹豫现状 Jeffrey V.Lazarus 教授报道的对 19 个国家 13426 名受访者中关于中国新冠疫苗接种意愿是 88.6%[31]， Yu lan Lin 等[32]在线调查]我国全国范围内的新冠肺炎疫苗接种意愿 83.5%，说明通过接种新冠疫苗来预防新冠病毒的感染是民众迫切希望的，然而仍有部分人存在犹豫现象。文献表明，目前不同的国家对新冠疫苗的接种意愿是由差别的，Kimberly 教授研究的美国新冠疫苗接种意愿 57.6%[33]。2、引起新冠疫苗犹豫的因素有：疫苗的安全性和有效性，对感染风险的轻视，以及疫苗接种的便利性和可及性等。3.解决策略：加强媒体沟通，宣传接种的必要性；调动医务人员积极性，提升接种服务质量；加强监管和监测能力，保证民众对疫苗的科学认知。
结论 疫苗犹豫是一个在特定背景下的复杂问题，会因为疫苗种类、时间、地点的不同而出现变化。全球免疫行动的成功必须有赖于实现和保持高的疫苗接种率。因此，“疫苗犹豫”问题应该作为国家免疫规划的优先事项得到关注和应对。

PU-2773

急性缺血性脑卒中患者血清同型半胱氨酸及血脂水平的分析

薛云松
云南大学附属医院

目的 通过观察急性缺血性脑卒中患者血清 HCY 及血脂水平的变化，探讨急性缺血性脑卒中与血清同型半胱氨酸及血脂水平之间的关系。
方法 根据急性缺血性脑卒中诊断标准，选取我院 2020 年 9 月至 2021 年 2 月收治的急性缺血性脑卒中患者 85 例为对象，将其归入治疗组，再随机选择同一时期在我院进行健康体检的 20 例正常人群作为对照组，用雅培 C16000 全自动生化分析仪和配套试剂对两组人群进行 HCY 和血脂水平的检测，包括血清总胆固醇(TC)、甘油三酯(TG)、高密度脂蛋白胆固醇(HDL-C)、低密度脂蛋白胆固醇(LDL-C)以及 HCY，所有受试者测定前均未服用影响同型半胱氨酸水平的药物。清晨空腹采集肘静脉血，2h 内分离血清待测。TG 的测定采用甘油磷酸氧化酶法，TC 的测定采用胆固醇氧化酶法，HDL-C 和 LDL-C 采用直接法测定，hcy 采用循环酶法法进行检测，并对检测结果采用 SPSS 19.0 软件对数据进行统计分析，数据资料以均数±标准差(ˉx±s)表示，组间的比较采用成组设计的两样本 t 检验，若 P＜0.05，表示对比差异显著，有统计学意义，p＞0.05 表示差异不显著，无统计学意义。
结果 治疗组患者的血清 HCY，血清 LDL 以及血清 TG 都明显高于对照组，血清 HDL 明显低于对照组，差异有统计学意义,P＜0.05。血清 TC 之间无明显差异。
结论 血脂和 HCY 水平升高与脑卒中有明显的关系，有效控制血脂和血清 HCY 水平，对降低脑卒中发生率具有显著的作用。对于缺血性脑卒中的预防，高脂血症病人应积极采取药物治疗，以及定期监测 HCY 水平。积极的体格锻炼，合理膳食等都可以干预并降低其发生率。

PU-2774

4 项生化指标测量不确定度评估及允许范围的初步研究

李伟、吴文礼、李燕
新疆生产建设兵团第四师医院

目的 探讨血清钠（Na）、钾（K）、甘油三酯（TG）、总胆固醇（TC）这 4 项生化指标的测量不确定度及其允许范围。
方法 参照中国合格评定国家认可委员会(CNAS) 技术报告《医学实验室－测量不确定度的评定与表达》和 Nordtest 准则，收集新疆生产建设兵团第四师医院检验科临床生化室 4 项生化指标 2020 年 11 月～2020 年 12 月的室内质量控制（Internal Quality Control，IQC）数据和国家卫计委临床检验中心 2019 年～2020 年连续 6 次的室间质量评价（External Quality Assessment，EQA）回报结果，计算实验室内测量复现性和偏倚，作为分量引入测量不确定的计算；基于检测项目 95%CI 导出的允许不精密度和偏倚，计算 4 项指标测量不确定度及其允许范围；并使用质量指标等级模式进行评估。
结果 Na、K、TC 和 TG 这 4 项生化指标的测量不确定度分别为 3.32%、4.97%、7.65%、9.28%，允许不确定度分别为 2.72%、6.08%、7.66%、9.84%。其中 K、TC 和 TG 的测量不确定度达到质量指标等级模式 2 的要求，Na 的测量不确定度达到等级模式 3 的要求，Na、K 的允许不确定度达到质量指标等级模式 3 的要求，TC、TG 的允许不确定度达到质量指标等级模式 2 的要求。
结论 4 项指标中，TC 和 TG 测量不确定度和允许范围均达到质量指标等级模式 2 的要求，Na 的测量不确定度和允许范围均未达到质量指标等级模式 2 的要求，K 的测量不确定度达到质量指标等级模式 2 的要求，而允许范围未达到质量指标等级模式 2 的要求。目前实验室 Na 的方法学和操作技术未达到较为严格的质量标准，应与临床医师沟通，了解临床对 Na 的决策需求，由临床和实验室共同研究确定合理的检测允许不确定度范围。

PU-2775

基于标准化的六西格玛理论性能验证图规范实验室尿液定量化学检验项目性能

杨璐、蒋叶
江苏省人民医院（南京医科大学第一附属医院）

目的 探讨采取基于标准化的六西格玛理论性能验证图规范实验室尿液定量化学检验项目性能的可行性。
方法（1）允许总误差的计算：参照卫生部室间质评的评价标准作为所有尿液定量化学项目的允许总误差。（2）不精密度数值描述：收集 2016 年 1-12 月江苏省人民医院生化专业组尿液定量分析所有月度 CV 值，取其平均值完成计算。（3）偏倚数值描述：收集 2016 年参加卫生部尿液定量化学室间质评的 5 个偏倚的绝对值的平均值进行计算。按照公式 σ ＝ （TEa-丨Bias丨）/ CV，计算每个检测项目的 σ 水平。
结果 尿钠、尿氯、尿糖、尿尿素、尿肌酐、尿尿酸、尿蛋白、尿钙检测水平评价为世界一流，尿镁评价为优秀，尿磷、尿钾、尿淀粉酶评价为欠佳。
结论 实验室可以采用基于标准化的六西格玛理论性能验证图来规范尿液定量化学检验项目性能，提高尿液定量化学检验项目的准确性。

PU-2776

新型冠状病毒核酸检测经验与思考

刘婕
山东大学第二医院

目的 总结公立医院日常及大规模新型冠状病毒核酸检测的经验，探究新型冠状病毒核酸检测的优化与发展。
方法 结合日常及大规模新型冠状病毒核酸检测工作，解读政策法规，复习相关文献，针对在新型冠状病毒核酸检测过程中遇到的问题，对新型冠状病毒检测要点方面进行分析，对其优化与发展进行探讨。
结果 在常态化疫情防控的形势下，生物安全及质量控制为新型冠状病毒核酸检测工作的重中之重，且作为新型冠状病毒核酸检测基地，需做好大规模新型冠状病毒核酸检测的预案及各方面的储备。
结论 总结新型冠状病毒核酸检测经验，思考优化工作流程，保障新型冠状病毒核酸日常检测的安全性、准确性，提升了公立医院应对突发公共卫生事件的能力。

PU-2777

探讨凝血检查对非小细胞肺癌疗效监测的价值

左娅薇
天津医科大学肿瘤医院

目的 探讨血浆中 ATIII、FDP 和 D-二聚体对非小细胞肺癌诊断和对手术疗效、病程进展、化疗前后效果观察和预后判断的临床应用价值。
方法 回顾性分析 108 例非小细胞肺癌患者手术前后和化疗前后血浆中 ATIII、FDP 和 D-二聚体的变化水平，并与 30 例肺良性肿瘤患者和 30 例健康体检者进行比较。
结果 非小细胞肺癌患者手术前血浆中 FDP 和 D-二聚体含量明显高于肺良性肿瘤患者（P<0.05）和健康对照组（P<0.05），ATIII 水平低于肺良性肿瘤患者（P<0.05）和健康对照组（P<0.05），

术后 FDP 和 D-二聚体水平明显下降，但仍高于肺良性肿瘤患者（P<0.05）和健康对照组（P<0.05），ATIII 水平有所上升，仍低于肺良性肿瘤患者（P<0.05）和健康对照组（P<0.05），肺良性肿瘤患者和健康对照组血浆中 ATIII、FDP 和 D-二聚体水平差异没有统计学意义（P>0.05），患者化疗前后血浆中 ATIII、FDP 和 D-二聚体的水平差异有统计学意义（P<0.05）。
结论 本研究证明了血浆中 ATIII、FDP 和 D-二聚体联合检测在非小细胞肺癌诊断和手术治疗中的意义及其对手术疗效、病程进展、化疗前后具有较高的临床应用价值，其变化对肺癌的转移及疾病的预后有重要意义。

PU-2778

探讨 PDCA 循环对检验报告及时率的效果

宋煜中
山东第一医科大学第一附属医院（山东省千佛山医院）

目的 PDCA 循环法是程序化、标准化的一种工作方式，是一种全面有效的质量管理方法，由美国戴明博士提出的 PDCA 循环法，广泛应用于质量管理。通过对各类检验项目报告时间的统计分析，了解检验的工作现状，分析其报告不及时的原因，为检验的优化提供依据。
方法 利用 LIS 功能将运用 PDCA 循环前后的各类检验项目的原始数据导出，统计在规定的时限内完成的检验报告数（及时率），并比较分析记录检验报告超时的原因。
结果 运用 PDCA 循环对检验报告超时原因进行分析并持续改进，检验报告及时率从 92.85%提高至 97.65%。
结论 在检验过程中运用 PDCA 循环可有效提高工作效率，改善检验人员的技能操作能力和仪器保养能力，最终达到提高检验报告及时率的目的。

PU-2779

PLD1 蛋白在胰腺癌中的临床应用

赵然
天津医科大学肿瘤医院

目的 探讨磷脂酶 D1 在胰腺癌中的表达，结合相关病例进行分析明确磷脂酶 D1 蛋白分子的表达水平与胰腺癌临床病理特征之间的相互关系，为胰腺癌的诊断、患者的治疗及预后提供新的思路。
方法 采用生物信息学的方法分析 PLD1 在胰腺癌组织及癌旁组织中的表达水平，并分析 PLD1 表达水平与胰腺癌患者的生存率之间的关系；回顾性分析 68 例接受手术治疗的胰腺癌患者的临床病理资料，采用免疫组化染色法分析 PLD1 的表达情况与胰腺肿瘤的发展进程之间的关系，应用 c2 检验分析 PLD1 表达水平与胰腺肿瘤患者临床病理特征之间的关系；肿瘤标志物糖类抗原 CA199、CA242 以及癌胚抗原 CEA 采用电化学发光方法进行检测，利用仪器 CobasE801 电化学发光仪进行分析，并使用相应配套的检测试剂盒，严格依照使用说明书进行检测，检测前严格确保仪器质控数据良好。
结果 生物信息学分析结果显示 PLD1 在胰腺癌组织中存在高表达，并且与患者总生存率和无病生存率相关；免疫组化结果表明正常的组织中 PLD1 不表达，在癌前病变组织中有少许的 PLD1 表达，在胰腺癌组织细胞 PLD1 呈现强阳性表达；PLD1 在胰腺癌组织中的高表达与肿瘤的分化程度、血清标志物 CA199、CA242 相关（P<0.05），而与年龄、性别、肿瘤大小、肿瘤的复发转移、血清标志物 CEA 无关（P>0.05）。
结论 PLD1 参与了胰腺癌的发生发展进程，未来可作为胰腺癌新型分子标志物参与疾病诊断及预后判断。

PU-2780

慢性肾脏病患者的甲状腺功能和血脂水平分析

张伟
江苏省人民医院（南京医科大学第一附属医院）

目的 探讨慢性肾脏疾病（CKD）患者的甲状腺功能和血脂状况。
方法 收集 2017 年 1 月至 2017 年 10 月南京医科大学第一附属医院肾脏科 CKD 患者 412 例，分别检测血清尿素（Urea），肌酐（Cr），总胆固醇（TC），甘油三酯（TG），高密度脂蛋白胆固醇（HDL-C），低密度脂蛋白胆固醇（LDL-C），三碘甲状腺原氨酸（FT3），游离甲状腺素（FT4）和促甲状腺素（TSH），计算估算肾小球滤过率（eGFR）。比较 CKD 各期患者的甲状腺功能和血脂水平，对甲状腺功能和血脂血清学指标与肾功能指标 Cr 和 eGFR 进行相关性分析，并对 CKD 各期患者的甲状腺功能和血脂疾病状态进行比较。
结果 CKD 各期间 Urea、Cr、TC、LDL-C、HDL-C、FT4 和 TSH 差异有统计学意义（P＜0.05），FT3 差异无统计学意义（P＞0.05）。FT4、HDL-C 与 Cr 呈负相关，与 eGFR 呈正相关；TSH、TC、LDL-C 与 Cr 呈正相关，与 eGFR 呈负相关。CKD 患者中高胆固醇血症，高甘油三酯血症，低 HDL-C 血症，高 LDL-C 血症发生率分别为 18.93%，21.12%，58.25%，12.14%。有 20.88% 的 CKD 患者存在甲状腺功能紊乱，最常见的是亚临床甲状腺功能减退（14.08%），其次是临床甲状腺功能减退（3.64%）和亚临床甲状腺功能亢进（3.16%）。
结论 甲状腺功能紊乱和血脂异常是 CKD 患者常见的症状，动态监测 CKD 患者的甲状腺功能和血脂的血清学水平可为早期诊断并治疗甲状腺和血脂疾病提供理论依据。

PU-2781

2020 年吉林省 0-6 岁儿童微量元素铁检测结果分析

刘琳
吉林金域医学检验所有限公司

目的 检测吉林省 0-6 岁儿童全血中微量元素铁的含量，了解吉林省 0-6 岁儿童微量元素铁的含量情况，为预防缺铁而导致缺铁性贫血，合理的提供相应的营养指导。
方法 选取 2020 年在吉林金域医学检验所有限公司检测的例全血铁微量元素数据，按照年龄一共分为 3 组:分别为 0-2 岁、2-4 岁及 4-6 岁。采用电感耦合等离子体质谱法来进行微量元素铁的检测，分析各组铁元素的检测结果，并讨论铁元素对儿童生长发育的影响，数据采用 SPSS22.0 统计学软件分析。
结果 1.0-2 岁有 1348 例，2-4 岁有 1550 例，4-6 岁有 395 例，分析不同年龄儿童铁元素缺乏水平，结果发现不同年龄的儿童的铁元素的平均值之间差异有统计学意义(P＜0. 05)。2.不同年龄儿童铁元素缺乏率分别为 0-2 岁 7.93%，2-4 岁 5.10%，4-6 岁 3.30%。
结论 在吉林省 0-6 岁儿童全血铁元素检测中，随着年龄的增长，缺铁情况逐渐降低。缺铁性贫血是最常见的营养性疾病，所以它的预防十分重要，主要是做好卫生宣教工作，使家长认识到，缺铁性贫血对孩子的危害性，以及做好预防工作的重要性。所以我们应该在婴儿时期就要按部就班的添加辅食，要尽早的添加含铁食物，比如红肉类的食物和肝脏，这样补充铁剂的效果是最好的。我们还提倡母乳喂养，并做好喂养指导，还可以在孩子的食品当中加入适量的铁剂加以强化，搭配合理的膳食，合理的补充微量元素，早发现早预防！

PU-2782

2021 年长春地区孕妇维生素 D 检测结果分析

曲丹
吉林金域医学检验所有限公司

目的 检测长春地区孕妇体内 25-羟基维生素 D 含量，为本地区孕妇维生素 D 缺乏情况研究提供理论支持。
方法 选取 2021 年在我公司检测的表现健康的孕妇 2365 例，根据孕期阶段分为三组：孕早期，孕中期，孕晚期，采用蛋白沉淀及液液萃取等方法对样本进行前处理，运用高效液相色谱串联质谱仪，经过三重四极杆对其进行筛选，根据相应子离子在检测器产生的信号强度及所绘制的标准曲线来定量待测物的浓度。
结果 1、在不同孕期阶段孕妇维生素 D 检测中孕早期组 845 人，孕中期组 1257 人，孕晚期组 263 人，分析不同阶段孕妇维生素 D 水平，结果发现不同阶段孕妇维生素 D 的平均值之间差异有统计学意义 (P＜0. 05)；2、不同阶段维生素 D 缺乏率分别为：孕早期 68.17%，孕中期 92.02%，孕晚期 82.10%，分析不同阶段维生素 D 的缺乏率，对比参考标准值，发现不同阶段孕妇维生素 D 的缺乏率差异有统计学意义(P＜0. 05)；3、分析不同阶段孕妇维生素 D 缺乏率差异无统计学意义（P＞0.05）。
结论 在长春地区孕妇维生素 D 检测中，随着孕期的增长，缺维生素 D 的情况有所差异但差异不大。维生素 D 可调节钙的代谢，从而维持骨骼健康。若孕妇存在维生素 D 缺乏情况，则可能造成钙的缺失，也可能影响胎儿健康，危害极大，家长和社会各方面应当对孕妇予以，进行合理膳食，科学补充，监测及维持孕妇体内的维生素 D 处于正常水平，保证其健康生育。

PU-2783

新疆伊犁地区 13437 例孕妇产前传染病 4 项检测结果分析

潘贞贞、吴文礼
新疆生产建设兵团第四师医院

目的 分析新疆伊犁地区不同民族孕妇乙肝、丙肝、梅毒及艾滋病 4 种血源性传染病的感染状况，为有效控制传染病的传播提供科学依据。
方法 以近 5 年在我院门诊进行围产期检查的汉族和维吾尔族孕妇为研究对象，分别检测乙肝五项、丙型肝炎抗体（抗-HCV）、梅毒螺旋体抗体（TP-AB）和人类免疫缺陷病毒抗体（抗-HIV），均采用酶联免疫吸附试验（ELISA）。
结果 共检测 13437 名孕妇，年龄在 16~47 岁之间，本地区汉族和维
吾尔族孕妇 4 种传染病标志物阳性检出率为 6.97%（936/13437）。
乙肝表面抗原（HBsAg）总阳性率为 6.44%（865/13437），其中汉族 HBsAg 阳性率为 6.63%（836/12608），维吾尔族 HBsAg 阳性率为 3.63%（29/829）(χ2=12.673, P=0.000)；抗-HCV 总阳性率为 0.16%（21/13437），其中汉族抗-HCV 阳性率为 0.15%（19/12608），维吾尔族抗-HCV 阳性率为 0.24%（2/829）(χ2=0.034, P=0.853)；TP-AB 总阳性率为 0.34%（46/13437），其中汉族 TP-AB 阳性率为 0.24%（30/12608），维吾尔族 TP-AB 阳性率为 1.93%（16/829）(χ2=65.280, P=0.000)；抗-HIV 总阳性率为 0.03%（4/13437），其中汉族抗-HIV 阳性率为 0%（0/12608），维吾尔族抗-HIV 阳性率为 0.48%（4/829）(P=0.000)。
结论 孕妇传染病检测有利于传染病的早发现、早预防、早治疗，减少院内感染，有利于优生优育提高人口素质。

PU-2784

对新生儿 25-OHD 检测值的分析

孙悦
吉林金域医学检验所有限公司

目的 维生素 D 是一种类固醇衍生物，主要生理作用是调节钙的代谢，维持骨骼健康；还可以通过噬菌作用而增强免疫力，在抗肿瘤活性和免疫功能调节方面发挥着重要作用。25OHD 是维生素 D 在体内的稳定存在形式，其含量能客观的反映人体内维生素 D 的水平近年来，人们对维生素 D 的检测开始重视起来，所以了解新生儿 VD 含量的现状是很有必要的。
方法 在吉林金域医学检验所有限公司 2021 年 3 月 1 日到 2021 年 3 月 31 日维生素 D，共 9480 例样本中，选取年龄≤1 岁样本，共 379 例，经蛋白沉淀、液液萃取、氮吹、复溶等步骤，采用液相色谱串联质谱仪对新生儿维生素 D 的含量进行检测，运用 SPSS 进行数据分析。
结果 根据中华儿科杂志 25-OHD 参考区间，按照 D2+D3 的总 D 值进行分组，分如下 5 组：总 D 值＜5.0，共 4 例，占 1.1%；5.0＜总 D 值＜15.0，共 23 例，占 6.1%；15.0＜总 D 值＜20.1，共 20 例，占 5.3%；总 D 值＞20.1，332 例，占 87.6%。
结论 本公司样本的新生儿维生素 D 含量普遍正常，占筛查样本的 87.6%，维生素 D 不足和缺乏的占筛查样本的 12.4%。新生儿维生素 D 的含量主要于儿童佝偻病相关，人们对维生素 D 检测意识的上升，是预防儿童佝偻病的有效手段，关注新生儿维生素 D，加强人们检测意识，仍不可以掉以轻心。

PU-2785

柳州地区儿童哮喘血清过敏原 IgE 检测结果分析

罗宇程
柳州市妇幼保健院

目的 分析柳州地区儿童哮喘的常见过敏原，为儿童哮喘的诊治提供参考。
方法 选取本院 2020 年 5 月至 2021 年 4 月收治的 230 名哮喘患儿作为研究对象，参照 2016 年版《儿童支气管哮喘诊断与防治指南》，患儿前七天停用美喘清、强的松、扑尔敏等抗过敏药物及全身糖皮质激素，统计并分析其检测结果。实验结果采用江苏浩欧博公司试剂免疫捕获法测定。实验检测患儿血清中总 IgE、食物性过敏原特异性 IgE、呼吸性过敏原特异性 IgE 结果。以血清中总 IgE 判断患儿哮喘严重程度，将哮喘患儿分为轻度组、重度组，其中以总 IgE < 200 为轻度组，以≥200 为重度组，对其中两组中的食物性过敏原特异性 IgE、呼吸性过敏原特异性 IgE 阳性结果进行统计。
结果 从整体来看，在特异性 IgE 中，呼吸性过敏原以屋尘螨、粉尘螨、屋尘所占比例较大，食物性过敏原以鸡蛋、牛奶所占比例较大。以总 IgE 将患儿分为轻度组与重度组，在轻度组中，呼吸性过敏原 IgE 以屋尘为主，屋尘螨、粉尘螨、柳树也占有一定比例；食物性过敏原 IgE 以鸡蛋为主，牛奶、牛肉也占有一定比例；在重度组中，呼吸性过敏原 IgE 以屋尘螨、粉尘螨为主，屋尘、柳树、交链孢霉也占有一定比例，食物性过敏原 IgE 以鸡蛋、牛奶为主，牛肉、鳕鱼、虾、蟹等也占有一定比例。女性哮喘患儿过敏原阳性率与男性无显著差异。
结论 在哮喘患儿的诊疗过程中，血清过敏原检测可帮助临床医生准确、全面、有方向地了解患儿哮喘过敏原的具体因素，及时采取有效的治疗措施，加快哮喘患儿的康复进程。

PU-2786

The frequency window effect of sinusoidal electromagnetic fields in promoting osteogenic differentiation and bone formation involves extension of osteoblastic primary cilia and activation of protein kinase A

jian zhou、zhuo li
Department of Laboratory Medicine, The First Affiliated Hospital of Xi'an Medical University

Electromagnetic fields (EMFs) have emerged as a versatile means for osteoporosis treatment and prevention. However, its optimal application parameters are still elusive. Here we optimized the frequency parameter firstly by cell culture screening and then by animal experiment validation. Osteoblasts isolated from newborn rats (ROBs) were exposed 90 min/day to 1.8 mT SEMFs at different frequencies (ranging from 10 to 100 Hz, interval of 10 Hz). SEMFs of 1.8 mT inhibited ROB proliferation at 30, 40, 50, 60 Hz, but increased proliferation at 10, 70, 80 Hz. SEMFs of 10, 50 and 70 Hz promoted ROB osteogenic differentiation and mineralization as shown by alkaline phosphatase (ALP) activity, calcium content and osteogenesis-related molecule expression analyses, with 50 Hz showing greater effects than 10 and 70 Hz. Treatment of young rats with 1.8 mT SEMFs at 10, 50 or 100 Hz for 2 months significantly increased whole body bone mineral density (BMD) and femur micro-architecture, with the 50 Hz group showing the greatest effect. Furthermore, 1.8 mT SEMFs extended primary cilia lengths of ROBs and increased protein kinase A (PKA) activation also in a frequency-dependent manner, again with 50 Hz SEMFs showing the greatest effect. Pretreatment of ROBs with the PKA inhibitor KT5720 abolished the effects of SEMFs to increase primary cilia length and promote osteogenic differentiation/mineralization. These results indicate that 1.8 mT SEMFs have a frequency window effect in promoting osteogenic differentiation/mineralization in ROBs and bone formation in growing rats, which involve osteoblast primary cilia length extension and PKA activation.

PU-2787

用溴化乙锭改良人外周血染色体制备方法

吴斌
海南金域医学检验中心有限公司

目的 人类高分辨技术由于能显示出大量结构精细的带纹，在医学中可以发现之前不能发现的染色体微小畸变，有助于阐明染色体细微结构的异常与疾病之间的关系。但由于制备方法较为繁琐，我们参考以往制备高分辨染色体技术进行改良，使外周血染色体条带水平达到 500 以上，易于批量制备工作。

方法 随机选取送检本单位的无血液病实验对象 10 例，用肝素抗凝管抽取空腹外周静脉血 3 mL。每例标本接种 4 瓶培养基，每瓶培养基接种 0.6 ml 外周血。混匀置 37 ℃培养箱培养 72 小时。其中两瓶收获前 0.5 h 加入 1mg/ml EB 0.1ml 作为 EB 组，另外两瓶不加 EB 作为对照组。收获前 10 min 加入 20 ug/ml 秋水仙胺 0.1ml。将培养基以 2100r/min 离心 5 分钟，弃上清液。加入 37℃预热的 0.075M/L KCL 8ml，充分混匀，37℃水浴 30 分钟。加入 2ml 固定液轻轻混匀，以 2100r/min 离心 7 分钟，弃上清液。加入固定液 8ml，轻轻混匀，以 2100r/min 离心 7 分钟，弃上清液。重复上述步骤，再固定两次。视管底细胞量加入 1~2ml 适量固定液，轻轻混匀制成细胞悬液。使用 4℃冰水浸泡的玻片，距离 10~15cm 高度滴片 2 张，放入染色体分散仪（温度：25℃,湿度：50%）进行风干。90℃烤箱烘烤 1 h。胰酶消化显带，吉姆萨染色后用自来水冲洗、晾干。

结果 EB 组可获得约 550 左右条带，带纹清晰，相比于对照组长度有明显差异。
结论 本研究采用 EB 阻止凝缩法，参考高分辨染色体制备技术进行改良，制备的染色体条带水平在 500 以上，分裂指数和分散程度良好，且操作流程更加简便，有较好的应用和推广价值。

PU-2788

甘肃 32161 例微量元素钙不同年龄段及不同地区结果分析

王小凤
甘肃金域医学检验所有限公司

目的 微量元素钙是机体生长发育，生命活动及繁衍等必不可少的元素，是构成骨骼和牙齿的必须成份；维持心脏的正常波动，神经、肌肉的正常兴奋性以及细胞内外水分和渗透压的平衡，调节体液容量，参与血液的凝固过程；生物膜的组成成份，维持细胞胶质的完整性。所以微量元素钙的检测具有重要的临床意义。
方法 微量元素钙的检测通过火焰原子吸收光谱法对 32161 例甘肃各地区医院的临床患者及体检样本。
结果 通过对 32161 例样本进行检测分析，分析发现男女性别之间无显著差异性 P>0.05（X2=0.000,P=0.833），即不具有统计学意义；按照不同年龄段进行分析，分析可得，不同年龄段之间具有显著差异性 P<0.001（X2=2902.949,P=0.000），即具有统计学意义，按年龄段分析发现，婴幼儿在 6 月-12 月异常率最高，成年后随着年龄的不断增长，异常率逐渐增加；按照不同地区进行分析，各地区之间全血微量元素钙检测结果具有显著差异性 P<0.001（X2=350.652,P=0.000），即具有统计学意义，异常率最高的地区为陇南，异常率为 77.23%，异常率最低的地区为临夏，异常率为 56.54%。

PU-2789

福建省某三甲医院检验科 2006-2019 年投诉原因分析与改进思考

马跃飞、刘灿、王炳龙、林锦骠、欧启水、杨滨
福建医科大学附属第一医院

目的 分析投诉产生的原因，探讨改进措施及成效，为进一步改善服务、提高医疗质量和满意度提供思路。
方法 回顾性分析。收集某医院检验科自 2006 年到 2019 年间受理的 47 起来自服务对象的投诉，分析投诉的性质、特点、产生原因和趋势。针对投诉内容，该科室不断改进和优化服务质量和检验流程，包括建立完善的质量管理体系，提高执行力；升级硬件设备、完善信息系统软件功能；加强专业素养人文素养的培训；以问题为导向，加强与临床沟通等，并通过了 ISO15189 实验室认可。
结果 47 份投诉中，26 份为有效投诉。有效投诉贯穿于分析前、中、后各阶段；以急诊临检组和门诊组受理的居多，分别有 10 起和 8 起。归因于“制度和流程”的有效投诉最多，有 23 起，与“技术水平”和“服务质量”相关的分别有 11 起和 8 起。制度不完善、执行不力是“制度和流程”类投诉的主要原因。与服务相关的投诉主要为检验与临床沟通不到位。技术类投诉主要由检验错误和报告延时所致。以中间时间点（2012 年）为界作前后对比发现，与制度流程和服务质量相关的投诉量均有增加；与技术层面相关的投诉量明显下降。优化信息系统、升级硬件、完善制度明确岗位职责和有力推行定期能力验证计划等措施能明显降低投诉量。从可查阅的数据看，投诉发生率总体趋势（线性）下降，服务对象满意度总体趋势（线性）上升。

结论 投诉是质量和管理薄弱环节的综合暴露。夯实质量体系、优化软硬件功能和提高专业能力和服务水平的举措对降低投诉发生率、提高满意度具有重要作用。

PU-2790

抗人缪勒氏管激素（AMH）在女性卵巢健康领域的临床应用

后江红
甘肃金域医学检验所有限公司

卵巢健康对于女性来说非常重要，这是每个女性都必须要关注的问题，当卵巢健康出现问题时，身体各方面都会有异常，也是女性身体年轻的一种表现，因此卵巢健康是女性身体是否健康的一个晴雨表。而抗人缪勒试管激素（AMH）在评估女性生育能力、辅助不孕病因诊断、提早预测卵巢相关疾病是非常重要的指标之一。

PU-2791

中药鸡骨香中抗肿瘤活性成分检测分析

林兆民、高冬芳、张璐、王鹏、林御星、陈元
山东大学第二医院

以抗肿瘤活性为指导，从民间中药鸡骨香的干燥根中找寻具有肿瘤细胞增殖抑制作用的萜类化合物，并对其活性机制进行研究。以 MTT 法测试肿瘤细胞增殖抑制作用，以此活性结果为指导，分离过程中只选择活性部位，直至分到纯化合物。柱层析法分离并纯化化合物，包括正相硅胶，葡聚糖凝胶，反相硅胶，制备高效液相等柱层析，通过各种波谱方法确定化合物结构：核磁共振，高分辨质谱，紫外光谱，红外光谱等。从中药鸡骨香提取物中分离得到了 15 个萜类化合物，鉴定了其结构。进一步的抗肿瘤活性筛选结果显示部分化合物呈现出很好的活性。中药鸡骨香中含有具有抗肿瘤活性的萜类化合物，值得进一步进行研究，为药物研发打下基础。

PU-2792

2018~2020 年岳阳市儿童临床常见多重耐药菌感染及耐药性分析

李童、杨昊
岳阳市妇幼保健院

目的 了解某院儿童感染多重耐药菌的分布特点及趋势，指导临床合理使用抗生素及预防和控制多重耐药菌。
方法 收集 2018 年 1 月-2020 年 12 月我院住院患儿 (包括新生儿科和儿科) 多重耐药菌检测结果及细菌药敏试验结果，对其分布特点和耐药性进行分析。
结果 三年来本院送检的 19033 例标本中共分离到病原菌 2199 株，其中多重耐药菌 282 例，占 12.82% (282/2199)。2018 年、2019 年和 2020 年多重耐药菌感染率分别是 13.30%、12.67%和 12.47%。三年来本院主要病原菌排名前三位的是大肠埃希菌、金黄色葡萄球菌和肺炎克雷伯。痰液为送检率最高的标本，也是检出多重耐药菌最主要标本；其次为咽拭子、尿液和血液。革兰阴性多重耐药菌对氨苄西林、替卡西林、哌拉西林、头孢噻吩、头孢唑啉、头孢呋辛、头孢克肟和头孢噻肟 8 种药物的耐药率均大于 80%，对亚胺培南、美洛培南和阿米卡星的耐药率均低于 10%。革兰阳性多重耐药菌对青霉素和苯唑西林的耐药率达 100%，对红霉素、庆大霉素、克林霉素和泰利

霉素耐药率大于 50%，对替考拉宁、喹奴普汀/达福普汀、米诺环素耐药率较低小于 5%，对呋喃妥因和万古霉素均为 100%敏感。
结论 2018 -2020 年本院儿童临床常见多重耐药菌以革兰阴性菌为主，大肠埃希菌呈上升趋势，金黄色葡萄球菌呈下降趋势。本院多重耐药菌感染的主要来源是呼吸道感染、泌尿系统感染和血流感染。三年来本院检出革兰阴性多重耐药菌对氨苄西林和替卡西林的耐药率较高，而对亚胺培南、美洛培南和阿米卡星的较为敏感。革兰阳性多重耐药菌对青霉素和苯唑西林的耐药率较高，对呋喃妥因和万古霉素均较为敏感。因此在临床多重耐药菌抗感染治疗的过程中，临床医生应根据患儿临床症状和以上分析的结果选择较为敏感的抗菌药物进行治疗，然后根据细菌培养和药敏结果及时进行药物调整，避免耐药菌株和泛耐药菌株的产生和传播。

PU-2793

结直肠癌患者血浆中细胞因子的诊断价值研究

蒋琰[1]、刘嘉妮[2]
1. 湖南省人民医院
2. 湖南师范大学

目的 探讨六种细胞因子（IL-4、IL-6、IL-10、IL-17、TNF-α、IFN-γ）在结直肠癌患者外周血的表达水平变化及其与结直肠癌的 TNM 临床病理参数（手术病理分期、组织分级、淋巴结转移程度）的关系，为评价结直肠癌的疾病进展情况提供可靠的参数值，以期成为参与结直肠癌临床病情评估的指标。
方法 随机选取 2020 年 10 月-2021 年 3 月湖南省人民医院收治的 30 例结直肠癌患者的肠活组织标本为结直肠癌实验组，按照 TNM 国际肿瘤分期系统将其分为 ＴⅠ、TⅡ、TⅢ、TⅣ组，患者年龄多为 50-70 岁，另外收集医院病理诊断为正常者 30 例作为正常对照组。留取此 30 例结直肠癌患者术前以及正常对照组 EDTA 抗凝全血，运用流式细胞术检测结直肠癌实验组、对照组循环血中此六种细胞因子的表达情况。
结果 IL-6、IFN-γ、TNF-α 在结直肠癌实验组外周循环血液中的表达水平高于对照组（P＜0.05）。随着病理分期的逐渐增高，IL-6 在结直肠癌中的表达水平呈逐渐上升趋势，且各个分期之间具有统计学意义（P＜0.05）。随着肿瘤分化程度的逐渐降低，IFN-γ 在外周血的表达升高（P＜0.05）。IL-6 与 IFN-γ 在结直肠癌实验组外周血中表达具有正相关性（r=0.50，P＜0.05）。
结论 结直肠癌实验组患者外周血中 IL-6、IFN-γ、TNF-α 表达水平增高。其中 IL-6 随着结直肠癌患者临床分期的升高逐渐增高，IFN-γ 随着结直肠癌分化程度的降低而逐渐升高。IL-6 与 IFN

PU-2794

Age-Specific Reference Intervals for High-Sensitive Cardiac Troponin T Among the Apparently Healthy Children

Jia Wei、Hanjun Shen
Children's Hospital of Soochow University

Background High-sensitivity troponin T (hs-cTnT) assay was widely used in the diagnosis of myocardial injury. However, the 99th percentile upper reference limits (URLs) derived from Roche’s product manual was established from multi-clinical centers in the United States and Europe for adults. Relatively few studies explored to determine the indications for the hs-cTnT application and how to interpret the values among children. Some investigators postulated that the higher level of troponin T in neonates may be caused by programmed cell death during the first 3 months of life. Therefore, it is necessary to establish the pediatric reference interval (RI) of

hs-cTnT to provide a basis for the clinical interpretation. Our study aimed to establish suitable RIs of hs-cTnT for Chinese children.
Methods A total of 1126 reference individuals presented to the Children's Hospital of Soochow University from December 2019 to March 2021were enrolled in our study. The laboratory data and medical history of children were retrospectively reviewed and exported from the laboratory information system (LIS) and electronic medical records. The hs-cTnT assay was carried out on the electrochemiluminescence (Cobas e 411, Roche Diagnostics, Germany), using a ruthenium labeled antibody. The inter-assay coefficient of variation for hs-cTnT was 4.74%. According to the Clinical and Laboratory Standards Institute C28-A3 guideline, the 99th percentile URLs with 90% confidence intervals (CIs) were calculated in different age and sex subgroups. The imprecision profile was assessed by repeatedly measuring 3 levels of serum pools. According to the CLSI guideline EP5-A2, these pools of mean, the inter-assay precision and total CVs were calculated Data of hs-cTnT were analyzed through SPSS ver 24.0 (IBM Corp, USA) and GraphPad Prism ver 8.0 (GraphPad Software, USA). $P<0.05$ was considered statistically significant. The distribution of data was obtained based on the Shapiro-Wilk test and non-Gaussian distribution data were expressed as median with interquartile range (IQR). The Wilcoxon signed-rank test was utilized to compare the levels of hs-cTnT in paired children. The hs-cTnT level between different age groups was compared by the Kruskal-Wallis one-way analysis of variance. Besides, the Spearman correlation analysis was used to evaluate the association between hs-cTnT and months of age. The Mann-Whitney U test was used to determine different sex subgroups.
Results In total, 1124 samples were drawn to analyze hs-cTnT (Median (IQR) of hs-cTnT: 6.27(4.28, 10.71) ng/L). There was no individual excluded as outliers from the reference population. Elevated hs-cTnT were observed in the infants (< 3 months) and gradually decreased with months of age ($r=-0.736$, $P<0.001$). Median values of hs-cTnT among neonates and infants younger than 3 months old were 33.60 ng/L and 24.04 ng/L respectively, which were both higher than 14 ng/L. The 99th percentile URLs of hs-cTnT were 37.31 (90%CI: 36.87-37.74) ng/L for 1-3 months old, 25.89 (90%CI: 24.46-28.26) ng/L for 4-12months old and 12.10 (90%CI: 11.25-12.95) ng/L for 1-18 years old, respectively. For children older than one year old, boys had a higher 99th percentile limit than girls (12.35 (90%CI: 11.05-12.95) ng/L VS 12.08 (90%CI: 11.02-14.50) ng/L). More than 99% of children elder than one year old had hs-cTnT below 14 ng/L in our study. However, owing to the insufficient sample size, further research about the RIs among neonates (≤28 days) was needed. The limit of blank (LoB) and limit of detection (LoD) were mentioned to be 3 ng/L and 5 ng/L in the manufacturer's specifications. The percentage of troponin concentrations measurable above the LoD in all groups exceed 50%
Conclusion Our study first established the age-specific RIs of hs-cTnT for children. The above RIs of hs-cTnT in different age groups may assist clinicians to better interpret and use hs-cTnT values in pediatric cardiomyopathies.

PU-2795

浅谈精神专科医院检验科的科学发展

蔡燕姗、薛雄燕、陈家强
佛山市第三人民医院（佛山市精神卫生中心）

结合精神专科医院的实际情况，对检验科目前的发展的影响因素做出分析，从实际工作经验中提出实用可行的建议，并对未来精神专科的发展方向和潜力作出分析。

检验科作为医院的辅助科室目前检验科所开展的项目，则多数用于躯体疾病的诊疗和预后观察，对辅助诊断精神病的检查项目开展比较少。因此，对精神专科检验科的发展，必须做好科学的计划我们从检验项目开展、质量控制、医疗服务模式创新、与临床建立沟通的桥梁几方面进行探讨。
对药物浓度监测、中枢神经递质及其代谢产物、神经内分泌激素和神经肽胺体项目的开展提出可行性的依据。对于特异性高的基因项目的检测也要开始进行我们精神专科的发展规划里。就实验室质

量体系的建设提出一些存在的难点，包括分析前和分析中的两个常见问题，并提出信息化系统的相关建议，更保证检测结果的准确性。

提出医疗服务模式的创新理念，精神专科医院逐步推行精神病人社区信息管理网格化，检验科应该强化信息化支撑，推进建设与之相匹配的智能检验服务体系。

如何建立检验科与临床沟通的桥梁 ？检验科与临床之间由于知识结构的不同，沟通交流总是存在着一些不可避免的问题。检验医师的培养对双方沟通有着积极的作用，还能促进科室的发展。检验科是医院不可或缺的一部分，除了做好日常的标本检测工作，还应该关注检验科的发展规划，我国目前大部分专医院对检验科发展还不够重视，对检验科发展的投入占比也比较少，因此，不能只依靠医院的投入，立足自身，提高整体。

PU-2796

检验科护士专利申请特点与应用

白璐、陈丽勤
陆军军医大学第一附属医院（西南医院）

目的 了解门诊检验科护士专利申请特点，为拓展护理创新思路和获得专利授权提供参考。
方法 采用回顾性统计分析法，2017 年 6 月-2020 年 12 月检验科护理组获得国家专利授权共 20 项，其中发明专利 6 项，实用新型专利 14 项。授权发明类型涉及:采血用留置针的改进；止血带装置设计；葡萄糖水调配装置；清洁消毒装置；弹力绷带缠绕装置。授权实用新型专利类型涉及:试管架功能、外观的改进；采血管收集、流转装置；采血物品的规范放置和使用仪器；便携指血采集装置；辅助沟通设备改进；垃圾分类装置。
结果 授权专利设计思路源于发现和解决临床实践中的护理问题，在自动化和智慧护理的背景下，应用机械设备等多学科知识，大胆创新，设计可能用于临床、符合逻辑的设施设备。由此，做好流程管控，节省人力物力财力和时间成本，提高患者满意度的同时提升护理效率和质量。
结论 护理专利是日常工作的梳理、总结，体现护理创新思维在护理实践中的应用，有助于护理科研的进一步挖掘。

PU-2797

长角血蜱中携带日本立克次体和新立克次体

秦祥荣
山东大学第二医院

立克次体属革兰氏阴性专性细胞内细菌，通过节肢动物媒介的叮咬感染人类和各种脊椎动物。硬蜱是斑点热组 (SFG) 立克次体的主要传播媒介。最近，发现几种新出现和重新出现的 SFG 立克次体可感染人类。日本立克次体是日本斑疹热的病原体。自 1984 年以来在日本、韩国和泰国均有报道。我们采集了山东省的蜱，通过 PCR 方法进行扩增，PCR 扩增表明立克次体感染率最低。在中国山东省采集的长角血蜱中为 0.66%。基于 rrs、gltA、ompA 和 ompB 基因的系统发育分析表明，蜱携带 R. japonica、Candidatus Rickettsia longicornii 和与 R. canadensis 相关的新立克次体物种。

PU-2798

长角血蜱携带无形体种类的检测

秦祥荣
山东大学第二医院

无形体（Anaplasma）是一种蜱传播的细胞内寄生细菌，可以感染人类和其他动物。中国的蜱携带的无形体种类目前还不是很清楚，本文目的是检测山东省胶南市蜱携带无形体的种类。从2013 年至 2015 年，我们在中国的山东省胶南县的植被中收集了 3145 只长角血蜱，包括 120 只幼虫，2460 只若虫和 565 只成虫。我们通过巢式 PCR 扩增了无形体的 16S rRNA 基因，检测了所有蜱携带的无形体种类。为了进一步区分 Anaplasma capra 与 Anaplasma centrale，我们又进一步使用 gltA 和 msp2 基因的引物进行扩增及测序。结果在若虫和成虫中检测到了三种无形体的种类，我们以最小感染率来计算蜱的病原体携带率，蜱的最小感染率如下：Anaplasma bovis 的感染率为 1.55％,Anaplasma phagocytophilum 的感染率为 0.10％, Anaplasma capra 的感染率为 0.03%。这些结果表明，胶南县的长角血蜱携带多种无形体种类，在很大程度上也说明蜱携带的无形体是公共卫生面临的重要挑战。

PU-2799

m6A 与程序性细胞死亡的相关性

刘莉
南华大学附属第一医院

In recent years, m6A methylation has increasingly caught scientists′ and researchers′ eyes, becoming a hot research topic. m6A plays multifunctional roles in bioprocesses, normal and abnormal. Aside from the earliest known apoptosis, more emerging programmed cell death(PCD) pathways get much-watched.The regulations among them tend to be plastic and feasible at the molecular level. Herein, what we want to have our minds on is a taste of high-complexity linked m6A and PCD types, e.g. pyroptosis, autophagy, and apoptosis, which is associated with the initiation and progression of cancer. There is a deserved focus—— that is, to realize that m6A functions largely dependent on its regulators and they are frequently context-reliant.

PU-2800

2020 年东北地区高苯丙氨酸血症结果分析

郝静
吉林金域医学检验所有限公司

目的 高苯丙氨酸血症为东三省常见的遗传代谢病之一，通过分析高苯丙氨酸血症结果以及复查结果了解疾病治疗情况，为临床提供参考依据。
方法 回顾本公司 2020 年 1 月至 2020 年 6 月经检测确诊为高苯丙氨酸血症患者 68 例，以及患者高苯丙氨酸血症复查结果,监测治疗情况。采用高效液相色谱质谱联用仪，检测苯丙氨酸（Phe）、苯丙氨酸与酪氨酸比值（Phe/Tyr），本实验室方法 Phe＞150，Phe/Tyr＞2.0 即可初步筛查为高苯丙氨酸血症。
结果 临床上有一过性高苯丙氨酸血症，可能由于苯丙氨酸羧化酶未成熟，导致血中苯丙氨酸浓度升高，但随着年龄的增长，血苯丙氨酸浓度可降至正常。患者一经确诊，应暂停天然饮食，低或者无苯丙氨酸饮食治疗；现主要方式为给予患者无苯丙氨酸特殊奶方治疗，根据患儿体重以及苯丙氨酸水平在，确定治疗方案。回顾结果发现，高苯丙氨酸血症患者治疗效果较好，相关指标明显降低，

若控制良好，苯丙氨酸可在正常范围内，可根据具体情况调整无苯丙氨酸奶粉用量适当加入母乳治疗。
结论 高苯丙氨酸患者开始治疗的年龄越小，预后越好，新生儿早期治疗者智力发育科接近正常人。遗传代谢病临床表现复杂多样，轻重不同，体内任何器官以及系统均可受累，一般的临床表现为智力发育落后，抽搐，昏迷，呼吸异常等表现，遗传代谢病患者若不得到及时治疗，常可致残，甚至危及生命。所以我们应该提高对遗传代谢性疾病的检测意识，做到早期诊断，及时处理、挽救生命、避免或者减少严重并发症及神经系统伤残的关键。

PU-2801

Identification of Novel Glycolysis-Related Gene Signatures Associated With Prognosis of Patients With Clear Cell Renal Cell Carcinoma Based on TCGA

Chengjiang Wu
The Second Affiliated Hospital of Soochow University

Objective The purpose of the present study was to detect novel glycolysis-related gene signatures of prognostic values for patients with clear cell renal cell carcinoma (ccRCC).
Methods Glycolysis-related gene sets were acquired from the Molecular Signatures Database (V7.0). Gene Set Enrichment Analysis (GSEA) software (4.0.3) was applied to analyze glycolysis-related gene sets. The Perl programming language (5.32.0) was used to extract glycolysis-related genes and clinical information of patients with ccRCC. The receiver operating characteristic curve (ROC) and Kaplan–Meier curve were drawn by the R programming language (3.6.3).
Results The four glycolysis-related genes (B3GAT3, CENPA, AGL, and ALDH3A2) associated with prognosis were identified using Cox proportional regression analysis. A risk score staging system was established to predict the outcomes of patients with ccRCC. The patients with ccRCC were classified into the low-risk group and high-risk group.
Conclusions We have successfully constructed a risk staging model for ccRCC. The model has a better performance in predicting the prognosis of patients, which may have positive reference value for the treatment and curative effect evaluation of ccRCC.

PU-2802

持续质量改进在采血和护理中的应用分析

杜秋明、王海燕、郭笑然
吉林大学第一医院

目的 探讨和分析持续质量改进在采血护理中的应用价值。
方法 质量持续改进于 2019 年 6 月开始。 分别于 2019 年 1-6 月和 2019 年 7-12 月随机抽取 600 名患者，对持续质量改进前后采血护理质量进行比较，对患者采血相关知识进行评分，统计改进前后不良事件发生率。
结果 实施持续质量改进后，患者对穿刺技术、健康教育、排队、样品运输等问题的满意度明显高于实施持续质量改进前。 同时患者对穿刺技术，健康教育，排队，样本运输等方面的满意度均显著高于实施持续质量改进前，差异具有统计学意义(P<0.05)。 持续质量改进后 0.0%的不良事件发生率明显低于改进前 3.0%，P 值<0.05。
结论 在医院门诊采血护理中实施持续质量改进，可有效提高采血护理水平，提高患者对采血知识的了解，降低护理不良事件发生率，具有较高的应用价值。

PU-2803

吉林地区糖尿病患者维生素 D 结果分析

廉春晖
吉林金域医学检验所有限公司

目的 通过分析对吉林地区糖尿病患者血清 25OHD 检测结果，了解糖尿病与维生素 D 缺乏相关性。
方法 采用高效液相色谱串联质谱仪，取 200ul 血清，经过液液萃取，蛋白沉淀等前处理方法后进行检测，选取 2020 年本公司检测 2 型糖尿病 1396 例，根据维生素 D 水平情况，分为 3 组，分别为维生素 D 缺乏：<20 ng/mL（935 例），维生素 D 不足：20-30 ng/mL（272 例），维生素 D 正常：30-100 ng/mL（189 例）；数据采用 SPSS22.0 统计学软件分析。
结果 2 型糖尿病患者各组维生素 D 水平情况如下：缺乏 66.9%；不足 19.5%；正常：13.6%；吉林地区 2 型糖尿病患者维生素 D 水平缺乏以及不足情况比较常见，发现各组之间缺乏率差异有统计学意义(P＜0.05)。
结论 2 型糖尿病患者血清 25 羟维生素 D 缺乏较普遍，可能与 2 型糖尿病合并其他脏器疾病有相关性，2 型糖尿病常见的并发症有糖尿病肾病，肾脏是维生素 D 作用的重要靶器官，肾小球系膜细胞、肾远曲小管、近曲小管、足细胞、集合管、髓袢等均具有维生素 D 受体。维生素 D 通过与相关受体结合具有一定的肾脏保护作用，故肾脏等相关脏器受损，可能影响血清维生素 D 合成及发挥作用，故而可能增加了疾病发生的风险。现研究表明除经典的维生素 D 缺乏疾病（佝偻病、骨质疏松等），多种慢性病例如，高血压、动脉粥样硬化以及肿瘤等均与维生素 D 缺乏有关，需要提高维生素 D 补充的意识，避免疾病的发生和发展。

PU-2804

新辅助化疗引起激素受体状态改变的研究

公娉
山东大学第二医院

乳腺癌是一种异质性疾病，内分泌治疗靶向治疗是乳腺癌治疗过程中重要有效的治疗方法。时下，乳腺癌常用病理学生物标志物，如雌激素受体、孕激素受体、HER2、Ki-67，常用来进行诊断指导乳腺癌患者术后的辅助治疗(41)。

新辅助化疗是局部肿块较大的乳腺癌患者术前常用的减瘤方案。其主要目的在于 1. 对于不适用手术的局部晚期乳腺癌患者降低其分期，使手术成为可能，使早期乳腺癌患者提高实行保乳手术的可能性。新辅助化疗之前通常进行核心针穿刺活检来明确诊断，并进行免疫组织化学检测来确定 ER、PR、HER2、Ki-67 等生物标志物的状态，有利于新辅助化疗后及术后辅助治疗的选择以及患者预后的判断。

过去的研究已经证实，新辅助化疗可以改变患者的激素受体（HR）、原癌基因人类表皮生长因子受体（HER2）、Ki-67、P53 等指标的状态。ER 表达从阳性变为阴性的患者相对于 ER 从阴性变为阳性或者没有改变的的患者从新辅助化疗中受益的要小。然而，新辅助化疗后激素受体的改变对于患者预后有什么影响还知之甚少。我们本次研究的目的是探究乳腺癌患者新辅助化疗前后生物标记物的改变，以及各类型的预后情况分析。

1．研究方法

回顾性研究分析了于 2005 年 1 月 1 日至 2016 年 11 月期间确诊为乳腺癌并于山东大学齐鲁医院接受乳腺外科手术的 5305 位女性患者的临床病理资料。接受新辅助化疗的患者共计 301 位，只接受术前穿刺未进行术前新辅助化疗的患者 71 位。本次研究的纳入标准为：住院期间接受手术治疗；术后的大体病理结果为乳腺癌，新辅助化疗组为完成 4 个周期化疗且有完整的病理信息的女性乳腺癌患者，穿刺组为术前接受穿刺但未接受新辅助化疗且有完整的病理信息的患者。排除标准：

男性乳腺癌；双侧乳腺癌；新辅助化疗后达到病理完全缓解的患者，PCR 定义为乳腺原发灶和腋窝淋巴结手术标本病理检查无浸润性肿瘤细胞残余。

PU-2805

乳腺癌治疗过程中内分泌治疗依从性的研究

公娉
山东大学第二医院

研究目的 在中国，乳腺癌的发病率逐年上升，乳腺癌是女性常见的恶性肿瘤之一，也是女性常见的死亡原因。手术治疗是其主要的治疗方式，化疗、放疗、内分泌治疗、靶向治疗等个体化综合治疗策略的不断成熟使得乳腺癌获得了理想的疗效和预后，但仍有一部分患者出现复发和转移。乳腺癌激素受体状态的测定是内分泌治疗选择的基础，所以，乳腺癌原发肿瘤的激素受体状态已经成为常规的分子病理学检查。但是，乳腺癌患者的激素受体状态缺乏大数据的统计。乳腺癌患者激素受体状态在治疗前后是否出现改变，经过治疗之后的复发转移癌巢的激素受体状态与原发肿瘤是否存在差异尚知之甚少。本研究旨在大数据统计分析山东省乳腺癌患者激素受体状态，研究乳腺癌患者雌激素受体（estrogen receptor, ER）、孕激素受体（Progesterone receptor, PR）等生物标志物在乳腺癌原发肿瘤、新辅助化疗、复发转移过程中的变化，探讨生物学特性改变的临床意义以及对预后的影响。
研究方法 回顾性分析 2005 年-2016 年于山东大学齐鲁医院收治的乳腺癌患者 5305 例，其中有完整的病理信息的患者 4786 例。回顾性分析其临床病理资料，其中术前接受穿刺的患者 71 例，接受新辅助化疗的患者 301 例，原发肿瘤及转移部位均进行病理学检查的患者 39 例。应用内分泌治疗的患者 1839 例，统计分析应用内分泌治疗的患者服药的种类及其依从性情况。计量资料比较采用 t 检验，计数资料比较采用卡方检验（Chi-square test，X2 检验），等级资料的比较采用 wilcon 秩和检验。Kaplan-Meier 法计算生存率及绘制生存曲线。以 $p<0.05$ 视为异有统计学意义。
研究结果 乳腺癌患者依从性为 62.7%
研究结论 乳腺癌患者依从性有待提高。

PU-2806

发酵支原体 MALP-2 生物学作用研究进展

梁珂莹
南华大学附属南华医院

巨噬细胞活化脂肽-2(MALP-2)是发酵支原体(Mf)上极具代表性的外膜脂肽,N 端为特殊的二酰化半胱氨酸残基结构。 MALP-2 是一把“双刃剑”,在致炎与抗炎、细胞凋亡与抗凋亡、免疫佐剂、生物协同与抑制、 血管损伤和血管修复等方面发挥重要作用。 因此,了解 MALP-2 复杂的生物学作用能为理解 Mf 的致病机制及其 临床治疗方案提供依据,同时也为 MALP-2 的临床应用提供理论基础。

PU-2807

急性肾损伤诊断及预后标志物研究进展

刘春梅[1]、李博慧[2]
1. 江苏省苏北人民医院
2. 大庆第三人民医院

目的 通过对最新文献的学习，总结近几年急性肾损伤（Acute kidney injury,AKI）诊断及预后的最新指标，为开展进一步的分子机制研究提供思路，也为临床的早期诊断和治疗提供理论依据。
方法 在中国知网数据库使用关键词“急性肾损伤”，在 PubMed 数据库使用关键词“Acute kidney injury”搜索近五年的中英文文章，通过文章题目或摘要筛选出需要精读的论文 ，进行全文阅读，精读文章共计 63 篇。总结急性肾损伤的最新诊断与预后标志物的研究思路。
结果 急性肾损伤的诊断仍然沿用 2012 年 KDIGO 的诊断标准，以血清肌酐和尿量作为诊断指标，以 AKI 分期及患者透析效果判断患者的预后。过去几年新兴起的标志物，如中性粒细胞明胶酶相关脂质体运载蛋白(NGAL),肾损伤分子-1（KIM-1）,L 型脂肪酸结合蛋白（L-FABR）都因检测技术难度大，诊断效能不理想，而未能应用到临床的诊疗工作中。最近对于急性肾损伤诊断标志物的研究大都集中于亚细胞水平，如线粒体损伤，内质网应激，代谢重编程，细胞周期阻滞等方面，这些指标可以在细胞发生损伤之前就出现变化，可以更早期识别急性肾损伤的发生。对于急性肾损伤预后指标的研究大都集中于实验室常规指标的联合分析，如中性粒细胞/淋巴细胞比值（NLR）,红细胞分布宽度（RDW）,高密度脂蛋白/中性粒细胞比值，血清白蛋白水平等，这些常规指标的新应用，在减轻患者经济负担的同时还能更大程度发挥这些指标的临床价值。
结论 目前对 AKI 诊断与预后评估的标志物研究进展缓慢，在亚细胞水平研究 AKI 的早期诊断标志物，利用实验室信息系统和住院电子病历，分析实验室常规指标在 AKI 预后中的价值将是未来科研工作者的研究方向。

PU-2808

陕西省西安地区围绝经期妇女阴道微生态状况分析

李春娟、赵小军
西安医学院第二附属医院

目的 了解本地区围绝经期妇女阴道微生态状况并探讨其失衡的原因。
方法 通过收集 2019 年 7 月-2021 年 4 月到我院妇科就诊的围绝经期患者 154 例，进行阴道微生态检测分析，并对结果进行分析。
结果 154 例就诊患者中，阴道微生态微失衡 111 例（72.0%），其中细菌性阴道炎（BV）43 例（27.9%），滴虫性阴道炎(TV)18 例（11.7%），念珠菌阴道炎(VVC)8 例（5.2%），BV 和 TV 双重感染 2 例（1.3%），BV 和 VVC 双重感染 1 例（1.6%）。阴道分泌物干化学法和革兰氏染色镜检的三种主要病原体结果无统计学差异（BV P=0.395、TV P=0.627、VVC P=0.64，P>0.05）。两个年龄组相比 BV(P=0.041)、菌群异常或抑制(P=0.008)两者有统计学意义（P<0.05）。
结论 本地区围绝期妇女阴道微生态的清洁度随着年龄的增长而下降，最常见的阴道炎为 BV、TV、VVC,还有少数为双重病原体感染,严重影响了围绝经期妇女的生活质量，所以需重视围绝经期妇女的生殖系统的卫生健康，做到早重视、早预防、早治疗。

PU-2809

721 例唐氏综合征患者外周血染色体核型分析的回顾性研究

张倩、张美玲、张丽敏、赵旷怡、潘攀
郑州金域临床检验中心有限公司

目的 探讨河南地区 2018 年至 2020 年 721 例唐氏综合征患者的年龄、性别、类型等分布情况，并对其进行统计学分析。
方法 对 2018 年至 2020 年在我中心进行外周血染色体核型分析的 42719 例标本，从中筛选出 721 例唐氏综合征患者，采用外周血淋巴细胞培养和 G 显带技术，进行染色体核型分析。
结果 在 42719 例外周血染色体核型分析标本中，共检出唐氏综合征患者 721 例，检出率为 1.69%，其中男性 419 例，占 58.11%，女性 302 例，占 41.89%；年龄段集中在 0-10 岁，共 663 例，占 91.96%；共检测 38 种核型，其中单纯性三体 675 例，占 93.62%，易位型 31 例，占 4.30%，嵌合型 15 例，占 2.08%。
结论 对 721 例唐氏综合征患者的外周血染色体进行统计学分析，发现年龄段集中在 0-10 岁，男性略高于女性，共检测 38 种核型，其中单纯性三体最为常见，易位型次之，且以 der(21;21)最多，嵌合体最少。

PU-2810

六西格玛和 5s 质量管理在临床生化实验室应用

张苹
暨南大学附属第一医院

目的 应用六西格玛质量管理方法，对我院引进的全自动生化分析系统贝克曼 AU5800 的性能验证数据进行分析，熟悉各生化项目的分析性能，设计质量控制方案，指导质量改进。利用 5s 管理理念即“整理- 整顿-清扫-清洁-素养”提高工作质量和工作效率，有效利用空间，提高科室形象。
方法 选取 26 个常规生化项目，分析贝克曼 AU5800 在 2020 年 1 月至 12 月时的性能验证数据，主要包括偏移(BIAS) 和不精密度(CV) ，根据卫生行业标准 WS /T403-2012 规定的项目允许总误差(TEA) ，计算西格玛值(σ) 并绘制标准化的西格玛性能验证图从而设计质控规则。同时计算所有项目的质量目标指数(quality goal index，QGI) ，查找 σ 值小于 6 的检验项目分析性能不佳的主要原因。
结果 26 个常规生化项目中，分析性能 σ 值≥6、5、4 和 3 者分别占 61.54% 、3.85% 、11.54% 和 7.69% ，全部检验项目的平均 σ 值为 7.105; 在未达六西格玛的 11 个检验项目中，43.75% 的项目需要优先改进精密度; 12.50% 的项目需要优先改进正确度;有 43.75% 的项目需要同时改进精密度和正确度。
结论 对于我院生化检测系统，基于性能验证数据的六西格玛质量管理可以快速了解检验项目的分析性能，指导质量控制工作。结合实验室的 5S 管理和整顿，提高了科室形象。

PU-2811

54 例性染色体嵌合体的遗传学分析

张磊、张美玲、李红敏、司马小可、张丽敏、阎安澜
郑州金域临床检验中心有限公司

目的 探讨河南地区 2018 年性染色体嵌合体患者的临床表现及嵌合类型。

方法 采用患者外周血进行细胞培养，常规外周血染色体 G 显带，徕卡自动扫片仪扫片并进行核型分析。
结果 在 13235 例外周血染色体核型分析标本中，共检出性染色体嵌合体患者 54 例，检出率为 0.40%，其中特纳综合征嵌合体 44 例，占 81.48%；克氏综合征嵌合体 5 例，占比 9.26%；超雌、超雄综合征嵌合体共 5 例，占比 9.26%；两种核型的嵌合体 51 例，占比 94.45%；三种核型的嵌合 2 例，占比 3.70%；四种核型的嵌合 1 例，占比 1.85%。
结论 性染色体嵌合体患者中最常见的是特纳综合征嵌合体核型，且以两种核型的嵌合为主；其主要临床表现为身材矮小、生殖功能障碍、发育不良、不孕不育、流产等。对具有明显临床表现的患者，要进行外周血染色体检查，有助于临床早发现、早诊断和早治疗。

PU-2812

分析比较不同类型肿瘤相关静脉血栓栓塞症的特征

刘艳红、李悦、马汝飞、胡敏、孙晓芳、郑培明、高岚
河南省人民医院检验科，郑州大学人民医院，河南大学临床医学院

目的 比较不同类型肿瘤合并静脉血栓栓塞症（VTE）的临床特征，为肿瘤合并 VTE 的防治提供参考。
方法 回顾性分析 2013 年 4 月-2019 年 4 月河南省人民医院肿瘤合并 VTE 患者的临床资料和实验室指标检测结果，分析比较不同类型肿瘤患者 VTE 的临床特点。
结果 符合入组条件的患者中，患者数量前三位的肿瘤类型分别为消化系统肿瘤、肺癌和妇科肿瘤。本研究共纳入消化系统肿瘤组 49 例，肺癌组 31 例，妇科肿瘤组 31 例。消化系统肿瘤组、妇科肿瘤组手术人数显著高于肺癌组（69.4%和 80.6%比 12.9%，p 均<0.001）。肺癌组采取溶栓治疗的患者人数显著低于妇科肿瘤组（0 比 25.8%，P=0.005）。妇科肿瘤组红细胞计数（RBC）和血红蛋白（HBG）显著低于肺癌组（P=0.005 和 0.009），消化系统肿瘤组红细胞分布宽度（RDW）显著高于肺癌组和妇科肿瘤组（P=0.015 和 0.003）。妇科肿瘤组凝血酶原时间（PT）显著低于消化系统肿瘤组和肺癌组（P<0.001 和 P=0.002），肺癌组活化部分凝血活酶时间（APTT）显著高于消化系统肿瘤组和妇科肿瘤组（P=0.01 和 0.001）。
结论 不同类型肿瘤的 VTE 危险因素不完全一样，实验室检测结果也存在差异，应针对不同类型肿瘤特点采取血栓防治措施。

PU-2813

稳抓降本增效，促进医学实验室高质量发展

张举、常中宝、冯广东、汪芬芳
南京金域医学检验所有限公司

降本增效措施作为精益管理的重要工具，在医学实验室日常运营中对提升人员工作效率，降低医疗资源浪费具有重要的发展意义。
目的 本文通过与南京金域医学检验所合作共建的 15 家医学实验室长期进行降本增效措施后的效果评估及运营改善回顾，将医学实验室精益管理的宝贵经验进行分享，希望对当下医院管理过程中医疗资源的合理使用提供参考和帮助。
方法 整理 15 家医学实验室（包括 1 家三级医院、12 家二级医院及 2 家一级医院）在人、机、料、法、环模块进行降本增效的改善措施，并做效果评估。
结果 经过降本增效改善措施的 15 家医学实验室在人均产能、效益提升和质量改善上均取得明显效果。

结论 医学实验室在重视质量安全和患者服务工作的同时，需要树立精益管理意识，并通过降本增效措施提高实验室工作效率，将医疗资源利用最大化。

PU-2814

吉林地区 0-6 岁儿童微量元素钙结果分析

张洋
吉林金域医学检验所有限公司

目的 随着生活水平的不断提高，人们对人体的健康意识不断加强，人体微量元素对健康的影响也逐步受到关注，通过检测吉林地区 0-6 岁儿童微量元素钙含量，分析吉林地区儿童微量元素钙含量情况，为儿童预防疾病，科学并且合理的膳食提供参考依据。
方法 选取 2020 年 1 月至 2020 年 12 月送检我公司的儿童微量元素钙 21772 例，按照年龄分为 3 组:0-1 岁婴儿组；1-3 岁幼儿组，3-6 岁学龄前组。采用稀释液(0.1％HNO3+0.1％曲拉通)对血样进行 1:20 稀释后直接用电感耦合等离子体质谱仪进行检测，数据采用 SPSS22.0 统计学软件分析。
结果 0-1 岁婴儿组共 6073 例，其中钙缺乏样本 40 例，钙缺乏率为 0.66%；1-3 岁幼儿组共 7341 例，其中钙缺乏样本 49 例，钙缺乏率为 0.67%；3-6 岁学龄前组共 8358 例，其中钙缺乏样本 10 例，钙缺乏率为 0.12%；分析不同年龄段儿童微量元素钙水平，结果发现 0-6 岁儿童微量元素钙整体钙缺乏率为 0.45% ，各组之间缺乏率差异有统计学意义(P＜0.05)。
结论 实验证明，2020 年吉林地区 0-6 岁儿童的微量元素钙整体缺乏率均不是很高，这可能与现阶段人们对微量元素的重视与及时补充程度有关。随着儿童年龄段的变化及喂养方式的不同，导致体内钙元素含量有所变化，钙元素缺乏需注意调整饮食或给予必要的药物补充。因此，儿童应每天适当的晒晒太阳，在饮食上多食用奶类、海带和虾皮、豆制品、动物骨头等，但在食用这些含钙丰富的食品时，应避免过多食用含磷酸盐、草酸、蛋白质丰富的食物，以免影响钙的吸收。同时，也应实时关注儿童体内微量元素情况，保证儿童健康成长。

硬皮病的研究

赵曼宇
呼和浩特金域医学检验所有限公司

硬皮病是一种慢性疾病，本文主要研究硬皮病的临床表现与治疗进展，通过一些常见临床表现以及部分可能引起发病的原因，具体原因尚在探索中，结合临床整理出部分现有治疗方法，但效果不一。药物可延缓该病进展，预后大多良好。

PU-2816

168 例高胆红素血症新生儿溶血病检测血清学结果分析

田甜
重庆医科大学附属第三医院检验科

目的 分析母婴 ABO 血型不合新生儿溶血病血清学检测结果。
方法 选择我院 2018 年 7 月至 2020 年 12 月收治的 168 例诊断为新生儿高胆红素血症且母婴 ABO 血型不同患儿作为此次研究对象，分别进行 ABO 血型和 Rh 血型鉴定及新生儿溶血病三项检测试验（直接抗人球蛋白试验、血清游离抗体试验、红细胞抗体释放试验）。

结果 168 例患儿中确诊为新生儿 ABO 溶血症 132 例，阳性率 78.6%，不同试验阳性率差异有统计学意义（P<0.05）；不同性别新生儿溶血病阳性率差异无统计学意义，血型 O-A 组与 O-B 组新生儿溶血病阳性率差异无统计学意义；日龄<4d 组 87.1%较日龄>4d 组 12.9%高，差异有统计学意义（P<0.05）。
结论 对于 O 型母亲产后出现新生儿黄疸、水肿、肝脾肿大等症状时应尽早进行产后新生儿溶血病三项试验检测，早发现、早治疗，才能有效降低新生儿溶血病后遗症的严重性。

PU-2817

长春地区 0-15 岁儿童全血中锌结果分析

高洪宇
吉林金域医学检验所有限公司

目的 分析吉林省长春地区 0-15 岁儿童全血中锌元素的含量，掌握长春地区儿童全血中锌元素的含量情况，为儿童预防疾病，科学并且合理的膳食提供数据支持及指导。
方法 选取 2020 年 1 月至 2020 年 12 月在送我公司检测的 29392 例儿童全血锌微量元素样本，按照年龄一共分为 3 组:分别为 0-5 岁、5-10 岁及 10-15 岁。采用电感耦合等离子体质谱法来进行微量元素锌的检测，仪器选用 ICP-MS(Agient 7900)；分析各组儿童锌元素检测结果，并讨论锌元素对儿童生长发育的影响。数据分析采用 SPSS22.0 统计学软件进行，以 P＜0.05 为差异有统计学意义。
结果 29392 例样本中，共有 7587 例缺乏锌样本，整体的锌缺乏率为 25.81% ，0-5 岁儿童一共 19545 例，其中有 7217 例缺乏锌，锌缺乏率为 36.93%；5-10 岁儿童一共 5825 例，其中有 266 例缺乏锌，锌缺乏率为 4.57%；10-15 岁儿童一共 4022 例，其中有 104 例缺乏锌，锌缺乏率为 2.59%。
结论 实验证明，2020 年在长春地区 0-15 岁儿童全血中锌元素总缺乏率为 25.81%，其中 0-5 岁的儿童锌缺乏率高达 36.93%，远高于 5-10 岁儿童的 4.57%与 10-15 岁儿童的 2.59%。因此，长春地区儿童的新缺乏率随年龄的增长呈现递减趋势，在不同性别儿童中，锌缺乏率无显著差别。锌在人体生长、发育、生殖遗传、免疫、内分泌等生理过程起重要作用。缺锌容易导致多种疾病发生，比如厌食，偏食，腻食，口腔溃疡受损，伤口不愈合，青春期痤疮，身材矮小，发育不良，免疫力低下，常患有感冒发烧，呼吸道感染疾病，智力落后。因此要加强对 0-5 岁儿童的合理膳食及对锌元素的合理补充，做到早预防、早治疗，以提高儿童的身体素质。

PU-2818

吉林通化地区老年人微量元素硒检测结果分析

李飞
吉林金域医学检验所有限公司

目的 运用电感耦合等离子体质谱法(ICP－MS)直接测定老年人血液中微量元素硒的含量，为吉林通化地区老年人的身体健康、预防疾病提供理论指导依据。
方法 选取吉林通化地区 2020 年在吉林金域进行体检的老年人（60-70 岁），检测项目为微量元素硒的样本 191 例，采集肝素抗凝全血 1-2 ml，采用 0.1%TritonX-100 和 0.1%HN03 对血样稀释 20 倍混匀后直接用等离子体质谱仪进行分析。
结果 硒方法的检出限分别为 2.3ug/L；精密度＜3.3%，加标回收率为 93.2-104.6%。在 191 例结果中，缺硒人数占比 10.5%，其中女性占比稍多一些，但无显著差异（P＞0.05）；硒摄入过量占比 1.6%。

结论 20 世纪 70 年代，我国将硒列为 15 种每日膳食营养元素之一，缺硒会严重影响人体健康，缺硒是苯丙酮尿症及各种心血管疾病的诱因，是人体克山病、大骨节病和白内障的主要原因。补硒可以有效预防多种疾病的发生，但硒摄入过量会导致人体中毒，补充要合理。据文献报到，中国缺硒现象非常普遍，有 72%的县市不同程度缺硒，本次分析结果显示通化地区老年人缺硒现象不十分明显，这可能与通化地区所处地理位置、环境及饮食习惯有关。人类所需的硒主要来源于土壤，硒在环境的迁移转化受多种因素制约和影响，因此，各地动植物中硒含量差距大，形态各不相同。适量补硒，提高人体免疫力，达到抗衰老，助长寿的目的。同时，ICP－MS 法测定微量元素硒的含量，方法操作简便、稳定、灵敏，准确度高，可用于临床大数据量分析。

PU-2819

一例新生儿不哭患儿的基因诊断

胡炜晨[1]、陈水平[2]、刘伟红[2]、代冰[1]、王雨[1]、袁悉奥[1]、龚强*[3]、黄晓亮*[2]
1. 长沙金域医学检验实验室有限公司
2. 浏阳市妇幼保健院新生儿科
3. 广州金域医学检验集团股份有限公司

目的 通过临床患者表型的收集和综合分析，结合高通量测序（NGS）、生信分析、ACMG 指南对张力减退-共济失调-发育迟缓综合症（HADDS)[mim:617330]相应基因变异进行定级，进而从遗传病因上对患者进行确诊。
方法 对患儿进行体格检查、常规辅助检查、影像学检查收集临床表型，结合临床症状完善染色体核型分析和家系全外显子组测序(WES）。WES 采用 VAHTS 试剂构建文库、IDT 探针杂交捕获、Illumina NovaSeq 6000 高通量测序。原始数据采用 fastp 软件过滤，以 hg19 为参考基因组、BWA 软件拼接序列，使用 GATK4 进行变异鉴定。检出变异使用 ANNOVAR 并结合 ClinVar、HGMD 和 OMIM 等数据库进行变异注释，SIFT、Polyphen 等生物信息学软件对变异进行致病性预测并利用人群基因变异频率数据库对变异进行频率注释。Sanger 测序对家系目标变异进行验证。根据《ACMG 遗传变异分类标准与指南》对变异进行评级。
结果 患儿表现为肌张力低、脸尖、耳位低、足内翻、轻度脑损伤、哭声小，对疼痛不敏感。与张力减退、共济失调和发育迟缓综合症较为符合。常规辅助检查、影像学检查及染色体核型分析等均无异常。测序质控结果如下：cleanBases:8.5G、Q30:91.2%、平均覆盖 119×,符合 NGS 测序要求。患儿检测到携带 *EBF3* 基因 c.578A>T(p.Lys193Met）杂合变异。父母未携带该变异，为新发变异；gNOMAD 数据库未收录；有报道该变异会导致 EBF3 表达量减少。根据现有证据，该变异被定义为“可能致病”变异。症状、变异级别、遗传模式（张力减退、共济失调和发育迟缓综合症为常染色显性遗传病）三个方面均符合，可以确诊。
结论 该患儿基因诊断的确诊，丰富了 HADDS 综合征的临床表型以及基因变异类型，为遗传基因检测、变异评级和遗传病的诊断丰富了证据。

PU-2820

50 例肺隐球菌病的临床分析

王甜甜
大连医科大学

目的 探讨肺隐球菌病的临床特征，提高对该病的认识和诊治能力。
方法 回顾性分析大连医科大学附属第一医院 2013 年至 2021 年收治肺隐球菌病患者的临床资料。包括患者的一般情况、易感因素、临床表现、影像学特征、治疗及预后。

结果 纳入研究肺隐球菌病患者 50 例中男性 25 例，女性 25 例。年龄范围在 27-82 岁,40-60 岁为高发病年龄段。48 例无明确的鸟粪、霉土等接触史,2 例有鸟类接触史。15 例伴有 1 种或多种基础疾病。20 例有免疫功能低下的相关因素。22 例有下列临床表现中的一种或多种:咳嗽、胸痛、胸闷、气短、咳痰、痰中带血、发热、乏力。入院诊断有肺部阴影、胸/肺部肿物、肺炎、肺占位、肺肿瘤、肺空洞、肺结节病、气短。影像学表现的病灶类型主要有结节/结节影、索条影/灶、团片影、团块影、粟粒影/灶、肺大泡、局限性气肿、斑片影、占位、团片影、钙化灶。病灶分布特点为：下叶多于上叶、右肺大于左肺。5 例存在阻塞性肺通气功能障碍，2 例存在混合型肺通气功能障。病理检查主要呈现肉芽肿的表现。47 例由肺组织行病理检查确诊，2 例由血清学确诊，1 例于隐球菌涂片中检查出隐球菌确诊。手术切除治疗 43 例、抗真菌药物治疗 6 例。1 例合并肺结核转院治疗。

结论 肺隐球菌病以中老年多发,在免疫功能正常和受损的人群中均可发病。基础疾病主要为高血压及恶性肿瘤，免疫力不同人群临床表现无统计学差异，肺部结节为影像学主要表现。手术切除为主要治疗手段，治疗疗效显著。

PU-2821

精神分裂症患者伴发高血压的概率及伴发的风险因素分析

陈倩
武汉大学人民医院

目的 探究精神分裂症患者伴发高血压的概率，并对其风险因素进行系统分析。

方法 纳入 2019 年 1 月至 2020 年 5 月在武汉大学人民医院确诊为精神分裂症的患者 246 例，收集所有患者的年龄、家族史、精神类药物服用史、病程等信息。检测并分析所有患者的血压、血清总胆固醇（TC）、甘油三酯（TG）、高密度脂蛋白（HDL-C）、低密度脂蛋白（LDL-C）、载脂蛋白 A1(ApoA1)、载脂蛋白 B(ApoB)、C-反应蛋白(CRP)等指标。根据患者的血压值，分为高血压组与非高血压组。

结果 在 246 例精神分裂症患者中 46 人伴发高血压，其伴发高血压概率为 23%。高血压组患者的年龄与病程均显著大于非高血压组（P＜0.01）；高血压组的受教育年限显著低于非高血压组（P＜0.05）；高血压组的 TC、TG、LDL-C、ApoB、CRP 均显著高于非高血压组（P＜0.05）。两组的性别、精神疾病家族史、精神类药物服用史、HDL-C、ApoA1 的差异无统计学意义（P＞0.05）。Logistic 回归分析显示，精神分裂症伴发高血压与患者的性别、年龄、血清 CRP 有关（P＜0.05）。

结论 精神分裂症患者伴发高血压的概率较高；同时，患者的性别、年龄、CRP 是精神分裂症患者伴发高血压的风险因素。

PU-2822

胃溃疡患者纤维结合蛋白和胆碱酯酶的变化及临床意义

陈倩
武汉大学人民医院

目的 分析胃溃疡患者纤维结合蛋白的变化并探讨其临床意义。

方法 收集武汉大学人民医院 2018 年 10 月至 2019 年 12 月收治并诊断为慢性胃炎患者 74 例作为 A 组、胃溃疡患者 59 例作为 B 组、胃癌患者 31 例作为 C 组。检测所有受试对象的白细胞（WBC）、中性粒细胞（NEUT）、淋巴细胞（LY）、单核细胞(MONO)、补体（C1q）、纤维结合蛋白（Fn）、胆碱酯酶（CHE）的水平，并比较组间差异。采用 pearson 线性相关分析各项指标与胃溃疡发生发展的相关性。

结果 B 组的 C1q、Fn、CHE 显著低于 A 组（P<0.001 或 P<0.05），WBC、NEUT、LY 和 MONO 显著高于 A 组（P<0.001 或 P<0.05）；C 组的 WBC、LY、MONO、Fn、CHE 显著低于 B 组（P<0.001 或 P<0.05），C1q 显著高于 B 组（P<0.05）。Spearman 相关性分析显示，Fn、CHE 与疾病分组呈负相关（r=-0.25、r=-0.246; p<0.01、p<0.01）。
结论 白细胞、中性粒细胞、淋巴细胞、单核细胞、补体 C1q、纤维结合蛋白、胆碱酯酶等血清指标的变化与胃溃疡的发生发展关系密切，对判断胃溃疡的愈合情况及是否有恶变倾向有一定价值。

PU-2823

组织工程技术和生物材料在肿瘤液体活检领域中的应用

毕庆庆、闫清、张磊、牟晓峰
青岛市中心医院

目的 综述组织工程技术和生物材料在肿瘤液体活检领域中的应用。
方法 组织工程作为一个新兴学科，经过三十余年的发展，已经在医学研究和应用方面取得了很多突破性的进展。肿瘤是当今时代人类面临的重大健康问题，在预防筛查、早期诊断、治疗监测、预后判断等肿瘤诊疗的各个环节中，越来越多的新兴学科开始展现出令人眼前一亮的作用。组织工程作为一门多学科交叉的新兴学科也已经在肿瘤诊疗的各个层面中崭露头角。本文综述了组织工程技术和生物材料在肿瘤液体活检领域中的应用。
结果 组织工程中常见的纳米生物材料、生物材料表面修饰和微流体等技术方法为体外捕获循环肿瘤细胞提供了新的思路。有研究者构建了一种新的基于拟生态方法和纳米技术相结合的捕获 CTC 的方法。该方法在纳米材料表面模拟了 CTC 与内皮细胞的相互作用，利用多价固定黏附和连接在纳米聚合物上的上皮细胞黏附分子（EpCAM）来捕获 CTC，效率较高。另外，基于组织工程的微流控技术也可以从腹水、胸腔积液和尿液等多种人体体液中捕获 CTC。捕获 CTC 的具体方式不同，各有优缺点。
结论 综上所述，组织工程技术在肿瘤液体活检领域中的应用研究已经十分广泛，但都存在一个共性的问题：虽然取得了很多令人兴奋的研究结果，但是研究的临床转化成功率不高。期望这些研究能最终回到临床，为临床肿瘤诊疗提供切实的帮助，造福肿瘤患者。

PU-2824

含羞云实的活性成分研究

王小玲
山东大学第二医院

目的 对含羞云实(Casealpinia mimosoides Lam.)的化学成分进行系统研究，发现其中具有抗肿瘤活性的化合物。
方法 采用 95%乙醇对植物进行提取，采用硅胶柱色谱、葡聚糖凝胶 Sephadex LH-20 柱色谱、C18 反相硅胶柱色谱，以及半制备型高效液相色谱等技术进行化合物的分离纯化，采用 NMR、MS、IR 和 CD 等波谱学技术进行化合物结构鉴定，采用 MTT 法测定化合物对肿瘤细胞增殖的抑制活性。
结果 共分离获得了 7 个化合物，其中包括 2 个新化合物，分别鉴定为 1 个高异黄酮类化合物(R)-3-(2¢,4¢-dimethoxybenzyl)-7-hydroxychroman-4-one (1)和 1 个卡萨烷型二萜 caesalpin I (2)。获得的已知化合物包括 1 个卡萨烷型二萜 neocaesalpin (3)、1 个黄酮类化合物 5,3’-diydroxy-3,7,4’-trimethoxyflavone (4)、1 个高异黄酮类化合物 bonducellin (5)，以及 2 个简单芳香化合物 1,2,4-trimethoxybenzene (6)和 vanillic acid (7)。活性实验显示化合物 1 和 5 对 PC3 和 A549 肿瘤细胞的增殖具有抑制活性。
结论 高异黄酮作为含羞云实中抗肿瘤活性化合物，值得进行深入研究。

PU-2825

C 反应蛋白在两种检测系统中的对比分析与偏倚评估

刘双、冯彩虹、李学武、丛琳、周汉王
解放军总医院海南医院

目的 通过对罗氏 cobas c702 全自动生化分析仪（简称罗氏 cobas c702）和迈瑞 BC-5180CRP 全自动血液细胞分析仪（简称迈瑞 BC-5180CRP）所测 C 反应蛋白（C-reactive protein，CRP）结果进行对比分析和偏倚评估，探讨两台仪器间是否具有可比性，如果具有可比性则新购入的迈瑞 BC-5180CRP 可投入使用。
方法 根据美国临床实验室标准研究所（CLSI）EP9-A2 作为参考文献，随机收集门诊或病房患者血清 60 例，以罗氏 cobas c702 作为目标系统，测定血清中 CRP 浓度，迈瑞 BC-5180CRP 作为待检测系统，测定血清中 CRP 浓度，将两者结果进行比较分析。
结果 两个系统在低、中、高 3 种不同浓度水平的 CRP 测定结果差异无统计学意义(P>0.05)，相关系数 r2≥0.9954，相关性较好，系统误差均在 1/2 CLIA'88 要求的可接受总误差限制范围内，因此，在低、中、高这三大浓度水平处可以接受。
结论 两个系统的测定结果具有良好的可比性，定期对仪器进行对比校正，这样可以保证测定结果的稳定性，从而满足实验室结果的一致性要求。

PU-2826

2015-2020 年腹腔感染患者引流液病原体分布及其抗菌药物敏感性分析

王雅轩、朱晓雁、马立艳、苏建荣
首都医科大学附属北京友谊医院

目的 分析腹腔感染患者引流液中的病原体分布及其耐药性。
方法 收集北京友谊医院 2015-2020 年间收治的 890 名腹腔感染患者的腹腔引流液标本，对其进行细菌的培养鉴定以及抗生素敏感性试验，分析其病原体分布情况及药物敏感性。
结果 在 890 名腹腔感染患者中，共分离出 1664 株病原菌。其中，常见病原菌的分离率分别为大肠杆菌（17.85%）、屎肠球菌（14.18%）、肺炎克雷伯菌（10.88%）、铜绿假单胞菌（7.87%）、粪肠球菌（5.59%）、阴沟肠杆菌（3.18%）、金黄色葡萄球菌（3.12%）和奇异变形杆菌（2.34%）。革兰阴性菌中的大肠杆菌、肺炎克雷伯菌、铜绿假单胞菌、阴沟肠杆菌和奇异变形杆菌对阿米卡星的敏感率均大于 80%。大肠杆菌和肺炎克雷伯菌对氨苄西林的耐药率均大于 80%，肺炎克雷伯菌对氨曲南、头孢曲松、庆大霉素和左氧氟沙星的耐药率均低于大肠杆菌。革兰阳性菌中，屎肠球菌、粪肠球菌和金黄色葡萄球菌对利奈唑胺和万古霉素的敏感率均大于 90%。屎肠球菌对氨苄西林、环丙沙星和左氧氟沙星的耐药率均大于 80%，粪肠球菌对喹努普汀/达福普汀和四环素的耐药率均大于 70%，金黄色葡萄球菌对青霉素的耐药率大于 90%。
结论 腹腔感染患者引流液中分离出的病原菌主要为大肠杆菌、屎肠球菌和肺炎克雷伯菌，临床应严密监测耐药结果，以便采取有效措施控制耐药菌的增长，并及时更换治疗方案。

PU-2827

MiR-7 在肿瘤中的分子调控机制和治疗潜力

李淼[1,2]、窦骏[2]
1. 南京鼓楼医院检验科
2. 东南大学医学院病原生物学与免疫学系

目的 综述 miR-7 在肿瘤中的多种分子调控机制及诊治潜力的研究进展。
方法 通过检索和阅读文献，对文献内容进行综合分析、归纳整理和讨论。
结果 miR-7 在正常组织中主要特异表达于脑和胰腺组织，其表达受到多种机制的调控。除在生理发育过程中发挥作用外，miR-7 还可以有效抑制肿瘤的发生发展与转移，是肿瘤治疗的重要潜在靶标。研究表明，miR-7 能通过抑制肿瘤细胞增殖和转移、促进肿瘤细胞自发 DNA 损伤、逆转肿瘤耐药、调控肿瘤干细胞的功能等，在乳腺癌、肺癌、脑肿瘤、骨肿瘤、胃癌、肝癌等多种肿瘤中发挥抑癌效应。此外，miR-7 在肿瘤的预测、诊断和预后方面也具有很大的潜力。目前，关于 miR-7 在肿瘤中的生物学行为有了广泛的研究，但基于 miR-7 的抗肿瘤治疗仍有许多问题尚待克服，如有效的体内递送。
结论 miR-7 可作为一种潜在的肿瘤抑制因子，在肿瘤的诊治和预后判断中具有临床应用前景。

PU-2828

乙型肝炎患者血清中发现 RR 抗体一例

夏欢、邱梅花
海口市人民医院

目的 探讨乙型肝炎病毒与 RR 抗体的关系。
方法 分析一例有“多囊肾、慢性肾脏病、乙型肝炎”既往史的患者血清中发现的 RR 抗体。
结果 本例在发现 RR 抗体后继而又发现乙型肝炎病毒呈低浓度复制。
结论 RR 抗体可以出现在乙型肝炎患者，可能与乙型肝炎病毒复制有关。

PU-2829

MiR-7 下调 CD44 表达抑制乳腺癌干细胞致瘤性的研究

李淼[1,2]、窦骏[1]
1. 东南大学医学院病原生物学与免疫学系
2. 南京鼓楼医院检验科

目的 探究 miR-7 降低乳腺癌干细胞（BCSCs）致瘤性的作用机制，为基于 miR-7 调控 BCSCs 治疗乳腺癌提供实验依据。
方法 免疫磁珠分选法从 MDA-MB-231 细胞中分选出 BCSCs，构建荷 BCSCs 异种移植物鼠原位瘤模型，通过蛋白芯片技术检测经 miR-7 agomir 治疗后肿瘤组织中的蛋白表达情况，筛选差异表达蛋白；q-PCR 和 WB 检测四株人乳腺癌细胞系中 miR-7 和 CD44 的表达水平；构建过表达 miR-7 的慢病毒重组体，感染人乳腺癌原代细胞（LD 细胞），筛选出稳定过表达 miR-7 的单克隆细胞株（Lenti-miR-7 细胞），采用 qPCR、WB 及 FCM 检测细胞中 miR-7 和 CD44 的表达量；构建荷 Lenti-miR-7-BCSCs 异种移植物鼠原位瘤模型，监测荷瘤鼠的一般状况及肿瘤生长，IHC 检测肿瘤组织中 CD44 的表达情况。
结果 蛋白芯片结果显示 miR-7 agomir 治疗组肿瘤中 CD44 的表达量较对照组降低了 2.4 倍；四株人乳腺癌细胞系中，CD44 在相对高表达 miR-7 的 MCF-7 细胞中低表达；对筛选出的 Lenti-miR-7 细胞的检测结果显示，通过慢病毒系统过表达 miR-7 后可有效降低 LD 细胞中 CD44 的表达水平；

相较对照组和化疗药治疗组，荷 Lenti-miR-7-BCSCs 异种移植物鼠的肿瘤生长显著受抑，肿瘤组织中 CD44 的表达下调。
结论 过表达 miR-7 可以有效抑制荷 BCSCs 异种移植物鼠的肿瘤生长，其机制可能是 miR-7 通过下调细胞中 CD44 的表达水平，从而降低了 BCSCs 在 NOD/SCID 小鼠体内的致瘤性。

PU-2830

2014-2020 年 11889 例新生儿及其产妇梅毒血清学检测结果分析

夏欢、洪云、范维丽、赵庆珠、邱梅花
海口市人民医院

目的 通过分析 2014-2020 年 11889 例新生儿及其产妇梅毒的血清学检测结果，为制定孕产期梅毒的防治策略提供依据。
方法 回顾性分析 2014-2020 年本院产科所有新生儿及其产妇的梅毒血清学检测结果。用酶联免疫吸附试验(TP—ELISA)和梅毒螺旋体明胶颗粒凝集试验(TPPA)检测梅毒密螺旋体抗体，甲苯胺红不加热血清反应素试验(TRUST)检测梅毒非密螺旋体抗体，最后采用卡方检验进行统计学分析。
结果 共计检测产妇 11843 例，新生儿 11889 例，其中双胞胎 46 例。产妇 TP 抗体共阳性 80 例，总阳性率为 6.76‰，2017 年 TP 抗体阳性率最高，呈现先增后降的趋势。产妇 TRUST 阳性共 50 例，总阳性率为 4.22‰，2017 年 TRUST 抗体阳性率最高，呈现先增后降的趋势。新生儿 TP 抗体共阳性 62 例，总阳性率为 5.21‰,2017 年 TP 抗体阳性率最高，呈现先增后降的趋势。TRUST 阳性共 20 例，总阳性率为 1.68‰，2017 年 TRUST 抗体阳性率最高，呈现先增后降的趋势。深入分析分娩梅毒阳性新生儿的产妇资料发现，<20 岁产妇分娩出 TP、TRUST 阳性新生儿占比均最高，不同年龄段占比率差异有统计学意义（$\chi2=11.838$，df=3，P=0.008；$\chi2=10.935$，df=3，P=0.012）；初中及以下文化程度的产妇分娩出 TP、TRUST 阳性新生儿占比率显著高于初中以上（$\chi2=4.209$，df=1，P=0.040；$\chi2=5.047$，df=1，P=0.025）；农村户籍的产妇占比率显著高于城镇户籍（$\chi2=4.758$，df=1，P=0.029；$\chi2=4.747$，df=1，P=0.029）。
结论 2014-2020 年产妇和新生儿梅毒 TP、TRUST 阳性率均呈现先增后降的趋势，不同年龄、文化程度、户籍的产妇分娩出梅毒阳性新生儿的比例有显著差异，未来梅毒的防治应重点向这部分人群扩大。

PU-2831

上海地区 2020 年度甘胆酸室间质量评价结果分析

金中淦、居漪、虞啸炫、欧元祝
上海市临床检验中心

目的 血清甘胆酸（Cholyglycine，CG）是胆汁酸的主要成分之一，是胆酸与甘氨酸在肝内结合而成的结合型胆汁酸，是临床检验中常见且重要的项目之一，在肝癌、胆管癌、肝内胆汁淤积症、肝硬化、胰腺癌、慢性阻塞性肺疾病等疾病的临床诊断和病情监测中具有重要的意义。本研究拟通过开展室间质量评价（EQA）了解上海地区临床实验室 CG 检测质量。
方法 2020 年 EQA 共发放 10 份样本进行甘胆酸测定，通过实验室反馈结果及仪器试剂信息对 GCA 进行统计分析。
结果 2020 年两次 EQA 结果显示，不同实验室间检测结果总体变异系数分别在 41.7%～59.8%、42.2%～78.8%，实验室间结果差异非常大；免疫比浊法结果远低于均相酶免疫法检测结果，第一次两种方法间结果偏差在-46.7%～-61.8%，第二次两种方法间的偏差在-48.7%～-73.6%，结果之

间不存在可比性。 即使都采用免疫比浊法，不同试剂检测结果的变异在 30.6%～42.5%，结果差异比较大。
结论 上海地区临床实验室检测系统和试剂品牌多样，不同方法不同试剂品牌间测量结果缺乏可比性， CG 检验结果的一致性和可比性有待进一步提高，质量控制对于保证检测结果的准确可比具有十分重要的作用，开展 CG 的量值溯源工作是努力的方向。

PU-2832

临床实验室设备管理系统功能与应用

姚恒、李敏、吕康琪、郭非凡、承宝贵、张秀明、熊丹
深圳市罗湖集团医学检验中心

目的 设备管理是保障医院正常运转的支持系统，随着医改的推进与深化,新形势与旧思维引发的冲突带来一系列设备管理上的问题，其健康发展关系到临床工作的正常开展,已成为医疗质量管理、医疗风险防范和医疗成本控制的重要一环。
方法 在实验室信息管理系统平台上，基于 Is015189 认可准则和模块化设计的智能化管理系统。
结果 该系统能在论证、采购、验收、入库、维修、保养、调拨、计量、报废等全生命周期内实施精确、高效的管理。
结论 本实验室在临床实验室设备管理信息系统中建立了设备管理模块，该模块实现了临床实验室设备管理全过程的实时记录监控、维修保养等各环节有机结合。是医疗设备管理部门，设备使用部门等部门机构的强力工具和助手。

PU-2833

血液质量对骨髓染色体核型分析的影响

翟贺、陈超
吉林金域医学

目的 探究不同质量的血液样本对骨髓染色体培养制片的影响，进一步提高骨髓染色体核型分析的效果。
方法 随机选取 2021 年 1 月至 2021 年 5 月的 60 例骨髓标本，观察血液样本状态，一般分为四种，良好，油脂，凝块，血量不足，对其进行细胞计数，取 20 微升血液放入 380 微升白细胞稀释液中，混匀，在血细胞计数板上充池，进行计数，通过细胞数量来计算在培养瓶中需接种的血量。48 小时后进行收获，进行制片，镜下观察分裂相的长短与粗细，是否有条带，可分析分裂相的数量。
结果 经观察，在 60 例骨髓标本中，有 30 例血液状态良好，14 例凝块，6 例油脂，10 例血量不足。计数时 30 例血液状态良好的细胞数均大于 50，接种比较顺利，经二氧化碳培养箱培养 48 小时后，培养后加入秋水仙素再次培养一小时，进行收获，所获得的沉淀细胞较多，显微镜下的分裂相也较多，染色体条带清晰，形态较好，便于分析。14 例带有凝块的血液计数基本小于 50，进行接种时较难将血液吸出注射到培养瓶中，导致接种血量不足，或者将小凝块注射到了培养瓶中，导致培养收获后沉淀细胞带有渣子，影响镜下分裂相的观察，分析时增加了难度，影响条带分析。6 例油脂的标本进行细胞计数时覆盖在细胞上，影响计数，导致接种血液数量不准，收获沉淀细胞不一，影响悬液浓度，导致镜下过密或过稀，可分析分裂相较少，会重滴。10 例血量不足标本导致接种血液不够，收获的沉淀细胞较少，镜下可分析分裂相较少。
结论 实验表明，标本中带有凝块，油脂以及血液的量不足均会影响到收获的沉淀细胞的量，以及镜下可分析分裂相的量以及形态条带，增加了退单率，延迟发单时间。因此，进行标本采集时，应

从是否有凝块、油脂及血液量等多方面注意标本的质量，以提升染色体培养制片质量，提高骨髓染色体核型分析的效果。

PU-2834

临床实验室业务管理决策支持系统的设计与应用

李敏、陈大洋、熊丹、姚恒、张秀明
深圳市罗湖医院集团

目的 建立全面满足行业标准的区域医学检验中心以业务流程优化重组为基础的实验室管理平台，提高实验室精细化管理和绩效管理水平。
方法 iLab 标准化智慧实验室管理平台利用数据库技术、计算机技术和网络技术，使用 SPRING+SHIRO+SNAKERFLOW 三个框架搭建而成的 B/S 型架构模式，WINDOWS/LINUX 作为操作系统，MYSQL5.7 作为数据库管理系统，JAVA+R 语言作为开发语言，并使用 REDIS 缓存提高读取效率，通过与 LIS、HIS 对接，数据挖掘和统计分析而搭建的平台。
结果 系统自动生成业务管理所需要的各种统计图、统计表、趋势图；按照标本量、项目量、业务收入等多维度，实现不同实验室、同一实验室不同专业组、同一专业组不同岗位的业务量对比、同比、环比分析及趋势分析；实时显示业务工作量数据和标本来源；实时显示委托实验室和受托实验室的检验项目、标本量和业务量；实时显示和监控关键质量指标、环境监测指标。
结论 数据管理中心满足实验室数据的利用、数据管理要求、支持实时可视化的统计分析，为医院管理和决策提供有力保障，为相关工作管理人员实施质量控制工作提供有效的工具。

PU-2835

评价三种检测系统检测糖化血红蛋白的一致性

李世红[1,2]、李永林[3]、栗秀芳[1]、钱净[1]、张水丽[1]、保梦珏[1]
1. 昆明市第一人民医院
2. 昆明医科大学附属甘美医院
3. 昆明学院

目的 对三个不同检测系统检测糖化血红蛋白（HbA1c）结果的一致性进行分析。
方法 分别使用 Sebia（毛细管电泳法，法国 Sebia Capillarys）、XPT（乳胶增强免疫比浊法，上海执诚）、贝克曼 AU5800（酶法，日本积水）三种检测系统同时检测 125 个 EDTA 抗凝血样本，用 Spearman 相关分析、Passing-Bablok 回归和 Bland-Altman 图分析三种检测系统检测 HbA1c 的一致性；以 HbA1c≥6.5%作为切点，结合临床诊断计算灵敏度、特异性、阳性预测值和阴性预测值绘制 ROC 曲线，分析 HbA1c 诊断糖尿病的最佳阈值。
结果 1.毛细管电泳法-乳胶增强免疫比浊法：Spearman 相关分析（r=0.965，p<0.001），Passing-Bablok 回归方程 y=-0.3396+1.0513x，p=0.67；毛细管电泳法-酶法：Spearman 相关分析（r=0.961，p<0.001）；Passing-Bablok 回归方程 y=0.2470+0.9630x，p=0.52；乳胶增强免疫比浊法-酶法：Spearman 相关分析（r=0.961，p<0.001），Passing-Bablok 回归方程 y=0.5491+0.9160x，p=0.12。2.ROC 曲线分析显示 Sebia 毛细管电泳法、乳胶增强免疫比浊法和酶法曲线下面积（AUC）分别为 0.98、0.97 和 0.98，最佳截断值分别为≥6.45%、≥6.35%和≥6.24%.
结论 Sebia Capillarys、XPT 和 AU5800 三个系统检测 HbA1c 的结果具有一致性，ROC 曲线分析显示最佳阈值均小于诊断标准 6.5%。

PU-2836

昆明某三甲医院中段尿培养的病原菌分布与耐药性分析

吕红玲
云南大学附属医院

目的 了解某院 5 年间中段尿培养病原菌分布及耐药情况，为抗菌药物的合理使用提供依据。
方法 回顾性分析 2015 年 1 月至 2019 年 12 月住院及门诊患者中段尿液标本中分离培养的非重复病原菌，采用 VITEK 2 Compact 全自动微生物鉴定仪进行菌种鉴定及药敏试验，使用 WHONET5.6 软件进行数据分析。
结果 按患者首次分离菌株进行统计分析，从尿液标本中分离出 4974 株病原菌，其中革兰阴性 3892 菌株，占 78.2%,革兰阳性菌 1082 株，占 21.8%。尿液标本分离细菌居前 5 位者依次为大肠埃希菌、肺炎克雷伯菌、屎肠球菌、铜绿假单胞菌、粪肠球菌。大肠埃希菌对含酶抑制剂的复方制剂的耐药率有升高趋势；肺炎克雷伯菌对大多数抗菌药物耐药率均较高；铜绿假单胞菌对所有测试抗菌药物耐药率均有升高趋势，且 2019 年耐药率较高，均≥70%；屎肠球菌和粪肠球菌对抗菌药物的耐药情况较平稳。
结论 大肠埃希菌和肠球菌是尿路感染的主要病原菌，该院尿培养病原菌中大肠埃希菌、肺炎克雷伯菌和铜绿假单胞菌的耐药率较高应重点监测。尿培养病原菌的耐药性监测，可为尿路感染抗菌药物的合理使用提供依据。

PU-2837

血清 CA72-4、SCC、IGF-1、CYFRA21-1 联合检测对食管恶性肿瘤的临床诊断价值

杨利萍[1]、李登云[2]
1. 衢州市人民医院（衢州中心医院）
2. 浙江省衢化医院

目的 探讨联合检测血清糖类抗原 72-4（CA72-4）、鳞状细胞癌（SCC）、胰岛素样生长因子 1（IGF-1）、细胞角蛋白 19 片段（CYFRA 21-1）在食道癌诊断中的意义。
方法 收集 144 例食道癌患者为恶性组，143 例健康体检者作为对照组，同时检测比较两组的血清 CA72-4、SCC、IGF-1、CYFRA21-1 水平差异，运用 logitic 回归并绘制 CA72-4、SCC、IGF-1、CYFRA21-1 以及联合检测的受试者工作曲线（ROC），并评价各指标对食道癌的诊断效能。
结果 食道癌组的血清 CA72-4、SCC、IGF-1、CYFRA21-1 水平（8.79±24.49、2.81±6.81、204.02±55.70、7.01±14.45）均高于对照组（1.75±1.46、0.86±0.42、97.01±61.12、1.93±0.85），差异均有统计学意义（P＜0.05），并且随着病情的恶性程度发展，CA72-4、SCC、IGF-1、CYFRA21-1 指标逐步升高。CA72-4、SCC、IGF-1、CYFRA21-1 诊断食道癌的 ROC 曲线下面积（AUC）分别为 0.74、0.75、0.71、0.70，灵敏度分别为 68.30%、62.50%、72.20%、56.25%，准确度分别为 64.45%、66.90%、65.85%、64.45%,均不能达到很好的诊断效果，四项指标联合检测的 AUC 提高到 0.86，灵敏度、准确度分别提高到 86.8%、78.10%，（P＜0.05），诊断效能优于单项检测。
结论 在食道癌诊断中，联合检测 CA72-4、SCC、IGF-1、CYFRA21-1 可以提高检测的准确度、灵敏度，并且各指标可作为病情评估的参考指标，联合检测可提高对恶性肿瘤的诊断效能，为临床提供更优质的实验诊断支持

PU-2838

miR-34a 靶向 CD47 对弥漫性大 B 细胞淋巴瘤生物学行为的影响

李凤龙
东南大学附属中大医院

目的 探究 miR-34a 靶向 CD47 对弥漫性大 B 细胞淋巴瘤生物学行为的影响。
方法 体外培养人弥漫性大 B 细胞淋巴瘤细胞 SU-DHL-2，随机分为对照组、miR-34a mimics 阴性对照组、miR-34a mimics 组三组，以 CCK-8 法和流式细胞术分别测定各组 SU-DHL-2 细胞活力、凋亡率；以细胞划痕和 Transwell 侵袭实验检测各组 SU-DHL-2 细胞迁移、侵袭能力；以实时荧光定量 PCR（qRT-PCR）实验检测各组 SU-DHL-2 细胞 miR-34a 和 CD47 mRNA 表达水平；以免疫印迹实验检测凋亡相关蛋白（Bcl-2、Bax）、上皮-间质转化（EMT）相关蛋白（Vimentin、E-cadherin）和 CD47 蛋白表达水平；以双荧光素酶报告基因实验检测 miR-34a 对 CD47 的靶向调节关系。
结果 相比对照组，miR-34a mimics 组 SU-DHL-2 细胞凋亡率、miR-34a 表达、E-cadherin 及 Bax 蛋白表达明显升高（P＜0.05），细胞活力、迁移细胞数、侵袭细胞数、CD47 mRNA 表达及 CD47、Vimentin、Bcl-2 蛋白表达显著降低（P＜0.05），miR-34a mimics 阴性对照组 SU-DHL-2 细胞各指标差异无统计学意义（P＞0.05）。miR-34a 可靶向下调 CD47 表达。
结论 miR-34a 能靶向下调 CD47 表达，抑制弥漫性大 B 细胞淋巴瘤细胞增殖，诱导其凋亡，降低其侵袭转移力。

新型冠状病毒肺炎疫情下临床实验室生物安全防护知识教学实践与思考

刘颖
陆军特色医学中心（大坪医院）

随着现代医学的快速发展，生物安全防护工作也越来越被人们所关注和重视。积极开展生物安全防护知识教学实践是在临床实验室医院感染管理培训的重点内容。生物安全防护教育依托于医院感染学，实验室生物安全防护教育是改善全体实验室工作人员对生物安全防护知识认知及技能的重

要方式，也是提升实验室整体医院感染防控意识、提升医疗质量的重要方式。本研究就检验科生物安全防护知识的教育与实践进行了论述，并对培训方案实施情况进行了深入思考和展望，以期为新型冠状病毒感染的生物安全培训工作提供新的思路。

PU-2841

Beckman Coulter AU5800 全自动生化分析仪的性能验证

王瑶、李卓
西安医学院第一附属医院

目的 对 Beckman Coulter AU5800 全自动生化分析仪进行性能验证。
方法 参照美国临床实验室标准化协会（CLSI）和美国临床实验室改进法案 CLIA'88 的质量要求，本文针对 10 个常规检测项目：总胆红素(TBIL)、谷草转氨酶(AST)、谷丙转氨酶(ALT)、总蛋白(TP)、白蛋白(ALB)、尿素(BUN)、尿酸(UA)、总胆固醇(TC)、甘油三酯(TG)、葡萄糖(GLU)精密度、正确度、线性范围、参考区间进行性能评价。
结果 批内精密度小于 CLIA'88 标准限值要求的 1/4，合格；批间精密度小于 CLIA'88 标准限值要求的 1/3，合格；正确度不超过 CLIA'88 标准限值要求的 1/2，合格；各检测项目引用的线性范围、参考区间均符合要求。
结论 Beckman Coulter AU5800 全自动生化分析仪检测符合质量要求，可以为临床提供可靠的依据。

PU-2842

上海地区载脂蛋白 E 基因分型检测室间质量评价

鲍芸、肖艳群、权静、张芃胤
上海市临床检验中心

目的 通过开展载脂蛋白 E（*ApoE*）基因分型检测室间质量评价计划（简称室间质评），评估参评实验室检测能力及存在的问题，提高临床实验室该项目检测质量。
方法 *ApoE* 基因分型与人体的血清总胆固醇和低密度胆固醇水平密切相关，不同基因型与高血脂症、心血管疾病及阿尔兹海默症的患病风险密切相关，同时影响他汀类药物的降脂效果。人体内存在的三种 ApoE 蛋白异构体（E2、E3 和 E4）是由两个常见的单核苷酸多态性（single nucleotide polymorphism, SNP）位点 rs429358 和 rs7412 共同决定的。针对 *ApoE* 基因以上 2 个 SNP 位点检测开展室间质评计划，并要求根据 SNP 检测结果报告 *ApoE* 分型结果。2020 年室间质评计划为一年 2 次，样本盘包含 5 支样本，类型为基因组 DNA。要求参评实验室收到样本后在规定时间内检测样本并网上上报结果。依据回报结果计算各实验室成绩，汇总样本的总体符合率和基因分型判定符合率，并分析不同检测方法的符合率和检测错误类型。
结果 2 次室间质评中成绩满分的实验室分别为 93.75%（30/32）和 100%（31/31），样本检测的总体符合率分别为 99.38%（318/320）和 100%（310/310），基因分型判定总体符合率分别为 97.5%（156/160）和 100%（155/155）。回报错误结果中包括 2 例 SNP 检测错误和 4 例分型结果判定错误。
结论 各实验室检测总体准确率较高，但个别实验室检测和基因分型判断能力有待提高。检测错误和基因分型判断错误集中出现在第 1 次室间质评中。实验室上报的错误结果中包含 2 例 SNP 检测结果正确、分析结果判定错误情况，表明实验室人员遗传学分析能力有待提高。室间质评计划能帮助实验室发现检测中存在的问题，提高检测质量。

PU-2843

动物源性屎肠球菌 FH65 耐药性分析研究

吴飞
南通市第三人民医院

为了研究温州农场鸡粪中分离的屎肠球菌 FH65 菌株氯霉素耐药基因的表型和耐药基因相关序列的结构分析。对屎肠球菌 FH65 进行分子克隆，克隆出 *fexA*、*optrA*、*tet*(M)、*tet*(L)等耐药基因，并用最低抑菌浓度(MICs)以确定克隆基因活性及耐药性水平。使用测序和比较基因组学方法分析耐药基因相关序列结构。结果表明，屎肠球菌 FH65 全基因组由一条编码 2,374 个预测开放阅读框(ORF)及长度为 2.53Mb 染色体，和三个分别编码 41、48 和 222 个 ORF 的质粒 p38、p48 和 p219 组成。屎肠球菌 FH65 被鉴定为一种新的序列类型 ST5781。屎肠球菌 FH65 对卡那霉素、链霉素、四环素、氟苯尼考、阿米卡星、红霉素、庆大霉素和氯霉素均表现出耐药性。本研究首次发现屎肠球菌在染色体和质粒中同时携带 *fexA* 基因。屎肠球菌 FH65 染色体中带有 *fexA* 的序列与粪肠球菌 L12 非常相似。聚类分簇结果表明簇 2、簇 6、簇 18 和簇 25 中大细菌来自粪肠球菌，只有一种屎肠球菌菌株的序列与携带 *fexA* 的 p48 序列相似。本研究结果表明，氯霉素抗性基因 *fexA* 广泛存在于不同菌种、不同来源的细菌之间，其中主要存在于肠球菌中。转座子可能携带 fexA 基因及其他耐药基因不同菌株之间水平转移。

PU-2844

60 例流行性出血热的诊断分析

束梅燕、葛秋霞
江苏省人民医院（南京医科大学第一附属医院）

目的 探讨流行性出血热的诊断依据。
方法 对我院近期 60 例流行性出血热住院病人临床资料进行回顾性分析。
结果 60 例患者分别入住于 5 个科室,提示该病早期临床表现多样化;有明显的五期临床表征者占 90%;血、尿常规及肾功能表征者 100%,但流行性出血热 IgM、IgG 抗体阳性率仅 18.5%;居住农村者占 97%。
结论 目前,流行性出血热仍无特异性诊断方法,其临床表现、实验室检查、流行病学史均为必要的诊断依据。

PU-2845

LncRNA HCP5：a potential biomarker for diagnosing gastric cancer

shiyi Qin [1,2,3]、lei Yang[1,2,3]、shan Kong[1,2,3]、yanhua Xu[1,2,3]、bo Liang[4]、shaoqing Ju[2]
1. 南通大学医学院
2. 南通大学附属医院检验科
3. 南通大学附属医院临床医学研究中心
4. 南通大学附属医院超声科

Background It has been reported that long non-coding RNAs (lncRNAs) can be regarded as a biomarker and had particular clinical significance for early screening and gastric cancer (GC) diagnosis. Recently, the treatment effect and prediction were still poor and low. Surgical resection was still the primary treatment at present. LncRNA can be divided into sense, antisense, intronic, bidirectional transcripts, intergenic, and enhancer RNAs. Current studies have shown that

lncRNA carried out strict regulation and abnormal expression during the development of different cancers. Simultaneously, more and more pieces of literature have confirmed that lncRNA can be used as a potential biomarker for tumor screening and prognosis monitoring. Therefore, this study aimed to investigate whether serum HCP5 could be a new diagnostic biomarker.
Methods Filtered out the HCP5 from the GEO database. The specificity of HCP5 was verified by real-time fluorescence quantitative PCR (qRT-PCR), and then the stability of HCP5 was verified by room temperature storage and repeated freeze-thaw experiments. Meanwhile, the accuracy of HCP5 was verified by agarose gel electrophoresis (AGE) and Sanger sequencing. Simultaneously, the expression level of serum HCP5 was detected by qRT-PCR in 98 patients with primary gastric cancer, 21 gastritis patients, 82 healthy donors, and multiple cancer types. Then, the methodology analysis was carried on. Moreover, receiver operating characteristic (ROC) was used to evaluate its diagnostic efficiency. Besides, the Fluorescence in Situ Hybridization (FISH) assay showed the subcellular localization of lncRNA HCP5. In addition, the survival curve showed the overall survival (OS) rate of patients.
Results qRT-PCR method had good repeatability and stability in detecting HCP5. The expression level of HCP5 in the serum of gastric cancer patients was remarkably higher than that of healthy donors, and it could distinguish gastritis patients from healthy donors. Moreover, the statistics of 20 pairs of GC tissues showed that HCP5 had a conspicuous trend of high expression. Besides, the expression of HCP5 was increased dramatically in MKN-45 and MGC-803. The FISH assay showed that HCP5 was mainly distributed in the cytoplasm of MKN-45 and BGC-823 cells. When HCP5 was compared with existing tumor markers, the diagnostic efficiency of HCP5 was the best, and the combined diagnosis of carcinoembryonic antigen (CEA), carbohydrate antigen199 (CA199), and HCP5 can significantly improve the diagnostic sensitivity. Besides, compared with the expression levels of thyroid cancer (THCA), colorectal cancer (CRC), and breast cancer (BRCA), serum HCP5 in gastric cancer was the most specific. Besides, clinicopathological parameters also showed that the high expression of serum HCP5 in GC was notably correlated with differentiation ($P<0.05$), lymph node metastasis ($P<0.05$), and nerve invasion ($P<0.05$), indicating that serum HCP5 expression was correlated with some GC clinicopathological parameters. Besides, by comparing the expression of serum HCP5 in patients with primary gastric cancer, patients undergoing surgery, and patients with postoperative recurrence, serum HCP5 rebounded in patients with tumor recurrence. Meanwhile, the expression level of HCP5 in 15 pairs of GC patients before and after an operation was also detected. The results showed that the expression level of HCP5 after gastrectomy was strikingly lower than that in patients with primary GC. What's more, the survival curve showed that the OS rate of patients with high serum HCP5 was significantly lower than that of patients with low expression of serum HCP5.
Conclusion Our study showed that the increase of serum HCP5 could significantly distinguish between patients with primary gastric cancer and healthy donors as well as gastritis and healthy donors. Besides, the combined diagnosis of HCP5, CEA, and CA199 had high diagnostic efficiency, which means serum HCP5 could be used as a potential biomarker of non-invasive fluid biopsy and had a unique value in the diagnosis, development, and prognosis of gastric cancer.

1. Second Xiangya Hospital of Central South University
2. 中南大学湘雅三医院
3. 中国医学科学院阜外医院
4. 山东大学齐鲁医院
5. 西南医科大学附属医院
6. 厦门大学附属心血管病医院
7. 浙江省人民医院

Background To investigate the association of optimal hemoglobin level and clinical outcomes after mitral valve surgery (MVR).
Methods This multicenter study included 1,518 patients undergoing MVR from 2016 through 2018. Patients were separated into six predefined groups based on initial postoperative hemoglobin (<7.5g/dL, 7.5-8.4g/dL, 8.5-9.4g/dL, 9.5-10.4g/dL, 10.5-11.4g/dL, ≥11.5g/dL). Multivariable analyses were used to adjust laboratory results and surgical features of patients to evaluate the relationships between initial hemoglobin after MVR and clinical outcomes.
Results Patients with initial postoperative hemoglobin < 7.5 g/dL had longer length of stays [mean(95% CI), 1.9(1.093~1.367)] in comparison with reference group of 9.5-10.4 g/dL. Similarly, for those with hemoglobin < 7.5 g/dL, the odds (95% CI) for secondary outcomes included myocardial infraction 11.801 (1.353~22.966) and thrombosis 5.113(1.340~9.508). However, for clinical outcomes, there was no significant difference between five groups with hemoglobin greater than 7.5 g/dL.
Conclusions In patients after MVR, initial postoperative hemoglobin values below 7.5 g/dL was associated with worse outcomes compared to other values. Given similar outcomes between hemoglobin more than 7.5 g/dL groups, targeting treatment to initial postoperative hemoglobin value at the lower may be more desirable.

PU-2848

梅毒螺旋体 Tp0971 经 MAPKs、NF-κB 和组蛋白乙酰化途径诱导巨噬细胞分泌 IL-8 及 GM-CSF

张跃军
株洲市中心医院

目的 研究梅毒螺旋体膜蛋白 Tp0971 对巨噬细胞分泌 IL-8 及 GM-CSF 的影响，并研究其作用机制。
方法 体外培养人单核细胞系 THP-1 并将其诱导分化为巨噬细胞，随后加入不同浓度的重组膜蛋白 Tp0971，ELISA 检测 IL-8 及 GM-CSF 分泌，qRT-PCR 检测 GM-CSF mRNA 表达，Western blot 检测组蛋白 H3 和 H4 的乙酰化，以及组蛋白去乙酰化酶（HDAC）1 和 HDAC2 表达，荧光发光法检测细胞内 HDAC 的活性，染色质共沉淀技术检测组蛋白与 IL-8 启动子的结合。

结果 ELISA 结果显示，10 μg/mL Tp0971 处理巨噬细胞 24 h 后可诱导巨噬细胞分泌 GM-CSF，并呈一定的时间依赖性。qPCR 结果也显示，Tp0971 也能上调 GM-CSF mRNA 表达。ERK1/2 抑制剂 U0126、p38 抑制剂 SB203580 以及 NF-κB 抑制剂 IKK-NBD 均能显著抑制 IL-8 和 GM-CSF 分泌，而 JNK 抑制剂 SP600125 对两者的分泌无明显影响。Tp0971 处理巨噬细胞 2 h 后，可显著上调乙酰化 H3 和 H4 表达水平，并能促进乙酰化 H3 和 H4 结合至 IL-8 启动子上。此外，组蛋白去乙酰化酶抑制剂 TSA 预处理细胞后，IL-8 的分泌水平显著增加。Western blot 结果也显示，Tp0971 处理后 HDAC1 和 HDAC2 表达水平明显降低，细胞核内 HDAC 的酶活性也有所降低。
结论 梅毒螺旋体膜蛋白 Tp0971 激活 ERK1/2、p38 和 NF-κB，并诱导组蛋白乙酰化从而诱导巨噬细胞分泌 IL-8 和 GM-CSF。

PU-2849

Co-delivery of Docetaxel and Resveratrol by liposomes synergistically boosts antitumor efficiency against prostate cancer

Lu Zhang
The Second Hospital of Shandong University

Combination therapy is frequently used in cancer treatments. Delivery of combined anticancer agents loaded in a nanocarrier would be a promising option for combination therapy. Here, we designed PEGylated nano-liposomes for co-delivery docetaxel (Doc) and resveratrol (Res) to evaluate antitumor efficiency of the combined drugs in prostate cancer. The average diameter of the liposomes was 99.67 nm with a spheral-like shape. Drug release studies showed that both drugs could synchronously leak from the liposomes in a sustained release behavior. Cellular uptake results demonstrated that liposomes could effectively deliver more coumarin 6 into cells than other formulations. Moreover, co-loaded liposomes with Doc/Res in a molar ratio of 1:2 exhibited significantly higher cytotoxicity than a mixed solution containing both drugs on cancer cells. Animal studies revealed that co-encapsulated Doc/Res in liposomes predominantly inhibited tumor growth in PC3 bearing Balb/c nude mice, as evidenced by a change in cell proliferation and apoptosis parameters. Importantly, little toxicities and prolonged survival time were observed in mice treated with liposome-loaded Doc/Res than control group exposed to liposome-free Doc/Res. These results provided evidence that loading of Doc/Res in a nano-liposome is an efficient delivery formulation for synergistic treating prostate cancer.

PU-2850

Quantification of m6A RNA methylation modulators pattern was a potential biomarker for prognosis and associated with tumor immune microenvironment of pancreatic adenocarcinoma

Lianzi wang、yuan hong Xu
Department of Clinical Laboratory, the First Affiliated Hospital of Anhui Medical University, No. 218 Jixi Road, Hefei, Anhui, 230032, China

Background m6A is the most prevalent and abundant form of mRNA modifications and is closely related to tumor proliferation, differentiation, and tumorigenesis. In this study, we try to conduct an effective prediction model to investigated the function of m6A RNA methylation modulators in pancreatic adenocarcinoma and estimated the potential association between m6A RNA methylation modulators and tumor microenvironment infiltration for optimization of treatment.

Methods Expression of 28 m6A RNA methylation modulators and clinical data of patients with pancreatic adenocarcinoma and normal samples were obtained from TCGA and GTEx database. Differences in the expression of 28 m6A RNA methylation modulators between tumour (n = 40) and healthy (n = 167) samples were compared by Wilcoxon test. LASSO Cox regression was used to select m6A RNA methylation modulators to analyze the relationship between expression and clinical characteristics by univariate and multivariate regression. A risk score prognosis model was conducted based on the expression of select m6A RNA methylation modulators. Bioinformatics analysis was used to explore the association between the m6Ascore and the composition of infiltrating immune cells between high and low m6Ascore group by CIBERSORT algorithm. Evaluation of m6Ascore for immunotherapy was analyzed via the IPS and three immunotherapy cohort. Besides, the biological signaling pathways of the m6A RNA methylation modulators were examined by gene set enrichment analysis (GSEA).
Results Expression of 28 m6A RNA methylation modulators were upregulated in patients with PAAD except for MTEEL3. An m6Ascore prognosis model was established, including KIAA1429, IGF2BP2, IGF2BP3, METTL3, EIF3H and LRPPRC was used to predict the prognosis of patients with PAAD, the high risk score was an independent prognostic indicator for pancreatic adenocarcinoma, and a high risk score presented a lower overall survival. In addition, m6Ascore was related with the immune cell infiltration of PAAD. Patients with a high m6Ascore had lower infiltration of Tregs and CD8+T cells but a higher resting CD4+ T infiltration. Patients with a low m6Ascore displayed a low abundance of PD-1, CTLA-4 and TIGIT, however, the IPS showed no difference between the two groups. The m6Ascore applied in three immunotherapy cohort (GSE78220, TCGA-SKCM, and IMvigor210) did not exhibit a good prediction for estimating the patients' response to immunotherapy, so it may need more researches to figure out whether the m6A modulator prognosis model would benefit the prediction of pancreatic patients' response to immunotherapy.
Conclusion Modulators involved in m6A RNA methylation were associated with the development of pancreatic cancer. An m6Ascore based on the expression of IGF2BP2, IGF2BP3, KIAA1429, METTL3, EIF3H and LRPPRC is proposed as an indicator of TME status and is instrumental in predicting the prognosis of pancreatic cancer patients.

PU-2851

增龄是我国东北地区成人糖尿病的重要危险因素，40 岁以后糖尿病高危人群应尽早开展健康干预

云科
中国医科大学附属第一医院

前言 关于我国糖尿病患病与出生年代相关性的研究报道文献有限。本研究以中国东北地区 30~80 岁体检人群为研究对象，探讨不同出生年代人群糖尿病患病率及其影响因素。
材料和方法 收集中国医科大学附属第一医院体检中心 2019 年体检人群数据，包括人口学、检验、检查等资料。计算不同时期出生体检人群糖尿病患病率。单因素和多因素 Logistic 回归模型被用来探讨不同时期出生人群糖尿病患病的影响因素。
结果 共收集 40235 名体检患者（糖尿病患者中位年龄 61 岁，非糖尿病患者中位年龄 44 岁）。分析显示糖尿病患病率：出生早于 1959 的人群（60 岁及以上年龄组）为 14.48%，1960~1969 年代出生人群（50 岁年龄组）为 7.29%，1970~1979 年代出生人群（40 岁年龄组）为 2.91%，1980~1989 年代出生人群（30 岁年龄组）为 0.57%。与 1980~1989 年代出生人群相比，1970~1979 年代出生人群（OR=5.21，95%CI: 4.09~6.69，P<0.001），1960~1969 年代出生人群（OR=13.7，95%CI: 10.9~17.3，P<0.001），出生年代早于 1959 年人群（OR=29.4，95%CI: 23.7~37.1，P<0.001）糖尿病患病风险均显著升高，且患病风险随年龄升高而显著升高（P<0.05），40 岁以后上升最为明显。其它糖尿病发生的显著影响因素包括：癌胚抗原测定、收

缩压、腰围、尿素测定、BMI、血清高密度脂蛋白胆固醇测定、血小板计数、血清甘油三酯测定（P<0.05）。
结论 增龄是我国东北地区成人糖尿病的重要危险因素，对 40 岁以后糖尿病高危人群尽早开展健康教育和基于多种风险因素的综合干预是十分必要的。

Primary cutaneous extranodal nasal NK/T cell lymphoma: a case report

Fan Bu、Qiang Feng
Taian City Central Hospital

Extranodal NK/T-cell lymphoma, nasal type(ENKTCL) is a rare type of non-Hodgkin's lymphoma (NHL) and is closely related to Epstein Barr virus infection. Most cases originate from the nasal cavity and above the throat, a few cases originate outside the nose, such as the skin, gastrointestinal tract, lungs, etc., and a very small number of cases show systemic dissemination at the beginning of the onset, without obvious nasal involvement. Its pathological manifestations are unique, with pleomorphic lymphocyte infiltration centered on blood vessels, tumor cell infiltration destroying blood vessels and causing necrosis. This article reports a rare case of primary ENKTCL on the left calf, manifesting as several dark purple-red subcutaneous nodules on the left anterior tibia. Pathological examination showed that the dermis and subcutaneous tissue of the affected area were diffused with small to medium-sized lymphoid cells. Infiltration, the infiltration phenomenon centered on blood vessels can be seen, EBER in situ hybridization (+), the diagnosis is ENKTCL.

PU-2853

Serum SYPL1 is a promising diagnostic biomarker for colorectal cancer

Lei Liu
Third People's Hospital of Chengdu

Background At present, the overall sensitivity and specificity of blood biomarkers are insufficient for a diagnosis of colorectal cancer (CRC).
Methods We analyzed the serum synaptophysin like 1 (sSYPL1) in controls, adenoma patients, CRC patients, pre- and postoperative CRC patients by ELISA.
Results The upregulation of SYPL1 was confirmed in CRC tissues at both mRNA and protein levels. Consistently, sSYPL1 was significantly higher in CRC patients than in either controls ($t = 14.50$, $P < 0.0001$) or adenoma patients ($t = 10.56$, $P < 0.0001$) and was associated with lymph node invasion ($\chi2 = 4.27$, $P = 0.039$). ROC curves showed that sSYPL1 performed superbly in distinguishing CRC patients from controls (AUC: 0.9481; sensitivity: 86.09%, specificity: 91.01%) and adenoma (AUC: 0.8631; sensitivity: 98.68%, specificity: 78.08%). This performance was much better than that of carcinoembryonic antigen (CEA) or carbohydrate antigen 19-9 (CA19-9). Even for patients with low CEA levels (under 5 ng/mL), SYPL1 maintained the same high performance for identification of CRC. Furthermore, sSYPL1 levels declined significantly after radical surgery ($t = 5.903$, $P < 0.0001$).
Conclusion sSYPL1 might be an outstanding marker for CRC diagnosis, especially for patients with low CEA levels.

PU-2854

淋巴细胞亚群、PCT、CRP 以及免疫球蛋白在小儿细菌性支气管肺炎中的临床应用

杨利萍[1]、李登云[2]
1. 衢州市人民医院（衢州中心医院）
2. 浙江衢化医院

目的 探讨淋巴细胞亚群（CD3+、CD4+、CD8+、CD4+/CD8+、CD19+、CD16+CD56+）、PCT、CRP 以及免疫球蛋白（IgG、IgA、IgM）在小儿细菌性支气管肺炎中的临床应用意义。
方法 收集 65 例小儿细菌性肺炎患儿作为观察组，30 例健康体检者作为对照组，同时检测 2 组研究对象的淋巴细胞亚群、PCT、CRP 以及免疫球蛋白的水平。使用 SPSS20 .0 软件，经 t 检验比较两组间血清淋巴细胞亚群、PCT、CRP 以及免疫球蛋白水平是否存在显著性差异，并绘制受试者工作曲线（ROC 曲线），评价各检测项目的诊断效能。
结果 观察组的 CD19+、PCT、CRP 水平（19.94±7.57、0.66±2.53、17.59±23.39）均高于对照组水平（15.79±2.91、0.04±0.02、1.83±1.49）P＜0.05,；观察组的 CD4+、CD4+/CD8+、CD16+CD56+、IgG、IgA 水平（36.94±9.87、1.57±0.83、9.68±7.61、5.95±2.80、0.60±0.49）低于对照组（41.71±5.66、2.11±0.64、14.79±3.92、9.53±2.28、1.30±0.26）P＜0.05。CD4+、CD4+/CD8+、CD19+、CD16+CD56+、PCT、CRP 、IgG 以及 IgA 的 ROC 曲线下面积分别为 0.64、0.67、0.63、0.80、0.94、0.92、0.837 和 0.83，灵敏度分别为 50%、60%、76%、83%、93%、89%、75%和 72%,特异度分别为 75%、72%、55%、69%、85%、84%、79%和 75%。
结论 细菌性支气管肺炎患儿的细胞及体液免疫均存在失衡紊乱，所以对细菌性支气管肺炎患儿提供免疫调节治疗有一定的临床必要性，其中 PCT 以及 CRP 有较好的诊断效能，能有效指导临床实用抗生素等诊疗活动。

2019-2020 年广州地区四项传染病的感染情况及分析

马建宏、刘长鈺、黄锦维
广东省人民医院（广东省医学科学院）

目的 通过调查广东省人民医院四项乙类传染病的感染率，收集和分析传染病监测信息，预测广州地区传染病的发生和流行趋势,为疾病预防控制策略的制度和医院感染防控措施提供依据。
方法 调查 2019 年 1 月 1 日至 2020 年 12 月 31 日广东省人民医院所有科室行传染病筛查的服务对象共 89735 个案例，年龄分布在 0-106 岁，其中男 44583 人，女 45151 人。
结果 2019-2020 年此四项传染病总的感染率为 13.99%，男女比例为 1.41：1。乙肝的患病人数最多，接着是梅毒、丙肝和艾滋病。从近 2 年的感染趋势来看，四项传染病的感染率均呈下降趋势；在所有感染的人群中，年龄在 20 岁以上的比例超过 98%。
结论 医院开展传染病检测是发现传染病人的重要手段，还能为传染病的流行病学调查提供信息，为提出疾病预防控制措施及保健对策提供依据。实施规范的操作，防止传染病的医源性感染和医院感染，以保障人体健康和公共卫生。

apoM-S1P activates hepatic stellate cells by activating STAT3 and Wnt/β-catenin signaling through S1PR3

Zhiyang Chen、Weimin Wu、Xing Lv、Min Hu
The Second Xiangya Hospital of Central South University

apolipoprotein M (apoM) is the major carrier and regulator of sphingosine-1-phosphate (S1P), a multifunctional bioactive lipid. Most recently, the apoM-S1P axis has been identified of great importance to many fundamental cellular processes through binding to and activating S1P receptors (S1PRs). Targeting S1PRs have become a novel and potent therapeutic strategy for many diseases, however, the biological function of apoM-S1P, and whether S1PRs can be a latent therapeutic target or not in liver fibrosis are remain unknown. Hepatic stellate cells (HSCs) are the core effectors for hepatic fibrosis of any aetiology, here, by using human HSCs line LX-2, we demonstrated that apoM-S1P promotes activation, proliferation, migration, as well as inhibits apoptosis of HSCs. Furthermore, after verified the S1PRs expression pattern in HSCs, we used receptors antagonists and illustrated that apoM-S1P exerts pro-fibrogenesis role via S1PR3 and downstream STAT3 and β-catenin signaling pathways. In summary, our findings clarified the role of apoM-S1P in HSCs and provide potential therapeutic targets for liver fibrosis.

PU-2857

军事飞行员甲状腺功能检测指标参考区间的建立

巩蓓
空军特色医学中心(原空军总医院)

目的 建立军事飞行员甲状腺功能检测指标-三碘甲状腺原氨酸(T3)、甲状腺素 (T4)、游离三碘甲状腺原氨酸 (FT3)、游离甲状腺素 (FT4) 、促甲状腺激素(TSH)的参考区间。
方法 选取 2019 年 10 月至 2021 年 3 月在我院就诊的军事飞行员 605 名，按年龄分为四组。根据 IFCC 相关要求制定参考区间的合理方法和可靠依据，以非参数方法确定 T3、T4、FT3、FT4、TSH 的 95%参考区间。
结果 各组按年龄段划分参考区间：A 组（20-30 岁）T3 1.09-2.07、T4 62.18-125.87nmol/L，FT3 4.21-6.06、FT4 13.79-21.88pmol/L、TSH 0.045-3.603 mIU/L；B 组（30-40 岁）T3 1.04-2.18n、T4 55.99-135.21nmol/L，FT3 3.99-6.17、FT4 12.20-22.81pmol/L，TSH 0-4.472 mIU/L；C 组（40-50 岁）T3 1.09-2.18、T4 60.94-124.04nmol/L，FT3 4.17- 5.92、FT4 13.06-20.34pmol/L，TSH 0.057-3.463 mIU/L；D 组（>50 岁）T3 1.12-2.08、T4 55.66-121.15nmol/L，FT3 4.01-5.94、FT4 11.92-20.87pmol/L，TSH 0-7.043 mIU/L。其中 B 组与 D 组 T4，A 组与 D 组的 FT3，A 组与 C 组、A 组与 D 组的 FT4，B 组与 C 组、B 组与 D 组的 FT4，A 组与 D 组、C 组与 D 组的 TSH 之间差异有统计学意义。
结论 建立了军事飞行员不同年龄阶段甲状腺功能检测指标参考区间，有助于了解高空特殊飞行环境对飞行人员甲功的影响，有助于飞行员甲状腺疾病的诊断、治疗和监测。

Correlation Between APOBEC3B Expression and Clinical Characterization in Lower-Grade Gliomas

Zhiyang Chen[1]、Min Hu[1]、Zhixiong Liu[2]、Quan Cheng[2]、Hao Zhang[2]
1. The Second Xiangya Hospital of Central South University
2. 中南大学湘雅医院

Background As the most aggressive tumors in the central nervous system, gliomas have poor prognosis and limited therapy Methods Immunotherapy has become promising in the treatment of gliomas. Here, we explored the expression pattern of APOBEC3B, a genomic mutation inducer, in gliomas to assess its value as an immune biomarker and immunotherapeutic target.
Methods We mined transcriptional data from two publicly available genomic datasets, TCGA and CGGA, to investigate the relevance between APOBEC3B and clinical characterizations including tumor classifications, patient prognosis and immune infiltrating features in gliomas. We especially explored the correlation between APOBEC3B and tumor mutations. Samples from Xiangya cohort were used for immunohistochemistry staining.
Results Our findings demonstrated that APOBEC3B expression level was relatively high in advanced gliomas and other cancer types, which indicated poorer prognosis. APOBEC3B also stratified patients' survival in Xiangya cohort. APOBEC3B was significantly associated with infiltrating immune and stromal cell types in tumor microenvironment. Notably, APOBEC3B was involved in tumor mutation and strongly correlated with the regulation of oncogenic genes.
Conclusion Our findings identified that APOBEC3B could be a latent molecular target in gliomas.

PU-2859

β-Catenin: oncogenic role and therapeutic target in cervical cancer

Bingqi Wang
The Second XiangYa Hospital of Central South University

Cervical cancer is a common and fatal malignancy of the female reproductive system. Human papillomavirus (HPV) is the primary causal agent for cervical cancer, but HPV infection alone is insufficient to cause the disease. Actually, most HPV infections are sub-clinical and cleared spontaneously by the host immune system; very few persist and eventually develop into cervical cancer. Therefore, other host or environmental alterations could also contribute to the malignant phenotype. One of the candidate co-factors is the β-catenin protein, a pivotal component of the Wnt/β-catenin signaling pathway. β-Catenin mainly implicates two major cellular activities: cell–cell adhesion and signal transduction. Recent studies have indicated that an imbalance in the structural and signaling properties of β-catenin leads to various cancers, such as cervical cancer. In this review, we will systematically summarize the role of β-catenin in cervical cancer and provide new insights into therapeutic strategies.

西格玛度量值在肿瘤标志物检测质量持续改进中的应用

高娟、王青、王云杰、马梦影、王科勇、李卓
西安医学院第一附属医院

目的 应用西格玛(σ) 度量值分析本科室常规开展的肿瘤标志物项目质量控制数据， 评价其精密度分析性能， 设计质量控制方法， 指导质量持续改进。
方法 收集 2018 至 2019 年西安医学院第一附属医院检测的 AFP、CEA、CA125、CA199、CA153、tPSA、fPSA、铁蛋白(FERR) 、β-HCG 和 β2 微球蛋白(β2-MG) 共计 10 个参加国家卫健委临床检验中心室间质评的肿瘤标志物室内质控及室间质评数据， 按照国家卫健委临床检验中心室间质评允许总误差(TEa) 标准， 采用 6σ 计算公式计算检验项目 σ 值， 评价检测项目分析性能， 设计质量控制方法， 计算检测项目的质量目标指数(QGI) ， 运用鱼骨图分析导致性能不佳的主要原因， 提出优先改进方案。
结果 2018 年数据结果显示， 在 10 个肿瘤标志物项目中， 平均 σ 值为 4．25， 其中 σ≥6 项目 2 个， 5≤σ＜6 项目 5 个， 4≤σ＜5 项目 4 个， 3≤σ＜4 项目 7 个， 2≤σ＜3 项目 2 个; 根据 QGI 值，需要优先改进精密度的项目有 7 个， 分别为: AFP、CA125、CA199、CA153、FERR、β-HCG 和 β2-MG; 需要优先改进正确度的项目有 3 个， 分别为 CEA、t-PSA 和 f-PSA。通过持续改进，2019 年 σ 值平均值为 6．58， 其中 σ≥6 项目 16 个， 5≤σ＜6 项目 3 个， 4≤σ＜5 项目 1 个。与 2018 年 σ 值相比， 世界一流水平项目比例明显增多， 差异具有统计学意义(P＜0．05) 。
结论 6σ 质量管理是实验室开展质量控制的一项有效的管理工具， 可以评价检测项目的性能， 指导质量持续改进。

PU-2861

PAGE4 在宫颈癌中的表达及其对癌细胞增殖、凋亡和转移的影响

王冰琦
中南大学湘雅二医院

目的 探究前列腺相关基因 4（PAGE4）在宫颈癌中的表达水平及作用机制。
方法 通过转录组学筛选出宫颈癌的抑癌基因 PAGE4，利用 GEPIA 数据库及 Kaplan-Meier Plotter 数据库分析 PAGE4 在宫颈癌中的表达，探究其与宫颈癌临床特征及预后的关系。采用 qRT-PCR 检测 PAGE4 在宫颈癌组织和细胞中的水平。构建并验证 PAGE4 过表达载体，随后转染宫颈癌 Hela、Siha 细胞系，运用 CCK8 实验、克隆形成实验、流式细胞术、划痕愈合实验、Transwell 迁移实验探究 PAGE4 在宫颈癌细胞增殖、凋亡和转移中的作用。
结果 转录组分析发现 PAGE4 在宫颈癌组织中表达明显下调，下调倍数约为 457 倍。GEPIA 数据库结果提示 PAGE4 在宫颈癌中存在差异表达，且与宫颈癌 FIGO 分期相关。Kaplan-Meier Plotter 数据库结果表明 PAGE4 表达水平与宫颈癌患者总生存期、无复发生存期长短无关。qRT-PCR 检测发现 PAGE4 在宫颈癌组织及宫颈癌细胞系中均呈低表达。细胞实验结果显示， 与对照组相比，过表达 PAGE4 组细胞增殖能力、细胞周期改变、细胞凋亡率无明显差异， 细胞迁移能力明显减弱。
结论 PAGE4 是宫颈癌潜在的抑癌基因，过表达 PAGE4 对宫颈癌细胞的迁移具有抑制作用。

PU-2862

微生物检验样本阳性率及病原菌分离情况分析

苏迎迎
东南大学附属中大医院

目的 了解我院临床微生物标本送检量及样本培养阳性率，分析主要病原菌及多重耐药菌检出及分布状况。
方法 使用 FORMA 3111 型二氧化碳培养箱和 BACTEC FX 全自动血培养系统进行细菌培养，使用 VITEK MS 质谱仪、 VITEK 2 全自动微生物鉴定及药敏分析仪对阳性标本进行菌株鉴定和药敏实验，使用 LIS 系统对 2021 年第一季度全院各个科室中送检标本和检出病原菌进行统计分析。
结果 经统计，2021 年第一季度全院送检样本共 21129 份，共检出病原菌 4164 株，全院样本阳性检出率平均值为 19.71%。其中革兰阳性球菌 982 株（23.5%），主要包括金黄色葡萄球菌、屎肠球菌、粪肠球菌，革兰阴性杆菌 2457 株（59%），主要包括肺炎克雷伯菌（15.2%）、大肠埃希菌（14%）、鲍曼不动杆菌（12.6%）、铜绿假单胞菌（7.8%）。此外，还检出真菌 544 株（13%）。第一季度全院共检出多重耐药菌 965 株，各耐药菌构成比分别为 MRSA（14%）、VRE（0.2%）、CRE（4%）、CRABA（51%）、MDRPA（8%）、CRK(22.5%)。
结论 微生物检验的阳性率与标本质量密切相关，。密切监测全院病原菌检出状况及多重耐药菌检出率及构成比，了解病原菌流行状况，为后续加强微生物检验及细菌耐药监测，指导抗菌药物的使用，降低医院感染的发生提供依据。

The roles and mechanisms of hypoxia in liver fibrosis

Jingyao Cai、Min Hu、Zhiyang Chen、Ling Zeng
The Second Xiangya Hospital of Central South University

Liver fibrosis occurs in response to any etiology of chronic liver injury. Lack of appropriate clinical intervention will lead to liver cirrhosis or hepatocellular carcinoma (HCC), seriously affecting the quality of life of patients, but the current clinical treatments of liver fibrosis have not been developed yet. Recent studies have shown that hypoxia is a key factor promoting the progression of liver fibrosis. Hypoxia can cause liver fibrosis. Liver fibrosis can, in turn, profoundly further deepen the degree of hypoxia. Therefore, exploring the role of hypoxia in liver fibrosis will help to further understand the process of liver fibrosis, and provide the theoretical basis for its diagnosis and treatment, which is of great significance to avoid further deterioration of liver diseases and protect the life and health of patients. This review highlights the recent advances in cellular and molecular mechanisms of hypoxia in developments of liver fibrosis.

PU-2864

Carbapenem-resistant Klebsiella pneumoniae Gastrointestinal carriage developed to infections：a pair of premature twins

Xiaofan Wang[1]、Min Wang[1]、Chunmei Chen[2]
1. The Second Xiangya Hospital , Central South University
2. 中山大学附属第七医院（深圳）

Background Premature infants admitted to the neonatal intensive care unit (NICU) have been identified as a significant population for acquiring and transmitting multidrug-resistant pathogens (MDR). Among them, Carbapenem-Resistant Klebsiella pneumoniae (CRKP) is of great concern due to limited therapeutic options. Until now, the relationship between its colonization and infection is much unclear. Longitudinal sampling beginning at birth is essential in identifying events prior to the presentation of any pathological conditions.
Methods A pair of premature twins with CRKP-associated colonization and infection, one of which even developed septicemia, were found in the NICU of a teaching hospital in mainland China and immediately raised our alarm. Their clinical course and laboratory examination data were analyzed retrospectively. Samples of the gut and other body sites with clinical infection symptoms were collected for strain isolation and culture. Antibiotic susceptibility tests, polymerase chain reaction (PCR), and drug resistance gene sequencing were conducted to explore the resistance of these isolated strains. The phylogenetic relationship of the isolates was studied by random amplified polymorphic DNA (RAPD) and multi-site sequence typing (MLST).
Results Five isolates from the twins were collected in this study, and four isolates were determined to be CRKP. Isolates collected from the same patient have almost identical antibiotic susceptibility. These isolates have slightly different resistance genes, and both TEM-1 and SHV were expressed in all isolates. The molecular typing experiments demonstrated that gut carriage and infection isolates own the same genotype and sequence type (ST54).
Conclusions The gut carriage and infecting isolates of the premature twins were highly homologous. Our results suggest that premature infants were infected with their colonizing strains, supporting the strong association between colonization and infection among neonates. Thus, actively surveillance on CRKP colonization in certain patients is a possible strategy to prevent infections.

PU-2865

乙型肝炎病毒核心抗原（HBcAg）通过 WNT/β-catenin 信号通路调节肝癌的侵袭和转移

荆振唐
山东大学第二医院

目的 明确乙型肝炎病毒核心抗原（HBcAg）是否通过上调 WNT/β-catenin 信号通路促进肝癌细胞的迁移和侵袭。
方法 1.将 HBcAg 基因转染 HepG2、Huh7 细胞，筛选获得稳定表达 HBcAg 蛋白的 HepG2、Huh7 细胞株；2. 采用 CCK8，克隆形成实验，划痕实验，Transwell 迁移及侵袭实验检测 HBcAg 过表达对肝癌细胞 HepG2、Huh7 迁移及侵袭的影响，并通过对裸鼠原位注射的方法研究 HBcAg 过表达对肝癌转移能力的影响；3. 利用 realtime-qPCR 和 Western blot 方法检测 HBcAg 对肝癌细胞上皮细胞-间充质转化(EMT)相关蛋白 E-cadhrin,ZO-1,Vimentin,N-cadherin 和 snail 影响；4.采用激光共聚焦技术检测 HBcAg 过表达对 β-catenin 蛋白定位的影响，运用免疫组化技术检测 30 对肝癌（同时是表达 HBcAg 的乙肝患者）及癌旁组织中 HBcAg 及 β-catenin 的表达水平；5.检测 wnt1-

GSK3β-β-catenin 轴相关蛋白 Wnt1、GSK3β、p-GSK3β(Ser9)、p-β-catenin(Ser33/37/Thr41)和 β-catenin 表达的影响。
结果 1. HBcAg 的过表达可在体内、外促进肝癌细胞的侵袭和转移；2. HBcAg 的过表达促进肝癌细胞 EMT 进程；3. HBcAg 上调 β-catenin 在肝癌细胞内的水平，β-catenin 在肝癌 EMT 以及迁移、侵袭中发挥调控作用；4. HBcAg 正向调控 wnt1,通过 wnt1-GSK3β-β-catenin 信号轴上调 β-catenin 水平，WNT/β-catenin 信号通路在 HBcAg 调控肝癌细胞 EMT、迁移和侵袭中发挥重要作用。
结论 HBcAg 能够通过正向调控 WNT/β-catenin 信号通路促进肝癌侵袭与转移。

PU-2866

SC-514 保护 LPS/D-Gal 诱导的小鼠急性肝衰竭

荆振唐
山东大学第二医院

目的 明确 SC-514 是否参与 LPS/D-Gal 对小鼠急性肝衰竭的保护作用。
方法 一定剂量的 LPS/D-Gal 联合应用，可引起 BALB/c、C57BL/6 两种不同品系小鼠产生急性肝衰竭甚至死亡。将 BALB/c、C57BL/6 分别分组，通过生化、病理和分子生物学技术研究手段，探究 SC-514 对 LPS/D-Gal 诱导小鼠急性肝衰竭的抑制作用。
结果 SC-514 的预处理，可以显著降低 LPS/D-Gal 诱导小鼠急性肝衰竭的死亡率或延长小鼠死亡时间，减轻相同时刻试验组的病理损伤，同时降低相同时刻试验组谷丙转氨酶（ALT）、谷草转氨酶（AST）的生化水平。进一步研究表明，SC-514 可抑制 LPS/D-Gal 诱导下小鼠体内肿瘤坏死因子 TNFα 的产生水平，而 TNFα 是 LPS/D-Gal 诱导急性肝炎模型中促使细胞凋亡的主要因素；并且 SC-514 作用下，试验组肝细胞凋亡率明显降低。
结论 SC-514 通过抑制 TNFα 的产生，减轻肝细胞所受细胞因子风暴的影响，降低实验小鼠急性肝衰竭的死亡率。提示对于 SC-514 的合理应用与研发可减少 LPS/D-gal 诱导的肝损伤和致死率。

PU-2867

BAY 11-7082 保护对乙酰氨基酚（APAP）诱导的小鼠急性肝衰竭

荆振唐
山东大学第二医院

目的 明确 BAY 11-7082 是否参与对乙酰氨基酚（APAP）对小鼠急性肝衰竭的保护作用。
方法 使用一定剂量 APAP，可引起 BALB/c、C57BL/6 两种不同品系小鼠产生急性肝衰竭甚至死亡。将 BALB/c、C57BL/6 分别分组，通过生化、病理和分子生物学技术研究手段，探究 BAY 11-7082 对 APAP 诱导小鼠急性肝衰竭的抑制作用。
结果 BAY 11-7082 的预处理，可以显著降低 APAP 诱导小鼠急性肝衰竭的死亡率或延长小鼠死亡时间，减轻相同时刻试验组的病理损伤，同时降低相同时刻试验组谷丙转氨酶（ALT）、谷草转氨酶（AST）的生化水平以及血氨浓度。进一步研究表明，BAY 11-7082 可抑制 APAP 诱导下小鼠体内 AHF 产生水平，而 AHF 与蛋白结合、线粒体功能障碍、氧化应激有关；并且 BAY 11-7082 作用下，试验组肝细胞凋亡率明显降低。
结论 BAY 11-7082 通过抑制 AHF，减轻肝细胞线粒体功能障碍，降低实验小鼠急性肝衰竭的死亡率。提示对于 BAY 11-7082 的合理应用与研发可减少对乙酰氨基酚诱导的肝损伤和致死率。

PU-2868

HBV DNA 聚合酶驱动糖代谢重编程 促进肝癌细胞的恶性行为

赵晓晴
山东大学第二医院

肝细胞癌（HCC）是全球第六大常见恶性肿瘤，是癌症相关死亡的第四大主要原因。慢性乙型肝炎病毒（HBV）感染是 HCC 的主要危险因素之一。最近，癌症代谢的重编程已被确定为癌症的标志。HCC 中从氧化磷酸化代谢途径向糖酵解途径的转变不仅满足了肝癌细胞快速增殖的需求，还为肿瘤的发展提供了良好的微环境。HBV DNA 聚合酶（HBV-DNA-Pol）具有逆转录酶（RT）和 DNA 聚合酶的活性，可以调节 HBV 复制，先天免疫等多种生物学功能。近期有研究发现，HBV-DNA-Pol 在肝癌细胞生长中起关键作用，但是 HBV-DNA-Pol 是否通过影响 HCC 的糖代谢来影响 HCC 的恶性行为还不是很清楚。本实验研究证实了 HBV-DNA-Pol，TRIM21 都可与 PYGL 相互作用，并且 TRIM21 可以促进 PYGL 经泛素-蛋白酶体途径降解，HBV-DNA-Pol 与 TRIM21 的强相互作用减弱了 TRIM21 对 PYGL 的泛素化修饰，从而上调了肝癌细胞中 PYGL 的蛋白水平，PYGL 的增加促进糖原分解，导致葡萄糖进入糖酵解的流量增加，最终促进 HCC 的发展。

PU-2869

E3 泛素连接酶 TRIM21 促进 HBV DNA 聚合酶的降解

赵晓晴
山东大学第二医院

三方基序 (TRIM) 蛋白家族是 E3 泛素连接酶家族。近期有研究已经表明一些 TRIM 蛋白具有抗病毒功能，尤其是在抗逆转录病毒这一方面。 然而，目前大多数研究主要集中在 TRIM21 与干扰素或其他抗病毒效应物这一方面。 而 TRIM21 对病毒编码蛋白的影响尚不清楚。在这项研究中，我们通过 FLAG 亲和纯化筛选 HBV DNA 聚合酶（Pol）的候选相互作用蛋白并通过质谱分析确定 TRIM21 作为 HBV DNA Pol 调节蛋白。我们首先使用了免疫共沉淀 (co-IP) 分析证明 TRIM21 与 HBV DNA Pol 的 TP 结构域相互作用。此外， TRIM21 使用其 RING 结构域促进 HBV DNA Pol 的泛素化和降解。 HBV DNA Pol 的 Lys260 和 Lys283 被确定为 TRIM21 介导的泛素化。最后，我们发现 TRIM21 将 HBV DNA Pol 降解为 限制 HBV DNA 复制，其 SPRY 域对这一活动至关重要。综合起来，我们的结果表明 TRIM21 主要通过促进 HBV DNA Pol 泛素化来抑制 HBV DNA 复制 ，可能为 HBV 的治疗提供新的潜在靶点。

Cell membrane remodeling mediates polymyxin B resistance in Klebsiella pneumoniae: an integrated proteomics and metabolomics study

Xinyi Chen、Jingjing Tian、Can Luo、Min Wang、Xianping Li、Xiaofan Wang
The Second Xiangya Hospital of Central South University

Polymyxin B (PB) is introduced into the clinic as the last-line therapy against carbapenem-resistant Klebsiella pneumoniae (CRKP). Unfortunately, increased resistance to PB in Klebsiella pneumoniae (K.pneumoniae) has threatened global health. This study employed TMT-labeled quantitative proteomics and LC-MS/MS metabolomics analysis to investigate the key biological processes associated with PB resistance in K.pneumoniae. The K.pneumoniae strains were

isolated from neonates and continuously passaged with different PB concentrations in vitro to develop PB resistance. A total of 315 differentially expressed proteins (DEPs) were identified, of which 133 were upregulated, and 182 were downregulated in the PB-resistant K. pneumoniae. GO annotation showed that DEPs were significantly enriched in transport, establishment of localization, and localization terms. KEGG enrichment analysis revealed that the DEPs were mainly involved in ATP-binding cassette (ABC) transporters and cationic antimicrobial peptide (CAMP) resistance. Proteins related to central carbon metabolism were inhibited in the PB-resistant K.pneumoniae, but proteins mediating LPS modification were activated. Transcriptional levels of CAMP resistance-related proteins were significantly different between PB-susceptible and -resistant K.pneumoniae. Metabolomics data demonstrated that 23 metabolites were significantly upregulated in PB-resistant K.pneumoniae, 18 were upregulated. The differential metabolites were mainly lipids, including glycerophospholipids, sphingolipids and fatty acids. Integrated omics showed that increased glycerophospholipids might be transported to the cell membrane through the upregulated Mla system to help bacteria grow under PB pressure. Our study suggested that membrane remodeling and inhibited central carbon metabolism are conducive to the development of PB resistance in K.pneumoniae.

PU-2871

PX Domain-Containing Kinesin KIF16B and Microtubule-Dependent Intracellular Movements

Jie Chen
The First Affiliated Hospital Of University Of South China

as a member of the kinesin-3 family, kinesin family member 16B (KIF16B) has a characteristic PhoX homology (PX) domain that binds to membranes containing phosphatidylinositol3phosphate (PI(3)P) and moves along microtubule flaments to abnormal lipid metabolism, and tumor brain metastasis. In this review, we summarize recent advances in the structural and obtained from clinical research suggest that KIF16B has a potential efect on the disease processes in intellectual disability, the plus end via a process regulated by coiled coils in the stalk region in various cell types. The physiological function of KIF16B supports the transport of intracellular cargo and the formation of endosomal tubules. Rasrelated protein (Rab) coordinates many steps of membrane transport and are involved in the regulation of KIF16B-mediated vesicle trafcking. Data physiological characteristics of KIF16B as well as diseases associated with KIF16B disorders, and speculating its role as a potential adaptor for intracellular cholesterol trafcking.

衡阳地区某三甲医院 2017-2019 年耐碳青霉烯菌检出情况分析

肖春兰
南华大学附属第一医院

目的 分析本院近 3 年耐碳青霉烯菌的分离情况和药物敏感性测试结果，分析近期耐碳青霉烯菌感染和耐药变迁趋势。
方法 回顾分析本院 2017 年 1 月—2019 年 12 月临床耐碳青霉烯菌的分离结果、标本来源和耐药情况，采用 Whonet5.6 和 SPSS 22.0 软件处理分析数据。
结果 2017—2019 年临床标本共检出耐碳青霉烯菌 2387 株，检出率 20.77%，其中非发酵革兰氏阴性杆菌 1774 株，肠杆菌科细菌 613 株，检出率居前三位的是脑膜脓毒性菌(100%)、产吲哚金黄杆菌(76.92%) 、鲍曼不动杆菌(73.12%)。阳性标本来源最多为痰，占比 77.50%。药物敏感性

测试结果显示耐碳青霉烯菌肠杆菌科细菌对阿米卡星、妥布霉素、庆大霉素具有较高敏感性，耐碳青霉烯非发酵革兰氏阴性杆菌对阿米卡星、哌拉西林/他唑巴坦、妥布霉素和庆大霉素具有较高敏感性，而耐碳青霉烯菌对其它抗生素均表现出高度耐药性。
结论 近期耐碳青霉烯菌检出数量呈上升趋势，并显示出广泛的抗生素耐药性，建议加强其分布和耐药性监测，以指导临床合理使用抗生素。

PU-2873

某儿童医院尿路感染病原菌分布及耐药性分析

方盼盼、王颍源、贾静、高凯杰、杨俊文、杨俊梅
郑州大学附属儿童医院

目的 了解郑州大学附属儿童医院尿路感染分离菌的分布及耐药性，为临床合理选择用药提供依据。
方法 将 2015 年 1 月至 2020 年 12 月就诊于郑州大学附属儿童医院 1236 例尿路感染患儿作为研究对象，收集其一般临床资料，采用 WHONET 5.6 软件分析其病原菌及抗菌药物耐药情况。
结果 1236 例患儿（非复杂尿路感染组 599 例和复杂尿路感染组 637 例）共检出 1309 株细菌，大肠埃希菌、屎肠球菌、粪肠球菌为主要病原菌。687 株革兰阴性菌前 2 位的是大肠埃希菌（352 株）和肺炎克雷伯菌(102 株)；562 株革兰阳性菌中前 2 位的是屎肠球菌（270 株）和粪肠球菌（215 株）；60 株真菌中最常见的是白念珠菌(34 株)。碳青霉烯类耐药的肺炎克雷伯杆菌菌株 41 株(40.20%)、大肠埃希菌 52 株(14.77%)。大肠埃希菌对阿米卡星、头孢哌酮/舒巴坦、亚胺培南、美罗培南耐药率均在 10%左右，对三、四代头孢菌素及其含酶抑制剂耐药率在 70%以上，呋喃妥因耐药率为 2.27%，未发现对替加环素耐药革兰阴性杆菌。非复杂尿路感染组与复杂尿路感染组中的革兰阴性菌对常见抗生素耐药率比较差异无统计学意义(P>0.05)。屎肠球菌对青霉素类、喹诺酮类及氨基糖甙类等抗生素的耐药性明显高于粪肠球菌，说明屎肠球菌比粪肠球菌耐药形势更为严重，且研究显示屎肠球菌和粪肠球菌非复杂尿路感染组诺氟沙星耐药率明显高于复杂尿路感染组(P<0.05)，未发现万古霉素、利奈唑胺耐药的革兰阳性菌。
结论 革兰阴性菌是尿路感染的主要病原菌，呋喃妥因可以作为轻症患儿经验性应用的推荐。耐药情况严峻，临床诊治工作应重在防控、及时送检及合理使用抗菌药物。

PU-2874

“沟通”助力“诊断”

王敏
江苏省人民医院（南京医科大学第一附属医院）

目的 患者，女，81 岁，慢性肾功能不全、肾病综合征于外院就诊。因计划肾穿刺活检，行凝血检查发现纤维蛋白原（FIB）为 1.10g/L，隔日复查 0.88g/L。遂转至我院血液科就诊，初步诊断为低纤维蛋白原血症（低纤症）。探讨该病人纤维蛋白原是否为真的降低。
方法 取患者静脉抗凝血用 CS5100 血凝仪检测，查看 Clauss 法和 PT 演算法结果有无差异
结果 本实验室两种 FIB 检测方法结果分别为：0.56 g/L（Clauss 法）及 2.20 g/L（PT 演算法)
结论 FIB 检测最常用两种方法（1）Clauss 法检测血浆中具有功能的 FIB 含量。（2）PT 演算法则根据 PT 检测过程中吸光度的变化而间接计算 FIB 的总含量。故与患者的接诊医生进行了两方面沟通：（1）患者 Clauss 法结果偏低，而 PT 演算法结果在正常范围内，故考虑为异常纤维蛋白原血症（异纤症）。（2）鉴于患者从未有出血症状，因此建议输注适量法布莱士后，可予以行肾穿刺活检。最终患者安全行肾穿刺术，并未出现大出血等不良后果。
检验对于临床诊断来说是必不可少的重要环节，检验结果是临床诊断的重要依据之一。多数临床实验室仅用 Clauss 法检测功能性 FIB，当其结果表现为降低时，有时会使临床医生将异纤症误判为

低纤症或无纤症。本例即为检验与临床沟通助力患者确诊的典型案例。本实验室两种 FIB 检测方法，有效降低了异纤症的漏诊和误诊。

PU-2875

湖南地区 34474 例葡萄糖-6-磷酸脱氢酶筛查结果回顾性分析

谭惠霞、陈偲、卢琴、闫一妮、申雨雅、何君兰、胡艳群、朱露、代冰*
长沙金域医学检验实验室有限公司

目的 对 2019 年~2020 年湖南地区 34474 例葡萄糖-6-磷酸脱氢酶（glucose -6-phosphate dehydrogenase ,G-6-PD）筛查的数据进行回顾性分析，了解现湖南地区人群 G-6-PD 缺乏情况，以加强人们进行 G-6-PD 筛查的意识，使之能够早诊断早预防，更大的降低此病的影响。
方法 运用速率法分别检测红细胞中 G-6-PD 和磷酸葡萄糖酸脱氢酶（6-PGD）活性，计算两者比值（G-6-PD/6-PGD），判断样本是否缺乏 G-6-PD。运用统计学分析性别、湖南各市区、高阳性率地区新生儿和成人之间的阳性率差异。
结果 筛查的 34474 例样本中，G-6-PD 缺乏人数为 1600 例，筛查阳性率为 4.64%，其中男性 1023 例，阳性率为 6.92%，女性 577 例，阳性率为 2.93%，男女阳性率之比为 2.4:1，男性阳性率高于女性，差异具有统计学意义（P<0.05）。湖南 14 个市区中郴州市（6.88%）和永州市（6.64%）阳性率最高，张家界市的阳性率（0.45%）远低于其他市区及总阳性率，G-6-PD 高阳性率地区新生儿和成人差异统计中，郴州市和永州市新生儿和成人的阳性率差异具有统计学意义（P<0.05），成人阳性率高于新生儿阳性率，推测是因为新生儿做的是筛查，而成人样本存在复查和监测的情况。
结论 湖南地区 G-6-PD 缺乏症阳性率较广西、广东、海南等高发地区低，但湖南地区 G-6-PD 缺乏症还是存在，我们应该重视开展 G-6-PD 缺乏症的筛查，进行早期的诊断和防治，避免接触诱因，做到最大限度地降低此疾病的影响。

PU-2876

The ratio of NT-proBNP to CysC^1.65 predicts heart failure in patients with chronic kidney disease

Sheng Wang、Xiaoyong Duan、Xiangyu Wang、Yulin Zou、Jing Luo
Sinopharm Gezhouba Central Hospital

Background Heart failure remains a considerable threat to patients with chronic kidney disease (CKD). The widespread use of the N-terminal pro B type natriuretic peptide (NT-proBNP) test has brought new insight to the prognosis of heart failure in patients with CKD. However, the levels of NT-proBNP are easily affected by renal insufficiency, which limits its use in this population. **Methods** A total of 292 consecutive patients with CKD were included in this study. The plasma levels of NT-proBNP, Cystatin C (CysC), and highly sensitive cardiac troponin T (hs-cTnT) were measured at admission. Meanwhile, the ejection fraction, left ventricular ejection fractions (LVEF), left ventricular end-diastolic dimension (LVDd), left ventricular end-systolic dimension (LVDs), left atrial volume index (LAVI), and the echocardiographic ratio of early diastolic mitral inflow velocity to early diastolic mitral annulus velocity (E/e') were detected. The age and body mass index (BMI) of all patients were recorded. Patients were divided into two groups based on their cardiac function: the heart failure group and the control group. Univariate analysis was used to examine the associations of cardiac insufficiency in CKD with age, BMI, LVEF, LVDd, LVDs, hs-cTnT, and NT-proBNP. Binary logistic regression analysis was performed to evaluate the degree of influence of all statistically significant factors on predicting cardiac dysfunction in patients with CKD. Pearson correlation analysis was used to analyze the relationship between the ratio of NT-

proBNP to $CysC^{1.65}$ (NT-proBNP/$CysC^{1.65}$) and the levels of NT-proBNP. ROC analysis was performed to analyze the sensitivity and specificity of five indicators (NT-proBNP, NT-proBNP/$CysC^{1.65}$, LVEF, E/e', and LAVI) for predicting cardiac dysfunction in CKD patients. **Results** Binary logistic regression analysis showed that NT-proBNP/$CysC^{1.65}$ was an independent risk factor for cardiac dysfunction in CKD (OR=1.002, 95% confidence interval: 1.000–1.003, P=0.000). Pearson correlation analysis showed that NT-proBNP/$CysC^{1.65}$ was not correlated with the levels of NT-proBNP (r=0.376, p=6.909) in all patients. In ROC analysis, the area under the curve (AUC) of NT-proBNP/CysC1.65 was 0.827 (95% confidence interval: 0.779-0.875), with a cut-off point of 738.125, a sensitivity of 78.47%, and a specificity of 79.73%.
Conclusion The ratio of NT-proBNP to CysC1.65 was superior to NT-proBNP alone in predicting cardiac dysfunction in patients with CKD.

PU-2877

海南省新生儿脐带血元素参考区间分析与建立

路淼
海南金域医学检验中心有限公司

目的 了解海南省新生儿脐带血常见微量元素水平，建立其正常参考值范围。
方法 收集海南省 2018 年 1 月 1 日至 2019 年 12 月 31 日送往海南省金域医学检验中心检测的 2511 名自然分娩或剖腹方式出生的新生儿（其中男性 1364 名、女性 1147 名）脐带血样本，采用电感耦合等离子体质谱法（ ICP-MS）对 Ca（钙） 、Mg（镁）、 Cu （铜）、Fe（铁） 、Zn（锌）、 Mn（锰）、 Pb（铅）元素进行检测和分析。为保证建立的参考范围的可靠性，数据处理采用 SPSS19.0 统计软件，将离群值以 D（疑似离群值与其相邻点的差值）/R（数据全距)≥1/3 为原则进行删除。采用非参数统计方法确定百分位数 p2.5 和 p97.5 作为参考限，确定 95%可信区间参考范围。
结果 Ca 元素的男性新生儿参考值是 44.80~71.70 mg/L，女性新生儿的参考值是 45.14~72.14 mg/L；Mg 新生儿可以共用参考值：29.70~49.07 mg/L； Mn 的男性新生儿参考值是 13.10~75.30μg/L， 女性新生儿的参考值是 12.30~73.80；Pb 新生儿可共用参考值：4.40~22.48μg/L；Zn 新生儿可共用参考值：1.50~3.30 mg/L；Cu 的男性新生儿参考值是 483.88~1140.79μg/L，女性新生儿的参考值是 477.19~1114.15μg/L；Fe 的男性新生儿参考值是 392.42~635.13 mg/L，女性新生儿的参考值是 393.65~624.27mg/L。
结论 初步建立了海南省新生儿脐带血常见的部分微量元素的参考区间。通过监测新生儿脐带血元素检测可为新生儿脐血中常见金属元素的水平含量评估提供参考依据；能及时发现新生儿微量元素情况，降低疾病发生和避免因元素含量异常而导致新生儿发育异常有重要的意义;可作为出生后元素补给的参考依据和日常监测依据。

PU-2878

甲状腺素的作用

李倩倩
山东大学第二医院

甲状腺素主要用于甲状腺功能亢进症和甲状腺功能减退症的鉴别诊断

血液中大于 99%的 T3.T4 和血浆蛋白结合，还有少量和前白蛋白结合。只有约占血浆中总量 0.4%的 T3 和 0.04%为游离的，结合型 T4 是血浆中含量最多的甲状腺激素，而只有游离的 T3.T4 才能进入靶细胞发挥作用。

血清游离甲状腺素（FT4）和三碘甲状腺原氨酸（FT3）,FT3.FT4 不受甲状腺激素结合球蛋白（TGB）影响。甲状腺激素的合成和分泌主要受下丘脑——垂体——甲状腺轴的调节，血液中游离 T3.T4 水平的波动，负反馈地引起下丘脑释放促甲状腺激素释放激素(TRH)和促甲状腺激素（TSH）的增加或减少。其中血液中游离 T3.T4 水平对垂体释放 TSH 的负反馈调控最重要。

主要为促进三大营养物质代谢，提高大多数组织的耗氧量，促进能量代谢，增加产热和提高基础代谢率。可与生长激素产生协同作用，促进机体生长发育，影响神经系统的发育。

甲状腺功能亢进：为多种病因导致甲状腺激素分泌过多导致的临床综合征，患者乏力.怕热.多汗.体重减轻心悸,食欲亢进.紧张.焦虑.易怒等.甲状腺功能减退:俗称甲减,多种原因引起甲状腺激素合成.分泌或生物效应不足所致的内分泌疾病.

甲状腺功能试验检查(1)FT3 和 FT4 不受甲状腺激素结合球蛋白影响,直接反馈甲状腺功能状态.(2)1.血清总甲状腺素是判断甲状腺功能最基本的筛选试验.2.TT3 是早期 Graves 病疗效观察及停药后复发的敏感指标。

PU-2879

多发性骨髓瘤患者血清 CRP 浓度与血清肌酐、血清尿酸浓度的相关性

刘子豪
石河子大学第一附属医院

目的 多发性骨髓瘤（Multiplemyeloma，MM）是浆细胞恶性增殖性疾病，疾病特征是骨髓中的浆细胞像肿瘤细胞一样无限制地增生，并且大部分病例伴有单克隆免疫球蛋白分泌，最终导致器官或组织损伤，它是严重威胁中老年人身体健康的恶性血液系统肿瘤，近年来发病率呈现出逐年上升的趋势。与健康体检者比较,多发性骨髓瘤患者的血清 CRP 水平值明显增高,且随疾病的进展而增高。肌酐(creatinine，Cre)是肌肉在人体内代谢的产物，主要由肾小球滤过排出体外，可反应肾损伤的程度。尿酸是嘌呤代谢的终产物，各种嘌呤氧化后生成的尿酸随尿排出，体液中尿酸含量变化，可以充分反映出人体内肾脏代谢机能的状况，检测血清尿酸可用于对多发性骨髓瘤患者肾功能的临床早期诊断。本研究探索 MM 患者血清 CRP 水平与血清肌酐、血清尿酸水平的关系。

方法 一般资料收集石河子大学第一附属医院 2012 年 1 月至 2021 年 5 月收治的初诊 MM 患者 34 例，年龄 46~86。通过 t 检验分析 MM 患者血清 CRP 水平是否与血清肌酐、血清尿酸水平存在联系，通过 Pearson 相关分析探索 MM 患者血清 CRP 与血清肌酐、血清尿酸水平的相关性。

结果和结论 结果显示，13 例 CRP 升高的 MM 患者血清肌酐明显高于 21 例 CRP 正常的 MM 患者,差异有统计学意义(P<0.001)。10 例 CRP 升高患者血清尿酸水平高于 24 例 CRP 正常患者血清尿酸水平,差异有统计学意义(P<0.05)。表明在 MM 患者中，血清中 CRP 水平与血清中肌酐、尿酸水平具有一定联系。通过 pearson 相关性分析得出，随着血清 CRP 水平的升高，其血清肌酐水平呈升高趋势,两者间呈正相关(r=0.643,P<0.05)；CRP 水平越高，血浆尿酸越高,两者呈正相关（r=0.659,P<0.05）。表明随 CRP 水平的升高，MM 患者的肾功能损害程度越高，预后越差。

PU-2880

Using FOCUS-PDCA to improve the management level of hazardous chemicals

Huali Li
The First Affiliated Hospital of Xi'an Medical University

Objective To standardize the management of hazardous chemicals by scientific management methods, improve the accuracy of registration of hazardous chemicals in and out of warehouse, as well as ensure the safety and accurate use of hazardous chemicals in clinical work.
Methods According to the FOCUS-PDCA procedure, the problems existing in hazardous chemicals storage and registration were analyzed, the improvement measures were formulated, the management system was improved, hazardous chemicals files were established, and the management of hazardous chemicals in and out of the warehouse was standardized and improved continuously.
Results Through the application of FOCUS-PDCA, the registration accuracy of hazardous chemicals was increased from 12.5% to 98.9%; It improves the staff's understanding and familiarity of hazardous chemicals, so as to ensure using them in clinical laboratory safely, timely and accurately.
Conclusion FOCUS-PDCA has a good effect on standardizing the entry, classification, and storage of hazardous chemicals, and plays an important role in achieving continuous improvement of medical quality and safety, which is worth promoting.

PU-2881

2015-2018 年郴州市恶性肿瘤发病状况的统计分析

周丹旎、曹红
郴州市第一人民医院

目的 分析 2016-2018 年郴州市恶性肿瘤的发生状况，为科学防治本地区恶性肿瘤提供依据。
方法 收集 2015-2018 年郴州市二级及三级医院住院患者的诊断资料，按照国家疾病分类标准编码 ICD-10 进行统计分类，分析恶性肿瘤（C00-C97）在不同年龄段和不同性别的分布情况。
结果 2015-2018 年郴州市恶性肿瘤报告人数为 63048 例，其中 2015 年 13930 例、2016 年 15087 例、2017 年 16837 例、2018 年 17194 例，四年来逐年增长；恶性肿瘤报告病例数前五位分别为支气管和肺恶性肿瘤、肝和肝内胆管恶性肿瘤、胃恶性肿瘤、乳房恶性肿瘤、直肠恶性肿瘤；在 6 个年龄段中，报告病例数较高的年龄段为 40 岁≤年龄＜65 岁和年龄≥65 岁，报告病例数分别为 35774 例、23463 例；男性恶性肿瘤报告病例为 37042 例；男性恶性肿瘤报告病例前五位为支气管和肺恶性肿瘤、肝和肝内胆管恶性肿瘤、胃恶性肿瘤、直肠恶性肿瘤、结肠恶性肿瘤；女性恶性肿瘤报告病例为 26006 例；女性恶性肿瘤报告病例前五位为乳房恶性肿瘤、支气管和肺恶性肿瘤、宫颈恶性肿瘤、胃恶性肿瘤、结肠恶性肿瘤。
结论 2015-2018 年郴州市恶性肿瘤报告病例数逐年增加；恶性肿瘤的发病人群以中老年为主；男性发病人群明显高于女性；男女的主要恶性肿瘤分布有差异，应依据本地区恶性肿瘤分布特征制定有效防控措施。

Targeted Metabolism Study in Normal Pregnancy Women

Rui Zhang [1]、lei zhou[1]、liu yang[1]、yueyun ma[2]、jiayun liu[1]
1. Air force medical uiversity xijing hospital
2. 空军军医大学特色医学中心

There are always unique metabolisms in pregnant women especially with the amino acid (AA) metabolism for their physical changes. Our research aims are to investigate different metabolomics in healthy pregnancies with normal women and provide possible baseline data for pregnant studies in the future. The 21 amino acids, 2 branch chain amino acid (BCAA) metabolites, and 3 catecholamine metabolites analysis in the serum of healthy second trimesters, third trimesters, and normal women were investigated by the high-performance liquid chromatography−mass spectrometry (HPLC-MS/MS). The concentration of the most analyses were decreased, and that of three amino acids were increased for maternal women compared with normal women. After orthogonal partial least squares discriminant analysis (OPLS-DA), some of the compounds with the most significant differences were selected in normal pregnancy. Then the most significant compounds were applied for the enrichment analysis and pathway analysis to find out the different metabolic pathways in pregnant women. After the above comprehensive analysis, we find that the difference in the ratio of related compounds is more valuable for metabolites in pregnant women research. Under the guidance of this conclusion, we found that the metabolomics of branched-chain amino acids in pregnant women's serum to α-ketoisovaleric acid is much faster than that of branched-chain amino acids to methyl-2-oxovaleric acid. The dominant pathway of branched amino acids to metabolism is the α-ketoisovaleric acid pathway. These normal profiles of metabolites and pathway information related to pregnancy have the potential to explore the complex mechanisms of physiological and metabolomic challenges in pregnant women and may produce the ability to have new hypotheses, which in turn can provide ideal hypotheses to begin large-scale epidemiological studies of women who subsequently develop diseases.

PU-2883

衍生化串联质谱检测 55 种酰基肉碱方法的建立及其临床应用

张瑞、周磊、杨柳、刘家云
空军军医大学西京医院

目的 建立衍生化串联质谱（MS/MS）检测人体中 55 种酰基肉碱的方法，考察该方法的影响因素及其在西部新生儿遗传代谢性病筛查中的应用和意义，为其有效防治提供科学的依据。
方法 利用衍生化 MS/MS 法分析比较了 2 869 例出生 3 d 至 1 岁婴幼儿的干血滤纸片。采足后跟血于空白采血滤纸上，完全渗透。用已知浓度的酰基肉碱同位素内标液液萃取干血滤纸片中的 55 种酰基肉碱，经过 20 min 衍生化反应后，用串联质谱仪分析标本中的 55 种酰基肉碱并计算其浓度。
结果 采用衍生化质谱法对新生儿进行遗传代谢病筛查最好不使用含有抗凝剂的血，标本于 4 ℃存放两周内进行检测，使用的内标液于 4 ℃条件下存放不超过一个月，氮气吹干 15 min 以上可得到较为理想的结果。酰基肉碱批内变异系数为 7.3%~9.9%，批间变异系数为 11.3%~13.9%。经统计学分析男、女之间酰基肉碱浓度差异无统计学意义(P>0.5)。
结论 衍生化串联质谱法进行血滤纸片中 55 种酰基肉碱分析，有较高的回收率，能够达到较高的精确性和准确性，能灵敏、特异地测定血中酰基肉碱浓度，为相关疾病的筛查诊断提供更多可能性，满足临床对遗传代谢疾病筛查及诊断的需要。

PU-2884

22 种氨基酸衍生化串联质谱高通量检测方法的建立

张瑞、杨柳、周磊、刘家云
空军军医大学西京医院

目的 考查衍生化串联质谱（MS/MS）法高通量快速检测全血中 22 种氨基酸并分析其影响因素。
方法 新生儿采足后跟血，儿童采末梢血于空白采血滤纸上，完全渗透，晾干。用已知浓度的氨基酸同位素内标液萃取干血滤纸片中的 22 种氨基酸, 衍生化 20 分钟,建立衍生化串联质谱法高通量快速检测全血中 22 种氨基酸法，采用方差分析优化其影响因素并分析了 2869 例 2014 年至 2018 年西部五省部队出生 3 天至 1 岁婴幼儿的干血滤纸片。
结果 建立衍生化串联质谱法高通量快速检测全血中 22 种氨基酸并优化了该方法的影响因素：使用不含抗凝剂的全血，标本 4℃保存不超过两周，内标液 4℃保存不超过一个月，氮气吹干时间为 15 分钟。本方法定量检出限为 0.3-10.0μM；批内变异系数为 5.3 % -7.9 %, 批间变异系数为 7.0 %-8.9 %，经统计学分析男、女之间氨基酸含量无显著性差异(P>0.5)；加标回收率为 96.1%-98.1%；偏倚<10%。
结论 衍生化串联质谱法高通量快速检测全血中 22 种氨基酸有较高的回收率,精确性和准确性,可以灵敏，特异地测定全血中 22 种氨基酸浓度，满足临床对遗传代谢疾病筛查及诊断的需要。

PU-2885

心理干预是否对儿童末梢采血的作用

王敏
山东大学第二医院

目的 探讨心理干预是否对儿童末梢采血疼痛感有明显影响。
方法 运用心理学的思想，从积极的角度针对我院随机 100 名不同年龄的儿童患者，采血时进行心理干预，再同样随机选取 100 名不同年龄的儿童患者，采血时不进行心理干预。
结果 心理干预组儿童患者恐惧率明显低于无心理干预组儿童患者。
结论 有效的心理干预能有效的减小或消除儿童患者对采血的恐惧。

PU-2886

一种简易高效的大鼠原代肝细胞分离方法

张秀莉、郭红云、张永东、王涛、梁涛、苏海翔*
甘肃省肿瘤医院、甘肃省医学科学研究院

目的 寻找一种简易高效的大鼠原代肝细胞分离方法，
方法 在 Selgen 两步胶原酶灌注法的基础上加以改进，按门静脉灌注法分离培养大鼠肝细胞,重复 10 次分离肝细胞实验，观察各项指标结果。采用胰酶、Ⅳ型胶原酶经门静脉灌注，大鼠肝脏肝门部结构、肝上及肝下腔静脉封闭保留胶原酶消化分离获取肝细胞，经 80 目和 200 目的筛网依次过滤细胞后，细胞悬液分别以 1000，500, 300rpm/min 离心各 5min 以纯化肝细胞,以台盼蓝排染法测定细胞活性，HE 染色鉴定肝细胞纯度。
结果 平均每只成年 Wistar 雄性大鼠可以获得（1.53±0.31）×108 个肝细胞，平均获得肝细胞活率可达到 94.63%，平均获得肝细胞纯度为 96.7%。
结论 本实验介绍的方法简便易行，且肝细胞产量较高，活力好，纯度高，适宜在一般条件的实验室推广和应用。

三级医院对口帮扶贫困县医院检验科的实践与体会

郭建林[1]、张志平[2]、侯勇[2]
1. 地区第二人民医院检验科
2. 喀什地区叶城县人民医院

为贯彻落实党中央、国务院关于打赢脱贫攻坚战的决策部署坚决打赢健康扶贫攻坚战，进一步夯实三级医院对口帮扶贫困县县级医院工作精神，从“输血式”支援向“造血式”支援转变的新模式。强化县级医院人才培养和学科建设为抓手，虽说县级医院是“二级甲等”医院，但是其人员素质，设施环境，人才梯队建设患者素质参差不齐等问题日益突出。而检验科与患者接触时间相对较短，为提升治疗服务质量，提升医患满意度，其中的任务可谓艰辛，下面是笔者在帮扶工作中的几点体会。

PU-2888

补体系统与子痫前期

薛宇廷[1]、贾珂珂[1]、杨楠[1]、邓兴宇[2]
1. 北京大学第三医院
2. 北京大学医学部

许多研究表明，补体系统(Complement system)与子痫前期(Preeclampsia, PE)存在一定的联系。补体系统的异常表达可在某种程度上参与到子痫前期的发病机制中从而诱发子痫前期，而子痫前期的病理生理过程中同样也存在补体系统的异常激活。本文从发病机制出发，结合临床患者资料，总结了补体系统在子痫前期中的变化，探讨补体系统在子痫前期的发病、辅助诊断以及预测等方面的临床价值。

PU-2889

METTL3 regulates m6A in endometrioid epithelial ovarian cancer independently of METTl14 and WTAP

Qin Li
Yantai Yuhuangding Hospital

N6-methyladenosine (m6A) RNA methylation, one of the common RNA modifications, has been determined to execute crucial functions on tumorigenesis and cancer development. The m6A “writers” including Methyltransferase like 3 (METTL3), METTL14 and Wilms tumor 1-associated protein (WTAP) contribute to the m6A modification process initiation. However, the coordination of m6A methyltransferase complex is not fully understood in endometrioid epithelial ovarian cancer (EEOC). In this study, mRNA and protein levels of METTL3, METTL14 and WTAP were detected in 33 EEOC cases using qPCR, immunohistochemistry and western blot. The overall m6A methylation was detected by dot plot. The METTL3 expression and overall m6A level were elevated in EEOC tissues, while the expressions of METTL14 and WTAP have no Accepted ArticleThis article is protected by copyright. All rights reserved. significant difference in EEOC compared to the adjacent tissues. The expression of METTL3 was an independent factor to correlate with poor malignancy and survival of EEOC patients. Moreover, METTL3 knockdown in TOV-112D and CRL-11731D cells weakened the capability of cell proliferation and migration, and promoted the cell apoptosis compared to negative control and cells with WTAP or METTL14 knockdown using CCK-8 assay, transwell assay, wound healing assay and TUNEL assay. Furthermore, METTL3 knockdown also reduced m6A enrichment of the genes associated with

ovarian cancer including EIF3C, AXL, CSF-1, FZD10 in TOV-112D and CRL-11731D cells by RIP-qPCR assay. Taken together, the high expressed METTL3 indicated poor malignancy and survival of EEOC via modulating the aberrant m6A RNA methylation. METTL3-mediated m6A modification, independent of WTAP and METTL14, was considered as a novel mechanism underlying m6A modulation and a potential therapeutic target of EEOC.

乳腺癌与 Wnt 信号通路的研究进展

毛杰[2]、谢小兵[1]
1. 湖南中医药大学第一附属医院医学检验与病理中心
2. 湖南中医药大学第一附属医院

Wnt 信号通路包括经典的 Wnt/β-catenin 信号通路和非经典的 Wnt 信号通路（Wnt/Ca2+信号通路、细胞极性通路），研究发现 Wnt 信号通路的异常激活与乳腺癌的发生和发展相关。乳腺癌由于高发病率和死亡率，长期以来一直是热门的临床研究课题。因此需要不断探索乳腺癌增殖、迁移、侵袭、复发的分子机制，寻找潜在的干预靶点，以期为临床提供新的治疗途径和方法。本文就 Wnt 信号通路在乳腺癌中的研究进展做一综述。

PU-2891

copeptin 的临床研究进展

毛杰[1]、卢晴晴[1]、李萍[2]、石盛洁[1]、李菁[1]、邓长娟[1]、谢小兵[2]
1. 湖南中医药大学第一附属医院
2. 湖南中医药大学第一附属医院医学检验与病理中心

近年来随着人民生活水平的提高，许多急慢性疾病的发病率逐年增高，这其中就包括心血管疾病、肾脏疾病、呼吸道疾病和脑卒中等，由此导致的各种慢性并发症造成了严重的社会及经济负担，如何早期发现该疾病并及早进行一些生物标志物的检测，从而为临床疾病的早期治疗和干预并发症的进展提供新的思路。和肽素（copeptin)作为一种敏感性较高的标志物应用于临床疾病的筛查检测，对疾病的早期、进展和预后有重要的监测作用。近年来大量研究结果表明和肽素在心脑血管疾病、肾脏疾病及脑卒中等预测方面有重要的临床价值，本文对和肽素在临床的研究进展作一综述

PU-2892

血晶案例

梁涵瑜
江苏省人民医院（南京医科大学第一附属医院）

目的 1 例穿刺液血晶案例
方法 湿片镜检可见棕黄色斜方形结晶及线型细丝状结晶
结果 血晶是血红素分解代谢的产物，橙色或褐色，通常表现为针状、菱形状或无定型
结论 血晶是红细胞外渗在一个封闭的组织隔室并且在低氧分压条件下血红蛋白代谢的结果。多见于陈旧性出血

PU-2893

Rh-D-稀有血型免疫血清学及遗传背景分析
——附新生儿溶血病报告 1 例

彭小友、阳爱丽、李胜涛、周杰英
郴州市第一人民医院

目的 对 1 例严重高胆红素血症新生儿及患儿母亲进行免疫血清学和分子生物学检测，诊断新生儿溶血病。
方法 对患儿进行直接抗球蛋白试验,放散试验及游离试验；对患儿母亲进行抗体筛查及抗体鉴定；检测患儿母亲 Rh 表现型并对其 RHCE 基因进行基因分型和外显子测序。
结果 母亲为 Rh-D-稀有血型,产生了针对高频抗原的抗体引起新生儿溶血病。该表型由ＲＨＣＥ基因外显子 5 和 6 缺失所致。
结论 发现了 1 名由ＲＨＣＥ基因 5 和 6 外显子缺失所致的 Rh-D-稀有血型个体,诊断了 1 例抗－Ｈｒ 0 抗体导致新生儿溶血病。

PU-2894

关于静脉采血的总结

郭雪焕
山东大学第二医院

目的 提高静脉采血的成功率，减轻病人痛苦，提高标本质量。
方法 认真选好血管是穿刺成功的第一步。我们在采血时应选择弹性良好、粗且直的静脉。对于不好找的血管，首先应有足够的耐心，足够的自信能力，才能摸清采血的具体位置，提高采血的成功率。消除患者的疑虑和负面因素，在众多的患者中，会有少数人心存疑虑，面对心存疑虑的患者，我们要耐心、细致的与他们交流，科学的解释他们提出的一系列问题，已彻底消除他们心中存在的焦虑问题，善于总结，加强与同事之间技术的交流，摆脱工作壁垒。
结果（1）、采血者应该加强自身的素质修为。应注重自己的仪表形象，工作期间着装要规范、干净、整洁。要以热情周到的服务在第一时间获得患者的信任。
（2）、采血者在整个采血过程中应该要求严肃认真，要严格执行采血各项标准与流程，遵守无菌操作，做到穿刺采血一次成功性，以严谨的工作作风和精湛的采血技术换取患者的绝对信任。
结论（1）、采血作为医师工作的重要部分，采血穿刺的一次成功率是衡量业务素质的最基本要素。而熟练的穿刺技术是保障穿刺成功的基本要素。只有掌握过硬的穿刺技术，才能在采血过程中保障穿刺的一次性成功。
（2）、良好的心里素质也是采血所必不可少的一部分。我们需要良好的自我控制能力，调整好自己的情绪，取得患者的信任与合作，才能有效的提高穿刺成功率。
（3）、加强沟通，做好采血前的健康教育，提供热情周到的服务，减少患者的紧张情绪，提高穿刺成功率。

PU-2895

乏氧饥饿状态下 IL-35 通过诱导乳腺肿瘤细胞自噬促进生长

陈茜
山东大学第二医院

背景 IL-35 是 IL-12 家族的新成员，在肿瘤发生发展和肿瘤免疫过程中发挥重要作用。但是，在乏氧饥饿状态下，IL-35 对乳腺肿瘤细胞的存活是否有影响目前尚未报道。
材料方法 我们利用免疫细胞化学、免疫荧光和流式细胞术检测乳腺癌细胞中 IL-35 及其受体的表达;在乏氧饥饿状态下，将乳腺癌细胞系用不同浓度的 IL-35 刺激观察乳腺癌细胞的生存及自噬情况。接着我们检测 IL-35 在乳腺肿瘤中促存活和促自噬的关系。利用 CCK8、细胞周期、凋亡试剂盒和 western blot 技术检测乳腺肿瘤的存活情况；利用自噬相关蛋白及底物检测自噬流情况。利用 MDC 方法和 western blot 检测细胞自噬情况，相关信号通路主要通过 western blot 方法检测。
结果 首先我们检测乳腺癌细胞中 IL-35 及其受体的表达。在乏氧饥饿状态下，外源性 IL-35 通过诱导自噬抑制凋亡促进肿瘤细胞存活；在阻断自噬的情况下可抑制 IL-35 的促存活作用。最后我们检测发现 IL-35 在乏氧饥饿状态下促肿瘤自噬主要通过激活 PI3K/AKT/mTOR 信号通路。
结论 本研究发现 IL-35 在乏氧饥饿状态下可通过诱导自噬促进乳腺肿瘤细胞存活，为乳腺肿瘤免疫及发生发展提供了新思路。

PU-2896

120 例肾病综合征患者的实验室检测结果分析

马汝飞、李刚
河南省人民医院

目的 分析肾病综合征（NS）患者的肾小球滤过率 (eGFR)、血脂、血清白蛋白、抗凝血酶、D-二聚体检测结果，对比其与健康对照组的结果差异，探讨实验室指标在肾病综合征患者诊疗中的应用。
方法 选择临床确诊的肾病综合征患者 120 例，并根据肾小球滤过率 (eGFR)的高低分为肾损伤轻度、中度、重度三组，轻度组患者肾小球滤过率 (eGFR)为 50-80ml/min，中度组患者肾小球滤过率 (eGFR)为 20-50ml/min，重度组患者肾小球滤过率 (eGFR)为小于 20ml/min，同时选取正常体检者（排除肾脏相关疾病）100 例作为对照组，对照组肾小球滤过率 (eGFR)为 80-120ml/min，同时检测总胆固醇（TCH）、血清甘油三酯（TG）、血清白蛋白、抗凝血酶（AT）、D-二聚体的水平，并对各组进行统计学分析。
结果 三组 NS 患者的 TCH、TG、D-二聚体水平显著高于健康对照组（P<0.05），AT、 血清白蛋白水平显著低于健康对照组（P<0.05）。NS 患者检验结果的组间差异为：重度组 TCH、TG、D-二聚体水平显著高于轻度、中度组（P<0.05），重度组 AT、 血清白蛋白水平显著低于轻度、中度组（P<0.05），中度组 TCH、D-二聚体水平显著高于轻度组（P<0.05），中度组 AT 水平显著低于轻度（P<0.05），中度组和轻度组间的 TG、血清白蛋白水平差异不显著（P<0.05）。
结论 肾病综合征（NS）患者的血脂、血清白蛋白检测水平跟肾损伤严重程度显著相关，检测指标抗凝血酶降低和 D-二聚体升高反映了肾病综合症患者高凝状态和纤溶亢进的存在，提示了患者处于易栓状态，对这些实验室指标的密切检测有利于肾病综合征的病情评估和疗效观察。

PU-2897

传染性单核细胞增多症患儿免疫状态与疗效观察分析

穆原[1]、单鸣凤[2]
1. 江苏省人民医院（南京医科大学第一附属医院）
2. 南京市儿童医院

目的 观察传染性单核细胞增多症（IM）及常见合并症患儿的细胞免疫与体液免疫指标，并分析其疗效间的关系。
方法 查阅 2019 年全年收治的 129 例 IM 患儿病历资料，将其中明确诊断的 116 例患儿淋巴细胞亚型和体液免液检测结果纳入本研究。对单纯 EBV 感染组 35 例，单纯 IM 组 24 例，IM 合并肝损伤组 19 例，IM 合并肺炎支原体（MP）感染组 38 例的淋巴细胞亚型、IgG、IgM 及疗效数据进行统计分析。
结果 IM 患儿 CD8+T 细胞显著高于健康对照组（$P < 0.05$），而 CD4+T 细胞与 CD19+B 细胞均显著低于健康对照组（$P < 0.05$），以杀伤 T 细胞增殖与辅助 T 细胞受抑为主要表现，当合并 MP 感染时这种差异更为显著（$P < 0.01$）。IM 患儿的血清 IgG 与 IgM 浓度均较健康对照组有显著升高（$P < 0.05$）。EBV 感染所致不同程度肝损伤的病例高达 16.4%（19/116），列 IM 合并症之首。单纯 IM 组在退热时间、咽峡炎好转时间及异型淋巴细胞<0.05 时间上均明显短于其它两组。
结论 IM 患儿免疫功能异常，提示临床在抗感染治疗同时，适当使用一些免疫调节剂，对缩短患儿病程、加速患儿康复、减少 EBV 感染后相关疾病的发生具有一定实践意义。

PU-2898

青年男性甲状腺功能血清学标志谱的初步分析

顾敏
江苏省人民医院（南京医科大学第一附属医院）

目的 探讨普通人群中青年男性甲状腺功能血清学指标的异常状况，提高人们对青年男性甲状腺疾病的认识和警惕，为预防、早期发现和治疗此类疾病提供参考。
方法 回顾性分析 2019 年 8 月至 2020 年 1 月在我院进行健康体检人群 847 例，其中青年男性 412 例，青年女性 435 例，分别行甲状腺功能血清学标志谱（FT3、FT4、TSH、TPOAb 和 TGAb）检测并进行对比研究。
结果 青年男性和青年女性人群甲状腺功能血清学指标总异常检出率分别为 16.75%和 30.11%，两者存在显著差异（$p<0.001$）。青年男性和青年女性的血清 TSH、TPOAb 和 TGAb 异常检出率均高于 FT3 和 FT4，其中青年女性中所有的差异均有统计学意义，而青年男性中仅血清 TSH 异常检出率显著高于 FT3 和 FT4。
结论 青年女性甲状腺功能血清学指标总异常检出率明显高于青年男性，但青年男性甲状腺功能血清学指标总异常检出率也处于较高水平。因此我们在研究女性和中老年人群甲状腺健康状况的同时也应对青年男性甲状腺健康给予更多的关注。

PU-2899

肝移植患者中性粒细胞的特殊形态变化

王丹、张怡婷、张丽霞
江苏省人民医院（南京医科大学第一附属医院）

背景 中性粒细胞是人体循环系统中数量最多、寿命最短的白细胞。研究表明，中性粒细胞参与先天免疫、病原体杀灭和肝脏疾病。中性粒细胞的错误激活参与了包括肝衰竭在内的多种炎症性疾病的发病机制。此外，中性粒细胞的形态也发生了特殊的变化。
方法和结果 本文报告两例肝移植患者外周血涂片(peripheral blood smears, PBSs)中一组特殊的中性粒细胞，其形态与单核细胞相似，导致血液分析仪(hematology analyzer, HA)将中性粒细胞误认为单核细胞。
结论 本案例中，特殊的中性粒细胞核形态变化是非常罕见的。HA 对中性粒细胞和单核细胞的错误识别，应引起实验室的重视。

PU-2900

如何提高采血人员的综合素质

高珍琪
山东大学第二医院

目的 随着社会的发展，患者对医务人员的要求也越来越高。窗口采血工作压力倍增，对采血人员的综合素质也提出了更高的要求和挑战。
方法 •采血人员要提高服务意识。
•采血人员要有耐心和爱心。
•采血人员要提高处理突发事件的能力。
•采血人员要提高静脉穿刺技术。
•采血人员要提高无菌意识，做到一人一针一带一纸一手消。
•采血人员要穿戴整洁，保持良好的个人形象。
•采血人员要根据患者的需求，及时调整工作状态。
•采血人员要提高个人修养，业余时间多读书学习。
结果 通过提高综合素质，采血人员能更好的服务患者，赢得患者的称赞和满意。通过提高综合素质，采血人员的自我认可度提高，工作更加自律、勤恳。通过提高综合素质，采血人员能调节自我，释放压力，从而自信的投入工作。
结论 采血人员综合素质的提高有利于更好地开展工作，服务患者，减少投诉的发生，保障医院与患者的权益。

同型半胱氨酸检测意义及临床应用研究进展

朱佳丹、杨勇、张宏磊
甘肃金域医学检验所有限公司

近年来，临床不断深入研究了同型半胱氨酸，发现其和肾脏疾病、心血管疾病等关系均极为密切，同时比传统指标的临床应用价值高。在心血管疾病的预防与治疗中，检测血清同型半胱氨酸能够将重要依据提供给临床[1]与此同时有研究表明高同型半胱氨酸血症(hHCY)是诱发胎儿血管疾病和出生缺陷的一个独立的危险因素与周围血管阻塞疾病也息息相关。因此同型半胱氨酸检测在临床

治疗患者疾病预测具有非常重大的意义。本文主要针对同型半胱氨酸的临床检测意义和临床应用情况进行综述。

PU-2902

长沙某医院血流感染病原性真菌分布及药敏分析

徐文[1]、吴玲[2]
1. 湖南省人民医院
2. 湖南师范大学

目的 通过收集和分析真菌血流感染中的真菌分布、耐药情况及相关因素，为真菌血流感染的诊断和治疗提供重要依据。
方法 回顾性统计分析湖南省人民医院 2020 年 01 月到 2020 年 12 月的临床真菌血流感染病例 80 例。根据患者的性别、年龄、科室、基础疾病等进行统计，分析探讨湖南省人民医院近期临床真菌血流感染的病原菌种类及耐药情况和其他相关因素。
结果 近平滑念珠、白色念珠菌、热带念珠菌、光滑的念珠菌分离率分别为 38.75%、26.25%、15.00%、15.00%。其中患者主要分布科室为 ICU，普外科和肝胆科。药敏结果中，主要为对唑类药物耐药，其中热带念珠菌对氟康唑、伏立康唑的耐药率高达 41.69%。
结论 在真菌血流感染中，病原菌以近平滑念珠菌、白色念珠菌、热带念珠菌、光滑念珠菌为主。临床医师在诊断治疗过程中，应密切关注患者危险因素，警惕病原性真菌的耐药情况，及时进行科学有效的抗菌治疗。

PU-2903

槲皮素抑制神经母细胞瘤生长作用及机制研究

张宗桃
广州医科大学附属第三医院（在读研究生）

目的 探讨槲皮素抑制神经母细胞瘤生长作用及分子机制。
方法 用神经母细胞瘤细胞株种植于裸鼠皮下构建肿瘤种植瘤动物模型，每两天一次腹腔注射槲皮素，测量神经母细胞瘤异位种植瘤的体积，大小，重量；体外实验采用不同浓度的槲皮素处理神经母细胞瘤株 N2a 和 SH-SY5Y 细胞，MTT 法检测槲皮素处理前后肿瘤活性的变化，流式细胞术检测槲皮素对肿瘤细胞凋亡作用及 Western blot 检测凋亡相关分子表达；转录组测序进一步阐明槲皮素诱导神经母细胞瘤凋亡的分子机制。
结果 槲皮素处明显抑制神经母细胞瘤异位种植瘤的生长。体外结果显示槲皮素明显抑制神经母细胞瘤细胞 N2a 和 SH-SY5Y 的生长。流式细胞术结果显示槲皮素诱导神经母细胞凋亡。Western blot 结果显示槲皮素明显上调肿瘤细胞的 caspase-3 水平和活性，同时下调 bcl-2，上调 bax 水平。转录测序结果显示槲皮素明显下调细胞周期通路、嘌呤和嘧啶合成通路以及 DNA 复制通路。
结论 槲皮素明显抑制神经母细胞瘤的生长，可能通过抑制嘌呤和嘧啶合成通路以及 DNA 复制通路，进而上调 caspase-3 活性 和调控凋亡相关蛋白 bcl-2 和 bax，最终诱导神经母细胞瘤凋亡。

检验与临床沟通方式探讨

吴宗勇[1,2]、张晓煜[1]、张丽[1]、齐军[1]
1. 中国医学科学院肿瘤医院深圳医院
2. 中国医学科学院肿瘤医院

目的 探讨检验科与临床科室之间如何建立有效的沟通方式，以便为临床诊疗提供更好的服务。
方法 列举法。检验科与临床沟通的方式有书面沟通，包括：(1)在检验前的质量控制阶段，定期向临床发放《检验用户手册》和《标本采集及运送指南》并定期更新。(2)细菌耐药率的定期通报等。当面沟通，包括：(1)定期（每年 2 次）召开检验科与临床沟通会。(2)举办全院继续教育项目，向临床医护人员介绍检验新技术与新方法以及行业新进展。(3)深入临床进行小讲课及新项目宣传，结合科室具体情况进行专项授课并向临床介绍新项目的临床意义以及开展注意事项。（4）对护理人员进行专项培训，介绍标本采集方法及注意事项。(5)认真处理临床抱怨与投诉等。信息化沟通：利用医院信息化管理系统(His)、微信群、电话通讯及医院自动化办公系统(OA)等平台介绍检验项目应用知识，及时宣传科室动向。其他沟通方式：参加临床多学科联合治疗（MDT）会议，提升检验医学在临床治疗中的地位。与临床进行科研协作，缩短检验与临床之间的距离，增进检验人与临床医生的友谊，同时提升检验人的学术水平。检验与临床联合举办学术会议，可促进新技术新项目在临床的顺畅应用。
结果和结论 检验与临床沟通可随时随地进行，并贯穿检验流程的全过程。检验与临床沟通渠道通畅，会助力检验医学发展，从而更快、更好地为临床服务。

PU-2905

NOD2 在高血压肾病中的作用及机制研究

李荃新
山东大学第二医院

目的 高血压肾病是高血压患者常见的、严重的并发症，也是导致终末期肾病的主要原因之一。目前高血压肾病的主要治疗策略是使用降压药物控制血压，包括血管紧张素转化酶抑制剂等。但是这种治疗方法不能逆转高血压肾病的发展，并且最近流行病学资料显示，因高血压造成患者发展为慢性肾脏疾病的人数呈逐年增多的趋势。因此，寻找治疗高血压肾病新的靶点已经迫在眉睫。NOD2 作为 NOD 样受体家族中新发现的的成员，近些年来受到了广泛的关注。研究发现 NOD2 可以通过结合 MHC I 类分子启动子上的特定区域来促进其的转录，NOD2 还可以调控细胞的炎症反应、增殖以及纤维化等。此外近些年来的研究发现，NOD2 与多种急慢性肾脏损伤，如肾缺血再灌注损伤、糖尿病肾病以及肾脏纤维化有密切的关系。本课题主要探究 NOD2 在高血压肾病中的作用及调控机制，为高血压肾病的治疗提供新的靶点。
方法 本课题运用细胞、动物模型及临床标本，借助体内外转染技术，通过形态学、细胞和分子生物学、流式细胞术、激光共聚焦、和免疫共沉淀等方法明确 NOD2 在高血压肾病中的作用及机制。
结果 在药物诱导的高血压肾病小鼠肾脏组织中 NOD2 表达升高，敲除 NOD2 可以明显降低小鼠的血压和白蛋白与肌酐的比值，减轻肾脏的损伤。基因沉默肾小球内皮细胞中的 NOD2 可以显著改善细胞凋亡，增加一氧化氮合酶的活性，增加一氧化氮的合成。
结论 在高血压肾病中，NOD2 通过下调一氧化氮合酶的活性加重肾脏损伤。

PU-2906

NLRC4 在小鼠缺血再灌注损伤中作用的研究

李荃新
山东大学第二医院

目的 缺血再灌注损伤(Ischemia reperfusion injury，IRI)是指组织或器官缺血后恢复血液供应不仅不能使其功能得到恢复、损伤得到修复，反而造成其功能障碍和结构破坏进一步加重的现象。临床上肾脏缺血再灌注损伤（ Renal ischemic reperfusion injury，RIRI）比较多见，常见于失血或中毒性休克、弥散性血管内凝血、肾移植、肾部分切除、肾实质切开取石等手术过程中。RIRI 是急性肾衰竭常见的原因，也是肾脏移植术后影响移植物功能和移植物长期存活的主要因素之一。因此，深入认识 RIRI 的机制及降低其损伤程度是临床上密切关注的问题。本课题主要探究 NLRC4 在肾缺血再灌注损伤中的作用及调控机制，为肾缺血再灌注损伤的治疗提供新的靶点。
方法 本课题运用细胞、动物模型及临床标本，借助体内外转染技术，通过形态学、细胞和分子生物学、流式细胞术、激光共聚焦、和免疫共沉淀等方法明确 NLRC4 在肾缺血再灌注损伤中的作用及机制。
结果 在肾缺血再灌注小鼠肾脏组织中 NLRC4 表达升高，敲除 NLRC4 可以明显降低小鼠血清中肌酐尿素氮的水平，减轻肾脏的损伤。基因沉默肾小管细胞中的 NLRC4 可以显著改善细胞凋亡，降低肾脏中炎性因子的表达水平。
结论 在肾缺血再灌注损伤中，NLRC4 高表达通过上调炎症反应和细胞凋亡加重肾脏损伤。

甲功五项化学发光法检测评价甲状腺功能及意义

李巧霞、王昌敏、郝立君、刘红、黄国虹、李智伟、庞秀惠、宋雪
新疆自治区人民医院

目的 探讨甲功五项检测指标在甲状腺功能减退症预测中的临床价值。
方法 选择我院甲状腺功能减退症患者 58 例为观察组，另设健康体检者 50 例为对照组，两组均采用化学发光法检测血清三碘甲状原氨酸（T3）、血清甲状腺素（T4）、血清游离三碘甲状原氨酸（FT3）、血清游离甲状腺素测（FT4）、血清促甲状腺激素（TSH）的浓度水平，采用 ROC 曲线分析评价各项检测指标的敏感性。
结果 观察组血清 T3、T4、FT3、FT4 及 TSH 阳性率均明显高于对照组，通过 ROC 曲线、诊断试验结果显示：血清 T3、T4、FT3、FT4 及 TSH 的曲线下面积分别为 0.658、0.748、0.720、0.812、0.829， 95%可信区间分别为 0.562～0.754、0.661～0.836、0.630～0.810、0.736～0.888、0.746～0.911，联合检测的曲线下面积及 95%可信区间为：0.855（0.801～0.920），差异均有统计学意义（P＜0.001）。
结论 血清 TSH、FT3 及 FT4 的敏感性高于 T4、T3，联合检测可作为甲状腺功能减退症的早期诊断指标，对预防甲状腺功能减退症的发生、发展及疗效评价有着重要的临床价值。

PU-2908

自动进样架操作固定装置

何娟
空军军医大学西京医院

在医学检验领域中，各种全自动分析仪在临床中广泛应用。在样本检测上机之前，分析前处理均有人工操作完成。从标本接收，编号，信息录入的一系列操作后，需要对样本进行开盖后上机。在这个环节中，因自动进样架为独立单架，外形窄而长，缺乏稳定性，易受外力因素影响而倾斜翻倒，从而引起标本溢漏流洒，致使样本量减少而需要再次采样，增加了患者的负担与不便，且加大工作量与工作成本，在生物安全方面存在一定的风险。此设计增加了自动进样器上机操作前的稳定性，且在标本接收时具有明显的条理性，在外观上具备收纳整齐功能四：此设计可选用 ABS 塑料，该材质具有强度高，轻便，表面光滑易清洁处理的优点。自动进样架外形尺寸：长 20 厘米，宽 2.5 厘米。操作固定装置可设计外形尺寸为：长 20 厘米，宽 25 厘米，可纵向排列放置十个自动进样架，标本孔为 100 孔。自动进样架的右侧底部有一凹槽，因此在设计时，在固定装置的右侧底部设计了突出的卡条，两者相互吻合，妥帖的固定自动进样架，从而不会再出现自动进样架倾翻情况。

PU-2909

西南地区 306845 例男女性高危型人乳头瘤病毒感染情况分析

谭筱醴、冯敏、邓方芳、张玮佳
四川金域医学检验中心有限公司

目的 了解西南地区男女性 17 种高危型人乳头瘤病毒（HPV）感染的亚型分布及流行病学特点，为该地区人群感染 HPV 的早筛、早诊及预防提供科学依据。
方法 选择 2018 年 4 月至 2021 年 4 月送检至四川金域医学检验中心的 306845 例男女性拭子样本，采用聚合酶链式反应（PCR）-反向点杂交法检测其 HPV 基因亚型，样本主要来自于中国西南地区（四川省、贵州省、云南省、重庆市和西藏自治区）的 56 个市、自治州及地区。
结果 306845 例样本包括女性宫颈拭子样本 304451 例，男性拭子样本 2394 例，送检样本性别比例为 127.17：1，男女性样本总体 HPV 阳性率为 19.0%。304451 例女性样本中，共 55774 例检出不同型别的 HPV 病毒，阳性率为 18.9%；在所有女性 HPV 阳性样本中，阳性率最高的型别为 HPV16 亚型（占比 14.16%）和 HPV52 亚型（占比 12.38%）。2394 例男性样本中共 787 例检出不同型别的 HPV 病毒，阳性率为 32.9%；在所有男性 HPV 阳性样本中，阳性率最高的型别为 HPV52 亚型（占比 20.46%）和 HPV16 亚型（占比 11.90%）。年龄分布显示，20 岁以下、21~40 岁、41~60 岁、61 到 80 岁及 81 岁以上人群 HPV 阳性率分别为 35.4%、18.0%、19.0%、30.6%和 23.6%。地区统计分析显示，四川省、贵州省、云南省、重庆市和西藏自治区高危型 HPV 阳性率分别为 18.9%、21.6%、22.1%、20.8%和 20.3%。
结论 西南地区男性感染 HPV 阳性率高于女性，男女性感染 HPV 均以 HPV52 亚型和 HPV16 亚型为主，高发于 20 岁以下及 61~80 岁人群，各省及自治区 HPV 感染阳性率差异不大。

PU-2910

包头地区汉族人群 ESR2 基因 SNPrs1256049、SNPrs4986938 多态性与男性弱精子症的相关性研究

李得春
内蒙古科技大学包头医学院第一附属医院

目的 探讨包头地区汉族人群 ESR2 基因 rs1256049、rs4986938 多态性与男性弱精子症的相关性。
方法 采用病例对照研究方法，选取 78 例男性弱精子症为实验组，同时选取精液正常、有正常生育史的正常男性 124 例为对照组，设计统一调查问卷收集男性一般人口统计资料以及临床流行病学调查资料，通过 PCR 扩增目的片段，应用测序法检测 ESR2 基因 rs1256049、rs4986938 基因型，分析 ESR2 基因 SNPrs1256049、SNPrs4986938 多态性在各组中的分布及差异，采用 Logistic 回归法分析 ESR2 基因 SNPrs1256049、SNPrs4986938 多态性与男性弱精子症的关系。
结果 本研究中，SNPrs1256049 多态位点在实验和对照组间，等位基因频率（P=0.805）；经 Logistic 回归法分析，以 GG 为对照，GA 基因型频率（P=0.622），AA 基因型频率（P=0.424），差异没有统计学意义； SNPrs4986938 多态位点在实验和对照组间，基因型（AG 基因型 P=0.044，GG 基因型 P=0.012）和等位基因（P=0.005）频率差异有显著意义；在调整相关影响因素后，ESR2 基因 rs4986938 位点 GA+AA 基因型与男性不育风险降低显著相关(P=0.018)。
结论 包头地区汉族人群中 ESR2 基因 rs1256049 位点多态性与男性弱精子症无显著相关性；包头地区汉族人群中 ESR2 基因 rs4986938 位点多态性与男性弱精子症风险降低显著相关。

PU-2911

TCT 联合高危型 HPV 定量检测在宫颈病变中的意义

付玉华
内蒙古科技大学包头医学院第一附属医院

目的 分析液基薄层细胞学（TCT）联合高危型人乳头状瘤病毒（HPV）定量检测在宫颈病变中筛查的临床意义。
方法 在我院妇科门诊及病房收集 2019 年到 2020 年两年间 3690 例妇女同时行两种方法检查，对其中任何一项阳性者行阴道镜下活检，以病理学诊断为金标准。
结果 共 720 例进行阴道镜活检，TCT 诊断阳性 565 例（15.3%），HPV 阳性 621 例（16.8%），与病理学诊断一致率：TCT 为 45.8，HPV 为 26%。TCT 联合 HPV 检测定宫颈病变的诊断价值优于单项检测。
结论 TCT 联合 HPV 检测灵敏度很高，可提高宫颈癌的检出率。

PU-2912

针对 600 例儿童食入物过敏原 IgG 检测结果的分析

曹健
山东第一医科大学第一附属医院（山东省千佛山医院）

目的 通过分析多例儿童特异性过敏 IgG 的检测结果，对儿童食入物过敏性疾病预防和治疗提供理论支持。
方法 采用酶联免疫吸附法对我院 2020 年 5 月-2021 年 5 月期间的 600 例儿童（保健门诊、儿科门诊和住院患儿）食入物过敏原特异性 IgG 结果，进行统计学分析。

结果 在 600 例患儿中检出总阳性率 86.66%蛋清/蛋黄阳性率最高 27.85%，牛奶次之 25.33%，一份血清标本可出现多种食入物过敏原存在。
结论 食物过敏原中蛋清/蛋黄和牛奶是最主要的儿童食入性过敏原，采取有效的预防措施，可以有效降低儿童因食入物导致过敏的疾病发生。

PU-2913

LRP10 基因相关遗传疾病的研究现状

成洋、刘靳波
西南医科大学附属医院

LRP10(低密度脂蛋白受体相关蛋白 10)基因是 LDLR 家族的一个新的亚家族成员， LRP10 基因编码跨膜蛋白 LRP10，可能在神经退行性变中具有广泛的作用。近年的研究发现 LRP10 基因可能与常染色体显性遗传帕金森病、帕金森病痴呆、路易体痴呆、阿尔兹海默病、进行性核上性麻痹等相关，但具体的致病机制还需要更多的复制研究及功能研究来阐明。

PU-2914

miR-451a 对胰腺癌细胞转移的影响及机制研究

陈佳、陈伟琴、李贞、胡晓波
上海中医药大学附属龙华医院检验科

目的 探究 miR-451a 在胰腺癌转移中的作用及分子机制，为认知胰腺癌转移相关机制提供新的视角，并发现胰腺癌治疗的潜在靶标。
方法 采用 qRT-PCR 检测胰腺癌组织和细胞中 miR-451a 的表达，采用 Transwell 小室实验和划痕实验确定 miR-451a 对胰腺癌细胞转移能力的影响，通过生物信息学软件进行预测，筛选出 miR-451a 可能的下游靶基因活化转录因子-2（activating transcription factor-2, ATF2），利用双荧光素酶报告基因实验、qRT-PCR 及 Western blot 对 miR-451a 的靶基因进行验证，采用 Transwell 小室实验和划痕实验确定 ATF2 对胰腺癌细胞侵袭和迁移能力的影响，并通过挽救实验进一步证实上述机制。
结果 miR-451a 在胰腺癌组织和细胞中均高表达；miR-451a 可显著增强胰腺癌细胞的转移能力；miR-451a 可作用于 ATF2 的 3'-UTR 并抑制其表达；ATF2 能抑制胰腺癌细胞的转移，减弱 miR-451a 对胰腺癌细胞转移的促进作用。
结论 miR-451a 在胰腺癌中高表达；miR-451a 可通过调控靶基因 ATF2 的表达，从而有效地促进胰腺癌细胞转移。

PU-2915

四个新冠病毒核酸快速检测系统初步性能验证

杨永长、蒋黎
电子科技大学附属医院·四川省人民医院

目的 验证 4 个新冠病毒核酸快速检测系统的检测限、重复性和符合率，为临床提供快速、准确的检测结果。
方法 采用样本保存液分别将中国计量研究院的标准物质稀释至 4 个检测系统（3 个 PCR 荧光法，1 个等温扩增法）的检测限，每个检测系统检测 5 次。采用样本保存液将商品化的质控品稀释至 1000 拷贝/ml，根据检测系统的通量不同，测定 5-10 次，计算各系统 ORF1ab 基因和 N 基因 Ct 值

的变异系数。采用阴性样本、模拟阳性样本（由样本保存液和阳性质控品制备不同浓度的模拟样本）初步验证 4 个检测系统的符合率。
结果 4 个检测系统在各自检测限浓度的 N 基因均能检出，部分系统的 ORF1ab 基因有未检出的情况。在 1000 拷贝/ml 浓度时测定 5-10 次，3 个检测系统 ORF1ab 基因平均 Ct 值分别为 20.9，27.8，39.3，变异系数分别为 0.53%，4.27%，2.57%。N 基因平均 Ct 值分别为 20.6，26.4，33.0，变异系数分别为 0.74%，3.26%，0.97%。1 个检测系统为等温扩增，无法计算变异系数。分析阴性样本和模拟阳性样本检测结果，4 个检测系统的阴性符合率和阳性符合率均为 100%。
结论 4 个新冠病毒核酸快速检测系统的检测限、重复性和符合率基本满足要求。临床应用中，对于高度疑似样本，建议多个系统同时检测避免假阴性。

PU-2916

携带 psm-mec 基因 MRSE 菌株 MLST 分析

杨永长
电子科技大学附属医院·四川省人民医院

目的 分析携带 psm-mec 基因 MRSE 菌株的同源性。
方法 收集临床分离表皮葡萄球菌，通过微生物学和分子生物学技术鉴定筛选携带 psm-mec 基因 MRSE。菌株 MLST 分型按照数据库公布的方法进行，扩增 arcC，arcE，gtr，muts，pyrR，tpiA 和 yqiL 管家基因，扩增产物经切胶回收后纯化测序，并将测序结果提交至 MLST 数据库中查询等位基因号和菌株 ST 型别。
结果 临床分离菌株中共有 17 株携带 psm-mec 基因 MRSE。MLST 分型结果显示，17 株携带 psm-mec 基因 MRSE 共产生了 3 个 ST 型别，其中 ST2 型菌株为 15 株，占菌株总数的 88%，另外 2 株 ST 分型无结果。
结论 临床分离携带 psm-mec 基因 MRSE 菌株以 ST2 型为主。

PU-2917

骨科术后患者血栓分子标志物的变化及其临床价值的探究

李广华
广东省人民医院

目的 分析不同危险等级骨科患者在接受手术后机体血栓分子标志物的改变，并探究其临床意义，为临床治疗提供帮助。
方法 选取 2020 年 7 月-2021 年 3 月在广东省人民医院进行治疗的 90 例患者为研究对象，并根据 Caprini 血栓风险评估将患者分为三组，分别在术前、术后 24 h 以及术后 3d 进行血栓早期分子标记物凝血酶-抗凝血酶复合物 (thrombin-antithrombin complex，TAT)、纤溶酶 -α2 纤溶酶抑制物复合物 (α2-plasmin inhibitor-plasmin complex，PIC)、血栓调节蛋白 (thrombomoduline，TM)、D—二聚体 (D-dimer，DD)以及常规凝血项目进行检测，并同期选取广东省人民医院健康查体人群 29 例纳入对照组，对不同时间点和不同组别之间进行比较。
结果 三组危险等级分组骨科患者术前 TAT、D-二聚体、PIC、TM、PT 均显著高于正常对照 (P 均 ＜ 0.001)，且不同危险分级的骨科术后患者血栓早期分子标志物 TAT、PIC、TM 和 D-二聚体均明显高于正常对照组 (P ＜ 0.05)；不同危险层次组别在各组内 TAT、PIC、TM 和 D-二聚体指标在术后 24 h 的水平，与术前相比均有不同程度的增加（P<0.05）；高危险分级患者血浆 D-二聚体浓度明显大于低危组和中危组患者，高危险分级存在着明确的血浆 D-二聚体浓度升高，并随 VTE 风险分层不同而有明显区别。

结论 血栓分子标志物的水平变化对凝血及纤溶系统功能紊乱有重要的提示作用，尤其是对于 VTE 高危险等级评估的患者的监测。TAT、PIC 等血栓标志物的术后变化趋势也进一步显示有部分患者仍存在一定的血栓风险。

PU-2918

血清 HCY 及 LP(a)的水平与冠心病的严重程度的相关性研究

王宇鹏[1]、王宏波[1]、石婷[1]、彭剑桥[1]、谭超超[1]、叶湘漓[2]
1. 湖南省人民医院
2. 湖南师范大学医学院

目的 探讨冠心病(CAHD)患者的血清 HCY 和 LP(a)水平与疾病严重程度的关系及其诊断价值。
方法 收集 CAHD 患者的 HCY 和 LP(a)的血清水平数据，将其分为稳定性心绞痛、不稳定性心绞痛及心肌梗死组，与健康人群进行比较；依据冠脉狭窄情况将 CAHD 患者分为单支以下狭窄、双支狭窄和多支狭窄组，分析三组之间的 HCY 和 LP(a)水平，探讨二者血清水平与 CAHD 严重程度之间的关系；作 ROC 曲线分析，探讨联合检测 HCY 与 LP(a)对 CAHD 的诊断价值。
结果 与健康对照组相比，不稳定性心绞痛和心肌梗死组的血清 HCY 和 LP(a)的血清水平均明显升高，且差异有统计学意义(p1 = 0.002； p2 ＜0.001；p3 =0.009；p4 =0.003)；与单支以下冠脉狭窄组相比，双支狭窄组的 HCY 水平更高(p = 0.003)，多支狭窄组的 HCY 和 LP(a)水平均升高明显(p ＜0.001；p = 0.008)；ROC 曲线分析显示，相比单独检测，联合检测 HCY 和 LP(a)有更高的诊断敏感性和特异性(AUC=0.841)。
结论 血清 HCY 和 LP(a)可能与 CAHD 的严重程度密切相关，对二者联合检测可以提高 CAHD 的预测和诊断价值。

PU-2919

广州地区 2012-2020 年肺炎链球菌分布与耐药性变迁

吕婧雯、顾兵
广东省人民医院

目的 分析 2012-2020 年广东省人民医院肺炎链球菌分离株中抗生素耐药的分布情况及耐药率与样本来源、医院病房、患者性别及年龄等独立因素的关系。
方法 收集 2012 年至 2020 年的电子临床数据登记记录进行回顾性分析，采用奥普托欣试验和 VITEK 2 Compact 全自动细菌鉴定系统与纸片扩散法进行菌株的鉴定与药敏试验，数据采用 WHONET5.6 和 SPSS23.0 软件进行统计分析，以研究广东省人民医院（GDPH）肺炎球菌分离株的耐药情况。
结果 共收集 1110 株菌株，将其中 753 株纳入分析，标本类型主要是痰液标本（73.7%）。年龄段主要集中在小于 5 岁的婴幼儿及儿童（53.9%），性别以男性居多。科室分布主要集中在重症监护室 ICU（51.4%）。肺炎链球菌对红霉素（95.5%）、克林霉素（92.2%）、四环素（91.6%）、和复方新诺明（63.8%）等高度耐药，对青霉素（43.0%）、阿莫西林（34.9%）、头孢噻肟（24.0%）、头孢吡肟（37.9%）、美罗培南（28.7%）等中度耐药，对其他抗生素较敏感，特别是厄他培南、利奈唑胺、万古霉素的使用没有出现耐药菌株的情况。9 年间多重耐药菌的总分离率为 75.3%，红霉素耐药率一直维持在较高的水平，美罗培南耐药率存在逐年增长的趋势。
结论 GDPH 肺炎球菌分离株中耐药菌株和多重耐药株流行率的增加，要求明智地使用抗生素并定期监测耐药性。

PU-2920

福州地区 3887 例羊水染色体核型分布

毛雅珍
福州市第一医院

目的 探讨 3887 例妊娠中期孕妇羊水染色体核型类型和分布，并分析不同产前诊断指征与胎儿染色体异常的关系。
方法 回顾性分析本院 2014 年 1 月至 2019 年 12 月共 3887 例有不同产前诊断指征并行羊膜腔穿刺术进行羊水染色体核型分析的病例。
结果 共检出异常染色体核型 178 例，异常检出率 4.58%，其中染色体数目异常 128 例，其中 21-三体 58 例，18-三体 24 例，13-三体 7 例，性染色体异常 16 例；染色体结构异常 50 例，其中易位 22 例，缺失 9 例，标记染色体 6 例。胎儿超声异常、产前血清学筛查高风险、高龄孕妇为主要染色体异常分布指征。
结论 目前，羊膜穿刺术结合核型分析仍是诊断胎儿染色体疾病的金标准；孕妇具有多项产前诊断指征染色体异常检出率高于单项产前诊断指征，临床咨询者要尽力劝服具有多项指征的孕妇进行产前诊断。

PU-2921

RBC、RET 系统参数在地中海贫血和缺铁性贫血的鉴别诊断应用

陈勇
福州市第一医院

目的 探讨红细胞 3 项系统参数：红细胞计数（RBC）、平均红细胞体积（MCV）、平均红细胞血红蛋白量（MCH）；网织红细胞 6 项系统参数：网织红细胞百分率（RET％）、网织红细胞绝对值（RET＃）未成熟网织红细胞比率（IRF%）、低荧光强度网织红细胞百分率（LFR％）、中荧光强度网织红细胞百分率（MFR％）、高荧光强度网织红细胞百分率（HFR％）在地中海贫血（thalassemia trait，TT）和缺铁性贫血（iron deficiency anemia，IDA）的鉴别诊断中的应用。
方法 将 100 例 TT 患者设为地贫组，100 例 IDA 患者设为缺铁贫组，100 例健康人设为对照组，用希森美康 XN9000 系列全自动血液分析仪检测红细胞参数及网织红细胞参数，用 SPSS 23.0 统计软件分析各组参数间的差异，多组间数据采用单因素方差（one-way ANOVA）分析，多组间比较采用 Tukey 校正，同时采用受试者工作特征曲线（ROC）分析各参数曲线下面积（AUC）,评价各项指标的在鉴别 TT 和 IDA 中的诊断效能。
结果 TT 组和 IDA 组 RBC、MCV、MCH、RET%、RET#、IRF%、LFR%、MFR%、HFR%与对照组比较，其差异均有统计学意义（P＜0.05）；地中海贫血组 RBC、MCV、RET%、RET#、IRF%、LFR%、MFR%、HFR%与缺铁贫组比较，其差异均有统计学意义（P＜0.05）。α 地中海贫血与 β 地中海贫血在这些参数上进行比较，差异无统计学意义（P＞0.05）。用 ROC 分析各项指标时，HFR%的曲线下面积（AUC）=0.862，在各项指标中 AUC 下面积最大，在鉴别 TT 和 IDA 中 HFR%的 cut-off 值为<2.680。
结论 在 TT 和 IDA 的鉴别诊断中 HFR%的诊断效能最大，有望作为两者鉴别诊断重要的实验室指标。

PU-2922

NSCLC 骨转移风险预测模型的建立和验证

胡春晓
安徽理工大学附属肿瘤医院

目的 构建列线图来预测非小细胞肺癌（NSCLC）患者骨转移的发生风险。
方法 回顾性分析 2016 年 1 月至 2020 年 12 月确诊的 NSCLC 患者的临床资料及血液学资料，包括是否发生骨转移、年龄、性别、病理类型、吸烟状况、PS 评分、T、N 分期、骨转移前是否有其他部位的转移、癌胚抗原（carcinoembryonic antigen,CEA）水平、甲胎蛋白（alpha fetoprotein,AFP）水平、血清钙浓度（Ca）、血清磷浓度（P）、碱性磷酸酶（alkaline phosphatase,ALP）水平，利用单因素分析筛选与 NSCLC 骨转移发生相关的潜在危险因素，并纳入多因素 Logistic 回归，筛选 NSCLC 骨转移发生的独立危险因素并建立预测模型，使用受试者工作特征曲线（receiver operating characteristic curve,ROC）、决策曲线分析法（decision curve analysis ,DCA）验证模型的准确性及临床获益度，使用使用“ RMS”软件包绘制列线图以进行模型可视化。
结果 ROC 曲线下面积（AUC）显示，在建模组的 132 例患者中，联合指标（年龄、性别、病理类型、CEA、ALP）预测的 AUC 值(AUC=0.790)要高于单一指标预测值，年龄、CEA、ALP 的特异度分别为 81.54%、78.46%、81.54%，灵敏度分别为 41.79%、47.76%、38.52%，而联合指标的特异度和灵敏度分别为 76.92%、76.12%。基于同一个模型，将验证组的 98 例 NSCLC 患者进行 ROC 分析，联合指标（年龄、性别、病理类型、CEA、ALP）预测的 AUC 值为 0.641，特异度为 45.83%，灵敏度为 86%。
结论 本研究构建的预测模型效果良好，可在早期识别容易发生骨转移的 NSCLC 患者，为临床筛选 NSCLC 骨转移的高危患者提供参考。

PU-2923

男性骨质疏松症患者肠道菌群组成及基因功能分析

吕静、于燕、曾玉红、赵和平
西安交通大学附属红会医院

目的 探讨男性骨质疏松症患者肠道菌群结构和基因功能改变与骨密度之间的关系。
方法 选取 2019 年 03 月-12 月到我院就诊的 50 岁及以上的初诊男性骨质疏松症患者 14 例、低骨量者 26 例及骨量正常者 21 例，收集粪便样本提取肠道微生物 DNA，进行 16S rRNA V3~V4 区和宏基因组扩增，使用 Illumina 平台进行高通量测序，对测序结果进行物种注释、菌群结构差异和基因功能分析，并观察其与骨密度之间的相关性。
结果 大多数肠道菌群在三组人群中是共同存在的，在门、纲、目、科、属、种各水平均存在一定的差别。相对于骨量正常组人群，Leuconostocaceae、Weissella 和 Lactobacillus gasseri 是骨质疏松症组患者肠道内丰度显著升高的关键差异菌群；而 Cardiobacteriales、unidentified Cardiobacteriales 和 Ignatzschineria 是骨量正常组人群肠道内丰度显著升高的菌群。相关性分析指出，Selenomonadales 和 Lactobacillus salivarius 相对丰度与骨密度之间具有一定的相关性（P<0.05）。肠道宏基因组功能注释分析显示，在 KEGG 1 级水平，细胞过程、环境信息加工和新陈代谢功能区域与骨密度呈正相关；在 KEGG 2 级水平，碳水化合物代谢和信号转导功能与骨密度呈正相关；在 KEGG 3 级水平，淀粉和蔗糖代谢、二组分系统注释功能与骨密度呈正相关；基因功能信号转导、蔗糖和淀粉代谢、二组分系统对于鉴别骨质疏松症患者具有较好的灵敏度和特异性。
结论 16S rRNA 和宏基因组测序分析有助于明确 50 岁及以上男性骨质疏松症患者的肠道菌群结构和基因功能的变化，为研究肠道菌群与骨代谢的关系提供理论依据。

PU-2924

宁夏医科大学总医院心脑血管病医院

张永华[2]、张成磊[1]、黄勇翔[1]
1. 宁夏医科大学总医院
2. 宁夏医科大学总医院

目的 探讨离心条件和溶血对高敏肌钙蛋白（hs-cTn）检测结果的影响。
方法 选取 2020 年 3 月至 12 月在我院就诊的患者 280 例作为研究对象，根据 hs-cTn 结果分组，不同离心条件处理后检测结果。另外配制不同溶血程度的 hs-cTn 样本，观察结果的变化。
结果 低浓度组标本经 5、10、15min 离心后，结果偏移分别是 13.51%和 15.48%，大于中浓度组（5.78 %和 10.17 %）和高浓度组（1.88 %和 4.28 %）。低浓度组中 3000 r/min、5min 与其他条件相比均有统计学意义（P=0.0484，0.0167，0.0314）；在中、高浓度组中，4000 r/min、5min 离心条件下的检测结果与其他结果均无统计学差异。在不同溶血程度的条件下，L 组结果增高幅度最大，最大偏移为 20.65%；H 组偏倚很小，不超过 1%。另外，L 组中各结果间均有明显差异（P<0.0001）；M 组中除 2g/L 外，其它各组结果与 0g/L 相比差异均有统计学意义（P=0.0057，<0.0001，<0.0001，<0.0001）；H 组中除 10g/L 外，其它各组间均无明显差异。
结论 不同离心速度、时间对结果的影响 低浓度组标本经 5、10、15min 离心后，结果偏移分别是 13.51%和 15.48%，大于中浓度组（5.78 %和 10.17 %）和高浓度组（1.88 %和 4.28 %）。不同溶血程度对结果的影响 在不同溶血程度的条件下，检测结果均呈现不同程度的增高（P < 0.0001）。L 组结果增高幅度最大，6 g/L、8 g/L、10 g/L 时结果偏移分别是 10.57%、15.45%和 20.65%；而 M 组仅在 8 g/L 和 10 g/L 时偏移大于 10%（10.72%和 16.29%）；H 组偏倚很小，不超过 1%。

基于时间节点监控的门诊血液采集流程管理

李梅
中国人民解放军空军军医大学第一附属医院

目的 探讨基于关键时间节点的监控在门诊血液采集流程管理中的应用，建立精确、有效的人员配置机制。
方法 实现血液采集系统的护士终端与 LIS 和 HIS 的无缝连接，设置关键时间节点并实时监控工作进度；采用 SPSS 20.0 统计学软件，t 检验比较时间节点监控前后 6 个月的平均分诊时间、等待时间、转运时间及 TAT 时间的差异性，χ2 检验比较误采率、试管差错率、漏采率及患者满意度。
结果 时间节点监控前后，分诊时间分别为（19.8±3.6）和（16.2±2.8）分钟，等待时间分别为（36.3±5.4）和（18.2±3.6）分钟，转运时间分别为（19.8±3.6）和（15.2±2.8）分钟，TAT 分别为（26.1±2.2）和（20.4±2.5）分钟，患者满意度分别为 93.17%和 99.17%，误采率、试管差错率、漏采率各项指标均明显降低（表 1），具显著性统计学意义（P＜0.05）。护理管理人员通过护士终端可直观获得各时段、各采血护理人员（窗口）所完成血液采集的患者人数以及待采血患者人数的实时动态信息（图 1、2），并以此为量化指标作决策性依据，及时作出响应，制定合理改进措施。
结论 实施时间节点监控，及时发现问题，采取改进措施，明显缩短分诊扣费时间、采血等待时间和检验 TAT 时间，降低采血错误率，提高患者满意度，为门诊血液采集流程管理提供决策性方案。

PU-2926

山东地区急性淋巴细胞白血病患者骨髓染色体核型的比较

王彦文[1]、王姣姣[2]、彭德志[1]、王佳佳[1]、张陈祎[1]、陈永新[3]
1. 济南金域医学检验中心
2. 山东大学生殖医学研究中心
3. 山东省千佛山医院检验科

目的 统计分析比较不同年龄段急性淋巴细胞白血病患者的核型表达。
方法 收集山东地区送检济南金域医学检验中心经流式细胞术检测和（或）骨髓组织活检确诊的急性淋巴细胞白血病的骨髓染色体核型 204 例。
结果 1.在异常核型中 t(9;22)和 t(9;22)伴其他异常最常见；且免疫表型 B-ALL 最常见，极少数为 T-ALL 表型。且年龄分布在 15-74 岁之间。2.不同年龄段骨髓染色体正常核型及骨髓染色体 t(9;22)和 t(9;22)伴其他异常核型具有统计学意义，P<0.05。且 ph 样骨髓染色体核型年龄范围锁定在 20 岁以上的成人，≦10 岁幼儿及儿童出现频率为 0。
结论 急性淋巴细胞白血病不论年龄范围，其免疫表型多为 B-ALL，T-ALL 少见；不同年龄段骨髓染色体核型的表现不同，其中 t(9;22)和 t(9;22)伴其他异常最常见，且具有年龄分布；≦10 岁患者正常核型检出率较高，但其正常核型中部分 FISH 检测出 TEL-AML1 融合基因阳性，可见在急性白血病中单一的骨髓染色体核检测不能全面了解其疾病性质，要结合其 MICM 综合考虑。

PU-2927

由戈登链球菌感染导致的急性心内膜炎——一种罕见的表现

田本顺
广东省人民医院
徐州医科大学

急性感染性心内膜炎(Acute 感染性心内膜炎，AIE)是一种严重威胁生命的急症，患者在短时间内死亡。因此，早期正确的发现是挽救患者生命的关键。戈登链球菌引起的亚急性心内膜炎已有文献报道。这里，我们首先报告一例年轻的经质谱(MS)鉴定出的戈登链球菌引起的急性心内膜炎病例，更重要的是，通过早期手术治疗和抗生素治疗，该年轻患者最终治愈。

PU-2928

基于 Top-Down 法评定临检常规项目测量不确定度

李明勇
四川省人民医院

目的 分别以室内质量控制数据与室间质量评价（EQA）数据以及校准品评定白细胞（WBC）、红细胞（RBC）、血红蛋白（Hb）、红细胞压积（HCT）、血小板（PLT）的测量不确定度，通过评价血液常规检验项目的测量不确定度，使临床检验项目更好地服务于临床。
方法 利用实验室内部的分析仪器日常工作中得到的复现性和参加卫生部临床检验中心室间比对结果， 分析检测中的测量不确定度，并计算合成不确定度和扩展不确定度。
结果 取 k＝2 时，包含概率 P＝95%，WBC 低、中、高值的扩展不确定度分别为（3.06 ± 0.27）、（7.35±0.49）、（18.32 ± 1.32）× 109/ L；RBC 低、中、高值的扩展不确定度分别为（1.37± 0.08）、（4.37 ±0.18）、（5.21 ±0.16）× 1012/ L； Hb 低、中、高值的扩展不确定度分别为

（58.97 ±3.09）、（121．89 ± 3.37）、（157.87 ±9.73）g/ L； PLT 的扩展不确定度分别为（57.72 ± 11.71）、（223.17 ± 31.35）、（515.63 ± 92.31）× 109/ L。基于校准品（中值）及校准过程中的测量不确定度分别为 WBC 0.424× 109/ L，RBC 0.15×1012/ L，Hb 3.4g/ L，HCT 1.62，PLT 27.9×109/ L.各项的扩展不确定度均包含于中华人民共和国卫生行业标准提出的临床血液学检验常规项目分析质量要求的允许总误差。

结论 利用实验室室间质量评价数据及校准品的不确定度对实验室血常规检测项目不确定度进行评定是合理可行的，且此方法比利用室间质评进行不确定度评估更方便、可靠。通过对不确定度的评价，可以提高实验室的检测水平，有助于临床更好地理解、使用检验结果。

PU-2929

15 号染色体 q11.2-q13 缺失病例 1 例

梁间芬
南方医科大学珠江医院

人类细胞染色体异常是遗传疾病的常见原因，而缺失、重复、易位、倒位、环状染色体等可产生严重的性状而引起各种染色体病。其中 15 号染色体长臂(15q11-q13)发生基因变异即 15 号染色体 q11.2-q13 缺失或该区域的父源性单亲二倍体 upd(15)pat 或母源性单亲二倍体 upd(15)mat，可导致普瑞德-威利氏综合症 PWS 和天使综合征 AS。

普瑞德-威利氏综合症 PWS 中 25%~30%为 upd(15)mat,1%~3%为印迹区域异常，70%~75%为父源性染色体 15q11.2-q13 的缺失。主要表现为新生儿肌张力减退、发育迟滞、智力低下、儿童期肥胖、身材矮小、性腺机能减退以及严重的行为异常。

天使综合征中 3%~7%为 upd(15)pat,,3%~5%为印迹区域的异常，5%~11%为 UBE3A 基因突变，68%~70%为母源性染色体 15q11.2-q13 的缺失，其余的 10%~15%则病因未明。天使综合征主要表现为严重智力低下、语言障碍、共济失调、癫痫、阵发性欢笑。现将我科检测儿科门诊病例 1 例报告如下：

PU-2930

抽丝剥茧，寻找真相

李丹、刘道林
隆回县人民医院

日常血液检验中，发现一血小板显著升高达 1314×109/L，嗜碱性粒细胞明显升高的病人，涂片镜检血小板成堆分布，其余各系数量、形态基本正常。查阅病史：青年女性，患鼻咽癌一年余，经系统放化疗后。查体肝脾淋巴结无肿大，实验室检查肝肾功能、凝血常规、自身抗体等正常。为明确诊断，行骨髓穿刺细胞形态学检查，同时外送 JAK2、CALR、MPL 突变基因检测。骨髓象巨核细胞显著增高，符合原发性血小板增多症。但病人骨髓象有核细胞增生明显活跃，粒系增生明显活跃，原始粒细胞占 3%，嗜酸、嗜碱性粒细胞增高，是否要考虑以血小板增高为主要表现的慢性粒细胞白血病？外检结果回馈 JAK2、CALR、MPL 基因均未检测到突变,也不支持 ET 的诊断。又加送 BCR-ABL1 融合基因检测。结果 P210 阳性。至此，基本可以确定此患者为慢性粒细胞白血病。

总结：1.骨髓增殖性肿瘤，一般有脾大甚至巨脾，而此患者无脾大。

2.慢性粒细胞白血病一般外周血白细胞显著增高，而此患者白细胞正常。

3.由于实验室条件限制，缺少必要的检查，如 NAP 积分，使结果难以判断。

4.慢性粒细胞白血病，部分初诊病人血小板明显升高，可达 1000×109/L，骨髓象巨核细胞数量增多或正常，易见小巨核细胞。原发性血小板增多症，血小板显著增高，血小板形态异常，大小不等，骨髓象巨核细胞明显增生，多为巨大的巨核细胞。

PU-2931

乌鲁木齐地区 0~18 岁人群 25 羟维生素 D 水平及其与季节相关性分析

崔彦杰、 刘红春
新疆维吾尔自治区人民医院

目的 了解乌鲁木齐地区 0~18 岁人群 25 羟维生素 D 水平及其与性别、年龄、季节的关系，为及时、科学的补充维生素 D 提供依据。
方法 回顾性分析 2018 年 1 月-2020 年 12 月间就诊于我院儿童保健室的 0~18 岁体检人群 3454 例为研究对象，根据其年龄将其分为学龄前组（0~3 岁），幼儿园组（4~6 岁），小学组（7~12 岁），初中组（13~15 岁），高中组（16~18 岁），采用雅培电化学发光仪检测其血清中 25 羟维生素 D 水平，根据其年龄、性别及季节因素分析比较其 25 羟维生素 D 水平的差异。
结果 3454 例 0~18 岁人群的 25 羟维生素 D 平均水平为（30.35±8.23），25 羟维生素 D 缺乏与不足者之和为 2161 例（占 62.57%）。随着年龄的增长 25 羟维生素 D 呈现降低的趋势，但同年龄段不同性别之间未发现存在显著差异（P>0.05）。夏季、秋季 0~18 岁人群的 25 羟维生素 D 水平明显高于春季、冬季，缺乏率及不足率明显低于春季、秋季，差异有统计学意义（P <0.05）。
结论 乌鲁木齐地区 0~18 岁人群 25 羟维生素 D 总体水平偏低，且与年龄、季节相关，应及时检测，并根据检测结果进行科学合理的补充。

PU-2932

检验科窗口工作的医患沟通

纵帅、冯倚帆、徐银海
徐州医科大学附属医院

目的 通过解读检验科窗口的工作特点和工作性质，并以此为依据、关注点和突破口，规范和提升检验科窗口工作医患沟通及其技巧。
方法 （1）指导患者正确做好标本采集前准备。做好标本采集前的准备是获取合格标本的前提,检验科窗口应该积极指导患者正确做好标本采集前准备，消除非疾病因素影响，消除患者顾虑，取得配合。（2）接收标本时做好必要的询问和告知。对患者送检标本，有必要主动与患者沟通获得信息，确保标本合格，并以适当的方式告知报告发出时间和可能延迟的情况进行合理解释，取得患者的理解，预防不必要的投诉或纠纷。（3）标本需要重新采集时做好合理解释。在临床检验中需要进一步确认结果需要复查的情况，应给患者合理的解释，向患者及家属耐心解释使其正确认识到需要重新采集标本的重要性。（4）认直谨慎对检验结果进行答疑。对于患者的咨询和疑问，既不可推卸责任，也不可武断给予解答或下结论，否则容易造成患者的心理负担乃至误导患者。要求检验科工作人员不仅要熟悉医疗法规，而且要了解本单位开展所有检验项目，不断加强结合临床内容的理解，给出合理合适的分析。
结果 通过上述四项主要沟通和注意事项，检验科窗口工作人员能够很好的从综合性，复杂性，专业性，服务性和危险性五个方面了解检验科的工作特点，明确在实际的临床工作中窗口岗位的特点，知道窗口工作既需要直接面对患者进行检验相关的操作和沟通，也需要专业技能，还需要有灵活机动的应变沟通能力和技巧，并且在沟通过程中保持足够的冷静和耐心，取得患者的理解和支持，消除医患矛盾。
结论 检验人员在做好检验本身工作的同时，也要做好耐心细致的解释工作，与患者在良好的沟通中取得理解和信任，对患者一视同仁，不冷淡、不歧视，不区别对待。与患者面对面交谈时善于运用语言艺术和身体语言，注意情感支持，就使患者充分感受到工作人员的耐心和关爱之意，赢得患者对检验科的认可，减少甚至避免不必要的医患矛盾。

PU-2933

2016-2020 年杭州地区单中心 EB 病毒感染患儿阳性率的统计与分析

徐旭栋[1]、周俊[1]、肖湘阳 2[2]、曾工博[1]、林先耀[1]、吴亦栋[2]
1. 杭州市儿童医院
2. 浙江省杭州市中医院丁桥院区

目的 了解杭州地区 2016 年至 2020 年间儿童 EB 病毒的感染情况、构成、流行趋势等信息。
方法 选取 2016 年至 2020 年期间，杭州市儿童医院病原体核酸检测的样本共 72526 例，将其中 EBV 核酸阳性的 1391 例纳入统计研究，并分析各年份杭州地区儿童 EB 病毒感染的人数、感染月份、性别比例及年龄构成等因素。
结果 2016-2020 年，报告 EB 病毒核酸阳性病例 1391 例，占全院儿童病原体检测数的 1.92%，五年间 EB 病毒感染阳性率分别为 1.56%，1.81%，1.89%，1.63%和 3.11%；性别方面，男性感染患儿报告 783 例，女性感染患儿报告 613 例，男女比例为 1.28：1；年龄分布方面，EB 阳性感染患儿 1-6 学龄前儿童累计报告 1184 例，占我院 1-15 岁患儿总阳性病例数的 85.12%。流行季节方面，夏秋季为感染高峰，冬春季不明显。
结论 2016 年-2019 年，杭州地区 EB 病毒感染比例相对平稳（x2 趋势检验，P>0.05），但在 2020 年，阳性率明显上升，这可能与新冠疫情有关；学龄前儿童为 EB 病毒的主要感染者，这与学龄前儿童的免疫水平以及淋巴细胞比例水平可能存在一定相关性，同时男童与女童的阳性感染率存在显著差异（P<0.05）且男童感染风险更高，此外 EB 病毒传播还具有一定季节规律。

PU-2934

境外输入新冠病毒感染者不同标本阳性检出率分析

杨勇卫、陈锡莲、林青、曲人亮、张帅、石建凤、刘静静
烟台市奇山医院

目的 探讨境外输入 2019-nCoV 感染者不同标本的阳性检出率，以期为新冠病毒变异相关研究和临床新冠肺炎诊治提供数据支持和理论依据。
方法 回顾性分析 2020 年 10 月至 2021 年 4 月烟台市奇山医院收治的 9 例境外输入新冠病毒感染者 36 次（108 份）新冠核酸检测实验的结果；每次实验采集标本类型均为痰、鼻咽拭子和粪便标本，运用荧光定量 PCR 方法检测，提取试剂和扩增试剂均购自上海之江生物科技股份有限公司，试剂均在有效期内，实验操作和结果判断均按照试剂说明书严格执行；运用 SPSS19.0 软件做卡方检验，P<0.05 具有统计学意义。
结果 108 份新冠核酸检测结果中，36 份痰标本检出阳性 11 份，检出率为 30.56%；36 份鼻咽拭子检出阳性 32 份，检出率为 88.89%；36 份粪便标本均未检出阳性；不同标本类型的新冠病毒核酸检出存在差异（Pearson 卡方 65.85，P<0.01）。
结论 境外输入新冠病毒感染者鼻咽拭子较痰标本阳性检出率高，粪便标本阳性检出率极低，对新冠肺炎轻症患者、新冠病毒无症状感染者以及健康筛查人员推荐优先采集鼻咽拭子标本，以提高检出率。

PU-2935

独立实验室葡萄糖检测流程优化研究

陈灿星[1]、胡志峰[1,2]、姚少濠[1,2]、张玲[1,2]、刘勇[1,2]、徐海超[1]、欧狄[1]、陶然[1,2]
1. 广州金域医学检验中心有限公司
2. 广州医科大学金域检验学院

目的 未使用专用抗凝管，葡萄糖因血细胞的糖酵解，每小时降低 5-7%，专用抗凝管能抑制糖的酵解过程。当医院、社康或独立透析中心等第三方医疗单位送检批量葡萄糖检测时，独立实验室复杂繁琐的检验流程，且要区分血清葡萄糖结果和葡萄糖专用抗凝管结果，需耗费人力，浪费时间和试剂，还增加检测者疲劳度的后果。本文以保证葡萄糖报告结果的准确性、减少员工疲劳程度、节约样品检测时间和降低样品检验成本为流程改造的目标，通过前期调查分析，研究并优化本实验室葡萄糖检测流程。
方法 以流程优化和“6S”管理的有关理论为优化的主导思路，整理既往数据，分析实验室葡萄糖检测周转时间，采用包括为社康等医疗单位提供专用抗凝管，定期到社康宣讲培训，增置新的为专用抗凝管检测的辅助设备和检测设备，优化葡萄糖标本接收检测流程，设计适合本实验室的葡萄糖检验方案，制作血糖检测操作卡，减少实验室人员对葡萄糖检测前的干预。
结果 2020 年葡萄糖检测量较 2019 年增长 25%，2020 年葡萄糖检测周转时间中位数为 5.1h，比 2019 年同期检测周转时间中位数提升 48%。
结论 本文的研究成果，不仅解决了本实验室现场管理混乱、员工素养不高、制度不完善的问题，还理顺了原来杂乱不清的检测程序、减少了繁琐的工作交接。葡萄糖检测程序运行的更加科学、合理、高效，也缩短其他检测业务的检测周转时间。对其它第三方实验室的葡萄糖检验业务或其他检验业务也有一定的借鉴意义。

PU-2936

术前外周血 NLR、PLR 及 NLR-PLR 评分与局部进展期胃癌新辅助化疗疗效及预后的相关性研究

刘亮华、赵明才
遂宁中心医院

目的 探讨局部进展期胃癌患者接受新辅助化疗前外周血 NLR、PLR 及 NLR-PLR 评分与临床疗效及预后的相关性。
方法 回顾性分析 2015 年 1 月至 2020 年 1 月在遂宁市中心医院就诊的 60 例胃癌患者的临床资料。根据 ROC 曲线确定 NLR、PLR 最佳截断值，将患者分别分为低 NLR (NLR＜2.62)组、高 NLR (NLR≥2.62)组，低 PLR (PLR＜169.0)组、高 PLR (PLR≥169.0)组；本研究根据 NLR-PLR 评分将患者重新分为 3 组，NLR、PLR 都低者为 0 分，一低一高者为 1 分，两者都高者为 2 分。采用卡方检验或 Fisher 精确概率法检验分析 NLR、PLR 与各临床特征之间的关系；利用 Kaplan-Meier 法对分类变量进行生存分析；采用 Cox 回归模型进行单因素和多因素生存分析。
结果 术前 NLR≥2.62 在高 CEA 值（P=0.01）、新辅助化疗无效（P=0.025）、cTNM 分期晚（P=0.04）、有脉管侵犯（P=0.021）、未能获得 pCR(P=0.044)的患者中较为常见。术前 PLR≥169.0 在 cTNM 分期晚（P=0.038）、新辅助化疗无效（P=0.006）、未能获得 pCR(P=0.039)的患者中较为常见。低 NLR 组的 PFS 明显优于高 NLR 组（P=0.015）；低 PLR 组的患者与高 PLR 组相比拥有更长的 PFS（P=0.032）；NLR-PLR 评分越低，患者的中位 PFS 越长（P＜0.001）。多因素 Cox 回归模型分析显示新辅助化疗效果差、未能获得 pCR、高 NLR 值、NLR-PLR 评分是影响胃癌患者预后的独立危险因素。NLR、PLR 的 AUG 值为 0.614（P=0.039）、0.559（P=0.026），均小于 NLR-PLR 评分的 AUG 值 0.696（P=0.007）。

结论 而 NLR-PLR 评分对胃癌患者的预后评估价值优于 NLR 及 PLR，但需要进一步的研究和验证。

PU-2937

Expression and prognostic analyses of TP53 family in human esophageal cancer

Lihua Yao、Xiaowu Zhong、Xiaolan Guo
Department of Laboratory Medicine, Affiliated Hospital of North Sichuan Medical College

Objective Esophageal cancer (ESCA) is one of the most common malignant tumor of digestive system, while the morbidity and mortality of esophageal squamous cell carcinoma were ranked fifth and fourth in China. It is high importance to identify more specific and sensitive biomarkers and understand the pathogenetic mechanisms of esophageal cancer is very helpful for clinicians to choose suitable treatments for esophageal cancer patients, which may further help to prolong the overall survival of patients. The TP53 family of transcription factors, including TP53, TP63, and TP73, plays key roles in both biological and pathological processes, including cancer and neural development. While the diverse expression patterns, prognostic value, and potential mechanism of TP53 family in esophageal cancer remain unclear. Thus, investigating the functions of TP53 family members and understanding their regulatory mechanism in esophageal cancer is crucial for the diagnosis and effective strategies to treat esophageal cancer.
Methods Expression data, Immune Infiltration Analysis and clinicopathological features of TP53 family genes for esophageal cancer patients were extracted from TIMER database and the Cancer Genome Atlas (TCGA). The prognostic value of TP53 family genes in esophageal cancer patients were explored using Kaplan–Meier plotter database. And validated the expression of TP53 in 65 pairs esophageal cancer tissues and corresponding adjacent tissues by qRT-PCR. Besides, Plasmid encoding knocked down the expression of TP53 and stably transfected in esophageal squamous cell carcinoma cells (Kyse150 and TE1), then the Transwell assay, Scratch test and Crystal violet assay were utilized to examine the effects of TP53 on esophageal squamous cell carcinoma cells migration and proliferation. Additionally, GSEA algorithm and Western Blotting were performed to explore the relationship between the TP53 and AKT-mTOR pathway.
Results In the present study, the mRNA expression of TP53 members (TP53, TP63, TP73) were significantly higher in esophageal cancer tissues compared with normal tissues, and high mRNA expression of TP53 members were associated with clinical cancer stages and nodal metastasis status in esophageal cancer patients. Moreover, additional experiments verified that the mRNA expression of TP53 was up-regulated in esophageal squamous cell carcinoma tissues. Furthermore, high expression of TP53 and TP73 were significantly correlated with shorter overall survival (OS) in esophageal cancer patients. Meanwhile, immune infiltration level analysis showed that the mRNA expression of TP53 were obviously related to tumor purity and neutrophil, and the correlation of mRNA expression of TP63 with B cells, CD8+ T cells and Dendritic cells was statistically significant, besides, the mRNA expression of TP73 had significant correlations with infiltrating levels of B cell and CD8+ T cells in esophageal cancer. Additionally, down-regulation of TP53 expression significantly retarded esophageal squamous cell carcinoma cells migration and proliferation, it may be involved in AKT-mTOR signaling pathway and TP53-dependent autophagy.
Conclusion Taken together, these results indicated that TP53 family members have the potential biological functionality and prognostic value in esophageal cancer, especially TP53 could be as a diagnostic marker and a valuable therapeutic target in esophageal squamous cell carcinoma.

PU-2938

IL-10 基因 rs1800872 位点多态性与宁夏回、汉族人群自发性早产的相关性

詹福寿
宁夏医科大学总医院

目的 探讨 IL-10 基因 rs1800872 位点多态性与宁夏回、汉族人群自发性早产（spontaneous premature delivery，SPTD）的相关性。
方法 收集 2013 年 1 月－2021 年 5 月，宁夏医科大学总医院和银川市妇幼保健院产科被确诊为 SPTD 患者 401 例（汉族 286 例，回族 115 例），正常足月分娩产妇 418 例（汉族 290 例，回族 128 例）作为对照组。采用聚合酶链反应-限制性片段长度多态性技术对研究对象 IL-10 基因 rs1800872 位点多态性进行检测，比较各组的基因型及等位基因频率，并分析其与 SPTD 的相关性。
结果 宁夏回、汉族人群 SPTD 组与对照组 IL-10 基因 rs1800872 位点的基因多态性分布差异均无统计学意义（P≥0.05）。宁夏回、汉族人群 SPTD 组 IL-10 基因 rs1800872 位点的基因多态性分布差异均无统计学意义（P≥0.05），将宁夏回、汉族群体合并，然后按照新生儿出生时的孕周大小分为早期 SPTD 组和中晚期 SPTD 组 2 组，早期 SPTD 组与对照组相比，CC 和 AC 基因型频率相似（P≥0.05），AA 基因型频率低于对照组（P<0.05），C 等位基因的频率高于对照组（P<0.05），A 等位基因的频率低于对照组（P<0.05），中晚期 SPTD 组与对照组 IL-10 基因 rs1800872 位点的基因多态性分布差异均无统计学意义（P≥0.05）。
结论 携带 AA 基因型的个体发生早期 SPTD 的风险显著降低，IL-10 基因 rs1800872 位点多态性可能与宁夏地区早期 SPTD 的发病存在相关性。

PU-2939

普陀区 6352 例妊娠中期孕妇全血微量元素结果分析

闫辉波
上海市普陀区妇婴保健院

目的 全面掌握上海市普陀区孕妇全血中微量元素的实际水平，为下一步合理补充微量元素以及妊娠期指导提供可靠的实验室依据。
方法 选取 2019 年 01 月至 2020 年 06 月在我院产科门诊就诊建卡的 6352 例孕妇作为研究对象，分析妊娠中期血中钙、镁、铁、铜、锌这五种微量元素的实验室检测结果，按年龄分为高龄组（≥35 岁）和适龄组（<35 岁），通过计算比较两组孕妇之间微量元素含量的差异。
结果 纳入分析的 6352 例孕妇中，钙、铁的缺乏最为普遍分别占比 21.76、21.39%，其次为锌缺乏占 8.66%，镁缺乏较少占 1.84%，铜缺乏者比较少见只有一例；随年龄的增加钙水平明显降低，镁、铁略有升高，铜、锌水平基本不随年龄发生变化。
结论 普陀区孕妇中钙、铁缺乏较为普遍，锌也存在一部分缺乏，在妊娠过程中要注意补充微量元素或者调整膳食结构以保证孕妇及胎儿的健康。

Analytical sensitivity comparison of 14 conventional and three rapid RT-PCR assays for SARS-CoV-2 detection

Xueliang Wang 、Zhongqiang Huang、Jian Song、Yanqun Xiao 、Hualiang Wang
Shanghai Centre for Clinical Laboratory

Purpose Recent reports have compared the analytical sensitivities of some SARS-CoV-2 RT-PCR assays, but differences in the viral materials used for these evaluations made comprehensive conclusions difficult. We aimed to conduct a direct comparison of the analytical sensitivities of 17 approved SARS-CoV-2 RT-PCR assays (14 conventional and three rapid detection assays).
Methods The comparison was performed utilizing a certified reference material for SARS-CoV-2 RNA that was serially two-fold diluted in RNA storage solution.
Results Our results show that the analytical sensitivities of the 17 assays varied within an 8-fold range (100–800 copies/mL). Moreover, a trend with some rapid assays yielding slightly higher analytical sensitivities (2- to 4-fold) compared with conventional assays was observed.
Conclusions We conclude that most of the RT-PCR assays can be used for routine COVID-19 diagnosis, but some assays with the poorest analytical sensitivities may lead to false-negative results when used to identify asymptomatic individuals who can carry a low viral load but still be infectious. These findings should be kept in mind when selecting high-sensitivity and rapid assays.

纳米酶及其在生物医学检测领域的研究进展

赵峰峰
东南大学附属中大医院

天然酶是高度特异性的生物催化剂，可通过选择性催化特定反应而达到识别和检测的目的。然而，天然酶制备成本高、易失活，限制了其实际应用。纳米酶是一类具有类酶活性的纳米材料，可通过无机材料自身的催化活性实现模拟酶的仿生催化功能，具有价格低廉、性能稳定、应用范围广泛等优点。基于纳米酶的生物医学检测具有灵敏度高、特异性强、检出限低等特点，展现出良好的发展前景。本文总结了目前主流的纳米酶材料，介绍了其在生物医学检测领域的研究进展，并展望了纳米酶在生物医学检测领域的发展方向。

PU-2942

结直肠癌患者合并大肠埃希菌血流感染的危险因素分析

张文芳
天津医科大学肿瘤医院

目的 研究结直肠癌患者大肠埃希菌血流感染的危险因素，进行临床分析。
方法 回顾性分析天津医科大学肿瘤医院 2011 年 1 月至 2020 年 12 月 2128 例血流感染的肿瘤患者临床资料，将病理诊断确诊为结直肠癌且合并大肠埃希菌血流感染的 33 例患者与同期 99 无血流感染的结直肠癌患者分为感染组和对照组；分析相关临床资料，采用 Whonet 5.6 软件和 SPSS 17.0 对数据进行统计学处理。
结果 引起肿瘤患者血流感染最主要的病原菌是大肠埃希菌 336 株（32.2%），引起大肠埃希菌血流感染第二多的肿瘤患者为结直肠癌患者 33 例（6.8%），均经病理诊断为结直肠癌。感染组患者男性 18 例，女性 15 例，平均年龄（59.7±26.7）岁；对照组患者男性 55 例，女性 44 例，平均年

龄（59.5±19.5）岁；通过单因素分析显示住院次数、使用≥2 种类型抗生素、住院天数、白细胞、中性粒细胞、PCT、化疗、和白蛋白为结直肠癌患者合并大肠埃希菌血流感染的潜在危险因素（P<0.1）;多因素 Logistic 回归分析显示住院天数、化疗和 PCT 为结直肠癌患者合并大肠埃希菌血流感染的独立危险因素（P<0.05）。

结论 尽可能缩短患者住院时间，严格控制院内感染以及化疗后的护理是在临床工作中应采取的有效治疗措施，以防止结直肠癌患者血流感染的发生。

PU-2943

群体感应系统介导的铜绿假单胞菌毒力因子研究进展

郝京臣
西南医科大学附属医院

铜绿假单胞菌是重要的医院获得性感染条件致病菌，属革兰阴性非发酵菌，可引起体弱、长期卧床者、各种医疗器械受检、皮肤组织感染、导管相关感染、尿路感染、血流感染及肺炎等，具有较高的致病性。铜绿假单胞菌的致病性与其产生的毒素和毒力因子密切相关,如弹性蛋白酶,生物膜,外毒素 A,蛋白分解酶和绿脓菌素等。细菌毒力可通过多种机制进行调节, 其中群体感应（quorum sensing,QS）系统是的主要机制之一。群体感应（quorum sensing,QS）作为最重要的一个信号途径，控制着众多致病因子的表达并且减弱宿主的免疫应答。研究表明群体感应系统参与铜绿假单胞菌各种毒力因子的调控，与其致病能力密切相关，且能激活生物膜的形成并调节外排泵的表达。近年关于铜绿假单胞菌中群体感应（quorum sensing,QS）系统的研究已成为研究者们的热点。而铜绿假单胞菌中的 QS 系统包括 LasI/LasR 和 RhlI/RhlR 两条主要的信号系统和喹诺酮信号系统。现对群体感应系统介导的铜绿假单胞菌相关的毒力因子作一综述。

PU-2944

不同年龄阶段患儿呼吸道病毒分布情况及 SAA、CRP 水平分析

尹姣姣、董雪梅、王临艳、孙朋、景萌萌、颜鲁伟、孙志鹏、张翀、赵翠生
甘肃省妇幼保健院

目的 探讨 974 例甘肃兰州地区不同年龄阶段（≤6 月，6 月-1 岁，1 岁-3 岁，>3 岁）呼吸道病毒感染阳性患儿呼吸道病毒的分布情况及 SAA、CRP 变化。

方法 选取 2020 年 3 月至 2021 年 3 月于甘肃省妇幼保健院行呼吸道病原血清 IgM 抗体检测（化学发光法）结果为阳性，并同时检测血清淀粉样蛋白 A（serum amyloid A ,SAA）、C 反应蛋白（C reaction protein,CRP）及细菌培养的患儿 1267 例。排除细菌培养阳性的患儿 293 例，分析 974 例患儿不同年龄阶段呼吸道病毒的分布情况，及 SAA、CRP 水平；进一步探讨感染不同种类的呼吸道病毒，患儿 SAA、CRP 的水平变化。

结果 974 例呼吸道病毒感染阳性患儿，各年龄阶段男女比例不同，3 岁以下男性（7.4%，29.6%，14.8%）明显大于女性（6.4%，14.4%，8.0%），3 岁以上女性（10.3%）大于男性（9.2%），差异具有统计学意义（P<0.05）。6 月-1 岁的患儿占总人数的 43.9%，更易感染呼吸道病毒；其中腺病毒 334 例（34.3%）、和肺炎支原体 252 例（25.9%）检出率高。各年龄阶段 SAA 的平均值（21.9mg/L，58.0mg/L，73.2mg/L，86.4mg/L），CRP 的平均值（9.1mg/L，14.9mg/L，20.4mg/L，20.8mg/L），均呈升高趋势，差异具有统计学意义（F=14.008，P=0.001；F=3.874，P=0.009），SAA 的变化率大于 CRP。感染 B 型流感病毒的患儿其 SAA 平均值 103.5mg/L，明显大于感染其他病毒的 SAA 水平（P<0.05）。

结论 6 月-1 岁的患儿更易感染呼吸道病毒，其中腺病毒、肺炎支原体检出率高；SAA、CRP 在各年龄阶段的平均值均呈升高趋势，其变化率 SAA 大于 CRP；不同的呼吸道病毒对应不同的 SAA 水平。

PU-2945

2020 年四川省细菌耐药性监测成人组结果分析

王潇、喻华
四川省医学科学院·四川省人民医院

目的 了解 2020 年四川省细菌耐药监测网成员医院成人段年龄组分离的细菌种类及对临床常用抗菌药物的敏感性和耐药性，为我省抗菌药物的合理使用提供依据。
方法 按照耐药监测方案,采用标准纸片扩散法或自动化仪器检测法,测定监测药物对细菌的敏感性,依据 CLSI 2020 年标准,使用 WHONET 5.6 软件进行数据统计分析。
结果 2020 年共纳入数据分析的非重复细菌总数为 98381 株，其中革兰阳性菌占 30.4%（29927/98381），革兰阴性菌占 69.6%（68454/98381）。革兰阳性菌分离率排名前五位的是：金黄色葡萄球菌 11007 株、粪肠球菌 2727 株、表皮葡萄球菌 2574 株、无乳链球菌菌 2376 株和屎肠球菌 2226 株。革兰阴性菌分离率排名前五位的是：大肠埃希菌 26890 株、肺炎克雷伯菌 13608 株、铜绿假单胞菌 7494 株、鲍曼不动杆菌 4432 株和阴沟肠杆菌 3010 株。金黄色葡萄球菌中 MRSA 的检出率为 28.4%，凝固酶阴性葡萄球菌中 MRCNS 的检出率为 76.0%，MRSA 和 MRCNS 对绝大多数测试药物的耐药率均显著高于甲氧西林敏感株(MSSA 和 MSCNS)。肠球菌属中粪肠球菌对多数测试抗菌药物(除外利奈唑胺)的耐药率均显著低于屎肠球菌,两者中均有少数万古霉素耐药株分别为 0.5%和 0.8%。三代头孢菌素、喹诺酮类及碳青霉烯类耐药大肠埃希菌的检出率分别为 48.7%、47.4%和 1.0%。三代头孢菌素及碳青霉烯类耐药肺炎克雷伯菌的检出率分别为 23.1%和 5.5%。碳青霉烯类耐药铜绿假单胞菌的检出率为 9.5%，铜绿假单胞菌对多黏菌素 B 耐药率高于 1.0%。碳青霉烯类耐药鲍曼不动杆菌的检出率为 47.1%。
结论 临床分离菌对常见抗菌药物的耐药率仍居高不下,在继续做好细菌耐药监测工作的同时加强实验室与临床的沟通,以发挥耐药监测工作的最大价值。

PU-2946

生化检测标本周转时间改进措施探讨

李杰、毛达勇、李转转、张吉才
十堰市太和医院

目的 探讨我院生化标本周转时间（TAT）实施持续改进措施的效果，为进一步流程优化提供依据。
方法 随机抽取 2019 年 3 月 1 日-3 月 15 日与 2021 年 3 月 1 日-3 月 15 日经实验室信息系统接收并审核的生化检测标本，统计各时间段 TAT 中位数及超时标本比例，分析 TAT 不合格原因及持续改进相关措施的成效。
结果 2021 年生化检测标本量较 2019 年明显增加，且集中在每周一至周四，以上午九点为标本送检高峰；采取检测设备升级改造、标本分类别集中签收、人员弹性排班等改进措施后，生化标本总 TAT 时间中位数由 236 分钟下降至 167 分钟，总 TAT 时间超过 120 分钟标本比例也由 78.16%降至 68.37%，其中以检验前 TAT 时间下降最为明显，实验室内 TAT 改善不显著。
结论 我院实施流程优化措施对降低生化标本 TAT 时间具有较好的效果，尤其是对降低检验前 TAT 时间成效显著，为提高我院及科室服务质量与管理水平提供了坚实基础，但仍需进一步优化改进措施以提高门诊标本 TAT 检测合格率。

PU-2947

项目开展前以贝叶斯公式计算某 NIPT 检测的阳性预测值

吕杨
海南金域医学检验中心有限公司

目的 在实验室开展 NIPT 检测前，在本实验室未累积数据情况下，根据试剂说明书和疾病流行率，从理论上计算评估本检测为阳性结果时真阳性的概率，为临床医生进行产前咨询提供指导数据。
方法 采用贝叶斯公式对阳性预测值进行计算评估。贝叶斯公式是 Thomas Bayes 于 1761 年提出的一个计算概率的公式。其具体公式为：$P(A|B)=P(B|A)\times P(A)/[P(B|A)\times P(A)+ P(B|A^C)\times P(A^C)]$。$P(A|B)$指检测结果阳性时被检测者患病的概率，即阳性预测值；$P(A)$为被检测者患病的概率，即某疾病的流行率；$P(A^C)$为被检测者未患病的概率，计算方法为 100%- P(A)；$P(B|A)$为已知患病的情况下检测为阳性的概率，即检测方法的敏感性；$P(B|A^C)$为已知未患病的情况下检测为阳性的概率，即检测方法的假阳性率。查询资料知新生儿中 21 三体综合征发病率为 1/800~1/600，18 三体综合征发病率为 1/8000~1/3500，13 三体综合征发病率为 1/25000。以上数据即为相应疾病的流行率，即 P(A)。查询本实验室所用试剂的说明书得知，此 NIPT 试剂的灵敏度为 100%，特异性为 99.93%，知 P(B|A)为 100%，$P(B|A^C)$为已知未患病的情况下检测为阳性的概率，此试剂盒的为 100%-99.93%即 0.07%。
结果 本检测对 21 三体综合征的阳性预测值为 64.13%~70.46%，对 18 三体综合征的阳性预测值为 15.15%~28.99%，对 13 三体综合征的预测值为 5.41%。
结论 实验室在检测开展前通过贝叶斯公式获得了理论的阳性预测值，结果与以往相关文献报道接近，可供临床产前咨询使用。后续可在实际工作中不断累积数据对阳性预测值持续进行修正。

PU-2948

临床化学室内质量控制数据分析对持续质量改进的作用

邱谷、张曙晴、戴世荣、刘培龙
南通市第二人民医院

目的 探讨周期性室内质量控制数据分析总结对持续质量改进的作用。
方法 回顾 2014-2018 年以来本实验室临床化学室内质量控制数据，对当月所有测定项目的失控情况及准确度、精密度改变超出允许范围的原因进行分析总结。
结果 2014-2018 年临床化学失控共 295 项次，其中，违反 1_{3s} 失控占 40.7%，违反 2_{2s} 失控 39.0%，违反 R_{4s} 失控 15.3%，三者总计占 94.9%。质控品因素、校准不当、试剂因素是失控的主要原因，占 67.5%，与其它原因比较差异有统计学意义($P<0.05$)。5 年中当月均值与设定均值比较，偏差超出实验室允许范围共 26 项，当月标准差或变异系数与设定值比较有明显改变，超出实验室允许范围共 21 项，试剂（包括水质）因素、仪器耗材因素、质控品因素等是引起准确度和精密度改变超出允许范围的主要原因。5 年来临床化学室内质量控制失控率呈逐年下降趋势，参加室间质评项目合格率逐年提高。
结论 认真进行室内质量控制数据的周期性分析总结对发现、排除质量环节中的不满意因素和持续质量改进，保证临床检验结果稳定可靠十分重要。

PU-2949

南昌地区 2019 年儿童流感样病例流感检测结果分析

梁振山
江西省儿童医院

目的 探讨 2019 年-2020 年期间南昌地区儿童流感的构成类型以及分布情况。
方法 收集流感流行期间前来我院就诊的儿童流感样病例（ILI）咽拭子，采用江苏硕士甲流/乙流流感抗原检测试剂盒（免疫层析法），行流感快速检测；应用 SPSS18.0 统计软件进行数据分析，采用描述性分析及×2 检验对两个流感流行季的流行特征及各亚型流感病毒感染患儿性别和年龄等特征进行比较分析。
结果 共采集 ILI 样本 38150 人次；阳性检出数 8589，阳性率 22.51%，其中甲流 6675 人次，甲流检出率 17.5%，乙流 1889 人次，乙流检出率 4.95%，甲流乙流同时感染患者 25 人；性别差异无统计学意义。
结论 本地区儿童流感发病主要集中在冬春季节，呈明显的双高峰流行；男女发病率无差异，学龄前和小中学儿童是高发病率人群。

PU-2950

省域应急检验人员储备能力建设的思考

宋建
四川省医学科学院·四川省人民医院

目的 探索由省、市、县（区）、基层社区等多级医疗机构检验人员参与的省域应急检验储备能力的形成方式，建设完整的应急检验人员储备体系，实现为卫生行政部门在应急救援情况下提供能力可靠的专业应急检验队伍的目的。
方法 成立省级检验专委会下辖的应急检验工作领导小组，由省级检验专家担任组长，市级专家担任副组长，县（区）检验科主任为组员的领导机构；依据国内及省内多发事件及偶发事件的不同类型建立相对应应急检验小组，编写管理文件；统计省内检验科相关仪器的型号和数量分布，确定满足应急检验使用需求的仪器类型；选择具有中级及以上专业职称检验人员进入后备人员数据库；开展应急检验工作技能、生物安全防护技能、户外生存技能、身心医学健康管理的培训。
结果 依据调查数据，省内具有应急检验工作经验的专家数名，具有领导该项工作开展的能力；我省参与新冠核酸应急检测的工作人员数千名，具备应急检验的初步能力储备，可以满足建立应急检验体系的人员要求；参照国家的法律法规可以编制应急检验工作的组织文件，包括应急事件的类型及响应程序；参照检验行业标准可以编制应急检验的质量管理文件，包括质量目标、检验工作制度、仪器设备的选择及维护、人员的培训考核及甄选、质量的评价及改进等内容；该体系的探索现局限在检验专业的局部领域内，未与卫生行政部门建立常规性联系，且缺少财政资金支撑，后期需要向行政部门寻求政策性支持。
结论 该“树状”结构的应急检验体系在专业技术层面具有可操作性，该体系的建立可以保证突发事件发生时我省可实时出动一支人员技术过硬、检验质量精准、持续作战能力强大的专业检验队伍，实现疾病的早发现、早诊断、早治疗，减少突发事件对人民群众生命健康的威胁；争取卫生行政部门及财政资金的支持是该体系作用发挥的关键因素。

PU-2951

黄腐酚通过抑制肝星状细胞的活化保护肝功

苏海翔、何贵山、张秀丽
甘肃省医学科学研究院，甘肃省肿瘤医院

目的 黄腐酚是啤酒花雌花序中的主要异戊二烯基黄酮。本文拟通过文献学习，了解天然黄酮类化合物黄腐酚是如何保护肝脏功能的。
方法 通过文献学习综述黄腐酚在肝脏功能保护中的作用。
结果 黄腐酚具有抗炎、抗氧化、降血糖、抗癌等多种药理作用，在抑制慢性肝病发生发展过程中，黄腐酚主要通过肝星状细胞的活化和促纤维化环节发挥作用。黄腐酚或富含黄腐酚的啤酒花提取物作为治疗剂在对抗慢性肝病进展中也具有潜在应用价值。除了具有保肝作用外，黄腐酚还有望作为治疗肥胖、糖代谢失调和代谢综合征的药物。
结论 治疗性黄腐酚应用似乎是一种很有前途的策略，特别是在肥胖患者中，黄腐酚可以抑制非酒精性脂肪肝的发展和进展。

PU-2952

黄腐酚和其相关的黄酮与健康

苏海翔、郭红云、王涛、张秀丽
甘肃省医学科学研究院，甘肃省肿瘤医院

目的 黄腐酚（3'-[3,3-二甲基烯丙基]-2'，4'，4-三羟基-6'-甲氧基查尔酮）是啤酒花雌性花序的主要异戊二烯基黄酮，啤酒花是啤酒的一种成分。人类接触黄腐酚和相关的异戊二烯类黄酮（如 8-异戊二烯柚皮素和异黄腐酚）的主要途径是通过啤酒消费。在体外研究中，黄腐酚被认为是一种"广谱"的肿瘤化学预防剂，而 8-丙炔柚皮素被誉为迄今为止最有效的植物雌激素。本文综述近年来啤酒花和啤酒中的黄腐酚和相关的黄酮在人类健康领域应用的研究进展。
方法 通过文献学习完成综述。
结果 啤酒花中的丙炔基黄酮类化合物在肿瘤预防和绝经后潮热和骨质疏松症预防和治疗方面有潜在的作用。黄腐酚和 8-异戊二烯柚皮素在体内被代谢成具有异戊二烯基结构的黄酮类化合物。黄腐酚是在羽扇豆素腺体中通过类黄酮生物合成的一个特殊分支形成的，该分支涉及聚酮中间体查尔康林素的异戊二烯基化和 O-甲基化。目前已知羽扇豆素腺体特异性查尔酮合酶，但尚未鉴定出参与黄腐酚的芳族丙氨酰转移酶和 O-甲基转移酶。
结论 黄腐酚在许多种人类疾病的预防和治疗方面有潜在价值，值得开展深入研究。

PU-2953

ISO15189 认可中实验室质量管理体系的建立与应用

任静
广元市中心医院

目的 探讨 ISO15189 实验室认可过程中实验室质量管理体系的建立及其在临床医学实验室中的应用价值。
方法 2018 年 7 月广元市中心医院检验科依据 CNAS－CL02:2012《医学实验室－质量和能力认可准则》和既往实验室质量管理的经验，建立临床实验室质量管理体系：确定实验室的质量方针和目标，完成各层文件的编写，并实施运行。

结果 实验室质量管理体系经过一年多的应用，实现了对人员、设备、试剂和耗材、环境、服务与供应等要素的全方位有效管理。同时建立质量管理体系质量指标和质量监督管理程序、质量体系管理评审程序等对质量管理体系进行控制，实现持续改进，确保质量管理体系的有效运行。
结论 建立的实验室质量管理体系效果好、效率高，满足了当前临床实验室质量管理需求，提高了管理水平和工作效率，创造了一个使员工充分参与的环境，保障了质量体系的有效运行和持续改进。

PU-2954

2020 年我院细菌耐药监测分析

谢扬虎
合肥市第二人民医院

目的 分析 2020 年我院临床标本常见细菌分布及耐药性。
方法 仪器法进行细菌鉴定和药敏试验，按 CLSI（2019）文件标准判断结果，采用 WHONET5.6 软件对数据进行分析。
结果 临床分离菌共 4126 株，其中革兰阳性菌占 25.3%，革兰阴性菌占 74.7%。革兰阳性菌居前 5 位的是金葡菌、屎肠球菌、粪肠球菌、表皮葡萄球菌和人葡萄球菌，革兰阴性菌前 5 位的依次为大肠埃希菌、肺炎克雷伯菌、铜绿假单胞菌、鲍曼不动杆菌和奇异变形杆菌。葡萄球菌中 MRSA 和 MRSCN 检出率分别为 49.7%和 75.7%；耐万古霉素粪肠球菌检出率为 0.7%；碳青霉烯类耐药肠杆菌（CRE）中，除大肠埃希菌为 1.7%外，碳青霉烯类耐药的肺炎克雷伯菌和黏质沙雷菌均高达 30.5%。碳青霉烯类耐药鲍曼不动杆菌（CRAB）为 57.1%，碳青霉烯类耐药铜绿假单胞菌（CRPAE）为 32.2%。
结论 细菌多重耐药仍然很严重，CRE 检出率有增高趋势，特别是碳青霉烯类耐药的肺炎克雷伯菌和黏质沙雷菌，应及时进行细菌耐药性监测。

PU-2955

The Clinical Application Value of Prognostic Nutritional Index for the Overall Survival Prognosis of Patients with Esophageal Cancer：a Robust Real-world Observational Study in China

guishu yang、huaichao luo
Sichuan Cancer Hospital & Institute, Sichuan Cancer Center, School of Medicine, University of Electronic Science and Technology of China

Background Esophageal cancer is a kind of cancer with high morbidity and mortality, which is accompanied by a profound poor prognosis. Prognostic nutritional index, based on serum albumin levels and peripheral lymphocyte count, has been confirmed to be significantly associated with various cancers. This study was aimed to explore the prognostic significance of PNI in overall survival prognosis of patients with esophageal cancer.
Methods As a real-world study based on the big database, clinical data of 2661 patients with esophageal cancer were evaluated retrospectively, and the individuals were randomly divided into training and testing cohort. In these two cohorts, patients are classified into high-risk group(PNI<49) and low-risk group(PNI≥49). The univariate and multivariate analyses were performed to analyze the independent risk factors for the prognosis of esophageal cancer patients by using the Cox proportional hazards regression model. A p-value of 0.05 was considered statistically significant.

Results In this study, whether in the training cohort or the test cohort, according to the univariate analysis, the gender, tumor size, tumor grade, T stage，N stage，M stage，TNM stage and PNI were significantly correlated with overall survival ($p<0.05$). Furthermore, the multivariate analysis showed that gender, T stage，N stage，M stage，TNM stage and PNI were independent prognostic risk factors of esophageal cancer($p<0.05$).
Conclusion PNI can be regarded as an independent prognostic factor combined with tumor size, T stage, N stage, M stage and TNM stage, and it might be a novel reliable biomarker for esophageal cancer.

PU-2956

1010 例女性泌尿生殖道支原体感染与耐药分析

高海强、刘艳飞、王真
杭州市妇产科医院

目的 分析本地区女性泌尿生殖道支原体感染情况并对常用抗菌药物进行耐药分析，为临床合理用药提供参考依据。
方法 对 2018 年 1 月 至 2019 年 12 月 1010 例疑似泌尿生殖道感染门诊患者的支原体感染情况病历资料进行收集，并对药敏结果进行回顾性分析。
结果 1010 例中有 566 例支原体阳性，占比 56.04 %，其中 Uu 阳性有 449 例 ，Mh 阳性有 13 例，Uu+ Mh 阳性有 104 例。女性感染主要集中在 20-30 岁，并且在耐药结果分析中，交沙霉素、强力霉素和美满霉素针对不同类型支原体感染的敏感率都高于 90% 。
结论 本地区女性泌尿生殖道支原体感染以单纯 Uu 感染多见，好发于 20-30 岁年龄段，支原体对常见药物产生较高耐药性，临床医生可以选用交沙霉素、强力霉素和美满霉素作为经验治疗首选药，但为了防止耐药情况加剧，临床医生应根据患者药敏培养结果合理选用抗菌药物，给足剂量，用足疗程，加强支原体耐药监测。

PU-2957

新型微管抑制剂克服肿瘤耐药

宁楠楠
山东大学齐鲁医院

目的 恶性肿瘤发病率逐年增加，治疗效果有待提高。作为一类化疗药，微管抑制剂在临床肿瘤治疗中应用广泛。但是，随着化疗的进行，肿瘤产生多药耐药，严重影响治疗效果。本研究旨在寻找能够克服肿瘤多药耐药的新型化疗药物。
方法和结果 通过高通量筛选，我们发现了一种小分子化合物 133，它能够抑制数百种肿瘤细胞株的增殖。流式细胞检测和免疫荧光染色表明，该化合物可将细胞阻滞在有丝分裂前中期。通过微管蛋白体外聚合试验，确定了 133 具有抑制微管聚合的作用。耐药细胞株增殖试验和小鼠模型说明 133 能够克服肿瘤耐药。
结论 我们发现了一种新型的微管抑制剂 133，在细胞水平和动物体内均能克服多药耐药，为临床肿瘤治疗研究提供帮助。

PU-2958

简析发热伴血小板减少综合征外周血涂片

曹选
江苏省人民医院（南京医科大学第一附属医院）

我们收集了 2019 年 5 月-2021 年 5 月期间在我院治疗的发热伴血小板减少综合征病人外周血涂片，发现血常规外周血涂片主要表现为白细胞和血小板进行性减少。少数患者白细胞降低不明显，红细胞正常，伴有核左移，浆细胞样反应淋增多，涂抹细胞增多，为发热伴血小板减少综合征比较特有的外周血表现，此时需要提醒临床做发热伴血小板减少综合征病毒检测。同时发现大多数患者特别是多器官功能衰竭危重症患者 ALT、AST、LDH、CK、APTT、TT、D-D 等指标均有不同程度异常，且升高程度与预后有一定的相关性。

PU-2959

多囊卵巢综合征患者血清抗缪勒管激素及血脂检测结果的分析

杨艳
江苏省连云港市第一人民医院

目的 多囊卵巢综合征(PCOS)是育龄女性一种很常见的内分泌紊乱的代谢性疾病，同时也是引起育龄女性不孕症的主要病因之一 ，其发病机制目前尚不清楚，其与环境和遗传及肥胖等多种因素相关联，其发病率占育龄期女性约 6％左右 。其对妇女身心健康及家庭造成非常严重的影响，本研究的目的是对多囊卵巢综合征患者血清抗缪勒管激素(AMH)及血脂检测结果进行分析。
方法 选取 2019 年 2 月到 2022 年 2 月在连云港市第一人民医院妇科确诊的 218 例多囊卵巢综合征患者作为观察组，选取同时期到本院体检中心进行健康体检的 218 例月经正常女性作为对照组,两组均测定三酰甘油(TG)、胆固醇（TC）、高密度脂蛋白胆固醇(HDL-C)、低密度脂蛋白(LDL-C）、血清抗缪勒管激素(AMH)。
结果 观察组的三酰甘油(TG)、、胆固醇（TC）、低密度脂蛋白(LDL-C）、血清抗缪勒氏管激素(AMH)均高于对照组（P<0.05）,观察组的高密度脂蛋白胆固醇(HDL-C)低于对照组（P<0.05），
结论 多囊卵巢综合征存在血清抗缪勒氏管激素和血脂的改变，现阶段对于多囊卵巢综合征 的诊断主要依据病人的临床表现和多囊卵巢超声检查及内分泌特征来判断，所以对于联合应用检测血清抗缪勒管激素和血脂对于多囊卵巢综合征具有相当高的临床诊断价值, 且各检测数值的变化有助于指导多囊卵巢综合征患者临床治疗。

PU-2960

北京协和医院定量生化和免疫检验报告取消审核现状分析及改进策略

李鹏昌、程歆琦、夏良裕、刘文静、王军、张强兴、鲁军、邱玲
中国医学科学院北京协和医院

目的 分析检验报告取消审核的原因，探索实验室信息系统改进方法，降低检验报告不正确率。
方法 回顾分析 2019 年 1 月 1 日至 12 月 31 日北京协和医院检验科定量生化和免疫检验报告取消审核的标本信息，计算取消审核率，分析取消审核原因、取消审核的时间和不正确报告打印率等指标。
结果 定量生化和免疫检验标本总数为 2134723 份，取消审核标本数为 1054 份，总体取消审核率为万分之 4.94。所有取消审核报告中，已打印率为 15.4%。最常见的取消审核原因为标本复检、

修改尿量、补录备注信息和样本需要稀释，占全部取消审核报告的比例分别为 43.8%、22.6%、14.2%和 6.1%。在信息系统中增加审核报告后延迟 10min、30min、60min、90min 或 120min 发送结果，将分别使不正确报告率下降 18.4%、27.5%、37.1%、43%和 45.9%。
结论 需要定期汇总和分析检验结果取消审核率，优化实验室信息系统的功能可以有效降低检验报告不正确率。

PU-2961

上海地区白细胞分类计数项目性能规范探索

缪颖波、王青、徐翀
上海市临床检验中心

目的 寻找一种适合白细胞分类计数能力验证项目的性能规范，帮助上海地区持续有效地提高白细胞分类计数项目的检测水平。
方法 收集 2015～2020 年 12 次共 60 批次白细胞分类计数能力验证活动数据，比较按照基于生物学变异和基于当前技术水平设定的性能规范评价各年份所有批次能力验证结果通过率，选择通过率均≥80%的性能规范作为该项目的性能规范。
结果 所有批次中性粒细胞计数（neutrophile，Neut）、嗜酸性细胞计数（eosinophil，Eos）、嗜碱性细胞计数（basophil，Bas）使用基于生物学变异设定的最佳性能规范（11.2%、18.6%和19.2%）时通过率均≥80%；所有批次淋巴细胞计数（lymphocyte，Lymph）使用基于生物学变异设定的最低性能规范（24%）时通过率均≥80%；所有批次单核细胞计数（monocyte，Mono）在使用基于当前技术水平设定的性能规范（＜1，±0.279；≥1，±27.9%）时通过率均≥80%。
结论 上海地区白细胞分类计数能力验证中 Neut、Lymph、Eos 和 Bas 可分别采用 11.2%、24%、18.6%和 19.2%的性能规范，Mono 可采用＜1 时，±0.279 和≥1 时，±27.9%的性能规范。

博鳌乐城国际医疗旅游先行区政策变化的研究

云天宝
海南博鳌金域国际医学检验中心有限公司

2013 年 2 月 28 日国务院正式批复海南设立博鳌乐城国际医疗旅游先行区，并给予九项支持政策“国九条”，加快先行区药品、医疗器械进口审批;对先行区范围内临床急需少量进口药品、医疗器械的符合要求的临床使用数据，可以用于进口药品、医疗器械注册申请;在患者备案承诺基础上，有条件允许先行区医疗机构患者带合理自用量的进口药品离开先行区使用;将卫生系列高级专业技术职称评审权下放先行区，试行社会化评价机制;建设国内一流的特许药械追溯管理平台。这标志着我国第一家以国际医疗旅游服务、医疗科技创新和国际组织聚集地为主要内容的国家级开发园区宣告成立。本文梳理了先行区的发展历程，通过政策的变化研究鳌乐城国际医疗旅游先行区内多家医疗机构的快速发展。结果证明，乐城国际医疗旅游先行区将有望破解游客对海南健康服务消费的刚性需求与健康服务供给不足的突出矛盾，并带动海南经济社会发展。乐城国际医疗旅游先行区“先行先试”将优化海南健康服务业的软硬环境，推动海南医疗、旅游、地产、会展、教育等产业融合。

海南省黎族新生儿地中海贫血基因特征分析

赵振东、王洁
海南省妇女儿童医学中心

目的 了解海南省黎族新生儿地中海贫血发病情况及基因特点。
方法 以海南省 1438 例黎族新生儿干血斑为样本，使用荧光 PCR 熔解曲线法检测中国人常见的地中海贫血基因，并对部分样本使用 PCR+导流杂交法进行验证。基因检测提示疑似新突变的样本外送基因公司以寻找未知突变。
结果 ①在筛查率达 94.8%（1438/1517）的情况下，检出地中海贫血基因 1024 例，黎族地中海基因贫血基因携带率高达 71.2%（1024/1438）。②检出地中海贫血男性 524 例和女性 500 例，男性和女性地中海贫血基因携带率分别为 70.5%（524/743）和 71.9%（500/695），经统计学分析男女间地中海贫血基因携带情况（X2=0.074,P=0.786）无统计学意义。③此次共检出 31 种已知基因型和 2 种疑似新基因型。经基因公司分析为-α4.2/HKαα 和 c.229G>C 少见型。
结论 海南省黎族新生儿人群中地中海贫血基因携带率高，以 α 地中海贫血基因型最常见，排在前三位的基因型为： -α4.2/αα、-α3.7/αα 和 αWSα/αα。

PU-2964

血清淀粉酶与血清脂肪酶的相关性研究

解春宝
电子科技大学附属医院•四川省人民医院

目的 探讨血清淀粉酶（AMY）与血清脂肪酶（LIPA）的相关性，为临床对检测结果的解读提供科学思路。
方法 对我院急腹症患者抽取静脉血液，分离血清后同时进行 AMY 与 LIPA 测定。分析比较单独结果阳性，两者同时为阳性的结果，同时分析两个项目的相关性。
结果 本研究中 114 例急腹症患者 AMY 的阳性率为 64.9%、LIPA 的阳性率为 71.9%。在研究对象中 AMY 与 LIPA 同时为阳性的比例为 27.2%，提示 AMY 与 LIPA 同时升高的比例较低、两者的相关性不高。
结论 AMY 与 LIPA 有各自的特性，其相关性较低。在分析临床结果时应综合多方面对患者做出诊疗。

PU-2965

湖南地区 1982 例脊髓性肌萎缩症携带者筛查结果与分析

梁雄伟、吴秋、陈鹏、余艳、代冰、唐春燕、朱加琳
长沙金域医学检验实验室有限公司

目的 对湖南地区 1982 名受检者进行脊髓性肌萎缩症(spinal muscular atrophy, SMA)携带者筛查，了解本地区人群脊髓性肌萎缩症 *SMN1* 基因拷贝数异常的携带频率，为遗传咨询以及进一步的产前诊断提供参考与依据。
方法 回顾性分析长沙金域医学检验实验室从 2018 年 1 月到 2021 年 4 月，应用荧光定量 PCR 技术，对 1982 例受检者进行 *SMN1* 基因中 exon 7 和 exon 8 拷贝数变异检测与诊断，并基于遗传平衡定律计算人群中各等位基因频率。

结果 在 1982 例筛查样本中，共检测出 SMA 携带者（即 *SMN1* 基因 exon 7 的拷贝数为 1）36 例，人群携带者频率为 1.82%。其中，exon 7 和 exon 8 的比值包含以下三种：exon 7:exon 8=1:1，exon 7:exon 8=1:2，exon 7:exon 8=1:3。正常人群中，*SMN1* 基因 exon 7 拷贝数为 2 共计 1868 例，频率为 94.3%，exon 7 的拷贝数大于等于 3 共检出 78 例，频率为 3.94%。exon 7 的拷贝数和 exon 8 的拷贝不一致，共检出 77 例，频率为 3.88%，表明 *SMN1* 和 *SMN2* 之间存在高频的相互转换。利用遗传平衡定律计算得，“0 拷贝”等位基因（5 号染色体上缺乏 *SMN1* exon 7）的频率为 9.40×10^{-3}，“1 拷贝”等位基因的频率为 9.71×10^{-1}，“2 拷贝”等位基因（5 号染色体上存在两个 *SMN1* exon 7）的频率为 1.97×10^{-2}。

结论 湖南地区 SMA 携带者频率为 1.82%（1/55），与不同人群携带波动频率 1/100~1/45 较为一致；SMA 作为一种高携带率、病情严重的遗传病，开展 SMA 携带者筛查对于预防 SMA 患儿的出生，提高出生人口质量有重要的价值和意义；qPCR 技术具有操作简单、成本低廉、结果准确等优势，可用于 SMA 患者的初步诊断和人群中大规模的携带者筛查。

PU-2966

拉萨某三甲医院儿科住院患者乙肝感染现状及分析

张子玉
拉萨市人民医院

目的 分析拉萨某三甲医院儿童住院患者乙肝（HBV）感染情况，为科学制定西藏地区乙肝免疫策略提供依据。

方法 统计 2017-2020 年拉萨市某三甲医院儿科住院患者乙肝表面抗原（HBsAg）检测结果，根据患儿性别、年龄、出生年份进行分组，分析儿童乙肝感染率。

结果 住院儿童乙肝感染率，男性为 2.74%，女性为 2.56%，两者之间无显著性差别。按照年龄分组，<1 岁组，1-5 岁组的阳性率分别为 2.16%、2.44%；6-10 岁年龄组的乙肝阳性率高达 7.30%，与其他两组具有显著性差异（$p<0.01$）。按照出生年份统计，2010 年、2011 年出生儿童乙肝阳性率分别为 8.70%、6.71%，逐渐降低至 2016 年的 1.44%。2017-2020 年的乙肝阳性率呈现窄幅波动。

结论 自 2010 年起西藏地区儿童乙肝感染率呈下降趋势，仍需加强西藏地区乙肝防控的宣传教育和措施，提高西藏地区乙型肝炎的防控意识。

PU-2967

Accuracy assessment of four blood glucose monitoring test systems against the accuracy requirements specified in different standards: A retrospective single center study

李润青
北京清华长庚医院

Background The aim of this study was to retrospectively evaluate the accuracy of four blood glucose monitoring test systems (BGMS) in comparison with the laboratory biochemical analyzer, and to explore the differences of comparison results against the requirements specified in five different criteria.

Methods The comparison between BGMS and the laboratory biochemical analyzer was conducted by laboratory technicians and nurses who performed blood glucose tests twice a year from 2015 to 2019. A total of 366 glucose meters with 10808 pairs of comparative results from four BGMS (Roche Accu-Chek® performa, Bayer Contour™TS, Sinomedisite Glupad® H1 Plus, and Sinocare® Gold-Accu) were retrospectively analyzed. The differences of the comparative

results of accuracy assessment were analyzed and compared applying five different criteria, the International Organization for Standardization (ISO) 15197:2003, Clinical Laboratory Standards Institute (CLSI) POCT12-A3, ISO 15197:2013, Chinese Society of Laboratory Medicine (CSLM) consensus, and the US Food and Drug Administration (FDA) guidance.
Results There was a very close correlation between the glucose results and the central laboratory hexokinase method Results The correlation coefficients were r = 0.995 for Roche Accu-Chek® performa, r = 0.994 for Bayer Contour™TS, r = 0.983 for Sinomedisite Glupad® H1 Plus, and r = 0.997 for Sinocare® Gold-Accu. Assessment of system accuracy varied significantly for one system of glucose meter when evaluated with five different accuracy criteria. BGMS of Roche Accu-Chek® performa, Bayer Contour™TS, Sinomedisite Glupad® H1 Plus, and Sinocare® Gold-Accu showed 99.26%, 88.07%, 58.62%, and 91.43% within the requirement of ISO15197:2013 by numbers of glucose meters, respectively. And the four BGMS showed 99.34%, 96.86%, 84.54%, and 97.83% within the requirement of ISO15197:2013 by number of pairs of comparative results, respectively. The Clarke and Parkes Error Grid analysis revealed both above 99.8% of the glucose results to be within the clinically acceptable areas (Clarke Error Grid: Zone A + B with Roche Accu-Chek® performa (99.83% + 0.13%), Bayer Contour™TS (99.67% + 0.33%), Sinomedisite Glupad® H1 Plus (96.08% + 3.87%), and Sinocare® Gold-Accu (99.71% + 0.14%.); Parkes Error Grid: Zone A + B with Roche Accu-Chek® performa (99.91% + 0.09%), Bayer Contour™TS (99.40% + 0.60%), Sinomedisite Glupad® H1 Plus (97.97% + 1.98%), and Sinocare® Gold-Accu (99.86% + 0.14%)).
Conclusions ISO15197:2013, with increased the technical accuracy and clinical accuracy requirements, was a high-level and feasible criterion for the system accuracy requirements of glucose meters. BGMS of Roche Accu-Chek® performa demonstrated more favorable accuracy than the other three BGMS

PU-2968

产前诊断免疫检验项目质量控制分析

廖琳
郴州市第一人民医院

目的 探讨采用质量控制措施对产前诊断免疫检验项目进行干预后获得临床效果。
方法 将我院 2017 年 05 月～2020 年 06 月收治的 60 例分娩孕妇数字奇偶法分组；干预组（30 例）：采用质量控制措施完成产前诊断免疫检验项目干预；常规组（30 例）：采用常规方式完成免疫检验工作；就组间甲胎蛋白、C-肽、Ca125、肿瘤标志物以及癌胚抗原展开对比。
结果 干预组分娩孕妇甲胎蛋白（31.35±3.99）、C-肽（56.79±7.25）、Ca125（25.29±2.85）、肿瘤标志物（31.03±2.49）以及癌胚抗原（40.03±2.69）同常规组分娩孕妇甲胎蛋白（65.69±2.79）、C-肽（36.39±2.03）、Ca125（59.03±5.69）、肿瘤标志物（60.85±5.69）以及癌胚抗原（64.88±3.03）比较差异显著（P<0.05）。
结论 质量控制措施的有效开展，可确保分娩孕妇产前诊断免疫检验项目开展价值获得显著提升，对于免疫检验结果可靠性以及准确性可以做出充分保证，并且管理期间不但需要将标本采集管理力度加强，而且针对阶段分析工作需要积极展开管理工作，就检验系列影响因素展开有效控制，针对甲胎蛋白、C-肽、Ca125、肿瘤标志物以及癌胚抗原等系列指标表现加以充分明确，最终对分娩孕妇身体状态进行充分了解，使检验结果准确性获得有效提高，对免疫检验项目检验质量做出充分保证，显著发挥质量控制措施应用价值。

PU-2969

急性脑梗死患者血清脂蛋白相关磷脂酶 A2 和超敏 C 反应蛋白的检验分析

廖琳
郴州市第一人民医院

目的 急性脑梗死患者机体的实验室指标可出现明显变化，本文主要对血清脂蛋白相关磷脂酶 A2 和超敏 C 反应蛋白的变化情况进行分析。
方法 本次实验的研究时间控制为 2019.1-2020.6，选取该期间内进行脑梗死患者 80 例作为实验组进行对比研究，且根据患者脑梗死面积的大小分为 45 例大面积组、35 例小面积组，同时，选择该期间内的健康体检人员 40 名作为对照组，均行血清脂蛋白相关磷脂酶 A2 和超敏 C 反应蛋白的检验，对比三组患者的不同检验结果。
结果 实验、对照二组患者的 Lp-PLA2、hs-CRP 对比，存在差异（P＜0.05）；对比 Lp-PLA2、hs-CRP 的变化情况，大面积组患者数据更高，统计学意义存在（P＜0.05）；不同严重程度急性脑梗死患者 Lp-PLA2、hs-CRP 的变化存在显著性差异（P＜0.05）。
结论 血清脂蛋白相关磷脂酶 A2 和超敏 C 反应蛋白是诊断、评估急性脑梗死的敏感指标，值得推广。

PU-2970

怀化地区男性患者人乳头状瘤病毒基因型分析

梁明星、廖晓敏、杨长顺
怀化市第一人民医院

目的 分析怀化地区不同年龄组男性人乳头状瘤病毒（HPV）感染亚型分布及流行病学特点，为男性 HPV 感染早期筛查、预防、诊断提供临床依据。
方法 采用 DNA 反向斑点杂交技术，回顾性分析了 742 例男性患者的 HPV DNA 亚型、感染率和年龄分布。
结果 742 例男性标本中检出 HPV 阳性者 376 例，总阳性率为 50.67%，其中单纯低危基因型 122 例（32.45%），单纯高危基因型 68 例（18.09%），低危型与高危型混合感染 186 例（49.47%）。低危型以 HPV6（27.40%）感染为主，其次为 HPV11（12.40%）。高危型以 HPV52（10.40%）感染为主。各年龄段均以单一感染为主，其次为双重感染。在 5 个年龄组中，≥51 岁男性 HPV 阳性率最高(70.21%)，其次为≤20 岁年龄组(57.50%)。
结论 怀化地区男性 HPV 感染率较高，感染情况以单一感染为主，低危亚型以 HPV6 和 HPV11 为主要感染亚型。高危亚型以 HPV52 和 HPV16 为主要感染亚型。

PU-2971

平均血小板体积在卵巢癌患者中的临床意义

施晶晶、束国防
东南大学附属中大医院

目的 探讨平均血小板体积（MPV）在卵巢癌患者中的临床意义，为卵巢癌的诊断提供新的依据。
方法 回顾性分析东南大学附属中大医院 2019-2020 年经病理确诊的卵巢良恶性肿瘤患者 110 例（良性 70 例，恶行 40 例），收集并记录相关临床资料，应用 t 检验比较两组 MPV 差异，应用 ROC 曲线计算 MPV 诊断卵巢癌的特异性、敏感性及曲线下面积，以评价 MPV 在卵巢肿瘤中的诊断价值。

结果 卵巢恶性肿瘤患者外周血 MPV 高于良性肿瘤患者，差异具有统计学意义（$p<0.05$）；MPV 对卵巢癌的诊断价值较低（AUC=0.550）。
结论 卵巢癌患者外周血 MPV 水平升高，MPV 可作为卵巢癌患者辅助诊断及病情监测的指标之一。

PU-2972

A novel LAMP2 p.G93R mutation associated with mild Danon disease presenting with familial hypertrophic cardiomyopathy

Jing Xu[1]、Qiming Dai[2]
1. 东南大学附属中大医院检验科
2. 东南大学附属中大医院心内科

Background Danon disease (DD) is an X-linked dominant multisystem disorder that is associated with cardiomyopathy, skeletal myopathy, and varying degrees of intellectual disability. It results from mutations in the lysosome-associated membrane protein 2 (LAMP2) gene.
Methods Herein, a proband with a mild DD case presenting with a familial hypertrophic cardiomyopathy (HCM) phenotype and additional family members were evaluated. Exome sequencing and Sanger sequencing were performed to explore the genetic basis of DD in the proband. Segregation, in silico, and functional analyses were carried out to explore potential pathogenicity in the candidate mutation.
Results Exome sequencing and Sanger sequencing identified one novel missense mutation (p.G93R) in the LAMP2 gene in the proband, and this mutation was also identified in three other family members. In silico analysis of LAMP2 predicted that the mutation causes a conformational change and subsequent protein destabilization. Furthermore, functional examination showed that mutation carriers have a significant reduction in LAMP2 expression, which supports that the mutation is pathogenic. Moreover, skewed X chromosome inactivation (XCI) was identified in one female mutation carrier, thus suggesting that skewed XCI may be the reason why this individual escaped the pathogenic influence of the mutation.
Conclusion These findings will aid in diagnosing DD patients carrying this LAMP2 mutation that presents with an HCM phenotype. Furthermore, this study illustrates the importance of utilizing a molecular diagnostic approach in HCM patients and is the first study to report a LAMP2 p.G93R mutation associated with mild DD and identify that XCI serves a protective role in DD etiology.

PU-2973

碘化造影剂对甲状腺癌患者治疗过程中尿碘检测的影响

张洁心、颜承靖
江苏省人民医院（南京医科大学第一附属医院）

目的 As3+-Ce4+催化分光光度法是我国国家卫计委推荐的尿碘定量检测方法，目前面向广大甲状腺疾病患者在临床实验室得到广泛应用。我们首次报道碘化造影剂与该方法中的过硫酸铵试剂会自发地发生非特异性化学反应，导致尿碘结果出现较大偏差，将可能误导甲状腺癌治疗方案的制定。
方法 对在我院首诊的甲状腺癌患者的生活史、病史、临床表现和临床检验项目进行分析，筛选得到在院尿碘检测结果极高的病例。从患者接受双能 CT 检查静脉注射碘化造影剂后第一份随机尿标本开始，收集至出院后一至两个月，着重比较研究尿碘检测反应曲线及检测结果。
结果 在院期间尿碘浓度极高的 24 位患者，其出院一至两个月尿碘结果示正常。进一步实验表明，即使人体内仅留存 0.01%的碘化造影剂，其仍对碘与过硫酸铵之间的生化反应产生干扰，导致尿碘检测结果不准确。

结论 本研究有助于提高我们检验人员对基于 As3+-Ce4+催化分光光度法的生物化学反应机制的认识，为临床医生在甲状腺疾病诊断和治疗过程中的尿碘检测项目提供必要的解释和辅助作用。本研究也提示应完善患者个体随访检测项目的评估体系。

PU-2974

加强血站实验室质量管理与血液检测不合格率的关系

张锋
苏州市中心血站太仓分站

目的 血站实验室的检测质量是在一个相对矛盾的环节中实施的。既要提高实验室的检测能力，将血液检测漏检率控制为零，又要合理保护珍贵的血源，要把假阳性率控制在最低，否则血液报废增多，造成血源浪费。这就要求我们在提高实验室质量管理能力，将血液漏检率降为零，血液检验不合格率控制在合理范围，确保临床用血安全。
方法 通过从标本管理，人员培训，设备的维护保养等方面加强管理，从而逐年统计分析血液检测不合格率的变化，查看加强实验室管理对血液检测不合格率变化的相关情况
结果 通过从标本管理，人员培训，设备的维护保养等方面加强管理，历年血液检测不合率变化如下:2011 年 3.45%,2012 年 3.60%,2013 年 2.44%,2014 年 1.69%,2015 年 1.67%,2016 年 1.71%,2017 年 1.70%,2018 年 1.60%,2019 年 1.17%,2020 年 0.96%.
结论 血站实验室分酶免技术和生化技术，随着医学实验科学技术的发展，酶免技术和生化技术以其迅速简便灵敏度高，特异性强等特点，在临床免疫和生化方面不断得到普及应用，特别是近年来，血站实验室基本都装备了全自设备，提高人对机器的控制管理优为重要，加强实验室质量管理尤为重要，实验室质量管理和血液检测不合格率息息相关。目前实验室质量管理主要表现在设备的运行状态、人员的素质培训、检测试剂等物料的控制、实验室全面质量管理体系的建立并不断完善和改进、生物安全等方面的管理环节。通过从标本管理，人员培训，设备的维护保养等方面加强管理，血液检测不合格率逐年下降.

ISO15189 监督评审工作做在日常

周海宁
沈阳金域医学检验所有限公司

目的 通过实验室认可准则后保证医学实验室始终处于能够让社会证相信其能力和公正性的状态顺利通过监督评审
方法 在日常工作中按照 ISO15189：2012《医学实验室质量和能力认可准则》的要求开展日常工作并将此种状态常态化。
结果 科室内宣贯准则要求，将科室工作合理进行模块划分并由合适的人员负责，科室人员间间互相监督提醒日常工作流程按照标准执行，遇到困难科室人员共同寻求解决方法，每人熟练掌握自己负责的工作同时，也了解其他同事的工作，能够做到临时顶替其他岗位工作，将准则贯要求穿到日常科室工作中。
结论 通过科室人员的共同努力，科室的工作流程清晰，要求明确，工作效率和完成质量都较高，对于即将到来的监督评审有十足的信心。

骨膜素通过激活外膜成纤维细胞来促进动脉硬化的外膜重构

雷小梅[2]、雷小梅[2]、王映芬[1]、刘巧突[1]、张巍[1]、李芬[1]
1. 郴州市第一人民医院检验科
2. 郴州市第一人民医院检验科

Objective In order to study the effect of adventitial remodeling of arteriosclerosis by periostin.
Methods We examined the effect of periostin by Immunofluorescence cell staining and collagen gel contraction assay.
Results Our data indicated that periostin is highly expressed in adventitia of atherosclerotic arteries. TGF-β1 induced the expression of periostin in fibroblasts of adventitia. While periostin can promote activation and enhance the contractility of adventitial fibroblasts. Periostin induces adventitial fibroblasts to produce collagen I and TGF-β1 and activate FAK and Src phosphorylation.
Conclusion These results suggest that periostin contributes to adventitial remodeling of arteriosclerosis by activating adventitial fibroblasts.

南京地区血栓弹力图参考范围的研究

张敏
东南大学附属中大医院

目的 建立南京地区健康成年人血栓弹力图（TEG）正常参考值。
方法 研究对象：2017.4-5 进行健康体检的成年人，肝肾功能正常，排除孕妇、有出血病史或血栓病史者、服用影响凝血药物者(阿司匹林、氯毗格雷、华法林、双嘧达莫等)人群。共收集 45 例健康成年人标本（枸橼酸盐抗凝血）3 ml，进行 TEG 检测。主要检测四项指标：R(凝血因子反应时间，是指凝血过程开始到凝血酶激活所需的时间；K(即从凝血开始至描记图振幅达到 20 mm 的时间，反映纤维蛋白原功能)；Angle(是从血凝块形成点至描记图最大曲线弧度作切线与水平线的夹角，反映纤维蛋白原功能）；MA(最大振幅，表示血凝块绝对强度，反映血小板功能)。
结果 45 名健康成年人 TEG 各参数均值为 R：5.631min，K：1.709min，Angle：65.944，MA：63.062mm。标准差分别为 1.331、0.506、5.578、3.822，按照参考范围制定标准，参考值分别为 R：3.024-8.238 min，K：0.717-2.701 min，Angle：55.012-76.878，MA：55.573-70.551mm。本研究所得参考值与厂家提供参考值有一定差异。

结论 不同地区、不同环境的人群 TEG 参考值可能略有不同，实验室有必要根据当地人群特点建立自己地区的正常参考值。此外，本研究例数较少，应扩大调查例数后再进行进一步分析。

PU-2979

妊娠中期孕妇血细胞分析参考值的研究

张敏
东南大学附属中大医院

目的 观察孕中期全血细胞计数（CBC）参数的变化，为孕中期健康孕妇建立合适的参考间期。
方法 健康孕妇于孕中期进行血液检查。健康的成年女性同时接受测试。所有血样在 Sysmex XE-2100 上进行检测。分析以下 CBC 参数：红细胞计数、血红蛋白、红细胞压积、平均红细胞体积、平均红细胞血红蛋白、平均红细胞血红蛋白浓度、血小板计数、白细胞计数，白细胞分类。确定孕妇和健康成年妇女之间是否存在差异。参考区间的计算基于 x± 1.96s。
结果 孕妇红细胞计数、血红蛋白浓度、红细胞压积、血小板压积均显著低于健康成人（p<0.001）。孕妇平均红细胞体积、平均红细胞血红蛋白、平均红细胞血红蛋白浓度及白细胞计数均显著高于健康成人（p<0.001）。中性粒细胞百分率显著增加；单核细胞百分率略有上升；淋巴细胞、嗜酸性粒细胞和嗜碱性细胞的百分率均相应降低。红细胞的参考区间为 3.19–4.58×1012/L，Hb 为 100.04–139.43 g/L，HCT 为 0.32-0.38L/L，PLT 为 91.27-281.32×109/ L，MCV 的参考区间为 81.40-99.83fL，MCH 为 24.95-36.85pg，MCHC 为 320.90-358.90g/L，白细胞计数的参考区间为 5.20-13.59×109/L，中性粒细胞百分比%为 63.34%-84.51%，淋巴细胞百分比为 10.21%-29.18%，单核细胞百分比为 2.96%-7.91%，嗜酸性粒细胞百分比为 0%-2.36%，嗜碱性粒细胞百分比%为 0%-0.46%。
结论 孕妇与健康成年妇女血细胞计数有显著性差异。本文初步确定了妊娠中期血细胞计数的参考范围。

PU-2980

扩增效率受损时应用 Ct 值与 Cp 值定量检测 HCV-RNA 的比较分析

杨辉
中日友好医院

目的 应用阈值法的 Ct（cycle threshold）值与二阶求导法的 Cp（cross point）值分别对 HCV-RNA 的 PCR 扩增曲线（外标法）进行定量分析，比较两种分析法的精密度，比较扩增效率受损时定量值的变化特征。
方法 real-time PCR 重复检测中等浓度的核酸样本，分别应用 Ct 值和 Cp 值计算浓度，比较 CV(Coefficient of Variance)差异，另有 3 名工作人员对扩增曲线重新分析，观察 4 人之间的分析差异；重复检测已赋值的 HCV-RNA 标准品与血清样本，用 Ct 值和 Cp 值计算浓度，比较二者的 CV 差异；两种方法降低扩增效率（梯度减少扩增液体积；反应体系中梯度递加扩增抑制剂 IgG），用 Ct 值和 Cp 值计算浓度，比较二者定量值的变化趋势。
结果 重复检测中等浓度核酸样本，四位工作人员各自独立分析存储数据，用 Ct 值和 Cp 值计算浓度，使用 Ct 值计算时 CV 大；用 Ct 值计算浓度，人员间有显著差异，用 Cp 值计算浓度，无人员差异；重复检测 5 个标准品和 6 个血清核酸样本，用 Ct 值和 Cp 值分析浓度并比较 CV，前者 CV 均大于后者；扩增液减少时，用 Ct 值和 Cp 值计算浓度，均会低估，但 Cp 值计算浓度，下降趋势相对平缓；扩增抑制剂（16.50g/L）增加时，使用 Ct 值和 Cp 值分析，定量浓度均明显低估。

结论 real-time PCR（外标法）检测 HCV 病毒载量，用二阶求导法计算浓度，精密度优于阈值法，不同浓度均有优势，中高浓度优势明显；不同人员分析同一批扩增曲线，用二阶求导法无人员间差异，优于阈值法；因扩增液成分差异导致扩增效率降低时，用二阶求导法定量值变化较小，优于阈值法；因抑制剂 IgG 导致扩增效率降低时，应用二阶求导法与阈值法计算浓度均不准确。

PU-2981

非编码 RNA 在自身免疫性甲状腺疾病中的研究进展

徐海娈
郑州安图生物工程股份有限公司

非编码 RNA（non-coding RNAs，ncRNAs）是指不编码蛋白质的 RNA，其中参与基因调控的 ncRNAs 主要包括两种：微小 NRA (microRNAs，miRNA)和长链非编码 lncRNAs（long non-coding RNAs，lncRNAs）。lncRNAs 和 miRNAs 的异常表达与自身免疫性甲状腺疾病（Autoimmune thyroid disease ，AITD）的发生发展密切相关。桥本氏甲状腺炎（Hashimoto's disease，HT）及格雷夫斯病（Graves' disease，GD）是最常见的两种 AITD。有研究表明差异表达的 miRNAs 与 GD 的预后相关，可能是 GD 的新的生物标志物和治疗 GD 的潜在靶点。有些 miRNAs 在 HT 患者外周血浆中显著升高，可有潜力作为 HT 的潜在诊断标志物。已经有研究发现 lncRNA 与 TRAb 水平呈现正相关，可通过调节 B 细胞的增殖参与 GD 的致病机制，但目前关于 lncRNAs 与 AITD 的研究较少。在 AITD 的发展和进程中探索 lncRNAs 和 miRNAs 的表达特征及其潜在的分子机制，可以在分子水平上增加对该疾病的了解，进而明确其临床意义，并为 AITD 的诊断生物标志物和可能的治疗靶标提供理论基础。

PU-2982

亚低温培养对猪肝细胞形态与功能的影响

张世昌、黄蕾、梁婷婷
江苏省人民医院（南京医科大学第一附属医院）

目的 评价亚低温培养对猪肝细胞形态与功能的影响，探讨亚低温保存和运输肝细胞的可行性。

方法 将分离的新生猪肝细胞分别采用 25℃、28℃、33℃条件下培养 24 h 后，恢复至 37℃继续培养，观察亚低温培养肝细胞的形态及 LDH 和 AST 漏出量，检测复温前后肝细胞白蛋白合成、氨清除率和尿素合成率。

结果 亚低温培养 24 h 和复温 37℃培养能较好的维持肝细胞形态，各组肝细胞 LDH 和 AST 漏出量无显著差异。亚低温培养 24h，25℃组肝细胞活性显著低于对照组、28℃组和 33℃组，28℃组和 33℃组尿素和白蛋白合成率、氨清除率均显著低于对照组。复温 37℃后，28℃组和 33℃组肝细胞活性显著高于对照组；28℃组和 33℃组肝细胞活性、尿素合成率和白蛋白合成率均显著高于复温前、25℃组和对照组，28℃组肝细胞氨清除率与对照组无显著差异，33℃组的肝细胞氨清除率显著高于对照组。

结论 亚低温特别是 28℃和 37℃培养可有效的保持肝细胞形态和维持肝细胞功能，有望为临床生物人工肝治疗提供一种较好的肝细胞保存和运输方法。

PU-2983

真空采血管性能评价的探讨

蔡斌宏
东南大学附属中大医院

目的 通过真空采血管性能验证，确认本科室使用的真空采血管不会增加检测结果的差异。
方法 依据 WS/T 224-2018《真空采血管的性能验证》，同时结合 ISO15189 医学实验室质量和能力认可准则及采血管制造商使用说明书的要求依次对采血管的外观、抽吸量、管体强度、血清分离管纤维挂壁、溶血情况、抗凝管的抗凝情况，结果可比性等项进行验证。
结果 采血管的外观、抽吸量、管体强度、血清分离管纤维挂壁、溶血情况、抗凝管的抗凝均符合行标要求。
结论 本次真空采血管性能验证，所有操作都按照 WS/T 224-2018《真空采血管的性能验证》的操作步骤严格执行，验证的结果均符合行业标准的要求。说明本实验室使用的采血管不会影响检测结果的准确性，完全能够满足临床检验的需求。

PU-2984

针对抗磷脂抗体检测的标准化研究进展

丁亚辉、李忠信、王文强、张亚平
郑州安图生物工程股份有限公司

目的 近年来，随着国内外对抗磷脂综合征的研究的深入，抗磷脂抗体对抗磷脂综合征的诊断重要性已得到认可和重视，因此对于抗磷脂抗体检测标准化研究显得格外重要。
方法 通过研读近年来关于抗磷脂抗体检测相关文献以及相关共识，对标准化现状进行归纳总结。
结果 不同厂家试剂盒检测结果可能存在差异，这种情况不利于医生针对抗磷脂综合征的严重程度的诊断、用药指导、预后判断等，因此，实现抗磷脂抗体检测的标准化显得十分重要。
结论 随着检测技术的发展，新兴的化学发光等自动化检测方法提高了抗磷脂抗体检测的精密性和可重复性，在一定程度上为国内抗磷脂抗体检测的标准化提供了助力。

PU-2985

Effects of meropenem combined with moxifloxacin on clinicalphenotype, pulmonary function and systemic inflammation in patientswith COPD

Meng Huang
The Affiliated Hospital of Qingdao University

This paper discusses the effect of meropenem combined with moxifloxacin on COPD patients with infectious pneumonia. The patients in the control group were treated with moxifloxacin on the basis of routine treatment and empirical anti infection treatment, and the patients in the observation group were treated with meropenem and moxifloxacin on the basis of routine treatment and empirical anti infection treatment. The results showed that the clinical effect of the observation group was better than that of the control group ($P < 0.05$). The recovery time of body temperature, leukocyte count, rales and cough in the observation group were shorter than those in the control group ($P < 0.05$). The clearance rate of pathogenic bacteria in the observation group was higher than that in the control group. There was no significant difference in the levels of PCT, TNF-a and hs CRP between the two groups before and after treatment ($P > 0.05$). There

was no significant difference in the incidence ofadverse reactions between the two groups. Meropenem combined with moxifloxacin is effective in the treatment of COPD patients with infectious pneumonia. It can effectively shorten the time for clinical symptoms to return to normal / disappear, improve the clearance rate of pathogenic bacteria, improve lung function, reduce inflammatory reaction, and has high safety.PCT is a kind of glycoprotein without hormone activity. The level of serum PCT in normal people is very low. The level of serum PCT in patients with acute and chronic pneumonia is high, and it is positively correlated with inflammatory response . TNF-α is a kind of cytokine which can secrete various biological effects through monocyte macrophage. It can promote the expression of other inflammatory factors and cause systemic inflammatory response . Hs-CRP is a kind of non glycosylated polymer protein secreted by hepatocytes after being stimulated by IL-6 and other related cytokines during acute inflammatory reaction. The results showed that PCT, TNF-α, hs CRP in the observation group were lower than those in the control group, suggesting that moxifloxacin combined with meropenem can effectively reduce the inflammatory response of COPD patients with infectious pneumonia. The results of this study also showed that there was no difference in the incidence of adverse reactions between the two groups, indicating that moxifloxacin combined with meropenem did not increase the incidence of adverse reactions in COPD patients with infectious pneumonia.Key words: Chronic obstructive pulmonary disease; Bacterial; Meropenem; Moxifloxacin

PU-2986

邻苯三酚红钼络合法与双缩脲比色法测定胸腹水蛋白的比较

陈炜钢、裴银桃、孔莉、童兰庭、张露、夏慧、王建平、缪卫华
南京医科大学第二附属医院

目的 对邻苯三酚红钼络合比色法测定胸腹水蛋白方法进行评价。
方法 收集 130 例胸腹水标本，采用邻苯三酚红钼络合比色法检测体系：检测 M（罗氏仪器 Modular P 模块生化分析系统和德赛邻苯三酚红钼络合试剂及校准品）和 3 种双缩脲比色法检测体系：检测 C（罗氏仪器 Modular P 模块生化分析系统和配套双缩脲试剂及校准品）、检测 E（罗氏仪器 Cobas 602 生化分析系统和配套双缩脲试剂及校准品）和检测 P（西门子仪器 Dimension® EXL™ 综合化学分析系统和配套双缩脲试剂及校准品）测定胸腹水蛋白。共 520 个数据，采用单因素多水平方差分析的两两比较的 Games-Howell 检验；正态分布数据分别采用 Pearson 相关、非正态分布数据采用 Spearman 相关分析。偏倚分析采用根据回归方程分别计算 3 种不同的检测体系在 25g/L 的浓度的相对偏差及相对偏差的 95%可信区间，并以相对偏差和 95%可信区间作为评价目标。
结果 检测 M 和 3 种双缩脲比色法检测体系（检测 C、检测 E 和检测 P）的测定结果进行配对 T 检验．P=0.000，表示检测有显著差异；相关性分析结果显示，邻苯三酚红钼络合法测定值与 3 种双缩脲比色法测定值显著相关，检测 C、检测 E 和检测 P 与检测 M 的相关系数分别为 0.687、0.599、0.863；相关性检验的概率 P 都为 0.000。其值小于 0.05，说明存在一定的相关性；邻苯三酚红钼络合法与 3 种双缩脲比色法在总蛋白为 25g/L 处的相对偏倚分别为：33.1%、33.3%和 40.4%。
结论 邻苯三酚红钼络合比色法测定值与 3 种双缩脲比色法测定值之间虽然有较好的相关性，其测定值普遍比双缩脲比色法测定值低，且配对检验有显著差异，因此要引起临床重视。

院内三年来 POCT 比对结果

单洪丽、孙瑞营、续薇
吉林大学第一医院

目的 为了进一步加强了医学检验的质量管理，保证临床检验项目的技术规范与检验结果的准确度、一致性，提高检验队伍的整体专业水平及全院 POCT 检验的准确度和规范性。
方法 自 2018 年起每年两次开展 POCT 的比对工作。比对按照 CNAS-CL02《认可准则》实验室间比对（5.6.3）的要求。临床采集患者标本后立即进行测定并记录结果，同时采集患者同侧的静脉血送至检验科，申请比对条码后由检验科进行检测。比对结束后由各科室 POCT 管理员打印比对报告单，将检测结果和 POCT 仪器记录结果，填写比对记录后送至中心进行评价，由医务部备案，2020 年简化流程，借助信息化软件汇总相关数据。
结果 截止到目前共计进行五次 POCT 比对，参加比对的科室 57 个，检测标本 5418 份（血糖 4832 份、血气分析 503 份、HCG 25 份），血糖项目参加比对仪器共 908 台次，一次性符合率 100%为 241 台次（26.54%），一次性符合率 80%为 142 台次（15.64％），校准后一次性符合率 100%为 136 台次（14.98%），校准后一次性符合率 80%为 124 台次（13.66%）；血气分析项目参加比对仪器共 83 台次，均合格；HCG 项目参加比对仪器共 1 台，均合格；
结论 经过五轮比对后，目前 POCT 仪器的动态管理及时有效，随时追踪仪器使用情况，同时保证了 POCT 设备的检测质量，使院内 POCT 设备能够有效利用。

Association between ICAM-1 level and weight loss: a review and meta-analysis

陈曦、王清、黄猛、田清武
青岛大学附属医院

Recently, several pilot studies already investigated potential association between ICAM-1 and weight, but the findings have been inconsistent. It is possible that a single study may have a relatively inadequate sample size to draw a definite conclusion, and different types of study populations, study design or duration of intervention obviously may also contribute to the inconsistent Results

Given these inconsistencies, we conducted a comprehensive meta-analysis of all eligible studies to clarify the association between ICAM-1 and weight, in order to provide evidence for further experimental and clinical studies, to understand the role of ICAM-1 in weight loss and to assess and predict the effect of weight loss through ICAM-1.

PU-2989

差值校验在临床医学实验室中的应用

朱晶、邵文琦、王蓓丽、郭玮
复旦大学附属中山医院

目的 研究差值校验在临床医学实验室中的应用。
方法 围绕差值校验的发展历史、参数选择、在临床医学实验室质量控制和检验报告自动审核中的应用价值进行综述。

结果 差值校验的如今临床实验室应用了多种质量控制方案以监控分析前中后各阶段可能发生的检测误差，尤其在分析前阶段。与传统室内质量控制方案相比，基于患者数据的质量控制方案拥有实时监控、克服质控品基质效应、没有额外检测成本等特点，已在临床医学实验室中得到越来越多的应用。自上世纪 60 年代发展至今的差值校验，就是其中一种非常经典的基于患者数据的质量控制方法。此外在临床医学实验室的检验报告自动审核系统中，差值校验也作为一类重要的审核规则用于拦截变化异常的检验报告提交人工审核。
结论 差值校验可用于识别实验室检测各阶段中可能发生的错误，以及识别和监测疾病显著变化。尽管差值校验在实验室医学中得到了广泛的应用，但目前明确支持其有效性的研究数据并不够充分。临床实验室需要通过选择，实施，监控来谨慎均衡地对差值校验报警采取措施，已达到更好的实际应用效果。

PU-2990

一对分别携带倒位染色体夫妻的遗传学分析

伍仙
湖南中医药高等专科学校附属第一医院（湖南省直中医医院）

目的 对婚后自然流产一次的夫妻外周血和流产组织进行遗传学检测，探讨染色体倒位对生育后代的影响。
方法 双方行外周血淋巴细胞培养，G 显带及 C 显带后分析妻子的外周血染色体核型；利用 G 显带及荧光原位杂交(fluorescence in situ hybridization,FISH)技术分析丈夫外周血染色体核型；高通量测序技术检测流产组织。
结果 妻子染色体核型确定为 46，XX，inv(9)(p12q13)；丈夫染色体核型确定为 46，XY，inv(7)(q21.2q32)；流产胚胎组织结果显示为 14 号染色体和 22 号染色体三体。
结论 染色体倒位携带者生育染色体病患儿的风险，需要从倒位的类型和倒位染色体以及倒位片段进行综合分析，合理进行遗传咨询，指导生育。

IL-6 和 CRP 预测新型冠状病毒肺炎严重程度的 Meta 分析

倪艺芸
永州市中心医院

目的 探讨白介素-6（IL-6）和 C 反应蛋白（CRP）预测新型冠状病毒肺炎（COVID-19）严重程度的临床价值。
方法 计算机检索 PubMed、Web of Science、Scopus、Embase、中国知网（CNKI）、万方数据知识服务平台（Wanfang Data）、维普数据库（VIP）及中国生物医学文献数据库（CBM），搜集以 COVID-19 为主题的相关研究，检索时间为 2019-12-01 至 2021-01-16，由两名研究人员独立筛选文献、提取资料，采用 RevMan5.4 软件进行 Meta 分析。
结果 共纳入 18 篇文献，共计 4286 例 COVID-19 患者，其中轻症组 2662 例，重症组 1624 例。与轻症组比较，重症组 IL-6 水平显著高于轻症组患者，差异有统计学意义（SMD=0.92，95%CI：0.65~1.18，P<0.00001），重症组 CRP 水平也显著高于轻症组患者，差异有统计学意义（SMD=1.47，95%CI：1.03~1.91，P<0.00001）。
结论 IL-6 和 CRP 水平的升高与 COVID-19 的严重程度呈正相关，可作为临床 COVID-19 患者风险分层的炎症指标，为临床治疗提供有意义的依据。

PU-2992

定点医院输血科救治 COVID-19 患者防控感染实践

秦莹[1]、林国跃*[1]、段丽[1]、木尼热.库尔班[1]、蔺志强[1]、付玉华[2]、李菲[3]、陈苒[4]、邓茜[5]
1. 新疆医科大学第八附属医院(新疆新冠肺炎医疗救治定点医院) 输血科
2. 新疆维吾尔自治区儿童医院输血科
3. 新疆维吾尔自治区人民医院输血科
4. 新疆维吾尔自治区第三人民医院输血科
5. 新疆维吾尔自治区第八人民医院检验科

目的 总结定点医院输血科在保障新冠肺炎救治 COVID-19 中的防控经验。
方法 通过回顾性总结和统计分析新冠疫情期间输血科创新性防控做法和一些有益经验探索。
结果 明确了定点医院输血科采用三级安全防护措施，要加强输血科人员院感再培训和日常生活管控，多层次检查督导实验室生物安全，严格规定特殊疫情取血流程，严把进入输血科物品和工作环境消毒关、检测标本保存监管及废弃物处置关， 确保输血科新冠感染防控工作安全有效。
结论 定点医院输血科为防范新冠病毒高度传染保证绝对安全，应重点把好血液标本关、个人接触关、环境消毒关、制度流程关，可避免感染风险和职业暴露。

PU-2993

天然抗肿瘤化合物的筛选及其抗肿瘤机制的研究

高丹丹、续薇
吉林大学第一医院

目的 本研究以人宫颈癌 HeLa 细胞为研究对象，从来源于植物内生真菌 Phomopsis 的六种化合物中筛选出具有较强抗肿瘤活性的天然化合物并研究其抗肿瘤机制。
方法 MTT 方法检测来源于内生真菌 Phomopsis 中六种化合物在不同时间、不同剂量下对人宫颈癌 HeLa 细胞和人胃癌 MGC803 细胞的增殖抑制能力，从六种化合物中筛选出最佳抗肿瘤活性的化合物 HX06，即 Dicerandrol B。Annexin V-FITC /PI 染色法流式细胞仪检测 Dicerandrol B 作用的 HeLa 细胞发生凋亡的细胞百分比，用 Western blot 检测与细胞凋亡相关的蛋白质 cleaved-PARP 的表达水平。
结果 与其他五种化合物相比，Dicerandrol B（HX06）具有较强的抗肿瘤活性且对人良性乳腺上皮细胞增殖抑制能力较弱。用 Dicerandrol B 处理 HeLa 细胞 24h，48h 和 96h，其 IC50 值分别为 7.13μg/mL，3.00μg/mL 和 1.84μg/mL，Dicerandrol B 抑制 HeLa 细胞的增殖呈现剂量依赖性和时间依赖性。流式结果显示 Dicerandrol B 处理 HeLa 细胞 24h，3μg/mL 组细胞凋亡发生率为 30.9％，5μg/mL 组细胞凋亡发生率为 45％，与对照组相比，差异有统计学意义（$p<0.01$）。同时 Dicerandrol B 引起 HeLa 细胞中 cleaved-PARP 的表达水平上调，说明 HeLa 细胞在 Dicerandrol B 的作用下发生了细胞凋亡。
结论 从内生真菌 Phomopsis 代谢产物中筛选到具有较强的抑制 HeLa 细胞增殖能力、呈现剂量和时间依赖性、同时对人乳腺上皮细胞 MCF10A 无明显细胞毒性的 Dicerandrol B。 Dicerandrol B 抑制 HeLa 细胞增殖的机制是诱导 HeLa 细胞发生了细胞凋亡。

PU-2994

临床乙肝两对半五项报告自动审核的优化与验证

朱晶、周佳烨、邵文琦、王蓓丽、潘柏申、郭玮
复旦大学附属中山医院

目的 探讨临床免疫乙肝两对半自动审核系统建立后的优化与验证。
方法 选取 2018 年至 2020 年经自动审核系统判断的临床免疫乙肝两对半五项报告，从两对半异常模式、灰区复检、HBsAg 与 HBcAb 定性结果 Delta check、HBsAb 定量结果根据大数据回顾分析优化 Delta check 范围和时间范围进行规则优化。以人工审核结果为标准，比较自动审核系统优化前后的性能参数。
结果 临床乙肝两对半五项报告自动审核系统通过率从 82.9%提高至 89.6%，灵敏度和特异性分别从 79.5%和 68.0%提高至 83.6%和 79.6%，阳性预期值和阴性预期值分别从为 74.9%和 83.2%提高至 89.7%和 93.2%。自动审核系统与两位实验室高年报告审核人员判断的一致性达到 98.68%。统计 kappa 分析结果为 0.99（P<0.001）。
结论 临床乙肝两对半五项报告自动审核系统优化后的性能参数显著提升，灵敏度和特异性更佳，同时与人工审核判断的一致性更高。使工作人员有更多的时间关注在疑难报告上。有效提高分析后环节的工作效率，进一步确保检验报告的准确性。

胎儿 9 号染色体臂间倒位与母体血清学筛查异常相关性研究

谢小雷
清远市人民医院

目的 研究胎儿 9 号染色体臂间倒位(inv9)与母体血清学筛查异常相关性。
方法 收集 2014 年 4 月至 2019 年 5 月来我院产前诊断中心因产前筛查高风险、高龄等进行产前诊断的孕妇病例及其妊娠结局数据。
结果 1865 例产前诊断样本中共检出 31 例 inv9 胎儿，检出率为 1.66%(31/1865)。87.10%(27/31)inv9 胎儿进行了血清学筛查，其中血清学筛查假阳性 13 例，临界风险 4 例，2 例单项指标异常，血清学筛查异常比例 70.37%(19/27)。free β-hCG 生化指标异常在 inv9 胎儿孕妇中所占比例最高达 52.63%(10/19)，其次为 PAPPA 占 26.32%(5/19)。Inv9 胎儿中，母体血清学筛查假阳性率明显高于同期人群筛查假阳性率(48.15%比 4.35%)，两者具有显著性差异(c2 =123.71，P <0.0001)。
结论 胎儿 9 号染色体臂间倒位通过影响母体血液中 free β-hCG 及 PAPPA 含量导致母体血清学筛查异常。

利用生物信息学技术初步筛选肺癌诊疗的潜在生物标记物

龙婷婷、陈月梅、江虹
四川大学华西医院

目的 利用生物信息学方法分析肺癌组织与正常组织之间差异基因的表达，筛选并评价肺癌相关分子标记物，挖掘潜在的肺癌诊疗靶标。
方法 提取 GEO 数据中肺癌相关的基因表达谱 (GSE19804)，利用 R 语言分析原始数据，经标准化处理后统计肺癌组织与正常组织之间基因在表达水平上的平均改变倍数（FC），满足|Log2 (FC)

|≥1 为差异表达基因（Differentially Expressed Genes，DEGs）。采用 DAVID 软件进行基因本体（GO）分析和京都基因和基因组百科全书（KEGG）信号通路分析。蛋白互作网络由 STRING 软件生成，并由 Cytoscape 软件构建蛋白互作网络，同时提取网络中的主要功能模块及关键蛋白进一步分析评价。

结果 通过生物信息学分析获得肺癌与正常组织间有 1970 个 DEGs，以下调基因为主，其中|FC|最大的是 AGER。这些 DEGs 涉及细胞增殖、粘附及迁移等多种生物学过程，并在细胞外基质受体相互作用、PI3K-Akt 信号通路等 77 条信号通路中存在明显富集。从 PPI 互作网络中挖掘出包括 EGFR 在内的 1770 个关键蛋白，涉及的主要功能模块包括趋化因子信号通路、细胞周期及癌症信号通路模块等。其中排名前十的关键节点分子有 EGFR，JUN ，FOS，IL6，MYC，MMP9，CDK1，CDH1，FYN，FGF2。

结论 通过生物信息学方法对肺癌差异基因进行分析，有助于增强对肺癌发生发展过程的认识。通过筛选肺癌关键基因、分子标记物（如 AGER 和 EGFR）及信号通路，将可能为肺癌的诊断与治疗提供线索。

Effects of co-infection with Clonorchiasis Sinensis on sex hormone levels in male patients with chronic hepatitis B

Huimin Dong、mei shang、Yuan Liao、Minqi Luo、Wenya Chen
Department of Clinical Laboratory, Third Affiliated Hospital, Sun Yat-Sen University

Objective The effects of co-infection with Clonochiasis Sinensis on sex hormone levels in male patients with chronic hepatitis B were statistically analyzed to explore the interaction between co-infection and sex hormone levels.

Methods Select 27 healthy male subjects,30 male patients mono-infected with Clonorichis Sinensis alone,18 male patients with post-hepatitis cirrhosis co-infected with Clonorichis Sinensis, 25 male patients with chronic hepatitis B co-infected with Clonorichis Sinensis,27 male patients with post-hepatitis cirrhosis with hepatitis B,and 18 male patients with hepatitis B alone. Measure their levels of sex hormone.

Results the levels of E2 in patients with post-hepatitis cirrhosis co-infected with Clonorichis Sinensis increased, while the levels of T and FSH decreased , compared with those in patients with hepatitis cirrhosis, and the difference were statistically significant（P<0.05)； the levels of E2 and T in patients with hepatitis B co-infected with Clonorichis Sinensis increased , compared with those in patients with hepatitis B alone, and the difference were statistically significant（P<0.05)；the levels of LH、PRL、E2、T、FSH and P in patients with post-hepatitis cirrhosis increased, compared with those in healthy male subjects; In contrast, the levels of PRL,E2 and T in patients with HBV decreased, compared with those in healthy male subjects; there was no statistically difference in the levels of LH、PRL、E2、T、FSH and P between the group of patients with only Clonorichis Sinensis and the healthy group.

Conclusion Co-infection with Clonorchiasis Sinensis would further aggravate sex hormone disorder in hepatitis B patients,whether in the chronic hepatitis stage nor the cirrhosis stage,the results of this study can guide the clinical medication and the selection of the correct treatment plan to prevent and control the diseases.

柳州地区儿童过敏性鼻炎患者常见过敏原 sIgE 检测分析

戴钰
柳州市妇幼保健院

目的 分析柳州地区过敏性鼻炎患儿常见过敏原分布特征，为合理防治过敏性鼻炎提供依据。
方法 采用酶联免疫捕获法，对 2019 年 3 月至 2021 年 4 月间在柳州市妇幼保健院进行过敏原特异性免疫球蛋白 E（sIgE）筛查的 532 例过敏性鼻炎患者进行血清学检测，其中，男性 337 例，女性 195 例，按年龄将受试患者分为 0~2 岁（115 例）、3~5 岁 （233 例）、6~≤15 岁 （184 例）。采用 SPSS 25.0 分析受试者年龄、性别以及季节等因素对过敏原分布特征的影响。
结果 最常见的过敏原是屋尘螨，阳性率均为 63.72%（339/532），其次是粉尘螨、鸡蛋、牛奶、屋尘。受试者中过敏原组合数量以 2~3 种最为常见（44.17%，235/532）。男性患儿最常见的过敏原为屋尘螨 64.09%， 216/337；女性患儿最常见的过敏原有两种，分别是屋尘螨/粉尘螨,63.08%，123/195）。性别在过敏原种类中无显著差异（P＞0.05）。吸入性过敏原（如尘螨类）在 6~15 岁组阳性率较高，而食物性过敏原（如鸡蛋、牛奶）在 0~2 岁组阳性率较高，差异有统计学意义（P＜0.05）。尘螨类（粉尘螨、屋尘螨）过敏原在夏季阳性率较高，屋尘、虾阳性率在冬季最低，而牛奶阳性率则在秋季最高，虾阳性率在冬季最低，差异有统计学意义（P＜0.05）。
结论 柳州地区过敏性鼻炎患者最常见过敏原是屋尘螨，吸入性和食物性过敏原是导致过敏性疾病发生的重要原因，在不同的年龄段及不同季节均存在差异，为柳州地区过敏性鼻炎患者实施个体化干预策略提供客观证据，具有重要价值。

PU-3000

急性早幼粒细胞白血病初诊检测结果的分析

黄美群、贾雪、张敏、张嘉琳
广东省人民医院

目的 探讨急性早幼粒细胞白血病（APL）初诊时检测结果的特点。
方法 收集 70 例急性早幼粒细胞白血病患者初诊时检测结果，并应用 SPSS19.0 软件对其进行统计学分析。
结果 70 例患者中白细胞< 4.0×109/L 38 例（54.3%）、中位数 1.45×109/L, 血红蛋白<99g/L 51 例(72.9%)、中位数 69.0g/L ,血小板 7－50×109/L 51 例(72.9%)、中位数 26.0×109/L。D-二聚体 351－1000 ug/L30 例(42.9%),中位数 761ug/L，1001－3000 ug/L 22 例(31.4%),中位数 1618ug/L 。单核细胞比值 0.11－0.857 36 例(51.4%)、中位数 0.225。通过骨髓细胞检查，发现异常早幼粒细胞

白血病骨髓增生活跃，其胞浆内充满紫红色颗粒及柴束样奥氏小体。59 例患者中细胞免疫表型 $CD33^+$, $CD13^+$为 46 例（78.0%），MPO +为 44 例（74.6%）。
结论 检测结果表明 70 例急性早幼粒细胞白血病（APL）初诊患者的外周血中白细胞、血红蛋白、血小板偏低，且单核细胞以增高为主，D-二聚体检查结果均增高。因此，对于初诊为外周血细胞偏低的急性早幼粒细胞白血病患者，必须借助于显微镜进行细胞形态和特征的分析,才能准确无误地发出报告。

PU-3001

POCT 信息化管理系统在医院中的建设和应用

姚瀚鑫
吉林大学第一医院

目的 在当前新型冠状病毒疫情下，为应对快速检测的需求，医院各临床科室不同类型的 POCT 设备，特别是发热门诊，隔离病房等中的 POCT 设备被大量应用，由于操作人员的复杂化，试剂耗材的多元化，各类型 POCT 设备厂家繁多导致质量标准和操作标准不统一，因此需要 POCT 信息化管理系统规范医院 POCT 设备的应用和管理。
方法 依据吉林大学第一医院临床质控（检验）中心的要求，以检验科为管理中心，结合 POCT 人员、设备等特点制定质量指标，构建符合本地化的医院 POCT 信息化管理系统。
结果 对医院各临床科室不同类型的 POCT 设备实现了智能化、标准化和规范化管理，使 POCT 设备为临床诊疗提供优质的服务。
结论 POCT 信息化管理系统是 POCT 设备一体化管理的有效手段，特别在疫情下 POCT 设备诸如快速核酸检测设备、床旁血气分析仪、床旁免疫分析仪、便携式生化分析仪、床旁快速凝血分析仪被大量应用，信息化、智能化、标准化的管理系统值得推广应用，特别是在 POCT 信息信息系统中应用检测结果自动审核，危急值或异常值提示，报告推送等功能，能大大提高检测效率，异常状态识别情况，及时采取临床干预措施。

不同方法联合检测在梅毒血清学筛查中的应用

杨静
天津市泰达医院

目的 探讨梅毒血清学的不同方法联合检测在两个不同年龄段人群中的应用价值。
方法 使用 CLIA 法对两个不同年龄段的人群进行梅毒血清学的初筛试验，阳性标本使用 TPPA 法和 TRUST 法复检，对于检测结果不一致的血清标本使用蛋白印记法确认。
结果 1. TPPA 法和 TRUST 法与 CLIA 法的阳性符合率，≤60 岁人群为 94.29%和 50.17%， >60 岁人群为 85.00%和 25.00%。TPPA 与 CLIA 两种检测方法结果的差异，主要集中在 CLIA 检测系统 s/co＜5 的阳性低值区。2. 在 CLIA 检测系统 s/co 的阳性低值区，当 CLIA 检测系统 1≤s/co＜5，且 TPPA 为阳性时，≤60 岁人群，与 WB 方法的符合率为 96.42%，＞60 人群为 86.66%；当 CLIA 检测系统 5≤s/co＜10 且 TPPA 为阳性时，≤60 岁人群与 WB 方法的符合率为 98.15%，＞60 人群为 96.29%。
结论 三种方法联合检测有效的减少了检测结果的漏诊和误诊，但对于 CLIA 法检测系统 s/co＜5 的阳性低值区标本应结合临床资料分析，如有必要须做确诊试验。

PU-3003

168 例念珠菌血流感染患者的预后相关危险因素分析

赵越、叶龙、凌勇、张莉澉
广东省人民医院

目的 探讨临床念珠菌血流感染患者的预后相关危险因素，为防控及改善念珠菌血流感染患者预后情况提供依据。

方法 回顾性分析 2017 年 1 月-2019 年 12 月广东省某三级甲等医院所确诊的念珠菌血流感染病例 168 例，查询相关病例的基础资料（年龄、性别、住院时间、基础疾病、入住科室、病原菌分离等）、临床病程诊疗记录（住院期间侵入性操作、抗菌药物使用情况等）及患者预后情况等信息，并对数据整理分析。同时根据患者预后，将纳入研究的病例分为两组：即生存组（81 例）与死亡组（87 例），并对两组间相关危险因素进行比较分析。

结果 168 例患者主要分布于重症监护室（81 例）、血液科（30 例）、内科（23 例）及外科（22 例）等科室，以白念珠菌（71 例）、热带念珠菌（45 例）及近平滑念珠菌（30 例）为主。患者病死率为 51.79%，死亡组患者的平均年龄要高于生存组（t 值=4.459，P 值=0.000）。单因素分析显示：患有白血病、恶性肿瘤，入住过重症监护室，存在机械通气、中心静脉插管、留置尿管等侵入性操作可能会加大患者死亡风险,应用抗真菌药物可能会降低患者病死率。多因素 logistic 回归分析显示：患者有留置过尿管（OR 值=10.847,95%CI:3.175-37.061，P 值=0.000）是影响患者预后的重要危险因素，尽早应用抗真菌药物治疗（OR 值=0.307,95%CI:0.132-0.714，P 值=0.006）对患者生存率有所改善。

结论 念珠菌血流感染病死率高，影响患者预后的各种危险因素需要引起临床重视。在诊疗过程中，需尽早完善病原学送检，加强环境卫生学监测，强化对各使用级别抗菌药物监管，做到精准用药，以改善患者预后，降低病死风险。

PU-3004

血清样本经不同处理后对胃泌素释放肽前体稳定性的影响

万鹏、渠文涛
安图生物工程股份有限公司

目的 胃泌素释放肽前体（ProGRP）是小细胞肺癌（SCLC）的肿瘤标志物；目前国内外均有用于 ProGRP 检测的试剂盒。血清中存在降解 ProGRP 的酶，且 ProGRP 蛋白上不同抗原结构位点降解的先后顺序也不一致，不同厂家生产的试剂盒因为针对检测 ProGRP 抗原结构位点的不同，导致样本保存的时间不同；时间短的，样本放置 2-8℃一天之后降幅就会超过 10%，长的可在 2-8℃保存三天。本文主要是研究了血清样本经过不同处理后，ProGRP 降解速率的变化。

方法 取一份血清样本，分为 A,B,C,D 等量 4 份，A 不经过任何处理，B 经过去激素处理，C 在 56℃灭活半小时，D 添加 2%海藻糖。分别在 4 份处理后的血清样本中添加等量的 ProGRP 标准品。将 4 份样本放到 2-8℃保存，分别在第 0 天、第 1 天、第 3 天、第 5 天、第 6 天进行检测。其中试剂盒采用“郑州安图生物工程股份有限公司”厂家的。

结果 A 不经过任何处理的样本可在 2-8℃保存 3 天，降幅在 10%以内；B 经过去激素处理的样本在 2-8℃一天降幅就超过了 10%；C 经过灭活的样本在 2-8℃保存 6 天之后样本降幅依然保持在 10%以内；D 添加海藻糖的样本，2-8℃可保存 5 天。

结论 经过去激素处理后的样本加速了 ProGRP 的降解速度；血清样本灭活或者在血清样本中添加海藻糖可以降低 ProGRP 的降解速度。

PU-3005

实验室自动化与信息管理系统的建立和性能优化

廖建枫、刘胜男、张喜钦、李靖华、张娟、顾兵
广东省人民医院

目的 探讨实验室自动化与信息化管理系统对提升实验室检验工作效率的作用。
方法 收集广东省人民医院检验科 2019 年 6 月 9 号-6 月 15 号 Remisol 信息管理系统优化前、2019 年 12 月 8 号-12 月 14 号优化后生化、免疫样本的周转数据和自动审核的运行数据，与 2018 年 9 月自动质控启用前、2019 年 12 月自动质控启用后的质控数据分析差异。
结果（1）流水线和信息管理系统优化后平均检测周期降低了 34min；（2）优化后样本前处理人员减少 50%，仪器操作人员减少 33%；（3）应用自动质控后可使仪器提前 1 小时进入工作状态，且 21 个自动化免疫项目中 17 个项目的 CV 对比和靶值偏差的评价提高；（4）应用流水线和信息管理系统优化后自动审核总通过率提高 9%；（5）应用流水线和信息管理系统优化后减少检验人员与标本直接接触，降低检验人接触传染性阳性标本的风险。
结论 实验室自动化与信息化管理系统优化后明显提升了实验室检验工作的效率，突出优化流程的优势，实验室在检测周期、样本采集、检测效率上明显提高，质控评价也有所提升。

PU-3006

20 项常规生化指标应用自上而下法计算测量不确定度的评定报告

张娟、禄梦笛、陈秀贤
广东省人民医院

目的 探讨自上而下法评估测量不确定度在临床常规生化检验中的应用。
方法 收集本室 2019 年质控批号稳定至少 3 个月的 IQC 数据和国家卫生健康委临床检验中心 2017-2019 年的 EQA 回报结果，采用自上而下法评定 20 项临床常规生化指标的测量不确定度。
结果 CA、P、GLU、UREA、URIC、TC、TG、TBIL、ALT、AST、ALP、AMY、CK、LDH、GGT、MG、FE、HBDH、CHE19 项常规生化指标低水平质控品浓度的合成相对扩展标准不确定度分别为 4.91%，7.10%，6.94%，7.88%，6.45%，6.96%，7.73%，7.86%，8.96%，6.69%，17.52%，8.10%，8.44%，9.99%，6.11%，9.53%，9.56%，10.02%，10.40%；其高水平质控品浓度的合成相对扩展标准不确定度分别为 3.83%，6.19%，5.90%，5.79%，5.90%，6.22%，6.82%，8.41%，8.23%，6.17%，14.58%，6.39%，8.07%，8.56%，5.35%，7.12%，7.06%，9.85%，11.99%均小于 WS/T 403-2012《临床生物化学检验常规项目分析质量指标》要求的目标扩展不确定度；DBIL 低高两个质控水平的合成相对扩展标准不确定度分别为 11.41%和 9.06%，均小于基于生物学变异的适当质量规范。其中批间不精密度与相对扩展标准不确定度呈极强相关（r=0.857，P<0.001），偏移呈中度相关（r=0.528，P<0.001），批间不精密度分量在大部分生化指标中呈主要分量趋势。但 ALT、AMY、CK、FE（高浓度水平）、HBDH（高浓度水平）则受偏移分量影响相对较大。
结论 应用自上而下法评定测量不确定度适用于临床常规生化检验项目；且不同项目不同分量来源的主要占比不同，为实验室质量管理提供了改进方向。

PU-3007

探讨三种不同评定方法在临床生化检验测量不确定度中的应用价值

姚亚男、张娟、顾兵
广东省人民医院

目的 探讨三种不同评定方法在常规生化检验测量不确定度中的应用价值。
方法 采用依据 Nordtest 准则的自上而下法（方法 1）、澳大利亚临床生物化学家协会(AACB)建议方法（方法 2）以及国内文献参考法（方法 3）三种不同的评定方法对 26 项常规生化指标进行测量不确定度的评定，对三种方法的评定结果进行差异性和相关性分析。分析其不同分量来源与合成的相对标准不确定度之间的相关性并单独比较 26 项生化指标的主要不确定度分量。
结果 三种方法评定结果间差异无统计学意义（P>0.05），并且显著相关（r1,2=0.895，P<0.001；r1,3=0.988，P<0.001；r2,3=0.885，P<0.001）。在 Tea 达标率的比较上，三种方法没有差异，均为 100%；在 1/2Tea 达标率比较上，国内文献参考法与 AACB 法有统计学意义（Bonferroni 校正，P<0.0167）；1/3Tea 达标率比较无统计学意义（P>0.05）。批间不精密度分量和合成相对标准不确定度呈显著相关性（r>0.8，P<0.001）。26 项生化指标不确定度分量的分布图显示大部分生化指标的 CVB 最大。其中 NA 和 CREA 则是以 CVBias 为主，分别为 1.27%，1.36%；6.34%，2.96%。CK 和 ALT 的 CVCal 分别达到 5.17%和 3.55%。三个指标 CL、FE、AMY 则出现两个浓度水平不一致的结果。
结论 三种评定方法结果无差异并显著相关，AACB 法的质量目标达标率最高。批间不精密度是三种方法中最主要的不确定度分量，其次是偏移分量。以单个的指标的不确定度分量来看，CVBias 分量是 NA 和 CREA 测量不确定度的主要分量，CVCal 分量则是 CK 和 ALT 测量不确定度的主要分量。

PU-3008

常用抗肿瘤药物对胃泌素释放肽前体检测的干扰

万鹏、渠文涛
安图生物工程股份有限公司

目的 肺癌是目前严重威胁人类健康的一种恶性肿瘤，其发病率及死亡率均居恶性肿瘤之首。其中小细胞肺癌（SCLC）在肺癌中所占的比例约为 15% ～ 25% ，其恶性程度高、发展迅速、转移发生早、预后差，5 年总体生存率小于 10% 。胃泌素释放肽前体（ProGRP）是 SCLC 的肿瘤标志物，本文主要是验证常用抗肿瘤药物对 ProGRP 检测结果的影响。
方法 选用 8 支临床血清样本，混合后浓度为 210pg/ml，分为 16 份；其中 8 份实验样本中添加常用抗肿瘤药物，卡铂、顺铂、环磷酰胺、多西他赛、洛莫司汀、吉非替尼、厄洛替尼、地塞米松，添加浓度分别为 600ug/ml，180ug/ml、500ug/ml、115ug/ml、175ug/ml、250ug/ml、150ug/ml、20ug/ml。对照组 8 份添加等量体积的 PBS 缓冲液，用国产安图生物公司生产的“胃泌素释放肽前体检测试剂盒（磁微粒化学发光法）”进行检测。按照公式“干扰率=（实验结果-对照结果）/对照结果”计算干扰率。
结果 常用抗肿瘤药物卡铂、顺铂、环磷酰胺、多西他赛、洛莫司汀、吉非替尼、厄洛替尼、地塞米松对 ProGRP 检测的干扰率分别为-2.43%、2.14%、3.26%、4.89%、-3.64%、-2.49%、1.35%、0.89%。
结论 常用抗肿瘤药物卡铂、顺铂、环磷酰胺、多西他赛、洛莫司汀、吉非替尼、厄洛替尼、地塞米松对 ProGRP 的干扰率均在±5%之内。

PU-3009

Association of Cardiovascular Risk Burden and Subsequent Poor Cognitive Performance among Older People: the Mediating Role of Brain MRI Measures

Chong Chen
Tianjin Medical University Cancer Institute and Hospital

Our aim was to measure the association between cardiovascular risk profiles and subsequent cognitive performance and to examine whether brain magnetic resonance imaging (MRI) markers modify the relationship. We assessed cardiovascular risk profiles, brain volume and cognitive performance using baseline and 7-year follow-up data from Tianjin Longitudinal Study of Aging in China (n=1360) and the embedded MRI (n=318) studies. Framingham general cardiovascular risk score (FGCRS) was computed using baseline data. Cognition was assessed with a comprehensive test battery at least three times over seven years. Mixed-effect model and structural equation model were used to assess the association between FGCRS, MRI variables and longitudinal cognitive performance. High FGCRS was significantly associated with poor performance in global cognition, and other specific cognitive domains. Low baseline hippocampal volume was significantly associated with cognitive decline for all neuropsychological tests in MRI variables. Low cortical white matter volume at baseline was associated with poor performance in all tests except perceptual speed. Subjects with both small hippocampal and cortical white matter volumes had higher risk of cognitive decline. SEM analyses indicated that the direct path between high FGCRS and poorglobal cognition was significant. Increased hippocampal volume mediated the relationship of FGCRS on global cognition. In conclusion, high cardiovascular risk burden was associated with subsequent poor cognitive performance. Hippocampal volumes loss can mediate the association between FGCRS and global cognition. Cardiovascular risk profiles, as manifested into appropriate brain MRI markers, may be an important tool for identifying subjects at high risk of future dementia.

PU-3010

罗森沙门菌临床菌株的基因组分析及毒力研究

周爱萍、郭建、吴文娟
上海市东方医院同济大学附属东方医院南院

目的 近年来，罗森沙门菌感染呈现上升趋势，但目前关于该血清型的毒力研究尚未见报道。本研究通过对一株临床来源的罗森沙门菌的毒力研究及基因组分析，加深人类对沙门菌致病性的认识，为沙门菌感染的预防和治疗提供依据。
材料和方法 首先利用动物实验和细胞实验，对该菌株的毒力进行评估，随后为了探究其致病机制，本研究对该菌株进行了全基因组测序，测序结果提交 NCBI non-redundant (NR)蛋白数据库进行注释并进行 COG 分析和 KEGG 分析。利用 Genomic Epidemiology (CGE)对基因组进行深入分析。
结果 罗森沙门菌对小鼠的致病性及对 HeLa 细胞的入侵能力弱于鼠伤寒沙门菌。在鼠来源的巨噬细胞 Raw264.7 中罗森沙门菌的存活和复制能力弱于 14028S，但在人来源的巨噬细胞 U937 中，罗森沙门菌的存活和复制能力强于 14028S。基因组分析结果显示该菌株中存在 8 个 SPI（SPI1-6，SPI-8 和 SPI-9）5 个耐药基因(blaTEM-1b, addA1, addA2, tetA, sul3, cmlA1), 25 个移动基因元件(2 T3ss, 1 T6ss, 6 噬菌体和 16 基因岛)。MLST 分型为 ST469 型。
结论 罗森沙门菌对小鼠的致病性弱于鼠伤寒沙门菌，但仍然能够引起小鼠的血流感染。并且对人类的巨噬细胞有较强的适应性。进一步基因组分析发现，虽然罗森沙门菌中缺失了常见的沙门菌毒力因子如 spv 毒力质粒，sodCI 及 spoE 等基因中，但仍然存在 8 个 SPI 及 2 个对致病性非常重要

的 T3SS。对罗森沙门菌毒力及基因组的研究，有利于人类对沙门菌致病机制的认识和沙门菌病的防治。

PU-3011

炎症因子与白血病相关性研究及临床意义探讨

袁媛、曹方方、韩斌、马书丽
青岛大学附属医院

目的 通过检测白血病患者标本中 IL-6、IL-8、IL-10、TNF-α 以及 T 细胞亚群，还有炎症相关检测指标 C-反应蛋白、D-二聚体、降钙素原的变化，并与正常人血液标本进行对比、分析。通过分析以上检测指标与白血病的发生、发展存在的相关性，以探讨其临床意义及应用前景。
方法 分析我院收治的 60 例白血病患者的血液标本, 男 30 例, 女 30 例,平均年龄 42（10～70 岁）, 全部患者均经免疫学及骨髓细胞学确诊，且符合 FAB 分型标准。另收集我院体检中心正常人血液标本 60 例，男 30 例, 女 30 例, 平均年龄 35（23～50 岁），作为对照组。运用西门子 BNP 特定蛋白分析仪测得 CRP 的结果；运用 ACLTOP700 全自动血凝仪检测 D-二聚体的水平；运用罗氏 411 电化学发光全自动免疫分析仪检测降钙素原的变化；运用 ELISA 检测试剂盒检测 IL-6、IL-8、IL-10、TNF-α 细胞因子表达水平；运用贝克曼 FC500 流式细胞术检测以上标本的 CD3、CD4、CD8、CD4/CD8、NK、 CD19 等细胞亚群的变化。
结果 CRP、D-二聚体、PCT 的表达明显高于正常人(P < 0. 01)；且 CD3、CD4、CD8 阳性 T 细胞水平均明显低于正常人(P < 0. 01)；在 MDS、急、慢性白血病及再生障碍性贫血中 IL-6、IL-8、IL-10、TNF-α 均高于正常对照组的水平。
结论 白血病的病程发展与炎症因子及抗炎因子的表达水平存在相关性。说明炎症因子和抗炎因子之间相互作用和动态平衡与白血病的发生、发展密切相关，此研究将有助于发掘白血病的“促炎治疗”策略，使未来开展个体化治疗成为可能。此外，为探讨新的检测手段和新型检测试剂盒的开发奠定了理论基础。

PU-3012

Increased Serum Levels of Complement C1q in Major Depressive Disorder

Qian Yao
Renmin Hospital of Wuhan University

Background The complement system is involved in multiple biological processes including inflammation, synaptic pruning and apoptosis. However, it is not well understood whether peripheral complement C1q levels are altered major depressive disorder (MDD) patients.
Objective This study aimed at assessing serum levels of complement C1q in MDD patients using a cross-sectional, case-control design. Also, the correlations between complement C1q and inflammation and lipid profile in patients with MDD were also assessed.
Methods Serum complement C1q levels were measured by ADVIA 2400 biochemical analyzer in 160 patients with MDD diagnosed using International Classification of Diseases-10 criteria (ICD-10) and were compared with those of 159 healthy controls between January 2017 to May 2019. Then correlation analysis was carried out between the level of serum complement C1q among MDD patients with inflammation and lipid profile.
Results Serum complement C1q levels were higher in MDD patients than in controls (P<0.0001) and the difference between the two groups was small (r=0.239 [0.128 to 0.350]). We found that serum complement C1q concentrations was positively correlated with HAMD-24 score (r=0.234, P=0.003) and log hs-CRP (r=0.334, P<0.001).

Conclusion We found serum complement C1q levels were significantly higher in MDD patients than in controls. The current results suggest that the dysfunction of complement C1q may be involved in the pathophysiology of MDD.

PU-3013

CLSI EP06-A 和 EP06-Ed2 应用于定量测量系统线性验证程序的差别

谢轩波、刘洋洋、单汉明、李晓博
杭州迪安医学检验中心有限公司

目的 以部分项目为例，讨论美国临床和实验室标准协会（CLSI）EP06-Ed2 与 EP06-A 在定量测量程序线性验证应用中的差异。
方法 通过选择接近线性区间上下限的样本，按比例配制 7 例样本，各重复测定 2 次，测定结果分别以 EP06-Ed2 和 EP06-A 的方法进行分析，比较两者的差异。
结果 部分项目的线性区间验证，以 EP06-A 分析视为临床不可接受，但以 EP06-Ed2 分析可被临床接受。
结论 CLSI EP06-Ed2 相对于 EP06-A 等指南，对线性样本浓度选择的要求合理，更符合实际临床使用需求，是值得借鉴的新的定量测量程序线性区间验证指南。

PU-3014

探讨在常规化学项目质量管理中进行 σ 验证的必要性

刘洋洋、李晓博、谢轩波、单汉明
杭州迪安医学检验中心有限公司

目的 通过计算 12 个常规生化项目的 σ 度量值，探讨 σ 验证在临床实验室测量程序评价和个性化 westgard σ 质控规则的应用。
方法 统计 2019 年度杭州迪安医学检验中心卫健委临检中心常规化学项目室间质量评价、正确度评价数据及室内质量控制数据，计算绘制标准化西格玛性能验证图，对 σ 验证未能通过的项目进行测量程序分析性能的评价，对 σ 验证通过项目进行 Westgard σ 质控规则及质控方法性能特征误差检出率，假失控概率的评估。
结果 经两种不同来源偏倚，双水平浓度质控品变异系数的计算，确定每个项目最低 σ 水平，σ≥6（世界一流）包括 CK、AMY、CREA 3 个项目，5≤σ＜6（优秀）无，4≤σ＜5（良好）包括 GLU、TC、NA、K 4 个项目，3≤σ＜4（临界）包括 TP、TG 2 个项目，2≤σ＜3（欠佳）包括 ALT、UREA 2 个项目，σ＜2（不可接受）包括 CA 1 个项目；ALT、UREA、CA 3 个项目年度分析性能验证均通过，σ 验证提示 CA 分析性能为不可接受，ALT、UREA 分析性能欠佳，对应无质控规则可选，应努力改善或更换测量程序；对 σ 验证通过项目进行 Westgard σ 质控规则评估，其中 CK、AMY、CREA 已达到世界一流水平，可选择宽松的质控规则进而降低假失控概率；TP、TC、TG、NA、K 项目误差检出率分别为：0.925、0.940、0.900、0.900、0.977 较评价前得到显著提高，ALT、CREA 项目 σ 值水平较低无可选的质控规则，需更换或改进测量程序，可见基于不同 σ 水平可选择合适的室内质控规则。
结论 σ 验证与测量程序的分析性能评价起到良好的协同作用，对质控方法个性化质控规则的应用起到相应的指导作用。

PU-3015

阿尔茨海默症患者血清中核酸氧化损伤产物与抗氧化物质硒、维生素 A 和维生素 E 的质谱检测及相关性研究

房敬尧、牛文彦
天津医科大学朱宪彝纪念医院

目的 研究显示 DNA 氧化损伤产物 8-氧化脱氧鸟苷(8-oxo-7,8-dihydro- deoxyguanosine,8-oxo-dGsn) 和 RNA 氧化 产物 8- 氧化鸟苷（8-oxo-7,8- dihydroguanosin，8-oxo-Gsn)与阿尔茨海默症（Alzheimer's disease，AD）发病的密切相关。具有抗氧化功能的维生素 A（Vit A）和维生素 E（Vit E），硒元素（Se）被证明对 AD 患者的氧化损伤具有一定的保护作用。然而尚未有研究对 AD 患者血清中 8-oxo-Gsn、8-oxo-dGsn 和 Vit A、Vit E、Se 的关系进行探讨，本研究将综合比较 AD 患者与同年龄层表观健康对照组血清中上述物质，对上述氧化应激相关物质的差异性与相关性进行探讨。

方法 选取 55 例 AD 患者，同时选取 64 例年龄分层相近，性别匹配且生化指标正常的表观健康人群，分别采用高效液相色谱串联质谱（HPLC-MS/MS）对血清中的 上述物质进行检测，使用电感耦合等离子体质谱（ICP-MS）测定血清中 Se 含量。比较两组人群以上各指标的差异，不同年龄分层的差异以及各项目的相关性。

结果 病例组血清中 Se 含量显著低于对照组（P<0.01），在各年龄分层中与对照组相比也显著降低（P<0.01）。VitA 在<60 岁和 60-69 岁低龄分组 中，病例组含量显著低于对照组（P<0.01），但总体上与对照组无显著差异。 Vit E 在对照组与病例组中差异不明显。对照组与病例组血清 8-oxo-Gsn 无显著 差异，在<60 岁和 60-69 岁低龄分组中病例组血清中 8-oxo- dGsn 含量显著高于对照组(P<0.01)。通过相关性分析发现 8-oxo-Gsn 与年龄存在显著相关性 （P<0.01），8-oxo-dGsn 仅在表观健康人群中与年龄呈现显著相关性。血清 Se 分 别与 Vit A 和 Vit E 呈现显著相关性（P<0.01），但未发现 8-oxo-Gsn、8-oxodGsn 与两种维生素和 Se 之间存在显著相关关系。

结论 AD 患者血清含有显 著高水平的 DNA 氧化损伤产物 8-oxo-dGsn 和低水平的抗氧化物质 Se，血清 8- oxo-Gsn、8-oxo-dGsn 与 Vit A、Vit E 和 Se 关系需进一步研究。

新型冠状病毒核酸检测中单基因“假阳性”可能因素的探讨

王梓
天津医科大学肿瘤医院

实时定量 PCR(简称 qRT-PCR)技术是检测新型冠状病毒(简称“新冠病毒”)的主要手段。目前 qRT-PCR 试剂盒，多以新冠病毒 RdRP 基因(ORFlab 读码框)、N 基因和 E 基因为靶基因，实现对新冠病毒的检测。其检测结果是新冠病毒感染者确诊及治愈出院的重要依据。由于 qRT-PCR 灵敏度高其特异性强，其结果容易出现假阳性及假阴性的状况。在临床实践中，多次出现 E 基因阳性、N 基因和 RdRP 基因阴性的情况。使用不同厂商的 qRT-PCR 试剂盒对可疑样本复查，最终确定 N 基因和 RdRP 基因阴性。由此可知 E 基因在新冠病毒检测中易出现假阳性结果。其原因可能为新冠病毒的 E 基因为保守基因，存在于多种病原体中。

分离胶采血管制备血清某些特定情况下对 HBsAg 定性检测结果的影响

贾红基、王爱华
杭州迪安医学检验中心有限公司

目的 通过对科室工作中遇到的 26 例 HBsAg 异常阳性样本进行分析，了解分离胶采血管制备的血清是否会在某些特定情况下对 HBsAg 定性结果产生影响。
方法 收集科室在工作中遇到的 26 例 HBsAg 定性检测初步判定为假阳性的样本，进行重新检测、罗氏乙肝定量复测及分注管样本复测，来比较三者结果之间的差异。
结果 经过实验，对 26 例 HBsAg 定性检测异常阳性样本进行分离胶采血管制备的原管血清重测结果和罗氏乙肝定量复测结果均为阳性，而用分注管样本进行复测的 HBsAg 结果均为阴性。
结论 用分离胶采血管制备的血清标本在血清量低于 1 毫升时检测 HBsAg，会对北京万泰生物药业股份有限公司生产的 HBsAg（ELISA）定性结果产生假阳性反应。

PU-3018

幽门螺旋杆菌抗体、抗原检测与 14C 呼气试验的对比研究

罗曼
成华区第三人民医院

幽门螺旋杆菌（H.pylori）是一种存在于胃粘膜上皮表面和黏液底层的革兰阴性弯曲螺杆菌，全球一半以上人口被 HP 感染。幽门螺旋杆菌感染可引起消化性溃疡、慢性胃炎、胃癌等多种消化道疾病相关，其传染性很强，可通过口-口、粪-口在人与人之间传播，因此准确快速的检测出幽门螺旋杆菌对大众健康有重要的价值。目的比较幽门螺旋杆菌的血清学抗体检测、粪便抗原检测和 14C 呼气试验对于诊断幽门螺旋杆菌感染的可用性和准确率，并进行比较研究。方法选择一段时间内 100 例以上的胃幽门螺旋杆菌检测患者分别进行三种试验的检测，记录结果。结果血清学抗体检测、粪便抗原检测和 14C 呼气试验三种试验的阳性率、敏感性、特异性无显著差异。结论三种方法用于幽门螺旋杆菌均具有一定意义，各有优缺点，可以根据患者自身情况选择对应的检测方法，以帮助病情的治疗和预后。

Ginkgolide B Maintains Calcium Homeostasis in Hypoxic Hippocampal Neurons by Inhibiting Calcium Influx and Intracellular Calcium Release

Li Wang、Qinghai Shi
新疆军区总医院临床医学检验诊断中心

Ginkgolide B (GB), a terpene lactone and active ingredient of Ginkgo biloba, shows protective effects in neuronal cells subjected to hypoxia. We investigated whether GB might protect neurons from hypoxic injury through regulation of neuronal Ca2+ homeostasis.

Primary hippocampal neurons subjected to chemical hypoxia (0.7 mM CoCl2) in vitro exhibited an increase in cytoplasmic Ca2+ (measured from the fluorescence of fluo-4), but this effect was significantly diminished by pre-treatment with 0.4 mM GB. Electrophysiological recordings from the brain slices of rats exposed to hypoxia in vivo revealed increases in

spontaneous discharge frequency, action potential frequency and calcium current magnitude, and all these effects of hypoxia were suppressed by pre-treatment with 12 mg/kg GB. Western blot analysis demonstrated that hypoxia was associated with enhanced mRNA and protein expressions of Cav1.2 (a voltage-gated Ca2+ channel), STIM1 (a regulator of store-operated Ca2+ entry) and RyR2 (isoforms of Ryanodine Receptor which mediates sarcoplasmic reticulum Ca2+ release), and these actions of hypoxia were suppressed by GB.

Taken together, our in vitro and in vivo data suggest that GB might protect neurons from hypoxia, in part, by regulating Ca2+ influx and intracellular Ca2+ release to maintain Ca2+ homeostasis.

系统性红斑狼疮患者抗核抗体检测及临床特点分析

邹红云、晁亚妮、何华月、何江
中国人民解放军新疆军区总医院检验科

目的 探讨 263 例系统性红斑狼疮（SLE）患者抗核抗体（ANA）及首发临床表现在不同性别、年龄间的分布差异和特点。

方法 回顾性调查和分析 2015 年 1 月至 2018 年 12 月 SLE 住院患者 263 例，收集患者的临床资料信息，包括年龄、性别、起病时首发临床表现、抗核抗体（ANA）及荧光核型实验结果等信息。采用线性免疫印迹法进行 ANA 谱检测，间接免疫荧光法（IIF）进行 ANA 免疫荧光检测，荧光显微镜下判读荧光核型。对收集的资料信息进行统计学分析。

结果 SLE 患者 ANA 阳性率为 94.29%，不同性别、年龄组间 ANA 阳性率无显著性差异（P > 0.05）；ANA 免疫荧光核型以核颗粒型最为多见（64.64%）；核颗粒型和着丝点型 2 种核型阳性率在不同年龄组间差异具有统计学意义（P< 0.05），≤35 岁年龄组的核颗粒型阳性率明显高于≤50 岁年龄组及> 50 岁年龄组的阳性率；> 50 岁年龄组的着丝点型阳性率（8.00%）明显高于≤35 岁年龄组(3.27%）及≤50 岁年龄组（4.39%）；女性患者 Ro-52 和 NUC 抗体阳性率均显著高于男性患者阳性率（P < 0.05）；≤35 岁年龄组抗组蛋白抗体阳性率（39.34%）显著高于≤50 岁年龄组（21.98%）和 > 50 岁年龄组阳性率（20%）；SLE 患者首发临床表现中肾损害阳性率最高（34.60%），其次为皮肤损害（23.19%）和关节炎（19.39%）。男性患者皮肤损害（41.46%）和神经系统症状（7.31%）的阳性率显著高于女性患者（19.82%，0.45%），女性患者关节炎阳性率（21.62%）显著高于男性患者（7.31%），差异具有统计学意义（P < 0.05）。

结论 SLE 患者 ANA 核型、ANA 谱和首发临床表现分布具有性别和年龄差异性。SLE 患者抗核抗体和临床表现特点，可为 SLE 的早期诊断和治疗提供重要参考依据。

PU-3021

梅毒螺旋体阳性患者与其血清学检测结果相关性分析

黄进梅
南方医科科大学皮肤病医院

目的 探讨梅毒螺旋体阳性患者与血清学检测结果相关性。

方法 选择临床症状怀疑梅毒感染患者，对其进行梅毒螺旋体暗视野检查、梅毒螺旋体明胶颗粒凝集试验（TPPA）和甲苯胺红不加热血清试验（TRUST），部分患者进行 2 型单纯疱疹病毒核酸检测或抗体检测。

结果 怀疑梅毒感染的患者 953 例中 60 例暗视野检查可见梅毒螺旋体，其中 TPPA 阳性 35 例阳性率 58.3%、TRUST 阳性 24 例阳性率 40.0%。53 例一期梅毒患者 TPPA 阳性 28 例阳性率 54.7%、

TRUST 阳性 17 例阳性率 32.1%；7 例二期梅毒患者 TPPA 和 TRUST 均为阳性。41 例梅毒螺旋体阳性患者中有 16 例合并 2 型单纯疱疹病毒感染，阳性率达 39.0%。

结论 梅毒螺旋体阳性的一期梅毒患者其血清学检测结果阳性率较低，但 TPPA 阳性率明显高于 TRUST；一期梅毒患者出现临床症状时间与 TPPA、TRUST 阳性率和滴度呈正相关。梅毒螺旋体暗视野检查法对于一期梅毒（尤其早期）患者的及时诊断、及早治疗、减少传播具有重要意义。梅毒患者合并单纯疱疹 2 型感染率高，应引起临床的高度重视。

PU-3022

浅谈方舱医院检验组规划建设和管理

袁改玲、李蓉
新疆生产建设兵团第五师医院

背景 2020 年 2 月，为了应对武汉发生的新型冠状病毒蔓延，国家卫健委及相关单位在武汉建立了武汉火神山医院、武汉雷神山医院，以及 14 所方舱医院。[1]新型冠状病毒肺炎疫情在武汉暴发后，方舱医院在阻止疫情蔓延扩散、落实"应收尽收"战略方面发挥了重要作用。武汉东西湖方舱医院作为武汉市首批投入使用的 3 家方舱医院之一，由武汉大学附属中南医院托管，国家紧急医学救援队组建，通过明确定位、合理布局、完善组织架构、健全规章制度、加强院内感染防控、做好支撑保障等举措，有效完成了轻症患者的收治任务。本文作者就所参与的方舱医院检验组的管理，浅谈方舱检验组的规划建设和管理。就进一步完善应急救治体系提出建议，国内救援医学以及国外救援医疗建立方舱医院提供较完善的检测实验方案和布局。

新冠肺炎具有高传染性、潜伏期长的特性，致使在早期不容易引发重视，加上防控初期的措施不力，信息不畅通，导致医疗资源被不断挤压。当时，大量的轻症疑似患者无法确诊，只能居家隔离，易造成次生的家庭聚集性传染，重症患者也不能及时收入专科医院接受治疗。 在这种情况下，有关专家向中央建议建立方舱医院，将大量的轻症确诊患者集中收治。事实证明，方舱医院在控制疫情上发挥了关键作用。目前，武汉的方舱医院已经全部关闭，世卫组织表示，当前多个国家床位紧张，可以借鉴“方舱医院”的方式对轻症患者进行集中隔离。方舱医院的大规模使用，对于整个疫情的防控和逆转具有重要意义，也为今后的医改乃至社会治理提供了思路。作为新冠诊疗的重要辅助组－临床检验组，承担着初筛、鉴别、确诊、分型、治疗监测的重要职责。如何在传染病条件下能够更好更快更安全的开展检验工作，一直是我们研究的课题。总结方舱医院检验组运行规划、质量控制、实验室检查，对进一步完善传染病疫情暴发期的方舱医院医疗检测体系，具有重要的现实意义。

遗传代谢病氨基酸和酰基肉碱的方法学验证

张洋
吉林金域医学检验所有限公司

目的 本文对遗传代谢病氨基酸和酰基肉碱检测进行方法学验证，以保证检测结果的准确性，为人类健康保驾护航。

方法 应用仪器为 API3200 MD。室内质控品是自配质控。通过准确度、精密度、灵敏度等进行方法学验证。准确度选用集团临床样品比对和集团 PT 比对两种方式。精密度：批内精密度及批间精密度使用自配质控样品，分别以 QC-AA-L、QC-AA-H、QC-AC-L、QC-AC-H 作为低、高两水平氨基酸及酰基肉碱血片；计算 8 种氨基酸和 14 种酰基肉碱指标检测结果的平均值及相对标准偏差（RSD）；灵敏度：混合收集同批次处理好的样品溶液，用流动相将该样品溶液按：原倍、1：2、1：4、1：8、1：16、1：32、1：48、1：64 稀释，最终确定氨基酸和酰基肉碱内标的响应下限。

携带效应：选取自配高浓度水平样品，分别以 QC-AA-H 表示高浓度氨基酸样品，QC-AC-H 表示高浓度酰基肉碱样品，与空白样本一起进行处理，氨基酸及酰基肉碱分别按照空白-空白-高浓度样本-空白-高浓度样本-空白-高浓度样本-空白-高浓度样本-空白-高浓度样本-空白-高浓度样本-空白进行上机检测。

结果 所有临床样本临床判读与集团判读一致，PT 检测结果与参考物质来源机构提供的结果一致。批内精密度与批间精密度均小于 25%。氨基酸和酰基肉碱内标的响应下限。空白样本的响应信号低于参考下限的响应信号。

结论 通过对批内、批间精密度的验证实验，其准确度、精密度、灵敏度、携带效应等均满足检测要求。新生儿遗传代谢病的检测有助于实现早筛查、早诊断、早治疗；减少疾病对家庭带来的经济与精神的压力，减少疾病对患儿带来的疼痛，保证患儿的健康成长。

Application of the sigma metrics to evaluate the analytical performance of cystatin C and design a quality control strategy

Qian Liu、Fumeng Yang
The Second People's Hospital of Lianyungang

Background Sigma metrics are commonly used to evaluate laboratory management. In this study, we aimed to evaluate the analytical performance of cystatin C using sigma metrics and to develop an individualized quality control scheme for cystatin C levels.

Methods Bias was calculated based on the samples used for the external quality assessment. The coefficient of variation was calculated using 6 months of internal quality control (IQC) measurements at two levels, and desirable specification derived from biological variation was used as the quality goal. The sigma value for cystatin C was calculated using the above data. The IQC scheme and improvement measures were formulated according to the Westgard sigma standards for batch size and quality goal index (QGI).

Results The sigma values for cystatin C, for quality control levels 1 and 2, were 3.04 and 4.95, respectively. The 13s/22s/R4s/41s/6x multi-rules (N=6, R=1), with a batch size of 45 patient samples, were selected as the IQC schemes for cystatin C. With different levels of cystatin C, the power function graph showed a probability for error detection of 94% and 100% and a probability for false rejection of 4% and 2%, respectively. According to the QGI of cystatin C, its precision needs to be improved.

Conclusions With a "desirable" biological variation of 6.50%, the Westgard rule $1_{3s}/2_{2s}/R_{4s}/4_{1s}/6_{x}$ (N=6, R=1, batch size of 45) with high efficacy for determining the detection error is recommended for individualized quality control schemes of cystatin C.

PU-3025

Distribution of urinary N-acetyl-beta-D-glucosaminidase and the establishment of reference intervals in healthy adults

Qian Liu、Fumeng Yang
The Second People's Hospital of Lianyungang

Background Urinary N-acetyl-beta-D-glucosaminidase (NAG) plays an important role in the early diagnosis and progression of diseases related to renal tubular injury. We detected the urinary

NAG concentration, assessed the preliminary statistics of its distribution, and established reference intervals for healthy adults in China using the rate method.
Methods A total of 1,095 reference individuals (aged 20 to 79 years) met the requirements for inclusion in this study. Urinary NAG concentrations were detected using an AU5800 automatic biochemical analyser with its matched reagents. The Kolmogorov-Smirnov test was used to analyse the normality of the data. According to the guidelines of C28-A3 and WS/T 402-2012, the reference intervals of urinary NAG were established using the nonparametric percentile method (unilateral 95th percentile).
Results The urinary NAG data showed a non-normal distribution. The distribution of urinary NAG was significantly different by sex and age. Therefore, the reference intervals of urinary NAG were established using the rate Method males (aged 20-59 years) <19.4 U/L (90% CI: 18.0–20.3 U/L); males (aged 60-79 years) <22.3 U/L (90% CI: 20.2–22.6 U/L); females (aged 20-59 years) <15.7 U/L (90% CI: 15.2–16.5 U/L); and females (aged 60-79 years) <21.4 U/L (90% CI: 20.3–22.3 U/L).
Conclusions We established preliminary reference intervals of urinary NAG for healthy adults in China to provide guidance for health screening, auxiliary diagnosis and treatment monitoring of renal tubule-related diseases.

PU-3026

Application of a six sigma model to the evaluation of the analytical performance of the assays of enzymes in serum and the design of a quality control strategy: a multicentre study

Qian Liu、Fumeng Yang
The Second People's Hospital of Lianyungang

Background We aimed to apply a six sigma model to the evaluation of the analytical performance of the assays of enzymes in serum, design of individualized quality control schemes and development of the improvement measures for multicentre laboratories using the detection platform based on an automatic AU5800 biochemical analyser.
Methods The internal quality control (IQC) and external quality assessment (EQA) data were collected and analysed by calculating the sigma values for the assays of enzymes in the serum based on the coefficient of variation, bias and allowable total error. Normalized sigma method decision charts for the assays of enzymes in the serum were generated using these parameters. IQC schemes and improvement measures were defined using the Westgard sigma rule with batch size quality control (QC) at two levels. The quality goal index (QGI) was used to assist with identification of the reasons (bias problems, precision problems or their combination) that affect the analytical performance of the analytes (sigma<6).
Results Sigma values for the assays of enzymes in the serum were significantly different at various enzyme concentrations, and the differences between the laboratories in the levels of the same analytes were also observed. Individualized quality control schemes were designed for each laboratory; for example, the sigma values ALT (Lab A) were more than six sigma, and 1_{3s} (N=2, R=1) with a batch size of 1000 patient samples was selected. Additionally, improvement measures for the analytes (sigma<6) were provided for each laboratory.
Conclusions The six sigma model can visualize the performance of the assays of enzymes in the serum to design individualized IQC schemes and provide strategies for continuous quality improvement for each laboratory.

PU-3027

基于六西格玛模式评价糖化血红蛋白的分析性能及质控策略的设计

杨伏猛、刘倩
连云港市第二人民医院

目的 应用六西格玛模式评价糖化血红蛋白(HbA1c)的分析性能，并初步建立 HbA1c 项目的室内质控策略和质量改进措施。
方法 收集本实验室 HbA1c 项目 2020 年国家卫健委临检中心室间质评数据及 2020 年 1 月至 6 月两个浓度水平的室内质控数据，并结合四个不同来源的允许总误差(TEa)分别计算 HbA1c 项目的 σ 水平，同时应用标准化的西格玛性能验证图进行标示。并依据具有批长度的 Westgard 西格玛规则流程图和质量目标指数(QGI)，制定 HbA1c 项目的室内质控策略和质量改进方案。
结果 基于西班牙室间质评标准和德国 RiliBAK 标准作为质量目标时，HbA1c 的分析性能均处于“世界一流”水平，而基于“适当”生物学变异和我国室间质评标准作为质量目标时，则 HbA1c 的分析性能分别处于“不可接受”和“优秀”水平。本研究依据我国室间质评标准作为质量目标，同时结合具有批长度的 Westgard 西格玛规则，初步建立以下质控策略：选择 $1_{3s}/2_{2s}/R_{4s}$ 多规则(N=2)且分析批长度为 450 个患者的样本作为 HbA1c 的室内质控方案。且 QGI 计算结果显示，HbA1c 项目的偏倚是影响其分析性能的主要因素，需优先在正确度的提升方面制定相应的改进措施。
结论 6σ 模式能够客观评价 HbA1c 项目的分析性能，且在实验室质控策略的设计和检测质量的改进方面具有重要的指导意义。

PU-3028

基于六西格玛模式评价血常规项目的分析性能及质控策略的设计

刘倩、杨伏猛
连云港市第二人民医院连云港市肿瘤医院

目的 应用六西格玛(6σ)模式评价血常规项目的分析性能，并建立血常规项目个性化的质控方案和质量改进措施。
方法 收集本实验室血常规项目 2020 年江苏省卫健委临检中心室间质评数据及同期室内质控数据，以“适当”生物学变异导出的质量规范作为实验室允许总误差(TEa)，计算各项目的 σ 值，同时应用标准化的 σ 性能验证图进行标示。并依据具有批长度的 Westgard 西格玛规则和质量目标指数(QGI)，分别制定各项目个性化的室内质控方案和质量改进措施。
结果 以生物学变异数据作为质量目标，白细胞计数(WBC)项目的分析性能达到“世界一流”水平，其余项目则处于“临界”至“优秀”之间。依据具有批长度的 Westgard 西格玛规则，WBC 项目选择 1_{3s} 规则(N=2)且分析批长度为 1000 个患者的样本作为其室内质控方案；红细胞计数(RBC)项目选择 $1_{3s}/2_{2s}/R_{4s}/4_{1s}$ 多规则(N=4)且分析批长度为 200 个患者的样本作为其室内质控方案；血红蛋白(Hb)项目选择 $1_{3s}/2_{2s}/R_{4s}$ 多规则(N=2)且分析批长度为 450 个患者的样本作为其室内质控方案；血细胞比容(HCT)和血小板计数(PLT)项目选择 $1_{3s}/2_{2s}/R_{4s}/4_{1s}/6_X$ 多规则(N=6)且分析批长度为 45 个患者的样本作为其室内质控方案。此外，Hb 和 HCT 需要优先改进精密度；RBC 和 PLT 则需同时改进精密度和正确度。
结论 6σ 模式能够客观评价临床血常规项目分析性能，其在帮助实验室质控策略的设计和质量改进方面具有重要的指导意义。

PU-3029

食管癌淋巴细胞亚群的临床意义

韩景银
东营市人民医院

目的 探讨食管癌患者 CD3+细胞、CD4+细胞、CD8+细胞、NK 细胞的表达及临床意义。
方法 回顾性分析 2015 年 1 月至 2020 年 1 月东营市人民医院收治的 80 例食管癌患者资料,选取 40 名正常人作为阴性对照。运用流式细胞术仪检测食管癌及健康人群的外周血淋巴细胞亚群,探讨淋巴细胞亚群中 CD3+, CD4+, CD8+，NK 细胞与食管癌临床特征的关系。
结果 与阴性对照组相比，食管癌患者 CD4+细胞比例降低，[(31.38±3.62)%vs(37.23±4.01)% ,P=0.012] ，CD8+细胞比例升高[(41.52±4.21)%vs(32.31±4.12) %, P=0.002]。NK 细胞和 CD4/CD8 比值均降低。在不同分期的食管癌组中，I 期，II 期， III 期， IV 期食管癌中，CD3+、CD4+、NK 及 CD4+/CD8+呈现递减趋势,CD8+呈现递增趋势,差异具有统计学意义(P <0. 05). 单因素分析提示，CD3+细胞、CD4+细胞、CD8+细胞、NK 细胞及 CD4+/CD8+均与食管癌 T 分期及 N 分期呈显著相关(P <0. 05)。多因素分析提示，CD4+/CD8+与食管癌患者预后相关，CD3+细胞、CD4+细胞、CD8+细胞、NK 细胞无明显相关性。
结论 食管癌患者 CD3+细胞，NK 细胞及 CD4/CD8 比值降低提示存在免疫功能失调，随着肿瘤分期增加，免疫功能越差，预后越差。

PU-3030

广州市 2017—2019 年流感暴发疫情及病原学特征分析

李美霞、潘心红
广州市疾病预防控制中心

目的 对广州市 2017－2019 年流感暴发疫情和病原学特征进行分析，为流感防控策略制定提供依据。
方法 收集流感暴发疫情资料进行统计分析，采集流感暴发疫情标本,采用多重实时荧光定量 PCR 方法检测流感病毒核酸。
结果 2017—2019 年我市分别报告流感样病例暴发疫情 110、75 和 183 起。2017 年 110 起疫情采集咽拭子共 1250 份，经检测 B 型流感 76 起，A(H3N2)型流感 16 起，A(H1N1)和 A(H3N2)混合型流感 4 起，A(H1N1)型流感 3 起， B 型和 A(H1N1)型混合型流感 2 起， B 型和 A(H3N2) 型混合型流感 1 起，阴性 8 起。2018 年 75 起暴发疫情共采集咽拭子 915 份，经检测 A（H1N1）型流感 54 起，A（H3N2）型流感 2 起，B 型流感 12 起，阴性 7 起。2019 年 183 起疫情采集咽拭子共 2490 份，经检测 A(H1N1)型流感 15 起，B 型流感 37 起，A(H3N2)型流感 11 起，阴性 9 起，混合感染 11 起。2017 年和 2018 年疫情均呈现双峰流行的特点，其中 2017 年流行高峰出现在 4—6 月和 11 月—次年 1 月，2018 年流行高峰为 4—5 月和 9—12 月。2019 年疫情呈现三个高峰，分别发生在 1 月、3-6 月和 12 月。2017 年疫情流行株为 B 型流感病毒和甲型 H3N2 亚型，2018 年为甲型 H1N1 流感病毒，2019 年为 B 型和 A(H3N2)型流感病毒。疫情主要发生在中小学及托幼机构等人群密集场所，尤其是小学，是流感暴发疫情的高发场所。
结论 广州市 2017—2018 年流感疫情呈双峰流行，高峰期出现在 4—6 月和 10—12 月，2019 年呈三个高峰，分别发生在 1 月、3-6 月和 12 月。不同流感病毒型别交替流行, 学校和托幼机构等集体单位为暴发事件发生的高风险场所。加强集体单位培训、落实疫情报告、晨检、通风和隔离消毒各项防控措施，加强中小学学生和托幼机构儿童流感疫苗接种有利于疫情防控。

异嗜性抗体对自身抗体检测结果干扰的处理和分析

梁晓玲[2]、连鑫磊[1]
1. 济南金域医学检验中心有限公司
2. 青岛金域医学检验所有限公司

目的 分析及处理人体内异嗜性抗体对自身抗体干扰，导致测定结果的假阳性。
方法 分别采用更换检测系统和异嗜性抗体阻断剂对 1 例女性患者样本进行处理检测，比较更换检测系统和使用异嗜性抗体阻断剂前后自身抗体检测结果的差异。
结果 受异嗜性抗体干扰的自身抗体，主要是 ds-DNA、His、Jo-1、Nuclear、P0、SSA、PM-Scl、Sm、SSB/La、Scl-70、AMA-M2、nRNP/Sm、GBM、MPO、PR3、β2-G、β2-M 等检测结果在更换检测系统和使用异嗜性抗体阻断剂后结果为正常值。
结论 该患者血清自身抗体检测受到异嗜性抗体的干扰，导致结果假阳性，在更换了检测系统和使用了非特异性吸附特殊试剂处理样本解决了异嗜性抗体的对检测结果的干扰。

PU-3032

非标准磷脂抗体在不良妊娠患者中阳性率分析

梁晓玲
青岛金域医学检验所有限公司

目的 通过对不良妊娠患者血液中非标准磷脂抗体阳性率分析，了解非标准抗体在磷脂综合征中的临床意义，为标准抗体阴性的磷脂综合征的诊断提供科学依据。
方法 选取 2020 年我检验中心共接收的 15291 例样本进行研究，分析不同送检类型的医疗机构各类抗体的阳性率情况。
结果 15291 例样本中某不孕不育专科医院送检量为 629 例，磷脂非特异性抗体阳性率为 31.16%，其他类型医院送检量为 14662 例，阳性率为 7.50%。同一患者超过两项抗体阳性占比情况，某不孕不育专科医院为 21.94%，其他类型医院为 14.27%。某不孕不育专科医院，各类非特异性磷脂抗体阳性率为 PT-IgG 8.94%、PT-IgM 21.86%、PSPT-IgG 1.71%、PSPT-IgM 12.68%、PS-IgG 0.78%、PS-IgM 2.58%、PI-IgG 2.60%、PI-IgM 1.82%，其他类型医院，各类非特异性磷脂抗体阳性率为 PT-IgG 7.25%、PT-IgM 14.38%、PSPT-IgG 1.40%、PSPT-IgM 9.25%、PS-IgG 0.61%、PS-IgM 0.62%、PI-IgG 1.74%、PI-IgM 1.19%。
结论 磷脂非特异性抗体在不良妊娠患者中阳性率较高，不孕不育专科医院的阳性率显著高于其他类型医院，且多项抗体阳性率占比具有显著性差异，PT-IgG、PT-IgM 、PSPT-IgG、PSPT-IgM、PS-IgG 、PS-IgM、PI-IgG、PI-IgM 在不孕不育专科医院的阳性率均高于其他类型医院，其中 PT-IgM、PSPT-IgM、PS-IgM 具有统计学差异（P＜0.05）。

国际输血协会 3 个新增红细胞血型系统的研究回顾（2019）

何克宇、徐婧、张敏
东南大学附属中大医院

国际输血协会（International Society of Blood Transfusion，ISBT）在 2019 年 8 月注册了 3 个全新的血型系统：KANNO 血型系统、Sid 血型系统、CTL2 血型系统（待定）。ISBT 此次更新的主要原因是，2019 年研究者们通过全基因组关联研究和全外显子组测序，先后发现了 KANNO

血型系统（rs1800014）和 Sid 血型系统（rs7224888）表面抗原的重要单核苷酸多态性（single nucleotide polymorphism，SNP）位点，获得了这 2 种血型系统的遗传学证据支持，其结果也与目前的免疫学研究结论相一致。此外，在 2017 年研究者首次发现红细胞血影（细胞膜）上也存在 CTL2 抗原，但由于缺少血清学和遗传学证据，CTL2 血型系统目前仍为待定状态。三种血型系统中，Sid 血型系统对输血安全具有重要意义。极少数人红细胞膜表面存在一种 Cad 抗原，亦称 Sd（a^{++}）抗原，能够与抗-Sd^a 抗体产生强烈的作用，引起溶血反应。此次新增血型系统的最关键证据是血型抗原编码基因和重要 SNP 位点的发现和验证。随着基因测序、基因芯片等基因组学方法的普及，未来高频抗原和新抗原亚型的遗传学验证仍将是血型研究的重要突破口。

PU-3034

强直性脊柱炎患者 HLA-B27 基因及分型、T、B 及 NK 淋巴细胞亚群检测的临床意义

刘倩、马亮
中日友好医院

目的 探讨强直性脊柱炎(Ankylosing spondylitis ,AS)患者人类白细胞抗原 B27(HLA-B27)基因、T、B 及 NK 淋巴细胞亚群检测的临床意义。
方法 收集中日友好医院 2018～2020 年期间确诊的 121 例 AS 患者以及 120 例健康体检人群外周血样本，采用荧光定量 PCR 染料法检测 HLA-B27 基因及分型，流式细胞术方法检测其标记为 T、B 及 NK 的淋巴细胞亚群。
结果 121 例 AS 患者中 HLA-B27 基因阳性 101 例，其中 HLA-B2704 型 58 例，HLA-B2705 型 40 例，HLA-B2702 型 1 例，HLA-B2704*HLA-B2705 复合杂合子 2 例。AS 组 HLA-B27 基因阳性率明显高于健康对照组（83.5%vs2.5%,P<0.01）。AS 组 CD3+CD8+(Ts)%、CD3-CD16+CD56+(NK)%明显低于健康组（P<0.01），AS 组 CD3+CD4+(Th)%、Th/Ts、CD19+CD5+(B1)%、CD19+CD5-(B2)%明显高于健康组（P<0.01）。HLA-B2705 型 AS 组 T%、Th%、Th/Ts 明显高于 HLA-B2704 型 AS 患者（P<0.01），B1%、NK%明显低于 HLA-B2704 型 AS 患者（P<0.01）。101 例 HLA-B27 基因阳性与 20 例 HLA-B27 基因阴性 AS 患者 T、B 及 NK 淋巴细胞亚群差异暂无统计学意义（P>0.05）。
结论 AS 患者淋巴细胞分布异常，免疫功能紊乱。检测 AS 患者 HLA-B27 基因分型及 T、B、NK 淋巴细胞亚群对于强直性脊柱炎发病机制、诊断、评估免疫状态等具有重要意义。

PU-3035

Analysis of Influence Factors of Intra-laboratory Turnaround Time in Emergency Blood Routine specimens

Fengfeng Zhao
Department of Clinical Laboratory of Zhongda Hospital, Southeast University

Objective A COX proportional hazards regression model was established to analyze the factors influencing the intra-laboratory turnaround time in emergency blood routine specimens
Methods In the retrospective study, 3,986 emergency blood specimens from October 2015 to August 2016 in the Department of Clinical Laboratory of Zhongda Hospital, Southeast University were used to randomly select 4 weeks of data. The records of Samples included determination date, sample statuses, times of arrival, times of test, processing time, project portfolios, measurement period, operators, 10 minutes treatment results, and delay factors. SPSS 18.0 was used for statistical analysis. The COX single factor analysis was performed for each of the above indicators, and COX multi-factor regression analysis was performed step by step.

Results Within 10 minutes, 3789 reports were sent, accounting for 95.1%. The median actual processing time of the specimens was 7.3 min. The single factor analysis of the COX proportional hazards regression model showed that the sample status, times of arrival, measurement period, operator and delay factors had statistically significant delays in sample turnaround time (P values were all less than 0.05); COX multi-factor regression analysis showed that the appropriate time of arrival was the favorable factor for shortening the sample turnover time (Wald=34.101, P=0.001). The non-normal measurement period and the handover factor were the negative factors for shortening the sample turnover time (Wald=17.210, 21.184, P= 0.001, 0.000), No. 3, No. 4 and No. 8 operators are favorable factors for shortening the sample turnover time (Wald=11.018, 13.219, 9.225, P=0.001, 0.001, 0.000), No. 2 operator was the unfavorable factors to shorten the sample turnaround time (Wald=27.163, P=0.001). There were no significantly different among other operators (P values were greater than 0.05).
Conclusion Time of arrival, measurement period, operator and delay factors are independent risk factors leading to the delay in the turnover time of the specimens in the laboratory. Other hospitals can establish the COX proportional hazards regression model according to specimen transport, testing procedures, and main influencing factors. To achieve a significant reduction in the laboratory specimen turnaround time and ensure that emergency and critically ill patients receive timely diagnosis and treatment, a quantitative evaluation of the various factors in the process of specimen processing lead to the extension of the laboratory specimen turnover time can be achieved.

PU-3036

血清 microRNA-26、microRNA-122 对原发性胆汁性肝硬化的诊断价值

张帅
青海大学附属医院

目的 观察原发性胆汁性肝硬化（primary biliary cirrhosis, PBC）患者血清 miR-26 和 miR-122 的含量表达水平，探讨血清 miR-26 和 miR-122 对于原发性胆汁性肝硬化的诊断价值和意义。
方法 本研究选取 33 例 PBC 患者，另选取 10 例慢性乙肝患者（chronic hepatitis B,CHB）作为疾病对照组及 7 例健康对照者（healthy control, HC）作为健康对照组，采用实时荧光定量 PCR 方法检测患者样本中血清 miR-26 和 miR-122 的表达水平，比较血清 miR-26 和 miR-122 在 PBC 患者和健康对照组之间以及疾病对照组之间存在的表达差异，分析血清 miR-26 和 miR-122 对 PBC 患者的诊断价值，并与现有诊断指标进行比较，探讨血清 miR-26 和 miR-122 对于原发性胆汁性肝硬化的诊断价值。
结果 原发性胆汁性肝硬化 PBC 患者血清 miR-26 和 miR-122 表达水平明显低于健康对照组（分别为 P=0.001, P <0.001）和疾病对照组（P=0.006, P=0.001）。血清 miR-26 和 miR-122 对原发性胆汁性肝硬化具有较好的诊断价值（AUC=0.913，AUC=0.963）和鉴别诊断价值（AUC=0.809，AUC=0.857）。血清 miR-26 和 miR-122 与现有诊断指标谷丙转氨酶（ALT）、白蛋白（ALB）、碱性磷酸酶（ALP）、谷氨酰转移酶（GGT）和球蛋白（GLOB）等与肝功能相关的指标都具有很好的相关性。
结论 血清 miR-26 和 miR-122 有望成为 PBC 患者明确诊断的潜在诊断标志物。

PU-3037

Atorvastatin inhibits inflammation through the cysteine-rich motor neuron 1 (Crim1) pathway in human umbilical vein endothelial cells

Xuehui Liu[1]、Shaoguo Wu[1]、Yanwei Hu[2]
1. Guangzhou Twelfth People's Hospital，Guangzhou，Guangdong
2. 广州市妇女儿童医疗中心

Background and Aims Inflammation has been recognized to have a role in the process of atherosclerosis. Although evidence indicates that atorvastatin has anti-inflammatory effects besides cholesterol-lowering ability in atherosclerosis, the specific mechanisms of atorvastatin in inflammation requires further discussion.
Methods Here, we explored the effects and mechanisms of atorvastatin on inflammation in human umbilical vein endothelial cells through quantitative real-time PCR and western blot analyses. In addition, microarray analysis and immunohistochemistry were used to analyze the expression of Crim1 in atherosclerotic plaques.
Results Cysteine-rich motor neuron 1 (Crim1) mRNA was upregulated 36.68 fold ($P<0.001$), and Crim1 protein was upregulated 3.63 fold ($p<0.001$), in human atherosclerotic plaques compared with normal intima tissues. Bioinformatics analysis revealed Crim1 co-expression with IL-6, TNF-α and NF-κB. Atorvastatin dramatically downregulated the mRNA and protein levels of Crim1 and inhibited inflammation by decreasing the levels of IL-6, TNF-α and NF-κB. Knockdown of Crim1 significantly inhibited IL-6, TNF-α and NF-κB expression, whereas overexpression of Crim1 upregulated IL-6, TNF-α and NF-κB expression. In addition, the inhibitory effects of atorvastatin on inflammation were markedly offset by overexpression of Crim1.
Conclusion These results demonstrated that atorvastatin decreases inflammation via the Crim1 pathway in HUVECs, thus, providing a new prospect for the use of atorvastatin for non-lipid lowering functions, and new directions for the prevention and therapy of atherosclerosis.

PU-3038

Cut-off 值的建立与验证

谢屿平、曹颖平
福建医科大学附属协和医院

Cut-off 值，即临界值，是临床检验免疫中"阴性"与"阳性"间的分界线。厂家在供应检测试剂盒时，会提供本试剂盒的 Cut-off 值,他们提供的 Cut-off 值通常是一成不变的固定值，但即使是试剂盒批次之间生产工艺也存在不均一的情况，以及不同实验室环境，受检人群的种族、地域等多种影响因素下，都用同一 Cut-off 值是不合理的，因此，各个医院诊断实验室在投入之前未开展的检验项目前，应该在厂家提供的 Cut-off 值基础上，自行建立适合该实验室的 Cut-off 值，美国临床病理学会(College of American Pathologists, CAP)推荐每六个月验证一次，以减少漏诊与误诊的发生，达到较高的准确度。本文就 Cut-off 值的建立与验证方法作一综述，以供实验室的规范化与标准化管理。

PU-3039

细菌性肝脓肿患者的细菌感染情况及临床疗效分析

陈喻
自贡市第一人民医院

目的 调查细菌性肝脓肿患者的细菌感染情况，分析临床治疗效果情况，探究其对临床指导用药的意义。
方法 利用细菌分离培养技术和 VITEK 2-Compact 微生物鉴定药敏系统，对 2013 年 1 月-2019 年 4 月间于自贡市第一人民医院就诊的细菌性肝脓肿患者的临床表现、感染病原体种类和耐药性，进行回顾性分析。
结果 共有 132 例患者被诊断为细菌性肝脓肿，且多为老年男性常有其他的并发症，最为常见的是糖尿病。132 例患者，其中送检的有 108 例，送检率 81.8%，有 58 例检出病原菌，检出率为 53.7%。共分离出 65 株非重复菌株，包括肺炎克雷伯菌（46 株），大肠埃希菌（8 株）。
结论 大多数细菌性肝脓肿是由肺炎克雷伯菌引起的，其次是大肠埃希菌，其中大量的菌株都对常见的抗生素表现出敏感。细菌的感染情况与治疗效果有一定的相关性，在治疗细菌性肝脓肿时，需根据病原学和药敏试验特点选择合适的抗菌药物。

PU-3040

CKD 患者 25(OH)D3、骨密度情况及二者关系

邵茁
中日友好医院

目的 了解 CKD 人群 25(OH)D3、骨密度情况、二者关系及影响因素。
方法 对住院 CKD 患者的临床资料进行回顾性分析。分析 25(OH)D3 水平与骨密度的关系，并将骨密度与其他临床指标进行相关分析，应用 Logistic 方程寻找低骨量的影响因素。
结果 CKD5 期患者股骨颈、桡骨骨密度低于对照组及 CKD 余各期患者。CKD 各期患者各组之间股骨颈低骨量的发生率存在差异($\chi2=8.635$，$P=0.035$）。CKD5 期患者股骨颈低骨量的发生率高于健康对照，差异具有统计学意义。股骨颈骨密度 T 值与年龄、性别、心脑血管疾病、BMI、Hb、CRP、ALB、eGFR、TC、24 小时尿蛋白相关，年龄、性别，BMI 是股骨颈低骨量的影响因素。桡骨骨密度 T 值与年龄、DM、心脑血管疾病、CRP、FIB、BMI、ALP、eGFR 相关，年龄、ALP 是桡骨低骨量的影响因素。
结论 CKD 患者 25(OH)D3 水平处于较低状态，白蛋白、BAP、DM、P 是维生素 D 缺乏的独立危险因素。CKD5 期患者股骨颈骨密度下降，年龄、性别、BMI、ALP 是低骨量发生的独立危险因素。

PU-3041

2020 年吉林地区过敏原检测结果分析

陈超
吉林金域医学检验所有限公司

目的 近年来过敏性疾病逐渐增多，通过分析过敏原检测结果情况，对吉林地区针对过敏性疾病进行预防及干预进行提供帮助。
方法 采用免疫印迹法检测血清样本，收取吉林地区样本，针对对 20 种过敏原进行检测，包括 10 种食入性过敏原：榛子/开心果、蟹、虾、鳕鱼、西红柿、牛奶、大豆、蛋黄/蛋清、花生、小麦；

以及 10 种接触性过敏原**结果** 狗上皮、猫毛、普通豚草、艾蒿、律草、榆树、梧桐、霉菌混合、蟑螂、尘螨组合 1(屋尘螨/粉尘螨)；
结果 通过对吉林地区 2020 年过敏原结果进行整理及分析，发现食入性过敏原，牛奶的阳性率较高，其次是榛子/开心果、虾以及蟹等；接触性的过敏原，尘螨、狗上皮以及猫毛阳性率较高，但大都数过敏原在不同年龄组间的差异有统计学意义（P<0.05），随着年龄的增长牛奶、蛋黄/蛋清以及尘螨等的阳性率明显下降。
结论 伴随生态环境的变化，饮食结构与生活习惯有所不同，食品添加剂被广泛应用于日常食品中，室内装修材料的更迭换代，由此引发的各种过敏性疾病逐年增加，给患者个人及其整个家庭造成了困扰。过敏性疾病的病因复杂多样，不容易明确过敏原的种类，给临床治疗和疾病防控造成困扰。为了明确过敏原种类并及时避免接触，除了询问病史、了解日常接触物品、观察临床表现外，过敏原检测成为辅助诊断过敏性疾病的重要手段，对吉林地区荨麻疹、过敏性鼻炎、湿疹等过敏性疾病辅助诊断以及干预有显著临床意义。

PU-3042

染色体核型分析实验室建设方案探讨

陈振朋
西安金域医学检验所有限公司

目的 随着诊疗水平的不断提高，遗传性疾病尤其是染色体疾病逐渐被认知和重视，染色体核型分析作为染色体病的一项重要筛查手段，在临床诊断中发挥重要作用。染色体核型分析制片实验室对环境要求非常高，甚至决定着着制片技术的成败，同时制片过程中使用的挥发性化学品、废液等影响工作人员的健康。同时不间断电力供应也是细胞培养成败的前提。因此合理设计实验室，不仅关乎到制片技术的成败，同时也关乎工作人员的健康。
方法 染色体核型分析实验室装修设计方案从以下几个方面考虑：
1. 实验室通风系统和外排系统；
2. 实验室电力系统；
3. 实验室密闭性设计；
4. 实验室地面防渗漏；
5. 实验室化学品使用和环境净化。
结果 根据实验室实际环境要求，通过对不同厂家比对，测试送风和排风量选择性价比高的送风和排风系统；因细胞培养需要在 37℃培不间断养数天，因此培养箱需连接 UPS 电源，若条件允许尽量配备独立供电的 UPS 电源；由于染色体核型分析在制片时对环境温湿度要求非常严格，制片过程中需整个实验室空间湿度至少达到 40%，温度需达到 24℃，位于南方的实验室需配备大功率抽湿机，而地处北方的实验室，一般加湿器无法满足整体湿度要求，多台配置又会影响实验环境温度，因此建议配备加湿毯；同时实验室应尽量封闭式设计，避免在实验过程中与外界环境有较多的空气流通，影响室内温湿度；另外，应配备化学品柜和通风橱，严格规定化学平的保存和使用，还需定期对实验室内环境进行净化，清除残存环境里的化学品，降低工作人员伤害。
结论 染色体核型分析实验室在设计时，在满足细胞培养和制片条件的同时，还应考虑降低人员伤害。

PU-3043

Serum-soluble ST2 as a novel biomarker reflecting inflammatory status and illness severity in patients with COVID-19

Zhikun Zeng
Zhongnan Hospital of Wuhan University

Aim The authors studied the role of soluble ST2 (sST2) in COVID-19 and its relationship with inflammatory status and disease severity.
Materials & Methods Serum levels of sST2 and interleukin (IL)-33, C-reactive protein (CRP), serum amyloid protein (SAA), IL-6 and procalcitonin (PCT), and T lymphocyte subsets from 80 subjects diagnosed with COVID-19 including 36 mild, 41 severe and three asymptomatic cases were tested.
Results Serum sST2 levels were significantly increased in COVID-19 patients, which were positively correlated with CRP, but negatively correlated with CD4 + and CD8 + T lymphocyte counts. Serum sST2 levels in nonsurviving severe cases were persistently high during disease progression.
Conclusion Serum sST2 level test is helpful for reflecting inflammatory status and illness severity of COVID-19.

PU-3044

Risk assessment and biosafety experience: How to minimize the nosocomial SARS-CoV-2 infection in clinical laboratory?

Zhikun Zeng
Zhongnan Hospital of Wuhan University

The coronavirus disease 2019 (COVID-19) pandemic, caused by the novel severe acute respiratory syndrome coronavirus-2 (SARS-CoV-2), is still ongoing. Early on during the COVID-19 outbreak, the healthcare workers (HCWs) working in the department of clinical laboratory in hospital have been facing high risk of developing COVID-19. Their daily work is to receive, test and analyse different types of specimens from patients, and also direct contact with patients through fingerstick or venous blood draw. This review assesses the potential infection risk and summaries the biosafety processes in clinical laboratory in Zhongnan Hospital of Wuhan University during the COVID-19 outbreak, aiming to promote the adoptable experience to minimize the nosocomial SARS-CoV-2 infection in clinical laboratory.

PU-3045

加强独立医检实验室的化学危险品管理

张岩
吉林金域医学检验所有限公司

目的 加强独立医检实验室化学危险品的管理，提高独立医检机构安全意识，强化化学危险品安全意识。

方法 ①制定健全的化学危险品管理制度及存储制度，根据相应的法律法规对化学危险品本身特点进行分类；②建立化学危险品管理委员会，针对管理、使用化学危险品人员应每年至少两次针对性培训及考核；③制定化学危险品的风险评估，通过风险评估来识别潜在未发生的危害；④建立可行有效的化学危险品应急防范预案。

结果 ①确定了化学危险品的危险特点以及储存方式，其中常规的化学危险品进行集中存放、统一管理；特殊的化学危险品应单独存放；所有的化学危险品应实行双人双锁制管理，并对出入库进行检查、验收、登记，进入化学危险品区域的人员必须实行防火措施，不仅规范了化学危险品的存储，也使这些危险品在使用时方便拿取，避免长时间接触；②通过全员培训，考核合格率达到 98%，提升了全员对化学危险品的认知，完善了个人防护措施及应急处置措施。③确定潜在风险，全员知晓率达到 100%，避免了因化学危险品而带来对人员、财产、环境等带来的危害。④应急预案的实施，使全员在遇到紧急情况时有可以及时、有效的应对，将危险和损失降到最低。

结论 综合上述，随着经济不断发展，独立医检实验室越来越多，随之化学危险品的使用量也跟随提升。医检实验室应加强对化学危险品的管理，重视化学危险品的危害，降低不必要的化学危险品事故。

PU-3046

POCT 技术在检验医学领域的应用与研究进展

李进
重庆医科大学

近年来，随着检验新兴技术的迅猛发展，POCT 技术已广泛应用于临床生化检验、血液学检验、分子生物学检验、微生物学检验、免疫学检验等领域中，它可通过与其它检查技术相结合，为临床疾病的诊治提供强有力的依据，是检验医学学科发展不可或缺的一门新兴技术。本文立足于 POCT 技术在检验医学领域的临床应用，简要阐述了 POCT 的概念和演化，详细介绍了 POCT 技术在检验医学领域应用的技术发展及最新研究成果，同时还探讨了 POCT 技术在临床应用中存在的问题及发展前景。

PU-3047

Case Report: Disseminated Talaromyces (Penicillium) marneffei infection in a Chinese Patient with nephrotic syndrome

Chenli Rao、Jieying Zhou、Guizhen Xu、Qiang Huang、Lin Zhang、Ting Fang
The First People's Hospital of Chenzhou Affiliated to University of South China

Background Talaromyces (Penicillium) marneffei is an important pathogenic thermally dimorphic fungus causing systemic mycosis in Southeast Asia. It is now widely recognized that the infection is not limited to HIV-infected patients, and an increasing number of Talaromyces marneffei infections have been reported among non-HIV-infected patients with impaired cell-mediated immunity, including autoantibodies against interferon-gamma, systemic lupus erythematosis, and use of novel targeted therapies. In this study we describe a case of fatal T. marneffei infection in a patient with nephrotic syndrome.

Case presentation A 44-year-old female, previously diagnosed with nephrotic syndrome and treated with prednisolone and tacrolimus (FK 506), was admitted to our hospital presented with fever, oral ulcer and diarrhea. Beforehand, she had been placed on antibiotic treatment in local

hospital. Laboratory results on admission showed kidney injury, glucose homeostasis alteration and inflammation response. CT scans showed bilateral pulmonary infiltrates, pleural effusion, and enlargement of the mediastinal and right axilary lymph nodes. The blood routine test showed thrombocytopenia and some yeast-like cells were found within leukocyte from the peripheral blood smear. Blood cultures drawn on admission grew fungi after 2 days of incubation. Fungal hyphae were discovered under microscope, suggestive of a disseminated infection with T. marneffei. Although our laboratory discovered the yeast cells on her admission and informed clinicians the suspicion of T. marneffei timely. The patient became severely exhausted and even suffered cardiac arrest on the morrow. It was unfortunate that she quitted continued therapy and discharged from hospital in view of poor outcome.

Conclusion T. marneffei infection usually occurred when patients with various autoimmune diseases received high-dose or prolonged treatment with T-lymphocyte-depleting drugs, including corticosteroids, cyclosporine, and tacrolimus, just as our case showed. The major clinical manifestation of this patient was fever, which shows the importance of differentiation between T. marneffei infection and other diseases (eg, mycobacterial, intracellular bacterial diseases) which have symptoms and signs that significantly overlap with it in non-HIV-infected individuals. This is especially true when the response to initial antibacterial treatment is unfavorable. So it would be important for clinicians to have a high index of suspicion on rare fungal infections such as T. marneffei infection in patients receiving immunosuppressor, and be familiar with the clinical characteristics and management of the infection among those at-risk individuals to avoid delay in diagnosis and treatment.

The laboratory diagnosis is performed by identifying the fungus by microscopy and culture from a variety of specimens. As shown in our case, T. marneffei can be found on direct examination of a peripheral blood smear in patients with disseminated disease, and it's relatively earlier than other diagnostic Methods Early diagnosis and appropriate treatment should result in clinical success and microbiological eradication, but delays in a timely diagnosis may result in a fatal outcome. Maybe there is a need to design an algorithm to evaluate such patients with stepwise laboratory investigations.

PU-3048

Using FOCUS-PDCA to improve the management of hazardous chemicals

Huali Li
The First Affiliated Hospital of Xi'an Medical University

Objective To standardize the management of hazardous chemicals by scientific management methods, improve the accuracy of registration of hazardous chemicals in and out of warehouse, as well as ensure the safety and accurate use of hazardous chemicals in clinical work.

Methods According to the FOCUS-PDCA procedure, the problems existing in hazardous chemicals storage and registration were analyzed, the improvement measures were formulated, the management system was improved, hazardous chemicals files were established, and the management of hazardous chemicals in and out of the warehouse was standardized and improved continuously.

Results Through the application of FOCUS-PDCA, the registration accuracy of hazardous chemicals was increased from 12.5% to 98.9%; It improves the staff's understanding and familiarity of hazardous chemicals, so as to ensure using them in clinical laboratory safely, timely and accurately.

Conclusion FOCUS-PDCA has a good effect on standardizing the entry, classification, and storage of hazardous chemicals, and plays an important role in achieving continuous improvement of medical quality and safety, which is worth promoting.

PU-3049

上海市临床实验室 13 个常规化学检测结果互认项目检测质量分析

蒋玲丽
上海市临床检验中心

目的 通过分析上海市临床实验室 13 个常规化学检测结果互认项目室内质量控制（internal quality control，IQC）和室间质量评价（external quality assessment，EQA）数据，了解互认和非互认实验室的检测质量。
方法 计算 13 个常规化学检测项目包括总蛋白（TP）、清蛋白（ALB）、丙氨酸氨基转氨酶（ALT）、天门冬氨酸氨基转氨酶（AST）、γ-谷氨酰基转移酶（GGT）、肌酐（CRE）、尿酸（UA）、尿素（URE）、总胆红素（TBIL）、总胆固醇（TC）、三酰甘油（TG）、铁（Fe）和镁（Mg）2019 年 IQC 数据累积变异系数（coefficient of variation，CV），以 WS/T 403-2012 临床生物化学检验常规项目分析质量指标为标准，评价互认和非互认实验室各项目 CV 合格率。计算 2019 年常规化学 EQA 数据，统计互认和非互认实验室各项目合格率。
结果 互认和非互认实验室 13 个项目 CV 合格率分别为 44.44%～100%和 43.58%～89.86%。GGT,TG，Mg，UA,AST，URE,TC 和 CRE 项目 CV 合格率在互认和非互认实验室比较差异有统计学意义（c2=5.197-13.636，P 值均<0.05）。互认和非互认实验室各项目 EQA 合格率分别为 97.22%～100%和 96.62%～100%,各项目互认和非互认组实验室比较差异无统计学意义（P 值均>0.05）。
结论 互认实验室检测质量优于非互认实验室，检验结果互认可以从市级公立医疗机构试点实施，通过监测 IQC 和 EQA 数据可作为检验结果互认动态监管的依据。

医疗实验室的计算机管理设计与优化研究

宋银森
郑州人民医院

随着人们生活水平的提高和社会的进步，医疗实验水平的高低与医疗实验的应用程度成为衡量医院业务水平的重要标志。引入计算机管理管理系统，不仅能医院的实验活动更加系统化，规则化；同时亦能加强医院对各科室及人员的信息统筹管理与协调。为了对智慧医疗实验室服务的计算机管理进行优化，找到最优解，我们基于 RBF 神经网络对本市医院的实验室计算机进行实验，为其他研究者提供了参考。通过采集相关数据，取得本文对现有的医疗实验室研究进行了归纳分析，总结了现行的实验室存在的问题和发展方向，利用 RBF 神经网络对这些模型进行修正，创新性的从而实现了一种具有效率高、低能耗、反应快等特点的医院实验室计算机管理优化系统。实验结果证明，通过 RBF 神经网络对实验室服务的计算机进行管理优化，计算机管理设计与优化效率有极大的提升，其速度比其他的算法计算快 30%以上，准确值也有极大的提高，比传统医疗实验室提高 20%左右。这表明，RBF 神经网络设计的智慧医疗实验室服务的计算机管理设计与优化可以在医院实验室建设中起到重要作用。

西藏地区某三甲医院临床用血分析及管理对策

陈艳美、王国洪、贡布、索朗央金
拉萨市人民医院检验科

目的 通过 2019、2020 年全年临床用血数据，分析西藏地区某三甲医院临床用血和管理现状，为医院三甲复审和突发重大公共卫生制定相应的输血管理方案和持续改进措施。
方法 统计拉萨某医疗机构 2019-2020 年全年临床用血信息，分析同期 2020 年住院、门急诊患者、手术患者用血量进行比较分析。
结果 2020 年住院人数与 2019 年基本持平，但输血率增加 4.1%；全血、悬浮红细胞输注量分别下降 75.4%、21.0%，血浆使用量增加 38.4%。开展互助献血和加强医院输血质量管理能有效缓解临床用血压力。
结论 新冠疫情对本院临床用血产生明显影响，全血用量下降，血浆用血量上升。通过互助献血和加强医疗机构临床输血管理能有效保证临床用血需求。

PU-3052

宫颈液基细胞学对子宫内膜癌的诊断

张雪莲
南京金域医学检验所有限公司

目的 探讨宫颈液基细胞学对子宫内膜癌尤其是Ⅰ型子宫内膜癌的检出和诊断线索。
方法 回顾 2010 年 12 月至 2019 年 12 月由本中心组织病理诊断为子宫内膜癌患者的术前宫颈液基细胞学涂片（进口耗材 38 例，国产耗材 90 例），对这些涂片中存在的诊断子宫内膜癌的线索及特征进行分析。
结果 128 例中阴性 30 例，非典型子宫内膜细胞(atypical endometrial cells AEM)57 例，宫内膜腺癌 39 例，阳性病例占 75%。1 级子宫内膜样腺癌中高达 72.9 %（35/48）的病例出现了具有诊断价值的中心粒细胞口袋。两种液基产品的灵敏度分别为 65.2%（23/38）和 81.1%（73/90），两组检出率比较，差异有统计学意义($\chi^2 = 6.038$, $P < 0.05$)。
结论 宫颈液基细胞学可作为筛查子宫内膜癌重要方法，国产耗材优于进口新柏氏，除细胞形态的改变与组织结构碎片外中心粒细胞口袋可作为诊断子宫内膜癌的重要线索。

PU-3053

毛细血管内增生性肾小球肾炎患儿肾穿刺组织中 miR-194-5p 表达意义及与 eIF3f 的相关性

李胜涛、彭小友、徐玉娟、曹红、朱军民
郴州市第一人民医院

目的 观察微小 RNA-194-5p（MicroRNA-194-5p, miR-194-5p）在毛细血管内增生性肾小球肾炎（endocapillary proliferation glomerulonephritis, EnPGN）患儿穿刺组织中的表达，分析与真核翻译起始因子 3f（eukaryotic translation initiation factor 3f, eIF3f）的关系。
方法 选择 69 例 EnPGN 患儿作为观察组，同时选择 69 例微小病变性肾小球病患儿作为对照组，均行肾穿刺后行病理活检，应用实时荧光定量 PCR 法检测二组中 miR-194-5p 的表达，应用免疫组化法检测观察二组中 eIF3f 的表达。

结果 观察组肾穿刺组织的病变均呈典型的病理形态。观察组中 miR-194-5p 的表达明显低于对照组，观察组中 eIF3f 的表达明显高于对照组，观察组中 miR-194-5p 的表达在不同病程、是否伴有新月体及急性肾损伤的分组中差别有统计学意义。观察组中 eIF3f 的表达在有无急性肾损伤的分组中差别有统计学意义。相关分析显示 miR-194-5p 与 eIF3f 具有负相关性。
结论 miR-194-5p 在 EnPGN 患儿肾穿刺组织中的表达下降，并参与病变的进展。miR-194-5p 与 eIF3f 具有负相关性。

PU-3054

UBE2T is a prognostic biomarker and correlates with immune infiltration in thymoma, lung adenocarcinoma and gastric cancer

Yunliang Yu、Jiankai Feng
Department of Medical Laboratory, Yantai Affiliated Hospital of Binzhou Medical University, Yantai, Shandong 264000

Aims Ubiquitin-conjugating Enzyme E2T (UBE2T) has been described participated in the occurrence of many tumors. However, cross talk between UBE2T and cancer immunity in diverse cancers remains unclear. Here, we evaluated the clinicopathological significance of UBE2T in different cancers and investigated the correlations of UBE2T to prognosis and tumor-infiltrating lymphocytes in several cancers.
Methods Expression data of UBE2T was extracted from the Oncomine, Gene Expression Profiling Interactive Analysis (GEPIA) and Tumor Immune Estimation Resource (TIMER) databases. The Kaplan-Meier plotter and GEPIA databases were used to investigate the correlation between UBE2T expression and the clinical prognosis of cancer patients. Correlations between UBE2T expression level and tumor-infiltrating lymphocytes as well as gene marker sets of immune infiltrates were analyzed by TIMER.
Results The results revealed that the up-regulated expression level of UBE2T was significantly associated with poor overall survival in patients with breast cancer or lung adenocarcinoma. However, patients with high expression of UBE2T had a better prognosis than the low expression group in thymoma, gastric cancer and ovarian cancer. Moreover, high expression of UBE2T significantly influenced the prognosis of breast, lung and gastric cancer in patients with lymphatic metastasis. There were clear positive or negative correlations between the expression level of UBE2T and the level of infiltration of immune cells in lung, gastric and thymoma cancer.
Conclusions UBE2T may appreciate for having a dual role in human cancers and it may play an important role in recruitment and regulation of immune infiltrating cells in cancers.

PU-3055

浅谈全自动染色机 HE 染色程序调试

张淑正、张效娟
南京金域医学检验所有限公司

目的 探讨全自动染色机正式用于临床样本的染色之前，其染色程序的调试步骤、方法、及问题的解决。确保能稳定、高效、安全地将“手染”作业过渡到“机染”自动化。
方法 以手工染色程序为初始模板，以手工染色的的染色质量、染色用时为“基准”，通过反复进行单架染色、连续 10 架次以上染色，评估并比较染色效果、观察并记录染色时间、分析并解决问题，不断调试机染程序。

结果 调试后的切片机染效果同比手染：①染色质量：机染切片细胞核蓝色、核染色质清晰，细胞浆成红色，核浆对比清晰，切片色彩鲜亮；机染与手染质量比较，基本一致。②染色用时：手染单独进行一架次染色用时 40min，以每 5min 增加一架次切片的频率，连续 10 架切片染色用时共 85min；机染单独一架次染色用时 42min，以每 5min 增加一架次切片的频率，连续 10 架切片染色用时共 87min。两者染色用时上差异不大。③试剂耗用量：机染与手染同步进行，连续 5 天，共染色 3000 张切片，所用试剂的更换规则有所不同，但所耗用试剂量无明显区别。④人员工时耗用：连续 10 架切片手染，需固定 1 位技术员持续在岗，用时共 85min；连续 10 架切片机染，仅上下架切片时需要技术人员手动操作，技术人员不必持续在岗，连续用时共 3min。
结论 调试完成后，获得了一套稳定有效的机染程序，该程序可用于“徕卡-AUTO Stainer XL-1 型全自动染色机”全自动染色机替代“手染”作业，正式用于临床样本的染色工作。

PU-3056

HP 亚甲蓝染色法改善探讨

张淑正、张效娟
南京金域医学检验所有限公司

目的 寻找一种提升 HP 阳性率的亚甲蓝染色检测法。
方法 选取胃镜活检标本 100 例，经过固定、脱水、包埋制成蜡块，每个蜡块切片 3um 厚白片 2 张，分别设为实验组 100 张，对照组 100 张。对照组使用传统方式染色，实验组使用改进过的方法染色。
结果 经两名高年资主治病理医生双盲阅片，两组的 HP 诊断阳性率一致，但在切片质量方面实验组优于对照组。
结论 本研究通过在染色前或染色时进行染液的充分混匀，可以使沉淀物重新溶化于染液中，促使染色效价开始回升，HP 阳性率得到提升；同时发现此时使用高浓度酒精（95%、100%）进行脱水，并不会洗脱掉或极少洗脱掉已结合于 HP 上的染料，其着色强度与传统方法无明显差异；而经过高浓度酒精（95%、100%）脱水后的组织切片再经二甲苯透明，可使组织切片在整个实验过程中均保持湿润状态，组织和细胞未暴露在空气中，其切片透明度相较传统方法显著提升，且组织上无干扰诊断（甚至可能引起误诊）的强折光小点样物，无“碳核”现象。

石家庄应对新型冠状病毒大规模筛查经验总结分析

冯广东
南京金域医学检验所有限公司

2021 年 1 月初，新型冠状病毒肺炎疫情在河北省局部地区出现爆发，尤其以石家庄市藁城区为主，短短数日确诊病例数即出现了较大规模的增长。根据石家庄市疫情防控工作需要，金域医学组建了一批来自全国各子公司近 60 人的核酸检测团队赶赴石家庄，支援石家庄全市开展大规模筛查工作。本文主要针对疫情期间石家庄金域医学检验所大规模筛查所遇到的各类问题总结分析，为可能存在的局部大规模人群筛查提供参考。

PU-3058

独立医学实验室与基层医院共建病原学诊断中心的实践探索

冯广东
南京金域医学检验所有限公司

目的 以南京金域医学检验所与江苏省内 7 家二级医院（其中民营二级医院 5 家，公立二级医院 2 家）共建病原学诊断中心为案例，结合新型冠状病毒肺炎的长期防控趋势，探讨基层医院建设病原学诊断中心的难点及痛点，为基层医院建设病原学诊断中心提供借鉴及帮助。
方法 逐条分析目前独立医学实验室与医院合作共建病原学诊断中心在建设费用、检测设备及检测技术能力等方面所存在的问题，并提出相应的解决方案。
结果 解决了基层医院因短期内缺少资金而无法进行的病原学诊断实验室的建设、设备采购等方面问题，从前期病原学检测平台的场地选择、图纸设计、设备配备、人员培训等做到标准化和统一化，且均通过了生物安全二级备案及江苏省临检中心验收。
结论 合作共建实验室避免了基层医院在实验室建设方面缺经验、走弯路的情况出现，为基层医院建设一个标准的核酸检测实验室提供了一套标准化模板。

PU-3059

抗血小板抗体阳性的相关风险因素分析

李文敏
广东省人民医院

目的 探讨抗血小板抗体阳性的相关风险因素。
方法 采用荧光鼠抗人 IgG 和羊抗人 IgM、IgA，用流式细胞仪测定血小板相关免疫球蛋白（platelet associated immunoglobulin，PAIg）。对 2018 年 1 月-8 月来广东省人民医院拟诊特发性血小板减少性的 303 例患者外周血进行例用流式细胞术（FCM）检测抗血小板抗体（PAIg），同时收集患者的年龄、性别、基础疾病、血常规、凝血指标等资料，采用 spss20.0 数据处理软件分析不同因素对 PAIg 的影响因素，以 P<0.05 表示具有统计学差异。
结果 男性 142 例，女性 161 例，年龄在 0-99 岁之间，平均年龄 53±30.0 岁，性别和年龄对 PAIg 的影响差异无统计学意义。女性怀孕次数对 PAIg 影响差异有统计学意义（P<0.05）。在 PAIg 阳性病例中，抗血小板抗体三项 PAIgG、PAIgM 和 PAIgA 中有两项及以上阳性的占 43.9%；APTT、DDI、自身免疫性疾病（包括 ITP,系统性红斑狼疮，痛风，风湿性关节炎等）都是抗血小板抗体阳性的独立危险因素（P<0.05）。外周血血小板数量与抗 PAIg 具有负相关性（P<0.05）。
结论 外周血血小板数量减少、APTT 延长、DDI 增高是血小板抗体阳性的危险因素；ITP、系统性红斑狼疮、风湿性关节炎等免疫性疾病患者都应该特别注意进行血小板抗体的检测，以期及早发现及早对症治疗。

PU-3060

干/湿化学法对不同方式处理脂血样本检测结果的一致性研究

汤新乐[1]、达尼亚尔•泰来提[1]、刘子峰[2]、梁静[1]
1. 新疆医科大学第六附属医院
2. 新疆维吾尔自治区第三人民医院检验科

目的 探讨干式化学和经低温高速离心/生理盐水稀释降脂处理后的脂血样本湿式生化检测结果的一致性研究分析，探讨不同检测系统检验结果之间是否具有可比性。

方法 收集 2021 年 1 月-2 月新疆医科大学第六附属医院、新疆维吾尔自治区第三人民医院血脂异常患者样本 30 例为研究对象,将每例患者的脂血标本平均分成 3 份。对其中 1 份脂血标本进行干式生化检验，分别检测钙离子（Ca2+）、天门冬氨酸氨基转移酶（AST）、谷丙转氨酶（ALT）、血清葡萄糖（GLU）、淀粉酶（AMY）、肌酐（Cr）浓度；对其它 2 份脂血标本分别使用低温高速离心法、生理盐水稀释进行去脂处理后用湿式生化检验上述项目。观察用原脂血标本进行干式生化检验及用低温高速离心/生理盐水稀释处理后湿式生化检验各项指标的水平并分析其相关性。
结果 经低温高速离心降脂处理后的脂血样本，湿式生化检测 ca2+、AST、ALT、GLU、AMY、Cr 结果与干式生化相比均存在统计学差异（P＜0.05）；线性回归分析：Ca2+、GLU、Cr 湿式化学检测结果与干式化学结果相关性较低，AST、ALT、AMY 湿式化学检测结果与干式化学结果相关性较好。经生理盐水稀释降脂处理后脂血样本，湿式生化检测 ca2+、AST、AMY、Cr 结果与干式生化相比存在统计学差异（P＜0.05），ALT、GLU 结果无统计学差异（P＞0.05）；线性回归分析：GLU、Cr 湿式化学检测结果与干式化学结果相关性较低。
结论 面对严重脂血样本，使用低温高速离心/生理盐水稀释法进行去脂处理，可在一定程度上减少 ca2+、ALT、AST、AMY、GLU、Cr 项目湿式生化检验结果受到的干扰，使湿式化学和干式化学检测脂血样本时结果具有一致性；除 ALT 外，其余项目定量检测结果在不同检测系统之间存在统计学差异，无法保证脂血样本检测结果的准确性。

PU-3061

化疗前 D-dimer 值在预测转移性结肠癌患者治疗效果中的临床价值

杜娜
天津医科大学肿瘤医院

目的 化疗前 D-dimer 值在预测转移性结肠癌患者治疗效果中临床价值。
方法 回顾性收集 2019 年 1 月至 2020 年 12 月期间我院收治的 107 例首次化疗的转移性结肠癌患者病历资料和实验室指标，化疗前外周血 D-dimer 值、中性粒细胞/淋巴细胞比值（NLR）、血小板/淋巴细胞比值（PLR）、全身免疫炎症指数（SII）、CEA、CA199、ALB、FBG 等并对检测结果进行统计分析。
结果 低 D-dimer 组患者的 PFS 明显高于高 D-dimer 组(D-dimer=1004.87ng/ml)。生存分析也显示低 D-dimer 组患者的 PFS 明显高于高 D-dimer 组。NLR、PLR、SII、CEA、CA199、AFP、ALB 正常组与异常组生存期差异无统计学意义（P>0.05）。
结论 化疗前 D-dimer 值对转移性结肠癌患者一线治疗的 PFS 有预测作用。可能是独立于病理类型和临床分期的转移性结肠癌预后指标。D-dimer 值越高，PFS 越短。

PU-3062

独立医学实验室在实验室感染控制与管理方面的探讨

谢曙光、李玲
广州金域医学检验中心

在医改的推动下，独立医学实验室在国内的行业规模快速增长，有效缓解患者排队就医难的问题，有利于间接提升公立医院服务的水平，社会影响力突显，在 2020 年新冠核酸检测中发挥了较大的作用。国内独立医学实验室启步晚，迅速的发展加重风险存在，而规模化、自动化标本集中检测，多科室交叉共享样本，如果实验室感染控制的缺位、投入不够等都有可能引发实验室人员感染，甚至环境污染，引发公共生物安全事故。所以研究和规范独立医学实验室的实验室感染控制，对于保证实验室安全和社会安全都具有非常重要的意义，必须引起独立医学实验室的高度重视。我国在

相关法律法规中明确要求实验室设立单位应当承担实验室感染控制工作，但目前独立医学实验室感染控制缺乏相关研究工作，相关理论、标准、做法基本上是引用医院院感管理模式，然而，独立医学实验室往往都是独立于医院之外单独检测场地，无病房和诊室，不与患者接触，如何做好独立医学实验室感染控制工作值得深入研究和探讨，本文从独立医学实验室设计，特别是普通型和加强型二级生物安全实验室设计、院感体系建设和相关制度制定、实验室感染性物质及实验活动的风险识别与评估、院感监测的项目和周期、实验室工作人员生物安全和感染控制知识培训、环境与物品消毒与感染性病原微生物灭菌、生物安全设备设施投入、实验室感染控制监督检查与持续改进等八个方面系统性研究和规范独立医学实验室感染控制要求，确保独立医学实验室感染控制有效，降低生物安全事故发生。

PU-3063

1566 例围生期孕妇生殖道分泌物 B 群链球菌培养及耐药性分析

王迪
桂林医学院第二附属医院

目的 研究围生期孕妇生殖道分泌物中 B 群链球菌感染情况及耐药性分析。
方法 对桂林医学院第二附属医院就诊的 1566 例围生期孕妇生殖道分泌物进行病原菌培养，对检出的 B 群链球菌进行药物敏感性实验。
结果 1566 例围生期孕妇生殖道分泌物中检出 B 群链球菌 149 株，阳性检出率为 9.5%。各年龄段检出率从高到低依次为：36-40 岁（11.7%）、26-30 岁（10.7%）、41-45 岁（9.1%）、31-35 岁（8.9%）、18-25 岁（7.1%），各年龄段检出率之间比较差异没有统计学意义（P>0.05)。检出的 149 株 B 群链球菌中红霉素、四环素、克林霉素、复方磺胺、左氧氟沙星、莫西沙星、氯霉素的耐药率依次为 52.3%、48.3%、42.2%、38.9%、28.8%、15.4%、10.7%，对美洛培南、头孢噻肟、头孢吡肟、阿莫西林、青霉素、替考拉宁、万古霉素、利奈唑胺的耐药率为 0。
结论 B 群链球菌对碳青霉烯类、第三代第四代头孢类、青霉素类、糖肽类抗生素敏感性较高，对大环内酯类、四环素类、林可霉素类、磺胺类抗菌药耐药性较高，临床不建议使用。

PU-3064

血小板输注效果影响因素分析

张强、张敏
东南大学附属中大医院

目的 探究影响血小板输注效果的因素，寻求有效的规避策略。
方法 收集本院 2016 年 7 月至 2017 年 10 月收治的共 583 例血小板减少患者的身高、体重、血小板输注量等数据资料，对患者输注血小板前血小板计数以及输注后血小板计数进行检测并记录结果，根据 PTR 诊断标准(CCI、PR%)判断患者的血小板输注效果。对患者的性别、年龄、疾病类型、血型以及累计输注次数与血小板输注效果进行相关性分析。
结果 583 例接受血小板输注患者中发生血小板输注无效患者为 200 例，血小板输注无效率为 34.30%。不同性别输注效果不同，女性输注无效率明显高于男性（P<0.05）；不同年龄组输注效果也不相同，随着年龄增加无效率升高，差异具有统计学意义（P<0.01）；不同疾病和不同累计输注次数也导致血小板输注效果的不同（p<0.01）；血型与血小板输注效果无相关性。
结论 患者血小板输注效果与性别、年龄、疾病类型和累计输注次数密切相关，而血型不是影响血小板输注效果的因素。

PU-3065

90 例 D 组染色体多态性统计学分析

任伟丹、刘玉霞、丁利霞、岳文兵
郑州金域临床检验中心有限公司

目的 探讨 D 组染色体多态性在年龄、性别上的分布情况及对生长发育、生殖的影响和相应的临床效应。
方法 采用外周血淋巴细胞培养和 G 显带技术，对送检郑州金域临床检验中心有限公司的 13 500 例外周血标本进行培养、染色体制备及分析，从中筛选出 90 例 D 组染色体多态性标本进行统计学研究。
结果 在 90 例 D 组多态性标本中，共检出 6 种核型，其中 pstk+ 49 例，占 54.44%；ps- 14 例，占 15.56%；ps+ 13 例，占 14.44%；cenh+ 8 例，占 8.89%；inv 4 例，占 4.44%；pss 2 例，占 2.22%。在 D 组多态临床效应中不孕不育 45 例，占 50%，其次为发育异常 30 例，占 33.33%。D 组多态性的人群分布中女性略高于男性，年龄分布以 21~30 岁为主，共 45 例，占比 50%，其次为 0~10 岁，29 例，占 32.22%。
结论 在 90 例 D 组多态性标本中，共检出 6 种核型，以 pstk+最多见，其次从高到低依次为 ps-、ps+、cenh+、inv、pss；其临床表现多样，以不孕不育为主，其次为发育异常；人群分布女性略高于男性，年龄分布以 21~30 岁为主，其次为 0~10 岁。

PU-3066

全血微量元素五项参考区间验证

王伟佳
吉林金域医学检验所有限公司

目的 对全血微量元素五项的参考区间进行验证，以保证检测在免疫分析物的改变、分析方法的改变、患者群体的改变、检测系统的改变及临床反馈的情况下保证检测质量。
方法 仪器为 ICP-MS7900，校准品为国家有色金属及电子材料分析测试中心的商业品，根据健康状况调查表在每个参考区间设置的年龄段（16 岁）选取 20 份符合的样本进行检测，男女各 10 例。
结果 全血钙，正态-95%的置信区间计算范围为(53.1-65.5)mg/L，厂家声明的参考区间为（46.0-84.0）mg/L；全血铁（<16 岁），正态-95%的置信区间计算范围为（397.9-459.0）mg/L，厂家声明的参考区间为（373.5-557.2）mg/L、全血铁（>16 岁），正态-95%的置信区间计算范围为（400.9-552.5）mg/L，厂家声明的参考区间为（380.8-572.3 ）mg/L；全血镁，正态-95%的置信区间计算范围为（33.4-43.2）mg/L，厂家声明的参考区间为（26.4-50.4 ）mg/L；全血铜（<16 岁），正态-95%的置信区间计算范围为（880.0-1129.5）ug/L，厂家声明的参考区间为（800.0-1290.0）ug/L、全血铜（>16 岁），正态-95%的置信区间计算范围为（724-1453）ug/L，厂家声明的参考区间为（720.0-1750.0）ug/L；全血锌（<16 岁），正态-95%的置信区间计算范围为（4.3-6.0）mg/L，厂家声明的参考区间为（3.7-7.3）mg/L、全血锌（>16 岁），正态-95%的置信区间计算范围为（5.7-6.8）mg/L，厂家声明的参考区间为（4.8-9.3）mg/L。
结论 通过验证，以上参考区间 100%落入厂家声明，实验室可以使用参考区间对病人的结果进行报告。

PU-3067

血清 25-OHD 检测项目的影响因素研究

廉春晖
吉林金域医学检验所有限公司

目的 开展血清 25-OHD 检测平台，检测东北三省内血清维生素 D 情况，为临床干预提供理论依据。
方法 确定样本处理方法，采用蛋白沉淀及液液萃取等方法对样本进行前处理，采用 AB Sciex Triple Quad 4500 MPX 系统，将处理后的样本经过液相进样、分离进入质谱，在 MRM 多反应监测模式下，质谱一级四级杆对其分子母离子进行筛选通过，而后进入碰撞室被氮气分子打碎成相应子离子，最后在二级四级杆监测特异性的子离子，根据相应子离子在检测器产生的信号强度及所绘制的标准曲线来定量待测物的浓度。然后制定搭建平台计划：试剂耗材准备、辅助设备、预实验及方法学验证等。
结果 在预实验过程中，发现采用本实验室方法检测 25-OHD，受温度，震荡幅度，以及耗材本地等影响较大。最后通过不断的测试及预实验，确定蛋白沉淀步骤温度需要控制在 25℃±2，并且震荡幅度需达到约 2500rpm 效果最佳;前处理耗材采用进口 Axgen 的 1.5ml 及 2.0ml 离心管对待测物质影响较小;
结论 维生素 D 的主要生理作用是调节钙的代谢，从而维持骨骼健康。最新的研究指出，多种慢性病（如动脉硬化、高血压、冠心病、糖尿病、乳腺癌、结肠癌、前列腺癌，慢性感染性疾病、自身免疫病等）的发生均与维生素 D 缺乏有关。经过基质效应、基质效应、携带效应、分析灵敏度、分析测量范围、正确度分析测量范围精密度等方法学验证，成功搭建血清 25-OHD 检测平台，可检测人体维生素 D 情况，为临床干预提供指导。

PU-3068

尿液有机酸 GCMS-QP2020 检测的方法学验证

高洪宇
吉林金域医学检验所有限公司

目的 由于尿中含有的氨基酸，糖类，脂肪和其他代谢终末或中间产物，而这些代谢产物的定量水平反应身体的代谢情况，通过对这些相关代谢产物的测定，可以对血遗传代谢病进行辅助诊断与鉴别诊断。因此有必要对尿液有机酸测定的方法学进行验证。
方法 应用仪器为气相色谱质谱联用仪 GCMS-QP2020。阴阳性质控品均为自配质控品。通过中间不精密度、重复性不精密度、准确度、携带效应几方面对尿液有机酸的检测方法进行验证。
结果 中间不精密度：通过对仪器的每日质控数据进行分析，来评估仪器的精密度，分析的数据从开始进行方法学验证之时前一个月的质控数据，计算其均值 X、标准差 SD 与变异系数 CV，CV 小于 30%；重复性不精密度：通过选取加入有机酸标准品的阴性样本，按照方法平行处理 12 个样品后上机检测，监测有代表性指标的精密度，计算其均值 X、标准差 SD 与变异系数 CV，CV 小于 30%；准确度：通过对已发报告的临床样本进行留样复查，其阴阳性均符合；携带效应：通过 6 组高浓度阳性样品和空白样品的数据比较，阳性样品无残留，且不影响下一样品检测。
结论 以上中间不精密度、重复性不精密度、准确度、携带效应的验证，说明用该方法进行尿液有机酸检测可被接受，满足临床标本检测的要求。

PU-3069

2020 年长春地区孕妇尿碘监测结果分析

李飞
吉林金域医学检验所有限公司

目的 运用电感耦合等离子体质谱法(ICP－MS)直接测定孕妇尿中碘元素的含量，为长春地区孕妇的饮食结构和含碘食盐用量提供理论指导依据，保证合理的碘摄入，促进优生优育。
方法 采集不少于 5mL 尿液，置于聚乙烯塑料或玻璃试管中，严密封口。采用 0.25%四甲基氢氧化铵和 0.02%TritonX-100 混合溶液对尿样稀释 10 倍混匀后直接用等离子体质谱仪进行分析。收集长春地区 2020 年在吉林金域进行体检的孕妇尿中碘元素数据结果 491 例，进行结果分析。
结果 该方法检出限为 2.1μg/L，精密度＜3.6%，加标回收率为 96.1-109.2%。尿中碘化物中位数为 163.9μg/L，其中＜100μg/L 占有 9.2%，提示碘营养缺乏；＞500μg/L 占有 2.6%，提示碘营养过量。
结论 随着人们生活水平的提高，科学意识的增强，孕期保健工作彰显尤其重要。碘是甲状腺激素合成的重要原料，在大脑的生长和发育过程中甲状腺激素扮演的重要角色，碘是脑组织正常发育必不可少的营养物质，孕妇的碘营养水平及其重要。根据 WHO/UNICEF/ICCIDD 推荐的尿中碘化物标准，碘化物中位数在 150-250μg/L 之间为碘营养适宜，2020 年长春地区孕妇碘营养水平处于适宜状态，碘营养缺乏和过量状态占比较小，可能是由于饮食烹调方式导致不足或过量，或者由于孕早期妊娠反应、后期水肿、高血压并发症导致碘摄入不足。根据尿中碘元素的监测，可及时调整孕期饮食结构，最大程度保证孕妇和胎儿的健康水平。同时，ICP－MS 法测定尿中碘元素的含量，方法操作简便、稳定、灵敏，准确度高，可用于临床大数据量分析。

PU-3070

56℃灭活 30min 对胃功能三项检测结果的影响

渠文涛、张杰、万鹏、史小芹
郑州安图生物工程股份有限公司

目的 为保障临床实验室操作人员的生物安全，通过会对一些含有潜在传染源的血清样本进行灭活处理，即将样本在 56℃灭活处理 30min。但灭活后样本的检测结果是否受影响，一直是检验工作者关注的重点。本文研究了血清样本灭活前后胃功能三项指标（PGI、PGII 和 G-17）检测结果的变化，以指导临床实验室对检测胃功能三项的样本采取正确的处理方法。
方法 取 10 例进行胃功能三项检测的血清样本，等分成 2 份，一组作为对照，在 2-8℃保存，另一组样本在 56℃条件下灭活 30min。取出两组样本，待恢复至室温后，使用 AutoLumo A2000 检测系统和配套试剂盒，平行考核两组样本的胃功能三项检测结果，并进行灭活前后的结果进行比对分析，观察灭活对检测结果是否有影响。
结果 与对照组相比，样本灭活后，三个项目的检测结果均有不同程度的降低，其中部分样本在灭活处理之后，基本变成了零值，即待测物全部被破坏掉。对照组三项的检测结果分别是：PGI 61.46±38.51 ng/ml；PGII 14.18±6.72ng/ml；G-17 5.07±3.73 pmol/L；灭活组三项的检测结果分别是：PGI 0.08±0.04ng/ml；PGII 0.11±0.07 ng/ml；G-17 0.82±0.59 pmol/L；结果差异有统计学意义（P＜0.05）。
结论 血清样本在 56℃灭活 30min 处理后，胃功能三项的检测结果均有非常显著的降低，说明三种待测物在 56℃条件下较不稳定，推测可能是由于高温导致蛋白变性或蛋白结合位点变性，使结果有显著差异。因此，临床实验室在进行胃功能三项检测时，血清样本不能进行灭活处理，否则会导致检测结果的不准确。

PU-3071

2020 年长春地区儿童维生素 D 检测结果分析

曲丹
吉林金域医学检验所有限公司

目的 检测长春地区表现健康的儿童体内 25 羟基维生素 D 含量，为本地区儿童维生素 D 缺乏情况研究提供理论支持。
方法 选取 2020 年在我公司检测的表现健康的儿童 1000 例，根据年龄分为三组：0-1 岁，1-6 岁，6-14 岁，采用蛋白沉淀及液液萃取等方法对样本进行前处理，运用高效液相色谱串联质谱仪，经过三重四极杆对其进行筛选，根据相应子离子在检测器产生的信号强度及所绘制的标准曲线来定量待测物的浓度。
结果 1、在不同年龄段儿童维生素 D 检测中 1-3 岁组 270 人，3-6 岁组 360 人，6-14 岁组 370 人，分析不同年龄段儿童维生素 D 水平，结果发现不同年龄段儿童维生素 D 的平均值之间差异有统计学意义 (P＜0. 05)；2、不同年龄段维生素 D 缺乏率分别为：1-3 岁 54.44%，3-6 岁 68.74%，6-14 岁 80.04%，分析不同年龄段维生素 D 的缺乏率，对比参考标准值，发现不同年龄段儿童维生素 D 的缺乏率差异有统计学意义(P＜0. 05)；3、分析不同性别儿童维生素 D 缺乏率差异无统计学意义（P＞0.05）。
结论 在长春地区 1-14 岁儿童维生素 D 检测中，随着年龄的增长，缺维生素 D 的情况逐渐上升，在不同性别儿童中，钙缺乏率无显著差别。维生素 D 可调节钙的代谢，从而维持骨骼健康。若儿童存在维生素 D 缺乏情况，则可能造成骨质疏松、龋齿、儿童佝偻病,危害极大，家长和社会各方面应当对儿童合理膳食，科学补充，监测及维持儿童体内的维生素 D 处于正常水平，保证其健康生长发育。

PU-3072

鲍曼不动杆菌多重耐药机制和用药的研究

孙悦
吉林金域医学检验所有限公司

目的 鲍曼不动杆菌属于革兰阴性杆菌，近些年来，多重耐药鲍曼不动杆菌在院内检出率逐渐上升，由于其多重耐药机制复杂，使得临床治疗十分困难。本文主要就鲍曼不动杆菌的耐药机制和用药进行研究。
方法 选用不同的抗生素，如舒巴坦复合制剂、碳青霉烯类、多粘菌素类 E 或联合使用抗生素等治疗鲍曼不动杆菌感染，用药时严密观察药物疗效，同时收集鲍曼不动杆菌耐药机制的研究资料，对其进行总结和研究。
结果 鲍曼不动杆菌的耐药机制主要存在以下 5 个方面：耐药基因、药物灭活酶、16S rRNA 甲基化酶、整合子及药物主动外排泵与外膜蛋白的协同作用。
结论 近些年来，国内鲍曼不动杆菌多重耐药发生率逐年增长，特别是耐碳青霉烯类鲍曼不动杆菌，四环素类和碳青霉烯类药物的应用，使鲍曼不动杆菌多重耐药有增多的现象，多粘菌素类抗生素对其在体外有明显的抗菌作用，但目前临床应用报道有限，还需进行进一步的研究。因此，实时监控鲍曼不动杆菌的传染源及其耐药，通过强化医院内预防感染措施，能减少鲍曼不动杆菌的传播，减少其耐药发生概率。加强管理措施，能够有效控制医院性感染，合理使用抗生素是防止和减少鲍曼不动杆菌感染及多重耐药性出现的重要对策。

PU-3073

三种不同试剂对新型冠状病毒的方法学验证结果比较

宋丽影、迟忠雨、张馨月
吉林金域医学检验所有限公司

目的 针对不同厂家生产的新型冠状病毒 2019-nCoV 核酸检测试剂盒（荧光 PCR 法）对新型冠状病毒的方法学进行验证，主要包括正确度、重复性精密度及检出限。最终对三种不同试剂做的新型冠状病毒方法学验证结果进行比较。
方法 使用深圳亚能试剂及仪器对样本进行自动提取，分别使用圣湘、伯杰和达安三种试剂扩增,对其正确度、重复性精密度、检出限进行验证。选取圣湘试剂检测为阳性的 20 例样本，分别用伯杰和达安试剂重复检测，评估其正确度；使用购买的水平 2 质控品，厂家为郑州标源，批号为 20210129-1，分别用三种试剂在同一次实验中重复检测该质控品各 20 次，记录结果并计算均值、标准差和变异系数 CV（%）。评估其重复性精密度；使用购买的水平 2 质控品浓度为 3 次方，稀释至 2、1 次方。平行检测 5 次，检测结果是否符合试剂盒 CT 值≤40 为阳性的判断标准，分别验证三种试剂盒的检测下限。
结果（1）通过选取用圣湘试剂检测为阳性的 20 例样本，再用伯杰和达安试剂检测后仍为阳性，正确度验证为 100%。
（2）评估其重复性精密度的结果为：圣湘试剂的 N 基因 CV 值为 3.12%，O 基因 CV 值为 3.91%,; 伯杰试剂的 N 基因 CV 值为 2.32%，O 基因 CV 值为 1.13%；达安试剂的 N 基因 CV 值为 3.29%，O 基因 CV 值为 4.35%,均小于 5%；三种试剂均满足说明书上面的要求，验证通过。
（3）最终验证新冠检测试剂盒圣湘检测下限 200copies/ml；伯杰检测下限 500copies/ml；达安厂家检测下限 500copies/ml。均符合用途要求。
结论 通过对三种试剂的方法学进行验证比较，均与试剂说明书一致，能够满足其用途。

PU-3074

二甲基塞来昔布抑制乳腺癌他莫昔芬敏感和耐药细胞增殖的机制研究

王映芬、谭潭
郴州市第一人民医院

目的 获得性他莫昔芬耐药是乳腺癌内分泌治疗的主要挑战，对其耐药机制的研究始终是人们关注的热点。本研究旨在探讨 2,5-二甲基塞来昔布(DMC)对他莫昔芬(TAM)敏感以及耐药乳腺癌细胞增殖的影响，并探讨其可能的作用机制。
方法 1.MTT 法检测 TAM 对 MCF-7 及 MCF-7/TamR 的增殖抑制作用并使用 SPSS 计算各细胞系在 72h 的 IC50 值，得出 MCF-7/TamR 的 RF；采用蛋白印迹技术检测 MCF-7、MCF-7/TamR 的蛋白基础表达情况，评估 MCF-7/TamR 的耐药特性。
2.MTT 及细胞克隆实验检测 DMC 对细胞的增殖抑制作用，筛选后续实验的药物浓度和作用时间。
3.实验分组：对照组(control)、TAM 干预组(TAM)、DMC 干预组(DMC)、TAM 联合 DMC 干预组(TAM+DMC)，MTT 实验检测不同干预对细胞增殖的影响，采用蛋白印迹技术检测细胞增殖相关蛋白的变化情况。
4.流式细胞术检测不同干预对细胞凋亡的影响，采用蛋白印迹技术检测细胞凋亡相关蛋白的变化情况。
5.蛋白印迹、细胞免疫荧光、彗尾实验探讨 DMC 抑制细胞增殖的作用机制。
6.小鼠成瘤实验及免疫组化验证体外细胞实验结果。**结果** 1.MCF-7/TamR 的 RF 为 2.231；Rb、P-Rb 在 MCF-7/TamR 中低表达。

2.TAM+DMC 作用显著抑制细胞增殖，P-Rb、Rb、MCM7、PCNA 表达降低。
3.TAM+DMC 作用显著诱导细胞凋亡,Bcl-2、survivin 表达降低，Cleaved PARP、Caspase-3 表达增加。
4.DMC 降低 MCM7/Rb 表达，增加 γ-H2AX 表达，诱导 DNA 损伤及激活 DNA 损伤修复相关蛋白，与 TAM 联合后更显著。
5.DMC 显著抑制动物体内肿瘤生长及 Rb/MCM7 蛋白表达。
结论 DMC 或 DMC+TAM 在体内外抑制他莫昔芬敏感及耐药乳腺癌细胞增殖，其作用机制可能与 DNA 损伤相关。

PU-3075

某医学实验室质量不良事件的分析

陈振朋、张维、李永霞
西安金域医学检验所有限公司

目的 通过分析质量不良事件，识别实验室质量管理过程中的高风险环节并加以控制，从而提升实验室质量体系运行能力。
方法 统计了某医学实验室近 3 年产生的质量不良事件，不良事件的来源包括实验室日常质量监督，内部审核、管理评审，外部的第二方审核和第三方审核，并对所发生的质量不良事件进行了分类分析。
结果 2018 至 2020 年 3 年间总共发生质量不良事件 345 起，其中记录控制方面 63 起，占比 18.2%；文控管理方面 48 起，占比 13.9%；人员管理方面 43 起，占比 12.5%；实验室检验结果质量保证方面 42 起，占比 12.2%；试剂耗材管理方面 35 起，占比 10.1%；设施与环境方面 24 起，7.0%；检验过程方面 23 起，占比 6.6%；实验室设备方面 22 起，占比 6.4%；外部服务于供应方面 9 起，占比 2.6%；持续改进方面 8 起，占比 2.3%；其他 28 起，占比 8.1%。在 345 起不符合事件中，其中建议项 101 项，观察项 104 项，一般不符合项 139 项，严重不符合项 1 项。
结论 建立良好的质量管理体系，并保证其有效运行，对提升实验室服务质量和效率尤为重要。通过对以上质量不良事件的分析，加强实验室工作人员的质量培训和教育，提升人员的实验室质量管理能力和水平，对促进实验室质量管理体系高效、健康的运行至关重要。

PU-3076

医学实验室关键指标的建立和运行

陈振朋、张维
西安金域医学检验所有限公司

目的 医学实验室关键指标指与实验室质量管理、技术运作和客户运作相关的关键过程监控指标，包括质量指标、技术指标和服务指标，实验室建立完善的关键指标管理程序，保证其良好运行，有助于提高实验室质量管，促进实验室质量体系持续改进，提升临床服务能力和水平。
方法 建立实验室关键指标的管理程序，规定关键指标程序实施范围、职责、关键指标的来源，明确关键指标监测的目的、方法和采集程序。确定实验室监测的关键指标，其来源包括卫健委规定的关键指标、行业标准和技术规范、ISO15189、实验室识别出的重点关注点以及与临床服务和体验相关性较大的指标。建立之初，通过对往年相关指标在实验室的表现值及变化情况制定关键指标的目标值，针对不同指标的属性制定其监控周期。建立的质量指标从以下几个维度监控：当月是否达到目标值；当月数据与上月数据（或上一统计周期）是否有较大差异；连续几个月或统计周期数据是否有不良上升或下降趋势；分析当年数据与历年数据是否有较大差异（在定本年度质量指标时需重点考量）；采集的数据是否与实际情况相符。对发现的异常情况进行分析，找出根本原因加以控

制，并定期监测确保依从。以一年为周期，在下年度对本年的关键指标进行回顾性分析，依据分析结论制定下年度关键指标目标值。
结果 通过关键指标程序的运行，及时发现实验室质量管理体系运行过程中的不足和存在的问题，并及时进行纠正，有效的减少了质量事件的发生，提高了质量体系运行的效率。
结论 关键指标做为实验室质量管理体系的一部分，尤其是在质量体系持续改进过程中发挥着非常重要的作用，建立和运行关键指标体系程序，对实验室质量管理至关重要，值得推广。

PU-3077

流式细胞技术在临床微生物定量质控品中的应用研究

徐蓉
上海市临床检验中心

目的 采用流式细胞技术，建立细菌定量分析的质量控制方法，为细菌定量检测提供更好的质量控制方法。
方法 根据细菌感染临床诊断阈值，设计病原菌的种类和数量，采用流式细胞技术联合琼脂菌落计数法，对样品中细菌数量进行准确定量分析，建立细菌定量分析的质量控制方法。
结果 采用定量计数方法，能够确定流式细胞技术定量结果与琼脂菌落计数法两种计数方法的对应关系，建立细菌定量分析的质量控制方法。
结论 采用定量计数方法，能够更好评价临床微生物实验室病原菌的定量检测能力，促进细菌鉴定和药敏试验的标准化，从而进一步提高实验室的临床微生物检出能力。

PU-3078

新冠抗体检测两种方法的性能评价及临床应用探讨

黄玮
长治医学院附属和平医院

目的 采用胶体金法和荧光免疫层析法检测新型冠状病毒血清特异性抗体，对两种方法进行性能评价，并对新型冠状病毒血清特异性抗体临床应用进行探讨。
方法 收集 2020 年 1 月 23 日至 3 月 2 日我院住院患者血清样本共 20 例。分别使用胶体金法和荧光免疫层析法检测各样本 IgM+IgG 总抗体及 IgM 抗体，并计算两种抗体试剂的敏感性、特异性、阳性预测值、阴性预测值、符合率及 Kappa 值等指标。
结果 胶体金法：敏感性为 91.6%（11/12）；特异性为 62.5%（5/8）；阳性预测值为 78.6%（11/14）；阴性预测值为 83.3%（5/6）；符合率为 80%（16/20）；与 RT-PCR 法 Kappa 值 0.565。荧光免疫层析法：敏感性为 83.3%（10/12）；特异性为 87.5%（7/8）；阳性预测值为 90.5%（10/11）；阴性预测值为 77.8%（7/9）；符合率为 85%（17/20）；与 RT-PCR 法 Kappa 值 0.693。
结论 从符合率来看，两种方法检验效能相当，均可进行新冠抗体检测。两种方法 Kappa 值与 RT-PCR 法检测结果中度一致。但是仍应明确，抗体检测只能作为核酸检测的有效补充检测指标，或疑似病例诊断中与核酸检测协同使用，或用于聚集性疫情的溯源，不适用于低流行区人群的筛查。

PU-3079

幽门螺杆菌既往及现症感染与肥胖/超重间相关性探讨

郭长青
江苏省中医院（南京中医药大学附属医院）

目的 探讨幽门螺杆菌（Hp）既往及现症感染与肥胖/超重之间的相关性。
方法 选取江苏省中医院 2017 年 5 月至 2019 年 8 月间接收的体检者 285 例作为受试者，分别测定各例 Hp IgG 抗体与现症感染蛋白抗体(CIM)，另测量各例身高与体重，计算其体重指数（BIM）；统计超重与非超重受试者二种抗体阳性人数，组间比较；统计不同性别及年龄组超重与非超重受试者二种抗体阳性人数，组间比较。
结果 Hp IgG 抗体阳性率、CIM 阳性率、Hp IgG 抗体与 CIM 同时阳性率在超重与非超重二组间均有显著性差异（$P < 0.05$）；超重组 Hp IgG 抗体阳性率、CIM 阳性率、Hp IgG 抗体与 CIM 同时阳性率在不同年龄组间有显著性差异（$P < 0.05$）。
结论 幽门螺杆菌既往及现症感染可引起肥胖/超重，二者间具有明显相关性，在高龄人群尤其显著。

PU-3080

PCR 实验室的区域设计及各区域要求探讨

文少佳、梁建萍、赵婷、张强、李永霞、张维
西安金域医学检验所有限公司

目的 通过对 PCR 实验室的分区及各区域要求进行探讨从而使得对 PCR 实验室有充分的认识和了解，确保按照规范进行相关基因扩增实验，进而保证检测结果的准确可靠。
方法 通过国家相关的法律法规要求，对 PCR 实验室进行相应的分区及各区域要求进行探讨。
结果 PCR 实验室对检测结果的准确性，可靠性，安全性起到至关重要的作用，因此实验内部的分区，以及对各区的要求都显得尤为重要。根据 PCR 操作流程方向，PCR 室主要分为缓冲区，试剂准备区，样本制备及加样区，扩增区，产物分析区。为了防止交叉污染，对 PCR 实验室的各实验房间压差控制一定要严格处理，尤其是基因扩增和产物区的气流不能互相串通，以免引起检测提取数据的重叠失效。各区域要求也略有不同，试剂配制室及样品处理室宜呈微正压，以防外界含核酸气溶胶的空气进入，造成污染；可以通过控制进风风量大于排风风量达到正压效果；而核酸扩增室及产物分析室应呈微负压，以防含核酸的气溶胶扩散出去污染试剂与样品，可以通过控制排风风量大于进风风量达到负压效果；在理想情况下，PCR 实验室缓冲间内，可设置正压，使室内空气不流向室外，室外空气不流向室内。
结论 在实际实验工作中要严格按照 PCR 实验室的分区要求进行实验，避免造成不必要的污染，从而影响实验结果的准确性和可靠性。

PU-3081

第三方医学检验行业产业链及业务模式分析

文少佳、赵婷、张强、梁建萍、张维、李永霞
西安金域医学检验所有限公司

目的 通过对第三方医学检验行业的产业链和业务模式的分析，对行业发展的前景进行一定的预测。
方法 采用第三方医学检验行业报告及各医学检验公司的业务模式的了解，对其产业链及业务模式进行分析。

结果 第三方医学检测公司主要以承接医院及各类医疗服务机构的检验业务，借助专业化的医疗器械，试剂及检验人员对待检样本进行集中检验，并将检验结果，临床解释及建议报告于送检单位，通过检验结果进行相应的临床治疗和医学实验。其上游供应商包括各种仪器生产供应商及检验试剂生产供应商，下游主要是各种医院及医疗服务机构，结合临床诊断，提供相应的检测服务。因其处于产业链的中游，可与各医疗机构形成合作，因此其集中化处理模式使得其可在检测项目数量及检测成本方面均形成较大的优势。

目前全国各区域检验公司及中心也依托医院检验科的实验室和设备资源，提供精细化的医学检测检验服务，形成了“医保+医检”整合服务、组建医联体整合资源、与医联体牵头医院合作共建、与三级医院协作共建等一系列创新型服务模式，同时基于各检测公司的规模、渠道、研发、生产、科研等优势差异，形成集研发、生产、销售，服务于一体各具特色的业务模式。

结论 第三方医学检验实验室通过集中化检测及特色的临床服务，形成了低成本，短时间，高质量，优服务的优势，因此第三方医学检验行业极大可能会成为将来的医学诊断的新风口。

PU-3082

第三方医学检验中心实验室员工能力的培养及综合素质的提高

文少佳、梁建萍、张强、李永霞、张维
西安金域医学检验所有限公司

目的 随着第三方医学检验行业的高速发展，相关检验人员的专业能力和综合素质直接影响检验结果的准确性和可靠性，进而对临床治疗产生决定性的作用，因此对相关检验人员的专业能力和综合素质的培训显得尤为重要，本文主要结合本实验室的实践经验, 为科室人员培训和能力评估的具体实施提供建议。

方法 1.对新进入科室人员，首先进行实验室生物安全和应急预案演练, 消防安全培训等突发事件的培训。

2.具体科室根据岗位要求进行相关专业知识的带教培训，经过一定时间的培训后进行相应的考核和测评，达到一定要求后方可进行相应的检验工作；特殊岗位如基因扩增室，HIV 初筛等岗位需参加相关机构或部门组织的培训班和上岗培训；

3.定期对员工进行职业道德素养的培训；

4.定期进行专业能力的考核和评估，对不合格者重新进行相应的培训并停止相应的检测项目，直至考核通过方可重新回到岗位进行相应检测。

结果 按照以上的要求进行员工培训及考核后，科室员工整体专业能力和素质均有明显提高，科室的检验工作更加快速精准的完成。

结论 本实验室按照以上要求对检验人员进行培养，一方面对日常检验工作有了明显质量和速度上的提升，另一方面，为当突发重大社会公共卫生事件时，培养出了专业能力过硬，综合素质达标的公共卫生后备人才。

PU-3083

第三方医学检验行业现状分析及前景预测

文少佳、张强、梁建萍、张维、李永霞
西安金域医学检验所有限公司

目的 基于国内目前第三方医学检验行业的发展现状，分析行业产业链和市场竞争格局，进一步预测该行业的发展前景并提出合理的发展建议。

方法 通过对我国与美国，日本，欧洲等发达国家第三方医学检验行业的发展阶段以及市场渗透率的比较，结合我国的国家政策，对该行业的发展前景进行预测病提出合理化建议。

结论 美、日、欧等发达国家第三方医学检验行业起步早，目前均已进入稳定发展阶段，且市场渗透率均在 40%以上。与其相比，我国的第三方医学检验行业目前处于竞争沉淀期，市场渗透率还较低，距进入稳定发展期还有一段距离。但近年来随着国家政策的支持和市场的需求，我国的第三方医学检验行业快速发展，据不完全统计，截止 2020 年 3 月，国内在业第三方医学检验实验室从 2012 年的 129 家增长到 1570 家，且依然呈现较高的增长趋势。同时，此次新冠疫情爆发后，在医院面对巨大的核酸检测压力的前提下， 国家政策的扶持以及广阔的市场需求给第三方医学检测机构带来重大发展机遇。因此，在后疫情时代，我国的第三方医学检验行业在各个有力条件的推动和加持下将会迎来的更大的发展契机。

PU-3084

Profiling serum cytokines in COVID-19 patients reveals IL-6 and IL-10 are disease severity predictors

Huan Han
Department of Clinical Laboratory, Renmin Hospital of Wuhan University

Background Coronavirus disease 2019 (COVID-19), which is caused by severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2), was first reported in December, 2019, and the affected countries has grown rapidly and recently WHO has been declared it as a pandemic. While the majority of patients were considered mild, critically ill patients involving respiratory failure and multiple organ dysfunction syndrome are not uncommon, which could result death. We hypothesized that cytokine storm is associated with severe outcome.
Method We enrolled 102 COVID-19 patients who were admitted to Renmin Hospital (Wuhan, China). All patients were classified into moderate, severe and critical groups according to their symptoms. 45 control samples of healthy volunteers were also included. Inflammatory cytokines profile of serum samples were analyzed by specific immunoassays.
Results showed that COVID-19 patients have higher serum level of cytokines (TNF-α, IFN-γ, IL-2, IL-4, IL-6 and IL-10) than control individuals. Within COVID-19 patients, serum IL-6 and IL-10 levels are significantly higher in critical group (n = 17) than in moderate (n = 42) and severe (n =43) group. Using univariate logistic regression analysis, IL-6 and IL-10 are found to be predictive of disease severity and receiver operating curve analysis could further confirm this result (AUC = 0.841, 0.822 respectively).
Conclusion Our result indicated higher levels of cytokine storm is associated with more severe disease development. Among them, IL-6 and IL-10 can be used as predictors for fast diagnosis of patients with higher risk of disease deterioration. Given the high levels of cytokines induced by SARS-CoV-2, treatment to reduce inflammation-related lung damage is critical.

PU-3085

Evaluation of Serum GDF15, AFP, and PIVKA-II as Diagnostic Markers for HBV-Associated Hepatocellular Carcinoma

Juanjuan Chen、pingan zhang
Renmin Hospital of Wuhan University

Objective To evaluate the potential diagnostic value of GDF15 alone and its combination with PIVKA-II and AFP for HBV-associated HCC.
Methods Serum levels of GDF15, PIVKA-II, and AFP were measured in 110 patients with HBV-associated HCC, 70 patients with HBV-related LC, 70 patients with CHB and 110 healthy subjects.

Results Serum GDF15 was positively related to the levels of PIVKA-II and AFP in HCC patients (r=0.352 and r=0.378, all P＜0.0001). When ROC curve was plotted for HCC versus all controls, serum GDF15 had diagnostic parameters of AUC 0.693, sensitivity 67.30%, and specificity 66.70%, which were lower than PIVKA-II and AFP (all P＜0.0001). When ROC curve was plotted for HCC versus LC, the combination of GDF15 and PIVKA-II had the highest diagnostic accuracy of AUC and specificity than other combinations (all P＜0.0001).
Conclusions GDF15 is a potent serum marker for the detection of HBV-associated HCC, and PIVKA-II combined with GDF15 can improve the diagnostic accuracy of HBV- associated HCC.

PU-3086

Elevated serum C1q levels in children with sepsis

Huan Li、Pingan Zhang
武汉大学人民医院

Objective To analyze the serum complement C1q levels in children with sepsis, and explore the suggestive effect of serum C1q levels on the condition of children with sepsis.
Methods The clinical and laboratory data of children with sepsis (n = 95) and healthy children (n = 71) in Renmin Hospital of Wuhan University from January 2019 to October 2019 were collected, and each index of the two groups was compared. Then we divided children with sepsis into three subgroups based on the Pediatric Critical Illness Score (PCIS): non-critical group, critical group, and extremely critical group. The serum C1q and PCT levels of the three subgroups were analyzed, and the correlation analysis was carried out between the levels of serum C1q and PCT levels as well as PCIS among children with sepsis. Finally, we analyzed the serum C1q levels of septic children infected by different pathogens.
Results The serum C1q levels of children with sepsis were significantly higher than those of healthy children (median 198.4 vs. 186.2 mg/L, P < 0.001). In the analysis of subgroups, the serum C1q levels of non-critical group, critical group, and extremely critical group septic children were 182.80 (166.75, 195.85) mg/L, 219.90 (209.10, 246.40) mg/L and 249.95 (239.10, 272.25) mg/L respectively, which were correlated with the severity of the disease. At the same time, we also found that serum C1q in children with sepsis was positively correlated with PCT levels (r = 0.5982, P < 0.001), and negatively correlated with PCIS score (r = -0.6607, P < 0.001). The serum C1q levels of septic children with bacterial infections, mycoplasma infections, viral infections, and co-infection were higher than those of the control group (P < 0.05).
Conclusion The serum levels of C1q in children with sepsis were increased and related to the severity of sepsis, suggesting that C1q may be involved in the occurrence and development of sepsis, which had reference value for the preliminary diagnosis and severity classification of sepsis.

糖尿病患者胰腺外分泌功能不全与腹部症状的原因

朱时帅
哈尔滨医科大学第一附属医院

胰腺有内分泌和外分泌两种功能，它们相辅相成，紧密合作，有助于食物的消化、吸收和新陈代谢。早在十多年前，就有研究表明，相当数量的糖尿病患者存在胰腺外分泌功能不全。糖尿病几乎影响到身体的每个器官系统，器官受累的程度取决于疾病的持续时间和严重程度，以及其他合并症。胃肠道副作用包括胰腺病、小肠细菌过度生长、食道动力障碍、胃食管反流病、胃瘫、神经病和非酒精性脂肪肝。

PU-3088

冷凝集素对血常规参数的影响及解决处理方法探讨

朱时帅、史永胜
哈尔滨医科大学附属第一医院

目的 探讨冷凝集素对血细胞分析参数的干扰以及处理方法。
方法 临床收集冷凝集患者 EDTA-K2 抗凝静脉血，根据标本的外观，将其分为无变化，果冻状，沙粒状。通过比较 37℃水浴法加热法前后，血浆置换法，以及预稀释法用 Beckman Coulter DXH 800 全自动血液分析仪对标本各种方法处理前后的血细胞参数进行检测，以手工镜检为金标准进行对照实验验证以上方法能否消除冷凝集素的影响，并采用统计学方法对检测参数进行评价。
结果 直接上机检测，冷凝集现象可导致 RBC、HCT 结果假性减低，MCH、MCHC 结果增高，并出现红细胞直方图，散点图异常，仪器报警提示 RBC 凝集及双峰 RBC 分布，但 WBC，PLT，Hb 结果无明显变化。对其进行温浴，血浆置换及预稀释处理后,即刻上机检测,可使红细胞凝集现象有所改善，从而得到正确的红细胞系列参数。
结论 冷凝集现象可导致多个血细胞检测参数失真, 传统 37℃水浴法检测对于高效价冷凝集处理效果不明显, 血浆置换法和预稀释法对红细胞系列参数则能起到明显改善结果, 从而使血细胞各项检测参数结果得以校正, 为临床提供准确参考数值。

临床用细胞培养的质量控制

刘军权
杭州金域医检验所有限公司

随着国家《“十三五”国家战略性新兴产业发展规划》以及《“健康中国 2030”规划纲要》的颁布。细胞药物的开发正在生物技术领域展开，许多以往难以治疗的疾病目前都得到了很好的控制甚至治愈。细胞产品的应用分为医疗级和消费级应用。这些产品的应用除了更加关注安全性以外，对细胞产品质量和有效性评估提出了更高的要求。由于细胞在应用之前必须经过实验室培养和扩增，每个相关的环节都需要明确质量标准。本文根据细胞培养制剂产品特点，提出细胞培养实验室质量控制的一些思路，从细胞生产质量管理规范、细胞制剂产品生产用原材料、制备工艺与过程控制、质量研究和质量控制等方面系统。基于细胞制剂产品的细胞来源、体外操作、临床应用等方面的不同而赋予产品不同的临床应用风险程度，在技术审评过程中，应该坚持基于风险等级的评价理念，减少不必要的冗余要求，减轻不必要的研究与检验负担，同时监管部门也应与研究单位通力合作，建立并不断完善、优化和更新相应的管理制度和技术指南及标准，推进细胞产业的健康发展。细胞制剂产品的研发技术日新月异，产品种类不断更新，细胞体外操作的复杂程度不断提升，适用的领域不断拓宽，基于现有的认知水平和人体经验，很难提出全面的、具体的、具有先见性的技术管理规范和要求，仍需遵循具体情况具体分析的原则进行质量研究和质量控制。基于细胞制剂产品的细胞来源、体外操作、临床应用等方面的不同而赋予产品不同的临床应用风险程度，在技术审评过程中，应该坚持基于风险等级的评价理念，减少不必要的冗余要求，减轻不必要的研究与检验负担，同时监管部门也应与研究单位通力合作，建立并不断完善、优化和更新相应的管理制度和技术指南及标准，推进细胞产业的健康发展。

参加美国病理家协会（CAP）非妇科细胞病理学能力验证计划经验分享

庞晓川
吉林大学第一医院

目的 通过参加美国病理学会(CAP) 非妇科细胞病理学能力验证计划，评价检验室细胞病理组非妇科细胞学诊断水平，根据对回报结果的分析，来进一步提高非妇科细胞学的检测质量。
方法 将收到的 CAP 非妇科细胞学样本按照常规涂片进行检测，按 CAP 的要求将结果上报，并及时对回报结果进行分析。
结果 参加 CAP 能力验证计划 10 次 55 张涂片中，10 次 PT 活动所得分数均大于 80 分。本室诊断良恶性能力较强，准确率 100%，但具体亚分类的诊断水平有待提高。
结论 通过参加 CAP 能力验证计划不仅了解美国细胞病理学诊断标准，开拓视野，并且能够了解薄弱之处，有的放矢，积极学习，增强了诊断水平。将个人能力评估标准化，从整体上提高了非妇科细胞学的检测质量。

PU-3091

人羊膜上皮细胞和人羊膜间充质干细胞的研究进展

谢军花[1,2,3]、刘军权[1,2,3]、薛玲玲[3]、陈锦阳[3]
1. 龙泉市人民医院
2. 杭州金域医学检验所有限公司
3. 浙江卫未生物医药科技有限公司

人羊膜上皮细胞和人羊膜间充质干细胞存在于人羊膜组织中，随着胎儿的娩出，人胎盘羊膜组织几乎是作为废弃物处理。但人羊膜细胞可塑性强，具有多向分化的潜能，能够分化为来自不同胚层的细胞；并且免疫原性低，移植不会发生免疫排斥反应。因此，成为近年来研究的热点。成为干细胞药物产品的标准是原料来源必须广泛，取材无创。人羊膜上皮细胞和人羊膜间充质干细胞具备以上条件，将其应用于诸多疾病的治疗中，如心肌梗塞、脑梗塞、肾损伤等，均已取得良好的疗效，此外还为许多疑难杂症提供了治疗方向。本文将从羊膜细胞的生物学特性、培养方法、表面标记物、分化潜能和临床应用等方面进行综述。

PU-3092

间充质干细胞治疗肺纤维化的研究进展

杨建兰[1]、刘军权[1,2,3]、冯欣丽[3]、庄盼[3]
1. 杭州市下城区中西医结合医院
2. 杭州金域医学检验所有限公司
3. 浙江卫未生物医药科技有限公司

肺纤维化是一种具有破坏性和不可逆性的弥漫性肺间质性疾病。研究发现，产生肺纤维化的原因是成纤维细胞灶的出现导致大量细胞外基质沉积，胶原积聚，肺基质逐渐破坏，肺泡结构破坏，同时肺泡上皮细胞不能进行正常的修复重建，最终导致正常肺组织结构的破坏等。目前在临床上，吡非尼酮和尼达尼布等西药以及部分中药能够改善患者的临床预后，但是它们并不能完全阻止肺功能的下降，或者逆转纤维化的病理改变，只能延缓疾病进展。间充质干细胞及分泌的外泌体或者细

胞因子对于特发性肺纤维化的发病机制有一定的改善作用，能减轻炎症反应、减少氧化应激、调节细胞外基质等作用。本文对肺纤维化的发病机制和间充质干细胞的治疗进行综述。

PU-3093

弹性工作制在临床微生物检验工作中的初探

弓艳娥
长治医学院附属和平医院

目的 回顾性分析我院 2013 年到 2020 年细菌培养标本送检及报告情况，为微生物室工作人员配置和排班提供科学依据。
方法 收集 2013 年到 2020 年细菌培养标本送检及报告数据，对我院微生物室特设的中午班和小夜班收检的标本量和发放的药敏报告量及 TAT 时间进行统计分析。
结果 在 2013-2020 年，中午班收检标本量占全年标本量的 13%-15%左右；小夜班收检标本量占全年标本量的 11%-13% 左右；2017-2020 年小夜班审核的药敏报告量占同年药敏报告总量量的 17%-22%，2017-2020 年药敏报告的实验室周转时间（TAT）比 2013-2016 年明显缩短。
结论 在临床微生物检验工作中，根据临床送检标本情况及时调整工作思路、实行弹性工作制，是一种有效提高微生物检验工作效率、缩短检验周期的手段。

PU-3094

实验室风险管理程序的建立和运行

陈振朋、张维
西安金域医学检验所有限公司

目的 风险管理作为一种常态化的实验室质量管理方法，已逐步走进实验室。建立完善的风险管理程序，对实验室日常风险管理具有非常重要的指导作用。
方法 首先建立实验室风险管理程序，说明风险管理的价值、原则、目的，规定风险管理的职责、风险评估时机和程序。在风险管理程序的指导下，建立实验室风险管理模式。对实验室包括人、机、料、法、环、测以及检验前、检验中、检验后整个检验环节进行全面的风险评估，识别各个环节可能存在的风险。风险评估的内容一般包括风险事件的识别、评价、控制和监控。风险评估采用的工具有头脑风暴法、专家指导、鱼骨图法、根源树法，矩阵法、5Why 法等多种方法联合使用。依据建立起来的风险评估报告，对实验室质量体系进行梳理和完善。在日常风险管理工作中，通过日常监督、质量检查、管理评审、临床反馈等识别出风险管理过程中出现的新风险和不受控的风险，并对该事件进行评价，确定其优先级别，制定对应的处置措施加以控制和记录，并持续跟踪确保依从。
结果 通过风险评估，预先识别出实验室质量体系中的不足和可能存在质量事件，及时发现及时处理，有效的预防实验室质量事件的发生，并通过日常风险监督，使整个风险管理形成一个闭环，减少了实验室质量事件的发生，保证实验室质量体系更加健康有效的运行。
结论 在实验室建立风险管理程序并规范运行，对减少实验室质量事件发生、财产损失，提高临床服务能力和水平有非常重要的价值。

PU-3095

克罗恩病发病机制和间充质干细胞治疗研究进展

廖雨琴[3]、吴小佳[2]、刘军权 Liu[1,2,3]、谢军花[1]
1. 龙泉市人民医院
2. 浙江卫未生物医药科技有限公司
3. 杭州金域医检验所有限公司

克罗恩病（CD）是一种易复发且发病症状多样性的慢性肠道疾病，目前发病机制尚不明确。CD 的常规治疗是通过药物、手术等方法以抑制炎性反应和调节局部免疫平衡为手段。近几年间充质干细胞（MSCs）疗法作为 CD 新的治疗手段越来越被重视。MSCs 来源于发育早期的中胚层多能干细胞，具有自我更新、复制和多向分化潜能的干细胞，有抗炎、免疫调节、组织修复和促进血管新生的作用，可实现肠道免疫重建，减少免疫介导的肠道炎症发生等功效，是 CD 最具潜力的新型治疗手段之一。本文根据近几年应用 MSCs 治疗 CD 的研究报道综述如下。

PU-3096

基于 HACCP 及 FMECA 的风险管理法在分析前不合格标本管理中的应用

王海燕、郭笑然、杜秋明
吉林大学第一医院

目的 探索运用 HACCP 及 FMECA 的风险管理法降低分析前不合格标本发生率，提高标本质量，以减少分析前错误对检验结果的影响。
方法 依据危害分析与关键控制点(HACCP)原理及失效模式、影响及其危害性分析（FEMCA）方法，经检验科与护理部共同设计、实践， 通过确定“吉林省不合格静脉血液样本量化指标管理”项目、建立小组、 明确标本分析前环节不合格错误类型、 运用 HACCP 系统确立关键控制点、 对关键控制点进行 FMECA、 对评分较高环节进行防范方案改进、对改进方案进行实施及评估 7 步， 进行不合格标本防范的风险管理。
结果 表明该风险管理法实施效果良好，且较为灵活实用，是适用于检验科与护理部等多部门对分析前不合格标本进行风险管理的方法体系。
结论 HACCP 及 FMECA 的风险管理法的应用,提高了分析前标本的质量,降低不合格标本发生率。

PU-3097

急性呼吸道感染患者中呼吸道合胞病毒感染的流行情况及临床特征

丁细霞
南方医科大学珠江医院

目的 了解急性呼吸道感染患者中呼吸道合胞病毒（respiratory syncytial virus, RSV）的流行特征及其相应的临床特点。
方法 以南方医科大学珠江医院 2009 年 11 月至 2016 年 6 月收治的有发热呼吸道症状患者为研究对象，采集鼻拭子标本 3494 份，提取标本 RNA，采用 qRT- PCR 方法进行 RSV 检测，并对 RSV 阳性标本进行临床上常见的 7 种（10 个亚型）呼吸道病毒的检测，以了解混合感染情况。

结果 共检测患者标本 3494 份，其中 RSV 阳性标本 675 份，总阳性率为 19.3%。四个季节中 RSV 检出率存在统计学差异（p＜0.001），并以春节最高，冬季次之，夏秋两季最少。RSV 感染患者随着年龄的增长检出率逐渐降低，并以 3 岁以下儿童检出率最高，占 RSV 阳性标本数的 90.5%（611/675），儿童患者检出率明显高于成年患者（p＜0.001），男性患者检出率明显高于女性患者（P =0.049），住院患者检出率明显高于门诊患者（p＜0.001）。混合感染标本 161 份，其中双病毒感染标本 144 份，三种病毒混合感染 16 份，四种病毒混合感染 1 份，并以鼻病毒和合胞病毒混合感染率最高，住院患者混合感染率明显高于门诊患者（P＜0.001）。RSV 感染组除了流涕和胸痛等临床症状不存在统计学差异外（P＞0.05），其他临床症状包括咽喉痛、咳痰、头痛、乏力、寒战/畏寒、肌肉酸痛、气促/呼吸困难等均存在统计学差异（P＜0.05），此外，RSV 组与非 RSV 组在临床诊断上也存在临床差异（P＜0.001）。
结论 RSV 是引起 3 岁以下儿童呼吸道病毒感染的主要病原体，也是引起 3 岁以下儿童呼吸道病毒感染住院的主要原因，临床上应加强对该年龄段儿童的防护。

PU-3098

嗜麦芽窄食单胞菌对复方新诺明耐药机制研究进展

杨勇文 Yang
中南大学湘雅医院

嗜麦芽窄食单胞菌（Stenotrophomonas maltophilia,SMA）现已成为重要的医院机会病原体。其引起的感染具有较高的发病率和死亡率，且对绝大多数抗生素天然耐药，是临床抗感染治疗的难题。复方新诺明（trimethoprim-sulfametoxasole,SXT）是临床治疗 SMA 感染的首选抗生素，国内外耐药监测显示已出现 SXT 耐药菌株，检出数量逐年升高，临床抗感染治疗将面临严峻的挑战。因此，本文将对耐复方新诺明的嗜麦芽窄食单胞菌的耐药机制进行综述。

PU-3099

临床医生如何选择检验项目及合理填写申请单

魏亚权、张维
西安金域医学检验所有限公司

目的 分析临床医生如何选择检验项目及合理填写化验申请单
方法 1.检验项目的种类越来越多，检验实验室应与临床医生交多流与沟通，介绍该项目的诊断实验的灵敏度，特异性，预测值等实验特性，使临床医生在选择化验项目时可供参考。
2.临床医生必须按照要求填写申请单上所有信息；包括姓名、性别、年龄、门诊或住院号、科别、临床诊断以及其他特定的识别等填写清楚，以保证实验结果的可靠性和准确，无年龄、性别，不同年龄和不同性别的人群有不同的参考范围。这些都是导致检验单或检验结果出现与临床偏差的重要原因。
3.送检标本应再申请单上注明标本类型、全血、血清、血浆、胸腹水、脑脊液或尿等，不同的标本类型对结果有不同的解释。比如内生肌酐清除率测定需要病员身高、体重及 24 小时尿量等信息，申请日期未填，无法确定标本送检时间。
4.申请单上临床医生签名未填或不清，当检验人员出具报告需要了解更多的临床资料或病史时，紧急情况下无法与临床医生取得联系，会延误对病人的抢救和治疗。
结果 保证检验实验数据的可靠性，为临床提供全面、快速，准确的循证资料。
结论 检验科室人员要加强与临床的沟通交流，增进相互理解，而要达到与临床科室互相学习、交流，两者架起基础医学和临床医学之间的友谊桥梁。

PU-3100

2016-2020 年郑州某三甲医院现患率调查分析

郭娟
郑州人民医院

目的 为了解本院乃至本地区医院感染现状和抗菌药物使用情况，针对总体趋势评价我院实际效果和问题不足，对 2016-2020 年连续 5 年住院患者感染率进行了调查，分析了解某三甲医院感染的实际情况和变化趋势及抗菌药物使用状况，评判医院感染的危险因素。
方法 采用横断面调查方法，调查当日以病区为单位，由管床医生按医院感染监控员要求，填写床旁调查表和调查登记表。调查内容包括患者一般情况、手术情况、感染情况（感染类型、感染部位、病原微生物、侵入性操作、危险因素、抗菌药物使用及微生物送检情况、感染相关的检验与检查结果。对 2016-2020 年每年所有住院患者进行医院感染横断面统计调查，分析 5 年现患率的医院感染情况。
结果 2016-2020 年共统计出 10422 例住院患者，其中医院感染 227 例（2.18%）、241 例次（2.31%）；连续 5 年感染部位均以下呼吸道为主，感染科室主要是重症医学科；医院感染病原体为革兰阴性菌居多，主要是肺炎克雷伯菌(34.95%)、鲍曼不动杆菌(12.62%)和铜绿假单胞菌(10.68%)；革兰阳性菌(9.71%)主要以金黄色葡萄球菌(2.91%)和粪肠球菌(2.91%)为主，连续 5 年病原菌中检出的多重耐药菌以肺炎克雷伯菌居多。抗菌药物平均使用率为 30.77%，联合用药均以一联用药为主。抗菌药物使用率比较差异无统计学意义，预防药物使用率和一联用药方面则有差异学意义，病原学标本送检差异也有统计学意义。
结论 连续 5 年该院院内感染现患率始终保持在较低水平，院内感染防控与抗菌药物管理取得一定成效。但医院仍需加强对重症医学科等重点科室的管理，科学制定医院感染的有效措施，加大对医护人员的无菌操作、手卫生的管理以及抗菌药物使用与环境清洁消毒防控，尽可能减少医院感染的发生。

开发 LIS 功能实现 2019 新型冠状病毒核酸及抗体自动审核和综合报告的尝试及探讨

李利娟[1]、丁利霞[1]、胡正川[1]、陶然[2,3]
1. 郑州金域临床检验中心有限公司
2. 广州金域医学检验中心有限公司
3. 广州医科大学金域检验学院

目的 实现新型冠状病毒核酸及血清学抗体结果自动审核和综合报告，提升临床服务
方法 根据新型冠状病毒检测流程的风险控制需求、检测结果意义，使用金域检验自行开发的自动审核系统设置 20 条自动审核规则，包括 3 条结果审核规则和 17 条结果解释规则。实验室信息管理系统（LIS）对新冠核酸和抗体结果自动审核并综合至一张报告单，实现自动报告
结果 LIS 成功进行结果审核和综合，结果解释类规则使用率占 99.7%，结果审核类规则使用率占 0.3%，自动审核缩减新型冠状病毒样本检测周转时间（TAT）2.7 小时，尚未发现任何 LIS 执行缺陷。
结论 通过自动审核和综合报告可以控制内部风险、提供结果解释，提升报告处理效率和临床服务质量，为检验临床的良性互动提供保障。

PU-3102

肠杆菌科与宿主健康的关联分析

吴凡
南方医科大学珠江医院

肠杆菌科细菌是常见的人类微生物组成员，是影响肠道微生态的重要菌科，并与多种营养代谢性疾病相关。然而目前对于肠杆菌科在人群中的流行率、丰度、结构组成、宿主疾病关联等基本信息的描述仍不清晰。因此，需要较大的样本量来揭示人群肠道中肠杆菌科的共性，并在此基础上进一步探究肠杆菌科与宿主生活方式、与其他肠道菌群的关系以及与宿主疾病之间的关联。

PU-3103

kit/D816V 基因突变阴性的 1 例慢性嗜酸性粒细胞白血病的病案讨论

陈月梅
四川大学华西医院

目的 探讨慢性嗜酸性粒细胞白血病（CEL）的临床特征以及临床诊疗方法，从而总结该类疾病的临床特征。
方法 回顾分析慢性嗜酸性粒细胞白血病(CEL)1 例病患的临床资料和诊断治疗方法。
结果 慢性嗜酸性粒细胞白血病除了白血病的临床特征外伴有嗜酸嗜碱性粒细胞的异常增生，并且浸润各脏器官的单克隆性增殖表现。
讨论 本文就我院临床收治的一位病人伴 MPN 未见基因突变、-kit/D816V 基因突变阴性。染色体为正常核型的临床表现讨论。病人进行伊马替尼治疗后缓解出院，因肝脾肿大再次入院，入院后发热采用达沙替尼治疗，停用伊马替尼。症状缓解后进行父系 HLA 5/10 相合异基因外周血造血干细胞移植，粒细胞植活后。因肺部感染再次入院治疗。酪氨酸激酶抑制剂(比如伊马替尼) 成为治疗 CEL 患者的首选方案，且效果显著。然而，不同重组基因类型对伊马替尼的敏感性及疗效差别显著。

PU-3104

BCR-ABL1 阳性伴 FLT3-ITD 及多种基因突变的原发性急性髓系白血病的实验室检测及临床特征分析

陈月梅
四川大学华西医院

目的 探讨 BCR-ABL1 阳性伴 FLT3-ITD 及多种基因突变的原发性急性髓系白血病（AML）的诊断和治疗，为研究这种罕见 AML 亚型的临床特征及预后意义提供临床参考。
方法 对伴有 BCR-ABL1、FLT3-ITD 和其它多种基因错义突变的原发性 AML 患者进行实验室临床诊断，并总结其临床及实验室特征。
结果 细胞形态学示原始细胞。原始细胞免疫表型为 CD13+、CD33+、CD34+（部分）、CD117+和 HLA-DR+。染色体核型分析示存在 t（9；22）形成的费城（Ph）染色体。髓系白血病 34 种高频基因筛查示 FLT3-ITD 阳性，且 DNMT3A、BCOR、IDH2、BCORL1 和 RUNX1 基因均检测到错义突变。结合历史实验室检查结果，该病例符合 BCR-ABL1 阳性 AML。患者接受伊马替尼、地西他滨、高三尖杉酯碱及盐酸阿糖胞苷化疗方案及抗感染治疗，总体生命体征平稳，出院随访。

结论 BCR-ABL1 阳性的原发性 AML 病例报道较少，尚未形成标准化的诊断和治疗方案，MICM 分型，尤其是细胞遗传学和分子生物学相关检测对其诊断和预后评估极为重要。本病例能够为 BCR-ABL1 阳性 AML 的临床和实验室特征提供资料。

PU-3105

血清炎性因子及血小板参数与肺癌的相关性研究

金亚雄
四川大学华西医院

目的 为探讨肺癌患者血清各炎性因子水平变化、血小板相关参数变化以及血清炎性因子与血小板相关参数之间的相关性。
方法 本研究回顾性纳入 2018 年 1 月~2020 年 1 月来华西医院就诊的 100 例肺癌患者，选择同期来华西医院健康体检中心体检的 100 例健康人做对照组，分别测定血清炎性因子水平及血小板相关参数，分析肺癌患者血清炎性因子与血小板相关参数的相关性。
结果 肺癌患者血清降钙素原、C 反应蛋白以及白介素 6 水平显著高于健康对照组（P 均<0.001）；肺癌患者血小板计数显著升高（P<0.001），而平均血小板分布宽度较低（P<0.001）；肺癌患者血清降钙素原、C 反应蛋白以及白介素 6 水平与血小板计数呈明显正相关（P 均<0.001），血清降钙素原和 C 反应蛋白水平与平均血小板体积及血小板分布宽度未见明显相关关系（P 均>0.05），血清白介素 6 水平与平均血小板体积未见明显相关关系（P=0.154），血清白介素 6 水平与血小板分布宽度呈显著负相关关系（P=0.041）。
结论 肺癌患者血清降钙素原、C 反应蛋白、白介素 6 水平显著升高，血小板计数也显著升高，且血清降钙素原、C 反应蛋白、白介素 6 水平与血小板计数呈明显正相关，血清炎性因子水平以及血小板参数可共同作为肺癌预后判断指标，为患者进一步治疗方案的选择以及治疗疗效的判断提供更准确的参考。

PU-3106

应用 ISO20914 将常规化学项目不确定度应用于检验报告的探讨

曲波、高昕、尹晓雪、张云丽、赵红梅
中国医科大学人民医院辽宁省人民医院

目的 探讨不确定度应用于检验报告的可行性。
方法 应用 ISO20914 提供方法计算实验室不确定度，评价不确定度是否满足行标要求，并计算每日不确定度以报告形式提供给临床。
结果 长期不确定度满足行标要求，并且葡萄糖项目的不确定度在临床决定水平附近时可以给内分泌科医生提供帮助。
结论 不确定度在具有临床决定水平的项目上可以帮助临床医生作出更恰当的诊治。

PU-3107

2 型糖尿病患者血清游离脂肪酸水平以及与空腹血糖的相关分析

林妍榕
南方医科大学第二附属医院珠江医院

目的 探讨 2 型糖尿病患者血清中游离脂肪酸（FFA）的水平，并探讨其与空腹血糖（FBG）的相关性。

方法 采取在珠江医院确诊为 2 型糖尿病的患者血样 82 份和正常对照血样 30 份，进行空腹血糖和游离脂肪酸检测，并进行相关性分析。
结果 2 型糖尿病组 FFA 水平较对正常对照组明显升高（P<0.01）；相关性 2 型糖尿组 FFA 与 FBG 成明显正相关（r=0.303，P<0.01）
结论 FFA 可以很好地反映 2 型糖尿病患者血糖情况，为该疾病提供新的诊断依据。

PU-3108

胸苷激酶 1 在癌性胸腹水方面的探讨

邓智铭
南方医科大学珠江医院

目的 目前针对胸腹水性质的鉴别诊断是医学难题，本次研究通过检测胸腹水中的胸苷激酶 1 的水平，来评估胸苷激酶 1 是否能用于鉴别诊断癌性胸腹水，进而为临床探索出一种新型的，可靠的鉴别诊断癌性胸腹水的方法。
方法 于 2014 年 10 月-2015 年 1 月，收集广州市珠江医院住院部临床胸腹水标本共 92 例，其中 42 例癌性胸腹水标本为实验组，50 例良性胸腹水标本为对照组,两组同时采用免疫点印迹化学发光法进行胸苷激酶 1 水平的测定并对其进行相关性分析；根据所得数据，绘制 ROC 曲线初步确定胸苷激酶 1 对癌性胸腹水的鉴别界限。
结果 与对照组相比，实验组胸腹水中胸苷激酶 1 的水平明显高于对照组（P＜0.05），差异有统计学意义；根据绘制的 ROC 曲线，本次研究初步确定以大于 3.10pg/ml 为诊断界限，其敏感度为 71.4% 特异性为 74.0% 。
结论 本次研究中癌性胸腹水中胸苷激酶 1 的水平显著升高，其在鉴别癌性胸腹水方面具有一定的临床意义和应用前景。

PU-3109

小剂量兔抗胸腺细胞免疫球蛋白在肾移植中的应用

潘沅
南方医科大学珠江医院

目的 评价小剂量兔抗胸腺细胞球蛋白(rATG)在同种异体肾移植术中应用的临床价值。
方法 回顾性分析我院 2016 年 1 月至 2017 年 1 月肾移植术后小剂量应用 rATG 临床病例患者共 107 例。
结果 84 例预防性应用 rATG 患者，81 例肾功能恢复正常。23 例急性排斥反应（AR）经 rATG 治疗后 22 例逆转，有效率 95.65%。术后出现移植肾功能延迟恢复（DGF）预防性应用 rATG 37 例（34 例恢复），32 例未使用 rATG (27 例恢复)，两组差异没有统计学意义 (P＞0.05)。DGF 平均恢复时间 rATG 组（18.22±13.74）d、非 rATG 组（24.76±16.34）d，差异有统计学意义(P<0.05)。小剂量应用 rATG 患者术后 3 年内感染率为 8.4%，而未使用 rATG 患者术后 3 年内感染率为 6.2%，差异无统计学意义(P＞0.05)。
结论 术后小剂量 rATG 能有效预防、控制 AR，且能逆转大部分对甲强龙冲击无效及短期内连续发生 AR 的难治性 AR，对于 DGF 患者应用 rATG 能有效平稳过渡，缩短 DGF 时间。在合理使用免疫抑制方案的情况下应用 rATG 的受者术后 1-3 年内继发感染风险较未使用 rATG 组无统计学差异。

浅谈检验危急值与患者安全

任建平
山西省中医药研究院 山西省中医院

危急值是表明患者可能正处于有生命危险的边缘状态的异常结果；既然是关系到患者的生命和安全，那么危急值的预警和预防是非常的重要，他不仅可以有效规避医疗风险的发生，显著降低纠纷和投诉率，缓和医患矛盾，而且最重要的挽救患者的生命。因此，危急值的管理：进无止境！

PU-3111

自动粪便分析仪在医院实验室使用过程中的流程优化及经验

张春莹、陈月梅、谢恒、邓山鹰、熊明、蒋能刚
四川大学华西医院

临床实验室检查中，粪便检验是常规检验三大项目之一，对消化系统疾病及寄生虫病等的诊断、治疗有十分重要的作用。由于粪便标本易采集、无创的特点，易被患者接受。但对于粪便的常规检测技术，目前国内外仍主要依赖手工操作方法（生理盐水湿片法），操作中易造成交叉污染且检出率较低，同时由于粪便的特殊气味严重影响工作环境，易引起医护人员抵触心理，由此而引发的生物安全问题突出。近些年，国内很多企业投入到粪便分析仪的研制中，粪便检验自动化得到了蓬勃发展，新的自动粪便分析装置层出不穷。

我院在多方面考察及对比多种粪便自动分析仪/自动粪便分析工作站的基础上，选择了一款自动粪便前处理分析系统。该仪器为全自动一体机，带有专用的多功能样本采集管和专门与仪器配套使用的粪便隐血试验卡（胶体金法），因而与本实验室之前手工检测方法使用的样本采集和隐血试剂有所不同，可替代人工操作涂片和显微镜检查，并自动判读隐血结果，大大解放人力，提高了工作效率。但是，检测方法的改变意味着工作流程的变化，在检测方法从手工转换为仪器的过程中，伴随着病人采样容器的改变和实验室隐血试剂的更换。作者所在医院于 2016 年开始使用自动粪便前处理分析仪，在因检测方法而改变工作流程中，涉及到门诊病人、住院病人、医生、护士以及检验人员的沟通与合作。本文就自动粪便前处理分析仪在我院使用过程中的流程优化以及使用经验作一个简要的总结。

PU-3112

296 例多发性骨髓瘤 mSMART 细胞遗传学预后分布的研究

华佳敏
上海金域医学检验所有限公司

目的 分析国内多发性骨髓瘤（MM）细胞遗传学预后分布情况，并与国外的数据进行比较。
方法 回顾性分析 296 例确诊的 MM 患者间期荧光原位杂交（FISH）检测（样本经过浆细胞富集）的结果，统计 MM 预后分层体系中各种细胞遗传学异常(CA)频率，并与国外的相关数据进行比较。
结果 296 例 MM 标本通过 FISH 检测分析，211 例阳性，阳性率为 71.28%。296 例标本中存在 1q21 扩增拷贝的总共 153 例，占 51.69%；存在 13q14 缺失的共 125 例，占 42.37%(295)；存在 17p13.1 缺失共 31 例，占 10.47%；存在 t (11; 14)的共 31 例，占 11.00%(282)；存在 t (4; 14)的总共 42 例，占 14.89%(282)；存在 t (14; 16)的共 5 例，占 1.77%(282)。根据 mSMART3.0 的定义标准，296 例 MM 样本中存在至少一项高危遗传异常的 170 例，占 57.43%，占所有阳性标本的

80.57%。双打击 57 例，占 19.26%，三打击 3 例，占 1.01%。结合近年文献报道的 MM FISH 细胞遗传学异常频率数据进行了讨论。
结论 根据 mSMART3.0 的定义标准，本组 MM 细胞遗传学高危与极高危病例比例总体上较高，高于文献报道的欧美国家数据。

PU-3113

PLT 与肝脏疾病严重程度的相关性分析

陈钰静、卢舜均
南方医科大学珠江医院

目的 分析 PLT 与肝脏疾病严重程度的相关性。
方法 收集在 2013 年 8 月到 2019 年 1 月期间被诊断为肝炎的 111 例病人、肝硬化的 118 例病人、肝癌的 113 例病人和健康体检者 122 例进行回顾性分析。分析各组的 PLT 水平及 PLT 与肝脏疾病严重程度的关系。以 ALT 超过正常值 2 倍以上，即 ALT≥80IU/L 作为判定肝损伤的诊断标准[1]，把三组中的患者再各自细分为是否有肝损伤，分析血小板计数与肝损伤之间的相关性。
结果 与对照组（236.52±49.37×109/L）比较，肝炎组（213.65±70.72×109/L）、肝硬化组（110.44±76.04×109/L）和肝癌组（153.62±57.85×109/L）的 PLT 都有下降（P＜0.5）。肝硬化组 PLT 最低，肝癌组次之，肝炎组 PLT 轻微下降,经方差分析差异具有统计学意义（F=93.22，P＜0.05）。各组之间的 PLT 总体均数不等或不全相等。进一步进行多个均数的两两比较，四组两两之间的总体均数差异都有统计学意义。采用 Spearman 相关性分析发现，PLT 与肝脏疾病严重程度呈负相关（rS=-0.517，P=0.01）。肝炎患者肝损伤组与非肝损伤组经近似 t 检验分析得差异不具有统计学意义（t=0.392，P＞0.05），肝硬化患者肝损伤组与非肝损伤组经两独立样本 t 检验分析得差异不具有统计学意义（t=0.621，P＞0.05），肝癌患者肝损伤组与非肝损伤组经两独立样本 t 检验分析得差异不具有统计学意义（t=0.277，P＞0.05）。
结论 PLT 与肝脏疾病损伤程度有一定的相关性，血小板数量在对肝脏疾病损害程度进行评估时，可以作为一项参考的指标。肝癌患者与肝硬化患者相比，其 PLT 增多，这种变化可以作为肝癌诊断的辅助依据。但同一肝脏疾病随着病情进程的加深，肝炎患者、肝硬化患者和肝癌患者 PLT 水平与肝功能损伤程度关系不大。

PU-3114

抗凝血酶在临床中的应用

杨萌
南方医科大学珠江医院

目的 抗凝血系统是人体内重要的功能系统，它与纤溶系统共同组成完整的防御体系。抗凝血酶是抗凝系统中重要的组成部分。在早期研究中ＡＴ可吸附凝血酶的纤维蛋白被称为为ＡＴⅠ，肝素辅助因子被称为ＡＴⅡ，促ＡＴ被称为ＡＴⅢ。其中 ATⅢ起决定性作用。它是一种球蛋白，由 3 个 β 折叠结构、9 个 α 螺旋结构和 1 个反应中心环。主要由肝脏合成，肺、脾、肾、心、肠、脑、血管内皮细胞和巨核细胞也可合成。本篇文章将系统性阐述抗凝血酶的结构及其在各系统疾病中的应用。
方法 通过 pubmed、万方、知网等数据库，检索抗凝血酶的相关研究，以综合阐述抗凝血酶在疾病方面的价值。
结果 抗凝血酶在抗凝系统中起关键作用，因此在多种疾病中广泛应用。在脓毒血症中，炎症细胞大量激活，释放各种因子损害机体，同时也破坏了人体的凝血系统，AT 活性明显下降。在脑梗死中，因机体处于高凝状态，从而消耗各种凝血因子，导致 AT 活性亦下降。在 DIC 中，，血管内的

抗凝系统被启动，导致ＡＴ被大量消耗，使ＡＴ水平明显低于发病前。在易栓症中，ＡＴ活性水平与易栓症的严重程度呈负相关关系，其活性水平越低易栓症的风险就越大。在肿瘤、习惯性流产中，AT 活性也是降低的。

结论 抗凝血酶在抗凝系统中起关键作用，通过测量抗凝血酶的活性，尤其是抗凝血酶Ⅲ的活性，并结合凝血四项，可很好的了解患者体内凝血系统状态，从而达到对疾病的早期干预，以防出血或再出血的风险。

PU-3115

儿童异型淋巴细胞检测结果分析

凌永基
南方医科大学珠江医院

目的 探讨全自动血液分析仪 Sysmex XT-2000i 对儿童外周血异型淋巴细胞(异淋)警示的可信性,以及儿童异型淋巴细胞增高症的临床意义。
方法 对 284 例各类疾病患儿进行血常规检测和人工显微镜检查（人工镜检），比较所得结果;对 49 例手工确认异淋阳性（人工镜检中异型淋巴细胞>5%者）标本中异淋的比率及患儿所患疾病进行统计。
结果 Sysmex XT-2000i 提示异淋阳性 90 例标本中人工镜检异淋阳性 17 例,其敏感性为 34.69%，阳性预测值为 82.02%；194 例未提示异形阳性的标本中人工镜检异淋阳性 31 例,特异性为 68.94%，阴性预测值为 83.94%；仪器提示异淋阳性与未提示异淋阳性的患儿标本中,人工镜检淋巴细胞和单核细胞百分比均值间均无统计学差异 (P>0.05)；其中，仪器提示异淋阳性和未提示异淋阳性标本，人工分类单核细胞>8%的频数符合度无统计学差异（P>0.05）。手工确认 49 例异淋阳性的患儿，传染性单核细胞增多症、上呼吸道感染和急性毛细支气管炎分别占 30.61%、16.32%和 10.20%。
结论 全自动血细胞分析仪对异型淋巴细胞提示的敏感性不高,阳性预测值低,因此对异淋的检测，此 Sysmex XT-2000i 不能作为过筛工具,外周血中单核细胞量对仪器判断是否有异淋无影响；同时异淋增高不是 EB 病毒感染特异现象,在各种感染性疾病中都有出现,异淋检测可为临床提供辅助诊断，用于疾病的鉴别诊断，临床应注重儿童异淋的显微镜检查。

PU-3116

一例 Rh 血型结果与历史不符的病例分析

周祺淇
南方医科大学珠江医院

患者女性，年龄 21 岁，为血液内科病区病人，临床诊断为急性淋巴细胞白血病。于 10 月某天早晨送来一份血型标本做检测，经过常规操作流程离心上机检测，第一次检测结果为：正定型 Anti-A 柱 4+，Anti-B 柱阴性；Anti-D 柱报 MF 警；Ctrl 阴性；反定型 A1-Cells 柱阴性，B-Cells 柱 4+。点开仪器的标本血型卡快照，显示 Anti-D 柱中有两群细胞，离心后沉下去的细胞数量较少。查看病人送检血型的结果历史，发现病人最近一次检测为同年 3 月份，Rh 血型结果为阴性。此时出现了 Rh 血型结果与历史不符的情况，在等待与联系临床医生的时间里，与同事几番讨论，提出输血、移植等几种可能性。后经与医生沟通了解到，该病人早前往当地血站送过血型鉴定，结果为 Rh 阳性（DEL 阳性），谜底逐渐揭开。

PU-3117

血清基质金属蛋白酶 16 表达水平在神经胶质瘤辅助诊断中的应用

张佳佳
河南省肿瘤医院

目的 分析基质金属蛋白酶 16 (Matrix metalloprotease 16)在神经胶质瘤患者血清中的表达水平，并探讨其在神经胶质瘤诊断中的应用价值。
方法 将 2019 年 1 月至 2020 年 6 月于河南省肿瘤医院就诊的 40 例神经胶质瘤患者纳入神经胶质瘤组,统计患者的年龄、性别、病理分级、肿瘤直径、体质指数等，另选同期 20 名健康受试者作为对照组。收集受试者空腹静脉血，通过酶联免疫吸附法测定两组血清中的基质金属蛋白酶 16 水平,经受试者工作特征曲线评价所观察指标对神经胶质瘤的诊断价值,并分析其与神经胶质瘤临床病理特征的关系。两组间比较采用 Wilcoxon 秩和检验，多组间比较采用 Kruskal-Wallis H 检验。
结果 神经胶质瘤组血清基质金属蛋白酶 16 水平（中位数）均高于健康组,且差异具有统计学意义(P<0.05)；受试者工作特征曲线结果显示,血清基质金属蛋白酶 16 对神经胶质瘤的诊断效能高，曲线下面积(AUC)为 0.938；基质金属蛋白酶 16 水平与病理分级呈正相关(P<0.05)，与肿瘤直径呈正相关(P<0.05)。
结论 神经胶质瘤患者血清中基质金属蛋白酶 16 水平呈高表达,且与 TNM 分期、肿瘤直径等病理特征密切相关,可作为诊断神经胶质瘤的潜在标志物。

PU-3118

性激素六项检查对多囊卵巢综合征的诊断价值

崔思洋
吉林金域医学检验所有限公司

目的 探讨性激素六项检查对多囊卵巢综合征的诊断价值。
方法 选取 2020 年 6 月至 2020 年 12 月确诊的多囊卵巢综合征患者 100 例，同期进行体检的健康女性 100 例作为对照组，回顾多囊卵巢综合征患者与所有对照组女性的性激素六项的检测结果，对两组性激素六项（睾酮，孕酮，泌乳素，促黄体生成素，雌二醇，促卵泡雌激素）水平进行分析对比结果，检测设备为雅培化学发光分析仪 i2000SR，方法为磁微粒化学发光法，使用雅培原装试剂进行检测。
结果 与对照组相比较，多囊卵巢综合征患者，促黄体生成素、促黄体生成素/促卵泡雌激素、睾酮水平显著升高，（P＜0.05）；促卵泡雌激素水平显著降低（P＜0.05）泌乳素、孕酮、雌二醇水平无明显差异（P＞0.05）
结论 多囊卵巢综合征是育龄妇女较常见的内分泌症候群，一种多病因、表现极不均一的临床综合征。性激素六项水平可以作为多囊卵巢综合征患者的辅助诊断手段，但对于不确定的多囊卵巢综合征患者，仍需进行阴道彩超等进一步的诊断。

PU-3119

TCT 与 HPV 联合阴道镜下用于宫颈癌筛查临床应用

付玉华
内蒙古科技大学包头医学院第一附属医院

目的 评价人乳头状瘤病毒（HPV）与液基薄层细胞学检查(Thinprep cytologic test TCT)并联合阴道镜下活检在妇女宫颈癌筛查中的诊断价值。
方法 临床妇科大夫采集宫颈细胞标本分别做 TCT 和 HPV 定量检测，TCT 用液基薄层技术制片。HPV 采用人乳头状瘤病毒核酸试剂盒的杂交捕获-化学发光法。收集我院 2017 年 1 月年到 2019 年 1 月接受 TCT、HPV 及阴道镜检查患者共 450 例。
结果 病理结果为正常的共计 380 例，低级别病变的 51 例，高级病变及原位癌 15 例，鳞状细胞癌为 4 例。
结论 以病理为金标准，TCT 阳性，HPV 阳性联合检测阳性率明显高于 TCT 或 HPV 单一检测。

PU-3120

与维生素 D 缺乏相关的气象条件和空气污染：一项基于中国西部人群的横断面研究

何訸、曾玉萍、王霞、杨礼丹、张玫、安振梅
四川大学华西医院（四川省国际医院）

目的 本研究旨在了解该地区人群维生素 D 缺乏状况及环境因素对维生素 D 水平的影响，为促进该地区公众健康工作提供理论支持。
方法 选择 2018 年 4 月至 2020 年 5 月在四川大学华西医院中心体检的 22387 名受试者为研究对象。对其性别、年龄、检查日期、血清 25-羟基维生素 D (25-(OH)D)、甲状旁腺激素(PTH)、总钙数据进行回顾性分析。比较不同性别、不同年龄组维生素 D 的水平，并描述维生素 D 水平随环境变化的变化情况。对维生素 D 缺乏的危险因素和保护因素进行单变量和多变量线性回归分析。
结果 本地区维生素 D 缺乏率为 42.17%，女性维生素 D 缺乏的患病率为 51.6%，高于男性的 34.1%，差异有统计学意义；不同年龄组中比较结果显示 20-30 岁人群维生素 D 不足患病率为 48.7%，维生素 D 缺乏患病率为 10.7%。50-60 岁人群微生素 D 不足和维生素 D 缺乏的患病率分别为 29.4%和 3.2%。在全年内 25-羟基维生素 D 水平的波动趋势与温度和太阳辐射一致，与空气质量相反。回归分析显示 25-羟基维生素 D 水平与甲状旁腺激素、空气质量呈负相关；与温度、太阳辐射呈正相关。
结论 亚热带地区(如四川盆地)维生素 D 普遍缺乏，可能与太阳辐射和空气污染有关。

PU-3121

尿白蛋白排泄率与肾小球滤过率在 2 型糖尿病肾病诊断中的关系与价值

吕献敏[1]、吕火烊[2]、陈铮铮[1]
1. 桐乡市第一人民医院
2. 浙江省人民医院

目的 探讨尿白蛋白排泄率与肾小球滤过率在 2 型糖尿病肾病诊断中的关系与价值。

方法 回顾分析已有数据，根据尿白蛋白排泄率（UAER）分组,比较各组估计肾小球滤过率（eGFR）的变化；根据 eGFR 分组，比较各组 UAER 的变化;分别比较 UAER 与 eGFR 各组的关系及 UAER 各组与 eGFR 的相关性以深入挖掘 UAER 与 eGFR 间的关系，以及在 2 型糖尿病患者中的变化情况，探讨其临床应用价值。
结果 不同 UAER 组，随着 UAER 升高，eGFR 降低，各组差异具有统计学意义(P<0.05）；不同 eGFR 组，随着 eGFR 下降，UAER 升高，各组差异具有统计学意义（P<0.05）；微量白蛋白尿组、大量白蛋白尿组患者肾功能异常率（分别为 13.5%和 37%）显著高于正常白蛋白尿组（7.8%），而肾功能异常组尿白蛋白（包括尿微量白蛋白和尿大量白蛋白）发生率 51.5%（35/68）显著高于肾小球高滤过组 10.2%（13/127）、正常滤过组 24.8%（34/137）和轻度滤过降低组 32.4%（83/256）；全部患者的 eGFR 与 UAER 呈负相关（r=-0.488 P<0.01），UAER 各组与 eGFR 相关性以大量白蛋白尿组最强（r=-0.572 P<0.01）。
结论 UAER 与 eGFR 是从不同角度较好反应肾功能早期变化的敏感指标，二者呈负相关，但单一检测均存在不能全面反映糖尿病肾病患者肾脏受损情况。联合检测能较全面了解肾小球器质性损伤情况和肾功能的损伤程度，能较好地对 2 型糖尿病肾病作出早期诊断。

PU-3122

原发性胆汁性胆管炎患者自身抗体的聚类分析

赵丹彤[1]、韩莹[2]、张海萍[1]、黄春洋[2]、刘燕敏[2]、廖慧钰[2]、张伟明[3]、赵艳[1]、闫惠平[1]
1. 首都医科大学附属北京佑安医院 临床检验中心
2. 首都医科大学附属北京佑安医院 肝病中心二科
3. 首都医科大学附属北京佑安医院 临床检验诊断学系

目的 比较不同自身抗体特征的 PBC 患者临床、预后的差别，为进一步了解疾病特点，加深对疾病的认识提供证据支持。
材料与方法 对 2009 年 7 月至 2019 年 7 月间 537 例 PBC 患者自身抗体检测结果进行聚类分析。包括：ANA, AMAs 和/或抗 AMA-M2、ACA 和/或 CENP-B、抗 Ro52、抗 SSA、抗 SSB、抗 Sm、抗 nRNP、抗 dsDNA、抗 Rib、抗 His、抗 Nuk、抗 Scl-70、抗 Jo1、抗 gp210、抗 sp100、抗 SLA、抗 LKM-1 和抗 Lc1。采用二阶聚类进行分析、Kaplan-Meier 法进行单因素生存分析，组间生存率比较采用 log-rank 检验；生存预后多因素分析采用 Cox 回归。
结果和结论 (1)共得 5 个聚类：聚类 1（n=107），主要为 ANA(100%)、AMA 和或 AMA-M2（84.1%）、ACA 和/或抗 CENP-B（28%）、抗 Ro52（15%）、抗 gp210（100%）；聚类 2（n=120），主要为 ANA（94.2%）、AMA 和或 AMA-M2（96.7%）、抗 Ro52（47.5%）、抗 SSA（47.5%）、抗 SSB（14.2%）、抗 gp210（34.2%）、抗 sp100（51.7%）；聚类 3（n=124），主要为 ANA（63.7%）、AMA 和或 M2（100%）、ACA 和/或抗 CENP-B（100%）；聚类 4（n=101），主要为 ANA（100%）、AMA 和或 AMA-M2（94.1%）、ACA 和/或抗 CENP-B（98%）、抗 Ro52（54.5%）、抗 SSA（18.8%）、抗 sp100(21.8%）；聚类 5（n=85），主要为 ANA（84.7%）、AMA 和或 AMA-M2（100%）、抗 Ro52（100%）、抗 gp210（47.1%）。(2)聚类 1 生存率明显低于聚类 2、聚类 3 和聚类 4（P<0.005）；抗 gp210 是影响 PBC 患者生存预后的主要危险因素。

PU-3123

2 型糖尿病患者血清非酶类抗氧化物水平的研究

吕献敏[1]、吕火烊[2]、陈铮铮[1]、虞国其[1]、肖龙[1]、姜黎花[1]
1. 桐乡市第一人民医院
2. 浙江省人民医院

目的 探讨 2 型糖尿病（T2DM）患者血清中非酶类抗氧化物水平，分析其与氧化应激的关系及与血糖的相关性。
方法 选择符合纳入条件的 588 例 T2DM 患者作为研究组，检测血清白蛋白、胆红素及尿酸，与同期健康体检者进行比对，统计分析二者的差异，并分析研究组非酶类抗氧化物与空腹血糖水平的相关性。
结果 T2DM 患者血清白蛋白、胆红素水平明显低于对照组，差异有统计学意义（P <0.05），血清白蛋白、胆红素水平与空腹血糖呈二者呈负相关（P <0.05）；尿酸水平明显高于对照组，差异有统计学意义（P <0.05），尿酸与空腹血糖呈正相关（P <0.05）。
结论 T2DM 患者血清白蛋白、胆红素、尿酸水平有显著变化，发生变化的原因可能与氧化应激有关，检测上述非酶类抗氧化物有助于 T2DM 的诊断及可为 T2DM 的治疗提供参考。

PU-3124

某院实验室危急值指标不同年度间的回顾性分析

李鹏、韩素丽、闫慧
长治医学院附属和平医院

目的 对临床实验室不同年度危急值报告指标进行统计分析并做出科学评价，使科室的危急值报告合理运行。
方法 对我院 2016-2019 年的危急值报告内容中的危急值发生率、危急值报告及时率、危急值发生的项目和危急值发生的科室等指标进行回顾性分析并提出改进性措施。
结果 2016-2019 年间危急值发生率升高，危急值报告及时率明显提高，危急值报告时间缩短，无需向临床发放的危急值率上升，危急值发生的科室构成比和发生率出现了相应的变化。
结论 对临床实验室危急值报告指标进行合理有效的分析对于临床危急值报告的运行具有重要价值。

PU-3125

类风湿因子对类风湿关节炎合并结核患者预后的影响

吕梦媛、赖红历、周妍冰、王义莉、唐婕希、陈雪融、应斌武
四川大学华西医院

目的 探究类风湿因子(rheumatoid factor, RF)对类风湿关节炎合并结核患者的结核相关预后的影响，并且建立预测两月痰涂片转化(2-month sputum smear conversion, 2m-SSC)的模型。
方法 收集 2013 年 12 月至 2019 年 9 月期间在四川大学华西医院住院的类风湿关节炎合并结核患者的初始医疗记录和随访数据（每半年随访一次）。通过 logistic 回归和 cox 回归识别 2m-SSC 及结核复发的危险因素，并计算相对危险度(odds ratio, OR)或风险比(hazard ratio, HR)和相应的 95%置信区间(confidence interval，CI)。使用 Logistic 回归和弹性网络回归构建预测模型，计算敏感性、特异度及曲线下面积(area under curve, AUC)以评估模型效能。
结果 纳入 434 例类风湿关节炎合并结核的患者。以纳入人群 RF 值的中位数（24）为截断值，将其分为 RF 高值组和低值组。回归分析显示 RF 分级(OR=9.548, 95%CI: 5.390-16.913, p<0.001)是

2m-SSC 的独立危险因素；结核复发风险在两组间无明显差异(p=0.292)。三个 2m-SSC 预测模型均纳入了 RF 分级这一变量。在训练集中，Logistic 回归模型的敏感度、特异性和 AUC 分别为 57.0%, 78.3% 和 66.6%；在验证集中，分别为 53.8%, 92.9% 和 74.9%。在弹性网络回归中应用 K 折叠交叉验证筛选变量时，模型在训练集中的敏感度为 81.2%，特异性为 70.0%，AUC 为 80.8%；在验证集中敏感度和 AUC 分别降至 62.1%和 78.0%，特异性升高至 89.3%。使用最小均方根误差选择变量时，模型在训练集中的敏感度、特异性和 AUC 分别为 70%, 80.5% 和 80.8%，在验证集中分别为 89.3%, 62.7% 和 78.1%。

结论 对类风湿关节炎合并结核的患者而言，RF 分级是 2m-SSC 的独立危险因素，并且对构建性能良好的 2m-SSC 预测模型做出了重大贡献。对 RF 水平进行分级可以帮助临床医生预测结核相关结局，及时采取措施，以改善患者预后。

PU-3126

2019 至 2020 骨髓涂片镜检与流式免疫分型结果不相符分析

金咏梅、刘雨涵、蒋能刚、廖红艳、粟军
四川大学华西医院

目的 探讨同时进行了骨髓涂片细胞学检查与流式细胞免疫分型两种检查结果不相符的情况，分析二者分型结果不相符的原因，并进一步分析其对于造血系统疾病的诊断价值，同时对如何提高实验室骨髓涂片镜检准确率进行探讨。

方法 回顾四川大学华西医院 2019 年 3 月 1 日至 2020 年 3 月 31 日内送至临检血液室骨髓组的骨髓涂片细胞学检查及流式细胞术免疫分型结果，并对其进行统计学分析。

结果 四川大学华西医院临检血液室骨髓组在 2019-2020 一年零一个月内共计接收 5373 例同时进行了骨髓涂片细胞学检查与流式细胞免疫分型的病例，其中两种检查结果不相符为 746 例，占总病例数的 13.88%。在分型结果不相符的病例中，急性髓系白血病分型结果不相符为 116 例(占总不相符数的 15.55%，下同)；混合型白血病分型结果不相符为 3 例（0.40%）；急性淋巴细胞白血病分型结果不相符为 82 例(10.99%)；上述两例之中形态学结果为急性淋巴细胞白血病而流式免疫分型结果为急性髓系白血病病例数为 6 例（0.80%）；慢性髓系白血病分型结果不相符为 5 例(0.67%)；异常细胞检测结果不相符病例数为 331 例（44.37%）；由形态学诊断为 MDS 的病例总数为 74 例，其中不相符 12 例(1.61%)；MM 诊断结果不相符病例数为 3 例(0.40%)；白血病预后检监测结果不相符病例数为 129 例(17.29%)；贫血类疾病检测结果不相符病例数为 74 例（9.92%）；由于取材或制片问题造成的结果不相符为 188 例(由于其为外在因素因此未计入不相符病例数中)。

结论 (1)形态学检查对于细胞典型特征病例(例如 MM、LPD)以及贫血类疾病(例如 AA,PRCA)的识别度较高，并能够诊断出 MDS；流式细胞数对于肉眼无法判别的异常细胞、以及淋巴细胞类分型的识别度较高，并在白血病分型与预后检测方面优于形态学。(2)二者的主要区别主要表现在异常细胞计数分类及红系细胞的识别两方面，一方面可提高形态学检查的准确性，另一方面可增加流式细胞术对红系表面抗原的检测。

PU-3127

2 型糖尿病合并肥胖病人中 Irisin 水平的研究

张诗田、王雅茹、刘影、张亚南、刘蕊、王爽、李宣、牛文彦
天津医科大学朱宪彝纪念医院

目的 近年来，由于人们高脂饮食增多，体力活动减少，生活压力增加，肥胖人群逐年扩大。糖尿病是以高血糖为特征的慢性代谢性疾病，90%以上为 2 型糖尿病。中心性肥胖是 2 型糖尿病发病的关键因素。Irisin 是纤维连接蛋白Ⅲ型域包含蛋白 5（FNDC5）112 号位氨基酸的裂解产物，由肌

肉和脂肪分泌故而称之为肌肉脂肪因子。Irisin 可上调产热以及白色脂肪棕色化相关基因的表达，促进能量消耗进而导致体重降低。同时，Irisin 还可以降低血中葡萄糖和胰岛素水平进而改善胰岛素抵抗。大多数研究发现 Irisin 与肥胖以及肥胖相关指标呈正相关。然而，在糖尿病人群中 Irisin 水平降低。Irisin 在糖尿病合并肥胖这一特定人群中水平如何相关文献报道较少。本研究旨在比较单一糖尿病以及糖尿病合并肥胖人群中 Irisin 水平，探讨 Irisin 与肥胖和糖尿病相关临床指标的关系，进而为临床诊断和治疗肥胖和糖尿病提供新视角。

方法 测量 2 型糖尿病组以及 2 型糖尿病合并肥胖组身高体重并计算、全自动生化分析仪及糖化血红蛋白分析仪检测肥胖和 2 型糖尿病相关的血液生化指标（甘油三酯、总胆固醇、低密度脂蛋白、高密度脂蛋、空腹血糖、糖化血红蛋白）、ELISA 试剂盒检测血中 Irisin 水平，分析血中 Irisin 水平与肥胖和 2 型糖尿病相关指标的相关性。

结果 2 型糖尿病合并肥胖组体重和 BMI 显著高于 T2DM 组。甘油三酯、总胆固醇、低密度脂蛋白、高密度脂蛋、空腹血糖、糖化血红蛋白水平在两组间无显著差异。2 型糖尿病合并肥胖组组血中 Irisin 水平显著升高，BMI 与 Irisin 水平呈正相关。

结论 在 2 型糖尿病病人中血中 Irisin 水平与肥胖密切相关。

PU-3128

不同方法学检测类风湿因子的比较

姚军、王文强、李忠信、谢茜、孙萌
郑州安图生物工程股份有限公司

目的 探讨不同检测方法学检测类风湿因子对临床诊断的辅助作用。

方法 采用散射比浊法、乳胶凝集法比浊法 、酶联免疫吸附法(ELISA)检测类风湿关节炎患者 104 例，系统性红斑狼疮患者 4 例及健康体检病患者 196 例。

结果 散射比浊法检测类风湿关节炎患者、非类风湿关节炎患者 RF 阳性率分别为 100%、100%,196 例健康者 9 例为阳性结果，诊断效率为 95.72%。乳胶凝集法检测类风湿关节炎患者、非类风湿关节炎患者 RF 阳性率分别为 98.1%、100%，196 例健康者 7 例为阳性结果，诊断效率为 99.01%。ELISA 法 IgA/G/M 诊断效率分别为 90.13%、66.90%、78.62%。

结论 乳胶凝集法检测类风湿因子的效果最好，虽然检出率低于散射比浊，但是其特异性较好，诊断效率总分最高。

PU-3129

Expression and prognosis analyses of Dectin-1 cluster genes in patients with lung adenocarcinoma (LUAD) and the association with immune checkpoint molecules

Liting You、Feifei Na、Juan Zhou、Lin Jiao、Yi Zhou、Binwu Ying
West China Hospital, Sichuan University

The Dectin-1 cluster comprises seven members: CLEC-12A, CLEC-12B, CLEC-1A, CLEC-7A, CLEC-2, CLEC-9A and OLR1. These members have been demonstrated to be involved in the tumorigenesis, progression, and metastasis of several cancers. However, little is known about their roles in human lung adenocarcinoma (LUAD). The expression patterns of the Dectin-1 cluster were analyzed via the ONCOMINE and GEPIA databases. We evaluated the prognostic value of the Dectin-1 cluster in patients with LUAD using the Kaplan-Meier plotter and GEPIA. Differential expression was validated with the EMBL-EBI database, and protein expression was analyzed with the HPA database. In addition, protein-protein interaction network, GO, and KEGG analyses were conducted. Finally, the correlations between CLEC-12A and immune molecules

(immune inhibitors and MHC molecules) were investigated via TISIDB and GEPIA. The expression levels of Dectin-1 cluster genes were downregulated in LUAD tissues compared to those in normal lung tissues. The expression levels of CLEC-12A, CLEC-12B, CLEC-2, and CLEC-9A correlated with tumor stage, and CLEC-12A and CLEC-12B were significantly associated with survival in patients with LUAD. The seven genes mostly participated in immune regulation processes and were involved in autoimmune disorders and hematological malignancies. Finally, correlation analyses revealed CLEC-12A expression was associated with most immune inhibitors and MHCs. CLEC-12A was positively related to PD-1, PD-L1, PD-L2, CTLA4, TIM3, and LAG3. In conclusion, our findings suggest that CLEC-12A and CLEC-12B can be used as prognostic biomarkers in LUAD. CLEC-12A expression was associated with immune checkpoint molecules, and CLEC-12A may be a potential assistant target to improve the efficacy of immune checkpoint inhibitors immunotherapy.

PU-3130

灯盏乙素调控同型半胱氨酸缓解 2 型糖尿病中肝脏损伤的分子机制研究

王依雨
四川省八一康复中心（四川省康复医院）

目的 灯盏乙素（SCU）是从灯盏花（Erigeron breviscapus（Vaniot）Hand.-Mazz）中提取的有效成分。它的主要生理功能是消炎和抗氧化剂。在这项研究中，我们建立了 STZ 诱导的 2 型糖尿病（T2DM）模型和同型半胱氨酸（Hcy）诱导的 LO2 凋亡模型，以研究 SCU 是否可以通过调节 2 型糖尿病中的 Hcy 减轻肝脏损害。
方法 用小剂量的链脲佐菌素（35 mg/kg）诱导大鼠 2 型糖尿病模型。SD 大依次分为正常组、2 型糖尿病模型组、灯盏乙素低剂量治疗组（100 mg/kg/d）、灯盏乙素高剂量治疗组（200mg/kg/d）和罗格列酮治疗组（5 mg/kg/d）；各治疗组进行灌胃治疗；各治疗时间段完成后，进行糖耐量实验分析；检测大鼠血清 CHO、TG 血脂指标，ALT、AST 肝功指标，血清及肝脏组织中 SOD 水平、MAD 水平以及肝脏组织中 GSH 水平；用 ELISA 检测 Hcy、Insulin、VitB 6 、VitB 12 、叶酸水平并计算胰岛素抵抗指数。用 HE 染色来观察肝脏细胞形态学改变；TUNEL 染色观察细胞凋亡情况，Western blot 和免疫组化学检测 CBS、CSE、MTR、MTHFR、Caspase-3 酶原和活性片段的蛋白表达水平。采用不同浓度 Hcy 诱导 LO2 肝细胞建立细胞凋亡模型，检测细胞凋亡情况；用灯盏乙素预处理后，流式细胞技术和 Western blot 检测灯盏乙素对 Hcy 诱导细胞凋亡模型的影响及关键的凋亡因子（caspase3）的改变。
结果 生化分析表明，SCU 可以通过下调甘油三酸酯（TG），胆固醇（CHO），低密度脂蛋白（LDL），丙氨酸转氨酶（ALT）和天冬氨酸转氨酶（AST），上调高密度脂蛋白（HDL）的水平来改善糖尿病大鼠的脂质代谢紊乱和肝功能。有趣的是，SCU 还可以下调 Hcy 和胰岛素的水平，并增强 2 型糖尿病大鼠调节血糖的能力。从机制上讲，我们的结果表明 SCU 可能通过调节肝脏组织中的 β-胱硫醚酶（CBS），γ-胱硫醚酶（CSE）和 5,10-亚甲基四氢叶酸（MTHFR）的水平来控制 Hcy 的水平，并上调叶酸，血清中的 VitB6 和 VitB12 水平。此外，SCU 抑制 T2DM 大鼠肝脏和 Hcy 处理的 LO2 细胞的凋亡。
结论 我们的发现表明 SCU 可能通过下调 T2DM 大鼠的 Hcy 水平来减轻肝脏损伤。

PU-3131

基于贝叶斯网的检验科标本采集风险分析研究

郭笑然、王海燕、杜秋明
吉林大学第一医院

目的 本文针对我院检验科采血室现状,对标本采集过程中发生的风险因素进行全面分析, 并基于贝叶斯网络理论构建标本采集风险分析研究模型,以识别标本采集过程中发生问题的影响因素，进行相应的风险分析，从而为降低标本采集风险采取针对性措施提供帮助。
方法 综合近年来对检验科采血室标本采集过程中发生风险研究的文献，基于贝叶斯网络的相关理论，通过事件回顾的方式，对我院检验科采血室采集标本过程中发生问题的事件作为样本，建立标本采集风险分析研究模型。
首先通过相关文献综述，对采血室标本采集风险进行了系统分析，选择患者因素、护士因素、管理因素、医生因素等作为标本采集风险发生的影响因素，利用因果关系构建出风险研究评估模型拓扑结构，依据事件回顾对情境因素节点的参数进行分析确定；
1、为获得给定条件下标本采集风险发生节点的概率，本文基于联合树算法对标本采集风险分析模型进行了详细的推理。首先，将护理风险分析模型转化为联合树，然后通过联合树消息传递来进行风险发生概率的确定，并通过样本数据进行节点概率学习。 3、为验证所构建护理风险研究模型的准确性，本文进行了相关的实验研究,并基于实验数据分析护理风险各因素的影响因子，测算各影响因子的导致发生护理风险的概率。
结果 第一、检验科作为主要科室，在标本采集过程中，由于数量大、情况复杂，随着样本扩大，发生风险概率也在扩大。
第二、根据本文得出的贝叶斯网络模型在根据样本训练后，可以判定标本采集过程中，护理人员失误操作造成的标本采集风险的概率最大。
第三、标本采集风险发生影响因素中，护士注意力指标为最主要影响指标。护士执业时间越长，发生护理风险概率越低。
第四、患者检验标本采集前的指导，尤其是采血护士采血前的叮嘱，可有效降低护理风险发生概率。
结论 该分析模型可以有效分析检验科标本采集过程中发生风险的概率，并根据采集到的影响因素给予预警，计算结果符合经验性认知，模型允许在更多数据支撑下逐步逼近真实值。

质量管理体系历年不符合项分析及改进

张青杨
中国医科大学附属第一医院

目的 依据 CNAS-CL02《医学实验室质量和能力认可准则》，对体系成立至今的所有内部审核和外部审核中识别的不符合项进行统计分析，以持续改进的宗旨，指导下一步质量监督工作。
方法 依据 CNAS-CL02:2012《医学实验室质量和能力认可准则》，对本实验室自 2009.09 体系运行至今，13 次内部审核识别的 123 项不符合项和 7 次 CNAS 外部审核识别的 37 项不符合项，进行统计分析。
结果 对所有 160 项不符合项统计分析发现：
1. 不符合项年度和部门分布：体系建立初期不符合项最多，2011 年为 41 个，占总数的 25.6%；部门分布中，临检室为 30 项次，占总数的 18.8%，为各部门最高。
2. 不符合项条款分布：发生不符合项覆盖要素 18 个，其中识别不符合项最多的要素是 5.3（34 个，占总数的 21.3%），其次为 5.6（27 个，占总数的 16.9%）。
3. 具体条款分析：依据 CNAS-CL02:2012《医学实验室质量和能力认可准则》对所有不符合项对应的条款号重新识别，然后对识别不符合项最多的两个要素（5.3、5.6）进行条款的具体分析，发

现 5.3 中识别最多的是 5.3.1.7 设备记录（12 个，占比 32.4%）和 5.3.1.2 设备验收（7 个，占比 20.6%），5.6 中识别最多的是 5.6.2.3 质控数据（14 个，占比 51.9%）和 5.6.2.2 质控物（6 个，占比 22.2%）。

结论 通过对既往不符合项的统计分析，发现实验室质量管理工作的薄弱环节，针对性地制定下一阶段质量监督的工作重心和具体细则，认真分析、定期监督，从根本上实现实验室的持续改进。

PU-3133

应用 PDCA 循环法提高门诊检验科自动贴标签机产生的弃用采血管利用率

白璐、王珂、蒋梨
陆军军医大学第一附属医院（西南医院）

目的 应用 PDCA 循环法，提高门诊检验科自动贴标签机产生的弃用采血管利用率。

方法 通过鱼骨图分析，找出门诊检验科抽血室真空采血管贴标签后被弃用的主要原因:患者未满足静脉采血要求；取号前缺乏相关指导和咨询；自动贴标机仪器故障，分析影响因素，制定计划，采取相应的干预措施。观察贴标后弃用真空采血管的产生率、利用率的变化。通过口头、书面、标识牌告知等形式，依托科室信息化建设，加强取号前咨询，减少无效取号；对已排号但不符合采血条件患者，及时取消贴管打印信息；定期进行仪器维护和系统升级，采用综合措施减少弃用机贴真空管的产生。定期整理弃用真空采血管，将试管原有的条码信息用记号笔涂写覆盖，摆放整齐后搁置于手工贴管位置，便于采血护士再使用。按时查看试管的有效期，联系并转送至其它采血量较大的科室使用。

结果 运用 PDCA 循环法后，使自动贴标机产生的无效真空采血占使用试管总数由 7.0%～7.3%减少到 4.5%～5.2%，弃用真空采血管的利用率从改进前的 25%提高到改善后 53%。

结论 应用 PDCA 循环法，提高了弃用真空采血管的利用率，节省科室成本，减少耗材浪费。

区域医学检验中心发展现状及展望

陈洪卫
上海市松江区中心医院

区域医学检验中心建设是落实国家医疗卫生改革、实行分级诊疗、推动医联体建设的重要环节，在提升区域医学检验质量、推动优质医疗资源下沉、降低医疗机构运营成本、减少政府财政重复投入、实现区域医学检验结果互认及区域医学检验资源共享等方面发挥重要作用。近年来，随着国家医改的深化和分级诊疗制度的不断推进，独立医学实验室和公立医院检验科的发展开始转型升级，我国区域医学检验中心建设进入快速发展期，出现多种新模式。未来，区域医学检验中心将呈现规模化、专科化、平台化、信息化、一体化的发展趋势。

浅析医学检验实验室质量管理体系

魏亚权、张维
西安金域医学检验所有限公司

探讨医学检验实验室质量管理体系的建。质量管理体系文件是质量管理体系存在的基础和证明，也是对质量管理的评价，执行文件者容易得到并能充分理解所有文件，同时要让技术人员认识到实验室的质量管理现状与先进管理模式之间的差异，认识到先进质量管理体系的意义。

PU-3136

IL-17 在急性痛风性关节炎大鼠中作用机制的研究

王国镇
中日友好医院

目的 探讨 IL-17 在痛风性关节炎中的作用机制。
方法 通过动物痛风性关节炎模型来验证 IL-17 对痛风性关节炎组织损伤的作用。分别在大鼠踝关节腔内注射纯化 IL-17、MSU、MSU+IL17 抑制剂或生理盐水，观察关节周径，关节腔周围软组织的炎性病理学改变、关节滑膜及骨组织的病理学改变、主要的血液炎性及生化指标等，以明确 IL-17 在痛风性关节炎发病过程中的作用。
结果 结果显示，大鼠踝关节腔内注射纯化 MSU 结晶或 IL-17，均可以诱导大鼠关节局部明显肿胀，大量炎性细胞浸润，血清各项炎性因子水平显著升高，可用于制备痛风性关节炎大鼠模型。MSU+IL-17 抑制剂组，大鼠关节局部肿胀明显减轻，组织病理显示炎症反应较轻，各项炎性因子水平（如 PGE2、MPO、CRP、IL-6、IL-8 和 TNF-α）显著低于单独注射 IL-17 或 MSU 组（$P<0.05$）。分别采用 IL-6 抑制剂、IL-8 抑制剂或 TNF-α 抑制剂与 IL-17 联合注射大鼠踝关节腔，所造成的大鼠关节炎症反应明显弱于 IL-17 单独注射组。
结论 IL-17 在痛风性关节炎中发挥了重要的促炎作用，并且 IL-17 可能促进 IL-6、IL-8、TNF-α 的表达与分泌从而参与痛风性关节炎的发病过程；抑制 IL-17 或下游炎性因子（如 IL-6、IL-8、TNF-α）对痛风性关节炎有较好的治疗效果。

PU-3137

甲状腺疾病实验室诊断现状与进展

王晨、陶庆春
北京中医药大学第三附属医院

目的 研究整理归纳总结甲状腺疾病主要的实验室诊断项目，列出其检测指标正常参考范围与检测方法，并探讨今后仍需思考和解决的，比如根据多种因素划分更细的分组建立各指标的正常范围等问题。
方法 应用文献搜集整理文献综述。
结果 目前临床常用的 12 个甲状腺疾病实验室诊断项目共包括 12 个，具体包括甲状腺功能测定：促甲状腺激素（TSH)、游离三碘甲状腺原氨酸（FT３)、游离甲状腺素（FT４)、三碘甲状腺原氨酸（T３）、甲状腺素（T４）；甲状腺相关自身抗体：抗甲状腺球蛋白抗体（TGAb）、抗甲状腺过氧化酶抗体（TPOAb）、促甲状腺素受体抗体（TRAb）；甲状腺激素合成功能测定：甲状腺吸131I 试验；甲状腺球蛋白(thyroglobulin, TG)测定；降钙素（calcitonin，CT）；甲状腺激素在机体组织中效应评价：基础代谢率、跟腱反射松弛时间测定、无创性心功能检查；下丘脑-垂体-甲状腺

轴评价：促甲状腺激素兴奋试验、促甲状腺激素释放激素兴奋试验、促甲状腺激素测定、甲状腺激素抑制试验；尿碘检测；五肽胃泌素激发试验；血清微小 RNA：血清 miR-451a、miR-25-3p、GAS8-AS1；外周血液白细胞分化抗原 195（CD195）、单核细胞趋化蛋白 1（MCP-1）；甲状腺细针穿刺活检（fine needle aspiration biopsy；FNA）。
结论 现在实验室检测项目与方法日新月异，有单一检测特异性高者，亦有联合检测敏感性增加者，查阅文献后能够发现全自动化学发光免疫分析仪在甲状腺疾病实验室诊断中现有很高的临床价值，具有准确度高且操作简便、快速等多种优点，但因为多种因素的影响，很多甲状腺实验室诊断项目并未确定好明确的指标正常范围，所以我们可以根据多种因素划分更细的分组，建立各指标的正常范围，是我们今后研究的重点，有待我们进一步探讨。

药物对临床医学检验结果的影响分析

刘恭序
中国人民解放军联勤保障部队第 900 医院(原福州总医院)

在新时代背景下，我国经济水平逐步提高，医疗事业也在逐步完善。临床医学检验在现代医学治疗过程中扮演着重要的角色，而药物在临床医学的检验中也有着很大的影响。本文首先简述了药物对临床医学检验的具体影响，然后列出了防范药物干扰在临床医学检验结果上的主要措施，最后说明临床医学检验结果有助于医师诊断患者的病情，为患者确定更为妥善合适的治疗方法。

PU-3139

一种 21 分型 HPV 检测试剂盒的性能验证和评价

冯倚帆、张帅、刘志坚、宋子威、李世宝
徐州医科大学附属医院

目的 对硕世生物科技股份有限公司的 21 型 HPV 检测系统进行性能验证。
方法 采用实时荧光定量 PCR 法对待启用的 21 型 HPV 检测试剂盒的准确度、测定下限、精密度、特异性、抗干扰能力等性能参数进行验证及评价。
结果 准确度实验结果与已知结果一致，符合率 100%；最低检测下限 104copies/ml；21 种 HPV 亚型和阳性参照物批内精密度 CV 范围为 0.22%~3.40%，均小于 5%，符合行业标准（CV≤5%）；21 种 HPV 亚型和阳性参照物批间精密度 CV 范围为 0.31%~0.91%，均小于 5%，符合行业标准（CV＜5%）；HPV40、白色念珠菌、大肠杆菌和解脲支原体与试剂盒 21 种 HPV 亚型不存在交叉反应；干扰物质对检测结果无明显影响。
结论 本研究所用的 HPV 分型检测系统的主要性能指标满足相关标准的要求，可常规应用于临床。

PU-3140

鲍曼不动杆菌黏菌素耐药机制的研究进展

樊轩扬、李荷楠
北京大学人民医院

目的 多重耐药鲍曼不动杆菌的出现与全球感染率和病死率的升高有关，黏菌素成为对抗其感染的最后一线抗菌药物。但是近几年，黏菌素耐药的鲍曼不动杆菌被多次报道，了解其耐药机制，有利于控制耐药的播散，对研发新型抗菌药物有重要意义。

方法 通过整理和阅读 PubMed 上近二十年关于鲍曼不动杆菌和黏菌素相关文献资料，综述了鲍曼不动杆菌黏菌素耐药机制的最新进展，包括 2001～2017 年的流行病学调查，黏菌素抗菌作用机制和耐药机制，以及有效减少耐药菌株出现的方法和对新型抗菌药物的展望。
总结 鲍曼不动杆菌与大多数革兰阴性菌黏菌素耐药机制不同。除了共同的双组份系统 PmrAB 突变对脂质 A 进行修饰改变膜电位外，其最特殊的耐药机制是脂质 A 生物合成基因 lpxC/A/B 突变导致外膜表面的脂多糖完全丧失表现较高水平的耐药。但最近的研究发现质粒、转座子、插入序列（IS）等可移动的遗传元件也在黏菌素耐药播散中发挥重要作用。除了基因组水平的变化，表达水平的变化也会对黏菌素耐药产生很大影响，比如 Emb 类外排泵表达增加，增强了菌株黏菌素的耐药。
结论 我国黏菌素耐药率仍比较低，但是需要引起临床医生的关注；黏菌素耐药机制最为常见的就是菌体外膜脂质 A 的修饰；黏菌素耐药的鲍曼不动杆菌在表型上会发生很大变化，菌落形态的改变，毒力的改变和适应性的改变，这些改变使得菌株更能适应黏菌素环境；联合用药，特别是黏菌素和利福平联合，有利于减少黏菌素的使用，减少耐药性的产生。

PU-3141

包皮龟头炎患者真菌分离鉴定结果分析

杨阳
电子科技大学附属医院•四川省人民医院

目的 对疑似包皮龟头炎患者进行真菌学检查，了解念珠菌、马拉色菌在包皮龟头部的感染情况及菌种结构。
方法 刮取包皮垢或分泌物分别接种于沙堡斜面培养基和含菜子油沙堡斜面培养基，同时涂片染色作滴虫、霉菌、线索细胞检查。根据培养物菌落形态及镜下结构特征和生理生化特点，采用血清出芽试验，科玛嘉显色培养基（CHROMagar Candia），吐温生长试验，过氧化氢试验及七叶苷分解试验对培养物进行鉴定。
结果 从 86 例标本中分离白色念珠菌 33 株（38.37%），光滑念珠菌 1 株（1.16%）；分离出 27 株菌马拉色菌，其中糠秕马拉色菌共 10 株（11.63%），合轴马拉色菌共 8 株（9.30%），钝形马拉色菌 5 株（5.81%），球形马拉色菌 3 株（3.49%），限制性马拉色菌 1 株（1.16%）。在同一标本中同时分离白色念珠菌和马拉色菌有 6 例标本（6.98%），有 1 例标本同时分离出了两株马拉色菌菌，分别是糠秕马拉色菌和合轴马拉色菌。
结论 白念珠菌是念珠菌致真菌性龟头炎的主要菌群；马拉色菌感染也是重要的致病因素。

PU-3142

探索 HPLC-MS/MS 在快速检测耐碳青霉烯类肠杆菌目产 KPC 型和金属酶型碳青霉烯酶中的应用

李根、叶致含、张雯雁、叶扬芹、陈念贞、范列英
上海市东方医院（同济大学附属东方医院）

目的 碳青霉烯酶的产生是肠杆菌目细菌耐碳青霉烯类抗生素的主要原因，它可水解碳青霉烯类药物，导致药物失效。肠杆菌目细菌产生的常见碳青霉烯酶型主要为 KPC 型和金属酶型，在体外条件下，KPC 酶活性可被苯基硼酸抑制，而金属酶活性能被 EDTA 抑制。临床中针对产不同碳青霉烯酶酶型的肠杆菌目细菌引起的感染，其治疗方案不同，而目前实验室使用的碳青霉烯酶型检测方法耗时过长，难以满足临床需要。HPLC-MS/MS 是检测小分子物质的金标准，具有快速、稳定、准确的特点，因此我们开发了一种基于 HPLC-MS/MS 快速检测耐碳青霉烯类肠杆菌目产 KPC 型和金属酶型碳青霉烯酶的技术方法。

方法 本实验共收纳 241 株分离于临床的产碳青霉烯酶肠杆菌目细菌（肺炎克雷伯菌 217 例，产酸克雷伯 4 例，产气克雷伯 1 例，阴沟肠杆菌 10 例，大肠杆菌 8 例，粘质沙雷 1 例），经过测序得知，产 KPC 酶 212 例，产金属酶 29 例（26 例 NDM，3 例 IMP）。将受检菌+美罗培南共孵育作为对照管；受检菌+美罗培南+苯基硼酸共孵育作为检测管 A；受检菌+美罗培南+EDTA 作为检测管 B，以测序结果作为金标准，通过 HPLC-MS/MS 检测对照管与 AB 管之间美罗培南药物峰面积之比的变化，计算出用于检测产 KPC 酶以及金属酶的 cutoff 值。
结果 通过 HPLC-MS/MS 检测，对照管与 A 检测管美罗培南药物峰面积之比<0.4 时，待测菌为产 KPC 型碳青霉烯酶，敏感性为 93.70%，特异性为 95.60%；对照管与 B 检测管美罗培南药物峰面积之比<0.5 时，待测菌为产金属酶型碳青霉烯酶，敏感性为 100.00%，特异性为 92.86%。
结论 在本次实验中，HPLC-MS/MS 展现出了对耐碳青霉烯类肠杆菌目产 KPC 型和金属酶型碳青霉烯酶极佳的检测能力，整个检测过程，操作简单快速，结果准确性高，有望未来应用于临床。

PU-3143

碳青霉烯耐药肺炎克雷伯菌临床分析

许鑫悦
沈阳金域医学检验所有限公司

目的了解碳青霉烯耐药肺炎克雷伯菌（carbapenem-resistant Klebsiella pneumoniae,CRKP）的流行病学特征以及抗菌药物敏感性，临床开展相关治疗提供理论依据。
方法 收集 2017 年 6 月至 2019 年 9 月的临床标本中非分离的 236 株碳青霉烯耐药肺炎克雷伯菌菌株，使用安图 AUTO 1000 进行菌种鉴定，VITEK 2 Compact 微生物自动分析仪、和 K-B 法进行药物敏感性试验。
结果 从 2017 年 6 月至 2019 年 9 月住院患者中筛选出的 236 例 CRE 菌株进行分析。其中尿液标本 110 个、血液 50 个、胆汁 11 个、引流液 19 个、脑脊液 14 个、胸水 4 个、分泌物 12 个、腹水 1 个、其他 15 个。据药敏结果显示 CRKP 菌株对碳青霉烯类药物亚胺培南和厄他培南的耐药率分别为 90.82%,100.00%，对头孢类药物头孢唑林、头孢西丁和头孢曲松的耐药率均为 100.00%，对氨曲南的耐药率也较高为 95.64%，对环丙沙星和左氧氟沙星的耐药率可达 90%以上。而对阿米卡星,庆大霉素和妥布霉素的耐药率相对较低,分别为 54.23%,70.17%,74.17%。
结论 近年来 CRKP 菌株呈现出多重耐药的现象,且耐药趋势的发展也日趋严重,加强重点科室的感染控制,对于控制医院内耐药菌株传播至关重要。研究其耐药现象及耐药机制、做好对医院内感染的控制、对抗菌药物的管理合理使用抗生素和联合用药，对于临床的治疗来说至关重要。

PU-3144

The determination of gyrA and parC mutations and the prevalence of plasmid-mediated quinolone resistance genes in carbapenem resistant Klebsiella pneumonia ST11 and ST76 strains isolated from patients in Heilongjiang Province, China

Lingyi Zeng、Jisheng Zhang
Yongchuan Hospital of Chongqing Medical University

Background There is increasing resistance to carbapenems among Klebsiella pneumoniae,and fluoroquinolones (FQ) are increasingly used to treat infections from extended-spectrum β-lactamase(ESBLs) and carbapenemase-producing Klebsiella pneumoniae. However, the

acquisition of plasmid-mediated quinolone resistance (PMQR) or the spontaneous mutation of the quinolone resistance-determining regions (QRDR) of the gyrA and parC genes can severely affect the therapeutic effect of quinolones. The goal of this study was to investigate the molecular determinants of FQ resistance(FQ-R) in carbapenem-resistant Klebsiella pneumoniae (CRKP) isolates from Heilongjiang Province,China.

Materials and Methods We isolated 40 strains of CRKP from a treatment center in the eastern part of Heilongjiang Province from January 2016 to December 2018. The VITEK2 Compact analyzer was used to identify and detect drug sensitivity. Different types of drug resistance genes were detected by polymerase chain reaction (PCR). PCR and DNA sequencing were used to assess the presence of qnrA, qnrB, qnrS,qepA and acc(6′) Ib-cr genes,which are plasmid-encode genes that can contribute to resistance. The sequences of gyrA and parC genes were sequenced and compared with the sequences of standard strains to determine if mutations were present.Multi-site sequence typing (MLST) and pulsed-field gel electrophoresis (PFGE) were performed on the strains to assess homology.

Results The isolated CRKP strains showed rates of resistance to fluoroquinolones of 22.5% to 42.5%. The resistance rate of ciprofloxacin was significantly higher than that of levofloxacin.Nine CRKP strains (22.5%) showed co-resistance to ciprofloxacin and levofloxacin.The quinolone resistant strains were screened for plasmid-encoded genes that can contribute to resistance (PMQR genes).Among the 17 quinolone resistant strains,one strain contained no PMQR genes,twelve strains contained two PMQR genes,and four strains contained four PMQR genes.Acc (6′)Ib-cr was the most frequently detected PMQR gene, detected in 95% of strains tested (38 of 40) and in 94.1% of the quinolone-resistant strains (16 of 17). The qepA gene encoding an efflux pump was not detected in any strains.No isolate carried five different PMQRs simultaneously.Changes of S83I and D87G changes in gyrA, and the S80I change in parC,which were mediated by QRDR,were identified in two isolates,which showed resistance to both ciprofloxacin and levofloxacin.Most of the FQ-R strains(58.8%,10/17) belong to ST(sequence type) 76, which is dominant in the local area, while all the mutant strains (100%,2/2),that differ in at least one site from standard bacteria, belong to the ST11 group. The strains were isolated from a hospital where there had been a recent outbreak of ST76 type CRKP in the neurosurgery ward and intensive care unit.

Conclusion CRKP strains were identified that were insensitive or even resistant to quinolones,and this resistance is common in Heilongjiang Province of eastern China;fluoroquinolone-resistance in these clinical CRKP strains is a complex interplay between PMQR determinants and mutations in gyrA and parC.The resistance level caused byQRDR mutation is higher than that caused by PMQR, however, the high frequency of PMQR genes in the isolated CRKP strains suggests the potential for impact of these genes.PMQR determinants are often found in carbapenemase-producing or ESBLs-producing Klebsiella pneumoniae,and some resistance genes,such as:SHV,TEM, CTX-M-15,and OXA-1 are closely associated with FQ-R. Finally, geographical factors can affect the emergence and spread of PMQR and QRDR.Some genetic lineages have higher potential risks, and continuous close monitoring is required.

PU-3145

Autof MS 1000 质谱鉴定系统对临床分离病原菌的鉴定能力评价

陆丹、周雪婷、陈雨婷、魏望、曹宇杰、薛魁
江苏省邳州市人民医院

目的 分析 Autof MS 1000 质谱鉴定系统和 VITEK 2 Compact 全自动微生物分析系统对临床分离病原菌鉴定的一致性和准确率，评价 Autof MS 1000 质谱鉴定系统对病原菌的鉴定能力。

方法 收集我院 2020 年 9 月-2021 年 5 月分离自临床的非重复菌株共 190 株，分别采用 Autof MS 1000 和 VITEK 2 Compact 两种细菌鉴定仪进行鉴定，鉴定结果不一致或未鉴定出结果的菌株以 16SrDNA 或真菌 ITS 区测序结果为准，分析比较两种仪器鉴定结果的一致性和准确率。
结果 本次研究共纳入 190 株菌株，其中革兰阳性需氧菌 58 株，革兰阴性需氧菌 93 株，厌氧菌 6 株，酵母样真菌 33 株。在种水平上鉴定一致的有 166 株（87.4%），不一致的有 24 株（12.6%）。鉴定结果不一致的菌株经 16SrDNA 或真菌 ITS 区测序确认，Autof MS 1000 的准确率为 70.8%（17/24），明显高于 VITEK 2 Compact 的准确率 45.8%（11/24）（P<0.05）。Autof MS 1000 鉴定的总准确率为 93.2%（177/190），略高于 VITEK 2 Compact 鉴定的总准确率 90.0%（171/190）（P>0.05），其中 Autof MS 1000 鉴定革兰阳性需氧菌的总准确率（94.8%）略高于革兰阴性需氧菌的总准确率（89.2%），鉴定厌氧菌的总准确率为 100%（6/6），鉴定酵母样真菌的总准确率为 100%（33/33）。
结论 Autof MS 1000 与 VITEK 2 Compact 鉴定结果较为一致，差异无统计学意义（P>0.05）；但对于临床少见菌，Autof MS 1000 较 VITEK 2 Compact 具有更高的准确率（P<0.05），且快速经济，适合临床分离病原菌的常规鉴定。

PU-3146

多粘菌素体外药物敏感性试验方法探讨

王珏
江苏省人民医院（南京医科大学第一附属医院）

近年来,抗菌药物不合理使用,使得细菌耐药问题越来越严重，抗感染治疗药物选择变得越来越棘手，特别是多重耐药（MDR）菌出现，尤其是产碳青霉烯酶的革兰阴性杆菌的感染，往往面临无药可用的境地，已成为威胁全球公共卫生健康的重要问题之一。在新抗菌药物研发鲜有突破的形势下，一些“老抗菌药” 重新被临床启用以应对抗感染治疗需求，黏菌素就是其中 之一，成为当前临床治疗多重耐药，尤其是产碳青霉烯酶的革兰阴性杆菌感染的最后手段。

日益突出的多重耐药菌问题给临床抗感染治疗带来了严峻挑战[1]。随着抗菌药物的广泛应用，细菌的耐药形式愈演愈烈，根据中国细菌耐药性监测网数据显示，2018 年 CRE 分离率为 28.6%，CRAB 分离率为 78.1%;我院 2018 年 CRE 分离率为 19.8%，CRAB 分离率为 78.6%；多重耐药的细菌已逐渐成为医院感染重要的病原菌，其引起的感染是导致患者病死率增加的主要因素[2，3] 。替加环素和黏菌素是治疗多重耐药革兰阴性杆菌的挽救性治疗措施[4];近年国内外逐渐分离出替加环素耐药革兰阴性杆菌，使得多粘菌素成为抗击泛耐药革兰阴性杆菌感染的最后一道防线，临床上迫切需要提供多粘菌素的药敏结果。

PU-3147

Antimicrobial resistance of Pseudomonas aeruginosa isolated from the clinical laboratory of the First hospital of Jilin University from 2020 to 2021

Chun Yang、Xufeng Ji
First hospital of Jilin University

Objective The main objective of this study is to investigate the antimicrobial resistance of Pseudomonas aeruginosa. To provide the theoretical guidance for the rational use of antimicrobial agents and the scientific basis for control the drug-resistant strains.
Methods 1. The Pseudomonas aeruginosa were isolated from the clinical laboratory of the First hospital of Jilin University.

2. The resistance of Pseudomonas aeruginosa for 20 antimicrobial agents were determined using paper disk method and minimum inhibitory concentration（MIC）method, analyzed the drug-resistant spectrum. The results were evaluated based on Clinical and Laboratory Standards Institute (CLSI-M100-S29).WHONET-5.6 software was used to analyze the drug resistance data.
Results 1. Most of 1104 Pseudomonas aeruginosa strains were collected from abdominal fluid (10 strains), broncho-alveolar lavage (25 strains), bile (10 strains), blood (39 strains), ear (6 strains), sputum (881 strains), urine (49 strains), shunt fluid (17 strains), secretion (6 strains) during the whole year.
2. The drug-resistant rates of the 1104 isolated strains to meropenem and imipenem were 11.8% and 12.4% respectively. 11045 strains were all resistant to ceftriaxon, cefotaxim, cefuroxim. The rates of Pseudomonas aeruginosa resistant to ceftazidime, cefepime, were 7.6% and 6.1% respectively. The rates of Pseudomonas aeruginosa resistant to levofloxacin and ciprofloxacin were 6.8% and 8.2% respectively. The rates of Pseudomonas aeruginosa resistant to piperacillin/tazobactam and amikacin were 4.7% and 6.8% respectively.
3.One thousand one hundred and four strains of Pseudomonas aeruginosa mainly from the surgical ward, 114 case from ICU, 2 case of infectious diseases department, 78 from neurology, 4 from pediatric respiratory medicine, 188 strains from department of respiration, 76 strains from neurosurgery, 50 strains from emergency department, 17 strains from oncology department, 23 strains from hepatobiliary pancreatic surgery, 22 strains from urinary surgery, 65 strains from gastrointestinal surgery, three strains from the outpatient department, five strains from trauma department of orthopedics, two strain from obstetrical department and only one strains from thyroid surgery.
Conclusions 1. One thousand one hundred and four strains of Pseudomonas aeruginosa were screened by analyzing the drug resistance spectrum in the research, which has different resistant rates to different antimicrobial agents.
2. Most of the 1104 Pseudomonas aeruginosa were isolated from sputum. Department of respiration is the department that isolated most numbers of Pseudomonas aeruginosa. The rate of Pseudomonas aeruginosa resistant to amikacin is lowest. Monitoring of the antimicrobial resistance of Pseudomonas aeruginosa should be strengthened. The change of the antimicrobial resistance should be investigated in order to direct rational drug usage in clinic.

PU-3148

厄他培南诱导铜绿假单胞菌耐药性变化的研究

许一筠[1]、蔡淑梅[1,2]、李卫滨[1,2]、张胜行[1,2]
1. 福建医科大学福总临床医学院检验科
2. 联勤保障部队第九〇〇医院福建省适配体技术重点实验室

目的 通过体外实验，研究厄他培南反复刺激耐 2 类碳青霉烯类铜绿假单胞菌和敏感铜绿假单胞菌对亚胺培南及美罗培南耐药性的变化及可能的机制。为预防和治疗临床铜绿假单胞菌所致的感染以及合理使用厄他培南提供依据。
方法 收集耐 2 类碳青霉烯类铜绿假单胞菌 10 株和敏感铜绿假单胞菌 2 株，用高浓度（10mg/ml、5mg/ml、2.5mg/ml）及低浓度（125μg/ml、62.5μg/ml、31.25μg/m）的厄他培南持续刺激及传代并将高浓度刺激后的菌株再用低浓度刺激。在刺激后的不同时间对待测菌株用 K-B 法进行美罗培南、亚胺培南药敏检测，分析厄他培南的使用对耐 2 类碳青霉烯类铜绿假单胞菌的影响。
结果 10 株耐 2 类碳青霉烯类铜绿假单胞菌经刺激后对亚胺培南、美罗培南及其他临床常用药耐药性未发生变化，但亚胺培南及美罗培南抑菌圈有所缩小，其中对美罗培南的药敏结果由中介变为耐药的有 3 株，菌株对亚胺培南的药敏结果由中介变为耐药有 1 株。2 株敏感铜绿假单胞菌经高浓度厄他培南刺激后无变化，由低浓度厄他培南刺激后由敏感变为耐药（亚胺培南分别由 26 到 6mm、22 到 10mm），且出现异质性耐药现象。药敏实验过程中，亚胺培南与哌拉西林/他唑巴坦药敏纸片相邻时可出现“D”圈，表现出拮抗作用。

结论 高浓度厄他培南的使用可能使耐 2 类碳青霉烯类铜绿假单胞菌对第 2 类碳青霉烯类药物的敏感性下降；7-14 天低浓度使用可能导致铜绿假单胞菌发生对美罗培南以及亚胺培南耐药；厄他培南的使用可能引起铜绿假单胞菌产生异质性耐药；亚胺培南与哌拉西林/他唑巴坦联合使用可对 PA 表现出拮抗作用。

PU-3149

质谱技术快速鉴定临床分离丝状真菌的应用探讨

曹敬荣、王岩、谢威、李文军、陈典典、段园园、刘云屹、闵嵘、王培昌
首都医科大学宣武医院

目的 探讨质谱（MALDI-TOF MS）在临床分离的丝状真菌快速鉴定的应用。
方法 收集某三甲医院 2017 年 1 月-2019 年 1 月经形态学鉴定为丝状真菌的菌株,分别采用双甲酸夹心法和甲酸乙腈萃取法提取真菌蛋白行 MALDI-TOF MS 鉴定，并与聚合酶链反应（PCR）内转录间隔区(ITS)基因序列测定结果比较；采用 SPSS20.0 软件统计分析丝状真菌菌种分布和标本来源。
结果 共收集临床分离的丝状真菌 90 株，其中曲霉菌属 70 株（77.78%），青霉菌属 6 株（6.67%），链格孢霉 5 株（5.56%），镰刀菌属 4 株（4.44%），赛多孢菌和接合菌各 2 株（2.22%）；曲霉菌以烟曲霉 47 株(52.22%)、黄曲霉 13 株（14.44%）和黑曲霉 4 株(4.44%)为主。标本主要来源于呼吸道标本（90.0%）（包括痰标本和肺泡灌洗液），其次为角膜和耳道分泌物（3.33%），其中分离率最多的为曲霉菌 59 株（65.56%）。MALDI-TOF MS 鉴定到种 82 株，与基因测序结果一致率为 92.11%，鉴定准确率远高于形态学（68.89%）鉴定结果（x2=12.02，p=0.01）；质谱鉴定丝状真菌中的曲霉菌（烟曲霉、黄曲霉、黑曲霉）、镰刀菌、赛多孢菌和链格孢霉时准确率高（98.57%-100%）；双甲酸夹心法和甲酸乙腈萃取法前处理的质谱鉴定丝状真菌到种水平的比率分别为 91.11%和 90%，鉴定曲霉菌种水平分别为 98.57%和 97.14%，鉴定准确率无明显差异（x2=0.34，p=0.95）；两种前处理方法均可 100%鉴定烟曲霉、黄曲霉、赛多孢菌和链格孢霉到种水平，其中 88.57%烟曲霉和 76.92%黄曲霉鉴定得分≥2.0 分，但前者操作更简单快速。
结论 MALDI-TOF MS 技术鉴定丝状真菌快速准确，双甲酸夹心法前处理操作更简便，适合实验室常规检测，可用于实验室常规鉴定曲霉菌等常见丝状真菌。

PU-3150

NDM-1 阳性大肠埃希菌分子生物学特征

李彬
福建医科大学附属协和医院

目的 探讨产 blaNDM-1 大肠埃希菌临床分离株的耐药机制及分子分型。
方法 收集 2014 年 8 月-2015 年 8 月福建医科大学附属协和医院临床分离非重复大肠埃希菌 700 株，采用 PCR 检测 blaNDM-1 基因；采用法国梅里埃 Vitek-2 Compact 系统检测 blaNDM-1 基因阳性菌株及其接合子药物实验；对 blaNDM-1 基因阳性菌株，采用 PCR 检测其毒力基因、O 抗原分型、系统发育分型以及其他 b 内酰胺基因；通过接合试验验证 blaNDM-1 基因能否水平转移，利用肠杆菌基因重复一致序列分析（ERIC-PCR）和多位点序列分型（MLST）进行菌株同源性分析。
结果 700 株大肠埃希菌中有 4 株（0.6％）blaNDM-1 基因阳性菌株；药敏结果显示 blaNDM-1 阳性菌对 β 内酰胺类抗生素高度耐药，系统发育分型显示 2 株属于 B1 群，A 群和 D 群各一株；blaNDM-1 阳性菌中检测到七种不同的毒力基因；EC12 菌株血清型分型为 O8，其余未能分型；blaNDM-1 阳性分离株共同携带其他 β 内酰胺酶基因（blaTEM-1、blaCTX-M-14 和 blaCTX-M-15）。接合实验有 3 株菌是成功的，质粒分型结果显示含有 blaNDM-1 基因的质粒属于 Inc FIB、

Inc I1 和 Inc P。ERIC-PCR 显示四种 blaNDM-1 阳性菌株被分为三种不同的型别；MLST 显示，四株 blaNDM-1 菌株分为四种不同类型：ST156、ST167、ST405 和 ST648。
结论 该院产 blaNDM-1 大肠埃希菌阳性菌株流行率较低，但具有广泛的耐药谱，同时携带多种耐药基因和毒力基因，以非克隆播散方式在该院流行。

PU-3151

基于 CRISPR-Cas12a 检测碳氢酶烯酶的新方法以及临床应用

徐华铭、徐华铭
安徽医科大学第四附属医院

碳青霉烯酶类耐药基因对抗生素的耐药性是目前全球关注的热点问题，这类耐药菌在医院内传播力强，引起的感染临床治疗手段有限，且效果不佳。如何快速、有效、方便的进行分子检测至关重要，是目前急需解决的问题。因此，我们开发了一种针对 KPC、NDM 碳青霉烯酶新型核酸检测**方法** 基于环介导等温扩增、CRISPR-Cas12a 和免疫层析条的检测系统（CRISPR/Cas-LAMP-lateral flow strip）。其原理是通过等温扩增的方式扩增目的基因再以 gRNA 靶向识别并引导 Cas12a 切割目标 DNA，同时切割反应体系内的任一条单链 DNA 为特征，并将切割后产物通过免疫层析条显示结果。这种方法有几个明显的优点。首先，LAMP 扩增强调了所需仪器简单或者无仪器要求，灵敏度也较传统 PCR 技术高,CRISPR/Cas12a 技术可特异性地反式切割报告基因，避免 LAMP 扩增假阳性的影响，使其结果可在横向侧流条上肉眼可见。其次，与传统繁琐、耗时的检测方法相比，该方法既大大地缩短了检测时间。全程四十分钟分钟即可完成检测，也不需要反复训练的操作人员，而且可精确地对不同耐药基因进行精确分型。最后，通过该技术可建立快速检测平台，该平台可应用于其他引起重大公共卫生问题的病原体，如新冠病毒、人乳头瘤病毒、新布尼亚病毒，且只需要改动其中的 LAMP 扩增引物和 crRNA 即可完成，在低医疗资源环境条件下，也可提供了更多的诊断结果。因此它可以广泛应用于医院院感防控和耐药菌的鉴定与治疗，管此方法刚刚起步，我们仍有理由相信该技术对病原体的诊断能力。它可以适用于大规模的人群筛查控制爆发感染，正在引领一场生物技术革命。

PU-3152

铜绿假单胞菌 T6SS clpV1 基因缺失株的构建及对相关功能的影响

邹雅如
上海市宝山区吴淞中心医院

铜绿假单胞菌是一种广泛存在于各种环境中的革兰阴性菌，是医院感染最常见的病原菌之一，常感染免疫力低下的人群，是临床引起患者发病和死亡的主要因素，特别是囊性纤维化(cystic fibrosis, CF)的患者。

细菌通过蛋白质分泌系统，与外界环境及宿主真核细胞相互作用。VI型分泌系统(Type VI secretion system, T6SS)广泛存在于革兰阴性菌中，是一种重要的毒性因子分泌系统，与病原菌的致病性和对外界环境的适应性密切相关，但目前对于 T6SS 生物学功能的了解仍很少。
铜绿假单胞菌几乎编码所有已发现的蛋白质分泌系统，包括三种不同类型的 T6SS 基因簇，即 H1-T6SS，H2-T6SS 和 H3-T6SS，这使它成为研究 T6SS 最理想的模式细菌之一。铜绿假单胞菌中，T6SS 的基因结构中约有 13 个保守的基因片段是其核心部件，包括 clpV 等。它们编码的胞外蛋白，如溶血素共调节蛋白(Hemolysin co-regulated protein, Hcp)和缬氨酸-甘氨酸重复蛋白 G (VgrG)，是 T6SS 最重要的两个效应蛋白。我们前期研究发现，PAO1 菌株生物被膜菌 Hcp1、Hcp2 和

Hcp3 基因的相对表达量均明显高于浮游菌，提示 T6SS 可能参与了生物被膜形成。clpV 是 T6SS 重要的功能元件，它属于 T6SS 的分子伴侣蛋白，具有 AAA+ ATP 酶活性，为 Hcp 蛋白的分泌提供必需的能量来源。因此，如果将 clpV1 基因敲除，铜绿假单胞菌将丧失分泌 Hcp1 的能力。VgrG1a 和 VgrG1c 蛋白的分泌也依赖于 clpV1。

基因敲除术是研究基因功能的重要方法，本研究中，我们通过同源重组法和融合 PCR 技术成功构建铜绿假单胞菌模式菌株 PAO1 的 clpV1 基因缺失株，为进一步在体外对铜绿假单胞菌的 H1-T6SS 的生物学功能进行研究奠定基础。

PU-3153

广州禾信 CMI-1600 全自动微生物质谱检测系统与 VITEK 2 Compact 全自动微生物鉴定仪对临床常见病原菌鉴定的一致性分析

李世荣
复旦大学附属华山医院虹桥院区

目的 分析广州禾信 CMI-1600 全自动微生物质谱检测系统与 VITEK 2 Compact 全自动微生物鉴定仪对临床常见病原菌鉴定的一致性。并评估两种方法的鉴定时间和经济成本。
方法 收集复旦大学附属华山医院 2021 年 3 月-2019 年 5 月来自临床不同标本分离的非重复菌株 292 株。
采用广州禾信 CMI-1600 全自动微生物质谱检测系统和 VITEK 2 Compact 全自动微生物鉴定仪对病原菌进行鉴定，比较两种鉴定方法的一致性。
结果 292 例临床菌株中，两种方法鉴定至种水平一致的样本 276 例，占比 94.5%；鉴定至属水平以上一致的样本 291 例，占比 99.6%，鉴定不一致的样本 1 例，占比 0.4%。
结论 CMI-1600 与 VITEK 2 Compact 对于临床常见病原菌的鉴定结果较为一致，但 CMI-1600 全自动微生物质谱检测系统在时间和经济成本上明显优于 VITEK 2 Compact 鉴定仪，且操作简便，易于使用，给临床微生物的鉴定带来了方便。

PU-3154

2016-2020 年安徽医院念珠菌血流感染患者临床特点及危险因素分析

叶乃芳、刘周、周强
安徽医科大学第二附属医院

目的 探讨安徽医院念珠菌血流感染患者临床特点及影响其预后的危险因素。
方法 收集 2016 年 1 月至 2020 年 12 月安徽医科大学第二附属医院全部念珠菌血流感染患者临床资料及抗真菌药物药敏结果进行回顾性分析,采用单因素、多因素回归分析对念珠菌血症患者预后危险因素进行分析。
结果 共检出念珠菌血症患者 85 例，其中 2016 年至 2020 年，分别为 12 株、11 株、20 株、12 株及 20 株。念珠菌血流感染的发生与年龄性别无明显相关性，菌株主要为热带念珠菌 28 株(32.9％),白色念珠菌 26 株(30.6％),光滑念珠菌 14 株(16.5％), 近平滑念珠菌 12 株(14.1％),克柔念珠菌 2 株(2.4％),其他念珠菌 3 株(3.5％)。对抗真菌药物的敏感率依次为氟胞嘧啶(100.0％)、两性霉素 B(100.0％)、伏立康唑(94.1％)、伊曲康唑(82.4％)和氟康唑(74.1％)。30 天死亡与念珠菌血症直接相关的归因病死率为 32.9％。Logistic 单因素回归分析显示，30 天内使用抗生素、2 个月内使用激

素及机械通气是归因死亡危险因素。Logistic 多因素回归分析显示，2 个月内使用激素及机械通气是其归因死亡独立危险因素。
结论 引起我院念珠菌血流感染病原体最常见为热带念珠菌，已经超过白色念珠菌。三唑类药物是抗真菌药物的主力军，其念珠菌对伏立康唑、氟康唑、伊曲康唑均有不同程度的耐药。2 个月内使用激素及机械通气是念珠菌血流感染死亡独立危险因素。

PU-3155

2015-2020 长沙地区泌尿生殖道支原体感染现状及药敏分析

肖金红、李江、徐文、胡一敏、谢良伊、刘琼
湖南省人民医院

目的 了解长沙地区泌尿生殖道支原体感染情况并进行药敏分析,为临床合理使用抗菌药物提供实验参考依据。
方法 对 2015—2020 年本院 50362 例疑似泌尿生殖道支原体感染患者的感染情况和药敏试验结果进行回顾性分析。
结果 50362 例标本中共检出支原体阳性标本 24677 例，感染率为 48.99%，其中解脲脲原体（Uu）感染 14267 例，感染率 28.33%，人型支原体（Mh）感染 2862 例 感染率为 5.68%，Uu+Mh 混合感染 7548 例，感染率为 14.99%。男性 Uu、Mh、Uu+Mh 感染率分别为 18.23、0.72%、6.25%，明显低于女性的感染率 42.24%、1.43%、10.61(P＜0.05）。对药敏实验结果分析表明，Uu、Mh 和 Uu+Mh 对强力霉素、美满霉素耐药率均低于 3%，对喹诺酮类抗生素耐药率较高；Uu 对大环内酯类抗生素中的阿奇霉素、红霉素耐药率较高，分别为 30.25%和 55.72%，而对交沙霉素、环酯红霉素和克拉霉素耐药率均低于 3%； Mh 对大环内酯类抗生素（除交沙霉素）耐药率均大于 90%。2015 至 2020 年，Uu 对阿奇霉素的耐药率呈逐年上升趋势，对加替沙星和甲砜霉素的耐药率呈下降趋势；Mh 对甲砜霉素、加替沙星的耐药率呈下降趋势。
结论 泌尿生殖道支原体对强力霉素、美满霉素和交沙霉素的敏感率较高，可首选用于本地区泌尿生殖道支原体感染的临床治疗。长沙地区泌尿生殖道支原体感染率呈上升趋势，且女性高于男性，应加强泌尿生殖道感染的监测和防控，同时规范临床抗菌药物的合理使用。

PU-3156

尿培养阳性标本中大肠埃希菌的耐药性分析

杜娜、尧静、李玉海
云南省中医医院（云南中医药大学第一附属医院）

目的 探究尿培养阳性标本中大肠埃希菌的耐药性，为临床治疗尿路感染提供合理的用药指导。
方法 通过 Vitek 2 Compact 系统对 2012-2018 年尿培养阳性标本进行细菌鉴定及药敏试验，使用 WHONET 5.6 软件进行分析。
结果 总的分离到 1419 株大肠埃希菌，前三位感染病区为内分泌科病区、肿瘤科病区和针灸科病区，构成比为 16.5%、15.5%和 14.8%。大肠埃希菌对氨苄西林、头孢唑啉、头孢他啶、头孢曲松、氨曲南、庆大霉素、环丙沙星、左旋氧氟沙星、复方新诺明及四环素呈现不同水平的耐药，但是对阿莫西林/克拉维酸、头孢吡肟、厄他培南、亚胺培南、美洛培南、阿米卡星及呋喃妥因还保留较高敏感活性。在统计的肠杆菌科细菌中，产 ESBLs 肠杆菌科细菌中所占比例最高的为大肠埃希菌(74.4%),碳青霉烯类耐药肠杆菌科细菌中所占比例最高的为肺炎克雷伯菌(67.8%)。
结论 引起尿路感染最常见的细菌为大肠埃希菌，其因产 ESBLs 对临床常用的青霉素类和头孢菌素类抗生素耐药，因此临床应根据细菌培养和药敏试验结果制订合理的抗生素用药方案，避免抗生素滥用，导致耐药菌的产生。

PU-3157

孕 35-37 周产妇外阴和肛周双部位采样进行 B 群链球菌筛查的必要性分析

陈涌泉、王世杰
厦门弘爱医院

目的 通过比较 B 群链球菌筛查中阴道分泌物和肛周拭子的阳性率，分析双部位同时采样送检的必要性。
方法 回顾性分析 2020 年 1 月—2020 年 12 月就诊于福建医科大学附属厦门弘爱医院的 3534 例孕 35-37 周产妇的 B 群链球菌筛查结果，用运送显色培养管分别采集阴道分泌物和肛周拭子，置 5%二氧化碳培养箱孵育 36-48 小时，记录显色的阳性结果。所有显色培养后样本再接种血平板中 5%二氧化碳培养过夜，挑选可疑菌落进行 CAMP 试验，必要时采用 VITEK MS 飞行质谱仪鉴定。
结果 B 群链球菌双部位采样筛查的阳性率为 22.84%，仅采集阴道分泌物阳性率为 16.77%，敏感性为 73.42%；仅采集肛周拭子送检阳性率为 16.44%，敏感性为 72.00%，以上差异均具有统计学意义 （P＜0.05）。与血平板细菌培养法对比，运送显色培养管法敏感性 96.68%，特异性 96.78%，此差异没有统计学意义（P>0.05）。
结论 同时采集阴道分泌物和肛周拭子双部位进行 B 群链球菌筛查，能提高 B 群链球菌筛查的阳性率；运送显色培养管的敏感性和特异性均较高，能达到作为筛查试验的基本要求。

PU-3158

深圳市罗湖区铜绿假单胞菌感染现状 及耐药性分析

付汉维、莫云均、覃俊龙、张宇英、张智耀、何婷、钟如燕、陈璐
深圳市罗湖医院集团医学检验中心

目的 研究罗湖区铜绿假单胞菌感染部位的分布特点及对常用抗菌药物的耐药性，为临床医师合理选用抗菌药物抗感染治疗提供依据。
方法 对我检验中心 2018-2020 年实验室常规分离培养并进行药敏实验分离的 161 株铜绿假单胞菌进行回顾性统计分析，分析临床分布情况和病人易感染部位，评价抗菌药物的体外抗菌活性。
结果 铜绿假单胞菌在呼吸道的检出率较高，对多粘菌素 B、哌拉西林/他唑巴坦、美洛培南、亚胺培南、左氧氟沙星等抗生素的敏感性较高，对氨苄西林/舒巴坦、复方新诺明、头孢噻肟耐药率较高，对其它抗生素出现不同程度的耐药。
结论 铜绿假单胞菌感染部位较多，感染率较高，耐药性呈上升趋势；对碳青霉烯类氨基糖甙类、多粘菌素 B、喹诺酮类、部分头孢类、β－内酰胺酶抑制剂复合药物保持较好的敏感性，耐药性逐渐上升，应加强对铜绿假单胞菌感染率和耐药性有计划地连续监测，加强耐药菌的隔离。

基于 ACE/ACE2 平衡的 COVID-19 治疗思路

李思进、任碧琼
湖南省第二人民医院

COVID-19 的全球流行已导致数十万人死亡，迄今为止尚未找到有效的治疗方法，严重威胁着世界公共健康和生命安全。因此我们迫切需要找到降低死亡率的有效方法。 ACE2 是 ACE 的同工酶，两者都是 RAS 的重要组成部分，但它们的生理作用却相反。 新型冠状病毒通过 ACE2 进入人

体，导致 ACE / ACE2 失衡，并导致各种病理变化。 本文综述了 ACE / ACE2 的双重作用，并讨论了基于 ACE / ACE2 平衡的药物对 COVID-19 引起的 ALI 和 ARDS 患者的潜在治疗作用。

PU-3160

血培养主要病原菌分布及耐药性分析

赵梅娥、王春霞
兰州市第一人民医院

目的 了解兰州市第一人民医院血培养病原菌分布及其对抗菌药物的耐药情况。
方法 对 2016 年 1 月 至 2020 年 12 月 的住院患者血培养的常规鉴定及药敏试验进行分析。
结果 2760 例血培养标本中共检测出病原菌 196 株，阳性率为 7.1％。其中革兰阴性菌占 63.8%（125 / 196），以大肠埃希菌为主、其次为肺炎克雷伯菌、阴沟肠杆菌、1 例耐碳青霉烯类药物的鲍曼不动杆菌等；革兰阳性菌占 32.7％（64 / 196），并以表皮葡萄球菌为主；真菌 7 株，占 3.57％。药敏结果显示大肠埃希菌和肺炎克雷伯菌对氨苄西林耐药率最高（83.2％ ~100％），对哌拉西林 / 他唑巴坦、头孢哌酮 / 舒巴坦、头孢吡肟、头孢他啶耐药率均较低（0~10％），对亚胺培南、阿米卡星 100.0%敏感；革兰阳性菌对青霉素、红霉素耐药率较高（80.5%-93.6%），对万古霉素、利奈唑胺、替考拉宁 100.0％敏感；
结论 兰州市第一人民医院血培养病原菌以革兰阴性菌为主，首选抗生素哌拉西林 / 他唑巴坦或头孢哌酮 / 舒巴坦，由于地区环境不同，病原菌及耐药情况应做定期监测分析，为临床合理使用抗菌药物提供客观、准确的依据。

PU-3161

新型冠状病毒疫情爆发前后西安某医院呼吸道病毒发病情况调查及分析

姚子淳
西安医学院第一附属医院

目的 分析新型冠状病毒疫情爆发前后西安某医院呼吸道病毒发病情况调查及分析。
方法 回顾性分析 2018 年 2 月～2021 年共 7893 例呼吸道感染的患者，抽取鼻咽部分泌物，采取胶体金法、直接免疫荧光法检测 7 种常见呼吸道病毒。分析比较常见呼吸道病毒季节分布特征以及在新冠疫情前后发病情况。
结果 7 种病毒中呼吸道合胞病毒（RSV）检测阳性例数最多，其次为 A 型流感病毒。从季节分布情况来看，，以春、夏季多发。从年龄段分析，1 岁以下的婴幼儿组阳性率在各年龄组中最高，其次是 1 ～ 3 岁的患儿，阳性率随年龄增长逐渐下降。总病毒阳性率与性别无关。不同疾病的病毒检出率不同，在肺炎、支气管肺炎患儿中，病毒阳性率最高，各组疾病检出的最主要病毒均为 RSV。新冠疫情爆发后，各种病毒阳性率均下降。
结论 呼吸道病毒发病具有明显的季节性，集中趋势明显。疫情爆发后，呼吸道病毒阳性率明显下降。

PU-3162

2016 年-2018 年某院血培养标本中病原菌分布及耐药性分析

吴玲玲
泰安市中心医院

目的 分析血流感染主要病原菌种类及耐药情况。
方法 对医院 2016 年 1 月-2018 年 12 月临床送 检成人血培养标本的培养和药敏结果进行回顾性统计分析，对阳性标本进行病原菌统计分析。
结果 2016 年 1 月-2018 年 12 月医院共送检成人血培养标本 17140 份，阳性标本 1753 份，阳性率 10.2%，共检出病原菌 1737 株。 其中, 革兰阴性菌 1120 株占 64.48%， 革兰阳性菌 550 株占 31.66%， 真菌 49 株占 2.82%， 专性厌氧菌 18 株占 1.04%。 病原菌分布占前 3 位的科室分别是重症医学科（ICU）、急诊科和血液内科。 检出率较高的病原菌依次为：大肠埃希菌、肺炎克雷伯菌和凝固酶阴性葡萄球菌。
结论 该院血流感染的病原菌以革兰阴性菌为主，定期对血培养 病原菌的分布及耐药情况进行分析，对临床合理用药有重要意义。

Xpert Mtb/RIF、γ-干扰素释放试验、荧光定量 PCR 在结核病诊断中的对比研究

刘爱波、王京梅
四川省医学科学院·四川省人民医院

目的 比较结核分枝杆菌/利福平耐药快速检测法(Xpert Mtb/RIF)、荧光实时定量 PCR、γ-干扰素释放试验检测结核分枝杆菌的价值。
方法 纳入 2018 年 4 月 1 日至 2019 年 4 月 1 日在四川省人民医院就诊的结核分枝杆菌培养阳性的患者 151 例。利用 Xpert Mtb/RIF、荧光实时定量 PCR 技术对其痰液（或体液）标本进行 DNA 检测，并抽血送检 γ-干扰素释放试验，利用统计分析方法比较这三种检测技术对结核分枝杆菌的检出率以及结核培养阳性患者的 r-干扰素的集中范围。
结果 以结核培养为金标准，用 γ-干扰素释放试验辅助检测结核分枝杆菌的阳性率高于荧光实时定量 PCR 法与 Xpert Mtb/RIF 法，P＜0.05，差异有统计学意义。
结论 与用荧光定量 PCR 技术和 Xpert Mtb/RIF 相比，用 γ-干扰素释放试验辅助诊断结核分枝杆菌的阳性率更高，但可能存在假阳性，在临床诊断中应结合多方面考虑。

PU-3164

糖尿病足溃疡的细菌分布及药物敏感试验分析

方慧
上海市杨浦区中心医院（同济大学附属杨浦医院）

目的 分析糖尿病足溃疡患者病原菌分布、特点及药物敏感性，指导医生选择性用药。
方法 选择 50 例糖尿病足溃疡患者，进行溃疡部位病原菌检测及药物敏感试验。
结果 50 例患者，共检出 65 株病原菌， 33 株革兰氏阳性菌（50.77%），30 株革兰氏阴性菌（46.15%），2 株白色念珠菌（3.08%）。排在前三位的分别为金黄色葡萄球菌、凝固酶阴性葡萄球菌（第二位）、大肠埃希菌（第二位）、阴沟肠杆菌。其中，革兰氏阳性菌中有金黄色葡萄球菌、凝固酶阴性葡萄球菌、粪肠球菌、屎肠球菌。有 6 株为耐甲氧西林的金黄色葡萄球菌(MRSA)

（35.29%），有 10 株耐甲氧西林的凝固酶阴性球菌（MRSCN）（100%）。革兰氏阳性菌对替加环素、替考拉宁、利奈唑烷、万古霉素全敏感。革兰氏阴性菌中有大肠埃希菌、阴沟肠杆菌、铜绿假单胞菌、奇异变形杆菌。革兰氏阴性菌对阿米卡星，亚胺培南、美罗培南全敏感。另外，铜绿假单胞菌对妥布霉素的敏感率也是 100%。

结论 DFU 患者在诊断和治疗过程中，要进行病原菌检验，在细菌培养和药敏试验结果出来以前，可参考以上细菌的药物敏感性数据选择性用药，待明确病原菌后，就选择窄谱抗菌药物，并注意多重耐药菌。

鸟分枝杆菌分泌的 EVs 调节宿主巨噬细胞的炎性反应

王静宇
南方医科大学南方医院

细胞外囊泡可以携带蛋白，核酸，脂质，毒素以及酶等生物活性物质的膜型囊泡。并且细菌分泌的 EVs 会携带菌体抗原，诱发靶细胞产生免疫反应，从而影响细菌的感染及致病机制。在本研究中，M.avium 可以分泌 EVs，建立了 EVs 密度梯度分离纯化的方法。并且通过 TEM 和 NTA 对 M.avium-EVs 进行了表征。随后证实，M.avium-EVs 可以被巨噬细胞捕获并促进巨噬细胞分泌 ROS 和 NO 的能力。M.avium 分泌的 EVs 促进巨噬细胞 IL-6、IL-10、TGF-β、TNF-α 细胞因子的分泌及抗原共刺激分子 CD80, CD83, CD86, MHC-II 的表达。蛋白质谱对 M.avium 分泌的 EVs 内容物进行深入分析，筛选到 EVs 内含有分枝杆菌的关键毒力蛋白脂蛋白、ESAT6 及 antigen 85B 等，并初步探索了携带生物活性的 EVs 可能通过 TLR2 信号通路，激活宿主的免疫炎性反应。这些发现可以为分枝杆菌的感染致病机制和疫苗的开发提供新的视角。

PU-3166

耐碳青霉烯类鲍曼不动杆菌耐药基因的检测在重症医学中的应用

马亚楠、王素梅、刘树业、张建东
天津市第三中心医院

目的 耐碳青霉烯类鲍曼不动杆菌已经成为引起院内感染的一大重要致病菌。本文针对重症监护病房内患者感染鲍曼不动杆菌对碳青霉烯类药物的耐药情况，探究 CRAB 耐药基因的检测在重症医学中的应用价值，从而快速指导临床用药。

方法 收集重症医学科疑似感染鲍曼不动杆菌患者的痰标本共 285 份；统计传统培养与耐药基因检测两种方法对 AB 及 CRAB 的阳性菌株数；筛选 PCR 基因检测 OXA-51 阳性的标本，将传统培养与荧光定量 PCR 两种方法对 CRAB 的检出率做统计学分析；并探讨 OXA-23 基因阳性的患者标本其他抗生素的耐药情况。

结果 鲍曼不动杆菌对碳青霉烯类药物耐药率为 72.20%。利用实时荧光定量 PCR 方法检测 OXA-51 基因检出 AB 的符合率为 92.28%(P>0.05)，OXA-23 基因检出 CRAB 的符合率为 86.62%(P>0.05)。在 108 株鲍曼不动杆菌感染 OXA-23 阳性标本中，耐药率明显较低的药物有米诺环素、头孢哌酮/舒巴坦、粘菌素、替加环素。

结论 近年来，临床上分离的鲍曼不动杆菌对碳青霉烯类药物的耐药率逐渐上升。与传统培养方法相比，qRT-PCR 法针对 AB 及 CRAB 检出结果的符合率高达 92.28%、86.6%，由于该方法简便、快速，特别是对重症患者可以及时救治，值得临床广泛应用。针对 qRT-PCR 方法检测 OXA-23 阳性标本的米诺环素、头孢哌酮/舒巴坦、替加环素、粘菌素的耐药率低，可为临床用药提供建议。

PU-3167

临床诊断肺隐球菌病的方法探究

朱波、郑港森、洪国斧
厦门大学附属第一医院

目的 初步探讨临床诊断肺隐球菌病的体系的建立。
方法 2020 年 1-4 月采集厦门大学附属第一医院确诊肺隐球菌病患者 50 例，根据临床表现，肺部影像学，病理穿刺，balf 培养，血培养，血清及 Balf 隐球菌荚膜多糖抗原检测，Balf NGS 测试数据综合分析各方法学在诊断肺隐球菌病中的作用。
结果 50 例患者中,经病理活检或培养阳性确诊为肺隐球菌病 14 例,血培养阳性 4 例，Balf NGS 检测阳性 10 例，血清和 balf 隐球菌荚膜多糖抗原阳性 49 例，上述方法中检测灵敏度最高的是隐球菌荚膜多糖抗原为 98%，高于其他方法。
结论 临床可以结合临床表现，肺部影像学，病理穿刺，Balf 培养，血培养，血清及 balf 隐球菌荚膜多糖抗原检测，Balf NGS 测试数据综合建立诊断肺隐球菌病的体系，其中胶体金隐球菌荚膜多糖抗原检测是临床诊断肺隐球菌病的灵敏度较好且经济快速的方法,临床应注意筛查。

PU-3168

临床微生物室两种常用血培养系统的性能评估

张学林、陈艳芝
保山市人民医院

目的 评估微生物室常用的两种血培养系统：BD BACTEC FX 和梅里埃 BacT/ALERT 3D 性能是否满足临床要求，并进一步判定两种血培养系统的优势。
方法 采用留样验证的方法对菌株进行一系列稀释，最终接种至培养瓶的细菌浓度为 5-30CFU/瓶；苛养菌添加适量的新鲜无菌血液（成人瓶 5-10ml，儿童瓶 1-3ml）后置于血培养系统上进行培养、检测。比较两种血培养系统配套的需氧瓶、厌氧和兼性厌氧瓶、儿童瓶的报阳时间和 3 天的检出率。
结果 BD BACTEC FX 和梅里埃 BacT/ALERT 3D 配套的培养瓶对 30 株病原菌的阳性率均为 100%，BD BACTECTM Plus 需氧瓶和 BacT/ALERT FA 需氧瓶阳性报警时间（h）和 BD BACTECTM Peds 儿童瓶和 BacT/ALERT PF 儿童瓶阳性报警时间（h）的 P 值分别为 0.13 和 0.16，两者差异无统计学意义（P>0.05），BD BACTECTM Lytic 厌氧瓶和 BacT/ALERT SN 厌氧瓶阳性报警时间（h）的 P 值为 0.03，两者差异显著（P<0.05），有统计学意义。
结论 两种血培养系统的性能能检出血液中的大部分病原菌，能满足临床需求和 CNAS-GL28《临床微生物检验程序验证指南》关于血培养系统性能验证的要求。

PU-3169

多重 PCR 方法检测血流感染常见病原菌的临床应用

井发红
西安医学院第一附属医院

目的 建立一种能够应用于临床检测血流感染患者常见病原菌的多重 PCR 方法。
方法 针对血流感染 7 种主要病原菌鲍曼不动杆菌、大肠埃希菌、金黄色葡萄球菌、铜绿假单胞菌、肺炎克雷伯菌、表皮葡萄球菌及屎肠球菌设计多重 PCR 体系，对其敏感性及特异性进行验证，然后对临床标本进行检测并与培养方法进行比较。

结果 采用优化后的多重 PCR 体系对 200 份血液标本和 60 份穿刺引流液标本进行检测，血液标本中共检出 21 例阳性，其中表皮葡萄球菌 5 例，大肠埃希菌 3 例，屎肠球菌 3 例，鲍曼不动杆菌 3 例，金黄色葡萄球菌 3 例，铜绿假单胞菌 2 例，肺炎克雷伯菌 2 例；穿刺引流液标本中共检出 24 例阳性，其中大肠埃希菌 5 例，表皮葡萄球菌 5 例，屎肠球菌 4 例，鲍曼不动杆菌 2 例，铜绿假单胞菌 3 例，金黄色葡萄球菌 3 例，肺炎克雷伯菌 2 例；经统计学分析表明多重 PCR 的敏感性高于培养方法。

结论 利用多重 PCR 体系可以在一个反应中同时检测 7 种血流感染常见病原菌，且有较高的特异性和灵敏度，可同时检测、鉴别出多种病原菌，在临床混合感染的鉴别诊断上具有其独特的优势。该方法稳定可靠，成本低，操作简单、快速，整个检测过程受污染风险小，具有很高的临床应用价值。

PU-3170

结核分枝杆菌感染后宿主细胞外泌体内容物的改变

简苗苗
德阳市人民医院

结核病（tuberculosis，TB）是由结核分枝杆菌（Mycobacterium tuberculosis，Mtb）感染引起的慢性传染病，严重威胁着人类的健康。结核病人外泌体浓度与细菌负荷相关，且 Mtb 感染修饰外泌体的组成。然而，参与结核病进展的具体外泌体内容物与机制尚未完全清楚。本文旨在总结 Mtb 感染后外泌体内容物的变化，并对外泌体作为结核病检测生物标志物的可能性进行介绍以及探索外泌体在结核病中的作用有利于新型结核病疫苗的开发及应用。

Mtb 感染的巨噬细胞中分离的外泌体中一共鉴定出 41 种分枝杆菌蛋白质，也包含脂阿拉伯甘露聚糖和其他分枝杆菌脂类。从受感染的巨噬细胞释放的外泌体中鉴定出 57 种 miRNA，但与未感染的细胞相比，Mtb 感染导致 miRNA 掺入外泌体普遍受抑制。在来自感染细胞的外泌体中检测到大量用于编码核糖体蛋白质以及 RNA 结合蛋白的转录物。实验发现 Mtb 感染的巨噬细胞释放的外泌体含有 9 种分枝杆菌转录物，TB 感染个体的血清外泌体中存在 Rv2796 和 Rv1369c。

外泌体是动态的，外泌体对于鉴定细胞内病原体尤其重要，因为细菌产物并不总是存在于用于病原体检测和诊断的流体中。与大多数免疫生物标志物不同，Mtb 产物对结核病是特异性的。呼出气中的外泌体包裹的 miRNA 被认为具有成为肺结核病患者生物标志物的潜能。通过多重反应监测质谱平台使用来自 GlcB7、HspX、Mpt51、Mpt63、Mpt64 蛋白的 7 个肽的生物标志物可以正确诊断出 83%的结核患者。在 LTBI 病人中，一些 Mtb 细胞被破坏并且许多 Mtb RNAs 和蛋白被外分泌进入血清外泌体。患者血清中外泌体内容物有望成为诊断和区分潜伏性结核和活动性结核的工具。

来自 Mtb 感染细胞的外泌体可以促进巨噬细胞和 T 细胞的趋化性。研究发现，使用 Mtb CFP 处理的巨噬细胞衍生的外泌体接种小鼠后，可以保护小鼠免受用低剂量的 Mtb 气溶胶感染。Mtb CFP-外泌体可以在体内引发保护性免疫应答，又能强化先前接种的 BCG 免疫反应，其保护作用优于或等于卡介苗。这些结果表明外泌体可能为新型结核病疫苗和 BCG 加强疫苗的开发提供独特的方向。

PU-3171

The mechanism and current situation of phage used in the treatment of multi-drug resistant bacteria

Dandan Tie
Department of Laboratory Medicine, Sichuan Provincial People's Hospital, University of Electronic Science and Technology of China, Chengdu, China.

The emergence of drug-resistant "super bacteria" will enable us to enter the "post-antibacterial era". In the face of increasing bacterial resistance, finding new treatment options has

become an urgent problem to be solved.In this article, by consulting a large number of successful cases of phage clinical treatment at home and abroad, the advantages of phage treatment are elaborated in detail.It fully shows that the use of phages to lyse drug-resistant strains is an effective way to treat bacterial diseases.

With the more and more widespread application of antibiotics, clinical multi-drug resistant bacteria are gradually increasing, and the current research and development speed of antibiotic drugs is far less than the speed at which bacteria acquire antibiotic resistance, The emergence of multi-drug resistant bacteria has brought great challenges to clinical anti-infective treatment.In order to overcome the dangers of drug-resistant bacteria and the diseases they cause, researchers are forced to turn their attention to alternatives to antibiotics-phages. Compared with antibiotics, phage preparations have the advantages of strong specificity, fast self-proliferation, and short development time .

PU-3172

血液来源表皮葡萄球菌生物被膜形成及分子特征研究

胡洪华
四川省医学科学院·四川省人民医院

目的 分析临床血液来源表皮葡萄球菌的生物被膜形成能力，探究生物被膜形成与相关基因携带的分子生物学特征。
方法 收集临床分离血液来源的表皮葡萄球菌 68 株，用 96 孔聚苯乙烯培养板分析生物被膜形成能力，用 PCR 法检测 psm-mec，icaA，IS256， aap，agrA 和 atlE 基因的携带，采用 fisher 检验分析这些基因与生物被膜形成的相关性。
结果 68 株表皮葡萄球菌中生物被膜阳性的有 36 株，占 52.94%；psm-mec，icaA，IS256， aap，agrA 和 atlE 基因的检出率分别为 38.24%，60.29%，67.65%，82.35%，82.35%，88.24%；其中 icaA，psm-mec 和 IS256 基因的携带与生物被膜形成相关，差异有统计学意义（$P<0.05$）。
结论 临床分离血液来源的表皮葡萄球菌具有较高的产生物被膜能力，icaA，psm-mec 和 IS256 基因是表皮葡萄球菌形成生物被膜的重要因素。

PU-3173

布鲁菌感染的实验室指标与临床特征分析

张秀芳
安徽亳州市人民医院

目的 总结并分析我院检出的布鲁菌感染患者的实验室指标及临床特征，提高非疫区检验人员对该病的检测能力，为布鲁菌病的早期诊断提供依据。
方法 收集我院 2016 年至 2020 年收治的 17 例布鲁菌病患者分析其实验室指标、临床资料、流行病学特点。
结果 布鲁菌病患者各年龄段均可感染，主要为中年人，最低 4 岁，最高 75 岁；75%以上有明确的、与牛羊相关的密切接触史，大多为农民及无职业的个体经营者；实验室检查 40%以上患者的白细胞（WBC）减低，80%以上患者的超敏 C-反应蛋白（CRP）和谷丙转氨酶（ALT）升高，90%以上患者降钙素原（PCT）升高。另外，90%以上患者会出现反复高热，部分病人会伴随关节痛、肌肉痛、腰痛等症状。
结论 布鲁菌病实验室检查及临床特征无特异性，非疫区医务人员均应提高对该病的认识，避免误检漏检。

PU-3174

急性与慢性细菌性关节炎病原菌组成及炎症指标比较

高玉红、郑瑞、李艺坤
云南省第一人民医院

目的 分析急性与慢性细菌性关节炎病原菌组成差异及炎症指标差异。
方法 回顾性分析 2016 年至 2020 年五年间云南省第一人民医院关节液培养阳性的患者资料，比较 90 例急性细菌性关节炎与 40 例慢性细菌性关节炎的病原菌组成，及炎症指标包括 C 反应蛋白、降钙素原、铁蛋白、血沉差异。
结果 急性细菌性关节炎病原菌主要以金黄色葡萄球菌为主，而慢性细菌性关节炎以马耳他布鲁菌感染为主。急性细菌性关节炎组的 C 反应蛋白和降钙素原均高于慢性细菌性关节炎组，两组结果有显著差异；而慢性细菌性关节炎组的血沉指标高于急性细菌性关节炎组，差异有显著性；两组的铁蛋白均有显著升高，差异无显著性。
结论 急性与慢性细菌性关节炎病原菌组成不同，且临床有效治疗用药也完全不同，及时送检关节液培养有重要的临床意义。

PU-3175

胶体金法测隐球菌荚膜多糖抗原在肺隐球菌病诊断中的应用

朱波、徐和平、洪国斧
厦门大学附属第一医院

目的 探讨胶体金检测隐球菌荚膜多糖抗原诊断肺隐球菌病的价值。
方法 2020 年 1-4 月采集厦门大学附属第一医院疑似肺隐球菌病患者 200 例的血液,采用胶体金法（美国 Immuno Mycologics 公司）检测隐球菌荚膜多糖抗原并评价效果.
结果 200 例患者中,经病理活检或培养阳性确诊为肺隐球菌病 36 例,非肺隐球菌病 164 例。上述两组分别采用胶体金法检测，其中 36 例肺隐球菌病患者中隐球菌抗原阳性 32 例，检测灵敏度为 88.89%，164 例非隐球菌病患者检测结果均为阴性，检测特异度 100.00%。
结论 胶体金隐球菌荚膜多糖抗原检测是一种简单快速的肺隐球菌病筛查方法,具有一定的临床应用价值。

PU-3176

基于 Mp 模拟表位的 MAP 的制备、纯化与鉴定

王阿金、张文瀚、宋然、李章勇、周杰英、张林、史文元
郴州市第一人民医院

目的 制备含有肺炎支原体 (Mp) 模拟表位的多抗原肽(MAP) ，为研制基于模拟表位的 MAP 用于 Mp 的诊断与预防提供前期实验基础。
方法 肺炎支原体感染患者的血清用饱和 (NH4)2SO4 法进行纯化，以此为靶分子应用噬菌体展示技术筛选出 2 条 7 肽 CS1：T-V-N-F-K-L-Y 和 CS2：L-P-Q-R-L-R-T；以多聚赖氨酸为核心基质，采用 Fmoc 方法合成含有 Mp 模拟表位的八分枝 MAP，反向高效液相色谱(ＲP-HPLC) 分析 MAP 的纯度，质谱分析法测定 MAP 的分子量并对其进行鉴定。
结果 分别制备了含有肺炎支原体 2 个模拟表位的 MAP，ＲP-HPLC 分析的结果表明合成的 2 个 MAP 的纯度都在 90%以上，质谱分析的结果表明所合成的 MAP 的分子量与预期的理论分子量基本相符。

结论 成功制备、纯化并鉴定了 2 个含有 Mp 模拟表位的 MAP。

PU-3177

低出生体重儿希木龙念珠菌血流感染的临床特征及同源性分析

朱波、房丽丽、洪国斧
厦门大学附属第一医院

目的 探讨低出体重儿希木龙念珠菌血流感染的临床特点。
方法 回顾性分析我院 NICU 极低出体重儿希木龙念珠菌血流感染 3 例患儿临床资料，并对菌株进行同源性分析。
结果 3 例患儿出生体重均小于 1200g。临床表现为呼吸暂停、发热、腹胀、黄疸等，感染初期多有血小板计数下降，C 反应蛋白升高，G 试验阳性。3 例患儿先后均有脐静脉置管和经外周中心静脉置管（PICC）；发生感染前使用广谱抗生素和氟康唑预防真菌治疗。3 例希木龙念珠菌对氟康唑、两性霉素 B、伊曲康唑、伏立康唑、5-氟胞嘧啶高度耐药。3 例用米卡芬净治疗均治愈。2 例为同源性最近。
结论 低出生体重儿，尤其是辅助生殖婴儿应警惕泛耐药希木龙念珠菌真菌感染的发生，及时监测感染性指标，尽快送检标本，早期治疗并采取合理院感防控措施以防爆发流行。

PU-3178

2016-2020 年某院碳青霉烯类耐药肺炎克雷伯菌分析

韩云港、赵悦、王伟
河南省胸科医院

目的 分析某院 2016-2020 年碳青霉烯类耐药肺炎克雷伯菌(CRKP)的流行趋势、分布特点及耐药性，为 CRKP 的防治提供临床诊疗依据。
方法 通过医院 HIS 系统调查 CRKP 患者的抗菌药物使用情况，采用纸片扩散法或自动化仪器法进行抗菌药物敏感性试验，按照 CLSI 2019 年标准判读结果，对科室来源、标本来源及药物敏感性进行分析，数据统计分析采用 SPSS25.0 软件及 WHONET 5.6 软件。
结果 5 年共分离肺炎克雷伯菌 1657 株，其中 376 株为 CRKP，2016-2020 年 CRKP 检出率分别为 24.2%、22.6%、29.7%、31.3%、12.4%。CRKP 分离株最多的科室重症监护室(ICU)为 63%，明显高于普通病房（$p<0.05$）,CRKP 标本来源最多为呼吸道标本（痰液 77%，肺泡灌洗液 8%），其次为血液 8%，静脉导管尖端 5%。CRKP 株的检出与第三代头孢菌素、碳青霉烯类和酶抑制剂复方制剂使用强度呈正相关($P<0.05$)。CRKP 株对大多数抗菌药物的耐药率超过 90%，耐药率较低的为替加环素 1.1%、多粘菌素 1.5%、头孢他啶/阿维巴坦 7.5%。
结论 该院 CRKP 分离率 2019 年之前较高，2020 年有明显下降趋势，CRKP 分离株与来源于呼吸道标本以及患者入住 ICU 有关、同时与广谱 β-内酰胺类、碳青霉烯类的用量有关。应加强抗菌药物管理，强化院感意识，做好消毒、隔离等措施，减少耐药菌株在院内感染的发生。

PU-3179

ICU 多重耐药鲍曼不动杆菌的产生及耐药性分析

朱薇、石红、顾振东
宝鸡市中心医院

目的 分析我院重症监护室（ICU）临床分离到的多重耐药不动杆菌的产生及耐药特点，为临床合理应用抗生素提供依据。
方法 采用法国梅里埃公司的 VITAIKE—2 对重症监护室（ICU）送检的标本进行细菌培养、鉴定和药敏试验,药敏试验结果判定依据 CLSI 颁布标准,采用 WHONET 5.4 软件进行数据分析。
结果 近一年我院重症监护室（ICU）分离到的多重耐药鲍曼不动杆菌 90%来自呼吸道标本，对抗生素耐药率最低的是米诺环素和多粘菌素 B,对碳青霉烯类抗生素的耐药性急速增长。
结论 我院所分离到的多重耐药鲍曼不动杆菌耐药性呈上升趋势，区分定植与感染对临床治疗及合理用药至关重要。

PU-3180

革兰阴性杆菌检出率及耐药性分析

肖慈然[1]、吴悦[2]
1. 四川省医学科学院·四川省人民医院东院
2. 成都医学院检验学院

目的 探讨四川省人民医院城东病区革兰氏阴性杆菌的检出率及耐药情况，为抗菌药物的使用提供理论依据。
方法 提取四川省人民医院城东病区 2019 年至 2021 年第一季度间革兰阴性杆菌的检出数据，使用 WHONET5 软件对上述数据进行分析。
结果 本次试验共检出 1268 株细菌，革兰阴性杆菌 871 株，占 68%；革兰阴性杆菌包含：大肠埃希菌 402 株、肺炎克雷伯菌 304 株、阴沟肠杆菌 37 株、奇异变形杆菌 19 株、沙门氏菌 18 株；革兰阴性杆菌的标本来源主要是：痰液 344 例、尿液 167 例、血液 124 例、分泌物 155 例、其他类型 81 例；主要送检科室是：呼吸内科 139 例、胃肠外科 100 例、ICU 94 例、肾脏内科 94 例；分离细菌对各类药物的最高耐药率：青霉素类的氨苄西林耐药率 92.2%：β 内酰胺合剂类氨苄西林/舒巴坦耐药率 48.2%、头孢菌素类的头孢唑啉耐药率 72.2%、碳青霉烯类的亚胺培南耐药率 4.6？、氨基糖苷类的庆大霉素耐药率 28.3%、喹诺酮类的莫西沙星耐药率 48.9%、四环素类的四环素耐药率 52%；敏感率超过 90%的药物有： 头孢替坦、亚胺培南、美洛培南、厄他培南、阿米卡星。
结论 革兰阴性杆菌在四川省人民医院城东病区检出率及耐药情况均较严重，需要引起临床重视，应更加合理规范性使用抗生素，实时监测耐药水平。

Identification of host cell proteins that interact with Chlamydia trachomatis T3SS effector CT622

Wenbo Lei[1,2]、Binfeng Peng[1]、Mingyi Shu[2]、En Chen[1]、Shuangquan Liu[1]、Zhongyu Li[2]
1. 南华大学附属第一医院检验医学中心
2. 南华大学衡阳医学院原生物学研究所

As a kind of obligate intracellular pathogen, Chlamydia trachomatis (C. trachomatis) infections are an important cause of public health diseases and there is no effective vaccine to prevent it. However, the pathogenic mechanism of C. trachomatis is still unclear. Previous studies

have demonstrated that C. trachomatis interacts with host cells by secreting effector proteins to complete its growth and development. Type III secretory system (T3SS) has emerged as the key device for the virulence of C. trachomatis, which mediates the interaction of Chlamydia with host cells through secretion of effector proteins, The T3SS effector protein CT622, which localizes in the host cell cytoplasm, is crucial for C. trachomatis growth and infection. To further understand the role of CT622 protein in the pathogenic mechanism of C. trachomatis, here, we screened the host cell proteins that interact with C. trachomatis T3SS effector CT622 by using co-immunoprecipitation combined with mass spectrometry, and we constructed the CT622 interaction host proteins database based on the Unused score of LC-MS/MS. We further identify several candidate host proteins (Myo1c， TPM1, ARP2, CAPZB， Rab4) through co-immunoprecipitation and GST-pulldown assays, our results confirmed the interaction between Myo1c and CT622 protein. However, the contribution of the interaction between Myo1c and CT622 in C. trachomatis infection needs to be further clarified. Collectively, these findings may further promote our focus on the role of CT622 in Chlamydial pathogenic mechanisms.

PU-3182

铜绿假单胞菌血流感染耐药机制研究及预后分析

李霜
成都市第三人民医院

目的 探讨血流感染中碳青霉烯耐药而头孢敏感的铜绿假单胞菌的耐药机制，致患者感染的危险因素及预后，为临床预防感染及治疗提供理论依据。
方法 收集我院 2011 年至 2017 年间血流感染患者的病历资料及致病菌株，定义感染碳青霉烯耐药而头孢敏感的铜绿假单胞菌患者为病例组 I，按 1：1：2 的比例随机选取感染碳青霉烯和头孢敏感的铜绿假单胞菌患者作为病例组 II，未患血流感染的患者作为对照组，进行病例-病例-对照研究。采用聚合酶链反应 (PCR)和实时逆转录 PCR (RT-PCR) 对铜绿单胞菌的耐药机制进行研究，同时采用卡方检验和 logistic 回归模型对患者病历资料进行危险因素和临床预后分析。
结果 PCR 结果显示 63 株碳青霉烯耐药而头孢敏感的铜绿假单胞菌均不产 ESBLs 和碳青霉烯酶相关基因，但 RT-PCR 结果显示外排泵的表达上调和孔蛋白 OprD 的表达下降与碳青霉烯耐药有关。预后分析显示病例组 I 的 30 天死亡率为 27% (17/63)，显著高于病例组 II (12.7%, 8/63)，差异有统计学意义（P <0.05）。危险因素分析显示 30 天之内再次入院、中央静脉置管和碳青霉烯的使用为病例组 I 的独立危险因素， 患血液肿瘤为病例组 II 的独立危险因素，完全肠外营养为两种表型血流感染的共同危险因素。入住 ICU 和休克为感染两种表型铜绿假单胞菌患者死亡的独立危险因素。
结论 碳青霉烯的使用为铜绿假单胞菌耐药的高危因素，同时头孢类药物应作为治疗此表型血流感染的一个重要选择。

PU-3183

6 例人型支原体血流感染的临床特征和耐药性分析

曾童、张小团、刘卓然
南华大学附属第二医院

目的 分析人型支原体引发血流感染患者的临床特征及耐药情况
方法 回顾性分析南华大学附属第二医院 2018 年 1 月－2020 年 12 月人型支原体血流感染患者的临床及微生物学资料。
结果 6 例人型支原体血流感染患者纳入研究，主要临床症状为不明原因且难以用临床经验性抗生素控制的发热，外周血白细胞升高或正常，以中性粒细胞升高为主。发热前行泌尿生殖道手术者占 50%（3/3），车祸后多发性外伤占 33.3%（2/6）；行导尿操作患者占 100%（6/6）。血液分离的

人型支原体对多西环素、米诺环素、交沙环素耐药率最低，为 0%（0/6），对罗红霉素、红霉素、克拉霉素耐药率最高，为 100%（6/6）。6 例患者中，发热完全控制大于 50 天 3 例（3/6），死亡 1 例（1/1）。

结论 人型支原体血流感染症状不典型；免疫缺陷的患者人型支原体血流感染症状更难控制；临床常用抗生素难以控制的高热应积极留取血培养，警惕人型支原体入血可能。

PU-3184

碳青霉烯类耐药大肠埃希菌的流行病学研究

梁树梅
成都市第三人民医院

目的 近年来对碳青霉烯类抗生素耐药的肠杆菌科细菌(Carbapenem-Resistant Enterobacteriaceae,CRE)不断出现,给临床治疗的用药选择带来了巨大挑战。本研究旨在了解大肠埃希菌的药物敏感性变迁,确定 CRE 菌株的产酶情况和科室分布情况等，为院内感染控制及临床治疗提供基础数据。

方法 收集 2018 年 1 月到 2020 年 4 月成都市某三甲院临床分离的碳青霉烯类耐药大肠埃希菌共 30 株进行回顾性分析，采用 Microsan WalkAway plus 96 全自动微生物鉴定仪进行细菌鉴定及药物敏感试验;采用碳青霉烯酶抑制剂增强试验对大肠埃希菌的耐药机制进行表型检测。

结果 30 株感染患者临床诊断大肠埃希菌感染的标本来源以尿液、痰液及血液多见，分别占 50.0%、26.7%和 16.7%；感染的病区主要集中在呼吸科、ICU、泌尿科和血液科，分别占 20.0%、16.7%、13.3%和 10.0%，碳青霉烯酶抑制剂增强试验结果表明已产 NDM 酶为主。

结论 对碳青霉烯类药物耐药的机制主要是携带 blaNDM-1 基因并呈现多重耐药，给临床治疗带来了困难。加强对碳青霉烯耐药菌株基因型和耐药基因的检测，将对减缓或阻断耐药菌的传播具有重要意义。

PU-3185

耐碳青霉烯类大肠埃希菌流行病学研究及耐药性分析

陈曦
中国人民解放军南部战区总医院

目的 了解南部战区总医院耐碳青霉烯类大肠埃希菌(CREC)药物耐药情况和流行趋势，为落实医院感染防控措施提供理论依据。

方法 1.收集 2015 年 10 月～2020 年 7 月期间本院耐碳青霉烯类大肠埃希菌。2.使用 mCIM 和 eCIM 方法快速筛查产酶情况。分析 26 株 CREC 的病区分布、标本来源分布和对临床常用 14 种抗生素耐药性。3.运用多位点序列分析(MLST) 方法分析待测菌株的 7 个管家基因，获得菌株的 ST 型；采用聚合酶链反应(PCR) 鉴定血清型。

结果 1. 我院住院患者临床标本中分离到耐碳青霉烯类大肠埃希菌共 26 株,其中 25 株均产金属酶。从临床标本分布来看，主要分离自中段尿(46.2%)；从临床科室分布来看，分离率最高的是泌尿外科病区(26.92%)。2.从药物敏感性来看，亚胺培南和厄他培南均耐药，其他各种药物的耐药率也较高，仅阿米卡星耐药率较低(23.1%)。3.多位点序列分型和血清型分型均获得 13 个型别，其中 ST167 、ST131 和 H4:O25、H9:O101 是本院最主要的流行型别，均为 4 株；且 MLST 分型与血清型分型结果基本一致。

结论 本院中段尿标本耐碳青霉烯类大肠埃希菌检出率高；泌尿外科病区流行情况最为严重；ST 型别及血清型种类较多且散在分布于各临床科室且均与标本类型无相关性；同一病人不同时间可出现不同 MLST 型和血清型，甚至同一标本中可出现不同型别；本研究中血清型和 MLST 分型表现出

较高一致性；同时高耐药率也提示临床应合理用药并加强消毒隔离措施，防止此类耐药菌的传播扩散。

PU-3186

2020 年四川地区尿路感染病原菌分布和耐药分析

钟敏
四川省医学科学院·四川省人民医院

目的 总结分析四川省细菌耐药监测网成员单位 2020 年尿液标本病原菌分布及耐药情况，为本省临床合理应用抗菌药物提供依据。
方法 收集 2020 年四川省细菌耐药监测网数据合格的 94 家成员单位中门诊和住院患者临床尿液标本中分离的非重复病原菌，按照监测方案，采用标准纸片扩散法、E-test 法或自动化仪器检测法，测定监测药物对细菌的敏感性，并依据美国临床和实验室标准协会(CLSI)2020 年标准，使用 WHONET 5.6 软件进行数据统计分析。
结果 按患者首次分离菌株进行统计分析，从尿液标本中共分离出 39797 株病原菌，其中革兰阴性菌 30307 株占 76.2%，革兰阳性菌 9490 株占 23.8%，检出率前 5 位的病原菌依次是大肠埃希菌（50.8%）、屎肠球菌（9.9%）、肺炎克雷伯菌（8.1%）、粪肠球菌（6.6%）、奇异变形杆菌（2.8%）。主要革兰阴性菌对碳青霉烯类抗菌药物耐药率较低，对头孢呋辛、头孢曲松、头孢噻肟耐药率较高。屎肠球菌和粪肠球菌对万古霉素、替考拉宁、利奈唑胺耐药率较低。未发现对万古霉素、利奈唑胺耐药的葡萄球菌。
结论 尿液标本病原菌多样化，以大肠埃希菌和肠球菌为主，临床应根据药敏结果合理用药，达到最佳治疗效果； 同时应充分利用本地细菌耐药监测结果进行感染控制管理，促进抗菌药物合尿路感染；病原菌分布；耐药分析理应用。

PU-3187

Xpert 诊断结核性脑膜炎的 Meta 分析

张杰
电子科技大学附属医院·四川省人民医院

目的 系统评价 Xpert 诊断结核性脑膜炎的价值。
方法 计算机检索 PubMed、EMbase、The Cochrane Library、Web of Science、CNKI、CBM、WanFang Data 和 VIP 数据库，搜集 Xpert 诊断结核性脑膜炎的诊断性试验，检索时间从建库截止至 2018 年 8 月 30 日。经过独立筛选文献、提取资料，并评价纳入研究的偏倚风险后，采用 Meta-Disc 软件进行 Meta 分析，计算其合并敏感度（Sen）、特异度（Spe）和绘制受试者工作特征曲线（SROC）并计算曲线下面积（AUC）。
结果 共纳入 10 个研究。Xpert 诊断结核性脑膜炎的合并敏感度、合并特异度和 AUC 分别为 0.57［95%CI（0.52，0.71）］、0.96［95%CI（0.95，0.98）］和 0.9135。根据是否离心进行亚组分析，其结果显示：未离心组的合并敏感度和特异度是 0.56(0.49, 0.61)，0.96(0.94, 0.97)，离心组的合并敏感度和特异度是 0.58(0.51, 0.65)和 0.98(0.96, 1.00)。
结论 Xpert 诊断结核性脑膜炎具有一定的诊断效能。将来需要更多的研究来验证本研究结果。

PU-3188

blaNDM-1 基因敲除对阴沟肠杆菌致病性和毒力的影响

代鹏飞、杜艳
昆明医科大学第一附属医院

目的 评估 blaNDM-1 基因对阴沟肠杆菌致病性和毒力的作用。
方法 比较携带 blaNDM-1 基因阴沟肠杆菌与 blaNDM-1 基因敲除阴沟肠杆菌（△NDM-1）感染小鼠后致病性和毒力的差异，包括小鼠生存率、脾脏载菌量、肝肺肠病理特征、肝肺脾产生的细胞因子等。
结果 blaNDM-1 基因敲除后，阴沟肠杆菌导致的腹膜炎小鼠在生存率、脾脏载菌量、肝肺肠病理特征、肝肺脾产生的细胞因子未见统计学差异。
结论 blaNDM-1 基因可能并不增加阴沟肠杆菌的毒力。

PU-3189

2020 年四川省细菌耐药监测网胆道标本病原菌分布及耐药

杨盛慧
电子科技大学附属医院•四川省人民医院

目的 对 2020 年四川省细菌耐药监测网成员单位胆道标本中的细菌分布与耐药情况进行统计分析，为临床合理使用抗菌药物提供依据。
方法 选取 2020 年四川省细菌耐药监测网数据合格的 94 所成员单位从临床患者胆道标本中分离的病原菌，经纸片扩散法或自动化仪器法检测细菌对抗菌药物的耐药性，并使用 WHONET 5.6 软件进行统计分析。
结果 从胆道标本共分离出病原菌 3502 株，其中革兰阳性菌 1049 株，占 30.0%，革兰阴性菌 2453 株占 70.0%，检出率排名前 6 位的细菌是大肠埃希菌、肺炎克雷伯菌、屎肠球菌、粪肠球菌、阴沟肠杆菌、铜绿假单胞菌。碳青霉烯类耐药大肠埃希菌、肺炎克雷伯菌、铜绿假单胞菌、鲍曼不动杆菌的检出率分别为 2.1%、4.0%、15.8%、30.0%。大肠埃希菌对头孢菌素类和喹诺酮类药物的耐药率较高，分别为 20%-70%，50%-70%，对碳青霉烯类药物的耐药率较低，小于 2%。肺炎克雷伯菌和阴沟肠杆菌对氨基糖苷类、喹诺酮类药物的耐药率低于大肠埃希菌。屎肠球菌和粪肠球菌对万古霉素、利奈唑胺、替考拉宁耐药率很低，屎肠球菌对多种抗菌药物的耐药率普遍高于粪肠球菌。
结论 四川地区 2020 年胆道分离的病原菌以肠杆菌目细菌和肠球菌为主，存在对多种抗菌药物耐药菌株，尤其是耐碳青霉烯类菌株，临床应根据药敏试验合理选择抗菌药物。

PU-3190

培养阳性的时间可以区分表皮葡萄球菌脑膜炎以外的神经外科手术后凝固酶阴性葡萄球菌与污染：病例对照观察性研究

郑光辉
首都医科大学附属北京天坛医院

目的 探讨表皮葡萄球菌（Nse-CoNS）脑膜炎以外的凝固酶阴性葡萄球菌（Nse-CoNS）脑膜炎的特点，应用脑脊液（CSF）时间阳性培养（TTPC）准确鉴别脑膜炎与污染。
方法 我们进行了病例对照研究来完成。首先，我们回顾性审查了 2019 年 1 月至 10 月在北京天坛医院产生 Nse-CoNS 的神经外科手术后患者的 CSF 记录；审查了 17 项临床特征和 12 项实验室

特征。其次，我们研究了 Nse-CoNS 的 TTPC、临界值和相应的参数，以区分 Nse-CoNS 脑膜炎与污染。
结果 本研究共纳入 146 名 Nse-CoNS CSF 培养阳性患者。 Nse-CoNS 脑膜炎组的平均 TTPC 明显短于污染组（分别为 20.2 ± 5.0 小时和 30.2 ± 12.6 小时，P < 0.05）。该模型的曲线下面积 (AUC) 为 0.802。 20.0 小时的 TTPC 具有 94.3% 的灵敏度和 90.2% 的负值，用于预测 Nse-CoNS 脑膜炎。
结论 Nse-CoNS 脑膜炎常引起临床诊断的混淆。在本研究中，我们评估了 Nse-CoNS 脑膜炎的临床预测因素，并确认 Nse-CoNS 脑膜炎组的中位 TTPC 显着短于污染组。 TTPC 短于 20.0 小时与 Nse-CoNS 脑膜炎有关，而 TTPC 长于 20.0 小时与 Nse-CoNS 污染有关。这些信息将有助于快速诊断 Nse-CoNS 脑膜炎。

PU-3191

耐碳青霉烯肠杆菌引起神经外科细菌性脑膜炎/脑炎的流行病学及危险因素

郑光辉
首都医科大学附属北京天坛医院

目的 这是在中国最大的神经外科临床中心之一进行的回顾性观察研究。我们的目的是确定碳青霉烯类耐药肠杆菌科 (CRE) 相关脑膜炎/脑炎的流行病学特征，并阐明 CRE 神经外科感染的危险因素。
患者和方法 我们在 2012 年 1 月至 2017 年 12 月期间对接受神经外科手术的患者进行了回顾性研究。对每位患者的病历进行审查，并通过 CRE 脑膜炎/脑炎的多变量逻辑分析提取和评估危险因素的 20 个临床变量。
结果 2012-2017 年神经外科脑膜炎/脑炎阳性率为 7.9%（2947/29605），肠杆菌科占所有细菌感染的 6.3%（185/2947）。本研究共获得 133 株肠杆菌科细菌，包括 26 株 CRE。其中，单因素分析显示 CRE 脑膜炎的危险因素为呼吸机、菌血症、重症监护病房（ICU）入院、医院获得性肺炎和感染致死率。多因素 logistic 分析显示，医院获得性肺炎和感染导致的死亡率是 CRE 脑膜炎的独立危险因素。
结论 CRE 是世界卫生组织（WHO）2016 年公布的最严重的耐药菌之一，CRE 引起的脑膜炎/脑炎是神经外科手术失败的重要标志，需要医生立即关注.

PU-3192

用于诊断中枢神经系统感染的微/纳米流体芯片平台的评估：多中心前瞻性研究

郑光辉
首都医科大学附属北京天坛医院

中枢神经系统感染 (CNSI) 是一种严重的感染类型，困扰着神经病学和神经外科科学领域。及时准确地诊断 CNSI 是临床和实验室评估的主要挑战；然而，开发新方法可能有助于改进诊断协议。本研究评估了第二代微/纳米流体芯片平台（MNCP-II），该平台克服了诊断中枢神经系统细菌和真菌感染的困难。 MNCP-II 操作简单，可在 50 分钟内识别 44 个属或种目标和 35 个遗传抗性决定簇。在多中心研究中评估用于 CNSI 的第二代微/纳米流体芯片平台的诊断准确性。使用第二代微/纳米流体芯片平台的检测限 (LOD) 首先使用六种不同的微生物标准确定。使用 MNCP-II 平台评估了总共 180 份含细菌/真菌的脑脊液 (CSF) 培养物和 26 份从微生物培养阴性的 CNSI 患者收集的 CSF

样本，以鉴定微生物和遗传抗性的决定因素。将结果与使用常规鉴定和抗菌药物敏感性测试方法获得的结果进行比较。发现用 MNCP-II 测试的各种微生物的 LOD 在 250-500 个 DNA 拷贝的范围内。对于 180 份 CSF 微生物阳性培养物，平台与常规鉴定方法的一致率为 90.00%；八个物种达到了 100% 的一致性。在碳青霉烯酶、ESBLs、氨基糖苷类、万古霉素相关基因、mecA 等 9 种抗生素耐药基因的检测中，与常规药敏试验方法的符合率超过 80.00%。对于碳青霉烯酶和 ESBLs 相关基因，平台检测的敏感性和阳性预测值均较高（>90.0%），完全可以满足临床诊断的要求。 MNCP-II 是一个非常有效的分子检测平台，可以辅助 CNSI 的诊断，可以显着提高诊断效率。

PU-3193

肠杆菌目细菌粘菌素耐药性机制研究进展

涂尚宇、张雅薇、王辉
北京大学人民医院

多重耐药的肠杆菌目细菌出现使得粘菌素重新被投入临床使用，并成为治疗此类难治性革兰阴性杆菌感染的最后防线。粘菌素主要通过与细菌外膜脂多糖上的脂质 A 成分结合，引起外膜结构紊乱，最终通过破坏细菌膜结构导致细菌死亡。肠杆菌目细菌对粘菌素耐药机制主要体现在对外膜脂质 A 的修饰，这种修饰大多数受双组分调节系统控制。最常见的是通过 L-Ara4N 和 PEtN 两种阳离子基团的修饰，来实现降低净负电荷，从而阻碍粘菌素的结合，这种改变源自于细菌的基因突变或质粒介导的水平转移。此外，外排系统与细菌粘菌素耐药性的相关性已被明确报道。对粘菌素天然耐药的细菌，其耐药机制源自于脂质 A 修饰相关基因 arnBCADTEF 操纵子的结构性表达。值得注意的是，已有许多研究者发现一些药物具有协同增强粘菌素抑菌作用，甚至逆转细菌对粘菌素耐药性的能力，包括 CCCP、SLAP-S25、氯硝柳胺等，但其机制尚不明确。本文主要以肠杆菌目细菌为例，概述关于粘菌素作用机制、耐药性情况及其他药物联合使用方面的研究进展。然而，目前存在许多未知的耐药机制和耐药性逆转机制，若能进一步研究透彻，将对我们理解如何克服粘菌素耐药性大有裨益。

PU-3194

耐亚胺培南的肺炎克雷伯菌（IMPKpn）的分布及流行病学研究

杨柳扬
中国人民解放军总医院第一医学中心

收集了本院 2009-2020 年分离到 29 株耐亚胺培南的肺炎克雷伯菌（IMPKpn），经全基因组测序分析，ST 型比较散发，存在 16 种不同的 ST 型，其中 4 型为新发现的 ST 型。同源分析结果显示，IMPKpn 在某些科室可能已经形成局部爆发，例如 ST5423 和 ST5422。IMP 酶型主要是 IMP-4（14 株）和 IMP-79（10 株），部分为 IMP-8（3 株）和 IMP-26（2 株），同时鉴定出一种新型的 IMP 酶（IMP-90）。

PU-3195

由产 ESBL 肠杆菌科引起的术后脑膜炎的表型、分子特征和危险因素分析：一项持续 6 年的比较队列研究

郑光辉
首都医科大学附属北京天坛医院

目的 为了确定在中国由产 ESBL 肠杆菌科引起的术后脑膜炎的表型、分子特征和危险因素分析。
方法 我们对 2014 年 1 月至 2019 年 12 月中国 4 个神经外科中心中发生术后脑膜炎感染患者进行了多中心对比队列研究，对分离菌株的分子生物学特性进行了回顾和检测，，并用二元 Logit 模型对脑膜炎 EPE 的独立危险因素进行了分析。
结果 在这项研究中，总共有 220 种肠道细菌，其中包括 78 种 EPE。85.6% (67/78)的 esbl 相关基因被检测，其中 blaSHV (14.9%) 和 blaSHV + blaTEM + blaCTX-M-9 (20.9%)是肠道细菌最常见的单基因和联合基因。二元逻辑分析，开颅手术/n(2.583,95% CI. 1.274-5.235，p = 0.008)和恶性肿瘤(OR)。2.406,95% CI. 1.299-4.456，p = 0.005)为/n 是脑膜炎相关的独立危险因素。
结论 就我们所知，这是 中国开展的最大的关于 EPE 脑膜炎的危险因素的研究，开颅手术和恶性肿瘤是发生脑膜炎的独立危险因素。确定的危险因素可在将来进一步用于临床实践和研究，以避免和降低死亡率

PU-3196

生物膜和细菌耐药的研究进展

刘青宇
湖南中医药大学第一附属医院

细菌一直以来是感染性疾病的重要来源。细菌分泌的胞外多糖以及胞外 DNA 等，形成致密的生物膜，是抗生素难以发挥其效应。生物膜的形成加重了细菌耐药，给临床治疗细菌感染性疾病增加了难度。本文从生物膜的结构和形成、生物膜的耐药机理和生物膜抑制药物等方面进行论述，为研究细菌耐药以及生物膜的控制提供理论基础。

PU-3197

2016 年-2020 年我院临床分离细菌种类分布及耐药性监测

彭利群、郑康
衡阳市中心医院

目的 了解 2016 年-2020 年我院临床分离细菌的种类分布和耐药性，为临床合理使用抗菌药物提供参考依据。
方法 分析我院 2016 年-2020 年各临床科室门诊和住院患者培养标本分离的细菌菌株，包括菌种名称、来源标本和药敏情况，应用 WHONET 5.6 和 SPSS20.0 软件对数据进行统计分析。
结果 2016 年-2020 年共分离细菌 15747 株，其中革兰氏阴性（G-）菌 11489 例，占 72.96%，革兰氏阳性菌 4258 例，占 27.04%。检出主要细菌排名前五的细菌分别为大肠埃希菌（3259 株，占 20.70%）、肺炎克雷伯菌（2159 株，13.71%）、铜绿假单胞菌（1511 株，占 9.60%）、金黄色葡萄球菌（1140 株，占 7.24%）和鲍曼不动杆菌（1039 株，占 6.60%）；肠杆菌目对美罗培南总的耐药率为 2.9%，仍高度敏感，大肠埃希菌和肺炎克雷伯菌分别为 0.8%和 4.7%，都低于 5%。铜绿假单胞菌对美罗培南的耐药率为 21.2%。鲍曼不动杆菌对美罗培南的耐药率较高，为 53.8%。

金黄色葡萄球菌对苯唑西林的耐药率为 33.5%，未检出对万古霉素和利奈唑胺耐药的菌株；检出耐万古霉素屎肠球菌和粪肠球菌（VRE）为 4 例；
结论 细菌对抗菌药物的耐药率呈增长趋势，特别是碳青霉烯类耐药肠杆菌科细菌，及时全面地了解耐药现状与趋势、细菌耐药谱的组成与变化对临床合理使用抗菌药物有指导性作用，并指导医院加强院内感染管理。

PU-3198

肺结核患者结核分枝杆菌的四种临床检验方法比较

梁桂亮、李晓非
昆明市第三人民医院

目的 通过对结核分枝杆菌四种临床检验方法的比较，以评价不同方法在肺结核病诊断中的临床应用价值。
方法 回顾性分析 2017 年某院接收的 418 例肺结核患者痰标本，以临床诊断肺结核为标准，对比 Xpert MTB/RIF 与 BACTEC MGIT 960(结核培养)、PCR-反向点杂交法、聚合酶链反应(PCR)四种检测方法的阳性检出率。
结果 418 例送检的痰标本中，结核分枝杆菌阳性检出率为 41.38%(173/418)；检出的 173 例阳性标本中，药物敏感性实验利福平(RF)敏感率为 61.27%(106/173)；耐药率为 38.73%(67/173)。72 例标本 Xpert MTB/RIF 与结核培养结果比较，检出率无统计学差异(Kappa=0.584, P=0.000<0.005; McNemar 检验=0.057>0.05)；50 例标本 Xpert MTB/RIF 与 PCR-反向点杂交法比较，检出率无统计学差异(Kappa=0.795, P=0.000<0.005; McNemar 检验=0.063>0.05)；186 例患者同时使用 Xpert MTB/RIF 与 PCR 比较，检出率有统计学差异(Kappa=0.535, P=0.000<0.005; McNemar 检验=0.013<0.05)。
结论 使用 Xpert MTB/RIF 能准确和快速检测痰标本中结核分枝杆菌，是适合基层医院开展结核病诊断的检测手段。

PU-3199

嗜麦芽窄食单胞菌菌血症感染的危险因素及临床预后分析

艾子译、孟涵、王启、王辉
北京大学人民医院

目的 探讨嗜麦芽窄食单胞菌菌血症感染和感染后死亡的风险因素。为临床嗜麦芽窄食单胞菌菌血症防治提供数据基础。
方法 对北京一家三级甲等临床医院 10 年中出现的嗜麦芽窄食单胞菌菌血症进行一项回顾性病例对照研究，以 53 例嗜麦芽窄食单胞菌菌血症感染病人作为病例组，53 例其他革兰阴性杆菌菌血症感染病人作为对照组。通过单因素分析和多因素 logistic 回归分析嗜麦芽窄食单胞菌菌血症感染的风险因素及临床结果。
结果 单因素分析显示：患有中性粒细胞缺乏症（OR=2.309,95%CI：0.920-5.794，P=0.071）、感染前 30 天内接受腰部穿刺（OR=2.136,95%CI：1.889-9.950，P=0.067）、感染前 30 天内接受中心静脉插管（OR=4.336,95%CI：0.943-4.836，P<0.001）、激素类药物使用史（OR=2.019,95%CI：0.923-4.418，P=0.077）两组间具有显著性差异，感染前 30 天内接受喹诺酮类药物（OR=2.136,95%CI：0.943-4.836，P=0.067）、碳青霉烯类药物（OR=3.559,95%CI：1.483-8.539，P=0.004）、头孢哌酮舒巴坦（OR=2.606,95%CI：1.076-6.310，P=0.031）、氨曲南（OR=1.128,95%CI：1.024-1.242，P=0.027）、替加环素（OR=4.365,95%CI：1.142-16.685，P=0.022）在两组间的差异具有统计学意义。多因素分析显示：感染前 30 天内中心静脉插管

（OR=13.679,95%CI：4.144-45.147，P<0.001），以及激素使用史（OR=4.416,95%CI:1.575-12.385,P=0.005）是嗜麦芽窄食单胞菌菌血症感染的独立危险因素。感染中毒性休克（OR=14.305,95%CI:3.014-67.899,P=0.001)是嗜麦芽窄食单胞菌菌血症感染后死亡的独立危险因素。

结论 减少感染前 30 天内中心静脉插管等侵入性操作以及激素的使用可能会降低嗜麦芽窄食单胞菌菌血症感染的概率。预测和预防感染中毒性休克的发生将有助于降低患者的死亡风险。

PU-3200

高通量宏基因组测序技术检测病原微生物的研究进展

曹啟新、赵亚楠
内蒙古自治区内蒙古人民医院

目的 分析研究高通量宏基因组测序技术在检测病原微生物上的最新进展和临床应用，对该项技术在检测病原微生物方面的进展综合论述。

方法 我们利用 PubMed/Medline、Scopus、Web of Science 和知网等检索了已有的基于高通量宏基因组测序技术用于微生物种类鉴定和抗菌药物敏感性鉴定的文献。

结果 随着医疗技术的快速发展，各种侵入性诊疗技术的大力应用，广谱抗生素的广泛使用，免疫抑制剂等的应用以及环境的变化，感染性疾病发生率逐年上升，已经成为临床治疗的重大难题。然而传统的检测病原微生物的方法存在阳性检测率低、周期长等弊端，已经无法满足临床需求，急需要一项快速准确率高的技术服务于临床。目前，高通量宏基因组测序技术已经开始应用于临床，研究显示，其能够快速、准确、高效地获得整个病原体群体的基因组信息。宏基因组测序不依赖于病原体的分离培养，可以得到环境中丰度较低甚至是痕量病原体的信息。同时宏基因组测序可以对任何类型的病原体进行鉴定，甚至可以用于识别新的病原体，这可能会替代许多目标病原体检测。随着高通量测序技术的发展，采用宏基因组测序技术可以突破传统检测方法的局限性。针对难以培养的病原体和不明病因无法预判的感染病患，利用高通量宏基因组测序技术和专业的病原体数据库，可直接对样本中的病原体 DNA 进行检测，通过软件分析得出覆盖齐全、准确可靠的样本病原体遗传信息。但是，高通量宏基因组测序技术也存在着一定的不足：如参考数据库不完整、测序结果复杂多样，缺乏统一的指南、测序成本高等等，这些问题还需我们进一步去克服。

结论 希望在不久的将来，高通量宏基因组测序技术发展的越来越完善，能够满足临床各方面的需求，更好的为临床服务。

某院 2020 年肺炎链球菌的标本来源、科室分布及耐药性分析

曹身云
泰安市中心医院

目的 了解我院 2020 年临床分离肺炎链球菌的标本来源、科室分布及耐药特点，为临床合理使用抗菌药物提供理论依据与数据支持。

方法 对 2020 年 1 月 1 日～2020 年 12 月 31 日间临床标本中分离的肺炎链球菌，采用 WalkAway 96 PLUS 型全自动细菌分析仪进行鉴定和药敏试验，部分药物试验采用纸片扩散法进行补充，应用 WHONET 5.6 软件对菌株分布及耐药率进行统计和分析。

结果 2020 年我院临床标本共分离出肺炎链球菌 169 株。主要科室分布为儿内科（46.83%）、神经外科（12.87%）、老年科（7.17%）、重症医学科（5. 52%）和耳鼻喉科（5.34%）。主要标本来源为痰液（83.77%）、分泌物（8.99%）和咽拭子（4.43%）。肺炎链球菌对红霉素耐药率

100%，克林霉素和四环素耐药率 90%以上，复方新诺明耐药率 72.3%,其余抗菌药物耐药率较低，均低于 3%。未发现对青霉素、美罗培南、万古霉素、利奈唑胺和三代头孢菌素耐药的菌株。
结论 我院肺炎链球菌主要科室分布为儿内科、神经外科、老年科、重症医学科和耳鼻喉科。主要标本来源为痰液、咽拭子和分泌物。肺炎链球菌对红霉素、克林霉素和四环素耐药较高，其余抗菌药物耐药率较低，未发现对青霉素、美罗培南、万古霉素、利奈唑胺和三代头孢菌素耐药的菌株。临床医生应及时关注本医院本病区细菌耐药监测报告，选取敏感性高的药物进行经验治疗，并及时送检相关培养，尤其是血培养等无菌体液的培养，根据药敏结果及时调整合理的抗菌药物。同时医护人员要注意手卫生和院感的防控。

某院 2020 年流感嗜血杆菌的标本来源、科室分布及耐药性分析

曹身云
泰安市中心医院

目的 了解我院 2020 年临床分离流感嗜血杆菌的标本来源、科室分布及耐药特点，为临床合理使用抗菌药物提供理论依据与数据支持。
方法 对 2020 年 1 月 1 日～2020 年 12 月 31 日间临床标本中分离的流感嗜血杆菌，采用 WalkAway 96 PLUS 型全自动细菌分析仪进行鉴定和药敏试验，部分药物试验采用纸片扩散法进行补充，应用 WHONET 5.6 软件对菌株分布及耐药率进行统计和分析。
结果 2020 年我院临床标本共分离出流感嗜血杆菌 276 株。主要科室分布为儿内科（26.83%）、神经外科（10.87%）、神经内科（7.97%）、呼吸内科（6. 52%）和肿瘤外科（5.84%）、。主要标本来源为痰液（89.77%）、咽拭子（5.43%）和分泌物（3.99%）。流感嗜血杆菌对氨苄西林和复方新诺明耐药率较高，分别为 69%和 66%。氨苄西林舒巴坦的耐药率 36%，头孢呋辛的耐药率 35%，阿莫西林克拉维酸耐药率 19%，未发现对三代头孢菌素、喹诺酮类药物、碳青霉烯类药物和阿奇霉素耐药的菌株。
结论 我院流感嗜血杆菌主要科室分布为儿内科、神经外科、神经内科、呼吸内科和肿瘤外科。主要标本来源为痰液、咽拭子和分泌物。流感嗜血杆菌对氨苄西林和复方新诺明耐药率较高，未发现对三代头孢菌素、喹诺酮类药物、碳青霉烯类药物和阿奇霉素耐药的菌株。临床医生应及时关注本医院本病区细菌耐药监测报告，选取敏感性高的药物进行经验治疗，并及时送检相关培养，尤其是血培养等无菌体液的培养，根据药敏结果及时调整合理的抗菌药物。同时医护人员要注意手卫生和院感的防控。

某院 2020 年金黄色葡萄球菌的标本来源、科室分布及耐药性分析

曹身云
泰安市中心医院

目的 了解我院 2020 年临床分离金黄色葡萄球菌的标本来源、科室分布及耐药特点，为临床合理使用抗菌药物提供理论依据与数据支持。
方法 对 2020 年 1 月 1 日～2020 年 12 月 31 日间临床标本中分离的金黄色葡萄球菌，采用 WalkAway 96 PLUS 型全自动细菌分析仪进行鉴定和药敏试验，部分药物试验采用纸片扩散法进行补充，应用 WHONET 5.6 软件对菌株分布及耐药率进行统计和分析。
结果 2020 年我院临床标本共分离出金黄色葡萄球菌 535 株。主要科室分布为儿内科（11.83%）、耳鼻喉科（9.11%）、重症医学科（5.74%）、神经外科（4.10%）、和血液病诊疗中心

（3.39%）。主要标本来源为痰液（32.77%）、分泌物（23.1%）、穿刺液（4.39%）和血液（2.97%）。金黄色葡萄球菌对青霉素和红霉素耐药率高，分别为 93%和 71%，其余抗菌药物耐药率低，苯唑西林的耐药率 23%，环丙沙星和左氧氟沙星的耐药率 13%，未发现对万古霉素、利奈唑胺、替考拉宁、达托霉素耐药的菌株。

结论 我院金黄色葡萄球菌主要科室分布为儿内科、耳鼻喉科、重症医学科、神经外科和血液病诊疗中心。主要标本来源为痰液、分泌物、穿刺液和血液。金黄色葡萄球菌对青霉素和红霉素耐药率高，其余抗菌药物耐药率低，未发现对万古霉素、利奈唑胺、替考拉宁、达托霉素耐药的菌株。临床医生应及时关注本医院本病区细菌耐药监测报告，选取敏感性高的药物进行经验治疗，并及时送检相关培养，尤其是血培养等无菌体液的培养，根据药敏结果及时调整合理的抗菌药物。同时医护人员要注意手卫生和院感的防控。

Impact of subinhibitory concentrations of tedizolid and linezolid on gene transcription in Staphylococcus aureus strain Newman and N315

Han Yang [1]、Wen Lin[1]、Chunyan He[1]、Wen Shu[1]、Qingzhong Liu[2]
1. Shanghai General Hospital
2. 上海市中医医院

Aim To access the impact of subinhibitory concentrations (sub-MIC) of tedizolid and linezolid on gene transcription in Staphylococcus aureus Newman and N315 strain.
Methods When the bacteria grew into exponential phase (3 h), 1/8, 1/4 and 1/2 MIC of tedizolid and linezolid were added into the cultures. After 4 h, the expression of 23 virulence factors and regulatory genes was determined by qRT-PCR.
Results Our findings show that tedizolid could significantly increase the most of gene's expression including clfA, lukE, nuc and agrA. In the Newman strain, 1/8 MIC of tedizolid up-regulated the mRNA levels of sasG, fnbA and sdrD by 3.5, 1.5 and 2.2 folds compared with the control group. The mRNA levels of hla, lukE and psmα in Newman were increased by 2.5 to 5 times, 3.2 to 7.9 times and 5.6 to 16.6 times with different sub-MIC of tedizolid. As for N315 isolate, tedizolid at different subinhibitory concentrations increased the expression levels of icaA, fnbA and sdrD 6.8 to 21.4 folds, 3 to 8.8 folds and 1.7 to 2.2 folds. 1/8 and 1/2 MIC of tedizolid up-regulated clfA mRNA by 2.1 and 1.8 folds. Linezolid could promote some gene gene's expression including clfA, psmα, sea and seaS but inhibit gene's expression including icaA, spa, coa and agrA in Newman strain. The mRNA of icaA was down-regulated by 2.9 to 4.2 folds by sub-MICs of linezolid. 1/4 and 1/2 MIC of linezolid inhibited spa mRNA transcription 1.7 to 2.3 folds. The antibiotic required to alter gene expression was strain-dependent.
Conclusion Sub-MIC of tedizolid and linezolid promote gene transcription in S. aureus and the finding is helpful to the rational use of tedizolid and linezolid in staphylococcal infection.

某院 2021 年第一季度痰液培养细菌的菌株分布及耐药特点

曹身云
泰安市中心医院

目的 了解我院 2021 年第一季度痰液培养细菌的菌株分布及耐药特点，为临床合理使用抗菌药物提供理论依据与数据支持。
方法 对 2021 年 1 月 1 日～2021 年 3 月 30 日间临床痰液标本中分离的细菌，采用 WalkAway 96 PLUS 型全自动细菌分析仪进行鉴定和药敏试验，部分药物试验采用纸片扩散法进行补充和复核，应用 WHONET 5.6 软件对菌株分布及耐药率进行统计和分析。
结果 2021 年第一季度我院临床共送检痰液培养 2607 人份，痰液标本共分离出非重复细菌 994 株，分离前五位的细菌主要是肺炎克雷伯菌（17.30%）、鲍曼不动杆菌（15.49%）、铜绿假单胞菌（10.46%）、金黄色葡萄球菌（9.39%）和纹带棒杆菌（8.35%）。肺炎克雷伯菌对氟喹诺酮类耐药率在 24%～30%；一二三代头孢菌素的耐药率 19%～34%，其中头孢曲松和头孢噻肟耐药率 32%；头孢他定耐药率 19%；酶的抑制剂类药物敏感性较好，耐药率低于 31%，其中氨苄西林舒巴坦的敏感性略差，耐药率 31%，阿莫西林克拉维酸敏感性较好，耐药率 12%；对碳青霉烯类药物耐药率 8%。未发现对替加环素和多粘菌素耐药的菌株。鲍曼不动杆菌耐药率较高，对头孢菌素类、酶的抑制剂类、碳青霉烯类和喹诺酮类药物的耐药率均在 90%以上，呈现多重耐药。只有米诺环素、替加环素和多粘菌素敏感性较好。
结论 痰液培养细菌主要是肺炎克雷伯菌、鲍曼不动杆菌、铜绿假单胞菌、金黄色葡萄球菌和纹带棒杆菌。肺炎克雷伯菌对酶的抑制剂类药物敏感性较好。未发现对替加环素和多粘菌素耐药的菌株。鲍曼不动杆菌耐药率较高，呈现多重耐药。临床医生应及时关注本医院本病区细菌耐药监测报告，选取敏感性高的药物进行经验治疗，并及时送检相关培养，尤其是血培养等无菌体液的培养，根据药敏结果及时调整合理的抗菌药物。同时医护人员要注意手卫生和院感的防控。

某院 2021 年第一季度血培养细菌的菌株分布及耐药特点

曹身云
泰安市中心医院

目的 了解我院 2021 年第一季度血培养细菌的菌株分布及耐药特点，为临床合理使用抗菌药物提供理论依据与数据支持。
方法 对 2021 年 1 月 1 日～2021 年 3 月 30 日间临床血液标本中分离的细菌，采用 WalkAway 96 PLUS 型全自动细菌分析仪进行鉴定和药敏试验，部分药物试验采用纸片扩散法进行补充和复核，应用 WHONET 5.6 软件对菌株分布及耐药率进行统计和分析。
结果 2021 年第一季度我院临床共送检血液培养 1625 人份，血液标本共分离出非重复细菌 141 株，主要是大肠埃希菌（40.43%）、肺炎克雷伯菌（17.02%）、金黄色葡萄球菌（4.26%）和人葡萄葡萄球菌（4.26%）。大肠埃希菌对氨苄西林耐药率高（84 %）；对氟喹诺酮类耐药率在 56%～60%；复方新诺明的耐药率 60%；一二代头孢菌素的耐药率 47%～49%；头孢曲松和头孢噻肟耐药率 47%；头孢他定耐药率 26%；酶的抑制剂类药物敏感性较好，耐药率低于 27%，其中氨苄西林舒巴坦的敏感性略差，耐药率 26%，哌拉西林他唑巴坦敏感性较好，耐药率 4%；对碳青霉烯类药物耐药率 2%。未发现对替加环素和多粘菌素耐药的菌株。
结论 我院 2021 年第一季度血培养细菌主要是大肠埃希菌、肺炎克雷伯菌、金黄色葡萄球菌和人葡萄葡萄球菌。大肠埃希菌对氨苄西林耐药率高，酶的抑制剂类药物敏感性较好，未发现对替加环素和多粘菌素耐药的菌株。临床医生应及时关注本医院本病区细菌耐药监测报告，选取敏感性高的药

物进行经验治疗，并及时送检相关培养，尤其是血培养等无菌体液的培养，根据药敏结果及时调整合理的抗菌药物。同时医护人员要注意手卫生和院感的防控。

我院 2021 年第一季度尿培养细菌的菌株分布及耐药特点

曹身云
泰安市中心医院

目的 了解我院 2021 年第一季度尿培养细菌的菌株分布及耐药特点，为临床合理使用抗菌药物提供理论依据与数据支持。
方法 对 2021 年 1 月 1 日～2021 年 3 月 30 日间临床尿液标本中分离细菌，采用 WalkAway 96 PLUS 型全自动细菌分析仪进行鉴定和药敏试验，部分药物试验采用纸片扩散法进行补充，应用 WHONET 5.6 软件对菌株分布及耐药率进行统计和分析。
结果 2021 年第一季度我院临床共送检尿液培养 1446 人份，尿液标本共分离出非重复细菌 357 株，主要是大肠埃希菌（56.02%）、肺炎克雷伯菌（12.61%）、屎肠球菌（8.40%）、粪肠球菌（6.16%）和奇异变形菌（4.48%）。大肠埃希菌对氨苄西林耐药率高（89 %）；对氟喹诺酮类耐药率在 60%～66%；一二三代头孢菌素的耐药率 42%～43%；酶的抑制剂类药物敏感性较好，耐药率低于 29%；对碳青霉烯类药物均敏感。肺炎克雷伯菌对一二三代头孢菌素的耐药率 29%～47%；对氟喹诺酮类耐药率在 33%～40%；对碳青霉烯类药物的耐药率 9%。屎肠球菌对环丙沙星、青霉素、左氧氟沙星和氨苄西林耐药率高，分别为 93%、90%、90%和 87%，其余抗菌药物耐药率低，未发现对万古霉素、替考拉宁和杜托霉素耐药的菌株。
结论 我院临床尿液标本的细菌分布以大肠埃希菌、肺炎克雷伯菌和屎肠球菌为主。肺炎克雷伯菌对抗菌药物的耐药率略低于大肠埃希菌，两者对酶的抑制剂类药物敏感性均较好。屎肠球菌对环丙沙星、青霉素、左氧氟沙星和氨苄西林耐药率高，未发现对万古霉素、替考拉宁和杜托霉素耐药的菌株。临床医生应根据药敏结果选择并及时调整合理的抗菌药物。

2021 年第一季度临床分离的耐碳青霉烯类肠杆菌科细菌的分布及耐药特点

曹身云
泰安市中心医院

目的 了解我院 2021 年第一季度临床分离的耐碳青霉烯类肠杆菌科细菌（CRE）的菌株分布、科室来源及耐药特点，为临床合理使用抗菌药物提供理论依据与数据支持。
方法 对 2021 年 1 月 1 日～2021 年 4 月 30 日间临床标本中分离的 CRE，采用 WalkAway 96 PLUS 型全自动细菌分析仪进行鉴定和药敏试验，部分药物试验采用纸片扩散法进行补充，应用 WHONET 5.6 软件对菌株分布及耐药率进行统计和分析。
结果 2021 年第一季度我院临床标本共分离出 29 株 CRE，主要是肺炎克雷伯菌（62.07%）、大肠埃希菌（17.24%）和粘质沙雷菌（13.79%）。主要科室分布为重症医学科（31.03%）、医养结合区（13.79%）、急诊内科病房（10.34%）、呼吸重症科（10.34%）和神经外科（10.34%）。CRE 对大多数临床常用抗菌药物耐药率高，呈现多重耐药甚至泛耐药。对头孢菌素类耐药率 100%，对酶的抑制剂类耐药率大于 90%，对喹诺酮类耐药率大于 70%，替加环素和多粘菌素耐药率最低。
结论 我院 CRE 检出率较高，以肺炎克雷伯菌、大肠埃希菌和粘质沙雷菌为主。主要来源于重症医学科、医养结合区、急诊内科病房、呼吸重症科和神经外科。CRE 耐药情况严峻，对大多数临床常用抗菌药物耐药率高，呈现多重耐药甚至泛耐药。临床医生应关注本医院本病区耐药监测报告，

选取敏感性高的药物进行经验治疗，并及时送检相关培养，根据药敏结果选择并及时调整合理的抗菌药物。医护人员要注意手卫生和院感的防控，防止 CRE 暴发流行。

2021 年第一季度我院临床标本病原菌检出情况及前三位细菌的耐药性

曹身云
泰安市中心医院

目的 了解 2021 年第一季度我院临床标本的病原菌检出情况及前三位细菌的耐药性，为临床合理使用抗菌药物提供理论依据。
方法 回顾性分析我院 2021 年 1 月 1 日～2021 年 4 月 30 日期间各临床标本中检出的细菌。利用 Microscan WalkAway 96plus 全自动微生物鉴定药敏系统进行菌株鉴定和药敏试验，部分药敏试验采用纸片扩散法进行补充。菌株分布及耐药率使用 WHONET5.6 软件进行统计分析。
结果 2021 年第一季度我院临床标本共分离出非重复细菌 2014 株，分离前五位的细菌分别为：大肠埃希菌（17.38%）、肺炎克雷伯菌（13.06%）、金黄色葡萄球菌（11.27%）、鲍曼不动杆菌（8.69%）和铜绿假单胞菌（6.01%）。主要科室分布为重症医学科（13.56%）、儿内科（8.292%）、血液科（7.55%）、呼吸重症科（6.36%）和耳鼻喉科（5.16%）。大肠埃希菌对氨苄西林耐药率高（89 %），对氟喹诺酮类耐药率在 59%～64%，一二三代头孢菌素的耐药率 45%～47%。酶的抑制剂类药物敏感性较好，耐药率低于 30%。肺炎克雷伯菌对抗菌药物的耐药率较低，均低于 32%。金黄色葡萄球菌对青霉素和红霉素耐药率高，分别为 93%和 71%，其余抗菌药物耐药率低，未发现对万古霉素和利奈唑胺耐药的菌株。
结论 我院临床标本的细菌分布以大肠埃希菌、肺炎克雷伯菌和金黄色葡萄球菌为主。主要科室分布为重症医学科、儿内科、血液科、呼吸重症科和耳鼻喉科。肺炎克雷伯菌对抗菌药物的耐药率低于大肠埃希菌，两者对酶的抑制剂类药物敏感性均较好。金黄色葡萄球菌对青霉素和红霉素耐药率高，未发现对万古霉素和利奈唑胺耐药的菌株。临床医生应根据药敏结果选择并及时调整合理的抗菌药物。

PU-3212

高毒力肺炎克雷伯菌的研究进展

曹身云
泰安市中心医院

目的 为了解高毒力肺炎克雷伯菌的流行现状、毒力影响因素及耐药性，为医院感染控制和临床治疗提供理论依据。
方法 肺炎克雷伯菌分为普通肺炎克雷伯菌和高毒力肺炎克雷伯菌。高毒力肺炎克雷伯菌致病性强，导致的感染多以严重的原发性肝脓肿为首发症状，并可合并眼内炎、败血症等其他部位的迁徙性感染。感染患者死亡率高。近年来发现了对多种抗生素耐药的高毒力肺炎克雷伯菌，高毒力与高耐药的重叠给临床带来了极大挑战。本文通过查阅国内外大量相关文献，对高毒力肺炎克雷伯菌的流行现状、毒力影响因素及耐药性方面的研究现状进行综述，以期为高毒力肺炎克雷伯菌的预防和治疗提供理论依据。
结果 分析发现高毒力肺炎克雷伯菌感染流行性传播的国家仍主要集中在亚洲。荚膜、菌毛、摄铁系统、脂多糖等毒力相关因子与其致病性密切相关。已发现对 ESBL 耐药，甚至对碳青霉烯耐药的高毒力菌株。高毒力肺炎克雷伯菌已成为威胁人类健康一大杀手。

结论 目前临床对于高毒力肺炎克雷伯菌检测方法有限，早期、灵敏的检测技术有待研发。许多具体的致病机制和耐药机制尚不清楚，需要我们进一步去研究。对于耐药的高毒力肺炎克雷伯菌，我们更应该提高警惕，做好感染预防和控制，防止多重耐药菌的产生和耐药菌的院内播散。

肠杆菌科碳青霉烯类传播方式的研究进展

邢小平
安徽省铜陵市人民医院

目的中国是抗菌药物的生产和使用大国，细菌耐药性已经成为全世界关注的问题，尤其是对碳青霉烯类抗生素的耐药。肠杆菌科是一大类革兰氏阴性细菌，包含许多重要的病原体，碳青霉烯类抗生素是杀死肠杆菌科的最后手段，已在我国广泛使用，既往的研究主要集中在耐药机制方面研究，本篇综述主要从流行病学、传播途径及防控措施来阐述。

PU-3214

耐碳青霉烯肺炎克雷伯菌的碳青霉烯酶基因携带情况及分子流行病学特点

曹身云
泰安市中心医院

目的 了解耐碳青霉烯肺炎克雷伯菌（CRKP）的碳青霉烯酶基因携带情况及分子流行病学特点,为医院感染控制和临床治疗提供理论依据。
方法 收集我院 2019 年 1 月～12 月临床分离的 CRKP 31 株, 采用 Microscan WalkAway 96plus 全自动细菌鉴定药敏仪进行菌株鉴定和药敏试验，同时用纸片扩散法和 E-test 法进行药敏试验的补充和复核；采用聚合酶链式反应（PCR）扩增相关碳青霉烯类耐药基因 KPC、NDM、 IMP-1、OXA-48 并测序；采用多位点序列分型（MLST）调查菌株的克隆相关性并进行流行病学比较。
结果 31 株 CRKP 主要标本来源为痰液（80.65%）和尿液（9.68%）,主要科室来源为各监护室病房。CRKP 耐药率高，酶的抑制剂和头孢菌素的耐药率为 100%。氟喹诺酮的耐药率在 90%以上。氨基糖苷耐药率略低，在 77%～81%。复方新诺明和多粘菌素的耐药率较低，分别为 12.90%和 3.23%。替加环素的耐药率为 0。经 PCR 测序确认,碳青霉烯耐药基因总检出率为 100%，其中 KPC-2 基因检出率为 93.55%（29/31），NDM-5 检出率为 6.45%（2/31）, OXA-48 和 IMP-1 检出率为 0。未发现同时携带两种碳青霉烯耐药基因的菌株。表明该院 CRKP 对碳青霉烯类药物耐药的机制是产碳青霉烯酶，主要携带是 KPC-2 基因，其次为 NDM-5 基因。菌株有 3 个 MLST 序列类型，分别属于三种克隆复合群。ST11 型是主要型别，通过 MLST E-burst 聚类分析，属于 CC258 克隆复合群，检出率为 93.55%（29/31）。与我国流行的 MLST 型别一致。
结论 碳青霉烯酶基因 KPC-2 基因和 NDM-5 基因是引起该院肺炎克雷伯菌对碳青霉烯类抗生素耐药的主要原因,ST11 是主要的克隆类型,医院需尽快强化医院感染预防控制措施。

PU-3215

2016—2020 年某三甲医院尿路感染细菌分布及耐药性分析

何盼、许心怡、李达明、姚冬梅、蒋传好
中南大学湘雅二医院

目的 了解本院 2016—2020 年引起尿路感染的常见病原菌分布以及临床常用的抗菌药物，为本院尿路感染患者临床选择用药的药物以及防治提供参考。
材料与方法 收集 2016—2020 年 5 年本院尿路感染患者的中段尿标本或尿液标本分离培养出来的革兰阴性菌、革兰阳性菌以及真菌（剔除同一患者同一部位同一菌种）。以微量肉汤稀释法为主，纸片扩散法和琼脂稀释法为辅进行抗菌药物敏感性实验。按照当年最新的 CLSI 原则进行药敏结果的判读：敏感（S）、中介（I）、耐药（R）。
结果 尿路感染病原菌以革兰阴性菌为主且呈上升趋势，分离出的 10616 株菌里检出率居前 5 位者分别是大肠埃希菌（34.2%~38.6%）、屎肠球菌（8.3%~12%）、白色念珠菌（6.9%~12.2%）、肺炎克雷伯菌（6.4%~10%）和粪肠球菌（4.8%~6.2%）。分离出的大肠埃希菌对头孢吡肟的耐药率均〉40%，对氨苄西林/舒巴坦耐药率〉44%,对左旋氧氟沙星、环丙沙星、复方新诺明耐药率均〉50%，肺炎克雷伯菌对氨苄西林/舒巴坦耐药率较高，耐药率均在 55%以上。屎肠球菌对左氧氟沙星、呋喃妥因、利福平高度耐药。白色念珠菌、热带念珠菌、光滑念珠菌对卡泊芬净、氟康唑、泊沙康唑、伏立康唑等抗生素低耐药。金黄色葡萄球菌、表皮葡萄球菌和溶血葡萄球菌中未发现对万古霉素、替考拉宁、利奈唑胺的耐药株，对青霉素高度耐药。
结论 本院尿路感染患者病原菌以革兰氏阴性菌为主，且多重耐药菌检出率较高。临床应继续规范抗菌药物的合理使用，加强院感防控。

PU-3216

2011-2020 新生儿分离病原菌分布及耐药性分析

黄佳怡、许心怡、李达明、曹伟、蒋传好
中南大学湘雅二医院

目的 了解本院 2011-2020 年新生儿患者感染病原菌的分布及其对常用抗菌药物的耐药性变化，为新生儿患者的抗感染治疗提供参考。
方法 采用回顾性方法，收集我院 2011 年 1 月 1 日～2020 年 12 月 31 日新生儿专科送检各类标本分离的病原菌和抗菌药物敏感性试验结果，应用 WHONET5.6 软件分析新生儿患者病原菌数据。
结果 从新生儿专科细菌标本中共分离出细菌 2245 株。其中革兰阴性菌共 1650 株占 73.7%，革兰阳性菌 588 株占 21.3%，革兰阴性菌的占比整体呈上升趋势。2020 年标本主要来自痰标本(59.8%)、血液标本(27.8%)、胃液标本(8.4%)。2011-2020 年临床分离菌株中前五位的菌分别为肺炎克雷伯氏菌、大肠埃希菌、溶血葡萄球菌、表皮葡萄球菌、鲍曼不动杆菌。金黄色葡萄球菌对青霉素的耐药率逐年上升（60.0%~100.0%），对庆大霉素保持较高的敏感率（70.0~100.0%）。凝固酶阴性的葡萄球菌对阿米卡星的耐药率逐年下降（12.5%~0.0%）。出现利奈唑胺的葡萄球菌属菌株。屎肠球菌对万古霉素、替考拉宁的敏感率均高于粪肠球菌。肺炎克雷伯菌对左旋氧氟沙星的耐药率为 0.0%～到 43.0%。大肠埃希菌对部分头孢类药物都有一定的耐药性，对亚胺培南的耐药率在 4.3%～25.0%。铜绿假单胞菌对大多数抗菌药物的敏感度都比较高，对亚胺培南的耐药率为 37.5%～80.0%。鲍曼不动杆菌对环丙沙星的耐药率从 2011 年的 44.4%下降到了 2019 年的 5.6%，对亚胺培南和美罗培南的敏感率有所上升，分别为 44.4%～89.5%、44.4%～100.0%。白色念珠菌仅对伊曲康唑产生了一定的耐药性。
结论 新生儿患者临床分离细菌以革兰阴性菌为主，且多重耐药菌检出率较高，应加强新生儿感染的预防和控制。

PU-3217

COVID-19 患者主调节子分析和单细胞测序揭示锌指蛋白抗 SARS-CoV-2 的潜在机制

杨阳、夏欣一
中国人民解放军东部战区总医院

目的 研究表明不同性别 COVID-19 患者的感染率相差不大，但死亡率和严重程度均存在显著差异。通过生物信息学从分子层面和单细胞层面分析不同性别的患者在抗 SARS-CoV-2 病毒机制中的差异。
方法 临床数据来自于 2020 年 2 月 4 日至 2020 年 4 月 13 日期间在武汉市火神山医院的 3059 例 COVID-19 患者，排除了病历不完整的患者后，共纳入 3044 例患者；430 份 SARS-CoV-2 阳性鼻咽拭子和 54 份阴性对照的转录组数据来自 GEO 数据库（GSE152075），生信分析包括差异表达分析和主调节子分析、基因功能分析和基因集活性计算、单细胞数据分析等。
结果 一方面，通过临床数据分析发现 COVID-19 女性患者的预后显著高于男性，女性患者比男性有更多的淋巴细胞与更少的中性粒细胞，单核细胞，白介素 6 和 C 反应蛋白等。另一方面，通过生物信息学分析确定了许多重要的主调控子，如 STAT1/STAT2 和锌指(ZNF)蛋白，且女性患者在 SARS-CoV-2 感染后，比男性患者表达更多的 ZNF 蛋白且有着更强的转录活性；ZNF 蛋白活性与 COVID-19 患者的 SARS-CoV-2 病毒载量存在显著负相关，作为转录因子也可激活其靶基因参与抗 SARS-CoV-2 感染过程；进一步分析发现 ZNF 蛋白活性与 COVID-19 患者的多重免疫细胞的丰度呈正相关，提示高 ZNF 蛋白活性可提高多种免疫细胞的丰度与抗病毒活性，有效抑制 SARS-CoV-2 感染。
结论 本研究发现 ZNF 家族的 MRs 在 SARS-CoV-2 感染后高度活化且与病毒载量和疾病分级呈负相关，暗示其可能具有抗病毒作用。此外，女性比男性有更多和更高活性的 ZNF 蛋白，这可能是女性新冠患者临床预后更好的原因之一。（本文部分内容已被 Brief Bioinform， IF=8.99 接受）

PU-3218

大疱性类天疱疮患者并发鼻疽诺卡菌引起右肺感染及胸壁脓肿一例

赵俊琴、王晖、何鸿绯、郑礼瑶
阳泉市第一人民医院

目的 探讨一例大疱性类天疱疮患者右肺上叶炎性占位的病原菌鉴定，为临床诊疗提供可靠依据。
方法 将患者送检痰液标本和右侧胸壁肿物穿刺标本分离得到的菌株，采用标本原始涂片革兰染色、抗酸染色、弱抗酸染色、细菌形态学观察、菌落涂片、微生物质谱技术、16S rRNA 基因测序鉴定等方法进行鉴定。
结果 痰液及右侧胸壁肿物穿刺液标本涂片，经革兰染色均可见到革兰阳性、纤细、杆状、90 度角交叉的菌丝体，抗酸染色阴性，弱抗酸染色阳性；痰液分离菌株及右侧胸壁肿物穿刺液分离菌株在血琼脂、巧克力琼脂均生长缓慢，约三天后长出细小淡黄色菌落，十天后变为黄色、粗糙有褶皱、质地坚硬、不易挑取的菌落；菌落涂片因乳化不良，多为聚集成簇的菌丝体，或散落的短杆菌，革兰染色阳性，弱抗酸染色有阳性有阴性，抗酸染色阴性；经外院布鲁克 Microflex 质谱仪鉴定为鼻疽诺卡菌，分值 1.500；经 16S rRNA 基因测序鉴定为鼻疽诺卡菌（Nocarida farcinica）。临床及时排查脑 CT 未见播散，应用磺胺类药物、米诺环素、左氧氟沙星等，症状缓解，肿块消退，出院随诊。

结论 诺卡菌为临床不常见病原菌，免疫力地下人群易感染，实验室鉴定时因其生长缓慢容易漏检，可通过原始标本涂片进行多种染色、延长标本培养时间，菌落形态观察，因其生化反应不易，可通过微生物质谱仪鉴定或借助分子生物学方法得到鉴定。临床明确诊断后，治疗有效。

PU-3219

孕中期母体泌尿系感染与子痫前期发生危险性的关系

杜伟平
延安大学附属医院检验科

目的 有理论认为孕期炎症因素在子痫前期的发生中起一定作用,探讨孕中期母体泌尿系感染与子痫前期发生的相关性。
方法 选取 2018-10 月-2020-12 月在延安大学附属医院诊治，1430 例单胎孕妇，于孕中期（22w-27w）无菌中段尿尿培养检测，观察孕妇子痫前期的发生率。
结果 ①孕中期，67(4.7%)例确诊为泌尿系感染；在孕末期，119(8.3%)例诊断为子痫前期。②孕中期单纯泌尿系感染的孕妇与孕末期泌尿系感染合并子痫前期的孕妇人数比较有统计学差异（29 VS 38，P=0.042）；伴有泌尿系感染阳性体征的子痫前期患者与泌尿系感染阴性体征的子痫前期患者比较有显著统计学差异（13 VS 5，P=0.008）③采用 Logistic 回归分析子痫前期发生的危险性，孕妇年龄［OR=3.91，（95％置信区间 2.76-5.38）］,体重指数［OR=5.37，（95％置信区间 4.01-5.85）］，孕中期伴有阳性体征的泌尿系感染［OR=3.27，（95％置信区间 2.33-4.25）］。
结论 孕中期伴阳性体征泌尿系感染与子痫前期发生有关。

PU-3220

流感合并细菌感染患者的临床和实验室特点

吴思颖、黄家旺、谢轶、康梅
四川大学华西医院

目的 探讨流感合并细菌感染患者的临床和实验室特点，以期为流感合并细菌感染患者的临床诊断和治疗提供一定的依据。
方法 纳入 2018 年 1 月至 2019 年 4 月，四川大学华西医院流感病毒核酸检测阳性的住院患者 1249 例，其中合并细菌感染的患者 211 例，随机筛选出 241 例流感未合并细菌感染的患者作为对照组。使用 lis 和 his 系统查询实验组和对照组的临床资料和实验室检查指标，使用 SPSS 软件进行统计学分析。
结果 流感合并细菌感染的发生率为 16.9%（211/1249）。211 例流感合并细菌感染的患者中，男性 143 例，女性 68 例，平均年龄 59±16 岁，平均住院天数 25±20 天，有 64.2%的患者入住 ICU。与对照组相比，实验组平均年龄高于对照组，住院天数增加，咳痰和呼吸困难症状的患者较多，差异具有统计学意义。实验组伴基础疾病的患者 201 例（95.3%），对照组伴基础疾病的患者 203 例（84.2%），其中基础疾病主要包括高血压、糖尿病、心脏病、肾脏病、肝脏疾病、慢性阻塞性肺疾病、肿瘤等。实验组患高血压、糖尿病、心脏疾病、肾脏疾病和慢性阻塞性肺疾病的患者比对照组多，差异具有统计学意义。实验组危重和死亡患者较对照组多，差异具有统计学意义。实验组白细胞计数，中性粒细胞百分比，降钙素原，C 反应蛋白和白介素-6 高于对照组，差异具有统计学意义。 211 例流感合并细菌感染患者中分离到 294 株细菌，共 28 个菌种，以鲍曼/溶血不动杆菌为主，占 35.4%，其他的主要菌种有铜绿假单胞菌（11.9%）、肺炎克雷伯菌肺炎亚种（11.2%）、大肠埃希氏菌（7.8%）、金黄色葡萄球菌（5.4%）。社区获得性感染中，主要为鲍曼/溶血不动杆菌（43%），其他的主要菌种为金黄色葡萄球菌（13.1%）、肺炎克雷伯菌肺炎亚种（9.3%）、大肠

埃希氏菌（5.6%）等。医院获得性感染中，以鲍曼/溶血不动杆菌为主（31.7%），其他的主要菌种为铜绿假单胞菌（15.8%）、肺炎克雷伯菌肺炎亚种（12.6）、大肠埃希氏菌（9.3%）等。
结论 流感合并细菌感染在临床上较为常见，多见于老年人，病人多有基础疾病，预后较差，相关实验室检查指标数值升高，分离菌株以鲍曼/溶血不动杆菌为主。

PU-3221

ICU 与非 ICU 血培养病原菌组成及耐药性差异

陶晓燕[1,2]、闵昌航[2]、于婷[2]、王海晨[2]、李军[2]、胡咏梅[2]、邹明祥[2]
1. 电子科技大学附属医院·四川省人民医院
2. 中南大学湘雅医院

目的 探讨重症监护病房（ICU）与非 ICU 住院患者血培养病原菌组成及耐药特点，为临床合理使用抗菌药物提供实验依据。
方法 对某大型三甲医院 2015 年 1 月-2019 年 12 月 ICU 与非 ICU 血培养检出的病原菌的组成及耐药性进行分析，并对 6 种关键多重耐药菌（MDRO）的检出情况进行比较。
结果 共分离非重复病原菌 3301 株，革兰阴性菌 2066 株，占 62.59%。ICU 共分离病原菌 734 株，鲍曼不动杆菌最多（19.75%）；非 ICU 分离病原菌 2567 株，大肠埃希菌最多（22.59%）。在监测的 6 种主要病原菌中，MDRO 占 33.46%（631/1886）。其中，鲍曼不动杆菌中 CRAB 最高（94.42%），大肠埃希菌中 CREC 最低（5.02%）。ICU 6 种病原菌中 MDRO 占 61.88%（276/446），高于非 ICU 的 24.65%（355/1440）。ICU 分离的肺炎克雷伯菌、大肠埃希菌、鲍曼不动杆菌、铜绿假单胞菌、金黄色葡萄球菌和凝固酶阴性葡萄球菌对多种抗菌药物的耐药率高于非 ICU（P<0.05）。
结论 我院血流感染病原菌以革兰阴性菌为主，且耐药十分严重。ICU 血培养分离菌株 MDRO 检出率高，对多种抗菌药物的耐药率高于非 ICU。临床应根据相应流行病学数据，制定针对性的经验治疗策略，并及时根据患者病原学检测结果，调整治疗方案。

PU-3222

抗菌药物莫西沙星联合益生菌培菲康治疗伴有细菌移位的 IBS-D 临床疗效观察

王勇
四川绵阳四 0 四医院

目的 探讨抗菌药物莫西沙星联合益生菌培菲康治疗伴有细菌移位的腹泻型肠易激综合征(IBS-D)临床疗效影响。
方法 选择 2017 年 1 月-2018 年 1 月在我院收治的 160 例 IBS-D 患者，按照随机数表法将其分为两组，各 80 例；其中对照组单纯采用抗菌药物莫西沙星进行治疗；观察组在服用莫西沙星 4 周后，口服培菲康治疗。比较两组患者治疗前后的免疫细胞因子、临床疗效、肝功能指标。
结果 ①两组患者治疗后 IL-6、IL-8、TNF、CD8+均降低(t=2.989，P=0.003；t=10.600，P=0；t=11.142， P=0；t=23.583，P=0；t=13.483，P=0；t=47.851，P=0；t=7.583，P=0；t=10.375，P=0)；CD4+/CD8+升高(t=14.013，P=0；t=16.663，P=0)，且观察组治疗后 IL-6、IL-8、TNF、CD8+低于对照组(t=14.583，P=0.00；t=21.934，P=0；t=33.217，P=0； t=12.484，P=0)，CD4+/CD8+高于对照组(t=11.465，P=0)。②对照组治疗有效率远低于观察组，差异具有统计学意义(t=112.624， P=0)。③两组患者治疗后

腹痛与腹泻症状评分低于治疗前(t=16.435，P=0；t=29.584，P=0；t=18.937，P=0；t=45.764，P=0)，且观察组患者评分均明显低于对照组(t=54.586，P=0；t=52.412，P=0)。

结论 抗菌药物莫西沙星联合益生菌培菲康治疗伴有细菌移位的 IBS-D 临床疗效显著，能够有效改善细胞炎症因子水平，改善腹痛、腹泻症状情况，值得临床广泛应用。

PU-3223

首次发现一株大肠埃希菌中 IS26 介导的三种喹诺酮耐药基因位于一个多重耐药质粒

陶颖[2]、孙景勇[1]
1. 上海交通大学医学院附属瑞金医院微生物科
2. 上海交通大学医学院附属瑞金医院临床检验中心

目的 喹诺酮类药物常用于肠杆菌科细菌感染的治疗,然而世界范围内喹诺酮类药物耐药性的上升构成临床和公共卫生风险。本研究旨在探究一种新的同时存在三种喹诺酮类耐药基因的多重耐药质粒以及分析大肠埃希菌 RJ749 耐药基因的遗传环境。

方法 Etest 法检测 RJ749 和接合子 c749 对头孢曲松、头孢吡肟、头孢他啶、环丙沙星以及左氧氟沙星的 mic 值。以叠氮化钠耐药的大肠埃希菌 J53 株为受体菌进行接合实验。全基因组测序探究多重耐药区的形成及其遗传环境。

结果 RJ749 对喹诺酮类药物表现为高水平耐药，c749 表现为低水平耐药。S1-PFGE 显示 RJ749 和 c749 均含有质粒。c749 中存在质粒 pRJ749，其包含 3 种质粒介导的喹诺酮类耐药(PMQR)基因(aac(6′)-Ib-cr、qnrS2 和 oqxAB)和 10 个其他种类的获得性耐药基因。qnrS2 基因首次发现存在两侧有两端为插入序列 IS26 的遗传环境。

结论 我们发现了 3 种 PMQR 基因在一个多重耐药质粒上共存，并发现了一个新的 qnrS2 的遗传结构，其两侧是 IS26 元件。IS26 在喹诺酮类药物耐药的水平传播中起重要作用。

PU-3224

粪便样本蓝氏贾第鞭毛虫、溶组织内阿米巴双重实时荧光 PCR 检测方法的建立

孟妍明、张春莹、易凡莉、马莹
四川大学华西医院

目的 本研究计划建立针对蓝氏贾第鞭毛虫以及溶组织内阿米巴的双重实时荧光聚合酶链式反应（RT-PCR）分子诊断方法。

方法 两种原虫基因序列比对后确定保守区，使用 Primer5 进行引物设计，Beacon Designer 软件进行探针设计。在 nr（non-redundant）数据库进行 Primer blast 分析确定其特异度。以 ATCC 标准株 DNA 梯度稀释液为模板进行扩增，筛选灵敏度较好引物对。使用较好引物进行双重 PCR 的体系建立，并使用临床样本进行性能验证。将目标序列导入 pUC57 质粒，梯度稀释用于测定最低检测限。收集临床粪便样本，首先镜检法筛查其原虫滋养体或包囊。随后提取 DNA 进行双重 taqman RT-PCR 检测，验证建立的所建方法效能。

结果 构建了蓝氏贾第鞭毛虫、溶组织内阿米巴双重 taqman RT-PCR 方法。8 例蓝氏贾第鞭毛虫镜检阳性样本 PCR 扩增结果均阳性，204 例蓝氏贾第鞭毛虫镜检阴性样本中 1 例 PCR 扩增结果为阳性，其余为阴性。3 例溶组织内阿米巴镜检阳性患者样本 PCR 扩增结果均为阳性，209 例溶组织内阿米巴镜检阴性的患者样本 1 例 PCR 扩增结果阳性，其余为阴性。通过扩增产物测序和 blast 分析确定了镜检阴性 PCR 阳性患者样本中扩增序列属于目标病原体，且临床信息也支持该诊断。

结论 设计了蓝氏贾第鞭毛虫、溶组织内阿米巴特异性引物、探针，建立了双重 taqman RT-PCR 检测体系。对引物进行 primer blast 分析，并使用其他致腹泻原虫及常见致腹泻细菌菌株进行 DNA 扩增，确定所建立方法与这些病原体不存在交叉反应。通过质粒确定两原虫最低检测限均约 30 拷贝。临床样本检测显示该方法可以检测出镜检阳性样本以及镜检漏检样本。

PU-3225

2013-2019 年上海某三级综合性医院重症监护室肺炎克雷伯菌分布及耐药性分析

尧荣凤
上海市杨浦区中心医院
同济大学附属杨浦医院

目的 了解上海某三级综合性医院重症监护室（Intensive Care Unit，ICU）肺炎克雷伯菌（Klebsiella pneumoniae，KPN）的分布和耐药性变迁，为临床合理使用抗菌药物提供参考。
方法 对同济大学附属杨浦医院重症监护室 2013 年 1 月-2019 年 12 月临床分离的肺炎克雷伯菌分布及耐药性进行回顾性分析。
结果 2013-2019 年共分离出肺炎克雷伯菌 653 株，主要来自呼吸道标本（80.7%）。主要分离自急诊科重症监护室（Emergency Intensive Care Unit，EICU） (37.5%) 和外科重症监护室（Surgery Intensive Care Unit，SICU）（38.6%）的患者。2013-2019 年该院 ICU 肺炎克雷伯菌中耐碳青酶烯类肺炎克雷伯菌(Carbapenemase resistant Klebsiella pneumoniae, CRKPN)共检出 199 株，检出率为 30.5%，从 2013 年至 2019 年肺炎克雷伯菌对亚胺培南和美罗培南的耐药率呈现逐年上升的趋势，从 2013 年的 10.2%和 11.3%，到 2019 的 58.6%和 60.0%。其中，MICU 病区 CRKPN 检测率（68.8%）最高。亚胺培南和美洛培南同时耐药肺炎克雷伯菌对多数抗菌药物的耐药率>80%，且对多数抗菌药物的耐药率明显高于非碳青霉烯类耐药菌株（P<0.05）。在不同病区中，CCU 和 SICU 病房患者中分离的肺炎克雷伯菌对受试的所有抗菌药物耐药率均明显低于 EICU、RICU 和 MICU（P<0.05）。从>65 岁患者分离的肺炎克雷伯菌对受试的所有抗菌药物耐药率均显著高于≤65 岁患者分离的肺炎克雷伯菌（P<0.05）。不同标本中，从尿液中分离的肺炎克雷伯菌对受试的大多数抗菌药物耐药率均明显的高于呼吸道标本和血液标本（P<0.05）。
结论 医院重症监护室分离的肺炎克雷伯菌耐药情况非常严峻，分离自不同年龄段、科室和标本的菌株对抗菌药物的耐药性相差较大，必须加强抗菌药物管理，继续开展病原菌分布及其耐药性监测，用于指导临床医师合理使用抗菌药物，控制耐药菌株在病区中的流行。

PU-3226

长沙某地区儿童艰难梭菌定植的相关研究

李艳明、刘文恩
中南大学湘雅医院

目的 了解长沙某地区健康儿童肠道艰难梭菌定植率及分子流行特征，为预防儿童艰难梭菌感染提供依据。
方法 收集 2020 年 3-6 月长沙市某地区小学 369 名儿童粪便标本各一份作为实验组，厌氧培养获得艰难梭菌的阳性定植率。回顾性分析 2017 年 1 月 1 日至 2020 年 1 月 30 日某大型教学医院住院儿童腹泻送检艰难梭菌筛查的数据，计算艰难梭菌的感染率。将临床分离的艰难梭菌非重复菌株 35 例作为对照组，对比分析实验组与对照组的毒素基因型、多位点序列分型。
结果 实验组 369 份标本中共分离到艰难梭菌 14 株，阳性定植率为 3.84%。分离得到的菌株主要为两类，其中 tcdA+tcdB+cdtA-cdtB-菌株占 57.14%（8/14），tcdA-tcdB-cdtA-cdtB-菌株占 42.86%

（6/14），产毒率为 57.14%（8/14）；2017 年 1 月 1 日至 2020 年 1 月 30 日共有 336 例腹泻儿童送检艰难梭菌筛查，共筛查出艰难梭菌 45 株（其中 10 株为重复菌株），阳性率为 13.4%。35 株非重复菌株中，tcdA+tcdB+cdtA-cdtB-菌株占 68.57%（24/35），tcdA-tcdB-cdtA-cdtB-菌株占 31.43%(11/35)，产毒率为 68.57%（24/35）。MLST 分型的分析结果表明，49 株艰难梭菌共检测出 16 种 ST 型别。其中 ST3(8 株)、ST2（7 株）、ST26（5 株）是主要型别，分别占 16.33%、14.29%、10.20%。在实验组分离的 14 株菌株中，共检测出 7 种 ST 型别，其中 ST2（4 株）、ST3（3 株）、ST8（3 株）为主要型别；在对照组分离的 35 株菌株中，共检测出 15 种 ST 型别，其中 ST3（5 株）、ST26（4 株）、ST35（4 株）ST37（4 株）为主要型别。

结论 长沙某小学健康儿童肠道艰难梭菌定植率远低于住院儿童腹泻患者的艰难梭菌定植率，但健康儿童和艰难梭菌感染儿童检出产毒株阳性率均较高，健康儿童与艰难梭菌感染儿童检出的艰难梭菌型别类似，艰难梭菌可能在儿童之间互相传播，无症状定植儿童可能作为移动传染源引起其他儿童的艰难梭菌感染。

PU-3227

利用实时荧光定量 PCR 快速检测肺炎克雷伯菌亚胺培南敏感性的方法

赵芯米、黄建胜、赵志钢
丽水市中心医院

目的 建立一种可在 2-3h 内快速检测肺炎克雷伯菌对亚胺培南敏感性的新方法。

方法 针对 4 种耐药基因 KPC、NDM、IMP、OXA48 以及膜孔蛋白 ompK36 突变序列设计 qPCR 引物及 Taqman 探针。收集丽水市中心医院分离的肺炎克雷伯菌 259 株，以 PCR 扩增产物测序结果为参考标准，验证 qPCR 检测目的基因的灵敏度和特异性；以微量肉汤稀释法测定菌株对亚胺培南的 MIC 值，结合 qPCR 结果，建立 qPCR 检测肺炎克雷伯菌对亚胺培南敏感性的判断标准。从丽水市疾控中心收集肺炎克雷伯菌 159 株，验证所建立方法的可靠性。

结果 丽水市中心医院的 259 株菌中，qPCR 检测 5 种目的基因的特异性和灵敏度均为 100%。比对药敏结果与 qPCR 结果发现，4 种耐药基因阴性的菌株 98.2%对亚胺培南敏感；KPC 阳性而 ompK36 突变阴性的菌株，96.8%MIC 值落在 4-16μg/mL；KPC 与 ompK36 突变双阳性的菌株，89.1%MIC≥32μg/mL。以此作为判断标准，丽水市疾控中心 159 株菌的检测结果显示，未检测出 4 种耐药基因的菌株 100%敏感；KPC 阳性而 ompK36 突变阴性的菌株，95.5%符合 MIC 值为 4-16μg/mL；KPC 与 ompK36 突变双阳性的菌株中，98.3%符合 MIC≥32μg/mL。

结论 本研究成功建立了一种肺炎克雷伯菌对亚胺培南敏感性快速检测的新方法，其操作简单，准确度高。

PU-3228

某医院肠杆菌科细菌耐药性及碳青霉烯类耐药菌株的分布

吴亚洲
上海市杨浦区中心医院（同济大学附属杨浦医院）

目的 了解我院 2015-2018 年临床分离肠杆菌科细菌耐药性，以及耐碳青霉烯类肠杆菌科细菌的分布及检出率变迁，为临床合理用药及医院感染防控提供依据。

方法 收集 2015-2018 年我院患者感染性标本中分离的肠杆菌科细菌，采用全自动细菌鉴定药敏系统对细菌进行鉴定和药物敏感性试验，并采用纸片扩散法（K-B）法进行补充药敏试验。

结果 近 4 年共检测出肠杆菌科细菌 6666 株，其中位列前 5 位的分别为大肠埃希菌 3189 株、肺炎克雷伯菌 1725 株、奇异变形杆菌 522 株、阴沟肠杆菌 358 株、粘质沙雷菌 297 株。大肠埃希菌中

产 ESBLs 菌株为 1897 株，产酶率 59.4%；肺炎克雷伯菌中产 ESBLs 菌株为 493 株，产酶率 28.6%。大肠埃希菌对氨苄西林及头孢唑林耐药率较高，分别为 84.6%和 76.6%；肺炎克雷伯菌对头孢唑林耐药率最高，为 60%。共检测出耐碳青霉烯类肠杆菌科细菌（ Carbapenem-resistant Enterobacteriaceae，CRE）498 株，检出率为 7.5%，其中肺炎克雷伯菌 339 株、大肠埃希菌 75 株、粘质沙雷菌 22 株、阴沟肠杆菌 16 株、奇异变形杆菌 11 株、其他 35 株;主要科室分布为神经外科（130 株），EICU（65 株），急诊观察室（53 株），SICU（43 株）。

结论 医院感染细菌中仍以肠杆菌科细菌为主，大肠埃希菌的 ESBLs 检出率较高且显著高于肺炎克雷伯菌，耐碳青霉烯类肠杆菌科细菌分离率逐年升高，且以肺炎克雷伯菌为主。

PU-3229

234 例甲型流感病毒感染调查

牛雷
东部战区总医院秦淮医疗区

目的 了解南京地区住院及社区甲型流感病毒的感染及分布情况。

方法 对 2017 年 3 月至 2019 年 3 月收治的 234 例疑似甲流感染患者咽拭子标本,采用免疫渗滤技术结合双抗体夹心法原理检测甲型流感病毒抗原。

结果 在 234 例咽拭子中, 甲型流感病毒抗原阳性 26 例, 甲型流感病毒感染率为 11.1%，其中男性为 14/166（8.4%），女性为 12/68（17.6%）；10 岁以下阳性 12 例；11～20 岁 2 例；21～30 岁 10 例；31～40 岁 2 例，41 岁以后未有检出阳性。

结论 甲型流感病毒感染男女有性别差异，年龄多分布在 10 岁以下和 21～30 岁的年轻人,并且春季 1～3 月感染为主。

PU-3230

EV71 致儿童手足口病患儿的肠道菌群分析

王珂、周红平、朱春晖、柯江维、刘发娣
江西省儿童医院

目的 探讨 EV71 感染后不同的临床类型的手足口病患儿肠道菌群的丰度、种群结构、群落等变化，以获取 EV71 感染的轻症与重症患儿肠道菌群差异，为手足口病的治疗和特效药物的研发提供理论依据。

方法 筛选经核酸检测 EV71 阳性的手足口病确诊患儿，根据疾病的严重程度分为重型组 S、和轻型组 M、以及健康对照组 N，采集患者发病 3 天内的大便标本，提取其基因组 DNA，经二代测序对合格样本建立文库，并分析测序结果。

结果 儿童肠道微生物群中含量最多的菌群在门水平上包括拟杆菌门(Bacteroidetes)、厚壁菌门(Firmicutes)、变形菌门(Proteobacteria)、放线菌门(Actinobacteria)、疣微菌门(Verrucomicrobia)、梭杆菌门(Fusobacteria)、TM7、广古菌门(Euryarchaeota)、互养菌门(Synergistetes)、蓝藻菌门(Cyanobacteria)，其中拟杆菌门、厚壁菌门、变形菌门是儿童肠道微生物群落中最丰富的菌群。拟杆菌门相对丰度在正常儿童中均值为 47.72%，而手足口病患儿中轻症为 57.33%，重症为 67.44%，呈逐渐上升的趋势；而厚壁菌门和变形菌门的相对丰度则是随着疾病严重程度的加重，相对丰度逐渐降低。

结论 随着手足口病患儿的临床症状加重，拟杆菌门比例增加，厚壁菌门和变形菌门比例减少，其肠道菌群多样性降低，菌群失调加重。

PU-3231

艾滋病合并马尔尼菲篮状菌病的体外药敏试验及临床治疗效果分析

高丽、张桂仙、樊红丽、李正伦、谢祺
云南省传染病医院

目的 分析艾滋病（AIDS）合并马尔尼菲篮状菌（TM）感染的体外药敏试验结果及临床治疗效果，为临床合理用药提供依据。
方法 收集 2016 年 2 月至 2018 年 11 月云南省传染病医院收治的 119 例 AIDS 合并 TM 感染患者的临床病历资料，分析患者的人口学特征、标本类型、TM 体外药敏试验结果及临床治疗效果。
结果 119 例病人中，男性病人人数是女性病人人数的 2.61 倍。平均年龄为 37.08 岁，年龄范围为 3~70 岁，以青壮年为主。病人感染 HIV 的传播途径中性传播人数居多，共 105 人，占总人数的 88.24%。检出最多标本类型是血液和骨髓，共占总样本数的 88.24%。CD4+T 淋巴细胞计数为 39±40cells/μl，大多数病人处于 AIDS 晚期。两性霉素 B、伊曲康唑和伏立康唑对马尔尼菲篮状菌的敏感性均为 100%。119 例患者中有 8 例未接受抗真菌治疗患者均死亡，111 例接受了抗真菌治疗，其中 105 例治疗好转，治疗好转率 94.59%（105/111）。两性霉素 B 治疗组和伏立康唑治疗组好转率比较差异无统计学意义（P=0.317，χ2=0.859）。
结论 AIDS 合并 TM 感染好发于 CD4+T 淋巴细胞计数低于 50cells/μl 的患者，临床表现复杂多样。云南省艾滋病合并马尔尼菲篮状菌病推荐选择两性霉素 B、伏立康唑和伊曲康唑治疗，尽量避免使用氟康唑和氟胞嘧啶。

PU-3232

肺炎链球菌抗原快速检测在痰液中的临床价值

蒋瑶[1,2,3]、郭杨柳[1,2,3]、廖涛[1,2,3]、岳瑾熙[1,2,3]、谢宁[1,2,3]
1. 川北医学院附属医院
2. 川北医学院医学检验系
3. 川北医学院转化医学研究中心

目的 社区获得性感染（CAP）是验证严重威胁人类健康的感染性疾病之一，其中肺炎链球菌是首要致病菌，但其常规痰培养检出率并不高，故探讨利用免疫层析法检测痰液中肺炎链球菌抗原对肺炎链球菌感染的诊断价值。
方法 分离痰标本中与肺炎链球菌同属的草绿色链球菌、星座链球菌，和呼吸道标本分离菌中前五位菌种包括肺炎克雷伯菌、鲍曼不动杆菌、铜绿假单胞菌、金黄色葡萄球菌和嗜麦芽窄食单胞菌，以及 CAP 中常见的流感嗜血杆菌和卡他莫拉菌，后配成菌悬液验证 BinaxNOW 试剂盒的特异性；利用 BinaxNOW 试剂盒检测 20 例肺炎链球菌培养阳性的原始痰液标本，比较两种方法的一致性。
结果 免疫层析法检测痰标本中分离得到的草绿色链球菌、星座链球菌、肺炎克雷伯菌、鲍曼不动杆菌、铜绿假单胞菌、金黄色葡萄球菌和嗜麦芽窄食单胞菌、流感嗜血杆菌和卡他莫拉菌结果均为阴性；免疫层析法检测 20 例肺炎链球菌培养阳性的原始痰液标本的阳性率为 95%（19/20）。
结论 免疫层析法在 CAP 中的肺炎链球菌抗原检测中具有较好的特异性，并且与痰培养结果有较好的一致性。

PU-3233

革兰阴性杆菌与真菌感染患者血小板参数变化的对比分析

梅秋雁、姜波
昆明医科大学第一附属医院

目的 探讨革兰阴性杆菌、真菌感染对血小板的影响 ，为感染性疾病的临床诊断、病情评估 、预防治疗提供试验依据。
方法 收集 2018 年 1 月-2018 年 12 月昆明医科大学第一附属医院革兰阴性杆菌感染患者 30 例 、真菌感染患者 30 例的病例资料；另外选择同期参加健康体检者 60 例病历资料为对照组，比较血小板的参数，包括血小板数量、血小板平均体积 (MPV)、血小板压积 (PCT)、血小板体积分布宽度(PDW)四项的变化，从而探讨革兰阴性杆菌、真菌感染对血小板的影响。
结果 试验组患者均出现血小板数量减低 、MPV 增大、PCT 减低 、PDW 增大，与对照组比较 ，差异均有统计学意义 (P<O.05)，比较革兰阴性杆菌 、真菌感染患者血小板数量、PCT、MPV、PDW 的变化具有统计学差异(P< O．05)，革兰阴性杆菌感染患者变化尤为明显；各试验组 PLT 数目与 MPV 均呈显著负相关，且相关系数均有降低，其中革兰阴性杆菌下降最明显。
结论 革兰阴性杆菌、真菌感染不单只会造成血小板的数量减低 ，还会造成 MPV 增大 、PCT 减低 、PDW 增大，且革兰阴性杆菌感染患者变化较明显。血小板计数简便而且容易操作，能比较正确以及敏感地反映出感染状态，可借助血小板计数以及相关参数检测为临床感染性疾病的诊断及鉴别诊断提供有效参数。

PU-3234

重庆市 2011-2019 年尿路感染肺炎克雷伯菌耐药趋势分析

丁艳辉
重庆医科大学附属第一医院

目的 分析自尿路感染（UTIs）患者尿液标本中分离的肺炎克雷伯菌（K.pneumoniae）对临床常用抗生素的耐药特点以及趋势。
方法 收集重庆市某教学医院 2011 年至 2019 年 UTIs 分离 K.pneumoniae 的实验室数据进行回顾性分析。
结果 自 UTIs 患者尿液样本分离的 17966 株非重复菌株中，共鉴定出 1543 株 K.pneumoniae，感染率仅次于大肠埃希菌（E.coli），并在 2013 年出现 K.pneumoniae 的感染高峰。自 2011 年至 2019 年，产超广谱 β-内酰胺酶（ESBL）的 K.pneumoniae 占比从 2011 年的 48.4%下降到 2019 年的 32.9%，而对碳青霉烯类抗生素的耐药率自 2.2%急升至 18.0%，其中 2017 年分离到的耐碳青霉烯 K.pneumoniae 高达 22.6%，伴随较低的 ESBL 产生率（30.9%）；K.pneumoniae 对哌拉西林/他唑巴坦和头孢吡肟的耐药率分别从 4.4%和 18.2%上升到 25.7%和 30.5%；此外，K.pneumoniae 对碳青霉烯类和丁胺卡那霉素的耐药率在 2017 年达到高峰后逐年下降，而对头孢他啶和氨曲南的耐药率相对稳定，分别在 21.8% - 35.6%和 32.2% - 39.4%之间波动。
结论 自 UTIs 患者尿液标本中分离的 K.pneumoniae 对碳青霉烯类抗生素的耐药率呈上升趋势伴随 ESBL 产生率的下降，需对其进行持续监测。

CRISPR-Cas9 基因编辑技术在念珠菌中的应用研究进展

于淑颖、徐英春
中国医学科学院北京协和医院

近年来，念珠菌感染已经成为严重威胁全球健康的疾病，亟需深入理解真菌病原体的生物学和病理生理学，并阐明耐药机制。因此，对于高效基因操作工具的需求十分迫切。本文旨在对 CRISPR-Cas9 系统的工作原理和其在念珠菌中的应用进行系统的综述，希望 CRISPR 的发展和应用能够有助于微生物学家解决念珠菌的致病机理和耐药机制等多方面问题，从而进一步促进新的治疗策略的开发。本文提供了 CRISPR-Cas9 基因编辑技术在念珠菌中应用的最新进展，灵活、有效的 CRISPR-Cas9 系统对医学真菌学领域产生了巨大的影响。在实验室方面，通过促进基因操作技术的发展，为探究真菌生物学和致病机制、剖析毒力因子的作用、调查新的药物潜在靶点以及研究宿主和病原体间的相互作用奠定了基础；在临床方面，进一步改善了真菌感染的诊断策略和抗真菌耐药的监测手段。此外，目前该系统在模式真菌中应用可以进一步推广至其他致病真菌，从而研究宿主和真菌间的相互作用或者解决念珠菌耐药等问题。

PU-3236

糖尿病肾病患者肠道菌群变化及生物标志物

伦恒忠
泰安市中心医院

人体拥有一个非常复杂的共生微生物群落，它们定殖在肠道、泌尿生殖道、呼吸道和其他屏障组织中，参与机体的发育以及人体生理功能的形成和维护，维持体内稳态，被称作人体的另外一个器官。肠道拥有人体内数量最多、构成最复杂的微生物群落。研究表明，肠道菌群在人体能量摄入、营养支持、代谢平衡、炎症、神经激素反应、免疫系统发育和免疫调节中起着重要作用。糖尿病肾病是由糖尿病所致的慢性肾脏疾病, 是糖尿病的主要微血管并发症之一，也是终末期肾病最常见的病因。大量研究指出：肠道微生物菌群与许多疾病有关，包括肥胖、2 型糖尿病和非酒精性脂肪性肝病等。最近研究表明糖尿病肾病 的发生发展与肠道菌群密切相关。

研究目的 本课题拟利用分子生物学方法探索糖尿病肾病患者肠道菌群的改变，识别与糖尿病肾病相关的标志性菌属,为进一步研究通过调节肠道菌群治疗糖尿病肾病提供理论基础。

研究方法 1. 招募糖尿病肾病患者和健康志愿者，收集入组者新鲜粪便标本，使用试剂盒提取粪便基因组 DNA，进行高通量测序。

2. 使用物种组成分析、主成分分析线性判别分析效应尺寸分析等多种生物信息分析方法来比较糖尿病肾病患者和正常人群肠道菌群的差异。

3. 制作受试者工作特征曲线鉴别糖尿病肾病患者和正常人群差异肠道菌属中最好的生物标志物。

研究结果 糖尿病肾病患者和健康人群的肠道菌群结构存在差异。糖尿病肾病患者肠道菌群分布发生了显著变化，硬壁菌门占比明显降低，拟杆菌门（Bacteroidetes）和变形菌门占比显著增加。

研究结论 与健康人群相比糖尿病肾病患者肠道菌群结构发生了改变。

PU-3237

Histone Acetylation Regulator Gcn5 Mediates Drug Resistance and Pathogenicity in Candida glabrata

Shuying Yu 、Yingchun Xu
Peking Union Medical College, Chinese Academy of Medical Sciences

Background Candida glabrata was the common pathogen causing invasive candidiasis. C. glabrata displayed an inherently reduced susceptibility to azoles, meanwhile, with a staggering rising in echinocandin resistance. Gcn5 is one of the most characterized fungal KATs, which is necessary for transcription regulation in eukaryotes. Here, we explore the role of GCN5 in antifungal resistance and pathogenicity in C. glabrata by genetic ablation of GCN5, as well as the expression dynamics of critical genes and pathways.
Methods The GCN5 gene in C. glabrata strain ATCC 2001 were knocked out and restored by using the Alt-R CRISPR-Cas9 system. Antifungal susceptibility testing and serial dilution growth assays were performed to detect the susceptibilities against antifungal drugs and stress agents of C. glabrata lacking GCN5. Time-kill kinetics of WT (ATCC 2001) strain and gcn5Δ strain against micafungin and fluconazole were carried out. Fungicidal and fungistatic activity were calculated, and resistant colony frequency and resistance-conferring mutations were evaluated. For western blot analysis, the effect of GCN5 deletion for the level of histone acetylation was detected. By transcriptomic analysis, we explored the regulatory mechanism of GCN5 deletion on drug resistance and virulence for C. glabrata. THP-1 macrophage infection assays were performed for detecting the viability of C. glabrata inside THP cells.
Results Deletion of GCN5 in WT Background increases 2 to 4-fold susceptibility for echinocandins, 2-fold for azoles and SCY048, more importantly, more than 8-fold for FK506 (4 μg/ml) + micafungin and APX001A. Deletion of GCN5 appeared to complete or near complete reverse the Fks-mediates echinocandins resistance by FK506 in 4 μg/ml. Disruption of GCN5 dramatically enhanced the fungicidal or fungistatic activity of micafungin and fluconazole. Reduced colony frequency and gain-of-function mutations detected from this dynamic experiment. Compared to the WT and gcn5Δ::GCN5 strain, the acetylation level of H3K9 and H3K14 in gcn5Δ strain were around 0.6-fold and 0.45-fold to those in WT strain. GCN5 deletion changes the landscape of several transcriptional networks by regulating specific functional gene group. The distribution of genes corresponding to GCN5 deletion major enriched in transmembrane transport, transmembrane transporter activity, component of membrane and plasma membrane and cell wall. Lack of GCN5 unable to drive the expression of transmembrane transporter activity genes, cell wall component synthesis genes and multidrug resistance transporters genes. Cells lacking GCN5 need to mobilize much more genes to sustain life upon micafungin pressure. Most of the significantly changed genes in gcn5Δ are down-regulated in response to micafungin treatment, which are major associated with cell wall biosynthesis. gcn5Δ cells were much more sensitive to killing by THP cells. Loss of GCN5 significantly reduced the viability of C. glabrata inside THP cells.
Conclusions C. glabrata histone acetyltransferase GCN5 plays a critical role in the antifungal resistance, stress response and pathogenesis. Loss of GCN5 attenuated antifungal drug resistance and pathogenicity in C. glabrata. We propose Gcn5 could be a promising candidate target for new drug discovery or therapeutic intervention to combat fungal infections.

基于 16S rDNA 测序分析血吸虫感染对宿主肠道菌群的影响

宋秋月
襄阳市第一人民医院

目的 研究日本血吸虫不同感染程度对小鼠肠道菌群的影响，寻找日本血吸虫感染潜在的肠道菌群标志物。
方法 将 15 只 6 周龄雄性 BALB/c 小鼠随机分为正常对照组（n=5）、轻度感染组（n=5）、重度感染组（n=5）。其中，轻度感染组每只小鼠感染 5±2 条日本血吸虫尾蚴，重度感染组每只小鼠感染 60±2 条日本血吸虫尾蚴。感染第 7 周处死小鼠，剖开腹腔切下一块肝左叶和一段结肠组织用于制作病理切片，同时在无菌条件下收取小鼠结肠内容物，提取 DNA 后利用 16S rDNA 测序技术进行微生物多样性分析。
结果 日本血吸虫感染小鼠肝脏、结肠中可见明显的虫卵肉芽肿和纤维化病变。小鼠肠道菌群的 α 多样性分析显示，重度感染组 Shannon 指数显著低于正常对照组或轻度感染组，差异有统计学意义（P = 0.0068；P = 0.015）；轻度感染组或重度感染组 Simpson 指数显著高于正常对照组，差异有统计学意义（P = 0.047；P = 0.012）。PCoA 分析显示，轻度感染组与正常对照组小鼠肠道菌群的群落组成比较接近，而重度感染组则与正常对照组的群落组成明显不同。小鼠的肠道菌群主要由厚壁菌门、拟杆菌门和变形菌门组成，随着感染程度的加重，变形菌门的相对丰度增加。Lachnospiraceae_NK4A136_group 菌属的相对丰度随着感染程度的加重而降低；Alistipes 和 Bacteroides 菌属的相对丰度随着感染程度的加重而增加。LEfSe 分析显示，Lachnospiraceae_NK4A136_group、 Desulfovibrio、Alistipes、Lactobacillus 菌属是正常对照组与感染组之间具有显著差异的菌属。
结论 日本血吸虫感染小鼠肠道菌群的物种分布、多样性和群落组成均发生了改变，而且这种改变会受到感染程度的影响； Lachnospiraceae_NK4A136_group 、 Desulfovibrio 、 Alistipes 、 Lactobacillus 菌属可作为日本血吸虫感染的潜在的生物标志物。

PU-3239

淋病奈瑟菌耐药性分析及蛋白质谱聚类应用初探

卢赞
昆明市第一人民医院

目的 了解本地区淋病奈瑟菌常用抗菌药物敏感性，探索蛋白聚类在细菌同源性分析中的应用；
方法 回顾分析该院 2018 年 5 月至 2020 年 12 月分离的 154 株淋病奈瑟菌药物敏感性，利用质谱仪配套软件 Biotyper3.4 对 65 株淋病奈瑟菌进行聚类分析，比较引入标准菌株和数据库内淋病奈瑟菌 MSP 后聚类图变化；
结果 未发现头孢曲松耐药菌株，头孢菌素类敏感性较好，青霉素均不敏感，环丙沙星耐药率为 96.8%，四环素耐药率为 83%。65 株临床分离淋病奈瑟菌聚类形成 3 个大簇，不同时间分离株散在分布于各簇。引入 ATCC19424、ATCC49226 和一株随机数据库内 MSP 后，聚类图无明显变化，上述 3 株菌分别聚类入已形成的 3 大簇。随机引入多株数据库内 MSP 后，聚类图明显改变，将所有菌株聚类为 2 个大簇；
结论 头孢曲松可做为本地区淋病奈瑟菌感染的首选用药，青霉素、喹诺酮类和四环素类应避免使用。利用 MALDI-TOF MS 进行细菌蛋白质谱聚类，可以反映菌株之间的相对差异，但不能量化差异大小。

PU-3240

2018-2020 年我院细菌耐药检测结果分析

吴迪[1]、吴亚洲，尧荣凤，方慧，任圣洁[2]
1. 上海市杨浦区中心医院（同济大学附属杨浦医院）
2. 同济大学附属杨浦医院

目的 对我院近两年细菌耐药监测结果进行统计分析，为本院临床合理使用抗生素及院内感染防控提供理论依据。
方法 收集 2018 年至今我院患者感染性标本中分离的病原菌，采用全自动细菌鉴定药敏系统对细菌进行鉴定和药物敏感性试验，并采用纸片扩散法（K-B）法进行补充药敏试验。用 WHONET 5.6 软件进行分析。
结果 2018 年至今剔除同一患者同一部位重复菌株共分离病原菌 7802 株，其中革兰阴性菌 5736 株（73.5%），革兰阳性菌 2066 株（26.5%）。耐甲氧西林金黄色葡萄球菌(MRSA)和耐甲氧西林凝固酶阴性葡萄球菌(MRCNS)的检出率分别为 67.8%和 81.1%，检出率较 2017 年均有所上升，未发现万古霉素、利奈唑胺和替考拉宁不敏感的葡萄球菌。大肠埃希菌、肺炎克雷伯菌和铜绿假单胞菌分别为 1402 株(24.4%)、1126 株(19.6%)和 1060 株(18.5%)，为革兰阴性菌分离率前 3 位。大肠埃希菌，肺炎克雷伯菌和奇异变形杆菌的 ESBLs 检出率分别为 58.9%，21.6%和 55.4%，产 ESBLs 株对测试药物的耐药率均比非产 ESBLs 株高。大肠埃希菌对三代头孢菌素中的头孢噻肟和头孢曲松的耐药率分别为 63.7%和 65.2%；肺炎克雷伯菌对三代头孢菌素中的头孢噻肟和头孢曲松的耐药率分别为 45%和 46.5%，较大肠埃希菌稍低。肠杆菌科细菌对亚胺培南和美罗培南的耐药率为 10.5%和 10.2%，虽仍是很敏感，但较 2017 年的 8.5%和 8.2%有所升高。鲍曼不动杆菌对亚胺培南和美罗培南的耐药率为 45.9%和 46.5%。与 2017 年耐药数据相比，铜绿假单胞菌中广泛耐药株的检出率有所上升。
结论 我院临床分离菌的耐药性仍呈增长趋势，应加强医院感染防控措施和抗菌药物临床应用管理措施，继续做好细菌耐药性监测工作。

PU-3241

分离胶离心法结合 MALDI-TOF MS 直接鉴定阳性血培养物的研究

卢赞
昆明市第一人民医院

目的 评价分离胶离心法结合 MALDI-TOF MS 直接鉴定阳性血培养物的结果符合性。
方法 对 204 份阳性血培养物分别用传统培养法和离心处理后 MALDI-TOF MS 直接鉴定法检测，以传统法结果为标准，观察直接法结果的符合性。
结果 204 份阳性血培养物经传统法检测包括 189 份单一微生物生长瓶、10 份复数菌生长瓶及 5 份假阳性瓶，共检出微生物 41 种，鉴定分值均数为 2.299。分离胶离心法结合 MALDI-TOF MS 直接检测，199 份给出了鉴定结果，5 份无结果。其中种符合占 68.6%，鉴定分值中位数 2.054；属符合占 6.4%，分值中位数 1.588；染色符合占 7.8%，分值中位数 1.295；完全不符合占 14.7%，分值中位数 1.182；无结果占 2.5%。染色及以上符合结果鉴定分值均数 1.916，与培养后鉴定得分均值差异有统计学意义（P<0.05）。结果符合性分布与培养瓶类型无关（P>0.05），阴性菌与阳性菌之间差异无统计学意义（P>0.05），微生物类型总体间差异有统计学意义（P<0.05）。
结论 分离胶离心法结合 MALDI-TOF MS 直接鉴定阳性血培养物与传统培养法结果有较好的符合性，实验室建立标准的操作和结果评价程序并结合培养液涂片结果，该方法可为临床血流感染的早期精准治疗带来帮助。

PU-3242

感染科 312 例血流感染患者病原菌分布及耐药性分析

金菲
江苏省人民医院（南京医科大学第一附属医院）

目的 探讨感染科血流感染患者病原菌分布及其药物敏感性，指导临床合理使用抗生素。
方法 回顾性分析南京医科大学第一附属医院感染科 312 例血流感染患者临床资料、实验室指标（白细胞计数、中性粒细胞百分比、C-反应蛋白、降钙素原）及血培养结果。
结果 2014 年-2018 年感染科患者共送检血培养标本 6370 份，同一患者相同菌株只分析第一株菌，共分离病原菌 312 株，血培养阳性率为 4.90%。312 株病原菌中革兰阴性菌 194 株，占 62.2%；革兰阳性菌 109 株，占 34.9%；真菌 9 株，占 2.9%。病原菌分离前五位分别为大肠埃希菌（77 株，24.7%）、肺炎克雷伯菌（46 株，14.7%）、链球菌（43 株，13.8%）、布鲁氏菌（35 株，11.2%）、金黄色葡萄球菌（28 株，9.0%）。G-菌血流感染患者血清 PCT 水平高于 G+菌患者，差异有统计学意义（P=0.028）。大肠埃希菌和肺炎克雷伯菌的抗菌药物敏感性较好，二者对亚胺培南、美罗培南的敏感性均在 95%以上。分离到耐甲氧西林的金黄色葡萄球菌（MRSA）12 株，占 42.86%（12/28），未发现对万古霉素和利奈唑胺耐药的链球菌和金黄色葡萄球菌药物。
结论 感染科血流感染患者以 G-菌为主，但布鲁菌和链球菌分离率高，G-菌感染患者血清 PCT 水平高于 G+菌患者。感染科发热血流感染患者总体耐药率不高。

PU-3243

MALDI-TOF-MS 快速鉴别 MRSA 和 MSSA 的临床研究

白秀伟[1]、曾春回[2]
1. 北京华信医院（清华大学第一附属医院）
2. 河北北方学院

目的 探讨基质辅助激光解吸/电离飞行时间质谱仪（MALDI-TOF-MS）快速鉴别甲氧西林耐药金黄色葡萄球菌（MRSA）及甲氧西林敏感的金黄色葡萄球菌（MSSA）的可行性，为临床提供一种快速简便的方法，方便指导临床用药。
方法 用 MALDI-TOF-MS 鉴定的 48 株金黄色葡萄球菌，经 Kirby-Bauer 法确认为 MRSA 和 MSSA 后，从质谱仪上查看各个菌株的特征峰，然后利用 SPSS 软件对特征峰进行聚类分析，聚类分析后随机选取 59 株金黄色葡萄球菌对其进行外部验证，验证其符合率。
结果 经 Kirby-Bauer 法确证经质谱仪鉴定为金黄色葡萄球菌的 48 株菌株，其中 16 株是 MSSA，32 株是 MRSA，48 株菌株的特征峰经过 SPSS 软件聚类分析后，聚类为 2 类，能够将 MRSA 和 MSSA 区分开来，外部验证的 59 株金黄色葡萄球菌，经 Kirby-Bauer 法确证为 37 株为 MRSA，22 株为 MSSA，与仪器鉴别结果符合率为 MRSA 72.97%（27/37），MSSA 68.18%（15/22）。
结论 MALDI—TOF—MS 能够快速鉴别 MRSA 和 MSSA，具有操作简便、耗时短等优点。

PU-3244

白念珠菌和非白念珠菌血症的流行病学、危险因素与预后

金菲
江苏省人民医院（南京医科大学第一附属医院）

目的 本研究旨在探讨白念珠菌和非白念珠菌血症的流行病学、危险因素和预后。

方法 回顾分析南京医科大学第一附属医院 2016 年 1 月-2020 年 12 月 171 例念珠菌血症患者临床资料。通过卡方检验和二元 Logistic 回归分析对白念组和非白念组血流感染患者的临床危险因素进行比较，确定与念珠菌感染有关的危险因素，且进一步分析与念珠菌血症预后相关的独立危险因素。
结果 光滑念珠菌是最常见的分离菌（28.65%），其次为白念珠菌（28.07%）、热带念珠菌（21.64%）、近平滑念珠菌（18.13%）和其他念珠菌（3.51%），非白念珠菌占 71.93%（123/171）。多因素分析显示机械通气（OR 2.588; 95%CI:1.119-5.987; P=0.026）是白念珠菌血症的独立危险因素。所有念珠菌对两性霉素 B 均敏感，白念珠菌、光滑念珠菌和近平滑念珠菌对氟康唑的敏感率分别为 91.8%、91.7%和 90.3%，热带念珠菌的耐药性相对较高。171 例念珠菌血症患者中，有 48 例死亡，病死率为 28.07%。多因素分析显示年龄（OR 1.027; 95%CI:1.004-1.050; P=0.022）、深静脉置管（OR 2.489; 95%CI:1.033-5.996; P=0.042）和入住 ICU（OR 2.921; 95%CI:1.020-8.362; P=0.046）是与死亡率相关的独立危险因素。
结论 我院念珠菌血症的念珠菌分布与其他医院存在差异。除热带念珠菌外，绝大多数念珠菌对抗真菌药物敏感性较高，为经验抗真菌药物的选择提供有用的信息。

PU-3245

替加环素耐药外排泵 tmexCD-toprJ 在不同物种中多种传播机制的探究

孙世俊、王启、靳龙阳、王辉
北京大学人民医院

目的 探究不同菌株替加环素耐药菌株中的耐药机制，以及不同物种中 tmexCD-toprJ 的传播结构，以及流行趋势。
方法 2018 年至 2019 年收集全国 26 个省市多家教学医院内收集碳青霉烯耐药的肠杆菌科细菌，从中分离替加环素耐药肠杆菌科细菌。通过 PCR 筛选其中 tmecXD-oprJ 阳性菌株，提取完整基因组 DNA，高通量短读长测序通过 Illumina 平台进行，同时利用 ONT 平台对长读长进行测序，测序结果利用 unicycler 混合二三代数据进行组装。耐药基因通过 resfinder 进行确认。对比下载数据库中数据，建立进化树。利用 BLAST 对发现的 tmexCD-oprJ 外排泵进行分型，并利用吉普森组装构建表达质粒，并在大肠杆菌 DH5α 中验证其功能。
结果 共在全国四个省市病人身上分离到 5 株不同分型的 tmexCD-oprJ 阳性菌株，其中在 kpn 和 kox 中新分离出两种 tmexCD1-toprJ1 和 tmexCD2-toprJ2 的新的亚型，实验证明新的亚型同样可以介导大肠杆菌对替加环素药品水平有四到八倍提升；另外有两株与 blaNDM 共存于同一质粒上，通过对比其遗传背景鉴定出主要的两条不同的耐药传播途径，并通过对于数据库对其不同分型的耐药传播进行分析。
讨论 替加环素耐药基因的传播，大大降低了临床重症感染患者可选择的抗生素用药范围。质粒介导的替加环素耐药外排泵 tmexCD-toprJ 自首次发现至今已被广泛报道，其耐药性的传播机制也多有不同，探究其耐药机制的传播途径对于耐药防控意义深远。

PU-3246

我院常见念珠菌快速鉴定与药敏分析

任圣洁
同济大学附属杨浦医院

目的 了解临床念珠菌的菌种分布及耐药谱，为合理使用抗真菌药物提供依据。
方法 对 2015 年~2019 年临床标本中分离出的念珠菌采用真菌快速培养鉴定药敏试剂进行鉴定和测定菌株对 10 种抗真菌药物的敏感性。

结果 共分离出 12848 株念珠菌，最常见的菌种依次为白色念珠菌占 67.62%，光滑念珠菌占 19.95%，热带念珠菌占 10.26%， 克柔念珠菌占 1.66%。以痰液最多，占全部标本 69.87%，其次是尿液占 14.94%。在痰液中主要是白色念珠菌（72.32%），其次是光滑念珠菌（18.53%），而尿标本主要是白色念珠菌（59.38%），其次是热带念珠菌（18.59%）和光滑念珠菌（17.86%）。粪便和血液标本是以白色念珠菌和光滑念珠菌为主。药敏结果显示两性霉素 B、制霉菌素和 5-氟胞嘧啶对四种常见念珠菌抗菌活性好，耐药率均<4%(除克柔念珠菌)；三唑类对四种常见念珠菌平均耐药率>35%；咪唑类（除酮康唑外）对四种常见念珠菌平均耐药率>53%。白色念珠菌对大多数的抗真菌药物的耐药率要明显低于非白念珠菌 P<0.05）。痰液中的白色念珠菌对伊曲康唑和咪唑类（益康唑、咪康唑、克霉唑）耐药率和热带念珠菌对三唑类耐药率均明显低于粪便标本（P<0.05），克柔念珠菌对制霉菌素、伏立康唑、伊曲康唑、酮康唑和克霉唑耐药率均明显低于尿标本（P<0.05）。

结论 本院临床分离的念珠菌以白色念珠菌为主，其次为热带念珠菌。非白念珠菌对大多数的抗真菌药物的耐药率要明显高于白色念珠菌，不同来源的同种念珠菌对常用抗真菌药耐药性也有不同，所以实验室应加强对真菌菌种的鉴定和耐药性的持续监测。临床一旦发生真菌感染，应尽早监测真菌的耐药性，按抗真菌药敏结果，合理使用抗真菌药物，减少医院感染、多重耐药和深部真菌感染的发生。

PU-3247

Cefazolin and Imipenem Enhance AmpC Expression and Resistance in NagZ-dependent manner in Enterobacter cloacae

Xianggui Yang[1]、Yuanxiu Zhong[2]、Fuying Wang[2]、Ying Xu[1]
1. the First Affliated Hospital of Chengdu Medical College
2. 成都医学院

Enterobacter cloacae (EC) is one of the most common opportunistic pathogens causing various infections in human, which is inherited resistant to the 1st- and 2nd- generation cephalosporins due to its inducible chromosomal AmpC β-lactamase (AmpC). However, whether β-lactams antibiotics enhance EC resistance remains unclear. In this study, we found that subinhibitory concentrations (SICs) of cefazolin (CFZ) and imipenem (IMP) can promote the expression of AmpC and enhance resistance to β - lactams through b-N- acetylglucosaminidase (NagZ) in EC clinical isolate. Our data indicated that AmpC was significantly up-regulated in EC in response to SICs of CFZ and IMP. In nagZ knockout EC (ΔnagZ EC), we found that the resistance to β - lactam antibiotics was attenuated and the effect of CFZ and IMP on induction of AmpC was completely abrogated, ectopic expression of NagZ can rescue the induction of CFZ and IMP on AmpC and enhance resistance in ΔnagZ EC model. More interestingly, CFZ and IMP could induce the expression of other target genes of AmpR (a global transcriptional factor that regulates hundreds of genes including ampC) in NagZ-dependent manner, which suggested that the promotion of AmpC by CFZ and IMP is mediated NagZ-AmpR pathway. Our data highlights that NagZ is the key factor for CFZ and IMP to induce AmpC expression and enhance resistance and that CFZ and IMP must be used carefully because they might aggravate the resistance of EC. At the same time, this study further improves the mechanism of resistance of EC.

PU-3248

Antimicrobial resistance of Acinetobacter baumannii isolated from the clinical laboratory of the First hospital of Jilin University from 2020 to 2021

Xufeng Ji、Chun Yang
The first hospital of Jilin University

ObjectiveThe main objective of this study is to investigate the antimicrobial resistance of Acinetobacter baumannii. To provide the theoretical guidance for the rational use of antimicrobial agents and the scientific basis for control the drug-resistant strains.
Methods1. The Acinetobacter baumannii were isolated from the clinical laboratory of the First hospital of Jilin University.
2. The resistance of Acinetobacter baumannii for 20 antimicrobial agents were determined using paper disk method and minimum inhibitory concentration（MIC）method, analyzed the drug-resistant spectrum. The results were evaluated based on Clinical and Laboratory Standards Institute (CLSI-M100-S29).WHONET-5.6 software was used to analyze the drug resistance data.
Results1. Most of 912 Acinetobacter baumannii strains were collected from abdominal fluid (14 strains), broncho-alveolar lavage (54 strains), bile (4 strains), blood (15 strains), ear (1 strains), sputum (765 strains), urine (17 strains), shunt fluid (7 strains), secretion (2 strains) during the one year.
2. The drug-resistant rates of the 912 isolated strains to meropenem and imipenem were 52.8% and 51.9% respectively. 912 strains were all resistant to cefazolin, cefotetan, cefuroxim. The rates of Acinetobacter baumannii resistant to cefatriaxone, cefepime, were 99.3% and 51% respectively. The rates of Acinetobacter baumannii resistant to levofloxacin and ciprofloxacin were 19.3% and 50.6% respectively. The rates of Acinetobacter baumannii resistant to piperacillin/tazobactam and amikacin were 54.8% and 36.4% respectively.
3. Nine hundred and twelve strains of Acinetobacter baumannii mainly from the surgical ward, 259 case from ICU, 2 case of infectious diseases department, 82 from neurology, 7 from pediatric respiratory medicine, 62 strains from department of respiration, 105 strains from neurosurgery, 40 strains from emergency department, 14 strains from oncology department, 21 strains from hepatobiliary pancreatic surgery, 10 strains from urinary surgery, 33 strains from gastrointestinal surgery, 9 strains from neonatal department, three strains from the outpatient department, three strains from trauma department of orthopedics, two strain from obstetrical department and only one strains from otolaryngology.
Conclusions1. Nine hundred and twelve strains of Acinetobacter baumannii were screened by analyzing the drug resistance spectrum in the research, which has different resistant rates to different antimicrobial agents.
2. Most of the 912 Acinetobacter baumannii were isolated from sputum. And the ICU is the department that isolated most numbers of Acinetobacter baumannii. The rate of Acinetobacter baumannii resistant to levofloxacin is lowest. Monitoring of the antimicrobial resistance of Acinetobacter baumannii should be strengthened. The change of the antimicrobial resistance should be investigated in order to direct rational drug usage in clinic.

PU-3249

Serum ceramide concentrations are associated with depression in patients after ischemic stroke-A two-center case-controlled study

Hong Lv
首都医科大学附属北京天坛医院

Background and aims: The present study aims to correlate the severity of post-stroke depression (PSD) and serumceramide concentration.
Materials and Methods In this two-center case-control study, we prospectively collected clinical and demographical information from age and gender-matched 51 PSD patients, 56 non-post-stroke depression (Non-PSD)patients, and 39 patients with major depression (MD) to perform the suitable biochemical analysis to bring acorrelation in causing depression in patients soon after the stroke. The ROC curve method was used to evaluateceramide's diagnostic effcacy in all three groups of patients. A follow-up analysis was also conducted based onPSD severity to associate serum ceramide levels and neuropsychiatric symptoms. The severity of the patient'sdepressive symptoms was assessed by using the self-rating depression scale (SDS).
Results In comparison between PSD and MD patients, three serum ceramide species were found to be signifcantly different. Compared with Non-PSD patients, PSD patients had signifcantly higher levels of all the fourserum ceramides, and increasing levels ofC16:0, C18:0(VS MD) and C16: 0(VS Non-PSD) serve as a diagnostictool and an independent risk factor in all three categories of patients. Moreover, the follow-up analysis resultsshowed that, as the treatment progressed, the differences in the 3 serum ceramide species were statisticallysignifcant.
Conclusion There was a stage-specifc association between serum ceramides and PSD, and the potential pathophysiological mechanism has to be investigated in future research.

PU-3250

核心基因多位点序列分型对鲍曼不动杆菌爆发的流行病调查

孙晓军
山东第一医科大学第一附属医院（山东省千佛山医院）

目的 核心基因多位点序列分型技术对 ICU 耐碳青霉烯鲍曼不动杆菌爆发进行分子流行病学调查。
方法 2016.12-2017.3 从 7 名 ICU 患者中分离出 13 个 CRAB 菌株，rep-PCR 进行基因分型，全基因组测序数据（GWS）进行多位点序列分型（MLST）结果的计算机分析以鉴定抗性基因和核心基因组 MLST 分析。
结果 所有分离物均存在碳青霉烯抗性谱并携带 blaOXA-23 碳青霉烯酶基因，rep-PCR 和 MLST 分型显示这些分离株为一种基因型；cgMLST 方法使用 2390 个基因靶标表征等位基因谱，证明了该基因型有两种表现型。
结论 cgMLST 基础上的 WGS 分析与传统的分类方法相比具有较高的区分性，更适合于迅速的流行病学调查。

PU-3251

免疫功能正常青少年肺隐球菌病的案例

杨芳、刘文恩
中南大学湘雅医院

目的 隐球菌的感染在临床并不罕见，但免疫功能正常青少年出现肺部隐球菌病极其少见。本文报道一例免疫功能正常青少年肺隐球菌病的病例报道。
方法 患者江某，男，18 岁，学生。因“发热、左侧胸痛近 2 月，咳嗽 43 天，咯血 8 小时”入院。
结果 患者 2 个月前受凉后出现发热，最高体温 38.5℃，发热以夜间为主，胸痛，左侧胸部持续性胀痛，深呼吸时明显加重，疼痛不向他处放射。无畏寒、寒战，无头痛、鼻塞、流涕、咽痛、咳嗽、咳痰等症状，在当地卫生院就诊，诊断不详，予抗感染（具体药物不详）治疗 8 天左右胸痛明显减轻后出院。出院后患者仍有低热，出院 2 天后开始患者出现阵发性咳嗽，偶有咳痰，痰液为白色泡沫样，量少，仍有夜间低热，再次至当地卫生院予抗感染治疗 6 天后无好转，并出现咯血，患者遂来我院就诊，门诊拟诊“左下肺感染？”收入呼吸内科。血常规：白细胞 18.4×109/L，血红蛋白 142g/L，血小板 407×109/L，中性粒细胞百分比 80.7%；肺部 CT 示：左肺下叶前内基底段实变，感染性病变可能性大，肿瘤性病变待排除。入院后痰液涂片抗酸染色镜下检查阴性，痰培养示正常咽喉杂菌。考虑患者肺部病变为感染可能性大，先予莫西沙星 0.4g qd 静滴抗感染治疗。入院第 2 天在 CT 引导下行肺穿刺活检，送肺组织标本做病原培养培养第 4 天初步报告见隐球菌，检验科将初步结果电话报告给临床，并建议抽血查隐球菌抗原，抽血查隐球菌抗原结果为阳性。予氟康唑经验性抗真菌治疗。肺组织标本送检第 7 天肺组织细菌培养鉴定结果为新型隐球菌，氟康唑敏感，此时患者体温恢复正常 2 天，要求回当地医院继续治疗，嘱继续使用氟康唑氯化钠注射液 0.4g 静滴 qd。1 个月后门诊复查肺部 CT，显示左肺下叶病灶有所减小，嘱患者继续用药。
根据患者血清隐球菌抗原检测阳性、肺组织培养结果及治疗效果，患者左下肺病变确诊为肺隐球菌病。
结论 本案例患者为免疫功能正常的青少年男性，无基础疾病，无明显真菌感染的高危因素，因此诊断疾病时未考虑到肺隐球菌病，因而未及时进行血清隐球菌荚膜抗原检测，实验室提示为隐球菌后抽血检测隐球菌荚膜抗原阳性，在得到病原学证据后积极采取持续强有力的抗真菌治疗，患者症状明显好转，足疗程治疗后患者痊愈。因隐球菌生长缓慢，痰培养时常被口咽正常杂菌覆盖，若能早日行血清学检查检测隐球菌抗原，对其早期诊断肺隐球菌病具有重要作用。提示临床合理选用辅助检查手段，对疾病的及时诊治具有重要的价值。

PU-3252

Rhodosporidiobolus fluvialis 作为一个新发病原体引发真菌血症

黄晶晶、徐英春
中国医学科学院北京协和医院

目的 报道一例目前尚未在人类临床样本中分离到的 *Rhodosporidiobolus fluvialis* 所致真菌血症。
方法 作为中国医院侵袭性真菌监测网（CHIF-NET）项目的一部分，在此报道国际首例由 R. fluvialis 引起的真菌血症。患者出现真菌血症前接受了中心静脉置管，并处于免疫低下状态。入院第 98 天，患者因发热、寒战抽取外周血进行培养，同时 C 反应蛋白检测值为 120.7mg/L。对血培养分离株进行基质辅助的激光解吸/电离飞行时间质谱（MALDI-TOF MS）和 rDNA 内部转录间隔区（ITS）测序鉴定，采用 Sensititre YeastOne YO10 进行提外抗真菌药物敏感性检测。
结果 在念珠菌显色培养基上，*R. fluvialis* 分离株呈珊瑚色至橙红色，比沙堡弱培养基上的菌落颜色略深。API 20C AUX 将该分离株错误鉴定为黏红酵母（*Rhodotorula glutinis*）。在两个 MALDI-

TOF MS 鉴定系统中，Vitek MS 和 Autobio MS 无法将其鉴定至属水平。该分离株的 rDNA ITS 区域和 D1 / D2 结构域序列与 *R. fluviali* 参考菌株 CBS 6568T 相似性≥99.18％。体外药敏显示，棘白菌素类药物对其无体外活性，氟康唑 MIC 值≥256 mg/L。菌株可在 37℃下生长，并在 35∽37℃孵育温度下形成假菌丝。

结论 本研究报道了 *R. fluvialis* 这一新兴病原体在接受了中心静脉置管的患者中引发的感染，并且其对棘白菌素类药物和氟康唑的低敏感性应值得注意。

PU-3253

全球范围内碳青霉烯耐药鲍曼不动杆菌流行克隆 ST208 的起源、系统发育与时空传播

高悦、李荷楠、王辉
北京大学人民医院

目的 研究全球范围分布的碳青霉烯耐药鲍曼不动杆菌（CRAB）流行克隆 ST208 的起源、地理分布与时空传播轨迹。

方法 收集 2005 年至 2018 年中国教学医院住院患者的 CRAB ST208 菌株，使用 Pacbio 平台测序，从 NCBI GenBank 非冗余数据库和全基因组测序数据库中获得了完整的鲍曼不动杆菌 ST208 基因组，并在 NCBI BioSample 数据库检索了相关的临床原始数据进行比较。使用 ResFinder 数据库鉴定抗生素耐药基因，Kaptive 数据库鉴定血清分型，VFDB 数据库鉴定毒力基因。分别使用 Prokka、Roary、Raxml 等生信分析软件进行基因组的注释、提取核心基因组以及建立系统发育树。使用 Beast2 软件分析 CRAB 流行克隆 ST208 的起源时间与进化速率，以研究全球范围分布的 CRAB 流行克隆 ST208 起源、地理分布与时空传播轨迹。

结果 共纳入鲍曼不动杆菌 ST208 基因组 239 个（本研究新测序 45 个, NCBI 数据库 194 个），包括中国（n = 124）、美国（n = 62）、加拿大（n = 9）、泰国（n = 7）、韩国（n = 6）、希腊（n = 4）、印度（n = 3）、巴基斯坦（n = 3）、西班牙（n = 3）、澳大利亚（n = 2）、丹麦（n = 2）、日本（n = 2）、墨西哥（n = 2）、德国（n = 1）、伊朗（n = 1）、瑞士（n = 1）。CRAB 流行克隆 ST208 地域分布广泛，内部发生 KL 重组。CRAB ST208 Bayesian 推测起源时间为 1976 年，进化速率为 6.4x10-4 substitutions per nucleotide site per year，且随时间推移，耐药基因携带有增加趋势，碳青霉烯酶 OXA 有地域分布差异。CRAB ST208 内部毒力基因差异与分离部位、血清分型无明显关联。中国 ST208 分离株的质粒多携带 OXA-23，且存在 OXA-23 在质粒和染色体上同时定位的菌株。

结论 全球范围内 CRAB 流行克隆 ST208 的起源时间为 1976 年，存在耐药基因的洲际传播现象，且中国 CRAB ST208 分离株的质粒多携带 OXA-23，因此应予以更多关注和监测。

PU-3254

Phenotypic and Genotypic Characterization of Carbapenem-resistant Enterobacter cloacae Complex in 11 cities of China

Yanning Ma
Chinese PLA General Hospital

Background Carbapenemase-resistant Enterobacter cloacae complex (CREL) were rapidly increasing in many regions of China. But the molecular epidemiology and clonal relateness of

CREL was not clarify. Especially with the development of bioinformatics, the research would be convenient.
Methods Using clinical CREL isolates detected in 12 hospitals of China over 4 years. Genome sequencing was performed with a paired-end library with an average insert size of 350bp on a HiSeq X Ten sequencer. The tree file was visualized by iTOL. Molecular epidemiological analyses were conducted with multilocus sequence type (MLST).
Results Among the 87 non-duplicate CREL isolates, 57 strains were identified as carbapenemase producers: 35 isolates carried blaNDM−1; 6 isolates possessed blaNDM-5 and blaKPC-2, respectively; 5 isolates contained blaIMP-26; 4 isolates had blaIMP-4, 2 isolates were blaOXA-48 positive. Besides, there were also two isolates coexisting of blaNDM-1 and blaKPC-2 simultaneously. Totally the MBLs genes accounted for 57.47% and existed in plasmids. Among them, the blaNDM-1 gene was mainly carried in IncX3 plasmid, secondly was the IncHI2/IncHI2A plasmid. The blaNDM-5 was mostly carried in IncX3 plasmid. The blaIMP and KPC-2 gene were all in IncHI2/IncHI2A plasmid. There were still 30 isolates without the carbapenemase resistance genes were 74.71% and 98.85% (86/87) positive for ESBLs and AmpC genes, respectively. In addition to β-lactam resistance, the CREL isolates also harbored a variety of multi-class antibiotic resistance genes. MLST showed subtype diversity. Isolates were distributed across 43 different sequence types (STs). The most prevalent was ST78, followed by ST93, ST171. The phylogenetic tree revealed six major clades. Different clades had different sequence types. Despite the ST types were sporadicly in geographically distribution, there might be a local outbreak in some districts, like the ST1001 in Chengdu and ST528 and ST182 in Beijing.
Conclusions Carbapenemase NDM-1 were the primary mechanisms responsible for CREL. It highlighted an urgent need to develop effective measures to monitor and control the further spread of it in China. Further understanding of the molecular epidemiology of CREL and investigation of carbapenemase gene-carrying plasmids, which was the most important resistance mechanism of transmission, are needed to for steps to prevent their further dissemination.

PU-3255

首例由 Candida sorboxylosa 引发的深部皮肤感染

黄晶晶[1]、胡仁静[2]、徐英春[1]
1. 中国医学科学院北京协和医院
2. 南京医科大学附属无锡第二医院

目的 报道一例由 Candida sorboxylosa 引发的深部皮肤感染病例。
方法 一名来自南京医科大学附属无锡第二医院的 51 岁女性患者，于 2019 年 11 月因小腿 10cm * 5cm 大小的皮肤缺损入院，在外科医生切开皮肤表面采集的深部肌肉组织拭子中培养出酵母样真菌。该患者因患有类风湿关节炎和高血压，接受泼尼松治疗长达 25 年，长期处于免疫低下状态。 临床医生根据体外抗真菌药敏试验结果，采用伊曲康唑治疗。
结果 在念珠菌显色培养基上，该菌株呈湿润、粉色菌落。MALSI-TOF MS 鉴定显示为：无鉴定结果；rDNA D1/D2 测序获得的序列与 NCBI 数据库 C. sorboxylosa 序列相似度≥98.95%。使用 YeastOne YO10TM 微量肉汤稀释法进行体外药物敏感性检测发现，其对氟康唑、伏立康唑、伊曲康唑、泊沙康唑的最小抑菌浓度（minimal inhibitory concentrations，MICs）分别为 16, 0.12, 0.25 and 0.12 μg/mL，对棘白菌素类药物和两性霉素 B 敏感性高（MIC 分别为≤0.03 和＜0.12 μg/mL），对 5-氟胞嘧啶的 MIC 值为 4 μg/mL。
结论 C. sorboxylosa 作为一机会致病性真菌病原体，其下降的敏感性需引起关注。

PU-3256

Molecular Characterization of Carbapenem-resistant clinical Citrobacter spp. isolates in China: a multicenter study

Liyan Ye
Center for Clinical Laboratory Medicine, Chinese PLA General Hospital

Background Carbapenem-resistant Citrobacter spp. (CRC) are increasingly recognized as healthcare-associated pathogens but systematic syudies on the clinical epidemiology, genetic diversity, and resistant mechanisms of CRC are relative limited. Herein, we first individually analyed the Chinese nationwide multicenter study about CRC in China.
Methods The prevalence of resistance rates and genes, STs and plasmid replicon types was investigated of CRC strains collected from five provinces between Oct. 2014 and Dec. 2017. All the isolates were identified by MALDI-TOF MS and rMLST. Antimicrobial susceptibility test was determined by the broth microdilution method. Molecular characterization research was done with genome sequencing, plasmidFinder, ResFinder, SNPs and phylogenetic analysis.
Results From the CRE monitoring work, 31 CRC isolates were received from 31 unique patients at 5 distributed hospitals in different provinces. Obvious differences existed in the geographical distribution of CRC. The identification of Citrobacter spp. by MALDI-TOF MS and rMLST were consistent at the genus level, but there were still some differences in species-level identification. There were highly resistant to the most common antimicrobial agents, except amikacin (12.12%), colistin (3.03%), and tigecycline (0%). KPC-2(25.81), NDM (41.94%), and IMP (19.35%) are the most frequent carbapenemases of CRC in China. One isolate co-harbored blaIMP-4 plus blaVIM-1 simultaneously, but four isolates did not detect any known carbapenemase. ST85 (12.90%) and ST116(12.90%) were the predominant ST and we detected 5 novel STs (ST551, ST552, ST553, ST554, ST555). Phylogenetic major lineages are characterized by high levels of core genome diversity and polyclonal spread of CRC across several Chinese geographical areas.
Conclusions The spread of carbapenem-hydrolyzing Citrobacter spp. has emerged in some regional hospitals in China. The small-scale clonal and polyclonal spread of CRC across hospitals in different geographical areas. Therefore, the extremely high antimicrobial resistance rates and the emergence of CRC represented a significant health threat in terms of both disease and treatment.

PU-3257

Xpert 联合液基夹层杯检测对结核病的诊断价值

曾玲
湖南省人民医院

目的 探讨 Xpert 联合液基夹层杯检测对结核病的临床诊断价值，区分结核杆菌和非结核杆菌所引起的肺部感染，为临床治疗提供理论依据。
方法 回顾性分析湖南省人民医院 2020 年 7 月-2020 年 12 月 300 例同时经过 Xpert 检测和液基夹层杯抗酸染色镜检的疑似结核病患者的临床资料，将研究对象分为三组：第一组为 Xpert 联合液基夹层杯检测组；第二组为单独使用 Xpert 检测组；第三组为单独使用液基夹层杯检测组；分别统计三组检测的阳性检出率、灵敏度和特异度，比较 Xpert 联合液基夹层杯检测与临床诊断的一致性。
结果 300 例患者中 51 例为活动性结核病患者，249 例为非结核患者，Xpert 联合液基夹层杯检测的阳性检出率 17.67%（53/300）明显高于单独使用液基夹层杯检测的阳性检出率 6.67%（20/300），差异有统计学意义（$\chi 2=7.98$, $P<0.05$）。以临床诊断为金标准，Xpert 联合夹层杯法检测的敏感度、特异度分别为 100%、99.19%，Xpert 检测的敏感度、特异度分别为 100%、100%,

夹层杯法检测的敏感度、特异度分别为 35.29%、99.19%，Xpert 联合液基夹层杯检测与临床诊断在结核病的诊断上有较好的一致性（Kappa=0.976）。
结论 Xpert 联合液基夹层杯检测与临床诊断在结核病的诊断上具有高度的一致性，并且能够同时检测出结核分枝杆菌及是否对利福平耐药,区分结核病患者是否为结核分枝杆菌感染，对肺结核及肺外结核病的早期诊断具有重要意义,减少不必要的抗结核药物应用。

PU-3258

Xpert MTB/RIF 检测对结核的辅助诊断价值研究

杨芳[1]、陈宜[2]、刘文恩[1]
1. 中南大学湘雅医院
2. 中南大学湘雅医学院

目的 本项目为研究利福平耐药实时荧光定量核酸扩增技术（Xpert MTB/RIF）在抗酸染色阳性涂片标本中结核分枝杆菌的诊断价值。
方法 回顾性调查分析湘雅医院 2020 年 01 月 01 日至 2021 年 01 月 01 日疑似结核患者病史资料，对其进行 Xpert MTB/RIF 检测、自动涂片抗酸染色、结核感染 T 细胞检测及结核抗体检测等分析，比较各自检测情况、灵敏度、特异度、阴性预测值，分析方法间一致性情况。
结果 共分析进行 Xpert MTB/RIF 标本 2381 例，阳性率 19.2%。标本以肺泡灌洗液为主，送检科室多来源于呼吸内科。除呼吸道标本以外，Xpert MTB/RIF 在非呼吸道标本中阳性率较高，提示在肺外结核诊断中具有良好价值。在 1903 例同时进行 Xpert MTB/RIF 与自动涂片抗酸染色标本中，Xpert MTB/RIF 阳性率为 16.29%,高于涂片法（4.89%）。以涂片法为参考，Xpert MTB/RIF 灵敏度为 94.62%,特异度 87.73%。以培养或综合参考标准（composite reference standard, CRS）为确诊结核金标准，Xpert MTB/RIF 灵敏度为 44.50%，阴性预测值为 85.75%，高于涂片法（16.14%、81.05%）；特异度为 83.71%，具有较好表现。
结论 Xpert MTB/RIF 具有较高的灵敏度、特异度、阴性预测值，可用于结核分枝杆菌感染临床早期快速筛查。

PU-3259

昼夜节律失调对 BALB/c 小鼠肠道菌群的影响

李月红
襄阳市第一人民医院

目的 肠道微生物群参与胃肠道等多种生理过程，在调节宿主新陈代谢过程中起着核心作用。人类几乎所有的生理功能都与昼夜节律有关，昼夜节律紊乱会引发疾病。那么昼夜节律的变化对哺乳动物的肠道菌群会造成什么影响呢？本研究旨在观察昼夜节律的破坏对 BALB/c 小鼠肠道菌群的影响。
方法 1. 实验研究对象：
选取 4 窝同一天出生的健康 BALB/c 小鼠，每窝选出 4 只雄性小鼠，一共 16 只。在 SPF 级环境中，正常昼夜（日夜 12:12）节律下养至 8 周的大小。
2. 实验分组：
分别标记 4 窝小鼠分别为 B1、B2、B3、B4，每窝 4 只小鼠分别标上 BX-1、BX-2、BX-3、BX-4。其中 BX-1、BX-2 为正常光照节律（日夜 12:12）。BX-3、BX-4 为昼夜节律破坏组（每 2 天日夜 12:12 周期提前 6 小时）。先把这两组在不同环境下饲养 3 周。
3. 样本采集：
（1）原始组：在小鼠 6 周、7 周、8 周时采集小鼠新鲜粪便。
（2）对照组：在小鼠 9 周、10 周、11 周时采集 BX-1、BX-2 小鼠新鲜粪便。

（3）实验组：在小鼠 9 周、10 周、11 周时采集 BX-3、BX-4 小鼠新鲜粪便。
4. 各实验样本采集后的粪便培养
尽量安排在同一时间，采集新鲜无污染粪便，做粪便培养。分别选用 XLD、哥伦比亚血平板、巧克力平板培养。
5. 观察粪便培养 72 内小时菌群的生长情况，记录情况。
结果和结论 为了探究昼夜节律破坏对 BALB/c 小鼠肠道微环境的影响，本研究记录了每一次粪便培养的细菌结果，并进行细菌种类及细菌数量的统计。由于粪便培养接种时取样没有做到统一的定量，且粪便内细菌数量杂，所以，未能对菌群种类及数量进行系统规范的比较。结果，本研究对正常昼夜节律下和昼夜节律破坏的 BALB/c 小鼠肠道菌群的比较，未能得出有统计学意义的差异。
改进措施，若研究对象采用荷瘤小鼠，对其进行昼夜节律破坏肠道菌群的研究，有望能更深入更详细的了解昼夜节律对肠道菌群的影响。

PU-3260

605 例脓液培养回顾性分析

马金霞
江苏省人民医院（南京医科大学第一附属医院）

目的 为了提高脓液培养的阳性率，更好的为临床诊治提供依据，探讨培养时间与阳性率的关系。
方法 PDCA 循环法，对 605 例脓液培养标本进行回顾性分析，按培养时间分为 A 组和 B 组，A 组 5%CO2 孵育箱培养 1-3 天，B 组 5%CO2 孵育箱培养 4-6 天，分别对可疑菌落分纯、格兰染色涂片镜检，用 Viteck2 细菌鉴定仪进行鉴定，报告临床。
结果 A 组阳性菌 32 例，阳性率 5.29%， B 组阳性菌 71 例，阳性率 11.73%，B 组阳性率明显高于 A 组（P<0.05）。
结论 延长培养时间有助于提高脓液培养的阳性率，尤其是一些慢性生长菌、厌氧菌的检出率，为临床诊治从经验治疗转为目标治疗提供参考依据。

PU-3261

“相识布君”一例布鲁菌病例的诊疗思考

汪文玉
娄底市中心医院

主要内容：病史摘要、诊疗经过、微生物培养及鉴定、讨论、经验积累。
患者中年女性，49 岁，湖南省涟源市湄江镇跑马村人，农民。
主诉：腰痛伴右下肢胀痛麻木伴发热 2 月余。
经验积累：1.询问病史时要注意尽量做到详尽。2.感染性疾病的诊断思路要清晰。

PU-3262

宏基因组测序在中老年女性泌尿系感染病原体检测的临床价值

付晓蕊、康蓓佩、周磊、刘家云
空军军医大学第一附属医院

目的 分析比较临床泌尿系感染患者宏基因组测序与常规培养检测结果，探讨宏基因组测序在中老年女性泌尿系感染病原体检测的临床应用价值。

方法 将我院近半年来临床泌尿系感染患者尿液标本分别进行宏基因组测序与常规培养检测感染病原体，分析其检出病原情况并做一致性分析。并对检出病毒样本进行 PCR 方法验证做一致性分析。
结果 宏基因组测序 20 例（83.33%）患者的尿液标本中检测到具有病原学意义的病原体 49 株，其中细菌 19 株（38.76%）、病毒 19 株（38.76%）。 微生物病原体分离培养培养出病原 8 例，阳性率为 33.33%。两种检测方法的一致性为 50.00%（12/24）。其中两种方法检出肺炎克雷伯菌、粘质沙雷菌的一致性较高（kappa=1.000）。2 例出现脲原体培养阳性，宏基因组测序出现 8 例人型支原体和细小脲原体感染。高通量测序法与普通培养法检测时间相差不大，但高通量测序检测检出阳性率 83.33%，阳性率极高，且检测出常规尿培养无法培养出的病毒、支原体和部分细菌，其中以 JC 多瘤病毒检出株数最多。
结论 宏基因组测序能更快更准确更全面的检出病原体，尤其是中老年女性有症状的尿液感染患者在排除细菌感染的情况下，宏基因组测序可以作为帮助明确病原体感染的又一有力的检测技术。

PU-3263

利奈唑胺耐药粪肠球菌的耐药机制与感染危险因素调查

夏云
重庆医科大学附属第一医院

目的 研究利奈唑胺耐药粪肠球菌（linezolid-resistant Enterococcus faecalis, LRE）的耐药机制并分析其感染的临床特征及危险因素。
方法 收集 2014-2018 年从住院病人的无菌体液标本中分离的 LRE（MIC≥8mg/L），利用 PCR 及测序技术检测菌株中的 optrA 基因，cfr 基因，poxtA 基因，23S rRNA V 区突变以及核糖体蛋白 L3、L4 的突变。回顾性收集 LRE 感染病人的临床和实验室资料，通过病例对照研究对 LRE 感染的危险因素进行分析。
结果 5 年内共检出 85 株(4.5%) LRE, 耐药机制主要包括获得 optrA(98.9%)， 核糖体蛋白 L4 突变(36.5%)，L3 突变(4.7%)。85 例 LRE 病例组和 85 例利奈唑胺敏感粪肠球菌（linezolid-susceptible Enterococcus. faecalis, LSE）对照组被纳入本研究。多因素分析表明，从外院转入（OR，2.8; 95％CI，1.3-6.1; P = 0.007），高龄（≥60 岁）（OR，2.3; 95％CI，1.1-5.0; P = 0.034），恶性肿瘤（ OR，5.5; 95％CI，2.5-12.5; P < 0.000），气管内插管（OR，3.8; 95％CI，1.7-8.3; P = 0.001）、碳青霉烯类（OR，0.1; 95％CI， 0.0-0.5; P = 0.003）和氟喹诺酮类抗生素的使用（OR，4.3; 95％CI，1.4-13.7; P = 0.013）为 LRE 感染的危险因素。
结论 本研究中携带 optrA 是 LRE 的耐药主要机制，而从外院转入，高龄，恶性肿瘤，气管插管，碳青霉烯类及氟喹诺酮类抗生素的使用是 LRE 感染的独立危险因素。

PU-3264

重症急性胰腺炎合并感染耐碳青霉烯类肠杆菌科细菌的危险因素分析

夏吉荣
重庆医科大学附属第一医院

目的 分析重症急性胰腺炎（SAP）合并感染耐碳青霉烯类肠杆菌科细菌(CRE)的危险因素。
方法 选取本院 2011-2019 年期间收治的 105 例 SAP 患者为研究对象。按照是否合并感染 CRE，分为病例组（35 例）和对照组（70 例），结合患者感染的临床特点，采用单因素和多因素 Logistic 回归分析 SAP 合并感染 CRE 的危险因素。

结果 病例组的病原菌包括肺炎克雷伯菌（42.86%），大肠埃希菌（31.43%），阴沟肠杆菌（20.00%），弗氏柠檬酸杆菌（5.71%）。单因素分析结果显示，SAP 合并感染 CRE 与患者检出 CRE 前住院天数，合并胃肠、肾脏等基础疾病，以及进行气管切开、血液滤过、穿刺引流等治疗措施和并发休克、腹腔积液、腹腔感染、皮肤及软组织感染有关(P<0.05)。多因素分析结果显示，腹腔感染、皮肤及软组织感染和血液滤过是 SAP 合并感染 CRE 的独立危险因素(P<0.05)。
结论 SAP 合并感染 CRE 受多种危险因素的影响,临床治疗时应针对合并腹腔感染和皮肤及软组织感染患者采取积极预防治疗措施, 尽量减少血液滤过等侵入性操作，降低感染发生率。

PU-3265

南非诺卡菌致颅内感染病例分析并文献复习

王玉霞
山东第一医科大学第一附属医院（山东省千佛山医院）

目的 通过对南非诺卡菌所致的颅内感染及治疗并回顾性查阅文献复习该菌的流行病学情况及相关研究为临床对该菌的诊治提供理论支持。
方法 通过文献分析及常规药敏检测对南非菌进行研究分析。
结果 南非菌是一种在环境中存在的可导致人类患病的一种条件致病菌，该菌大量分布于土壤中可致患者肺部或皮肤及全身性播散感染。
结论 南非诺卡菌是一种条件致病菌，常导致人类肺部及全身性感染，且具有临床症状不典型等特点，结合既往文献对该菌的感染应当引起重视，可有效防止病情恶化。

PU-3266

侵袭性真菌感染的实验室诊断技术以及面临的挑战

郁谨菡
中国医学科学院北京协和医院

侵袭性真菌感染（Invasive fungal infection ,IFIs）具有较高的发病率和死亡率，尤其在免疫系统受损的患者中，如血液恶性肿瘤患者、造血干细胞移植（HSCT）患者、实体器官移植（SOT）患者，以及重症监护室（ICU）的危重症患者。早期诊断与真菌感染预后息息相关。传统的真菌病诊断方法包括临床样本直接镜检、培养和组织病理学诊断。一些新的诊断方法包括抗原检测、分子生物学和基于蛋白质组学的诊断方法也逐渐被用于真菌病的诊断。这些新的方法显著提高了疾病的早期诊断水平。本文旨在对目前侵袭性真菌感染的实验室诊断技术以及临床研究的问题和现状给予总结，拟从诊断方法学角度对真菌病诊断进行概述。

PU-3267

厌氧菌血流感染的病原菌分布及临床特征分析

朱以军、单小云、卜黎红、方寅飞、陈科强
金华市中心医院

目的 分析厌氧菌所致血流感染的病原菌分布及临床特征，为临床抗感染治疗提供依据。
方法 对 2018 年 5 月-2021 年 1 月金华市中心医院微生物实验室分离的厌氧菌应用 Maldi-Tof（质谱）技术进行鉴定，并对患者的临床特征、感染指标进行统计分析。
结果 共有 84 例患者检出厌氧菌，其中单一厌氧菌感染 82 例，2 株厌氧菌混合感染、3 株厌氧菌混合感染各 1 例。患者男女比例为 1.05（43：41），平均年龄 55.67 岁。菌种分布以革兰氏阴性杆

菌为主，占 61%，其他依次为革兰氏阳性杆菌（23%）、革兰氏阳性球菌（11%）、革兰氏阴性球菌（4%）。革兰氏阴性杆菌中最常见的菌种为拟杆菌和普雷沃菌。厌氧菌血流感染患者的科室分布以外科、妇产科为主，两者之和占所有患者的 61.9%。61.9%（52/84）患者有基础疾病（高血压、冠心病、糖尿病、恶性肿瘤）。57.1%（48/84）患者有手术史（以子宫切除或宫腔手术、肠道及阑尾手术为主）。厌氧菌血流感染患者中 CRP、WBC、PCT 的异常增高率分别为 84.5%、63.1%和 44%。

结论 厌氧菌血流感染以革兰氏阴性杆菌，尤其是拟杆菌为主；患有基础疾病且进行腹部手术的患者是厌氧菌血流感染的高危人群，临床对于该类患者应加强厌氧菌感染的预防和治疗工作。

PU-3268

肿瘤患者念珠菌感染的危险因素及药敏分析

辛娜、陈燕
福建省肿瘤医院

目的 分析福建省肿瘤医院肿瘤患者念珠菌感染的临床特点、流行病学特征及导致感染发生的可能危险因素，为临床念珠菌感染的预防和诊疗提供参考依据。

方法 回顾性分析我院 2015-2017 年恶性肿瘤患者念珠菌感染的 60 例临床资料，对可能的危险因素进行单因素及多因素 logistic 回归分析，估计各危险因素的 OR 值并统计病原菌药敏试验结果作进一步分析。

结果 在念珠菌感染中，根据单因素卡方检验分析结果显示，应用广谱抗生素、住院天数（≥14 天）、术后引流管留置数量（≥4 个）及天数（≥7 天）、放化疗和是侵入性操作是发生念珠菌感染的危险因素（P＜0.05）。Logistic 分析中，应用广谱抗生素、术后引流管留置天数（≥7 天）、住院天数（≥14 天）和侵入性操作的 OR 值分别为 11.177、1.925、15.154、4.613 均是发生感染的独立危险因素（P＜0.05）。白色念珠菌仍是最主要的病原菌（73%），常见真菌对常见抗真菌药物的敏感性由高到低依次为：两性霉素 B,5-氟胞嘧啶，伊曲康唑，伏立康唑，氟康唑。

结论 肿瘤患者住院治疗的周期长，放化疗，术后引流管插管数量多时间长，侵入性操作，术后广谱抗生素应用不规范等是引起念珠菌感染危险因素，临床应对存在危险因素的患者重点预防感染并掌握引起真菌感染病原菌的分布及耐药性，同时合理应用抗真菌药物以及同时注意及时送检合格标本。

PU-3269

探讨妇科恶性肿瘤患者局部感染及围手术期预防用药选择

辛娜、陈燕
福建省肿瘤医院

目的 分析我院妇科恶性肿瘤患者宫颈非厌氧菌感染菌种分布及耐药性，为多重耐药菌管理提供依据，探讨妇科恶性肿瘤患者围手术期预防用药的选择。

方法 回顾性分析 2016-2017 年 482 例妇科恶性肿瘤患者感染情况，并收集临床分离株，采用 K-B 纸片扩散法结合 VITEK II MIC 法进行病原菌药敏试验，按照美国临床实验室标准化委员会（CLSI）标准判断结果,采用 WHONET5.5 进行统计。

结果 宫颈部位发生感染率为 59.43%，其中大肠埃希菌检出率占居首位，构成比为 64.9%，其次是粪肠球菌、肺炎克雷伯菌、铜绿假单胞菌，前四位构成比合计高达 91.50%。大肠埃希菌和肺炎克雷伯菌对头孢唑啉、头孢呋辛、头孢曲松耐药率均高于 50%，两者产超广谱 β-内酰胺酶（ESBL）菌检出率分别为 62.47%和 41.94%。肠球菌对红霉素耐药率为 88.37%，对环丙沙星和左旋氧氟沙

星耐药率高于 30%，屎肠球菌对多数抗菌药物耐药率均保持较高水平，金黄色葡萄球菌耐药率相对较低，本实验室未检出耐碳青霉烯类的肠杆菌科细菌和耐万古霉素及利奈唑烷的阳性球菌。
结论 妇科恶性肿瘤患者宫颈感染率较高，且耐药现象严重，需加强多重耐药菌管理及防治。妇科恶性肿瘤患者宫颈感染主要病原菌为大肠埃希菌、粪肠球菌、肺炎克雷伯菌、铜绿假单胞菌，其对第一、二代头孢菌素、头孢曲松及头孢噻肟耐药率高，是否可应用其他抗菌药物作为妇科恶性肿瘤围手术期预防用药值得探讨。

PU-3270

降钙素原在非霍奇金淋巴瘤患者伴感染中的诊断价值

陈丽妹、陈燕
福建省肿瘤医院

目的 分析降钙素原(Procalcitonin，PCT)在非霍奇金淋巴瘤（NHL）患者中的影响因素、评估感染诊断价值，探讨其在临床中的合理应用。
方法 收集 2017 年 1 月 1 日至 2020 年 12 月 31 日入住福建省肿瘤医院 736 例 NHL 患者病例，根据临床特点划分感染组与非感染组，并对两组患者的血清 PCT 水平进行比较；分析 NHL 非感染组基础血清 PCT 水平与肿瘤病理分型、肿瘤分期、肿瘤进程以及中性粒细胞数等影响因素，并进行多因素及独立影响因素分析；分析 80 例 NHL 患者在基础状态、感染状态、有效抗感染治疗后的三个阶段血清 PCT 检测值；分析感染组血清 PCT 水平与感染部位和致病菌类型之间关系。
结果 血清 PCT 水平在组织病理学类型、IPI 评分（0-2 与 3-4 分）、肿瘤分期、肿瘤进展和性别等方面有明显差异（P<0.05），与患者年龄无显著性差异（P>0.05），肿瘤转移和肿瘤进展是非感染 NHL 患者血清 PCT 水平升高的独立影响因素。I-III 与 IV 期比较，血清 PCT 诊断肿瘤 IV 期转移的 ROC 曲线下面积为 0.6532，最佳临界值为 0.065ng/mL，敏感度、特异性分别为 61.1%、59.9%，阳性预测值、阴性预测值分别为 56.3%、64.6%。血清 PCT 诊断感染 ROC 曲线下面积为 0.7885，最佳临界值为 0.120ng/mL，敏感度、特异性分别为 54.9%、89%，阳性预测值、阴性预测值分别为 65.6%、83.8%；在 80 例 NHL 患者中，其基础值、抗感染有效治疗后与感染阶段比较，血清 PCT 水平统计学均具有显著差异（P<0.001）。血清 PCT 水平在血流感染和局部感染之间统计学有显著差异（P<0.001）；在血流感染中血清 PCT 水平在 G+和 G-之间统计学存在差异（P=0.012，<0.05），凝固酶阴性葡萄球菌（coagulase-negative staphylococcus，CNS）血流感染组与污染组的血清 PCT 水平差异具有统计学意义（P=0.007，<0.05），诊断 CNS 感染的 ROC 曲线下面积为 0.7143，最佳临界值为 0.165ng/mL，患者 PCT 诊断指标敏感度、特异性、阳性预测值、阴性预测值分别为 60%、85.71%、75%、60%。
结论 血清 PCT 水平有望作为诊断 NHL 患者是否转移的参考指标；可作为 NHL 伴感染诊断和抗感染治疗监测指标，诊断感染 cut-off 值为 0.12ng/mL；同时对区分 NHL 患者血流感染与局部感染、区分血流感染 G+与 G-菌、血浆 CNS 血流感染与污染具有一定价值；建议 NHL 患者入院进行常规 PCT 检查，建立患者的 PCT 基础值，作为后续感染诊断对照。

PU-3271

鼻咽癌患者鼻咽溃疡医院感染及临床分析

辛娜、陈燕
福建省肿瘤医院

目的 调查分析鼻咽癌患者放疗过程中鼻咽溃疡发生医院感染的菌种分布、耐药性及其临床特征，总结临床经验，为医院感染的预防工作提供理论依据。

方法 随机选取医院 184 例鼻咽癌发生鼻咽溃疡的住院患者作为研究对象，通过对临床资料的回顾性分析，研究患者医院感染的临床特征与病原菌类型。
结果 184 例鼻咽癌鼻咽溃疡的住院患者中有 64 例发生医院感染，感染率高达 37%，共检出病原体 90 株 ，以肺炎克雷伯菌（26.9），铜绿假单胞菌（19.2%），金黄色葡萄球菌（15.4）为主，真菌比例较低。鼻咽癌患者行放化疗过程中鼻咽腔黏膜发生发射性反应 ，形成鼻咽溃疡，易造成医院感染 。肿瘤分期晚，肿瘤体积大，激素类药物的应用并发感染的概率高。发生医院感染的危险因素包括住院时间、鼻咽黏膜完整性、体内白细胞水平、抗菌药物。
结论 为预防医院感染，鼻咽癌患者在行放化疗时，应积极关注其鼻咽黏膜完整性，预防性保护，及时送检分泌物标本，合理用药。

PU-3272

G 试验在肿瘤患者侵袭性念珠菌感染中的临床价值

辛娜、陈燕
福建省肿瘤医院

目的 讨论 G 试验在恶性肿瘤患者侵袭性念珠菌(invasive candidiasis, IC) 感染中的临床早期诊断价值及其临床特征之间的关系。
方法 选取福建省肿瘤医院 2019 年 1 月至 2020 年 12 月期间 64 例侵袭性念珠菌感染(invasive candidiasis, IC)患者、58 例念珠菌粘膜定植者，采用免疫比浊法分别检测两组 G 试验与 pct 浓度，分析 G 试验早期诊断恶性肿瘤患者 IC 的灵敏度、特异度、阳性预测值、阳性预测值等指标，以受试者工作特征（ROC）曲线评估 G 试验在恶性肿瘤患者 IC 早期诊断中的价值，并比较 G 试验阳性率与患者临床特征之间的关系，以及与 PCT 联合检测对肿瘤患者 IC 的诊断价值。结果用 SPSS 26.0 分析。
结果 IC 组 G 试验浓度与粘膜定植组相比显著增高；64 例 IC 组患者中，白色念珠菌比例高于非白色念珠菌；G 试验诊断总体灵敏度为 56.25%，特异度为 87.9%，阳性预测值为 85.71%，阴性预测值为 67.1%，阳性似然比为 4.648，阴性似然比为 0.498，约登指数为 0.44；G 试验 ROC 曲线下面积 AUC 为 0.628；IC 患者 G 试验阳性率与病原菌、粒细胞、体温、合并感染的情况、治疗方法等临床特征无关；G 试验与 PCT 联合检测的灵敏度及特异度（分别为 75%、65.31%）高于二者单独检测（P＜0.05），但阴阳预测值并未明显改变。
结论 G 试验对于恶性肿瘤患者 IC 的早期诊断具有一定临床可用性，能区分定植和感染，但其在恶性肿瘤的患者临床应用价值准确性一般，实验室应优化检测方法，临床连续检测 G 试验以减少假阳性和假阴性的发生，提高 IC 诊断的准备性。

PU-3273

Development of a Droplet Digital Polymerase Chain Reaction (ddPCR) for Sensitive detection of Pneumocystis jirovecii in the Respiratory Tract Specimans

Jie Yi
Peking Union Medical College Hospital

Background Pneumocystis jirovecii Pneumonia (PJP) is a life-threatening and opportunistic lung infection that affects the immunocompromised patients. As the Pneumocystis colonization may be linked to the development or transmission of disease, the detection of Pneumocystis in immunocompromised patiesnts has become particularly important. The low fungal biomass and the presence of PCR inhibitors limits the usefulness of quantitative PCR (qPCR) for accurate absolute quantification of Pneumocystis in specimens from the human

airway. Droplet digital PCR (ddPCR), however, presents an alternative methodology allowing higher sensitivity and accuracy, which can be used for early detection and subsequent monitoring of treatment of low-load pathogenic microorganisms. Here, we developed an in-house method with ddPCR in detecting Pneumocystis in the diseased airway from respiratory specimens, and evaluated its sensitivity compared to qPCR.
Methods 82 BALF from 82 suspected PJP patients were collected to detect Pneumocystis jirovecii DNA using both ddPCR and qPCR, and the inconsistent results were confirmed by mNGS(metagenomics next generation sequencing). 37 sputum from 16 PJP patients, as well as continuous respiratory tract specimens from 9 patients with PJP and treated with sulfonamides, were also collected to detect Pneumocystis jirovecii DNA using both ddPCR and qPCR.
Results In BALF, 93.90% (77/82) results of both two Methods were coincident but there were results from 5 specimens were inconsistent. The 5 specimens were positive using ddPCR while negative using qPCR, and confirmed to be positive by mNGS. Detection results of 78.37%(29/37) sputum were coincident, but there were results from 8 specimens were inconsistent, which were positive using ddPCR while negative using qPCR. Pneumocystis biomass of PJP patients have decreased after treatment according to qPCR, even to 0, but they were still canbe detected using ddPCR.
Conclusions DdPCR importantly demonstrates better sensitivity especially at low abundance compared to qPCR. Considering the importance of Pneumocystis in patients with immunologic deficiency, ddPCR represents a useful, viable and reliable alternative to qPCR in such patients.

PU-3274

Genomic and pathogenic insights into the diversification of colony morphology in closely Related Clinical Isolates of Acinetobacter baumannii

Hongwei Pan、enhua sun、yi zhang
Qilu Hospital of Shandong University

Objective Acinetobacter baumanniiis a gram-negative, nonmotile, aerobic coccobacillus that is commonly found in natural environment and susceptible to most antibiotics in the 1970s. However, A. baumanniiis a fast-evolving organism, which exhibits a remarkable ability to rapidly acquired resistance to a vast array of antimicrobials that led to multidrug resistance (MDR) strains. Multidrug resistance (MDR)A. baumanniihas become a particularly problematic nosocomial pathogen during the past decades.The strains are frequently found to cause infections in hospitalized patients and resulted in disease such as bacteremia, pneumonia, septicemia, urinary tract infections, wound sepsis, endocarditis and meningitis, which highly increases the mortality of the immune compromised hospitalized patients. Thus, the emergence and rapid spreading of MDR A. baumanniistrains has become a big and growing public health threat worldwide. The ability of MDR A. baumanniito form variant morphology colonies was frequently observed in clinical microbiology lab. However, little has been done to analyze the pathogenic or biological importance of this phenomenon.The phenotype and genome differences analysis could provide us better understanding of the relationship between genome evolution and phenotype diversification of the closely related strains in the same hospital environment.
Methods Three closely related clinical isolates of A. baumanniithat show different colony morphology were collected for the analysis. All three strains were isolated from the respiratory samples of patients admitted to ICU the intensive care unit within a 6-month interval. Strains were cultured and purified in Columbia blood agar at 37oC. The strain identification and antimicrobial susceptibility testing were carried out by Vitek 2 system (bioMérieux, Marcy l' Étoile, France). The pathogenic ability of the strains was analyzed by biofilm formation and cell adhesion assay.

Whole genome sequencing and comparisons of the three clinical isolates were carried out for the genetic evolution analysis.
Results Based on the colony morphology, the three isolates were designated A.b-WT, A.b-mu, M.A.b, respectively. A.b-WT forms white and raised colonies that are similar to that of the wild type strain. A.b-mu forms gray white and flat colonies that are quite different with the wild type strain, while M.A.b forms mucoviscous colonies that areassociated with viscous, sticky strings when lifted with a toothpick. Similar antibiotic resistance profiles of the three closely related strains were revealed by antimicrobial susceptibility analysis. Detailed phenotype characteristic show that the three strains had different biofilm formation and cell adhesions ability in vitro. In order to better understand the evolutionary processes that contribute to the three closely related strains diversification, genome sequencing was carried out.A. baumanniiA.b-WT was assembled into 68 contigs and approximately 3,914 kb long with 38.84% GC content. A.b-Mu was assembled into 103 contigs and approximately 4,000 kb with 38.95% GC content. M.A.b was assembled into 56 contigs and approximately 3,920 kb with 38.81% GC content. All the three sampled A. baumanniistains are classified into International clone II. A total of 24 putative antibiotic resistance related genes in A.b-WT genome, 31 putative antibiotic resistance related genes in A.b-Mu genome and 25 putative antibiotic resistance related genes in M.A.b genome were identified, while 67 putative virulence factors related genes in A.b-WT genome, 65 putative virulence factors related genes in A.b-Mu genome and 67 putative virulence factors related genes in M.A.b genome were identified. Further single-nucleotide polymorphisms (SNPs) analysis reveals genes that may responsible for the phenotype diversification of the strains.
Conclusion Overall, we analyzed the relationship between genome evolution and phenotype diversification of the closely related clinical strains. The results demonstrated the microscale genome modification between the closely related A. baumannii strains, which expanded our understanding of the evolutionary processes that contribute to strain diversification and pathogenic in the same hospital environments.

PU-3275

Evaluation of an in-house rapid diagnostic method for direct identification of different panel of organisms from positive blood culture broths using MALDI-TOF MS

Hongwei Pan、enhua Sun、yi Zhang
Qilu Hospital of Shandong University

Objective Matrix-assisted laserdesorption-ionisation time-of-flight mass spectrometry (MALDI-TOF MS) is a fast and accuracy method for bacteria identification, which offers the potential for micro-organisms identification directlyfrom positive blood culture broths within an hour. Recently, we published an easy and accurate in-house (IH) developed lysis-centrifugation-wash sample preparation method that can facilitate the direct identification of bacteria in positive blood cultures. In order to further evaluate the IH method, we compared the accuracy and practical performance of the IH method and the Sepsityper™ kit (Bruker Daltonics, Bremen, Germany) for micro-organisms identification directlyfrom positive blood culture broths by MALDI-TOF MS in this study.
Methods Blood cultures positive for gram-positive bacteria, gram-negative bacteria, yeast and anaerobic bacteria from 112 patients were employed for analysis using the IH method and Sepsityper™ kit.
Results We observed 92.86% concordance with traditional culture-dependent colony identification Methods for IH and 87.50% for Sepsityper™ kit. Little difference was observed in the identification of regular gram-negative (100% and 97.5%) bacteria. The IH method demonstrated better identification rate than Sepsityper™ kit for gram-positive bacteria (95% and 87.5%). For identification of yeast, the Sepsityper™ kit works better than IH method (94.74% and 84.21%). However, identification ability was greater for anaerobic bacteria when the IH method

was applied, as the identification rated was 100% for IH method and 33.33% for Sepsityper™ kit. In addition, IH method constantly takes less time than the Sepsityper™ kit for samples processing. Finally, the viability of the isolated organisms from blood cultures using the two Methods was compared. The IH sample preparation method does not affect the viability of the isolated organisms from blood cultures, while the Sepsityper™ kit killed most isolates. Thus, microbial samples obtained from IH method could be used for the following direct susceptibility testing, while samples obtained from Sepsityper™ kit were not applicable for susceptibility testing.
Conclusion Both systems allowed for more rapid determination, compared to the classical culturing Methods However, our IH method displayed higher accuracy and cost-effectiveness than the commercial kit.

PU-3276

肿瘤患者尿路感染病原菌分布及常见细菌的耐药性分析

王国婧、朱宇、冯莎娜、魏葆珺、崔巍
中国医学科学院肿瘤医院

目的 了解引起恶性肿瘤患者尿路感染的病原菌分布和常见菌株的药敏特点，为临床的早期治疗提供实验室依据。
方法 对中国医学科学院肿瘤医院 2015 年 1 月至 2017 年 5 月恶性肿瘤患者送检的尿液标本进行常规培养，并对分离的菌株进行鉴定和 MIC 法药敏试验。
结果 2403 例尿液标本中，共检出病原菌阳性 334 例（13.90%），其中革兰阴性杆菌 207 例（占 61.98%），革兰阳性球菌 73 例（占 21.85%），酵母样真菌 54 例（16.17%）。207 例革兰阴性杆菌中以大肠埃希菌（119 例，占 57.49%）、肺炎克雷伯菌（31 例，占 14.98%）和铜绿假单胞菌（16 例，7.73%）为主；73 例革兰阳性球菌中以粪肠球菌（33 例，占 45.2%）、屎肠球菌（24 例，占 32.88%）和表皮葡萄球菌（8 例，占 10.96%）为主；54 例酵母样真菌中，以白色念珠菌为主（37 例，68.52%）。药敏试验结果显示，革兰阴性杆菌中大肠埃希菌和肺炎克雷伯菌产超广谱 β-内酰胺酶（ESBLs）的检出率分别为 49.58%和 29.03%，对阿米卡星和亚胺培南保持较高的敏感率（均>90%）；革兰阳性球菌对万古霉素的敏感率为 100%。
结论 引起恶性肿瘤患者尿路感染的病原菌以大肠埃希菌、肠球菌和白色念珠菌为主，临床应根据药敏结果合理选用抗菌药物，减少耐药菌株的产生。

PU-3277

Xpert 难辨梭菌分子检测方法对难辨梭菌感染的诊断效能评价

白媛媛
山东第一医科大学附属省立医院

目的 目前迫切需要快速准确的分子诊断检测方法来诊断难辨梭菌感染(Clostridium difficile infection ,CDI)。我们评估了 Xpert 难辨梭菌分子检测方法（Xpert Clostridium difficile assay, Xpert CD）对 CDI 的诊断准确性并对之前的分析进行了数据更新。
方法 根据制定的入选标准全面检索 PubMed, EMBASE， Cochrane 数据库，中国知网及万方医学网。RevMan 5.2 软件实现诊断试验质量评价体系-2 对入选文献的质量评价。STATA 13.0 软件实现敏感度、特异度、阳性似然比、阴性似然比、诊断比值比及拟合诊断受试者曲线等指标。Meta 回归，亚组分析及斯皮尔曼相关系数评价异质性。稳健性分析评价合并数据的稳定性。
结果 总共 26 个研究纳入了本项研究，Xpert CD 诊断难辨梭菌的合并敏感性（95%可信区间）为 0.97（0.95-0.99）；合并特异性为 0.96（0.94-0.96）。诊断曲线下面积为 0.99（0.98-1.00）。研

究间存在显著异质性。Meta 回归和亚组分析显示，样本量、样本类型、种族类型、患病率可能是异质性的显著来源。敏感性分析显示数据有很好的稳定性。
结论 Xpert CD 对于诊断难辨梭菌感染是一种有用的诊断工具，灵敏度高，特异性高，由于它的快速和简单性，具有良好的可用性。

PU-3278

孕妇 B 链球菌的筛查及耐药情况分析

刘莹、张桂华
中国医科大学附属第一医院鞍山医院

目的 调查 431 例妊娠晚期孕妇Ｂ族链球菌感染情况，，对Ｂ族链球菌的耐药情况进行检测分析。
方法 选择 2018 年 1 月～2020 年 1 月在本院门诊产检的妊娠 35～37 周的孕妇 431 例，筛查孕妇Ｂ族链球菌感染情况，并进行药敏试验。
结果 2018 年 1 月～2020 年 1 月该院门诊及住院产妇共分离Ｂ族链球菌共 31 株。Ｂ族链球菌的药敏试验显示，妊娠晚期孕妇感染的Ｂ族链球菌对万古霉素、头孢曲松、头孢丙烯、庆大霉素、氨苄西林、、替考拉宁、呋喃妥因、利奈唑胺以及磷霉素敏感，耐药率均为 0；青霉素耐药率为 6.45％（2／31），左氧氟沙星 35.48％（11／31），阿奇霉素和克林霉素耐药率分别为 77.42％（24／31）和 67.74％（21／31）(P＜0.05）。
结论 Ｂ族链球菌定植孕妇更容易出现不良妊娠结局，因此，应加强孕期和产前Ｂ族链球菌的筛查力度，以降低新生儿感染风险及时预防和治疗，以减少Ｂ族链球菌的定植感染，为母婴安全提供更多保障。

PU-3279

2016-2020 年肿瘤患者铜绿假单胞菌感染及耐药趋势的回顾性研究

崔兆磊、霍然、陈燕
福建省肿瘤医院/福建医科大学附属肿瘤医院

目的 回顾分析肿瘤患者临床标本分离的铜绿假单胞菌（PA）菌株相关信息，研究肿瘤患者感染 PA 的临床分布、耐药趋势，为临床上治疗肿瘤患者 PA 感染提供相关依据。
方法 回顾性分析 2016-2020 年福建省肿瘤医院临床标本分离的 PA 及相关数据，采用 WHONET5.6 和 SPSS22.0 统计软件对数据进行分析。
结果 从 2016 年 1 月到 2020 年 12 月，5 年共检出 PA 926 株，每年 PA 占临床分离菌株的比率分别为 8.61% （163/1893）、7.68%（170/2213）、7.62%（201/3637）、6.33%（182/2876）、7.36%（210/2852）； 2018-2020 年 PA 分离率与 2015-2017 年的 PA 分离率相比有所降低，但无显著差异（p=0.084）。临床患者标本来源主要为呼吸道标本（65.12%），各类来源之间具有显著差异。ICU 患者、腹部肿瘤患者、胸部肿瘤患者和头颈部肿瘤患者的 PA 分离率有显著差异（p＜0.05）。抗生素药敏试验表明，在 2016-2020 年，我院分离 PA 菌株对亚胺培南的耐药率大于 30%，；对庆大霉素、环丙沙星、头孢他啶的耐药率在 25%-3%之间，具有较大波动；对美罗培南的耐药率大于 20%；对头孢吡肟、左氧氟沙星、哌拉西林、哌拉西林/他唑巴坦的耐药率均小于 20%。我院肿瘤患者临床标本 PA 分离率与全国平均水平无显著差异，但分离的 PA 菌株对亚胺培南（31.43% vs 23.2%, χ2=10.416, p<0.05）的耐药率高于全国平均水平，对左氧氟沙星（13.82% vs 17.47%, χ2=10.262, p<0.05）、头孢吡肟（10.48% vs 14.78%, χ2=13.532, p<0.001）、哌拉西林（12.20% vs 16.4%, χ2=29.917，p<0.001）、哌拉西林/他唑巴坦（13.07% vs 15.55%, χ2=13.867, p<0.001）的耐药率低于全国平均水平，具有显著差异。

结论 肿瘤病人对某些药物的耐药率高于全国平均水平，但对某些药物的耐药率低于全国平均水平，这可能与肿瘤病人病种特殊性有关。研究结果提示我们，我们应该密切监测肿瘤患者 PA 感染及耐药情况，同时在临床 PA 感染治疗中应合理使用抗菌药物，预防耐药菌株的产生。

血清降钙素原（PCT）、Presepsin (sCD14-ST)和血培养联合应用对脓毒症的诊断价值

王芳、黄声雷、林见敏、邓燕燕、陈辉凤、王金金
复旦大学附属中山医院青浦分院

目的 探讨血清降钙素原（PCT）、可溶性白细胞分化抗原 14 亚型(sCD14-ST，Presepsin)和血培养联合应用对脓毒症的诊断价值。
方法 收集 2017 年 1 月至 2018 年 12 月门诊、急诊住院患者 127 例，根据脓毒症诊断标准分为住院患者中非脓毒症患者 50 例，住院患者确诊脓毒症感染者 47 例，同期选择 30 例健康体检者作为对照组；所有收集患者都进行 PCT 及 Presepsin 的检测。同时把住院患者确诊脓毒症感染者，根据血培养检测结果分为真菌组、革兰阳性细菌组、革兰阴性细菌组，血培养阴性组进行分析。
结果 通过对实验组（血培养阳性、血培养阴性）和对照组（正常健康人）的 PCT 检测绘制出 ROC 曲线，发现 PCT 的 ROC 曲线下的面积为 0.982，P=0.000(p<0.01),两组有显著统计学差异，PCT 在检测脓毒血症方面有诊断价值；通过对实验组（血培养阳性、血培养阴性）和对照组（正常健康人）的 presepsin 检测绘制出 ROC 曲线，发现 presepsin 的 ROC 曲线下的面积为 0.716，P=0.000(p<0.01),两组有显著统计学差异，presepsin 在检测脓毒血症方面有诊断价值；通过两组临床试验检测结果显示，PCT 检测的 CUT-OFF 值为 0.02ng/ml，其灵敏度为 97.8%，特异度为 90%，阳性预测值为 93.9%，阴性预测值是 96%。
结论 PCT 和 presepsin 在检测脓毒血症方面均有诊断价值，但 PCT 的诊断价值要高于 presepsin，可能是由于 presepsin 试剂盒检测灵敏度不够等原因引起。

PU-3281

An Outbreak of Carbapenem-Resistant Klebsiella pneumoniae of K57 Capsular Serotype in an Emergency Intensive Care Unit of a Teaching Hospital in China

Chunhong Shao [1]、Yan Jin[1]、Meijie Jiang[2]
1. Shandong Provincial Hospital affiliated to Shandong University
2. 泰安中心医院

The emergence of carbapenem-resistant hypervirulent K. pneumoniae (CR-hvKP) strains has increased the threat posed by K. pneumoniae. Here, we described an outbreak of 32 CR-hvKP isolates from the emergency intensive care unit (EICU) of a teaching hospital in China. 32 CRKp isolates were collected from 6 patients and their surrounding environment in EICU. Antimicrobial susceptibility testing was performed using VITEK 2 compact system, E-test or the broth microdilution method. All isolates were serotyped, antimicrobial resistance genes and virulence-associated genes were screened using PCR. Multilocus sequence typing (MLST) and pulse-field gel electrophoresis (PFGE) were employed to characterize the genetic relationships among the CPKP isolates. The virulence capability of 11 CRKp isolates from 6 patients was evaluated through Galleria mellonella larva infection assay. PFGE showed that all 32 isolates belonged to one cluster, and MLST revealed that belonged to ST11. All isolates exhibited high resistance to β-lactam antibiotics, quinolones, and aminoglycosides. They were susceptible to

ceftazidime/averbatan, tigecycline, and colistin. All 32 isolates harbored blaKPC-2, blaSHV-11, blaTEM-1, rmtB, and qnrD. The serotype of all 32 isolates was K57. All 32 isolates contained 6 virulence genes, namely, fimH, iucB, mrkD, rmpA, uge, and wabG. Infection assays demonstrated high mortality in the Galleria mellonella model. Following measures implemented by the hospital, the outbreak was controlled. The mortality rate was 83.3%. The epidemiology of CR-hvKP should be monitored closely to detect early indications of this emerging public health threat.

PU-3282

耐碳青霉烯类铜绿假单胞菌耐药机制研究

胡咏梅[1]、邹明祥[1]、李军[1]、祁瑄[2]
1. 中南大学湘雅医院
2. 中南大学湘雅医学院

目的 检测和分析临床分离耐碳青霉烯类铜绿假单胞菌携带的耐药基因，明确其耐药机制。
方法 收集 2018 年 12 月至 2019 年 4 月中南大学湘雅医院临床分离的 54 株耐碳青霉烯类铜绿假单胞菌，采用改良碳青霉烯灭活试验（mCIM 法）初步筛查碳青霉烯酶，通过聚合酶链反应(PCR)法检测铜绿假单胞菌的耐药基因。
结果 54 株耐碳青霉烯类铜绿假单胞菌对碳青霉烯类抗菌药物 100.0%耐药，但对氨基糖苷类及喹诺酮类抗菌药物的敏感性较高；经 mCIM 试验初筛，发现 5 株铜绿假单胞菌为阳性，阳性率为 9.3%；对 8 种常见的耐药基因进行 PCR 检测，发现 7 株菌携带碳青霉烯酶耐药基因，其中 2 株检出 blaKPC 基因，3 株检出 blaIMP 基因以及 2 株检出 blaVIM 基因，余下 5 种耐药基因（NDM-1、SIM、SPM、GIM、OXA-48）未检出阳性菌。
结论 产碳青霉烯酶是 54 株铜绿假单胞菌对碳青霉烯类抗菌药物耐药的重要机制，但同时还存在其他耐药机制，应加强院内感染预防措施，防止该类细菌的传播和流行。

PU-3283

碳青霉烯肺炎克雷伯菌的毒力基因携带情况及感染患者的临床特点

姜梅杰
泰安市中心医院

目的 了解耐碳青霉烯肺炎克雷伯菌（CRKP）的毒力基因携带情况及感染患者的临床特点,为医院感染控制和临床治疗提供理论依据。
方法 收集我院 2019 年 1 月～12 月临床分离的 CRKP 31 株, 采用 Microscan WalkAway 96plus 全自动细菌鉴定药敏仪进行菌株鉴定和药敏试验，同时用纸片扩散法和 E-test 法进行药敏试验的补充和复核；采用聚合酶链式反应（PCR）扩增相关毒力基因包括黏液表型调控基因 A（rmpA）、I 型菌毛粘附相关基因（fimH）、III 型菌毛粘附蛋白基因（mrkD）、铁载体相关的基因（iucB）、脂多糖编码基因（uge），阳性扩增产物送测序测序。
结果 该院 CRKP 的主要标本来源为痰液（80.65%）和尿液（9.68%）,主要科室来源为各监护室病房。有两种及以上基础疾病的患者和住院天数在 15 天以上的患者均占 90.32%（28/31）。接受过有创操作的患者占 96.77%（30/31）。使用过广谱抗菌药物的患者占 80.65%（25/31）。毒力基因的总检出率为 100%。其中 mrkD、fimH、uge 检出率均为 100%，iucB 检出率为 77.42%（24/31），rmpA 检出率为 70.97%（22/31）。mrkD + fimH +uge +rmpA +iucB 五种毒力基因同时检出率为 67.74%（21/31）。

结论 CRKP 感染患者大多基础疾病多，住院时间长。有创操作和抗菌药物暴露史可能是其感染率较高的原因。该院多株 CRKP 均同时携带多种毒力基因，可能是其致病性较高的原因。

PU-3284

2020 年山东某三甲医院的耐药性分析

赵书平
泰安市中心医院

目的 了解 2020 年我院临床标本的病原菌检出情况及前三位细菌的耐药性，为临床合理使用抗菌药物提供理论依据。
方法 回顾性分析我院 2020 年 1 月～2020 年 12 月各临床标本中检出的细菌。利用 Microscan WalkAway 96plus 全自动微生物鉴定药敏系统进行菌株鉴定和药敏试验，部分药敏试验采用纸片扩散法进行补充。菌株分布及耐药率使用 WHONET5.6 软件进行统计分析。
结果 2020 年我院临床标本共分离出非重复细菌 7058 株，分离前三位的细菌分别为：大肠埃希菌（15.98%）、肺炎克雷伯菌（13.22%）、金黄色葡萄球菌（9.00%）。主要科室分布为重症医学科（15.68%）、神经外科（10.16%）、儿内科（9.62%）。大肠埃希菌对氨苄西林耐药率高（91.00 %），对氟喹诺酮类和一、二、三代头孢菌素耐药率在 51%～58%，酶的抑制剂类药物敏感性较好，耐药率低于 30%。肺炎克雷伯菌对抗菌药物的耐药率较低，均低于 38%。金黄色葡萄球菌对青霉素和红霉素耐药率高，分别为 91%和 70%，其余抗菌药物耐药率低，未发现对万古霉素和利奈唑胺耐药的菌株。
结论 我院临床标本的细菌分布以大肠埃希菌、肺炎克雷伯菌和金黄色葡萄球菌为主。主要科室分布为重症医学科、神经外科和儿内科。肺炎克雷伯菌对抗菌药物的耐药率低于大肠埃希菌，两者对酶的抑制剂类药物敏感性均较好。金黄色葡萄球菌对青霉素和红霉素耐药率高，未发现对万古霉素和利奈唑胺耐药的菌株。临床医生应根据药敏结果选择并及时调整合理的抗菌药物。

PU-3285

耐碳青霉烯类肠杆菌科细菌的分布及耐药分析

赵书平
泰安市中心医院

目的 了解临床分离的耐碳青霉烯类肠杆菌科细菌（CRE）的菌株分布、科室来源及耐药特点，为临床合理使用抗菌药物提供理论依据与数据支持。
方法 对 2020 年 01 月-2020 年 12 月间临床标本中分离的 CRE，采用 WalkAway 96 PLUS 型全自动细菌分析仪进行鉴定和药敏试验，部分药物试验采用纸片扩散法进行补充，应用 WHONET 5.6 软件对菌株分布及耐药率进行统计和分析。
结果 2020 年我院临床标本共分离出 104 株 CRE，主要是肺炎克雷伯菌（65.38%）和大肠埃希菌（12.50%）。主要科室分布为重症医学科（42.31%）、神经外科（10.58%）和儿科监护病房（10.58%）。CRE 对大多数临床常用抗菌药物高度耐药，对头孢类耐药率 100%，对酶的抑制剂和氨曲南耐药率大于 90%，对喹诺酮类耐药率大于 70%，替加环素和多粘菌素 B 耐药率最低。
结论 我院 CRE 检出率较高，以肺炎克雷伯菌和大肠埃希菌为主。主要来源于各监护室病房。CRE 耐药情况严峻，临床医生应根据药敏结果选择并及时调整合理的抗菌药物。医护人员要注意手卫生和院感的防控，防止 CRE 暴发流行。

PU-3286

Anti-psychotic drug thioridazine acts as a potent anti-microbial agent for multidrug-resistant bacteria: a clinical strains-based study

印琳
湖南省第二人民医院

Purpose The aim of the study was to comprehensively investigate the effect of anti-psychotic drug thioridazine on common MDR clinical isolated strains, and provide new strategies for the therapeutics of MDR infections.
Methods Bacteria were isolated from the clinical patients. The identification and susceptibility testing of isolated strains in this study were completed by MALDI-TOF mass spectrometry and VITEK 2 Compact analysis system, respectively. The antibacterial efficacy of thioridazine in vitro was assessed by agar dilution method.
Results MRSA and CRAB were significantly inhibited by thioridazine at low concentrations (20 μM). CRPA and CREO were inhibited by thioridazine at middle concentration (40 μM). CRKP were inhibited by thioridazine at high concentration (100 μM).
Conclusion The present study shows that thioridazine is an effective drug against common MDR clinical isolated strains, which provides an alternative strategy for MDR and has a highly translational value.

微生物检验技术研究

李思齐
山东第一医科大学第一附属医院（山东省千佛山医院）

目的 大多致病源来自于食品，所以对食品微生物安全的检查是至关重要的，检测技术是至关重要的。
方法 从微生物的角度出发，代谢学技术，抗体的方法，分子生物学技术、仪器法。
结果 发现许多电阻抗法、快速酶处法及代谢产物检验、微量升华法、ATP 生物发光法、放射检测技术；乳胶凝集反应，酶联免疫吸附法；核酸探针技术，PCR 技术；流式细胞术，免疫磁性微球，电阻电导检测器，VITEK-AMS，VIDAS 全自动免疫分析仪，质谱技术，拉曼光谱仪等微生物检验技术。
结论 由于微生物种类复杂，也可能有所改变，随着科技的发展，对微生物检验技术，进行总结，发现了许多新的微生物技术，为临床提供了方便。

PU-3288

鲍曼不动杆菌外膜囊泡（OMVs）通过携带 adeB、adeJ 外排泵相关分子介导耐药性传递的机制研究

姜红烨[1]、胡秀梅[2]、郑磊[2]、吕伟标[1]
1. 南方医科大学顺德医院(佛山市顺德区第一人民医院)
2. 南方医科大学南方医院

目的 近年来鲍曼不动杆菌耐药形势越来越严峻，研究发现外膜囊泡（OMVs）可以传递抗生素抗性，但其是否可介导鲍曼不动杆菌耐药性传递及其与外排泵相关机制尚不清楚，本研究旨在探讨外膜囊泡（OMVs）介导鲍曼不动杆菌耐药性传递的外排泵机制。
方法 首先利用密度梯度离心法提取鲍曼不动杆菌 OMVs，并通过纳米颗粒追踪分析（NTA）和透射电镜（TEM）对其进行鉴定表征；接着利用纸片扩散法探讨鲍曼不动杆菌 OMVs 是否具有介导耐药性传递的作用；进一步利用 PCR、qRT-PCR 和蛋白质组学分析对鲍曼不动杆菌敏感株和耐药株 OMVs 中的外排泵相关基因在不同水平检测外排泵分子的表达情况，最后加入外排泵抑制剂 PAβN 反向验证 OMVs 中外排泵在介导耐药性传递中的作用。
结果 从鲍曼不动杆菌菌液中可提取出粒径较均一、大小在 100-250 nm 之间的 OMVs，TEM 证实其具有典型的囊泡结构。介导耐药性传递的实验证实 OMVs 确实可以介导耐药性的传递。PCR 检测耐药菌和敏感菌及其外膜囊泡中 2 个外排泵基因 adeB、adeJ，结果证实 OMVs 可以携带相关基因，且耐药菌 OMVs 中相关基因水平高于敏感菌 OMVs。qRT-PCR 检测耐药菌和敏感菌的菌液和 OMVs 中上述耐药基因的 mRNA 表达水平，发现耐药组显著高于敏感组（$P<0.05$），而且 adeB、adeJ 在 OMVs 中实现了富集，升高的倍数达到几百倍。蛋白质组学相对定量分析结果显示，耐药菌 OMVs 中外排泵相关蛋白较敏感菌 OMVs 中多。加入外排泵抑制剂 PAβN 后，发现其可有效逆转耐药菌 OMVs 与敏感菌共培养后的耐药性传递的趋势。
结论 本研究表明鲍曼不动杆菌外膜囊泡（OMVs）可以通过携带 adeB、adeJ 外排泵相关分子介导耐药性的传递。

抗菌药物的使用与铜绿假单胞菌和鲍曼不动杆菌耐药率的相关性分析

乔秀强、彭海英、高春海
临沂市人民医院

目的 分析医院近几年抗菌药物使用情况以及对铜绿假单胞菌和鲍曼不动杆菌耐药的影响，为临床合理使用抗菌药物，降低细菌耐药率提供指导依据。
方法 对我院 2017-2020 年常用抗菌药物使用频度和强度及同期分离的铜绿假单胞菌和鲍曼不动杆菌耐药情况进行回顾性调查分析。
结果 医院抗菌药物使用强度（AUD）从 2017 年-2018 年逐年上升，2019 年有所下降。铜绿假单胞菌和鲍曼不动杆菌对常用抗菌药物的耐药率也在缓慢上升。2019 年铜绿假单胞菌耐药率有所下降，而鲍曼不动杆菌的耐药率，特别是对头孢类、碳青霉烯类的耐药率仍居高不下。抗菌药物使用频度（DDDS）分析，铜绿假单胞菌耐药率与左氧氟沙星和头孢他啶的使用频度呈高度正相关、与头孢曲松、亚胺培南和哌拉西林/他唑巴坦呈正相关、与头孢哌酮/舒巴坦、头孢呋辛、头孢吡肟和庆大霉素呈负相关。鲍曼不动杆菌耐药率与美洛培南使用频度呈显著的正相关，有统计学意义（$r=0.938$，$P=0.018$）、与头孢吡肟和庆大霉素呈正相关、与亚胺培南、加酶抑制剂抗生素、左氧氟沙星、头孢他啶、头孢呋辛呈负相关。

结论 铜绿假单胞菌和鲍曼不动杆菌对临床常用抗菌药物耐药率高。鲍曼不动杆菌除对头孢哌酮/舒巴坦较敏感外，对其它抗菌药物的耐药率均明显高于铜绿假单胞菌，细菌与临床常用抗菌药物的使用频度有一定的相关关系，为避免细菌耐药的快速发展,应加强抗菌药物的监管。

Evaluation of GeneXpert vanA/vanB in the early diagnosis of vancomycin-resistant enterococci infection

zhuolei li[1,2]、qibing luo[1,2]、shanshan xiao[1,2]、zehong lin[1,2]、yeling liu[1,2]、mengyi han[1,2]、jinghua zhong[1,2]、tianxing ji[3]、xuguang guo[1,2]
1. Guangzhou Medical University
2. 广州医科大学附属第三医院
3. 广州医科大学附属第二医院

Purpose Vancomycin-resistant enterococci (VRE) infection is a worrying worldwide clinical problem. To evaluate the accuracy of GeneXpert vanA/vanB in the diagnosis of VRE, we conducted a systematic review in the study.
Methods Experimental data were extracted from publications until May 03, 2021 related to the diagnostic accuracy of GeneXpert vanA/vanB for VRE in PubMed, Embase, Web of Science and the Cochrane Library. We used the summary receiver to operate characteristic curve (SROC curve), pooled sensitivity, pooled specificity, PLR(positive likelihood ratio), NLR (negative likelihood ratio), and DOR(diagnostic odds ratio) to evaluate the accuracy of GeneXpert vanA/vanB for VRE.
Results We divided the 9 studies into 3 groups according to two golden standard references, vanA and vanB group, vanA group, vanB group, including 6 researches, 5 researches and 5 researches, respectively. The pooled sensitivity and specificity of group vanA and vanB were 0.96 (95% CI, 0.93–0.98) and 0.90 (95% CI, 0.88–0.91) respectively. The DOR was 440.77 (95% CI, 37.92–5123.55). The pooled sensitivity and specificity of group vanA were 0.86 (95% CI, 0.81–0.90) and 0.99 (95% CI, 0.99–0.99) respectively, and those of group vanB were 0.85 (95% CI, 0.63–0.97) and 0.82 (95% CI, 0.80–0.83) respectively.
Conclusion GeneXpert vanA/vanB can diagnose VRE with high-precision and shows greater accuracy in diagnosing vanA.

High prevalence of Extended-spectrum beta-lactamases in Escherichia coli strains collected from strictly-defined community-acquired urinary tract infections in adults in China: a multicenter clinical microbiological study

Peiyao Jia、Ying Zhu、Xue Li、Yang Yang、Ge Zhang、Jingjia Zhang、Yingchun Xu、Qiwen Yang
Department of Clinical Laboratory, Peking Union Medical College Hospital, Peking Union Medical College, Chinese Academy of Medical Sciences

Objectives To investigate the susceptibility and Extended-spectrum beta-lactamases (ESBL) rates of community-acquired urinary tract infection (CA-UTI) Escherichia coli in Chinese hospitals.
Methods A total of 809 E.coli isolates from strictly- defined CA-UTIs in 10 hospitals (5 tertiary hospitals and 5 secondary hospitals) from different regions of China during 2016 to 2017 were collected and antimicrobial susceptibility testing was carried out by standard broth microdilution method. ESBL confirmation was conducted by the third generation cephalosporin +/- clavulanic acid test recommended by CLSI.

Results The ESBL positive/ ESBL negative/ ESBL uncertainty rate was 38.07%/ 58.96%/ 2.97% against E. coli strains isolated from CA-UTIs. The antimicrobial agents with susceptibility rates of greater than 90% included imipenem (99.9%), colistin (99.6%), ertapenem (98.9%), amikacin (98.3%), cefmetazole (97.9%), nitrofurantoin (96%), and fosfomycin (95.4%). However, the susceptibilities to first-, third- and fourth-generation cephalosporins were relatively low, varying from 58.6%-74.9%. Antimicrobial susceptibilities of imipenem, cefmetazole, colistin, ertapenem, amikacin and nitrofurantoin against ESBL-producing Escherichia coli strains were greater than 90%. The percentage of ESBL-producing strains was much higher in male patients (53.6%) than in female patients (35.2%) ($p<0.001$). The incidence of carbapenem-resistant E. coli from CA-UTI was 0.25% (2/809).
Conclusion Our study indicated high prevalence of ESBL in E. coli strains collected from strictly-defined community-acquired urinary tract infections in adults in China. Imipenem, colistin, ertapenem, amikacin and nitrofurantoin were the most active antimicrobials against ESBL positive E. coli isolates. The use of cephalosporins for empiric treatment of CA-UTIs should be based on local ESBL prevalence and the use of fluoroquinolone need to be restricted.

PU-3292

侵袭性真菌血流感染的分布情况及其危险因素的分析

史永胜、金英玉
哈尔滨医科大学附属第一医院

目的 了解哈尔滨医科大学附属第一医院侵袭性真菌血流感染的分布情况及其危险因素分析，为临床预防侵袭性真菌血流感染提供参考依据。
方法 收集哈尔滨医科大学附属第一医院 2016 年 1 月至 2019 年 1 月 12 例血培养结果为侵袭性真菌血流感染的标本的资料进行菌种分布、送检科室、年龄分布、感染的危险因素进行回顾性分析。
结果 在侵袭性真菌血流感染中，白色念珠菌和光滑念珠菌最多，各占 33.3%（4/12），其次为近光滑念珠菌 16.7%（2/12）。科室主要分布在新生儿科和 ICU 重症监护室，各占 33.3%（4/12）。年龄段最集中在婴幼儿，占 41.7%（5/12），其次是免疫力低下的中老年。侵袭性真菌血流感染的高危因素主要是广谱抗生素的使用以及气管插管，分别占 33.3%（4/12）和 25%（3/12），其次是外科手术 16.7%(2/12)。
结论 白色念珠菌和光滑念珠菌是我院侵袭性真菌血流感染中重要的病原菌，年龄、广谱抗生素的使用、气管插管、免疫力低下、外科手术等都是我院主要的侵袭性真菌血流感染的危险因素。

Development of a combined immunochromatographic lateral flow assay for accurate and rapid Escherichia coli O157:H7 detection

Yuanyuan Ye
the Second Affiliated Hospital of Chongqing Medical University

Escherichia coli O157:H7 (E. coli O157:H7) is an important pathogenic Bacterium that threatens human health. A convenient, sensitive and specific method for the E. coli O157:H7 detection is necessary. We developed two pairs of monoclonal antibodies through traditional hybridoma technology, one specifically against E. coli O157 antigen and the other specifically against E. coli H7 antigen. Using these two pairs of antibodies, we developed two rapid test kits to specifically detect E. coli O157 antigen and E. coli H7 antigen, respectively. The detection sensitivity for O157 positive E. coli is 1x103 CFU ml-1 and for H7 positive E. coli is 1x104 CFU

ml-1. Combining these two pairs of antibodies together, we developed a combo test strip that can specifically detect O157: H7, with a detection sensitivity of 1x104CUF ml-1, when two detection lines are visible to the naked eye.This is currently the only rapid detection reagent that specifically detects O157: H7 by simultaneously detecting O157 antigen and H7 antigens of E. coli. Our product has advantages of simplicity and precision, and can be a very useful on-site inspection tool for accurate and rapid detection of E. coli O157:H7 infection.

PU-3294

耐碳青霉烯酶肠杆菌科细菌表型检测方法的评价分析

陈弟、邓德耀、徐红云、杨宝瑞、刘春林、马众仙
云南大学附属医院

目的 探讨耐碳青霉烯酶肠杆菌科细菌各表型检测方法的敏感性、特异性。
方法 选取碳青霉烯酶耐药的肠杆菌科细菌（CRE）50 株，碳青霉烯酶敏感的肠杆菌科细菌 20 株，采用改良 Hodge 试验（MHT）、纸片筛选及协同试验、Carba NP 试验、改良碳青霉烯灭活试验(mCIM)分别对菌株进行检测，以 PCR 检测碳青霉烯酶基因为金标准，评估每种表型检测方法的能力。
结果 50 株 CRE 菌株中，44 株携带碳青霉烯酶耐药基因。以 PCR 试验为金标准，表型筛选试验结果显示，MHT 试验、纸片筛选及协同试验、Carba NP 试验、mCIM 试验的敏感性分别是 79.5%（35/44）、90.9%(40/44)、93.2%(41/44)和 97.7%（43/44），特异性分别是 80.8%（21/26）、92.3%(24/26)、96.2%(25/26)和 100%（26/26）。
结论 纸片筛选及协同试验、Carba NP 试验、mCIM 试验均具有较高的敏感性和特异性，但 mCIM 相较与其他俩种方法，具有更高的检出率和一致性，且该方法操作简单、结果容易判读，是耐碳青霉烯酶肠杆菌科细菌表型筛选的有效方法。

PU-3295

铜绿假单胞菌的临床分布及耐药性分析

史永胜、金英玉
哈尔滨医科大学附属第一医院

目的 讨论哈尔滨医科大学附属第一医院感染铜绿假单胞菌的各科室分布及对抗生素的耐药性特点，对临床正当运用抗生素以及干预措施进行正确指导，及时切断多重耐药菌株的传播。做法，收集哈尔滨医科大学附属第一医院 16 年和 17 年这两年哈尔滨医科大学附属第一医院分离拿到的 490 株铜绿假单胞菌，并且分别在血平板、伊红平板、巧克力平板和沙宝弱培养基上进行 24 小时培养，观察其菌落形态，并用纸片扩散法进行药敏试验，同时做细菌涂片，并用显微镜镜检，观察其结构特点。
结果 经过培养观察共分离鉴定出 490 株铜绿假单胞菌，其中来源于呼吸道的标本痰液、咽拭子总共 359 株；490 株铜绿假单胞菌大多分布在呼吸科、重症监护室，共 213 株，占总数的 43.47%；根据药敏结果显示，我们对铜绿假单胞菌用的 14 种药物都有不同的耐药结果表现，在所有的结果上看耐药性都比较低，不高于 16%，其中耐药率最低药物是阿米卡星，为 3.1%，其次是妥布霉素，为 4.9%；敏感性最低的是氨曲南和左旋氧氟沙星，分别是 15.5%，13.6%。
结论 铜绿假单胞菌分布广泛，遍及各种科室，来源于各种标本，呼吸道最易感染此菌，加强呼吸道的保护，注重呼吸科相应仪器设备的消毒灭菌，避免感染此菌。

Epstein Barr virus regulates the expression of PD-L1 in EBV Associated-gastric carcinoma and EBV positive cell lines through methylation

Zhongxin Jiang、Mengyang Liu
The Affiliated Hospital of Qingdao University

Objective Epstein Barr virus (EBV) is an important DNA virus, which is closely related to a variety of B cell or epithelial cell-derived tumors, with the carcinogenesis of epigenetics on gene and protein expression of the cells and their biological behaviors. Immunosuppressive tumor immunotherapy based on the negative regulatory pathways of CTLA-4/B7 and PD-1/PD-L1 is a hot topic in the field of tumor therapy in recent years, and improving its efficiency is the key point. The purpose of this study is to explore the mechanism of PD-L1 expression in EBV positive gastric cancer and corresponding cell lines, and to provide a theoretical basis for improving the efficiency of tumor immunotherapy.
Method PD-L1 expression in EBV positive and negative gastric cancer tissues was detected by in situ hybridization and immunohistochemistry, and the expression of PD-L1 in EBV positive and negative gastric cancer tissues and cell lines were detected by high-throughput sequencing and real-time quantitative PCR (RT-qPCR); MSP(Methylated Specific PCR) was used to detect the methylation of CpG sites of PD-L1 gene in EBV positive tumor tissues and cell lines, and BSP(Bisulfite Sequencing PCR) was used to detect the methylation status of 24 CpG sites in CpG island in the promoter region of PD-L1 gene.
Results (1) The expression of PD-L1 in EBV positive gastric cancer was significantly lower than that in EBV negative gastric cancer ($P < 0.05$); (2) High throughput sequencing and RT-qPCR showed that the expression of PD-L1 in EBV positive gastric cancer tissues and cell lines was significantly increased than that in EBV negative gastric cancer tissues and cell lines ($P < 0.001$); (3) MSP showed that the CPG site of PD-L1 gene was hypomethylated (U-type) in EBV positive tumor tissues and cell lines, while it was hypermethylated (M-type) in EBV negative tumor tissues and cell lines, BSP detection of 24 CpG islands in PD-L1 promoter region further verified the MSP results($P < 0.05$).
Conclusion EBV regulates the expression of PD-L1 by regulating the methylation status of PD-L1 gene promoter in EBV associated-gastric cancer and cell lines. This study provides a theoretical basis of epigenetic for the regulation of PD-L1 expression and improving of the effect of tumor immunotherapy.

PU-3297

耐碳青霉烯肺炎克雷伯菌(CRKP)的耐药性及耐药基因类型研究

谢印容、廖蕴惠
厦门市中医院

目的 分析耐碳青霉烯肺炎克雷伯菌(CRKP)的耐药性，并研究其耐药基因类型。
方法 以 2019 年 1 月-2019 年 12 月我院肺炎患者中分离出的 CRKP 共 31 株为研究材料，通过改良碳青霉烯类失活试验(mCIM)对其中碳青霉烯酶进行检测，并经聚合酶链反应(PCR)、测序法分析耐药基因的具体类型。
结果 31 株 CRKP 对亚胺培南、哌拉西林、氨苄西林/舒巴坦、替卡西林/棒酸表现出 100%耐药；mCIM 试验显示 CRKP 菌株阳性率 61.29%；碳青霉烯酶基因检测 KPC 型、IMP 型、NDM 型基因的检出率分别为 19.35%、16.13%、38.71%，ESBLs 基因检测 TEM 型、SHV 型、CTX-M3 型基因的检出率分别为 61.29%、77.42%、61.29%，Amp C 酶基因检测 DHA 基因的检出率为 12.90%。

结论 CRKP 对多种抗菌药物均存在比较高的耐药性，KPC-2、NDM-1 是主要耐药基因类型，必须强化做好院感防控工作，做好这类菌株播散的预防控制。

Chlamydia psittaci inclusion membrane protein CPSIT_0844 elicits inflammatory cytokines in human monocytes via TLR2/TLR4 signaling pathways

Xiaoliang Yan[1]、Dan Luo[2]、Kang Zheng[1]、Wenheng Qing[1]
1. Affiliated HengYang central Hospital，Southern Medical University
2. 南华大学附属南华医院

The respiratory disease caused by Chlamydia psittaci infection may be associated with inflammation. However, the molecular mechanisms of C. psittaci leading to the production of proinflammatory cytokines have not been thoroughly elucidated. In our study, we demonstrated that the C. psittaci inclusion membrane protein CPSIT_0844 induced THP-1 cells to express IL-6 and IL-8. Moreover, silencing of Toll-like receptor 2 and Toll-like receptor 4 genes and transfection with the dominant negative plasmid encoding MyD88 were found to reduce the expression of IL-6 and IL-8 in THP-1 cells stimulated with CPSIT_0844. Furthermore, we found that CPSIT_0844 induces IL-6 and IL-8 production through MAPK and NF-κB signaling pathways by Western blotting. These results showed that CPSIT_0844 recognized by TLR2 and TLR4 promoted the expression of IL-6 and IL-8 in THP-1 cells through MyD88 mediated the activation of MAPK and NF-κB signaling pathways, which will promote our understanding of the pathogenesis of C. psittaci.

基于语言模型的原核病毒结构蛋白识别

方臻成、周宏伟
南方医科大学珠江医院检验医学部

目的 病毒与其宿主的相互作用是影响人体微生态的重要因素之一。因传统研究均依赖于培养菌株，人体微生物组中相当一部分的原核病毒以“暗物质”的形式存在。宏基因组测序理论上提供了病毒组序列的全景数据，但该数据中大量无法识别的结构蛋白成为病毒检测与研究微生物群落病毒组成、病毒宿主相互作用的瓶颈。本研究旨在开发高效的原核病毒结构蛋白识别算法，以促进病毒对微生物群落调控机制的研究。
方法 我们利用人工智能领域中自然语言处理的“分布式表示”数学模型对蛋白序列进行刻画。该方法将相邻的三个氨基酸映射为一“词向量”，蛋白序列中所有三氨基酸“词向量”的平均向量为该蛋白的特征向量。我们用基于该特征向量的随机森林算法对原核病毒结构蛋白进行识别。
结果 基于 t-SNE 的可视化结果显示，结构蛋白与非结构蛋白的“分布式表示”特征向量具有显著不同的空间分布。在基准测试集的性能评估中，我们提出的方法对结构蛋白的识别性能，比目前已有的 iVIREONS、PVPred、PVP-SVM、PVPred-SCM、Meta-iPVP、PhANNs、VirionFinder 工具高出约 8%-24%。此外，我们观察该方法对细菌蛋白的判断情况，结果显示，尽管在构建算法的训练集数据中不包含细菌蛋白，但算法仅将 2.09% 的细菌蛋白误判为病毒的结构蛋白。这表明词向量能对病毒蛋白进行良好的表征，使该方法在实际使用中不受非病毒蛋白的影响。
结论 利用语言模型对蛋白序列进行刻画显著提升了病毒结构蛋白的识别，为病毒组大量未知的结构蛋白注释提供了更好的技术保障，并有望进一步帮助生物学家认识病毒群落的物种结构及病毒对宿主的相互作用。

PU-3300

秀丽隐杆线虫感染产碳青霉烯酶肺炎克雷伯菌的转录反应

曹玲
南昌市第一医院

目的 建立秀丽隐杆线虫－产碳青霉烯酶肺炎克雷伯菌感染模型，并通过观察感染过程中线虫状态确定时间点，为了进一步理解线虫感染产碳青霉烯酶肺炎克雷伯菌的宿主防御机制。
方法 将产碳青霉烯酶肺炎克雷伯菌与线虫共培养，建立线虫－产碳青霉烯酶肺炎克雷伯菌感染模型，使用高通量 RNA 测序（RNA-seq）来量化产碳青霉烯酶肺炎克雷伯菌感染后的宿主 mRNA 水平。
结果 产碳青霉烯酶肺炎克雷伯菌能够感染线虫并致其死亡，CRKP 感染激活线虫中 p38-MAPK 途径的先天免疫防御反应，且 ROS 可能介导 CRKP 感染线虫的致死作用。
结论 通过对线虫感染后不同时间点基因表达谱的研究了解 CRKP 感染线虫后，寿命调控因子 daf-2 通过激活 FoXo 途径产生过氧化物等 ROS 介导对线虫的致死作用。

PU-3301

一例疑似棒孢霉菌感染的实验室菌株分离鉴定及蛋白指纹图谱数据库的建立

张婷、程建军
苏州市独墅湖医院（苏州大学附属独墅湖医院）

目的 对 1 株疑似棒孢霉菌感染的病原菌进行分离鉴定，并应用 MALDI-TOF-MS 自建棒孢霉菌蛋白指纹图谱数据库，实现对该细菌的快速鉴定。
方法 研究和比较记录体外分离棒孢霉菌在不同培养条件下的菌落形态、染色形态、产孢特征。采用甲酸萃取法进行棒孢霉菌蛋白指纹图谱的添加,并用不同培养条件下的棒孢霉菌株对图谱进行验证。
结果 体外分离棒孢霉菌在 35℃和 28℃均可生长，37℃时生长更好。在固体培养基上比液体培养基内生长更好，更有利于产孢。在寡营养琼脂上比富营养琼脂更有利于产孢。采用新的棒孢霉菌蛋白指纹图谱鉴定时，甲酸萃取法鉴定准确率为＞90%。
结论 临床分离疑似棒孢霉菌时，可选取寡营养琼脂分离纯化，35℃培养后进行形态学鉴定或质谱鉴定。添加的棒孢霉菌蛋白指纹图谱能快速准确地鉴定棒孢霉菌,此图谱可以应用于棒孢霉菌的临床快速准确诊断。

2020 年四川地区腹水标本检出细菌的分布及其耐药性分析

常凡
电子科技大学附属医院·四川省人民医院

目的 了解 2020 年四川地区腹水送检标本中细菌检出的分布及其耐药情况，为本省临床合理应用抗菌药物提供实时依据。
方法 对四川省细菌耐药监测网成员单位 2020 年度腹水标本的细菌分布及耐药情况进行回顾性分析，参照美国临床实验室标准化研究协会(CLSI)2020 年标准，采用纸片扩散法、E-test 法或自动化仪器检测法进行药敏试验, 使用 WHONET 5.6 软件进行数据分析。

结果 2020 年度四川地区腹水标本共分离出 3363 株非重复细菌,其中革兰阳性菌 936 株,占比 27.8%,革兰阴性菌 2427 株,占比 72.2%。 前五名最常见的细菌依次为大肠埃希菌、肺炎克雷伯菌、屎肠球菌、铜绿假单胞菌、粪肠球菌。金黄色葡萄球菌中耐甲氧西林金黄色葡萄球菌 (MRSA)的检出率为 32.9%，凝固酶阴性葡萄球菌中耐甲氧西林凝固酶阴性葡萄球菌(MRCNS)的检出率为 78.1%，未发现万古霉素、替考拉宁及利奈唑胺耐药菌株；粪肠球菌和屎肠球菌对氨苄西林耐药率分别为 3.7%和 75.4%。碳青霉烯类耐药铜绿假单胞菌的检出率为 5.0%，碳青霉烯类耐药鲍曼不动杆菌的检出率为 47.1%，三代头孢菌素、喹诺酮类及碳青霉烯类耐药大肠埃希菌的检出率分别为 45.2%、51.4%和 1.0%。

结论 四川地区腹水标本送检分离细菌对常见抗菌药物的耐药形势仍较严峻,临床科室应进一步重视腹水等无菌体液标本的细菌学检查，积极主动与微生物检验室进行沟通，充分利用本地区细菌耐药监测结果进行感控管理,促进抗菌药物合理应用，加强感染预防控制。

PU-3303

2020 年四川地区胸水标本检出细菌的分布及其耐药性分析

常凡
电子科技大学附属医院·四川省人民医院

目的 了解 2020 年四川地区胸水送检标本中细菌检出的分布及其耐药情况，为本省临床合理应用抗菌药物提供实时依据。

方法 对四川省细菌耐药监测网成员单位 2020 年度胸水标本的细菌分布及耐药情况进行回顾性分析，参照美国临床实验室标准化研究协会(CLSI)2020 年标准，采用纸片扩散法、E-test 法或自动化仪器检测法进行药敏试验, 使用 WHONET 5.6 软件进行数据分析。

结果 2020 年度四川地区胸水标本共分离出 849 株非重复细菌,其中革兰阳性菌 462 株,占比 54.4%,革兰阴性菌 387 株,占比 45.6%。 前五名最常见的细菌依次为大肠埃希菌、金黄色葡萄球菌、肺炎克雷伯菌、表皮葡萄球菌和屎肠球菌。金黄色葡萄球菌中耐甲氧西林金黄色葡萄球菌 (MRSA)的检出率为 27.8%，凝固酶阴性葡萄球菌中耐甲氧西林凝固酶阴性葡萄球菌(MRCNS)的检出率为 73.4%，未发现万古霉素、替考拉宁及利奈唑胺耐药菌株；屎肠球菌和粪肠球菌对氨苄西林耐药率分别为 95.7%和 5.9%，均未发现万古霉素和利奈唑胺耐药株。碳青霉烯类耐药铜绿假单胞菌的检出率为 7.7%，碳青霉烯类耐药鲍曼不动杆菌的检出率为 40.5%，三代头孢菌素、喹诺酮类及碳青霉烯类耐药大肠埃希菌的检出率分别为 67.4%、62.5%和 5.2%。

结论 四川地区胸水标本送检分离细菌对常见抗菌药物的耐药形势仍较严峻,MRSA 检出率较 2019 年有所下降，但碳青霉烯类耐药肺炎克雷伯菌(CR-KPN)、三代头孢菌素和喹诺酮类耐药大肠埃希菌检出率仍明显高于整体检出率。临床科室应进一步重视胸水等无菌体液标本的细菌学检查，充分利用本地区细菌耐药监测结果进行感控管理,促进抗菌药物的合理使用。

PU-3304

抗具核梭杆菌多抗血清的制备、应用及评价

王昆
重庆市人民医院（三院院区）

目的 制备抗具核梭杆菌(Fusobacterium nucleatum，其抗原简写为 Fn)多抗血清，评价不同处理方式对抗原免疫原性的影响。

方法 采用甲醛灭活、热灭活、超声破碎 3 种方式处理细菌抗原接种新西兰兔和 c57 小鼠，检测不同抗原免疫动物抗血清的 ELISA 效价[1][k1] 。

结果 (1)ELISA 方案最佳条件：兔抗 Fn 抗体，二抗稀释度为 1 / 5000，抗原包被浓度为 4ug / ml ；小鼠抗 Fn 抗体，二抗稀释度为 1 / 5000，抗原包被浓度为 10ug / ml； (2)超声破碎抗原(UT-Fn)免疫新西兰兔和小鼠的抗血清 ELISA 效价分别高达 1 / 128000 与 1/256000。热灭活抗原(HT-Fn)抗血清 ELISA 效价达 1 / 64000。 (3)甲醛灭活抗原（FT-Fn）抗血清 ELISA 效价达 1 / 64000。 (3) UT-Fn 具有较强的免疫原性，HT-Fn 与 FT-Fn 在小鼠与新西兰兔中的免疫原性相对较弱(P<O，05)。
结论 建立了抗具核梭杆菌多克隆抗体的检测方法，制备了高效价的具核梭杆菌多抗血清；甲醛灭活和热灭活细菌具有较好的免疫原性，为下一步具核梭杆菌的原位检测打下了基础 。

PU-3305

9 株分离自住院患者 CA-MRSA 基因型菌株的分子特征及耐药性研究

王院霞、姚锂凤、陈旭
上海交通大学医学院附属第九人民医院

目的 分析自住院患者分离的社区获得耐甲氧西林金黄色葡萄球菌（community-associated methicillin-resistant Staphylococcus aureus, CA-MRSA）菌株的分子水平特征和耐药性，为治疗、控制 CA-MRSA 感染提供研究依据。
方法 收集 2014 年 4 月到 2015 年 12 月临床住院患者入院后 48h 内获取的标本中分离的金黄色葡萄球菌，检测其 mecA 基因以区分耐甲氧西林金黄色葡萄球菌（methicillin-resistant Staphylococcus aureus,MRSA）与甲氧西林敏感的金黄色葡萄球菌（methicillin-sensitive Staphylococcus aureus,MSSA），并根据葡萄球菌染色体基因盒 mec（Staphylococcal cassette chromosome mec,SCCmec）的携带情况筛选基因型 CA-MRSA 菌株，采用金黄色葡萄球菌 A 蛋白（Staphylococcus protein A,spa）基因分型、多位点序列分型（multilocus-sequence typing,MLST）等方法分析 CA-MRSA 菌株的分子水平特征，根据美国临床实验室标准化研究所（Clinical and Laboratory Standards Institute,CLSI）指南，采用纸片扩散法检测 CA-MRSA 菌株的药物敏感性，并对 CA-MRSA 菌株是否携带杀白细胞素基因（panton-valentine leukocidin gene,pvl 基因）进行检测。
结果 共收集到 147 株金黄色葡萄球菌，其中 MRSA 58 株，根据 SCCmec 分型结果,共有 CA-MRSA 9 株，包括 SCCmecIV 3 株、SCCmecV 6 株；9 株 CA-MRSA 菌株均有对不同的非 β-内酰胺类抗生素均耐药，其中有 8 株对红霉素和克林霉素耐药，主要是由 erm(B)基因介导；有 8 株对氨基糖苷类药物（主要为卡那霉素）耐药；对其进行分子流行病学特征分析后发现，CA-MRSA 主要以 t437-ST59 为主，其他还有 t034-ST804、t127-ST1、t008-ST8、t437-ST338 等，9 株 CA-MRSA 菌株中有 5 株携带毒力基因 pvl。
结论 致病性较强的 CA-MRSA 菌株逐渐进入医疗环境中，且对非 β-内酰胺类药物的耐药性也逐渐增加，应加强对住院患者 CA-MRSA 分离株的监控。

艰难梭菌肠道外感染

赵海
陕西省人民医院

Clostridioides (Clostridium) difficile is the major cause of healthcare antibiotic-associated diarrhoea. However, extra-intestinal manifestations of Clostridioides (Clostridium) difficile infection (CDI) (including bacteremia and tissue infection) are extremely rare. We report a case of extraintestinal CDI after surgery. The isolate of C. difficile was not the PCR ribotype 027.

However, this isolate produced toxins A and B. The patient underwent a follow-up examination 30 days after discharge, which showed complete recovery. This case report adds to existing knowledge of CDI.

PU-3307

分子生物学检测方法与传统方法检测结核病的比较研究

乔相练
庆云县人民医院

目的 对比传统方法与分子生物检测方法检测结核病的效果。
方法 选取 2020 年 1 月~2020 年 12 月在本院就诊的疑似结核病患者 80 例作为研究对象，所有患者均采用传统方抗酸杆菌涂片、分枝杆菌培养法和分子生物检测方法，对比三种检测方法的实施效果。
结果 传统方法的抗酸杆菌涂片检查诊断阳性率 62.5%，分枝杆菌培养诊断阳性率 70%。分子生物检测方法诊断阳性率 82.5%，分子生物检测方法高于传统方法的抗酸杆菌涂片和分枝杆菌培养的诊断阳性率，三种检测方法差异具有统计学意义（P<0.05）。
结论 在结核病的检测中，分子生物检测方法简便快捷，灵敏度高，具有较高的诊断和鉴别诊断价值，适合在临床推广应用。

PU-3308

单细胞测序在病原学发展中的价值

蔡阳
苏州市独墅湖医院（苏州大学附属独墅湖医院）

目的 单细胞测序（Single-cell Sequencing，SCS）可用于探索未知病原微生物或者已知病原体的未知功能基因，通过分析核酸序列检测和鉴定物种，监测耐药株的出现，甚至在分子水平研究病原微生物的进化机制和感染动力学。然而，目前单细胞测序技术在临床应用中面临很多难题。
方法 查阅近 5 年的文献，归纳和总结单细胞测序技术在病原学发展中的价值。
结果 单细胞测序的技术过程包括单细胞分离、核酸序列扩增、基因测序和数据分析。其技术难点在于分离单个细胞及核酸序列扩增策略的选择。
可有较多信息产出的单细胞分离技术的主要方法有 FACS、MACS，但是会存在偏倚，可以收集的参数主要有细胞表面标志物的表达等。同时，需要对单细胞 RNA 序列谱和表型进行联合分析以得到特定的细胞表型与转录特征之间的联系，有助于识别针对病毒表型的新生物标记。
随着科技的发展，在扩增策略方面近些年的理念正不断更新完善。如，Christoph 等对六种单细胞测序常用的方法的性能进行比较，为方法的选择提供了依据。Yin 等对传统的单细胞基因组测序方法进行改进，提出一种结合了组合索引和线性扩增的单细胞测序方法-sci-L3，提升了通量和均匀性的水平。Guo 及其团队开发了一个可对单个细胞中的病毒感染进行动力学分析的基于微流体的高通量平台。通过该平台，研究了上千名脊髓灰质炎患者的病毒感染动力学，发现由于突变负荷，抗病毒药物对每个病毒的消灭能力不同，解释了为何病毒感染动力学与模型推测不符的原因，阐明了病毒种群逃避药物的作用机制。
除此之外，近些年使用单细胞测序技术检测真菌的试剂盒也已问世，填补了这一方面的空白。
结论 然而，单细胞测序费用高昂，若想在临床推广还有很多路要走。除此之外，该技术还有以下几方面需要注意：①在检测前的样本采集和保存阶段，要注意样本的新鲜，如果无法及时检测，可根据需要加入适宜的保护剂；②单细胞分选阶段仍旧存在细胞交叉污染、细胞损伤的可能，目前的技术尚无法完全避免该问题；③DNA 或 RNA 扩增过程中依旧会出现扩增失败及产生大量非特异性

产物的情况，严格控制实验条件以减少此类事件的发生，当然，我们相信过不断改进的扩增技术也会逐步降低该类事件的发生。

PU-3309

肿瘤医院妇科患者支原体和衣原体检查结果分析

周友全[1]、宴君[2]
1. 昆明医科大学第三附属医院（云南省肿瘤医院）
2. 昆明医科大学 2017 级医学检验技术专业

目的 为了明确肿瘤医院的妇科患者生殖道分泌物标本中支原体和衣原体的检出率；支原体、衣原体阳性患者的年龄和疾病的分布情况；以及不同类型支原体对抗菌药物的敏感情况。
方法 收集云南省肿瘤医院检验科细菌室从 2018 年 2 月到 2020 年 9 月的女性阴道支原体、衣原体检查结果。标本检测采用安图生物支原体培养鉴定药敏试剂盒、安图生物沙眼衣原体检测试剂盒。统计分析标本中支原体和衣原体检出情况及支原体的药敏结果。
结果 1557 份标本的检测结果中，沙眼衣原体的阳性率为 13.49%（210/1557），支原体的阳性率为 53.63%（835/1557），其中支原体计数＞104cfu/ml 的占比为 59.9%。单纯人型支原体感染构成比为 4.43%，人型支原体与解脲脲原体混合感染的比例为 15.69%，单纯解脲脲原体感染比比例为 79.88%。支原体、衣原体阳性标本中，妇科患者的年龄分布最大占例为≤44 岁，其次为年龄在 45-54 岁，年龄≥65 岁占比最小。支原体阳性患者中临床诊断为宫颈癌的概率较高，达 74.38%，其他良性疾病概率不高，如子宫肌瘤占 6.09%。人型支原体对红霉素、克拉霉素耐药率较高，对交沙霉素、多西环素敏感率较高。解脲脲原体对克林霉素耐药率较高，对多西环素、米诺环素敏感率较高。人型支原体和解脲脲原体混合感染时对红霉素、克拉霉素耐药率较高，对米诺环素、多西环素敏感率较高。
结论 女性泌尿生殖道支原体和衣原体有混合感染或单纯感染。不同妇科疾病、不同年龄阶段与支原体感染相关性不同，临床可以根据患者的相关情况进行支原体检查，以便及时进行治疗。不同类型支原体感染对抗菌药的敏感性也不同，临床可根据感染类型的差异和药敏结果，选用合理的抗菌药，来保证患者治疗的高效性和减少耐药菌株的出现。

PU-3310

血清 IFI27mRNA 监测甲型流感病毒感染进程的临床意义

韦栋、于德敏、张东华、张欣欣
上海交通大学医学院附属瑞金医院

目的 甲型流感病毒（IAV）感染进程的实时监测长期以来一直缺乏有效的技术手段，临床仅能通过常规炎症指标及影像学结果进行大致评估。本研究通过针对临床样本的回顾性研究分析与体外研究验证，尝试探究甲型流感病毒感染患者外周血干扰素刺激因子 IFI27 作为一种新型宿主生物标志物用于监测病毒感染进程的可行性。
方法 通过综合 261 例临床呼吸道感染患者（包括甲型流感患者组 148 例，非甲流呼吸道病毒感染患者组 55 例，细菌性感染患者组 58 例）的临床信息，分析各类感染患者血清 IFI27 mRNA 的表达水平及动态变化，并与 103 例健康人对照进行比较。比较血清 IFI27 mRNA 表达水平与甲型流感病毒感染患者感染进程之间的相关性，评估其作为 IAV 感染进程监测指标的临床应用价值。
结果 通过分析瑞金医院 2018-2019 年 261 例呼吸道感染住院患者的外周血样本、上呼吸道样本及临床资料，发现甲流病毒感染患者的血清 IFI27mRNA 表达水平显著高于其他各组。使用血清 IFI27mRNA 用于区分住院患者中 IAV 感染与细菌感染及非甲流呼吸道病毒感染的 ROC 曲线下面积分别可达 81.8%与 77%。针对其中 87 例 IAV 感染住院患者选取五个时间点进行持续监测（入院

后 1 天、3 天、5 天、7 天及出院时），结合血清外泌体及细胞感染模型的 RNA-Seq 分析结果，发现在 IAV 感染中血清 IFI27 的 mRNA 水平相比较于其他分子具有更好的特异性和相关性，，可以随患者住院时间点不同保持动态变化，其变化趋势在入院 1-5 天内同患者体温及 CRP 一致性较差，但与肺部影像学结果一致。当血清 IFI27 mRNA 水平下降到较低水平时，患者体温及 CRP 通常也伴随性回落，特别是出院时，绝大多数甲型流感病毒感染患者的血清 IFI27 mRNA 均下降到极低水平。上述结果表明血清 IFI27 mRNA 表达水平可以随着患者的感染进程而动态变化。此外，IAV 感染导致重症肺炎患者血清 IFI27 mRNA 峰值水平显著高于轻中度感染患者。进一步利用体外细胞及动物感染模型的验证实验结果与临床观察结果一致。

结论 血清 IFI27mRNA 水平不仅可以显著区分甲型流感病毒感染与其他病毒及细菌性感染，同时还可以直接反映甲型流感病毒感染患者的感染进程。

PU-3311

Study on the characteristics of intestinal microorganism disorder in patients with lung cancer

Xingbing Lu 、Xie Yi
Department of Laboratory Medicine,West China Hospital,Sichuan University

Objective Lung cancer is a malignancy with high morbidity and mortality worldwide. More evidences indicated that gut microbiome plays an important role in the carcinogenesis and progression of cancers by metabolism, inflammation and immune response. However, the study about the characterizations of gut microbiome in lung cancer is limited.

Method In this study, the fecal samples were collected from 20 healthy individuals and 40 lung cancer patients who were analyzed using 16S rRNA gene amplicon sequencing.There were 20 cases of adenocarcinoma and 20 cases of squamous cell carcinoma, including 7 cases of metastases and 33 cases of lung metastases.

Result the number of OTUs in each sample is between 448 and 1837.At the phylum level, Bacteroidetes (45.61%), Firmicutes (33.19%), Proteobacteria (15.83%), Actinobacteria (2.91%) and Fusobacteria (1.72%) were the most common in lung cancer patients, accounting for 99.27% of the total intestinal bacteria. At the genus level, Bacteroides (28.43%), Faecalibacterium (6.96%), Prevotella_9 (6.64%), Escherichia-Shigella (5.76%) and Klebsiella (4.90%) are the most common in lung cancer patients, accounting for 52.71%of the total intestinal bacteria.Species with higher ADC abundance correlation are Armatimonadetes and Caldiserica; species with higher SCC abundance correlation are Synergistetes and Thaumarchaeota; Nonmetastasis species with higher abundance correlation are: Planctomycetes, Caldiserica, Elusimicrobia, WPS-2 and Synergistetes ; Species with higher correlation of metastasis abundance are: Thaumarchaeota; Control: Zixibacteria, Dependentiae and Entotheonellaeota.No significant difference was observed in alpha diversity between LC patients and healthy controls.The result indicates that alpha diversity of the gut microbiota in ADC (and Metastasis) groups was higher than that of healthy control in terms of good coverage (P=0.016).Metastasis was lower than that of healthy control in terms of chao1 and PD whole tree (P=0.041,P=0.041).The alpha diversity of the gut microbiota was no differences between each SCC group and healthy control group. The principal coordinates analysis (PCoA) and ADONIS test based on unweighted uniFrac distance and binary jaccard distance indicated the stool microbiome composition and abundance of lung cancer patients clustered significantly separately from that of healthy controls ($p < 0.05$) .With a standardized importance value of 2.0-bit threshold, Subdoligranulum (MDG=2.130) and Parabacteroides (MDG=2.027) are the characteristic microbial flora of the healthy control group, which can be completely distinguished from LC patients.At the same time, Lachnospira and Parabacteroides can well screen out SCC patients.The Kyoto Encyclopedia of Genes and Genomes (KEGG) and COG annotation demonstrated decreased abundance of some dominant metabolism-related pathways in the lung cancer.

Conclusion This study explored the characteristics of the gut microbiota in patients with lung cancer for the first time. The systematic and multi-level assessment of the role of gut microbes in laparoscopic cholecystectomy provided basic guidance, suggesting that the gut microbiota may be a microbial marker It has the potential for early prevention and targeted intervention.

PU-3312

耐碳青霉烯类抗菌药物的铜绿、肺克及鲍曼的医院感染特征分析

李愿
苏州市独墅湖医院（苏州大学附属独墅湖医院）

目的 探讨耐碳青霉烯类抗菌药物的铜绿假单胞菌、肺炎克雷伯菌及鲍曼不动杆菌的医院感染特征，推动医院感染耐药细菌的防治工作。
方法 选取苏州市独墅湖医院 2020 年 1 月至 2021 年 5 月，经临床检测中心微生物实验室鉴定临床样本培养结果为阳性的 129 个病例。采用质谱仪鉴定菌株，M50 药敏仪检测耐药情况。统计对碳青霉烯类抗菌素亚胺培南和美罗培南“耐药”的菌株作为耐碳青霉烯类抗菌药物菌株。
结果 在 129 个病例中，感染铜绿假单胞菌 55 例，其中碳青霉烯类耐药铜绿假单胞菌 23 例，占 41.82％；肺炎克雷伯菌共 51 例，碳青霉烯类耐药肺炎克雷伯菌 12 例，占 23.53％；鲍曼不动杆 23 例，碳青霉烯类耐药鲍曼不动杆菌 13 例，占 56.52％。所有耐碳青霉烯类药物共 48 例，其中 23 例为铜绿假单胞菌感染，12 例为肺炎克雷伯菌感染，13 例为鲍曼不动杆菌感染。其中耐亚胺培南有 48 例，耐美罗培南者 46 例，二者全部耐药 46 例。48 例均为下呼吸道感染病例，耐药菌株均从痰液及支气管灌洗液样本中分离，其中从痰液中分离的有 46 例，从支气管灌洗液中分离的有 2 例。
结论 本医院作为 2020 年 1 月新开设的医院，在开业半年内出现如此多的耐碳青霉烯类抗生素的菌株，一方面可能由于病人和医护人员在苏州市各医院之间的流动性导致，另一方面不排除敏感菌的耐药突变，产生的原因值得深入分析为新医院的感染控制提供理论支持。同时，医院应加强管理，执行严格的隔离预防措施，积极控制，及时遏止其在医院内的传播和流行。

Gut Microbiota Dysbiosis in Patients with Preeclampsia: A Systematic Review

卿维、史艺雅、周宏伟、陈慕璇
南方医科大学珠江医院

Currently, the etiology of preeclampsia (PE) has not been comprehensively clarified. Accumulating evidence indicated that gut microbiota is associated with the onset of PE. Herein, a systematic review was conducted to explore the dysbiosis of gut microbiota in PE patients compared with healthy controls (HCs). Publications were retrieved from Medline, EMBASE, Web of Science and Scopus. Studies comparing the composition of gut microbiota in PE patients to HCs using culture-independent Methods were included. In total, six studies with an overall sample size of 416 PE patients and 704 HCs were included. In terms of alpha- and beta-diversity, consistent results reflecting the dysbiosis of gut microbiota were observed in PE patients. Furthermore, Fusobacterium enriched, while Lachnospira, Akkermansia, Faecalibacterium and Alistipes were depleted in PE. This systematic review demonstrates significant dysbiosis of gut microbiota in PE patients, and confirms that that the possible correlations between gut microbiota dysbiosis and PE onset.

PU-3314

Inflammasomes restrain cytosolic Chlamydia trachomatis growth through GSDMD-mediated pyroptosis in macrophages

Ping Jiang、Xiaojing Feng、Yiyuan Fang、Lingli Tang
Second Xiangya hospital

Purpose Chlamydia trachomatis (Ct), an obligate intracellular Gram-negative bacterium, is a major cause of human sexually transmitted disease. Activation of inflammasomes plays a crucial role in the immune responses generated during C. trachomatis infection. However, the mechanism of inflammasome-mediated defense against C. trachomatis remains unclear. Thus, we aimed to explore anti-Ct effector mechanisms triggered by the inflammasome activation in macrophages.

Methods RAW264.7 cells were infected and uninfected with Ct. The morphological changes of macrophages after Ct infection were observed by inverted optical microscopy and transmission electron microscopy. PI fluorescence staining intensity and LDH release were used to evaluate the membrane permeability of macrophages infected with Ct. The secretion of IL-1β and IL-18 in the cultured supernatant, the activation of GSDMD, the canonical inflammasome NLRP3/caspase-1and non- canonical inflammasome caspase-11, and the expression of the Ct mark protein cHSP60 in the cell lysate were detected by Western Blot. Indirect immunofluorescence was used to detect the number and size of intracellular Ct inclusions. Intracellular Ct survival was evaluated by reinfection of Hela cells with the lysate of macrophages infected with Ct. To investigate the mechanisms by which inflammasomes defend against Ct infection in macrophages, the NLRP3 inhibitor MCC950, caspase-1 inhibitor Ac-YVAD-cmk and caspase-11 inhibitor Wedelolactone were used to pretreat macrophages. To study the effect of GSDMD-mediated pyroptosis during Ct infection, GSDMD-NT inhibitor Necrosulfonamide was used to pretreat macrophages.

Results Compared with uninfected macrophages, infected macrophages showed typical morphological changes of pyroptosis: cell swelling, characteristic large bubbles, fragmented cell membranes and organelle damage. High PI fluorescence intensity, the elevation of LDH release and IL-1β and IL-18 secretion suggested that membrane permeability of macrophages increased after infection with Ct. Both Canonical inflammasome NLRP3/caspase-1 and non-canonical inflammasome caspase-11 were activated in macrophages infected with Ct, which subsequently cleaved GSDMD into GSDMD-NT then induced pyroptosis. Blocking the activation of canonical and non-canonical inflammasomes significantly reduced GSDMD-mediated pyroptosis and increased Ct yield in macrophages. Consistently, direct inhibition of membrane perforation activity of GSDMD-NT significantly promoted the Ct growth in macrophages, including increased inclusion number and size, and infectious yield.

Conclusions The results demonstrate that GSDMD-dependent pyroptosis triggered by both canonical inflammasome NLRP3/caspase-1 and non-canonical inflammasome caspase-11 plays a critical role in restricting Ct infection in macrophages. This study reveals novel therapeutic targets for treating Ct infection.

PU-3315

胶体金免疫层析法快速检测 CRE 菌株碳青霉烯酶的应用评估

姚锂凤、郑巧平、杨蒙、罗清琼、陈旭、陈福祥
上海交通大学医学院附属第九人民医院

目的 评估胶体金免疫层析法快速检测耐碳青霉烯类肠杆菌科（Carbapenem-Resistant Enterobacteriaceae, CRE）菌株中碳青霉烯酶类别的临床应用价值。
方法 收集上海交通大学医学院附属第九人民医院 2016 年分离自临床标本的 CRE 菌株 73 株，采用聚合酶链反应（PCR）技术鉴定碳青霉烯酶的基因型，并采用胶体金免疫层析法（Colloidal Gold Immunochromatograohic Assay, GICA）对这些菌株的碳青霉烯酶进行快速检测，同时以 PCR 法为参考方法评估 GICA 法在快速检测碳青霉烯酶的准确度和临床应用价值。
结果 PCR 法结果显示 73 株 CRE 菌株中有 51 株为 blaKPC 基因阳性（69.9%），19 株为 blaNDM 基因阳性（26.0%），2 株为 blaIMP 基因阳性（2.7%），1 株为 blaVIM 基因阳性（1.4%），未检测到 blaOXA 基因阳性菌株；采用胶体金免疫层析法对这些菌株进行碳青霉烯酶检测，结果显示 GICA 法对 blaKPC 阳性菌株酶型检测准确度为 100% (51/51)，对 blaNDM 阳性菌株酶型检测准确度为 100%（19/19），对 blaIMP 阳性菌株酶型检测准确度为 100%（2/2），对 blaVIM 阳性菌株酶型检测准确度为 100%（1/1）。
结论 GICA 法与 PCR 方法在检测 CRE 菌株碳青霉烯酶类型中的一致性为 100%。 GICA 法具有简便快速、准确度高等特点，在早期监测临床耐碳青霉烯类菌株和抗感染治疗中具有重要的应用前景。

427 株无乳链球菌的临床分布及耐药性分析

陈坤[1]、黄程鑫[2]、张胜行[1]、李卫滨[1]
1. 联勤保障部队第九〇〇医院
2. 福建医科大学福总临床医学院检验科

目的 分析无乳链球菌的临床分布及其对常用抗生素的药物敏感性情况，为临床防治孕妇或新生儿无乳链球菌感染提供依据。
方法 回顾性分析 2018 年 1 月~2020 年 12 月自中国人民解放军联勤保障部队第九〇〇医院门诊和住院患者的标本中分离出的无乳链球菌。分离株均经 VITEK-MS 全自动微生物鉴定质谱分析仪鉴定为无乳链球菌，而后使用 ATB 半自动微生物鉴定及药敏分析系统对经分纯培养后的无乳链球菌进行药物敏感性试验。
结果 共收集 427 株无乳链球菌临床分离株，主要分离自阴道分泌物（46.1%）、精液（24.4%）、中段尿（15.9%）。患者主要来自妇产科（41.9%）、生殖助孕中心/不孕不育专科（24.4%）、泌尿外科（7.3%）。药敏结果显示，无乳链球菌对四环素、红霉素和克林霉素有较高的耐药率，分别为 77.7%、68.6%和 57.7%。对左旋氟氧沙星中等耐药（28.6%），偶见对青霉素（1.5%）和头孢噻肟（0.5%）不敏感的菌株。本次试验未发现对万古霉素和利奈唑胺耐药的分离株。对阴道分泌物中检出的无乳链球菌的患者按照年龄分组分析，分析结果表明各年龄段的分离率差异无统计学意义（$\chi2=3.654$，$P>0.05$），表明年龄不是本院阴道分泌物中无乳链球菌分离率的影响因素。
结论 无乳链球菌主要寄生于人类泌尿生殖道，孕妇是无乳链球菌感染的高风险人群。在药敏结果未报告之前，青霉素和其它 β-内酰胺酶类药物可以作为防治其感染的经验用药。其对四环素、红霉素和克林霉素的耐药率较高，临床需根据药敏结果合理选用抗菌药物。

PU-3317

布氏杆菌病以及布氏杆菌的微生物学检验的相关进展

宋威、关秀茹
哈尔滨医科大学附属第一医院

布氏杆菌病是世界上最为严重的人畜共患病之一，目前已成为我国发病数增长速度最快的传染病之一。近年来，布氏杆菌病呈现由牧区向非牧区转移，由职业人群向非职业人群扩散的趋势，我国布病疫情防治形势严峻。本病临床表现变化多端，可影响全身各个系统、器官，与多种疾病难于鉴别。因此，在流行区高度怀疑本病且正确的诊治对降低发病率有重要意义。其中在布氏杆菌病的相关诊断中，分离培养鉴定布氏杆菌是诊断布氏杆菌病最可靠的方法，因此通过细菌学检验检查到布氏杆菌对于布氏杆菌病的诊断是至关重要的。本综述将对布氏杆菌病以及布氏杆菌的微生物学检验相关进展做总结。

PU-3318

一例通过空调通风系统传播的嗜军团菌肺炎感染病例研究

秦诗睿
三峡大学附属仁和医院

目的 通过对一例本市新闻报道中通过空调通风系统传播造成感染的军团菌肺炎的病例的分析对嗜军团菌肺炎的传播特征和抗感染治疗进行探讨
方法 对该病例进行分析对军团菌的传播特点和药敏特征进行分析。
结果 通过对该病例进行分析，确定在空调滤芯中的湿润环境中滋生的军团菌通过空调通风系统进行传播，该患者出现急性上呼吸道感染及发热症状并迅速发展为呼吸衰竭和肾衰竭。该患者出现急性纤维蛋白化脓性肺炎及多器官损伤，符合嗜军团菌肺炎的典型病理特征。
结论 嗜军团菌肺炎主要感染部位为肺泡巨噬细胞，培养结果为阳性，是诊断军团菌感染的金标准。但其培养条件苛刻，阳性率较低。所以，关于军团菌肺炎的确诊，一般通过以下几种**方法** ①胸腔积液、痰液、血液或支气管肺泡灌洗液培养阳性，但需注意，嗜军团菌肺炎的培养需要特殊培养基，营养要求高，生长缓慢，阳性率一般不高。②军团菌血清学实验，通过免疫层析技术快速检测尿液中嗜军团菌 1 型抗原，但此方法只针对 1 型血清型，对于其它嗜军团菌以及非嗜肺军团菌阳性率很低。③双份血清抗体 4 倍升高或减低，但是血清抗体检测受检测方法的影响，其中 IFA 检测是公认比较好的办法，需注意的是，IFA 方法在结果判读时存在一定的主观性。关于嗜军团菌肺炎的治疗，由于军团菌在细胞内寄生，所以容易进入肺组织，气道分泌物并且细胞内药物浓度高的药物是比较好的选择。大环内酯类是治疗军团菌肺炎的常用药物，阿奇霉素、克拉霉素在目前一般比红霉素使用的更为广泛。氟喹诺酮类，如莫西沙星、加替沙星也有很好的抗军团菌的活性。利福平在临床上厂与大环内酯类抗生素联合使用，用于重症嗜军团菌肺炎的治疗。此类病例一般首先考虑为社区获得性肺炎，一般耐药性不高，但对于常用于社区获得性肺炎的抗生素，包括左氧氟沙星，头孢呋辛，青霉素等治疗无效后，应当考虑其耐药性发生变化或其它特殊感染。

PU-3319

流感病毒感染与急性心肌梗死关系的研究

杜柏岩、关秀茹
哈尔滨医科大学附属第一医院

目的 探讨流感病毒（influenza virus, IV）感染与急性心肌梗死（acute myocardial infarction, AMI）之间的关系。
方法 采用 EL ISA 法检测 74 例 AMI 患者与 77 例正常对照组血清中 IV-A 及 IV-B 抗体水平，同时检测两组的 IL-18、hsCRP 的水平，并对冠心病危险因素进行调查。
结果 AMI 组 IV-A IgG 抗体阳性率（86.48%）、IV-B IgG 抗体阳性率（75.67%）显著高于对照组（66.23%, 16.88%, p<0.01）。AMI 组 IL-18(0.98±0.26)、hsCRP (23.71±33.26)水平与对照组(0.46±0.12，2.10±1.81)比较明显增高，差异具有统计学意义，并且 IgG 水平与 IL-18 和 hsCRP 呈正相关。校正冠心病危险因素前后，IV-A 和 IV-B IgG 抗体阳性均与 AMI 有相关性(IV-A：OR = 3.2 , P = 0.025；OR =4.18 , P = 0. 001。IVB：OR = 15.31 , P = 0.01；OR =19.44 , P = 0. 001) 。
结论 IV 感染可能激发或加重冠状动脉内炎症反应，IL-18 和 hsCRP 参与 AMI 的病理过程。

PU-3320

148 例沙门菌血清型分布和耐药性分析

陈娟[1]、陈慧珍[2]、李卫滨[1]、张胜行[1]
1. 第九〇〇医院检验科
2. 福建医科大学

目的 分析联勤保障部队第九〇〇医院 2016 年 1 月-2021 年 4 月所检出的沙门菌的血清型分布、抗菌药物的耐药率及耐药变迁趋势，为临床利用抗生素治疗沙门菌提供指导。
方法 收集上述时间段内临床分离的沙门菌，对其进行血清学分型，采用 Walkaway 96 Plus 全自动细菌鉴定和药敏分析仪检测沙门菌的耐药情况，以 CLSI 为标准对药敏结果进行判读，应用 Excel 2007 与 SPSS 26.0 软件对数据进行整理分析。
结果 2016 年 1 月-2021 年 4 月共收集有效菌株 148 株，患者年龄分布以儿童（＜14 周岁 44.6%）与老人（＞60 周岁 28.4%）为主，标本类型以粪便（74.3%）为主，血清学分型中鼠伤寒沙门菌（20.9%）最多见，其次是肠炎沙门菌(11.5%）；药敏结果显示沙门菌对氨苄西林的耐药率最高为 57.6%，复方新诺明耐药率(26.4%)居于第二位，喹诺酮（环丙沙星 3.4%、左氧氟沙星 0.7%）和氨基糖苷类药物（妥布霉素 9.4%、庆大霉素 9.4%、阿米卡星 1.3%）的耐药率呈现下降趋势，对三代头孢（头孢曲松 7.4%、头孢噻肟 7.4%、头孢他啶 3.4%）表现出低耐药率，有 12 株产超广谱 β 内酰氨酶，3 株出现对碳青霉烯类药物（亚胺培南与美罗培南）耐药。
结论 本院儿童群体的沙门菌检出率最高，鼠伤寒沙门菌检出数量最多，夏秋季节（5-10 月）的检出量明显高于春季与冬季；对氨苄西林药物的耐药率最高，有多重耐药菌株出现且在儿童中占比大。综上建议临床医生应根据微生物实验室的培养结果并结合当地流行病学特点，合理地选择与使用抗生素，增加对儿童与老人患者的关注，控制多重耐药菌株的产生和增加。

PU-3321

（1-3）-β-D 葡聚糖临床研究

宋熙瑶、刘文博
哈尔滨医科大学附属第一医院

（1-3）-β-D 葡聚糖是酵母和丝状真菌的细胞壁脂多糖成分，可从真菌细胞壁释放至血液、肺泡灌洗液、脑脊液等。鲎的凝血系统中凝血酶原 G 因子能识别这种葡聚糖，所以被称为 G 试验。目前，临床上用比浊法和显色法来测定。在临床试验中，应该严格按照操作规程，无菌操作，必须确保使用试管等器具无菌、无热原的专用管。

G 试验<60pg/ml 为阴性结果不推荐抗真菌治疗，存在宿主因素，72 小时需再次检测。60-100pg/ml 时属于灰区，有可能发生侵袭性真菌感染的可能。存在宿主因素，48 小时需再次检测。当结果 100-500pg/ml 很可能会发生全身侵袭性真菌感染，此时建议进行抗真菌治疗，但也需要 6-24 小时复查确认。>500pg/ml，则发生全身侵袭性真菌感染可能性极大，建议治疗，G 试验结果还需要动态监测。

注意事项：G 试验的阳性阈值仅适用于成人，儿童和婴儿体内含量较成人高。脑脊液（1-3）-β-D 葡聚糖检测可用于中枢神经系统真菌感染的诊断，由于真菌无法通过血脑屏障，患者脑脊液中（1-3）-β-D 葡聚糖远高于血清。脑脊液含量随真菌治疗进行而逐渐下降。

PU-3322

不同感染性指标在血流感染早期诊断中的应用价值探讨

伏改芬
昆明市第一人民医院

目的 以血流感染患者为研究对象，分析不同感染性指标在病情早期诊断中的应用价值。
方法 以 193 例自 2018 年 8 月至 2020 年 4 月进行治疗的疑似血流感染患者为研究对象，将 76 例血流感染患者纳入研究组，将 117 例未确诊为血流感染者纳入对照组，检测两组患者 WBC、N 、CRP、PCT、IL-6、FIB 及体温等不同感染性指标并对各项指标水平进行对比。
结果 研究组 WBC、N%等各项外周血感染性指标水平均高于对照组，两组各项指标水平差异均有统计学意义，P<0.05。以血培养结果作为金标准分析各项指标单独检查以及联合检测在血流感染早期诊断价值，结果表明各项指标联合检测特异度及敏感度均明显高于各项指标单独检测，差异有统计学意义，P<0.05。各项感染性指标在血流感染及非血流感染鉴别中的效能均较高，具有一定的检测价值。
结论 血流感染患者不同感染性指标均存在一定程度的异常现象，早期联合检测能够为临床进行病情严重程度判断及预后评估提供重要指导和参考。

PU-3323

哈尔滨医科大学附属第一医院 ICU 细菌分布和耐药性分析

宋熙瑶、俞晓晨
哈尔滨医科大学附属第一医院

目的 分析本院 2018 年 ICU 分离菌的总体情况及其耐药性。
方法 使用梅里埃全自动细菌鉴定/药敏鉴定仪对临床有意义的分离菌进行鉴定和药敏试验，细菌药敏结果根据 2017 版临床和实验室标准协会 CLSI-M100 文件判读。

结果 2018 年本院共培养出 2603 株分离菌，约占全院分离菌的 25%（2603/10401）。占前五位的分别为鲍曼不动菌（694 株，占 26.7%）、肺炎克雷伯菌（281 株，占 10.8%）、金黄色葡萄球菌（181 株，占 7.0%）、铜绿假单胞菌（161 株，占 6.2%）、大肠埃希菌（126 株，占 4.8%）。与去年（2017 年 2008 株）相比，菌株数量明显增加。而前 5 位细菌分布变化不大。2017 年分别为鲍曼不动菌（653 株，占 32.5%）、肺炎克雷伯菌（265 株，占 13.2%）、金黄色葡萄球菌（163 株，占 8.1%）、铜绿假单胞菌（133 株，占 6.6%）、大肠埃希菌（120 株，占 6.0%）。
结论 2018 年 ICU 细菌耐药率与往年相比略有不同。总体而言，鲍曼不动杆菌在菌株去重之后，依然超过 1/4，且耐药严重，但可能很多细菌为定植株。另外，肺炎克雷伯菌紧随其次，而且肺炎克雷伯菌毒性大，所以更应引起临床重视。

PU-3324

鼠疫菌与酸应激相关转录组学和代谢组学研究

王敏
泰安市中心医院

鼠疫菌通过跳蚤叮咬进入人体被巨噬细胞吞噬后进入了一个低钙、弱酸、低镁、高渗的胁迫环境，并快速启动一系列应对机制存活下来从而发挥致病性。本研究将从鼠疫菌对酸性刺激在基因转录水平及代谢水平的变化探讨其可能存在的致病机制。研究**方法** 将鼠疫菌在 pH 值为 6、37℃无钙 TMH 培养基中进行培养（模拟鼠疫菌在巨噬细胞溶酶体内环境），运用 RNA-Seq 技术研究它们在转录水平上的差异，利用 GO 分析、 KEGG 通路富集分析发现影响显著的功能分类及代谢通路。运用气相色谱-飞行时间质谱联用技术 GC-TOFMS（气相色谱-飞行时间质谱联用技术）和 UHPLC-QTOFMS（超高效液相色谱-四极杆飞行时间质谱联用技术）检测酸刺激培养条件下的鼠疫菌在代谢物水平上的变化，经 PCA 及 OPLS-DA 多元统计分析方法找到对实验条件改变响应较强且稳定的差异代谢物。与在中性环境培养的鼠疫菌相比较，鼠疫菌在 pH 为 6 的弱酸环境下有 785 个基因发生了转录水平上调， 551 个基因发生了转录水平下调。差异表达基因在二元调控系统，TCA 循环，核糖体代谢，脂肪酸， T3SS 和无机盐代谢途径富集显著。联合运用 GC-TOF MS 和 UHPLC-QTOF MS 两个平台对 pH 为 6 且 37℃无钙离子培养条件下的鼠疫菌代谢物检测， 总共鉴定到 630 种物质，酸刺激培养环境下总差异代谢物 87 种。经代谢通路富集分析，发现嘧啶代谢通路被显著富集，同时发现脯氨酸明显累积，有研究表明脯氨酸积累可促进细菌对乳酸的耐受能力，改善应激下的细胞活力。我们通过转录组学和代谢组学分析，揭示了鼠疫菌胞内低 pH 环境下的转录与代谢规律，为该菌致病早期应对宿主抵抗的策略，为深入揭示分子机制提供了数据基础和新的研究思路。

PU-3325

CRISPR 技术在艰难梭菌研究中的应用进展

伏改芬
昆明市第一人民医院

艰难梭菌（Clostridium difficile，CD）是医院治疗腹泻获得性较高的病原菌之一，与抗生素治疗相关性腹泻、致命性的伪膜性结肠炎密切相关。随着广谱抗生素的应用、质子泵抑制剂、化疗药物等，艰难梭菌感染 （Clostridiumdifficile-infection CDI）的发生率明显增加，推测其与肠道菌群失调密切相关。CRISPR 免疫系统技术是广泛存在于人类细菌和其他古生菌细胞中的一种高度适应性自体免疫系统，CRISPR 技术已被广泛的应用到基因敲除、基因替换等基础基因细胞编辑方式、基因激活、疾病模型构建、甚至是基因治疗。由 II 型 CRISPR/Cas 系统改造而成的 CRISPR/Cas9 技术已经被开发成一种强大的基因组结构编辑和基因表达调控工具，应用最广泛。本文从艰难梭菌

感染的致病机制，治疗策略，CRISPR 基本结构、工作原理、CRISPR 技术在艰难梭菌中的应用进行综述总结及展望。

PU-3326

通过重组腺病毒介导的颗粒溶素的联合治疗提高结核病的清除率

马记磊
郑州大学第一附属医院

目的 结核病（TB）仍然是全世界传染病中主要的死亡原因。结核病患者对长期治疗的依从性差会增加复发的风险，并导致出现耐多药和广泛耐药的结核病（MDR-TB 和 XDR-TB）。迫切需要更有效的结核病治疗方法。我们假设细胞内外表达颗粒溶素，清除感染宿主肺泡巨噬细胞内外结核分枝杆菌，增强对 TB 的化学治疗功效。
方法 分别开发基于重组腺病毒 5 型（rAd5）的治疗性疫苗 rAdhGLi 和 rAdhGLs（rAds），以表达细胞内和细胞外颗粒溶素。在 U937 和 RAW264.7 细胞上评估了 rAdhGLi 和 rAdhGLs 的离体杀菌作用。进一步评估了使用 rAdhGLi 和 rAdhGLs 对结核分枝杆菌感染的 SCID 小鼠进行免疫治疗或对药物敏感的 TB 或 MDR-TB 小鼠模型进行免疫治疗联合化疗的疗效。
结果 rAdhGLi 和 rAdhGLs 分别对细胞外或细胞内结核分枝杆菌 H37Rv 和 MDR-TB 临床菌株表现出直接的杀菌作用。与单独使用 rAdhGLi 或 rAdhGLs 相比，用 109 PFU 的 rAdhGLi 和 109 PFU 的 rAdhGLs 进行免疫治疗对结核分枝杆菌 H37Rv 感染的 SCID 小鼠具有更显着的杀菌作用，并延长了它们的生存期。更重要的是，化学疗法与 rAds 免疫疗法相结合将结核分枝杆菌 H37Rv 感染小鼠的化学治疗时间缩短至 4 个月，并防止了复发。 rAds 与 MDR-TB 小鼠化学疗法的联合使用也比单次使用显着降低了器官细菌负荷。
结论 重组腺病毒将颗粒溶素递送至受感染的肺可提高体内结核的清除率，可能是一种有前途的结核和耐多药结核病辅助治疗疫苗。

PU-3327

耐碳青霉烯类肠杆菌科细菌的流行病学特点及耐药性分析

朱军
资阳市第一人民医院

目的 分析该院耐碳青霉烯类肠杆菌科细菌(CRE)的检出情况和耐药性,以期能够合理使用抗菌药物,更好地预防和治疗 CRE 感染.
方法 收集 2018-2020 年该院检出的肠杆菌科细菌,使用全自动微生物测定仪对菌株进行培养、鉴定、药敏试验,分析 CRE 的检出情况,统计 2018-2020 年主要 CRE 的检出率,比较各类型标本中 CRE 的检出情况,统计主要 CRE 对常用抗菌药物的耐药率.
结果 共分离肠杆菌科细菌 8139 株,其中 CRE 菌株为 180 株(2.2％),主要是肺炎克雷伯菌(54.2％)、大肠埃希菌(18.0％)和产气肠杆菌(12.0％)等菌株,主要来自痰液(57.8％)、尿液(27.7％)、静脉血(8.4％)和腹腔引流液(3.6％)等标本;检出的 CRE 中,肺炎克雷伯菌、大肠埃希菌和产气肠杆菌检出率总体呈现逐年递增趋势,尤其是肺炎克雷伯菌在 2019 年高达 47.2％;CRE 对所有常用抗菌药物的耐药率均＞60％,特别是对 β-内酰胺类和喹诺酮类的耐药率高达 100.0％.
结论 2018-2020 年该院 CRE 主要为肺炎克雷伯菌、大肠埃希菌和产气肠杆菌等,检出率总体呈逐年递增趋势,对临床常用抗菌药物的耐药性较高,特别是对 β-内酰胺类和喹诺酮类抗菌药物全耐药.

PU-3328

2018—2020 年资阳某医院血培养分离菌的耐药性分析

杨祺
资阳市第一人民医院

目的 了解 2018-2020 年该院血培养阳性细菌的分布及耐药情况.
方法 根据全国细菌耐药监测网技术要求,对血培养阳性分离菌进行鉴定和药敏试验,按照 2018 年美国临床和实验室标准化协会(CLSI)标准进行结果判读，结果 2018-2020 年自血培养中共分离得病原菌 1352 株,其中革兰阳性菌 224 株,占 16.6%;革兰阴性菌 1128 株,占 83.4%,前五位分离菌依次为大肠埃希菌、克雷伯菌属、金黄色葡萄球菌、肠球菌属和凝固酶阴性细菌.金黄色葡萄球菌和凝固酶阴性葡萄球菌中甲氧西林耐药株(MRSA、MRCNS)的检出率分别为 31.6%和 81.4%.除四环素外,粪肠球菌对其他抗菌药物的耐药率均低于屎肠球菌,肺炎链球菌对青霉素 G 的耐药率仅为 1.6%,未检出耐万古霉素和利奈唑胺的细菌.碳青霉烯类耐药大肠埃希菌和肺炎克雷伯菌检出率分别为 4.4%和 21.5%.
结论 血培养分离菌以革兰阴性菌为主,MRSA 仍然是革兰阳性菌感染中的主要问题.碳青霉烯类耐药的肠杆菌科细菌逐年增加,应加强医院感染防控和抗菌药物临床应用管理,以遏制此类菌株的传播扩散.

PU-3329

2020 年资阳市某三甲医院细菌耐药性监测结果分析

宋旭辉
资阳市第一人民医院

目的 探讨 2020 年资阳市某三甲临床分离菌株对常用抗菌药物的耐药率，为临床经验性抗感染治疗提供依据。
方法 收集 2020 年 1 月至 12 月我院检验科分离的非重复细菌，按统一方案进行菌株鉴定及药敏检测，应用 Whonet5.6 软件对数据进行分析。
结果 2020 年共分离出有临床意义的细菌 4801 株，其中，肺炎克雷伯菌共 1248 株（25.99%），大肠埃希菌 818 株（17.04%），金黄色葡萄球菌 512 株（10.66%），铜绿假单胞菌 469 株（9.77%），鲍曼不动杆菌 431 株（8.98%），阴沟肠杆菌共 254 株（5.30%）；本年度多重耐药菌的检出率中，耐甲氧西林金黄色葡萄球菌（MRSA）检出 180 株（35.16%），产超广谱酶 β-内酰胺酶细菌（ESBLs）检出大肠杆菌 308 株（37.65%）、肺炎克雷伯菌 142 株（11.38%），耐碳青霉烯肠杆菌（CRE）75 株（3.63%），耐碳青霉烯鲍曼不动杆菌（CRABA）115 株（26.68%），耐碳青霉烯铜绿假单胞菌（CRPAE）15 株（3.20%）。
结论 本院临床分离的常见细菌对不同抗菌药物呈不同耐药率，应充分了解细菌耐药监测结果，合理使用抗菌药物并加强医院感染管理。

PU-3330

Detection of a clinical carbapenem-resistant Citrobacter portucalensis strain and the dissemination of Citrobacter portucalensis in clinical settings

xiaoli cao
Nanjing Drum Tower Hospital'

Objective A clinically isolated carbapenem-resistant Citrobacter portucalensis was characterized by whole genome sequencing (WGS).
Methods Strain 3839 was identified by Vitek 2.0 and matrix-associated laser desorption ionization-time of flight mass spectrometry (MALDI-TOF MS). Antibiotic susceptibility testing was performed by microbroth dilution method. WGS followed by bioinformatics analysis was conducted.
Results Strain 3839 was initially identified as C. freundii by Vitek and MALDI-TOF MS, and later was demonstrated as C. portucalensis by WGS analysis. Through average-nucleotide identity analysis, we further detected 55 C. portucalensis genomes which were misidentified as C. freundii in GenBank, and at least 22 were clinical-associated, suggesting that the occurrence of C. portucalensis in the clinical setting might be underestimated by the conventional method. Strain 3839 was extremely drug-resistant, and the presence of multiple resistance determinants was detected by WGS, including blaNDM-1, blaSHV-12, blaCMY-150, blaOXA-1, qnrB9, qnrA1, aac(6')Ib-cr; aph(6)-Id_1, aph(3")-Ib, aac(6')Ib-cr, tetA, tet34, and catB3. Forty-five insertion sequences, 8 phages, and 1 integron gene cassette were identified in this strain. The blaNDM-1 gene was carried by an IncX3 plasmid, which was identical to a plasmid detected in a C. freundii strain. The genetic context of blaNDM-1 was IS30-blaNDM-1-bleMBL-trpF-dsbD-cutA1-groES-groEL-IS91.
Conclusion To our knowledge, this is the first report of carbapenem-resistant C. portucalensis isolated from clinical samples. The blaNDM-1 gene carried by C. portucalensis may transmit among Citrobacter spp. mediated by plasmids. Together with the underestimation of clinical occurrence caused by the misidentification, our study warrants the necessity of preventing the dissemination of such emerging drug-resistant species in clinical settings.

PU-3331

某三甲医院 2018-2020 年 ICU 病原菌分布及耐药性分析

龙绮云
资阳市第一人民医院

目的 了解四川省资阳市某三甲医院 2018-2020 年重症监护病房（ICU）分离所得病原菌的耐药性，为细菌耐药性监测提供基础数据。
方法 四川省资阳市某三甲医院 2018-2020 年分离所得病原菌的类型及耐药性进行回顾性分析。
结果 2018-2020 年 ICU 分离所得革兰阴性菌以大肠埃希菌 (12.67%、13.12%、13.2%)和肺炎克雷伯菌（13.4%、14.2%、14.51%）为主，革兰阳性菌以金黄色葡萄球菌（6.5%、7.3%、9.1%）为主。
结论 我院 ICU 病房分离所得病原菌耐药性较强，呈逐年递增趋势，ICU 应进一步强化无菌操作意识，应充分利用和重视细菌培养结果进行感控管理，有效控制细菌耐药率，促进抗菌药物的合理应用。

PU-3332

PfAP2-G2 介导恶性疟原虫配子体发育的研究

许瑶征
中国医科大学

目的 研究 PfAP2-G2 在恶性疟原虫配子体发育阶段的角色和作用并探讨其内在调控机制。
方法 通过 CRISPR-Cas9 技术获得 PfAP2-G2 敲除型以及标签型虫株，经间接免疫荧光（IFA）以及逆转录定量 PCR（RT-qPCR）检测 PfAP2-G2 的表达水平以及定位情况。通过生长试验以及诱导配子体检测敲除 PfAP2-G2 对于无性期疟原虫和配子体的生长状况的影响。通过 IFA 检测敲除 PfAP2-G2 对于恶性疟原虫从无性期转向有性发育比例的改变情况。通过 RNA-seq 以及 RT-qPCR 检测敲除 PfAP2-G2 影响何种基因转录改变。通过染色质免疫共沉淀-实时荧光定量 PCR（CHIP-qPCR）检测 PfAP2-G2 的直接作用靶点，从而分析 PfAP2-G2 影响恶性疟原虫配子体发育的具体机制。
结果 成功获得 PfAP2-G2 的基因修饰性虫株，发现 PfAP2-G2 在无性阶段中环状体期表达量最高并且定位在细胞核内。敲除 PfAP2-G2 对于无性期疟原虫的原虫率没有影响，但是使配子体感染率降低且使得配子体发育停滞在Ⅲ期。敲除 PfAP2-G2 使得恶性疟原虫从无性期转向配子体发育的转化率降低，并且雌雄配子体比例升高。敲除 PfAP2-G2 后，PfMDV-1 的表达量在环状体期以及裂殖体期均降低；PfAP2-G 在环状体期的表达量无变化，但在裂殖体期表达量降低。通过 RNA-seq 结果分析，PfAP2-G2 敲除型虫株在环状体期表达量下降的基因有 12 个，表达量上升的基因有 113 个；PfAP2-G2 敲除型虫株在裂殖体期表达量下降的基因有 102 个，上升的基因有 41 个。PfMDV-1 是 PfAP2-G2 的靶基因之一。
结论 PfAP2-G2 在无性阶段中环状体期表达量最高并且定位在细胞核内。PfAP2-G2 对于配子体的产生及发育有重要作用，尤其是雄配子体。PfMDV-1 是 PfAP2-G2 的靶基因之一，PfAP2-G2 是通过调控 PfMDV-1 的基因表达，从而影响配子体的发育。

PU-3333

衡阳地区某三甲医院微生物培养细菌分布及耐药性分析

陈聪
南华大学附属第一医院检验科

目的 了解衡阳地区某三甲医院患者医院感染病原菌分布及耐药性分析，为助力于临床合理使用抗生素提供有力依据。
方法 收集我院 2020 年 1 月至 2020 年 12 月所有临床科室送检标本，回顾性分析其临床科室分布特点及耐药性。
结果 2020 年 1 月至 2020 年 12 月临床送检细菌培养标本约 53315 份，送检标本检出病原菌约 10737 株，阳性率为 20%。其中革兰阳性菌 2311 株，占 22%；革兰阴性菌 6447 株，占 60%；真菌株 1979，占 18%。主要病原菌为大肠埃希菌、鲍曼不动杆菌、肺炎克雷伯菌、铜绿假单胞菌、金黄色葡萄球菌和白色假丝酵母菌。革兰阴性杆菌对亚胺培南、美诺培南的敏感率约为 85%。革兰阳性球菌对万古霉素敏感率约为 86%。
结论 衡阳地区某三甲医院临床分离菌种分布及耐药率与中国细菌耐药检测结果趋势大致相同，目前临床上细菌对抗菌药物的耐药趋势仍然较为严重，为应对多重耐药细菌所致感染，应加强并做好细菌耐药监测工作，积极主动与临床进行沟通，促进抗菌药物合理应用，加强感染预防控制。

MALDI-TOF MS 快速鉴定阳性血液培养物的快速方法

王月玲[1,2]、金炎[1]、白媛媛[1]、宋真[1]、初文君[1]、郝莹莹[1]
1. 山东第一医科大学附属省立医院临床医学检验部
2. 山东省立医院临床医学检验部

基质辅助激光解吸电离飞行时间质谱（MALDI-TOF MS）在阳性血液培养物鉴定中的应用是临床微生物实验室中鉴定微生物的一场革命。尽管有几种商业预处理方案，但是它们的成本很高。在这里，我们评估了本地生产的 Bioyong 预处理试剂盒的性能，该试剂盒通过 MALDI-TOF MS 方法直接鉴定阳性血液培养物（BCs）中的微生物。使用 200 个 Thermo 有氧血培养瓶和 200 个 Scenker 有氧血培养瓶进行模拟的阳性血培养。总共感染了 200 种生物，包括 91 株革兰氏阳性菌，97 株革兰氏阴性菌和 12 株念珠菌。将阳性 BC 传代培养，并通过经典生化 Vitek II 测试鉴定为鉴定的金标准。Bioyong 预处理试剂盒可以分别成功鉴定 189（94.5％）个热阳性 BCs 和 189（94.5％）Scenker 阳性血液培养物中的微生物。 94（96.9％）革兰氏阴性细菌中分离出 86 种（94.5％）革兰氏阳性细菌和 9 种（75.0％）念珠菌。正确鉴定出热阳性 BC 到物种水平。从 Scenker 阳性 BC 分离出的 95 种（97.9％）革兰氏阴性细菌，86 种（94.5％）革兰氏阳性细菌和 8 种（66.7％）念珠菌已正确鉴定到物种水平。此方法可在阳性血液培养物中在一小时内快速，准确地鉴定细菌和念珠菌。这项技术的常规应用将改善菌血症和念珠菌血症患者在 24 小时内的抗菌治疗。

健康儿童肠道产 ESBLs 大肠埃希菌的分子流行特征分析

钟一鸣[1]、殷雯钰[2]、刘文恩[1]
1. 中南大学湘雅医院
2. 中南大学湘雅医学院

目的 研究湖南长沙某幼儿园内健康儿童肠道产 ESBLs 大肠埃希菌的分子流行特征以及 ST38 型产 ESBLs 大肠埃希菌与非 ST38 型大肠埃希菌的耐药性和传播危险因素的差异。
方法 收集湖南长沙某幼儿园健康儿童的粪便标本，分离培养出产 ESBLs 大肠埃希菌，采用特异性引物扩增 7 对管家基因进行多位点序列分型；采用多重 PCR 检测耐药基因 CTX-M 并分型；采用特异性引物扩增检测碳青霉烯类耐药相关基因 OXA-48；采用 χ2 检验或 Fisher 确切概率法检验分析 ST38 型产 ESBLs 大肠埃希菌与非 ST38 型大肠埃希菌的耐药性和传播危险因素的差异。
结果 共检出产 ESBLs 大肠埃希菌 63 株，多位点分型成功分型 63 株，其中 ST38 占 12.70%（8/63）；ST1193，占 7.94%（5/63）；ST69 占 6.35%（4/63）；ST12、ST131 各占 4.76%（3/63）；发现 6 株大肠埃希菌具有新的序列类型。63 株大肠埃希菌中有 56 株大肠埃希菌成功扩增检测出 CTX-M 基因，其中 CTX-M-14 占 35.71%（20/56）、CTX-M-55 占 26.79%（15/56）、CTX-M-27 占 17.86%（10/56）。8 株 ST38 型产 ESBLs 大肠埃希菌中未检测出 blaOXA-48 基因阳性的菌株。ST38 型大肠埃希菌与非 ST38 型大肠埃希菌在耐药性和传播的危险因素方面并没有具有统计学意义的差异。
结论 长沙某幼儿园内健康儿童肠道携带的产 ESBLs 大肠埃希菌以 ST38 型为主，占 15.68%，其携带的耐药基因 CTX-M 以 CTX-M-14 为主，占 38.64%。ST38 型大肠埃希菌与非 ST38 型大肠埃希菌在耐药性和传播的危险因素方面并没有具有统计学意义的差异。

PU-3336

中年人脱发人群肠道菌群变化特点

强永杰
南方医科大学珠江医院

目的 研究通过分析脱发人群与正常人群肠道菌优势菌群变化与菌属组成结构变化，为未来脱发治疗方法提供一定的思路。
方法 实验组通过采集 10 例脱发人群（30-40 岁）大便样本，进行细菌、真菌涂片染色，细菌真菌培养（稀释后培养）鉴定，找到优势菌群；通过二代测序方法分析肠道菌群组成种类对照 10 例，为健康未脱发人群（30-40 岁）。提取粪便样本总 DNA;根据细菌 16SrDNA V3~V5 区设计引物进行扩增,利用 Illumina Miseq 平台进行高通量测序;测序结果经过 Reads 拼接,OTUs(operational taxonomic units)聚类,物种注释,α 多样分析,主成分分析,最终得到样品物种信息。
结果 涂片：实验组大便涂片革兰氏染色球/杆菌比例明显高于对照组；细菌、真菌培养：实验组双歧杆菌、消化链球菌、乳杆菌、产气荚膜梭菌、肠杆菌检出比例低于对照组；二代测序：实验组其中拟杆菌门(Bacteroidetes)占比 46.94%，厚壁菌门(Firmicutes)占比 30.58%，对照组实验组其中拟杆菌门占比 60.96%，厚壁菌门占比 41.51%包含幽门螺杆菌的螺杆菌属检出比例升高，实验组平均占比比对照组高 0.03%。
结论 表明实验组（脱发组）和对照组（未脱发组）菌群结构存在显著差异。这些结果表明,脱发人群与未脱发人群在肠道菌群多样性方面没有明显差异,但在菌群结构上存在较大差异;同时脱发人群肠道菌群致病菌数量多于健康人群,而拟杆菌类有益菌低于健康人群。由于有研究表明，脱发与生物素合成相关，未来可进一步细菌对生物素合成情况进行研究。

PU-3337

Dental plaque microbial resistomes of periodontal health and disease and their changes after scaling and root planing therapy

Yutong Kang[2]、Yongliang Lou [2]、Meiqin Zheng[1]
1. Eye Hospital of Wenzhou Medical University
2. 温州医科大学

Background The human oral microbial community has been considered to be reservoirs of antibiotic resistance, which constitute a direct threat to human health. Currently, the effects of the periodontitis and scaling and root planning (SRP) treatment on the performance of antibiotic resistance genes (ARGs) and metal resistance genes (MRGs) in the dental plaque microbiota are not well characterized. This is the first analysis of the profile of the microbial community, antibiotic and metal resistance genes in dental plaque by the metagenomic approach, to the best of our knowledge.
Methods To explore this problem, we selected 48 (healthy state), 40 periodontitis state (before treatment) and, 24 resolved state (after scaling and root planing treatment) metagenomic data from the Sequence Read Archive (SRA) database. This is the first analysis of the profile of the microbial community, antibiotic and metal resistance genes in dental plaque by the metagenomic approach.
Results NetShift analysis identified Fretibacterium fastidiosum, Tannerella forsythia, and Campylobacter rectus as key drivers during dental plaque microbiota alteration in the progression of periodontitis. The periodontitis group and SRP group had a significantly greater number for both ARGs and MRGs than the health group. PCoA analysis based on Bray–Curtis distance and Jaccard distance showed that the comprehensive composition for both ARGs and MRGs of the three groups was very different. In this study, 269 ARG subtypes of 18 ARG types and 240 MRG

subtypes of 18 MRG types were found in dental plaque. Bacitracin, beta−lactam, macrolide-lincosamide-streptogramin (MLS), tetracycline, and multidrug resistance genes were the main classes of antibiotic resistance genes (ARG) types with high relative abundance, whereas multi-metal, iron, chromium, and copper were the primary metal resistance gene (MRG) types. Procrustes tests indicated that the variation of microbial community composition was the determinant for the ARG and MRGs profile. Variation partitioning analysis also demonstrated that the Microbial community was the main driver shaping the resistome compared with mobile genetic elements (MGEs). The co-occurrence pattern network implied that 32 species might be potential hosts of 25 ARG subtypes and 35 species were speculated to be the possible hosts of 40 MRG subtypes. The co-occurrence of ARGs, MRGs, and MGEs indicated a co-selection phenomenon may exist in the resistome of the microbiota on the dental plaque.
Conclusions Overall, our data provide new insights into the standing of the distribution of ARGs and MRGs in oral microbiota of periodontitis patients. Monitoring the profile of these resistomes, has huge potential to provide reference regarding proper antibiotics use and the development of new antimicrobial strategies in periodontitis therapy and thereby improve actual efficacy of the treatment regimens.

PU-3338

人型支原体腰椎手术后切口感染一例

唐艳
湖南株洲市三三一医院

1 病历摘要
患者，男，64 岁。2018 年 11 月 28 日因“腰椎退行性变，继发性椎管狭窄，腰椎不稳”步行入院。于 11 月 20 日在全麻下进行腰椎后路减压椎间盘摘除骨内固定术手术。术后一周伤口无红肿，精神食纳明显好转。12 月 1 日下午突然出现不明原因的发烧，患者诉伤口胀痛，精神食纳差，感四肢无力。体查：伤口上部有明显渗出，渗出液较浑浊，伤口周围压有波动感，压痛明显，临床考虑伤口深部感染。12 月 6 日晚急诊脓肿清除引流术+腰椎后路伤口感染病灶清除灌洗引流术，给予万古霉素+美罗培南联合抗感染治疗，效果不佳，手术切口不愈合。期间取四块坏死组织培养，其中一块组织在血平板上培养出 Mh，另外中心静脉血也培养出 Mh。依据药敏结果临床给予左氧氟沙星、强力霉素治疗后，体温、血常规和 CRP 逐渐恢复正常，伤口愈合出院。
2.细菌培养及鉴定
12 月 2 日至 7 日共送 5 份脓液分泌物及脓液处组织物做细菌培养及涂片，细菌培养接种于痰三格平皿，其中一管脓液处组织物 3 天后在血平皿上长出细小菌落，倾斜平皿可见针尖大小、圆形、不溶血、半透明的菌落，革兰染色、抗酸染色均不着色。12 月 2 日分别送了中心静脉导管、中心静脉血、外周血做细菌培养，其中中心静脉血和外周血注射在血培养瓶中，在血培养仪中进行培养，中心静脉血在第 8 天报阳。其涂片和培养出来的菌落与分泌物中菌落一致。将该细菌接种在支原体培养液中，培养出人型支原体，药敏显示强力霉素、美满霉素、交沙霉素、司帕沙星敏感，左氧氟沙星中介。将该细菌送至广州金域医学研究所进行基因测序鉴定结果为 Mh，鉴定值为 100%。
3、讨论
人型支原体通常在宿主抵抗力低下时可引起非淋病性尿道炎，偶尔可穿透到黏膜下层，侵入血液并播散到全身各器官和组织。因此，对于患者手术后出现切口感染、持续发热，广谱抗生素治疗切口不愈合、效果不佳并且对其分泌物及无菌部位样本涂片革兰染色未发现细菌时，有必要考虑人型支原体感染，［实验室可采用专门的支原体培养基进行分离培养予以确认，并通过其药敏分析指导临床用药。由于人型支原体无细胞壁，革兰染色未见细菌形态，在血平板或哥伦比亚琼脂平板上至少 3 天才能长出针尖样小菌落，然而，针尖样半透明的小菌落很容易被人为的忽略或在 Mh 生长所需的时间（3 天甚至更长）到达之前就已经把培养基丢弃了，所以对于无菌部位标本或切口分泌物的培养，应延长培养时间至 4d，密切观察可疑菌落。患者发热时双份采集血培养标本，适当延长

血培养时间至 7-8 天，有助于人型支原体血液感染的检出。最后取菌落进行 16S rDNA 聚合酶链反应检测其是否为人型支原体。

PU-3339

Ceftazidime is the Key Diversification and Selection Driver of KPC-Type Carbapenemases

Siqiang Niu
Department of Laboratory Medicine, The First Affiliated Hospital of Chongqing Medical University

Objectives To explain the selection driver of KPC-Type Carbapenemases.
Methods KPC phylogroups analysis were conducted according to the results of the maximum-likelihood (ML) tree obtained using the nucleotide sequences by MEGA-X software, and 31 and 8 variants in nature and artificiality, respectively, were obtained by overlap extension PCR and expressed in an isogenic context. Drug susceptibility assays were performed by a standard broth microdilution method. Enzyme kinetics assays were conducted to compare the hydrolytic activities of KPCs, and molecular modeling and ITC assay were also employed to compare the interaction between AVI and different KPC variants.
Results The phylogenetic ancestral reconstruction revealed that the diversifications of blaKPC-2 and blaKPC-3 nodes were mainly the results of single, nonsynonymous mutations. The first was formed by blaKPC-2 with 24 members (blaKPC-2, -4, -5, -6, -11, -12, -14, -16, -17, -18, -20, -21, -22, -24, -25, -26, -30, -33, -34, -35, -37, -42, -43 and -44), the second corresponded with blaKPC3 with 18 members (blaKPC-3, -7, -8, -9, -10, -13, -15, -19, -27, -28, -29, -31, -32, -36, -38, -39, -40 and -41). The common characteristic of KPC-3 variants are a single amino acid substitution (H272Y) of KPC-2 type variants due to a single nucleotide substitution (C814T), which increased resistance to ceftazidime. When ceftazidime was considered as the selector antibiotic in different approaches, KPC-4, -5, -6, -14, -33 and -35 were always selected. Three positions, P103R (corresponding to KPC-5), V239G (corresponding to KPC-6) and D178Y(corresponding to KPC-31) with high frequency , were selected in the evolution experiments with ceftazidime. MICs of E. coli clones expressing KPCs enzyme were consistent with clinical isolates producing KPCs, both showed an increasing resistance to ceftazidime. The docking results showed that these interactions of KPC-14, -28 and -31 with AVI demonstrated by ITC were weaker than KPC-2 and KPC-3, which could result in lower inhibition of AVI on KPC.
Conclusions We first systematically analyzed the effect of amino acid mutation on the resistance of KPC enzyme and further identified ceftazidime as a driver drug of the KPC subtype outbreak.

PU-3340

中性粒细胞 / 淋巴细胞比值与 C 反应蛋白对新生儿血流感染的预测价值

吴琼、易斌
中南大学湘雅医院

目的 研究中性粒细胞 / 淋巴细胞比值（NLR）与 C 反应蛋白(CRP)在新生儿血流感染早期的预测价值，以及鉴别常见皮肤定植菌血流感染与污染的临床价值。
方法 收集本院 2013 年 1 月-2020 年 3 月发生血流感染的新生儿患者 70 例和未发生血流感染的新生儿患者 71 例，根据临床诊断及培养结果分为感染组、污染组和对照组，比较各组中 NLR、CRP 和 WBC 计数、中性粒细胞百分数（NEU%）、淋巴细胞百分数(LYM%)和报阳时间有无差异，并用受试者工作特征（ROC）曲线分析其预测及鉴别诊断价值。

结果 新生儿血流感染组 CRP、NLR、WBC、NEU%显著高于对照组，LYM%低于对照组，差异均有统计学意义（P<0.05）。在感染组中，革兰阴性细菌组引起的血流感染患者 CRP、NLR、NEU%显著高于革兰阳性组，LYM%显著低于革兰阳性组，而 WBC 计数无统计学差异。常见皮肤表面定植菌引起的血流感染与血流污染相比，患者 CRP、NLR、NEU%和报阳时间比较差异均有统计学意义（P<0.05），而 WBC 与 LYM%无明显差异（P>0.05）。ROC 曲线分析结果显示，NLR、CRP 诊断新生儿血流感染的曲线下面积（AUC）分别为 0.786 和 0.785，检测灵敏度分别为 64.9％和 67.10％，特异度分别为 74.6％和 69.0％，NLR 联合 CRP 检测后诊断新生儿血流感染的曲线下面积（AUC）达 0.846。NLR、CRP 鉴别常见皮肤表面定植菌引起新生儿血流感染与污染的曲线下面积（AUC）分别为 0.664 和 0.858，检测灵敏度分别为 70.8％和 83.3％，特异度分别为 79.40％和 85.90％。NLR 联合 CRP 检测后鉴别血流感染与污染的去线下面积（AUC）达 0.888。
结论 NLR 联合 CRP 检测对新生儿血流感染具有较好的预测价值，并对鉴别血培养常见皮肤表面定植菌阳性的患者为血流污染或血流感染有一定的应用价值。

PU-3341

Association of Ocular Surface Diseases with SARS-CoV-2 Infection in Six Districts of China: An Observational Cohort Study

Shengjie Li、wenjun cao
Eye & ENT Hospital, Shanghai Medical College, Fudan University

Purpose The association between SARS-CoV-2 and ocular surface diseases is poorly described.
Methods An observational cohort study. A total of 2, 0157 participants from six districts of China were enrolled. Serum samples were tested for immunoglobulin G and M (IgG and IgM) antibodies against the SARS-CoV-2 spike protein and nucleoprotein using magnetic chemiluminescence enzyme immunoassays. Throat swabs were tested for SARS-CoV-2 RNA using RT-PCR assays in a designated virology laboratory.
Results Of 2, 0157 serum samples tested, 1, 755 (8.71%) were from ocular surface diseases, 1, 2550 (62.26%) from no-ocular surface diseases, 5, 852 (29.03%) from no-ocular diseases. SARS-CoV-2 prevalence for the combined measure was 0.90% (182/2, 0157). Seroprevalence of SARS-CoV-2 was significantly (p<0.05) higher in the population with ocular surface diseases (2.28%, 40/1755) compared with no-ocular surface diseases (0.70%, 88/1, 2550), and no-ocular diseases (0.92%, 54/5, 852). The proportions of positive tests by sex, age, region, and times also show markedly higher proportions in ocular surfaces diseases than others (p<0.05). Logistic regression analyses revealed that ocular surface diseases [ocular surface diseases vs. no-ocular diseases (p=0.001, OR =1.467, 95% CI=1.174-1.834); ocular surface diseases vs. no-ocular surface diseases (p<0.001, OR =2.170, 95% CI=1.434-3.284)] were associated with increased risk of susceptible to SARS-CoV-2 infection.
Conclusions Ocular surface diseases may be a risk factor for getting COVID-19.

PU-3342

评估 EDTA 改良碳青霉烯灭活试验和碳青霉烯酶抑制增强试验鉴定肠杆菌目细菌产碳青霉烯酶型别的临床价值

王芳、邓燕燕、林见敏、王金金、龚倩、黄声雷
复旦大学附属中山医院青浦分院

目的 评估 EDTA 改良碳青霉烯灭活试验和碳青霉烯酶抑制增强试验检测肠杆菌目细菌产碳青霉烯酶型别的临床价值。
方法 收集临床标本分离的肠杆菌目细菌共 130 株，其中产碳青霉烯酶菌株（CPE）100 株，首先使用微量肉汤稀释法进行体外药敏试验，然后分别用 EDTA 改良碳青霉烯灭活试验和碳青霉烯酶抑制增强试验检测对肠杆菌目产生的碳青霉烯酶进行检测并分型，同时使用 PCR 作为金标准检测碳青霉烯酶基因型。
结果 耐碳青霉烯类的肠杆菌目细菌对常见的抗菌药物敏感率均<50%，除了对替加环素和粘菌素的敏感率>95%外。和 PCR 结果比较，碳青霉烯酶抑制剂增强试验检测丝氨酸碳青霉烯酶的灵敏度为 98.61%(71/72)，特异性为 100%(58/58)；检测金属 β-内酰胺酶的灵敏度为 100.0%(27/27)，特异性为 100%(103/103)。碳青霉烯酶抑制剂增强试验还能够准确鉴定同时产丝氨酸碳青霉烯酶和金属 β-内酰胺酶的菌株。 mCIM 和 eCIM 试验检测产丝氨酸碳青霉烯酶的灵敏度为 97.2%(70/72)，特异性为 100.0%(58/58)；检测金属 β-内酰胺酶的灵敏度为 96.3%(26/27)，特异性为 100.00%(103/103)，但 eCIM 试验无法检测同时产两种酶的菌株。
结论 EDTA 改良碳青霉烯灭活试验和碳青霉烯酶抑制增强试验都能较好区分不同类型的碳青霉烯酶，其中碳青霉烯酶抑制增强试验操作更加简易，结果更易观察，但试验成本较高，总之不同层级的微生物实验室可以根据自身需求选择性的常规开展 CRE 的快速表型检测。

PU-3343

儿童碳青霉烯类耐药肺炎克雷伯菌分子流行病学和耐药机制研究

周颖、孔子艳、杨晋
连云港市第一人民医院

目的 碳青霉烯类耐药肺炎克雷伯菌（CRKP）引起的感染具有高发病率和高死亡率，给临床抗感染治疗带来了严峻的挑战，尤其对于儿童患者。但有关儿童患者中 CRKP 感染的数据有限，因此本研究旨在阐明江苏省儿童 CRKP 的分子流行病学和耐药机制。
方法 本研究收集 2018 年 7 月-2019 年 5 月南京市儿童医院患儿分离的 CRKP 菌株。微量肉汤法检测菌株对临床常用药物的敏感性，PCR 检测菌株是否携带相关耐药基因，MLST 以及 PFGE 分析耐药菌株的同源性。
结果 本研究收集 94 株 CRKP，药敏结果发现菌株均为多重耐药菌，对美罗培南、头孢菌素类、哌拉西林/他唑巴坦均耐药。CRKP 均携带碳青霉烯酶耐药基因，以 blaKPC-2（79.8%）为主。值得警惕的是有 2 株 CRKP 同时携带 blaKPC-2 和 blaNDM-5，2 株 CRKP 同时携带 blaKPC-2 和 blaIMP-4。MLST 发现 CRKP 属于 14 种 ST 型，以 ST11 （75.5%, 71/94）为主，另外发现 2 株新型 ST 型（ST4854 和 ST4855）。PFGE 结果显示，产 KPC-2 酶 ST11 型菌株分为 4 个克隆型（E、D、O、S），以 PFGE-E 型为主，该型菌株主要分布在 PICU 和 CCU；非 ST11 型菌株可分为 15 个克隆型，其中存在 5 种脉冲型在院内不同科室进行小范围的克隆播散（C、L、M、N、R）。
结论 南京市儿童医院患儿分离的肺炎克雷伯菌对碳青霉烯类药物的耐药机制主要产 KPC-2 酶，并且院内多个科室存在产 KPC-2 酶 ST11 型肺炎克雷伯菌的克隆传播以及其他一些脉冲型菌株的小范围克隆播散，医院应及时制定有效感控措施, 防止耐药菌在病房进一步的暴发流行。

PU-3344

The relationship between mycoplasma infection in female genital tract and serum vitamin D level

Na An 、bitao wu、jun luo、chunmei dai、yarong liu
Mianyang Central Hospital, School of Medicine, University of Electronic Science and Technology of China

Objective To explore the relationship between female genital tract mycoplasma infection and serum vitamin D (Vit D) levels in Mianyang area.
Methods 1 776 women who attended the Obstetrics and Gynecology Department of Mianyang Central Hospital from January 2018 to December 2020 participated in the study. Vaginal secretions were collected for mycoplasma culture, and serum 25-(OH)VD2 and 25-(OH)VD3 levels were detected by high performance liquid phase mass spectrometry tandem mass spectrometry.
Results From January 2018 to December 2020, 791 people were diagnosed with mycoplasma infection, mainly 21-30 years old. The detection rate in 2018 was as high as 46.96%. The resistance rate of Mycoplasma genitalium to ofloxacin and josamycin is increasing year by year; among 220 women with complete data, 84 cases (38.18%) were infected with Mycoplasma genitalia. The serum 25-(OH)VD2 level (1.95±2.35 ng/ML) of the infection group was lower than that of the control group (2.14±2.56 ng/ML), and the difference was not statistically significant (t=-0.535, P=0.593) The serum 25-(OH)VD3 level (21.93±8.66 ng/ML) was lower than the control group (23.67±9.52 ng/ML), the difference was not statistically significant (t=-1.361, P=0.175). Serum 25-(The OH)VD level (23.88±9.00 ng/ML) was lower than the control group (25.81±9.71 ng/ML), and the difference was not statistically significant (t=-1.466, P=0.144). The positive rate of genital mycoplasma infection in the 25(OH)VD reduced group (42.68%) was higher than that in the 25(OH)VD normal group (26.98%), and the difference was statistically significant (χ2=4.690, P=0.033). Among the 84 cases of mycoplasma infection, the drug resistance rate of the 25(OH)VD reduced group (26.87%) was lower than that of the 25(OH)VD normal group (35.29%) (χ2=0.472, P=0.552); 25(OH)VD There was no statistically significant difference in the resistance rate of a single drug between the reduced level group and the 25(OH)VD level normal group (P>0.05).
Conclusion The situation of mycoplasma infection in female genital tract in Mianyang area still needs attention. Decreased serum Vit D levels are related to mycoplasma infection in the genital tract.

PU-3345

由须癣毛癣菌引起的儿童头部脓癣一例及文献阅读

胡中兰
郑州大学第一附属医院

脓癣是一种具有明显炎症性反应的头癣类型，由头皮毛囊及周围组织对感染真菌的强烈的炎症反应或不正规治疗导致，常伴有细菌感染。典型的损害是炎性毛囊丘疹、形成炎性肿块或囊肿，可伴局部疼痛、压痛及全身性反应。近年脓癣发病率有上升趋势，既往主要发生在城郊地区，随着饲养宠物的流行，城市人群发病率亦不断增加。此病因炎症反应过重或处理不当，往往治疗时间过长或治疗有效率低，给患者身心健康带来严重伤害。临床诊断脓癣主要由嗜动物真菌感染引起，在中国主要为须癣毛癣菌及犬小孢子菌。

须癣毛癣菌是临床上除红色毛癣菌外最常见的皮肤癣菌，可以引起人很动物包括毛发、趾甲、皮肤在内的多部位感染。由于须癣毛癣菌感染易发生误诊漏诊，正确治疗的延迟使得患者出现瘢痕、秃发及继发感染等危害，且须癣毛癣菌感染治疗时间长，容易反复感染。传统诊断主要通过刮取皮损皮屑、脓液或者活检组织进行真菌直接镜检或培养。

1140 例泌尿生殖道解脲脲原体和人型支原体感染情况及药敏分析

杨勇文
中南大学湘雅医院

目的 研究本地区解脲脲原体（Uu）和人型支原体（Mh）感染情况以及对常用抗生素的耐药情况，为临床合理用药治疗提供参考。
方法 收集 2017 年 1 月至 2019 年 12 月中南大学湘雅医院解脲和人型支原体培养的相关结果，采用 Excel 以及 SPSS 22.0 对结果进行统计分析。
结果 在 1140 例支原体检测结果中，Uu 感染、Mh 感染以及 Uu+Mh 混合感染的比例分别为 73.5%、3.9%、22.6%；其中女性 1086 例（95.3%），男性 54 例（4.7%）。70%的支原体感染患者集中 26～40 岁之间。药敏结果显示，交沙霉素、美满霉素和强力霉素的敏感率分别为 96.1%、96.8%、96.3%，其次左氧氟沙星和氧氟沙星的敏感率为 21.4%和 11.8%。
结论 Uu 是长沙地区泌尿生殖道感染的主要支原体类型，并且存在一定数量的混合感染，主要集中于中青年人群。交沙霉素、美满霉素和强力霉素可作为治疗 Uu 和 Mh 感染的首选药物，同时需要关注喹诺酮类药物的耐药变迁，防止耐药情况进一步恶化。

PU-3347

铜绿假单胞菌 ISCR1 分布及 ERIC-PCR 分型

孙静静
郑州大学第一附属医院

目的 研究临床分离铜绿假单胞菌的 ISCR1 的分布情况,并对其进行基因分型.
方法 分离临床 123 株铜绿假单胞菌,用 WHONET5.4 分析菌株药敏情况,PCR 检测 ISCR1 以及 ISCR1 携带的耐药基因.ERIC-PCR 进行基因分型.
结果 铜绿假单胞菌对阿莫西林/克拉维酸,氨苄西林,氯霉素,头孢唑啉,米诺环素,氨苄西林/舒巴坦高度耐药,对环丙沙星,头孢他啶,头孢哌酮/舒巴坦,阿米卡星,亚胺培南,美洛培南较敏感, 2 株 ISCR1 和 ISCRI 携带的耐药基因阳性.123 株铜绿假单胞菌分为 92 个基因型.
结论 ISCRI 携带率较低,ERIC-PCR 可用于临床分离铜绿假单胞菌的基因分型.

PU-3348

微生物形态学检验用于感染性疾病诊断的应用价值

熊阁
资阳市乐至县人民医院

目的 分析感染性疾病诊断中应用微生物形态学检验的价值。
方法 在 2019-3 至 2020-2 期间院内选取 134 例患感染性疾病的患者，分为 2 组。对照组分离出来的 134 例菌株不做任何处理和检查，形态学组也分离出来 134 例菌株，对其进行微生物形态学检验。然后对比各组病人感染程度，以及免疫力下降情况。
结果 形态学组患者中度和重度等感染率低于对照组，且形态学组免疫力下降率也比对照组低，差异有统计学意义（P＜0.05）。
结论 应用微生物形态学检验感染性疾病具有重要诊断价值，值得应用。

PU-3349

微生物检验在尿路感染预防和诊断治疗中的意义评价

陈敏
资阳市乐至县人民医院

目的 分析在尿路感染预防与诊断中应用微生物检验的意义。
方法 在 2019-3 至 2020 年 2 月期间选取 78 例尿路感染患者，将其分为 2 组。常规组实施常规检验，实验组实施微生物检验，然后对比各组检验结果。
结果 实验组治疗有效率、病情诊断准确率均比常规组高，且实验组无效患者感染率低于常规组，差异有统计学意义(P＜0.05)。
结论 使用微生物检验尿路感染患者能准确知晓感染情况，进而加以预防和治疗，能取得显著的治疗效果，值得应用。

PU-3350

2020 年度淋球菌耐药监测结果分析

梁艳华
广州市皮肤病防治所

目的 监测 2020 年收集的淋球菌耐药性，为淋病防治提供策略。
方法 采用琼脂稀释法，检测 2020 年本单位门诊临床分离培养的 100 株淋球菌，测定青霉素、四环素、环丙沙星、大观霉素、 阿奇霉素、头孢曲松、头孢克肟的最低抑菌浓度(MIC)，分析淋球菌耐药性，判定质粒介导的高度耐四环素淋球菌(TRNG)，同时用纸片碘量法检测 ß-内酰胺酶，筛查产青霉素酶淋球菌(PPNG)。
结果 PPNG 阳性率为 46%(46/100)；TRNG 阳性率为 35%(35/100)；青霉素、四环素、环丙沙星和阿奇霉素耐药率分别是 95％(95/100)、88％(88/100)、97％ (97/100)、16％ (16/100)。头孢克肟和头孢曲松未见耐药菌株，低敏率分别为 11％(11/100)和 4％(4/100)，大观霉素未发现耐药菌株和低敏菌株。
结论 广州市淋球菌临床分离株普遍对青霉素、环丙沙星、四环素耐药，治疗淋病的首选药仍是大观霉素、头孢曲松和头孢克肟，淋球菌耐药监测应定期进行。

PU-3351

微生物检验在感染性疾病临床诊断治疗中的应用价值

李阳
资阳市乐至县人民医院

目的 分析在临床上感染性疾病诊断治疗中应用微生物检验的价值。
方法 在 2019.3-2020.2 月期间选出 70 例(2 组)患上感染性疾病的患者，对照组患者不实施检验，根据患者的临床症状和医生的经验选择相应的抗生素进行治疗。检验组患者先进行微生物检验，然后根据结果选择针对性抗生素进行治疗。最后对比各组患者治疗效果以及病情诊断准确性。
结果 检验组治疗有效率、诊断准确率均比对照组高，差异有统计学意义(P＜0.05)。
结论 在临床上使用微生物检验判断感染性疾病能准确诊断出患者的病情，并给予针对性治疗，能获得显著的治疗效果，值得应用。

PU-3352

碳青霉烯耐药基因在肺炎克雷伯菌中的分布特点分析

刘畅
南京大学医学院附属鼓楼医院

目的 分析碳青霉烯耐药基因 KPC 在全球肺炎克雷伯菌中的分布规律和特点。
方法 从 NCBI 中下载全球肺炎克雷伯菌的基因组，分析 KPC 基因在这些细菌中的分布，产 KPC 肺炎克雷伯菌细菌基因组进行多位点序列分析，确定其序列分型（Sequence type,ST），进一步分析 KPC 基因在不同克隆菌株中分布，并使用 SPSS 软件分析主要 KPC 变异体 KPC-2 和 KPC-3 的流行与主要流行克隆 ST11、ST258 及 ST512 的相关性。
结果 我们检出了 14 个 KPC 的变异体，KPC 在全球的流行主要以 KPC-2（n=959）和 KPC-3（n=952）为主。产 KPC 肺炎克雷伯菌的克隆有 115 个 ST 型，以 ST258 (n=996)、ST11 (n=285)和 ST512(n=259)为主。KPC-2 分布在 87 个不同的 ST 菌株中，以 ST258 (n=413)和 ST11 (n=274)为主；KPC-3 分布在 45 个不同的 ST 菌株中，以 ST258 (n=570)和 ST512 (n=259)为主。ST11 携带的 KPC 变异体主要为 KPC-2(n=274)；ST258 携带的 KPC 变异体主要为 KPC-2(n=413)和 KPC-3(n=570)。ST512 携带的 KPC 变异体主要为 KPC-3 (n=259)。
结论 从全球范围来看，KPC 的流行以 KPC-2 和 KPC-3 为主，KPC-2 的流行克隆菌株以 ST11 和 ST258 为主，KPC-3 的流行克隆菌株以 ST258 和 ST512 为主，加强该类细菌的监测对于预防院内感染控制具有重要的作用。

PU-3353

精胺与 β-内酰胺类抗生素联合抗菌作用功能研究

刘畅
南京大学医学院附属鼓楼医院

目的 研究精胺与 β-内酰胺类抗生素联合应用时对于多重耐药细菌的协同治疗作用。
方法 实验菌株选取我院临床多重耐药革兰阴性杆菌，采用微孔稀释法测定 MIC 值，评估精胺与 β-内酰胺类抗生素的协同作用。
结果 β-内酰胺类抗生素与精胺联合使用时具有协同作用，抗菌效果增强，MIC 值大幅度下降，部分菌株 FICI 比值<0.5。
结论 β-内酰胺类抗生素与精胺联合用药方案可以有效提高临床抗感染治疗的效率。

PU-3354

基于荧光素酶报告基因的细菌外膜囊泡标记方法的建立

刘畅
南京大学医学院附属鼓楼医院

目的 建立一种基于荧光素酶报告基因的细菌外膜囊泡标记方法。
方法 利用细菌外膜囊泡表面携带高丰度外膜蛋白的特点，构建外膜蛋白-荧光素酶融合蛋白，实现细菌外膜囊泡的“自发光”以用于后期检测。
结果 通过构建 OmpA-NanoLuc 融合蛋白的方式实现细菌外膜囊泡的荧光素酶标记，表达该融合蛋白的细菌所分泌的外膜囊泡具有明确的荧光素酶活性，因此可通过检测荧光素酶活性的方式对细菌外膜囊泡进行检测。

结论 成功构建了一种基于荧光素酶报告基因的细菌外膜囊泡标记方法，可在不使用细胞膜染料的情况下对细菌外膜囊泡进行检测。

PU-3355

通过 mNGS 诊断鹦鹉热衣原体肺炎的患病、诊断和控制情况分析

卢秋然、葛虎、代冰、曹媛、刘昌霖、彭千、余艳（通讯作者）
长沙金域医学检验实验室有限公司

目的 了解湖南省各地级市地区居民鹦鹉热衣原体肺炎患病、诊断和控制情况，为鹦鹉热衣原体肺炎的防治工作提供科学依据。
方法 回顾性分析长沙金域实验室从 2020 年 10 月-2021 年 5 月，应用宏基因组高通量测序技术（metagenomic next-generation sequencing，mNGS），基于 20 例临床已经确诊为鹦鹉热衣原体肺炎的患者中进行总结其临床特征及诊治要点，比较不同地区人群鹦鹉热衣原体肺炎的患病、诊断及控制情况。
结果 在 20 例临床确诊为鹦鹉热衣原体肺炎的患者，共检测出永州市 6(7.69%)，长沙市、邵阳市均 3 例 (0.56%,6.12%)，岳阳市、郴州市均 2 例 (5.26%,2.90%)，吉首市、怀化市均 1 例 (1.64%,1.08%)。其中调查对象中男女性别比为 13：7。本研究中鹦鹉热衣原体肺炎的患者均有家禽接触史，其中男性患病率（65%）高于女性（35%），差异有统计学意义（P<0.05）。送检呼吸道样本（痰、肺泡灌洗液、肺组织）通过 mNGS 检测出鹦鹉热衣原体核酸序列，结合临床表现及接触史以明确诊断。其中肺泡灌洗液 mNGS 检出的病原体序列数较痰标本多，且没有口腔定植菌的干扰，还可以识别是否合并其他细菌、病毒等感染，大大缩短了鹦鹉热衣原体肺炎的诊断时间和病程，减少不必要抗菌药物的使用。
结论 湖南省居民鹦鹉热衣原体肺炎以永州市、邵阳市患病率较高，而诊断率和控制率较低，应进一步采取综合措施提高人群诊断率和控制率水平。据统计两地呼吸道标本送检总量分别是 78 例、50 例，随着 mNGS 更广泛的应用，会对该地区的鹦鹉热衣原体肺炎患病率有更全面的认识。同时，相信 mNGS 逐渐应用于临床后，越来越多的非典型病原菌被发现，特别对于肺部感染病原体不明的人群，做到及早发现，及时诊断、规范治疗。

PU-3356

重症监护病区接受肠道营养患者艰难梭菌感染的危险因素分析

王道盛、彭奕冰、董丹凤
上海交通大学医学院附属瑞金医院

研究目的 艰难梭菌感染（Clostridioides difficile infection, CDI）是住院病人医源性腹泻的主要原因，在重症监护病区（Intensive care unit, ICU）接受肠道营养的病人是 CDI 的潜在高发人群。本研究旨在揭示在 ICU 病区接受肠道营养病人 CDI 的发生率与 CDI 发生相关的危险因素。
研究方法 收集 2018 年 7 月至 2019 年 12 月期间于上海交通大学医学院附属瑞金医院 ICU 病区接收肠道营养至少一周的患者，自患者启动肠道营养后每周收集其粪便，使用培养法和毒素抗原检测法筛查其艰难梭菌携带状态，记录患者临床特征并分析其相关危险因素。
研究结论 研究期间共收集 168 名 ICU 病区接受肠道营养治疗至少一周的患者，18 名被确诊为 CDI，发病率为 10.7%。脑梗死个人史是肠道营养病人 CDI 的显著风险因素（OR, 9.759; 95% CI, 2.140-44.498）；预先使用甲硝唑是肠道营养病人 CDI 的显著保护因素（OR, 0.287; 95% CI, 0.091-0.902）。

Bacteraemia caused by Tsukamurella tyrosinosolvens in an immunocompromised patient in China

Lifeng Wang、Liyan Ye、Kun Ye、Qiang Zhao、Jiyong Yang
Chinese PLA General Hospital

We reported case of Tsukamurella tyrosinosolvens bacteraemia in an immunocompromised patient who was successfully treated with a ten days course of single Cefoperazone sulbactam. The identification of Tsukamurella tyrosinosolvens were by 16S rRNA sequence and Whole genome sequence. Antimicrobial susceptibility testing showed that the strain was susceptible to amikacin, ciprofloxacin, imipenem, Cefotaxime. Bioinformatic analysis showed that the G+C content and genome size of this isolate is 71.02% and 4.99 Mb. Single-nucleotide polymorphism (SNP) analysis was performed on Tsukamurella tyrosinosolvens genomes from our strain and seven international strains A maximum likelihood phylogenetic tree constructed on the basis of 10,300 core genome single nucleotide polymorphisms (cgSNPs) showed that TY201901 isolate in this study clustered in the same branch with GCA_001575225.1 and GCA_001623895.1 isolates from Subsurface soil and chemical hydrocarbon sludge, respectively. Therefore, the possible route of infection in our patient was environmental exposure in an immunocompromised status.

PU-3358

宏基因组高通量测序技术辅助诊断血流结核感染 1 例

刘昌霖、葛虎、代冰、曹媛、卢秋然、彭千、余艳
长沙金域医学检验实验室有限公司

目的 探索宏基因组高通量测序技术（metagenomic next-generation sequencing，mNGS）在临床检验技术中的应用，将 mNGS 检验技术更好的服务于临床，为 mNGS 检验技术更好的应用于血流感染的临床检验提供潜在价值。
方法 回顾性收集本实验室采用外周血 mNGS 技术辅助确诊的血流感染病例临床资料，采用 Illumina NextSeq™ 550 测序平台对外周血进行病原微生物测序，综合分析病例的临床、实验室和辅助检查结果。
结果 在送检的外周血标本中，发现 1 例老年男性患者，检出结核分枝杆菌复合群阳性，其中血常规检查白细胞 12.6X10^9/L 严重偏高、中性粒细胞比例 97.30%严重偏高、淋巴细胞比例 1.80%严重偏低；痰液抗酸染色（+++）；痰液结核分枝杆菌及利福平耐药检测(Xpert MTB/RIF Assay)阳性。外周血 mNGS 检测，结核分枝杆菌复合群 reads 数为 2，结核分枝杆菌 reads 数为 1，属的基因覆盖率为 0.208%，提示血流感染结核分支杆菌，临床确诊结核感染。在血流中检出结核分支杆菌，究其原因可能是由于感染部位的结核分枝杆菌经淋巴细胞播散传播进入血流，从而使其被检测到。
结论 mNGS 检验技术对血流感染病原微生物的鉴定具有一定的优势，有助于血流感染的诊断，扩展了人们对结核分枝杆菌感染在血流检测的认识，为结核分枝杆菌感染的诊断提供了一个新的检测方向，也为检验医学和临床治疗提供了参考。

PU-3359

碳青霉烯类耐药肺炎克雷伯菌药敏及流行病学分析

罗雪丹
资阳市安岳县中医医院

目的 研究碳青霉烯类耐药肺炎克雷伯菌的检测方法，对常用抗生素药物进行临床实践中敏感性的测定，分析其在临床上的流行特点为如何有效地控制医院感染提供了依据。
方法 搜集医院临床上分离出的非重复的 CRKP 进行筛选，应用上机与纸片法结合来测定临床上常用抗生素的敏感性，然后用改良 Hodge 试验与 EDTA 协同试验对碳青霉烯酶进行检测以及筛选。。
结果 发现 CRKP 菌株对多粘菌素几乎完全敏感，对四环素、米诺环素、替加环素、氯霉素均较敏感，对头孢菌素类和 β-内酰胺类抗菌药物均表现为高度耐药，而对阿米卡星、庆大霉素、妥布霉素的耐药率较低。 在收集到的这些 CRKP 菌株中，出现病区的分布以 ICU 病区占比重最多，其次是呼吸科病区。收集到的 CRKP 主要来源于呼吸道标本，尤其痰液最多，占一半以上。其次分别是血液、尿液、粪便等。CRKP 在临床疾病中的分布情况发现患者所患疾病以慢性阻塞性肺疾病和重症肺炎为主，其次是肺部感染、脓毒血症、尿路感染、肿瘤疾病等，与肺炎克雷伯菌的传播途径密切相关。
结论 CRKP 的治疗可以多粘菌素、四环素、氯霉素等为主，联合使用抗生素常强于单一使用某种抗生素的效果，ICU 的病患出现 CRKP 的风险更高，且肺炎克雷伯菌的主要传播途径是通过呼吸道。

PU-3360

临床微生物检验和细菌耐药性监测的应用价值研究

王阳
资阳市安岳县中医医院

目的 研究临床微生物检验和细菌耐药性监测的应用价值。
方法 抽取 2019 年 1 月-2020 年 12 月到我院接受住院诊疗的患者作为本次的研究对象，从他们的血液样本、尿液样本以及分泌物样本中剔除重复菌株提取 428 株致病菌作为本次的研究样本，对每个样本分别实施药敏试验，并对结果进行详细的分析，然后对细菌的耐药性进行监测。
结果 在本次研究的 428 株致病菌中发现革兰氏阴性杆菌有 256 株、革兰氏阳性球菌有 172 株，多重耐药菌 171 株，检出率达 40%。有许多临床医学中比较常见的致病菌，其中耐药性比较严重的几种致病菌包括鲍曼不动杆菌、铜绿假单胞菌、金黄色葡萄球菌以及凝固酶阴性葡萄球菌。耐甲氧西林金黄色葡萄球菌以及耐甲氧西林凝固酶阴性葡萄球菌检出率分别达 40%和 80%，而耐碳青霉烯的鲍曼不动杆菌检出率高达 87.5%，多重耐药的铜绿假单胞菌检出率也高达 42.5%。

结论 细菌的耐药性升高比较明显，多重耐药菌的检出率也越来越高，因此对临床微生物进行检验和耐药性监测的措施十分重要，能够帮助医院更加了解流行的致病菌分布情况以及细菌的耐药性，有效的对这些感染病菌进行预防，为患者的身体健康筑起一个屏障，是一项值得推广的应用。

PU-3361

临床微生物关于对临床泌尿系统感染病原菌的构成与耐药情况分析

李辉
资阳市安岳县中医医院

目的 分析临床患者泌尿系统感染病原菌分布特点及耐药情况，为临床合理用药提供依据。
方法 采集 2019 年 5 月 1 日至 2021 年 4 月 30 日我院临床病人的中段尿标本，了解病原菌分布情况及主要病原菌对抗菌药物的耐药性及其变化。
结果 共分离病原菌 335 株，其中革兰氏阴性杆菌占 69.6%，以大肠埃希菌（51.0%）为主，革兰氏阳性菌占 22.4%，以屎肠球菌（13.7%）为主，真菌占 6%，以副热带假丝酵母菌（3.9%）为主。病原菌分离率最高的科室为外一科。通过对比 2 年的药敏结果发现，大肠埃细菌中产超广谱 β-内酰胺酶的菌株比例较高，且呈逐年上升的趋势，头孢唑啉，头孢曲松，左氧氟沙星，氨苄西林及氨苄西林舒巴坦的耐药率较高，屎肠球菌对万古霉素和利奈唑胺耐药率较低，副热带假丝酵母菌对抗真菌性药物敏感性较好，耐药率不到 5%。
结论 我院泌尿系统感染患者的病原菌主要以革兰氏阴性杆菌为主，以大肠埃希氏菌最常见，其中 ESBLs 的菌株比例呈上升趋势，临床上应重视抗生素的合理使用，减少耐药菌的产生。

PU-3362

痰涂片与结核抗体检验在诊断肺结核中的应用

陈焦
四川省安岳县人民医院

目的 探讨痰涂片与结核抗体检验在诊断肺结核中的应用价值。
方法 选择 2019 年 2 月-2019 年 3 月在我院明确诊断为肺结核的患者 86 例，按照检验方法不同分为 A 组与 B 组，每组 43 例，分别行痰涂片检验、结核抗体检验，检验过程均严格按照试剂盒说明书进行，比较两组阳性检出率。
结果 A 组阳性检出率为 74.42%，B 组阳性检出率为 93.02%，B 组阳性检出率明显高于对照组，P＜0.05，差异有统计学意义。
结论 结核抗体检验在肺结核诊断中的阳性率更高，临床应用价值优于痰涂片检验，值得临床推广。

PU-3363

一种鉴定申克氏孢子丝菌的质谱方法

叶家美
四川金域医学检验中心有限公司

目的 探索申克氏孢子丝菌复合体的鉴定方法，寻找简单、快捷、准确的鉴定方法。申克氏孢子丝菌是一种子囊菌类的双相真菌，会引起一种世界范围的皮肤或皮下孢子丝菌菌病，偶尔也可向内脏和骨骼播散，严重者甚至可引起全身的播散感染。本病在我国东北地区相对多发，且部分区域可成

批发生，对人们的健康造成严重威胁。该菌在 SDA 上 25℃培养生长缓慢，7 天以上呈褐色有皱褶短绒毛菌落，棉兰染色镜下分生孢子梗直立，分生孢子呈梨花样排列；35℃培养可见卵圆形至雪茄形酵母样孢子。传统的培养方法至镜检周期较长（真菌生长缓慢），且需要丰富的经验来进行判断和鉴别。

方法 选用一例皮肤科感染了申克氏孢子丝菌的脓液样本，通过在 SDA 上 25℃和 35℃的条件进行培养，培养时间 3 天，有菌落成形生长，再利用郑州安图 Autof ms1000 飞行质谱仪进行鉴定，前处理方法为裂解法，在 1.5ml 离心管中加入 30 微升甲酸裂解液，挑取少量菌体至甲酸裂解液中，震荡裂解 1-3min，取 1 微升悬液滴加到样品靶上，晾干后，滴加 1 微升基质溶液，晾干后进样打靶。用第二代 DNA 测序加以证实结果的准确性。

结果 实验显示：郑州安图 Autof ms1000 飞行质谱仪总分值为 10 分，申克氏孢子丝菌质谱鉴定分值为 9.384 分，第二代 DNA 测序显示分辨率较好，与质谱鉴定结果一致。

结论 综上所述，Autof ms1000 飞行质谱仪开启了申克氏孢子丝菌新的鉴定方法，大大缩短了传统培养方法至镜检的报告周期，大大降低了其他方法的鉴定成本。同时，也开启了孢子丝菌鉴定研究的新领域，以期为临床孢子丝菌病的诊疗工作提供可靠依据。

PU-3364

2015～2019 年真菌血流感染菌种分布及抗真菌药物敏感性分析

王盛华
山东第一医科大学附属省立医院

目的 分析真菌血流感染菌种分布和抗真菌药物的敏感性，为临床诊治提供依据。

方法 回顾性分析山东省立医院 2015 年 1 月～2019 年 12 月血培养鉴定结果为真菌的临床资料，对菌种分布、抗真菌药的敏感性、阳性报警时间、科室分布等进行分析。

结果 血培养中共分离非重复真菌 156 株。排在前 3 位的真菌分别为白色念珠菌 59 株（37.8%），热带念珠菌 26 株（16.7%）和近平滑念珠菌 20 株（12.8%）；少见菌包括季也蒙念珠菌、毕赤酵母菌、新生隐球菌、酿酒酵母和红酵母等。我院真菌血流感染好发于 60 岁以上的老年患者 68 例（43.5%），男性 83 例（53.8%）。真菌血流感染前 3 位的科室为内科 ICU33 株（21.2%），急诊科 31 株（19.9%），和外科 ICU28 株（17.9%）。阳性报警时间从长到短依次为：光滑念珠菌（55.8±28.3）h，近平滑念珠菌（52.3±40.7）h，白色念珠菌（44.1±37.5）h 和热带念珠菌（22.6±19.2）h。白色念珠菌、近平滑念珠菌、光滑念珠菌和热带念珠菌对氟康唑敏感率分别为 100%、100%、93.8%和 73.1%。

结论 本院真菌血流感染以白念珠菌为主，绝大多数真菌对抗真菌药具有较高敏感性，热带念珠菌的耐药率相对较高。

PU-3365

耐碳青霉烯类肺炎克雷伯菌抗生素耐药性及毒力的分子进化研究

朱威南、沈立松
上海交通大学医学院附属新华医院

背景 耐碳青霉烯肺炎克雷伯菌(CRKP)是世界范围内的一种严重的致病菌，给公共卫生带来了严重的问题。本研究对我院分离的 CRKP 菌株进行了长时间回顾性地流行病学和基因组研究(2009-2018 年)，涵盖菌株早期出现到克隆菌株暴发的完整过程，用于评估 CRKP 和高毒力 CRKP (hv-CRKP)的流行和演变。

方法 本研究在住院患者中连续收集了 1181 株非重复 CRKP 分离株，采用 wzi 测序、基因组测序、rmpA/rmpA2 筛选、质粒追踪等，对菌株的荚膜类型、遗传亲缘关系、毒力特征和质粒传播特征进行鉴定。同时，对其中具有代表性菌株进行了生物膜形成、黏度和大蜡螟感染模型中毒力等进行了分析。
结果 wzi209-CRKP 和 wzi64-CRKP 被发现是主要存在的群别，均属于 ST11 且在进化关系上关系密切。blaKPC 被发现存在于 IncFII-IncR 耐药杂交质粒上。通过质粒上 blaKPC 周围的耐药环境(blaSHV-12/TnAs1)和接合环境(traN/traC)标记，我们确定了 wzi209-CRKP 与 K14.K64-CRKP 在我院不同患者之间的转移。hv-CRKP 主要存在于 K14.K64-CRKP 中。其中两种不同的毒力质粒，非结合的 IncFIB(k)-IncHI1B-rmpA/rmpA2 和接合型 IncFIB-IncHI1B-rmpA2-only 被发现在我院流行。IncFIB-IncHI1B-rmpA2-only 的发生率高于 IncFIB(k)-IncHI1B-rmpA/rmpA2。
结论 深入了解 CRKP 特别是 hv-CRKP 的流行和演变，对公共卫生控制策略的合理设计和实施是非常必要的。

PU-3366

无乳链球菌在临床不同类型标本中的分子分型分布

高珮菁、孙景勇
上海市交通大学医学院附属瑞金医院 临床检验中心

目的 明确临床不同标本类型中无乳链球菌的分子分型分布特征，了解临床上从阴道分泌物和中段尿标本中是否存在具有生存优势或更易引起感染的无乳链球菌分型。
方法 从无乳链球菌阳性的不同标本中分离无乳链球菌，冻存菌种并提取 DNA；通过 PCR 扩增 cpsG、cpsI、cpsJ、cpsN，检测分离株表面的荚膜多糖，进行血清型分型；通过 PCR 扩增 7 个管家基因，测定其序列后与数据库中基因序列比对，对分离株进行多位点序列分型（MLST）；主要分析临床上从阴道分泌物和中段尿标本中分离得到的无乳链球菌的分子分型分布情况，分析其是否具有统计学差异。
结果 本课题中采用收集的无乳链球菌 114 株，其中 41 株来自中段尿标本，73 株来自阴道分泌物标本。未采用的其余分离株来自前列腺液、白带等其他类型标本，但由于同种标本数量较少，结果随机性不足，故不进行分析。在对中段尿标本和阴道分泌物标本进行荚膜多糖血清分型后，发现在中段尿标本、阴道分泌物标本中分离株都以Ⅴ型为主，分别占 36.58%和 36.99%。在对中段尿标本和阴道分泌物标本进行 MLST 分型后，发现其中中段尿标本以 ST-10 和 ST-19 为主，分别占 17.07%和 19.51%，阴道分泌物标本以 ST-19 和 ST-24 为主，分别占 20.55%和 19.18%。
结论 本课题的 114 株 GBS 分离株中，分离株的血清型分型在中段尿及阴道分泌物标本中都以Ⅴ型为主，分离株的 MLST 分型在在中段尿及阴道分泌物标本中都以 ST-19 为主。

PU-3367

A ceftazidime-avibactam resistant and carbapenem susceptible Klebsiella pneumoniae strain harboring blaKPC-14

Siqiang Niu
Department of Laboratory Medicine, The First Affiliated Hospital of Chongqing Medical University

Objectives Here we report a novel KPC-14 allele found in the K. pneumoniae isolate (designated BK13048) in New York City.
Methods Drug susceptibility assays were performed by a standard CLSI broth microdilution method. And sequencing and characterization of the blaKPC-14 was achieved by first

segregating the plasmid into an E. coli host as described previously. Then the plasmid and whole genome sequencing was performed. Then the KPC-14- , KPC-2- and KPC-3-encoding open reading frames were cloned in E. coli DH10B with pET28a-kpc_pro vector.
Results Drug susceptibility assays showed that BK13048 was resistant to ceftazidime-avibactam but susceptible to ertapenem, imipenem and meropenem. The blaKPC-14-harboring plasmid was successfully transferred to E. coli J53 by conjugation. Sequencing the blaKPC gene in BK13048 revealed a novel KPC-type carbapenemase that differed from blaKPC-3 by a 6-bp deletion at position 721-726 and a transition T814C, leading to a two-amino acid (242Thr and 243Ala) deletion and a Tyr272His change relative to KPC-3, respectively. The transformant BK51985 harboring kpc-14 gene showed ceftazidime-avibactam MIC of 16 μg/ml, which is 64-folds higher than BK51982 and BK51984 transformant, more than 512-folds higher than native E. coli DH10B cells.
Conclusions we have isolated and characterized a novel KPC variant from K. pneumoniae BK13048, designated KPC-14. The data presented here show that KPC-14 is mainly responsible for the ceftazidime-avibactam resistance of this strain.

PU-3368

多种表型检测方法在耐碳青霉烯肠杆菌科中的应用评价

贾珉
武汉市第一医院

目的 评价三种方法对肠杆菌科细菌碳青霉烯酶表型的筛选能力。
方法 收集 59 株耐碳青霉烯肠杆菌科细菌和 22 株碳青霉烯类敏感菌，分别用 Carba NP 试验、mCIM 与 eCIM 试验、KPC 显色培养基三种方法进行表型检测。以 PCR 检测结果为金标准，比较三种方法对 CRE 表型检测的灵敏度和特异度等。
结果 基因检测中，共 58 株检出耐药基因，包括 KPC 型 35 株，NDM 型 21 株，IMP 型 2 株，有 1 株耐药菌未检测到相关基因。表型检测中，Carba NP 的灵敏度和特异度分别为 96.6%、100%；mCIM 的灵敏度和特异度均为 100%；eCIM 在 B 类金属酶的筛查中的灵敏度和特异度分别为 92%、100%；KPC 显色培养基的灵敏度和特异度分别为 100%、95.5%；其中有一株携带 KPC 基因的肺炎克雷伯菌 eCIM 为阳性。Carba NP 分别与 mCIM 与显色培养基之间进行一致性比较，其 Kappa 值分别为 0.94、0.91。
结论 三种方法均有较好的灵敏度和特异度，且有较好的一致性。其中 mCIM 的筛查效果最好，与 eCIM 联合使用可以有效的筛查丝氨酸酶和金属酶。

PU-3369

接受恩替卡韦或 peg-干扰素治疗的慢性乙型肝炎患者血清 HBV RNA 水平的动态变化

俞晓琦、于德敏、龚启明、张欣欣
上海交通大学医学院附属瑞金医院

目的 本研究旨在研究血清 HBV RNA 与其他生物标志物的相关性及其在抗病毒治疗过程中的动态变化和临床意义。
方法 回顾性分析 136 例接受恩替卡韦或 peg-干扰素抗病毒治疗慢乙肝患者的血清 HBV RNA 水平。使用实时荧光定量聚合酶链式反应（PCR）进行定量检测，受试者工作特征曲线（ROC）用以评估其对 HBeAg 阴转的预测价值。

结果 基线血清 HBV RNA 的平均值为 6.41 copies/ml，其中 HBeAg 阳性患者的平均值为 7.20 copies/ml，显著高于 HBeAg 阴性患者的平均值 4.60 copies/ml (p<0.001)。基线 HBV RNA 水平与 HBV DNA 水平显示出较强的相关性(r=0.82, p<0.001)，与 HBsAg 水平也呈现出一定的相关性(r=0.69, p<0.001)，但与 ALT 的相关性较弱(r=0.28, p<0.05)。和恩替卡韦单药治疗相比，peg-干扰素治疗的患者第 4 周、24 周和 48 周的 HBV RNA 水平下降更显著。接受恩替卡韦治疗后，获得 HBeAg 血清学转换的患者第 4 周、12 周、24 周和 48 周血清 HBV RNA 水平的下降更为显著。接受恩替卡韦治疗的患者基线 HBV RNA, HBV DNA 及 HBsAg 预测 HBeAg 血清学转换的受试者工作特征曲线下面积分别为 0.68，0.66 和 0.64；而在 peg-干扰素治疗患者中，HBV DNA 的曲线下面积最大为 0.66，其次是 HBV RNA 及 HBsAg，分别为 0.63 和 0.60。在抗病毒治疗过程中，恩替卡韦治疗组患者 HBeAg 血清学转换的最佳预测指标是第 4 周的 HBV RNA 水平 (AUC=0.71)，其预测的截断值、敏感度、特异性、阳性预测值、阴性预测值分别为 7.95 log10copies/mL, 83%, 56%, 40%, 91%；而在接受 peg-干扰素治疗的患者中则是第 24 周的 HBV RNA 水平(AUC=0.70)，其预测的截断值、敏感度、特异性、阳性预测值、阴性预测值分别为 3.55 log10copies/mL, 89%, 62%, 44%, 94%。

结论 血清 HBV RNA 水平可在慢乙肝患者抗病毒治疗期间作为一项新的生物标志物预测疗效。

PU-3370

Ribokinase screened from T7 phage displayed Mycobacterium tuberculosis genomic DNA library had good potenital for the serodiagnosis of tuberculosis

Dan Luo[1,2]、Jun He[2]、XiaoLiang Yan[1]、Yanhua Zeng[1]
1. Affiliated NanHua Hospital, University of South China
2. 南华大学附属南华医院

Tuberculosis (TB) caused by Mycobacterium tuberculosis is the leading cause of death among infectious diseases in the worldwide. Lack of more sensitive and effective diagnostic reagents has increased the awareness of rapid diagnosis for TB. In this study, T7 phage displayed genomic DNA library of M. tuberculosis was constructed to screen the antigens that specially bind with TB–positive serum from the whole genome of M. tuberculosis and to improve the sensitivity and specificity of TB serological diagnosis. After 3 rounds of biopanning, results of DNA sequencing and BLAST analysis showed that 19 positive phages displayed 4 different proteins and the occurrence frequency of the phage which displayed ribokinase (RK) was the highest. The results of indirect ELISA and dot immunoblotting indicated that representative phages could specifically bind to TB–positive serum. The prokaryotic expression vector containing the DNA sequence of RK gene was then constructed and the recombinant protein was expressed and purified to evaluate the serodiagnosis value of RK. The reactivity of the recombinant RK with different clinical sera were detected, and the sensitivities and specificities in TB serodiagnosis were 90% and 86%, respectively by screening sera from TB patients (n=90) and uninfected individuals (n=90) based on ELISA. Therefore, this study demonstrated that RK had good potential for the serodiagnosis of TB.

PU-3371

血培养联合质谱快速鉴定在肠炎沙门氏菌引起食物中毒公共事件中的应用

李晟彬、哈依努尔、刘洁
新疆自治区第三人民医院

应对一起疑似群体食物中毒公共卫生事件进行实验室检测分析，明确中毒原因，利用基质辅助激光解析电离飞行时间质谱（MALID-TOF MS）鉴定技术，实现病原体快速鉴定，进而指导后续的应急处理。

方法 根据临床《WST640-2018 微生物学检验标本的采集和转运行业标准》以及《WST498-2017 细菌性腹泻临床实验室诊断操作指南》对中毒病人粪便、血液标本进行细菌培养采样和实验室检测分析。

结论 从患者血液及粪便标本培养物中均分离检测出肠炎沙门氏菌。且血培养联合微生物质谱快速鉴定相较传统培养及鉴定结果提前 24～48 h ，时效性更高，第一时间为临床明确诊断、快速治疗提供有效病原学证据。

PU-3372

微生物检验泌尿系统的病原菌结果临床分析

杨姗
资阳市雁江区中医医院

目的 探讨采用微生物检验方法检验泌尿系统疾病患者的泌尿系统病原菌分布情况。

方法 选取本院于 2018 年 7 月至 2019 年 7 月收治泌尿系统疾病患者 200 例，患者均行微生物检验与细菌培养，分析检验结果。

结果 200 例泌尿系统感染患者尿液样本检出致病菌 287 株，包括单一病原菌感染 113 例、病原菌混合感染 87 例，单一感染几率相比混合感染更高（P<0.05）；单一病原菌感染者大肠埃希菌感染占比相比于白色尿球菌、尿肠杆菌占比明显更高（P<0.05）；病原菌混合感染患者的支原体+其他类型致病菌感染的占比较高，且多见为解脲支原体+其他类型细菌感染。

结论 临床针对泌尿系统疾病患者采用微生物检验方法检验有助于了解患者感染微生物类型，以此明确选择合理的治疗方案治疗，以降低误诊、误治几率，提高临床疗效。

PU-3373

利奈唑胺耐药头状葡萄球菌生物膜形成能力分析

周万青[2]、高硕[1]、陆瀚文[1]、张燕[1]、康怡[1]、沈瀚[1]
1. 南京大学医学院附属鼓楼医院
2. 南京大学医学院附属鼓楼医院

目的 分析临床分离利奈唑胺耐药头状葡萄球菌生物膜形成能力。

方法 收集 2017-2020 年间临床分离头状葡萄球菌共 104 株，采用 VITEK MS 质谱分析仪进行鉴定，VITEK 2 Compact 分析仪进行药敏试验并用 E-test 法复核利奈唑胺最低抑菌浓度（MIC）；PCR 及测序分析耐药基因 cfr， optrA 及 23S rRNA 耐药突变；96 孔板及结晶紫染色检测菌株生物膜形成能力，PCR 检测生物膜形成相关基因 icaAD，bap，fnbA 及 cna 的携带情况。

结果 44 株利奈唑胺耐药菌株中 35 株携带 cfr 基因（79.5%），44 株菌均存在 23S rRNA V 区 G2576T 突变。利奈唑胺耐药菌株均能形成生物膜（44/44，100%）。60 株利奈唑胺敏感株有 30

株生物成膜阳性（30/60，50%）。生物膜定量结果显示利奈唑胺耐药菌株明显强于敏感株（ U=658, P<0.0001）。生物膜阳性菌株均检出 icaAD 基因（74/74，100%），生物膜阴性菌株中有 93% icaAD 基因阳性（28/30）。bap 基因在产生物膜菌株中阳性比例为 86.5%，生物膜阴性菌株中有 40%菌株未检出 bap 基因。fnbA 和 cna 在所有菌株中均未检出。
结论 临床分离头状葡萄球菌对利奈唑胺耐药由 23S rRNA 突变及 cfr 基因导致；利奈唑胺耐药菌与敏感株相比具有更强的生物膜形成能力，并与黏附相关基因 icaAD 和 bap 有关。

PU-3374

股疝术后切口感染的病原菌分布特点及其危险因素分析

赵晓杰
徐州医科大附属医院

目的 探讨和分析股疝无张力修补术后切口感染的病原菌分布特点及其危险因素。
方法 选取 2015 年 1 月至 2019 年 12 月期间在医院进行腹股沟疝无张力修补术的 312 例患者作为临床研究对象，并分别对股疝无张力修补术后切口感染患者的病原菌分布特点和耐药情况，以及诱发感染的相关危险因素进行统计和分析。
结果 本次 312 例行股疝无张力修补术患者中发生切口感染 28 例，感染率为 8.97％。28 例腹股沟疝无张力修补术后切口感染患者中共检出病原菌 42 株，股疝无张力修补术后切口感染患者病原菌分布为革兰阴性杆菌 30.94％，革兰阳性球菌 66.68％，真菌 2.38％。感染病原菌中革兰阳性球菌对青霉素、红霉素均表现出较高的耐药性，耐药率均处于 70％以上；而对替考拉宁则均表现出较低的耐药性，耐药率均处于 20％以下。感染病原菌中革兰阴性杆菌对头孢唑林、氨苄西林均表现出较高的耐药性，耐药率均处于 70％以上；而对阿米卡星、庆大霉素则均表现出较低的耐药性，耐药率均处于 20％以下。年龄≥60 岁，合并糖尿病，低蛋白血症，手术时间≥30 min，均为腹股沟疝无张力修补术后切口感染的危险因素，差异具有统计学意义(P<0.05)。
结论 股疝修补术后切口感染的病原菌分布以革兰阳性球菌为主，其次为革兰阴性杆菌，且切口感染与年龄，合并糖尿病，低蛋白血症，手术时间相关，临床治疗过程中应结合病原菌分布特点及其危险因素给予针对性干预。

PU-3375

产 NDM-1 酶阴沟肠杆菌耐药性与毒力基因检测

余艳[1,2,3]、牛敏[1,2,3]、杜艳[1,2,3]、任玉吉[1,2,3]、代鹏飞[1,2,3]、何秋月[1,2,3]、刘淑敏[1,2,3]
1. 昆明医科大学第一附属医院检验科
2. 云南省检验医学重点实验室
3. 昆明医科大学第一附属医院临床检验诊断省创新团队

目的 了解产新德里金属 β-内酰胺酶-1（NDM-1）阴沟肠杆菌（ECL）耐药性与毒力基因分布情况。
方法 收集 2017 年 1 月至 2020 年 11 月昆明医科大学第一附属医院分离的阴沟肠杆菌，实验组为 29 株产 NDM-1 酶的耐碳青霉烯类阴沟肠杆菌(CR-ECL)，对照组为 32 株不产 NDM-1 酶 CR-ECL 和 35 株碳青霉烯类敏感阴沟肠杆菌（CS-ECL）。采用基质辅助激光解吸电离飞行时间质谱仪（MALDI-TOF MS）、全自动微生物分析系统进行菌株鉴定和药敏试验，PCR 方法检测 NDM-1 耐药基因、24 对毒力基因，χ 2 检验比较毒力基因分布差异。
结果 本院分离的 CR-ECL 菌株 NDM-1 基因检出率为 47.5%，产 NDM-1 酶的 CR-ECL 对常用抗菌药物表现为多重耐药。所有 96 株 ECL 菌株中，毒力基因 acrA、tolC、wcaA、wcaM、wza 的检出率较高，分别为 80.2%、90.6%、87.5%、75.0%、92.7%, clpB、icmf、VasD/Lip 基因的检出率也均在 60%以上，未检出 escV、nleB、pet、hlyA 等毒力基因。统计学分析显示产 NDM-1 酶 CR-

ECL 组 clpB、icmf、VasD/Lip 、acrA 基因检出率高于不产 NDM-1 酶 CR-ECL，CR-ECL 组 clpB、icmf、VasD/Lip 基因检出率高于 CS-ECL 组，差异具有统计学意义（P＜0.05）。
结论 产 NDM-1 酶 CR-ECL 耐药形势严峻而且部分毒力基因的携带率也增高，临床用药应兼顾细菌的耐药性和毒力基因分布情况。

PU-3376

小分子 STK-35/66 对革兰阴性致病菌的广谱抗菌活性研究

徐兰兰、佘鹏飞、刘亚倩、伍勇
中南大学湘雅三医院

目的 研究小分子 STK-35 及 STK-66 对大肠杆菌、铜绿假单胞菌、肺炎克雷伯菌和鲍曼不动杆菌及其持留菌的体内和体外抗菌活性。
方法 通过微量肉汤稀释法检测 STK-35/66 的抗菌谱；通过 K-B 纸片扩散法验证 STK-35/66 对革兰阴性菌的生长抑制能力；通过摇菌培养和菌落稀释计数绘制 STK-35/66 对革兰阴性菌的时间-杀菌曲线；通过人红细胞溶血试验和 CCK-8 细胞毒性实验检测 STK-35/66 的红细胞溶血率和细胞毒性；通过棋盘稀释法检测 STK-35/66 和传统抗生素联用对革兰阴性菌的抗菌效果；通过持留菌杀菌实验检测 STK-35/66 对革兰阴性菌持留菌的杀菌效果；通过小鼠腹膜炎模型检测 STK-35/66 对大肠杆菌的体内抗菌效果。
结果 STK-35/66 对四种革兰阴性菌具有较好的抗菌作用，但具有一定的菌株依赖性，其 MICs 范围在 0.0625-16μg/ml 之间，其中，对大肠杆菌的 MIC 值为 0.0625μg/ml；K-B 实验结果表明，相比对照组，STK-35/66 可明显增大对革兰阴性菌的抑菌圈直径范围，表现出较好的抗菌能力；STK-35/66 对人红细胞、人支气管上皮细胞（HBE）、人非小细胞肺癌细胞系（A549）的的溶血率和细胞毒性较低；此外，棋盘稀释法结果表明,洗必泰与 STK-35 联用对革兰阴性菌的协同抑菌指数值为 0.281-0.625，表现为协同或部分协同作用，其中，对大肠杆菌的抑制作用最强；利奈唑胺和 STK-66 联用对大肠杆菌和肺炎克雷伯菌的协同抑菌指数值分别为 0.125 和 0.375，表现为协同抗菌作用；STK-35/66 在 4h 时可明显降低鲍曼不动杆菌和大肠杆菌的持留菌数量，差异有统计学意义；此外，STK-35/66 可明显提高小鼠生存率，使小鼠肝脾肾细菌数量相比对照组下降约 5 个 Log10，达到和多粘菌素 B 相似的体内抗菌效果。
结论 STK-35/66 对革兰阴性菌具有较好的抗菌潜能，为我们治疗革兰阴性菌感染提供了新的思路。

PU-3377

血流感染播散源头及病原学分析

赵晓杰
徐州医科大附属医院

目的 通过对 723 例血流感染病原菌侵袭性及病原学感染特点进行分析，寻找血流感染病原菌的侵袭途径，查找播散源头，降低患者死亡率。同时对血流感染病原菌的菌群分布，耐药特点，耐药表型进行分析，指导临床合理用药，减少耐药菌的产生，为临床对血流感染的防控及治疗提供依据。
方法 收集我院 2018 年 1 月到 2019 年 12 月血培养阳性病原菌，用 Phoenix100 全自动细菌鉴定/药敏系统对其做出准确的分离鉴定及药敏试验。同时及时了解患者病情，查找病原菌侵袭性特点、临床耐药性特点、病原菌构成特点，并进一步分析病原菌及科室分布，结合相关实验室检查和病原菌侵袭特点，查找病原菌感染源头。同一时间段内感染灶培养菌株与血培养检出的菌株相同，且除外其他感染来源，认为该感染灶为血流感染的播散源头。
结果 1 血流感染病原菌播散源头情况：两年间共检出 723 株血流感染病原菌，分离率位于前五的病原菌依次为肺炎克雷伯菌（18.8%）、大肠埃希菌（15.3%）、鲍曼不动杆菌（10.7%）、凝固

酶阴性葡萄球菌（8.0%）和金黄色葡萄球菌（7.8%）。主要分布科室为重症医学科、泌尿外科和肾内科；腹腔感染来源 114 株（16.0%），以肠杆菌科细菌和链球菌为主，主要分布科室为重症医学科和普通外科；下呼吸道感染来源 86 株（11.9%），以肺炎链球菌（32 株）为主，主要分布科室为呼吸内科；外伤感染来源 57 株（7.9%），以金黄色葡萄球菌（33 株）为主，主要分布科室为骨科。其他不明途径 53 株（7.3%）。

结论 1 血流感染病原菌检出率位于前五位的依次为肺炎克雷伯菌、大肠埃希菌、鲍曼不动杆菌、凝固酶阴性葡萄球菌、和金黄色葡萄球菌。2 病原菌主要分布科室为重症医学科和神经外科；泌尿系感染来源的以大肠埃希菌为主，主要分布科室为重症医学科、泌尿外科和肾内科；腹腔感染来源以肠杆菌科细菌和链球菌为主，主要分布科室为重症医学科和普通外科；下呼吸道感染来源以肺炎链球菌为主，主要分布科室为呼吸内科；外伤感染来源以金黄色葡萄球菌为主，主要分布科室为骨科。

PU-3378

梅里埃 FAN Plus 瓶与 BD 树脂需氧瓶和溶血素厌氧瓶抗生素吸附能力评估

申芳芳[1]、李子尧[2]、纪爱芳[1]
1. 长治医学院附属和平医院
2. 中日友好医院

目的 本实验对梅里埃 FAN Plus 瓶与 BD 树脂需氧瓶和溶血素厌氧瓶对抗生素中和能力进行了评估。
方法 实验中所使用的抗生素包括亚胺培南、美罗培南、万古霉素、哌拉西林/他唑巴坦、左氧氟沙星、阿米卡星、替加环素。根据 CLSI 推荐的菌种与相应的抗生素进行组合并结合临床实际，分别用 ATCC25922 和亚胺培南、哌拉西林/他唑巴坦、阿米卡星、替加环素组合，以及 ATCC29213 和美罗培南、万古霉素、左氧氟沙星组合对试验所选用的血培养瓶进行了抗生素中和能力的评估。
结果 梅里埃 FAN Plus 瓶对于实验 7 种抗生素都可以吸附 ；BD 树脂需氧瓶和溶血素厌氧瓶均不能吸附亚胺培南、美罗培南、万古霉素 ；BD 厌氧瓶不能吸附哌拉西林/他唑巴坦、左氧氟沙星、替加环素； BD 需氧瓶对于左氧仅 80%吸附，且慢于梅里埃 FA PLUS 瓶 6.16h；BD 需氧瓶对于阿米卡星仅 50%吸附，且慢于梅里埃 FA PLUS 瓶 5.58h。
结论 梅里埃 FAN Plus 瓶对亚胺培南、美罗培南、万古霉素吸附性能显著优于 BD 树脂需氧瓶和溶血素厌氧瓶，梅里埃 FA PLUS 厌氧瓶对哌拉西林/他唑巴坦、左氧氟沙星、替加环素的吸附性能显著优于 BD 溶血素厌氧瓶，梅里埃 FA PLUS 需氧瓶对阿米卡星吸附性能显著优于 BD 树脂需氧瓶。

PU-3379

不同药敏实验评价流感嗜血杆菌对三种 β-内酰胺类药物的药敏结果一致性的研究

王战豪
成都市第三人民医院

目的 对比研究三种体外药敏试验在测定流感嗜血杆菌（haemophilus influenzae，Hi）对氨苄西林、阿莫西林克拉维酸、头孢呋辛等三种 β-内酰胺类药物药物敏感的可靠性及实用性。
方法 采用肉汤稀释法、纸片扩散法（K-B 法）和自动化微量肉汤稀释法（ATB 法）检测 Hi 对氨苄西林、阿莫西林克拉维酸、头孢呋辛的药物敏感度。以肉汤稀释法为参考方法，分析比较 K-B 法和 ATB 法结果间的一致性和误差率。
结果 K-B 法与肉汤稀释法对氨苄西林、阿莫西林克拉维酸、头孢呋辛的药敏一致率分别为 77.19%、91.58%、69.16%，ATB 法与肉汤稀释法的一致率分别为 70.18%、73.16%、51.98%，K-B 法对

阿莫西林克拉维酸、头孢呋辛这两种药物的一致率显著高于 ATB 法。结果误差方面，K-B 法对氨苄西林和头孢呋辛的重大误差率和极重大误差率都显著低于 ATB 法，K-B 法对阿莫西林克拉维酸的重大误差率也显著低于 ATB 法。

结论 检测 Hi 对 β-内酰胺抗生素药敏实验方面，K-B 法和肉汤稀释法的一致性较好；ATB 法对 Hi 药敏试验产生的误差较大。临床工作中报告 ATB 法药敏结果时，应结合 β-内酰胺酶试验，出现异常药敏表型，或者对 ATB 药敏结果有疑问时，建议联合使用其他药敏方法，对 ATB 法结果进行修正。

PU-3380

应用基质辅助激光解析电离飞行时间质谱鉴定金黄色葡萄球菌

罗慧娴
南方医科大学珠江医院

目的 应用基质辅助激光解析电离飞行时间质谱（Matrix Assisted Laser Desorption Ionization Time of Flight Mass Spectrometry，MALDI-TOF-MS）快速鉴定金黄色葡萄球菌。

方法 将经过 VITEK-2 系统鉴定为葡萄球菌的 234 株临床分离株进行 MALDI-TOF-MS 鉴定，鉴定结果不一致的菌株通过基因序列测定来确证，导出指纹图谱，采用自由距离计算的方法对他们进行聚类分析。

结果 MALDI-TOF-MS 鉴定的 234 株葡萄球菌中有 229 株与 VITEK-2 结果相符，有 5 株结果不一致。结果不一致的菌株采用 16S rDNA 测序分析，测序结果与 MALDI-TOF-MS 相符。将所有的葡萄球菌进行聚类分析，系统树状图示可将所有的葡萄球菌区分到种。

结论 基质辅助激光电离飞行时间质谱方法鉴定葡萄球菌可达到种的水平，能对金黄色葡萄球菌进行快速鉴定，具有准确、灵敏的特点，且实验时间短，是金黄色葡萄球菌分析鉴定的重要工具。

PU-3381

评价自建立飞行质谱仪检测肺炎克雷伯菌对亚胺培南耐药性的方法价值的研究

张子馨[1]、蔡淑梅[1,2]、李卫滨[1,2]、张胜行[1,2]
1. 福建医科大学福总临床医学院检验科
2. 联勤保障部队第九 OO 医院福建省适配体技术重点实验室

目的 利用基质辅助激光解吸电离飞行时间质谱(MALDI-TOF-MS)检测肺炎克雷伯菌（KP）对亚胺培南(IPM)的水解能力，以期检测产碳青霉烯酶肺炎克雷伯菌(CRKP)，建立一种利用 MALDI-TOF-MS 可以快速、准确检测产碳青霉烯酶肺炎克雷伯菌的方法。收集临床肺炎克雷伯菌株 40 株，和仪器 walkaway 96 plus MIC 法检测结果进行对比，评价自建立的方法检测能力。

方法 通过实验探寻本实验室合适的亚胺培南浓度、孵育时间以及温度，再利用检测 KP 对 IPM 的水解能力，建立基质辅助激光解吸电离飞行时间质谱(MALDI-TOF-MS)检测肺炎克雷伯菌（KP）对亚胺培南(IPM)的水解能力方法。在此基础上，收集临床肺炎克雷伯菌株 40 株，进行双盲随机编码，利用自建立的方法检测其肺炎克雷伯菌株水解 IPM 能力。将结果和 MIC 法结果进行比对，从而评价自建立的方法检测的敏感性和特异性。

结果 在实验中探索亚胺培南水解实验，亚胺培南浓度为 1mg/ml,菌悬液比浊度为 1McF,37℃条件下孵育 60min，有部分待测菌的亚胺培南质谱峰明显下降（70%以上）；在 37℃条件下孵育 120min,产碳青霉烯酶菌株的亚胺培南质谱峰均有明显下降（70%以上）。亚胺培南浓度为 1mg/ml，

菌悬液比浊度为 1McF，37℃条件下孵育 120min 下检测结果与 MIC 法结果进行比对结果，自建立的方法检测的敏感性和特异性分别为：82.76%，81.82%。

结论 KP 对 IPM 的水解能力与其产生碳青霉烯酶能力和酶的活力呈正相关,通过检测 KP 对 IPM 的水解能力可以筛查 CRKP。自建立的方法检测的敏感性和特异性较高，可适用于临床筛选 KP 是否水解 IPM, 指导临床合理用药，早期治疗，控制 CRKP 传播扩散。

PU-3382

徐州市 C 群流行性脑脊髓膜炎病病例病原学分析

赵树龙
徐州医科大学附属医院

目的 对江苏省徐州市 2021 年 3 月发现的 1 例青少年 C 群流行性脑膜炎（流脑）病例进行病原学分析。

方法 采集患者脑脊液接种于血培养瓶，对培养出的菌株采用生化鉴定、血清学分型和普通聚合酶链反应（polymerase chain reaction,PCR）技术鉴定进行基因分型；同时进行多位点序列分型（multilocus sequence typing，MLST）以及临床常见 14 种抗生素敏感性试验。

结果 从临床标本中分理出的菌株经生化鉴定、血清学分型与 PCR 技术鉴定、基因分型结果一致，均是 C 群脑膜炎奈瑟菌。该菌株的 MLST 分型为 ST-4821 型。该菌株对临床常见 14 种抗生素均敏感。

结论 徐州市发现 C 群流行性脑膜脊髓膜炎病例，应加强病原菌的检测与研究，方便指导进一步进行的防治与治疗。

PU-3383

老年神经内科患者感染肺炎克雷伯菌整合子耐药基因分析

刘唯
湖南省人民医院马王堆院区/湖南师范大学第一附属医院

目的 探讨在老年神经内科患者中感染产超广谱 β－内酰胺酶(ＥＳＢＬｓ)肺炎克雷伯菌整合子基因的分布及耐药率，为临床合理使用抗菌药物提供依据。

方法 运用法国生物梅里埃公司的 VITEK-2 微生物自动鉴定系统,对我院 2015 年 1 月至 2017 年 12 月老年神经内科患者患者的所有临床标本进行细菌鉴定和药敏试验,对产 ESBLs 肺炎克雷伯菌 214 株用 PCR 分析整合子基因,并通过测序明确基因.

结果 收集的肺炎克雷伯菌 524 株中产 ESBLs 检出率为 40.83%;非产 ESBLS 菌株耐药率明显低于产 ESBLS 肺炎克雷伯菌菌株;整合子阳性检出率 61.19％;检出全为Ⅰ类整合子; 整合子可变区扩增出为 TEM 基因、SH Ⅴ基因和 CTX-M 型 ESBLs 完整基因.

结论 老年神经内科患者感染产ＥＳＢＬｓ肺炎克雷伯菌和整合子基因密切相关，在细菌的耐药上整合子起着重要作用。

PU-3384

老年尿路感染耐碳青霉烯类大肠埃希菌整合子分布情况及耐药性分析

徐艳
湖南省人民医院

目的 研究老年尿路感染（UTI）患者耐碳青霉烯类大肠埃希菌（CREco）的耐药情况，以及整合子的分布与耐药性的关系。
方法 收集湖南省人民医院 2016 年 1 月至 2020 年 1 月老年尿路感染患者尿液分离大肠埃希菌（E.coli），采用 VITEK-2 系统鉴定及检测药敏情况。采用改良 Hodge 试验确证产碳青霉烯酶菌株表型，聚合酶链反应（PCR）方法检测整合子分布情况。
结果 共分离 610 株 E.coli，主要分布在重症病房（22.63%）、泌尿外科（16.23%）、康复科（13.93%）内分泌科（13.13%）、老年科（11.64%）。检出 CREco 共 68 株，占 11.15%。CREco 菌株耐药性均明显高于非 CREco 菌株（P＜0.05）。筛选多重耐药的 284 株 E.coli 中，检出Ⅰ类整合子阳性 163 株，检出率 57.39%，未检出Ⅱ、Ⅲ类整合子，其中 68 株 CREco 全部检测出Ⅰ类整合子。Ⅰ类整合子在 CREco 中的分布明显高于非 CREco 组（P＜0.01）。
结论 老年 UTI 患者 CREco 耐药情况严重，这与整合子在其分布较高有关系，临床需严格合理用药，避免 CREco 的传播与爆发。

PU-3385

血清降钙素原检测对血培养预测价值研究

刘梦婕
湖南省人民医院

目的 探讨血清降钙素原(PCT)对血培养结果的预测价值。
方法 采用回顾性分析研究，以 2016 年 1 月~2016 年 12 月我院收治的疑似菌血症的 304 例患者为研究对象，根据血培养结果分为阳性组和阴性组，比较两组间 PCT 水平的差异。绘制受试者工作特征曲线(ROC) 并计算曲线下面积分析 PCT 诊断菌血症的价值。
结果 PCT 检测血培养阳性的敏感性和特异性分别为 61.3%（73/119）和 73.0（135/185）。血培养阳性组 PCT 明显高于血培养阴性组，差异有统计学意义(P < 0.001)；血培养检出革兰阴性菌组 PCT 明显高于检出革兰阳性菌组，差异有统计学意义(P < 0.001)。PCT 检测血培养阳性的 ROC 曲线下面积为 0．700，最佳诊断临界值为 0.87 ng /ml，灵敏度为 0．538，特异度为 0．843。
结论 PCT 预测血培养阳性有很好的实用价值，临床上检测血清 PCT 可比血培养更快了解患者是否存在菌血症并预测病原菌种类，提示临床初步抗生素的使用方向，值得应用和推广。

PU-3386

高毒力肺炎克雷伯菌中 KPC-2 型碳青霉烯酶对细菌毒力 的影响

祝俊英[1]、沈震[1]、李敏[2]
1. 上海交通大学医学院附属仁济医院
2. 上海交通大学医学院附属仁济医院(东院)

目的 了解高毒力肺炎克雷伯菌获得 blaKPC-2 型碳青霉烯酶 后对细菌毒力的影响。
方法 收集 3 株碳青霉烯类敏感的高毒力肺炎 克雷伯菌野生株(hvKP)作为实验菌株并调查其临床信息,采用 PCR 方法检测其毒力基因、荚膜血清分型及 ST 分型等。采用过表达实验 将 blaKPC-2 克隆至 pHSG396 质粒并转化至 hvKP 野生株构建 blaKPC-2 转化株,采用血清抵抗试验和生物膜实验比较 hvKP 野生株和 blaKPC-2 转化株对血清中杀菌物质的抵抗能力及生物被膜形成能力, 低速度离心沉降实验及糖醛酸测定比较二者黏液性及荚膜多糖(CPS) 含量,荧光定量 PCR 检测 CPS 结构基因及调控基因转录水平。
结果 3 株 hvKP 野生株中 1 株为 ST23,K1 型,所检测的 10 种毒力基因均 为阳性。另外两株为 ST65,K2 型,毒力基因中 rmpA、rmpA2、iroB、iutA、ybtS、entB、mrkD 均为阳性,magA、allS 及 kfu 均为阴性。与 hvKP 野生株相比,blaKPC-2 转化株对血清中杀菌物质的抵抗能力明 显下降,生物被膜形成能力明显下降,细菌黏液性下降,CPS 含量下 降,CPS 结构基因及调控基因转录水平下降。
结论 hvKP 野生株获得 blaKPC-2 型碳青霉烯酶后可导致细菌荚膜多糖产生减少,细菌毒力降低。

PU-3387

肠道微生物在高脂饮食促进胰腺癌发生中可能会发挥关键作用

高惠茹
山东大学第二医院

目的 胰腺癌是目前消化系统最恶性的肿瘤，其死亡率接近发病率，预后极差。然而，胰腺癌的发病机制尚不完全清楚。许多研究表明，高脂饮食、肥胖、超重和糖尿病是胰腺癌的高危因素。作为一个公共健康问题，高脂饮食已被证明与多种消化疾病和肿瘤有关。它可以通过改变机体的炎症和代谢，促进胰腺癌的发生。肠道微生物是近年来的研究热点，肠道微生物的组成受饮食、地域、性别、环境等多种因素的影响。近年来，肠道微生物已被证实通过免疫系统直接或肠外作用促进胰腺癌的发生发展。本文旨在探讨高脂饮食、肠道微生物与胰腺癌发生发展的关系。
方法 作者使用各种搜索词组合从 PubMed 数据库中检索信息，包括高脂饮食、西式饮食、肠道微生物、胰腺癌、胃肠道肿瘤。选择了与评审主题相关的研究性文章和综述性文章。探讨并总结了高脂饮食与肠道微生物变化与胰腺癌发生发展的关系。
结果 高脂肪饮食通过促进上皮细胞的增殖，抑制上皮细胞抵抗癌症、炎症、DNA 损伤和代谢重编程的能力，从而促进胰腺癌的发生。肠道和胰腺微生物的变化，如 Firmicuts/Bacteroides 比值的增加，与胰腺癌的发生发展有关，同时，高脂饮食会促进肠道微生物的失衡。基于上述研究基础，我们提出“高脂饮食可通过改变肠道微生物组成促进胰腺癌的发生发展”的观点，并提出了三者相互作用的可能机制。.
结论 本文综述了近年来高脂饮食、肠道微生物与胰腺癌关系的研究现状，以及胰腺癌的主要治疗方向。同时，我们提出了高脂饮食改变肠道微生物组成促进胰腺癌发生发展的观点，为胰腺癌的发病机制和治疗研究提供了新的思路。

毛霉菌的质谱分析方法探析

涂杉
四川省人民医院城东病区

毛霉菌病致死率高达 50%，对免疫力低下的人群致死率甚至达 80%。当前在实验室诊断中霉菌病通过组织病理学发现组织中具有毛霉目典型结构结构的微生物，并经培养确诊，但培养经常无真菌生长，并且带有一定的主观性 [1],不能满足临床上对致病菌进行快速诊断的需要，而基质辅助激光解吸电离飞行时间(MALDI-TOF)质谱分析可以用来识别培养标本中的致病菌种，以达到精确高效检测毛霉菌的实验诊断方法，具有灵敏度高、准确度高及分辨率高等特点，其原理是不同的微生物样品与过量的基质溶液点在样品板上，溶剂挥发后形成样品与基质的共结晶，利用激光作为能量来源辐射结晶体，基质从激光中吸收能量使样本吸附，基质与样本之间发生电荷转移使得样本分子电离，样本离子在加速电场下获得相同的动能，经高压加速、聚焦后进入飞行时间质谱分析器进行质量分析，检测器检测到不同质荷比（m/z）的离子，并以离子质荷比为横坐标，以离子峰为纵坐标形成特异性的病原菌蛋白质组指纹图谱，进而与毛霉菌图谱库中进行对比，得到鉴定结果并最终确定细菌种类。在毛霉菌的 MALDI-TOF 分析中，从样本制备到获取准确的鉴定结果，每个步骤都决定了医技人员能否及时为临床医生提供准确结果。现就待测样品的制备及 MALDI-TOFMS 技术对毛霉菌分析(包括鉴定,分型,抗真菌敏感性测试方面)的应用及前景作一系统综述,也将对其一些未来发展进行展望。

某三级医院鲍曼不动杆菌的临床分布及耐药性分析

苏小燕
重庆市人民医院

目的 分析重庆市某三级医院鲍曼不动杆菌的临床分布及耐药情况，对医院感染预防和抗生素的选用提供实验室依据。
方法 对该院 2020 年 1 月至 2021 年 3 月所分离的 174 株非重复鲍曼不动杆菌临床病区分布、来源标本类型、感染者年龄及性别、抗生素的耐药性进行回顾性分析；用 VITEK 2 Compact 全自动细菌鉴定及药敏分析系统进行初步细菌鉴定和药敏检测，用 K-B 法及浓度梯度稀释法确认药敏结果。
结果 2020 年 1 月至 2021 年 3 月住院患者中共分离鲍曼不动杆菌 174 株，其中重症医学科共 73 株（41.95%），呼吸科 24 株（13.79%），肝胆胰腺外科 22 例（12.64%）；标本主要来源于呼吸道的痰和肺泡灌洗液，共 127 株（72.99%）；感染人群年龄广泛分布在 18 岁到 79 岁之间，男性（118 例）多于女性（56 例）；药敏结果显示呋喃妥耐药率为 99.43%，其他耐药率均在 60%以下；多粘菌素 b 敏感率为 99.42%，替加环素敏感率为 90.23%，米诺环素为 80.17%，复方新诺明为 65.23%，其余敏感率都低于 60%。
结论 本院鲍曼不动杆菌感染的高发人群未见明显年龄分布倾向，以呼吸道标本为主，危重症患者感染鲍曼不动杆菌的概率更大，说明基础疾病严重及免疫力低下患者更易感该菌，年龄分布没有特殊性；本院检测出的鲍曼不动杆菌大多对呋喃妥因耐药，对多粘菌素 b，替加环素米诺环素的敏感率较高。

PU-3390

多重耐药肺炎克雷伯菌酶型鉴定及治疗新策略

曹伟良、史莉
襄阳市第一人民医院

由于抗生素的大量使用，多重耐药肺炎克雷伯菌（CR—KPN）检出数量不断增加，酶型鉴定技术可以检出 CR-KPN 产生金属 β-内酰胺酶或丝氨酸酶，方便临床合理用药。

试验方法 将细菌用生理盐水稀释成 0.5 麦氏浊度后，用医用棉签均匀涂布在 MH 平板上；取亚胺培南纸片 4 片均匀贴到 MH 平板上，平板中间贴一片头孢他啶-阿维巴坦纸片；将四片纸片分别标记为 A、B、C、D；在 B 纸片上滴加 EDTA 溶液 10μL，在 C 纸片上滴加硼酸溶液 10μL，在 D 纸片上滴加 EDTA 溶液和硼酸溶液各 10μL，放 36℃培养箱孵育 24 小时观察结果。

结果 当 A 纸片抑菌圈直径<=16mm 时，说明细菌具有多重耐药性；当 B 纸片抑菌圈直径比 C 纸片抑菌圈直径大 5mm 以上时，细菌产生金属 β-内酰胺酶；当 B 纸片抑菌圈直径比 C 纸片抑菌圈直径小 5mm 以上时，细菌产生丝氨酸酶；无论产生金属酶还是丝氨酸酶，D 纸片的抑菌圈都有较大抑菌圈，其抑菌圈直径>=B 纸片抑菌圈直径和 C 纸片抑菌圈直径。头孢他啶-阿维巴坦敏感时抑菌圈>=22mm。

结论 酶型鉴定技术可以快速检测出多重耐药性肺炎克雷伯菌的酶型，帮助临床医生选择合理的抗生素。当 CR-KPN 产金属 β-内酰胺酶，而且头孢他啶-阿维巴坦敏感时可以选用此药物。

PU-3391

陕西 1712 例泌尿生殖道标本支原体培养结果分析

杨冰
西安金域医学检验所有限公司

目的 分析陕西某单位就诊患者泌尿生殖道标本支原体培养结果，为临床合理使用抗菌药物提供依据。

方法 使用支原体培养鉴定计数药敏试剂盒对陕西某单位 2020 年 1 月 1 日—2020 年 12 月 31 日就诊的 1712 例泌尿生殖道感染患者标本进行支原体培养及药敏试验。

结果 1712 例泌尿生殖道标本支原体感染者 691 例(40.36%)，其中单纯 Uu 感染 397 例(57.45%)，单纯 Mh 感染 89 例(12.88%)，Uu + Mh 混合感染 205 例(29.67%)。女性感染 683 例，男性感染 8 例，女性泌尿生殖道支原体感染率(98.84%) 高于男性(1.16%)，支原体感染患者在＜ 20 岁、 21 -30 岁、 31 -40 岁、 41 -50 岁、＞ 50 岁五个年龄段的感染率分别为 2.17%、31.26%、36.61%、23.30%、5.93%，以 31 -40 岁这个年龄段的感染为主。

结论 陕西某单位泌尿生殖道支原体感染以单纯 Uu 感染为主，女性感染率高于男性。通过支原体培养及药敏试验，可明确生殖道感染的病原体及指导临床的合理用药。

PU-3392

2014～2019 年某三甲医院血液分离病原菌耐药性变迁分析

李军、邹明祥
中南大学湘雅医院

目的 了解某三甲医院临床血液标本分离主要病原菌的分布及耐药性变迁，以指导临床合理使用抗菌药物。

方法 回顾性分析 2014 年 1 月～2019 年 12 月临床血液标本分离病原菌的药物敏感性，MALDI-TOF MS 质谱仪对其进行鉴定，VITEK 2 Compact 全自动细菌鉴定及药敏分析系统检测其药物敏感性，采用 WHONET5.6 软件进行数据分析。
结果 共分离到 5771 株各类病原菌，其中革兰阳性菌 3209 株，占 55.6%。2014～2019 年居前五的病原菌稍有变化，肺炎克雷伯菌和金黄色葡萄球菌的检出率有上升趋势。非发酵革兰阴性杆菌中鲍曼不动杆菌所占比例最高（4.4%，254/5771），但检出率有下降趋势。大肠埃希菌对亚胺培南和厄他培南的耐药率分别在 0～4.7%和 0～7.3%。近三年肺炎克雷伯菌对亚胺培南的耐药率有下降趋势。鲍曼不动杆菌对碳青霉烯类的耐药率约 80.0%，2018 年亚胺培南和美罗培南的耐药率甚至高达 90.7%。葡萄球菌属中，耐甲氧西林金黄色葡萄球菌（Methicillin-resistant Staphylococcus aureus，MRSA）有下降趋势，未发现对万古霉素和替加环素耐药的葡萄球菌属，金黄色葡萄球菌和凝固酶阴性葡萄球菌对利奈唑胺的耐药率分别为 0 和 0.3～1.3%。
结论 本院血液标本分离病原菌主要以革兰阳性菌为主，肺炎克雷伯菌和金黄色葡萄球菌的检出率有上升趋势。碳青霉烯类耐药肺炎克雷伯菌检出率虽有下降趋势，但是检出率仍较高，MRSA 的检出率有下降趋势。应加强临床血液分离病原菌耐药性监测，以合理使用抗菌药物。

PU-3393

Isolation and Characterization of Nocardia Species from Pulmonary Nocardiosis in a tertiary hospital in China

Jun Li、Mingxiang Zou
Department of Clinical Laboratory, Xiangya Hospital, Central South University

The aim of this study was to determine the clinical features, distribution and antimicrobial susceptibility of Nocardia species isolated from pulmonary nocardiosis cases in tertiary hospital in China. The species were collected from January 1, 2018 to May 31, 2019 and identified using MALDI-TOF MS or PCR. Antimicrobial susceptibility testing was performed using the broth microdilution method. Within the 44 Nocardia species, N. farcinica was the most frequently identified species (n = 36), followed by N. nova (n = 5), N. otitidiscaviarum (n = 1), N. cyriacigeorgica (n = 1), and N. transvalensis (n = 1). The top three predisposing factors of pulmonary nocardiosis were chronic obstructive pulmonary disease (45.45%), hypertension (34.09%), and tuberculosis (31.82%). All 44 Nocardia strains were susceptible to amikacin, trimethoprim / sulfamethoxazole, and linezolid. The resistance rates of Nocardia to amoxicillin-clavulanic acid, ciprofloxacin, clarithromycin, ceftriaxone, tobramycin, and imipenem were 4.5%, 9.1%, 79.5%, 72.7%, 63.6%, and 38.6%, respectively. Two Nocardia strains had decreased sensitivity to trimethoprim / sulfamethoxazole. In conclusion, N. farcinica was the most frequently isolated Nocardia species in our hospital. All isolated clinical Nocardia strains showed susceptible to amikacin, trimethoprim / sulfamethoxazole, and linezolid, suggesting that these drugs can be primary therapeutic choices for treating Nocardia infections.

PU-3394

Emergence of blaOXA-23 gene carried by Tn2006 on chromosome in hypervirulent Acinetobacter baumannii strain

Jun Li[2]、Mingxiang Zou[1]
1. Xiangya Hospital, Central South University
2. Xiangya Hospital, Central South University

Background Acinetobacter baumannii is notorious for its extensive drug resistance but has traditionally been considered an opportunistic pathogen with low virulence.
Objectives Here, to the best of our knowledge, we describe the first detection and characterization of blaOXA-23 gene carried by Tn2006 on chromosome in hypervirulent A. baumannii strain (hvAB).
Methods Characterization of XYAB2018 isolate was performed using MALDI-TOF MS, automated microdilution and MLST. The virulence experiments was carried out using a Galleria mellonella infection model. The genetic characterization of XYAB2018 was performed by Whole-genome sequencing (WGS).
Results XYAB2018 was more virulent in G. mellonella than that of A. baumannii ATCC 19606 with the 5 days survival rate of 10%. The isolate expressed ST457 was resistant to the most of antimicrobial agents detected, except for tigecycline and colistin. The genome of XYAB2018 strain included chromosome gene (3,909,403 bp) with blaOXA-23 gene and two plasmids with no drug resistance gene identified. The blaOXA-23 gene was downstream of ISAba1 and carried by transposon Tn2006. Phylogenetic analysis revealed that the closest related strains was VMKE01 with 91 SNPs difference, which was a hospital environment ST457 A. baumannii strain.
Conclusions The first detection (to the best of our knowledge) of blaOXA-23 gene carried by Tn2006 on chromosome in hvAB. It might derived from hospital environment, so we should strengthen the monitoring of these strains in the future.

PU-3395

Emergence of hypervirulent Klebsiella pneumoniae isolated from urine specimens in community adults in China

Jun Li[1]、Mingxiang ZOU [2]
1. Department of Clinical Laboratory, Xiangya Hospital, Central South University
2. Xiangya Hospital

The strain of Klebsiella pneumoniae known as hypervirulent K. pneumoniae (hvKP) is becoming more common as a source of nosocomial and healthcare-associated infections. Tracking its epidemiology and progression is critical to develop successful prevention and treatment strategies. K. pneumoniae isolates were collected from community adults between October and December 2020, and the antimicrobial susceptibility, virulence-associated genes and biofilm formation for isolates were examined. HvKP was defined by the presence of one or a combination of biomarkers (prmpA, prmpA2, iroB, peg344, and iucA) and the Galleria mellonella infection model. Whole-genome sequencing of hvKP strains was performed. A total of 61 K. pneumoniae isolates were collected from 7530 urine samples. The strains were highly sensitive to the antimicrobial agents tested, and a polymyxin resistant strain was found. Four hvKP strains with lower biofilm forming ability than KP (0.2625 ± 0.0579 vs. 0.6686 ± 0.0661, P = 0.0333) were identified as belonging to K2-ST65, K2-ST86, K57-ST592, and K2-ST5559 (a new ST type). Analysis with BacWGSTdb 2.0 showed that KPNY31 (ST5559) shared

a close genetic relationship with KPNY42 (ST86) and other ST86 isolates, which have been detected in both nosocomial and community-acquired infections. In conclusion, hvKP with relatively weak biofilm formation was detected for the first time in urine specimens from community adults. A novel sequence type (ST5559) hvKP derived from ST86 was found. Therefore, hvKP should be monitored in community adults.

PU-3396

MALDI-TOF MS 在微生物方面的应用

温金
山东大学第二医院

目的 MALDI-TOF MS 技术检测分析应用于病原微生物检测，是因为其所具有的特异性肽类和蛋白质,这些肽类和蛋白质主要取决于病原微生物自身的遗传因素，较少受到体外培养等外界因素的影响，通过采用 MALDI-TOF MS 技术准确、高效、快速、高通量和低成本鉴定微生物。
方法 1.MALDI-TOF MS 直接鉴定血培养阳性病原体；2.通过研究金黄色葡萄球菌的质谱图，发现甲氧西林敏感金黄色葡萄球菌（MRSA）与耐甲氧西林金黄色葡萄球菌(MSSA)的峰图之间有很大差异，通过在数据库中对 MRSA 和 MSSA 的质谱图进行聚类分析，分析质谱图之间的差异，选取有统计学意义的蛋白峰建立分类模型。
结果 1.在血培养中检测病原体方面，革兰阳性菌、真菌的细胞壁较革兰阴性菌厚，细胞壁更难被破坏，MALDI-TOF MS 对革兰阴性菌的准确鉴定概率，远高于革兰阳性菌和真菌，以及革兰阳性菌被污染的概率明显高于革兰阴性菌；2.在筛查 MRSA 方面，聚类分析的准确性较低，同源性菌株的质谱图较为相似，对其的鉴别率较低。
结论 1. MALDI-TOF MS 与传统仪器鉴定相比，优势突出，在血培养阳性标本直接检测方面，具有简便、快速、准确的优势。2.质谱图分析可以筛查区分 MRSA 和 MRRA，可以在临床中使用。综上所述， MALDI-TOF MS 可作为一种简单且快速的方法用于病原体微生物的检测，但在细菌同源性检验、体液等直接检测方面待深入研究，以期早日应用于临床。

PU-3397

Rare Mycoplasma hominis postoperative infection and rapid identification of MALDI-TOF MS

Peng Tang[2]、Pan Feng[1]、Weiwei Huang[1]、Tao Tang [1]、Liqun Zhang[1]、Fei Liu[1]
1. Department of Clinical Laboratory, The Second Clinical Hospital of Army Medical University, Chongqing 400037, China
2. Department of Clinical Laboratory, The Second Clinical Hospital of Army Medical University

Objectives To explore the application of matrix assisted laser desorption ionization time of flight mass spectrometry (MALDI-TOF MS) in rapid and accurate identification of Mycoplasma hominis infection in surgical incision, and analyze the drug sensitivity of M. hominis, so as to provide basis for clinical diagnosis and treatment.
Methods The clinical data, microbiological test Methods and drug sensitivity data of postoperative infection caused by M. hominis in our hospital from January 2019 to December 2020 were reviewed.
Results There were 8 cases of postoperative infection of M. hominis, including 4 cases of spinal surgery, 1 case of brain tumor resection, 1 case of lower abdominal incision herniorrhaphy, 1 case of bladder cancer operation and 1 case of caesarean section. Suspicious bacteria were isolated from the infection site of surgical incision, and identified as M. hominis by 16S rRNA gene sequencing analysis and MALDI-TOF MS self-built database analysis technology. M.

hominis is more sensitive to doxycycline, minocycline, josamycin, spectinomycin and gatifloxacin, but less sensitive to other macrocyclic lipids and quinolones.
Conclusions The MALDI-TOF MS analysis technology can quickly and accurately identify the M. hominis isolated from the incision infection site after operation, and can guide the clinical diagnosis and targeted treatment.

PU-3398

37 例 ESBLs 阳性大肠埃希致尿路感染及其耐药性分析

杨珊珊
新疆医科大学第五附属医院

目的 分析 37 例产超广谱 β-内酰胺酶（ESBLs）大肠埃希菌尿路感染的临床特征、耐药性及治疗转归，为临床合理使用抗菌药物提供参考。
方法 收集 2019 年 1-12 月临床送检患者中段尿标本，采用 VITEK2-Compact 全自动细菌鉴定及药敏分析仪对大肠埃希菌进行分离及鉴定。
结果 经培养、鉴定共获得 126 株病原菌，其中大肠埃希菌为 66 株，占 52.38%；37 例为产 ESBLs 大肠埃希菌，经药敏试验结果表明产 ESBLs 大肠埃希菌对广谱青霉素类抗菌药物哌拉西林、氨苄西林的耐药率高达 90％以上；对第 3 代头孢菌素类抗菌药物头孢他啶的耐药率达 56.76％，头孢曲松、头孢噻肟、头孢哌酮的耐药率均高达 80.0％以上；喹诺酮类抗菌药物的耐药率在 70.0％以上；氨基糖苷类抗菌药物的耐药率高达 60％以上；仅出现 1 株耐亚胺培南的菌株；含 β-内酰胺酶抑制剂的抗菌药物哌拉西林／他唑巴坦的耐药率低于 3.0％；对头孢哌酮／舒巴坦的耐药率低于 22.0％。
结论 产 ESBLs 大肠埃希菌尿路感染临床表现无明显特异性，结合病人临床主要表现：不同程度的发热、尿路刺激征、腰背部酸痛、下肢水肿，恶心呕吐和肾区叩击痛等。其中老年女性患者居多，且多有基础疾病及易感因素；其发生与患者基础疾病和危险因素等有关，对疑有尿路感染且伴有基础疾病及危险因素者应尽早做尿培养，经验选择使用覆盖 ESBLs 菌感染的药物，慎用氟喹诺酮类、氨基糖苷类及头孢菌素类抗菌药物治疗产 ESBLs 细菌尿路感染。

PU-3399

An Outbreak of Carbapenem-Resistant Klebsiella pneumoniae in an Intensive Care Unit of a Major Teaching Hospital in Chongqing, China

Lingyi Zeng[1]、Chengru Yang[1]、Jisheng Zhang[1]、Kewang Hu[1]、Jingbo Zou[2]、Jie Li[1]、Jianmin Wang[1]
1. Yongchuan Hospital of Chongqing Medical University
2. 重庆市永川区疾病预防控制中心

Background Due to the critical condition and poor immunity of patients, the intensive care unit (ICU) has always been the main hospital source of multidrug-resistant bacteria. In recent years, with the large-scale use of antibiotics, the detection rate and mortality of carbapenem-resistant Klebsiella pneumoniae (CRKP) have gradually increased. This study explores the molecular characteristics and prevalence of CRKP isolated from the ICU ward of a tertiary hospital in China.
Methods A total of 51 non-duplicated CRKP samples isolated from the ICU were collected from July 2018–July 2020. The enzyme production of the strains was preliminarily screened by carbapenemase phenotypic test, and drug-resistant and virulence genes were detected by PCR. The transferability of plasmid was verified by conjugation test. The minimal inhibitory

concentration (MIC) was determined by microbroth dilution method and genetic diversity was detected by multilocus sequence typing and pulsed-field gel electrophoresis.
Results blaKPC-2 was the only carbapenemase detected. The major virulence genes were uge (100%), mrkD (94.1%), kpn (94.1%), and fim-H (72.5%), while wcag, ironB, alls and magA genes were not detected. Only four out of 51 CRKP isolates (7.8%) exhibited the hypermucoviscous phenotype during the string test, the rest were negative. Two sequence types (STs) were identified among all isolates, with 50 (98.0%) belonging to ST11, and one (2.0%) being an isolate of ST1373.One sequence type ST1373 strain, hypervirulent K. pneumoniae (hvKP), was detected. CRKP strains were highly resistant to quinolones, cephalosporins, aminoglycosides, and polymyxin, but susceptive to tigecycline and ceftazidime–avibactam. The success rate of conjugation was 12.2%, indicating the horizontal transfer of blaKPC-2. Compared with the original donor, the MIC value of the transconjugants for carbapenems (IMP, MEM) was significantly decreased (4–64 times), similarly, LEV and PB were also decreased. On the contrary, AK, TIG, and CAZ-AVI did not show obvious changes, except for CRKPJ55, which had a change in CAZ-AVI. Homology analysis showed that there was a clonal transmission of ST11 CRKP in the ICU of our hospital.
Conclusion The present study showed the outbreak and dissemination in ICU were caused by ST11 CRKP, which were KPC-2 producers, and simultaneously, also carried some virulence genes. ST11 CRKP persisted in the ward for a long time and spread among different areas. Due to the widespread dispersal of the transferable blaKPC-2 plasmid, the hospital should promptly adopt effective surveillance and strict infection control strategies to prevent the further spread of CRKP. Ceftazidime–avibactam showed high effectiveness against CRKP and could be used for the treatment of ICU infections. Although this study did not conduct long-term and systematic sampling of all potentially contaminated areas in the ICU, there is a need for understanding the dynamic distribution and spread of CRKP, a major threat to clinical treatment that cannot be ignored. Timely and effective infection control measures are essential to contain and mitigate the risk of nosocomial transmission and outbreaks in hospitals. According to the European Society of Clinical Microbiology and Infectious Diseases (ESCMID) guidelines, the implementation of hand hygiene education programs, contact precautions, and use of alert codes to promptly identify patients with CRKP infections should be applied and infected patients should be isolated. In addition, a program of active screening culture, and implementation of an antimicrobial stewardship program, should be implemented to reduce transmission of multidrug-resistant Gram-negative bacteria in hospital patients, especially in ICUs.

PU-3400

呼吸道感染病原体 IgM 抗体检测在呼吸道感染中的诊断价值

张谨
空军总医院

目的 呼吸道感染（RTI）是全球常见感染性疾病之一，有较高的感染率和死亡率，其病原学组成复杂。探讨所在区域呼吸道病原体的分布以及流行特征，进一步了解本地区 RTI 情况以及多方面的流行因素，为呼吸道感染的诊治和预防提供相关资料。
方法 采用间接免疫荧光法（IFA）对 967 例就诊于北京民航总医院的呼吸道感染患者血清中 Q 热立克次体（COX）、肺炎支原体（MP）、嗜肺军团菌（LP）、肺炎衣原体（CP）、副流感病毒（PIV）、呼吸道合胞病毒（RSV）、腺病毒（ADV）、甲型流感病毒（FluA）、乙型流感病毒（FluB）进行检测。采用荧光显微镜观察结果，计算各年龄段和季节的阳性率，并用统计学方法进行比较。
结果 9 种病原体 IgM 总阳性率为 28.23%（273/967），其中单一感染占 25.65%（248/967），MP 阳性率最高，为 21.61%（209/967），其余为 FluB3.21%（31/967），ADV0.31%（3/967），PIV0.21%（2/967），CP0.21%（2/967），RSV0.1%（1/967），未检出 FluA、COX、LP。混合感染阳性率为 2.59%（25/967），以 MP 合并 FluB 感染阳性率最高，为 1.96%（19/967）。

MP 和 FluB 感染阳性率在儿童组最高，分别为 51.40%（147/286）、7.69%（22/286），各年龄段的 MP 阳性率有统计学差异（P<0.05），但 FluB 结果相反。秋冬季多为 MP 感染，其与春夏之间差异有统计学意义（P<0.05）。而 FluB 感染多见于春冬季，但仅春夏之间有显著差异（P<0.05）。

结论 年龄、季节和地域差异可影响病原体分布。IFA 有较高的灵敏度和特异度，少量血清便可检测 9 种呼吸道病原体，解决了儿童痰培养取样困难、细菌培养时间较长以及阳性率较低的问题。而且 IgM 可表示近期感染，因此通过该方法检测 9 种呼吸道病原体，对临床早期诊断、指导用药以及防治 RTI 有重大意义。

PU-3401

省级三甲医院菌血症及 PCT 指标现状调查分析

张莉滟、赵越、叶龙、凌勇、欧阳峰
广东省人民医院

目的 对省级三甲医院菌血症及 PCT 指标现状进行调查分析，为临床工作提供合理指导。

方法 收集某省级三甲医院近几年菌血症确诊病例 401 例为试验组，并随机选取相同时期血培养阴性病例 100 例作为对照组，并观察血清 PCT 在两组中的表达情况。

结果 试验组中，革兰阴性菌（264 例，65.84％）、革兰阳性菌（99 例，24.68％）、真菌（35 例，8.73％）菌血症患者血清 PCT 浓度（ng/ml）的中位数与百分位数（P_{25}，P_{75}）分别为 1.20（0.23，8.58）、0.97（0.20，4.64）和 2.66（0.48，15.19），三类病原体菌血症患者组间血清 PCT 浓度无统计学差异（P＞0.05）。试验组与对照组相比，血清 PCT 浓度（ng/ml）的中位数与百分位数（P_{25}，P_{75}）分别为 1.21（0.23，7.66）和 0.24（0.06，0.74），其浓度差异具有统计学意义（P＜0.05）；试验组内科（289 例，72.07%）、ICU（81 例，20.20%）、外科（31 例，7.73%）血清 PCT 浓度（ng/ml）的中位数与百分位数（P_{25}，P_{75}）分别为 0.77（0.18，4.73)、4.32（1.00，19.96)和 3.60（0.56，18.99)，即不同科室间菌血症患者血清 PCT 浓度差异具有统计学意义（P＜0.05）。菌血症患者病原体大多为临床常见菌株，如大肠埃希菌、肺炎克雷伯菌、金黄色葡萄球菌、铜绿假单胞菌、肺炎链球菌、白念珠菌、近平滑念珠菌、热带念珠菌等，羊布鲁菌、戈登链球菌、产单核细胞李斯特菌等少见菌所致菌血症也时有发生。

结论 临床应结合 PCT 指标关注菌血症常见病原体的种类及科室分布，以做到精准施策。

PU-3402

血小板计数评估肺炎克雷伯菌血流感染患者预后价值研究

曹慧军、冯舒婷、杨蕾
贵州医科大学附属医院

目的 研究血小板计数对肺炎克雷伯菌血流感染患者预后的预测价值。

方法 收集 2019 年 1 月—2020 年 12 月期间入住贵州医科大学附属医院确诊为肺炎克雷伯菌血流感染患者的临床基本资料及血小板计数（PLT）的检测数据。根据患者的预后情况分为预后好及预后不良两组，按患者血小板减少差异分为血小板无减少组、血小板轻度减少组、血小板中度减少组和血小板重度减少组。采用 χ^2检验分析血小板减少不同程度组患者的预后。

结果 共收集患者 180 例，血小板无减少组共 114 例，血小板轻度减少组共 36 例，血小板中度减少组共 19 例，血小板重度减少组共 11 例。四组患者预后不良患者的百分率分别为 31.6%、61.10%、73.70%、90.9%。采用 χ^2检验分析血小板减少不同程度组患者的预后，与血小板无减少组相比较，血小板轻度减少组、血小板中度减少组、血小板重度减少组预后较差，且血小板越低，患者的预后不良比例越高，差异均有统计学意义（P<0.05）。

结论 PLT 减少是肺炎克雷伯菌血流感染患者预后差的危险因素，PLT 计数可作为评估患者预后情况的重要指标，用于预测患者病情的转归。

PU-3403

血培养阳性报警时间对血流感染患者的预后价值以及患者转归情况分析

曹啟新
内蒙古自治区内蒙古人民医院

目的 探讨血培养阳性报警时间（TTP）对血流感染患者预后的预测价值
方法 收集 2017-2020 年内蒙古自治区人民医院 435 例血流感染患者的临床资料和 TTP 值，采用 Logistic 回归分析影响患者预后的各项危险因素，ROC 曲线分析 TTP 值对患者预后的预测价值。
结果 分析 435 例血流感染患者 TTP 值，将其分为低 TTP 组（TTP≦0.68d）和高 TTP 组（TTP>0.68d）,二者之间比较发现低 TTP 组患者比高 TTP 组更易发生泌尿感染、严重脓毒血症及休克和住院期间死亡，且二者差异有统计学意义(P<0.05)；ROC 曲线分析 TTP 值预测住院期间病死率和脓毒血症及休克的最佳切点分别为 TTP≦0.67d 和 TTP≦0.78d，曲线面积分别为 0.56 和 0.57；Logistic 回归分析 TTP≦0.68d、脓毒血症及休克和入住 ICU 是患者预后的三个独立危险因素。各科血流感染患者转归情况：按药敏结果用药,发现经验用药与药敏结果的一致率为 55.8%。在 ICU、普外科、肾内科和干部保健所的患者死亡率明显低于经验用药患者的死亡率 (P<0.05)。
结论 血流感染患者病情复杂，实验室根据 TTP 值大小结合临床相关资料可以早期为临床预后提示预警信息，可以通过患者的转归情况为患者选择最合理有效的用药方案，提高患者的治愈率。

PU-3404

2017-2020 年内蒙古自治区人民医院血培养阳性报警时间（TTP）的临床分析

赵亚楠、曹啟新
内蒙古自治区内蒙古人民医院

目的 通过采集内蒙古自治区人民医院的血培养阳性报警时间（TTP），研究 TTP 值在初步鉴别微生物种类和区分病原菌与污染菌的意义，为临床早期提示预警以及合理用药提供依据。
方法 回顾性分析 2017-2020 年本院所有血流感染阳性菌株，剔除同一患者相同部位的重复菌株，共 534 株。结合临床资料进行综合分析。采用 SPSS 22.0 软件进行数据分析，TTP 值比较采用 t 检验或秩和检验。
结果 534 株血培养分离菌中，TTP≦1d 检出细菌 323 株（60.5%），TTP≦2d 检出 454 株（85.0%），TTP≦3d 检出 513 株（96.0%），不同微生物血培养阳性报警中位时间不同，从最快到最慢依次为肠杆菌科（0.57d）<链球菌属（0.68d）<非发酵菌属（0.71d）<肠球菌属（0.72d）<葡萄球菌属（1.36d）<酵母样真菌（1.98d）<马耳他布鲁杆菌（2.75d）。肠杆菌科细菌 TTP 除与非发酵菌属和链球菌属比较差异无统计学意义（P>0.05）外，与其他细菌比较差异均有统计学意义（P<0.05）。534 株血培养分离菌检出 99 株污染菌，污染率占 18.5%，污染菌在 1d 内检出率为 15.2%，1-2d 检出率为 46.5%，2-3d 检出率为 26.2%，>3d 检出率为 12.1%；报阳时间≧1d 的可疑污染菌占 84.8%。污染菌以凝固酶阴性葡萄球菌（CNS）及革兰阳性杆菌为主，其中 CNS

占 59.6%，革兰阳性杆菌占 9.1%，将病原菌与污染菌的报阳时间进行比较，发现二者均有统计学差异（P<0.05）。
结论 血流感染患者病原菌及其分布复杂，实验室可以根据 TTP 值的大小初步预测微生物的菌株类别，区分病原菌与污染菌，指导临床合理用药。

PU-3405

Outbreak of KPC-2–Producing Klebsiella pneumoniae ST76 Isolates in an Intensive Care Unit and Neurosurgery Unit

Shanshan Su
Yongchuan Hospital of Chongqing Medical University

Background The aim of this study was to investigate the characteristics of carbapenem-resistant Klebsiella pneumoniae (CRKP) ST76 isolates collected during an outbreak in a hospital's intensive care unit and neurosurgery unit. Whole-genome sequencing of ST76 CRKP was carried out to provide evidence to guide clinical anti-infective treatment and control of drug-resistant bacterial transmission.
Methods Seventeen separate clinical isolates of CRKP were collected from patients from March 2016 to February 2017. Bacterial isolates were identified, and antimicrobial susceptibility testing was conducted using the VITEK-2 compact system. Isolates containing antibiotic resistance genes were characterized by polymerase chain reaction and DNA sequencing. Clonal relatedness was assessed by multilocus sequence typing and pulsed-field gel electrophoresis. Conjugation experiments were performed to determine the transferability of plasmids with antibiotic resistance. The genomic features and mobile genetic elements of ST76 CRKP were detected by whole genome sequencing.
Results The 17 CRKP isolates were identified in a diverse population of ICU and neurosurgery unit patients from March 2016 to February 2017. Among these, 70.6% of patients had surgery, 76.5% had tracheotomy and mechanical ventilation, and all patients received antibiotic treatment, catheterization, and arteriovenous catheterization. Hospital admissions were typically long, and the average admission time was 25.9 days. The mortality rate was 35.3%. All isolates were resistant to ampicillin–sulbactam, piperacillin/tazobactam, cefazolin, ceftriaxone, aztreonam, and imipenem, and all were susceptible to amikacin. MLST analysis of 7 housekeeping genes of K. pneumoniae showed that 17 CRKP isolates belonged to the ST76 strain. According to a cutoff of 85% genetic similarity, all 17 CRKP isolates, of which 8 were obtained from the ICU and 9 were from neurosurgery unit, belonged to ST76 and shared the same PFGE pattern, suggesting that they were clonally related.ST76 KPC-2–producing CRKP prevailed in our hospital, causing an outbreak. The strains also carried blaSHV-1,blaCTX-M-15,blaTEM-1, qnrB, and acc(6')Ib-cr resistance genes. Plasmids from 17.7% of the isolated strains bearing these resistance genes could be transferred into the recipient Escherichia coli J53 through conjugation. Sequencing results showed that the KP4 genome mainly consisted of a circular chromosome and three antibiotic resistance plasmids. The plasmid carrying the blaKPC-2 gene was located on a 437kb IncFIB(pQil) plasmid with Tn1721-blaKPC-2-DT3 gene structure. Genes conferring resistance against aminoglycosides, quinolones, fluoroquinolones, beta-lactamase, phenicols, sulfonamides, and trimethoprims and the presence of virulence-associated genes related to iron acquisition or adhesins were determined.
Conclusion From March 2016 to February 2017, a total of 17 CRKP isolates were detected from the ICU and neurosurgery unit of our hospital, and all of them were ST76. PFGE showed homology between all isolates, indicating an outbreak and spread between the two departments. These strains were different from ST11, which is the main epidemic strain in China; cases of ST76 have been rarely reported. This is the first report of the whole genome sequence of the Klebsiella pneumoniae ST76 isolate that produced KPC-2, and the first report of Tn1721 in ST76 Klebsiella pneumoniae,suggesting that the transfer of mobile elements carrying the blaKPC gene

could cause more strains of K. pneumoniae to become resistant to carbapenem. The blaKPC gene copy number, the insertion or deletion of an upstream sequence to alter the structure of the promoter region, and loss of outer membrane porins are all factors that could affect the expression of the blaKPC gene, resulting in a change in the MIC value of the horizontally transmitted strain. This work provides a basis for understanding antibiotic resistance and resistant plasmid transmission. Relevant departments should implement infection control and prevention measures to reduce the incidence of nosocomial infections.

PU-3406

抗菌药物使用与多重耐药菌检出率的相关性分析

李绍红[1]、王晓茜[2]、武广晔[1]、温学红[1]
1. 天津中医药大学第二附属医院
2. 天津医科大学

目的 分析抗菌药物使用与多重耐药菌检出率的关系，关注病原菌的多重耐药现象，提示临床合理用药。
方法 1.使用世界卫生组织细菌耐药性监测网 WHONET 软件统计 2018 年-2020 年全院的病原菌检出总株数及三种耐碳青霉烯类药物多重耐药菌株数，包括：耐碳青霉烯类药物鲍曼不动杆菌（CR-Ab）、耐碳青霉烯类药物铜绿假单胞菌（CR-PS）、耐碳青霉烯类药物肺炎克雷伯菌（CR-KP），分析各季度上述多重耐药菌的检出率。2.回顾性分析 2018-2020 年本院抗菌药物的使用率和使用强度。3.分析本院多重耐药菌检出率、耐碳青霉烯类药物多重耐药菌占比、CR-Ab、CR-PS 和 CR-KP 的检出率以及抗菌药物使用率、抗菌药物使用强度与多重耐药菌（包括 CR-Ab、CR-PS、CR-KP）检出率的相关性。
结果 本院 2018-2020 年多重耐药菌检出率分别为 18.72%、19.03%和 24.05%；耐碳青霉烯类药物多重耐药菌占比分别为 16.23%、32.00%和 42.56%；CR-Ab 的检出率分别为 23.53%、38.12%和 26.19%；CR-PS 的检出率分别为 13.74%、17.85%和 17.85%；CR-KP 的检出率分别为 1.34%、6.28%和 22.52%；CR-Ab 科室分布前五名中 ICU 占比由 2018 年的 62.50%降为 2020 年的 15.91%；CR-Ab、CR-PS 和 CR-KP 抗菌药物使用强度与本院患者 CR-Ab、CR-PS 和 CR-KP 检出率的 r 值分别为 0.682、0.766 和 0.787，三者均 $P<0.05$，均有统计学意义。抗菌药物使用强度与 CR-Ab、CR-PS 和 CR-KP 检出率均呈正相关。
结论 本院 2018-2020 年期间多重耐药菌检出率呈上升趋势且耐碳青霉烯类药物多重耐药菌占比增加；本院 2018-2020 年期间 CR-Ab 有向非重症科室扩散的现象；2018-2020 年各季度的抗菌药物使用强度与 CR-Ab、CR-PS 和 CR-KP 的检出率有相关性且呈显著正相关，因此要多注意抗菌药物的合理使用，对于减少 MDRO 的产生有积极的意义。

PU-3407

某院 132 例替加环素用药合理性分析

李丽华
西安国际医学中心医院

目的 分析替加环素使用情况，评估替加环素用药合理性，为临床合理使用替加环素提供参考。
方法 本研究采取回顾性分析，收集医院 2020 年 5 月~2021 年 1 月使用过替加环素的出院患者病历 132 份，对病原学送检情况、替加环素使用情况、联合用药和不良反应监测情况进行分析。
结果 132 例出院患者中病原学送检 131 例（99.24%），92 例（69.70%）按照替加环素说明书要求用药。革兰阴性多重耐药菌感染均与其他抗菌药物联合使用，不良反应监测对肝功能、凝血功能、钙浓度均有监测，但对淀粉酶监测仅有 23 例（17.42%）。

结论 我院替加环素临床应用基本合理，但替加环素用法、用量和不良反应监测方面仍有待改善，以减少由于经验性用药引起多重耐药的发生。

PU-3408

2010-2020 年某三甲医院血培养分离菌的分布及耐药性分析

赵亚楠、曹啓新、赵建平
内蒙古自治区内蒙古人民医院

目的 研究内蒙古自治区人民医院 10 年间血培养分离菌的分布及耐药性
方法 回顾性分析我院 2010-2020 年所收集的 3754 株血培养分离菌，采用 WHONET 5.6 软件进行数据统计，率的比较采用 SPSS 22.0 进行统计比较。
结果 3754 株血培养分离菌前十位依次为凝固酶阴性葡萄球菌（CNS）（32.7%）、大肠埃希菌（29.3%）、肺炎克雷伯菌（10.1%）、金黄色葡萄球菌（6.2%）、屎肠球菌（4.4%）、铜绿假单胞菌（2.5%）、鲍曼不动杆菌（2.5%）、阴沟肠杆菌（2.4%）、粪肠球菌（2.0%）、奇异变形杆菌（0.8%）；对各类菌的检出率进行前五年与近五年的比较，发现 CNS、大肠埃希菌、肺炎克雷伯菌、鲍曼不动杆菌、阴沟肠杆菌及粪肠球菌近五年检出率明显升高，差异有统计学意义（P<0.05）；血培养分离菌科室主要分布在 ICU；药敏结果显示，MRSA 和 MRCNS 的检出率为 33.8%和 56.7%，未发现对万古霉素、利奈唑胺耐药的葡萄球菌和肠球菌，链球菌属对红霉素、复方新诺明的耐药率均较高，对其他抗菌药物的耐药率均较低；肠杆菌科以大肠埃希菌和肺炎克雷伯菌为主，耐碳青霉烯类的肺炎克雷伯菌（CRKP）检出率为 24.2% ，耐碳青霉烯类的大肠埃希菌（CRCE）检出率为 5.6%，CRKP 对多种抗菌药耐药率较高；铜绿假单胞菌对哌拉西林、氨曲南、亚胺培南、美罗培南、阿米卡星、庆大霉素、妥布霉素、环丙沙星以及左旋氧氟沙星耐药率低（<15%），鲍曼不动杆菌表现为多重耐药，但对阿米卡星耐药率低（20%）。
结论 血培养分离菌构成复杂，耐药率高，应加强细菌耐药性监测，指导临床合理用药

PU-3409

大肠埃希菌的感染分布与耐药性分析

侯向萍、王莉、岳帆、韩凯云、周志芳
新疆生产建设兵团第一师阿拉尔医院

目的 探讨 2016—2020 年阿拉尔医院大肠埃希菌的临床分布和耐药率变迁情况,为临床合理用药提供参考。
方法收集 2016—2020 年本院不同标本分离的大肠埃希菌 980 株,使用全自动细菌鉴定和药敏分析仪及纸片扩散法进行体外药敏试验。根据细菌鉴定和药敏试验结果,分析各年度大肠埃希菌科室分布、不同标本来源的细菌分布和细菌对常见抗菌药物的耐药。
结果 共检出大肠埃希菌非重复菌株 980 株, 2016 年-2020 年病区来源分布,其中来源呼吸内科有 103 株（10.51%）,门诊有 77 株（7.86%）,普外科有 104 株（10.61%）,泌尿外科有 260 株（26.53%）,肾病内科有 135 株（13.78%），内分泌内科有 86 株（8.78%）其他科室 215 株（21.93%）。980 菌株的标本来源分布,其中来源为呼吸道有 145 株（14.80%）,尿液有 440 株（44.90%）,血液有 300 株（30.61%）,分泌物有 95 株（9.70%）。标本来源和科室分布以尿液和泌尿外科为主,分别占 44.90%和 26.53%。大肠埃希菌的产超广谱 β-内酰胺酶（ESBL）整体检出率为 49.3%,对头孢菌素类和喹诺酮类的耐药性非常严峻,其中哌拉西林的耐药率为 78.6%，头孢呋辛的耐药率为 65.2%,环丙沙星的耐药率为 53.8%,左氧氟沙星的耐药率为 41.0%。其中亚胺培南的耐药率为 2.0%，美罗培南的敏感率为 5.5%,哌拉西林/他唑巴坦为 4.2%,阿米卡星敏感率为 6.8%.

结论 本院大肠埃希菌检出率高的是尿液标本，2016 年-2021 年对喹诺酮类抗菌药物和头孢菌素的耐药率总体仍然处于较高水平,而碳青霉烯类的美罗培南和亚胺培南的耐药率非常低,哌拉西林/他唑巴坦和阿米卡星也具有非常高的敏感性,与全国细菌耐药监测报告基本一致。近几年医院也制定各项措施降低细菌的耐药率，在《2021 年国家医疗质量安全改进目标说明》中提出提高抗菌药物治疗前病原学送检率，有效提高抗菌药物使用的科学性和规范性，对遏制细菌耐药、提升治疗效果和保障人民群众健康权益具有重要意义。通过国家政策及本院的相关制度，期待大肠埃希菌对头孢类及喹诺酮类的较高耐药现象能够得到缓解。

PU-3410

2018-2020 年流感抗原检测结果分析及人群分布特征

邓杰伦
四川大学华西医院

目的 调查我院近三年流感病毒抗原检测结果及分布特征并分析新冠病毒防控措施对流感病毒流行的影响。
方法 回顾性分析 2018-2020 年于我院就诊并检测流感病毒抗原的 23888 例患者，统计甲型、乙型流感病毒抗原检测阳性率及阳性患者的人群特征。
结果 23888 例患者中，流感抗原检出率为 11.97%（2860/23888），其中甲流抗原阳性率为 8.25%（1971/23888），乙流抗原阳性率为 3.80%（913/23888）。2018 年-2020 年甲流抗原阳性率分别为 8.99%（396/4403）、10.59%（1448/13667）和 1.50%（87/5818）；乙流抗原阳性率分别为 2.91%（128/4403）、5.22%（713/13667）、1.24%（72/5818）。2020 年甲流、乙流抗原阳性率明显低于 2018 年和 2019 年。甲流，乙流均以冬，春季节流行为主，甲流流行率更高。除 2019 年 4 月份乙流抗原阳性率高峰外，甲流、乙流抗原检测均在 1 月份阳性率达到峰值；甲流，乙流抗原阳性检出率女性均稍高于男性，差异无统计学意义（P=0.317）； 中年人群（25-64 岁）阳性检出率最高，儿童（<=14 岁）阳性检出率最低。
结论 我院 2018-2020 年流感流行以甲型流感为主，流行季节为冬春季，流行后期乙流感染人群增多，人群普遍易感。2020 年 1 月末开始实施新冠疫情防控之后甲流和乙流阳性检出率明显降低，说明加强个人防护和减少人群聚集等防控措施，大大减少了非新冠肺炎呼吸道疾病(甲流，乙流)的感染率

PU-3411

基质辅助激光解吸电离飞行时间质谱检测大肠埃希菌

张敏、杨丽英、刘明珠、李雨艳
吉林金域医学检验所有限公司

目的 通过对不同类型送检标本和年龄进行研究，了解大肠埃希菌的患病人群和比率，为临床提供参考依据。
方法 选取 2021 年 1 月至 2021 年 5 月送检吉林金域医学检验所有限公司的细菌培养+药敏检测项目的分泌物、咽拭子、浓汁等体液样本 1244 例，对单个纯菌落进行基质辅助激光解吸电离飞行时间质谱检测。
结果 1、质谱图谱，特征峰的相对丰度和质荷比符合对比标准谱库找到特征峰组高峰值特征峰集中在 4000 m/z ～9000 m/z 区；2、1244 例样本中标本类型数量为分泌物 125 例，浓汁 156 例，咽拭子 963 例，其中 125 例分泌物样本中 14 例检出大肠埃希菌，阳性率为 11.2%，其中 2 例同时检出无乳链球菌和奇异变形杆菌；156 例浓汁样本中 17 例检出大肠埃希菌，阳性率为 10.9%，其中 1 例同时检出凯斯特丛毛单胞菌；963 例咽拭子样本中 8 例检出大肠埃希菌，阳性率为 0.83%。3、

不同标本类型送检年龄分析：14 例分泌物样本中大肠埃希菌阳性患者年龄均为 25 岁以上，且 60 岁以上患者仅为 14%，17 例浓汁样本中大肠埃希菌阳性患者年龄均为 35 岁以上，且 60 岁以上患者仅为 17%，8 例咽拭子样本中大肠埃希菌阳性患者年龄均为 1 岁以下。4、大肠埃希菌阳性结果，经 VITEK 2 COMPACT 全自动鉴定及药敏分析系统鉴定符合。
结论 应用基质辅助激光解吸电离飞行时间质谱检测，结果准确率高、操作简便、重现性好、节省培养时间，可为临床快速提供结果，争取治疗时间。

PU-3412

脑脊液培养病原菌分布及耐药性分析

张楠
南京大学医学院附属鼓楼医院

目的 探讨临床送检脑脊液培养病原菌分布及耐药情况,为临床合理使用抗生素提供依据.
方法 采用 whonet 软件对临床送检的脑脊液培养阳性病原菌分布及耐药性资料进行回顾性分析.
结果 共分离出病原菌 110 株,其中革兰阳性(G+)球菌 40 株(36.4％),革兰阴性(G-)杆菌 53 株(48.2％),真菌 15 株(13.6％),G-球菌 2 株(1.8％).主要病原菌分布为:鲍曼不动杆菌 21 株(19.1％)、表皮葡萄球菌 11 株(10％)、金黄色葡萄球菌 8 株(7.3％)和铜绿假单胞菌 7 株(6.4％).药敏结果显示,G+球菌对万古霉素、利奈唑胺和替考拉宁敏感率最高;G-杆菌中,鲍曼不动杆菌耐药较严重,其药物敏感性均＜30％,其中阿米卡星敏感率为 23.5％,铜绿假单胞菌和肺炎克雷伯菌的药物敏感性均较好.
结论 临床送检脑脊液培养样本中以 G-杆菌的分离率较高,耐药情况不明显,可为中枢神经系统感染的用药提供建议和参考.

PU-3413

支原体感染与阴道微生态环境相关性回顾性研究

王青
西安医学院第一附属医院

目的 探讨和分析支原体感染患者阴道微生态的相关状况，为临床治疗提供有效参考。
方法 选取 2018 年 4 月至 2020 年 12 月这段时间内，我院妇科支原体阳性的 182 例患者同时统计该患者阴道微生态情况，分析支原体与阴道微生态环境改变的相关性。
结果 182 例支原体阳性的患者中单独解脲脲原体（Uu）132 例，占比 72.53%，单独人型支原体（Mh）2 例，占比 1.11%，混合感染 Uu＋Mh48 例，占比 26.37%，而单独解脲脲原体（Uu）的患者更易出现阴道微生态功能下降，人型支原体（Mh）+解脲脲原体感染（Uu）的患者更易出现阴道微生态菌群失调，患细菌性阴道病（P<0.05）,差异具有统计学意义。
结论 支原体感染的患者更易出现阴道微生态环境的改变，对于女性患者患者来说，支原体感染是重要的病原体，在临床诊疗的过程中应当予以高度重视，因此可将支原体衣原体感染与阴道微生态的检查作为患者的常规检验科目，对于降低阴道炎复发具有较大的应用价值，促进广大女性朋友的健康发展。

PU-3414

肺炎克雷伯菌阳性检出率情况及耐药分析

德非凡、杨丽英
吉林金域医学检验所有限公司

目的 肺炎克雷伯菌作为院感中常见菌类之一，可引起伤口创面、呼吸道、泌尿道感染及败血症、甚至脑膜炎等。本文分析送检样本中肺炎克雷伯菌的阳性率和药敏表型，并分析其临床意义，为临床合理化防治提供参考依据。
方法 回顾 2020 年 1 月至 2020 年 12 月送检我公司微生物室所有样本，进行数据统计分析。统计出肺炎克雷伯菌在所有样本类型中的检出率及耐药率。
结果 在 2987 例样本中，有 425 例分离出肺炎克雷伯菌，总阳性率为 14.2%。其中呼吸道样本中分离出 269 例，阳性率为 23.8%；尿液样本中分离出 48 例，阳性率为 8.9%；血液样本中分离出 10 例，阳性率为 7.6%；脓样本中分离出 23 例，阳性率为 8.9%；分泌物样本中分离出 14 例，阳性率为 7.8%。对氨苄西林、哌拉西林耐药率 70%；一、二代头孢耐药率 40.9%；三四代头孢耐药率 38.4%；碳青霉烯类基本敏感。
结论 肺炎克雷伯菌多在患者呼吸道及体表脓汁、分泌物样本中被分离出来。肺炎克雷伯菌作为人体正常菌群，为条件致病菌，当人体免疫力低下时，便会侵入机体造成疾病。肺炎克雷伯菌在院感菌类中也占相当大的一部分比例，上述数据中可以看到呼吸道样本中分离出肺炎克雷伯菌的例数最多，呼吸道也是肺炎克雷伯菌感染的主要途径。预防院感菌类需要从病原菌的内源感染途径和外源感染途径入手，需要医护人员和患者的共同配合，合理使用抗生素，避免耐药菌的产生。

PU-3415

肺炎克雷伯菌阳性检出率及耐药分析

杨丽英
吉林金域检验医学检验所有限公司

目的 肺炎克雷伯菌作为院感中常见菌类之一，可引起伤口创面、呼吸道、泌尿道感染及败血症、甚至脑膜炎等。本文分析送检样本中肺炎克雷伯菌的阳性率和药敏表型，并分析其临床意义，为临床合理化防治提供参考依据。
方法 回顾 2020 年 1 月至 2020 年 12 月送检我公司微生物室所有样本，进行数据统计分析。统计出肺炎克雷伯菌在所有样本类型中的检出率及耐药率。

结论 肺炎克雷伯菌多在患者呼吸道及体表脓汁、分泌物样本中被分离出来。肺炎克雷伯菌作为人体正常菌群，为条件致病菌，当人体免疫力低下时，便会侵入机体造成疾病。肺炎克雷伯菌在院感菌类中也占相当大的一部分比例，上述数据中可以看到呼吸道样本中分离出肺炎克雷伯菌的例数最多，呼吸道也是肺炎克雷伯菌感染的主要途径。预防院感菌类需要从病原菌的内源感染途径和外源感染途径入手，需要医护人员和患者的共同配合，合理使用抗生素，避免耐药菌的产生。

PU-3416

过敏性鼻炎患者鼻腔微生物失调

苗平、李敏
上海交通大学医学院附属仁济医院

目的 过敏性鼻炎(allergic rhinitis，AR)是指特应性个体接触变应原后由 IgE 介导的释放炎性介质、有免疫活性细胞以及细胞因子、炎性介质等参与的鼻部变态反应性疾病。AR 发病机制复杂，影响因素众多，微生物和过敏原均能刺激鼻粘膜，导致 AR 的发生。本研究旨在探讨过敏性鼻炎患者鼻腔微生物群的改变，进而为 AR 的诊断和治疗提供新思路。
方法 收集健康人及 AR 患者鼻腔拭子各 100 例，提取细菌基因组 DNA，通过对 16S 核糖体 RNAV3-V4 区测序的方法，获得基因信息，之后运用生物信息学、医学统计学分析了 AR 患者鼻腔微生物群落的系统发育组成，并与健康人进行比较。
结果 两类患者在门水平的相对丰度上存在显著差异。在所有微生物中，厚壁菌门占的比重最大（两组均超过 50%）。与健康对照组相比，在 AR 患者组，厚壁菌门的比例明显升高，拟杆菌门、放线菌门、变形菌门、梭杆菌门、软皮菌门的比例均一定程度的下降，并且差异都具有显著统计学意义。有意思的是，在 AR 组厚壁菌门与拟杆菌门存在显著的负相关。
结论 过敏性鼻炎患者与健康人鼻腔微生物的组成存在明显的差异，可进一步深入研究 AR 患者鼻腔微生物的改变与 AR 发病机制的关联性，进而为 AR 患者的临床诊断和治疗提供新的思路。

PU-3417

同一种细菌菌落为何存在不同形态

陈璐
上海市第一人民医院嘉定分院

目的 不同细菌于琼脂平板上的菌落生长形态不同，因此我们可以通过菌落形态大致判断不同细菌的种属。但是，对于培养的结果，不仅仅是不同细菌菌落形态的差异，对于同一种细菌的也存在菌落形态的差异，那么是什么原因使这种现象出现，就很值得我们来进行探讨一番。比如：培养的环境（温度、湿度、明暗程度、二氧化碳浓度），接种平板的质量差异及培养时间等。
方法 针对不同的影响因素，保证只有求证的影响因素作为唯一变量。
培养环境
1、选取两块质量完全一样的血琼脂平板，接种已知菌种的细菌（如金黄色葡萄球菌：用标准且光滑接种环挑取一个完整单个菌落的一半，两块平板各接种一半，四区划线法进行接种，保证操作过程流畅且一致。）
2、按第一步准备的两块平板为一套实验标本，一共准备四套，分别置于不同温度、湿度、明暗程度、二氧化碳浓度的环境下进行培养 48 小时，保证唯一变量。（如温度不同时，湿度、明暗程度和二氧化碳浓度保持一致）
接种琼脂平板的质量
1、随机选取 2~4 块血琼脂平板，接种已知菌种的细菌（如金黄色葡萄球菌：用标准且光滑接种环挑取一个完整单个菌落的一半，两块平板各接种一半，四区划线法进行接种，保证操作过程流畅且一致。）
2、将接种好的平板置于相同的培养环境（相同温度、湿度、明暗程度和二氧化碳浓度）进行培养 48 小时。
培养时间
1、选取两块质量完全一样的血琼脂平板，接种已知菌种的细菌（如金黄色葡萄球菌：用标准且光滑接种环挑取一个完整单个菌落的一半，两块平板各接种一半，四区划线法进行接种，保证操作过程流畅且一致。）

2、将接种好的平板置于相同的培养环境（相同温度、湿度、明暗程度和二氧化碳浓度）进行分别培养，于 24 小时、36 小时、48 小时和 72 小时进行菌落形态观察并记录。
结果 1、对于培养环境，不同的温度、湿度、和二氧化碳浓度对于同一菌种的菌落形态会有少许的差别，大致形态特征是保持一致的。
2、接种琼脂平板平板质量的差异对于菌落的形态存在偶然的差异性，但整体来说，菌落大致形态特征是具有一致性的。
3、培养时间的对于菌落形态有较大影响，24 小时的菌落普遍较小和稚嫩，典型特征（如溶血环）没有完全显现；36 小时的菌落处于过渡期，典型特征逐渐显现；48 小时菌落处于形态特征最具明显，最容易分辨；72 小时的生长的菌落已经逐渐老化，特征形态渐渐失去不易辨别。
结论 培养的环境（温度、湿度、明暗程度、二氧化碳浓度），接种平板的质量差异对于同一种细菌菌落形态存在一定程度的影响，但是大致形态和特征可以辨别，培养时间长短对于菌落形态影响较大，对于菌落形态观察的最适宜。

PU-3418

上海瑞金医院 2019-2021 年临床艰难梭菌感染的流行病学研究

陈炜[1,2]、彭奕冰[1]
1. 上海交通大学医学院附属瑞金医院
2. 上海交通大学医学院检验系

艰难梭菌（*Clostridium difficile*，CD)是一种革兰阳性厌氧芽孢杆菌，过去十年来，艰难梭菌感染（*Clostridium difficile* infection，CDI)在全球的发病率和死亡率急剧升高，已经成为最常见的医院获得性感染。
目的 本研究旨在通过分子生物学检测、流行病学调查等研究方法，明确我院临床艰难梭菌感染现状、分子流行病学特点及其耐药情况，为临床 CDI 的预防性管理和治疗提供依据。
方法 收集本院 2019 年 12 月至 2021 年 3 月临床进行艰难梭菌毒素检测的粪便标本，经过微生物分离培养、鉴定获得分离株，通过聚合酶链式反应（Polymerase Chain Reaction,PCR）检测毒素基因并确定临床 CDI 病例，同时进行多位点序列分型（Multilocus sequence typing, MLST）区分其基因型。根据 CLSI 指南，采用琼脂稀释法进行药物敏感性试验，分析菌株对 9 种常用抗菌药物的耐药情况，包括克林霉素、四环素、头孢噻肟、莫西沙星、甲硝唑、万古霉素、利福平、非达霉素、氨苄西林。最后查阅病史，分析 CDI 患者人群特征，根据不同分型分组并进行多项临床指标的统计假设检验。
结果 在分离所得 51 株艰难梭菌中，毒素 A、B 均阳性（A^+B^+）有 22 例（43.1%），毒素 A 阴性，毒素 B 阳性（A^-B^+）有 22 例（43.1%），毒素 A、B 均为阴性（A^-B^-）有 7 例（13.8%），主要分离自急诊 ICU（31.25%）、消化（20.83%）、儿科（20.83%）等病区。MLST 分型方法产生 16 种基因型，其中 ST81 型为主要流行克隆，占 39.2%。所有菌株对甲硝唑、万古霉素、利福平、非达霉素、氨苄西林均敏感；对克林霉素、四环素、头孢噻肟、莫西沙星的耐药率分别为 73.47%、48.98%、89.80%、44.90%，多重耐药菌比例达 53.06%，且 ST81 型菌株的整体耐药水平显著高于非 ST81 菌株（$p<0.001$）。CDI 患者共有 41 例，其中高龄患者占 26.83%，超过半数患者（51.22%）有外科手术史，绝大部分患者（85.37%）近三个月有抗生素接触史。显著性检验结果显示不同毒素型患者在性别、年龄、原发疾病、白细胞、肌酐等方面无统计学差异，而 A^-B^+型 CDI 患者的白蛋白和血红蛋白值则显著低于 A^+B^+型 CDI（$p<0.01$）。
结论 我院 A^-B^+型艰难梭菌感染比例明显上升。与国内其他地区报道不同，ST81 型艰难梭菌为本院近两年的主要流行株，其耐药性明显强于其他型别艰难梭菌，需要进行持续严格的监测。

PU-3419

Detection of virulence genes and analysis of drug resistance of pseudomonas aeruginosa TTSS

Chengbin Lei、Wen Zhang
Zibo Central Hospital

Objective To detect the presence of virulence genes related to Pseudomonas aeruginosa (Pa) in 51 cases of Pseudomonas aeruginosa isolated from zibo region, and analyze their drug resistance.
Methods ATB system was used to identify Pa. Two virulence genes, exoU and exoS, were detected by PCR.
Results among the 51 cases of clinical pseudomonas aeruginosa, 12 cases were positive for exoU gene (23.5%) and 39 cases were positive for exoS gene (76.5%).There was no significant difference in the positive rate of the two virulence genes between mucous and non-mucous Pa strains (P >0.05).The drug resistance rate of Pa strain carrying exoU was higher than that of exoS strain, and there were significant differences in drug resistance rate of imipenem, levofloxacin and piperacillin/tazobactam (P <0.05).The clinical characteristics of exoU group and exoS group were analyzed retrospectively. The clinical characteristics of the exoU group were that most patients had endotracheal intubation history, ICU hospitalization history and anti-infection treatment were mostly treated with combined medication.
Conclusion exoU and exoS genes are mutually exclusive in isolated strains.The proportion of Pa strain carrying exoU was low in the isolated strain, but the drug resistance rate was higher than that of Pa strain carrying exoS.Patients in exoU group were mostly infected with pseudomonas aeruginosa, while those in exoS group were mostly colonized with pseudomonas aeruginosa.

PU-3420

一种基于抗菌肽的细菌快速鉴别方法的建立及初步评价

许伟[1]、范小波[2]、吴国球[1]
1. 东南大学附属中大医院
2. 东南大学

目的 基于抗菌肽与各种细菌的结合能力不同建立一种细菌快速鉴定方法并对其进行初步评价。
方法 抗菌肽 Ib 因其与各种细菌结合及裂解膜的特性具有抗菌的生物活性，在低浓度情况下，其裂解细菌的活性较弱，仅表现为与细菌结合的活性，而且其结合能力受离子影响而减弱。因此，根据其与各种细菌有不同结合能力的特性可开发一种细菌快速鉴别的方法。首先合成绿色荧光蛋白标记的抗菌肽 Ib-GFP，使用生物工程方法表达蛋白并进行提纯。探索 Ib-GFP 与细菌的结合能力并得出最适宜的反应条件。将细菌洗涤以除去盐分，然后将细菌与 Ib-GFP 共孵育 15 分钟。反复洗涤四次后分别使用 5%葡萄糖溶液以及 0.01M PBS 缓冲液重悬细菌。使用流式细胞仪检测两组菌液的绿色荧光。以葡萄糖组结果为横坐标，PBS 组为纵坐标，标记每种细菌的荧光强度在坐标轴范围，即可得到每种细菌对应的特异性荧光结果。使用该方法对 18 种常见临床致病菌进行检测（其中革兰氏阴性菌 10 例，阳性菌 8 例），评价该方法的检验效果。
结果 成功表达并纯化 Ib-GFP。使用该方法检测 18 株分离菌并成功地鉴别出 15 株细菌，占实验样本的 83%。无法分辨的另外三株均为革兰氏阴性菌，分别为肺炎克雷伯菌、阴沟肠杆菌、以及臭鼻克雷伯氏菌，其荧光结果在二维平面上有部分重叠而无法判断。
结论 本实验成功建立了一种新型快速的细菌鉴定方法，可用于细菌的快速鉴定诊断。其可用于多数的临床常见致病菌的快速鉴别，但是仍然有极大的优化空间。

PU-3421

血液病患者肠道定植 CRE 后感染的危险因素分析

晏群、陈霞
中南大学湘雅医院

目的 耐碳青霉烯类肠杆菌科细菌（carbapenem-resistant Enterobacteriaceae,CRE）检出率日渐上升，已引起广泛的国际关注，并对全球公共卫生安全带来严峻挑战。目前针对血液病患者肠道定植 CRE 后发生感染的相关研究在国内国外均较少。本研究旨在探究血液病患者肠道定植 CRE 与后续发生感染的相关性及其危险因素。
方法 筛选出 2017 年 1 月 1 日至 2021 年 4 月 26 日送检至中南大学湘雅医院检验科微生物室的耐碳青霉烯肠杆菌筛查标本中的 2304 例，其中肠道定植 CRE 的 146 例。去除同一患者重复送检的标本后，送检的血液病患者标本共 599 例，筛查出肠道定植 CRE 的 75 例。以其中检测出肠道定植 CRE 的患者为实验观察对象（共 75 例），以 17 例检出 CRE 定植后发生由同种菌属细菌引起感染的病例为实验组，58 例检出 CRE 定植后未发生由同种菌属引起感染的病例为对照组，回顾性比较两组病例在临床数据上的差异，以卡方检验进行单因素分析，以 logistic 回归分析分析危险因素。并比较不同类型血液病的定植率和各类病原菌的定植率。
结果 血液科患者定植率为 12.52%（75/599）。各类血液病中淋巴瘤定植率最高（16/62，25.81%），其次是急性髓细胞性白血病（29/197，14.72%），而后依次是骨髓增生异常综合征（5/35，14.29%）、急性淋巴细胞性白血病（13/143，9.09%）、红细胞相关疾病（7/93，7.53%），最后是其他类型血液病（5/69，7.52%）；在各类定植的 CRE 中，最常见的是肺炎克雷伯菌（34/75，45.3%），其次是大肠埃希菌（19/75，25.3%），而后依次是阴沟肠杆菌（7/75，9.3%）、枸橼酸杆菌（2/75，2.6%）、产气克雷伯菌（2/75，2.6%）、产酸克雷伯菌（1/75，1.3%）、克氏枸橼酸杆菌（1/75，1.3%），其他未分类的肠杆菌科细菌占 12%；单因素分析结果显示，血液病患者肠道定植 CRE 后发生感染与肝脏疾病、腹泻和休克有关（P<0.05）；多因素分析结果显示是否患有肝脏疾病、入院期间是否发生腹泻和休克是血液病患者肠道定植 CRE 后发生感染的独立危险因素（P<0.05）。
结论 血液病患者中淋巴瘤患者定植率最高，肝病、腹泻和休克是血液病患者肠道定植 CRE 后发生感染的独立危险因素，应对上述患者加强关注，采取合理有效的临床干预措施，减小感染发生的可能。

PU-3422

ICU 患者发生耐碳青霉烯类革兰阴性杆菌血流感染的危险因素分析

简子娟、李艳明、李虹玲、陈霞、晏群、刘文恩
中南大学湘雅医院

目的 分析 ICU 患者发生耐碳青霉烯类革兰阴性杆菌血流感染的危险因素，为临床制定防治策略提供参考依据。
方法 收集回顾性分析某大型三甲综合性教学医院 2018 年 1 月至 2020 年 12 月 ICU 血流感染患者分离的革兰阴性杆菌及相应临床资料，根据是否对碳青霉烯类抗菌药物耐药，分为耐碳青霉烯类革兰阴性杆菌（CR-GNB）组和碳青霉烯敏感革兰阴性杆菌（CS-GNB）组，采用 Logistic 回归分析患者耐碳青霉烯类革兰阴性杆菌感染发生 CR-GNB 血流感染的危险因素。
结果 405 例革兰阴性杆菌血流感染中，270 例为 CR-GNB，数量占比排在前三位的菌种为肺炎克雷伯菌、铜绿假单胞菌和大肠埃希菌。通过单因素分析，发现合并多器官功能障碍（MODS）（P=0.003）、患有呼吸系统疾病（P=0.021）、PBS 评分（0.001）、使用三代头孢菌素类抗菌

药物（P=0.020）以及使用三种或三种以上抗菌药物（P=0.015）是发生 CR-GNB 血流感染的危险因素，进一步多因素回归分析表明使用三种及三种以上抗菌药物（OR=3.503，95%CI 为 0.270-0.937，P=0.03）与患有呼吸系统疾病（OR=3.572，95%CI 值为 0.336-0.972，P=0.039）为 ICU 患者发生 CR-GNB 血流感染的独立危险因素。

结论 患有呼吸系统疾病及使用三种及三种以上抗菌药物为 ICU 患者发生 CR-GNB 血流感染的独立危险因素。临床应加强感控措施，合理使用抗菌药物，尽可能减少 CR-GNB 血流感染的发生。

PU-3423

假体周围关节感染的危险因素分析以及最佳诊断标志物筛选

陈霞、晏群
中南大学湘雅医院

目的 分析假体周围关节感染（periprosthetic joint infection，PJI）的危险因素、探索患者凝血相关指标对于 PJI 的诊断效能，并评估凝血相关指标结合常用感染相关血液标志物对 PJI 的诊断能力，尤其是区分培养阴性的 PJI 患者和无菌性松动患者的能力。

方法 对于 2014 年 1 月至 2020 年 12 月间在湘雅医院行翻修关节置换术的共 198 例患者进行回顾性分析。根据美国感染协会 2013 年指南提出的诊断标准定义 PJI。采用单因素卡方检验及多因素 Logistic 二元回归分析 PJI 的相关危险因素。绘制受试者工作曲线（ROC），计算 PJI 组与无菌组以及培养阴性 PJI 组与无菌组之间的各诊断指标的敏感度、特异度、阳性预测值和阴性预测值，并根据曲线下面积（AUC）判断诊断价值。

结果 本次研究中 PJI 患者与无菌组患者在性别、年龄或位置方面无显著的组间差异（P>0.05）。患有骨关节炎、骨折病史、糖尿病、高血压或冠心病等其他基础疾病并不会增加患 PJI 的概率（P>0.05）。多因素 Logistic 二元回归分析显示患者关节出现红肿、以及有吸烟史是 PJI 的独立危险因素（P<0.05）。PJI 患者 WBC、N%、NRL、PLT、PLT/MPV、FDP、CRP、ESR、IL-6、PCT 的水平显著高于无菌组患者（P<0.05）。CRP、ESR、FDP 三项指标能较好得鉴别培养阴性的 PJI 患者与无菌组患者（P 值均小于 0.05）。经分析 CRP+FDP 联合诊断时的诊断能力最佳，AUC 为 0.892，联合诊断性能大于单独时，诊断指标的临界值时的灵敏度、特异度分别为 96.4%、72.3%。

结论 关节红肿与有吸烟史是 PJI 患病的独立危险因素。凝血相关指标 PLT，PLT/MPV 和 FDP 对 PJI 的诊断有统计学意义。FDP 对于培养阴性的 PJI 具有良好的诊断性能，CRP 与 FDP 联合诊断的诊断性能最优。

PU-3424

江苏地区患儿分离产 NDM-5 酶大肠埃希菌的传播机制研究

孔子艳
江苏省连云港市第一人民医院

目的 分析江苏地区儿童分离的携带 bla_{NDM-5} 基因碳青霉烯类耐药大肠埃希菌（CRECO）传播机制，为临床抗感染治疗及制定相应的防控措施提供依据。

方法 收集江苏省南京市儿童医院 2018 年 6 月至 2019 年 6 月非重复 CRECO 菌株。采用微量肉汤法测定菌株对常见抗菌药物的敏感性。PCR 法以及 Sanger 测序检测碳青霉烯类耐药基因、超广谱 β-内酰胺酶耐药基因及头孢菌素酶耐药基因。脉冲场凝胶电泳（PFGE）及多位点序列分析（MLST）分析耐药菌株同源性。通过接合试验，质粒复制子分型，S1-PFGE，Southern blotting 以及全基因组测序对质粒进行特征分析。

结果 本研究共收集 25 株 CRECO 菌株，药敏结果显示均为多重耐药菌，对碳青霉烯类、头孢类，酶抑制剂类均显示耐药。PCR 检测 *bla*$_{NDM-5}$ 基因的阳性率为 100.0%（25/25）。同源性分析发现菌株可分为 5 个 ST 型，以 ST410 为主（64.0%，16/25），进一步的 PFGE 结果显示院内存在 ST410, ST167 以及 ST349 耐药菌株的克隆播散。质粒特征分析结果表明 CRECO 菌株接合成功，且接合子对碳青霉烯类药物耐药，说明携带 *bla*$_{NDM-5}$ 基因的质粒具有高度的自主转移性，并且 52.0%（13/25）的耐药质粒为 IncX3 型，另外 blaNDM-5 基因位于约 33~100kb 大小的质粒，其中以 47kb 的质粒最常见。本研究挑选了一株代表性的菌株进行全基因组测序，发现质粒 pNDM-XZA88 与经典型质粒 pNDM-MGR194 序列相比，blaNDM-5 基因的遗传背景中 ΔISAba125 部分拷贝缺失。
结论 携带 blaNDM-5 基因大肠埃希菌在儿童群体中广泛流行, 其中 IncX3 型质粒可介导 blaNDM-5 在不同的菌株进行水平转移，该型质粒是传播 *bla*$_{NDM-5}$ 基因的重要载体，质粒遗传背景在传播中也逐渐进化。

PU-3425

某三甲医院碳青霉烯耐药肺炎克雷伯菌下呼吸道医院感染流行病学分析

康海全、马萍
徐州医科大学附属医院

目的 分析碳青霉烯类肺炎克雷伯菌（carbapenemase resistant K. pneumoniae， CRKP）引起的医院内下呼吸道感染的流行病学特征，为 CRKP 医院内感染提供理论依据。
方法 收集 2018 年 1 月至 12 月在某三级甲等教学医院医院内下呼吸道感染 CRKP，并进行流行病学调查分析。研究对象为下呼吸道医院感染患者痰液、肺泡灌洗液培养 CRKP 的病例。通过 PCR 和 DNA 测序检测耐药基因。通过多基因座序列分型（Multilocus sequence typing，MLST）分析 CRKP 菌株的细菌克隆相关性。试验结果使用 WHONET 5.6 和 SPSS 18.0 进行汇总分析。
结果 2018 年医院 CRKP 感染年发病率为 5.71/10,000 出院人数（104 / 182,243 * 10,000）， 每 10 万患者住院日为 5.53（104/ 1,879,650 * 100,000）。104 名研究对象中，65 岁以上占 46.16%（48/104）， 既往史中高血压 42.83％（44/ 104）， ICU 入住史 27.89％（29 / 104）， 抗菌药物暴露史为 88.46％（92/104）。 最常见的 MLST 分型为 ST11（79/104，76.0%）， 其次是 ST48（9/104， 8.65%）。 KPC-2（101/104，97.12%）是主要的碳青霉烯酶，AmpC-酶和超广谱 b-内酰胺酶分别以 DHA-1、CTX-M-65 为主。
结论 医院内下呼吸道感染的 CRKP 菌以中产生 KPC-2 的 ST11 肺炎克雷伯菌最为常见。长期的、系统的检测以及严格的控制措施是遏制此类细菌传播的重要措施。

PU-3426

127 例金黄色葡萄球菌血流感染临床流行病学分析

康海全、马萍
徐州医科大学附属医院

目的 探究金黄色葡萄球菌（金葡菌）血流感染的临床特征，分析预后不良的危险因素，为金葡菌血流感染的诊治提供依据。
方法 回顾分析 2018 年 9 月-2020 年 8 月徐州医科大学附属医院 127 例金葡菌血流感染病例，收集临床特征和实验室数据，运用单因素和多因素 logistic 回归，分析转归相关的危险因素。
结果 logistic 多因素回归分析显示预后不良的独立危险因素为脑卒中、ICU、中心静脉插管、PCT 升高（OR 值为 12.123、4.906、3.315、15.879）。对金葡菌进行 MRSA 和 MSSA 分组，通过比

值比分析，中心静脉插管、ICU、PCT 升高三个独立危险因素存在时感染 MRSA 的可能性较大（OR 值为 4.048、4.141、3.231，且 95%CI 不包括 1），差异有统计学意义。
结论 脑卒中、中心静脉插管、ICU、PCT 升高在金葡菌血流感染患者预后不良中起到重要作用，控制好 MRSA 感染有利于改善患者预后。

PU-3427

肺炎链球菌小片段自溶素蛋白 LytA′的体外抗菌活性探讨

谢兴凤
绵阳市中心医院

目的 构建肺炎链球菌（ATCC49619）小片段自溶素基因 lytA′的原核表达载体，通过大肠埃希菌表达系统进行原核表达获得一种新型肺炎链球菌小片段自溶素重组蛋白 LytA′，初步探讨该蛋白的体外抗菌活性，并与青霉素 G 同时进行比较。
方法 设计 lytA 基因的特异性引物，并通过 PCR 方法从肺炎链球菌（ATCC49619）中扩增 lytA 基因，并将其插入原核表达载体 PGM-T 中，构建 PGM-T /lytA 重组质粒，使用限制性核酸内切酶 BamHI 和 HindIII 消化 PGM-T / lytA 获得小片段自溶素基因 lytA′。再构建表达质粒 pET-32a（+）/lytA′ 并转化到感受态细胞大肠埃希菌 BL21（DE3）中，经 IPTG 诱导表达目的蛋白，使用透析袋等电点洗脱技术纯化回收目的蛋白 LytA′；采用微量肉汤稀释法分别测定 LytA′和青霉素 G 对肺炎链球菌（ATCC49619）的最小抑菌浓度（MIC），并将其作用于青霉素 G 敏感菌株肺炎链球菌（ATCC49619），初步探讨小片段自溶素蛋白 LytA′的体外抗菌活性。
结果 成功构建重组质粒 PGM-T / lytA 和 pET-32a（+）/ lytA′。小片段自溶素重组蛋白表达良好，并显示出预期的抗菌活性。与生长对照组相比，LytA′和青霉素 G 在 3h 时显示出明显的抗菌活性在（P <0.05），抑菌效应持续至 7h（P<0.05），抑菌效应逐渐增强。此外，在 7h 时，LytA′ 的抑菌活性明显强于青霉素 G（P<0.05）。
结论 小片段自溶素重组蛋白 LytA′对青霉素 G 敏感肺炎链球菌显示出一定的体外抑菌活性，且持续时间久，有成为抗肺炎链球菌感染治疗药物的可能性。

PU-3428

无菌体液中耐碳青霉烯类肠杆菌科细菌的临床分布及耐药性分析

张鸿娟
昆明医科大学第一附属医院

目的 分析某院无菌体液中分离出的耐碳青霉烯类肠杆菌科细菌（CRE）的检出情况和耐药性。
方法 回顾性分析 2020 年 1 月-2021 年 2 月昆明医科大学第一附属医院医学检验科临床微生物实验室无菌体液中分离出的耐亚胺培南或美罗培南的肠杆菌科细菌，对表型确定的 CRE 菌株进行测序分析，确定基因型，同时统计无菌体液中 CRE 对常用抗菌药物的耐药情况。
结果 无菌体液中共分离出 46 株 CRE，其中肺炎克雷伯菌 43 株，大肠埃希菌 1 株，产气克雷伯菌 1 株，阴沟肠杆菌 1 株。其中 KPC 型 32 株，OXA-48 型 9 株，IMP 型 1 株，NDM1 株，同时存在 KPC、OXA-48 耐药基因的有 2 株，不产酶 1 株。 46 株无菌体液中的 CRE 除对碳青霉烯酶类抗生素（亚胺培南或美罗培南）绝对耐药外，对 β-内酰胺酶、氨基糖甙类、大环内酯类、磷霉素等耐药，对替加环素的普遍敏感，对复方新诺明部分敏感，对四环素部分敏感。
结论 无菌体液中的 CRE 以肺炎克雷伯菌为主，基因型以 KPC 为主，有多种耐药基因同时存在的情况。对常用抗菌药物普遍耐药，临床治疗建议采取的抗感染措施为碳青霉烯类、替加环素及其他抗菌药物两药或三药联合为首选用药方案。

PU-3429

腹腔积液标本的病原菌分布情况

郭媛媛
云南大学附属医院

目的 了解腹腔积液的病原菌构成情况。
方法 回顾性分析我院 2015 年 1 月-2019 年 12 月收集的腹腔积液标本分离的病原菌培养结果。
结果 共分离出腹腔积液非重复病原菌 687 株（54.78%），其中主要是以大肠埃希菌和肺炎克雷伯菌为主的革兰阴性菌（60.84%），其次是以屎肠球菌和表皮葡萄球菌为主的革兰阳性菌（28.97%）；真菌占 10.19%，最多见的是白色念珠菌。革兰阴性菌检出率由 2016 年的 79.82%下降至 2019 年的 53.21%，呈现明显下降趋势（X2= 17.800，P＜0.05），革兰阳性菌检出率由 2016 年的 20.18%上升至 2019 年的 46.79%，呈现明显上升趋势（X2= 17.800，P＜0.05）。
结论 我院腹腔积液分离病原菌中以革兰阴性菌为主，革兰阴性菌检出率逐渐下降，而革兰阳性菌检出率呈现明显上升趋势。

PU-3430

本院耐碳青霉烯类肠杆菌科细菌（CRE)主动筛查结果分析

邵靖懿[1]、陈永寿[2]、金秀秀[1]、李卫滨[2,3]、张胜行[2,3]
1. 联勤保障部队第九〇〇医院检验科
2. 福建医科大学福总临床医学院检验科
3. 联勤保障部队第九〇〇医院福建省适配体技术重点实验室

目的 通过主动筛查分析联勤保障部队第九〇〇医院 CRE 高流行科室内 CRE 流行特征，探究其与临床常规病原微生物检测结果的一致性，以期通过主动筛查指导临床医师合理化、规范化使用抗菌药物，控制院内 CRE 的流行与传播。
方法 以 2020 年 10 月 10 日-2021 年 4 月 21 日本院 CRE 高流行科室内住院患者为研究对象，采集住院患者的痰液、肺泡灌洗液（BALF）、中段尿、分泌物等标本进行病原微生物检测，同时采集 518 名住院患者的粪便常规标本进行主动筛查，对已分离的 CRE 菌株进行表型鉴定、菌种统计以及耐药性分析。
结果 ①临床常规病原微生物检出情况：362 份临床标本共分离 27 株 CRE 菌株，其中肺炎克雷伯菌的检出率最高，占 55.6% （15/27），分离菌株中产 A 类碳青霉烯酶的 CRE 菌株最多，占 66.7%；②CRE 高流行科室主动筛查检出情况：580 份粪便标本共分离 8 株 CRE 菌株，其中肺炎克雷伯菌的检出率最高，占 62.5% （5/8）,分离菌株中产 A 类碳青霉烯酶的 CRE 菌株最多，占 75.0%；③主动筛查检出的 1 株 CRE 菌株早于临床检出，有 3 株 CRE 菌株在实验期间临床尚未检出，其余 4 株 CRE 菌株均晚于临床检出。④有 3 例住院患者先后在其体内检出不同的 CRE 菌株。
结论 本院 CRE 高流行科室内住院患者 CRE 定植与感染的主要致病菌为肺炎克雷伯菌，对临床常用抗菌药物具有较高的耐药性；碳青霉烯酶耐药基因可能会在肠道内不同种属细菌中传播，造成耐药基因的扩散；主动筛查具有早于临床常规病原微生物检验发现 CRE 的可能性；利用主动筛查早期发现 CRE 定植或感染者，可能为临床医师针对性实施个体化治疗方案及预防控制措施提供参考依据，有利于控制 CRE 定植或感染者引起的院内感染。

PU-3431

30 株碳青霉烯类耐药肺炎克雷伯菌（CRKP）耐药表型、基因型及联合药敏分析

张震、甘宇必
重庆市人民医院

目的 本研究拟对从不同类型的临床标本中分离出 30 株 CRKP（Carbapenem-resistant Klebsiella pneumoniae,CRKP）耐药表型、耐药基因型和联合药敏情况进行分析，以期待获得本医疗机构 CRKP 的相关数据后，指导临床对 CRKP 感染进行更精准的治疗，为临床合理联合抗生素治疗 CRKP、提高 CRKP 感染救治成功率提供坚实的理论基础。
方法 本研究通过碳青霉烯酶抑制剂增强实验测试 30 株 CRKP 产碳青霉烯酶的表型；利用细菌免疫显色试剂盒测试 30 株 CRKP 的碳青霉烯酶基因型；采用 K-B 法测试对临床常见抗菌药物的敏感性，并利用微量肉汤稀释法和 E-test 法复核菌株对多黏菌素和替加环素的敏感性；用 K-B 法测试不同药物联合方式下的药敏情况。
结果 30 株 CRKP 中产 KPC 型酶的菌株有 29 株，产 NDM 型仅有 1 株，未发现产其他酶型的菌株；受试菌株已对美罗培南（MEM）、磷霉素（FOT）、复方新诺明（SXT）等耐药程度较高，但未发现对多粘菌素（PB）、替加环素（TGC）耐药的菌株；所有联合方式中仅 FOT+TGC、FOT+PB 表现出明显协同作用。
结论 本院分离 CRKP 中流行的碳青霉烯酶型仍以 KPC 和 NDM 为主，与国内流行情况一致，且 FOT 与 TGC 或 PB 联合均有明显协同作用，提示临床可结合这两个情况对本院 CRKP 感染进行更为精准的治疗。同时，我们的实验结果也显替加环素和多粘菌素联合阿米卡星和利福平均未显示出协同抗菌作用。

PU-3432

天津地区感染性心内膜炎临床特征及病原学分析

翟志楠、贺靖冬、侯敏
天津市胸科医院检验科

目的 通过对我院 2018 -2020 年近 3 年间 92 例感染性心内膜炎（Infective Endocarditis，IE）确诊病例的临床资料进行描述性分析，以了解天津地区 IE 患者的临床特征、检验指标、致病菌的分布、治疗及预后等，获得本地区 IE 变化趋势，为提高 IE 的临床诊疗结果提供参考。
方法 采用回顾性研究的方法，对 IE 患者的临床资料进行描述性分析及影响预后的因素进行研究，包括患者的一般情况、临床表现、实验室检查、病原菌分布、治疗方式及预后等。
结果 （1）IE 患者以男性为主，发病比例大致为 2.17：1。IE 患者以 50-70 岁为主。（2）IE 患者中有心脏基础病的患者最多，为 95.7%，其中非风湿性心脏病患者占 65.9%；风湿性心脏病为 1.1%；先天性心脏病为 11.4%；心脏外科术后为 21.6%。（3）IE 患者的临床症状中发热最常见，约有 75%。（4）80.8% IE 患者 CRP 升高；89.9% IE 患者 BNP 升高；80.6% IE 患者血沉升高。（5）35.9% IE 患者血培养阳性，其中链球菌最多，占 73.9%；凝固酶阴性葡萄球菌占 17.4%，革兰阴性杆菌占 4.3%，其他革兰阳性球菌占 4.3%。（6）预后不良组的肌酐、BNP 高于预后良好组且具有统计学差异（P＜0.05）。
结论 （1）IE 患者的发病以中老年人为主，而且男性多发于女性。（2）非风湿性心脏病是 IE 患者主要的基础心脏病类型。（3）IE 患者的临床症状中，发热为最常见的症状。（4）多数 IE 患者会出现不同程度的贫血、BNP 升高，超敏 CRP 升高，红细胞沉降率升高，CRP 升高。（5）IE 患者的病原菌以链球菌为主。（6）IE 患者的治疗以外科手术为主，而且在同样符合手术体征情况下，

外科手术治疗比内科保守治疗治愈率高，死亡率低。（7）预后不良组的肌酐、BNP 比预后良好组高且具有统计学意义。

PU-3433

高原地区 MS 与基因测序对诺卡菌鉴定评价 及病例分析研究

巢世兰、阿祥仁
青海省人民医院

以基因测序（16s rDNA、rpoB）为金标准，评价飞行时间质谱（MALDI-TOF MS）对高原地区诺卡菌临床分离株的准确性研究及病例分析。

方法 回顾性调查我院 2015.1-2019.12 月，5 年临床标本中分离的 16 株诺卡菌，对比 MS 与测序的鉴定结果，将质谱法鉴定与基因测序法结果不一致的菌株维护进质谱数据库；剔除病例缺如者，共收集完整诺卡菌感染临床病例 13 例，对其临床特点及耐药性进行分析。

结论 高原地区分离的 13 株诺卡菌中，肺部依然是主要感染部位,而且不同诺卡菌的药敏谱存在差异，因此菌种的鉴定和药敏试验至关重要。

PU-3434

免疫层析技术在耐碳青霉烯肠杆菌科细菌耐药基因检测的临床应用

赵雅[1]、白倩[2]
1. 西安市第一医院
2. 陕西中医药大学

目的 探讨胶体金免疫层析技术在检测耐碳青霉烯酶肠杆菌科细菌耐药基因上的临床应用效果。

方法 收集 2020 年 1 月—12 月西安市第一医院分离的 24 株耐碳青霉烯肠杆菌，采用胶体金免疫层析法检测碳青霉烯酶基因。

结果 24 株临床分离菌株中，肺炎克雷伯菌 23 株，产酸克雷伯菌 1 株。其中 21 株检出产 KPC 酶，3 株检出产 NDM 酶，无产双酶菌株检出。

结论 采用胶体金免疫层析技术可以快速地检测产碳青霉烯酶肠杆菌的产酶类型，且操作简单、方便，在临床具有较高的应用前景。

PU-3435

金黄色葡萄球菌的耐药与临床治疗研究进展

任莉[1]、陆嘉敏[2]
1. 西安市第一医院
2. 海南医学院

院内感染是人类共同关注的公共卫生健康问题。其中金黄色葡萄球菌(SAU)是目前临床常见的感染性革兰阳性致病菌，可导致患者皮肤软组织感染，引起肺炎、败血症、菌血症等严重疾病。本文通过查找相关文献，归纳汇总金黄色葡萄球菌的耐药情况及治疗方法进展，为金黄色葡萄球菌的耐药研究和临床治疗提供参考依据。

PU-3436

NICU 极低出生体重儿真菌血流感染的危险因素及预后分析

姜波、朱敏
昆明医科大学第一附属医院

目的 探讨 NICU 极低出生体重儿真菌血流感染的危险因素及对患儿预后的影响。
方法 回顾性采集 2014 年 1 月至 2020 年 12 月入住昆明医科大学第一附属医院 NICU 的极低出生体重儿近平滑假丝酵母菌血流感染患儿 43 例，其中单独近平滑假丝酵母菌感染者 17 例（40%），合并一种或两种革兰阴性菌感染者 26 例（60%）进行血流感染的危险因素分析。
结果 17 例单独感染近平滑假丝酵母菌和 26 例混合感染患儿两组中进行单因素分析，分析表明合并凝血功能障碍、血小板减低和复查血培养阳性三个因素的差异具有统计学意义（P<0.05）。真菌感染使用抗生素导致菌群失调继而合并感染革兰阴性菌是影响患儿真菌血流感染预后的独立危险因素。
结论 合并凝血功能障碍、血小板减低和复查血培养阳性是 NICU 极低出生体重儿真菌血液感染的独立危险因素；而抗生素的使用导致菌群失调继而合并感染革兰阴性菌是影响患儿真菌血流感染预后的独立危险因素，应引起重视以改善预后。

PU-3437

金黄色葡萄球菌分子分型技术研究进展

谢跃
西安市第一医院

金黄色葡萄球菌（Staphylococcus aureus）是人类的一种重要病原菌，可引起多种严重感染，被认为是导致食物中毒、皮肤和组织感染、甚至菌血症和心内膜炎的主要人类病原体之一,如今MRSA(耐甲氧西林金黄色葡萄球菌)已成为全球院内感染的首要致病菌。研究报道表明，金黄色葡萄球菌特别是 MRSA 治疗的复杂性和困难性已引起医疗保健预算不断增加，造成了许多国家严重的医疗和经济问题，故减少金黄色葡萄球菌尤其是 MRSA 感染成为临床医学的一大挑战。快速准确的金黄色葡萄球菌分型方法，对于获得包括菌株来源、进化规律及流行病学在内的后续信息尤为重要,故就近年来金黄色葡萄球菌的分子生物学检测方法研究及发展趋势作一综述。

从慢性鼻窦炎患者分离多杀巴斯德菌与鉴定

王淑玲、颜 令、徐兰兰、张震 、廖璞
重庆市人民医院

目的 分析首次从慢性鼻窦炎患者分离的多杀巴斯德菌的鉴定、药敏和临床。
方法 采用生化反应鉴定和飞行时间质谱方法对此菌株进行鉴定，纸片法进行药敏试验，并对患者临床病史进行回顾。
结果 两种方法鉴定为杀巴斯德菌，对测试抗菌药物敏感，患者有宠物猫接触史。
结论 多杀巴斯德菌可以引起慢性鼻窦炎，实验室人员加强该菌的检测能力，医生应对动物源性的多杀巴斯德菌感染提高警惕，饲养宠物者应注意卫生。

PU-3439

布洛芬可促进肺上皮细胞对铜绿假单胞菌的抑制作用

俞娟、向雅婷、曹静
南通大学附属医院

目的 铜绿假单胞菌的耐药性严重，而耐药性与其 QS 系统密切相关。本研究旨在探索非抗生素布洛芬促进肺上皮细胞对铜绿假单胞菌的抑制作用。
方法 建立铜绿假单胞菌 PAO1 感染肺上皮细胞 A549，用 qRT-PCR 和 WB 技术分别检测感染前后 A549 中 PPARγ 和 PON-2 的表达，向感染了 PAO1 的 A549 细胞中加入布洛芬，分别检测加药前后 A549 中 PPARγ 和 PON-2 的表达。比较加入布洛芬前后 PAO1 对 A549 细胞的粘附数及粘附后布洛芬对 A549 细胞中细菌数的影响。
结果 肺上皮细胞 PPARγ、PON-2 的表达被铜绿假单胞菌抑制，且表达下降趋势趋于一致；在感染铜绿假单胞菌的肺上皮细胞中加入布洛芬后，PPARγ 和 PON-2 的表达明显升高；PON-2 随 PPARγ 的表达而增加，随 PPARγ 的表达而减少；加入布洛芬后，铜绿假单胞菌对肺上皮细胞的黏附数及共培养后细菌数较未加药下降；将 siPPARγ 处理后的肺上皮细胞感染铜绿假单胞菌，与未处理肺上皮细胞相比，siPPARγ 处理后的肺上皮细胞中铜绿假单胞菌数量明显增加。肺上皮通过表达 PPARγ 激活 PON-2 抑制铜绿假单胞菌，加入 siPPARγ 后，PON-2 的表达明显降低，对铜绿假单胞菌的抑制作用下降。当将布洛芬加入到 siPPARγ 处理后的肺上皮细胞时，铜绿假单胞菌的数量下降。
结论 布洛芬可促进 PPARγ 和 PON-2 在感染铜绿假单胞菌的肺上皮细胞中的表达；在肺上皮细胞中，PON-2 的表达受 PPARγ 调控；布洛芬可激活 siPPARγ 从而激活 PON-2 表达，促进肺上皮细胞抑制铜绿假单胞菌。

PU-3440

A potential control for blaKPC plasmid—blaCTX-M-15 plasmid

Weiwen Wang
Huashan Hospital, Fudan University

Purpose The KPC-producing Klebsiella pneumoniae has formed a long-term, large-scale, and high-positive rate spread around the world. Almost all blaKPC plasmids selectively invade the CG258 Klebsiella pneumoniae strains, but relevant mechanism is still unclear. The study aims to explore the molecular epidemiological characteristics of blaCTX-M-15 plasmid, which determines whether blaCTX-M-15 plasmid could be used as a good reference plasmid for studying blaKPC plasmid.
Methods The complete genome sequences of blaCTX-M-15(+) Klebsiella pneumoniae were obtained from Genbank database. Meanwhile, we collected blaCTX-M-15 positive clinical strains (including eight provinces and cities) and analyzed the molecular epidemiological characteristics of blaCTX-M-15 plasmids, including drug susceptibility and MSLT typing. And representative clinical strains were selected for whole-genome sequencing, and corresponding transposon structures and Inc typings were analyzed.
Results Our studies found that blaCTX-M-15 plasmid was randomly distributed in the CG258 and Non-CG258 isolates, and the genome analysis showed that blaCTX-M-15 plasmids were the IncF plasmid carrying the FII replicon (IncFII plasmid), which was consistent with blaKPC plasmid. And almost blaCTX-M-15 plasmids carry Tn3 type transposons. The previous study found that transposons of domestic blaKPC plasmid are of type Tn1721, which belongs to Tn3 family. The above results all confirm that blaCTX-M-15 and blaKPC plasmids are highly similar, but their distribution is significantly different.

Conclusion To clarify the blaKPC-CG258 dissemination is the key to studying the mechanism of large-scale spread of carbapenem-resistant Klebsiella pneumoniae. Our study found that the genetic Background of blaCTX-M-15 and blaKPC plasmids are similar, but their distribution types of strains are different. Based on the above results, blaCTX-M-15 plasmid may be a good control plasmid for studying the selective invasion of blaKPC plasmid into the CG258 strains, providing a new direction for in-depth exploration of the blaKPC-CG258 epidemic.

PU-3441

白血病患者皮肤软组织感染分析

许青霞
河南省肿瘤医院

目的 探讨革兰氏阴性杆菌引起致命性皮肤软组织感染的有效治疗方法。
方法 报道 2 例革兰氏阴性杆菌引起致命性皮肤软组织感染，复习文献，并探讨其发病机制。
结果 1 例患者为嗜水气单胞菌，1 例为嗜麦芽窄食单胞菌革兰氏阴性杆菌引起的皮肤软组织感染，出现皮肤红肿、大疱，大疱液恶臭难闻，进展迅速，最终抢救无效死亡。
结论 无创伤时出现皮肤软组织嗜水气单胞菌感染罕见，碳青霉烯类暴露是嗜麦芽窄食单胞菌多重耐药的风险因子。革兰氏阴性杆菌引起皮肤软组织感染罕见，且进展迅速，治疗效果不佳，应及早发现，寻找病原菌，合理应用敏感抗生素，延长生存时间。

PU-3442

两种基质辅助激光解吸电离飞行时间质谱系统对常见微生物鉴定结果的比较

伊贝拜汗买卖提
新疆生产建设兵团总医院

目的 比较进口质谱 A 和国产质谱 B 两种商业化基质辅助激光解析电离飞行时间质谱系统对常见微生物的鉴定一致性。
方法 收集 2019 年 9 月至 2020 年 1 月本实验室临床常规分离菌株共 762 株，采用扩展直接涂抹法平行使用两种质谱系统进行鉴定，鉴定结果不一致者采用 16S rDNA 基因测序予以确证。采用 SPSS18.0 软件对数据进行统计分析。
结果 762 株菌株质中革兰阴性杆菌(G-b)430 株，革兰阳性球菌(G+c)200 株，革兰阳性杆菌 52 株，革兰阴性球菌 17 株，真菌 63 株。762 株菌株质谱鉴定在种水平置信度得分和可信任得分水平中，进口质谱 A 和国产质谱 B 准确鉴定率分别为 89.6%(683/762)、79.7%(607/762)，在属水平鉴定中，准确鉴定率分别为 98.7%(752/762)、90.9%(693/762)。63 株真菌进口质谱 A 和国产质谱 B 在真菌属水平鉴定率分别为 98.4%(62/64)、76.2%(48/64)，在种水平鉴定率分别为 76.2%(48/64)、52.4%(33/64)。430 株 G-b 中进口质谱 A 和国产质谱 B 在属水平鉴定率分别为 97.9%(422/430)、92.3%(398/430)，200 株 G+c 中进口质谱 A 和国产质谱 B 在属水平鉴定率分别为 100%(200/200)、180%(180/200)
结论 两种质谱系统对常见微生物鉴定有很好的一致性。依据质谱系统的鉴定分值评判原则，进口质谱 A 在种可信水平上的准确鉴定率较高。

PU-3443

甲型和乙型副伤寒沙门菌同时暴发流行事件的临床特征及菌株药物敏感性分析

伊贝拜汗买卖提
新疆生产建设兵团总医院

目的 对一起甲型和乙型副伤寒沙门菌同时暴发流行事件中的患者临床特征及菌株药物敏感性进行分析，为不同型别副伤寒同时暴发流行的防治提供参考。
方法 收集 2018 年 9 月到 11 月间新疆生产建设兵团医院副伤寒确诊病例及疑似病例临床资料进行回顾性分析，并对副伤寒沙门菌分离株进行药物敏感性分析。
结果 研究纳入副伤寒确诊病例 31 例和疑似病例 35 例，所有病例均为乌鲁木齐市某中学高中年级学生，其中 22 例男性、44 例女性，平均年龄为 16.22±0.57 岁。患者首发症状均为发热，部分患者伴有全身中毒症状及消化道症状，一般实验室检查以 PCT、CRP 异常升高为主。31 例确诊病例共分离 32 株副伤寒沙门菌，血清学分型为甲型 19 株、乙型 13 株。所有菌株对环丙沙星的中介率为 100%，对氨苄西林、复方新诺明、头孢他啶、头孢曲松、氯霉素的敏感率均为 100%。
结论 甲型和乙型副伤寒沙门菌同时传播具有临床表现典型及环丙沙星药物敏感性差的特点，应引起实验室及临床的高度关注。

PU-3444

维持性血液透析患者病原菌感染特点及耐药性分析

伊贝拜汗买卖提、王海叶
新疆生产建设兵团总医院

目的 通过回顾性分析 2016~2018 年维持性血液透析（MHD）患者的临床资料，分析 MHD 患者发生感染的相关因素及病原菌感染特点，为降低患者的感染发生率提供一定的理论依据。
方法 采用自动化仪器对临床分离菌株进行鉴定及药物敏感性试验，采用 CLSI M100-S27 标准判断药敏结果及 WHONET 5.6 软件进行数据分析。
结果 MHD 患者感染以血流感染为主占 39.8%，其次为泌尿系统和呼吸系统感染，分别占 26.1%和 18.8%；共分离 178 株病原菌，革兰阴性菌 85 株（47.8%），革兰阳性菌 79 株（44.4%），真菌 14 株（7.8%）；肺炎克雷伯菌和大肠埃希菌对头孢 1 代～3 代耐药率高于 68%，对亚胺培南、美罗培南、哌拉西林/他唑巴坦耐药率为 0，金黄色葡萄菌及表皮葡萄球菌对苯唑西林耐药率分别为 23%和 81%，革兰阳性菌对替考拉宁、万古霉素、利奈唑胺、替加环素耐药率为 0。
结论 MHD 患者病原菌以革兰阴性菌为主，病原菌耐药性较为严重，应根据药敏结果及时选用有效抗菌药物进行治疗，以减少感染的发生。

PU-3445

临床流行鲍曼不动杆菌基因型演变的研究

袁晨燕
东南大学附属中大医院

目的 临床上鲍曼不动杆菌检出率逐年上升，其中超过一半都是碳青霉烯耐药的菌株（CRAB），近年来，临床观察发现，不同于之前的认识，高致病的鲍曼不动杆菌逐渐出现。由于鲍曼不动杆菌可以耐药医院环境，耐药菌株对多数抗生素都不敏感，可以导致大规模的院内感染，高毒力菌株的出

现和流行将严重威胁患者生命对，研究十年来本院鲍曼不动杆菌流行的基因型可以为感染监控以及流行病学调查提供有力的支持。
方法 使用十年来临床分离的鲍曼不动杆菌菌株共 98 株，时间跨度为 10 年，使用 MLST 分型的方法对所有菌株进行分型，并利用 GeoBurst 软件分型菌株亲缘关系，利用 MAGA 软件绘制菌种进化图。
结果 十年前流行的鲍曼不动杆菌基因型与现在流行的型别有很大的差异，亲缘关系和进化关系显示，目前流行的鲍曼不动杆菌由之前的型别进化而来。
结论 鲍曼不动杆菌基因组出现进化趋势，可能已经获得毒力基因。

PU-3446

2020 年丹东市第一医院临床检出前 5 位病原菌的细菌耐药性分析

刘国强
丹东市第一医院

目的 对 2020 年丹东市第一医院临床送检标本分离出阳性菌株进行统计分析，检出前 5 位菌，按照全国细菌监测网主要监测的耐药机制和耐药指标进行分析。为全国细菌耐药网提供准确数据的同时，也为临床发布耐药分析，合理指导临床抗生素合理应用和控制。
方法 临床检出阳性标本的 1230 株菌进行分析和计算，使用贝克曼半自动微生物鉴定仪 MicroScan AutoScan-4.鉴定试剂采用 NCU61 和 PC33 以及迈瑞天地人公司微生物鉴定仪 TDR-200C 和配套检测试剂 TDR STAPH-96 和 TDR NF-96、TDR ONE-96。
结果 检出大肠埃希菌 297 株，占 24.1%；检出肺炎克雷伯菌 172 株，占 14%；检出铜绿假单胞菌 134 株，占 10.9%；检出鲍曼不动杆菌 99 株，占 8%；检出金黄色葡萄球菌 63 株，占 5.1%；其中大肠埃希菌中：碳青霉烯类耐药(CRECO)11 株，占 54.4%；三代头孢耐药 129 株，占 47.4%；产 ESBLs 菌株 148 株，占 54.4%。肺炎克雷伯菌中：碳青霉烯类耐药(CRKPN)7 株，占 4.4%；三代头孢耐药肺炎克雷伯菌 43 株，占 27.2%；产 ESBLs 菌株 41 株，占 25.9%.
铜绿假单胞菌：碳青霉烯类耐药铜绿假单胞菌（CRPAE）26 株，占 20.6%。鲍曼不动杆菌：碳青霉烯类耐药不动杆菌（CRAB）68 株，占 77.3%；金黄色葡萄球菌：耐甲氧西林金黄的葡萄球菌（MRSA）14 株，占 22.2%。
结论 随着广谱抗菌药物的广泛应用，抗菌药物的耐药性也在逐年增加，抗菌药物已越来越难以应对感染病原体。过度使用抗菌药物和临床无指征的预防用药及治疗用药；尤其是医师对用药指征掌握不必然导致细菌耐药性的产生和耐药率的增加。因此为有效地治疗感染性疾病并减少耐药菌株在院内的流行与传播。临床用药需要依据微生物学检验结果和药敏情况选择用药。

PU-3447

铜绿假单胞菌细菌生物膜形成及对抗生素敏感性的影响

袁晨燕
东南大学附属中大医院

目的 比较临床上使用的两种硅胶生物材料形成生物膜的难易程度，研究细菌生物膜形成对耐药性的影响，以指导临床合理使用材料和用药选择。
方法 经细菌孵育两种硅胶生物材料（硅胶眼科植入物环扎带，硅胶导尿管）制备生物膜模型，通过银染法直接观察生物膜形成情况并用扫描电镜观察生物膜的形态。测定游离细菌的 MIC 值及 MBC 值与形成 bbf 后的 MEBC 值，二者比较。

结果 两种不同硅胶材料的生物膜经银染后观察，导尿管上更易形成 BBF，又进一步经扫描电镜证实，硅胶导尿管材料制备的生物膜表面可观察到大块 BBF。游离细菌 MIC 与 BBF 的 MEBC 间比较，差异有统计学意义。
结论 硅胶眼科植入物环扎带较硅胶导尿管不容易形成 BBF；形成 BBF 后，细菌的耐药性增加。

PU-3448

梅毒螺旋体假定蛋白 Tp0259 促炎活性初步研究

谢亚锋
南华大学附属第二医院

目的 探讨梅毒螺旋体(Treponema pallidum,Tp)假定蛋白 Tp0259 的促炎活性并初步分析其可能机制。
方法 去除重组蛋白 Tp0259(rTp0259)中的内毒素，然后以其刺激 THP-1 细胞，ELISA 检测促炎细胞因子 IL-1β、IL-6 和 IL-8 的表达水平。ERK1/2、JNK、p38 和 NF-κB 特异性抑制剂分别预处理 THP-1 细胞 30min 后以 rTp0259 刺激 THP-1 细胞，ELISA 检测 IL-1β、IL-6 和 IL-8 的表达水平。
结果 rTp0259 在一定范围内以时间和剂量依赖方式刺激 THP-1 细胞表达 IL-1β、IL-6 和 IL-8，3.0μg/mL 刺激 24h 时各细胞因子表达水平最高。rTp0259 刺激经 ERK1/2、JNK、p38 和 NF-κB 特异性抑制剂预处理后的 THP-1 细胞，IL-1β、IL-6 与 IL-8 表达水平均明显下降 (P＜0.01))。
结论 rTp0259 可能通过 MAPK 和 NF-κB 通路诱导 THP-1 细胞表达促炎细胞因子 IL-1β、IL-6 和 IL-8，可能是 Tp 新的致病因子。

PU-3449

回顾性分析鲍曼不动杆菌血流感染的临床特征和结局

张肃川
自贡市第一人民医院

目的 探究血流感染鲍曼不动杆菌患者的临床特征、临床结局、危险因素及抗生素治疗。
方法 纳入自贡市第一人民医院 2015 年至 2019 年符合纳入与排除标准的患者 40 例，收集人口学资料、临床特征、基础疾病、抗菌药物治疗方案。根据 30 天预后分为死亡组（16 例）和存活组（24 例）和是否耐碳青酶烯类分为耐碳青酶烯类组（28 例）和非耐碳青酶烯类组（12 例），通过 COX 回归和 logistics 回归探究危险因素，K-M 法绘制生存曲线，对数秩检验比较生存率差异。
结果 鲍曼不动杆菌血流感染死亡率 40%。单因素分析发现糖皮质激素使用（HR=3.3, P=0.02）、PBS（HR=1.4, P=0.002）、脓毒性休克（HR=86.0, P=0.03）、不恰当经验性治疗（HR=8.9, P=0.04）是 30 天死亡的危险因素；多因素分析发现：PBS（HR=1.6, P＜0.01）是 30 天死亡的独立危险因素。对 CRAB 组和非 CRAB 组单因素分析显示：侵入性操作（OR=19.3, P=0.01）、入住 ICU（OR=25, P＜0.01）、入住 ICU 时间（OR=1.1, P=0.04）、抗生素暴露（OR=65, P＜0.01）、PBS（OR=2.1, P＜0.01）是感染 CRAB 的危险因素，多因素分析发现：抗生素暴露是感染 CRAB 的独立危险因素（OR=28.1, P＜0.01）。生存分析显示：与 CRAB 组和非 CRAB 组存在明显差异（P＜0.01），对治疗方案进行分析发现：包含替加环素方案与无替加环素方案死亡率没有明显差异（75% vs 50%，P=0.4）。
结论 鲍曼不动杆菌血流血流感染病死率高，感染前糖皮质激素使用、感染时 PBS 高、合并脓毒性休克、不恰当经验性治疗提示不良预后，侵入性操作、入住 ICU、入住 ICU 时间长、抗生素暴露、PBS 与发生碳青酶烯类耐药相关。以替加环素为基础的方案没有明显增加死亡率。

PU-3450

Serotype, antimicrobial resistance patterns and virulence genes of salmonella isolated from the intestinal tract

yue wang
Joint Logistics Support Unit 903 hospital

Salmonella (Salmonella. spp) is a zoonotic gram-negative pathogen in the Enterobacteriaceae family. It is mainly infected by the mouth after contaminating food and water sources, causing salmonellosis in humans and animals. Its clinical manifestations are gastroenteritis, food Poisoning, bacteremia, typhoid fever and paratyphoid fever, enteric fever, etc. According to reports, diseases caused by isolated Salmonella infection outside the intestine, such as bacteremia, gastrointestinal bleeding, intestinal perforation, and typhoid encephalopathy, etc., even if given appropriate antibacterial treatment, the mortality rate cannot be ignored [1]. In recent years, due to the abuse of antimicrobial drugs, the drug resistance of Salmonella has become more and more serious, and there are different degrees of resistance to one or more antimicrobial drugs, especially fluoroquinolones (the first choice) drug resistance, which brings clinical treatment Difficulty [2]. The pathogenicity of salmonella is related to its virulence factors. The pathogenicity of salmonella involves multiple virulence factors encoded by different genes, including virulence island genes (hilA, ssrB, marT, siiD, sopB, pagN, vexA), Virulence plasmid gene (icmF, spvB), pili operon virulence gene (pefA), and Cytotoxin (cdtB). These virulence factors help Salmonella to invade, multiply, exert virulence, and spread in a complex environment [3]. A variety of virulence genes are involved in the expression, and the higher the virulence gene carrying rate, the stronger the potential pathogenicity of Salmonella [4]. This study conducted a study on extra-intestinal Salmonella clinically isolated from the 903th Hospital of the Joint Logistics Support Force of the People's Liberation Army from 2016 to 2018, clarified its serotype distribution, antimicrobial resistance, and virulence gene distribution, and formulated preventive measures which provide a scientific basis for guiding the rational use of drugs in clinical practice.

PU-3451

田鼠巴贝虫颈部蛋白 2 的克隆、表达及蛋白特性分析

杨春利
中国人民解放军 903 医院

目的 为了获得田鼠巴贝虫颈部蛋白 2（RON-2），并对该蛋白特征进行分析。
方法 根据 PubMed 中田鼠巴贝虫颈部蛋白基因 1 已知序列，设计相应的引物，构建田鼠巴贝虫的动物模型，提取巴贝虫总 RNA，反转录，PCR 扩增该蛋白基因，构建重组质粒 pET30a-RON-2，异丙基-β-D-硫代半乳糖苷（IPTG）诱导表达。用 Ni+离子亲和层析柱纯化其重组蛋白，十二烷基磺酸钠-聚丙烯酰胺凝胶电泳（SDS-PAGE）鉴定其表达效果。
结果 成功确定田鼠巴贝虫棒状体蛋白基因，该基因该基因全长为 4443bp，只有 1 个开放阅读框架，可编码 1 480 个氨基酸。编码蛋白分子质量为 165.307 KDa，为分泌蛋白，含一个信号肽，4 个跨膜区，并含有较多抗原表位，并构建了重组质粒 pET30a-RON-2，SDS-PAGE 结果表明该蛋白基因在 Ecoli DHa 中获得良好的表达，经亲和层析纯化后，表达产物分质量约为 32.7KD 和 29.1KD。
结论 克隆表达了田鼠巴贝虫颈部蛋白，经纯化后获得较高纯度的重组蛋白，并对三级结构进行分析，为进一步研究该蛋白的结构和功能奠定了理论基础。

PU-3452

The Emergence of Multidrug-Resistant Candida duobushaemolnii : Using Whole-Genome Sequencing to Describe the Population Structure of Candida duobushaemolnii

Xinfei Chen、Meng Xiao、Xinmiao Jia、Xin Hou、Yingchun Xu
Peking Union Medical College Hospital

Background The emergence of a multidrug-resistant yeast, *Candida auris*, has drawn attention to the closely related species from the *Candida haemulonii* complex includeing *C. haemulonii*, *C. duobushaemulonii*, *C. pseudohaemulonii*, and *C. haemulonii var. vulnera*. The goal of this study was to investigate the genetic relationships and drug-resistance profiles among isolates of the *C. haemulonii* from different cities and to examine possible evidence of transmission if it existed.
Materials/Methods The12 *C. duobushaemulonii* isolates causing invasive fungal diseases were collected from nine tertiary hospitals through CHIF-NET. We used antifungal susceptibility testing and whole-genome sequencing (WGS) to investigate drug resistance and genetic diversity among isolates of *C. duobushaemulonii* from different geographic areas of China.
Results Between 2010 and 2017, 12 isolates of *C. duobushaemulonii* from China; In the China, 41.7% of *C. duobushaemulonii* was isolated from blood, and other invasive sites (Table 1). Phylogenetic analysis using SNPs called against the *C. duobushaemulonii* reference strain B09383. Genetic relationships among *C. duobushaemulonii* isolates are shown in (Figure 1). The average pairwise difference between the isolates was 691 SNPs (range 15–1273), and there was distinct phylogeographic population structure.
Three isolates, F4444, F4464 were different from each other by fewer than 15 SNPs. These two isolates were recovered from the same patients. In addition, two isolates, F4490, F4560, differed by fewer than 90 SNPs recovered from difference hospital. We observed high levels of susceptibility to amphotericin B among 12 tested Candida duobushaemulonii isolates: all had elevated MICs from 4μg/mL to >8μg/ ml. All isolates had elevated MICs of fluconazole ranging from 64 to 256μg/ml (Table 2). Interesting, these isolates don't have the known mutation in ERG11, only with synonymous mutation.
Conclusions Our results indicate that, although we are not observing the widespread of the *C. duobushaemulonii*, at least these isolates had elevated MICs of fluconazole. We need to investigated the antifungal-resistance mechanism.

PU-3453

下呼吸道感染常见病原菌耐药性分析

严纪梅
滨州医学院烟台附属医院

目的 收集所在医院 2019 年下呼吸道感染标本，分析主要病原菌构成和耐药特点,为本地下呼吸道感染的治疗和抗菌药物的应用提供参考。
方法 收集本医院 2019 年 1 月-2019 年 12 月下呼吸道感染病人的 8634 份痰标本,分离得到致病菌的数量是 2379,使用自动化仪器对病原菌实现鉴定和耐药检测（MIC 法）,并对病原菌分布和耐药率的数据进行分析处理。
结果 2379 株病原菌中，数量最多的细菌为肺炎克雷伯菌（K. pneumonia）、铜绿假单胞菌（P. aeruginosa）、鲍曼不动杆菌（E. cloacae）、白假丝酵母菌（C. albicans）、金黄色葡萄球菌（S. aureus）。G+菌共 216 株，占比为 9%，金葡菌共 156 株，占所有菌株数量的 7%,其次是肺炎链球菌、棒状杆菌、诺卡氏菌、溶血葡萄球菌。G-细菌共 1664 株,占总菌株 70%,真菌共 499 株,

占所有病原菌数量的 21.0%,在 2379 株病菌中，白假丝酵母菌共 259 株，占 11.0%。细菌耐药检测结果显示,糖肽类抗菌药物对和 SPN 的效果较好，没有发现耐药菌。除去鲍曼不动杆菌，对 G-菌效果较好的药物有阿米卡星（Amikacin，AMK）、碳青霉烯类（Carbapenems, CPMS）和头孢唑酮-舒巴坦（CSL）等。

结论 2019 年本院患者下呼吸道感染的病原菌以 G-为杆菌主，鲍曼不动杆菌对多种药物都表现出较高的耐药率，产超广谱内酰胺酶 ESBLs 细菌和 MRAS 值得注意。应对下呼吸道感染致病菌进行检测和耐药分析，及时发现问题并应用于临床和医院感染管理。

PU-3454

2019 年烟台地区小儿肺炎痰培养病原菌分布及耐药分析

李文文
滨州医学院烟台附属医院

目的 研究 2019 年本院小儿肺炎患者病原菌的分布及药物敏感性。

方法 对本院 410 例小儿肺炎患者进行痰培养以及药敏分析。

结果 410 例痰标本中检出细菌 109 株，阳性率 26.59%；革兰阴性杆菌 77 株（70.64%），革兰阳性杆菌 32 株（29.36%），检出的细菌依次为肺炎链球菌 30 株（27.52%）、卡它莫拉菌 45 株（41.28%）、流感嗜血杆菌 31 株（28.44%）、金黄色葡萄球菌 2 株（1.84%）、大肠埃希菌 1 株（0.92%）。以上细菌对常用的头孢类、亚胺培南、美罗培南敏感性较高，对青霉素、氨苄西林类药物耐药。革兰阴性菌对头孢类、红霉素、亚胺培南敏感性较高，对氨苄西林敏感性较低。

结论 本院的小儿肺炎患者培养的致病菌以革兰阴性杆菌为主，不同病种对抗菌药物存在差异。

PU-3455

The Emergence of Multidrug-Resistant Candida auris : Using Whole-Genome Sequencing to Describe the Population Structure

Xinfei Chen、Meng Xiao、Xinmiao Jia 、Xin Hou、Yingchun Xu
Peking Union Medical College Hospital

Background The emergence of a multidrug-resistant yeast, *Candida auris*, has drawn attention to allover the world. The goal of this study was to investigate the genetic relationships and drug-resistance profiles among isolates of the *Candida asuris* from different counties and to examine possible evidence of transmission if it existed.

Materials/Methods The 6 *Candida auris* isolates causing invasive fungal diseases were collected from one tertiary hospitals through CHIF-NET. We used antifungal susceptibility testing and whole-genome sequencing (WGS) to investigate drug resistance and genetic diversity among isolates of *Candida auris* from different geographic areas of China.

Results Between 2017~2018, 6 isolates of *Candida auris* from China; 5 (83%) of *Candida auris* was isolated from blood (Table 1). Phylogenetic analysis using SNPs called against the *Candida auris* reference strain B8441. Genetic relationships among *Candida auris* isolates are shown in (Figure 1). The average pairwise difference between the isolates was 1200 SNPs, and there was distinct phylogeographic population structure. Five isolates, F6410, F6412, F6414, F6416, F6418, F6420, were different from each other by fewer than 40 SNPs. These isolates These isolates were recovered from difference patients. In addition, one isolates, F6410 recovered from difference hospital different from each other by fewer than 40 SNPs. We observed high levels of susceptibility to amphotericin B among 6 tested Candida auris isolates: all had elevated MICs

from 2μg/ml to 4μg/ ml. All isolates had elevated MICs of fluconazole ranging from 256 to >256μg/ml (Table 2).
Conclusions Our results indicate that, we are observing the widespread of the *Candida auris* and these isolates had elevated MICs of fluconazole. We need to investigated the antifungal-resistance mechanism.

PU-3456

结核病的诊断与治疗及其研究进展

邹燕萍
中国人民解放军第一一七医院

目的 结核病（TB）是由结核分枝杆菌（MTB）引起的空气传播疾病，通常会影响肺部，导致严重的咳嗽，发烧和胸闷等。结核病也是世界范围内传染病最常见的死亡原因之一。尽管近期一系列的研究为结核病的传播，诊断和治疗提供了宝贵的见识，但要有效降低结核病的发病率并最终根除结核病，还有许多工作要做。结核病给世界范围内的公共健康带来了极大的压力，其在造成高死亡率方面仅次于艾滋病毒/艾滋病，引起了公共卫生领域和社会界的广泛关注。本文将从结核病的历史，流行病学分析，发病机理以及结核病免疫应答，治疗和控制等方面对其进行综合阐述。
方法 对目前国内外结核分枝杆菌进行回顾性分析。
结论 人们对结核病的认识从 19 世纪不断发展。然而，为了开发更加有效的治疗结核病的药物和疫苗，我们需要更全面地了解结核病的病理性免疫应答及其与免疫系统的相互作用。有研究表明，可以通过测量个体的转录特征，对疾病进行更个体化的监测。从而帮助减少 MDR 病例的数量，更好的替代 DOTS 疗法。值得注意的是，结核病自 19 世纪被发现以来便对公众健康构成了严重的威胁，但人们在对其的治疗研究等方面的进展一直是徒劳和缓慢的。在这场结核病作斗争的竞赛中，我们有必要从宏观角度对结核病有一个明确的了解。只有在社会各界的合作努力下，才能不断推进人们对结核病有新的认识，减轻结核病给全球带来的负担。

PU-3457

滨医附院 2017-2019 年感染铜绿假单胞菌的临床分布和耐药性分析

马静哲
滨州医学院烟台附属医院

目的 分析滨医附院 2017-2019 年间铜绿假单胞菌的临床分布和耐药性情况，为医院内感染监控提供参考数据，指导临床的合理用药。
方法 收集滨医附院 2017-2019 年间各临床科室送检的细菌培养标本，用常规办法对细菌进行分离培养，采用 VITEK MS IVD3.0 质谱仪鉴定病原菌，以及 Vitek2-Compact 全自动细菌药敏系统对病原菌进行药敏分析，并进行数据统计分析。
结果 2017-2019 年该院共分离 1029 株铜绿假单胞菌非重复菌株，其中临床分离痰标本最多，占 67.4%（694 株），其次为脓液占 7.1%（73 株）和分泌物占 5.9%（61 株）；在临床分布的情况中可以发现分布最多的为呼吸内科（18.0%）其次是泌尿外科（13.3%）和老年医学科（12.9%）；铜绿假单胞菌耐药率最高的是氨曲南（25.2%），耐药率最低的为阿米卡星（3.6%），而且调查发现，铜绿假单胞菌对碳青霉烯类药物的耐药率在一直在升高以及多重耐药铜绿假单胞菌的检出率也越来越高。
结论 耐碳青霉烯类铜绿假单胞菌的检出率呈上升趋势，结合药敏试验的结果，可以选择氨基糖苷类的妥布霉素和氟喹诺酮类的左氧氟沙星对铜绿假单胞菌进行抗感染治疗。

PU-3458

130 株阴沟肠杆菌耐药分析

贺莎莎
滨州医学院烟台附属医院

目的 研究医院内临床分离阴沟肠杆菌(ecl)的耐药情况，以及科室分布情况，为临床合理应用抗菌药物提供依据。
方法 收集医院 2019 年各临床科室分离阴沟肠杆菌(ecl)，采用美国 BD PHOENIX-100 全自动细菌鉴定/药敏分析系统进行菌株鉴定及药敏试验；血液培养采用法国梅里埃 3D 血培养仪；采用 WHONET5.6 软件对数据进行分析。
结果 阴沟肠杆菌对氨苄青霉素（AMP）、头孢菌素 V(CFZ)、头孢呋肟(CXM)、头孢西丁（CFX）、氨苄西林（AMP）/舒巴坦天然耐药，其次是头孢他啶(CAZ)、头孢曲松(CRO)、头孢哌酮(CFP)耐药率分别为 79.0%、28.7%、6.5%，氨苄青霉素(AMP)，替卡西林(TIC)，哌拉西林(PRL)耐药率分别为 98.9%，45.6%，32.3%，对阿米卡星(AK)等氨基糖苷类耐药率 83.6%。
结论 医院分离的阴沟肠杆菌骨外科检出率最高。除天然耐药的抗菌药物外的常用抗菌药耐药率均低于 30%，临床医生可以根据药敏试验选择抗菌药物。

PU-3459

铜绿假单胞菌的临床分布和耐药性分析

王熠
滨州医学院烟台附属医院

目的 了解医院内铜绿假单胞菌的临床分布和耐药性，对医院临床合理用药进行指导，从而能够及时切断多重耐药菌株的传播。
方法 收集 2018 年 6 月-2020 年 5 月医院住院患者分离的 280 株不重复铜绿假单胞菌，然后分析该菌的临床分布和耐药性。
结果 分离的 280 株铜绿假单胞菌主要分布在 ICU、呼吸内科、神经内科、神经外科、感染科等。其中标本主要来自痰液。根据药敏结果显示，复方新诺明的耐药率是最高的，占 80.4%，其次是哌拉西林，占 57.1%，而亚胺培南和美罗培南的耐药率是最低的，分别是 6.1%、5.4%。
结论 铜绿假单胞菌作为院内感染的主要机会致病菌之一，并且它的耐药机制较为复杂，并还具有多重耐药的特性。因此，应加强铜绿假单胞菌临床耐药性的监测，在临床治疗中，及时考虑其药敏结果，合理使用抗菌药物。

PU-3460

某儿童医院 2017 年-2019 年金黄色葡萄球菌的分布与耐药性分析

逯思显
呼和浩特金域检验所有限公司

目的 通过对某儿童医院 2017-2019 年就诊儿童中感染的金黄色葡萄球菌进行统计分析，加强对金黄色葡萄球菌耐药性的监测，从而为儿科合理使用抗生素提供更好的依据。
方法 回顾性分析某儿童医院 2017-2019 年各类临床标本中分离得到的金黄色葡萄球菌共 6387 株，利用 WHONET 5.6 系统收集 VITEK-2 Compact 全自动细菌鉴定药敏仪得到的金黄色葡萄球菌的药敏实验结果。

结果 某儿童医院检验中心微生物室在 2017-2019 年共分离得到金黄色葡萄球菌 6387 株，其中耐甲氧西林金黄色葡萄球菌（MRSA）1530 株（24.3%），其主要标本来源为痰液及咽拭子，约占 50.9%。药敏结果显示，检出的金黄色葡萄球菌对青霉素 G 的耐药率最高，其次为红霉素、苯唑西林、克林霉素、四环素，耐药率依次为 92.5%、50.1%、24.5%、22%、19%，对庆大霉素、利福平、左旋氧氟沙星、莫西沙星、呋喃妥因、利奈唑胺、万古霉素、替加环素高度敏感，敏感率均大于 95%，且目前尚未检出有对利奈唑胺、替加环素中介或耐药的菌株。
结论 某儿童医院检出的金黄色葡萄球菌主要来源于痰液、咽拭子，提示该院金黄色葡萄球菌感染的患儿以呼吸道感染多见，检出主要以 MSSA 为主，但金黄色葡萄球菌及 MRSA 的检出率均呈现出逐年上升的趋势，且对苯唑西林、庆大霉素、环丙沙星、左旋氧氟沙星、莫西沙星的耐药性也有所上升，提示临床上应根据药敏试验结果合理使用抗生素，加强儿童感染金黄色葡萄球菌的耐药监测，以减缓耐药菌株的出现。

PU-3461

腹透相关性新型隐球菌腹膜炎 1 例报道

陈士颖、杨爽
上海交通大学医学院附属仁济医院(东院)

腹透相关性腹膜炎是腹膜透析最常见的并发症，也是导致腹膜透析技术失败和患者死亡的主要原因。导致腹膜炎的致病菌中，50%以上为革兰阳性细菌，最常见凝固酶阴性的葡萄球菌和金黄色葡萄球菌。真菌性腹膜炎只占 3%-6%，但由真菌导致的腹膜炎死亡率达 20-30%。成人真菌性腹膜炎最常见的致病菌为酵母菌，70%-90%为念珠菌属。由隐球菌引起的腹透相关性腹膜炎比较罕见。现报道一例由新型隐球菌感染致腹透相关性腹膜炎，最终发展为散播性隐球菌病的病例。

PU-3462

肠道菌群与动脉粥样硬化

王新铭
哈尔滨医科大学附属第一医院

肠道菌群平衡指的是在肠道中所存在的多种微生物之间所保持的比例的，动态的，相对的平衡。动脉粥样硬化的特点是受累动脉的病变从内膜开始，先后有脂质积聚、纤维组织增生和钙质沉着，并有动脉中层的逐渐退变和钙化，在此基础上继发斑块内出血、斑块破裂及局部血栓形成。近年来越来越多的研究表明肠道菌群与心血管疾病关系密切，肠道菌群失衡极有可能是引起冠状动脉粥样硬化性心脏病的高危因素。

PU-3463

血培养病原菌分布和药敏分析

王雅江
雅安市人民医院

目的 统计四川省雅安市地区三甲医院市人民医院从 2018 年 1 月到 2018 年 12 月共计一年时间内的所有住院病人和门诊病人血培养病原菌鉴定结果并根据病原菌的种类进行药敏试验，最终指导临床合理的经验用药。

方法 使用 BacT/ ALERT 3D240 全自动血培养仪对血培养瓶进行培养，仪器报阳后立即转种并做革兰染色涂片，用布鲁克质谱仪进行血培养病原菌的鉴定，用 VITEK2 COMPACT 进行药敏试验，采用 WHONET 5.6 软件进行药敏试验分析。
结果 在该次试验中，总计 12541 瓶培血培养瓶标本中有 985 瓶报阳，共计 498 人次阳性，革兰阳性菌有 149 人次，构成比约为 29.92%，主要为金黄色葡萄球菌。革兰阴性菌有 337 人次，构成比约为 67.67%，主要为大肠埃细菌和肺炎克雷伯菌。真菌 12 人次，构成比约为 2.41%，均为酵母菌属。金黄色葡萄球菌的敏感性主要体现在对万古霉素、利奈唑胺、替加环素 100%的敏感，对红霉素的耐药率达到 62.31%，对青霉素的耐药率更高为 94.51%。肺炎克雷伯菌和大肠埃希菌在抗菌药物的敏感性上高的多为阿米卡星和亚胺培南等，在耐药性的表现上则是复方新诺明和头孢曲松等耐药。
结论 该次血培养试验统计中病原菌种类复杂，主要病原菌为革兰阳性球菌和革兰阴性杆菌，真菌查出率很低，其中又以大肠埃希菌（44.58%）肺炎克雷伯菌（10.04%）以及金黄色葡萄球菌（4.22%）构成比最高，根据血培养阳性鉴定后病原菌的药敏试验结果，指导临床合理经验用药和避免抗菌药物滥用有重要临床意义。

PU-3464

围产期生殖道分泌物无乳链球菌分布状况及耐药分析

徐红云、刘春林、陈弟、马众仙、杨宝瑞、余林、袁文丽、吴广娟、赵珠、杨文波
云南大学附属医院/云南省第二人民医院

目的 探讨围产期孕妇阴道分泌物无乳链球菌（GBS）的分布状况及耐药性分析，为临床预防性治疗提供依据。
方法 回顾性分析 2016 年 1 月-2020 年 12 月围产期孕妇送检的 7218 例阴道分泌物进行 GBS 筛查及体外药敏试验的结果。
结果 7218 例围产期孕妇阴道分泌物，共分离到 472 株 GBS，检出率为 6.54%，GBS 对青霉素、氨苄西林及万古霉素 100%敏感，对克林霉素、红霉素的耐药率在 60 %以上。
结论 围产期孕妇 GBS 的筛查对围产期孕妇感染诊断中具有重要的意义，GBS 的筛查对于临床医师及时进行干预，对于预防产妇和新生儿并发症的发生，减少婴儿及产妇的感染有非常重要的意义。针对携带无乳链球菌的围产期孕妇预防用药，可以首选青霉素，对于青霉素过敏者及其他细菌感染可根据药敏结果选用合适抗菌药物。

PU-3465

2019 年到 2020 年肺炎克雷伯菌的耐药性和应对方法

罗雅文
雅安市人民医院

目的 根据 2019 年到 2020 年一整年雅安市人民医院微生物室培养出肺炎克雷伯菌耐药的耐药分析研究，并探讨其战略，以提供临床依据。
方法 将痰液标本接种在琼脂培养基上并进行分离培养、 鉴定和药敏试验。
结果 检出肺炎克雷伯菌 535 例，敏感率在百分之九十以上的药物有：阿米卡星、哌拉西林/他唑巴坦、环丙沙星、头孢他啶、庆大霉素、头孢替坦、氨曲南、厄他培南、亚胺培南、妥布霉素、左旋氧氟沙星。其中耐药率最高的药物是氨苄西林，耐药率达到了 69.7%，其次为呋喃妥因，耐药率为 33.6%。对氨苄西林/舒巴坦、头孢唑林、头孢曲松、复方新诺明的耐药率为 14%-20%。
结论 肺炎克雷伯菌在临床上的耐药趋势越来越严重，我们应对其耐药趋势进行监测，及时控制耐药菌的流行传播。

PU-3466

不同痰液标本结核杆菌染色结果比较

杨名宇
雅安市人民医院检验科

目的 了解不同时间段,不同性状痰标本结核杆菌抗酸阳性率的大小，能更好的选择痰标本进行抗酸染色,节约成本。
方法 采用抗酸染色对 3756 例痰液标本进行染色镜检，痰液标本按时间和性状的不同分别分类，比较不同时间，不同性状痰液阳性率高低。
结果 对 3756 份标本进行镜检，其中 437 份培养为阳性，阳性率为 11.0%。按照咳痰时间进行分类，痰染色阳性率由高到低排序结果为：晨痰（16.0%）大于夜间痰（11.0%）大于即时痰（7.0%），三者比较有显著差异。按痰液性状进行分类，痰染色阳性率由高到低排序结果为：干酪痰阳性率（21.9%）大于粘液痰阳性率（15.0%）大于血痰阳性率（12.1%）大于唾痰阳性率（9.6%），四者相比同样有明显差异。
结论 痰涂片染色从时间上最佳选择是晨痰，性状上最佳选择是干酪痰。

PU-3467

新生儿无菌体液感染的细菌耐药性及危险因素分析

向丹[1]、张秀瑜[2]、何霞[1]
1. 雅安市人民医院检验科
2. 重庆医科大学附属第二医院检验科

目的 探讨新生儿无菌体液感染的细菌耐药性及危险因素，为临床合理用药、科学诊治提供依据。
方法 选取 2017 年 1 月-2020 年 1 月雅安市人民医院收治的 114 例无菌体液感染的新生儿作为研究对象，回顾性分析其病原学特点、临床特征及危险因素。
结果 114 例新生儿无菌体液感染以凝固酶阴性葡萄球菌最常见，低出生体重儿、羊水污染、入住暖箱、联合使用抗菌药物较非无菌体液感染患儿多见（P＜0.05），无菌体液感染患儿住院时长、抗生素使用时间较非无菌体液患儿长（P＜0.05）；单因素分析显示性别、羊水污染、入住暖箱、使用激素、联合使用抗菌药物、留置胃管、气管插管、抗菌药物使用时间（＞14 天）、住院时长（＞7 天）是新生儿无菌体液感染的危险因素（P＜0.05）；多因素分析提示使用激素、安置胃管、气管插管为新生儿无菌体液感染的独立危险因素（P＜0.05）。
结论 新生儿无菌体液感染以凝固酶阴性球菌为主，对常用抗菌药物敏感性较高；使用激素、安置胃管、气管插管为新生儿无菌体液感染的独立危险因素。

PU-3468

临床分离大肠杆菌的广泛耐药性及其 β-内酰胺类基因对其表型的作用

张旭华
山东大学第二医院

从山东大学第二附属医院的一名患者的尿液样本中分离出了一株广泛耐药（XDR）的大肠杆菌 W60。药敏实验研究了其 XDR 表型的遗传基础；全基因组测序以鉴定大肠杆菌 W60 中的遗传结构；进一步的克隆分析以鉴定 β-内酰胺/BLI 组合抗性的决定因素。大肠杆菌 W60 对几乎所有测试的抗生素都有抗性，包括所有常用的 β-内酰胺/BLI 组合。基因组结构分析表明，两个新的可转移质粒是

耐药表型的原因。进一步的遗传分析表明，blaNDM-5 导致对 β-内酰胺/BLI 组合的高抗性，这可通过共表达 bleMBL 来增强。pECW602 带有一个截短的 blaTEM，由于 N 端信号肽编码区的缺失而无法正常工作。这项研究得出了几个重要的结论大肠杆菌 W60 的 XDR 表型可归因于可转移的多药耐药质粒的存在。NDM-5 对 β-内酰胺/BLI 组合具有很高的抵抗力；bleMBL 的共表达增强了 NDM-5 引起的耐药性；TEM 型 β-内酰胺酶的信号肽对其分泌和功能至关重要。这项工作的发现表明了可转移的多重耐药性质粒和金属 β-内酰胺酶的危险性，在多重耐药菌的分析和治疗中应引起重视。

PU-3469

某院老年患者感染肺炎克雷伯菌的临床分布及耐药性分析

钟杰
中国人民解放军联勤保障部队第九二一医院

目的 探讨某院老年患者感染肺炎克雷伯菌的临床分布及耐药性情况，为临床用药和控制老年患者该菌的感染提供依据。
方法 采用回顾性分析，选取 2018 年 1 月至 2020 年 12 月本院≥65 岁的老年患者分离的 222 株肺炎克雷伯菌作为研究对象,对肺炎克雷伯菌进行科室分布、耐药性等分析。
结果 2015 年-2017 年共检出肺炎克雷伯菌 222 株，科室分布中呼吸内科(19.36%)、心血管内科(16.67%)、ICU(13.51%)居临床科室的前三位。送检标本中痰液标本的检出率最高，为 80.63%，其次是中段尿标本，检出率为 10.36%。药敏结果显示，老年患者分离的肺炎克雷伯菌对碳青霉烯类抗生素的耐药率最低，喹诺酮类药物耐药率在 16%左右，氨基糖苷类药物耐药率为 0.45%~11.26%，硝基呋喃类中的呋喃妥因耐药率高达 65.32%。
结论 从本院老年患者上分离得到的肺炎克雷伯菌主要侵袭上呼吸道和泌尿道，其主要分离自该院的呼吸内科，每年的耐药率无明显变化趋势且低于全国水平，在临床治疗上美洛培南可作为该院老年患者严重感染肺炎克雷伯菌时的首选药物。

PU-3470

肺部曲霉菌感染采取微生物检验的诊断效果

高伟
雅安市人民医院检验科

曲霉菌是导致肺部感染比较常见的病原菌，可根据其致使正常人患病的能力有致病性与条件致病性之分，临床上肺部曲霉菌感染多数继发于肺部疾病基础上，患者多表现为咳嗽、发热、呼吸困难等，可分为三大类型：过敏性支气管肺曲霉病、菌球型肺曲菌病、侵袭性肺曲霉菌病[1]。该疾病根据患者临床表现有不同的治疗方式，因此为了使患者采取最佳的治疗方案，疾病的诊断是至关重要的，本次实验对象选取 2018 年 6 月至 2020 年 6 月期间本院肺部曲霉菌感染患者，参与人数 46 例，针对肺部曲霉菌感染患者实行微生物检验，分析该方法诊断效果

PU-3471

慢性乙型肝炎免疫清除期患者血清 HBV RNA 与其它血清病毒学指标相关性分析

高玉华
郑州大学第一附属医院

目的 探索慢性乙型肝炎免疫清除期患者血清 HBV RNA 与 HBV DNA、表面抗原（HBsAg）、e 抗原（HBeAg）和 ALT 等指标相关性。
方法 收集 25 例慢性乙型肝炎免疫清除期患者血清样本，定量检测患者血清 HBV RNA、HBV DNA、HBsAg、HBeAg 和 ALT 等指标，分析血清 HBV RNA 与其它指标的相关性。
结果 25 例免疫清除期患者血清 HBV DNA 均值为 7.63 log IU/ml，而血清 HBV RNA 均值也高达 5.32 log IU/ml，血清 HBsAg 和 HBeAg 分别为 4.01 log IU/ml 和 2.38 log S/CO。相关性分析表明，血清 HBV RNA 与血清 HBsAg、HBeAg 和 HBV DNA 均有较强的相关性，r 值分别为 0.729、0.650 和 0.709，P 均<0.001，而血清 HBV RNA 与 ALT 之间无相关性（r=-0.113，P=0.591）。
结论 免疫清除期患者 HBV 病毒复制、转录和表达均处于活跃状态，血清 HBV RNA 与血清 HBsAg、HBeAg 和 HBV DNA 均有较强的相关性。

PU-3472

2451 例儿童支气管肺泡灌洗液分离细菌的特点及耐药性分析

甄杨
首都医科大学附属北京儿童医院

目的 研究儿童支气管肺泡灌洗分离细菌分布及耐药情况，指导临床合理用药。
方法 回顾性分析 2016 年 1 月-2016 年 12 月，临床送检 2451 例支气管肺泡灌洗液培养出细菌种类及耐药情况。
结果 共分离出病原菌 623 株，革兰阴性菌 386 株，占 62.0% ，革兰阳性菌 237 株，占 38.0%。分离革兰阴性杆菌排名依次为流感嗜血杆菌、铜绿假单胞菌、鲍曼不动杆菌、肺炎克雷伯菌、卡它莫拉菌、大肠埃希菌、阴沟肠杆菌；分离革兰阳性杆菌排名依次为肺炎链球菌、金黄色葡萄球菌。未发现金黄色葡萄球菌对万古霉素和利奈唑胺的耐药菌株，耐甲氧西林金黄色葡萄球菌（MRSA）24 株，占 30.8％。青霉素中介的肺炎链球菌（PISP）和青霉素敏感肺炎链球菌（PSSP）比例分别 52.8％为和 40.2％。流感嗜血杆菌 β-内酰胺酶阳性率为 62.1% 。肺炎克雷伯菌中 25 株细菌对碳青霉烯类耐药（CR-KPN）占 47.2％，并检测有 81.1％的菌株产 ESBLs。铜绿假单胞菌对亚胺培南和美罗培南耐药率分别为 46.7％和 42.2％.鲍曼不动杆菌对头孢哌拉、美罗培南和庆大霉素的耐药率较高，分别为 73.8％、73.8％、72.5％，对其他抗菌药物的耐药率在 70%以下。
结论 支气管肺泡灌洗液主要病原菌的特点主要是革兰阴性杆菌，多重耐药现象严重，合理用药是控制感染的关键。

PU-3473

梅毒螺旋体如何逃避宿主的免疫反应

唐云、刘双全
南华大学附属第一医院

梅毒是由梅毒螺旋体苍白亚种（Treponema pallidum；TP）引起的慢性感染性疾病。由于其生长缓慢，感染具有较长的潜伏期，因此具有明显的早期和晚期特征。在没有干预的情况下，有机

体通过血液和中枢神经系统广泛传播，随后产生不同的感染临床表现，因此其临床表现、治疗措施都因自然感染史而异。梅毒是一个重大的全球健康问题。在一些低收入的国家，梅毒是一个较为普遍的问题；而在一些高收入国家，梅毒似乎呈现一种周期性的特性。梅毒周期性复发的模式发生在10-15 年的时间内，其原因要么是未能努力维持控制措施，增加风险行为（such as crack-cocaine use，男男性行为者），要么是部分宿主对感染的保护性免疫增强和减弱。免疫力的存在对传染病的动力学有重要影响。尽管梅毒螺旋体在感染者中可以引发了强烈的免疫反应，早期梅毒患者的血液和其他体液中通常都有致病性的梅毒螺旋体，这表明 TP 发展了免疫逃逸策略。多年来，梅毒螺旋体对特异性抗体结合的固有抵抗力引起了梅毒研究人员的注意，因为这一体外现象与体内梅毒螺旋体的免疫逃避直接相关。其他人已经提出了几种机制来解释梅毒螺旋体的持久性，包括细胞内位置，停留在免疫特权部位，局部免疫反应过早下调，以及不能结合固定或中和抗体，可能是由于缺乏表面暴露的抗原。本文主要就梅毒螺旋体在体内形成的免疫反应以及如何逃避机体的免疫反应作出论述。

PU-3474

嗜水气单胞菌致眼内感染

郭建壮
山东第一医科大学第一附属医院（山东省千佛山医院）

嗜水气单孢菌是一种新的能够导致肠道疾病的细菌，目前已被纳入了腹泻病原菌的常规检测中，其中食品卫生检验部门也对此菌进行感染检测，同时也是导致院内感染的细菌。此菌是一种能够导致人-畜-鱼共患病的病原菌，具有多种不同的致病基因，同时具有相当的毒力和广泛的宿主感染能力[1]。

嗜水气单孢菌在人类感染中以胃肠感染最为常见，多为急性肠胃炎，其发病可能与食物中毒或引用被污染的水有关；发病多以爆发或流行为常见形式[2]。外伤感染的几率和败血症的几率远低于胃肠感染。帮助临床详细了解嗜水气单胞菌的生活习性及发病原因、药物敏感性协助临床对该菌所致感染的治疗及预防。

PU-3475

Distribution of type VI secretion system (T6SS) in clinical Klebsiella pneumoniae strains and its potential relationship with virulence and drug resistance

Yang Liu 、si chen
First Affiliated Hospital of Nanchang University

The type VI secretion system (T6SS) in K. pneumoniae strains isolated from the bloodstream, intestinal, the pyogenic liver abscess has been reported. Here we aimed to characterize T6SS in clinical K.pneumoniae isolates with all kinds of specimens and to investigate the potential association of T6SS with virulence and drug resistance. The frequency of T6SS genes among the clinical K. pneumoniae isolates was 72.2%. The hcp-positive isolates displayed higher resistance to piperacillin-tazobactam, ciprofloxacin, levofloxacin, meropenem than the hcp-negative isolates(P<0.05). The hcp-positive isolates formed significantly more biofilm mass than the hcp-negative isolates(mean±standard deviation [SD], 0.3±0.09 vs.0.16±0.06; P< 0.01). Compared to the hcp-negative isolates, the hcp-positive isolates had a higher frequency of virulence genes(rmpA, fimH, entB, kfu, ybtS) and the pLVPK-like plasmid(P<0.05). In conclusion, the prevalence of the type VI secretion system is high in clinical K.pneumoniae isolates in a Chinese

teaching hospital. T6SS-positive strains show higher biofilm-forming activity with highly drug resistance and exhibit higher virulence.

PU-3476

结核γ—干扰素酶联免疫法释放试验结果及影响相关因素分析

徐宁
云南省第一人民医院

目的 目前结核病诊断方法中，细菌学检查是诊断结核的金标准，但是阳性率较低，结核菌培养耗时长，对肺外结核的诊断阳性率更低，影像学、TST、抗体检测、分子诊断方法等在敏感性和特异性方面均都存在一定的局限性，近年来以 T 细胞免疫为基础的 γ 干扰素释放试验（IGRA）被证实在结核分枝杆菌感染检测中具有较好的敏感性和特异性，本研究针对 γ-干扰素酶联免疫法释放试验结果及影响因素进行探讨。
方法 纳入 2019 年 1 月至 2019 年 12 月云南省第一人民医院门诊及住院患者，且经相关病理及细菌学检查和临床转归而最终证实的结核感染患者 516 例为阳性组，而阴性组则是疑似结核，最终通过其他检查排除结核患者 444 例，探讨 γ-干扰素释放试验(IGRA)临床应用的准确性和特异性，以及实验的影响因素。
结果 干扰素试验结果和最终病理确诊结果之间比较 p 值<0.001 为差异有统计学意义，在年龄、干扰素释放量、淋巴细胞、CRP、单核细胞等方面差异有统计学意义（p<0.05）。
结论 γ-干扰素与病理结果有很高的一致性，可作为临床传统影像及病理判断结核方法的有力补充，年龄、干扰素释放量、淋巴细胞、CRP、单核细胞等都是实验结果的影响因素。

PU-3477

Current status of laundry management in 4,379 healthcare centers in Guangdong province, Southern China

Dianrong Zhou
Guangdong general hospital

Objectives Healthcare textile (HCT) associated infections are common, and many developed countries have implemented complete laundry outsourcing standard procedures. However, few data about healthcare textile management are available from the developing world. Study design: we conducted a census to determine the state of healthcare textile management in Guangdong province, China.
Methods The Guangdong Health Committee (GDHC; formerly the Guangdong Ministry of Health) and the Guangdong General Hospital-associated Infection Quality Control Center (GDHICC) organized all of the City Hospital Infection Quality Control Centers to hold a census about the stage of HCT management through a real-name questionnaire survey.
Results A total of 4,374 healthcare centers from 21 cities in Guangdong participated in the survey. It consisted of 213 (4.87%) tertiary hospitals, 499 (11.41%) secondary hospitals, and 3,662 (83.72%) primary and lower healthcare centers. Out of the participants 3,674 (84%) mainly washed in healthcare centers, 507 (11.59%) subscribed to laundry outsourcing, and 193 (4.41%) used the two modes. Healthcare laundries were managed and supervised by different departments in different healthcare centers, and no department was specifically responsible for HCT management. This survey included 3,867 healthcare laundries and 700 commercial laundries. According to the Chinese national standards, commercial laundries were better than healthcare laundries in quality control.
Conclusions Our study showed that a small number of healthcare laundries were outsourced. However, the quality control of healthcare laundries was not complete, and no professional

institutions were in charge of supervision. Basic healthcare laundries should be reintegrated, and regional laundries should be established.

PU-3478

基于单细胞拉曼的尿路致病菌耐药表型与基因型测定方法

屈丽平[1]、朱鹏飞[2]、徐健[2]、周宏伟[1]
1. 南方医科大学珠江医院
2. 中国科学院青岛生物能源与过程研究所

抗生素敏感性由抗生素暴露的表型反应决定，是临床决策治疗多种尿路致病菌和鉴定耐药标志物的关键。传统的金标准培养法检测药敏均依赖于耗时的细菌分裂增殖过程，只能反映细菌的生长；而基于群体耐药基因检测等分子诊断技术仅能推断耐药可能性，无法准确反映耐药表型。单细胞拉曼光谱以免标记和非侵入性的方式、根据细胞特征的"生化指纹"图谱，来快速识别病原体，同时，因重水标记呈现的拉曼光谱中氘峰替换率与细胞代谢活性线性相关，可实现细菌耐药性快速检测及其细胞间异质性分析。然而，由于微生物多样性、临床样本基质复杂性以及低细菌负荷，直接从临床样本检测药敏仍然存在巨大挑战。同时，单细胞异质性耐药也一直未在临床样本中被证实。因此建立单细胞精度的耐药表型与基因型耦合的研究方法，对于探究原位临床样品中耐药产生原因及其传播机制至关重要。本研究以全球首台"临床单细胞拉曼药敏快检仪"（CAST-R）在尿路感染致病菌中的应用为切入点，结合卷积神经网络建立了 13 种常见模式菌分类模型及方法，平均分类准确率为 94.7%。基于重水标记拉曼技术，结合重水延迟效应及相对代谢活性指标建立了大肠杆菌针对左氧氟沙星的快速药敏快检方案及评价阈值，进一步在 3h 内实现了临床尿液样本原位药敏快检。基于 D_2O-RAGE-Seq 策略可同时揭示目的单细胞的耐药表型和基因型，发现左氧氟沙星耐药程度与突变位点数目相关，且单细胞间基因型存在异质性，从而在单细胞层面揭示了临床样品中原位基因型的多态性。这种快速、精确和完整的解决方案为个体定制抗生素治疗和改进抗菌管理奠定了基础。

PU-3479

2017-2020 年南京医科大学第一附属医院血培养病原菌分布及耐药性分析

范坤、刘成成
江苏省人民医院（南京医科大学第一附属医院）

目的 分析 2017-2020 年南京医科大学第一附属医院血培养样本病原菌分布情况及耐药特点，为临床抗感染治疗经验性用药提供依据。
方法 采用 VITEK-2 Compact 全自动微生物分析系统对血培养样本中分离的病原菌进行鉴定及药敏试验，分析其分布特点和耐药情况。
结果 2017-2020 年血培养共分离出病原菌 3799 株，检出病原菌革兰阴性杆菌占 58.75%（2232/3799），革兰阳性球菌占 35.96%(1366/3799)，真菌占 4.61%(175/3799)，其余细菌占 0.68%（26/3799）；排名前 3 位的病原菌依次为大肠埃希菌、肺炎克雷伯菌和金黄色葡萄球菌。大肠埃希菌对亚胺培南和美罗培南耐药率较低，分别是 2.1%和 1.9%，对氨苄西林，头孢唑林和头孢呋辛耐药率较高，分别是 92.5%、73.5%和 72%；肺炎克雷伯菌对头孢替坦和阿米卡星耐药率较低，分别是 32.8%和 22%，对氨苄西林、头孢唑啉和氨苄西林/舒巴坦耐药率较高，分别是 91.1%、58.7%和 58.5%；金黄色葡萄球菌对利奈唑胺和万古霉素敏感性较高，未发现耐利奈唑胺和万古霉素的金黄色葡萄球菌，对红霉素，克林霉素和青霉素的耐药率较高，分别是 53.8%，49.8%和 39.1%。

结论 医院血培养样本中分离病原菌种类多样，且对常用抗菌药物耐药较为严重，临床应加强血流感染病原菌的耐药监测，合理使用抗菌药物。

PU-3480

诺卡菌所致肺炎并文献分析

马建萍
山东第一医科大学第一附属医院（山东省千佛山医院）

目的 通过对诺卡菌所致肺炎患者的情况分析为临床对诺卡菌肺炎的治疗提供理论支持。
方法 通过实验介绍及文献回顾分析，对诺卡菌进行描述及药敏实验结果分析；阐述诺卡菌的生活习性及药敏特点。
结果 诺卡菌属于条件性致病菌，在环境中广泛存在，易对免疫力低下患者造成感染，诺卡菌肺炎是最常见表现。对复方新诺明、碳青霉烯类抗生素敏感，治疗时间较长。
结论 鼻吸入诺卡菌是最常见的进入体内方式，大多数感染累及肺部其严重程度不一，肺诺卡菌病临床常见，极少会发展为重症肺炎。

PU-3481

泛耐药鲍曼不动杆菌肺部感染的风险因素与抗菌药物治疗方案分析

周典蓉
广东省人民医院

背景 泛耐药的鲍曼不动杆菌是院内感染重要的病原菌，而肺部是鲍曼不动杆菌最常见的分离部位，严重威胁了住院病人的疾病预后。
目的 本次研究针对主要就泛耐鲍曼不动杆菌肺部感染的临床分布特征及危险因素相关问题进行分析研究。同时，调查泛耐鲍曼不动杆菌的药敏结果、临床治疗用药及患者预后情况，为有效防控医院感染和临床诊治提供参考依据。
方法 收集我院 2018 年 2019-2020 年所有住院患者病例下呼吸道标本分离出泛耐鲍曼不动杆菌的病例，剔除重复例数及定植菌株，采用病例回顾性分析的研究方法,系统阅读病例资料并进行研究。
结果 临床科室分布主要集中于危重病监护室，有 108 例（51.4%）；药敏试验结果 PDRAB 对大多数常用抗菌药物呈现高水平耐药，其中对碳青霉烯类、哌拉西林、头孢曲松等抗菌药物的耐药率均达到 100%。感染 PDRAB 的患者存在多种危险因素，包括长时间住院、基础疾病、侵袭性操作、入住危重病监护室、糖皮质激素的使用、抗菌药物的使用、三种以上多药联用及长期使用抗菌药物等等。其中呼吸道疾病、碳青霉烯类、喹诺酮类、β-内酰胺抑制剂、三种以上多药联用、留置引流管是感染 PDRAB 的独立危险因素。临床治疗感染 PDRAB 的患者使用最多的抗菌药物是替加环素联合舒巴坦合剂，有 27 例，好转率为 63.0%。感染 PDRAB 的临床治疗好转率为 50%，死亡率 27.6%。
结论 由 PDRAB 菌株标本分离情况可看出，主要来自呼吸道标本，分离自危重病监护室的比例最高，呼吸道疾病、碳青霉烯类、β-内酰胺抑制剂、喹诺酮类、三种以上多药联用、留置引流管是感染 PDRAB 的独立危险因素，通过分析 PDRAB 的药敏数据可得出，PDRAB 对碳青霉烯类、哌拉西林、头孢曲松等抗菌药物的耐药率达到 100%，替加环素联合舒巴坦合剂是临床治疗感染 PDRAB 使用最多的抗菌药物，感染 PDRAB 的死亡率较高，预后差。

PU-3482

新疆塔城地区肠杆菌科细菌对 β-内酰胺类药物的耐药状况分析

杨文婧
中国医科大学

目的 分析新疆塔城地区肠杆菌科细菌对 β-内酰胺类药物的耐药状况，了解常规药敏实验结果与特殊表型检测实验之间的差异。
研究方法 使用自动化仪器法进行药敏试验，使用纸片扩散法对特殊耐药机制表型进行检测。
结果 本研究收集了 2019-2020 年新疆塔城地区人民医院各类标本中分离出的肠杆菌科细菌共 750 株，产 ESBLs 的大肠杆菌有 132 株，占大肠杆菌总数的 41.3%，肺炎克雷伯菌为 61 株，占 25.5%
结论 塔城地区大肠埃希菌产 ESBLs 菌株检出率高于肺炎克雷伯菌，肠杆菌属细菌对头孢噻肟、头孢西丁耐药率高于 90%，应引起临床重视

PU-3483

高尿酸血症人群的肠道菌群特征

王展强、周宏伟
南方医科大学珠江医院

目的 探究高尿酸血症人群的肠道菌群的紊乱特征。
方法 采用多阶段整群随机抽样的方法(PPS)在广东省 14 个监测点按照人口规模抽取一定数量的志愿者进行调查，现场采集所有志愿者的新鲜粪便标本和通过问卷调查收集所有志愿者的相关信息，采用 illumina 高通量测序平台对志愿者的粪便进行 16S rRNA 测序，用 qiime 1.9.1 和 R 语言分析高尿酸血症人群的肠道菌群紊乱特征。
结果 与健康人群相比，高尿酸血症人群中肠道菌群 α 多样性降低，两者的 β 多样性存在差异，且肠道菌群结构上的差异不受性别的影响；LEfSe 分析和 MaAsLin 分析提示与健康人群相比，高尿酸血症人群的肠道菌群中 *Enterobacteriaceae*、*Oxalobacteraceae* 等细菌的相对丰度升高，而 *Ruminococcaceae*、*Bacteroides*、*Prevotella* 等细菌的相对丰度下降。
结论 高尿酸血症人群的肠道菌群结构与非高尿酸血症人群存在差异，在高尿酸血症人群的肠道菌群中机会致病菌的相对丰度升高，而常见定植菌的相对丰度下降。

PU-3484

2015-2020 年山东省某三甲综合医院临床分离肺炎链球菌的分布和耐药性变迁

张志军、赵书平
泰安市中心医院

目的 了解医院临床分离肺炎链球菌(Streptococcus Pneumonia，SP)的分布情况及耐药性变迁，为临床合理使用抗生素提供实验室依据。
方法 回顾分析山东省泰安市中心医院 2015-2020 年临床分离的肺炎链球菌的分布情况，纸片扩散法进行药物敏感性试验（青霉素、美罗培南、头孢噻肟、头孢曲松和头孢吡肟采用 E-test 试验法），应用 WHONET 5.6 软件对结果进行统计和分析。
结果 六年间，临床标本中共分离出 SP 菌株 2095 例；标本类型最主要来源于呼吸道，所占比例为 88.74%，其次为血液（2.24%）；以冬季分离出菌株为主，所占比例为 39.24%；年龄分布方面，以 0-14 周岁的儿童分离出为主，比例为 63.10%；同时科室分布主要为儿内科病房（60.76%）；

药敏结果显示：近六年，未发现对万古霉素、利奈唑胺耐药的 SP 菌株，对利福平、头孢吡肟、头孢噻肟、头孢曲松、美罗培南、莫西沙星以及青霉素耐药率均低于 1%。但对红霉素、克林霉素一直处于高耐药水平。
结论 我院肺炎链球菌主要引起儿童患者的呼吸道感染，对常用抗菌药物的敏感情况良好，临床医生应根据药敏试验结果选择合理的抗生素。

PU-3485

双侧双瓶血培养报阳时间分析

刘成成、范坤、刘根焰
江苏省人民医院（南京医科大学第一附属医院）

目的 分析双侧双瓶血培养阳性报警时间（TTP），为双侧双瓶血培养报阳后处理流程的改进提供参考。
方法 回顾性分析 2020 年 1 月至 2020 年 12 月南京医科大学第一附属医院微生物室有报阳瓶的外周血双侧双瓶血培养的报阳时间。
结果 2020 年 1 月至 2020 年 12 月共检测到有阳性报警的双侧双瓶血培养 756 套。其中，4 瓶全部报阳 255 套，3 瓶报阳 68 套，2 瓶报阳 174 套，1 瓶报阳 259 套，分别占 33.7%、9.0%、23.0%和 34.3%。以每套双侧双瓶中第 1 瓶报阳时间为基点，第 2、3、4 阳性瓶的报阳时间的中位数分别为 1、3 和 4 小时。88.7%（927/1045）阳性瓶在第 1 瓶报阳后的 12 小时内报警。
结论 仅 1/3 双侧双瓶血培养能够在培养期间全部报警。双侧双瓶血培养第 1 瓶报阳后，后续阳性瓶报警大部发生在 12 小时以内。目前的双侧双瓶血培养报阳后的处理流程尚存在一定优化的空间。

PU-3486

Gene X-pert MTB/RIF 检测在尘肺病人中的应用

彭艳华、刘艳芝、伏刚
湖南省职业病防治院

目的 探讨 Gene X-pert MTB/RIF 技术在尘肺病人中的使用价值。
方法 对湖南省职业病防治院 2020 年 4 月-8 月尘肺住院病人的痰标本进行抗酸染色，并运用 Gene X-pert MTB/RIF 技术检测结核分枝杆菌及利福平耐药基因。
结果 242 例尘肺病人痰抗酸染色阳性率为 7.0%，Gene X-pert MTB/RIF 检测结核分枝杆菌阳性率为 11.2%，其中利福平耐药的病人占 12.0%。**结论** Gene X-pert MTB/RIF 技术能够提高尘肺病人合并肺结核的检出率，并且能够检测结核分枝杆菌利福平耐药基因，为尘肺合并肺结核患者的诊断和治疗提供帮助。

PU-3487

多重耐药鲍曼不动杆菌 bla-oxa 酶型检测及分析研究

张峰领[1]、秦瑶[2]
1. 重庆医科大学附属第三医院
2. 重庆医科大学检验学院

目的 对临床分离的多重耐药鲍曼不动杆菌（MDR-AB）耐药性和产 bla-oxa 酶情况进行检测及分析。
方法 收集重庆医科大学附属第三医院 2020 年 1 月至 2020 年 12 月分离的 48 株多重耐药鲍曼不动

杆菌，通过微量肉汤稀释法和纸片扩散法进行抗菌药物敏感试验，同时采用 PCR 进行 OXA 酶基因检测分析。
结果 多重耐药鲍曼不动杆菌对替加环素敏感度高达 100.00%，庆大霉素和米诺环素药物敏感率分别为 10.42%和 8.33%。48 株多重耐药鲍曼不动杆菌均检测出 bla-oxa 酶基因。其中 48 株（100.00％）检出 blaoxa-51 基因阳性，45 株（93.75%）检出 blaoxa-23 基因阳性，30 株（62.50%）检出 blaoxa-58 基因阳性，11 株（22.92%）检出 blaoxa-24 基因阳性。
结论 我院临床分离的 MDR-AB 菌株耐药性较高，仅对替加环素敏感性较好，尚未分离出对替加环素耐药的菌株。分离菌株以携带 blaoxa-51 酶及 blaoxa-23 酶型为主，分离菌株未发现明显同源聚集现象。通过本研究可指导临床应合理使用抗生素防止 MDR-AB 的产生和传播。

PU-3488

2016-2020 年山东省某三级综合医院肺炎克雷伯杆菌的分布与耐药性变迁

张志军
泰安市中心医院

目的 分析院内近五年临床分离肺炎克雷伯杆菌的分布与耐药性变迁，为临床合理使用抗菌药物提供理论依据与数据支持。
方法 对 2016 年 01 月-2020 年 12 月间临床标本中分离的肺炎克雷伯杆菌，采用 WalkAway 96 PLUS 型全自动细菌分析仪进行鉴定和药敏试验，部分药物试验采用纸片扩散法进行补充，应用 WHONET 5.6 软件对结果进行统计和分析。
结果 五年间，我院临床标本中共分离出 4264 株目标菌株，药敏结果显示：肺炎克雷伯杆菌对头孢菌素的耐药率分布在 20.5%-52.2%，耐药率逐年下降，差异具有统计学意义（P<0.05）；对头孢哌酮/舒巴坦的耐药率呈上升趋势，差异具有统计学意义（P<0.05）；对哌拉西林/他唑巴坦的耐药率一直比较低（<11.5%）；对阿米卡星的耐药率为 4.8%-9.5%；对左氧氟沙星与环丙沙星的耐药率分别为 22.6%-27.2%与 28.3%-33.7%；对碳青霉烯类药物耐药率 7.3%-11%。科室分布主要为神经外科病房，重症医学科病房以及儿内科病房等，所占比例分别为 14.66%、13.51%、7.86%；检出率最高的标本为痰液（60.44%），其次是尿液（18.08%）与血液（7.86%）。
结论 肺炎克雷伯杆菌对临床常用的抗生素耐药差异比较大，是引起神经外科，重症医学科与儿内科患者呼吸道感染的重要病原菌之一。临床医生应根据药敏结果选择并及时调整合理的抗菌药物。

PU-3489

肠球菌血流感染危险因素及预后分析

吴婷婷
溧阳市人民医院

目的 进行肠球菌血流感染的流行病学调查，危险因素及预后分析。
方法 回顾性收集 2019 年 1 月至 2020 年 12 月江苏省人民医院肠球菌血流感染病例 164 例的临床资料，按照种类将病例分成粪肠球菌血流感染组（48 例），屎肠球菌血流感染组（95 例）和其它肠球菌血流感染组（21 例），用 WHONET 软件分析菌株构成及各组耐药情况，用 SPSS 分析粪肠球菌 42 例和屎肠球菌 84 例两组的危险因素差异。用 SPSS 对生存组 125 例和死亡组 22 例进行预后分析。
结果 164 例肠球菌中屎肠球菌 95 例（58%），粪肠球菌 48 例（29%），铅黄肠球菌 8 例（5%），鹑鸡肠球菌 7 例（4%），鸟肠球菌 3 例（2%），棉子糖肠球菌 2 例（1%），耐久肠球菌 1 例（1%）。164 例中，3 例对万古霉素耐药，对青霉素耐药率在 12.5%-90.4%之间。多因素分析结

果显示，留置导尿管是肠球菌血流感染的危险因素。 有无手术和有无感染性休克是影响肠球菌血流感染预后的危险因素。
结论 留置导尿管是肠球菌血流感染的危险因素。有无手术和有无感染性休克是影响肠球菌血流感染预后的危险因素。应加强关注并重视这些因素以改善预后。

PU-3490

产单核李斯特菌侵袭性感染的临床特征分析

刘素玲、周典蓉、高红林、张妮、赵云虎、顾兵
广东省人民医院

目的 分析成人非孕妇感染产单核李斯特菌的特点，为该病的诊治提供依据。
方法 纳入 2010 年 1 月至 2020 年 6 月广东省人民医院收治的产单核李斯特菌感染成人非孕妇患者 15 例。回顾性分析患者的年龄、症状、基础疾病和预后等临床资料,以及白细胞(WBC)、中性粒细胞与淋巴细胞比值(NLR)、降钙素原(PCT)、白细胞介素-6(IL-6)和 C 反应蛋白(CRP)等实验室结果，分析其临床感染和预后特点。
结果 15 例患者年龄 15～93 岁,60 岁以上占 26.6%(4/15)。季节分布以夏季发病最高(66.6%,10/15)。9 例合并基础疾病;13 例发生脓毒症,2 例脑膜炎。李斯特菌病确诊时间为(5.1±2.9)d,确诊后调整以碳青霉烯类(20%,3/15)、青霉素类(33.3%,5/15)为主的目标性治疗。住院治疗的 15 例患者治疗后的 WBC、NLR 和 CRP 水平明显低于治疗前(P 均<0.05)。12 例患者根据指南治疗后,10 例好转,1 例预后不佳,1 例死亡。
结论 成人非孕妇产单核李斯特菌感染的主要风险因素为其基础疾病,特别是自身免疫性疾病和肺部疾病。青霉素类可作为经验治疗首选药物,碳青霉烯类、红霉素等可联合足疗程治疗。

PU-3491

Performance of Resin or haemolysin-Containing Blood Culture Media in Detection of Bloodstream Infections：Clinical Comparison of the BacT/Alert VIRTUO and Bactec FX Systems

suling liu、yunhu zhao、dianrong zhou、xinqiang zhang、weisha wang、bin gu、tieying hou
Guangdong Provincial People's Hospital

Objective To evaluate the clinical performances of BacT/Alert VIRTUO media linein Detection of Bloodstream Infections.
Methods We compared the clinical performances of the BacT/Alert VIRTUO (bioMérieux) and Bactec FX (Becton Dickinson) aerobic and anaerobic blood culture (BC) media with Resin or haemolysin-Containing Blood Culture Media. Patients >16 years old with suspected bloodstream infections (BSIs) were enrolled in 6 ICU departments and 3 general departments of Guangdong Provincial People's Hospital from June 2020 to May 2021.Each patient collected 2 sites of blood samples, one site was inoculated into BacT/Alert VIRTUO (FA Plus & FN Plus) cultures and anotherwas inoculated into Bactec FX (Resin Aerobic & Hemolysin Anaerobic) cultures, each set consisting of one aerobic and one anaerobic bottle. Cultures were incubated <5 days in the BacT/Alert VIRTUO and Bactec FX instruments, respectively.
Results A total of 1772 unique BSI episodes were identified based on the recovery of clinically significant growth in 275 aerobic cultures (144 BacT/Alert VIRTUO and 131 Bactec FX) and 148 anaerobic cultures (91 BacT/Alert VIRTUO and 57 Bactec FX).The positive recovery rate of BACT/Alert Virtuo system was higher than that of BACTEC FX400 system (9.7% and 7.7%,

respectively). The positive recovery rate of BACT/Alert Virtuo system was significantly higher than that of FX system (9.4% vs. 1.9%) during the initial stage of 0-8h of culture.
Conclusion The BacT/Alert VIRTUO media line appears to be a reliable, time-saving tool for routine detection of BSIs in the population we studied。

PU-3492

豚鼠气单胞致肝内感染病例分析及文献回顾

郭亮亮
山东第一医科大学第一附属医院（山东省千佛山医院）

目的 通过对豚鼠气单胞菌介绍及药敏实验对临床的诊断及治疗提供理论依据。
方法 利用文献回顾及对豚鼠气单胞菌的流行病学及生存特性进行阐述，并通过临床常规药敏实验对该菌进行体外药敏实验。
结果 豚鼠气单胞菌是一种环境中存在的条件致病菌，在水产养殖中常见；其临床感染常和水质污染相关。该菌对 β-内酰胺类抗生素耐药，对氨基糖苷类、碳青霉烯类抗生素敏感。
结论 豚鼠气单胞菌是一种条件致病菌，其在水污染后可对免疫力低下患者造成感染。其常对氨基糖苷类及碳青霉烯类抗生素敏感。

PU-3493

阴道五联检联合镜检对阴道分泌物清洁度、阴道疾病诊断的临床价值

湛文博、熊文娟、解晨曦、郑倩、李大伟
新疆医科大学第五附属医院

目的 探讨阴道五联检联合镜检对阴道分泌物清洁度、阴道疾病诊断的临床价值。
方法 选取 2019 年 12 月至 2020 年 12 月在新疆医科大学第五附属医院进行体检的 300 例女性，通过阴道分泌物五联检、常规镜检联合检测阴道分泌物的清洁度、诊断阴道疾病。
结果 与镜检法相比，阴道五联检方法对清洁度Ⅲ度和Ⅳ度阴道分泌物的检出率较高，P＜0.05；阴道五联检方法对阴道分泌物中念珠菌、滴虫的阳性检出率更显著，P＜0.05。
结论 阴道分泌物检测联合五联检与显微镜可提高检出率，准确反映阴道清洁度、病原菌分布，为治疗提供有价值的依据。

PU-3494

被纳米银杀死的细菌的二次杀菌活性特征研究

邓中华、熊艺灿、谭超超、陈杰、王璐、曹友德
湖南省人民医院（湖南师范大学附属第一医院）

目的 探讨被纳米银杀死的细菌的二次杀菌活性特征。
方法 以金黄色葡萄球菌(Staphylococcus aureus, S. aureus)标准菌株，耐甲氧西林金黄色葡萄球菌(Methicillin-resistant Staphylococcus aureus，MRSA)菌株，大肠埃希菌(Escherichia coli,E.coli)标准菌株，产超广谱 β 内酰胺酶(Extended-spectrum β-lactamase-producing，ESBLs)大肠埃希菌菌株四中菌为代表。用纳米银溶液直接杀死四种试验菌株，洗涤获得被纳米银杀死的各死菌悬液。以四种死菌悬液作为杀菌物质，与四种实验菌株新鲜活菌混合，探讨纳米银杀死的死菌悬液的二次杀

菌作用，比较二次杀菌作用在革兰氏阴阳性菌之间、耐药菌和敏感菌之间的差异，分析被纳米银溶液杀死的细菌的二次杀菌活性特征。
结果 金黄色葡萄球菌标准株和 MRSA 株的同菌株纳米银二次杀菌率分别为(59±9.1)%和(55±9.9)%，分别低于大肠埃希菌标准菌株同菌株二次杀菌率(75±9.3)%和产 ESBLs 菌株同菌株二次杀菌率(71±9.0)%，差异有统计学意义(P<0.05)。金黄色葡萄球菌和大肠埃希菌标准菌株的同菌株纳米银二次杀菌率与各耐药菌株之间经卡方检验无统计学差异(P>0.05)。纳米银杀死的大肠埃希菌标准菌株作用于大肠埃希菌标准菌株的二次杀菌率为(75±9.3)%，高于作用于金黄色葡萄球菌标准菌株的二次杀菌率(57±6.6)%，差异有统计学意义(P<0.05)。
结论 被纳米银杀死的细菌的二次杀菌活性对革兰氏阴性菌的杀伤作用更大，且对敏感株和耐药菌株有同等杀伤力。纳米银的二次杀菌能力在不同菌种之间也有杀菌功能。

PU-3495

健康妇女生殖道内格氏乳杆菌的分离鉴定与安全性评价

邱峰[1]、苏炳森[2]
1. 南方医科大学第七附属医院
2. 广东省中山市火炬开发区医院

目的 为了建设人体微生态样本库，对健康妇女生殖道内分离得到的格氏乳杆菌进行鉴定及安全性评价。
方法 通过对分离得到细菌的 16S rDNA 基因序列进行测定和分析，确定细菌种类并构建系统发育树。安全性评价包括微生物菌种溶血实验、药物敏感性实验和小鼠毒性实验。
结果 分离得到的格氏乳杆菌（LGV03）可发酵蔗糖、麦芽三糖、D-葡萄糖、熊果甙、D-纤维二糖、D-甘露糖、D-麦芽糖和 5-溴-4-氯-3-吲哚-β-D-葡萄糖苷。丙氨酸-苯丙氨酸-脯氨酸芳氨酶、亮氨酸芳氨酶、L-吡咯烷酮芳氨酶和苯丙氨酸芳氨酶实验为阳性，且能水解七叶苷。溶血反应阴性,小鼠毒性实验结果显示分离菌株无毒性。
结论 成功分离得到的格氏乳杆菌，并进行了鉴定及安全性评价。

PU-3496

黏液型细菌导致感染的临床特征及危险因素分析

张妮、刘伟江
广东省人民医院

目的 通过分析临床分离的黏液型细菌，了解黏液型细菌引起感染的临床分布特点和危险因素，提高临床对黏液型细菌的认知和干预。
方法 收集广东省人民医院 2018 年 1 月——2018 年 12 月临床分离出的黏液型细菌 51 例；采用病例-对照组回顾性分析，分析黏液型细菌导致感染的临床特征，通过 SPSS 多因素分析统计学方法，分析导致黏液型细菌形成的危险因素。
结果 51 例黏液型细菌主要是铜绿假单胞菌（18 例，占 35.29%）、大肠埃希菌（16 例，占 31.37%）、肺炎克雷伯菌（9 例，占 17，65%）；黏液型铜绿假单胞菌主要来自呼吸道，占 77.7%；黏液型大肠埃希菌主要来自泌尿道，占 100%，黏液型肺炎克雷伯菌主要来源于创面与无菌部位。检出病原菌患者的科室主要分布在泌尿外科（19.60%）、呼吸科（17.65%）和重症监护病房（15.69%）。单因素分析发现糖尿病、气管插管、手术史、感染前抗菌药物的使用以及头孢菌素类抗菌药物的使用是黏液型细菌引起感染的危险因素，多因素分析发现，糖尿病和手术史是黏液型细菌引起感染的独立危险因素。

结论 黏液型细菌更易形成生物膜，导致临床治疗困难。长期慢性呼吸道和泌尿道疾病患者、重症患者是黏液型细菌感染的易感人群，临床应予以重视，加强控制和干预，以达最佳治疗效果。

PU-3497

2011-2020 年感染性心内膜炎病原菌分布及耐药性分析

张鑫强[1]、陈文妍[2]、李正康[1]、凌勇[1]、刘素玲[1]
1. 广东省人民医院
2. 中山大学南方学院

目的 分析我院近 10 年来，感染性心内膜炎确诊患者病原菌分布及耐药性的差异，为临床提供准确的检测结果，提高感染性心内膜炎的诊疗效果。
方法 采用回顾性分析我院 2011-2020 年感染性心内膜炎患者作为研究的对象。药敏试验采用最低抑菌浓度和纸片扩散法进行测定。病原菌的分布及药敏结果均采用 WHONET5.6 软件分析。
结果 收集我院 2011-2020 年感染性心内膜炎患者分离病原菌 774 株。（1）病原菌分布：革兰阳性菌占有 661 例（占 85.40%），革兰阴性杆菌 61 例（占 7.88%），真菌 52 例（占 6.72%），分离率占前三的病原菌为草绿色链球菌群，金黄色葡萄球菌，粪肠球菌。（2）药敏试验:链球菌对万古霉素和利奈唑胺的耐药率为 0,对四环素的耐药率为 35.34%,对红霉素的耐药率为 36%，，对头孢噻肟，头孢吡肟，氯霉素及青霉素 G 的耐药率均<2%。
结论 近 10 年来我院链球菌药敏耐药率较低，仅红霉素和四环素耐药率有增高趋势。

PU-3498

降钙素原（PCT）诊断血流感染的应用研究

张妮、刘伟江、叶龙、刘素玲、陈晓丽
广东省人民医院

目的 探讨血清降钙素原（PCT）定量检测在血流感染中的应用价值。
方法 回顾性分析 2019 年 1 月至 12 月就诊于广东省人民医院同时送检血培养和 PCT 的住院患者的临床资料及检测结果记录，应用 ROC 曲线分析不同 PCT 界值对血流感染的敏感性、特异性、阳性预测值（PPV%）、阴性预测值（NPV%），分析不同 PCT 界值与血流感染病原菌种类的关系。
结果 4923 例血培养中，血培养阴性共 4423 例，该组 PCT 的平均值、中位数分别为 2.75ng/ml、0.23ng/ml；血培养阳性 500 例，该组 PCT 的平均值、中位数分别为 17.86ng/ml、2.01ng/ml，PCT 阳性率 68.6%，血培养阳性组 PCT 水平明显高于血培养阴性组（P＜0.001＝；建立 ROC 曲线分析不同 PCT 分界值对血培养结果时 ROC 曲线下面积为 0.729，当 PCT 为值为 0.05ng/ml 时，灵敏度达 94.4%，阴性预测值高达 100%；当 PCT 为 0.5ng/ml 时对血培养的敏感性、特异性、阳性预测值、阴性预测值分别为 68.6%、64.5%、18%和 94.8%，患者局部感染未导致血源播散或非感染因素诱导的 PCT 升高是导致 PCT 对血培养阳性预测值偏低的主要原因；革兰阴性细菌感染组、革兰阳性菌感染组、真菌感染组 PCT 平均值分别为 23.55ng/ml 、 7.04ng/ml、8.60ng/ml，PCT 值组间两两比较存在差异（P＜0.05＝，但不建议根据 PCT 水平确定感染的病原菌类型，PCT 水平在真菌感染患者中血清值绝大部分在 0.1-5.5ng/ml。
结论 血清 PCT 定量检测对血流感染患者早期诊断具有重要的指导意义，可以用于排除血流感染，不建议根据 PCT 水平确定感染的病原菌类型。PCT 水平必须结合临床情况进行判读，并应考虑假阳性和假阴性的可能性。

PU-3499

碳青霉烯酶耐药肺炎克雷伯菌耐药基因分布及与表型相关性分析

谢强
安徽省滁州市第一人民医院

目的 通过全基因组测序技术（Whole genome sequencing, WGS）分析某三甲医院耐碳青霉烯肺炎克雷伯菌（CRKP）的耐药基因分布及与耐药表型的关系，为临床治疗和防控提供参考。
方法 收集并鉴定临床分离非重复 CRKP 28 株。采用 VITEK-2 compact 全自动微生物鉴定药敏分析仪鉴定和药敏试验，使用全基因组测序技术进行测序。
结果 共检出 47 种耐药基因。其中碳青霉烯类耐药基因 3 种，主要为 blaKPC-2 基因（25 株，89.29%），其次为 blaNDM-5 基因（2 株，7.14%）和 blaOXA-48 基因（1 株，3.57%）；超广谱 β 内酰胺酶（Exterded spectrumβ-lactamases, ESBLs）耐药基因 8 种，主要为 blaTEM-1、blaSHV-28、blaCTX-M-15 和 blaOXA-33，检出率分别为 89.29%、75.00%、75.00%和 67.86%；氨基糖苷类耐药基因 10 种，以 AAC(6')-Ib-cr 和 AAC(3)-IIa 为主，检出率分别为 71.43%和 67.86%；喹诺酮类耐药基因 4 种，主要为 oqxA 和 AAC(6')-Ib-cr，检出率分别为 85.71%和 71.43%，其中 20 株 CRKP 同时携带 oqxA 和 AAC(6')-Ib-cr；磷霉素耐药基因 1 种，为 FosA6，检出率为 100%；磺胺类耐药基因 3 种，主要为 sul2 和 sul1，检出率分别为 21.43%和 17.86%。28 株 CRKP 的药敏结果显示，对碳青霉烯类抗菌药物、头孢菌素类、喹诺酮类和 β-内酰胺类/β-内酰胺酶抑制剂合剂的耐药率均为 100%；对阿米卡星的耐药率为 14.29%，未检出替加环素耐药株。28 株 CRKP 的耐药表型与耐药基因型在所测 β 内酰胺类抗菌药物完全一致。
结论 该院分离的 CRKP 同时携带多种抗菌药物的耐药基因，呈现泛耐药表型，其耐药表型和耐药基因型有很高的一致性。

PU-3500

碳青霉烯耐药肺炎克雷伯菌耐药机制及分子流行病学研究

谢强
安徽省滁州市第一人民医院

目的 分析本院耐碳青霉烯肺炎克雷伯菌（CRKP）的耐药情况及耐药基因，为临床治疗提供依据。
方法 收集并鉴定临床分离非重复 CRKP27 株，采用 Vitek2 compact 全自动微生物鉴定药敏分析仪鉴定和药敏试验，碳青霉烯酶抑制剂增强试验检测 A 类丝氨酸碳青霉烯酶和 B 类金属 β 内酰胺酶，聚合酶链反应(PCR)法和基因测序技术检测常见的耐药基因。使用肠杆菌目基因间重复一致序列 PCR(ERIC-PCR)对菌株进行同源性分析。
结果 27 株肺炎克雷伯菌对碳青霉烯类、头孢菌素类、喹诺酮类等抗菌药物的耐药率均大于 96%。碳青霉烯酶抑制剂增强试验显示 26 株 A 类丝氨酸碳青霉烯酶阳性，1 株 B 类金属 β 内酰胺酶阳性。PCR 和基因测序结果显示，26 株 CRKP 携带 KPC-2 基因，1 株携带 NDM-1 基因。ERIC-PCR 将 27 株 CRKP 分为 9 型，以Ⅳ型和Ⅴ型为主，集中于重症监护病房和神经外科。
结论 分离的 CRKP 对临床常用抗菌药物表现出高水平耐药；其耐药机制主要是该类细菌产 KPC-2 型碳青霉烯酶。

PU-3501

社区获得性血流感染病原菌分布及死亡相关危险因素分析

许雨乔
江苏省人民医院（南京医科大学第一附属医院）

目的 分析社区获得性血流感染（Community-acquired Bloodstream Infection，CABSI）的病原菌分布、耐药情况及死亡相关危险因素，为临床医师诊断及治疗提供依据。
方法 收集 2017 年 1 月至 2019 年 12 月 CABSI 患者分离的病原菌及临床资料，并按治疗 28d 转归分为死亡组和存活组。用 χ2 检验进行单因素分析，与死亡相关的变量采用 Logistic 二元回归进行多因素分析。
结果 本研究共从 292 例患者中分离病原菌 323 株，其中革兰阴性菌 192 株，革兰阳性菌 118 株，真菌 9 株，厌氧菌 4 株。革兰阴性菌对头霉素类、碳青霉烯类和氨基糖苷类抗菌药物耐药率均在 10%以下，金黄色葡萄球菌对庆大霉素和莫西沙星的耐药率小于 20%，链球菌属对青霉素类耐药率为 6.7%。292 例患者中 55 例死亡，死亡率为 19.0%。单因素分析显示脑梗塞、感染性休克、肺炎克雷伯菌感染、降钙素原（Procalcitonin，PCT）升高与患者死亡有关，死亡组 PCT 值显著高于存活组（P<0.05）。脑梗塞、感染性休克和较高 PCT 值是 CABSI 患者死亡相关的独立危险因素（P<0.05）。
结论 CABSI 病原菌对临床常用抗菌药物耐药率低于住院患者。脑梗塞、感染性休克和 PCT 升高能显著增加患者死亡率，临床医师应及时采取相应防治措施。

PU-3502

2044 例尿路感染病原学及耐药性分析

刘婕
山东大学第二医院

目的 探究尿路感染的细菌病原学及其耐药性，为尿路感染病原菌的精准诊断和抗生素合理应用提供依据。
方法 选取 2016 年 1 月-2020 年 8 月山东大学第二医院收治的 2044 例尿路感染患者为研究对象，用德国西门子公司 Micro ScanWalkaway 96 Plus 微生物全自动细菌鉴定和药敏分析仪进行病原菌鉴定及药敏试验，数据采用 WHONET 5.6 进行统计分析对其细菌分布及其耐药性进行分析。
结果 2044 例尿路感染患者检出中细菌中，革兰阴性菌 1428 株占 69.9%，革兰阳性菌 616 株占 30.1%，检出率最高的前 5 位病原菌依次为大肠埃希菌、屎肠球菌、肺炎克雷伯菌、粪肠球菌、奇异变形杆菌。主要革兰阳性菌对万古霉素的耐药率为 2.5%，对利奈唑胺的耐药率为 0%；主要革兰阴性菌中 ESBL 比例为 52.6%；对碳青霉素类耐药率为 1.1％。
结论 2044 例尿路感染病例中，病原菌以革兰阴性菌为主，不同病原菌的耐药性存在显著性差异，且多重耐药菌的比例呈增长趋势，提示临床诊疗中应依据病原菌药敏结果进行抗生素的合理应用。

肠道微生物与阿尔茨海默症

谭志霞
长沙市精神病医院

肠道微生物群由一个庞大而多样的微生态系统组成，科学家认为，肠道微生物群甚至可以称为“第二大脑”。肠道微生物和中枢神经系统（CNS）通过双向的神经、内分泌和免疫通讯形成“微生物

-肠-脑轴”。最近的临床前和临床试验表明，肠道微生物群在肠道与大脑相互作用中起着重要作用，肠道微生物组成的改变影响着中枢神经系统疾病，其中包括阿尔茨海默症（AD）。AD 是最常见的痴呆类型，是一种神经退行性疾病，主要可能机制有淀粉样蛋白 β（Aβ）沉积、高磷酸化 tau 蛋白的神经纤维缠结、神经元丢失和神经炎症等。有实验表明，肠道微生物群在宿主认知或 AD 相关的发病机制中起重要作用。肠道微生物菌群失调及其代谢产物等引起肠道和血脑屏障通透性增加，通过肠脑轴诱发神经炎症，可能介导 AD 和其他神经退行性疾病。本文主要介绍肠道微生物群在 AD 发病中的作用，充分的了解其发病机制，寻找新的有价值的治疗靶点，为更好的预防和治疗 AD 提供切实可行的方案。

耐甲氧西林金黄色葡萄球菌菌血症患者临床特征及预后危险因素分析

许雨乔
江苏省人民医院（南京医科大学第一附属医院）

目的 分析耐甲氧西林金黄色葡萄球菌(Methicillin- resistant Staphylococcus aureus，MRSA)菌血症患者临床特征及预后危险因素，为控制和预防 MRSA 血流感染提供依据。
方法 回顾性分析 2015-2020 年南京医科大学第一附属医院门诊及住院患者血液中分离的 MRSA 对常用抗菌药物敏感性，以及患者临床特征和预后危险因素。
结果 共收集 142 株 MRSA，其对青霉素、氨苄西林均耐药，对喹诺酮类抗菌药物耐药率在 50%以上。死亡组血清 PCT 值显著高于存活组，ROC 曲线下面积为 0.723，以 1.075mg/L 为诊断界值时，PCT 区分患者预后的敏感度 73.3%，特异度 66.2%。合并感染性休克和呼吸系统 MRSA 感染是患者死亡独立危险因素。
结论 血清 PCT 值与 MRSA 菌血症患者预后密切相关，合并感染性休克和呼吸系统 MRSA 感染是患者预后的独立危险因素，临床医师应早预防早治疗。

HO-1 mediates the anti-inflammatory actions of Sulforaphane in monocytes stimulated with a mycoplasmal lipopeptide

Haodang Luo[1,2]、lianmei qin[1]、Jun He[2]、Xiaoxing You[1]
1. 南华大学衡阳医学院病原生物学研究所
2. 南华大学附属南华医院检验科

Exposure to Mycoplasma pneumoniae leads to lung inflammation through a host defense pathway. Increasing evidence has indicated that the mycoplasma-derived membrane lipoprotein, or its analogue macrophage-activating lipopeptide-2 (MALP-2), excretes LPS as an immune system-stimulating substance and plays a crucial role in pathological injury during M. pneumoniae infection. It has been established that Sulforaphane confers anti-inflammatory properties. However, the underlying mechanism responsible for the inhibitory actions of Sulforaphane in the context of mycoplasmal pneumoniae are poorly understood. Here, we report that Sulforaphane is an inducer of heme oxygenase (HO)-1, a cytoprotective enzyme that catalyzes the degradation of heme through signaling pathways in human monocytes. Sulforaphane stimulated NF-E2-related factor 2 (Nrf2) translocation from the cytosol to the nucleus, and small interfering RNA-mediated knock-down of Nrf2 significantly inhibited Sulforaphane-induced HO-1 expression. Additionally, PI3K/Akt and ROS were also involved in Sulforaphane-induced Nrf2 activation and HO-1

expression, as revealed by the pharmacological inhibitors LY294002 and NAC. Moreover, Sulforaphane treatment inhibited MALP-2-induced pro-inflammatory cytokine secretion and pulmonary inflammation in mice, as well as MALP-2-triggered NF-κB activation. Furthermore, SnPP, a selective inhibitor of HO-1, reversed the inhibitory actions of Sulforaphane, while a carbon monoxidereleasing molecule, CORM-2, caused a significant decrease in MALP-2-induced cytokine secretion. Collectively, these results suggest that Sulforaphane functions as a suppressor of the MALP-2-induced inflammatory response, not only by inhibiting the expression of cytokines and the induction of HO-1 but also by diminishing NF-κB activation in cultured monocytes and the lungs of mice.

基于鹦鹉热衣原体质粒蛋白 CPSIT_p6 多表位融合抗原抗感染免疫保护作用研究

李育萌、陈恩、谢小平、刘双全
南华大学附属第一医院

目的 探究鹦鹉热衣原体（Chlamydia psittaci，Cps）质粒蛋白 CPSIT_p6 多表位融合抗原的抗感染免疫保护效果，为研制预防和治疗抗 Cps 感染的多肽疫苗奠定基础。
方法 生物信息学软件预测质粒蛋白 CPSIT_p6 的优势抗原表位，制备重组多表位肽段 P-P。重组肽段 P-P 经腹腔途径免疫雌性 BALB/c 小鼠，末次免疫 2w 后处死小鼠取血清检测血清抗体水平，取小鼠脾细胞上清细胞因子水平；末次免疫 2w 后呼吸道鼻滴接 Cps 6BC，评价重组肽段 P-P 抗 Cps 感染的保护效果，并通过免疫过继转移探讨 CD4+ T、CD8+ T 细胞在 P-P 诱导产生免疫保护中的作用。
结果 经腹腔免疫 3 次后，小鼠血清 IgG, IgA, IgM 以及 IgG 亚类水平均显著高于对照组；免疫小鼠脾细胞产生的 IFN-γ、IL-2 水平也明显高于对照组。P-P 免疫组小鼠经 Cps 6BC 呼吸道感染后，取肺组织进行培养，包涵体数量明显低于对照组（P＜0.01）；ELISA 法检测肺组织匀浆上清中细胞因子水平，实验组比对照组具有显著低的 IFN-γ 以及 IL-6 水平（P＜0.001）；肺组织经 H&E 染色和 S-P 免疫组织化学染色，对照组肺组织弥漫性炎性细胞大量浸润，重组肽段 P-P 免疫组肺组织病理改变明显轻于对照组，并能清晰识别肺泡结构，炎症清除明显；脾细胞过继转移实验结果显示，消耗 CD8+ T 细胞的脾细胞经过继转移后，实验组小鼠肺组织中的衣原体包涵体数量显著低于对照组，而消耗 CD4+ T 细胞的脾细胞经过继转移后，各组间的衣原体数量没有明显差异。
结论 多表位融合抗原 P-P 可诱导特异性体液免疫及 Th1 型细胞免疫应答，提示多表位融合抗原 P-P 是一种潜在的候选肽疫苗，对于衣原体疫苗研究与开发具有重要的价值。

Chlamydia trachomatis glycogen synthase promotes MAPKmediated proinflammatory cytokine production via TLR2/TLR4 in THP-1 cells

Yumeng Li[1]、zhenjie sun[2]、chunxue lu[2]、shuangquan liu[1]、en chen[1]
1. The First Affiliated Hospital of University of South China
2. University of South China

Aims To investigate the roles and mechanisms of C. trachomatis glycogen synthase (GlgA) in regulating the inflammatory response in THP-1 cells.
Main Methods In this work, after THP-1 cells were stimulated with GlgA, transcript and protein expression levels were measured by qRT-PCR and ELISA, respectively. Western blotting and

immunofluorescence were used to determine the signaling pathway involved in the inflammatory mechanism.
Key findings GlgA elicited the expression of interleukin-8 (IL-8), interleukin-1beta (IL-1β) and tumor necrosis factor alpha (TNF-α) in THP-1 cells, and the blockade of TLR2 and TLR4 signaling abrogated the induction of IL-8, TNF-α and IL-1β expression. Similarly, IL-8, IL-1β and TNF-α secretion was reduced by transfection with adominant negative plasmid (pDeNyhMyD88). Moreover, Western blotting and immunofluorescence experiments further validated that MAPKs and NF-κB signaling are involved in the transcription and translation of these cytokines. Treatment of the cells with ERK and JNK inhibitors dramatically attenuated the induction of IL-8, IL-1β and TNF-α.
Significance These results suggest that GlgA contributes to inflammation during C. trachomatis infection via the TLR2, TLR4 and MAPK/NF-κB pathways, which may enhance our understanding of the pathogenesis of C. trachomatis.

PU-3508

Emerging resistance mechanisms for 4 types of common anti-MRSA antibiotics in Staphylococcus aureus: a comprehensive review

刘婉婷
南方医科大学珠江医院

Staphylococcus aureus is one of the leading hospital-associated and community associated pathogens,which has caused a global public heath concern.The emergence of methicillin-resistant S.aureus(MRSA)along with the wide spread use of different classes of antibiotics has become a significant therapeutic challenge. Antibiotic resistance is a disturbing problem that poses a threat to humans.Treatment options for S.aureus resistanttoβ-lactam antibiotics include glycopeptide antibiotic,cyclic lipopeptide antibiotic,cephalosporins andoxazolidinone antibiotic.The most representative types of the se antibiotics are vancomycin,daptomycin,ceftaroline and linezolid.

PU-3509

Chlamydia psittaci plasmid-encoded CPSIT_P7 elicits inflammatory cytokines response in human monocytes via TLR4 and TLR6 signaling pathways

Yumeng Li[1]、qian chen[1]、shuanquan liu[1]、jian xiao[2]、yimou wu[3]
1. The First Affiliated Hospital of University of South China
2. Affiliated Nanhua Hospital
3. University of South China

The chlamydial plasmid, an important virulence factor, encodes plasmid proteins that play important roles in chlamydial infection and the corresponding immune response. However, the virulence factors and the molecular mechanisms of Chlamydia psittaci are not well understood. In the present study, we investigated the roles and mechanisms of plasmid-encoded protein CPSIT_P7 of C. psittaci in regulating the inflammatory response in THP-1 cells (human monocytic leukemia cell line). Based on cytokine arrays, THP-1 cells were stimulated by CPSIT_P7 can induce the expressions of interleukin-6 (IL-6), interleukin-8 (IL-8), and monocyte chemoattractant protein-1 (MCP-1). Moreover, the expressions of IL-6, IL-8, and MCP-1 stimulated by CPSIT_P7 were declined after the silencing of the Toll-like receptor 4 (TLR4) gene

by using small interfering RNA and transfection of dominant negative plasmid encoding TLR6 (pZERO-hTLR6), respectively. We further demonstrated that transfection with the dominant negative plasmid encoding MyD88 (pDeNy-hMyD88) and the dominant negative plasmid encoding Mal (pDeNy-hMal) could also abrogate them. Immunofluorescence assays showed that CPSIT_P7 could activate nuclear factor κB (NF-κB) signaling pathways. Altogether, our results indicate that CPSIT_P7 induces TLR4-Mal-MyD88-NF-κB and TLR6-Mal-MyD88-NF-κB signaling axis, and therefore contributing to inflammatory cytokines response.

PU-3510

TLR2 mediates autophagy through ERK signaling pathway in Chlamydia psittaci plasmid-encoded protein CPSIT_p7-stimulated RAW264.7 cells

Yumeng Li[3]、Ying Luo[2]、en chen[1]、xiaoping xie[1]、shuangquan liu[1]
1. The First Affiliated Hospital of University of South China
2. Qingyuan People's Hospital
3. The First Affiliated Hospital of University of South China

Chlamydia psittaci is a zoonotic pathogen in avian birds and humans. Macrophages as a major share of the innate immune defenses can fight infections by eradicating chlamydial infection and triggering an adaptive immune response. However, the molecular mechanisms of macrophages against C. psittaci infection are not well understood. In our current study, we investigated the roles and mechanisms of plasmid-encoded protein CPSIT_P7 of C. psittaci in regulating the autophagy in RAW264.7 cells (mouse macrophage cell line). The results demonstrated that stimulation of RAW264.7 with C. psittaci plasmid protein CPSIT_p7 induced the expressions of the autophagy signaling primal regulators LC3 and Beclin1, which could also significantly induced the phosphorylation levels of ERK, JNK, p38 and Akt. Next, siRNA knockdown of TLR2 resulted in a significant down-regulation of CPSIT_p7-triggered autophagy in RAW264.7 cells. Moreover, extracellular regulated protein kinase (ERK) inhibitor PD98059 could also markedly reduced the level of autophagy in CPSIT_p7-stimulated macrophages. In summary, these results indicate that TLR2 may play anessential role in induction of autophagy through ERK signaling pathway in CPSIT_p7-stimulated RAW264.7 cells.

PU-3511

5691 例住院儿童呼吸道合胞病毒感染检测分析

程相信、张宇培
柳州市妇幼保健院

目的 研究柳州地区住院患儿呼吸道合胞病毒感染现状，掌握柳州地区导致儿童急性呼吸道感染的呼吸道合胞病毒流行特征，为临床及社区防治提供依据。
方法 收集 2020 年 4 月至 2021 年 3 月在柳州地区某院住院的呼吸道感染患儿共 5691 例，取其鼻咽拭子，采用直接免疫荧光法，利用抗病毒特异性单克隆抗体快速对患儿鼻咽部分泌物进行呼吸道合胞病毒、腺病毒、流感病毒 A、B 型、副流感病毒Ⅰ、Ⅱ、Ⅲ型 7 种病毒抗原检测，对儿童急性呼吸道感染的病原体分布进行整体分析，统计出呼吸道合胞病毒的阳性率并分析其阳性率随不同季节及不同年龄段的变化规律。
结果 5691 例标本中 7 种呼吸道病原体阳性总数为 1038 例，总阳性率为 18.24%；其中呼吸道合胞病毒阳性为 797 例，阳性率 14.0%，占 7 种呼吸道病毒阳性病例中的 76.73%；其中以 1-6 月年龄组检出率最高，达阳性患儿的 43.54%，明显高于其他年龄段，其差异具有统计学意义（P＜

0.05），大于 1 岁的患儿呼吸道合胞病毒检出率随年龄的增加呈下降趋势；呼吸道合胞病毒检出率高峰在冬春季，明显高于夏秋季；混合感染参与率最高的是呼吸道合胞病毒，混合感染的患儿中，最常见的类型为 RSV+ADV 。

结论 呼吸道合胞病毒是柳州地区住院患儿呼吸道感染的重要病原体，好发于 1 岁以内的儿童，以 1-6 月龄为多，冬春季高发，近两年呼吸道感染合胞病毒感染率呈现上升趋势，提示临床及相关社区注意防治及避免交叉感染。

PU-3512

急性胰腺炎继发感染菌群分布及耐药性分析

谭超超
湖南省人民医院

目的 分析急性胰腺炎继发感染菌群分布及耐药性，为临床使用抗菌药物进行预防及控制感染提供依据。

方法 采取回顾性分析方法，统计某院三年内急性胰腺炎患者发生继发感染的病例，收集患者的基本信息以及继发感染的细菌培养和药敏分析结果，分析其菌群感染特点及耐药情况。

结果 2969 例急性胰腺炎患者中存在继发感染且微生物培养为阳性的有 138 例患者，总共分离出 216 例菌株，G-菌占 54.6%，G+菌占 36.1%，真菌 9.2%。其中大肠埃希菌占 25.9%，对头孢唑啉和氨苄西林耐药率高于 78%，具有多重耐药特点；肠球菌分离出 36 例，占 16.7%，粪肠球菌和屎肠球菌对四环素类抗生素均有较高的耐药性，屎肠球菌对青霉素、氨苄西林、高水平庆大霉素、环丙沙星、左氧氟沙星、莫西沙星、红霉素的耐药率均高于粪肠球菌；葡萄球菌 36（16.7%）例，头孢西丁筛选阳性率高于 78%，对多种抗生素具有较高的耐药率；真菌对常见抗真菌药物未见耐药情况。

结论 急性胰腺炎继发感染主要以肠道杆菌为主，其次为葡萄球菌及肠球菌，其耐药性大多呈现多重耐药。

PU-3513

鱼腥草素钠对 48 株多重耐药铜绿假单胞菌抑菌效果的研究

金秀秀、庄婉珍
中国人民解放军联勤保障部队第九〇〇医院

目的 分析多重耐药铜绿假单胞菌的临床分布特点和抗生素耐药情况，充分了解抗多重耐药铜绿假单胞菌的重要性，并通过体外药敏试验研究鱼腥草素钠对多重耐药铜绿假单胞菌体外抗菌作用，旨于为临床治疗提供思路和参考依据。

方法 对中国人民解放军联勤保障部队第 900 医院患者标本中的病原菌进行培养、分离，采用质谱仪和药敏系统及纸片扩散法鉴定出多重耐药铜绿假单胞菌并分析其临床分布特点和常用抗生素耐药情况。用琼脂打孔法确认鱼腥草素钠的抗多重耐药铜绿假单胞菌活性。

结果 共分离出中国人民解放军联勤保障部队第 900 医院的 48 株多重耐药铜绿假单胞菌中有 39 株对鱼腥草素钠敏感，其中属于高度敏感多重耐药铜绿假单胞菌有 30 株（61.22%），中度敏感有 9 株（18.75%）。39 株均出现不同大小的抑菌圈（79.59%），剩余 9 株未出现明显抑菌圈，占比 18.75%。鱼腥草素钠对质控菌株 ATCC 27853 的抑菌圈直径为 27mm，属于高度敏感。提示鱼腥草素钠对多重耐药铜绿假单胞菌有不同程度的抑制作用。

结论 本次研究在基于多重耐药铜绿假单胞菌的临床分布特点及抗生素耐药情况的基础上，进行琼脂打孔法形成鱼腥草素钠的抑菌圈，反映体外分离的多重耐药铜绿假单胞菌对鱼腥草素钠的敏感程

度。结果表明，鱼腥草素钠对多重耐药铜绿假单胞菌的生长有抑制作用，有成为临床上抗多重耐药菌的辅助药物的可能。

PU-3514

粘液型与非粘液型假单胞菌的院感分布及耐药性分析

肖启国、汤美华、郑康
衡阳市中心医院

目的 分析该院 2019 年 1 月-2020 年 12 月临床分离的粘液型与非粘液型铜绿假单胞菌（pseudomonas aeruginosa,PA）的分布情况及耐药性，指导临床合理用药，控制铜绿假单胞菌的医院感染。
方法 对临床分离出来的 486 株铜绿假单胞菌进行标本，科室分布的统计及耐药性分析，并对抗菌药物联合治疗前后的粘液型铜绿假单胞菌进行药敏分析。
结果 486 株铜绿假单胞菌中粘液型占 15.2%（74/486），非粘液型占 84.8%（412/486），标本主要来自痰液，占 63.2%（307/486），其次为伤口分泌物及穿刺液，分别占 21%（102/486），10%（49/486）；主要分布于 ICU，呼吸内科，分别占 36%（175/486），24.1%（117/486）;黏液型和非黏液型 PA 对常用 14 种抗菌药物的耐药率比较结果为：非黏液型 PA 对庆大霉素、头孢噻肟、氨曲南、头孢吡肟、环丙沙星和左氧氟沙星的耐药率显著高于黏液型 PA（P<0.05），而对亚胺培南、美罗培南、哌拉西林/他唑巴坦、阿米卡星、头孢他啶和头孢哌酮/舒巴坦的耐药率，两者差异无统计学意义（P>0.05）。抗菌药物联合治疗黏液型 PA 感染前后，对亚胺培南和美罗培南的耐药率一致；对阿米卡星、头孢噻肟的耐药性，治疗后明显高于治疗前（P<0.05）；其他抗菌药物的耐药率也出现不同程度的增高。
结论 该院 PA 主要分离自痰标本，以 ICU 感染最为严重，其次为呼吸内科，非粘液型 PA 的耐药率普遍较粘液型 PA 高，黏液型 PA 体外药敏试验虽耐药性较低，但体内用药治疗效果不佳，因此临床应使用体外药敏敏感的药物结合能抑制细菌表面生物膜作用的药物联合使用，方能达到较好的治疗效果。以便控制医院的感染。

PU-3515

无乳链球菌感染性疾病的体外药物敏感性及其临床分布研究

郭 昊
滨州医学院烟台附属医院

目的 了解无乳链球菌感染性疾病的临床分布并对其分离株进行药物敏感性分析，为临床合理使用抗菌药物提供依据。
方法 收集 2018 年 1 月－2019 年 12 月门诊及住院患者无乳链球菌阳性分离株，采用纸片扩散法(K-B 法)对抗菌药物进行敏感性分析，克林霉素和红霉素双纸片协同试验（D 试验）来确定其耐药表型.
结果 分离的 122 株无乳链球菌主要来自于妇产科，占 39.3％（48 株），标本的主要来源为阴道分泌物，占 40.9％（50 株）；克林霉素和红霉素的耐药率最高，分别为 58.1％ 和 55.7％，其中结构性耐药（红霉素耐药，克林霉素耐药）是其主要的耐药表型；其次为左氧氟沙星，耐药率为 20.4％；2018 年左氧氟沙星耐药率为 27.4％,高于 2017 年的 13.3％；未发现对头孢曲松、青霉素、万古霉素、头孢噻肟耐药的菌株。
结论 选择红霉素和克林霉素来作为治疗以及预防无乳链球菌感染的药物应用价值应重新评估；喹诺酮类抗菌药物的耐药率有所增加，应予以重视，青霉素类可作为无乳链球菌感染性疾病治疗的首选药物。

PU-3516

烟台地区 2016-2019 年大肠埃希菌耐药性分析

张允艺
滨州医学院烟台附属医院

目的 对烟台地区 2016-2019 年大肠埃希菌耐药性进行分析，为临床上快速合理有效的用药提供参考依据。
方法 使用 Excel 对 2016-2019 年大肠埃希菌的抗药性实验数据进行统计分析。而每年的结果是用全自动微生物分析系统 Vitek2 C60 进行初步药敏试验，再用纸片扩散法近一步验证结果。
结果 大肠埃希菌在烟台地区 2016-2019 年的检出率基本上保持在第二位。大肠杆菌对头霉素类、喹诺酮类部分药物具有稍微强的抗药性；对于氨基糖苷类等一些药物抗药率偏低。
结论 大肠埃希菌的耐药性变化明显，但治疗大肠杆菌药物选择多。感染后应及时治疗；平时也应养成良好的卫生习惯。

PU-3517

荧光定量 PCR 检测妊娠晚期妇女 B 族链球菌的情况

张娜
滨州医学院烟台附属医院

目的 分析荧光定量 PCR 法检测妊娠晚期妇女感染 B 族链球菌（GBS）的高危因素。
方法 随机选取 2018 年 6 月到 2019 年 6 月在威海市立医院就诊的妊娠晚期孕妇作为研究对象，取孕妇阴道分泌物和直肠标本后用实时荧光定量 PCR 的方法统计孕妇 B 族链球菌的带菌率，然后分别统计孕妇的年龄、是否多次妊娠、妊娠期糖尿病和瘢痕子宫对孕妇感染 B 族链球菌的影响。
结果 妊娠晚期孕妇感染 B 族链球菌受妊娠期糖尿病的影响（$P<0.05$），而与孕妇的年龄、妊娠次数以及是否瘢痕子宫等因素无关。
结论 妊娠期糖尿病会增加妊娠晚期孕妇感染 B 族链球菌的概率，是孕妇感染 GBS 的重要因素。

PU-3518

群体感应在鲍曼不动杆菌生物膜形成中的作用

张康见
山东大学第二医院

通过对浮游和生物膜状态鲍曼不动杆菌标准菌株 ATCC 17978 进行 RNA-seq 测序，并借助于生物信息学技术，研究其生物膜形成与群体感应之间的关系，进而寻找抑制鲍曼不动杆菌生物膜形成的靶点，为临床治疗生物膜相关感染提供新的启发。通过对浮游和生物膜状态下的鲍曼不动杆菌进行链特异性测序，获得差异表达基因，经生物信息学技术分析候选差异表达基因可能参与调控的细菌细胞组分、参与的代谢过程和具备的生物学功能。QRT-PCR 技术验证测序结果。建立生物膜模型，检测群体感应分子 C12-HSL 对生物膜形成的影响。以微孔板法定量，结晶紫染色和扫描电镜定性检测其生物膜的形成能力。用双硫仑和牛磺酸干预鲍曼不动杆菌生物膜的形成，以紫外分光光度法检测生物膜状细菌乙醇脱氢酶活性的变化。最后以一定量的临床鲍曼不动杆菌分离株验证双硫仑对生物膜的抑制作用。转录组测序共获得 504 个差异表达基因，264 个下调，240 个上调。QRT-PCR 验证结果与测序数据一致。C12-HSL 的加入使生物膜的形成能力增强，细菌运动性增强。双硫仑处理后，生物膜内细菌乙醇脱氢酶的活性减弱，群体感应相关基因的表达下调，生物膜形成能力下降。双硫仑对鲍曼不动杆菌生物膜形成的抑制作用在临床分离株中同样有效。鲍曼不动杆菌

生物膜的形成与群体感应系统相关。群体感应增强，生物膜形成能力和细菌运动性增强。双硫仑处理后鲍曼不动杆菌乙醇脱氢酶活性减弱，同时群体感应基因表达下调，生物膜形成能力下降。

一例肠炎沙门氏菌引起的血流感染

徐艳
江苏省人民医院（南京医科大学第一附属医院）

2021 年 5 月 26 日，我院于血培养结果中发现一例肠炎沙门氏菌引起的血流感染。患者约 5 月 12 日前后，因发热（体温 40℃）及后背下腹部疼痛于当地医院就诊，医生开具头孢他啶进行抗感染治疗。患者体温降至正常四天后，于 5 月 20 日再次发热（体温 38~39℃），后背下腹部疼痛未减轻。患者于 5 月 24 日于我院就诊，5 月 26 日血培养结果发布为肠炎沙门菌感染。感染科医生暂用比阿培南对患者进行抗感染治疗。明确后背部疼痛病因后，于 5 月 27 日转入 ICU 进行手术治疗，此时药敏结果已发布。值得一提的是，该菌对于氨基糖苷类抗生素、第一代和第二代头孢菌素和头霉素体内治疗无显著效果，对于左氧氟沙星无 MIC 折点。故改用 KB 法对左氧氟沙星重新进行药敏测试，结果显示为中介。随后临床抗生素用药更新为美罗培南、左氧氟沙星及利奈唑胺联合抗感染。目前病人情况已好转。

PU-3520

泰安市儿童流感嗜血杆菌感染耐药性分析

高雪
泰安市中心医院

目的 分析泰安市儿童流感嗜血杆菌感染药物敏感情况及病例分布，为临床诊疗提供依据。
方法 收集 2019-2020 年儿童患者呼吸道流感嗜血杆菌，采用头孢硝噻吩纸片法检测 β-内酰胺酶，纸片扩散法检测常用 13 种常用抗生素的耐药情况，进行分析统计。
结果 共收集 352 株流感嗜血杆菌，结果显示，流感嗜血杆菌对氨苄西林和复方新诺明耐药率为 84.5%、77.5%；对阿莫沙星/克拉维酸、氨苄西林/舒巴坦、头孢呋辛耐药率为 23.5%、31.5%、40.5%；对氯霉素、四环素耐药率为 3.8%、8.6%；对头孢噻肟、亚胺培南、美洛培南、环丙沙星、左氧氟沙星、阿奇霉素敏感性为 100%。
结论 流感嗜血杆菌是引起儿童呼吸道感染的重要致病菌，临床医生应熟悉流感嗜血杆菌对常用抗生素的药物敏感状况，提高用药准确率。

Construction of an autophagy interaction network based on competitive endogenous RNA reveals the key pathways and central genes of SARS-CoV-2 infection in vivo

Haifang Zhang、Hong Du
Department of Clinical Laboratory, The Second Affiliated Hospital of Soochow University, Suzhou, Jiangsu, 215004, China.

As of April 1, 2021, more than 2.8 million people have died of SARS-CoV-2 infection. In addition, the mutation of virus strains that have accompanied the pandemic has brought more severe challenges to epidemic control. Host microRNAs (miRNAs) are widely involved in a variety of biological processes of coronavirus infection, including autophagy in SARS-CoV-2 infection. However, the mechanisms underlying miRNAs involved in autophagy in SARS-CoV-2 infection have not been fully elucidated. In this study, the miRNA and messenger RNA (mRNA) expression profiles of patients with SARS-CoV-2 infection were investigated based on raw data from Gene Expression Omnibus (GEO) datasets, and potential novel biomarkers of autophagy were revealed by bioinformatics analyses. We identified 32 differentially expressed miRNAs and 332 differentially expressed mRNAs in patients with SARS-CoV-2 infection. Cytokine receptor related pathways were the most enriched pathways for differentially expressed miRNAs identified by pathway analysis. Most importantly, an autophagy interaction network, which was associated with the pathological processes of SARS-CoV-2 infection, especially with the cytokine storm, was constructed. In this network, hsa-miR-340-3p, hsa-miR-652-3p, hsa-miR-4772-5p, hsa-miR-192-5p, TP53INP2, and CCR2 may be biomarkers that predict changes in mild SARS-CoV-2 infection. Some molecules, including hsa-miR-1291 and CXCR4, were considered potential targets to predict the emergence of severe symptoms in SARS-CoV-2 infection. To our knowledge, this study provided the first profile analysis of an autophagy interaction network in SARS-CoV-2 infection and revealed several novel autophagy-related biomarkers for understanding the pathogenesis of SARS-CoV-2 infection in vivo.

PU-3523

降钙素原、C 反应蛋白在鉴别不同细菌血流感染中的应用价值

袁勇、姚瑶、孔凡斌、谢享园
昆明市延安医院

目的 探讨血清降钙素原（PCT）和 C 反应蛋白（CRP）在鉴别革兰阳性菌和革兰阴性菌所致的血流感染中的应用价值，为临床医生早期诊断和治疗提供依据。
方法 选取 2019 年 1 月-2020 年 12 月在昆明市延安医院同时进行血培养、PCT 和 CRP 检测的住院患者为研究对象，收集患者血培养、PCT 和 CRP 的结果，应用统计学软件 SPSS25.0 比较血培养阳性组和阴性组 PCT 和 CRP 检测水平之间的关系
结果 共收集到同时测定血培养、PCT 和 CRP 的病例 334 例。血培养阳性病例为 153 例，PCT 水平为 1.26（0.27，22.62）ug/L，CRP 水平为 100.68（25.00，178.69）mg/L；血培养阴性为 181 例，PCT 水平为 0.27（0.11，1.15）ug/L，CRP 水平为 33.98（2.15，128.91）mg/L。采用 Mann-Whitney U 检验比较血培养阳性组和血培养阴性组 PCT 及 CRP 水平均有显著的统计学差异（P<0.001）。血培养阳性组中革兰阳性菌感染病例 60 例，PCT 和 CRP 的水平分别为 0.33(0.13,1.21)ug/L、52.37(10.43,129.83)mg/L；革兰阴性菌感染病例 93 例，PCT 和 CRP 的水平分别为 8.57(0.61,43.23)ug/L、128.21(43.38,194.09)mg/L。Mann-Whitney U 检验比较革兰阳性菌组与革兰阴性菌组间 PCT 和 CRP 水平的差异有统计学意义（P<0.05）。分别对革兰阳性菌组和革兰阴性菌组做 ROC 曲线，曲线下面积分别为 0.527、0.583；在革兰阴性菌组的曲线下面积分

别为 0.79、0.69，PCT 和 CRP 在鉴别革兰阴性菌感染时有更高的价值，且 PCT 比 CRP 有更高的价值。
结论 PCT 和 CRP 对鉴别革兰阳性菌与革兰阴性菌血流感染有一定的临床应用价值。

PU-3524

肺炎克雷伯菌中新型毒素-抗毒素系统的鉴定

张小团、曾童、刘罗根、刘卓然
南华大学附属第二医院

目的 鉴定肺炎克雷伯菌毒力质粒中一对特殊结构基因序列的表达产物是否具有毒素-抗毒素系统的生物活性。
方法 采用细菌重基因组测序和纳米孔测序组装肺炎克雷伯菌的完成图，对全基因组序列进行注释和生物信息学分析，采用同源重组的方法构建基因表达载体并转入到大肠杆菌 DH5α 中，分别使用 IPTG 和阿拉伯糖诱导蛋白的表达，OD600 检测细菌的生长状态，平板菌落形成试验观察细菌的生长情况。
结果 通过对 13 株肺炎克雷伯菌进行全基因组测序发现，在毒力质粒中存在一对特殊结构的基因序列，它们之间共用 4 个碱基，基因注释为一对假定蛋白（本课题组暂命名为 KipTA），其中 KipT 以 ATG 为启动子，KipA 以 GTG 为启动子。标签蛋白 WB 提示成功构建 KipT-pBAD33 和 KipA-pQE-80L 表达载体。通过 IPTG 诱导 KipT 表达发现，KipT 可以对细菌生长产生显著的毒杀作用，但是诱导 KipA 表达却可以拮抗 KipT 对细菌的毒素作用。
结论 KipTA 为一对新型的毒素-抗毒素复合蛋白，其中 KipT 为毒素蛋白，KipA 为抗毒素蛋白。

PU-3525

柳州地区住院患儿肺炎链球菌临床分布及耐药性分析

张宇培、程相信
柳州市妇幼保健院

目的 评价柳州地区儿童肺炎链球菌临床分离株的临床分布及耐药情况，为儿童肺炎链球菌感染相关性疾病的治疗与防控提供参考依据。
方法 收集柳州市妇幼保健院 2020 年 4 月－2021 年 3 月间的儿科住院患者临床分离的肺炎链球菌 412 株，分析其来源标本、分离季节及来源患者年龄分布特征，及其临床常用抗菌药物敏感性试验情况。
结果 共分离到肺炎链球菌 412 株，占检出细菌总数的 14.91%。肺炎链球菌来源构成比中，前 3 位标本依次为痰液 398 例（96.60%）、肺泡灌洗液 8 例(1.94%)和分泌物 3 例(0．73%)，血液标本仅 1 例（0．24%）；412 株肺炎链球菌临床分离菌株中，冬季分离株数所占比例高于其他季节，差异具有统计学意义（P＜0.05），春、夏、秋季间比较差异无统计学意义（P＞0.05）；在各年龄段患儿中，以 3 岁以下患儿检出为主（83.64%）；药敏结果显示肺炎链球菌对青霉素、厄他培南、左氧氟沙星、泰利霉素、利奈唑胺、万古霉素、氯霉素、头孢噻肟较敏感（89.1%~100%），对红霉素、四环素和复方新诺明耐药率较高（88.9%~97.6%）。
结论 在寒冷冬季，应加强预防 3 岁以下儿童肺炎链球菌感染，引起重症感染时治疗应首选青霉素和头孢噻肟等三代头孢菌素，经验性治疗可选用左氧氟沙星、万古霉素，从分析可见肺炎链球菌对常用抗菌药物特别是大环内酯类耐药日趋严重，故临床上应避免选用红霉素、复方新诺明及四环素等抗菌药物，重视药敏检验结果，加强临床沟通，进行科学合理的规范治疗，尽量减少细菌耐药的发生。

PU-3526

血培养阳性标本质谱快速鉴定联合直接快速药敏试验的应用评估

陆燕飞、文怡
江苏省人民医院（南京医科大学第一附属医院）

目的 评估血培养阳性标本质谱快速鉴定联合直接快速药敏试验的可行性，为临床血流感染及时用药提供依据。
方法 收集 2020 年 4 月-2020 年 7 月南京医科大学第一附属医院血培养阳性标本，利用基质辅助激光解析电离飞行时间质谱直接鉴定，根据欧洲药敏试验委员会（EUCAST）颁布的阳性血培养液直接快速药敏（rapid antimicrobial susceptibility testing, RAST）指南进行快速药敏，将 4h、6h 和 8h 判读的药敏结果与常规药敏结果比较。
结果 本研究共纳入血培养阳性菌株 118 株，包括肺炎克雷伯菌 50 株、大肠埃希菌 40 株、金黄色葡萄球菌 16 株、肠球菌属 12 株。肠杆菌目细菌在 4h、6h、8h 判读药敏结果时与常规结果的符合率分别为 76.8%、92.6%、94.2%；金黄色葡萄球菌分别为 56.3%、100%、100%；肠球菌属分别为 41.7%、74.8%、94.5%。6h 判读肠杆菌目细菌药敏符合率优于 4h（P<0.05），与 8h 无差异（P>0.05）；耐碳青霉烯类肠杆菌科细菌（Carbapenem resistant Enterobacteriaceae bacteria，CRE） 在 4h、6h、8h 的检出率及药敏符合率无统计学差异（P>0.05）；肠球菌属在 8h 判读的药敏符合率高于 4h 和 6h（P<0.001）。
结论 阳性血培养液 RAST 4h 即可判断是否存在 CRE 感染并推测其整体抗菌谱，6h 判读 MRSA 及肠杆菌目细菌整体抗菌谱在时间和准确性上具有优势，8h 可作为肠球菌药敏结果判读的最佳时间。血培养阳性标本 MALDI-TOF MS 快速鉴定联合 EUCAST 直接快速药敏试验方法简单、速度快、易于标准化，常规试验室可开展。

PU-3527

院内混合血流感染患者临床特征及预后危险因素分析

陆燕飞、倪芳
江苏省人民医院（南京医科大学第一附属医院）

目的 分析院内混合血流感染（nosocomial polymicrobial bloodstream infection nPBSI）患者的临床特征及预后危险因素，为 nPBSI 患者治疗及预后判断提供依据。
方法 回顾性分析 2017-2020 年南京医科大学第一附属医院 nPBSI 患者的临床资料及病原菌分布情况，采用 Logistic 回归分析患者的死亡危险因素。
结果 共 159 例患者纳入研究，其中男性占 68.6%（109/159），患者平均年龄 60.1±15.5 岁，主要来自 ICU（51/159，32.1%）和肝胆胰外科（33/159，20.8%），消化系统疾病（106/159，66.7%）是最常见的基础疾病，患者多有外科手术史（127/159，79.9%），死亡率为 34%（54/159）；共分离病原菌 345 株，排名前三位的病原菌分别为肺炎克雷伯菌、大肠埃希菌、屎肠球菌，以两种病原菌混合感染为主（134/159，84.3%），最常见的细菌组合为大肠埃希菌+肠球菌属（16/159，10.1%）；多重耐药鲍曼不动杆菌（MDRAB）nPBSI、机械辅助通气、连续性血液净化、合并肺部感染、感染性休克是混合血流感染患者死亡的独立危险因素。
结论 nPBSI 患者多发生于存在消化道疾病的老年男性；临床用药应考虑到不同病原菌组合模式；患者存在 MDRAB nPBSI、机械辅助通气、感染性休克、肺部感染、连续性血液净化时死亡风险增加。

PU-3528

生殖支原体感染的临床分布和耐药性分析

曾丽洪、张小团、刘卓然
南华大学附属第二医院

生殖支原体的感染在临床上非常常见，其耐药率也受到广泛的关注。本文回顾性分析了 502 例临床疑似生殖支原体感染患者的临床资料和培养结果。共检出生殖支原体阳性 334 例，阳性率 66.53%，年龄中位数为 34 岁，其中女性阳性率显著高于男性，比例为 17.6:1。生殖支原体的临床分布中以解脲脲原体为主，检出率为 87.72%，男女性别构成比无明显差异。生殖支原体对喹诺酮类和大环内酯类的耐药性较高，对克林霉素的耐药率最高，达到 53.5%。其中解脲脲原体对加替沙星、左氧氟沙星、阿奇霉素、克拉霉素和红霉素的耐药率均低于 10%。而人型支原体或人型支原体与解脲脲原体的混合药敏却表现相反，对阿奇霉素、克拉霉素、红霉素和罗红霉素表现为高度耐药，耐药率均大于 60%。因此，临床应更加关注支原体培养及药敏结果，合理使用抗生素，延缓抗生素耐药。

PU-3529

827 例血流感染患者的临床分布及病原谱分析

张小团、刘卓然
南华大学附属第二医院

血流感染（Bloodstream infection，BSI）是一种严重感染性疾病，研究 BSI 的临床分布及病原菌流行特征，可为经验性治疗提供用药参考。分析某院 2016—2018 年发生 BSI 患者的临床资料及病原菌的耐药数据。827 例 BSI 患者共检出病原菌 863 株，其中革兰阴性菌 600 株，占 69.5%，以大肠埃希菌和肺炎克雷伯菌为主；革兰阳性菌 218 株，占 25.3%，以金黄色葡萄球菌为主；深部真菌 45 株，占比 5.2%。科室分布主要以消化内科、ICU、泌尿外科和儿科为主。儿童中 0-1 岁患儿 BSI 的发生率最高，成人中>60 岁患者 BSI 的发生率达到了 51.4%。大肠埃希菌和肺炎克雷伯菌对头孢曲松的耐药性较高，分别为 53.6%和 38.3%，对 β-内酰胺/酶抑制剂和碳青霉烯类的耐药性较低。未检出耐万古霉素金黄色葡萄球菌，但 MRSA 检出率 12.5%。因此，本院 BSI 患者病原菌分布以革兰阴性菌为主，常见细菌耐药性较为严重，年龄和科室分布存在较大差异，临床应进行分层诊疗，合理选用抗生素。

PU-3530

2016—2018 年某医院肺炎克雷伯菌的临床分布及耐药性分析

张小团、李蓓、徐畅、王露、刘卓然
南华大学附属第二医院

目的 分析某院肺炎克雷伯菌（Klebsiella pneumoniae, KPN）的临床分布，产超广谱 β-内酰胺酶（ESBLs）的情况以及综合耐药特点，为临床经验性选用抗生素提供参考。
方法 回顾性分析某院 2016—2018 年临床分离培养的 KPN 的耐药数据及临床资料，所有菌株均采用全自动分析仪进行菌种鉴定和药敏分析。
结果 3 年间共检出非重复 KPN2 211 株，主要样本类型为痰液（57.35%）和尿液标样本（14.97%），科室分布前三的依次为 ICU 病房（12.39%）、泌尿外科（11.80%）和儿科（11.22%）。2211 株 KPN 共检出 ESBLs 阳性 708 株，检出率为 32.02%。KPN 对复方新诺明、一、二代头孢和三代头孢曲松的耐药率已经超过 40%；但对酶抑制合剂哌拉西林他唑巴坦、头孢

哌酮舒巴坦的耐药率较低，分别为 9.60%和 10.09%。对阿米卡星、亚胺培南、美罗培南保持高度的敏感性，耐药率分别为 5.21%，5.20%，5.88%。然而，比较尿液、胆汁、血液和痰液样本中 KPN 的耐药性发现，尿液分离株的耐药性普遍较高（P <0.05）。
结论 KPN 样本来源以痰和尿液为主，主要分布在 ICU 病房、泌尿外科和儿科。ESBLs 检出率较高，耐药情况较为严峻，并且不同样本来源菌株的耐药性较大差异，以尿液分离株的耐药性更为严重。医院需加强对重点科室，不同样本中 KPN 的耐药性监测，合理使用抗菌药物。

PU-3531

海绵附生放线菌抗结核分枝杆菌 活性物质的筛选及分离

冯鹭
山东大学第二医院

目的 从海绵共附生的放线菌代谢物质中筛选出具有抗结核分枝杆菌活性的新型物质。
方法 采用平板稀释法从南海海域采集的海绵中分离共附生放线菌菌株，使用微孔板稀释法评估放线菌代谢物抗结核分枝杆菌 H37Rv 能力。根据分子量和极性，使用高效液相色谱(HPLC)对初筛具有较高抑菌活性的菌株培养上清进行分离，并分别从分离各组分中进一步筛选、鉴定具有抑制结核杆菌生长作用的活性物质。提取该菌株的基因组 DNA，采用通用引物对其 16SrRNA 行 PCR 扩增，并对扩增产物进行测序比对。
结果 分离出的 416 株放线菌中，6 株具有抗结核分枝杆菌功能，其中编号为 NH128 菌株的培养上清中含有抑制 H37Rv 生长的活性物质且作用较为明显;对其进行分离后的组分 F3 具有较高的抑菌活性;进一步通过 HPLC 和微孔板稀释法鉴定出，F3 的亚组分 S3 含有高抑菌活性的物质，其 MIC50 约为 3μg/mL。对 NH12816SrRNA 序列比对结果显示，其与 Aclinomycetales(R03AY94262)同源性为 9%。
结论 南海海域海绵附生放线菌能够产生较高的抗结核分枝杆菌活性物质;NH128 菌株可能为放线菌菌属 Aclinomycetales(R03AY94262)的变种。

PU-3532

1218 例泌尿生殖道支原体培养及药敏结果分析

何天娇
西安医学院第一附属医院

目的 研究我院支原体阳性率及 12 种抗生素药敏结果情况。
方法 回顾性分析本院 2018 年 5 月-2019 年 12 月在本院就诊的疑似泌尿生殖道支原体感染 1218 例患者的临床资料。
结果 所有患者中支原体阳性为 435 例（35.71%），女性支原体检出阳性率 56.09%高于男性 43.91%，差异显著，P<0.05；其中 Uu 阳性 322 例（74.02%）,Mh 阳性 11 例（2.53%）,Mh 混合型为 102 例（23.45%）。药敏试验显示药敏试验显示 Uu、Uu 十 Mh、Mh 耐药性存在一定差异。单纯 Uu 感染者对杭生素的敏感性明显高于混合感染者，美满霉素、强力霉素与新型大环内酯类抗生素交沙霉素对支原体敏感性最高。
结论 本院 Uu 是引起泌尿生殖道感染的主要支原体,女性患者感染率高于男性,对疑似支原体感染的患者需要进行支原体的分离培养鉴定和药敏检测，临床应根据感染类型和抗生素敏感性的不同选择合适的药物进行治疗。

PU-3533

某三级医院儿童下呼吸道感染细菌的流行特征及耐药性分析

张小团、徐畅、王露、李蓓、刘卓然
南华大学附属第二医院

目的 了解儿童呼吸道感染细菌的流行特征及耐药性，为临床经验性诊治提供参考。
方法 回顾性分析我院近三年儿童呼吸道感染细菌（除外肺炎支原体）的检出情况、不同季节的变化规律、年龄的分布和重点细菌的耐药性分析。
结果 共检出细菌 2267 株，其中革兰阳性菌 1133 例，占比 50.0%，革兰阴性菌 1114 例，占比 49.1%，真菌 20 株，占比 0.9%。检出率排名前五的细菌依次是肺炎链球菌 759 株，流感嗜血杆菌 450 株，金黄色葡萄球菌 352 株，卡他莫拉菌 232 株，肺炎克雷伯菌 136 株。这些细菌以冬、春季节为主要流行，且主要好发于婴幼儿期。细菌耐药性监测显示，肺炎链球菌青霉素的耐药率为 0.4%，甲氧西林耐药金黄色葡萄球菌的为 20.9%，产超广谱 β-内酰胺酶的肺炎克雷伯菌为 36.0%，β-内酰胺酶阳性的流感嗜血杆菌和卡他莫拉菌分别为 59.8%和 97.8%。
结论 儿童下呼吸道病原菌的耐药性较为严峻，其细菌感染以肺炎链球菌和流感嗜血杆菌为主，冬、春季为高发期，0-3 岁为高发人群，家庭护理和临床诊疗应尤其注意上述特征。

PU-3534

儿童感染铜绿假单胞菌的流行趋势及耐药变迁

杜琴
江西省儿童医院

目的 了解铜绿假单胞菌儿童分离株的临床分布特点及对临床常用抗菌药物耐药的耐药特征，以便指导临床合理用药。
方法 常规方法进行菌株分离，全自动微生物分析仪进行菌株鉴定及药敏试验，依据当年度美国临床实验室标准化委员会（CLSI）标准判断抗菌药物的敏感性，WHONET 5.5 软件进行统计分析。
结果 2015－2018 年共分离获得铜绿假单胞菌 319 株，药物耐药率较 2000-2001 年相比，头孢他啶耐药率下降达 47.25%，阿米卡星、环丙沙星、庆大霉素耐药率变化在 10%左右。2015-2018 四年间对亚胺培南的耐药率为 13.8%。
结论 近年来我院 MRPA 检出率明显下降;哌拉西林、哌拉西林他唑巴坦、头孢他啶可作为临床治疗铜绿假单胞菌感染的一线药物。

PU-3535

结核分枝杆菌抗原检测（胶体金法）的实验室诊断应用评价

夏文颖、刘根焰
南京医科大学第一附属医院（江苏省人民医院）

目的 评估结核分枝杆菌抗原检测（胶体金法）在结核分枝杆菌培养中的临床应用价值。
方法 收集南京医科大学第一附属医院（江苏省人民医院）2018 年 6 月至 2020 年 6 月的结核培养标本 875 例，BACTEC MGIT 320 仪器培养，仪器培养阳性后，培养液分别进行抗酸染色、结核分枝杆菌核酸检测（PCR 方法）和结核分枝杆菌抗原检测（胶体金法），以 PCR 方法作为金标准。
结果 875 例结核培养标本经仪器培养后，145 例标本培养阳性，抗酸涂片阳性为 101 例，结核分枝杆菌抗原检测阳性 62 例， PCR 检测阳性 64 例，以 PCR 方法为金标准，结核分枝杆菌胶体金

法的敏感性和特异性分别为 97.0%和 100%，阳性预测值和阴性预测值分别为 100%和 97.7%，与 PCR 方法结果一致性检验 Kappa 值为 0.972（P<0.01）。
结论 结核分枝杆菌抗原（胶体金法）检测方法在结核培养检测中具有很好的临床诊断应用价值。

PU-3536

耐碳青霉烯类肠杆菌科细菌血流感染临床特征和危险因素分析

夏文颖、倪芳
南京医科大学第一附属医院（江苏省人民医院）

目的 探讨医院耐碳青霉烯类肠杆菌科细菌(carbapenem-resistant Enterobacteriaceae，CRE)血流感染(bloodstream infection，BSI)患者的临床特征及危险因素分析，为临床耐碳青霉烯类肠杆菌科细菌血流感染防治提供依据。
方法 回顾性分析 2014 年 1 月至 2020 年 12 月江苏省人民医院诊断为耐碳青霉烯类肠杆菌科细菌血流感染的 228 例患者的临床资料，分析 CRE-BSI 患者临床特征，应用 Logistic 回归分析 CRE-BSI 的危险因素。
结果 175 例为男性患者，53 例为女性患者。其中，158 例（69.3%）患者合并有一种或一种以上基础疾病，130 例（57%）患者感染前有外科手术经历，220 例（96.5%）患者治疗过程中有一种或一种以上侵入性操作，患者中 132 例（57.9%）年龄在 60 岁及以上。肺炎克雷伯菌为临床最常见 CRE-BSI 感染病原菌，120 例（52.6%）患者预后不良。Logistic 回归显示年龄、机械通气血液透析是 CRE-BSI 的危险因素。
结论 本研究表明耐碳青霉烯类肠杆菌科细菌血流感染患者存在高龄化、高死亡率；年龄、机械通气和血液透析是耐碳青霉烯类肠杆菌科细菌血流感染预后不良的危险因素，临床应规避侵入操作的感染可能、尽早根据药敏结果合理用药干预以降低死亡风险。

PU-3537

2014-2019 年鲍曼不动杆菌的临床分布及耐药性分析

袁文丽、邓德耀、沈彦均、郭媛媛、顾津伊、徐红云、马众仙、陈弟、余林
云南大学附属医院

目的 探讨鲍曼不动杆菌的临床分布情况及耐药性变迁，为临床合理使用抗菌药物提供参考。
方法 回顾性分析某院 2014 年 1 月至 2019 年 12 月临床分离 2089 株鲍曼不动杆菌的患者临床资料和药敏结果。
结果 2089 株鲍曼不动杆菌中重症监护室(38.1%)和外科(20.8%)是分离鲍曼不动杆菌的主要科室；大于 60 岁男性患者的临床样本中鲍曼不动杆菌分离率较高；鲍曼不动杆菌对哌拉西林，哌拉西林/他唑巴坦，亚胺培南、美罗培南，阿米卡星耐药率逐年上升，对左旋氧氟沙星耐药率逐年下降；多重耐药的鲍曼不动杆菌分离率逐年上升；耐亚胺培南的鲍曼不动杆菌对哌拉西林等 12 种抗菌药物耐药率显著高于亚胺培南敏感株。
结论 重症监护室和外科的患者是鲍曼不动杆菌的易感人群；男性患者较女性更易分离出鲍曼不动杆菌；鲍曼不动杆菌对大部分抗菌药物耐药率总体呈逐年上升趋势，应加强对鲍曼不动杆菌耐药性的监测并合理使用抗菌药物。

PU-3538

优化万古霉素、利奈唑胺、替考拉宁和达托霉素在对葡萄球菌属血流感染患者中的给药方案：基于全国血流感染耐药监测联盟（BRICS）的蒙特卡洛模拟研究

金丹婷
连云港市第一人民医院

目的 借助全国血流感染细菌耐药监测联盟（BRICS）平台收集 2018-2019 年血培养中分离的葡萄球菌属，通过蒙特卡洛模拟预测和评价万古霉素、利奈唑胺、替考拉宁和达托霉素对葡萄球菌属的抗菌效果，进而优化临床给药方案。
方法 万古霉素、利奈唑胺和达托霉素采用肉汤稀释法，替考拉宁采用琼脂稀释法分别对 1847 株血培养中分离的葡萄球菌属进行最低抑菌浓度（minimuminhibitoryconcentration，MIC）的测定。通过蒙特卡洛模拟计算四种药物不同给药方案的的达标概率 (probability of target attainment，PTA) 和累计反应分数（cumulative fraction of response，CFR）。
结果 万古霉素给药剂量 500mg q6h、1000mg q12h、1500mg q12h、2000mg q12h 对葡萄球菌属的 CFR 分别为 51%、51%、80%和 83%。利奈唑胺给药剂量 800mg qd、 500mg q12h、600mg q12h、600mg q8h 对葡萄球菌属的 CFR 分别为 74%、84%、89%和 95%。替考拉宁给药剂量 400mg q12h、600mg q12h、800mg q12h、1000mg q12h 对葡萄球菌属的 CFR 分别为 89%、93%、94%、94%。达托霉素 4mg/kg/day、6mg/kg/day、8mg/kg/day、10mg/kg/day、12mg/kg/day 对葡萄球菌属的 CFR 分别为 97.429%、99.242%、99.936%、100%和 100%。
结论 针对葡萄球菌属引起的血流感染，利奈唑胺的 600mgq8h、替考拉宁的 600mgq12h、800mgq12h 和 1000mgq12h、达托霉素的 4mg/kg/day 给药方案即可达到较好的抗菌效果。

PU-3539

广东地区妊娠期糖尿病孕妇尿路感染的临床特点与危险因素分析

凌勇、刘洁、周典蓉、梁雪冰、周艳
广东省人民医院

目的 探讨广东地区妊娠期糖尿病（Gestational diabetes mellitus，GDM）孕妇尿路感染的临床特点与相关危险因素，为降低感染及临床治疗提供参考依据。
方法 收集 2016 年 1 月至 2020 年 12 月在广东省人民医院确诊为 GDM289 例患者，回顾性分析 GDM 孕妇尿路感染的发生率、病原菌分布及耐药情况，采用多因素 Logistic 回归分析 GDM 孕妇尿路感染的可能相关危险因素。
结果 289 例 GDM 孕妇中有 32 例发生尿路感染，发生率为 11.07%。中段尿培养共检出 32 株病原菌，其中以大肠埃希菌（53.13%，17/32）为主。大肠埃希菌对氨苄西林的耐药率较高，对碳青霉烯类、β-内酰胺酶抑制剂合剂、阿米卡星等抗菌药物的耐药率较低。多因素 Logistic 回归分析显示，甘油三酯（OR：1.276、95%CI：1.066-1.526、P＜0.05）是 GDM 孕妇尿路感染的独立危险因素。
结论 甘油三酯与 GDM 孕妇尿路感染的发生有关，临床上可采取相应措施，降低尿路感染的发生率，并根据患者病情合理选择抗菌药物。

PU-3540

云南省部分地区 HIV 共感染丙型肝炎病毒 NS5 基因的遗传进化及 C316N 耐药位点分析

王佳丽
云南省传染病医院

目的 探讨云南省 HIV 共感染丙型肝炎病毒（HCV）基因分型及分布和 NS5B C316N 抗病毒耐药位点变异，为当地共感染 HCV 患者抗病毒治疗提供科学依据。
方法 2018 年-2019 年在云南省传染病医院采集 HIV 共感染 HCV 患者血清及信息，经 RNA 提取、cDNA 合成，采用 HCV NS5 基因特异引物进行 PCR 扩增，阳性产物测序，采用 DNAstar、GeneDoc、MEGA-X 等生物信息学软件对基因序列进行遗传进化和耐药位点分析。
结果 共收集到 197 例丙型肝炎患者血清，67 例扩增阳性。序列分析结果显示普洱、西双版纳和德宏的 4 例（5.8 %）与 1a 型病毒核苷酸同源性最高在 92.7%-93.5%，表明这 4 例病毒为基因 1a 型；丽江、昆明、曲靖、玉溪、楚雄、普洱、红河的 13 例（18.8 %）与 1b 型 HCV 核苷酸同源性最高在 86.5%-91.5%，表明这 13 例病毒为基因 1b 型；普洱、曲靖、大理、玉溪、昆明、红河的 12 例(17.4 %)与 3a 型病毒核苷酸同源性最高在 88.1%-97.1%之间，表明 12 例 HCV 为基因 3a 型；版纳、昆明、保山、昭通、楚雄、红河、曲靖、临沧、大理、玉溪的 30 例(44.8 %)与 3b 型 HCV 核苷酸同源性最高在 85.6%-98.5%之间，表明 30 例 HCV 为基因 3b 型；临沧、怒江、版纳、德宏、昆明的 8 例（11.9%）与 6n 型 HCV 核苷酸同源性最高在 92.8%-96.5%，表明这 8 例 HCV 为基因 6n 型。耐药位点分析结果显示 1b 型病毒存在 dasabuvir 耐药位点 C316N 变异，而其它基因型或基因亚型未发现该耐药位点变异。
结论 云南省存在 HCV 1a、1b、3a、3b、6n 型等 3 个基因型 5 基因亚型流行，但以基因 3 型病毒为主要流行基因型，不同基因型型或亚型具有明显地域性，并在云南省流行的 1b 型 HCV NS5B 316 位上发生了 dasabuvir 耐药位点突变。

PU-3541

MALDI-TOF MS 技术快速鉴定在儿童血流感染诊治中的应用

周艳
江西省儿童医院

目的 应用基质辅助激光解吸电离飞行时间质谱（MALDI-TOF MS）技术快速鉴定儿童血培养阳性标本中的病原菌，分析 MALDI-TOF MS 快速鉴定法的符合率，探讨其是否适合直接快速鉴定儿童常见血流感染病原菌的鉴定。
方法 运用细胞裂解-分离胶管法以及分离胶法富集儿童阳性血培养瓶中的病原菌，应用 MALDI-TOF MS 对经前处理的血培养阳性标本进行直接鉴定，鉴定结果与传统培养 24 小时菌落 MALDI-TOF MS 鉴定结果以及传统的 Phoenix 100 全自动鉴定药敏分析仪鉴定结果进行比较。
结果 在实验的 160 株儿童阳性血培养标本中，革兰阴性菌的鉴定符合率达 94.3%；革兰阳性菌鉴定符合率达 96%。两种及两种以上细菌混合感染的阳性标本直接鉴定还存在一定困难，其直接鉴定方式还需进一步探讨。血培养假阳性标本直接鉴定均未鉴定出病原菌。
结论 MALDI-TOF MS 直接快速鉴定阳性儿童血培养标本中的病原菌，对血流感染中主要病原菌的鉴定符合率较高，可将细菌快速地鉴定到菌种，能够显著缩短阳性报警后血培养的最终报告时间，并且可提高临床抗菌药物初始化治疗的准确性，是适合在临床实验室推广的一种快速、准确、灵敏、特异的直接快速鉴定儿童血流感染病原菌的方法。

PU-3542

老药新用：五氟利多对金黄色葡萄球菌、持留菌及其生物膜的抗菌作用研究

刘亚倩、佘鹏飞、徐兰兰、陈丽华、李懿敏、刘莎莎、李泽浩、 Hussain Zubair 、伍勇
中南大学湘雅三医院

目的 探讨抗抑郁症药物五氟利多（PF）对金黄色葡萄球菌、持留菌及其生物膜的抗菌作用研究。
方法 采用微量肉汤稀释法检测 PF 对金黄色葡萄球菌的最低抑菌浓度（MIC）及最低杀菌浓度（MBC),应用时间-杀菌曲线评价其杀菌效果。采用棋盘稀释法检测 PF 与常规抗生素的联合抗菌作用。利用微孔板法构建生物膜，结晶紫染色和生物膜内活菌计数法检测 PF 对金黄色葡萄球菌生物膜的抑制和分散作用以及对膜内菌的杀灭作用，并在激光共聚焦显微镜下观察细菌生物膜的形态变化。通过诱导形成持留菌，检测 PF 对持留菌及生物膜内持留菌的杀灭效果。通过膜通透性试验、膜去极化实验、ATP 释放试验、RNA 测序和扫描及透射电子显微镜研究 PF 对细菌细胞膜完整性的影响，探讨其作用机制。人红细胞溶血试验和细胞活性试验用于检测 PF 的细胞毒性。利用一步和连续诱导耐药法检测 PF 对金黄色葡萄球菌的耐药突变选择。采用药代动力学模型研究 PF 在小鼠体内吸收和代谢的规律。构建小鼠 MRSA 感染的皮肤脓肿、伤口感染、急性腹膜炎模型，评估 PF 的体内抗菌效果。
结果 PF 对金黄色葡萄球菌的 MIC 在 4-8 μg/mL 之间，MBC 在 16-32 μg/mL 之间，2×MIC 和 4×MIC 的 PF 分别在 8h 和 2h 内迅速杀死所有的细菌细胞。棋盘法显示 PF 与四环素和 PMBN 具有协同抗菌作用。PF 可以抑制金黄色葡萄球菌生物膜形成，并以剂量依赖性方式分散 24h 成熟生物膜。PF 对持留菌及生物膜内持留菌具有显著清除作用。抗菌机制研究表明 PF 可通过提高细菌细胞膜通透性，破坏细胞膜完整性从而导致细菌难以存活而死亡。PF 的细胞毒性低，不易对金黄色葡萄球菌产生耐药，并且具有合理的药代动力学特性。在小鼠皮肤脓肿，伤口感染以及急性腹膜炎模型中，均展现出有效的抗菌作用。
结论 PF 在体内和体外对金黄色葡萄球菌均具有良好的抗菌效果，有潜力作为新型抗菌药物治疗金黄色葡萄球引起的相关感染。

PU-3543

Genetic and phenotypic characterization of the novel metallo- β-lactamase NDM-29 from Escherichia coli

Ying Zhu、Xinmiao Jia、Peiyao Jia、Li Xue、Qiwen Yang
Peking Union Medical College Hospital

Objectives The blaNDM can hydrolyze almost all clinically-available β-lactam antibiotics and has widely spread all over the world. An NDM-29-encoding Escherichia coli strain, 19NC225, isolated from a patient with biliary tract infection, was discovered in 2019 in China.
Methods PacBio Sequel and Illumina sequencing, conjugation, transformation, cloning test and fitness cost were performed to analyze the genetic and phenotypic characterization of the newly-discovered blaNDM-29 from plasmid and strain level.
Results The strain, 19NC225, containing two plasmids (pNC225-TEM1B and pNC225-NDM-29), belongs to ST1485 and O83:H42. blaNDM-29, carrying a G388A (D130N) mutation compared with blaNDM-1, is located on a 60 Kb plasmid, pNC225-NDM-29, which exhibited 99% identity with six blaNDM-1-carrying plasmids and showed responsibility for the MDR phenotype. The transferability and phenotypic function of the plasmid pNC225-NDM-29 and the blaNDM-29 gene was verified by conjugation/ transformation and cloning test. Furthermore, fitness cost test confirmed that the presence of NDM-29 exerts no survival pressure on bacteria, which strongly supports the transmission capacity of blaNDM-29-bearing plasmid.

Conclusions Our study provides a comprehensive view of the whole genome sequence of an NDM-29-encoding Escherichia coli strain and the novel NDM variant blaNDM-29 which mediates carbapenem resistance and has the capacity of transmission. Further epidemiological concerns should be warranted on NDM-29-producing isolates which has the potential capacity of spread.

感染性心内膜诊治的研究进展

张晓慧、倪芳、夏文颖
江苏省人民医院（南京医科大学第一附属医院）

感染性心内膜炎（Infective Endocarditis，IE）为心内膜或者心脏瓣膜受到细菌、真菌或其他微生物（如立克次体、螺旋体、衣原体等）感染，伴赘生物形成，是一种严重致死的感染性疾病。IE 的病因复杂，临床表现及并发症多样，对其诊断和治疗带来巨大困难。近年随着人口的老龄化，人工瓣膜置换、留置心脏装置、血液透析及各种血管内治疗技术的应用，IE 的发病率不断增加，同时其临床特征、致病菌的分布及耐药性均发生了显著变化。目前国内大部分地区引起 IE 的病原菌仍以链球菌为主。耐药菌株的不断涌现给临床治疗带来极大的困难。国内对 IE 的报道多为单中心研究，受地域、地区经济及气候条件限制，具有一定的局限性。本文旨在对近年 IE 诊断、病原菌分布及治疗等相关文献进行复习总结，为 IE 的诊治提供有利依据。

PU-3545

Evaluation of the clinical systems for polymyxin susceptibility testing of clinical gram-negative bacteria in China

Ying Zhu、Peiyao Jia、Menglan Zhou、Jingjia Zhang、Ge Zhang、Wei Kang、Simeng Duan、Tong Wang、Yingchun Xu、Qiwen Yang
Peking Union Medical College Hospital

Objectives The performance of mainstream commercial antimicrobial susceptibility testing systems on polymyxins have not been well evaluated in China. In this study, three antimicrobial susceptibility testing systems were evaluated for polymyxin B and colistin.
Methods The MICs of 257 Gram-negative strains collected from clinical cases and livestock were determined and analyzed. Using Broth Microdilution as the gold standard, the performance of VITEK 2® COMPACT, Phoenix™ M50 and Bio-kont AST System were evaluated. Essential agreement (EA), category agreement (CA), very major error (VME) and major error (ME) were calculated for comparison. The results of mcr-1 positive strains were separately discussed.
Results The EA, CA, VME and ME to polymyxin B for Bio-kont were 83.5%, 95.6%, 13.1% and 0.6%, respectively. The EAs, CAs, VMEs and MEs to colistin were as follows: Bio-kont, 86.7%/96.5%/7.2%/1.7%; Vitek 2, 64.2%/86.8%/41.0%/0% and Phoenix M50, 92.9%/92.9%/21.7%/0%. The performance of Bio-kont to polymyxin B and colistin for Pseudomonas spp. (EA, CA <90%, VME >1.5%, ME=5.6%/10%) and Enterobacter spp. (EA, CA <90%, VME >1.5% and ME= 0%), Vitek to colistin for most genera and Phoenix to colistin for Enterobacter spp. (EA, CA <90%, VME >1.5%, ME=0%) were unsatisfactory compared with other genera. The performance of Bio-kont to polymyxins for Escherichia spp. and Phoenix to colistin for Citrobacter spp., Escherichia spp. and Klebsiella spp., which all met the CLSI standard, were satisfactory. When the susceptibility of mcr-1 positive E. coli was tested, Bio-kont and Phoenix M50 presented excellent performance with no category errors, while Vitek 2 performed a high VME (25.5%).

Conclusions With relatively more accurate results for polymyxin B and colistin and lower VME, Bio-kont has its advantage for polymyxin antimicrobial susceptibility testing, especially for Escherichia spp., Klebsiella spp., Citrobacter spp. and Acinetobacter spp..

PU-3546

感染性心内膜炎患者病原菌分布及药物敏感性分析

张晓慧、夏文颖、倪芳
江苏省人民医院（南京医科大学第一附属医院）

目的 分析感染性心内膜炎（Infective endocarditis, IE）患者血培养的病原菌分布及其药物敏感性分析，为临床合理选用抗菌药物及择期手术提供理论依据。
方法 选取 2016 年 1 月至 2019 年 12 月我院血培养阳性的 IE 患者 104 例，回顾性分析其致病菌的类型及药物敏感性情况。
结果 2016 年至 2019 年我院共收治 IE 患者 249 例，其中血培养阳性 104 例，阳性率为 41.8%。104 例 IE 患者通过血培养共检出 108 株菌，其中革兰阳性菌 92 株（占 85.2%），主要以链球菌（50.9%）和葡萄球菌（26.9 %）为主；分离出革兰阴性菌共 13 株、真菌 2 株、厌氧菌 1 株。药敏试验结果显示，链球菌属对 β-内酰胺类、喹诺酮类药物敏感性较好（均>80%），但对红霉素、克林霉素耐药率较高。金黄色葡萄球菌对青霉素 G 的敏感性（11.1%）较低，红霉素（35.3%）、克林霉素（38.9%）次之，对庆大霉素（94.4%）和喹诺酮类药物（>80%）的敏感性较高，其中有 5 株为耐甲氧西林金黄色葡萄球菌。对苯唑西林耐药的凝固酶阴性葡萄球菌占 66.7%。两种菌属均未见对万古霉素或利奈唑胺耐药的菌株。
结论 链球菌仍是 IE 最常见的致病菌，其次是葡萄球菌。近年 IE 的病原菌分布呈现出多样化、复杂化趋势，临床需密切关注并根据药敏结果及时调整抗感染方案，以确保诊疗的有效性，提高患者的生存率。

Repurposing FDA-approved drugs against biofilm and persister cells of Pseudomonas aeruginosa

Pengfei She、Shijia Li、Linying Zhou、Wu Yong
The Third Xiangya Hospital of Central South University

Pseudomonas aeruginosa is a ubiquitous bacterium found in hospitals and the surrounding environment. The ability of P. aeruginosa to form biofilms confers high-level resistance to antibiotics, and the persister cells formed in the presence of high antibacterial drug concentrations make P. aeruginosa-related infections more refractory. Further, there rarely is an effective antimicrobial alternative when biofilm- and persister cell-targeting treatment fails. Using a high-throughput screening assay, we previously identified fluoroquinolones sitafloxacin, prulifloxacin, and tosufloxacin as well as aminoglycoside sisomicin as FDA-approved drugs with significant time- and dose-dependent P. aeruginosa biofilm eradication effects. These agents also exhibited bactericidal efficacy against antibiotic- or CCCP-induced P. aeruginosa persister cells. In addition, we confirmed the in vivo anti-biofilm efficacy of identified antibiotics in a subcutaneous implantation biofilm-related infection model. Taken together, our results indicate that sitafloxacin, prulifloxacin, tosufloxacin, and sisomicin have great potential as alternatives for the treatment of refractory infections caused by P. aeruginosa biofilms and persister cells.

PU-3548

湖南地区耐碳青霉烯肺炎克雷伯菌的耐药情况及耐药机制研究

唐云、罗椿意、刘双全
南华大学附属第一医院

目的 本研究收集湖南省多家医院的 CRKP 临床分离株，对其进行鉴定、药敏分析和耐药基因筛查，了解湖南省 CRKP 流行的耐药基因型及其对常见抗菌药物的耐药情况，为临床医师合理使用抗菌药物及控制院内感染提供理论依据。
方法 1. 收集 2019 年 5 月-2020 年 11 月期间来自湖南省衡阳、长沙、湘潭和怀化地区的 CRKP 菌株共 96 株，对其科室、性别、年龄分布等情况进行统计分析。
2. 利用拉丝实验筛检 CRKP 菌株中的高黏液型 CRKP 菌株，并使用微生物分析系统进行药敏分析、菌种鉴定。肉汤稀释法确定常见抗菌药物的最低抑菌浓度。
3. 通过 mCIM 联合 eCIM 试验检测 CRKP 菌株的碳青霉烯酶表型。使用 PCR 分子学方法检测 CRKP 菌株的相关耐药基因，同时测序鉴定检出的耐药基因。
结果 1. 96 株 CRKP 菌株主要分离自痰液标本 55.21%并主要分布于 ICU 40.63%；男性分离率 67.71%高于女性 32.29%；以 61-70 岁分离率最高，为 21.88%。
2.筛检高黏液表型 CRKP 菌株的阳性率为 14.43%。CRKP 菌株对碳青霉烯类抗生素耐药率均为 100%，对 26 种抗菌药物的耐药率均在 50%以上。
3. mCIM 试验单独阳性率为 79.17%，mCIM 和 eCIM 试验均阳性率为 16.67%。测得碳青霉烯类耐药基因 KPC 基因率最高，为 98.96%；多粘菌素 B 耐药基因 MCR-1 基因率为 35.42%；外膜孔蛋白基因 Ompk35 基因率为 100%，同时检测到 Ompk36 基因率为 94.79%，所有检出基因经基因测序验证为目的基因。
结论 1. 湖南省多家医院收集的 96 株 CRKP 菌株主要来源于痰液标本并主要集中分布于 ICU，男性较女性的分离率高。
2. 本次收集的 CRKP 菌株以产丝氨酸酶为主，且对多种常用的抗菌药物耐药，耐药机制主要以产生 KPC 耐药基因为主，同时存在 Ompk36 基因缺失，多粘菌素 B 耐药 MCR-1 基因阳性率亦较高。

内质网应激与感染性疾病研究进展

唐云、罗椿意、刘双全
南华大学附属第一医院

内质网(endoplasmic reticulum，ER)是一类膜细胞器，包含粗糙型和光滑型两种类型，其生物学功能多样化，同时也是脂质合成、蛋白质发挥功能和钙离子代谢的主要场所。但是当细胞受到刺激时，内质网会发生紊乱，内环境稳态发生改变可干扰内质网功能则引起内质网应激(Endoplasmic reticulum stress，ERS)，为保证机体的稳定性，大量异常堆积的错误/未折叠蛋白质所引发的未折叠蛋白反应(unfolded protein response，UPR)会恢复内质网稳态来减少 ERS 带来的不良反应。ERS 是一种机体自适应性机制，有着双重作用。一方面能诱导 GRP78 等分子伴侣的表达而产生保护作用，在一定程度上能够维持细胞和机体稳态；另一方面，若细胞中存在高强度的 ERS，又能诱导细胞自噬或凋亡，从而导致疾病的发生。细胞中存在几种维持内质网稳态的机制，其中 UPR 是最为主要的。近期，越来越多的文献报道指出 ERS 相关信号通路与炎症、自噬或凋亡存在显著关联性，其参与多种疾病(如病毒性肝炎、心血管、代谢性疾病和神经退行性疾病等)的病程进展。由于 ERS 相关信号通路在这些疾病中的复杂性，我们需要进一步加强对内质网作用机制的研究，从而更深入、更全面的掌握其与感染性疾病的发生发展中的潜在机制，有望为这一类疾病的诊治提供新方法、新思路。因此，本文主要针对内质网应激与几种感染性疾病的相关研究进展作简要的阐述，为探明感染性疾病的发病机制及其防控措施给予理论指导。

Fluconazole-Induced Microevolution of Candida parapsilosis harbouring novel mutation G490R in Tac1p: a new site responsible for the high MIC value

Yating Ning[2]、Tianshu Sun[1]、Li Zhang[1]
1. Peking Union Medical College Hospital, Chinese Academy of Medical Sciences & Peking Union Medical College
2. Peking Union Medical College Hospital, Chinese Academy of Medical Sciences & Peking Union Medical College

Candida species are a major cause of life-threatening invasive infections worldwide. Even though Candida albicans is responsible for the vast majority of infections, the clinical relevance of other Candida species has also emerged over the last twenty years, especially Candida parapsilosis, which ranks second in total isolation rate of Candida species and first in bloodstream infections in China. Besides, azole-resistant C. parapsilosis strains are frequently isolated in the hospital setting. The mechanism for resistance to azoles is well-known in C. albicans and C. glabrata, where it is mediated by amino acid substitutions at defined locations of Erg11p, Mdr1p, Cdr1p and their upstream regulator Tac1p and Mrr1p. However, less is known about acquired substitutions in C. parapsilosis. In this study, we applied fluconazole to induce directed evolution experiments to generate C. parapsilosis strains with acquired resistance to azole. Then, SNPs were analyzed based on whole-genome sequencing results, and the role of SNPs was verified by CRISPR gene editing. The evolved strains gained cross-resistance to fluconazole, voriconazole, posaconazole and itraconzole. In particular, MIC value of fluconazole had the highest increase, from 2 mg/L (F0, ACTT22019) to 32 mg/L (F50). Sequencing of related drug resistance genes showed that the evolved strain harbored base substitution G1585A in TAC1 (L986P). Introduction of the mutation G1585A into fluconazole-susceptible isolate F0 using CRISPR-Cas9 was confirmed to increase fluconazole resistance by 16-fold, and the correction of the same mutation in the fluconazole-resistant isolate F50, decreased fluconazole MIC by 16-fold. In addition, we found virulence and biofilm formation ability of F50 were attenuated in vivo after fluconazole adaptation. Altogether, our results demonstrate fluconazole adaptation can result in azole cross-resistance and virulence attenuation in C. parapsilosis, and L986P mutation in Tac1p significantly contributes to fluconazole resistance.

生艾叶对人肺炎支原体体外抑菌实验研究

杨川琪、柴琳
昆明市中医医院

目的 探讨生艾叶提取物对人肺炎支原体（MP）流行株、耐药株体外抑菌和杀菌的效果。
方法 将生艾叶中药原液倍比稀释成三个浓度，依次为：250 g/L,62.50 g/L,15.625 g/L；通过体外对三个浓度在 0 小时，12 小时，24 小时三个与 MP 作用时间段计数菌落数，筛选出生艾叶提取物对本地人肺炎支原体流行株 ATCC15531、ATCC29342 和耐药株 MP19 直接抑菌杀菌作用最佳的药物浓度和时间。
结果 生艾叶粗提药液浓度 250 g/L 对人肺炎支原体（MP）流行株、耐药株体外在 0 小时、12 小时、24 小时三个时间段均有杀菌作用，灭菌率在 83%~100%。生艾叶粗提药液浓度 62.5 g/L 在 24 小时对肺炎支原体流行株 ATCC15531 灭菌率为 92%，对 ATCC29342 灭菌率为 87%，对耐药株 MP19 灭菌率为 94%。
结论 浓度为 62.5 g/L 的生艾叶提取物对人肺炎支原体 MIC90 值在 65g/L-30g/L，与肺炎支原体作用 24 小时是最佳抑菌杀菌浓度和时间。

TPPA 和 TRUST 两种检查方法在梅毒血清抵抗检查应用及中医辨证施治观察

唐亚娟
昆明市中医医院

目的 探究明胶颗粒凝聚试验（TPPA）、甲苯胺红不加热血清试验（TRUST）两种检查方法在梅毒血清抵抗检查应用及中医辨证施治观察。
方法 收集笔者单位皮肤科收治梅毒血清抵抗患者为探查对象，病例筛查时间 2017 年 7 月到 2020 年 7 月，共计 52 例，依据患者入院序号划分小组，试验 1 组 26 例予以 TPPA 检查，试验 2 组 26 例予以 TRUST 检查，比对诊断结果，予以受查患者中医辨证治疗，观察疗效。
结果 试验 1 组特异性及敏感性高于试验 2 组（P<0.05）；所选患者均成功完成治疗，医学随访治疗后 3 个月、6 个月，转阴率 73.08%、98.15%，复发率 1.92%。
结论 TPPA、TRUST 检查方法均可检出梅毒血清抵抗情况，各具优缺点，可联合诊断，以便开展早期中医辨证治疗，确保预后转阴。

浅谈呼吸道九联检检测对儿童呼吸道感染的检测意义及分析

罗癸敏
昆明市中医医院

目的 通过间接荧光免疫技术对常见儿童呼吸道感染检测血清中发病率最高的 IgM 抗体九类病原体做临床意义分析。
方法 采用间接免疫荧光法(IFA)对昆明市中医医院儿科门诊的 435 例呼吸道感染疾病的儿童患者，其中男性患儿 237 例，女性患儿 198 例，年龄 0～6 岁同时检查嗜肺军团菌(LP)、肺炎支原体(MP)、Q 热立克次体(COX)、肺炎衣原体(CP)、腺病毒(ADV)、呼吸道合胞病毒(RSV)、甲型流感病毒(IFA)、乙型流感病毒(IFB)和副流感病毒九种病原体在小儿呼吸道感染患者中的检出阳性率，其中主要以肺炎支原体最为常见，占阳性例数的 53.73%，其次为合胞病毒 4.477%，混合感染占感染比例的 27.62%。
结论 呼吸道九联检的检测方法在儿童呼吸道感染检测中检出的阳性率高，能够同时检测九种病原体，及时发现感染的病原体，对临床呼吸道感染疾病的诊断及鉴别诊断，提供合理的支持依据，并对合理用药具有一定的指导意义,有助于避免抗菌药物的盲目使用及滥用。

两种 G 试验检测系统结果的比对分析

李晓丽
昆明市中医医院

目的 目前有关 G 试验不同检测系统检测结果的比对分析报道并不多，本文旨在探讨 MB-80 微生物快速动态检测系统（北京金山川科技有限公司）和 LGL200 系列动态检测系统（天津喜诺生物有限公司），两种 G 试验检测系统的检测结果之间是否具有可比性。
方法 参照 NCCLS 文件 EP9-A2 指南，对两种 G 试验检测系统进行重复性试验，计算 CV 值。收集符合要求的临床标本，在 5 个工作日内对 40 份标本进行测定，分别对两组数据进行统计分析，评价两系统检测结果的相关性。
结果 MB-80 微生物快速动态检测系统和 LGL200 系列动态检测系统的变异系数分别为 7.49%和 6.45%。线性回归计算得回归方程（R^2=0.969）。
结论 两系统在试验期间有较好的重复性，变异系数均≤10%，两系统检测结果相关性较好。

基于海胆状金纳米的细菌 ECL 广谱分析方法研究

韩道宾[1]、丁世家[2]
1. 山东大学第二医院
2. 重庆医科大学

本研究创新性地利用银纳米（Ag nanoparticle, AgNPs）的 LSPR 作用增强过硫酸系统的电化学发光强度。同时，海胆状金纳米（Sea urchin like gold nanoparticles, SAuNPs）不仅可以利用自身的物理结构穿刺细菌，而且可以在一定程度上发挥 LSPR 作用促进过硫酸系统的电化学发光。SAuNPs 和 AgNPs 的电化学发光双重增强作用使电化学发光强度显著提高。当细菌加入后，快速被 SAuNPs 表面的棘刺状结构刺破并牢固结合，细菌在电极表面的聚集会阻挡电子在电极表面的转移，从而猝灭电化学发光。本方法简单快速，30 min 内可实现细菌的广谱检测，对 S.aureus 和

大肠杆菌（Escherichia coli, E.coli）均可以实现快速灵敏检测，在 102-108 CFU/mL 内实现了良好的线性检测，最低检测限达到 52 CFU/mL。此外构建的生物传感方法实现了在血浆中细菌的快速检测。该生物传感器设计简单、检测灵敏，为细菌的广谱高效检测提供了实验依据。

PU-3558

基于二硫化钼-铂纳米-万古霉素的金黄色葡萄球菌 ECL 分析方法研究

韩道宾[1]、丁世家[2]
1. 山东大学第二医院
2. 重庆医科大学

基于金纳米（gold nanoparticle, AuNPs）和氯化高铁血红素（hemin）作为 S2O82−/O2 ECL 系统的可再生增强底物，利用二硫化钼-铂纳米（Molybdenum disulfide-Platinum nanoparticles, MoS2-PtNPs）作为猝灭剂，构建了一种“开关”式高灵敏 ECL 适体传感器用于金黄色葡萄球菌（Staphylococcus aureus, S.aureus）检测。在本研究中，AuNPs 不仅可以增强电极导电，而且可以通过局域表面等离子体共振效应（Localized SPR， LSPR）增强 S2O82−/O2 ECL 系统的发光强度。而且，hemin 也可以通过自身的氧化还原反应增强 S2O82−/O2 ECL 系统的发光强度，增强效应促使传感器达到“开”的状态。二硫化钼-铂纳米-万古霉素（MoS2-PtNPs-Vancomycin, MoS2-Pt-Van）通过结合青霉素结合蛋白进而结合到 S.aureus 的表面，MoS2 则通过消耗中间产物 OOHž 发挥猝灭作用。ECL 强度与 S.aureus 浓度对数在 1.5×102 - 1.5×108 CFU/mL 范围内的呈线性关系，检测限为 28 CFU/mL。此外，本方法可用于尿液样本中 S.aureus 的检测。因此，该方法可能成为医学研究和早期临床诊断中细菌检测的潜在应用工具。

PU-3559

2016-2020 年上海市某三甲医院骨科感染病原菌分布及药敏结果分析

权文强
上海市同济医院(同济大学附属同济医院)

目的 了解骨科住院患者感染的常见病原菌分布及其药物敏感实验（AST）结果情况，为临床医师合理应用抗菌药物提供科学依据。
方法 回顾性分析 2016 年 1 月 1 日至 2020 年 12 月 31 日上海市某三甲医院骨科住院患者术后感染的临床现状，采用 WHONET 5.6 软件对临床分离病原菌进行统计，利用 VITEK2 Compact 自动微生物鉴定药敏仪进行耐药性鉴定和分析。
结果 近 5 年该院骨科住院术后感染患者送检的各类标本中共分离出病原菌 698 株，其中革兰阴性菌 362 株（51.9%），革兰阳性菌 323 株（46.3%），假丝酵母菌属 13 株（1.9%）。革兰阳性菌中金黄色葡萄球菌（23.9%）、无乳链球菌（6.2%）和表皮葡萄球菌（2.6%）较多；革兰阴性菌中大肠埃希菌（13.8%）、肺炎克雷伯菌（11.2%）、铜绿假单胞菌（8.5%）较多。药敏试验结果显示，革兰阳性菌中金黄色葡萄球菌耐对青霉素、氨苄西林、红霉素、克林霉素等抗菌药物具有较高的抗药性（均>50%）；无乳链球菌耐药率较高的抗菌药物分别为四环素、头孢唑林和环丙沙星。革兰阴性菌中的大肠埃希菌和肺炎克雷伯菌的超广谱 B-内酰胺酶检出率分别为 33.3%和 25.8%。大肠埃希菌耐药率较高的抗菌药物分别为氨苄西林、环丙沙星和左氧氟沙星；肺炎克雷伯菌耐药率较高的抗菌药物分别为氨苄西林、头孢唑林和呋喃妥因；铜绿假单胞菌对多种抗菌药物明显耐药，其中对氨苄西林、头孢唑林、头孢曲松和呋喃妥因耐药率均为 100％。耐甲氧西林金黄色葡萄球菌

（MRSA）检出率为 45.5%，MRSA 组各种抗生素药物耐药性均高于 MSSA 组，且比较差异均有统计学意义（P＜0.05）。

结论 该院骨科感染的病原菌分布广泛，以金黄色葡萄球菌为主，致病菌呈现出广泛、多重耐药等特点。临床应合理使用抗菌药物，积极通过耐药监测预防控制感染，尽量避免骨科患者术后出现多重耐药菌感染。

PU-3560

179 株无乳链球菌的标本分布及耐药性分析

林宇岚、杨 滨
福建医科大学附属第一医院

目的 分析临床分离无乳链球菌的标本分布和对常用抗菌药物的耐药性。

方法 收集不同来源标本，在 VITEKⅡ微生物分析仪上采用 GPI 卡和 GP67 卡进行菌种鉴定和药敏实验，红霉素、美罗培南的药敏实验及 D-试验采用 K-B 纸片法检测。

结果 共收集无乳链球菌 179 株，标本的主要来源为中段尿（63.1%）、生殖道（7.8%）和伤口分泌物（6.7%）。来源患者年龄大于 50 岁的 110 例（61.5%），女性患者 113 例（63.1%），孕妇 12 例（6.7%），母婴垂直感染 3 例（1.7%），肿瘤、手术、放化疗、糖尿病、 结核等患者 82 例（45.8%）。无乳链球菌对青霉素的耐药率除 2008 年之外均小于 10%，对四环素的耐药率均大于 80%，对红 霉素的耐药率为 42.9%～93.3%，对克林霉素的耐药率为 41.9%～80.0%，D 实验阳性率为 4.1%。未发现对万古霉素、美罗培南 的耐药株，偶见喹奴普丁 / 达福普丁耐药株。

结论 成年人感染无乳链球菌中最常见的是泌尿生殖系统感染和软组织感染，女性患者比例高于男性；青霉素和其他 β－内酰胺类药物仍可作为无乳链球菌感染经验用药的首选药物；四环素、红霉素、克林霉素的抗 菌作用是有限的，必须有实验室药敏实验结果作为使用依据。

PU-3561

MALDI-TOF MS 与实时 FQ-PCR 检测淋病奈瑟菌比较分析

赵立红
泰安市中心医院

目的 评价基质辅助激光解析电离飞行时间质谱（matrix-assisted laser desorption ionization–time of flight mass spectrometry，MALDI-TOF MS)和实时实时荧光定量聚合酶链反应（Fluorescence Quantitative Polymerase Chain Reaction，FQ-PCR）两种方法检测淋病奈瑟菌（Neisseria gonorrhoeae，NG）的诊断敏感度和诊断特异度。

方法 选取 2018 年 1 月～2019 年 12 月泌尿外科、妇科、生殖科及性病科就诊患者泌尿生殖道标本，进行 NG 培养，然后采用 ATB Expression 全自动细菌鉴定仪进行 NG 生化反应鉴定。采用 MALDI-TOF MS 和实时 FQ-PCR 两种方法同时直接检测临床标本中 NG 和检测细菌培养后菌落中 NG。以细菌培养-生化反应鉴定作为 NG 检测的金标准，分别对 MALDI-TOF MS 和实时 FQ-PCR 两种方法检测 NG 的诊断敏感度和诊断特异度进行比较分析。

结果 细菌培养后，采用质谱鉴定法进行鉴定，临床敏感度、临床特异度、阳性预期值和阴性预期值均为 100%。采用质谱法直接检测临床标本中 NG，临床敏感度、临床特异度、阳性预期值和阴性预期值分别为 39.09%、100%、100%和 61.54%。细菌培养后，采用实时 FQ-PCR 法进行检测，临床敏感度为 100%，临床特异度为 97.92%，阳性预期值为 98.01%、阴性预期值均为 100%。采用实时 FQ-PCR 直接检测临床标本，临床敏感度为 95.94%，临床特异度为 97.92%、阳性预期值为 97.93%、阴性预期值均为 95.92%。

结论 采用细菌培养-质谱法检测 NG 的临床敏感度、临床特异度、阳性预期值和阴性预期值最优，优于实时 FQ-PCR 方法，为目前最好的 NG 检测方法。

PU-3562

Molecular epidemiology of invasive Klebsiella pneumonia at a children's medical center in east China

Yang Li、Qiwen Ju、Yunzhong Wang、Yunzhen Tao、Xuejun Shao
Children's Hospital of Soochow University

Objective Invasive infection caused by *Klebsiella pneumoniae* (*K. pneumoniae*) is a common disease in children, which is associated with high morbidity and mortality. The purpose of this study was to investigate the virulence and drug resistance of invasive *K. pneumoniae* clinical isolates at a children's medical center in east China and provide guidance for clinical anti-infection treatment.
Methods A total of 94 invasive *K. pneumoniae* strains were isolated from children between January 2016 and December 2020 in Children's Hospital of Soochow University. Mass spectrometry was used for the identification of *K. pneumoniae*, The Kirby-Bauer method and VITEK 2 Compact system were used to analyse antimicrobial susceptibility. Polymerase chain reaction (PCR) was performed to detect the capsular serotypes, virulence-associated genes and β-lactam antibiotic resistance genes.
Results The PCR results showed that 87 strains (92.55%) of invasive *K. pneumonia* carried hypervirulent capsular serotypes and the dominant capsular serotype was K57 (62.77%). The remaining serotypes were K2 (11.70%), K1 (7.45%), K54 (6.38%), K5 (4.26%) and others (7.45%). All invasive *K. pneumonia* strains carried virulence-associated genes. Among them, 84 strains (89.36%) carried hypervirulent genes, which were *iroB* (86.17%), *peg-344* (34.04%), *prmpA* (30.85%), *iucA* (13.83%), $_{c}$rmpA (6.38%) and *prmpA2* (2.13%). The other virulence genes, namely *wabG* (100.00%), *mrkD* (98.94%), *ycfM* (96.81%), *fimH* (95.74%) and *Uge* (88.30%), were detected in most of the strains. Antimicrobial susceptibility showed that the rates of resistance to antimicrobial drugs were low. The PCR results also showed that all invasive *K. pneumonia* strains carried β-lactam antibiotic resistance genes. The carbapenemase genes were *NDM-1* (19.15%), *VIM-1*(13.83%), *KPC-2* (10.64%) and *OXA-1* (5.32%). The extended-spectrum β-lactamase genes were *SHV-11* (86.17%), *CTX-M-14* (48.94%), *TEM-1* (19.15%) and *VEB-1* (6.38%). The AmpC cephalosporinase genes were *FOX-1* (86.17%), *ACT-1* (70.21%) and*DHA-1* (31.91%). Of note, 12 invasive *K. pneumonia* isolates were identified as carbapenem-resistant *Klebsiella pneumonia* (CRKP). Moreover, they all carried hypervirulent genes, indicating that they were carbapenem-resistant and hypervirulent *K. pneumonia* (CR-HVKP).
Conclusions All invasive *K. pneumonia* strains isolated from children carried virulence-associated genes, including hypervirulent genes, and a high proportion of β-lactam antibiotic resistance genes. 12 CR-HVKP strains were identified, which should be of concern to clinicians.

PU-3563

三种结核分枝杆菌检测方法的比较

王敏、曹璇
苏州大学附属第二医院

目的 本研究旨在对抗酸杆菌涂片法、Xpert MTB/RIF 检测和 NGS 测序这三种临床常用的结核分枝杆菌检测方法进行阳性率比较及结果一致性分析，为临床诊断结核分枝杆菌感染提供数据参考。

方法 本研究选取苏州大学附属第二医院 2020 年 9 月至 12 月收集的 134 例住院的疑似为肺结核患者的痰液、支气管肺泡灌洗液及胸水等标本作为研究对象，进行 Xpert MTB/RIF 检测及抗酸杆菌涂片镜检，并统计结果。同时查询病例信息，收集外送标本进行 NGS 检测的结果。对这三种检测方法的检测结果进行阳性率比较及结果一致性分析。
结果 我们的研究结果显示，在总共 134 例的病例中，涂片抗酸染色法的阳性率是三种方法中最低的，Xpert MTB/RIF 技术和 NGS 测序的阳性率较高，NGS 测序略高于 Xpert 法。涂片抗酸染色法的结果与 Xpert 法较为一致，但 Xpert 法与 NGS 检测存在 4 例结果不一致的现象。
结论 分子诊断技术耗时短、检出率高，具有极好的发展前景。在实际的临床工作中，应将涂片抗酸染色法这样的传统诊断技术与 Xpert MTB/RIF 检测、NGS 检测这样的分子诊断技术结合起来，从而提高结核分枝杆菌的检出率，促进结核病的快速诊断，减少结核病的传播。

PU-3564

南京地区儿童肠道沙门菌的流行病学特点及耐药性分析

成祥君、马金霞
江苏省人民医院（南京医科大学第一附属医院）

目的 了解南京地区儿童粪便分离沙门菌的流行病学特征及其对抗菌药物的敏感性，为疾病防治和临床选用抗菌药物提供依据。
方法 从 2017 年 1 月-2020 年 12 月江苏省人民医院妇幼医院 578 例儿童送检粪便标本中分离沙门菌 40 株，分析检出沙门菌儿童的年龄及检出时间的分布特点、用沙门菌诊断血清检测其血清型分布，并用药敏纸片法检测其药物敏感性。
结果 粪便检出沙门菌的儿童男女比例为 1.67（25/15），年龄分布为 2 月-8 岁，年龄主要集中在 0 ～ 3 岁（67.5%），＜ 1 岁最多(35%)， 3～4 岁其次（27.5%）。检出时间集中在 5～8 月（65%），5 月最多（30%）。血清型主要为 O4 群。对左氧氟沙星和复方新诺明的敏感率分别为 47.5%和 72.5%，三代头孢菌素的敏感率为 80%，对氨苄西林及氯霉素的敏感性分别为 20%和 37.5%。
结论 本地区沙门菌对氨苄西林及氯霉素敏感性较低，对三代头孢菌素及复方新诺明敏感性较高。临床要根据药物敏感性结果和疗效进行调整用药。

PU-3565

肺炎克雷伯菌血流感染患者的 NK 细胞功能研究

鲁敏仪、郑佳佳
北京大学第三医院

目的 通过检测肺炎克雷伯菌血流感染患者外周血中自然杀伤细胞（NK 细胞）的表型和功能，探讨其在肺炎克雷伯菌血流感染（KPBSI）引起机体固有免疫功能中的可能作用机制。
方法 选择 2020 年 10 月至 2021 年 5 月在北京大学第三医院被诊断为肺炎克雷伯菌血流感染的 20 名患者，收集其血液样本，采用流式细胞术等方法检测 NK 细胞的表型和功能，以同时间段收集的 16 名健康对照者的血液样本作为对照组。
结果 KPBSI 患者表现出明显的细菌感染炎症反应；从 KPBSI 患者血液标本中分离出的菌株对大部分抗菌药物敏感，但也出现高耐药性的菌株；KPBSI 患者同健康对照者的检测结果相比较，NK 细胞表面抑制性受体 CD158e 的表达水平较低（*P*=0.005）；KPBSI 合并糖尿病患者的 NK 细胞穿孔素表达水平低于非糖尿病患者（*P*=0.010）；KPBSI 患者 NK 细胞活性测定项目结果与其部分实验室检测项目相关性分析结果显示：NK 细胞表面抑制性受体 NKG2A 与淋巴细胞绝对值（*P*=0.037）呈负相关、与降钙素原（*P*=0.026）呈正相关；NK 细胞表面活化性受体 NKp44 与降钙素原

（*P*=0.004）呈正相关；NK 细胞表面活化性受体 NKp46 与血清谷丙转氨酶（*P*=0.030）呈负相关；颗粒酶 B 与淋巴细胞百分数（*P*=0.047）呈正相关、与血清 γ-谷氨酰转肽酶（*P*=0.034）呈负相关。**结论** KPBSI 患者的 NK 细胞功能检测结果表明，KPBSI 患者存在一定的 NK 细胞功能异常，可能影响机体潜在的抗菌免疫应答。在感染过程中 NK 细胞可能被激活从而分泌细胞因子，与其他免疫细胞一起协同抗感染免疫，但由于纳入研究的样本量较少，具体激活机制还有待进一步研究。

PU-3566

新生儿科血培养病原菌分布及耐药性分析

张旭华
山东大学第二医院

目的 通过分析三年内（2016 年-2020 年）本院新生儿科血培养病原菌菌株种类分布、耐药率、多重耐药性等，了解新生儿科主要病原菌及其耐药性，为新生儿科抗感染治疗提供理论基础。
方法 按照标本采集规范要求收集临床标本进行培养，使用安图微生物质谱仪进行细菌鉴定，使用 BD M50 药敏仪和西门子 MicroScan Walkaway-96 Plus 全自动细菌鉴定及药敏分析仪进行药敏试验，收集其中新生儿科血培养菌株及药敏数据信息，使用 WHONET 5.6 软件统计，分析病原菌菌株种类分布、耐药率、多重耐药性等。
结果 2016 年-2020 年新生儿科血培养中共分离菌株 332 株，其中以凝固酶阴性葡萄球菌占绝大多数，为 167 株；其次，肺炎克雷伯菌 42 株，大肠埃希菌 26 株，屎肠球菌 20 株，阴沟肠杆菌 16 株，金黄色葡萄球菌 11 株、粘质沙雷菌 8 株，其他 42 株。凝固酶阴性葡萄球菌和金黄色葡萄球菌 β-内酰胺酶阳性率分别为 92.7%和 90.9%，苯唑西林耐药率分别为 77.0%和 36.4%，对万古霉素和利奈唑胺均敏感。肺炎克雷伯菌和大肠埃希菌 ESBLs 阳性率分别为 61.9%和 26.9%，对厄他培南、亚胺培南、美罗培南的耐药率分别为 9.5%、4.8%、4.8%和 0、3.8%、3.8%，对三代头孢菌素耐药率分别为 85.7-95.0%和 7.7-30.8%，对喹诺酮类耐药率分别为 9.5-38.1%和 32.0%。
结论 新生儿科血培养中以凝固酶阴性葡萄球菌为主，其中部分可能为污染菌，其次以肺炎克雷伯菌、大肠埃希菌和屎肠球菌为主。凝固酶阴性葡萄球菌 β-内酰胺酶阳性率和苯唑西林耐药率均高于金黄色葡萄球菌。肺炎克雷伯菌耐药性普遍高于大肠埃希菌，除外喹诺酮类，这与成人细菌耐药性相似。新生儿科由于患者年龄特殊性、用药限制性，可能导致可用药物耐药率上升且可能高于成人，给临床用药带来极大困难。

PU-3567

重症医学科血培养分离菌株及耐药性分析

张旭华
山东大学第二医院

目的 通过分析 2016 年-2020 年本院重症医学科血培养分离菌株种类、耐药性、多重耐药性，了解重症医学科血流感染细菌耐药情况，为科室抗感染治疗及院内感染防控提供理论依据。
方法 使用安图微生物质谱仪对血培养分离株进行鉴定，使用 BD M50 全自动药敏仪和西门子 MicroScan Walkaway-96 Plus 全自动药敏分析仪对相应菌株进行药敏试验，收集菌株及其药敏信息，使用 WHONET 5.6 软件进行统计，分析重症医学科血培养分离株细菌种类、耐药性及多重耐药率。
结果 2016 年-2020 年重症医学科血培养共分离非重复细菌菌株 144 株，其中凝固酶阴性葡萄球菌 32 株、肺炎克雷伯菌 29 株，大肠埃希菌 29 株，鲍曼不动杆菌 20 株，屎肠球菌 13 株，铜绿假单胞菌 4 株等。分离耐碳青霉烯的鲍曼不动杆菌 18 株、肺炎克雷伯菌 20 株、大肠埃希菌 1 株，碳青霉烯耐药率分别为鲍曼不动杆菌 90.0%、肺炎克雷伯菌 69.0%、大肠埃希菌 3.4%。

结论 重症医学科血培养分离株以凝固酶阴性葡萄球菌为主，可能与患者留置中心静脉导管有关。其他分离株主要为肺炎克雷伯菌、大肠埃希菌、鲍曼不动杆菌等。鲍曼不动杆菌、铜绿假单胞菌、肠杆菌科细菌对碳青霉烯类药物耐药率高，其中肺炎克雷伯菌对碳青霉烯耐药性尤为突出。各类细菌耐药率居于较高水平，可能与室患者基本情况、科室布局设置、抗菌药物使用情况息息相关，迫切需要规范临床用药、避免院内感染，从而改善科室患者治疗效果。

PU-3568

耐碳青霉烯肠杆菌科细菌分析

张旭华
山东大学第二医院

目的 通过分析近四年（2016 年-2019 年）本院耐碳青霉烯肠杆菌科细菌（CRE）的菌株分布、科室分布、分离比率趋势，为临床合理用药提供依据，避免滥用抗菌药物。
方法 根据临床标本采集部位，分离可能病原菌，使用安图微生物质谱仪进行细菌鉴定，使用 BD M50 全自动药敏仪和西门子 MicroScan Walkaway-96 Plus 全自动细菌鉴定及药敏分析仪进行药敏试验，收集菌株及药敏信息，使用 WHONET 5.6 软件统计，分析耐碳青霉烯肠杆菌科细菌的菌株分布、科室分布、分离比率趋势。
结果 近四年共分离 632 株 CRE 菌株，其中肺炎克雷伯菌 478 株，产气肠杆菌 60 株，大肠埃希菌 36 株，粘质沙雷菌 26 株，阴沟肠杆菌 18 株，雷氏普罗威登斯菌 6 株，潘尼变形杆菌 2 株，科泽氏枸橼酸杆菌、弗劳地枸橼酸杆菌、阿氏肠杆菌、产酸克雷伯菌、摩根摩根菌和奇异变形杆菌各 1 株。CRE 菌株分离率逐年增高，分别为 5.3%、6.7%、10.9%和 16.8%，其中以肺炎克雷伯菌分离率升高最为明显，分别为 10.7%、13.4%、21.5%和 36.8%。CRE 的科室来源主要为重症医学科、呼吸内科、老年病科、急诊科和神经内科。CRE 标本来源依次为痰液 388 株、尿液 117 株、血液 45 株、分泌物 22 株、引流液 14 株、其他共 46 株。
结论 CRE 分离菌株数和分离率均呈逐年增高趋势，且增高大幅上升，其中以肺炎克雷伯菌最为明显。CRE 菌株来源科室广泛，并且可导致呼吸道感染、泌尿道感染、血流感染等多部位感染，已成为临床最为惧怕的病原菌种类。CRE 菌株的出现且快速增多，不仅与细菌自身遗传变异性相关，而且更与临床不合理应用抗菌药物、院内感染有关，临床科室迫切需要规范使用抗菌药物、做好院内感染防范措施，遏制耐药形势进一步加剧。

PU-3569

产 ESBLs 肺炎克雷伯菌耐药性及预后死亡风险研究

姚华、杨静
重庆医科大学附属第三医院

目的 分析我院产超广谱 β-内酰胺酶（ESBLs）肺炎克雷伯菌的临床分布特征及其耐药性，探讨影响 ESBL 阳性肺炎克雷伯菌感染患者预后相关因素。
方法 对 2016 年 6 月至 2020 年 12 月重庆医科大学附属第三医院收治的 111 例感染产 ESBLs 肺炎克雷伯菌住院患者临床资料进行回顾性分析，对不同科室疾病分类、临床特征及治疗等进行单因素分析和多因素 Logistic 回归分析。
结果 1140 株肺炎克雷伯菌中产 ESBLs 菌株共 111 株，检出率 9.70%；产 ESBLs 肺炎克雷伯菌在神经疾病中心、泌尿疾病中心和 ICU 三个科室的分离率较高；产 ESBLs 肺炎克雷伯菌对氨苄西林/舒巴坦、头孢曲松、头孢他啶、氨曲南、环丙沙星、复方新诺明的耐药率均>60%，显著高于非产 ESBLs 组；111 例产 ESBLs 肺炎克雷伯菌感染患者中死亡 14 例，死亡率 12.6%；单因素分析表明，与产 ESBLs 肺炎克雷伯菌感染患者死亡相关的因素包括肿瘤(P=0.007)、慢性肝病(P=0.029)、

慢性肺部疾病(P=0.017)、使用引流管(P=0.021)、中央静脉插管(P=0.043)和动脉穿刺置管(P=0.003)；多因素 logistic 回归分析发现肿瘤(P=0.003)、慢性肺部疾病(P=0.031)与产 ESBLs 肺炎克雷伯菌感染患者死亡密切相关。

结论 与非产 ESBLs 肺炎克雷伯菌相比，产 ESBLs 菌株对青霉素、头孢菌素、喹诺酮类以及磺胺类抗生素的耐药率明显升高；肿瘤性疾病和慢性肺部疾病是产 ESBLs 肺炎克雷伯菌感染患者死亡的独立危险因素。本研究表面临床在诊治过程中需进一步规范使用抗生素，重点监测肿瘤和慢性肺部疾病患者，从而减少感染病死率。

PU-3570

2019 年本医院细菌耐药监测数据分析

冯小艳、杨莉莉
成都市第三人民医院

目的 了解本医院临床分离细菌的分布及耐药情况进行统计分析，为本院临床合理应用抗菌药物提供参考。

方法 收集本院 2019 年全年成都市第三人民医院分离的临床菌株，依据 CLSI2019 年标准采用 WHONET5.6 软件进行数据分析。

结果 2019 年共分离出 6654 株细菌，其中革兰氏阳性菌 1498 株，占 22.51%，革兰氏阴性菌 5023 株，占 75.49%，真菌 126 株，占 1.89%。分离菌中前 5 位的细菌分别是肺炎克雷伯菌 956 株（14.4%）、大肠埃希菌 810 株（12.2%）、鲍曼不动杆菌 717 株（10.8%）、铜绿假单胞菌株 663 株（9.96%）、金黄色葡萄球菌 472 株（7.09%）等，标本类型以痰和尿液为主，其中痰中以肺炎克雷伯菌和鲍曼不动杆菌为主，尿液中以大肠埃希菌和屎肠球菌。耐甲氧西林金黄色葡萄球菌、（MRSA）和耐甲氧西林凝固酶阴性葡萄球菌（MRCNS）的检出率分别为 24.15%和 83.28%，未发现万古霉素、利奈唑胺耐药的葡萄球菌。万古霉素耐药的粪肠球菌和屎肠球菌分别占 0%和 1.1%，非脑脊液中分离的肺炎链球菌对青霉素的耐药率为 0%.革兰氏阴性菌中肺炎克雷伯菌和大肠埃希菌对碳青霉烯类抗生素耐药率 33.8%和 5.3%，大肠埃希菌对喹诺酮类耐药率 在 53.6%，对三代头孢菌素中头孢曲松耐药率在 64.5%左右，肺炎克雷伯菌对三代头孢菌素中孢曲松耐药率在 46.5%左右，比大肠埃希菌耐药率稍低，鲍曼不动杆菌和铜绿假单胞菌株对碳青霉烯类抗生素耐药率 32.1%和 34.7%，对氨基糖苷类、哌拉西林/他唑巴坦、多粘菌素 B 仍保持较高的抗菌活性。

结论 本院分离菌以革兰氏阴性菌为主，不同标本类型分离的菌的差异较大，尤其是肠杆菌科细菌对碳青霉烯类耐药菌株，监测本院细菌耐药监测对临床合理用药和有效控制感染具有重要意义

PU-3571

尿培养病原菌分布及耐药性分析

常欢
宝鸡高新医院

目的 了解医院门急诊和住院患者尿液细菌培养中病原菌分布及耐药性 ，为临床治疗提供可靠的参考依据 。

方法 432 株病原菌分离自 2018 年 1 月 一 2018 年 12 月医院门急诊和住院患者的尿液标本 ，采用 VITEK2 compact 全 自动微生物鉴定和药敏分析系统进行细菌鉴定和药敏试验 ，采用 WHONET5．6 软件进行统计分析。

结果 共分离病原菌 432 株 ，检出排前 3 位依 次为大肠埃希菌、粪肠球菌 、凝固酶阴性葡萄球菌 ，分别占 38.89 、11．11、5．55 ；168 株大肠埃希菌中有 106 株产超广谱 β 一内酰胺酶 (ESBLs)，占 63.64 ；大肠埃希菌对阿米卡星、亚胺培南较为敏感 ，耐药率较低；粪肠球菌和屎肠球菌对万

古霉素和利奈唑胺的耐药率均较低 ；分离 的凝固酶阴性葡萄球菌(CNS)中，最常见的是表皮葡萄球菌占 50．9 ；24 株 CNS 中耐甲氧西林凝固酶阴性葡萄球菌 (MRCNS)的检出率为 48.08 ，CNS 对呋喃妥因、克林霉素、利奈唑胺、利福平、万古霉素较敏感 。
结论 临床应根据尿培养药敏结果合理应用抗菌药物 ，控制耐药率的上升 。

PU-3572

碳青霉烯类抗生素非敏感肠杆菌产碳青霉烯酶的基因型分析

崔兰英、王希、赵金英、柏利婧
哈尔滨医科大学附属第一医院

目的 分析我院临床标本分离的碳青霉烯类抗生素非敏感肠杆菌碳青霉烯酶的产生情况及其基因型分布情况,为更好地指导临床合理用药提供依据。
方法 回顾性分析我院 2021 年 1 月至 2021 年 3 月期间收集的 38 株非重复碳青霉烯类抗生素非敏感肠杆菌菌株，采用 VITEK 全自动微生物分析仪鉴定卡及 MALDI-TOF 质谱仪对待检测菌进行鉴定；采用 VITEK 全自动微生物分析仪药敏卡结合药敏纸片琼脂扩散法（K-B）对待测菌株药敏试验进行检测。采用 PCR 方法扩增碳青霉烯酶待测基因，并进行 DNA 测序分析。PCR 扩增的 5 种常见碳青霉烯酶基因,包括 KPC 型,IMP 型,VIM 型及 NDM-1 型以及 OXA-48 型。
结果 38 株碳青霉烯类抗生素非敏感肠杆菌包括 35 株肺炎克雷伯菌，2 株大肠埃希菌，1 株阴沟肠杆菌。38 株待测菌对 ß-内酰胺酶类抗生素均耐药，对氨基糖苷类抗生素耐药率为 92.1%，对喹诺酮类抗生素耐药率为 97.4%。对多粘菌素均敏感。共 33 株待测菌株检测到 blaKPC-2，占 86.8%（33/38），2 株检测到 blaIMP-8，占 5.3%（2/38），另有 3 株未检出待测基因。
结论 碳青霉烯类抗生素非敏感肠杆菌产碳青霉烯酶基因型以 KPC 型为主，说明产碳青霉烯酶是碳青霉烯类抗生素非敏感肠杆菌重要的耐药机制之一，临床及相关部门应关注此类肠杆菌的流行情况，加强防控。

PU-3573

耐碳青霉烯类肠杆菌科细菌的流行情况及耐药性分析

崔兰英、孙妍、宋熙嫄、刘文博
哈尔滨医科大学附属第一医院

目的 了解我院临床标本分离的耐碳青霉烯类肠杆菌科细菌（CRE）的分布及耐药情况，为指导临床合理应用抗生素，及时掌握 CRE 的流行情况提供依据。
方法 回顾性分析我院 2020 年 9 月-2021 年 3 月临床分离出的 83 株非重复 CRE，采用 VITEK 全自动微生物分析仪及 MALDI-TOF 质谱仪对待检测菌进行鉴定,采用 VITEK 全自动微生物分析仪药敏卡及纸片扩散法（K-B 法）对待检测菌进行药敏试验测定，按美国临床和实验室标准协会的标准判读药物敏感试验结果。
结果 83 株 CRE 表现为对亚胺培南，美罗培南，厄他培南耐药率为 100%（83/83），对头孢菌素类抗生素耐药率为 100%（83/83），对多粘菌素敏感率为 100%（83/83），对替加环素敏感率为 96.4%（80/83）。83 株 CRE 中肺炎克雷伯菌所占比例最高，为 85.5%（71/83），其次为大肠埃希菌，占 6.0%（5/83）。标本种类以痰液所占比例最大，占 54.2%（45/83），其次为血液标本，占 21.7%（18/83）。83 株 CRE 分布科室以重症监护室多见。
结论 近年来 CRE 临床分离株的检出率在该院呈上升趋势。CRE 中菌种类型以肺炎克雷伯菌所占比例最高，其对临床常用抗菌药物有较高的耐药率，多表现为多重耐药，给临床治疗带来一定困难，应联合多部门，加强对 CRE 的检测，控制 CRE 的产生和传播。

PU-3574

第三方医学检验中心 2020 年血培养分离病原菌种类及耐药性分析

杨柳、陈莎、李慧
杭州迪安医学检验中心有限公司

目的 了解血流感染病原菌分布特点及耐药情况，为临床合理使用抗菌药物提供依据。
方法 回顾分析 2020 年 1 月至 2020 年 12 月本中心检测的血液样本，对其检出病原菌情况及耐药性进行回顾分析。
结果 共分离病原菌 2153 株，包括革兰氏阴性菌 1127 株(52.35%)，革兰氏阳性菌 856 株（39.76%），及酵母样真菌 170 株(7.89%)，分离最多的为凝固酶阴性的葡萄球菌，共 618 株（28.70%），其次为大肠埃希菌，共 281 株（13.05%）、肺炎克雷伯菌共 222 株（10.31%），洋葱伯克霍尔德菌共 199 株（7.39%）、金黄色葡萄球菌 101 株（4.69%），肠球菌属 82 株（3.81%）；耐甲氧西林金黄色葡萄球菌检出率为 60 株（59.4%），耐甲氧西林的凝固酶阴性的葡萄球菌检出率为 497 株（80.4%），未发现万古霉素、利奈唑胺和替考拉宁耐药的葡萄球菌，粪肠球菌对万古霉素和替考拉宁耐药的数量为 0，屎肠球菌对万古霉素耐药的为 4 株（12.12%），对替考拉宁耐药的为 1 株（3.03%），大肠埃希菌 ESBL 检出数量为 139 株（49.47%），肺炎克雷伯菌 ESBL 检出数量为 33 株（14.86%），其对头孢唑林、头孢噻肟、头孢呋辛全部耐药，且耐药率显著高于相应产 ESBLs 阴性菌。非发酵菌中铜绿假单胞菌及鲍曼不动杆菌对碳青霉烯类药物耐药率分别为 48.72%和 66.67%。
结论 回顾分析可看出，2020 年全年血培养分离病原菌以革兰氏阴性菌为主，且凝固酶阴性葡萄球菌的检出率较高，耐药菌株检出率也较高，故应在合理用药的同时加强血培养标本的规范操作。

PU-3575

沙门菌属特征分析及耐药基因检测

陈东杰、胡辛兰、吴长生、李宁、吴少莲、陈发林
福建省立医院

目的 观察福建省立医院 2013 年至 2021 年经证实为沙门菌属的 70 个标本的来源分布以及耐药情况；分析收集到的沙门菌耐药基因的分布情况。
方法 收集福建省立医院微生物实验室从 2013 年至 2021 年经证实为沙门菌属的 70 个标本；对其进行复苏、过夜培养、设计引物，确定耐药基因分布情况，对扩增产物进行凝胶电泳实验；做药敏试验，对氨苄青霉素、复方新诺明、环丙沙星、氯霉素、部分第三代头孢类等耐药情况，并结合临床信息进行相关统计学分析。
结果 从标本来源上看，标本大多数来自血液和粪便，分别占比 45.7%（32/70）以及 38.6%（27/70），其余标本来自于腹水、引流液、尿液、组织、切口分泌物，共占 15.7%。从患者年龄分布上看，大多数患者年龄＞69 岁，占 54.3%（38/70），其次是 46-69 岁，占 22.9%（16/70），其余分别为 18-45 岁占 11.4%（8/70）、13-17 岁占 1.4%（1/70）、7-12 岁占 1.4%（1/70）、0-6 岁占 8.6%（6/70）。分析其药敏情况，氨苄青霉素、复方新诺明、氯霉素的耐药率相对较高，达到 30%以上，环丙沙星、头孢曲松、头孢噻肟、头孢他啶、左旋氧氟沙星的耐药率相对较低，均为 10%左右。分析 qPCR 扩增结果，其中选取年份较近的 50 株沙门菌做 qPCR 扩增，其中基因 blaTEM、blaCTX-M、sul1、blaOXA、floR 的阳性率均为 100%，基因 acc(6')-Ib 的阳性率为 66%。分析凝胶电泳结果，基因 blaTEM、blaCTX-M、sul1、blaOXA、acc(6')-Ib 长度在 300-400bp 之间，基因 floR 在 200-300bp 之间。6 个耐药基因的扩增产物可测得基因序列，进行 Blast 比对后显示扩增结果无误。

PU-3576

探讨全自动快速微生物检测系统在鉴定流感嗜血杆菌的应用

李想、蓝依依、张宇培、徐少林、丁燕玲
柳州市妇幼保健院

目的 探讨全自动快速微生物检测系统（VITEK MS）在鉴定流感嗜血杆菌的应用价值 。
方法 收集柳州市妇幼保健院 2021 年 3 月 1 日至 2021 年 5 月 1 日从痰液或耳分泌物标本中分离的流感嗜血杆菌共 95 株 ，用 16S rDNA 测序确证 。并且用 VITEK MS 质谱仪 ，VITEK2 COMPACT 鉴定仪与脑心磷脂琼脂平板上卫星试验需求性试验 3 种方法对上述菌株鉴定分析。
结果 在 95 株流感嗜血杆菌细菌中，VITEK MS 质谱仪与 VITEK2 COMPACT 鉴定仪差异无统计学意义（P>0.5），而 VITEK MS 质谱仪与脑心磷脂琼脂平板上卫星试验需求性试验差异有统计学意义（P<0.5）。 在本研究中，VITEK MS 质谱仪与 VITKE 2 COMPACT 鉴定仪对流感嗜血杆菌的鉴定率都比较高，均为 90%以上。而传统的卫星试验对于流感嗜血杆菌的鉴定率仅为 75%，漏检情况比较严重，且受培养环境、菌悬液浊度、涂板时间厚度、所用金黄色葡萄球菌生长情况等诸多因素影响。鉴定时间方面，在涂板优秀的情况下，VITEK MS 仪能在 5-10 分钟内完成对细菌的鉴定，且马上能给临床发布鉴定报告，VITEK 2 COMPACT 鉴定仪则需 5-8 小时，而脑心磷脂琼脂平板上卫星试验需要在培养箱内培养 18-24 小时才能观察到较为准确的结果。但 VITKE MS 仪器成本过高，VITKE 2 COMPACT 鉴定仪仪器及鉴定卡成本也不便宜，所以现如今基层医院大多仍然使用成本低廉的脑心磷脂琼脂平板上卫星试验。
结论 对于 VITKE 2 COMPACT 鉴定仪鉴定与脑心磷脂琼脂平板上卫星试验需求性试验 ，VITEK MS 质谱仪能快速、准确地鉴定流感嗜血杆菌，对临床诊治提供很大的帮助，有非常好的应用前景 。

PU-3577

耐碳青霉烯类肠杆菌科细菌（CRE）的分离情况及耐药性分析

吴长生、陈东杰、胡辛兰、李宁、陈发林
福建省立医院

目的 探究我院 CRE 的临床分离情况，以及其对常用抗菌药物的耐药特征。
方法 收集 2000 年~2020 年间检测出的 CRE 菌株信息，运用 WHONET 5.6 软件对信息进行统计分析。
结果 共分离出 CRE 1549 株，位列前三的是肺炎克雷伯菌 1044 株（67.40％），大肠埃希菌 185 株（11.94％），阴沟肠杆菌 167 株（10.78％）； ICU 分离数量占 44.67%，非 ICU 占 55.33%；2000 年 10 月首次分离出一株 CRE，为产气肠杆菌。CRE 数量的增长呈现三个不同平台期：2000-2012 年，CRE 检出数量少；2012~2016 年， CRE 检出数量是前一阶段的 3-5 倍左右，主要分布在 ICU；2017~2020 年，CRE 检出数量暴增，是第一阶段的 10 倍左右。CRE 菌株耐药率很高，对 CZO、AMP、ETP 全部耐药；对 CRO、SAM 的耐药率也一直在 90%以上；对其他大部分常用药物耐药率在 80%左右，且有不断升高趋势。CRKP 的分离率在 CRE 中占比接近 70%，CRE 两次数量的暴发性上升主要是 CRKP 的增长，其耐药性也比其他 CRE 更高。在 CRKP 中，对 17 种药物全部耐药的表型最常见，占所有表型的 46.5%。
结论 我院 CRE 感染形势十分严峻，临床分离菌株对常用的抗菌药物的耐药率都较高，仍然呈现逐渐增长的趋势，医院应加强感染防控措施和抗菌药物的临床应用管理措施。

PU-3578

德尔卑沙门菌致呼吸道感染病例分析并文献复习

邓飘
山东省千佛山医院

目的 通过对德尔卑沙门菌所致的呼吸道感染及治疗并回顾性查阅文献复习该菌的流行病学情况及相关研究为临床对该菌的诊治提供理论支持。
方法 通过文献分析及常规药敏检测对德尔卑沙门菌进行研究分析。
结果 德尔卑沙门菌是一种在环境中存在的可导致人类食源性疾病的一种条件致病菌，该病感染常有水源污染或患者免疫力低下。
结论 德尔卑沙门菌是一种条件致病菌，常导致人类腹泻或食物中毒，其具有多种致病质粒，对该菌的感染应当引起重视，可能会导致爆发性感染。

PU-3579

育龄女性社区获得性生殖道支原体感染及耐药分析

甘龙杰、杨滨
福建医科大学附属第一医院

目的 了解本地区育龄女性社区获得性生殖道支原体感染及耐药情况,为临床诊治提供依据。
方法 2016 年 11 月至 2017 年 10 月,采集门诊育龄女性患者生殖道分泌物标本共 2 836 份进行支原体培养、鉴定及药敏操作。育龄女性按每 10 岁年龄段进行分组并计算分析结果。
结果 育龄女性社区获得性生殖道支原体感染以 Uu 单纯感染为主（430/574,74.9%）,其次为 Mh 单纯感染（83/574,14.5%）,同时感染 Uu+Mh（61/574,10.6%）,不同年龄段以 25～34 岁为感染检出的数量最多。单纯 Uu 感染时仅对氟喹诺酮类药物的耐药率大于 10%,其余抗生素耐药率较低（<10%）;单纯 Mh 感染时,仅对氟喹诺酮类药物的耐药率大于 50%;混合感染 Uu+Mh 时耐药性明显高于单纯感染。
结论 育龄女性社区获得性生殖道支原体感染以 25～34 岁居多,Uu 感染为主,其次为 Mh 感染,除氟喹诺酮类药物外,其余抗生素均较为敏感。

PU-3580

一株罕见 Ihumii 放线菌的分离和鉴定

张维清、杨滨
福建医科大学附属第一医院

放线菌大多存在于健康人口腔,上呼吸道,胃肠道和泌尿生殖道等与外界相通的腔道,是寄居人体的一种正常菌群^[1-2].当机体免疫力减弱,口腔卫生不良,拔牙或外伤时,可侵入组织导致皮肤,皮下组织,肌肉,骨骼及中枢神经系统化脓性感染^[3].根据感染的途径和涉及的器官不同,临床上分为面颈部,胸部,腹部和中枢神经系统感染.其主要特征为慢性化脓性肉芽肿病变,以向周围组织扩展形成瘘管并排出带有硫磺样颗粒的脓液为特征.绝大多数放线菌易引起内源性感染,大量应用免疫抑制剂是一个重要的诱发因素.2015 年,法国科学家从一个 50 岁的 HIV 感染者粪便中首次分离出一株新的放线菌,并命名为 Ihumii 放线菌^[4].福建医科大学附属第一医院于 2016 年收治一例由 Ihumii 放线菌引起的膝关节化脓性感染,现报道如下。

PU-3581

我院 2019 年第一季度血培养污染情况分析

余罗莉
福建医科大学附属第一医院

目的 分析我院 2019 年第一季度血培养污染情况,以提高临床血培养的合格率,从而使临床更有效地进行血流感染诊疗。
方法 由实验室信息系统统计同时收集 2019 年 1～3 月每个月的血培养送检总瓶数（n=6459）、污染总瓶数（n=42）,依据数据计算出月污染率。统计和分析各个科室中的污染情况,找到出现污染率较高的问题,然后有针对性地提出措施,以降低污染率。
结果 1 月份的污染率为 0.69%,2 月份为 0.51%,3 月份为 0.71%。凝固酶阴性葡萄球菌是主要的污染细菌,该细菌占比最高,达 69.05%。污染率最高的是 ICU 病区,占 42.86%;内、外科总的污染率为 42.86%,与 ICU 的污染率相似。
结论 污染情况发生的原因有很多种,而血培养污染的情况不能被忽视,有效预防并减少污染的情况,对临床血液感染的诊疗以及药物的应用非常有益。定期统计医院各科室送检标本污染率,有助于指导临床治疗。

PU-3582

碳青霉烯类耐药肠杆菌科细菌无症状携带者主动筛查的研究进展

陈善建、杨滨
福建医科大学附属第一医院

碳青霉烯类耐药肠杆菌科细菌（carbapenem resistant Enterobacteriaceae,CRE）的感染与传播是危害人类健康的公共问题。采取有效措施预防 CRE 感染是应对这种威胁的关键。住院患者肠道是耐药菌的储存库,这些定植的耐药菌具有引发院内感染暴发流行的潜在风险。CRE 的定植常先于 CRE 的感染或与感染并存,对入院患者进行 CRE 的主动筛查并对阳性患者采取一定的措施是预防 CRE 感染与传播的有效途径。现在,越来越多的研究关注 CRE 的主动筛查。该文就 CRE 的流行现状、CRE 主动筛查的人群及样本、筛查的方法等作简要综述。

PU-3583

基质辅助激光解吸电离飞行时间质谱仪鉴定临床分离菌的应用评估

林宇岚、杨滨
福建医科大学附属第一医院

目的 使用布鲁克基质辅助激光解吸电离飞行时间质谱仪对临床分离的病原菌进行鉴定并评价其准确性。
方法 收集福建医科大学附属第一医院 2015 年 11 月至 2016 年 12 月分离得到的 21 270 株病原菌,分别以布鲁克质谱仪以及 VITEK-Ⅱ/API 表型鉴定系统进行鉴定,并以分子生物学结果为金标准,验证鉴定结果的准确性。
结果 对临床常见病原菌,质谱系统的检出率>95%、表型系统的检出率>90%,具有较高的一致性。对 43 株厌氧菌,质谱有 90. 7%能鉴定到种,97. 7%被鉴定到属。表型系统有 65. 1%被鉴定到种,69.8%被鉴定到属,差异有统计学意义（X2=6. 76,P<0.01）; 1 558 株真菌中,丝孢酵母和念珠菌的检出率

差异均无统计学意义（均 P> 0. 05）,质谱对 78 株丝状真菌鉴定的准确率为 76%;18 株放线菌、诺卡菌、分枝杆菌和军团菌都能被鉴定到属。
结论 蛋白质谱鉴定技术操作简单、灵敏度高,能够对临床分离的常见病原菌、厌氧菌、真菌等提供快速、准确的鉴定。

PU-3584

改良显色平板在筛查碳青霉烯类耐药肠杆菌科细菌中的性能评价

陈善建、杨滨
福建医科大学附属第一医院

目的 碳青霉烯类耐药肠杆菌科细菌（CRE）的感染是威胁人类健康的重要卫生问题。建立一种快速、准确的筛查方法是应对这种威胁的关键措施;本研究旨在制备快速检测 CRE 的改良显色平板并对其性能进行评价。
方法 以传统的 PCR 方法为参考方法,用临床标本分离出的 49 株 CRE 及 24 株非 CRE 对 3 种改良显色平板的敏感度和特异度进行评价;其中,21 株 CRE 用于三种改良平板的检测限评价。
结果 亚胺培南改良显色平板的敏感度为 83.7%（41/49）,特异度为 100%（24/24）。美罗培南改良显色平板的敏感度为 87.8%（43/49）,特异度为 100%（24/24）;厄他培南改良显色平板的敏感度为 93.9%（46/49）,特异度为 95.8%（23/24）。
结论 三种改良显色平板均具有较高的敏感度与特异度,且操作简便,无需昂贵的仪器,对人员技术要求低;厄他培南改良显色平板相对于美罗培南与亚胺培南改良显色平板,其还具有检测限低的特点,更适用于临床的推广应用。

PU-3585

川东北地区耐头孢哌酮/舒巴坦鲍曼不动杆菌同源性分析

刘亮华、赵明才、刘海波、林芳、胡娟
遂宁中心医院

利用 MALDI-TOF MS 技术对重点科室耐药菌和主要的耐药基因共表达型进行同源性分析，探究重点科室细菌流行特点及 MALDI-TOF MS 技术在同源性研究中的应用价值。
方法 收集 2018 年 1 月至 2019 年 6 月我院微生物室分离的 157 株对头孢哌酮/舒巴坦耐药的鲍曼不动杆菌，利用基质辅助激光解吸电离飞行时间质谱（MALDI-TOF MS）对神经外科和 ICU 部分耐药菌进行同源性分析，同时对耐药基因 OXA-51、TEM 和 OXA-23 共表达型进行聚类分析。
结果 随机选取 23 株神经外科耐药菌，MALDI-TOF MS 聚类程度大于 60%，聚类树状图分为两大簇（I 型 7 株，II 型 16 株），II 型又分为四小簇（IIa 型 5 株，IIb 型 4 株，IIc 型 2 株，IId 型 5 株）；随机选取 28 株 ICU 耐药菌，聚类程度大于 65%，聚类树状图呈散在分布，未见时间聚类现象；随机选取 14 株 OXA-51、TEM 和 OXA-23 共表达菌株，聚类分析成同一簇分布。
结论 MALDI-TOF MS 同源性分析神经外科耐头孢哌酮/舒巴坦鲍曼不动杆菌成簇聚集分布，感染模式为阶段性同型菌株播散，而 ICU 耐头孢哌酮/舒巴坦鲍曼不动杆菌呈散在分布，遗传亲缘关系较神经外科更近；MALDI-TOF MS 技术有望成为分子流行病学研究新型手段。

PU-3586

2020 年遂宁地区铜绿假单胞菌分布及耐药性分析

赵明才、黎昆、刘家瑞、刘亮华、刘海波、胡娟
遂宁市中心医院

目的 分析 2020 年遂宁地区某医院临床分离的铜绿假单胞菌的分布特点和耐药状况，为该菌所致感染性疾病的防控提供实验室依据。
方法 分析 2020 年 1 月-2020 年 12 月临床各科室送检标本中铜绿假单胞菌的检出率、分布特点和药敏试验。
结果 临床送检各类标本 33855 份，阳性检出率 13.30%（3376/33855），其中铜绿假单胞菌总的检出率为 0.96%（326/33855），排名第四位；主要分布在呼吸中心 31.90%（104/326），ICU 13.80%（45/326），老年病科 4.91%（16/326），神经中心 4.29 %（14/326）和感染科 3.68%（12/326）；65.64 %（214/326）来自痰标本，5.52%（18/326）来自灌洗液标本；碳青霉烯耐药菌株占 9.20 %（ 30/ 326 ），铜绿假单胞菌耐药率（除天然耐药外）高于 30%的仅有氨曲南（37.40%），其他常见抗生素耐药率均小于 30%。
结论 铜绿假单胞菌是临床常见致病菌，主要分布在呼吸中心和重症监护室，且耐药率不高，及时监测其耐药趋势对指导临床用药有重要意义。

PU-3587

2020 年遂宁地区鲍曼不动杆菌临床分布及耐药性分析

赵明才、黎昆、刘家瑞、刘亮华、刘海波、胡娟
遂宁市中心医院

目的 分析 2020 年遂宁地区某医院临床分离的鲍曼不动杆菌的临床分布特点和耐药状况，为该菌所致感染性疾病的防控提供实验室依据。
方法 分析 2020 年 1 月-2020 年 12 月临床各科室送检标本中鲍曼不动杆菌的检出率、分布特点和药敏试验。
结果 临床送检各类标本 33855 份，阳性检出率 13.30%（3376/33855），其中鲍曼不动杆菌总的检出率为 0.43%（146/33855），排名第五位；主要分布在呼吸中心 23.5%（35/146），ICU 12.3%（18/146），神经中心 11.0 %（16/146），心血管中心 6.9 %（10/146）和骨科 4.8%（7/146）；69.9%（102/146）来自痰标本，7.5%（11/146）来自尿液标本；碳青霉烯耐药菌株占 30.8 %（45/146）。
结论 鲍曼不动杆菌是临床常见致病菌，主要分布在呼吸中心和重症监护室，且耐药性较高，亚胺培南、左氧氟沙星和阿米卡星可以作为本院推荐用药。

PU-3588

NDM-5 肺炎克雷伯菌美罗培南和多粘菌素体外诱导株的分子特性及其相关性研究

鲍金凤[1,2]、麻雅婷[1]、王驰[1]、周愿[2]、顾兵[2,3]、王成彬[1]
1. 中国人民解放军总医院第一医学中心
2. 徐州医科大学
3. 广东省人民医院

目的 探讨体外诱导美罗培南和多黏菌素耐药 NDM-5 肺炎克雷伯菌的适合度代价，并分析诱导株的分子特性，为开发新的有效抗生素提供理论依据。
方法 对临床分离的 2 株 NDM-5 肺炎克雷伯菌进行美罗培南和多粘菌素的体外诱导，分别诱导成对美罗培南耐药性进一步增加及多黏菌素耐药株；微量肉汤稀释法检测诱导耐药前后菌株对临床常用抗菌药物的最低抑菌浓度(minimal inhibititory concentration，MIC)；对诱导耐药菌株及其对应敏感菌株进行生长曲线分析、体外竞争试验及生物膜形成能力检测，分析诱导耐药后菌株的适合度代价；质粒接合实验确认 NDM 基因的转移能力，TapMan RT-PCR 检测 NDM 基因的表达量变化；对诱导前后菌株进行全基因组测序，分析诱导前后突变基因位点及其功能。
结果 成功诱导两株菌对多粘菌素由敏感到耐药，对美罗培南耐药性进一步增加。诱导株与原始株相比，对临床其他常用抗生素的药敏未发生明显变化；24 h 生长速率降低；体外竞争能力降低；NDM 基因表达量增加；与生物膜形成相关的三个基因（bsmA、fimI、yjfN）在两种抗生素诱导后均发生突变。
结论 肺炎克雷伯菌经美罗培南及多黏菌素诱导后会出现一定的适合度改变。碳青霉烯耐药表型与 NDM 基因表达量呈正相关性。抗生素条件会影响细菌生物膜形成相关基因（bsmA、fimI、yjfN）的表达，进而改变细菌的耐药性。

PU-3589

2018-2020 年川中地区鲍曼不动杆菌临床分布及耐药变迁

赵明才、林芳、刘亮华、刘家瑞、黎昆、刘海波、胡娟
遂宁市中心医院

目的 分析川中地区临床分离鲍曼不动杆菌的分布特点和耐药变迁，为该菌所致感染性疾病的有效防治提供实验室依据。
方法 分析 2018 年 1 月至 2020 年 12 月临床各科室送检标本中鲍曼不动杆菌的检出情况、分布特点和药敏试验。
结果 近三年鲍曼不动杆菌分离率分别是 0.6%（213）、0.4%（160）和 0.4%（146）。519 株鲍曼不动杆菌主要分离自呼吸道痰标本(68.1%)，其次为脓液(7.2%)，其他标本检出率较低。鲍曼不动杆菌以呼吸中心检出率最高(23.6%)，其次为神经外科(14.2%)，内科的检出率高于外科。2018 年 1 月至 2020 年 12 月耐药率总体呈下降趋势，除氨曲南、头孢唑林、头孢替坦和头孢曲松天然耐药外，头孢哌酮 / 舒巴坦、亚胺培南、米诺环素有所下降。
结论 川中地区鲍曼不动杆菌分离率有下降趋势，但仍然是临床常见致病菌，科室分布广泛，耐药率虽有下降，临床治疗也应根据药敏结果选择合适的抗菌药物。

PU-3590

昆明地区部分铜绿假单胞菌对碳青霉烯类抗生素的耐药机制研究

姚瑶、高辉、黄云昆、王佳、丁家伟、朱雯梅
昆明市延安医院

目的 研究昆明地区铜绿假单胞菌对碳青霉烯类抗生素的耐药机制。
方法 收集 2018 年 11 月-2019 年 12 月昆明地区三所三甲医院的耐碳青霉烯类铜绿假单胞菌共 60 株，采用纸片扩散法进行药物敏感试验，使用 WHONET5.6 软件进行药敏数据统计分析；采用 PCR 方法进行膜孔蛋白 oprD2 基因检测，扩增阳性产物进行测序分析，并选取扩增阳性的部分菌株采用 RT-PCR 方法进行 oprD2 基因的 mRNA 表达水平检测；对金属酶筛查阳性菌株采用 PCR 方法进行 IMP,VIM,SIM,GIM1,SPM,NDM 金属酶基因检测，扩增阳性产物进行测序分析；对外排泵筛查阳性菌株采用 RT-PCR 方法进行 MexA,MexC,MexE,MexX 基因的 mRNA 表达水平检测。
结果 60 株 CRPA 菌株对亚胺培南和美罗培南的的耐药率分别为 98.3% 和 81.7%，对头孢他啶、头孢吡肟、头孢哌酮/舒巴坦、头孢他啶/阿维巴坦的耐药率分别为 58.3% 、58.3%、63.3%、56.7%，对哌拉西林、哌拉西林/他唑巴坦的耐药率分别为 61.7%、 60%，对氨曲南的耐药率为 61.7%，对左氧氟沙星的耐药率为 63.3%，对阿米卡星、妥布霉素的耐药率分别为 48.3%、 41.7%；oprD2 基因缺失率为 6.7%（4/60），oprD2 基因表达降低率为 54.5%（12/22）； 20 株检出 MBLs 基因，金属酶基因检出率为 33%（20/60），其中 IMP 基因检出 16 株，VIM 基因检出 4 株；9 株 CRPA 菌株检出外排泵基因高表达，外排泵高表达检出率为 15%。
结论 耐碳青霉烯类铜绿假单胞菌对常用抗生素呈现较高的耐药率，临床需合理选择抗生素，控制 CRPA 的传播；本地区铜绿假单胞菌对碳青霉烯类抗生素耐药的机制以外膜通透性下降为主，其次为产金属酶，金属酶基因以 IMP 型为主，外排泵高表达可能不是本地区铜绿假单胞菌对碳青霉烯类抗生素耐药的主要耐药机制。

Genetic diversity and evolution of the virulence plasmids encoding aerobactin and salmochelin in Klebsiella pneumoniae

Dongxing Tian、Xiaofei Jiang
Huashan Hospital, Shanghai Medical College, Fudan University

Virulence plasmids of hypervirulent Klebsiella pneumoniae (hvKp) have the potential to transfer to drug-resistant strains or integrate with other plasmids, facilitating the genome evolution of threatening pathogens. We conducted an in-depth analysis of the publicly available 156 complete genome sequences of hvKp together with a multi-region clinical cohort of 171 hvKp strains from China to provide evidence for the virulence plasmid evolution. Virulence plasmids were frequently detected in the ST23 and ST11 K. pneumoniae strains. Multidrug-resistant hvKp (MDR-hvKp) occupied a large proportion of hvKp, and the coexistence of virulence and resistance plasmids may be the major cause. Virulence plasmids commonly possessed multiple replicons, of which IncFIBK was the most prevalent (84.6%). We identified 49 IncFIBK alleles among 583 IncFIBK plasmids, and they could be divided into Clades I, II, and III. We further observed that conjugative and non-conjugative virulence plasmids could be distinguished by IncFIBK genetic diversity, and IncFIBK subtyping could also indirectly indicate a chimeric preference of conjugative virulence plasmids. On this basis, we developed an open-access web tool called KpVR for IncFIBK subtyping. In conclusion, the genetic diversity of IncFIBK virulence plasmids could be used for tracking the evolution of virulence plasmids, and further preventing the emergence of MDR-hvKp strains.

VITEK MS 全自动微生物质谱检测系统性能验证

蓝依依[1]、何友[2]、徐少林[1]、李想[1]、张宇培[1]
1. 柳州市妇幼保健院
2. 柳州市中医医院

目的 针对医院检验科临床微生物检验实验室所用的 VITEK MS 全自动微生物质谱检测系统在常规的临床微生物鉴定中的性能要求进行验证，以确保所用仪器检测系统及试剂性能正常，微生物鉴定符合率能够满足临床的需求和要求。
方法 选取覆盖革兰阳性和革兰阴性的非苛养菌、苛养菌、厌氧菌、念珠菌等。包括临床留样菌株和标准/质控菌株，每种类型应至少 1 株，总体不少于 20 株及 VITEK MS 质控菌株（ATCC8739），所有的菌株均经过 VITEK 2 COMPACT 全自动鉴定药敏分析仪分析验证。菌株在试验前经过合适的琼脂培养基上复苏和分纯，35℃孵育 24-72 小时后待用，根据检测系统推荐的方法，按照其标准操作流程制备标本并通过质谱检测系统进行鉴定。每株菌株进行 2 个平行试验,于 VITEK MS 准备工作站中录入标本编号，结果于 Myla 数据分析平台查看并记录分析。标准/质控菌株符合率应为 100%，临床留样菌株的符合率应在 90％以上。
结果 VITEK MS 全自动微生物质谱检测系统对标准/质控菌株符合率为 100%，对临床留样菌株的符合率也为 100%，每一株细菌的鉴定率皆为 99.9%。
结论 VITEK MS 全自动微生物质谱检测系统在革兰阳性和革兰阴性非苛养菌、苛养菌、厌氧菌、念珠菌等的临床留样菌株和标准/质控菌株鉴定符合率符合要求，验证通过。本文建立的全自动微生物质谱检测系统性能验证方案能够满足现阶段医院临床微生物检验实验室常规的鉴定需求及要求。

PU-3593

血液病原菌种类分布和耐药性分析

牛瑜
山东大学第二医院

目的 分析 2016 年-2020 年本院临床科室血培养标本中病原菌的种类分布和耐药情况，为临床治疗血流感染感染提供理论依据。
方法 按照标本采集规范要求采集血培养标本，在血培养仪报警阳性时取出血培养瓶并接种血平板和巧克力平板，使用安图微生物质谱仪对可疑病原菌进行鉴定，并使用 BD M50 全自动药敏仪和西门子 MicroScan Walkaway-96 Plus 全自动药敏仪进行药敏试验，然后使用 WHONET 5.6 软件统计，分析尿液中病原菌菌株种类分布和耐药情况等。
结果 自 2016 年至 2020 年本院血培养病原菌共计 1573 株，其中凝固酶阴性葡萄球菌 601 株、大肠埃希菌 325 株、肺炎克雷伯菌 177 株、屎肠球菌 66 株、金黄色葡萄球菌 58 株、鲍曼不动杆菌 43 株等。血培养中碳青霉烯耐药的鲍曼不动杆菌 27 株、铜绿假单胞菌 12 株、肺炎克雷伯菌 50 株、大肠埃希菌 5 株，对碳青霉烯的耐药率分别为 62.8%、44.4%、28.2%、1.5%。苯唑西林耐药的金黄色葡萄球菌 17 株，耐药率为 29.3%。
结论 血培养分离菌株以凝固酶阴性葡萄球菌为主（38.2%），其中大部分来源于儿童，可能与采血过程污染有关，其次为大肠埃希菌（20.7%）、肺炎克雷伯菌（11.3%）、屎肠球菌（4.2%）、金黄色葡萄球菌（3.7%）。鲍曼不动杆菌和肺炎克雷伯菌对碳青霉烯的耐药率较高，延长患者的病程并增加了患者的病死率，应足够重视。

PU-3594

Integrated Signaling System under Endoplasmic Reticulum Stress in eukaryotic microorganisms

Ting Cao、Shuangquan Liu
The First Affiliated Hospital of University of South China

The endoplasmic reticulum (ER) is a multifunctional organelle, which is crucial for correct folding and assembly of secretory and transmembrane proteins. Perturbations of ER function can cause ER stress. ER stress can activate the unfolded protein response (UPR) to cope with the accumulation of misfolded proteins and protein toxicity. UPR is a coordination system that regulates transcription and translation, leading to the recovery of ER homeostasis or cell death. However, cells have an integrated signaling system to cope with ER stress, which helps cells to restore and balance their ER function. The main components of this system are ER-associated degradation (ERAD), autophagy, hypoxia signaling and mitochondrial biogenesis. If the balance cannot be restored, the imbalance will lead to cell death or apoptosis, or even to a series of diseases. In this review, a series of activities to restore the homeostasis of cells during ER stress are discussed.

Summary and perspectives Under normal conditions, in order to protect the survival of cells and maintain the balance of the body, ER stress components coordinate and work together to cope with various adverse stimuli. When these components are out of balance and cannot maintain the homeostasis of cells, disease can be progressed. Understanding how ischemia, hypoxia, nutrient deficiency, Ca2+ imbalance, pathogen infection and inflammation activate ER stress is helpful for us to better understand the occurrence and development of diseases. When ER stress occurs, it will produce ER protective signals to reshape the cell homeostasis, and related integration signals include degradation of abnormal proteins accumulated in the ER lumen through the ERAD pathway, removal of damaged organelles and generation of new cell components and energy by autophagy, activation of transcription of downstream genes by conduction of the hypoxia signal to alleviate the damage of hypoxia to cells, and mutual regulation of cells to cope with various adverse injuries by interaction between ER and mitochondria.

Moreover, understanding how ERAD, autophagy, hypoxia signal transmission and mitochondrial biogenesis respond to the adverse effects of ER stress will help us better grasp the treatment and prognosis of diseases. Additionally, exploring the signaling pathways between ER stress and ERAD, autophagy, hypoxia and mitochondrial biogenesis will provide us new therapeutic drugs or strategies for the treatment of various diseases, such as inflammation, tumor, heart, and nervous system diseases.

In summary, ER is the site for many crucial activities such as the biosynthesis of proteins of the secretory pathway, which is the main cell Ca2+ store and regulates synthesis and distribution of phospholipids and sterols. Alterations in such functions induce ER stress and may have detrimental consequences for the cell. Therefore, cells evolved a number of processes (UPR, ERAD, autophagy etc.) to counteract ER stress that may result in recovering cell homeostasis, in-depth study of the signal integration system under ER stress can help us further understand the self-regulation mechanism of cell biology when diseases occur, and it is helpful for us to identify the therapeutic targets and take more effective measures to prevent disease progression.

PU-3595

内质网应激与病理性血管生成相关疾病

曹婷、蔡佳伦、刘双全
南华大学附属第一医院

血管生成是由已存在的血管在多种促血管生长因子的共同作用下产生新血管的过程，这是一个多阶段、多分子调控的复杂过程。生理性血管生成是细胞处于增殖和快速代谢条件下由低氧诱导因子（HIF-1α)上调内皮细胞血管内皮生长因子(EGF)的分泌产生的。病理性血管生成除受血管内皮生长因子调控外，还与许多炎症因子、黏附分子、基质金属蛋白酶等相关。病理性血管生成在肿瘤中不仅可为肿瘤细胞提供血供和养分，还可促进肿瘤细胞向远端组织和器官转移。内质网应激（ERS）是真核细胞对于细胞内环境改变所做出的应激反应，轻微的 ERS 可引导蛋白质的正确折叠，恢复细胞内环境的稳态，然而持续性或剧烈的应激反应则会导致一系列疾病发生。许多病理情况下的血管生成与 ERS 相关，如病毒感染，肿瘤侵袭和慢性炎症等，病理性的血管生成涉及的机制和通路非常复杂，主要通过 ERS 激活内质网上的三个效应器: X-box 结合蛋白 1S、激活转录因子 4 和剪切后的 ATF-6，这三种效应器可作用于下游促血管生成因子 VEGF、炎症因子(IL-1β、IL-6、TNF-α、IL-8)、PIGF、bFGF 等的释放来促进内皮细胞的增殖和迁移进而促进血管生成。在此过程中内质网应激与病理性血管生成密切相关，当发生 ERS 时 GRP78/BIP 会与下游跨膜感受器解离从而激活 PERK 和 IRE1-α，其中 PERK 激活会进一步磷酸化下游 eIF-2α；而 IRE1-α 的激活则可剪切下游 XBP-1u 为 XBP-1s，两者共同促进 JNK 的磷酸化来促进炎症因子 IL-6、IL-8 的分泌，此外 NF-κB 也可响应 PERK 感受器的激活进而促进 IL-6、IL-8 的分泌来促进血管的生成。因此深入探讨 ERS 与血管生成之间的关系对于病理性血管生成相关疾病的致病机制和防治研究具有非常重要的意义。本文将从 ERS 与病理性血管生成相关疾病的发生机制做一综述。

Coinfection pulmonary mucormycosis and aspergillosis with disseminated mucormycosis involving gastrointestinalin in an acute B-lymphoblastic leukemia patient

胡志敏[1]、王兰兰[2]、邹亮[2]
1. 武汉市第一医院
2. 武汉市

Pulmonary mucormycosis and aspergillosis with disseminated mucormycosis involving gastrointestinalin is a very rare but lethal infection leading to extreme mortality. Herein, we present a unique case of pulmonary coinfection with Cunninghamella bertholletiae and Aspergillus flavus, with disseminated mucormycosis involving the jejunum caused by C. bertholletiae in an acute B-lymphocytic leukemia (B-ALL) patient with familial diabetes. Early administration of active antifungal agents at optimal doses and complete resection of all infected tissues led to improved therapeutic outcomes.

PU-3597

脑膜炎败血性伊丽莎白菌感染的分布及耐药性分析

石晓红
山东省千佛山医院

目的 脑膜炎败血性伊丽莎白菌（Elizabethkingia meningoseptica）EM 的定义经过了一系列的分类学演变。EM 被认可的时间并不长，既往被认为是一种无害细菌，EM 暴发性感染报道的逐渐增多，并且该菌耐药性强，临床治疗比较困难。并且在鉴定方面极可能与氧化酶阳性的多抗性非发酵剂如假单胞菌 、伯克霍尔德菌 、鞘氨醇单胞菌等相混淆，具体的属或种的鉴定比较困难。因此，对近年来该菌的感染分布及耐药性进行分析和研究，以便临床引起足够重视。
方法 2010-2021 临床分离株，药敏试验用 MH 琼脂或 HTM 琼脂，为 OXOID 公司商品。抗菌药物纸片为 BBL、OXOID 或国产公司商品 。药敏试验采用纸片扩散法（Kirby-bauer）或自动化药敏系统。
结果 临床分离菌住来自各个科室，以 ICU 病区为主，该菌对所有 β-内酰胺类抗菌药物头孢吡肟、头孢曲松、头孢噻肟、头孢西丁、头孢呋辛钠及阿莫西林阿维酸，亚胺培南 、美罗培南 、氨曲南，氨基糖苷类抗菌药物和甲氧苄啶-磺胺甲恶唑均有耐药性；对万古霉素、哌拉西林/他唑巴坦、头孢哌酮舒巴坦等相对敏感。
结论 脑膜炎败血性伊丽莎白菌是多重耐药菌，该菌的高耐药率与高产酶率有关，耐药机制较为复杂。其临床上引起感染时，应根据病情，参照实验室药敏结果选用合适的抗菌药物。并且要切实做好院感防控，预防该菌院内感染的发生。

PU-3598

尿路感染无乳链球菌的耐药性及分子流行病学特征研究

林锦琼、林子
广州医科大学附属第一医院

目的 了解近 5 年内由无乳链球菌感染引起尿路感染的分布情况，及其耐药性、耐药基因、毒力因子的特征，为临床个体化治疗提供准确的实验室数据。
方法 收集 2015 年 1 月至 2019 年 12 月广州医科大学附属第一医院无乳链球菌菌株标本 315 株，删除重复标本及不合格标本，筛选出 107 株有效标本，经 Vitek2Compact 全自动细菌鉴定及药敏分析系统进行药敏试验分析，进行菌株毒力因子基因分析以及耐药基因分析，同时进行菌株毒力因子基因分析以及耐药基因分析。
结果 经研究的 107 株尿路感染性无乳链球菌菌株中，检出率最高的科室是泌尿外科 70.1%（75/107）和泌尿男性科 21.5%（23/107）；临床标本类型检出率以中段尿 76.6%（82/107）和拭子 11.2%（12/107）占比最高。药敏结果显示，107 株菌株中未出现对利奈唑胺、氨苄西林、达托霉素、替加环素、青霉素这五钟抗生素耐药的无乳链球菌菌株，对红霉素的耐药率最高（62.3%），左氧氟沙星次之（27.1%）；毒力因子基因 PCR 结果显示，毒力因子及比例分别为 scpB（50%）、Lmb 和 bsaB（42.1%）、Cyl（19.6%）、Bac（6.5%）、Hvga（5.6%）。在 67 株红霉素耐药的无乳链球菌株中，scpB 基因检出阳性率最高。结论无乳链球菌对四环素的耐药性与耐药基因 tetM 密切相关，mefA/E 基因与菌株红霉素的耐药性有关。
结论 虽然青霉素的耐药菌株呈日益增长的趋势，但无乳链球菌对青霉素敏感性仍然保持较高水平，青霉素仍是目前临床治疗的首选药物。

PU-3599

2012-2019 年某院肺炎克雷伯菌的临床分布及耐药性变迁

欧阳鹏文[1]、腾静[2]
1. 湖南省人民医院
2. 湖南师范大学

目的 分析 2012～2019 年湖南省人民医院肺炎克雷伯菌感染及其耐药性的分布情况，更合理地指导耐药细菌的临床监测和监督。
方法 采用回顾性分析法, 收集 2012～2019 年送检至湖南省人民医院细菌实验室的各种临床标本 58583 例, 以及连续分离得出的 6388 例肺炎克雷伯菌的病例和药敏数据,采用 spss26.0 软件对其进行了统计学分析。
结果 从 2012 年的 619 株增加到 2019 年 1289 株，并且表现出逐年增加的趋势。标本主要是来源于痰液,占比 39.6%；在胆汁、血液、分泌液以及尿液的检出量分别占 12.1%、9.7、9.3%、8.0%。肺炎克雷伯菌对各类临床常用抗生素如亚胺培南的耐药率从 2012 年的 4.8%升到 2019 年 22.3%，表现出逐年增加的趋势。其中对氨苄西林的平均耐药率高达 99.9%,对头孢唑啉的平均耐药率高达 43.8%。一、二代头孢菌素的耐药性均超过 30%，对亚胺培南的平均耐药率 14.9%，对氨基糖苷类的抗菌素阿米卡星的平均耐药率最低为 6.2%。
结论 湖南省人民医院肺炎克雷伯菌的检出率呈逐年增加的趋势，同时其对临床常用抗菌药物耐药性严重。对此需要我们加强对抗生素的管控，重视对细菌耐药性的监测。

PU-3600

Virulence and Genomic Features of a virulent Burkholderia thailandensis strain BPM in China

Jin Li
Daping Hospital, Army Medical University

Introduction Burkholderia thailandensis is frequently isolated from the environment, however only a few studies describe the isolation of this subspecies from invasive human infections, so it is still not clear about the virulence and genomic features of B. thailandensis. In the present study, we described a case of B. thailandensis infection in a person in China.
Aim The aim of this study was to analyze the genomic features of a virulent B. thailandensis strain BPM, and to investigate the virulence-specific genes of BPM.
Methodology The potential virulence of B. thailandensis BPM was determined by in vitro and in vivo Methods And the whole-genome sequencing technology, molecular biology, and bioinformatics analysis Methods were used to analyze the genomic features associated with the virulence of BPM.
Results The BPM strain exhibited typical features of B. thailandensis, showing hypermucoviscosity phenotype, similar to B. thailandensis E264 (BtE264). In contrast to BtE264, we got molecular explanations for previously known virulence differences, discovered potentially 18 virulence-related genes, and then found that the acquisition of a 251 bp prophage gene BPM00110 in BPM, which is likely to have occurred non-randomly via horizontal gene transfer. Through bioinformatics analysis, we found that the BPM00110 gene is also a T3SS effector protein of BPM, indicating that it may be related to the hypervirulent of B. thailandensis.
Conclusion In this study, we provide a basic information on the phenotypic and genomic features of BPM, a strain displaying relatively high level of virulence. These findings support the notion that the virulence-associated genes (clusters) are sufficient for the hypervirulence of B. thailandensis. Therefore, we should take genome-based profile together with experimental work in the future studies to explore the virulence of B. thailandensis. The detailed mechanism involving in the virulence of BPM remains to be further explored.

PU-3601

浙南地区感染性角膜炎病因与致病菌特征分析

邵姣
温州医科大学附属眼视光医院

目的 感染性角膜炎，是全球失明的第四大病因。它主要是由细菌、真菌、病毒等病原微生物引起的眼睛和辅助组织化脓性疾病。由于地理环境、卫生状况、当地诊疗水平、经济发展水平等不同，感染性角膜炎的菌种分布、人口特点、临床特征在不同地区存在很大差异。

本课题拟对浙江省温州医科大学附属眼视光医院 2016 年 1 月至 2020 年 12 月收治入院的感染性角膜炎患者的临床资料进行回顾性分析，以期为浙南地区感染性角膜炎的诊疗提供理论依据。

PU-3602

The Diagnostic Value and Performance Evaluation of Five Serological Tests for the Detection of Treponema pallidum

Can Liu、Bin Yang
The First Affiliated Hospital of Fujian Medical University

Background Syphilis is caused by the bacterium Treponema pallidum (TP). The aim of this study was to establish a clinical approach for serodiagnosis of syphilis by evaluating the performance and diagnostic value of five serological tests for the detection of TP.
Methods Five tests were used to test the serum from syphilis patients and control patients, namely rapid plasma reagin (RPR) test, toluidine red unheated serum test (TRUST), TP passive particle agglutination assay (TPPA), TP-specific enzyme-linked immunosorbent assay (TP-ELISA), and TP-specific chemiluminescent immunoassay (TP-CMIA).
Results The sensitivity and diagnostic efficiency of TPPA (96.25%/98.38%), TP-ELISA (100%/95.41%), and TP-CMIA (100%/94.86%) were significantly higher than that of RPR (73.13%/86.22%) and TRUST (73.75%/86.49%) ($P < 0.05$). The minimum detectable concentrations for the five tests were 30 mIU/ml, 20 mIU/ml, 15 mIU/ml, 150 mIU/ml, and 150 mIU/ml, respectively. According to receiver operating characteristic (ROC) curve, the optimal cut-off values for syphilis diagnosis by TP-CMIA and TP-ELISA were 2.2 and 2.0 S/CO (where S/CO = Sample/calibrator cut off), and the area under the ROC curve (AUC) were 0.998 for TP-CMIA and 0.999 for TP-ELISA. The titers/positive rates for RPR and TRUST dropped from 1:4 (100%) to 1:1 (23.3%) (both $P < 0.05$) after treatment. However, there were no significant differences when we compared the positive rate of syphilis patients before and after treatment by TPPA, TP-ELISA, and TP-CMIA.
Conclusions Treponemal tests, such as TPPA, TP-ELISA, and TP-CMIA, are recommended for clinical routine screening of syphilis. However, nontreponemal tests, for example, RPR and TRUST, perform better in therapy response assessment. Serological test should be tailored to respective facilities and clinical demands.

PU-3603

Gut microbiota dysbiosis in patients with hepatitis B virus-induced chronic liver disease covering chronic hepatitis, liver cirrhosis and hepatocellular carcinoma.

Yongbin Zeng 、Qishui Ou
The First Affiliated Hospital of Fujian Medical University

The information regarding the effect of hepatitis B virus (HBV) infection on gut microbiota and the relationship between gut microbiota dysbiosis and hepatitis B virus-induced chronic liver disease (HBVCLD) is limited. In this study, we aimed at characterizing the gut microbiota composition in the three different stages of hepatitis B virus-induced chronic liver disease patients and healthy individuals. Faecal samples and clinical data were collected from HBVCLD patients and healthy individuals. The 16S rDNA gene amplification products were sequenced. Bioinformatic analysis including alpha diversity and PICRUSt was performed. A total of 19 phyla, 43 classes, 72 orders, 126 families and 225 genera were detected. The beta-diversity showed a separate clustering of healthy controls and HBVCLD patients covering chronic hepatitis (CHB), liver cirrhosis (LC) and hepatocellular carcinoma (HCC); and gut microbiota of healthy controls was more consistent, whereas those of CHB, LC and HCC varied substantially. The abundance of Firmicutes was lower, and Bacteroidetes was higher in patients with CHB, LC and HCC than in healthy controls. Predicted metagenomics of microbial communities showed an increase in glycan biosynthesis and metabolism-related genes and lipid metabolism-related genes in HBVCLD than in healthy individuals. Our study suggested that HBVCLD is associated with gut dysbiosis, with characteristics including, a gain in potential bacteria and a loss in potential beneficial bacteria or genes. Further study of CHB, LC and HCC based on microbiota may provide a novel insight into the pathogenesis of HBVCLD as well as a novel treatment strategy.

PU-3604

基于表面活性剂的敷料在各类伤口上的应用

李婷婷、李招吟倩
西南医科大学附属第一医院

表面活性剂为一类化合物，是指加入少量能使其溶液体系的界面状态发生明显变化的物质，它们是同时具有亲水和疏水部分的两亲性分子，在包括减少环境污染甚至食品和饮料工业、农业、微生物提高石油采收率，生物医学科学、纳米技术和各种其他领域在内的各个细分市场中发挥着不同和重要的作用。近年来，表面活性剂在伤口愈合方面的能力逐渐挖掘出来，被证明具有可以通过调节血管生成、炎症反应和细胞迁移而加速伤口愈合过程的能力，并且在慢性伤口或合并多种阻碍愈合因素的情况下，仍具有促进伤口愈合的作用。现目前基于泊洛沙姆的伤口敷料作为最常见且方便的治疗手段，既能防止水分与体液的损失，覆盖及保护创面不受感染，又利于上皮组织和肉芽的正常生长，从而促进伤口愈合过程本身。因此，本文将综述表面活性剂在临床不同伤口上的作用，着重讨论基于泊洛沙姆的伤口敷料的应用。

PU-3605

囊泡调控疏水性分子的输送和功能

刘瑶、李敏
上海交通大学医学院附属仁济医院

目的 人体皮肤共生人葡萄球菌可以分泌疏水性分子微球菌素，杀伤绝大部分的革兰阳性病原菌。人葡萄球菌依赖于该微球菌素的产生，从而可以作为益生菌直接杀伤病原菌，但疏水性的微球菌素分子在体内和体外都具有极差的抗菌活性。因此该疏水性分子发挥抑菌作用的机制还有待阐明。
方法 超高速离心和密度梯度离心法分离人葡萄球菌分泌的囊泡；脂质、蛋白含量检测和纳米粒径追踪技术检测囊泡的个数和粒径；透射电子显微镜观察囊泡的形状；抑菌实验检测囊泡的抗菌活性；荧光定量 PCR 技术检测不同时间点人葡萄球菌中抗菌分子的表达情况；小鼠皮肤脓肿模型检测携带抗菌分子的囊泡的体内抑菌效果。
结果 （1）将人葡萄球菌的上清液分为<>50kDa 组分，只有>50kDa 的部分才具有抗菌活性，考虑到微球菌素的分子大小只有 1.14kDa，因此该共生人葡萄球菌分泌的微球菌素并不是以游离的形式发挥抗菌活性。（2）对人葡萄球菌 2-22h 分泌的囊泡进行探究，发现囊泡的粒径和数量在 6h-12h 都是不断增加的，并在其后的生长时间内维持相对稳定的状态。（3）在密度梯度分离液的不同组分中，囊泡的含量与微球菌素的含量呈正相关关系提示囊泡可以携带微球菌素。（4）在不同的生长时间点，囊泡的抑菌活性与人葡萄球菌上清液的抑菌活性一致，且只有>50kDa 的部分才具有抑菌活性，提示人葡萄球菌的抑菌活性是由囊泡介导的。进一步实验证明微球菌素并不存在于囊泡的表面还是被富集于囊泡的内部。（5）动物模型和抗菌实验证明囊泡可以增强微球菌素的抑菌活性。
结论 这种以囊泡运输疏水性抗菌分子的机制不仅适用于该人葡萄球菌，也存在于其他细菌运输疏水性分子的过程。囊泡并不是细菌随意脱落的产物，它们对细菌发挥一定的功能具有重要的意义。

PU-3606

A part of 2020 Global Fungal Surveillance Program: the evaluation of in Vitro antifungal activity of isavuconazole against filamentous fungi from a multicenter study in China

Ran Jing[1]、Ian Morrissey[2]、Tian-Shu Sun[1]、Ge Zhang[1]、Ying-Chun Xu[1]
1. Peking Union Medical College Hospital
2. International Health Management Associates, Inc. (IHMA)

Objectives Monitoring antifungal susceptibility patterns for new or established antifungal agents against filamentous fungi is necessary, because the increasing antifungal resistance frequently occurred in filamentous fungi which are able to lead to invasive mold infections (IMIs) in immunocompromised patients with high morbidity and mortality in China. However, the resource of effective antifungal agents used for IMIs treatment are still limited in China, bringing an enormous challenge in clinic.
Methods We evaluated the *in vitro* activity of isavuconazole and comparator antifungal agents (voriconazole and amphotericin B) against 131 clinical isolates of *Aspergillus* spp. and order *Mucorales* collected from 2017-2020 under China Hospital Invasive Fungal Surveillance Net–North China Program. Identification of these isolates was performed using conventional morphological Methods and MALDI-TOF MS, and *in vitro* antifungal susceptibility testing was determined using the standard broth microdilution method according to CLSI M38-A3 document.
Results A total of 105 isolates of *Aspergillus* species were evaluated, including *A. fumigatus* complexes (n=75), *A. niger* complexes (n=11), *A. flavus* complexes (n=10) and *A. terreus* complexes (n=9). There were also 25 isolates of the order *Mucorales*. Against all of these *Aspergillus* species, both azoles had an MIC50 of 1 μg/ml and MIC90 of 2 μg/ml. Amphotericin B was less active than the azoles against *Aspergillus* spp. with an MIC50 of 4 μg/ml

and MIC90 of 8 μg/ml overall and susceptible wild-type MICs for 10.7%, 60%, 63.6% and 88.9% of *A. fumigatus* complexes, *A. flavus* complexes, *A. niger* complexes, and *A. terreus* complexes, respectively. Of note, the azoles showed contrasting activity against the order *Mucorales*, with isavuconazole producing an MIC50 of 0.5 μg/ml and MIC90 of 1 μg/ml, and voriconazole producing an MIC50 of 8 μg/ml and MIC90 of >8 μg/ml. Besides, one *Mucor circinelloide* isolate was found with the resistant to isavuconazole (MIC>8 mg/L). Amphotericin B produced an MIC50 and MIC90 of 1 μg/ml.

Conclusions This was the first multicenter study in China to evaluate *in vitro* antifungal activities of isavuconazole. Our study confirmed the excellent activities of isavuconazole against *Aspergillus* spp. and the order *Mucorales*, providing an advantage over other currently available broad-spectrum azole antifungals and a clinically useful alternative to voriconazole for IMIs treatment. However, it should be highly alerted in clinic with *Mucor* spp. has been resistant to new azole antifungal drugs.

PU-3607

人类免疫缺陷病毒合并侵袭性曲霉菌病的研究进展

邓佳敏
西南医科大学附属医院

侵袭性曲霉菌病是临床上较为常见的侵袭性真菌感染，主要见于免疫功能低下人群。然而，在人类免疫缺陷病毒感染的免疫功能低下人群中，侵袭性曲霉菌病却并不多见，到目前为止，全世界仅有数篇关于人类免疫缺陷病毒并发侵袭性曲霉菌病的病例报道。由于该病的临床诊断较为困难，且病死率高，极易出现误诊或漏诊，这一疾病逐渐受到国内外的高度重视，预计将成为临床研究的一大热点。针对这一现象，此综述通过对国内外人类免疫缺陷病毒合并侵袭性曲霉菌病的病因、流行病学特点、高危因素、发病机制、临床特点、辅助检查及药物治疗进行系统性回顾总结，以提高医务人员对该病的认识，降低临床死亡率。该文章是国内外迄今为止第一篇系统性报道人类免疫缺陷病毒合并侵袭性曲霉菌病的综述，对今后免疫缺陷病毒合并侵袭性曲霉菌病的发展具有一定的参考价值。

PU-3608

应用不同前处理法联合质谱技术快速检测血培养病原菌

刘鑫、张杰、张凯、钟敏、黄湘宁、殷琳、喻华*
电子科技大学附属医院•四川省人民医院

目的 通过不同前处理方法对阳性血培养标本进行前处理，联合基质辅助激光解析电离飞行时间质谱（MALDI-TOF MS），对阳性血培养标本病原菌进行快速检测，分析探讨不同前处理方法结合质谱技术快速检测病原菌与传统方法（即过夜培养后鉴定药敏）优劣性比较，优化目前血培养检测流程。

方法 将 30 份阳性血培养标本采用分离胶促凝管法、血培养试剂盒法、短时间培养法 2.5h、短时间培养法 5.5h 进行前处理后，分离病原微生物通过质谱进行快速鉴定，将不同前处理方法与传统方法相比较，就准确性、时间效益、经济效益、临床满意度等方面进行统计分析。

结果 以传统过夜培养后鉴定为参考方法，分离胶促凝管法鉴定率为 86.7%（23/30），短时间培养法 2.5h 的鉴定率为 46.7%（14/30），短时间培养法 5.5h 的鉴定率为 80.0%（24/30），血培养试剂盒法的鉴定率为 86.7%（26/30）。

结论 短时间培养法 5.5h 和分离胶法结合质谱仪进行血培养标本病原菌鉴定可快速有效的明确病原菌，血培养试剂盒法更为高效和便捷，利用不同前处理法分离到的病原菌同时进行药敏试验，可显著缩短血培养报告周期，为患者及早得到合适的抗菌药物治疗争取宝贵时间。

外伤性表皮葡萄球菌性眼内炎的危险因素及耐药性分析

张碟
温州医科大学

目的 通过回顾分析外伤性表皮葡萄球性眼内炎患者的资料，总结患者的流行病学特点，菌株耐药情况等，分析影响患者预后视力的危险因素，预测患者视力结局，为临床诊疗提供建议和参考，改善患者预后视力。
方法 选取 2013 年 9 月至 2020 年 12 月就诊于温州医科大学附属眼视光医院，诊断为外伤性眼内炎，且病原学确定为表皮葡萄球菌的患者共 90 例。将患者预后视力≥0.1 定义为预后好，＜0.1 定义为预后差。对等级资料使用使用秩和检验，对计量资料使用 t 检验或 u 检验，对计数资料使用卡方检验或 Fisher's 确切概率法，筛选影响因素，进行多因素 Logistic 回归分析获得预后视力相关的危险因素。绘制 ROC 曲线，评价 WBC、NEUT#、NLR 预测患者预后视力结局的诊断效率。
结果 绘制 ROC 曲线，WBC、NEUT#、NLR 诊断患者预后视力差 AUC 分别是 0.628、0.637、0.624（P＜0.05）。眼内异物、前房积脓、眼部伤口大小≥5mm 是影响外伤性表皮葡萄球性眼内炎患者预后视力的危险因素。患者眼部培养标本玻璃体液培养阳性率最高（占 86.5%）。患者眼部表皮葡萄球菌分离株对万古霉素、妥布霉素、左氧氟沙星敏感率较高，分别为 100%、81.2%、72.7%。对青霉素、红霉素、苯唑西林耐药率较高，分别为 95.5%、64.4%、61.2%。90 例患者中 56.7%的患者预后视力差，22.3%患者预后视力为无光感，3 例患者接受了眼内容物剜除术。
结论 存在前房积脓、眼内异物、眼部伤口大小≥5mm 的患者视力预后差。WBC、NEUT#、NLR 对于临床医师在疾病早期判断患者预后视力结局有一定价值。PPV 治疗可以改善患者预后视力。玻璃体注药可以继续使用万古霉素，眼部局部用药可以使用妥布霉素滴眼液和左氧氟沙星滴眼液。外伤性表皮葡萄球性眼内炎患者接受有效的治疗后仍有一半的患者的预后视力难以达到有效视力。

PU-3610

沙门菌外膜囊泡对小鼠髓源树突状细胞免疫功能的影响

韦莉
蚌埠医学院

目的 本试验以沙门菌为对象，利用超滤浓缩法提取沙门菌 OMVs，通过检测其对 DC 超微结构及免疫功能的影响，探索细菌 OMVs 的生物学活性。
方法 无菌取小鼠骨髓细胞，体外经粒细胞/巨噬细胞集落刺激因子(rm GM-CSF)和白细胞介素-4(rmIL-4)联合诱导扩增 DC，培养至第 7 天，于倒置相差显微镜下观察悬浮细胞形态变化情况；吸管轻轻吹打培养板收获半悬浮及疏松贴壁细胞，用抗鼠 CD11c-FITC 染色后经流式细胞术鉴定 DC 纯度。超速离心分离获取沙门菌 OMVs，CCK-8 法测定 OMVs 对 DC 存活率的影响，确定后续试验 OMVs 刺激浓度。不同浓度 OMVs 负载后，透射电镜观察 DC 超微结构，流式细胞术检测 DC 细胞因子分泌、表面分子表达和吞噬能力的变化。
结果 离心收集细胞样本经流式细胞仪检测分析，扩增到的细胞中 CD11c 阳性的 DC 能达到 85%以上，透射电镜可见 DC 表面有大量丝状伪足。CCK-8 法测定 DC 存活率结果显示：低浓度 OMVs(1 μg/mL, 5 μg/mL, 10 μg/mL)对 DC 的细胞毒性作用不强，对细胞生存率影响小。选择 5 μg/mL, 10 μg/mL 作为沙门菌 OMVs 的刺激浓度。流式细胞术检测 DC 细胞因子分泌、表面分子表达和吞噬能力结果显示：不同浓度 OMVs 处理后，DC 吞噬能力明显下降(P<0.05)，成熟表型特征性分子表达显著上调(P<0.05)，TNF-a 和 IL-1β 明显升高(P<0.05)。
结论 沙门菌 OMVs 可诱导 DC 分泌 IL-1β 和 TNF-a，促进 DC 成熟和抗原提呈的能力。

PU-3611

人体皮肤及鼻腔共定植金黄色葡萄球菌的分子特征

赵娜、刘倩
上海交通大学医学院附属仁济医院

背景 金黄色葡萄球菌是一种重要的条件致病菌，可引起多种疾病。正常情况下，金黄色葡萄球菌可定植在人体皮肤、粘膜、胃肠道和阴道等，而这被认为是引起金葡菌内源性感染的重要危险因素之一。然而，对于定植于人体的金黄色葡萄球菌的分子特征的鉴定，特别是针对同一个体不同部位定植的金黄色葡萄球菌，目前还没有很好的研究。
方法 本研究中，我们从 526 名健康人分为三个年龄组(儿童、青年和老人)并从他们的皮肤和鼻腔拭子中分离并培养了所有可培养细菌。其中，对于同一个体皮肤及鼻腔共定植的金黄色葡萄球菌，我们通过 spA 分型和 MLST 分型比较、药敏试验、溶血试验、生物膜半定量试验、细胞粘附试验以及建立小鼠鼻腔和皮肤定殖模型等方法，对这些金黄色葡萄球菌的分子特征进行了系统性分析与比较。
结果 无论是在皮肤或鼻孔中，葡萄球菌都是优势种属，其中以凝固酶阴性葡萄球菌丰度最高；此外，金黄色葡萄球菌也可从皮肤及鼻腔中分离得到。我们在 7 个个体的皮肤和鼻腔中同时分离到 52 株金黄色葡萄球菌，进一步研究表明，从同一个体不同甚至相同器官分离的金黄色葡萄球菌的基因型并不完全相同，而且在生物膜形成和溶血活性等表型方面也存在显著差异。同时，在细胞粘附实验和小鼠定植模型中，我们发现，相较于鼻腔，从皮肤分离出的金葡菌对皮肤上皮细胞有更强的粘附力。
结论 综上所述，金黄色葡萄球菌在人体不同器官的分布并非完全同质的，其传播或内源性感染的来源是多种多样的；并且细菌在人体不同部位定植期间能够发生微进化以适应人体内环境。

PU-3612

探讨 VISAVRSA 相关耐药进化史及耐药进化的代价

夏启航
上海市临床检验中心

金黄色葡萄球菌是最常见的临床病原菌之一，对医疗卫生构成重大威胁。1980 年以来，万古霉素作为治疗 MRSA 引起的严重感染的一线药物，成为治疗严重金黄色葡萄球菌感染的有效保障。然而，随着越来越多的万古霉素敏感减弱的菌株在全球范围报道，研究人员和医生们开始担心 VISA/VRSA 是否有一天也会爆发。这篇综述，我们简单回顾了金黄色葡萄球菌耐药性的历史，并还归纳了相关 VISA/VRSA 进化模式和相应的进化改变，提出如何更好得优化临床治疗策略。

PU-3613

上海地区 CA-MRSA/OS-MRSA ST59 进化分析

李天铭、简颖、李敏
上海交通大学医学院附属仁济医院

目的 研究一家教学医院临床分离金黄色葡萄球菌（Staphylococcus aureus, S. aureus）中苯唑西林敏感、mecA 阳性的金黄色葡萄球菌（OS-MRSA ST59）以及 CA-MRSA ST59 的进化特点及耐药规律，以指导临床预防和治疗 S. aureus 感染。
方法 收集 2008 年到 2018 年上海华山医院分离的非重复金黄色葡萄球菌 CA-MRSA ST59 81 株，以及儿中心分离的 OS-MRSA ST59 9 株，经质谱仪鉴定及 VITEK2 全自动细菌药敏分析，表型分

析判定苯唑西林耐药金黄色葡萄球菌（MRSA）和苯唑西林敏感金黄色葡萄球菌（MSSA）菌株。抽提 DNA 进行全基因组测序，并进行进化分析，分析 mecA 基因及其启动子 SNP，mecA 调控基因 SNP 以及相关基因的覆盖度分析。
结果 经全基因组序列比对，81 株 CA-MRSA ST59、9 株 OS-MRSA ST59 与全球金黄色葡萄球菌 ST59 数据共分析，本课题研究的 ST59 主要为 TaiWan 来源。SNP 分析发现，与 N315 比对，mecA SNP 分为 5 种 Cluster，其中 8 株 OS-MRSA 为 Cluster1 型；mecA 启动子 SNP 分为 4 种 Cluster，其中有文献报道 mecA 启动子 SNP 与耐药性相关；本研究又对 mecA 调控基因 blaR1 进行 SNP 分析，发现有 5 株 OS-MRSA 属于一种 Cluster，均缺失一个碱基。
结论 2008-2018 年上海华山医院分离的 CA-MRSA ST59 与课题组前期分离的 OS-MRSA ST59 均为 Taiwan 来源。blaR1 基因中，5 株 OS-MRSA 属于一种 Cluster，均缺失一个碱基，可能导致 bla 蛋白的失活，引起耐药性的降低。

PU-3614

普外科无菌体液多重耐药菌特征及混合感染危险因素分析

杨晓燕[1]、邸师红[2]、韩鹏鹏[2]、王利新[2]
1. 宁夏医科大学总医院
2. 宁夏医科大学总医院心脑血管病医院

目的 分析我院普通外科无菌体液病原菌感染特征以及混合感染的危险因素和预后，为降低医院感染的发生率和院感防控提供依据。
方法 回顾性分析 2018 年 1 月至 2021 年 1 月在普通外科住院且无菌体液培养阳性患者的临床资料、病原学分布以及多重耐药菌特征，再根据分离出病原菌的数量将患者分为单一感染组和混合感染组，两组资料进行单因素卡方检验后，用多因素 Logistic 回归模型进行多元分析筛选混合感染的危险因素。
结果 共纳入 882 例患者，检出 1075 株病原菌，排前五位的病原菌主要为大肠埃希菌、肺炎克雷伯菌、金黄色葡萄球菌、肠球菌属以及念珠菌。单一感染 700 例（79.37%），混合感染 182 例（20.63%），混合感染主要以大肠埃希菌+肠球菌属以及大肠埃希菌+肺炎克雷伯菌组合感染模式为主。与单一感染组相比，混合感染组多重耐药菌（MDRO）、耐甲氧西林金黄色葡萄球菌（MRSA）、耐甲氧西林凝固酶阴性葡萄球菌（MRCNS）、耐万古霉素的肠球菌（CRE）、产 ESBLs 的大肠埃希菌（ESBL-produding E-coli）、产 ESBLs 的肺炎克雷伯菌（ESBL-produding kpn ）、耐碳青霉烯类抗生素的鲍曼不动杆菌（CR-AB ）检出率（46.5%,28.9%,59.5%,43.0%,50.1%,40.2%,86.5%）明显升高，且混合感染组患者住院时间（t=18.85，P=0.000)明显延长，病死率（χ2=18.95，P=0.000)明显升高。多因素结果筛选出：高龄、恶性肿瘤、多脏器功能衰竭、基础疾病≥2 种、侵入性治疗、近期住院超过 7 天以及多重耐药菌感染是无菌体液混合感染的独立影响因素（P＜0.05）。
结论 普通外科患者无菌体液分离的病原菌种类多，耐药形式严峻，影响普外科混合感染的因素较多，根据监测结果采取针对性干预措施，可降低混合感染发生率，缩短患者住院时间，降低病死率。

PU-3615

新冠疫情爆发前后儿童呼吸道合胞病毒感染流行特征分析

王莉莉[1]、刘志[2]、彭虹艳[1]、吴舒婷[1]、阳青兰[1]、李梨平[1]
1. 湖南省儿童医院儿科医学研究所
2. 湖南省计量检测研究院

目的 了解新冠疫情爆发前后，2019-2020 年湖南省儿童医院就诊病人呼吸道合胞病毒（RSV）感染及流行病学特征。
方法 2019 年 1 月-2020 年 12 月期间，采集湖南省儿童医院门诊和住院病人急性呼吸道感染儿童鼻咽拭子标本，采用直接免疫荧光法对 RSV 抗原进行检测，对病例信息进行统计学分析，同时采用 RT-PCR 对 76 例 RSV 阳性标本进行亚型检测。
结果 2019 年和 2020 年共检测病例 25094 例和 15219 例，阳性率分别为 8.89%和 14.92%，2020 年阳性检出率高于 2019 年（$\chi 2=347.41$, $P<0.001$）；阳性率存在明显的季节性，冬季最高；年龄越小，阳性率越高，阳性率无性别差异；RSV 阳性标本中，A 型 13 例（17.10%），B 型 63 例（83.9%），2020 年 RSV 流行亚型以 B 型为主。
结论 通过对 2019-2020 年湖南省儿童急性呼吸道感染 RSV 进行监测，为湖南地区及全国儿童长期呼吸道 RSV 病原学检测提供资料，有利于新冠后疫情时代 RSV 防控和临床诊断。

PU-3616

真菌 1,3-β-D 葡聚糖检测室间质评的建立和结果探讨

徐蓉
上海市临床检验中心

目的 建立真菌 1,3-β-D 葡聚糖检测的室间质评，对室间质评结果进行分析以提高临床真菌 1,3-β-D 葡聚糖检测质量。
方法 使用模拟血清的质控品进行真菌 1,3-β-D 葡聚糖检测项目的室间质评，评判结果以定性（阴性或阳性）为准。
结果 通过 2016-2020 年 5 年 950 家次实验室的共 4750 次检测的室间质评结果来看真菌 1,3-β-D 葡聚糖检测的室间质评活动运行正常，各临床实验室上报定性的结果均能符合设定值。
结论 真菌 1,3-β-D 葡聚糖检测的室间质评适用于临床真菌 1,3-β-D 葡聚糖的检测，该室间质评方法的成功建立使参与室间质评的各临床实验室在该检测项目的质量得到保障，同时室间质评的定量检测值的统计结果也有助于参评实验室能发现本实验室的结果是否存在偏离。

PU-3617

Analysis on microbial contamination of 25202 umbilical cord blood units of Shanghai in the past 6 years

Xuejie Liu
Shanghai Center For Clinical Laboratory

To investigate the contamination situation of microbial contamination during cord blood collection and treatment, and provide some reference for reducing cord blood pollution，a total of 25202 cord blood samples were collected from Shanghai cord blood hematopoietic stem cell bank from August 2014 to July 2020, of which 458 strains of bacteria were isolated, which the total pollution rate was 1.82%, and what will be identified to search the possible sources. The research finds that 210 strains of the bacteria are the aerobic bacteria, accounting for 45.85%,

and the others are the anaerobic bacteria, accounting for 54.15%, and from the perspective of delivery mode, the proportion of cesarean section is 5.02%, a total of 23 strains of contaminated bacteria, and the proportion of eutocia is 94.98%, a total of 435 strains of contaminated bacteria. And most of the contaminating bacteria are escherichia, bacteroides, lactobacillus, eubacterium. The conclusion is that there is little difference between aerobic bacteria and anaerobic bacteria in the distribution of pathogenic bacteria. and from the aspect of delivery mode, the anaerobic bacteria species of the eutocia are more than the cesarean section in the umbilical cord blood contamination; amd from the detected bacteria, the heliconia, bacteroides, lactobacillus and the eubacteria are the main contaminating bacteria, and what are also the normal flora of the human mouth, respiratory, intestinal and reproductive tract. So the strengthening of the technical training in cord blood collectors and the strictly implementing the aseptic operation system is necessary, which will reduce the pollution rate of cord blood.

PU-3618

BLAF 标本中半乳甘露聚糖检测在侵袭性肺曲霉病中的价值研究

李伟、孙恩华、张义
山东大学齐鲁医院

目的 评估支气管肺泡灌洗液（BALF）与血清中半乳甘露聚糖（GM 试验），以及 1,3-β-D 葡聚糖（G 试验）联合检测在非粒缺患者侵袭性肺曲霉病（IPA）中的诊断价值，探讨 IPA 实验室诊断的最佳组合。

方法 前瞻性收集考虑为 IPA 的住院患者数据资料（排除粒细胞缺乏症患者），检测血清和 BALF 中 GM 试验，同时检测血清 G 试验；利用 ROC 曲线分别分析血清 G 试验、血清 GM 实验、BALF-GM 试验的敏感度、特异度、阳性预测值、阴性预测值，并通过 logistic 回归将三者数值引入方程，构建 IPA 诊断模型，评估联合后的新指标对 IPA 敏感度和特异度。

结果 血清 G 试验的敏感度 88.9%，特异度 85.4%，阳性预测值 82%，阴性预测值 91.21%；血清 GM 试验的敏感度 77.4%，特异度 92.5%，阳性预测值 76.0%，阴性预测值 90.6%；BALF-GM 试验的敏感度 82.6%，特异度 93.2%，阳性预测值 76.0%，阴性预测值 95.1%。经逐步 logistic 回归分析，血清 GM 被剔除（P=0.178,选入变量的检验标准为 P<0.05，剔除变量为 P>0.1），筛选出有意义的变量为血清 G 试验和 BALF-GM，构建联合检测 IPA 的诊断模型：logit(Y)=0.36+0.03*G－5.90*BALF-GM，得到新变量 Y 诊断 IPA 的 AUC 为 0.92(95%CI=0.873~0.967)，高于血清 G 试验和 BALF-GM（P<0.05），敏感度为 94.1%，特异度为 80.2%。

结论 G 试验和 GM 试验是 IPA 的重要早期实验室指标，BALF-GM 对 IPA 的诊断效能高于血清 GM 和 G 实验，联合检测 BALF-GM 和血清 G 实验可进一步提高诊断效能，可为 IPA 的早期诊断和治疗提供有力的实验室证据。

PU-3619

A Capillary Electrophoresis Method for analyzing the diversity of Vaginal Microbiome

Li Lai
Fujian Provincial Hospital

Background16S ribosomal RNA (rRNA) gene sequences analysis is the common method to identify the bacteria in human vaginal flora.While specific DNA primers were designed to target 16S rRNA gene sequences,DNA fragments analysis using capillary electrophoresis can obtain more accurate qualitative and quantitative information on the microbiome.This study aimed

to assess the ability of capillary electrophoresis method to analyze the diversity of vaginal microbiomes,and provide a theoretical basis for the accurate gene detection of vaginal flora.
Methods We collected 75 vaginal secretion samples from female outpatient aged 25-50,who had underwent routine gynecologic examinations in Fujian provincial hospital from March 2021 to April 2021.Clinical diagnosis was based on the results of Gram staining microscopic examination and biochemical tests of bacteria(pH value,
Catalase,Leukocyte esterase,Sialidases,β-Glucuronidase and Acetylglucosaminidase).
Vaginal secretion samples were collected and then total bacterial DNA was extracted.We used six pairs of fluorescent dye tagged specific primers that were designed base on the 16S rRNA genes of four Lactobacillus species (L. iners, L. crispatus, L. jensenii and L. gasseri), G. vaginalis and A. vaginae. PCR products of six species of bacteria were detected and analyzed by a 3130 Genetic Analyzer.
Results 75 samples were divided into two groups according to the viginal microbiome evaluation,including 50 cases which had vaginal bacteria balance and 25 cases which had vaginal bacteria disorder. PCR amplification of 16S ribosomal RNA genes of L. iners, L. crispatus, L. jensenii, L. gasseri,G. vaginalis and A. vaginae was successfully performed on the DNA extracted from vaginal secretion samples.Four Lactobacillus species were detected in 4-33 cases of “Balance” group ,and G. vaginalis was detected in 23 cases of“Disorder”group ,simultaneously A. vaginae was detected in 20 cases .
Conclusion Based on the technique of DNA fragments analysis using capillary electrophoresis method,the most common vaginal bacteria in Chinese healthy women are L.iners and L.crispatus. G.vaginalis and A. vaginae are the most common pathogenic bacteria detected in the patients who had vaginal bacteria disorder.Using capillary electrophoresis method to detect the vaginal bacteria will be useful for accurate identification of vaginal microbiome.There will be a application value to find out the composition of the vaginal microbiome rapidly and detect specific gene markers to identify potential pathogenic bacteria when women was at risk of serious illness before they develop obvious symptoms.

PU-3620

一种进口呋喃妥因药敏纸片试验性能评价

张戈、黄晶晶、赵颖
中国医学科学院北京协和医院

目的 评估一种进口呋喃妥因药敏纸片产品的检测性能。
方法 收集北京地区一家三甲医院 2016 至 2017 年从临床标本中分离的 118 株病原菌，包括肠杆菌目细菌 61 株、葡萄球菌属 48 株、肠球菌属 9 株。依照美国临床和实验室标准协会（The Clinical and Laboratory Standards Institute, CLSI）文件 M100ED30，对国产和进口呋喃妥因药敏纸片采用纸片扩散法进行体外药物敏感性试验检测，并根据其临床折点进行结果判读，比较两种纸片判读结果的分类一致率（CA）。
结果 118 株病原菌中，有 73 株对呋喃妥因敏感，4 株中介，41 株耐药。进口与国产体外药敏实验纸片的分类一致率为 100%。
结论 该呋喃妥因进口药敏实验纸片，体外抗菌药物敏感性试验结果可靠，与国产体外药敏实验纸片一致性好。可以满足实验室需求，为临床感染性疾病诊疗提供用药参考。

PU-3621

天津市某三级医院 2015-2019 年尿路致病性大肠埃希菌的耐药变迁

魏寒松、王永宁、马春红
天津市宁河区医院

目的 回顾性分析某三级医院临床患者尿样本中分离的大肠埃希菌耐药情况，评估其耐药趋势变化，为尿路感染诊疗提供理论依据。
方法 收集 2015 年 1 月至 2019 年 12 月疑似尿路感染患者的尿样本进行尿培养和药敏试验。用 Vitek 2 Compact 进行细菌鉴定和药敏试验，将所有大肠埃希菌分离株的耐药数据纳入本研究。
结果 尿路致病性大肠埃希菌（UPEC）所致尿路感染人群以老年人为主，年龄段分布以 50-70 岁年龄段为主。UPEC 耐药率最高的抗菌药物分别为氨苄西林、环丙沙星、左氧氟沙星和复方新诺明，分别为 87.80%，71.40%，67.50%，64.70%。耐药率最低的抗菌药物是美罗培南、亚胺培南、哌拉西林/他唑巴坦。所检测的抗菌药物中，哌拉西林、头孢唑林、头孢呋辛、呋喃妥因五年间的耐药率变化有统计学差异。
结论 大肠埃希菌所致泌尿道感染以五十岁以上老年人为主。UPEC 对氟喹诺酮类抗菌药物耐药率较高，临床上在治疗尿路感染时应当参考药敏结果给予合适的药物。在经验性治疗时要慎重选择氟喹诺酮类药物。

PU-3622

2017~2020 年孕产妇阴道致病菌群分布及无乳链球菌检出率分析

刘栋宾、陈敏、谭继权、董沅君
湖南省妇幼保健院

目的 对 2017~2020 年的孕产妇阴道致病菌群分布及无乳链球菌检出率进行分析比较。
方法 选取 2017 年 1 月至 2020 年 9 月在湖南省妇幼保健院产检且阴道分泌物需氧培养为阳性的 11282 例孕产妇作为本次研究对象，将收集到的数据进行统计与整理，探讨分析孕产妇的阴道菌群分布特征，并比较 2017~2020 四年间无乳链球菌的检出率以及耐药率的变化。
结果 孕产妇阴道分泌物需氧菌培养的 11282 例阳性中，真菌 8960 例（79.79%），革兰阳性菌 1505 例（13.34%），革兰阴性菌 817 例（7.24%）。分离率最高的前五位病原菌分别为：白色念珠菌 4742 例（42.03%）、光滑念珠菌 3497 例（31.00%）、无乳链球菌 566 例（5.02%）、大肠埃希菌 544 例（4.82%）、克柔念珠菌 370 例（3.28%）。2017~2020 年无乳链球菌在需氧培养阳性菌中的占比分别为 3.27%（96/2934）、4.24%(135/3186)、5.83%(191/3275)、7.63%（144/1887），无乳链球菌对红霉素（70.83%、75.56%、78.01%、81.25%）、四环素（51.04%、60.00%、80.68%、78.47%）、克林霉素（50.00%、59.26%、66.49%、65.97%）的耐药率呈现逐年上升的趋势。
结论 临床应关注孕产妇在围产期时阴道的微生物菌群变化。无乳链球菌的检出率和耐药率呈逐年上升的趋势。孕产妇应在孕期做好产检，重视阴道分泌物的培养，针对致病菌及早干预并合理使用抗生素进行治疗，避免孕期的不良结局出现。

1 例拟气味类香味菌的实验室特点和耐药分析

樊冰、张彦鹏、罗勇、张鑫、聂勇波、周明、陈锐锋、顾大勇*
深圳市第二人民医院

目的 研究拟气味类香味菌患者的临床特点，并分析该菌的耐药情况，为临床提供诊疗依据。
方法 对 ICU 住院患者尿标本中分离的 1 株拟气味类香味菌用 BD 全自动微生物鉴定飞行时间质谱仪鉴定，用 VITEK2 Compact 系统中国定制卡 AST-N335 进行抗菌药物的敏感性测定，用 mCIM 法检测碳青霉烯酶，碳青霉烯酶抑制剂增强试验，检测 A 类丝氨酸碳青霉烯酶和 B 类金属 β 内酰胺酶。
结果 这 1 例拟气味类香味对哌拉西林/他唑巴坦、头孢哌酮/舒巴坦、头孢他啶、头孢吡肟、氨曲南、美罗培南、亚胺培南、阿米卡星、妥布霉素、左旋氧氟沙星、环丙沙星片、复方新诺明、粘菌素、多西环素、米诺环素、替加环素均为耐药；用 mCIM 法检测碳青霉烯酶，抑菌圈的直径为 6mm，表明这例菌株是产碳青霉烯酶阳性菌株；碳青霉烯酶抑制剂试验显示添加 EDTA 溶液的亚胺培南纸片抑菌圈直径与单药纸片相差 7mm。
结论 类香味菌是一种寄居环境的革兰阴性非发酵细菌，在临床标本检出率低，可以引起免疫缺陷患者的尿路感染、蜂窝织炎、败血症、肺炎、脑膜炎、筋膜炎及静脉炎等感染性疾病，以尿路感染最为多见。该例拟气味类香味菌是从本院 ICU 患者导管尿中培养出来的，有报道显示，留置导尿管可以作为类香菌感染的一个独立危险因素。本研究中该例拟气味类香味菌的药敏结果显示对 16 种抗菌药物均耐药，类香味菌属对临床常见的抗菌药物具有广泛的耐药性，有报道指出当培养的药敏结果均为耐药时，在联合治疗方案中加入碳青霉烯类药物仍然可以取得比较理想的疗效。本研究中利用碳青霉烯酶抑制剂试验，推断该例拟气味类香味菌可能是产 B 类金属 β 内酰胺酶，但是该试验是针对肠杆菌目的细菌，对于非发酵细菌没有足够的数据支持，还需要进一步的研究。

PU-3624

Population genomics study revealed recent population expansion of multi-azole-non-susceptible Candida albicans associated with invasive infections

Meng Xiao[1]、Jie Gong[2]、Jianzhong Zhang[2]、Yingchun Xu[1]
1. Peking Union Medical College Hospital
2. 中国疾病预防控制中心传染病预防控制所

Widely application of antimicrobials may influence population of microbes. Here we present genomic population structure of C. albicans and its association with antifungal non-susceptible phenotypes. From 33 cities in China, 370 C. albicans isolates causing invasive fungal diseases were collected, and 181 global C. albicans genomes were involved as comparators. It revealed that 15.4% of isolates, including 66.6% of azole non-susceptible strains belonged to C. albicans Clade 1. Of note, two sub-clades in Clade 1, namely Clade 1-R1 (n=44) and Clade 1-R2 (n=9) were identified, and loss-of-heterozygosity events indicated two recent population expansions. Clade 1-R1 isolates exhibited higher azole non-susceptible rate (75.0%), while all Clade 1-R2 isolates were pan-azole-non-susceptible and carried A114S and Y257H substitutions in Erg11p. Worldwide, Clade 1-R2 isolates were exclusively identified in China, but from a large span of geographic origins. Our study illustrated dissemination of antifungal non-susceptibility coupled with pathogens' population expansion in C. albicans.

Significance of serology testing to assist timely diagnosis of SARS-CoV-2 infections: implication from a family cluster

Meng Xiao、Yan Xu、Xinchao Liu、Yingchun Xu
Peking Union Medical College Hospital

Confirmative diagnosis of SARS-CoV-2 infections has been challenged due to unsatisfactory positive rate of molecular assays. Here we identified a family cluster of SARS-CoV-2 infections, with five of six family members were SARS-CoV-2-specific immunoglobin serology testing positive, while molecular assays only detected two of this five patients even repeated twice. We comprehensively analyzed this familial cluster of cases based on the clinical characteristics, chest CT images, SARS-CoV-2 molecular detection results, and serology testing Results At last, two patients were diagnosed with COVID-19, two were suspected of COVID-19, and two were considered close contacts. Our results emphasized the significance of serology testing to assist timely diagnosis of SARS-CoV-2 infections, especially for COVID-19 close contacts screening.

PU-3626

Analysis of common pathogenic bacteria and drug resistance of biliary tract infection in Nanjing area

Ruixia Yang
Jiangsu Province Hospital （The First Affiliated Hospital of Nanjing Medical University）

Background Analyze the distribution and drug resistance of pathogenic bacteria that causebiliary tract infections in Nanjing, and provide evidence for the rational useof antibacterial drugs in clinical practice.
Methods Clinical strains isolated from bile specimens ofpatients suspected of biliary infection in the First Affiliated Hospital ofNanjing Medical University in 2019 were collected, The drug susceptibilitycriteria are based on the standards published by the National StandardizationCommittee of the US Clinical Laboratories. WHONET 5.6 software was used toanalyze the distribution of pathogens and drug resistance.
Results A total of 693 strains of pathogenic bacteria wereisolated, including 448 Gram-negative bacteria(64.6%), 245 Gram-positivebacteria(35.4%). The top three pathogens were 210 strains of Escherichiacoli(30.3%), 87 strains of enterococcusfaecium (12.6%), 76 strains of klebsiella pneumoniae (11.0%), The resistancerates of Escherichia coli to ampicillin, cefuroxime, cefazolin, ceftriaxone,piperacillin and ampicillin / sulbactam were 80.1%, 69.4%, 67.3%, 64.1%, 63.6%and 62.8%, The resistance rates of Klebsiella pneumoniae to ampicillin /sulbactam, cefuroxime and cefazolin were 65.8%, 64.5% and 61.1%, The resistancerates of Enterobacter cloacae to ceftriaxone, ceftazidime and aztreonam were56.2%, 53.1% and 53.1%, The resistance rates ofEnterococcus faecium to moxifloxacin, clindamycin, erythromycin, penicillin G,ampicillin, ciprofloxacin and levofloxacin were 100%, 90%, 76%, 72.1%, 64.4%,64% and 62%.
Conclusions Pathogens ofbiliary tract infections are mainly Enterobacteriaceae such as Escherichia coliand Klebsiella pneumoniae, followed by Enterococcus faecium and Enterococcus faecalis.There were many drug-resistant bacteria, so we should pay attention to bilespecimen culture and drug sensitivity test.

PU-3627

The molecular characteristics, clinical manifestations, and risk factors of hypervirulent Klebsiella pneumoniae infections in a large teaching hospital in Southwest China

Zixuan Ding、Zhaoyinqian Li
Department of Laboratory Medicine, the Affiliated Hospital of Southwest Medical University, 25 Taiping street, Luzhou, 646000, Sichuan, P.R. China.

Hypervirulent Klebsiella pneumoniae (hvKp) has been globally disseminated recently, especially in Asia. The purpose of this study was to identify the molecular characteristics, clinical manifestations, and clinical risk factors of hvKp infections among patients in a large teaching hospital. A retrospective study was conducted in 123 patients infected with K. pneumoniae at the Affiliated Hospital of Southwest Medical University (Luzhou, China) from October 2016 to November 2018. An isolate that positive for both PCR amplification of aerobactin gene and Galleria mellonella infection model was defined as hvKp. Overall, 43.1% (53/123) of K. pneumoniae isolates were hvKp. String tests were performed on all isolates, and MLSTs of all hvKp were conducted. The K1 ST23 isolates were the dominant clone of hvKp (35.8%). Univariate analysis revealed the following risk factors for hvKp: hepatic abscess (OR=41.818 [95% CI, 5.379-335.086]), bacteremia (OR=19.94 [95% CI, 5.565-71.446]), metastatic spread (OR=19.938 [95% CI, 6.344-62.654]), CRP (OR=1.008 [95% CI, 1.001-1.015]), nitroimidazole treatment (OR=7.907 [95% CI, 1.652-37.843]), diabetes (OR=3.067 [95% CI, 1.38-6.817]), and admission to positive culture interval (OR=3.636 [95% CI, 1.524-8.678]). Moreover, Multivariate analysis implicated hepatic abscess (OR=74.332 [95% CI, 3.121-1769.588]), bacteremia (OR=28.388 [95% CI, 3.039-264.200]), and metastatic spread (OR=19.391 [95% CI, 3.633-103.498]) as independent risk factors for hvKp infections. Thirteen of twenty-one tested antibiotics were founded resistance to non-hvKp, which is significantly greater than hvKp. Importantly, the ESBL-hvKp and MDR-hvKp were responsible for 7.5% and 15.1% in the hvKp group, respectively.

PU-3628

川南地区侵袭性感染念珠菌流行病学特征及耐药性分析

徐灵玲、曾章锐
西南医科大学附属医院

目的 分析侵袭性感染念珠菌的菌种分布，样本类型和抗真菌药物的敏感性等数据，为临床诊治提供依据。
方法 回顾性分析本单位 2013 年 7 月至 2019 年 12 月临床诊断为侵袭性念珠菌感染的患者临床资料，对菌种分布、样本类型、科室分布和抗真菌药敏感性等进行分析。
结果 共收集非重复性侵袭性念珠菌感染患者 686 例，男性 373 例，占 54.37%，大于 60 岁患者占 53.35%；最主要念珠菌是白念珠菌 332 株（48.40%），其次是光滑念珠菌 244 株（35.57%）和热带念珠菌 74 株（10.79%）；样本类型以创口深部分泌物（247 例，36.01%）为主； 其次是清洁尿液（182 例，26.53%）和血液（124 例，17.64%），侵袭性念珠菌感染前 3 位科室是内科（270 例,39.36%），外科（237 例，34.55%），儿科（78 例,11.37%）；所有念珠菌对氟康唑、伊曲康唑和伏立康唑总耐药率分别为 18.82%、36.15%和 19.38%，对两性霉素 B 和 5－氟胞嘧啶的敏感性均为 100.00%。
结论 本地区侵袭性念珠菌感染以老年患者和白念珠菌为主，但非白念珠菌占主要地位，念珠菌对唑类抗真菌药物耐药率较高，但对两性霉素 B 和 5－氟胞嘧啶保持高度敏感性。

PU-3629

临床高毒力肺炎克雷伯菌分离株生物膜诱导的抗生素耐药性

李招吟倩[1]、丁子煊[2]
1. 西南医科大学附属医院
2. 西南医科大学

目的 为了了解生物膜形成在抗生素耐药性中的作用，共研究了 65 株临床肺炎克雷伯菌（hvKp）菌株的生物膜形成能力和与生物膜形成相关的基因。
方法 从西南医科大学附属医院共收集 65 株 hvKp 临床分离株，MicroScan Walk-Away 96 Plus 系统确定了对 18 种抗生素耐药性。通过结晶紫染色评估生物膜形成能力并通过共聚焦激光扫描显微镜观察。环丙沙星、美罗培南和头孢他啶的最低抑菌浓度（MIC）、最低细菌浓度（MBC）、最低生物膜抑制浓度（MBIC）和最低生物膜根除浓度（MBEC）通过肉汤微量稀释法对选定菌株进行测试。通过聚合酶链反应（PCR）检测生物膜相关基因。
结果 大约 21％的分离株具有多重耐药性（MDR），但没有菌株对替加环素和多粘菌素 B 具有抗性。我们发现 88.1％的测试菌株可以形成生物膜，其中 48％是强生物膜生产者。非 MDR 菌株相比 MDR 菌株能够形成更强的生物膜。环丙沙星、头孢他啶和美罗培南的 MBECs 和 MBICs 与所有测试菌株的 MICs 和 MBCs 相比明显增加。此外，生物膜形成相关基因 bamb 和 fabZ 的携带率与生物膜形成成正比。
结论 尽管目前 hvKp 的耐药性不是很高，但大多数菌株能够形成生物膜，使耐药性显著增加。解决生物膜特异性抗性的调节机制，需要在基因组和转录水平上进行彻底的研究。

PU-3630

A novel conjugative pK2044-like virulence plasmid with multiple conjugation-related genes in a bacteremic hypervirulent Klebsiella pneumoniae strain

Yang Liu 、wenjian liao、qisen huang
First Affiliated Hospital of Nanchang University

In the present study, we characterized a novel pK2044-like virulence plasmid in AP8555, an ST23 hvKP strain, which induced a metastatic infection and fatal septic shock in a critically ill patient. The serum killing assay, the quantitative biofilm formation assay, the G. mellonella infection model, and the mouse lethality assay demonstrated that AP8555 was almost as virulent as the hvKP strain NUTH-K2044. Whole-genome sequencing revealed that the genetic Background of the AP8555 chromosome is the same as that of NTUH-K2044. The plasmid pAP855 (357.8 kb in size) was almost structurally similar to the pK2044 plasmid apart from the addition of a 130-kb fragment from a conjugative InFII(K) plasmid with multiple conjugation-related genes of type IV secretion systems (T4SS) and plasmid-mediated ccdAB toxin-antitoxin systems (TAS). The results of conjugation and transformation experiments showed that the novel virulence plasmid could be efficiently transferred to the recipients, enhancing their virulence-associated phenotypes. In conclusion, unlike the non-conjugative pK2044 plasmid, pAP855 may promote rapid dissemination of virulence-encoding elements among clinical K. pneumoniae strains because of the inserted T4SS and ccdAB TAS. Therefore, continuous monitoring the prevalence of the novel conjugative pK2044-like virulence plasmids and simultaneously minimizing potential risks from the acquisition of pAP855-like virulence plasmids by classic Klebsiella pneumoniae strains, especially carbapenem-resistant K. pneumoniae strains, are essential.

PU-3631

高盐对肠道菌群改变的影响

董召刚、张义
山东大学齐鲁医院

目的 高盐饮食被认为参与某些慢性疾病的发生发展，最近研究显示慢性疾病与肠道菌群密切相关，然而，对于高盐饮食对肠道菌群构成的影响尚不清楚。本研究的目的是探讨 Wistar 大鼠摄取高盐后肠道菌群构成的改变。
方法 4 周龄雄性 Wistar 大鼠按标准流程喂养后分为高盐组和对照组。高盐组大鼠通过灌胃方式给予 1 ml 10％NaCl 溶液，每周 3 次，共 4 周。收集粪便，提取 DNA 后，利用靶向 V4 区的 16S rRNA 基因测序技术分析粪便菌群表达谱。利用贝叶斯分类器对 OTUs 进行了分类分析，观察菌群多样性。LEfSe 分析比较微生物种群的相对丰度，并利用 PCA 和 LDA 分析来寻找两个或多个组之间差异表达菌群。使用微生物群落的系统发育研究，通过 PICRUSt 生物信息学软件预测微生物基因组的功能。
结果 结果表明高盐组和对照组粪便微生物 α 多样性无显着差异，而主成分分析（PCA）表明两组之间的菌群结构不同。在门水平，高盐组含量最丰富的是 Bacteroidetes（58.4％），而对照组为 Firmicutes（48.0％）。根据 LDA≥4 的标准使用 LEfSe 进一步分析显示，高盐摄入后 wistar 大鼠粪便中 Lactobacillus 和 Prevotella NK3B31 显着降低，而 Alloprevotella 和 Prevotella 9 在高盐组大鼠中增加。但是两组间的体重、肠道形态变化和血压、生化指标等参数均无明显差异。
结论 作为一项探索研究，高盐摄入与肠道微生物菌群构成变化有关，本研究为提高微生物菌群在高盐相关疾病发病机制中作用的认识提供了理论基础。

PU-3632

Increasing Prevalence of Hypervirulent ST5 Methicillin Susceptible Staphylococcus aureus Subtype Poses a Serious Clinical Threat

Ying Jian、Min Li
Shanghai Jiao Tong University School of Medicine Affiliated Renji Hospital

Staphylococcus aureus (S. aureus) is a clinical pathogen of great significance causing metastatic or complicated infections. ST5 clonotype isolates have dominated *S. aureus* infections for more than 10 years in Shanghai, China. The proportion of methicillin-susceptible *S. aureus* (MSSA) has remarkably increased in the past decades, although the vast majority of isolates in ST5 linages are methicillin-resistant *S. aureus* (MRSA). By whole-genome sequencing (WGS) 121 ST5 clonotype *S. aureus* isolates using next-generation sequencing (NGS) platforms and characterizing the evolutionary dynamics of ST5 linages, we found that MSSA evolved independently, making it a subtype differed from other MRSA clones. Drug resistance gene analysis by usage of the NGS data demonstrated that ST5 clonotype MRSA might be more tolerant under the threat of antimicrobials, which was confirmed in further *in vitro* susceptibility tests. However, MSSA subtype isolates exhibited relatively high virulence upon the analysis of virulence factors using NGS data. Furthermore, MSSA subtype isolates displayed higher hemolysis capacity and higher ability to adhere to epithelial cells including A549 human alveolar epithelial cells and HaCaT human skin keratinocytes, caused more severe infections in murine abscess model. With its high virulence and enhanced magnitude in the past decades, the ST5 MSSA subtype poses a serious threat in clinical *S. aureus* infections, hence more attention should be paid in the prevention and control of methicillin susceptible isolates.

PU-3633

肺炎克雷伯菌 β -内酰胺酶耐药基因及毒力因子的流行和分布特征

朱梅、陆颖、朱志军、童红芳
安徽医科大学附属巢湖医院

Objective To investigate the frequency of antibiotic resistance profile and virulence factors of Klebsiella pneumoniae isolated from our hospital.
Methods The MIC of antibiotics was determined by broth microdilution method. The phenotype were identified by mCIM, MHT and string test. The antibiotic resistance gene, virulence gene and MLST were detected by PCR.
Results All of strains carried mrkD virulence gene, followed by fimH (88.9%), ybtS (51.9%). MLST results showed that 32 STs were found in 54 isolates, and ST11 (14.8%) was the dominant sequence type. Two new STs were assigned as ST5214 and ST5215.
Conclusion Klebsiella pneumoniae carried high frequency and diversity of β-lactamase genes and virulence genes.

PU-3634

肺癌患者下呼吸道病原菌分布特征与耐药性分析

孟红委、娄加陶
上海市胸科医院

目的 了解肺癌患者下呼吸道病原菌分布及耐药性，以指导临床经验治疗及合理使用抗菌药物。
方法 收集 2015 年至 2019 年上海交通大学附属胸科医院肺癌患者的痰培养资料，对病原菌进行鉴定和体外药物敏感性实验，并分析其分布特点和耐药情况。
结果 2015-2019 年共收集 4753 份痰培养，有 672 份痰培养检出病原菌 720 株，检出率为 14.1%，其中革兰阴性菌、革兰阳性菌、真菌分别占 71.5%、6.9%、21.5%。在所有病原菌中排名前 5 的分别是肺炎克雷伯菌（21.0%）、铜绿假单胞菌（16.8%）、白色念珠菌（16.5%）、鲍曼不动杆菌（11.0%）和金黄色葡萄球菌（5.0%）。肺炎克雷伯菌、铜绿假单胞菌、鲍曼不动杆菌对氨苄西林/舒巴坦、左旋氧氟沙星、环丙沙星、头孢他啶、妥布霉素、庆大霉素均较为敏感。白色念珠菌对常用的抗真菌药物两性霉素 B、氟康唑、伊曲康唑、伏立康唑、5-氟胞嘧啶均敏感。未发现对替加环素、万古霉素、利奈唑胺、奎奴普丁/达福普汀耐药的金黄色葡萄球菌。
结论 肺癌患者下呼吸道病原菌种类复杂，以革兰阴性菌为主。临床对于下呼吸道感染的肺癌患者可以根据耐药监测结果进行经验治疗，并根据具体药物敏感性试验结果进行针对性治疗。

PU-3635

金黄色葡萄球菌克隆株 ST398 进化分析

吕慧颖、何磊
上海交通大学医学院附属仁济医院

目的 对 2008-2018 年患者分离的 ST398 克隆株及动物分离的 ST398 克隆株通过全基因组测序进行遗传进化分析。
方法 本研究主要对 2015-2018 年收集的 52 株 ST398 MRSA 进行了二代全基因组测序。基于 52 个当前 MRSA ST398 和我们先前发表的 76 个 ST398(包括 7 个人类来源 MRSA（human-adapted MRSA，HO-MRSA）分离株、54 个人类来源 MSSA(human-adapted MSSA，分离株和 15 个动物

来源 MSSA（livestock-associated MSSA，LA-MSSA）分离株)的核心基因组的 SNP 数据，建立系统进化树，分析高致病性的 ST398 HO-MRSA 的进化特征。
结果 2015 年开始，高毒力 HO-MRSA ST398 逐渐流行，我们发现 50 株 ST398 HO-MRSA 分离株与我们先前研究的 4 株 ST398 HO-MRSA 分离株聚集在一起，使其成为区别于 MSSA 和其他 MRSA 克隆群的主要类群。证明了这一类群在近几年中成为优势谱系，促进了 ST398 在社区甚至医院的流行。我们也再一次证实，部分动物源性 MSSA 起源于人源 MSSA 的进化。基于 NGS 数据的耐药性和毒力基因分析表明，ST398 HO-MRSA 主克隆群中的所有分离株有相似的毒力和耐药基因模式。通过比对 SCCmec 分型检索，我们发现，ST398 HO-MRSA 主簇均含有 D 型的短 SCCmec V 移动元件，保持了极低的甲氧西林抗性。进一步的表型研究证实，流行的 HO-MRSA ST398 在保持高毒力时表现出增强的生物膜形成能力。在 HO-MRSA ST398 亚型中形成了毒力和生物膜形成能力的双重优势。
结论 高致病高生物膜形成能力的 HO-MRSA 克隆株 ST398 是社区和医院感染的严重威胁因素。

PU-3636

社区获得性金黄色葡萄球菌 ST398 ESS 分泌系统毒力蛋白 EsxA、EsxB 诱导宿主细胞死亡的机制研究

吕慧颖
上海交通大学医学院附属仁济医院

目的 研究 CA-SA 克隆株 ST398 中 EsxA、EsxB 毒力蛋白在上皮细胞中发挥毒力、诱导细胞死亡的通路。揭示 CA-SA 克隆株 ST398 金黄色葡萄球菌 EsxA/EsxB 蛋白在侵染宿主细胞过程中发挥作用的机制。
方法 选取代表性的 ST398 临床分离株作为野生株，构建 esxA、esxB 基因的突变株，并用质粒 pOS1 构建回补株。通过裸鼠皮肤脓肿模型、小鼠菌血症模型等研究该基因对金黄色葡萄球菌毒力和致病性的作用。构建毒力蛋白表达载体，获得携带 His 标签的 EsxA、EsxB 蛋白。并用该毒力蛋白与肾小管上皮细胞 293T 共孵育，通过检测细胞 LDH 释放，并用流式细胞仪 FITC-AnnexinV/PI 双染法，确定 EsxA、EsxB 蛋白诱导宿主细胞死亡的主要方式。并用程序性坏死通路的主要蛋白 RIPK1、RIPK3、MLKL 抑制剂及其缺陷细胞株验证该通路。
结果 CA-SA 克隆株 ST398 ESS 系统分泌蛋白 EsxA、EsxB 促进金黄色葡萄球菌的毒力，esxA、esxB 缺陷株感染小鼠及皮肤脓肿形成能力均下降。EsxA、EsxB 蛋白主要引起上皮细胞的程序性坏死而非凋亡。并且该蛋白诱导细胞程序性坏死主要依赖于 RIPK3-MLKL 通路磷酸化，不依赖于 RIPK1 蛋白。RIPK1、RIPK3、MLKL 抑制剂及其缺陷细胞株证实了该通路的存在。
结论 EsxA、EsxB 是社区获得性金黄色葡萄球菌 ST398 的重要毒力蛋白，其缺陷株的皮肤脓肿形成能力和菌血症形成能力较野生株，发生明显下降。在社区获得性金黄色葡萄球菌侵染宿主的过程中，毒力蛋白 EsxA、EsxB 通过 RIPK3-MLKL 的程序性坏死通路诱导细胞死亡。

PU-3637

MALDI TOF MS 技术检测病原微生物影响因素探究

陈蓉
上海市临床检验中心

上海地区综合性医院患者多、周转快，疑难杂症多，如何在繁忙的工作中既能满足临床对微生物检测快速的需求，同时又能保障检验结果的准确性一直是困扰临床检验的重要难题。MALDI-TOF MS 技术的出现给微生物实验室带来了革命性的飞跃，它改变了现有的微生物鉴定流程，工作效率得到显著提升，检验结果回报时间明显缩短，为临床提供更有利的诊治支持。我们对其鉴定的

影响因素、性能验证和对无菌体液标本直接检测的适用性进行了研究，发现在不同培养基的培养条件下，质谱的检测结果无明显差异；在不同培养时间的培养条件下，24 h 获得的检测分数值明显高于 72 h 的分数值，且分数值均≥2.300，可正确鉴定到种。三种前处理方法中，提取法比直接法的检测结果分数值偏高，尤其是在革兰阳性菌的检测结果中体现的更加明显。性能验证方面 MALDI-TOF 质谱仪在需氧菌、厌氧菌、真菌方面都有很好鉴定结果，能够满足临床微生物常规的细菌鉴定要求。重复性好，灵敏度可达到 104 cfu/mL。但是也存在一些局限性，如对于同一菌属中某些蛋白质图谱十分相近的菌种无法直接鉴定到种,一些罕见菌种或新型细菌由于蛋白指纹图谱收录不完善导致鉴定率低或无鉴定结果。在直接检测无菌体液时，由于样品中菌量偏低以及其他成分的干扰影响了该技术对病原菌的检出率。我们认为应该自建数据库，进一步完善同一菌属中相近菌种图谱库以及罕见菌种的图谱库，使这些细菌得到更好的鉴定。对临床标本的直接检测，进一步优化标本的前处理，获得富集细菌，提高检出率。

PU-3638

从乳腺炎分泌物中分离到结核硬脂酸棒状杆菌

宋皓月[1]、舒文[1]、刘庆中[2]
1. 上海市第一人民医院
2. 上海市中医医院

目的 对患者乳腺炎分泌物中分离得到的一株棒状杆菌进行细菌鉴定、药敏检测、耐药基因、毒力基因分析。
方法 收集 2018 年一例因乳腺炎就诊病人，在无菌条件下于乳腺脓肿处，抽取脓液标本，经培养后，采用镜检、理化、质谱等方法，对细菌进行初步鉴定，并通过全基因组测序进一步鉴定，对所得菌株进行药敏检测，并鉴定耐药基因。
结果 分离培养所得细菌，最终鉴定结果为结核硬脂酸棒状杆菌，药敏结果提示对万古霉素、碳青霉烯类药物敏感，对克林霉素、磷霉素、复方新诺明等耐药，其所携带耐药基因为 blaTEM 及 erm（X）。
结论 此病例最终证实为结合硬脂酸棒状杆菌引起的感染，此菌株携带耐药基因 blaTEM 及 erm（X），药敏结果提示尚对大部分药物敏感，治疗效果好。目前相关病原菌临床分离株数较少，应注意病原菌筛检，为临床提供更多的参考依据。

PU-3639

Identification and characterization of lncRNA AP000253 in occult hepatitis B virus infection

qingqin hao
Wuxi red cross blood center

Background Recent studies suggest that lncRNAs may play significant roles in the development of hepatitis B virus (HBV) infection. However, as a special stage of HBV infection, the lncRNA expression in occult HBV infection (OBI) remains unclear.
Methods The plasma level of 15 HBV infection-related lncRNAs was initially detected using qRT-PCR in 10 OBI and 10 healthy controls (HCs) in discovery phase. Significantly dysregulated lncRNAs were subsequently validated in another 64 OBI, 20HCs, 31 chronic hepatitis B (CHB) and 20 asymptomatic HBsAg carriers (ASC). Moreover, the AP000253 expression in liver tissues and its potential biological functions in HBV infection were further investigate with public transcriptomic data and HBV-expressing cell lines.
Results Among candidate lncRNAs, the plasma level of AP000253 decreased significantly in OBI, ASC and CHB patients compared to HCs, while no difference was found among OBI, ASC and

CHB patients. In liver tissues, similar AP000253 expression was also observed from the GSE83148 dataset, while that in HBV-expressing hepatoma cells was opposite. ROC curve analysis indicated that plasma AP000253 yielded an AUC of 0.73 with 60% sensitivity and 75% specificity when differentiating OBI from HCs, but it could not specifically separate the stage of chronic HBV infection. Furthermore, functional experiments suggested that AP000253 could promote HBV transcription and replication in hepatoma cell lines.
Conclusions AP000253 might be involved in HBV replication, and be served as a potential biomarker for HBV infection. In the setting of blood donations, plasma AP000253 would be more useful to moderately distinguish OBI in HBsAg-negative donors. However, the AP000253 expression in liver tissues and associated molecular mechanism of HBV infection deserve further study in future.

PU-3640

PCR、LAMP、PCT 在细菌性痢疾诊断中的应用价值及与免疫指标的相关性

姚杰、李昕、程娟、唐伟、周强
安徽医科大学第二附属医院

目的 探究聚合酶链反应（PCR）、环介导等温扩增法（LAMP）、降钙素原（PCT）在细菌性痢疾诊断中的应用价值及与免疫指标的相关性。
方法 收集 2019 年 5 月~2020 年 5 月我院收治的 110 例细菌性痢疾患者粪便标本为观察组，同时选择同期 50 例健康体检者为对照组，均使用 PCR、LAMP、PCT 进行联合检验，对 PCR、LAMP、PCT 三种技术的特异性、灵敏度进行评价，并检验两组的免疫指标水平。
结果 观察组与对照组使用 3 种检测志贺菌阳性差异有统计学意义（P<0. 05）；以临床诊断为标准，PCR、LAMP、PCT 的灵敏度分别为 62.56%、58.72%、60.26%，特异度分别为 71.67%、75.00%、74.17%，准确度分别为 59.11%、62.22%、59.44%。观察组 CD3+、CD4+、CD4+/CD8+水平均低于对照组，组间差异有统计学意义（P＜0. 05）。
结论 联合应用 PCR、LAMP、PCT 法检测细菌性痢疾可提高临床诊断准确性。免疫指标水平可对细菌性痢疾中志贺菌检测提供临床依据，可辅助上述检测方法进行检测。

PU-3641

尿路感染主要致病菌流行病学分析

郭敏、杜鸿
苏州大学附属第二医院

目前，临床尿路感染治疗主要存在致病菌多重耐药的难题。为此，本文拟围绕尿路感染主要病原菌分子流行病学展开研究，以期为临床合理用药、避免暴发流行提供理论依据。同时，评估由产碳青霉烯酶大肠埃希菌与肺炎克雷伯菌引起尿路感染的临床特征和结局。
方法 1、微生物鉴定与药敏。
2、耐药表型确证实验。
3、耐药基因的检测。
4、分子流行病学分析。
5、全基因组测序。
6、ST 分型、血清荚膜分型及毒力基因检测。
7、评估由产碳青霉烯酶大肠埃希菌与肺炎克雷伯菌引起尿路感染的临床特征和结局。

结果 1、尿液标本中头孢噻肟耐药大肠埃希菌(CTX-R-ECO)检出率 55.2%，略高于全国细菌耐药监测网(CARSS)监测数据，头孢噻肟耐药肺炎克雷伯菌(CTX-R-KPN)检出率 46.0%，略低于全国细菌耐药监测网监测数据。
2、本研究中，尿路感染分离到的产碳青霉烯酶大肠埃希菌、肺炎克雷伯菌，分别为 2 株、9 株。
3、从耐药基因来看，我院产碳青霉烯酶大肠埃希菌与肺炎克雷伯菌中，产碳青霉烯酶 NDM、KPC 是主要的耐药机制。产 ESBLs 大肠埃希菌与肺炎克雷伯菌，主要是以产 CTX、TEM、SHV 的菌株为主。
4、同源性分析中，PFGE 研究结果显示我院尿路感染大肠埃希菌为非克隆性传播。
5、全基因组测序显示：与耐药基因、ST 分型、毒力基因筛查结果相吻合。
6、ST 分型、血清荚膜分型和毒力相关基因检测结果显示：尿路感染肺炎克雷伯菌均为 ST11 型，血清荚膜分型大多数为 KL64 型，毒力相关基因检测显示多样化。
7、评估由产碳青霉烯酶大肠埃希菌与肺炎克雷伯菌引起尿路感染的临床特征和结局：由产生碳青霉烯酶和大肠埃希菌引起的大多数泌尿道感染患者恶化，放弃治疗并自动出院，只有 2 例敏感药物有效地改善了感染。
结论 非克隆性传播为尿路感染大肠埃希菌的主要传播方式。由产生碳青霉烯酶和大肠埃希菌引起的大多数泌尿道感染患者恶化。

PU-3642

Hospital sewage isolated lytic bacteriophages against epidemic carbapenem-resistantKlebsiella pneumoniae ST11 strains

Min Guo 、Hong Du
The Second Affiliated Hospital of Soochow University

Carbapenem-resistanceKlebsiella pneumoniae (CRKP) poses a significant clinical problem given the limited choices of effective antibiotics. Alternative anti-bacterial agents, such as bacteriophages, could be used as a valuable tool to treat the infections caused by these highly resistant bacteria. In this study, we isolated 54phages from medical and domestic sewage wastewater between July and Sepetember2019, and tested their activities against 54 clinical CRKP isolates collected from a tertiary hospital in Eastern China. These CRKP isolates were from 7sequence types (STs) and belonged to 9 capsular K locus types (KLs), harboring blaKPC-2 (n=49), blaNDM-1 (n=5), and blaIMP-4 (n=3). The 54 phages showed the host ranges from 7 to 52 CRKP strains, and were all active against some CRKP ST11 strains. The combination of various phages showed the capacity to cover all CRKP isolates. Among the 54 phages, phage P545has the widest host range (96.3%), which was classified as a member of Myoviridaes, order Caudovirales. Physiological characterization suggested that P545 had a short latent period of 20 min, a low burst size of 82 PFU/cell and was stably maintained at different pH values (4-10) and temperatures (up to 60 oC). In addition, plaque morphology analysis indicated that four phages, P507, P560, P569 and P551, may encode depolymerases with polysaccharide-degrading activity. Taken together, our study showed that phages isolated from local sewagewastewater had wide host range and excellent properties against clinical CRKP isolates, especially the epidemic CRKP ST11 strains, providing promising phage candidates for future phage therapy applications.

PU-3643

MALDI-TOF MS 结合 UF1000i、短期培养法在尿路感染微生物快速鉴定中的应用

郭敏、杜鸿
苏州大学附属第二医院

目的 拟研究 MALDI-TOF MS 结合 UF1000i、短期培养法对快速鉴定尿路感染微生物的应用价值。
方法 1、标本前处理-差速离心法浓集细菌。2、直接 MALDI-TOF MS 检测。3、短期培养后 MALDI-TOF MS 鉴定。4、ROC 曲线计数细菌阈值。
结果 1、质谱检测鉴定率：短期培养 5h 后，取菌膜质谱检测鉴定率为 87.2%，高于直接质谱检测鉴定率的 77.1%。2、标本菌落计数对应质谱检测鉴定率：标本的菌落计数越多，则直接质谱检测鉴定率及短期培养后质谱检测鉴定率越高。3、质谱鉴定分值：本实验可以发现：短期培养后质谱检测分值≥1.7（大肠埃希菌≥1.5）的菌株数，明显多于直接质谱检测分值≥1.7（大肠埃希菌≥1.5）的菌株数。4、混合感染：不论是直接质谱检测，还是短期培养后质谱检测，大部分情况下只能鉴定出所占比例较高的菌种，且可信度较高。5、ROC 曲线计数细菌阈值：当 UF1000i 检测细菌数值≥1100/μl 时，直接质谱检测容易成功鉴定出菌种。同样，当 UF1000i 检测细菌数值≥470/μl 时，短期培养后质谱检测容易成功鉴定出菌种。
结论 与传统的尿培养相比，本研究中对尿培养标本进行差速离心浓集细菌，通过 MALDI-TOF MS 结合 UF1000i、短期培养法在快速鉴定尿路感染微生物，具有简单快速、成本低、准确率高等优点，可极大提高 MALDI-TOF MS 技术快速鉴定尿路感染微生物的临床应用价值，对于明确尿路感染微生物、指导临床用药和及时控制尿路感染有着重要的临床意义。

PU-3644

MALDI-TOF MS 直接检测血流感染病原菌产碳青霉烯酶效果的评估

谢小芳、王敏、郑毅、朱雪明、杜鸿
核工业总医院（苏州大学附属第二医院）

目的 利用基质辅助激光解吸电离飞行时间质谱(Matrix Assisted Laser Desorption Ionization-Time Of Flight，MALDI-TOF MS)技术快速检测血培养瓶中肠杆菌科细菌是否产生碳青霉烯酶。
方法 收集本实验室保存的 67 株对碳青霉烯类耐药的肠杆菌科菌株，包含 33 株肺炎克雷伯菌、11 株阴沟肠杆菌、8 株产酸克雷伯菌、6 株大肠埃希菌、4 株产气肠杆菌、3 株弗劳地枸橼酸杆菌和 2 株粘质沙雷菌。将菌株配制为 0.5 麦氏浊度的菌悬液，稀释至 10cfu/ml 后与绵羊血一同注入需氧和厌氧瓶中建立血培养模型，置于 BD FX100 全自动血培养仪中培养。待血培养瓶阳性报警后，差速离心法富集细菌，取细菌沉淀与 0.1g/L 厄他培南溶液混匀孵育 2h 后再次离心取上清进行 MALDI-TOF MS 检测，通过菌株与药物反应后产生的药物特征性谱峰的存在与消失来快速判断菌株是否产碳青霉烯酶，并将其与 PCR 检测结果进行比较。
结果 PCR 检测结果表明 67 株肠杆菌科细菌均含有碳青霉烯酶基因。MALDI-TOF MS 快速检测结果显示该 67 株肠杆菌与厄他培南孵育后，需氧瓶中有 66 株与厄他培南孵育后将其水解，而厌氧瓶中有 64 株与厄他培南孵育后将其水解，质谱图显示水解后厄他培南有四个特征峰 335m/z、379m/z、422m/z、465m/z 明显消失，结果提示携带有 KPC、GES、NDM、IMP 基因的肠杆菌需氧与厌氧瓶检出率都为 100%，携带有 VIM 基因的肠杆菌需氧瓶和厌氧瓶检出率分别为 100%和 83.3%，携带有 GIM 基因的肠杆菌需氧瓶和厌氧瓶检出率分别为 100%和 75%，而 1 株携带有 SIM 基因的阴沟肠杆菌，需氧与厌氧瓶均未检测出。

结论 本研究利用 MALDI-TOF MS 技术快速检测血流感染中肠杆菌科细菌是否产碳青霉烯酶，为血流感染病原菌的临床治疗提供早期依据。

PU-3645

HAdV-B55 腺病毒 LAMP 检测方法的建立及评价

董磊、刘娟
空军特色医学中心(原空军总医院)

目的 HAdV-B55 为经呼吸道和消化道传播的 DNA 病毒，感染人体可引发急性腺病毒型肺炎、急性胃肠炎、眼角膜炎、乳糜泻和急性间质性肾炎等多种疾病。环介导等温扩增(loop-mediated isothermal amplification, LAMP)法是一种新型的核酸扩增技术，具有较高的灵敏度及特异性，可以通过颜色的变化判断结果，无需开盖，容易判读，且可以完全避免样本污染。本研究尝试建立了一种针对 HAdV-B55 病毒的 LAMP 检测方法，为临床快速诊断和监测 HAdV-B55 提供技术支持。
方法 采用在线 LAMP 引物设计工具设计获得针对 HAdV-B55 Hexon 基因序列的特异性引物，建立 HAdV-B55 腺病毒的 LAMP 扩增方法。将 HAdV-B55 病毒标准品进行梯度稀释，评估该检测方法的灵敏度；提取 HAdVB3、B5、B7、B55/Y16、B11、B14 及 H1N1、H5N1、H3N2 病毒 DNA，评估该检测方法的特异性。之后随机选取疑似临床腺病毒感染患者的咽拭子样本进行该方法的临床应用评价，同时以报道的腺病毒通用引物作为检测对照方法。
结果 获得了针对 HAdV-B55 的特异性引物，建立了特异检测 HAdV-B55 的 LAMP 检测方法，该方法特异性良好，选取的最终引物具有较好的种属特异性。该方法灵敏度较高，最低可检测到 4PFU/ml 的病毒 DNA，灵敏度可达 0.008PFU/反应。在临床样本评估中，与已公布的腺病毒通用 PCR 检测方法相比，LAMP 法在 65 份疑似腺病毒感染患者样本中检测到 19 份为阳性，且阳性及阴性对照成立，而已公布的腺病毒通用 PCR 检测方法仅检测到 13 份阳性样本，结果表明本研究建立的 LAMP 检测方法具备更高的灵敏度。
结论 该研究成功建立了针对我国 HAdV-B55 的特异性 LAMP 检测方法，具备良好的灵敏度及特异性，为我国 HAdV-B55 的快速检测及防控提供了有力的技术支持。

PU-3646

耐碳青霉烯类大肠埃希菌整合子的分子特征与耐药性研究

王育慧
潍坊市人民医院

回顾分析 2012.01 至 2019.12 潍坊市人民医院临床分离的 117 株耐碳青霉烯类大肠埃希菌（carbapenem-resistant escherichia coli ，CR-Eco）的临床分布及其对常用抗菌药物的敏感性变化，检测其 1、2、3 类整合子及基因盒的分布情况，探讨其耐药机制并追踪溯源其亲缘关系。117 株 CR-Eco 检测到底一类整合子阳性的菌株 92 株，其中 77 株检测到可变区，通过测序分析，共检测到 7 种基因盒组合 dfrA17-aadA5、aadA22、dfrA12-aadA2、dfrA12、dfrA17、dfrA27 和 aadA1，以 dfrA17-aadA5 最常见。药敏试验结果显示，IPM 和 MEM 均耐药组菌株对部分抗菌药物的耐药率高于 IPM 单一耐药组，包括 AMK、ATM、CAZ、CIP、FOX、LVX、SXT 和 TOB 等（P<0.05）；另 IPM 和 MEM 均耐药组菌株对部分抗菌药物的耐药率高于 MEM 单一耐药组，包括 CAZ、FEP、FOX 和 TZP 等（P<0.05）。第 1 类整合酶阳性菌株耐药性也高于阴性菌株，包括 ATM、CAZ、CIP、CRO、GEN、MEM 和 SXT 等药物（P<0.05）。运用 Eric-PCR 技术针对临床分离的 117 株耐碳青霉烯类大肠埃希菌分为 A、B、C、D、E、F 六个分型，其中 A 型 25 株、B 型 27 株、C 型 12 株、D 型 25 株、E 型 11 株、F 型 17 株。进行追踪溯源通过 Quantity one 软件作出基因树状图谱，发现 3 株细菌高度同源性，提示可能存在院内克隆传播。

PU-3647

霉烯高毒力肺炎克雷伯菌的临床特征及分子分析

黄韵
武汉大学人民医院

目的 分析耐碳青霉烯的高毒力肺炎克雷伯菌(CR-HvKP)的临床及分子特征,加强临床医生对该菌的认识。
方法 收集 2019 年 10 月至 2020 年 10 月分离自武汉大学人民医院的 CR-HvKP 菌株，碳青霉烯酶抑制剂增强试验对碳青霉烯酶进行表型确证，通过拉丝试验、毒力耐药基因检测、毒力相关荚膜抗原基因检测、多位点序列分型和患者临床表现分析该菌的临床及分子特征。
结果 共收集到 CR-HvKP 13 株，均为产 KPC-2 的 ST11 型，荚膜血清学分型均为 K64 型，表型确证试验也均显示产 A 类碳青霉烯酶。毒力基因以 rmpA+rmpA2+iucA+peg-344 4 种共同携带为主，占 69.2%（9/13），其中，3 株拉丝实验阳性。感染集中发生在重症医学科，患者大都患有多种严重的基础性疾病
结论 本院 CR-HvKP 菌株为同一型别，CR-HvKP 因其高耐药性和高毒力的结合可引起较为复杂和严重的感染,应加强院感监测，提高临床医生对该菌的认识，防止其暴发流行。

PU-3648

碳青霉烯酶抑制剂增强试验在肺炎克雷伯菌中检测碳青霉烯酶的应用

黄韵
武汉大学人民医院

目的 评价碳青霉烯酶抑制剂增强试验在产碳青霉烯酶肺炎克雷伯菌耐药表型检测中的应用效能。
方法 随机选取 105 株耐碳青霉烯肺炎克雷伯菌（CRKP），采用 PCR 法检测碳青霉烯酶基因(blaKPC、blaNDM、blaIMP、blaVIM、blaOXA-48)，采用碳青霉烯酶抑制剂增强试验检测产碳青霉烯酶肺炎克雷伯菌耐药表型。以碳青霉烯酶基因检测结果为金标准, 计算该试验检测产 A 类碳青霉烯酶,B 类碳青霉烯酶及共产 A 类与 B 类碳青霉烯酶菌株的敏感性和特异性。
结果 105 株 CRKP 中,104 株碳青霉烯酶基因检测阳性（99.0%，104/105）,其中 88 株仅 KPC 基因阳性菌株在碳青霉烯酶抑制剂增强试验中检测为产 A 类碳青霉烯酶, 即该试验检测产 A 类碳青霉烯酶菌株的敏感性为 100.0% (88/88) ,1 株碳青霉烯酶基因检测阴性菌株在该表型试验中呈阳性，特异性为 94.1%（16/17）。7 株基因检测仅携带金属-β 内酰胺酶（6 株 NDM 与 1 株 NDM+IMP）菌株在碳青霉烯酶抑制剂增强实验中也呈 B 类碳青霉烯酶(也称金属 β 内酰胺酶)阳性，即该试验检测 B 类碳青霉烯酶敏感性与特异性均为 100%。 9 株 KPC 与 NDM 基因阳性菌株在碳青霉烯酶抑制剂增强试验中检测为共同产 A 类与 B 类碳青霉烯酶，即该试验检测共同产 A 类与 B 类碳青霉烯酶敏感性与特异性均为 100%。
结论 碳青霉烯酶抑制剂增强试验检测产碳青霉烯酶肺炎克雷伯菌耐药表型的敏感性和特异性极高，且具有操作简单、结果容易阅读以及可检测单产或同时产不同类型碳青霉烯酶的特点，适合所有临床微生物实验室开展。

PU-3649

2179 例晚期妊娠妇女生殖道Ｂ族链球菌筛查及耐药性分析

熊劲芝
郴州市第一人民医院

目的 分析晚期妊娠妇女生殖道 B 族链球菌（GBS）感染状况及耐药性情况，为临床用药提供参考。
方法 收集 2018 年 1 月-2020 年 12 月就诊的妊娠 35 周及以上妇女生殖道分泌物标本 2179 份，孕妇年龄 25～49 岁。纳入标准：妊娠＞35 周、2 周内无抗生素使用史。排除标准：急性泌尿系统感染、2 周内有抗生素使用史、合并高血压、糖尿病等基础疾病。将采集的阴道分泌物标本接种于 5%羊血琼脂培养皿中，并培养 18～24 h，在血琼脂培养皿上挑显灰白色、圆形、β-溶血的可疑菌落借助质谱仪进行菌种鉴定。对 GBS 阳性标本取单个菌落溶于 3mL 无菌生理盐水中，调整 GBS 菌悬液浓度为 0.5 麦氏单位，使用全自动微生物分析仪和革兰阳性球菌药敏卡进行细菌的耐药性检测，检测药物包括:青霉素、氨苄青霉素、奎奴普汀/达福普汀、利奈唑胺、万古霉素、左氧氟沙星、克林霉素、红霉素、四环素。
结果 疑似菌株借助 VITEK MS 质谱仪鉴定为 GBS 139 例，阳性率为 6.38%(139/2179)。分离出的 139 株 GBS 标本全部上机进行药物敏感试验，抗生素的药物敏感性分析显示:139 株 GBS 对青霉素、氨苄青霉素、利奈唑胺、奎奴普丁/达福普汀、万古霉素高度敏感，无中介及耐药现象；对左氧氟沙星的耐药率为 29.50%、对克林霉素的耐药率为 90.65%、对红霉素的耐药率为 77.70%、对四环素的耐药率为 87.05%。
结论 应重视晚期妊娠妇女 GBS 筛查，根据药敏试验结果合理选用抗菌药物进行预防治疗。

PU-3650

Characteristic analysis on the minimal inhibitory concentration drift of vancomycin against methicillin-resistant staphylococcus aureus in Xuzhou area from 2015 to 2019

Shuai Zong
The Affiliated Hosipital of Xuzhou Medical University

OBJECTIVE To retrospective analysis the characteristic change of minimal inhibitory concentration(MIC) value change trend and drift features of vancomycin against methicillin-resistant Staphylococcus aureus(MRSA), and provide a scientific reference for clinical treatment of MRSA infection.
METHODS A total of 900 non repetitive strains of MRSA were collected from three general hospitals according to the standard of nosocomial infection in Xuzhou area during 2015-2019. The MIC values were collected, and then the mean value of MIC was calculated by statistical method, and their variation characteristics were analyzed.
RESULTS All the 900 strains of MRSA were sensitive to vancomycin. The mean value of MIC in recent five years was 1.058, 1.100, 1.108, 1.122 and 1.147, respectively, and there were statistically significant differences among groups (P<0.05)；The mean MIC of ICU departments was 1.159, 1.253, 1.320, 1.413 and 1.451, respectively(P<0.05), the mean MIC of non ICU departments was 0.995，1.005，1.005，1.016 and 1.006, respectively(P＞0.05), and the mean differences between ICU and non ICU departments in 2015-2019 were statistically significant (P<0.05). The ratio of MIC≥1.5μg/mL of vancomycin against MRSA had an increasing trend year by year.

CONCLUSIONS It turned out that no strains were resistant or intermediate to vancomycin in Xuzhou region during 2015-2019, but the drift had been discovered in MIC value of vancomycin against MRSA, which mainly came from ICU departments; MIC drift was not found in non ICU departments. The patients with MRSA infection, whose vancomycin MIC≥1.5μg/mL in ICU departments, should be given more intensive monitoring and active treatment.

PU-3651

ICU 老年患者血培养阳性细菌的分布及耐药情况分析

王莹
沈阳金域医学检验所有限公司

目的 分析 ICU 老年患者血培养阳性样本中的病原菌构成及耐药情况。
方法 搜集 2019-2020 沈阳金域医学检验所微生物室接收的 ICU 老年患者血培养阳性样本 196 例。使用质谱分析仪（AUTOF MS1000）对其进行鉴定试验，使用梅里埃全自动微生物鉴定和药敏分析系统（VITEK2 COPACT）对其进行药敏试验。并使用 WHONET 5.6 软件对数据进行统计分析。
结果 196 例病原菌中排名前五位的分别为肺炎克雷伯菌、大肠埃希菌、金黄色葡萄球菌、鲍曼不动杆菌、凝固酶阴性葡萄球菌。此外还分离出铜绿假单胞菌、嗜麦芽窄食单胞菌、肠球菌、其他非发酵革兰阴性杆菌等。其中肺炎克雷伯菌数量最多，碳青霉烯类耐药肺炎克雷伯菌和大肠埃希菌和检出率分别为 26.5％和 6.4％。金黄色葡萄球菌和凝固酶阴性葡萄球菌中甲氧西林耐药株(MRSA、MRCNS)的检出率分别为 38.6％和 31.4％。所有细菌对药物青霉素、头孢曲松、左氧氟沙星等药物均存在不同程度的耐药性。ICU 老年患者菌株耐药性明显高于青年人，差异具有统计学意义（P<0.05）。
结论 ICU 老年患者血培养样本中检出病原菌数量及种类较多，临床应根据病原菌对药物的耐药性差异选择合理的抗菌药物。

PU-3652

抗生素所致肠道菌群失衡的研究

赵妍
沈阳金域医学检验所有限公司

目的 探讨使用抗生素后肠道菌群紊乱与菌群代谢的关系,协助评估抗生素使用后的肠道菌群紊乱。
方法 实验组为 2021 年 1 月至 2021 年 5 月期间送检于本公司的 23 例有静脉使用抗生素治疗的患者,其中男 10 例,女 13 例,年龄在 18 岁 23 岁之间,平均年龄 21.5 岁,均符合以下入选标准:(1)年龄小于 23 周岁;(2)病原学检查确诊为细菌感染;(3)治疗经过均有静脉使用抗生素(如阿莫西林、头孢美唑、头孢呋辛、头孢地嗪、头孢曲松、头孢哌酮、阿奇霉素),使用时间 37 天;同时设有对照组。收集并处理其粪便标本后置于低聚糖培养基、棉籽糖(RAF)、低聚果糖(FOS)、低聚半乳糖(GOS)、低聚异麦芽糖(IMO)、低聚甘露醇(MOS)、低聚木糖(XOS)、菊粉(INU)、可溶性淀粉(STA)、甘露糖醇(MAI)、木糖醇(XYI)等)中恒温发酵,24h 后采用气相色谱法(GC)检测各培养基中的短链脂肪酸(SCFA)含量及产气量,最后应用 SPASS 19.0 对数据进行统计学分析。
结果 1.抗生素组患者粪便中总短链脂肪酸(SCFA)、丙酸、丁酸含量等明显低于正常对照组(P0.05),乙酸值无差异(P0.65)。2.抗生素组丙酸、丁酸含量明显低于正常对照组(P0.05)。3.抗生素组 24h 发酵后,各低聚糖培养基总 SCFA、丙酸、丁酸含量明显低于对照组(P0.05)。
结论 1.通过测定粪便发酵前总 SCFA 含量,以及丙酸和丁酸含量,可间接印证抗生素对肠道菌群有显著影响。2.抗生素导致肠道菌群代谢发生紊乱,还表现在乙酸:丙酸:丁酸三者百分比率明显失调。

PU-3653

女性生殖道微生态评价的临床价值研究

付莉
沈阳金域医学检验所有限公司

目的 研究女性生殖道微生态评价的临床价值。
方法 选取医院接收的体检的健康女性体检者及患有生殖道感染就诊患者作为本次研究的观察对象，采用问卷调查及辅助检查结合的方式对每一位体检者及就诊者进行统计分析,分析阴道分泌物结果,统计各类阴道炎症的构成比,对阴道微生态进行评价,分析阴道微生态失调检出率,并分析阴道微生态失调与阴道炎的关系。
结果 1800 例女性阴道微生态失调者为 954 例,占百分比为 53%,BV 的发生率最高,占比在 12%,接着是 VVC 占 8%,阴道微生态失调率与 BV 的感染率随年龄的增长不断攀升,VVC 的感染率随年龄的增加,不断下降,差异具有统计学意义（P <0.05）,阴道微生态失调和 BV、VVC 的感染率在不同季节感染率也是不尽相同的。数据差异具有统计学意义（P <0.05）。
结论 阴道微生态失调与各种阴道炎的发生具有一定的相关性。是阴道炎发生的重要影响因素。

PU-3654

全自动细菌鉴定仪法在快速检测耐甲氧西林金黄色葡萄球菌中的应用价值

张震
沈阳金域医学检验所有限公司

目的 全自动细菌鉴定仪法在快速检测耐甲氧西林金黄色葡萄球菌中的应用价值。
方法 金黄色葡萄球菌阳性标本作为研究对象,进行实时荧光聚合酶链反应（PCR）检测,将其检验结果作为金标准。分析全自动细菌鉴定仪法检测耐甲氧西林金黄色葡萄球菌的灵敏度及特异度。
结果 金黄色葡萄球菌阳性标本中,经实时荧光 PCR 法检测出耐甲氧西林金黄色葡萄球菌耐甲氧西林金黄色葡萄球菌。全自动细菌鉴定仪法检测耐甲氧西林金黄色葡萄球菌的灵敏度及特异度分别为 94.44%、100.00%。不同类型临床标本检出率由高到低为:痰液标本>咽拭子标本>伤口分泌物标本>血液标本。
结论 全自动细菌鉴定仪法检测耐甲氧西林金黄色葡萄球菌具有较高的灵敏度与特异度。

PU-3655

嗜麦芽窄食单胞菌鉴定及药敏分析

张寅卓
沈阳金域医学检验所有限公司

目的 探讨嗜麦芽窄食单胞菌简易鉴定方法和对抗菌药物的耐药情况，为临床医师能有效预防及合理使用抗生素提供可靠依据。
方法 对嗜麦芽窄食单胞菌菌落生长及部分理化特性进行简易鉴定,并采用全自动微生物鉴定药敏系统与其对照及药敏实验。
结果 采用简易鉴定方法检出的嗜麦芽窄食单胞菌与全自动微生物鉴定系统结果均一致。嗜麦芽窄食单胞菌对抗菌药物呈广泛耐药,仅对复方新诺明和左旋氧氟沙星、加替沙星保持较高的敏感性。
结论 药敏试验结果显示,对替卡西林/克拉维酸、左氧氟沙星、复方新诺明和米诺环素有较高的敏感性,对头孢他啶耐药率较高。 该简易鉴定方法可及早检出嗜麦芽窄食单胞菌的感染发生,临床治疗首

选复方新诺明和左旋氧氟沙星,靶向性治疗效果较好。临床需要根据药敏试验结果合理选用抗菌药物。

PU-3656

痰标本中分离鉴定金黄色葡萄球菌的临床实验研究

张震
沈阳金域医学检验所有限公司

目的分析从感染患者痰液中分离鉴定金黄色葡萄球菌（SAU）及耐药性的临床实验,为合理应用抗菌药物提供参考。
方法用全自动细菌培养鉴定仪对痰标本进行 SAU 分离鉴定,选择 15 种临床中常用抗菌药物对其耐药性进行药敏试验。替考拉宁、万古霉素和呋喃妥因对 SAU 的抗菌活性较好;青霉素、诺氟沙星、氨苄西林、克林霉素、庆大霉素、四环素、利福平和红霉素等对 SAU 抗菌活性差;其他抗菌药物对 SAU 耐药性一般。
结论 SAU 是化脓感染中最常见的病原菌,痰标本中检出率较高,且耐甲氧西林增强,万古霉素、替考拉宁和呋喃妥因等是目前杀灭 SAU 的理想药物,临床中应依据药敏试验合理选择抗菌药物。

PU-3657

Disseminated Trichosporon asahii infection presenting as eosinophilia in an immunocompetent patient

Fengzhen Yang
Yantai Yuhuangding Hospital

Trichosporon are naturally found in external environments and are a part of the normal flora of the human skin, respiratory tract, and gastrointestinal tract. Disseminated Trichosporon infection occurs sporadically in patients with immunodeficiency, and is mainly manifested as blood, urine, catheter, and thorax/peritoneum infections, rarely as lymphatic, liver and spleen infections. Elevated blood eosinophil granulocyte from Trichosporon infection have rarely been reported. Here,we report a rare case of eosinophilia associated with lymphatic, liver and spleen infections due to Trichosporon asahii in an immunocompetent patient. No reports of eosinophilia from Trichosporon infections other than lung, to our knowledge, have been published.

PU-3658

B 族链球菌检测在孕妇孕晚期的临床意义分析

蒋瑜采
柳州市妇幼保健院

目的 B 族链球菌是围生期女性泌尿生殖道感染和新生儿期重症肺炎、败血症和脑膜炎的常见病原菌。本研究针对孕晚期检测 B 族链球菌的临床意义进行探讨。
方法 选 2019 年 1 月～12 月来我院产前检查的 325 例孕妇作为研究对象。统计 325 例孕妇 B 族链球菌检测结果，观察 B 族链球菌阳性孕妇的孕周分布特征，同时对 325 例孕妇都进行随访，比较 B 族链球菌阳性组孕妇和阴性组孕妇的妊娠结局以及新生儿健康状况。
结果（1）325 例孕妇 B 族链球菌检测中，共 37 例结果阳性，阳性检出率为 11.4% ，28 例孕妇的孕周超过 34w，所占比例为 75.7%。其中 24～34+6w 占 9 例，构成比为 24.3%；35～37+6w 占

18 例，构成比为 48.6%，38w 及以上占 10 例，构成比为 27.1%，B 族链球菌阳性孕妇的孕周多为 35～37+6w，所占比例与其他孕周比较存在差异，具有统计学意义（P<0.05）；（2）对 325 例孕妇均进行有效的随访，经统计 B 族链球菌较阳性组孕妇的不良妊娠结局发生率为 24.3%，阴性组孕妇的不良妊娠结局发生率为 5.2%，两组组间比较存在的差异具有统计学意义(P<0.05) ；（3）B 族链球菌阳性组和阴性组新生儿的健康状况比较，经统计发现 B 族链球菌阳性组新生儿的阿氏评分较阴性组新生儿低，肺炎发生率较阴性组新生儿高，组间上述指标比较均存在明显差异(P<0.05)。
结论 孕晚期 35～37+6w 及以上孕妇 B 族链球菌检测阳性率比其他孕周数明显增高，B 族链球菌感染可增加孕妇的不良妊娠结局发生率，影响新生儿健康状况，建议将 B 族链球菌检测纳入常规产前检查项目，改善孕妇妊娠结局。

PU-3659

镜检法和核酸杂交法检测念珠菌性阴道炎的差异及评价

蒋瑜采
广西柳州市妇幼保健院

目的 念珠菌性阴道炎是临床中十分常见的一种妇科疾病，其有着较高的发病率.尤其是在近几年，我国女性群体因不良生活习惯以及饮食习惯的影响，使得念珠菌性阴道炎的发病率持续上升。本文研究镜检法与核酸杂交法，对念珠菌性阴道炎患者检测价值的影响，帮助念珠菌性阴道炎患者提高临床治疗效果。
方法 选 2020 年 1-12 月到我院诊治的 94 例念珠菌阴道炎患者纳入研究，取患者分泌物分别采用镜检法与核酸杂交法进行检测，计算两种方法学的检出率和方法学性能比。
结果 94 例念珠菌性阴道炎患者，镜检法念珠菌阳性检出率为（90.43%），核酸杂交法法念珠菌阳性检出率为（96.81%），P＞0.05。镜检法与核酸杂交法检查结果有着较高的一致性，符合率为（91.49%），特异度为（22.22%），灵敏度为（92.31%），P＞0.05。
结论 镜检法对念珠菌阴道炎阳性检出率为（90.43%），虽低于核酸杂交法对念珠菌阴道炎阳性检出率（96.81%），但二者比价无差异，（P＞0.05）。这说明了镜检法以及核酸杂交法对念珠菌阴道炎患者均有着积极的临床诊断价值，可提高临床诊断的准确性，可提高诊疗效果。同时镜检法与核酸杂交法对念珠菌性阴道炎患者的检查结果的一致性较高，其中符合率为为（91.49%），特异度为（22.22%），灵敏度为（92.31%），P＞0.05，这一研究结果再一次说明了镜检法与核酸杂交法的应用可靠性，在临床中应当灵活选择。

PU-3660

231 例胎盘拭子细菌培养阳性结果与产妇宫内感染临床情况分析

叶辉铭、陈玲、林雪燕、林雅茵、吴佳音
厦门市妇幼保健院（厦门大学附属妇女儿童医院）

目的 回顾分析产妇胎盘拭子细菌培养结果与其宫内感染的临床情况，了解产妇下生殖道细菌上行性感染的临床特点，为围产期母婴相关细菌感染性疾病提供实验室依据。
方法 整理我院 2016 年 1 月 1 日至 2018 年 12 月 31 日胎盘拭子细菌培养阳性结果、胎盘病理检查结果及临床特征，并进行回顾性分析。
结果 该院 2016 年 1 月 1 日至 2018 年 12 月 31 日期间胎盘拭子细菌培养的 231 例阳性标本，最终临床确诊为宫内感染的有 155 例（67.1%），其余的 76 例（32.9%）为未感染者，将两者分为感染组与未感染组比较发现，两组在侵入性操作和生产方式之间有统计学差异。且如产前有宫内侵入性操作史者确诊率可提高到 76.8%，特别是生产方式为剖宫产产妇胎盘分泌物拭子细菌培养阳性的宫内感染确诊率高达 95.2%。宫内细菌感染胎盘病理结果比较，细菌培养结果与病理阳性符合率为

49.0%，两组在孕周与宫腔内操作存在统计差异。宫内细菌感染胎盘拭子培养分离的病原菌以大肠埃希菌为主，所占比率高达 56.8%，其它分离较多的菌株依次为粪肠球菌、无乳链球菌、金黄色葡萄球菌、肺炎克雷伯菌，各占阳性标本比率为 18.7%、4.5%、3.9%、3.9%；革兰阴性杆菌对亚胺培南、美罗培南、哌拉西林/他唑巴坦敏感性最高；无乳链球菌青霉素敏感率 100%，未检出耐甲氧西林金黄色葡萄球菌（MRSA）和对万古霉素耐药的粪肠球菌（VRE）。

结论 行胎盘拭子细菌培养阳性样本可提高产时宫内感染的诊断率，并且分离得到的病原菌可通过细菌鉴定和抗菌药物药敏试验给临床提供诊疗依据，是一种可行、有效的检查方案。

PU-3661

糖尿病伴尿路感染患者中段尿标本细菌培养及其耐药分析

付莉
沈阳金域医学检验所有限公司

目的 探究糖尿病伴尿路感染患者清洁中段尿标本中致病菌的分布及其对抗菌药物的耐药性。

方法 选取糖尿病合并尿路感染患者 145 例,收集其清洁中段尿实施细菌分离培养与菌株鉴定,并实施药敏试验分析各菌种对各类抗菌药物耐药性。

结果 145 例糖尿病伴尿路感染患者尿液中,分离出病原菌 122 株,其中革兰阴性菌 88 株（65%）、革兰阳性菌 47 株（30%）和真菌 4 株（5%）;革兰阴性菌中以大肠埃希菌为主（79.55%）;革兰阳性菌中以肠球菌及凝固酶阴性葡萄球菌为主,凝固酶阴性葡萄球菌占 42.55%;其中粪肠球菌属对青霉素、环丙沙星耐药性较高,分别为 42.11%（16/38）、36.84%（14/38）,凝固酶阴性葡萄球菌对青霉素、红霉素耐药性较高,分别为 88.24%（15/17）、47.06%（8/17）;大肠埃希菌、肺炎克雷伯菌为主要革兰氏阴性杆菌,其中大肠埃希菌对磺胺甲恶唑甲氧苄啶、环丙沙星耐药性较高,分别为 63.16%（108/171）、50.88%（87/171）,肺炎克雷伯菌对磺胺甲恶唑甲氧苄啶、环丙沙星耐药性也较高,分别为 62.07%（18/29）、51.72%（15/29）;凝固酶阴性葡萄球菌中,MRS 检出率为 41.18%（7/17）,大肠埃希菌、肺炎克雷伯菌中,ESBLs 菌株检出率分别为 63.74%（109/171）、51.72%（15/29）。

结论 糖尿病伴尿路感染患者尿液中病原菌以革兰阴性菌居多,其中尤以大肠埃希菌为主,临床应根据病原菌检出情况及药敏试验结果合理选用抗菌药物,以提高糖尿病伴尿路感染的治愈率。

PU-3662

一例犬巴斯德菌的鉴定及药敏分析

任艳俏
沈阳金域医学检验所有限公司

目的 研究一例犬巴斯德菌的鉴定及药敏分析，掌握其生物学特性、鉴定及药敏试验。

方法 将伤口分泌样本接种哥伦比亚血琼脂平板及巧克力琼脂平板，置于 35±1℃,5%二氧化碳培养箱中培养 18-24 小时，挑取哥伦比亚血琼脂平板上灰白菌落，使用快速鉴定，取该菌落配置 0.5 麦氏浓度菌悬液，参考 WS/T639-2018《抗菌药物敏感性试验的技术要求》使用 K-B 药敏纸片法进行药敏试验。

结果 经全自动质谱检测系统 AUTOF MS1000 鉴定为犬巴斯德菌，药敏结果对氨苄西林、红霉素、青霉素、左氧氟沙星、头孢曲松均表现为敏感。

结论 犬巴斯德菌较为罕见，对于多种抗生素敏感。

PU-3663

疫情下病原微生物实验室生物危害及安全防护

王莹
沈阳金域医学检验所有限公司

目的 探讨病原微生物实验室可能产生的生物危害及采取的相应措施，保证病原微生物实验室安全有序运行。
方法 通过查阅相关资料，结合病原微生物实验室的工作特点，分析病原微生物实验室可能存在的安全隐患，制定相应的防护措施。
结果 临床实验室所面临的微生物危害主要为1、细菌、真菌、病毒等极易引起实验室安全事件的生物因素；2、实验室设计建造、安全设施的配置、个体防护装备等环境因素；3、工作人员生物安全意识的主观因素。采取的措施主要有：1、制定标准化的病原微生物实验室操作规程及安全管理的规章制度，所有工作人员必须在工作中严格遵守各项操作规程；2、合理设计，完善和配备相应的安全设施和防护设备装备；3、规范病原微生物实验室消毒措施及医疗废物处置；4、不断提升人员防护意识，并进行生物安全知识培训。
结论 充分了解病原微生物实验室生物危害，采用有效的生物安全防护措施提高病原微生物检验工作的效率和质量，减少职业卫生相关事件发生。

PU-3664

应用全自动质谱检测系统 AUTOF MS1000 快速鉴定临床酵母菌

任艳俏
沈阳金域医学检验所有限公司

目的 评价全自动质谱检测系统 AUTOF MS1000 快速鉴定应用于临床快速鉴定临床酵母菌感染的可行性。
方法 分别应用安图显色培养基和全自动质谱检测系统 AUTOF MS1000 系统鉴定 522 株临床酵母菌。对未能鉴定、鉴定结果不一致或质谱鉴定得分低于 1.7 的菌株通过基因测序进行确证。
结果 安图显色培养基和全自动质谱检测系统 AUTOF MS1000 种鉴定符合率分别为 72.2%和96.9%。
结论 基于全自动质谱检测系统 AUTOF MS1000 具有很好的准确性,并且其检测成本较低,实验准备时间很短,与安图显色培养基相比全自动质谱检测系统 AUTOF MS1000 更加适用于临床酵母菌感染的快速鉴定。

PU-3665

临床分离泌尿生殖道支原体的感染状况及药敏分析

张红艳[1]、郑良建[2]
1. 四川省医学科学院•四川省人民医院（东院）
2. 成都市第三人民医院

目的 探讨临床分离泌尿生殖道支原体的感染状况及对常用抗菌药物的敏感性，为掌握本地区支原体感染的流行病学资料和指导临床合理用药提供依据。
方法 采用商品化支原体培养及药敏试剂盒对 2019 年 3 月至 2021 年 1 月四川省医学科学院·四川省人民医院（东院）泌尿生殖道来源的标本进行支原体培养和药敏试验，数据采用 SPSS 软件进行统计学分析。

结果 送检的 5548 份样本中，共 3016 份检出了支原体，阳性率为 55.9%，以 20-35 岁居多。解脲脲原体单独感染、人型支原体单独感染、解脲脲原体和人型支原体混合感染的阳性率分别为 43.7%（2424/3016）、0.8%（44/3016）和 11.5%（638/3016）。女性支原体阳性率为 57.3%，高于男性的 41.9% (P<0. 01)。解脲脲原体对强力霉素、美满霉素和克拉霉素的敏感性较高（>89%），人型支原体对强力霉素、美满霉素和交沙霉素的敏感性较高（>88%），生殖道支原体对喹诺酮类药物的耐药性较严重。
结论 泌尿生殖道支原体以单独解脲脲原体感染多见，其次为解脲脲原体和人型支原体混合感染。四环素类药物如强力霉素和美满霉素可以作为临床治疗泌尿生殖道支原体感染的首选药物。

PU-3666

2015-2019 年江苏连云港市布鲁菌病的流行病学及临床特征分析

刘波
连云港市第一人民医院

目的 分析布鲁菌病患者的临床特点和实验室检查结果，以提高非疫区临床医生对布鲁菌病的认识，减少临床对该病的误诊和漏诊率。
方法 收集 2015 年 1 月到 2019 年 12 月连云港市第一人民医院收治并确诊的布鲁菌病患者 54 例，剔除 8 例门诊及复发患者，对 46 例患者的科室分布、人口学信息、临床特征、流行病学史、实验室检查及诊治等方面进行了回顾性分析。
结果 46 例布鲁菌病患者中，男性 33 例，女性 13 例，年龄从 4 岁到 78 岁，确诊的布病患者分布在医院多个科室。职业分布主要以农民为主，占比达到 63%（29/46）；有 10 例患者来自市区，其余 36 例均来自辖区内各县，其中 26 例来自于东海县。有明确牛、羊等接触史的患者 21 例。全年各个月份均有病例出现，以 2-6 月最多见，占到了 71.7%（33/46）。患者首发症状主要以发热为主，占比达到 91%（42/46）。所有患者的血培养均检出布鲁菌，且虎红凝集试验均为阳性。患者在明确病因前使用多种药物，确诊后均采用多西环素加利福平，必要时联合喹诺酮类或 ß 内酰胺类等药物。患者经规范治疗后，预后较好，4 例患者出现复发。
结论 布病的临床表现常无特异性，一半以上的患者自述无明确的接触史；非疫区医生对此病的接触较少或认识不足，导致一些患者常被误诊或漏诊。因此对于不明原因发热的病人，在常规抗感染治疗无效的情况下，应考虑本病的可能。

PU-3667

HPV16 E7 蛋白经 Daxx/JNK 通路拮抗 HeLa 细胞凋亡

谢小平[2]、唐双阳[1]、丁霜[1]、廖雅琪[1]
1. 南华大学病原生物学研究所
2. 南华大学附属第一医院检验医学中心

目的 研究人乳头瘤病毒（Human papilloma virus，HPV）16 型 E7 蛋白对 Daxx/JNK 通路以及宫颈癌细胞凋亡的影响，为进一步阐明 HPV16 E7 在 HPV 致病机制中的作用提供理论依据。
方法 pET30a/HPV16 E7 重组质粒经 IPTG 诱导重组蛋白表达，并经 Ni-NTA 树脂纯化重组蛋白，用多粘菌素去内毒素处理后刺激 HeLa 细胞；经 Western blot 分析 Daxx 和 Bax、Bcl2 以及 t-JNK、p-JNK 蛋白表达，并经 DAPI 染色及流式细胞术检测细胞凋亡情况。
结果 经 HPV16 E7 蛋白刺激的 HeLa 细胞表现出 Daxx、Bcl2 蛋白表达上调，Bax 蛋白下调，且 Bcl2/Bax 比值上调，同时凋亡率降低；t-JNK 与 p-JNK 蛋白表达下调；干扰 Daxx 表达或经茴香毒素预处理后 HPV16 E7 蛋白的抗细胞凋亡效应减弱。
结论 HPV16 E7 蛋白能经 Daxx/JNK 通路拮抗 HeLa 细胞凋亡。

PU-3668

PDCA 循环法优化临床微生物学检验流程

于桥爱
柳州市妇幼保健院

目的意义及主要用途：国家政策的要求:做好微生物检验,持续落实抗菌药物管理力度。实验室检测结果是临床医师为患者进行病情诊断、治疗的临床依据，要求检测结果要准确、及时。由于各种原因造成微生物检验结果回报不及时，可给临床工作带来不良影响，甚至失去最佳抢救患者时机。因此优化微生物室的检验流程，缩短实验室周转时间(TAT) ，是微生物工作人员赖以追求的目标，也是医院管理者关注的重点。

PDCA 循环法又称戴明循环，是由美国著名质量管理专家戴明于 1954 年首先提出的，是全面质量管理所应遵循的标准化、科学化循环体系。PDCA 包含 4 个阶段，即 P（plan）计划、D（do）执行、C（check）检查、A（action）行动、改进。应用 PDCA 循环对优化医院工作流程和加强医院管理起到了重要的作用，只有不断改进工作流程中不完善的地方，科学应用全面流程管理，及时找到影响相关工作的瓶颈，对其有针对性地提出改进意见并追踪评价， 确认其改进效果，才能达到提高检验质量、提升医患满意度的目的，才能实现检验质量的持续改进，更好地为临床和患者服务。

PU-3669

广州地区 1015 株淋球菌对阿奇霉素耐药性结果分析

曹文苓
广州市皮肤病防治所

目的 淋病是我国法定的乙类传染病，由于临床上滥用抗生素和不规则治疗，使淋球菌的耐药率逐年增加，为了解广州地区淋球菌对阿奇霉素的耐药状况而进行耐药监测。
方法 用琼脂稀释法测定阿奇霉素的最低抑菌浓度（MIC）。以 WHO　P 株标准菌株作为质控菌株。阿奇霉素折点参考 WHO 的标准，敏感：MIC≤0.5mg/L,耐药：MIC ≥1mg/L。
结果 1015 株淋球菌中检出阿奇霉素敏感株 873(86%)株，耐药株 142 株(14%)。
结论 阿奇霉素是一种半合成的新型大环内酯类抗生素，2001 年 WHO 在性传播疾病感染处理指南中将阿奇霉素纳入治疗淋病的一线药物，２０１０年美国ＣＤＣ在成人宫颈、尿道及直肠无并发症淋球菌感染推荐方案是头孢曲松注射联合阿奇霉素治疗，阿奇霉素在临床上不仅对淋球菌有杀菌作用，对衣原体、支原体、梅毒等性病病原体引起的感染都也有治疗作用，临床使用比较广泛。但是由于药物不规范使用或用药剂量的不合理， 阿奇霉素的耐药率达到 14%，应该引起临床重视，临床要规范合理应用抗生素，同时加强淋球菌耐药性的连续性监测十分重要。

PU-3670

黏液脓性宫颈炎微生物的培养及药敏测定分析

姑丽尼格尔库来西、李晓勤、蒋斓、李维艳、韩婷婷
新疆维吾尔自治区妇幼保健院

目的 分析黏液脓性宫颈炎微生物的培养及药敏测定。
方法 选取 2019 年 1 月-2020 年 12 月 280 例医院收治黏液脓性宫颈炎患者的临床资料进行回顾性分析，所有患者均采集阴道分泌物行微生物培养检查，观察培养结果并行药敏试验，对药物敏感情况进行统计观察。

结果 280 例患者经微生物培养检查共检出病原菌阳性 188 例（67.14%），其中单一细菌感染 19 例（6.79%），细菌合并支原体感染 126 例（45.00%），细菌合并假丝酵母菌感染 43 例（15.35%）。本次研究中 188 份阳性样本中有革兰阴性菌 49 株（26.06%）、革兰阳性菌 94 株（50.00%）、真菌 45 株（23.93%），其中以革兰阳性菌检出率明显高于革兰阴性菌和真菌（P＜0.05）。达托霉素、利奈唑胺、万古霉素等药物对革兰阳性菌均有较高的敏感性，美罗培南、亚胺培南、阿米卡星以及氨苄西林对革兰阴性菌具有较高的敏感性。
结论 黏液脓性宫颈炎患者中主要以细菌感染最为常见，且致病菌中以革兰阳性菌的检出率较高，达托霉素、利奈唑胺、万古霉素等药物对革兰阳性菌均有较高的敏感性；美罗培南、亚胺培南、阿米卡星以及氨苄西林对革兰阴性菌具有较高的敏感性。

乳酸杆菌对海洛因成瘾小鼠急性戒断综合征的影响

张宇航[1,2]、马岩团进[1,2]、钱源[1,2]
1. 昆明医科大学第一附属医院
2. 云南省检验医学重点实验室

目的 通过乳酸杆菌干预海洛因急性戒断期小鼠，改善小鼠的急性戒断综合征以及乳酸杆菌对海洛因急性戒断期大脑单胺类神经递质水平的影响。
方法 将 36 只 C57 小鼠随机分为 3 组（A： 空白组、B：海洛因成瘾组、C：海洛因成瘾组+乳酸杆菌组），每组 12 只，采取 CPP 成瘾方法建立海洛因成瘾模型，利用 FMT 给予小鼠乳酸杆菌，用 ELISA 检测小鼠大脑 GABA 神经递质水平。
结果 乳酸杆菌能够改善小鼠急性戒断综合征，并且能使小鼠大脑 GABA 神经递质水平接近正常水平。
结论 通过乳酸杆菌干预海洛因成瘾小鼠，能够有效改善急性戒断综合征以及大脑神经递质水平，希望本研究能够为临床进一步治疗海洛因吸毒人群急性戒断综合征提供帮助。

PU-3672

2328 例阴道微生态阳性率的汇总

杨冰
西安金域医学检验所有限公司

目的 统计 2328 例女性阴道微生态中各种诊断的阳性率，为临床预防和治疗各种阴道炎提供依据。
方法 对 2328 例女性阴道拭子进行涂片，固定，采用硕世诊断自动染色仪进行革兰染色，全自动显微镜在 100 倍油镜下进行采图，并结合硕世诊断阴道炎自动检测工作站的干化学结果进行分析。
结果 通过对 2328 例女性阴道微生态进行分析，共检出 BV（细菌性阴道炎）354 例，阳性率 15.21%，AV（需氧性阴道炎）73 例，阳性率 3.14%，VVC（念珠菌性阴道炎）164 例，阳性率 7.04%，TV（滴虫性阴道炎）32 例，阳性率 1.37%，BV+AV（细菌性阴道炎+需氧性阴道炎）110 例，阳性率 4.73%，BV+VVC（细菌性阴道炎+念珠菌性阴道炎）25 例，阳性率 1.07%，其他合并感染 20 例，阳性率 0.86%，菌群抑制 382 例，阳性率 16.41%。
结论 女性阴道炎是阴道粘膜及粘膜下结缔组织的炎症，是妇科门诊常见的疾病。正常健康妇女，由于解剖学及生物化学特点，阴道对病原体的侵入有自然防御功能，当阴道的自然防御功能遭到破坏，则病原体易于侵入，导致阴道炎症。本次研究阴道炎的阳性率为 33.42%，菌群抑制阳性率为 16.41%，所以女性阴道炎更应引起临床的高度重视。

腹腔结核的临床特征及诊断方法来自非结核病定点医院 5 年经验分享

金文婷、马玉燕、史庆丰、鲍容、郭玮、高晓东、潘珏、胡必杰
复旦大学附属中山医院

背景 腹腔结核是肺外结核的一种常见类型，但临床诊断存在困境。本研究旨在介绍非结核病定点医院感染病科收治的腹腔结核的临床特征及诊断方法。
方法 回顾性收集 2015 年 8 月至 2020 年 7 月复旦大学附属中山医院感染病科收治的腹腔结核患者 70 例，将腹腔结核分为腹膜结核、腹腔淋巴结结核、胃肠道结核、实质脏器结核和混合腹腔结核共 5 组。
结果 70 例患者中 18 例(25.7%)为腹膜结核,9 例(12.9%)为腹腔淋巴结结核，5 例(7.1%)为胃肠道结核，2 例(2.9%)为实质脏器结核，混合腹腔结核共 36 例（52.45%）。24 例(34.3%)患者未累及腹腔外其他部位，7 例(10.0%)合并肺结核，7 例(10.0%)合并肺结核，19 例(27.1%)合并至少 1 处其他部位结核，另外 20 例(28.6%)即合并肺结核又合并其他部位肺外结核。中位诊断时间为 60 天(30-120 天)。腹水(58.6%)、腹胀(48.6%)、体重减轻(44.3%)和发热(42.9%)为最常见的临床症状。总体微生物确诊率和组织学确诊率分别为 70.0%(49/70)和 38.6%(22/70).在非腹水标本微生物确诊率(63.6%,14/22)高于所有标本(40.8%, 20/49)。组织学确诊病例共 18 例，占 69.2%(18/26)。共有 45 例患者为临床诊断病例(64.3%, 45/70)。经有创性操作确诊的比例较高，如手术确诊率 85.7%(6/7)，经皮腹腔组织活检确诊率 100.0%(7/7)，腹腔淋巴结结核中内镜下淋巴结细针活检确诊率 80.0%(4/5)。
总结 腹腔结核的诊断需临床表现、实验室检查、影像学、微生物结果及病理才能获得更高诊断率。

PU-3674

上海市 101 所医院 2016-2019 年血标本送检调查分析

史庆丰、胡必杰、崔扬文、郭玮、孙伟、沈燕、孙翔、林佳冰、高晓东
复旦大学附属中山医院

目的 分析上海市 101 所医院 2016-2019 年血标本送检情况。
方法 上海市院内感染质控中心对市监测网 101 所医院每季度开展一次血标本送检率调查，对该季度最后一个月第 2 周的前三天发热≥38.5℃的住院患者信息及血标本送检情况进行收集和分析，数据采用 SPSS 20.0 软件进行录入和分析。
结果 2016-2019 年，上海市 101 所医院发热患者血标本总送检率分别为 56.7%，57.8%，58.3%，62.1%，呈逐年上升趋势（线性 $\chi 2=49.360$，$P<0.001$）；ICU 和普通病房发热患者前三日抗菌药物总使用率为 81.6%~92.7%。发热患者伴疑似肺部感染时血标本送检率为 67.5%~75%；伴留置深静脉导管＞5 天时血标本送检率为 64.7%~71.1%；送检痰标本同时送检血标本率为 76.5%~77.1%。未送检原因合理比例呈逐年上升趋势。
结论 上海市 101 所医院血标本送检率呈逐年上升，但送检前抗菌药物使用率较高，高危合并因素条件下送检率有待进一步提升。

PU-3675

热和呼吸困难患者九联检 IgM 抗体检测结果分析

杨耀永、唐满玲、蒋最明、何聪玲、吴莹
株洲市中心医院

目的 了解本地区发热和呼吸困难患儿的病原谱, 为临床抗感染及病原体检测提供依据。
方法 收集 1033 例临床症状表现为发热和呼吸困难患儿的血清标本, 采用间接免疫荧光法检测其中 9 种常见病原体的 IgM 抗体。
结果 1033 例患儿中肺炎支原体抗体阳性 495 例,春季、夏季和秋季都是肺炎支原体高发期。
结论 湖南株洲地区引起儿童发热和呼吸困难的主要病原体是肺炎支原体，并且春季、夏季和秋季感染率都很高。

PU-3676

2017-2019 年上海某教学医院 ICU 患者血流感染分离的耐碳青霉烯类肺炎克雷伯菌耐药机制和分子流行病学特征

周春妹、黄声雷、胡必杰、郭玮
复旦大学附属中山医院

目的 研究复旦大学附属中山医院 ICU 患者血流感染中分离的耐碳青霉烯类肺炎克雷伯菌血流感染(carbapenem resistant Klebsiella pneumoniae, CRKP)的耐药性、耐药基因与同源性，为临床用药与院感控制提供依据。
方法 收集复旦大学附属中山医院 2017 年 1 月—2019 年 5 月 ICU 患者血流感感染分离的 53 株 CRKP，检测其对 28 种抗菌药物的敏感性。PCR 法扩增碳青霉烯酶基因(blaKPC、blaIMP、blaVIM、blaOXA 和 blaNDM-1)并对扩增阳性产物进行测序，所得序列与 GenBank 数据库进行比对，确定耐药基因分型。采用 PFGE 和 MLST 法进行同源性分析。
结果 53 株 CRKP 对 19 种抗菌药物耐药率中，耐药率低于 50%的抗菌药物仅有替加环素 0%、黏菌素 7.1%。对复方磺胺甲噁唑的耐药率为 57.5%、四环素 63.8%、阿米卡星 64.2%。对碳青霉烯类、头孢菌素、氨曲南、含酶抑制剂、以及喹诺酮类、氨基糖苷类的耐药率为 80%~100%。53 株 CRKP 中，均检出碳青霉烯酶基因，其中 49 株(92.5%)blaKPC、3 株(5.7%)blaNDM 和 1 株（1.8%）同时产 blaKPC 和 blaNDM。53 株 CRKPMLST 分型均为 ST11 型，PFGE 分型显示 ICU 中以 K1 型 15 株（28.3%）为主，其次是 K2 型 5 株（9.4%）和 K3 型 4 株（7.5%）。
结论 CRKP 的耐药率高，主要耐药机制是产 KPC 型碳青霉烯酶。CRKP 存在不同 ICU 科室间、科室内的克隆传播，应加强对 CRKP 的监测和院感控制。

PU-3677

2018-2021 全球革兰阴性杆菌细菌对粘菌素类药物耐药性的 meta 分析

黄嘉仪、黄声雷、周春妹、郭玮
复旦大学附属中山医院

目的 了解近年来革兰阴性杆菌对粘菌素类药物的耐药情况，为临床提供精确的抗菌药物方案选择。
方法 从 PubMed 上收集发表于 2018-2021 年的关于粘菌素类药物耐药性研究性文献，提取内容包

括文献来源杂志、菌株收集时间、菌种来源地区、作者、文献标题、菌种、菌株总数、耐药菌株数，比较不同地区、不同时间段、不同菌种对粘菌素类药物敏感率或耐药率的差异。
结果 2018-2021 年发布文献中的粘菌素类药物在革兰阴性杆菌非天然耐药菌中总体耐药水平为 16.19%，与 2015 年的研究相比有所上升。粘菌素类药物主要对埃希氏菌属、铜绿假单胞菌、不动杆菌属、克雷伯氏菌属、肠杆菌属有较强抗菌活性，耐药率分别为 11.1%（95%CI 10.1%~12.0%）、12.7%（95%CI 12.1%~13.3%）、13.8%（95%CI 13.3%~14.3%）、21.5%（95%CI 20.4%~22.6%）、24.6%（95%CI 23.7%~25.5%）。其次为枸橼酸杆菌属（37.9%）和沙门氏菌属（46.8%）。此外对粘菌素天然耐药的沙雷氏菌属和嗜麦芽窄食单胞菌分别出现了敏感菌的报道。
结论 2018-2021 年全球的粘菌素类药物在革兰阴性杆菌中总体耐药水平较之前有所上升。建议定期进行耐药菌流行病学调查，监控各菌属对粘菌素类药物耐药性的改变，更加规范进行粘菌素类药物的使用管理。

PU-3678

肠杆菌目细菌产耐碳青霉烯酶的耐药基因分型检测方法新进展

曹锦楠、黄声雷、周春妹、胡必杰、郭玮
复旦大学附属中山医院

目的 介绍临床微生物实验室鉴定肠杆菌目细菌产碳青霉烯酶型别的检测方法及最新临床应用进展，为不同层次的实验室结合自身情况选择合适的检测方法提供依据。
方法 围绕微生物实验室鉴定碳青霉烯酶型别的检测方法的原理、结果判读、检测性能以及优缺点等方面作一综述。
结果 由于不同种类的抗菌药物对产生不同类型的碳青霉烯酶菌株体外抗菌活性不同，因此准确而快速地对 CRE 产生的碳青霉烯酶进行型别的鉴定，对于临床抗多重耐药菌感染的精准治疗和医院感染预防控制其传播流行具有重要的意义。目前实验室用于检测碳青霉烯酶的方法主要包括改良 Hodge 实验、Carba NP 试验、改良碳青霉烯灭活试验（mCIM 和 eCIM）、分光光度计法、碳青霉烯酶抑制增强试验、免疫层析方法、时间飞行质谱试验、耐药基因精准检测、二代测序、Xpert® Carba-P 和宏基因组测序。
结论 本文对比各试验的优缺点，推荐使用碳青霉烯酶抑制增强试验，因其操作简便、成本低、结果观察直观，所以适合绝大多数实验室常规开展。

PU-3679

168 株淋病奈瑟菌耐药监测结果分析

王有为、李红霞、李春花、杨阳、赵薇、陈媛玮
电子科技大学附属医院•四川省人民医院

目的 分析 2019-2020 年本院 168 株淋病奈瑟菌临床分离菌株对六种抗菌药物的敏感性，为淋病的社会防治提供参考。
方法 收集四川省人民医院皮肤性病门诊患者生殖道分泌物，T-M 淋球菌分离培养基分离培养，通过纸片酸度法测定产青霉素酶淋球菌，琼脂稀释法测定青霉素、环丙沙星、大观霉素、阿奇霉素、头孢曲松和头孢克肟的最小抑菌浓度(MIC) 。
结果 168 株淋球菌中，共检出 PPNG 67 株（39.88%）、TRNG 47 株（27.98%）。未发现头孢曲松、头孢克肟和大观霉素的耐药菌株。对环丙沙星、青霉素和阿奇霉素的耐药比例分别为 98.81%、77.97%和 13.09%。两年共发现 22 株对头孢曲松低敏的淋球菌、且比例有所增加。

结论 大观霉素和头孢曲松适合本地区作为治疗淋病的一线药物。持续开展淋球菌耐药监测对于淋病的防治具有重要的意义。

PU-3680

热休克蛋白 90α 对脓毒症的诊断及预后价值探究

赵卫东、李福兴、张玉琳、程明璟
大理大学第一附属医院

目的 探讨血清 HSP90α 在脓毒症诊断及预后中的价值。
方法 选取 2019 年 9 月-2020 年 9 月入住大理某三甲医院 ICU 的 150 例脓毒症患者作为研究对象，110 例非脓毒症患者作为同型病例对照，110 例体检中心健康人群作为健康对照。随后根据脓毒症患者预后分成生存组(n=94)及死亡组(n=56)，在医院信息系统收集所有研究对象的临床资料，用酶联免疫吸附实验(ELISA)法测定 HSP90α 水平，流式细胞术测定细胞因子(IL-1β，IL-18)和趋化因子(MIP-3α，ENA-78)的表达水平，并进行统计学比较，利用受试者工作特征(ROC)曲线比较各实验室指标对脓毒症患者预后判断的价值，以 28 天作为随访终点，用 Kaplan-Meier 生存分析评估不同组别脓毒症患者的存活时间，采用单变量 Logistic 回归分析脓毒症的危险因素，Pearson 相关性分析分析 HSP90α 与 SOFA 评分、PCT、IL-1β、IL-18、MIP-3α、ENA-78 的相关性。
结果 脓毒症组 HSP90α 水平显著高于病例对照组及健康组(P <0.05)，脓毒症死亡组 HSP90α 水平显著高于生存组(P <0.05)；ROC 曲线分析表明 HSP90α 对脓毒症的预后判断价值最佳，AUC 为 0.84［95%CI（0.77~0.90）］；生存分析表明 HSP90α 水平越高则脓毒症患者 28 天死亡率越高(P <0.05)；单变量 Logistic 回归分析提示 SOFA 评分、HSP90α、IL-18 是脓毒症的独立危险因素；相关性分析提示 HSP90α 水平与 SOFA、IL-1β、IL-18、MIP-3α 水平成明显正相关。
结论 HSP90α 对脓毒症具有较好的诊断及预后判断价值，其作用机制可能与细胞因子风暴相关。

PU-3681

陕西地区泌尿生殖系统感染患者 NG、CT 和 UU 感染状况分析

张强
西安金域医学检验所有限公司

目的 了解陕西地区泌尿生殖系统感染患者淋球菌(NG)、沙眼衣原体(CT)和解脲脲原体(UU)的感染情况，为性传播疾病的临床治疗和预防提供依据。
方法 选取从 2018 年 5 月到 2021 年 4 月在西安金域医学检验所进行 NG、CT、UU 检测的 1419 例患者标本，其中女性 1266 例，男性 153 例，使用实时荧光 PCR 法检测上述 3 种病原体。
结果 NG、CT、UU 的总阳性率分别为 1.76%(25/1419)、3.59%(51/1419)和 56.24%(798/1419)，女性和男性最常见的病原体均为 UU，但 NG 阳性率男性显著高于女性($\chi2=44.94$,$P<0.01$)，UU 阳性率女性显著高于男性($\chi2=65.87$,$P<0.01$)。在混合感染类型中，NG+CT 混合感染具有性别差异($\chi2=6.41$,$P<0.05$)，另外女性以 CT+UU 感染为主。男性和女性的主要感染人群集中在≤20 岁。
结论 NG、CT 和 UU 是泌尿生殖系统感染常见的 3 种病原体，陕西地区男性和女性均以 UU 感染为主，并部分伴有混合感染，≤20 岁的年轻男性和女性为易感人群。在临床诊断和治疗中，应同时检测多种病原体，并加强青年人群的早期筛查和检测，普及性传播疾病预防知识的宣传教育。

PU-3682

山东地区诺卡菌属的鉴定、临床特点及药物敏感性分析

谢莲[1]、陆书华[2]
1. 胜利油田中心医院
2. 济宁医学院附属医院

诺卡菌是引起多种临床感染的病原体。本研究旨在调查中国两所三级综合医院 3 年多来诺卡菌的种类分布、临床特点及药物敏感性。自 2017 年 1 月至 2019 年 12 月，本回顾性研究共从 27 个患者中分离出 27 株诺卡菌。从病历中收集临床资料，并通过质谱和 16S rRNA 测序鉴定诺卡菌属。采用标准发酵液微量稀释法测定药敏性。27 例诺卡菌感染患者（男 12 例，女 15 例）平均年龄为 60.11 岁。27 株诺卡菌分离株中共鉴定出 7 个诺卡菌种，其中最常见的为豚鼠耳炎诺卡菌(otitidiscaviarum，40.7%)。不同诺卡菌种的抗菌敏感性差异较大。所有诺卡菌分离株都对利奈唑胺敏感。诺卡菌分离株主要来自呼吸内科(55.56%)和痰标本(44.44%)。肺区受累最多(70.37%)，其次是皮肤(7.4%)和胸腔(7.4%)。大多数诺卡菌感染患者需要联合抗生素治疗。在治疗期间 2 例患者死亡，24 例患者在抗生素治疗后得到改善。诺卡氏菌感染的临床表现和药敏特征随种类的不同而不同。因此，菌株的准确识别对诊断和选择抗生素治疗至关重要。

PU-3683

老年性阴道炎患者阴道微生态变化分析

罗雪
柳州市妇幼保健院

目的 分析老年性阴道炎患者与正常体检老年女性的阴道微生态构成及微生态失调的病原分布，为老年女性阴道感染性疾病的病原学诊断及治疗提供实验室依据。
方法 选取 2018 年 3 月～2019 年 6 月在某市妇幼保健院就诊的 938 例老年性阴道炎患者为病例组，病例组所有诊断符合人卫出版社第 9 版《妇产科学》中阴道炎诊断标准，另选取同期正常体检的 441 例老年女性为对照组，两组人群年龄比较差异无统计学意义（P>0.05）。采集所有研究对象的阴道分泌物进行阴道微生态综合检测，比较两组阴道清洁度、乳酸杆菌含量、病原分布以及酶学指标等情况。
结果 病例组阴道微生态失衡率为 96.2%、清洁度Ⅲ～Ⅳ度占比为 52.7%，均高于对照组的 93.4%、38.1%，但两组乳酸杆菌含量无或少量占比比较，差异无统计学意义，分别为 77.8%、73.9%。病例组各种阴道炎总患病率（54.8%，514/938）高于对照组各种阴道炎总患病率（38.8%，171/441），其中病例组中混合感染占比最高，为 18.3%（172/938）；其次 AV（需氧菌性阴道病），为 17.2%（161/938）；然后 VVC（外阴阴道假丝酵母菌病），为 10.7%（100/938）；观察组中 BV（细菌性阴道病）占比最高，为 13.8%（61/441）；其次 AV，为 11.6%（51/441）。病例组的 AV、VVC 及混合感染发生率高于对照组（P<0.05），BV 发生率低于对照组（P<0.01）。两组间 PH＞4.5 占比、H2O2 阳性率及唾液酸苷酶阳性率比较差异无统计学意义（P>0.05），但病例组白细胞酯酶阳性率显著高于对照组（P<0.01）。
结论 老年女性阴道微生态失衡率高，应重视混合感染和 AV 的防治工作。

PU-3684

骨科患者伤口感染菌的分布及耐药性分析

杨雅琼[1]、丁倩倩[2]
1. 天津市天津医院
2. 天津医科大学 临床医学院

目的 分析骨科伤口感染菌的分布以及病原菌对常用抗菌药物的耐药情况为临床合理应用抗菌药物提供合理的科学依据。
方法 收集天津医院骨科创伤患者 2020 年 1 月至 12 月伤口分泌物及脓液标本，对分离出的病原菌及耐药性情况进行回顾性分析、分组，资料的统计分析及药敏实验应用 VITEK2-compact 全自动细菌分析系统。
结果 2020 年 1 月-12 月骨科患者伤口分泌物中共分离出致病菌 1541 株，其中革兰阳性菌 733 株（47.57％），革兰阴性菌 792 株（51.40％）。革兰阳性菌以金黄色葡萄球菌（20.57％），粪肠球菌（9.15％），表皮葡萄球菌（7.14％）为主。革兰阴性菌中以铜绿假单胞菌（10.06％），大肠埃希菌（8.63％），鲍曼不动杆菌（7.07％），肺炎克雷伯菌肺炎亚种（6.23％），阴沟肠杆菌阴沟亚种（5.71％）为主。革兰阳性优势菌为金黄色葡萄球菌和粪肠球菌，针对金黄色葡萄球菌耐药率较高的抗菌药物为阿莫西林、青霉素、克林霉素、红霉素、阿奇霉素;针对粪肠球菌耐药率较高的抗菌药物为四环素、红霉素、环丙沙星。革兰阴性优势菌为铜绿假单胞菌和大肠埃希菌，针对铜绿假单胞菌耐药率较高的抗菌药物为呋喃妥因、头孢泊肟、莫西沙星、萘啶酸；针对大肠埃希菌耐药率较高的抗菌药物为青霉素类抗菌药物、一二代头孢菌素、环丙沙星、左氧氟沙星。
结论 金黄色葡萄球菌、铜绿假单胞菌、粪肠球菌、大肠埃希菌是骨科患者伤口感染的主要病原菌。了解骨科伤口感染主要病原菌和它们的耐药情况，对于制定有效的用药治疗方案和避免术后感染有着重要意义。

PU-3685

B 族链球菌液固双相显色培养基的临床应用研究

瞿颖、童郁、林建萍、江俊华
温州市人民医院

目的 通过与荧光 PCR 法结果进行比对来，并评价 B 族链球菌液固双相显色培养基临床应用价值。
方法 采集孕晚期孕妇的阴道及肛门样本共 1026 例，通过液固双相显色培养基和 PCR 方法进行检测，结果不一致时使用质谱仪进行验证。
结果 PCR 方法检出阳性 82 例，阳性率为 7.99%（82/1 026）。液固双相显色培养基检测阳性 76 例，阳性率为 7.41%（76/1026）。液固双相显色培养基与 PCR 方法检测 GBS 阳性率差异无统计学意义（P>0.05），液固双相显色培养基与 PCR 方法检测 GBS 特异性差异有统计学意义（P<0.05）。
结论 B 族链球菌液固双相显色培养基检测 GBS 的性能能在临床比对试验中得到验证。由于 B 族链球菌液固双相显色培养法技术难度低，特异性优，成本低，对比 PCR 方法不需要大型仪器，可作为 GBS 筛查方法在基层医院推广应用。

PU-3686

不同年龄段女性生殖道支原体感染及耐药性分析

王超慧
吉林金域检验

目的 了解不同年龄段女性生殖道支原体感染情况的分布及其耐药情况，为临床治疗不同年龄女性支原体感染提供依据。
方法 选取我公司 2020 年 1 月 1 日至 2020 年 12 月 31 日送检的 820 例女性生殖道分泌物标本进行布支原体培养鉴定。实验前将冷藏保存的试剂和生殖道分泌物标本平衡至室温，接种标本于基础液中，加盖混匀；将混匀之后含有样本的基础液按每孔 100 微升加入到含有药物的微孔中；在所有微孔上滴加 1 滴矿物油，以防止基础液蒸发；将药敏实验板置于培养箱中，35-37℃培养 24 小时，观察结果。
结果 820 例标本中，20-30 岁女性生殖道分泌物支原体感染阳性率为 15.4%，其中单纯解脲支原体（U urealyticum,Uu）感染阳性率为 40.5%；30-40 岁女性生殖道分泌物支原体感染阳性率为 49.1%，其中单纯 UU 感染阳性率为 36.5%；40-50 岁女性生殖道分泌物支原体感染阳性率为 35.5%，其中单纯 UU 感染阳性率为 39.2%。药敏结果显示左氧氟沙星（89.0%）、美满霉素（83.1%）、强力霉素（80.0%）对所有年龄段患者敏感性均高于其他抗生素,阿奇霉素对年龄≤30 岁的患者敏感性高于其他年龄段患者。
结论 30-40 岁女性由于受到婚后阴道酸碱度改变以及生产后机体免疫力下降等多种因素的影响，女性支原体感染和单纯解脲支原体感染阳性率较大，感染风险较高。治疗支原体感染所引起的妇科疾病应首选左氧氟沙星、美满霉素、强力霉素。由支原体引起的女性阴道炎、宫颈炎等妇科疾病日渐增多，通过对不同年龄女性生殖道分必物标本进行常规的支原体检测及药敏分析，对指导临床合理治疗及用药具有重要意义。

PU-3687

基于自增强鲁米诺复合物功能化 CuMn-CeO2 纳米球的无酶电化学发光生物传感器用于无乳链球菌的超灵敏检测

凌佳继
四川大学华西第二医院

目的 无乳链球菌（GBS），是一种重要的致病菌，全球成年人感染率高，尤其是孕产妇。新生儿早发感染通常是由母亲无症状携带的 GBS 引起的，并在分娩时垂直传播给婴儿，由于新生儿免疫力低下，感染后可引起新生儿败血症甚至死亡，由此可见，早期筛查 GBS 至关重要。因此本文致力于建立一种灵敏高效的方法用于 GBS 早期监测，以此提高孕产妇和新生儿 GBS 的检出率。
方法 本研究将自增强的聚乙烯亚胺-鲁米诺复合物（PEI-luminol）功能化的 CuMn-CeO2 (CuMn-CeO2-PEI-luminol)与多组分核酸酶（MNAzyme）介导的目标物循环扩增相结合，建立了一种新型实用的电化学发光（ECL）生物传感方法，对 GBS 进行超灵敏特异性检测。首先将共反应物（PEI）与鲁米诺（luminol）合成高效自增强的 PEI-luminol 发光集团，缩短电子转移距离，增强了 ECL 信号。利用 CuMn-CeO2 负载大量的 PEI-luminol，通过对 H2O2 氧化的高催化活性，增强了鲁米诺的发光效率。然后，利用目标物驱动的 MNAzyme 系统实现了 GBS 核酸序列的循环，生产丰富的触发链，在电极表面实现核酸杂交反应，将信号分子引入电极表面，输出 ECL 信号。
结果 本研究设计的无酶 ECL 生物传感器对目标 DNA 检测具有超强灵敏性，检测限分别为 68 aM （合成 DNA） 和 5×102 CFU mL-1 （GBS 菌株基因组 DNA）。更重要的是，该生物传感器成功地应用于临床阴道/肛门拭子中提取的 GBS 基因组 DNA 的检测，检测结果低至 320 拷贝数。

结论 本文提出的基于 CuMn-CeO2 的新型自增强鲁米诺复合物功能化 ECL 生物传感策略，不仅可以实现对靶 DNA 的高灵敏、高效检测，而且为临床样品中 GBS 的超灵敏检测提供了一个新的实用平台，为核酸分析和临床诊断提供了一种潜在的通用工具。

PU-3688

支原体培养加药敏试验在生殖道分泌物检测中的应用价值

杨丽英、齐春林、王超慧
吉林金域检验医学检验所有限公司

目的 分析生殖道分泌物检测中支原体培养+药敏的结果情况，为临床合理用药选择提供一定参考依据。
方法 收集 2020.01.01-2020.12.31 期间送检我司的生殖道分泌物检测样本 994 例，均进行支原体培养及药敏试验，统计分析支原体培养及药敏耐药结果。
结果 2020.01.01-2020.12.31 期间送检我司支原体培养+药敏共 994 例样本，其中单独解脲脲原体阳性 369 例，单独人型支原体阳性 11 例，两者均阳性有 73 例，解脲脲原体总体阳性率：44.47%，人型支原体总体阳性率：8.45%。送检样本中女性为 973 例，男性为 11 例。女性送检比例大大超过男性。其中单独生长解脲脲原体的患者对美满霉素、强力霉素、红霉素、阿奇霉素、交沙霉素普遍较敏感，而单独人型支原体和联合感染的患者对美满霉素、强力霉素、交沙霉素普遍较敏感。
结论 生殖道分泌物中支原体感染包括解脲脲原体和人型支原体感染，男女均可引起感染。通过药敏试验可分析支原体耐药性，对支原体感染患者可选择美满霉素、强力霉素、交沙霉素抗生素进行治疗，对临床用药有一定指导作用。

PU-3689

奴卡菌感染的临床特点、分子分型和药敏结果分析

潘少敏、黄东红
福建医科大学附属第二医院

目的 为了提高临床医生对诺卡菌病的认识以及早期作出诊断，并指导临床医生合理使用抗生素。
方法 收集 2019 年 1 月到 2020 年 12 月诺卡菌感染患者菌株，用质谱仪和 16S rRNA 序列分析鉴定到种，用微量肉汤稀释法检测诺卡菌药敏。
结果 10 株诺卡菌来源于 10 个不同的病人，包括 2 名女性和 8 名男性，平均年龄 58 岁。共检出 7 种不同的诺卡菌，不同种诺卡菌对抗生素的敏感性不同。所有的菌株对复方新诺明，阿米卡星，利奈唑胺均敏感，妥布霉素敏感率 90%，米诺环素敏感率 80%，亚胺培南和头孢曲松敏感率 60%,阿莫西林/克拉维酸敏感率 50%,克拉霉素敏感率 40%，环丙沙星敏感率 20%。
结论 诺卡菌感染的临床表现和抗菌敏感性随诺卡菌种类的不同而不同。 因此，准确鉴定诺卡菌对于诊断和选择抗生素治疗至关重要。复方新诺明仍然是治疗奴卡菌病的首选药物。

PU-3690

Mechanisms and biological characteristics of acquisition of daptomycin resistance by Enterococcus faecium strains

Weiliang Zeng[2]、tao chen[2]、qing wu[2]、ye xu[2]、kaihang yu[1]、ying zhang[1]、shixing liu[2]、jianming cao[1]、tieli zhou[2]
1. Department of Medical Lab Science, School of Laboratory Medicine and Life Science, Wenzhou Medical University, Wenzhou, Zhejiang Province, China.
2. 温州医科大学附属第一医院

Objective Daptomycin-resistant (DAP-R) Enterococcus faecium (E. faecium) strains are well documented, but have not been reported yet in China. It is great important to investigate the resistance mechanism of daptomycin (DAP) and its effect on biological characteristics to prevent the occurrence of DAP-R E. faecium.
Methods Six daptomycin-susceptible (DAP-S) E. faecium clinical isolates were exposed to DAP in vitro to induce DAP-R mutants. Then the resistance mechanisms of DAP and bacterial biological characteristics, such phenotype changes and fitness costs, were investigated among these mutants.
Results In vitro, a total of twenty-one DAP-R mutants were obtained, which carried more than one mutation of liaFSR or yycFG. More positive charges were detected among highly DAP-R mutants than parent isolates, and the cell walls of SC1174-D and SC1762-D mutants were remarkly thicker than those of the parent isolates, these phenotypic changes which were compatible with significant differences in dltABCD and tagGH genes expression of parent strains versus mutant strains. Fitness costs were also observed among highly DAP-R mutants. The growth, competition ability and virulence were significantly reduced except biofilm formation capacity.
Conclusion E. faecium isolates acquire DAP resistance easily in vitro through different dynamic resistance mechanisms, which often accompany by significant phenotypic changes and fitness costs. It is necessary to take preventive and control measures to deal with DAP-R E. faecium that may appear in China in the future.

PU-3691

Identification and antifungal susceptibility analysis of Stephanoascus ciferrii complex species isolated from patients with chronic suppurative otitis media

Yuting He、Penghao Guo、Zhongwen Wu、Pingjuan Liu、Yili Chen、Kang Liao、Yaqin Peng
The First Affiliated Hospital, Sun Yat-sen University

Backgroud Stephanoascus ciferrii is a heterothallic ascomycetous yeast-like fungus. Recently, the concept of microbial complexes is applied. Microbial complex refers to a group of pathogens which are phenotypically indistinguishable but different at the genetic level, such as Acinetobacter calcoaceticus-baumannii complex and Candida parapsilosis complex. By sequencing of the 18S rRNA gene, Kumiko Ueda-Nishimura and Kozaburo Mikata divided S.ciferrii into three groups and proposed the S.ciferrii complex, which consists of S.ciferrii, Candida allociferrii and Candida mucifera. Usually, the widely used VITEK 2 yeast identification system (bioMérieux, France) just identified the microorganism as S.ciferrii complex and it doesn't identify the complex at species level. However, as for a rare kind of opportunistic pathogenic fungus, identifying S.ciferrii complex at species level is of great importance in epidemiological studies and the management of empirical antifungal therapy. We aimed to identify 32 strains of S.ciferrii complex isolated from patients with chronic suppurative otitis media at the species level and analyze the morphology and antifungal susceptibility profiles of the three species.

Method The sequencing of ITS region and MALDI-TOF MS were used to identify S.ciferrii complex species. The SARAMIS software was used for cluster analysis of the mass spectra. All the strains were cultured on SDA and CHROM plate for 7 days. Meantime, colonies of the 32 strains went through Gram staining. The Sensititre YeastOne YO10 colorimetric panel was used for the antifungal susceptibility analysis.
Results There were 10 strains of C.allociferrii (31.25%), 6 strains of C.mucifera (18.75%) and 16 strains of S.ciferrii (50%) in the 32 strains of S.ciferrii complex according to the sequencing of ITS region. MALDI-TOF MS could identify S.ciferrii but showed no results for C.allociferrii and C.mucifera. The cluster analysis of the mass spectra by SARAMIS indicated the MALDI-TOF MS could distinguish the three species. For MALDI-TOF MS, the limitation lies in its inability to identify non-clinically validated species or species not included in MALDI-TOF database. The three species of S.ciferrii complex had their own special peaks in the mass spectra, making it possible to identify them using MALDI-TOF MS by constructing reference databases at species level. The morphology characteristics of the three species were similar. The colonies embedded to the agar and the texture became hard after 72 hours. A week later, creamy or slightly yellowish colonies could be seen and the center of the colonies was gyri-like or cauliflower-like. The three species all had low MICs for echinocandins, making this kind of antifungal a good choice to treat S.ciferrii complex infection. The MICs for posaconazole, voriconazole and itraconazole were relatively small and there were no differences among the antifungal susceptibility of the three species for them. However, for fluconazole, all the strains had high MICs. Besides, S.ciferrii and C.mucifera tended to have high fluconazole MICs compared with C.allociferrii. Moreover, C.mucifera and C.allociferrii had relatively low flucytosine MICs while the S.ciferrii owned high flucytosine MICs. Besides, C.mucifera tended to have higher MIC value than S.ciferrii for amphotericin B and C.allociferrii for anidulafungin, micafungin, caspofungin.
Conclusion The morphology observation, antifungal susceptibility analysis and the mass spectra from MALDI-TOF MS of the 32 strains of S.ciferrii complex could provide experimental evidence and clinical experience for the diagnosis and treatment of the rare fungi at species level. Actually, the macroscopic and microscopic characteristics of the three species were similar, making it hard to distinguish them based on morphology. The antifungal susceptibility profiles of the three species of S.ciferrii complex had their own characteristics. Besides, more mass spectra of C.allociferrii and C.mucifera are needed to construct the reference database for Stephanoascus ciferrii complex species, enabling MALDI-TOF MS to identify S.ciferrii complex at species level.

PU-3692

临床分离大肠埃希菌第一类整合子的分布及其对耐药作用研究

李万翔
潍坊市人民医院

目的 筛查临床分离大肠埃希菌中第一类整合子的分布，研究其对大肠埃希菌耐药性的影响，为临床治疗和控制院内感染播撒提供理论依据。
方法 收集 2018 年 9 月至 10 月潍坊市人民医院就诊患者临床标本中分离的非重复 138 株大肠埃希菌。应用 Vitek 2 Compact 进行鉴定和药敏；应用 PCR 方法筛查第一类整合子基因，确定整合子在大肠埃希菌中分布。应用 SPSS 软件对整合子阳性株和整合子阴性株药敏分析以确定整合子对大肠埃希菌的药敏影响。
结果 第一类整合子阳性率为 67.39%（93/138）；临床常用药物耐药率最高的药物为氨苄西林 89.86%（124/138），其次为环丙沙星 73.91%（102/138），氨基糖苷类、碳青霉烯类耐药性最低；临床常用药物中庆大霉素、妥布霉素、复方新诺明、环丙沙星耐药率为整合子阳性菌株显著高于整合子阴性菌株，其他药物均无统计学差异。
结论 本次实验大肠埃希菌主要来源于泌尿外科、肾内科等科室的尿液标本。对 β-内酰胺类及氟喹诺酮类药物耐药率最高，而氨基糖苷类及碳青霉烯类耐药性处于较低水平。I 类整合子阳性率处于

较高水平，因整合子有明显耐药改变的药物主要为传统药物如复方新诺明、氨基糖苷类。这些药物恰恰是本实验相对敏感的一些药物，整合子的表达将加速菌株对这些药物的耐药进程。整合子对大肠埃希菌耐药起到关键作用，应当引起足够的重视。

PU-3693

2015～2019 年我院金黄色葡萄球菌分布及耐药变化分析

盛以泉
中国人民解放军陆军第 72 集团军医院

目的 分析我院 2015～2019 年金黄色葡萄球（SAU）分布及耐药性，为抗菌药物合理选用提供参考。
方法 收集本院临床分离的 SAU，并使用 MicroScan WalkAway96 plus 全自动微生物分析仪进行鉴定及药敏，采用ＷＨＯＮＥＴ5.5 软件对我院 2015 年-2019 年临床标本分离 SAU 病原体资料进行回顾性分析。
结果 期间共分离 SAU 1154 株，其中耐甲氧西林金黄色葡萄球菌(MRSA)438 株，检出率为 37.95％。MRSA 的检出率从 2015 年的 45.64％降至 2019 年的 35.80％，下降趋势明显。SAU 主要分布于骨科(421 株，36.48％)、外科(288 株，24.96％)、烧伤科(141 株，12.22％)和 ICU(53 株，4.59％)。各类临床标本中，分泌物标本中分离的 SAU 最多(631 株，54.68％)，其次痰标本(343 株，29.72％)。 MRSA 对常用的抗菌药物均有较高的耐药率，但对庆大霉素、左氧氟沙星呈下降趋势，对复方新诺明、环丙沙星呈明显下降趋势。而甲氧西林敏感金黄色葡萄球菌(MSSAU)对常用的抗菌药物耐药率较低，除青霉素 G 、氨苄西林、红霉素、克林霉素外，其耐药率均呈下降趋势且低于 18.8%。应注意的是每年均检出利奈唑胺耐药菌株，未检出万古霉素耐药株。
结论 SAU 的临床分离率呈上升再下降趋势，应时刻加强对其耐药性监测，以便临床合理用药并有效防控 SAU，特别加强 MRSA 的院内感染防控。

PU-3694

2020 年包头市细菌耐药性监测

李静
内蒙古科技大学包头医学院第一附属医院

目的 分析内蒙古包头市临床分离菌对常用抗菌药物的耐药情况。
方法 收集包头市 11 所参加全国细菌耐药监测网的三级医院 2020 年临床分离菌数据，利用 WHONET 5.6 及 SPSS 22.0 统计软件对所收集到的数据进行统计分析。
结果 2020 年包头市 11 所医院共检出 8094 株非重复菌株，其中革兰阴性菌 5950 株（73.5%），革兰阳性菌 2144 株（26.5%）。耐甲氧西林金黄色葡萄球菌(MRSA)和耐甲氧西林凝固酶阴性葡萄球菌(MRCNS)的检出率分别为 12.4%和 68.0%，未检出利奈唑胺、万古霉素和替考拉宁耐药菌株。屎肠球菌（EFM）对大多数抗菌药物的耐药率显著高于粪肠球菌（EFA），EFA 中发现有 1 株利奈唑胺和 1 株万古霉素耐药菌株。大肠埃希菌（ECO）、克雷伯菌属细菌和奇异变形杆菌中 ESBLs 阳性率分别为 46.2%、16.7%和 26.8%。产 ESBLs 菌株对所测抗菌药物的耐药率高于非产 ESBLs 菌株。耐碳青霉烯类的克雷伯菌属(CRKL)细菌检出率为 2.3%，耐碳青霉烯类的大肠埃希菌（CREC）检出率为 0.6%。铜绿假单胞菌(PAE)对亚胺培南和美罗培南的耐药率为 12.9%和 10.4%。鲍曼不动杆菌(ABA)对亚胺培南和美罗培南的耐药率为 19.1%和 21%。
结论 包头地区大肠埃希菌对喹诺酮类抗菌药物的耐药率和耐碳青霉烯类克雷伯菌属的检出率有所增长，其余细菌耐药情况低于全国平均水平，需要继续加强抗菌药物的合理使用和科学管理。

PU-3695

抗菌肽 lycosin-Ⅰ抗黏液型铜绿假单胞菌活性研究

程优、牛文彦
天津医科大学朱宪彝纪念医院

目的 通过体外实验探讨 lycosin-I 对黏液型铜绿假单胞菌浮游以及成膜状态的抗菌活性。
方法 收集临床中的黏液型以及普通型铜绿假单胞菌标本，应用微量肉汤稀释法检测 lycosin-I 的体外参数；微量平板法构建上述菌株的体外生物膜模型，结晶紫染色法检测 lycosin-I 对细菌生物膜形成的抑制和破坏作用。
结果 L-及 D-lycosin-I 在体外条件下对两种铜绿假单胞菌均有良好的抗菌效果，其中对普通型更为敏感；两种 lycosin-I 体外抗菌活性差异不明显，均在较低浓度下即有抗菌活性；L-或 D-lycosin-I 在 40min 时即能杀灭 50%左右的铜绿假单胞菌；体外培养二十四小时可见在 MIC 以下浓度抗菌肽干预下普通型铜绿假单胞菌于 6-16 小时快速生长，18 小时后其生长速度趋于平缓；黏液型铜绿假单胞菌于 6-16 小时快速生长，20 小时后其生长速度趋于平缓；在 MIC 及以上浓度抗菌肽干预下，细菌均难以生长；钙离子或镁离子可以提高 lycosin-I 针对上述实验菌的 MIC 值，减弱抗菌肽的体外抗菌活性，钙离子较镁离子具有更强的减弱效果。但是当抗菌肽处于高浓度状态时，钙、镁离子作用会被削弱。L-或 D-lycosin-I 能够抑制 30%~60%黏液型或者 20%~50%普通型铜绿假单胞菌的生物膜的形成；L-或 D-lycosin-I 能够消除 10%~40%的黏液型或者 10%~20%的普通型铜绿假单胞菌的成熟生物膜。 两种 lycosin-I 的抗生物膜活性、抑制和消除效果差异不明显。
结论 L-及 D-lycosin-I 在体外条件下可以有效对抗黏液型以及普通型铜绿假单胞菌浮游菌的生长，具有起效快、效果彻底和一定的盐耐受的特点，同时在体外均可以表现出一定的抗生物膜活性，极有可能成为一种新的药物被开发利用。

PU-3696

细菌对喹诺酮类抗生素耐药机制的研究

张钊冠、柴剑男
吉林大学第一医院

近年来，多重耐药菌尤呼吸系统多重耐药菌在临床的检出率呈逐年增多趋势[1]，氟喹诺酮类药物是近年来治疗下呼吸道感染的重要药物，多用于治疗院内呼吸道感染及重症监护室中的感染[2]。但由于其广泛和过度使用，具有喹诺酮类抗生素抗性的菌株自从 20 世纪 90 年代起就开始稳定增长[3]。细菌对其耐药性产生包括受体介导，质粒介导和染色体介导三种主要机制，前者通过突变改变促旋酶和拓扑异构酶 IV 与喹诺酮类药物的相互作用，后两种变化则减少细胞内喹诺酮类药物的浓度。

本文讨论了喹诺酮类药物如何与促旋酶和拓扑异构酶 IV 相互作用，以及这些酶中的突变怎样导致喹诺酮类药物的耐药性的最近进展，可为设计新药物来增强其对耐药菌株的作用活性提供可能的依据。

PU-3697

基于液相色谱-串联质谱技术骨关节结核血清代谢组学的初步研究

陈汐濛、温新宇、王成彬
中国人民解放军总医院第一医学中心

目的 骨关节结核是结核分枝杆菌感染骨关节组织或由活动性肺结核迁延至骨关节组织所引起的一种常见的肺外结核病。该病早期临床表现特异性低，同时现有临床影像学和实验室检查对该病早期检出率低，极大地影响患者的治疗和预后。针对骨关节结核早期诊断较为困难的现状，本课题利用液相色谱-串联质谱 (LC-MS/MS) 检测骨关节结核患者血清中特异性表达的血清差异代谢物，从分子水平对骨关节结核可能的发病机制提供思路并探究代谢物作为诊断标志物的价值。
方法 收集临床上已确诊的骨关节结核、类风湿关节炎、强直性脊柱炎患者血清样本各 30 例，同时收集健康成人血清样本 30 例为对照，并据此设置相应的分组。应用 LC-MS/MS 对所收集血清样本的代谢物成分进行分析并生成代谢图谱，经 SIMCA 软件处理后进行正交偏最小二乘辨别分析（OPLS-DA），通过其模型的变量重要性投影值（阈值>1）并结合 t-test 的 p 值（ $p<0.05$）来归纳各组间差异性代谢物质，并对差异代谢物质进行生物信息学分析。
结果 经过 LC-MS/MS 分析， 共鉴定出在骨关节结核组中特异性表达的差异代谢物 34 种，包含表达上调 19 种和表达下调 15 种。上调代谢物主要有卵磷脂类、鞘磷脂类、神经酰胺类，下调代谢物主要有氨基酸类、脂肪酸类、神经酰胺类。对上述差异代谢物的信号通路进行了分析，主要与丙氨酸代谢、甘氨酸代谢、鞘磷脂代谢、甘油磷脂代谢、花生四烯酸代谢等氨基酸和脂类物质代谢有关，提示骨关节结核发病过程可能涉及上述相关机制。
结论 应用 LC-MS/MS 初步筛选出 34 种骨关节结核组中特异表达的差异代谢物，经信号通路分析有助于从分子水平认识和了解骨关节结核的发病机制。同时下一步的研究还可以挑选代表性较好的差异代谢物，经临床样本靶向代谢组学验证后，探讨其作为诊断标志物的可能性，为骨关节结核的早期诊断提供参考价值。

PU-3698

粘液型铜绿药敏试验方法探讨

俞晓晨[1]、孙妍[2]
1. 哈尔滨医科大学附属第一医院
2. 黑龙江省哈尔滨市医科大学附属第一医院

目的 探讨临床常见的粘液型铜绿假单胞菌（Pseudomonas aexuginosa, PA）药敏试验（K-B 法）操作和报告。
方法 对分离得出的 15 株粘液型 PA 进行体外药敏试验（K-B）法，分别选择 M-H 平板和血平板，且记录不同时间点（24h、48h、72h）的结果。并将结果进行对比。
结果 不同时间药敏环直径不同；血平板和 M-H 平板制作药敏结果有差异
结论 1 黏铜 MH 平板上 24h 报结果不可信，因为黏铜生长不良
2 原有研究体外药敏试验都表明黏铜的药敏耐药性要低于普通铜绿，但是体内的抗菌效果不佳，除了粘液的原因，是否读取药敏的时间过短是其中原因之一。
3 药敏结果黏铜偏敏感，可能和做药敏实验时挑起了大量的粘液，从而使实际的菌液浓度偏低所致。

PU-3699

布鲁菌的鉴别

俞晓晨[1]、孙妍[2]
1. 哈尔滨医科大学附属第一医院
2. 黑龙江省哈尔滨市医科大学附属第一医院

目的 目前我国布鲁菌疫情严重，疫区扩大。作为一种传染性极强的细菌，快速鉴别出布鲁菌，可以减少实验室感染。
方法 柯氏染色法可以利用实验室常用的染色试剂，快速的帮助鉴别布鲁菌。
结果 对于临床中常见的细菌，柯氏染色鉴别布鲁菌优势明显。染色结果特异，染色时间快速。
结论 对于临床革兰染色疑似布鲁菌的细菌均可开展柯氏染色。

PU-3700

碳青霉烯耐药高毒力肺炎克雷伯菌血流感染血清蛋白组学分析

鲍金凤
中国人民解放军总医院第一医学中心

目的 应用液相色谱-质谱仪（LC-MS）分析碳青霉烯耐药高毒力肺炎克雷伯菌（CR-hvKP）血流感染小鼠的血清蛋白变化，寻找差异表达蛋白，并进行相应的生物学功能分析。
方法 建立 ICR 小鼠 CR-hvKP 及经典的肺炎克雷伯菌（cKP）血流感染模型，收集感染 12h 的小鼠血清，进行 LC-MS 检测。采用 Maxquant 软件对 LC-MS 结果进行鉴定，并对差异蛋白进行相应的生物信息学分析。
结果 与正常对照组相比，CR-hvKP 分别有 24 和 20 个蛋白上调和下调（>1.5 Log2, p<0.05）。与 cKP 组相比，CR-hvKP 组有 107 个蛋白上调，无下调蛋白。134 个差异表达蛋白参与生物调控、细胞过程、发展过程、免疫过程、生物间相互作用、本地化、运动、代谢过程、对刺激的反应、信号转导、炎症反应、氧化应激、血管生成等过程；信号通路分析涉及补体和凝血级联、胆固醇代谢、细菌感染、血红素的清除、血浆脂蛋白的组装、重塑和清除等多条代谢相关通路。 我们重点分析了 SAA1、KLKB1、VNN3、HBB-b2、Serpina1b 这 5 个差异蛋白。其中 KLKB1 及 Serpina1b 与正常组相比下调但与 cKP 组相比上调。其余在 4 个蛋白与 cKP 组及正常组相比均上调。经功能分析及文献检索证实这 5 个蛋白与 CR-hvKP 血流感染相关。
结论 CR-hvKP 血流感染涉及多个蛋白的激活及作用，SAA1、VNN3、HBB-b2 升高或 KLKB1、Serpina1b 下降时或提示 CR-hvKP 血流感染。

PU-3701

乌鲁木齐地区产 ESBLs 肺炎克雷伯菌耐药基因的差异化分析

马晶[2]、杨丽[1]、王昌敏[2]、师东豪[1]、徐菲莉[1]
1. 新疆医科大学附属中医医院临床检验中心
2. 新疆维吾尔自治区人民医院临床检验中心

目的 探讨分析产超广谱 β-内酰胺酶(extended-spectrum β-Lactamase，ESBLs) 肺炎克雷伯菌的耐药基因型的种类和药物敏感性，探讨本地区分离的肺炎克雷伯菌的耐药机制，指导临床降低耐药率并能够有效使用抗生素。
方法 采用全自动快速微生物质谱检测系统对分离的肺炎克雷伯菌进行菌种鉴定，采用 VITEK-2 Compact 全自动微生物分析仪进行药敏试验，收集 2019 年 1 月至 2019 年 12 月临床标本中分离的产 ESBLs 和不产 ESBLs 肺炎克雷伯菌，按照常规标准纸片扩散法进行超广谱 ESBLs 表型筛选

和确认试验，分析产与不产 ESBLs 肺炎克雷伯菌的耐药性，采用聚合酶链式反应（PCR）及测序分析 ESBLs 的基因型。
结果 共分离 4918 株肺炎克雷伯菌，其中男性患者 3688 人（74.99%），女性患者 1230 人（25.01%），年龄为 28~89 岁。临床分离的产 ESBLs 的肺炎克雷伯菌共 2238 株，阳性检出率 45.50%。产 ESBLs 的肺炎克雷伯菌对哌拉西林、头孢唑啉、头孢曲松的耐药率较高，分别为 87.52%、84.32%、83.79%。对亚胺培南、美罗培南、米诺环素的耐药率相对较低，分别为 3.61%、2.45%、2.35%。除了头孢替坦外，大多数产超广谱 β-内酰胺酶的肺炎克雷伯菌比不产 ESBLs 的耐药率高，差异有统计学意义（P<0.05）。经过测序后发现，38 株产与不产 ESBLs 的肺炎克雷伯菌中均含耐药基因 TEM 、SHV 和 CTX-M 型。
结论 本地区产超广谱 β-内酰胺酶的肺炎克雷伯菌的耐药性比不产 ESBLs 的要高；产超广谱 β-内酰胺酶的肺炎克雷伯菌的基因型在本地主要是 TEM 型、SHV 型和 CTX-M 型，需要继续增强肺炎克雷伯菌的监测，从而更好的降低肺炎克雷伯菌的耐药率，有效阻止肺炎克雷伯菌的传播。

PU-3702

ICU 住院患者抗菌药物应用与耐药菌感染相关性研究

景丽萍、庄学伟
山东省立第三医院

目的 分析 ICU 住院患者抗菌药物应用与耐药菌感染的相关性，探讨发生耐药菌感染的相关危险因素，为临床合理应用抗菌药物，降低耐药菌感染提供科学依据。
方法 用整群抽样的方法选取 2016 年 1 月 1 日至 2016 年 12 月 31 日入住某三甲医院 ICU 的住院患者 454 例，用目标性监测方法，将病人资料填写到自行设计的《ICU 住院患者耐药菌感染目标性监测调查表》中，分析抗菌药物应用与耐药菌感染情况。
结果 应用抗菌药物的患者耐药菌感染率较未应用者高，为 30.44%；耐药菌感染的发生率随着抗菌药物应用时间的延长而增加；耐药菌感染率随着药物联用种类的增加而显著增加；入 ICU 前应用抗菌药物的患者耐药菌感染率较未应用者高，为 37.58%；死亡患者的耐药菌感染率高，为 62.96%。
结论 抗菌药物应用与耐药菌发生有一定相关性，临床应加强抗菌药物应用管理，合理使用抗菌药物，以降低耐药菌感染发生率。

PU-3703

YouTube™ as a source of information for Candida auris infection: a systematic review

Jiangqing Huang、Bin Li
Fujian Medical University Union Hospital

Background Candida auris is a novel Candida species, and has emerged globally as a multidrug-resistant health care-associated fungal pathogen. YouTube™ (http://www.youtube.com) as the largest free video-sharing website is increasingly used to search health information. Thus, the aim of this study was to evaluate the content, reliability and quality of YouTube™ videos regarding Candida auris infection, and to identify whether it is a useful resource for people.
Methods The YouTube™ was used to search systematically for videos using the keywords: "Candida auris infection" and "Candida auris". Strict inclusion and exclusion criteria were used to select the videos. The videos were reviewed and scored by two independent reviewers and recorded the "title", "length", "views", "comments", "dislike", "like", "posted days" and "category of videos". The videos were categorized as "poor", "good" and "excellent" by the score. The DISCERN tool was used to assess the reliability of the YouTube™ videos.

Results Seventy-six videos were included in final analysis in our study. Most videos (59.2%, 55/76) had better quality. There were no statistically significant differences between groups in respect of the number of likes, dislikes, views, comments, percentage positivity, likebility, view rate and viewers' interaction. Length and posted days were significantly associated with the classification. The videos were categorized as "educational video", "new report", "personal experience and blog entertainment" and "interview". Significant differences were found in the source of videos and the characteristics of the individuals appearing in a video between the groups.
Conclusion YouTube™ has striking potential to be an effective user-friendly learning interface for people to obtain information of Candida auris infection.

PU-3704

Hospital Wastewater as a Reservoir for Antibiotic Resistance Genes: A Meta-Analysis

shengcen zhang、Bin Li
Fujian Medical University Union Hospital

Background The emergence and dissemination of antibiotic resistance genes (ARGs) in the environment poses a huge global health hazard. Hospital wastewater (HWW), in which a high density of antibiotic residues and antibiotic-resistant bacteria are present, may be a reservoir of ARGs dissemination into the environment. Our meta-analysis comprehensively analyzes the prevalence of ARGs in HWW, as well as the influencing factors in ARGs distribution.
Methods Online databases were used to search for literature using the subject terms: "Drug Resistance" AND "Genes" AND "Hospitals" AND "Wastewater." Two reviewers independently applied predefined criteria to assess the literature and extract data including "relative abundance of ARGs," "title," "authors," "country," "location," "sampling year," and "sampling seasons." The median values and 95% confidence intervals of ARGs abundance were calculated by Wilcox.test function in R. Temporal trends, spatial differences, seasonal variations and removal efficiency of ARGs were analyzed by Pearson correlation analysis and Kruskal-Wallis H test.
Results Resistance genes to carbapenems, sulfonamides, tetracyclines and mobile genetic elements were found at high relative abundance (>10-4 gene copies/16S rRNA gene copies) in HWW. The abundance of resistance genes to extended-spectrum β-lactams, carbapenems, sulfonamides and glycopeptide significantly decreased, while tetracycline resistance genes abundance increased from 2014 to 2018. The abundance of ARGs was significantly different by country but not by season. ARGs could not be completely removed by on-site HWW treatments and the removal efficiency varies for different ARGs.
Conclusions HWW presents more types of ARGs, and their abundance is higher than those in most wastewater systems. HWW may be a reservoir of ARGs and play an important role in the dissemination of ARGs.

PU-3705

Characterization of Integrons and Antimicrobial Resistance in Escherichia coli Sequence Type 131 Isolates

Jiangqing Huang、Bin Li
Fujian Medical University Union Hospital

Background Escherichia coli sequence type 131 (ST131) is an important multidrug-resistant extraintestinal pathogen, which can cause many kinds of infections. Integrons may play a crucial

role in the dissemination of antibiotic resistance genes. The purpose of this study was to characterize the prevelance of integrons among E. coli ST131 strains in China.
Methods Eighty-three E. coli ST131 strains in China. E. coli ST131 strains in China.
Results Overall, 26.5% (22/83) of the E. coli ST131 strains in China. dfrA17-aadA5 and aac(6')-Ib-cr-cmlA5. Only one type of Pc promoter variant was detected among 22 integron-positive isolates (PcW). In vivo transfer of integron was successful for 9 of integron-positive E. coli ST131 strains in China. E. coli ST131 strains in China.
Conclusions Our study showed a low prevalence of integrons was detected in E. coli ST131. Continued surveillance of this mobile genetic element should be performed to study the evolution of antibiotic resistance among E. coli ST131.E. coli ST131 strains in China. E. coli ST131 strains in China.

PU-3706

Pathogenicity- and survivability-associated phenotypic characteristics reveal ST1193 superiority: a comparative study of fluoroquinolone-resistant Escherichia coli lineages

黄江庆、李彬
福建医科大学附属协和医院

Background The aim of this study was to compare the pathogenicity and survivability features of E. coli ST1193.
Methods E. coli ST1193 (n=15) and ST131 (n=15) were used in this study. Adhesion and invasion and serum resistance were quantified. Biofilm formation capacity was assessed by crystal violet assay. Macrocolony formation was detected. Anti-phagocytic function and hydrogen Peroxide resistance were assessed.
Results E. coli ST1193 could adhere and invade T24 cells. most E. coli ST1193 could form biofilms and 66.7% strains possessed no curli/no cellulose. E. coli ST1193 showed significant growth in serum and hydrogen peroxide.
Conclusion Our study provided more insights into pathogenicity and survivability features of E. coli ST1193.

PU-3707

耐碳青霉烯类肺炎克雷伯菌的耐药基因及毒力基因研究

谢屿平、曹颖平
福建医科大学附属协和医院

目的 分析福建医科大学附属协和医院 2014 年-2015 年收集的耐碳青霉烯类肺炎克雷伯菌（CR-KP）的临床分布、耐药基因、毒力基因。
方法 采用 PCR 及测序法检测 CR-KP 碳青霉烯酶基因，并进行多位点序列分型（MLST），并通过 PCR 扩增毒力基因，检测并分析 CR-KP 的毒力因子表型。
结果 对 101 株耐碳青霉烯类肺炎克雷伯菌进行碳青霉烯酶基因的检测发现，KPC-2 检出率最高，阳性率为 67.3%（68/101）；其次为 IMP-4 基因占 5.0%（5/101）；NDM-1 阳性率为 1.0%（1/101），其中有 1 株 CR-KP 同时携带 KPC-2 和 NDM-1 基因。101 株 CR-KP 中未发现 SME、GES、IMI、VIM、SIM、GIM、SPM 和 OXA-48。在 MLST 的检测结果中，68 株产 KPC-2 酶的肺炎克雷伯菌均为 ST11；在 5 株产 IMP-4 的肺炎克雷伯菌中，3 株为 ST26，2 株为 ST334。毒力相关基因中 urea(92.1%), fimH(91.1%), uge(81.2%), wabG(87.1%)的检出率高。

结论 本院临床分离的 CR-KP 耐药基因主要是 KPC-2 和 IMP-4 基因。毒力因子尤其是 ureA、fimH、uge、wabG 的高检出率使菌株具有更强的适应力与生存特性，需引起重视。

PU-3708

人感染猪链球菌致感染性心内膜炎一例

丛培珊、何宏、孙桂荣
青岛大学附属医院

猪链球菌是一种革兰阳性，圆形或卵圆形，单个、成对或短链状排列的兼性厌氧菌。可引起猪多部位感染，人通过直接接触病(死)猪，致病菌经破损皮肤或黏膜侵入人体而引发感染，是一种人畜共患病原菌。猪链球菌感染通常引起化脓性脑膜炎及菌血症，病情进展快，预后差，很多病例存在严重的后遗症。本文报道一例少见猪链球菌感染导致感染性心内膜炎患者，发现治疗及时，预后好，未出现严重并发症。患者，男，54 岁，厨师。因反复发作活动后胸闷、憋气、心慌 2 月，于 2020 年 10 月 14 日入住我院。患者 2 月前始出现活动后胸闷、憋气、心慌不适，休息后可缓解，平素无咳嗽、咳痰、咯血，可从事轻度体力活动，曾就诊于我院门诊，行心脏彩超检查，诊断为：二尖瓣脱垂并反流，为行手术治疗入住我院。入院查体：体温：37.3 ℃，脉搏：91 次/分，呼吸：32 次/分，辅助检查：白细胞计数 10.37×109/L，中性粒细胞计数 7.9×109 /L，C 反应蛋白 20.9 mg/L；考虑存在感染的可能，于是暂停手术查找病原，于 10 月 15 日采集患者双侧上肢静脉血做需氧+厌氧血培养。16 小时后，4 瓶血培养全部报阳，经鉴定为猪链球菌。药敏试验结果显示，对青霉素、头孢噻肟、红霉素、克林霉素、左旋氧氟沙星、氯霉素、奎奴普丁/达福普汀，利奈唑胺、万古霉素敏感，四环素耐药。明确诊断为猪链球菌感染性心内膜炎，遂用邦达抗感染治疗。11 月 5 日，患者无发热，一般情况可，全麻下行二尖瓣机械瓣膜置换术+主动脉瓣机械瓣置换。患者手术顺利，术后好转出院，未出现严重的后遗症。

PU-3709

全程高脂肪饮食对益生菌调节大鼠变应性进程的影响及机制研究

宋佳平、徐永成
大连市第三人民医院

背景与目的 变应性疾病，包括变应性皮炎，变应性鼻炎和变应性哮喘等。而变应性皮炎到变应性哮喘是一个逐渐发展的过程，称为变应性进程。在动物模型中，益生菌缓解变应性疾病效果明显，但在临床上作用却不明确。这可能与人类的饮食习惯不同相关。本研究探究全程高脂肪饮食对变应性疾病的发展及调节的影响，为变应性疾病的治疗以及益生菌的临床应用奠定基础。
方法 利用鸡卵清白蛋白建立大鼠变应性进程的模型，灌服益生菌治疗，全程用高脂肪饮食喂食。观察大鼠的喷嚏和抓鼻次数，进行 HE 组织学染色，利用 DGGE 分析对肠道菌群的影响， 检测血清、鼻腔和肺中各免疫因子的水平。
结果 1.临床表现：与模型组（M）比，益生菌组（NP）在滴鼻激发和雾化激发后 15min 内喷嚏和抓鼻数量均有下降趋势，鼻粘膜上皮完整，肺组织炎症浸润减少，全程高脂肪模型组（HM）喷嚏数量有增多趋势粘膜破坏更严重，全程高脂肪益生菌组（HP）的喷嚏和抓鼻数量均有上升趋势，鼻粘膜上皮破坏明显，肺组织炎症浸润增多。2.菌群变化：DGGE 实验结果显示，M 组的 DGGE 条带数明显减少（$p<0.01$），与 M 组相比，NP 组条带数增加明显（$p<0.05$），HM 组的条带数显著减少（$p<0.05$）；与 NP 组相比，HP 组的条带数明显减少（$p<0.01$）。3.免疫机制：与 M 组相比，NP 组在血清、鼻腔和肺 IL-4 的含量均有下降趋势，IFN-γ 均升高，其中在鼻腔中显著上升（$p<0.001$），HM 组的 IL-4 含量均上升，其中在血清中显著上升（$p<0.001$），IFN-γ 在血清和肺中有降低的趋势；与 NP 组相比，HP 组的 IL-4 含量有升高趋势，IFN-γ 有下降趋势。

结论 益生菌通过调节菌群和免疫失调，缓解变应性进程，高脂肪饮食会促进变应性疾病的严重程度，延缓益生菌的缓解作用。

PU-3710

铜绿假单胞菌药敏结果分析

赵楠楠、杨丽英
吉林金域医学检验所有限公司

目的 细菌培养周期长，结果发布较慢，对临床上的急重症患者用药起到一定的限制，通过分析我实验室痰培养+药敏结果，其中致病菌为铜绿假单胞菌的药物敏感性，了解其耐药性的分布，为临床经验用药提供参考依据，从而缩短患者的治疗周期、一定程度上减轻患者痛苦。
方法 分析我实验室 2020 年 1 月 1 日-2020 年 12 月 31 日全年铜绿假单胞菌阳性样本的药敏结果。
结果 我实验室 2020 年全年共接收痰液培养+药敏标本 2940 例，阳性样本 1244 例，阳性率 42.31%；其中致病菌为铜绿假单胞菌的有 241 例，阳性率 19.37%。通过对此 241 例标本药敏结果进行分析发现：阿米卡星- 敏感占比 93.78% 耐药占比 2.90%；妥布霉素- 敏感占比 88.38%、 耐药占比 6.22% ；对头孢他啶-敏感占比 81.74%、 耐药占比 13.27% ；美罗培南-敏感占比 80.50%、耐药占比 16.18%；庆大霉素-敏感占比 78.42%、 耐药占比 11.62%；哌拉西林舒巴坦- 敏感占比 76.35% 、耐药占比 6.22%；头孢吡肟-敏感占比 76.35% 、 耐药 10.79%； 亚胺培南- 敏感占比 74.69%、耐药占比 19.09%；哌拉西林-敏感占比 73.03%、耐药占比 13.28%；左氧氟沙星- 敏感占比 62.66%、 耐药占比 26.97%；环丙沙星-敏感占比 57.68%、 耐药占比 29.05。
结论 铜绿假单胞菌对阿米卡星、妥布霉素、头孢他啶、美罗培南等敏感性较强，在急重症患者治疗过程中，当确定感染菌为铜绿假单胞菌时，可优先提前使用以上药物；而对环丙沙星、左氧氟沙星出现耐药趋势。

PU-3711

口腔白念珠菌的毒力、耐药性及其相关性研究

孙康德、张家胜、陈旭
上海交通大学医学院附属第九人民医院

目的 了解口腔白念珠菌分泌型水解酶、生物膜和菌丝相形成等毒力因子的体外表达水平及其耐药性，以及两者的相关性。
方法 分别采用牛血清白蛋白平板、卵黄琼脂平板和三丁酸甘油脂平板检测口腔白念珠菌分泌型天冬氨酸蛋白酶（SAP）、磷脂酶（PL）和脂肪酶（Lip）的活性；使用结晶紫法检测其生物膜的形成；采用实时荧光 PCR 法检测菌丝壁蛋白 1 基因（HWP1）的表达；并用 ATB FUGUS 3 法检测白念珠菌对常用抗真菌药物的耐药性；且运用皮尔逊相关性分析和 T 检验进行数据分析。
结果 80%的菌株高产分泌型天冬氨酸蛋白酶，98%的菌株高产磷脂酶，然而 78%的菌株脂肪酶产量中等，且无菌株高产脂肪酶；50 株菌株均能形成生物膜，其中 30 株（60%）生物膜形成强；SAP 和 PL 的体外表达水平呈正相关（$P<0.05$），其他毒力因子之间均无相关性；耐药株与敏感株的毒力因子体外表达及 HWP1 表达之间没有显著性差异。
结论 大部分口腔白念珠菌高表达 SAP 和 PL，中等表达 Lip，生物膜形成能力强，SAP 和 PL 的体外表达水平呈正相关，口腔白念珠菌的毒力与耐药性之间没有显著相关性。

PU-3712

基于代谢组学分析结核分枝杆菌耐药机制的研究

朱彧[1]、吴敏[1]、张丽霞[1]、陈怀永[2]
1. 天津市海河医院检验科
2. 天津市海河医院基础研究中心

背景 据世界卫生组织估计，2019 年全球有 1000 万人患结核病。耐药结核病（DR-TB）是当今人类重大的公共卫生威胁，2019 年全球有接近 50 万的利福平耐药结核病（RR-TB）患者，其中 78%患者是耐多药结核病（MDR-TB）。我们通过代谢组学分析耐药结核分枝杆菌（MTB）上清液中的代谢物和代谢途径，进而探索结核病耐药机制的潜在标志物。
方法 收集药物敏感（DS）、耐多药（MDR）和泛耐药（XDR）结核分枝杆菌菌株的培养物上清液并以空白上清液作为阴性对照（NC）。采用 LC/MS 方法检测上清液中的代谢物质，分析代谢途径并预测代谢物相关的酶和基因。
结果 我们分析定量了 5478 种代谢产物。与 DS 组代谢物质相比，MDR 组和 XDR 组分别有 11 种和 23 种显著上调，6 种和 13 种显著下调。与 MDR 组相比，XDR 组有 3 种上调，3 种下调。生物信息学分析表明，涉及到结核分枝杆菌的细胞壁成分以及氧化还原过程的代谢途径包括果糖和甘露糖代谢、鞘磷脂和甘油磷脂代谢、半胱氨酸和蛋氨酸代谢以及烟酰胺和叶酸的代谢等。代谢物相关酶和基因预测显示外聚磷酸酶(PRUNE)、甲酰四氢叶酸脱氢酶(ALDH1L1/2)、鞘氨酰胺激酶(SPHK1/2)等是与上述代谢途径相关的酶和基因。
结论 细胞壁组成和氧化还原特性的改变可能在 MTB 耐药性中起重要作用，代谢产物可能是评估结核病耐药性发展的潜在生物标志物。

PU-3713

结核分枝杆菌耐药特异性代谢物鉴定研究

吴敏[1]、朱彧[1]、张丽霞[1]、陈怀永[2]
1. 天津市海河医院检验科
2. 天津市海河医院基础研究中心

目的 筛选结核分支杆菌(MTB)不同耐药性培养物上清液代谢标志物，研究 MTB 特异性代谢物化学结构和生物途径，发现新的结核耐药诊断标记物。
方法 收集空白对照组(NTC)、敏感结核菌(ALS)、耐多药结核菌(MDR)、泛耐药结核菌(XDR)培养物上清液，样品经预处理、代谢物提取，LC-MS 技术检测样本中的代谢物质，结合代谢组学数据处理软件 Progenesis QI v2.3，对原始数据进行定性及相对定量分析，采用多维分析和单维分析相结合的办法筛选组间差异代谢产物。筛选的标准为 OPLS-DA 模型第一主成分的 VIP 值>1，T 检验的 P<0.05，FC>1.2 或 FC<1/1.2。基于 KEGG 数据库对差异代谢物进行代谢通路富集分析，探讨差异样品中代谢途径变化机制。利用软件 Legend 分析筛选结核代谢预测基因反应酶。
结果 富集通路差异代谢物分析得出，与 ALS 组相比，MDR 组检测出 17 种差异代谢物，其中上调 11 种、下调 6 种。同 ALS 组相比，XDR 组检测出 36 种差异性代谢物，其中 23 种上调、13 种下调。与 MDR 组相比，XDR 组检测出 6 种差异代谢物，其中上调 3 种，下调 3 种。利用多元统计分析、t 检验筛选差异代谢物；分析结果表明，不同处理组的代谢物有明显的差异。
结论 差异性代谢物可能是指示结核多耐药的潜在标志物，联合分子标志物来评估结核耐药的发生发展，可以增强诊断的灵敏度和特异性，具有一定的临床应用前景。

PU-3714

沙门氏菌现行国内外标准中基于选择性增菌的等效性研究和评估

刘玥[1,2]、胡屹[2,3]、刘弘[1]、顾其芳[1]、陈敏[1]、崔琳[4]、许学斌[1]
1. 上海市疾病预防控制中心
2. 复旦大学公共卫生学院
3. 复旦大学公共卫生安全教育部重点实验室
4. 上海市临床检验中心

目的 评估现行国内与国际食品沙门氏菌标准中基于前增菌步骤的等效性。
方法 构建现行标准中基于沙门氏菌选择性增菌液对接两种沙门氏菌选择性分离平板的检测流程，使用 5 种参比菌株测试对沙门氏菌选择性增菌液的回收效果，对 5 种常用沙门氏菌选择性平板的沙门氏菌典型菌落特征进行评估；通过实样比较不同沙门氏菌增菌流程的分离敏感性、相对真值（Relative Trueness, RT）和可接受限值（Acceptability Limit, AL）。
结果 纯菌液和模拟样回收罗伯特增菌液（Rappaport Vassiliadis broth, RV）、四硫磺酸钠煌绿增菌液（Tetrathionate Broth, TTB）、亚硒酸盐煌绿增菌液（selenite brilliant green enrichment broth, SBG）、穆勒-考夫曼四硫酸盐新生霉素增菌液（Muller-Kauffmann tetrathionate-novobiocin, MKTTn ）和亚硒酸盐胱氨酸增菌液（Selenite Cystine broth, SC）的稀释度相差 1~2 个梯度，前 4 种增菌液适合非伤寒沙门氏菌增殖，SC 仅适用伤寒沙门氏菌、副伤寒沙门氏菌的增殖；84 件肉制品和水产品样品经 5 种选择性增菌组合方法处理后分离、筛选和确认，结果发现 25 件阳性样品（29.76%），共检出 42 株沙门氏菌。5 种组合方法的沙门氏菌分离敏感性分别为 84.00%、100.00%、88.00%、88.00%和 92.00%；RT 分别为 95.24%、100.00%、96.43%、96.43%和 96.72%。方法 1 的 AL 超出 ISO16140 释义的一类样本可接受限值，其他方法的 AL 均在可接受范围内。
结论 我国现行的国标方法基于 SC 增菌液的无效检验将导致结果偏倚，其他 4 种选择性增菌液的随机组合均可避免负偏差结果产生。

PU-3715

A predictive nomogram for mortality of cancer patients with invasive candidiasis: a 10-year study in a cancer center of North China

Ding Li
Tianjin medical university cancer institute and hospital

Background Invasive candidiasis is the most common fungal disease among hospitalized patients and continues to be a major cause of mortality. Risk factors for mortality have been studied previously but rarely developed into a predictive nomogram, especially for cancer patients. We constructed a nomogram for mortality prediction based on a retrospective review of 10 years of data for cancer patients with invasive candidiasis.
Methods Clinical data for cancer patients with invasive candidiasis during the period of 2010-2019 were studied; the cases were randomly divided into training and validation cohorts. Variables in the training cohort were subjected to a predictive nomogram based on multivariate logistic regression analysis and a stepwise algorithm. We assessed the performance of the nomogram through the area under the receiver operating characteristic (ROC) curve (AUC) and decision curve analysis (DCA) in both the training and validation cohorts.
Results A total of 207 cases of invasive candidiasis were examined, and the crude 30-day mortality was 28.0%. Candida albicans (48.3%) was the predominant species responsible for infection, followed by the Candida glabrata complex (24.2%) and Candida tropicalis (10.1%). The training and validation cohorts contained 147 and 60 cases, respectively. The predictive

nomogram consisted of bloodstream infections, intensive care unit (ICU) admitted > 3 days, no prior surgery, metastasis and no source control. The AUCs of the training and validation cohorts were 0.895 (95% confidence interval [CI], 0.846-0.945) and 0.862 (95% CI, 0.770-0.955), respectively. The net benefit of the model performed better than “treatment for all” in DCA and was also better for opting low-risk patients out of treatment than “treatment for none” in opt-out DCA.
Conclusion Cancer patients with invasive candidiasis exhibit high crude mortality. The predictive nomogram established in this study can provide a probability of mortality for a given patient, which will be beneficial for therapeutic strategies and outcome improvement.

PU-3716

临床 VAP 患者下呼吸道分离 CRKP 菌株临床特征、基因分型及毒力因子研究

刘周、储雯雯、李昕、汪雅婷、周强
安徽医科大学第二附属医院

目的 分析呼吸相关性肺炎（VAP）患者下呼吸标本分离碳青霉烯耐药肺炎克雷伯菌（CRKP）菌株临床特征、基因型及主要毒力因子携带情况。
方法 收集 2019 年 1 月至 12 月期间，临床 VAP 患者合格下呼吸道标本分离非重复肺炎克雷伯菌（KP），药敏试验筛选 CRKP 并检测其碳青霉烯耐药基因。将碳青霉烯非耐药 KP（CnRKP）作为对照组，分析 CRKP 组患者临床感染特征。应用 PCR 联合测序技术检测 KP 菌株多位点序列分型、荚膜 wzi 分型及毒力因子。应用脉冲场凝胶电泳（PFGE）分析 CRKP 菌株同源性。
结果 共收集 56 株 KP，60.7%为 CRKP（34 株），CRKP 主要携带 blaKPC-2（97.1%），对除替加环素以外的抗菌药物耐药率高。CRKP 组患者死亡比例显著高于 CnRKP 组（P＜0.05）。82.4%的 CRKP 属于 ST11 型，K64（50.0%）为主要荚膜型。CRKP 携带多种毒力因子，pLVPK-like 质粒介导的毒力因子 rmpA2、iucA 及 iroN 主要由 K64-ST11 型 CRKP 携带，且 PFGE 显示 K64-ST11 型 CRKP 存在克隆传播。
结论 VAP 患者下呼吸分离 CRKP 菌株呈现多重耐药，K64-ST11 型为其主要分子型别。K64-ST11 型 CRKP 携带多种质粒介导的毒力因子并存在克隆播撒，应密切监控该基因型 CRKP 菌株临床流行趋势。

PU-3717

2013—2020 年某医院耐碳青霉烯类铜绿假单胞菌的临床分布、耐药性及金属 β-内酰胺酶基因检测

李进
重庆医科大学

目的 回顾性分析 2013—2020 年重庆某医院耐碳青霉烯类铜绿假单胞菌的临床分布、耐药性及金属 β-内酰胺酶常见基因分布情况，为指导临床抗感染治疗提供可靠的依据。
方法 收集重庆某医院 2013 年 1 月至 2020 年 12 月临床分离的非重复 CRPA 菌株 482 株，利用 DL-96 全自动细菌测定系统进行菌株鉴定和药敏实验，参照 2020 版 CLSI-M100 文件标准判断结果，并通过 WHONET 5.6 软件对菌株的临床分布和耐药特征进行统计分析，同时采用亚胺培南-EDTA 双纸片协同法筛选金属酶表型阳性的菌株，再利用 PCR 法检测铜绿假单胞菌 MBL 基因的分布情况。
结果 2013 年 1 月至 2020 年 12 月我院住院患者送检的临床标本共检出 CRPA 菌株 482 株，其中，2013 年 78 株、2014 年 24 株、2015 年 55 株、2016 年 32 株、2017 年 78 株、2018 年 90 株、

2019 年 82 株、2020 年 43 株。从标本类型来看，482 株 CRPA 菌株中痰液占 83.6%，肺泡灌洗液占 7.5%，分泌物占 2.1%，尿液占 3.1%，血液占 1.0%，其它占 2.7%；从年龄分布来看，CRPA 菌株中，61-70 岁的患者人数最多，共 152 例，其次为 71-80 岁的患者，共 107 例，20 岁及以下无患者；482 株 CRPA 菌株主要分布的科室为呼吸内科、重症医学科和神经外科。药敏结果显示 482 株 CRPA 菌株对临床常见抗菌药物的敏感率相对稳定。PCR 检测结果显示，MBL 基因阳性 98 株，其中 IMP 型 42 株，VIM 型 36 株，SPM 型 20 株，未检测出其他基因型。
结论 2013—2020 年分离出来的 482 株 CRPA 菌株临床分布广泛，对临床上常用的抗菌药物耐药率普遍较低，产 MBL 是引起铜绿假单胞菌对亚胺培南耐药的主要原因，临床应加强对产金属酶铜绿假单胞菌的检测和监控，制定合理有效的感染控制措施，合理使用广谱抗菌药物，最大限度阻止 CRPA 菌株的播散。

PU-3718

东北地区 1233 例布鲁菌抗体三项样本的结果分析

杨丽英、齐春林
吉林金域检验医学检验所有限公司

目的 分析 2020.09-05-2020.12.31 期间送检我司布鲁菌抗体三项样本 1233 例样本的结果情况，给流行病学资料调查提供一定参考依据。
方法 收集 2020.09-05-2020.12.31 期间送检我司布鲁菌抗体三项样本 1233 例样本结果数据进行分析。
结果 2020.09-05-2020.12.31 期间送检我司布鲁菌抗体三项样本 1233 例样本，其中布鲁菌 IGG 抗体检测阳性 351 例，阳性率为 28.47%；布鲁菌病虎红平板凝集试验阳性 263 例，阳性率为：21.33%；布鲁菌病试管凝集试验阳性 222 例，阳性率为：18.00%。其中 1233 例样本中三项全阳患者为 167 例，1233 例样本中两项全阳（含布鲁菌病试管凝集）患者为 38 例。由于无法逐一溯源患者的流行病史和临床表现，结合中华人民共和国卫生行业标准《WS 269-2019 布鲁氏菌病诊断》Diagnosis for brucellosis 标准，可以判断有 205 例患者感染布鲁氏菌。
结论 2020.09-05-2020.12.31 期间送检我司布鲁菌抗体三项样本 1233 例样本，感染布鲁菌的患者有 205 例，患者综合感染率为 16.63%， 需引起相关行业及医务人员的关注。

Bloodstream infection in hospitalized COVID-19 patients: a retrospective cohort study

Kewen Tang[2]、Congrong Li[1]
1. Renmin Hospital of Wuhan University
2. Renmin Hospital of Wuhan University

Background Bacteraemia is a global healthcare issue and continues to be the leading cause of death from infection. There is little information about the clinical characteristics of COVID-19 patients with bloodstream infections.
Objectives To describe the incidence of bloodstream infection (BSI) in hospitalized patients with COVID-19 and the clinical characteristics of these patients with BSI.
Methods In this retrospective study, one hundred and twenty-one COVID-19 patients who underwent blood culture tests in Renmin Hospital of Wuhan University from January 1st to June 30th, 2020 were included. We collected the clinical electronic medical records of these patients, and the data of demography, clinical symptoms, microbiology and clinical outcomes were compared and analysed.

Results The incidence of bacteraemia in patients diagnosed with COVID-19 was very low (1.23%). A total of 23 types of pathogenic bacteria were detected in patients with BSI, including 9 bacteria and 2 fungi. Compared with patients who without BSI, patients with BSI have significantly increased hospitalization time and mortality.
Conclusions Secondary bloodstream infection is not common in the diagnosis of COVID-19. These results may be crucial for determining the role of empirical antibacterial therapy or antibiotic management strategies, and suggest that we strictly abide by standard surveillance management practices and infection control protocols.

PU-3720

一例血培养胎儿弯曲菌引起的思考

王秀菊、单星星、赵水娣
南京金域医学检验所有限公司

目的 通过对一例送检三瓶血培养，在 120h 内仅有一瓶仪器报阳并鉴定出胎儿弯曲菌、另外两瓶“阴性瓶”经转种后均有胎儿弯曲菌生长的案例进行分析，思考怎样提高实验室关于血培养检出少见菌及疑难菌的能力。
方法 通过革兰染色涂片镜检及郑州安图质谱鉴定仪和法国梅里埃质谱鉴定仪认识胎儿弯曲菌，了解其生长特性，同时关注血培养仪检测原理及细菌生长曲线，对疑似“阴性瓶”进行验证。
结果 检出的细菌经过染色及质谱鉴定确认为胎儿弯曲菌，“阴性瓶”中生长的细菌经过确认与报阳瓶中结果一致，这是一例由胎儿弯曲菌感染所引起的菌血症。
结论 少见菌引起的血流感染常常由于细菌生长缓慢导致结果“假阴性”，实验室应当认真慎重对待每一个报阳血瓶及生长曲线，并关注感染病原体，发放出最值得有参考意义的检测报告单。

PU-3721

人型支原体对四环素、左氧氟沙星敏感性方法研究

王秀菊、单星星
南京金域医学检验所有限公司

目的 比较 CLSI-M43-A 琼脂稀释法（固体法）与支原体液体培养基法（液体法）测定人型支原体对四环素和左氧氟沙星的敏感性差异。
方法 选取从泌尿道中段尿、生殖道分泌物培养标本中分离的 20 株人型支原体菌株经质谱仪鉴定后，用固体法测定左氧氟沙星、四环素对这些人型支原体的最低抑菌浓度（MIC），并与液体法得出的结果进行比较。
结果 固体法显示四环素 MIC 值范围 0.125－1ug/mL，左氧氟沙星 1－32ug/mL。液体法显示 20 株人型支原体对四环素（TE）均敏感（S）；左氧氟沙星(LEV)6 例中介(I)14 例耐(R)。两种方法检测泌尿道和生殖道标本人型支原体对 TE、LEV 敏感性结果无明显差异。
结论 四环素对人型支原体仍保持较好的抗菌活性，左氧氟沙星的耐药性较高。固体法与液体法检测人型支原体对四环素、左氧氟沙星敏感性结果一致性较好，可以用液体培养基作为尿液标本中人型支原体的药敏检测方法。

PU-3722

Molecular epidemiology of Candida tropicalis isolated from urogenital tract infections

Qianyu Wang
Renmin Hospital of Wuhan University

Candida tropicalis is a common human pathogenic yeast, and its molecular typing is important for studying the population structure and epidemiology of this opportunistic yeast, such as epidemic genotype, population dynamics, nosocomial infection, and drug resistance surveillance. In this study, the antifungal susceptibility test and multilocus sequence typing (MLST) analysis were carried out on C. tropicalis from central China. Among 64 urogenital isolates, 45 diploid sequence types (DST) were found, of which 20 DSTs (44.4%) were new to the central database. The goeBURST analysis showed that CC1 (clonal complex) was the only azole-resistant (100%, 10/10) cluster in Wuhan, which was composed of DST546, DST225, DST376, and DST506, and most of the strains (90%, 9/10) were isolated from the urinary tract. Potential nosocomial infections were mainly caused by CC1 strains. The azole resistance rate of urinary isolates (50.0%, 21/42) was higher than that of vaginal isolates (27.3%, 6/22). The genotype diversity and novelty of vaginal isolates were higher than those of urinary isolates. C. tropicalis population in Wuhan was genetically diverse and divergent from that seen in other countries. In this study, there were significant differences in genotype and azole susceptibility between urine and vaginal strains. The azole-resistant cluster (CC1) found in urine is of great significance for the clinical treatment and prevention of nosocomial infection. The newly discovered DSTs will contribute to further study the similarity, genetic relationship, and molecular epidemiology of C. tropicalis worldwide.

血液中检出脓肿奴卡菌 1 例

杜赛君、单星星
南京金域医学检验所有限公司

目的 探讨基质辅助激光解吸电离飞行时间质谱（MALDI-TOF MS）对于奴卡菌属的快速鉴定，并分析奴卡菌的药敏结果，为临床诊疗提供依据。

方法 取阳性需氧血培养瓶中血液转种哥伦比亚血琼脂培养基和巧克力培养基后置于 35℃ CO2 环境进行培养。对培养后的细菌经涂片染色一系列试验后判断疑似为奴卡菌，再使用 MALDI-TOF MS 方法对于临床分离的疑似奴卡菌进行快速鉴定。

结果 本次我们报告一例乳腺癌术后合并脓肿奴卡菌血源性感染，鉴定为脓肿奴卡菌，置信度 9.195。药敏结果显示莫西沙星 2μg/ml，阿米沙星≤4μg/ml，利福平≤0.5 μg/ml，乙胺丁醇≥512μg/ml 左氟氧沙星 4μg/ml，克拉霉素 256μg/ml，异烟肼≥128μg/ml。选择敏感抗生素进行抗菌治疗后，感染症状得到有效控制。

结论 应用 MALDI-TOF MS 技术可快速鉴定临床分离疑似奴卡菌，指导实验室正确选择药敏试验，为临床提供感染诊断及药物治疗依据。

PU-3724

住院患者血流感染大肠埃希菌的实验室与临床分析

曹敬荣、王岩、陈典典、李文军、谢威、刘云屹、闵嵘、王培昌
首都医科大学宣武医院

了解住院患者大肠埃希菌血流感染的临床特点及实验室结果，为临床诊疗提供实验室依据。
方法 回顾性分析本院 2015 年 1 月至 2019 年 1 月大肠埃希菌血流感染患者的临床分布、耐药情况和实验室检查结果，并与同期血培养阴性患者实验室检查结果对比；比较感染产超广谱 β-内酰胺酶（ESBLs）大肠埃希菌组和非产 ESBLs 组）患者的耐药性及临床特征。
结果 四年间共收集 255 例大肠埃希菌引起血流感染患者，男 107 例（41.96%），女 148 例（58.04%），年龄 16-95 岁（平均 62.79±17.92 岁），≥60 岁占 63.14%（161/255）；产 ESBLs 大肠埃希菌占 57.14%，对呋喃妥因、阿米卡星和碳青霉烯类药物耐药率较低（＜10%）；患者总病死率为 5.49%（14/255），其中 ESBLs 组死亡率为 8.28%（12/145）远高于非产 ESBLs 组的死亡率 1.82%（2/110），差异有统计学意义（p＜0.05）；是否合并肾功能不全、机械通气、入住 ICU 是患者产 ESBLs 的危险因素（p＜0.05）。成对血培养阳性报警比率（56.79%）显著高于单需氧瓶（16.08%）和单厌氧瓶（20.39%）；成对报阳瓶中厌氧瓶先报阳的比率（64.81%）明显高于需氧先报阳（35.19%），差异有统计学意义（p＜0.05）；TTP≤24h 者占 95.29%（243/255），≤12h 者占 71.76%（183/255）。实验室检查白细胞、C 反应蛋白和降钙素原升高者分别占 44.31%、63.53%和 78.04%，高于同期血培养阴性者（p＜0.05）。
结论 大肠埃希菌血流感染分布广泛，血培养成套送检有助于提高阳性检出率，碳青霉烯类耐药菌的出现应引起重视。

PU-3725

SARS-COV2 神经系统相关症状研究进展

曹敬荣、凌佳意
首都医科大学宣武医院

新型冠状病毒肺炎目前已成为全球性重大的公共卫生事件，为结束当前疫情和获取未来防疫经验，深入了解 COVID-19 和 SARS-CoV-2 以成为当务之急。COVID-19 为急性呼吸道传染病，以发热、干咳、乏力为主要表现，除典型的呼吸系统症状，很多 COVID-19 患者表现出嗅觉、味觉减退、颅内出血等症状。本文探讨 SARS-CoV-2 对于神经系统的影响以及神经系统症状发生机制，SARS-CoV-2 具有神经侵袭性，可以至少通过神经途径和血行途径造成各种神经病变；SARS-CoV-2 诱导“细胞因子风暴”即对于 CNS 病毒感染的免疫反应，免疫应答水平的差异可能与 CNS 症状产生有关；小胶质细胞被认为是脑损伤和神经炎症事件的标志物，ENS 胶质细胞起到包括免疫调节和抗原呈递的作用，这些细胞的感染可能会产生合适的免疫反应，转而可能导致全身疾病的播散或者或细胞因子风暴。帕金森病，多发性硬化和发作性睡眠病等神经系统疾病的发病机制与神经系统症状产生机制存在关系。神经影像一般改变以及免疫抑制等情况对诊断用药产生了影响。

中枢神经系统感染主要病原菌的构成及药物治疗研究进展

曹敬荣、杨蕾
首都医科大学宣武医院

各种病原菌侵犯中枢神经系统可引起脑膜炎、脑炎、脓肿等各种感染性疾病，引起中枢系统功能障碍，严重威胁人类健康。严重者可出现菌血症、脓毒症等全身炎性反应症状，危及生命。因此对于发现是中枢神经系统感染的患者，应根据具体情况，及时进行抗感染治疗，保护中枢神经系统功能和避免全身炎症反应。本文主要讨论导致中枢神经系统感染的病原菌的构成和抗感染药物选择的研究进展。

PU-3727

碳青霉烯耐药高毒力肺炎克雷伯菌的耐药性与毒力研究进展

陈典典、曹敬荣
首都医科大学宣武医院

肺炎克雷伯菌是引起多种感染的常见致病菌，可通过获得耐药基因或毒力基因两种方式形成泛耐药高毒力肺炎克雷伯菌（extensively drug-resistant hypervirulent Klebsiella pneumoniae, XDR-hvKP）。相比于经典肺炎克雷伯菌，高毒力肺炎克雷伯菌（hypervirulent Klebsiella pneumoniae, hvKP）的感染程度更加严重。而随着碳青霉烯耐药肺炎克雷伯菌（Carbpenem resistant Klebsiella pneumoniae，CRKP）引起感染的增加，新出现的碳青霉烯耐药高毒力肺炎克雷伯菌（CR-hvKP）由于其高致病性和高耐药性，成为临床面临的一种新的“超级细菌”，CR-hvKP 感染病例的报道已出现并有逐渐增加趋势，位于可移动元件上的耐药基因与毒力基因在肺炎克雷伯菌中的传播会造成 CR-hvKP 在医院内或社区的流行，其危害和后果将更加严重，给临床治疗带来严峻挑战。本文从感染现状与危险因素、流行病学特征、耐药机制、毒力特点等方面对碳青霉烯耐药高毒力肺炎克雷伯菌进行综述，以期对临床防治该类细菌感染提供有用信息，使临床对其有更清楚的认识和根据其进化规律采取有效的预防手段。

PU-3728

成人和儿童中枢神经感染的差异研究进展

曹敬荣、宋妍
首都医科大学宣武医院

目的 研究中枢神经系统感染相关疾病中成人和儿童的差异，为临床诊治提供帮助。
方法 通过阅读大量文献，分析整理在中枢神经系统感染相关疾病中，成人和儿童在危险因素、流行病学等方面的差异之处。
结果 中枢神经系统感染相关疾病中，成人和儿童存在差异。危险因素方面，主要体现在感染方式的不同以及免疫因素对疾病的影响；流行病学方面，在细菌性脑膜炎患者中，可以看到明显的随年龄分布的病原体差异；结核性脑膜炎多见于 4 岁以下的儿童和老人，在成年人中主要是免疫抑制患者；病毒性感染，真菌性感染也各有其分布特征；临床表现方面，不同类型的中枢神经感染疾病在不同年龄患者中表现各异，缺乏特异性表现；检查手段方面，腰椎穿刺是目前中枢神经感染相关疾病鉴别病因方面的重要手段，病原学检查，影像学检查，特殊标记物等也发挥着不同的作用；诊疗过程方面，由于存在儿童和成人在上述的差异，在诊断流程自然方面存在着差异，更由于儿童的特

殊性，治疗往往也有所差异；在预后方面，成人中枢神经感染疾病相较儿童往往并发症更多，更严重，预后较为不良。而儿童主要应该考虑并发症对其未来生长发育和生活的影响。
结论 在中枢神经系统感染相关疾病中，成人和儿童在危险因素、流行病学、临床表现、检查手段、诊疗过程以及预后方面存在着差异，临床医生面对不同年龄的患者，应该结合病情，综合考虑。

PU-3729

Susceptibility Testing of Aspergillus against Mold-Active Antifungal Drugs Using the broth microdilution Methods of the Clinical and Laboratory Standards Institute and the European Committee on Antimicrobial Susceptibility Testing

Ying Li、Jingrong Cao、Rong Min、Peichang Wang
Department of Clinical Laboratory, Xuanwu Hospital, Capital Medical University, Beijing, China

Background Aspergillus is an important opportunistic pathogen with high morbidity and mortality among immuno-compromised patients. Antifungal susceptibility testing (AFST) based on broth microdilution method is recommended to detect the resistant isolates and provide informative message for the clinicians to choose the optimal treatment drugs.
Materials/Methods We compared three broth microdilution AFST methods, namely the two reference Methods of EUCAST E.DEF 9.3.1 and CLSI M38-A2 and the commercial method of Sensititre YeatOne for 289 isoaltes of clinically important Aspergillus species including A. fumigatus (n=141), A. flavus (n=83), A. niger (n=26), A. terreus (n=10), A. nidulans (n=15) and other 7 rare species (n=14) against amphotericin B, itraconazole, voriconazole, posaconazole, caspofungin and micafungin. The MIC50/MIC90 or MEC50/MEC90 were calculated for each species - antifungal agent combination. Differences in MICs or MECs of within ±1/±2 dilutions between the each two Methods were calculated to assess the agreement percent.
Results The MIC50/MIC90 values of the 289 isolates against the six drugs among the three AFST Methods in this study were quietly being close of ≤ 2 mg/L. The total agreement within ±1/±2 dilutions were 78.2%/93.7% between the CLSI and EUCAST Methods and 66.8%/91.1% between the CLSI and YeastOne Methods and 67.9%/82.6% between the EUCAST and YeastOne Methods The agreements on susceptibility classification of the tested isolates were 98.0% between the CLSI and EUCAST methods, 95.5% between the CLSI and YeastOne methods, and 94.1% between the EUCAST and YeastOne Methods In details, most of the categorical discrepancy concentrated on A. flavus - amphotericin B combination which YeastOne method mainly got MICs >2 mg/L for this group and categorized as being resistant according to the YeastOne's instruction while the other two Methods just got lower values of <2 mg/L as being susceptible.
Conclusions the agreements between the three AFST Methods are quiet good for Aspergillus especially on the triazoles susceptibility testing. However, extra notice should be paid when Sensititre YeastOne system was used to detect the susceptibility of amphotericin B for A. flavus, which may give higher MIC values than the two reference Methods

PU-3730

真菌性中枢神经系统感染的实验室检测进展

曹敬荣、葛小铭
首都医科大学宣武医院

中枢神经系统真菌感染在免疫力低下的人群中易感，发病率有逐年上升的趋势，常见的病原菌有新型隐球菌、念珠菌、曲霉菌、毛霉菌等。其病程长，复发率和死亡率高，早期病原体诊断对临床治疗具有重要指导作用。因大多数患者的临床症状不典型，传统病原体检测方法特异性有限，临床诊断和治疗较为困难。随着分子生物学的不断发展，基因测序、扩增等技术的逐渐成熟，聚合酶链反应、基因芯片等技术已经逐步运用到真菌性中枢神经系统感染的检测中。本文主要介绍了真菌性中枢神经系统感染的流行病学、实验室检测进展及这些检测方法的优缺点，并对未来真菌检测新技术的发展进行了展望。

PU-3731

Phosphorylcholine esterase plays a critical role in Dolichos biflorus agglutinin and Helix pomatia agglutinin binding to pneumococci

Menglan Zhou、Yingchun Xu
Peking Union Medical College Hospital

Background Streptococcus pneumoniae (pneumococcus) has lipoteichoic acid (LTA) and cell wall teichoic acid (WTA) expressing the Forssman antigen (FA), which is created when phosphorylcholine esterase (Pce) removes phosphorylcholine from GalNAcα1→3GalNAcβ1 at the non-reducing end of LTA/WTA. Dolichos biflorus agglutinin (DBA) and Helix pomatia agglutinin (HPA) are two lectins targeting FA, and may be useful in identifying pneumococcus.
Methods To investigate the usefulness of DBA for pneumococcal identification, 15 pneumococcal strains, including one non-encapsulated strain, were studied for DBA binding with flow cytometry and fluorescence microscopy.
Results Twelve strains were positive for DBA binding while three were negative. Structured illumination microscopy showed that DBA stained only the subcapsular area of pneumococci. The three DBA non-binders showed no Pce activity in vitro while the 10 DBA binders displayed Pce activity (the remaining two strains were DBA binders with no Pce activity in vitro). The pce gene sequence for 10 representative strains revealed two functional pce alleles, the previously recognized “allele A” and a newly discovered “allele B” (with 12 additional nucleotides). Isolates with allele B showed no Pce activity in vitro but did bind to DBA, indicating allele B Pce is functional in vivo. Genetic transfer experiments confirmed that either allele is sufficient (and necessary) for DBA binding. The three DBA non-binders had various mutations that affected Pce function. Observations with HPA were identical to those with DBA.
Conclusion We show that DBA and HPA fail to identify some pneumococcal isolates and that they bind only to the LTA/WTA of pneumococcal isolates with functional Pce.

PU-3732

Rapid identification of Streptococcus pneumoniae serotypes by cpsB gene-based sequetyping combined with multiplex PCR

Menglan Zhou、Xu Yingchun
Peking Union Medical College Hospital

Background/purpose Streptococcus pneumoniae is an important human pathogen that causes invasive infections in adults and children. Accurate serotyping is important to study its epidemiological distribution and to assess vaccine efficacy.
Methods Invasive S. pneumoniae isolates (n = 300) from 27 teaching hospitals in China were studied. The Quellung reaction was used as the gold standard to identify the S. pneumoniae serotypes. Subsequently, multiplex PCR and cpsB gene-based sequetyping Methods were used to identify the serotypes.Methods Based on the Quellung reaction, 299 S. pneumoniae isolates were accurately identified to the serotype level and 40 different serotypes were detected. Only one strain was non-typeable, and five most common serotypes were identified: 23F (43, 14.3%), 19A (41, 13.7%), 19F (41, 13.7%), 3 (31, 10.3%), and 14 (27, 9.0%). Overall, the multiplex PCR method identified 73.3 and 20.7% of the isolates to the serotype and cluster levels, respectively, with 1.7% of the isolates misidentified. In contrast, the cpsB sequetyping method identified 59.0 and 30.3% of the isolates to the serotype and cluster levels, respectively, and 7% were misidentified.
Conclusions The cpsB gene sequetyping method combined with multiplex PCR and the Quellung reaction can greatly improve the accuracy and efficiency of serotyping, besides reducing the associated costs.

PU-3733

Early Predictors of Severe COVID-19 Among Hospitalised Patients

Youhua Yuan、Wenjuan Yan、Qi Zhang、Baoya Wang
Henan Provincial People's Hospital

This study aimed to develop a reliable early prediction model for identifying who will develop severe illness from COVID-19 at hospital admission to ensure appropriate treatment delivery and optimal use of resources. In total, 52 and 64 severe and mild cases of COVID-19, respectively, were enrolled in this retrospective, multicentre, cohort study from January to March 2020. Least Absolute Shrinkage and Selection Operator (LASSO) and logistic regression were used to construct a predictive risk score. A prediction model was then developed and verified, using data from four hospitals in central China. Of the 50 variables assessed, 8 were identified as independent predictors and risk scores for severe COVID-19, including age (OR = 14.01, 95% CI 2.1–22.7), number of comorbidities (OR = 7.8, 95% CI 1.4–15.5), abnormal bilateral chest computed tomography images (OR = 8.5, 95% CI 4.5–10), lactate dehydrogenase (OR = 4.6, 95% CI 1.2–19.2), C-reaction protein OR = 16.7, 95% CI 2.9–18.9), neutrophil cell count (OR = 10.1, 95% CI 1.88–21.1), haemoglobin (OR = 16.8, 95% CI 2.4–19.1), and D-dimer (OR = 5.2, 95% CI 1.2–23.1). The model was effective, with an area under the receiver-operating characteristic curve of 0.944 (95% CI 0.89–0.99, $p < 0.001$) in the derived cohort and 0.8152 (95% CI 0.803–0.97; $p < 0.001$) in the validation cohort. The score has been translated into a nomogram risk calculator card that is freely available to the clinician. In **Conclusions** Predictors based on the characteristics of COVID-19 patients at the time of hospital admission may help in the early prediction of risk of developing critical illness later.

PU-3734

一种快速检测耶氏肺孢子菌的荧光定量 PCR 方法

许婉怡、杨洋、张磊、陈敬贤
广州金域医学检验中心

耶氏肺孢子菌是一种酵母样真菌，分布广泛。血清学研究表明 3-4 岁以上儿童大多已经受到暴露。耶氏肺孢子菌在正常健康人呼吸道中定植或引起无症状感染并不罕见，而在长期住院的病房里颇为常见。耶氏肺孢子菌通常在免疫受损病人中引起肺孢子菌肺炎，临床表现包括呼吸困难、发热、干咳等，胸部影像可见异常。肺孢子菌目前还未能体外培养，主要的实验诊断方法包括组织学检查（六胺银染色可见菌体包囊外壁）、免疫荧光染色、PCR 扩增病原体的核酸以及微生物宏基因组测序等。

为了能够快速地检出病人下呼吸道样品中是否存在耶氏肺孢子菌，并提高敏感性，我们建立了基于荧光探针的实时定量 PCR 法。该方法在 103～108 拷贝/微升范围有良好的线性范围，其最低检出量为 2000 拷贝/反应。干扰实验表明，B 族链球菌、肺炎链球菌、化脓链球菌、卡他链球菌、表皮葡萄球菌、金葡、肺炎克雷伯菌、铜绿假单胞菌、百日咳杆菌、D 群沙门氏菌、白念、光滑念、近平滑念、结核杆菌、烟曲霉、黄曲霉、黑曲霉、土曲霉，以及腺病毒、鼻病毒、副流感病毒、呼吸道合胞病毒对肺孢子菌实时定量 PCR 都没有干扰。

用本方法共分析了 190 例病人的肺泡灌洗液、深咳痰液或血液样品，其中 186 例同时做了六胺银染色。与六胺银染色的阳性率 4.3%相比，荧光 PCR 为 20.96%。PCR 阳性的标本包括 18 份肺泡灌洗液和 21 份深咳痰，没有在外周血标本中检出（仅 3 份样品）。总之，我们建立的耶氏肺孢子菌分子检测法特异性和敏感性高，能够从临床病人的样品中快速地诊断是否含耶氏肺孢子菌的 DNA。

PU-3735

MALDI-TOF MS 技术在侵袭性丝状真菌快速鉴定中的应用

宗来斌[1]、吕火烊[2]
1. 浙江大学医学院附属第四医院
2. 浙江省人民医院

目的 探索不同培养基、不同培养时间和不同蛋白质提取方法对侵袭性丝状真菌质谱鉴定准确率的影响，旨在提高 MALDI-TOF MS 技术鉴定侵袭性丝状真菌的准确率。

方法 采用分子生物学方法为金标准，同时运用 MALDI-TOF MS 技术对所收集临床丝状真菌进行鉴定。根据分子生物学的鉴定结果，去除 VITEK-MS V3.0 数据库中没有的菌株，其余菌株接种在三种不同的培养基中（SDA、PDA 和 CA），采用两种不同的蛋白质提取方法(甲酸乙腈法和磁珠法)，获得了不同培养时间点（2、3、5、7 和 9 天）的特异性质谱指纹图谱。

结果 不同丝状真菌蛋白质提取方法进行比较，甲酸乙腈法总鉴定准确率为 79.8%，磁珠法总鉴定准确率为 77.5%，两种丝状真菌蛋白质提取方法的质谱鉴定准确率无显著性差异（$\chi2 = 1.040$，$P = 0.308$）。不同培养基进行比较，SDA 培养基总鉴定准确率为 90.7%，PDA 培养基总鉴定准确率为 81.4%， CA 培养基总鉴定准确率为 67.4%，三种不同培养基的丝状真菌质谱鉴定准确率有显著性差异（$\chi2 = 36.609$，$P = 0.000$），其中使用 SDA 培养基鉴定准确率最高，使用 CA 培养基鉴定准确率最低。不同培养时间进行比较，丝状真菌培养 2 天、3 天、5 天、7 天和 9 天后的质谱总鉴定准确率分别为 64.3%、88.4%、89.1%、79.1%和 78.3%，不同培养天数的质谱鉴定准确率有显著性差异（$\chi2 = 32.274$，$P = 0.000$）。培养 3 天和培养 5 天的质谱鉴定准确率优于培养 7 天和培养 9 天的质谱鉴定准确率，培养 2 天的质谱鉴定准确率明显低于其它天数。

结论 侵袭性丝状真菌使用 SDA 培养基培养 3 天，运用甲酸乙腈法提取蛋白质进行质谱鉴定最理想。

PU-3736

杭州地区 2015-2019 年 356 例耐碳青霉烯类肠杆菌科细菌的分布特点和耐药性分析

翁远珍[1]、王欢[2]、单宇[2]、刘军权[1,2]
1. 杭州市下城区中西医结合医院
2. 杭州金域医检验所有限公司

目的 了解我院 2015-2019 年检出的 356 例耐碳青霉烯类肠杆菌科细菌（carbapenem-resistant Enterobacteriaceae，CRE）的分布特点和耐药性，以期为临床的抗感染与治疗提供依据。
方法 收集我院 2015-2019 年临床分离的 356 例碳青霉烯类肠杆菌科细菌及患者临床资料，对检出的 CRE 菌属分布、标本来源、检出病区、检出患者年龄分布和耐药性情况进行统计分析。
结果 2015-2019 年，我院共检出 CRE 菌株 356 例，总检出率为 5.62%，各年度 CRE 菌株检出率分别为 2.15%、3.97%、5.19%、6.95%、8.30%，呈逐年上升趋势。在检出的 356 株 CRE 菌株中，主要是肺炎克雷伯菌（66.6%）、大肠埃希菌（19.1%）两种菌株；标本主要来源是痰液（51.7%）、尿液（22.2%）、脓液及分泌物（6.4%）、血（6.4%）、胆汁（4.5%）；检出病区主要是重症监护室（43.8%）、儿科（18.0%）、泌尿外科（12.1%）、脑病科（10.4%）、呼吸内科（7.3%）；新生儿（9.06%）、老年人（6.05%）的 CRE 菌株检出率高于儿童（4.97%）和青少年人群（5.05%）；两种主要 CRE 菌株对阿米卡星、妥布霉素、庆大霉素较为敏感，对青霉素类、头孢类、氟喹诺酮类抗菌药物耐药率较高。
结论 耐碳青霉烯类肠杆菌科细菌检出率逐年升高，且对临床常见抗菌药耐药率普遍较高，临床中应加强耐药菌株的监测，合理选择使用抗菌药物，避免 CRE 的大规模传播。

PU-3737

杭州地区老年病医院 2017-2019 年 2097 例耐碳青霉烯类肠杆菌科细菌的分布特点和耐药性分析

单宇[1,2]、翁远珍[2]、刘军权[1]
1. 杭州金域医学检验所有限公司
2. 杭州下城区中西医结合医院

目的 探究杭州地区老年患者耐碳青霉烯类肠杆菌科细菌(carbapenem-resistant Enterobacteriaceae, CRE)的分布特点和耐药性状况，以期指导临床合理用药。
方法 收集 2017-2019 年杭州地区 60 余家老年病医院送检标本分离菌株，并采用 VITEK-2 Compact 全自动微生物分析系统和 K-B 法药敏纸片补充完善药敏结果，并分析耐碳青霉烯类肠杆菌科细菌的分布特点和耐药性。
结果 2017-2019 年，共检出肠杆菌科细菌 12819 株，含耐碳青霉烯类肠杆菌科细菌 2097 株，总检出率为 16.36%，且 CRE 检出率逐年上升；主要菌属为肺炎克雷伯菌(64.09%)和大肠埃希菌(18.74%)，各年中各菌属类型分布占比没有明显变化。产酸克雷伯菌、肺炎克雷伯菌、粘质沙雷菌、摩氏摩根菌 2017-2019 年总计耐药率均超过了 10%，肺炎克雷伯菌、大肠埃希菌、产酸克雷伯菌、摩氏摩根菌的耐碳青霉烯类药物耐药检出率日益增高。检出 CRE 菌株的标本类型主要是痰液(56.60%)和尿液(28.04%)，其次是咽拭子(6.15%)、全血(3.24%)、导管(2.72%)、脓液及分泌物(1.86%)。2097 株 CRE 对阿米卡星、庆大霉素、妥布霉素、环丙沙星、左旋氧氟沙星、复方新诺明、四环素等相对敏感，敏感率在 42.7~75.3%。
结论 杭州地区老年患者耐碳青霉烯类肠杆菌科细菌检出率呈逐年上升趋势，对多数临床常用抗菌药物敏感性呈逐年下降趋势，临床应加大对老年患者用药的重视程度并采取相应措施。

Enhancement in serum (1–3)-β-D-glucan level by cutaneous alternariosis: A case report and literature review

zongyao chen、yayun jiang、dengchao wang、mao zheng、xiao liu、chengliang yuan
People's Hospital of Deyang City

Objective Report a case of cutaneous alternariosis, to provide reference for the diagnosis and treatment of cutaneous alternariosis.
Methods Retrospective analysis of the diagnosis and treatment process of this case, this diagnosis was based on microscopic examination and mycological culturing of patient's vesicular lesions, with the use of 5 molecular markers (namely, ITS, ATPase, Actin, rpb2, and tef1) for strain identification. serum (1–3)-β-D-glucan (BG)assay was performed using a kit (Dynamiker Biotechnology [Tianjin] Co., Ltd.) based on spectrophotometry for the quantitative detection of BG in the human serum.
Results Microscopic examination of the blister fluid showed hyphae with light green, obtusely round at the top and slender at the end, the blister fluid was cultured on SDA at 28◦C for 3 days, we got the colony appeared round, grayish-green, margin regular, and fluffy. The strain was identified by sequencing for 5 phylogenetic markers, and the results from this 5 phylogenetic markers blast sequence alignment revealed that our strain highly matched A. alternata. The value of BG assay of the patient was >600 pg/mL. Repeated mycological culturing and BG assay were conducted 2 days later and obtained the same Results After pathogen identification, methylprednisolone therapy was discontinued and voriconazole
therapy was initiated. After 5 days, the blisters subsided, and the patient was discharged with improved symptoms; but he was continued on the oral voriconazole therapy. After 2 weeks, no recurrence of the skin infection of the limbs was noted.
Conclusion Alternaria often causes infection in immunocompromised people. In addition to histopathological examination and microbial culturing, the serum BG level detection can be used as a potential auxiliary diagnostic, albeit further research is required to validate and confirm its significance.

乙型副伤寒沙门菌致颈深部脓肿一例报道并文献复习

肖华亮
德阳市人民医院检验科

目的 促进检验科与临床科室之间的沟通，提高广大医务工作者对乙型副伤寒沙门菌导致颈部脓肿的认识。
方法 通过质谱鉴定技术和沙门菌特异性血清鉴定法对患者颈部脓肿所分离出测沙门菌进行分型，运用法国梅里埃 VITEK 2 Compact GN13 卡及纸片扩散法双复核的方式进行药敏试验，结合患者的病史及临床症状进行病例讨论，并对相关发病机制和文献进行复习。
结果 经过鉴定该患者颈深部脓肿分离出的是一株耐环丙沙星的乙型副伤寒沙门菌，由该患者病史推测患者可能进食被乙型副伤寒沙门菌污染的食物后，乙型副伤寒沙门菌侵入肠腔深部，通过淋巴管或血液向颈部等远处播散，同时也不排除通过患者口咽部间隙直接感染并扩散到颈部淋巴结，从而形成颈深部巨大脓肿。积极给予哌拉西林他唑巴坦联合奥硝唑抗感染治疗，患者治愈出院。同时查阅相关文献可知 2017 年我国西部地区沙门菌耐喹诺酮类药物的耐药率为 16.2%，高于同期全国水平。
结论 对于患有糖尿病的老年患者，存在沙门菌感染的高危因素，即使没有消化道症状也要考虑到沙门菌感染的可能，通过积极控制血糖、根据需氧或厌氧菌的鉴定及药敏结果调整抗菌药物、及时

清创引流等有效的诊治方法可明显降低患者的病死率。对于临床工作者，抗菌药物的选择要根据本地区或本单位的细菌耐药监测数据和患者感染的具体情况并结合相关指南综合考虑。对于检验工作者，更要积极的进入到临床疾病的诊治中，结合病史资料、临床症状等共同判断，不断提高微生物鉴定水平，用及时准确的药敏和鉴定技术为患者服务。

肺部念珠菌感染与定植--荧光 PCR 结合多种检测方法及患者转归前瞻性研究

欧阳津、龙军
南方医科大学珠江医院

目的 念珠菌广泛定植于呼吸道表面，但对于肺念珠菌感染与定植的界限，尚缺乏依据。
方法 采用念珠菌荧光 PCR 法，结合基因测序、荧光镜检（检测孢子和菌丝）、真菌培养、革兰氏染色、G 试验及临床抗真菌治疗效果，旨在研究肺部念珠菌感染与定植的关系，探寻检测肺部念珠菌感染的有效方法。纳入住院疑似肺部真菌感染重症患者 47 例，主要来源于 ICU 和呼吸内科，男 36 例，女 11 例；收集痰 13 例、纤支镜抽吸痰 22 例及肺泡灌洗液 12 例。
结果 念珠菌荧光 PCR 有 31 例阳性，其中强阳性 14 例（29.79%），中阳性 9 例（19.15%），弱阳性 8 例（17.02%），阴性 16 例（34.04%）。在念珠菌荧光 PCR 强阳性的 14 例中，有 13 例荧光镜检阳性，阳性符合率 92.86%。总阳性率为荧光 PCR（65.96%）>基因测序（57.45%）>荧光镜检（51.06%）>>革兰氏染色（19.15%）>培养（14.89%）>G 实验（14.29%）。治疗效果，弱阳性组和中阳性组缓解率分别为 62.50%和 77.78%，死亡率均为零；强阳性组缓解率为 50.00%，恶化及死亡率为 50.00%。荧光 PCR 阳性程度与念珠菌菌丝的发生呈正相关关系，与治疗缓解率呈负相关关系。
结论 念珠菌荧光 PCR 弱阳性和中阳性基本为念珠菌定植，强阳性肺部可能存在念珠菌感染，其感染率为 19.15%。应用荧光 PCR 法结合荧光镜检可以鉴别肺部念珠菌感染和定植，为临床抗真菌治疗提供依据。

PU-3741

建立基于流式细胞仪检测碳青霉烯类耐药菌的新方法

盛华芳、凌嘉慧、陈定强、周宏伟
南方医科大学珠江医院

目的 建立基于流式细胞仪检测碳青霉烯类耐药菌的新方法，为临床耐药菌的检测提供新的思路。
方法 基于 SYTO9 能够通过所有的细胞膜而 PI 仅能通过受损的细胞膜，故在两种染料的共同作用下，活菌仅能被 SYTO9 染上在激光激发下呈现绿色而 PI 则呈现红色的特性，通过流式细胞仪进行死活比分析。①选取肠道的常见菌群进行不同比例死活菌混合后染色分析；②选取敏感株及耐药株给予抗生素干预后染色分析。
结果 ①利用不同比例的死活菌混合染色分析后，对其进行曲线绘制，横坐标为混合的比例，纵坐标为流式细胞仪检测的比例，可以看见其基本接近，我们进一步对其进行了线性分析，其 R2 均大于 0.97，呈明显的线性关系。故可得出利用染色后流式细胞仪的信号分析能准确反应死活菌的比例。②在敏感株及耐药株的抗生素干预实验中，敏感株可见明显的总菌量减少及死菌增多，而耐药株则无明显变化，且随着浓度的增加，此趋势更加明显。故可知流式可区分碳青霉烯耐药菌及敏感菌。

结论 染色后流式细胞仪的信号分析能够帮助我们获取单菌株甚至菌群的活性分析，在此基础上还可以对耐药菌及敏感菌在流式上呈明显的区分，为传统的药敏实验提供新的思路。

PU-3742

利用阿拉伯糖甘露糖脂检测结核分枝杆菌的 meta 分析

周妍冰、吕梦媛、王义莉、应斌武
四川大学华西医院

目的 采用 Meta 分析的方法综合评价阿拉伯糖甘露糖（lipoarabinomannan，LAM）在结核病中诊断价值。LAM 是一种结核分枝杆菌（mycobacterium tuberculosis，MTB）包膜上的糖脂成分，LAM 的检测可直接提示结核分枝杆菌的活跃感染。因此本研究通过 Meta 分析探究 LAM 在结核感染中的诊断性能。
方法 通过检索 3 个数据库中的文献（PubMed，OVID 和 Web of Science），制定文献的纳入排除标准。提取纳入研究的特征信息，并对纳入文献使用 QADAS-2 进行质量评估。使用 Review Manager Version 5.3 和 STATA Version 15 对提取的纳入文献特征进行分析。并评估发表偏倚，检验研究间的异质性，Meta 回归用来分析异质性的来源。
结果 检索了相关文献 1,830 篇，最终纳入了 159 个研究。将纳入研究根据检测 LAM 的方法不同分为 5 个亚组。其中 80 个研究使用了胶体金的方法检测 LAM，特异性为 0.89，敏感性为 0.43，71 个研究使用了 ELISA 的方法，特异性为 0.92，敏感性为 0.52。其他 27 个研究使用包括电化学发光等方法。Meta 回归探究显示，LFA 检测 LAM 的异质性主要来源于纳入患者的的 CD4 计数中位数不同，样本类型不同等，种族也影响了研究的异质性。ELISA 检测 LAM 的异质性主要来源于 ELISA 商品化试剂盒的厂家以及种族和样本类型。
结论 使用 ELISA 检测 LAM 的方法特异性很高，尤其是在血清标本中，并且不同的生产厂家 ELISA 的检测性能也有一定的差距。LFA 虽然灵敏度和特异性稍差，但其操作简便，适用于尿液标本，可以实现床旁检测。因其具有操作简便及较好的诊断性能，因此 LAM 检测是结核患者的有效辅助诊断手段。

PU-3743

应用脉冲场凝胶电泳方法和 MALDI-TOF RUO 模式对临床分离的肺炎克雷伯菌进行同源性分析和方法比较及耐药表型研究

傅俊方
南方医科大学珠江医院

目的 脉冲场凝胶电泳（Pulse-field gel electrophoresis, PFGE）方法是微生物分型的金标准。本研究希望利用 MALDI-TOF RUO 模式来对想要进行流行病学相关研究的细菌进行初筛，通过聚类分析，筛出认为可能有研究意义的菌株，再利用其他的方法做进一步的验证。
方法 收集 2013 年 4 月至 2013 年 10 月分离的肺炎克雷伯菌 29 株，进行脉冲场凝胶电泳分析其同源性。同时，再利用 MALDI-TOF RUO 模式进行质谱检测，得到的结果进行聚类分析，得到聚类分析图。此外，采用 VITEK-2 微生物鉴定系统测定其对 18 种抗生素最低抑菌浓度。
结果 29 株肺炎克雷伯菌实验菌株种，经过 PFGE 指纹图谱分析，分为 21 个基因型。其中 11 株 PFGE 图谱分为 A 型（5 株）、B 型（4 株）、C 型（2 株）。其中的 11 株肺炎克雷伯菌虽然并非全部为 ESBLs 株，但其对青霉素类、头孢菌素类以及单环内酰胺类耐药率为 100%，对碳青霉烯类耐药率为 27.3%，对环丙沙星耐药率为 27.3%，对左氧氟沙星保持敏感，对丁胺卡那霉素、庆大霉素、妥布霉素耐药率分别为 45.5%、54.5%、90.9。MALDI-TOF RUO 模式得到的聚类分析图显示的分类结果与 PFGE 方法得到的结果没有明显的统一性，利用 PFGE 分为同一型的菌株，在

MALDI-TOF RUO 模式下未能分到同一类，可能的原因为两者在原理上的差异，以及 MALDI-TOF RUO 模式的数据分析软件需进一步更新完善。但 MALDI-TOF RUO 模式下得到的聚类分析结果具有初步的参考意义。
结论 脉冲场凝胶电泳方法是分型的金标准，MALDI-TOF RUO 模式对研究细菌分型具有一定的意义。

PU-3744

环介导恒温扩增芯片法在 AECOPD 伴感染患者可疑病原体检测中的应用价值

陶建霞
四川大学华西医院

目的 探讨环介导恒温扩增芯片法（LAMP）在慢性阻塞性肺疾病急性加重（AECOPD）伴感染患者可疑病原体检测中的应用价值。
方法 收集我院 2019 年 2 月至 2020 年 5 月收治的 159 例 AECOPD 伴感染患者的下呼吸道合格标本，同时进行 LAMP 检测和病原体分离培养，分析两种方法呼吸道病原体检出情况并比较。
结果 159 例标本中，LAMP 检测出呼吸道病原体的阳性标本 58 例，总阳性率 34.3%，其中单一病原体 46 例（77.6%），混合病原体 13 例（22.4%）；共检出 10 种呼吸道病原体，鲍曼不动杆菌检出率最高（13.8%），其次为铜绿假单胞菌（9.4%）；检出结核分枝杆菌复合群 6 例。159 例标本同时进行病原体分离培养，培养阳性 48 例，阳性率 30.2%，其中鲍曼不动杆菌 18 例（11.3%），铜绿假单胞菌 12 例（7.5%）。对两种方法检出呼吸道病原体的检出率进行比较，除大肠埃希菌外，其他细菌的检出率均有差异，差异具有统计学意义。
结论 对于 AECOPD 伴感染患者可疑病原体检测，呼吸道病原体 LAMP 十三联检操作简便快捷，常见病原体检出率高于分离培养法。

PU-3745

CD248 抗体干预小鼠肾纤维化形成的实验研究

刘婉婷
南方医科大学珠江医院

目的 本研究拟以小鼠肾纤维化模型为研究对象,输注 CD248 单克隆抗体,检测纤维化相关指标,探讨 CD248 在纤维化中的作用机制。
方法 1.建立叶酸肾纤维化小鼠模型:将 C57BL/6 小鼠随机分为正常对照组和叶酸(Folicacid, FA)组,分别予以腹腔注射 NaHC03 或者叶酸(剂量 250mg/kg)。在注射叶酸后第 3、14 和 28 天处死小鼠,检测血肌酐和尿素水平,免疫组化检测肾组织 a-SMA、Collagen Ⅰ、Fibronectin 以及 CD248 蛋白表达水平。
结果 1.与正常对照组比较,FA3 天、FA14 天和 FA28 天叶酸模型组血肌酐和尿素水平显著升高（P<0.05）,肾纤维化程度逐渐加重,肾组织 α-SMA、Collagen Ⅰ、Fibronectin 以及 CD248 蛋白表达均显著升高。
结论 1.成功建立叶酸肾纤维化小鼠模型。2.CD248 抗体干预能够改善纤维化程度,CD248 可能成为纤维化诊疗的重要靶点。

新型冠状病毒血清特异性抗体检测技术应用探讨

宁雅婷、徐英春、侯欣、陆旻雅、吴宪、李永哲
中国医学科学院北京协和医院

新型冠状病毒肺炎疫情发展迅速，早期诊断成为疫情防控的关键。2019 新型冠状病毒（2019 novel coronavirus，2019-nCoV）核酸检测阳性虽是疑似患者确诊的“金标准”，但其操作繁琐、耗时长，检测结果受抗本质量、病毒感染部位及表达量等众多因素影响，因而核酸单项检测不能满足疫情期间对疑似病例快速筛查的要求。血清特异性抗体是诊断病毒感染的另一关键证据，抗体检测可协同核酸检测用于辅助诊断和快速筛查。本文从抗体产生特点、检测方法及灵敏度/特异度、检测结果假阴性/假阳性及核酸与抗体联合检测等方面进行讨论，以期推动 2019-nCoV 血清抗体检测技术的建立与应用。

PU-3747

呼吸道感染儿童血清维生素 D 水平与体液免疫情况分析

范文廷
徐州医科大学附属医院

目的 研究维生素 D 对体液免疫及儿童呼吸道感染的影响，为临床治疗与预防儿童呼吸道感染提供实验依据和线索。
方法 收集呼吸道感染儿童（感染组）与正常体检儿童（对照组）的外周血及一般资料。检测分析感染组与对照组儿童血清维生素 D 水平，血清抗体 IgG、IgM 和 IgA 水平的差异。
结果 共收集了 961 例呼吸道感染儿童与 120 正常体检儿童的资料，两组在性别分布上无统计学差异。感染组儿童的血清维生素 D 水平（25.58±12.55）显著低于对照组儿童（36.23±8.92, t=9.01，P<0.05），儿童血清维生素 D 缺乏与不足与呼吸道感染存在一定的联系（）。感染组儿童血清 IgG 和 IgA 含量显著低于对照组儿童（t=3.706,P<0,05;t=4.687，P<0.05），而 IgM 两组儿童相比差异无显著性（t=1.587, P=0.11）。儿童血清维生素 D 水平与免疫球蛋白 IgG、IgA、IgM 含量呈正相关（）。
结论 儿童血清维生素 D 的缺乏与儿童呼吸道感染有相关性，可能是低维生素 D 儿童体内免疫球蛋白水平较低所致。

Aspartate aminotransferase and Lactate dehydrogenase predict the severity of COVID-19: lessons from a front-line primary hospital

Wenting Fan
Department of Laboratory Medicine, Affiliated Hospital of Xuzhou Medical University,

Objective Since December 2019, coronavirus disease 2019 (COVID-19) caused by a novel coronavirus emerged in Wuhan and rapidly spread around the world. The predictors of the severity of COVID-19 remain unclear.
Methods The aim of our study was to determine the biomarkers of severe COVID-19 in a front-line primary hospital. Clinical data from 109 COVID-19 patients admitted to the People’s Hospital of Gongan County, Hubei Province, China, from January 19, 2020, to March 5, 2020, were

collected. The general status, clinical manifestations, laboratory tests and radiologic findings of non-severe and severe patients were analyzed.
Results Decreased lymphocytes (LYM) and albumin (ALB), elevated alanine aminotransferase (ALT), aspartate aminotransferase (AST), lactate dehydrogenase (LDH), D-Dimer, fibrinogen (FIB), C-reactive protein (CRP) and erythrocyte sedimentation rate (ESR) were observed in severe COVID-19 patients. AST and LDH were main predictors related to the severity of COVID-19, and a positive correlation was observed between the two markers. The combined use of LDH and AST showed a sensitivity of 88.9% and specificity of 91.0%.
Conclusions Abnormal blood biochemical tests were more frequent in COVID-19 patients with severe pneumonia than patients with non-severe pneumonia. High levels of AST and LDH were positively related to the severity of COVID-19. Thus, AST and LDH may be used as considerable predictors of COVID-19 prognosis in primary hospitals.

Seroprevalence of Talaromyces marneffei Mp1p specific antibodies in HIV infected patients during 2004-2011 in Guangzhou, China.

Yanfang Wang[1]、Zhigang Han[2]、Caiyun Liang[2]、Huifang Xu[2]
1. 南方医科大学珠江医院
2. 广州市疾病预防控制中心

Seroprevalence of Talaromycosis marneffei infection by antibody response is not known in human immunodeficiency virus (HIV) infected patients. This retrospective study aimed to evaluate the seroprevalence of and risk factors for T.marneffei infection in HIV-infected patients during 2004-2011 in Guangzhou, China. We tested 8131 archived HIV-infected patient serum samples for T.marneffei-specific mannoprotein (Mp1p) antibody using double antigen sandwich ELISA we previously established. The CD4+T cell of 2686 cases was determined by flow cytometry. Logistic regression was used to assess predictors of Mp1p antibody. The overall seroprevalence of talaromycosis as detected by positive serum Mp1p antibody was 2.82% (229/8131). There was no significant difference among 8 years and months. Talaromycosis was strongly associated with AIDS related. (P<0.001), and slightly associated with sex(male) (OR 0.55, 95%CI 0.37-0.78，P=0.001), age (OR 1.01，95%CI 1.00-1.02，P<0.05) . For 2686 cases with known CD4 cell count, 5.09% (67/1315) of patients developed T.marneffei-specific antibody when CD4 count of <200 cell/μL. In conclusion, approximately 2.82% of the HIV-infected patients in our study developed T.marneffei-specific antibody. A joint application of Mp1p antigen and antibody test, a prevalence of 11.89% (967/8131) for talaromycosis in HIV-infected patients.

PU-3750

慢性粒单核细胞白血病伴马尔尼菲篮状菌合并新泻诺卡菌感染一例

赵燕、王艳芳
南方医科大学珠江医院

目的 马尔尼菲篮状菌是一种机会致病真菌，长期以来一直被认为是艾滋病患者的标志性感染，近年来，其在血液恶性肿瘤患者人群中的感染逐渐被重视。目前对马尔尼菲篮状菌病的诊断主要依赖于病原学诊断，由于病理活检是有创操作，培养阳性率不高且耗时较久，常造成患者治疗的延误而

影响预后。本研究报告一例慢性粒单核细胞白血病患者发生的马尔尼菲篮状菌感染，旨在通过报告此病例对马尔尼菲篮状菌感染的诊疗提出建议。
方法 报告一例慢性粒单核细胞白血病患者发生的马尔尼菲篮状菌血流感染。
结果 患者为一位 71 岁的老年男性，入院前 10 天出现了脚疼、乏力、纳差，患者 10 年前具有肺结核病史，入院时左足局部脓肿，胸片提示肺部感染，在下级医院抗细菌治疗效果不佳，因此在入院后即送检了真菌感染相关指标如半乳甘露聚糖检测、隐球菌荚膜抗原检测等，抽取了静脉血进行培养，同时穿刺取左足脓肿脓液进行涂片及培养。最终，患者艾滋病抗体检测结果是阴性的，骨髓穿刺明确了慢性粒单核细胞白血病的诊断。脓液涂片见革兰氏染色阳性的丝状杆菌，培养 3 天后被鉴定为新泻诺卡菌，静脉血培养提示了马尔尼菲篮状菌的生长。另外，该患者曲霉半乳甘露聚糖抗原检测结果为：GMI=0.463。住院期间应用了莫西沙星、卡泊芬净、泊沙康唑等抗菌药物，遗憾的是，患者最终放弃治疗。
结论 下级医院对真菌感染如马尔尼菲篮状菌感染的认识不够，马尔尼菲篮状菌和曲霉属真菌细胞壁均存在半乳甘露聚糖而可使 GM 试验呈现阳性，但本例中检测结果未升高，快速诊断试验存在一定的局限性，因此还是要联合培养、病理等对患者情况作出正确判断，针对马尔尼菲篮状菌的敏感而特异的快速诊断试验仍需要进一步的研究开发。

PU-3751

Colistin resistance due to site mutations of the mgrB gene in carbapenem-resistant Klebsiella pneumoniae of clinical origin: first report from Jiangsu province, China

Shulong Zhao
Laboratory Department of Affiliated Hospital of Xuzhou Medical University

Objectives To investigate the molecular mechanism of colistin resistance in clinically isolated carbapenem-resistant Enterobacteriaceae (CRE).
Methods Clinical isolates of Enterobacteriaceae with colistin resistance from May 1st, 2018 to July 31st, 2019 were collected from the Affiliated Hospital of Xuzhou Medical University. Minimum inhibitory concentrations (MICs) of all isolated strains were determined by using the broth microdilution method. The existence and mutations of mgrB and mcr-1 genes were then detected by gene sequencing.
Results A total of 10 colistin resistant strains were collected, five of which were Escherichia coli and contained the mcr-1 gene, and the other five strains were Klebsiella pneumoniae, in which point mutations of mgrB gene were identified by comparison with sensitive strains.
Conclusion Point mutations in mgrB gene lead to the inactivation of mgrB, which plays an important role in the molecular mechanism of polymyxin resistance of Klebsiella pneumoniae.

PU-3752

耐碳青霉烯类革兰氏阴性杆菌分布及耐药机制研究

曹希武
南方医科大学珠江医院

目的 碳青霉烯类是菌 β-内酰胺类抗生素，由产生超广谱 β-内酰胺酶（ESBL）的细菌 引起的在严重感染中具有良好的功效。 例如亚胺培南，美罗培南，多利培南，厄他培南， 帕尼培南和比阿培南，然而，全球范围内肠杆菌科细菌对头孢菌素类抗生素的耐药性逐渐 上升。细菌通过水解碳青霉烯类抗生素，产生了新的耐 β-内酰胺酶的机制，使抗生素治疗 的选择越来越少。

方法 碳青霉烯耐药性是全球范围内一个持续存在的公共卫生问题。 它主要发生在革 兰氏阴性杆菌中，如肺炎克雷伯菌，铜绿假单胞菌和鲍曼不动杆菌等，可能是由固有的或 可转移的碳青霉烯酶编码介导基因。 这种抗性基因已经在世界某些地区广泛传播，特别是 欧洲，亚洲和南美，而其他地区（如撒哈拉以南非洲）的情况目前并不清楚。 在本文中， 我们将提供对碳青霉烯类药物耐药性有关的最新信息。
结果 细菌耐药对公共健康的威胁越来越大，其中包括耐碳青霉烯酶的肠杆菌科细菌 （CRE）在社区中的迅速传播。多重耐药的革兰氏阴性细菌，例如不动杆菌和假单胞菌属， 是造成医院感染的主要病原菌。 这些微生物也有可能将对细菌的抗性传播到社区。 尽管 要控制碳青霉烯的耐药性，但解决该问题的方法仍在积极探索中。
结论 碳青霉烯酶编码基因已经在世界某些地区广泛传播，特别是，欧洲，亚洲和南 美，而其他地区（如撒哈拉以南的非洲）的情况却并不明确，需要监测碳青霉烯酶编码基 因来控制细菌耐药性的传播。

PU-3753

安图 ms 1000 与梅里埃 VITEK MS 质谱仪鉴定准确性对比研究

王淋荆
南方医科大学珠江医院

目的 对比安图 ms 1000 全自动微生物质谱检测系统与梅里埃 VITEK MS 全自动快速微生物质谱检测系对于临床微生物菌株鉴定的准确性。
方法 本研究采用 334 株临床菌株和 17 株标准菌株分别用安图 ms 1000 全自动微生物质谱检测系统与梅里埃 VITEK MS 全自动快速微生物质谱检测系统做鉴定，以梅里埃 VITEK MS 结果为参考，两者鉴定不一致的菌株采用 16SRNA 测序定鉴定，将测序结果在 NCBI blast 数据库做比对，以得分率最高的菌株未参考标准，评价两种质谱仪的鉴定准确性。
结果 准确性试验共采用 351 株（涵盖革兰氏阴性杆菌阳、阳性杆菌、阳性球菌、阴性球菌、酵母样真菌），其中标准菌株 17 株,临床菌株 334 株，17 株标准中菌株安图质谱 Autof ms1000 属水平鉴定一致性为 100%，种水平鉴定一致性为 100%，334 株临床菌株中安图质谱 Autof ms1000 属水平鉴定一致性为 99.40%，种水平鉴定一致性为 97.31%。而安图 ms 1000 全自动微生物质谱检测系统重复性、样本新鲜度的测定结果准确性均为 100%。
结论 安图质谱 Autof ms 鉴定准确性优于 1000 梅里埃 VITEK MS

PU-3754

肺诺卡菌病 5 例实验室检查分析

蒋苏苏
南方医科大学珠江医院

目的 提高对肺诺卡菌病的认识以及诊疗水平。
方法 收集南方医科大学珠江医院 2018-2020 年确诊的诺卡菌肺部感染病例 5 例，回顾性分析患者的临床资料， 包括人口统计学、临床表现、影像学检查、实验室检查、治疗方法及预后。
结果 5 例患者中男性患者有 3 例，女性患者 2 例，年龄在 31~63 岁不等；基础疾病分别为支气管扩张症 3 例，非霍奇金淋巴瘤异基因造血干细胞移植术后 1 例，慢性阻塞性肺病 1 例；患者的常见临床表现依次为咳嗽、咳痰、发热、咯血、呼吸困难以及乏力，2 例外周血白细胞和中性粒细胞升高，3 例外周血白细胞和中性粒细胞正常； 3 例抗酸染色弱阳性，另 2 例未查；2 例弱抗酸染色阳性，3 例未查； 4 例痰培养诺卡菌阳性，1 例肺泡灌洗液培养阳性；鉴定结果为烯蓓诺卡菌 1 例，

乔治教堂诺卡菌 2 例，未分型诺卡菌 2 例；患者均单独或联合使用头孢哌酮/他唑巴坦或哌拉西林/他唑巴坦和复方磺胺甲噁唑抗感染；5 例患者均经治疗后病情好转。
结论 肺诺卡菌病的临床表现和影像学表现均为非特异性表现，临床很难依靠这些表现准确诊断肺诺卡菌病，目前主要依靠实验室检出诺卡菌来明确诊断。

PU-3755

Clinical Characteristics and Virulence Gene Analysis of Pseudomonas aeruginosa in Bloodstream Infections

Xin Li
The Second Hospital of Anhui Medical University

Introduction We aimed to explore the clinical characteristics and isolate, type III secretion system (T3SS) genotypes of patients with bloodstream infection due to community-acquired Pseudomonas aeruginosa (CA-PA) or hospital-acquired P. aeruginosa (HA-PA), and to analyse the differences in risk factors between them.
Methodology Clinical data were collected from 2015-2019. We designated two groups: CA-PA and HA-PA. The clinical characteristics, drug sensitivity data, and T3SS genotypes were compared. The χ2 test and χ2 trend tests were used to analyse the data, and logistic regression was used to analyse the independent risk factors of the two groups.
Results P. aeruginosa was collected from 89 patients, including 43 patients with CA-PA and 46 patients with HA-PA. Most patients with CA-PA were ≥ 60 years old, accompanied by diabetes mellitus and kidney disease, and susceptible to catheter-associated infection. Hospital stay ≥ 15 days, mechanical respiration, and prior antibiotic treatment readily led to HA-PA bloodstream infection. HA-PA bloodstream infection was often complicated with other bacterial infections. Most P. aeruginosa isolates were drug sensitive, and the CA-PA resistance rate to imipenem was lower than that of HA-PA (P = 0.038). CA-PA carried mainly exoS and HA-PA and multidrug-resistant P. aeruginosa (MDR-PA) carried mainly exoU.
Conclusions The CA-PA and HA-PA risk factors and imipenem resistance rates differed. The T3SS virulence genes in the two groups also differed. Further research is needed to elucidate the relationship between the T3SS and disease.

PU-3756

金黄色葡萄球菌临床检测方法的研究

黄婉婷
吉林金域医学检验所有限公司

目的 本文对目前金黄色葡萄球菌的检测方法进行综述，目的是对金黄色葡萄球菌进行快速有效的检测和精准的鉴定，为临床实验室检验提供参考和指导。
方法 通过查阅大量文献及对实验室日常检测方法进行分析，总结出金黄色葡糖球菌的临床检测方法。
结果 1.常规检测方法包含直接涂片染色法和细菌培养与鉴定 。
2.快速检测法包含免疫学方法和分子生物学方法。其中免疫学方法包含乳胶凝集法，酶联免疫吸附法，化学发光酶联免疫检测法。分子生物学方法则包含多重 PCR 技术，实时荧光定量 PCR，环介导等温扩增技术，基因芯片技术检测 。
3.其他快速检测方法则有显色培养基，快速测试片，生物传感器技术，计算机视觉技术。
结论 该菌常规培养鉴定法检测成本较低，是临床最为常用普遍方法。但这种方法操作时间长，已经不能适应当代临床实验室快速检测的大环境。免疫学方法使用将抗原和抗体相结合的方式，但存

在假阳性或假阴性结果。PCR 检验结果准确，从分子水平定性，实验时间缩短 50%以上，明显节约了成本，但容易出现外源 DNA 的污染。LAMP 易于操作，提高了金黄色葡萄球菌的检测灵敏性，具有良好的前景。该细菌在未来临床检验的发展趋势是准确，方便和快速。以常规检测方法为基础，结合快速检测方法对细菌进行有效检测，特别是分子生物学方法，在基因的角度，提供了新的检测手段，极大推动了对该细菌的检测手段，现如今计算机视觉技术以及生物传感器检测等方法也逐步走向成熟。

Two rapid protein extraction Methods using focused-ultrasonication and zirconia-silica beads for filamentous fungi identification by MALDI-TOF MS

Yating Ning[1,2]、Wenhang Yang[1,2]、Li Zhang[2]、Yingchun Xu[2]
1. Graduate School, Peking Union Medical College, Chinese Academy of Medical Sciences, Beijing 100730, P. R. China
2. Beijing Key Laboratory for Mechanisms Research and Precision Diagnosis of Invasive Fungal Diseases, Beijing, China.

Filamentous fungi identification by Matrix-assisted laser desorption ionization time-of-flight mass spectrometry (MALDI-TOF MS) has been challenging due to the lack of simple and rapid protein extraction Methods and insufficient species coverage in the database. In this study, we created two rapid protein extraction Methods for filamentous fungi: an one-step zirconia-silica beads (ZSB) method without using a homogenizer and a focused-ultrasonication method (FUS). The two rapid sample processing Methods were evaluated with the VITEK MALDI-TOF MS (bioMérieux, Marcy-l'Étoile, France) and compared to the routine method. The more efficient method was applied as a means to build a filamentous fungi in-house spectra library for the M-Discover 100 MALDI-TOF MS (Zhuhai Meihua Medical Technology Co., Ltd., China). The routine method was then performed in parallel to verify the accuracy and commonality of the in-house library. Two rapid Methods were evaluated using 123 filamentous fungi isolates belonging to 13 genera and 29 species by VITEK MS with the commercial database v3.2 and compared to the routine method. Both ZSB and FUS Methods identified isolates from most mold types equal to or better than the routine method, and the total correct identification rate using VITEK MS was 79.67%, 76.42%, and 76.42%, respectively. An in-house library of M-Discover MS was built with 135 isolates from 42 species belonging to 18 genera using the ZSB method. Analysis of 467 isolates resulted in 97.22% correctly identified isolates to the species level by the ZSB method versus 95.50% by the routine method. Using the two optimized methods, the dedicated operating time before MALDI-TOF MS analysis was reduced from 30 min (routine method) to 7 (ZSB) or 5 (FUS) min per sample, with only a few seconds added for each additional strain. The two novel Methods are time- and cost-effective and allow efficient identification of filamentous fungi while providing a simplified procedure to build an in-house library. Thus, more clinical laboratories may consider adopting MALDI-TOF for filamentous fungi identification in the future.

PU-3758

自身抗体对甲苯胺红不加热血清试验检测结果的影响分析

黄学东[1]、杨翠丽[2]、侯晓芹[3]、李冬冬[1]、胡静[1]、牛倩[1]
1. 四川大学华西医院
2. 新疆医科大学第一附属医院昌吉分院
3. 四川省老年病医院·四川省第五人民医院

目的 探讨不同类型的自身抗体对甲苯胺红不加热血清试验（TRUST）检测结果的影响，为梅毒相关临床诊疗实践提供参考依据。
方法 纳入 2020 年 3 月至 7 月于我院进行抗核抗体（Antinuclear antibody，ANA)、抗心磷脂抗体（anti-cardiolipin antibody，ACA）、抗可溶性抗原可提取性核抗原（extractable nuclear antigen，ENA）抗体、狼疮抗凝物（lupus anticoagulant，LA）检测且具有阳性结果的患者 140 例，以及性别、年龄匹配且上述自身抗体检测阴性的健康对照者 107 例，收集血清样本进行 TRUST 和梅毒螺旋体颗粒凝集试验（TPPA）检测，当 TRUST 阳性而 TPPA 阴性时认为 TRUST 为假阳性结果，分析不同类型自身抗体导致 TRUST 假阳性的情况。
结果 病例组中 TRUST 阳性患者有 17 例（12.14%），阳性率明显高于健康对照组（0.00%）（P＜0.05）。17 例 TRUST 阳性患者的 ANA 均为阳性，其中，ANA 单阳性者 5 例、ANA+ENA 双阳性者 8 例、ANA+ENA+ACA+LA 均阳性者 4 例。17 例患者中 1 例经 TPPA 和临床确诊为梅毒患者，其 TRUST 滴度为 1:8；其余 16 例患者经 TPPA 验证均为 TRUST 假阳性，其 TRUST 滴度分别为 1:1 阳性 15 例和 1:2 阳性 1 例。
结论 自身抗体如 ANA 的存在可导致 TRUST 试验出现低滴度（≤1:2）假阳性，因此，在诊断梅毒相关疾病时应结合流行病学、临床表现及其他血清学检测结果，降低误诊率，提高诊断水平。

PU-3759

Complete genome comparative analysis of CV-A6 causing Hand, foot and mouth disease and Herpangina in Yunnan province

Hongchao Jiang、Jiaollian Tang、Xiaolin Zhang
KUNMING CHILDREN'S HOSPITAL

Objective to understand the genome characteristics of CV-A6（Coxsackie virus A6） strains causing Herpangina (HA) and Hand，foot and mouth disease(HFMD), so as to explore the possible reasons for the difference of clinical symptoms between HA and HFMD.
Methods 9 strains of CV-A6 causing HFMD and 8 strains of CV-A6 causing HA from Kunming children’s Hospital in Yunnan Province were selected for genome-wide characterization.Positive samples were screened for sequencing using enterovirus group A universal primers, samples that were CV-A6 after alignment by NCBI, and 17 CV-A6 strains that caused HA and HFMD were randomly selected for sequence amplification using whole genome primers, and sequencing was spliced to generate whole genome analysis using BioEdit, MEGA7.0, SimPlot, Heml1.0 and Phyre2 were used for analysis of genome characteristics.
Results The results showed that CV-A6（Coxsackie virus A6） causing HA and HFMD were both belong to type IV branches in the phylogenetic tree based on the whole genome sequence，and there might be small fragment recombination in VP1, VP3, and 2C regions between HA321 and HFMD 275 strains. Meanwhile, nucleotide differences were observed between HA and HFMD isolates at S597T, Q705Land Q663L of VP1.

Conclusion CV-A6（Coxsackie virus A6） strains that cause HA and HFMD have high homology. Mutations of amino acid in P1 region of CV-A6（Coxsackie virus A6） may lead to different clinical symptoms.

PU-3760

patients: a comparative cohort study during 2014-19

Yijun Shi
Department of Clinical Diagnosis Laboratory of Beijing Tiantan Hospital, Capital Medical University

Purpose Our study is a retrospective observational study conducted in one of the largest clinical centers of neurosurgery in China. We aimed to investigate the antimicrobial susceptibility patterns of the Enterobacteriaceae isolates responsible for nosocomial meningitis/encephalitis in post-neurosurgical patients. Meanwhile, we tried to evaluate the risk factors for mortality following Enterobacteriaceae meningitis/encephalitis.
Patients and Methods Medical data on clinical characteristics, antibiotic susceptibilities, and mortality were reviewed until patients discharge or death in the hospital. Data for a total of 164 cerebrospinal fluid (CSF) infection cases due to Enterobacteriaceae after neurosurgery were collected between January 2014 and November 2019 in order to identify risk factors affecting the outcome. Kaplan–Meier survival analysis and multivariable Cox proportional hazard models were applied.
Results In this study, a total of 2416 neurosurgical meningitis/encephalitis cases were reported between 2014 and 2019, Enterobacteriaceae accounted for 7.3% (176/2416) of all the bacterial infections. Of them, 164 Enterobacteriaceae isolates were available to divide into two groups according to the final outcome of whether the patient died or survived. In total, 38 patients died (23.2%) and 126 patients survived (76.8%). The most frequent infecting species was Klebsiella pneumoniae (47.0%, 77/164). Fourteen-day and 30-day mortality rates were 7.9% (13/164) and 15.2% (25/164). Kaplan–Meier survival analysis revealed that the risk factors of Enterobacteriaceae meningitis/encephalitis that resulted in poor outcomes included comorbidities, Glasgow Coma Scale (GCS) score, sepsis, Intensive Care Unit (ICU) admission, Extended-Spectrum Beta-Lactamase (ESBLs) producing Enterobacteriaceae, and ventilation. A GCS score of less than or equal to 8 (P=0.04, HR 2.562) was identified to be a significant risk factor for mortality according to the multivariable Cox proportional hazards model.
Conclusion In-hospital mortality caused by Enterobacteriaceae meningitis/encephalitis in neurosurgery was high. A GCS score of ≤8 was an independent risk factor for mortality Enterobacteriaceae meningitis/encephalitis in post-neurosurgical patients.

PU-3761

Metagenomic Next-generation Sequencing of Cerebrospinal Fluid for the Diagnosis of External Ventricular and Lumbar Drainage-associated Ventriculitis and Meningitis

Lingye Qian
NO. 119 Nansihuan West road, Fengtai district Beijing

Metagenomic next-generation sequencing (mNGS) has become a widely-used technology that can accurately detect individual pathogens. This prospective study was performed between February 2019 and September 2019 in one of the largest clinical neurosurgery centers in China. The study aimed to evaluate the performance of mNGS on cerebrospinal fluid (CSF) from

neurosurgical patients for the diagnosis of external ventricular and lumbar drainage (EVD/LD)-associated ventriculitis and meningitis (VM). We collected CSF specimens from neurosurgical patients with EVD/LD for more than 24 hours to perform conventional microbiological studies and mNGS analyses in a pairwise manner. We also investigated the usefulness of mNGS of CSF for the diagnosis of EVD/LD-associated VM. In total, 102 patients were enrolled in this study and divided into three groups, including confirmed VM (cVM) (39), suspected VM (sVM) (49), and non-VM (nVM) (14) groups. Of all the patients, mNGS detected 21 Gram-positive bacteria, 20 Gram-negative bacteria, and five fungi. The three primary bacteria detected were Staphylococcus epidermidis (9), Acinetobacter baumannii (5) and Staphylococcus aureus (3). The mNGS-positive coincidence rate of confirmed EVD/LD-associated VM was 61.54% (24/39), and the negative coincidence rate of the nVM group was 100% (14/14). Of 15 VM pathogens not identified by mNGS in the cVM group, eight were negative with mNGS and seven were inconsistent with the conventional microbiological identification Results In addition, mNGS identified pathogens in 22 cases that were negative using conventional methods; of them, 10 patients received a favorable clinical treatment; thus, showing the benefit of mNGS-guided therapy.

PU-3762

多重耐药肠杆菌致医院获得性脑膜炎的分子流行病学及生存分析

郑光辉
首都医科大学附属北京天坛医院

背景 探讨多重耐药肠杆菌 (multi-drug resistance Enterobacteriaceae, MDRE) 所致的医院获得性脑膜炎 (nosocomial meningitis, NM) 的死亡危险因素。同时分析了 MDRE 的分子流行病学特征。
方法 研究者来自于 2014-2019 年间 2 个中国神经外科中心 MDRE NM 患者。对每种 MDRE 进行分子微生物学流行病学调查，建立 Kaplan-Meier 生存分析，并用 Cox 风险模型进行多变量分析。
结果 90 例 MDRE-NM 患者被纳入本研究。肺炎克雷伯菌所占比例最高 (51.11%，46/90) ，其中有 44 例 (44.44%) 对美罗培南耐药。blaKPC (67.50%，27/40) 是碳青霉烯类抗生素的主要耐药基因。多因素 Cox 分析显示，室外引流 (EVD，危险比 (HR) 2.524，95%可信区间 (CI) 1.101-5.787，P=0.029) 和格拉斯哥昏迷评分 (GCS) ≤8 (HR 4.033，95%可信区间 (CI) 1.526-10.645，P=0.005) 是 MDRE NM 的死亡危险因素。
结论 MDRE 引起的 NM 是神经外科手术失败的重要因素，MDRE 具有多种耐药基因型，EVD 和 GCS≤8 是 MDRE-NM 的独立死亡危险因素，这值得微生物学家和神经外科临床医生引起重视。

PU-3763

徐州地区 2015-2019 年万古霉素对 MRSA 最低抑菌浓度值的特征分析

纵帅
徐州医科大学附属医院

目的 回顾性分析万古霉素对耐甲氧西林金黄色葡萄球菌（MRSA）最低抑菌浓度（MIC）值的特征性变化，为临床使用万古霉素治疗 MRSA 感染提供参考。
方法 按医院院内感染标准纳入 2015-2019 年徐州地区三家三级甲等综合性医院临床标本分离的非重复 MRSA 共 540 株，收集其 MIC 值，采用统计学方法计算 MIC 几何均值，MIC50 和 MIC90 等，并分析其特征。
结果 540 株 MRSA 全部对万古霉素敏感；近五年万古霉素对 MRSA 的 MIC 几何均值分别为 1.058，1.100，1.108，1.122 和 1.147，组间整体差异有统计学意义（P＜0.05）；ICU 科室的 MIC 均值

分别为 1.155，1.252，1.309，1.399 和 1.445，非 ICU 科室 MIC 均值分别为 0.996，1.003，0.979，0.944 和 0.956，其中 2016-2019 年四年间 ICU 和非 ICU 科室同年份均值差异有统计学意义（P＜0.05）；万古霉素对 MRSA 的 MIC≥1.5μg/mL 的比例逐年增加（P＜0.05）。
结论 2015-2019 年间徐州地区未发现耐万古霉素的 MRSA 株；万古霉素 MIC 值存在漂移，漂移主要来自 ICU 科室；对 ICU 科室万古霉素 MIC≥1.5μg/mL 的 MRSA 菌株和患者应重点监控，积极治疗，防止感染暴发。

PU-3764

房水中分离嗜水气单胞菌 1 例并文献复习

郭建壮
山东省千佛山医院

嗜水气单孢菌是一种新的能够导致肠道疾病的细菌，目前已被纳入了腹泻病原菌的常规检测中，其中食品卫生检验部门也对此菌进行感染检测，同时也是导致院内感染的细菌。此菌是一种能够导致人-畜-鱼共患病的病原菌，具有多种不同的致病基因，同时具有相当的毒力和广泛的宿主感染能力[1]。

嗜水气单孢菌在人类感染中以胃肠感染最为常见，多为急性肠胃炎，其发病可能与食物中毒或引用被污染的水有关；发病多以爆发或流行为常见形式[2]。外伤感染的几率和败血症的几率远低于胃肠感染。帮助临床详细了解嗜水气单胞菌的生活习性及发病原因、药物敏感性协助临床对该菌所致感染的治疗及预防。

PU-3765

老年性阴道炎患者阴道微生态状况分析

罗雪
柳州市妇幼保健院

近年随着阴道微生态理念的兴起，老年性阴道炎的阴道微生态研究也逐渐成为热点，但报道多为治疗方法的探讨，对患者阴道微生态整体状况分析则较少，本研究通过分析老年性阴道炎患者与正常体检老年女性的阴道微生态构成及微生态失调的病原分布，以期为老年女性阴道感染性疾病的病原学诊断及治疗提供实验室依据。

PU-3766

新型 BacT/ALert FA/FN PLUS 聚合物吸附珠血培养瓶对模拟菌血分析性能的研究

谢宁、郭斌
川北医学院附属医院

目的 探索新型 BacT/Alert FA/FN Plus 聚合物吸附珠血培养瓶对菌血症的检验分析性能。
方法 选择菌血症患者常见细菌病原体和常用抗菌药物，将预制的菌液、抗菌药物和血液注入血培养瓶，采集 5 天内各培养瓶报阳率和报阳时间，比较具有不同抗菌药物吸附剂的血培养瓶对不同细菌的分析性能。

结果 新一代 Bio-FA/FN Plus 培养瓶对大肠埃希菌、金黄色葡萄球菌、白色念珠菌或热带念珠菌检出时间明显快于其他培养瓶；但铜绿假单胞菌-哌拉西林/他唑巴坦组 BacT/Alert FA/FN Plus 和 BACTEC PLUS 培养瓶 TTD 差异不显著；对厌氧菌无抗菌药物时 BD-L 厌氧瓶检出时间最快。
结论 BacT/Alert FA/FN Plus 聚合物吸附珠血培养瓶对临床常用抗菌药物均具有强吸附能力，能提高血培养阳性率，有利于更快速、高效检出病原菌。

PU-3767

近 5 年我院耐碳青霉烯类鲍曼不动杆菌的分布 及耐药分析

幸运
陆军特色医学中心（大坪医院）

目的 通过对近 5 年我院耐碳青霉烯类鲍曼不动杆菌（Carbapenem-resistant Acinetobacter baumannii，CRAB）和碳青霉烯类敏感鲍曼不动杆菌（Carbapenems-sensitive Acinetobacter baumannii，CSAB）的分布及耐药性分析，指导临床合理用药。
方法 采用 WHONET 5.6 软件对 2016 年 1 月至 2020 年 12 月本院住院患者送检的临床标本中分离的鲍曼不动杆菌(Acinetobacter baumannii， AB）进行回顾性分析。
结果 2016 年 1 月至 2020 年 12 月本院住院患者送检的临床标本共检出细菌 24259 株，其中 AB 2211 株（占 9.1%）；AB 包含 CRAB 和 CSAB，分别检出 1482 株（占 6.1%）和 729 株（占 3.0%）。CRAB 和 CSAB 主要分离自痰、肺泡灌洗液标本，五年共计检出 1665 株(占 75.3%)，其次是尿液 142 株(占 6.4%)及分泌物 123 株(占 5.6%)。CRAB 和 CSAB 科室分布以重症监护室（ICU）为主，五年共计 782 株（占 52.8%），其次是呼吸科 302 株（占 20.4%）。CRAB 和 CSAB 感染患者中，51-80 岁的患者人数最多，五年共计 1249 例(占 56.5%)，明显多于其他年龄段。CRAB 对 14 种常用抗菌药物的耐药性普遍较高，其中对米诺环素耐药率最低，五年平均耐药率 44.5% ；CSAB 对 14 种常用抗菌药物的耐药性普遍较低，其中对氨苄西林/舒巴坦耐药率最低，五年平均耐药率 10.2%。
结论 鲍曼不动杆菌临床分布广泛，耐药率高，特别是对 CRAB，实验室和医院应重视对该菌的耐药性监测,应制定合理有效的措施，抑止耐药菌株传播。

PU-3768

云南省昆明市 HIV-1 流行株 pol 基因序列特征分析

李健健
云南省传染病医院

目的 了解云南省昆明市人类免疫缺陷病毒 1 型（HIV-1）的亚型分布特征及其 pol 结构基因的变异特征。
方法 随机抽取 2015-2019 年昆明市抗病毒治疗半年以上的样本 390 例，收集其流行病学信息，血浆提纯 HIV-1RNA，采用巢式聚合酶链式反应扩增 HIV-1pol 基因，应用 Genotyping Tool、BLAST 在线分型工具及 MEGA 6.06 软件进行基因分型，运用 MEGA Distance 程序计算基因距离，Entropy 程序分析氨基酸多态性，进而对 HIV-1 流行株的 pol 基因序列特征进行分析。
结果 成功扩增获得 pol 基因序列 318 例，亚型分析结果显示：B 亚型 10 例（3.1%）、C 亚型 14 例（4.4%）、CRF01_AE 83 例（26.1%）、CRF07_BC 65 例（20.4%）、CRF08_BC 136 例（42.8%）以及其他亚型 10 例（3.1%），各个亚型在性别、年龄及感染途径的构成上均有差别（P<0.001）。CRF01_AE、CRF07_BC、CRF08_BC 的基因距离分别为 0.018±0.008、0.015±0.006、0.006±0.004，差异有统计学意义（P<0.01）。CRF01_AE 亚型中静脉药瘾感染者与性接触感染者的氨基酸序列存在差异，共有 45 个位点的氨基酸差异存在统计学意义（P<0.05）。

结论 昆明市 HIV-1 亚型分布复杂多样，以 CRF08_BC 为主，传播途径以异性性传播为主，CRF01_AE 亚型为昆明地区变异程度较高的流行株，不同感染途径毒株的氨基酸突变位点存在差异，应密切监视其变化。

PU-3769

新型冠状病毒肺炎病例治疗进程中不同类型样本核酸检测 CT 值与结果分析

李健健
云南省传染病医院

目的 分析 2019 新型冠状病毒(2019 Novel Coronairus,2019-nCoV)感染患者住院治疗进程中不同类型样本中的核酸检测 CT 值及结果，为疫情的防控和疾病治疗提供参考建议。
方法 收集 2020 年 1 月至 2020 年 4 月在云南省某医院住院治疗的 24 例新型冠状病毒肺炎(COVID-19)确诊病例资料，采用荧光定量逆转录聚合酶链反应(real-time fluorescence reverse transcriptase polymerase chain reaction, RT-PCR)方法检测患者口咽拭子、鼻咽拭子和痰液中的 2019-nCoV 核酸，分析不同治疗阶段 CT 值和阳性率变化情况。
结果 24 例 COVID-19 确诊病例中男性 14 人，女性 12 人，集中分布在 18-44 年龄段，其中轻型 9 例，普通型 10 例，重型/危重型 5 例；在不同的治疗进程中各部位标本的阳性率不同，治疗后期痰液的阳性率最高为 83.3%，鼻咽拭子 41.7%，口咽拭子最低；口咽拭子的 Ct 值均值在治疗进程中呈上升的趋势，在治疗后的 20 天 Ct 值均值为 38.5,鼻咽拭子的 Ct 值均值在治疗进程中波动明显，在治疗后 5 天最低为 20，而在治疗后的 11-20 天 Ct 值均值高于痰液；各临床分型患者的口咽拭子的 Ct 值均值在治疗进程中都呈上升的趋势，鼻咽拭子的重型/危重型标本的 Ct 值均值随治疗的进程波动较为明显。
结论 COVID-19 患者在治疗后期痰标本的阳性率最高，阳性持续时间最长；鼻咽拭子的 Ct 值受疾病进程影响较为明显，研究提示在开展新型冠状病毒实验室核酸检测中，监测各种类型标本的 Ct 尤为重要。

PU-3770

重度子痫前期患者与正常孕妇凝血功能差异比较

王 璐
滨州医学院烟台附属医院

目的 同时观察重度子痫前期患者和同期正常孕妇的凝血功能指标和血小板参数，并根据两者之间的差异得出结论。
方法 将我院住院的 300 例重度子痫患者作为实验组，同期 300 例来院检查的正常孕妇作为对照组。两组分别测定凝血酶原时间（PT）、凝血酶原时间国际标准化比值（INR）、部分凝血活酶时间（APTT）、凝血酶时间（TT）、纤维蛋白原（Fib）、血小板（PLT）、平均血小板体积（MPV），接着进行实验组和对照组的比较分析，得出相应结论。
结果 得出结论，实验组中，PT、INR、Fib 低于对照组，TT 高于对照组，差异具有统计学意义（$P<0.05$）。APTT、PLT、MPV 的差异无统计学意义（$P>0.05$）。
结论 通过对重度子痫前期患者的凝血状态进行观察，可以发现重度子痫前期患者孕期和分娩期出血的危险性增加，凝血功能指标的检测可以对此做出一定的解读，方便做出判断。

PU-3771

降钙素原、超敏 C-反应蛋白、白细胞计数及中性粒细胞淋巴细胞计数比值对住院患者血流感染的早期诊断研究

白珊珊
雅安市人民医院

目的 探讨降钙素原（PCT）、超敏 C-反应蛋白(CRP)、白细胞计数(WBC)及中性粒细胞/淋巴细胞计数比值(NLR)对住院患者血流感染的早期诊效能，为临床早期诊断提供参考依据。
方法 回顾性分析研究 2018 年 12 月-2019 年 12 月我院疑似血流感染者(873 例)，以临床诊断为准，分为血流感染组与非血流感染组，基于 Logistic 回归的受试者工作特征(ROC)曲线分析 PCT、CRP、WBC、NLR 单独与联合检测对病原菌血流感染的诊断价值，数据采用 SPSS19.0 软件进行统计分析。
结果 873 例疑似血流感染患者中，血流感染组有 228 例（26.117%），其中血培养阳性 102 例（11.684%），非血流感染组 645 例（73.883%），其中血培养阴性 618 例（70.790%），其灵敏度为 44.74%，特异度为 95.81%，诊断符合率为 82.47%；分析两组 WBC、PCT、CRP、NLR 指标，差异均有统计学意义（P<0.05）；当 PCT cut-off 值为 1.245 ng/ml 时，AUC 面积最大为 0.843，诊断效能最高，灵敏度、特异度分别为 75.44%及 80.78%；当 CRP cut-off 值为 82.63 mg/l 时，AUC 面积最大为 0.643，其灵敏度、特异度分别为 61.4%及 64.5%，仅次于 PCT；WBC、NLR 在 cut-off 值为 12.21 x109/L、16.85 时，特异性较高分别为 72.87%及 79.85%，但灵敏度均较低（<50%）；双指标组合中，PCT/CRP 组合的 ROC 曲线下面积最高为 0.843，且与 PCT 单项检测比较差异没有统计学意义（P>0.05）； PCT 以 1.245 为 cut-off 值，从血流感染组中选取 PCT 及血培养同时阳性患者，分为革兰阴性菌组（57 例），革兰阳性菌组（12 例），两组间 PCT 值无统计学差异。

PU-3772

隐血粪便检测方法

李梅、董莉芹
哈尔滨医科大学附属第一医院

目的 隐血干扰因素多，灵敏性和特异性较差，而近年来发展的单克隆抗体法检测粪便隐血不受饮食限制，快速、简便、准确，方便临床。
方法 用单克隆抗体法对 5 种浓度的人和动物的血红蛋白液进行检测，结果单克隆抗体法隐血试验，可测出样本中微量的血红蛋白(0.2μg/ml)，这使得单克隆法对人体无症状的消化道微量出血更敏感。结果从试验结果也可看出，单克隆抗体法仅特异性地针对人血红蛋白，其他动物肉类对此试验无干扰作用。含过氧化物酶的新鲜蔬菜，铁剂、维生素 C 及对化学法有干扰作用的某些药物对此法的结果均无影响。此法比愈创木酯法(化学方法)的灵敏度也要高很多结论它可以检测出 0.2μg/ml 的血红蛋白(0.03mgHb/g 粪便)，也就是说，它可检测出粪便中微量的血红蛋白，如前所述，这对胃肠道出血性疾病的早期诊断是非常重要的。

PU-3773

AVE-562 粪便分析仪性能验证结果评价及临床应用评估

何亚琼
东南大学附属中大医院

目的 对 AVE-562 全自动粪便分析仪进行性能评价，探讨其在临床粪便检验中的应用价值.
方法 采用新鲜大便标本对 AVE-562 全自动粪便分析仪检测标本的颜色、性状、准确性、重复性、携带污染率等指标进行验证。
结果 选取的临床粪便标本（含正常和异常），仪器检测与人工目测结果比较，颜色 85%符合、性状 90%符合。AVE-562 粪便分析仪检测的红细胞、白细胞、虫卵、脂肪球、真菌等指标与人工显微镜结果的符合率均为 100%；重复性：仪器检测的红细胞（低值、高值）、白细胞（低值、高值）的变异系数分别为：8%、4%、3%、1.45%；回收率分别为：96%、92%、101.45%、103%。隐血实验结果与手工检测结果的符合率为 100%、回收率 100%；携带污染实验，隐血阴性组标本结果均为阴性，且镜检细胞结果均为 0 个/ul。
结论 经验证，AVE-562 粪便分析仪在人工修正的情况下，其颜色性状识别能力、准确性、重复性、携带污染率等性能参数均符合临床实验要求，在实际工作中需定期进行仪器各种性能检查,以保证仪器更高速准确得检测结果。
关键词 AVE-562 全自动粪便分析仪；粪便；红细胞；白细胞；隐血

PU-3774

临床检验血细胞的注意点

李梅、董莉芹
哈尔滨医科大学附属第一医院

目的 抗凝剂对血细胞形态影响很小，因此适用于血细胞计数，特别是血小板计数。
方法 血液标本在室温中必须 6 h 内上机检测，上机前一定要将血液标本颠倒混匀至少 8 次，如需制备血涂片，应在采血后 3 h 内涂制。无论多先进的血液分析仪，只能当作一种过筛手段，不能完全替代目视法显微镜镜检,因为仪器还不能准确区分幼稚细胞、异常淋巴细胞、有核红细胞等。结果一般医院显微镜档次偏低，分辨率低，维修和正确使用欠缺，提高显微镜档次更好发挥光镜的观察效应；但要做到准确分类 结论目前还存在不少困难，个别细胞的分类标准至今尚未全国统一。

PU-3775

353 例住院患者红细胞制剂输注疗效回顾性分析

华诗
电子科技大学附属医院•四川省人民医院临床医学检验中心

目的 探讨临床患者红细胞悬液输注的疗效并分析其影响因素，为临床医生合理、有效用血提供依据。
方法 通过检验科及输血科 LIS 和 HIS 系统分析四川省人民医院 2018 年 9 月至 2018 年 10 月 353 例部分临床患者红细胞悬液输注疗效及其与年龄、性别、输血前血红蛋白(Hb)浓度、输血量和基础疾病的关系。
结果 353 例贫血患者总输血量为 1259U；“有效”输血 194 例(54.96%)，输血量为 520.5U；“无效”输血 159 例(45.14%)，输血量为 738.5U。对资料进行 x^2检验分析得到：不同基础疾病患者、输血

前血红蛋白浓度、输血量、性别,红细胞疗效各组组内因素比较 P<0.05，差异有统计学意义；不同年龄段患者红细胞输注疗效组内因素比较 P>0.05，差异无统计学意义。
结论 临床患者的无效输注与其性别、输血前 Hb 浓度、输血量和基础疾病有关。输血量越多则无效输注的发生率越高，可能与免疫因素有关。临床患者红细胞输注效果的发生机制尚需进一步研究，有必要针对相关影响因素制定独立、安全、有效的个体化输血策略，以帮助临床医生更加合理用血，并达到最佳输血效果。

PU-3776

肾综合征出血热

张怡婷
江苏省人民医院（南京医科大学第一附属医院）

目的 通过实验室常规检查助力临床肾综合征出血热诊断
方法 采集患者 EDTA 抗凝静脉血 2ml，采用 Sysmex XN-1000 全自动血液分析仪进行检测，同时用 Sysmex XN 流水线 SP-10 推片机推片，瑞氏染色，用全自动细胞形态学分析仪 DI60 进行分析
结果 散点图淋巴细胞和单核细胞灰区，幼稚粒区面积大，仪器报警提示：白细胞异常散点图，幼稚粒细胞存在，异型淋巴细胞？左移？外周血涂片可见核左移，浆样淋多，细胞核浆变化大，有大血小板。治疗过程中的变化：可见散点图趋于正常，白细胞降低，血红蛋白降低，血小板升高。
结论 看似最基本的血常规，通过分析血常规结果、散点图特点以及外周血涂片特点，我们依旧可以给临床诊断指引方向，更好地服务于临床。

PU-3777

不同剂量的铁剂对缺铁性贫血的治疗效果

翟贺
吉林金域医学

目的 缺铁性贫血是由于体内铁缺乏引起的，骨髓象表现为小细胞低色素性贫血，诊断为缺铁性贫血后，应采取有效的方法铁剂治疗。本文分析了小剂量铁剂与常规剂量铁剂对缺铁性患者的补铁治疗效果。
方法 选取 100 例缺铁性患者作为研究对象，运用生物对比试验方法将其随机分为实验组与对照组，实验组服用正常剂量铁剂，对照组服用小剂量铁剂，分别测得每个患者的网织红细胞，红细胞，血红蛋白，平均红细胞体积，平均红细胞血红蛋白量，平均红细胞血红蛋白浓度，铁蛋白，通过对以上指标测量分析评估疗效。一个月内，对两组进行铁剂补充后，选取血细胞比容，铁蛋白，血红蛋白浓度其中三项较为灵敏的指标进行测量。
结果 实验组治疗前的三项指标为 26.34%,6.1μg/L,42g/L,对照组治疗前的三项指标为 24.79%，7.5μg/L,46g/L。铁剂补充后，实验组的三项指标为 33.96%,8.7μg/L,97g/L，对照组的三项指标为 35.29%,10.5μg/L,104g/L。实验组的血细胞比容升高了 7.62%，铁蛋白升高了 2.6μg/L，血红蛋白浓度升高了 55g/L，而对照组血细胞比容升高了 10.5%，铁蛋白升高了 3μg/L，血红蛋白浓度升高了 58g/L。
结论 铁剂补充后，实验组与对照组的指标均升高，但升高程度不一，对照组指标升高幅度大一些，通过指标分析治疗效果，对照组优于实验组。对缺铁性患者治疗，应采取小剂量铁剂补充，铁是人体所必须的微量元素，大剂量补充可能会产生不耐受，也会造成胃肠道紊乱，使其补铁效果不佳，然而小剂量铁更利于患者机体吸收，治疗效果较好。

PU-3778

浓缩尿与非离心尿非定量有形成分沉渣定量计数板换算关系初探

李焱鑫
四川省医学科学院·四川省人民医院

目的 探讨浓缩尿与非离心尿非定量有形成分沉渣定量计数板换算。
方法 取含草酸钙结晶的新鲜尿液使用尿沉渣计数板定量对非离心尿和离心尿草酸钙结晶计数。
结果 两方法的相关系数为 0.978，线形方程为 Y 离心法=28.243X 非离心法+125.897；获得近似的定量结果与等级值结果的对应关系。
结论 草酸钙结晶适用于尿沉渣计数板的评价；可保证所报告结果与现行国家报告标准的一致性和可读性，提高样本检测效率。

不典型慢性髓系白血病一例及其实验室诊断体会

陈涛[1]、杨旭旭[2]、黄滔[1]、高伟[1]、唐明霞[1]
1. 雅安市人民医院检验科
2. 雅安市人民医院输血科

不典型慢性髓系白血病，BCR-ABL1 阴性（aCML）是一种同时具有骨髓增生异常与骨髓增值特点的白血病，特点是具有发育异常的幼稚和成熟中性粒细胞增多，但白血病细胞无 Ph 染色体或 BCR-ABL1 融合基因。患者多为老年人，男女比例为（1-2.5）:1。多数患者有与贫血或血小板减少有关的临床表现，其他主要是与脾大相关的症状[1]。不典型慢性髓系白血病的实验室诊断主要依靠外周血计数、骨髓细胞形态检查，相关遗传学检查，但目前暂未发现其特征性的遗传学改变，所以 aCML 的诊断更多的是排除性诊断，骨髓涂片检查则显得尤为重要。现将我院诊治的一例以皮肤症状为首发表现到院就诊的 aCML 报道如下。

PU-3780

血浆 D-二聚体在类风湿性关节炎诊断中的应用研究

尹智平、施雄飞、詹倩
云南省中医医院（云南中医药大学第一附属医院）

目的 探讨血浆 D-二聚体及类风湿因子（RF）、血沉（ESR）、C-反应蛋白（CRP）检测在类风湿性关节炎（RA）诊断中的应用价值。
方法 选取云南省中医医院 2017 年 3 月～2018 年 5 月期间收治的 80 名 RA 患者为研究对象，另取 60 名正常人群为对照组，免疫比浊法测定血浆 D-D、 透射比浊法测定 RF、全自动动态血沉仪测定 ESR、免疫荧光分析仪测定 CRP，并对结果采用方差分析、独立 t 检验进行统计分析。
结果 RA 患者组的 D-D、ESR、CRP 水平明显高于对照组（P<0.05），[d1] 两组比较差异有统计学意义。
结论 D-D、RF、ESR、和 CRP 水平与 RA 患者的病情活动有关，对 RA 患者病情的早期诊断、用药及预后判断有重要的临床参考意义。

PU-3781

NLR，SAA 与 CRP 联合检测在儿童感染性疾病早期诊断中的价值

宋子阳[2]、杨双[1]
1. 湖南师范大学第一附属医院
2. 湖南师范大学医学院

目的 探究中性粒细胞淋巴比值（NLR）、血清淀粉样蛋白 A（SAA）、C 反应蛋白（CRP）对儿童感染性疾病初期的诊断价值。
方法 采用回顾性分析方法，选取 2018 年 1 月至 2021 年 3 月来院就诊儿童 100 例为研究对象，其中病毒感染病例为 50 例，细菌感染病例为 50 例。并以来院就诊为健康的儿童 50 例为对照，检测所以实验对象外周血 NLR 以及 SAA、CRP 数值，运用受试者工作曲线（ROC）分析各检测项目及其联合检测对儿童感染性疾病的诊断价值。**结果** 细菌感染和病毒感染组的 NLR、SAA 和 CRP 数值都明显比健康组要高(P<0.05)，细菌感染组的 SAA 和 CRP 数值明显比病毒感染组要高(P＜0.05)，NLR 数值略高于病毒感染组(P<0.05)。对于单独诊断儿童早期细菌感染时，CRP 在三项指标中的 ROC 曲线下面积(AUC)和灵敏度均最高或最大，而 SAA 特异度在这三项中最高；对于单独诊断儿童早期病毒感染时，SAA 在三项指标中的 AUC 和灵敏度均较大，NLR 的特异度为最高;与各项指标单独诊断相比较，NLR、SAA 和 CRP 三者的联合诊断儿童早期细菌感染与病毒感染的 AUC 和灵敏度均有增大或增高，联合诊断病毒感染的特异度亦有所增大，但在联合诊断细菌感染时特异度相较 SAA 单独诊断时有所下降。
结论 NLR、SAA 和 CRP 三者的联合诊断对儿童开始感染的初期的感染类型的鉴别具有重要的临床参考价值，且这三种检测指标进行相结合对病毒感染的诊断的特异度要好于细菌感染的特异度。

PU-3782

评估血清 AMH 检测预测多囊卵巢综合征卵巢反应的应用价值

赵军
厦门大学附属第一医院

目的 评估多囊卵巢综合征卵巢反应利用血清 AMH 检测预测的应用价值。
方法 研究对象纳入我院 2018 年 2 月至 2019 年 8 月收治的 IUI 多卵巢综合征患者 48 例作为研究组，选取同期我院收治的 IUI 普通产妇 48 例，并作为对照组。借助微粒子化学发光免疫法进行两组患者 LH 水平检测、利用 ELISA 测定两组患者血清 AMH 水平，分析比对患者卵泡数。
结果 两组患者 AMH 水平比对，研究组明显高于对照组，P<0.05；两组患者黄体生成素比对，研究组明显高于对照组，P<0.05；两组患者卵泡数比对，研究组明显高于对照组，P<0.05。
结论 对多囊卵巢综合征患者利用血清 AMH 检测预测，其卵巢反应准确，并且卵泡数会随着 AMH 水平的提高而增多，具有较高临床应用价值。

PU-3783

导致血小板假性减少的因素及处理办法

文思雨
大理大学第一附属医院（云南省第四人民医院）

目的 分析影响血小板计数导致血小板假性减少的因素，为检验工作中能够及时分辨血小板是假性减少还是真性减少提供经验,为临床诊治提供可靠的诊断依据。

方法 选择红河州第三人民医院检验科 2020 年 8 月份到 2021 年 2 月份六个月里收集的经血细胞分析仪检测血小板假性减少的 15 例标本为实验对象，对十五例血小板假性减少的标本进行回顾性分析，总结导致血小板出现假性减少的原因。
结果 15 例患者由于乙二胺四乙酸二钾依赖性凝集而使血小板假性减少 7 例，采血过程不顺利而使血小板假性减少 6 例，存在较多大血小板而使血小板假性减少 2 例。
结论 掌握导致血小板假性减少的影响因素, 实施相应的纠正处理方法,得出准确的检验结果,为临床提供正确的诊治依据,以避免血小板假性异常造成临床误诊

PU-3784

Procoagulant platelet: generation, characteristics and therapeutic target

Yaxin Chu、Rui Qiao
Peking University Third Hospital

Platelets play a pivotal role in thrombosis and hemostasis. It is recognised platelets respond differently to activation. In response to agonist(thrombin and/or collagen), activated platelets are heterogeneous, some of them belong to the procoagulant subgroup, basically involved in promoting formation of thrombin and fibrin, and others are aggregatory, mainly involved in the platelets aggregation, connection with damaged vessel wall and clot restraction. Different populations of platelets play different roles in the process of thrombus formation. Procoagulant platelet with PS externalization binds tenase and prothrombinase complexes, promoting thrombin and stable fibrin clot formation at the wound site. Therefore, procoagulant platelet can be seen as the connector between the primary and the secondary hemostasis. In this review, We discuss the primary generation mechanisms of procoagulant platelet, pivotal characteristics of it and its potential as a clinical biomarker and therapeutic target.

PU-3785

血凝仪 TOP750 与 TOP300 结果比对

马瑜婷
西安医学院第一附属医院

目的 探讨同一实验室同一厂家不同型号的全自动血凝分析仪检测凝血酶原时间（ PT),部分凝血酶原时间（ APTT),凝血酶时间（ TT),纤维蛋白原（ FIB), 纤维蛋白原降解产物（ FDP)与 D-二聚体（ DD)结果的可比性和一致性。
方法 参加室间质评且成绩优秀的血凝仪为参比仪器，随机采取 50 份患者新鲜血浆，在 ACL TOP700 与 ACL TOP300 上检测并进行结果比对。
结果 俩台血凝仪 6 项检测项目的结果变异系数（ CV)均小于 5%,相关系数（ r）值均大于 0.975，结果具有良好的相关性。
结论 两台血凝仪的可比性与一致性较好，可满足临床需要。

PU-3786

1685 例血液病患者骨髓染色体核型分析

杨冰
西安金域医学检验所有限公司

目的 通过对血液病患者进行骨髓染色体核型分析，为血液系统疾病的诊断、治疗、病情监测及预后判断提供细胞遗传学数据。
方法 采集陕西 1685 例各种恶性血液系统疾病患者的骨髓样本，骨髓细胞经过短期培养及秋水仙素处理，使其停止在分裂中期，经 G 显带法进行染色体核型分析。
结果 在 1685 例骨髓染色体核型分析中共检出异常核型 560 例，检出率为 33.23% 。其中＞70 岁的异常核型 107 例占比 19.11%，51-70 岁的异常核型 247 例占比 44.11%，31-50 岁的异常核型 151 例占比 26.96%，＜30 岁的异常核型 36 例占比 6.43%。
结论 骨髓染色体核型分析为血液系统疾病明确诊断、指导治疗、病情监测及预后判断等提供了必不可少的依据。

PU-3787

肝素在凝血障碍患者治疗中的作用

刘阔
山东第一医科大学第一附属医院（山东省千佛山医院）

目的 研究手术患者自体输血与非自体输血对凝血结果的影响。
方法 收集自体输血手术患者与常规输血手术患者，在手术期间运用肝素抗凝后对凝血结果的影响。用 t 检验及卡方检验进行统计学分析。
结果 围手术期药物如阿司匹林可诱发血小板功能障碍。自体输血具有成本效益，是避免或减少同源输血的最安全方法。鼓励术前，术中抢救和术后抢救。促红细胞生成素可能有助于增加先天性红细胞的数量。
结论 凝血障碍是由多种因素引起的，例如肝素，血小板功能障碍和纤溶。必须合理使用血液成分疗法和药物，例如肝素，鱼精蛋白和去氨加压素。自体输血在减少或避免使用同种输血中非常有用。

PU-3788

孕早中晚期尿碘/尿肌酐比值与甲状腺功能的关系

肖建波
绵阳市中心医院

目的 了解当地妊娠妇女不同孕期的甲状腺功能与尿碘/尿肌酐比值情况，并探讨尿碘尿肌酐比值与甲状腺功能的关系。
方法 纳入从某年月某日至某年某月某日某某市妊娠 12 周前来某某医院接受产前护理的单胎妊娠妇女 158 例。分别于研究对象的妊娠早期、中期、晚期采集清晨尿样和血清标本，测定尿碘和肌酐浓度，计算尿碘尿肌酐比值，检测甲状腺功能指标 TSH 和 FT4，探讨不同孕期不同尿碘尿肌酐比值范围的妊娠妇女甲状腺功能异常情况。
结果 妊娠早、中、晚期 TSH（mIU/L）中位数及四分位数间距分别为 1.33（0.72,2.17），2.00（1.28,2.71），2.06（1.44,2.88），中位数随着妊娠的进展升高；TSH 异常率分别为 6.96%，10.76%，1.90%，妊娠中期异常率最高。FT4（ng/dl）妊娠早、中、晚期中位数及四分位数间距分别为 0.83（0.77,0.92），0.62（0.55,0.67），0.61（0.55,0.66），随着妊娠的进展，FT4 中位数

降低。孕早期尿碘尿肌酐比值中位数为 116.47ug/g；孕中期尿碘尿肌酐比值中位数为 175.43ug/g；孕晚期尿碘尿肌酐比值中位数为 233.40ug/g，尿碘尿肌酐比值中位数随着妊娠的进展而升高。妊娠早期，＜150 ug/g 组 TSH 异常率（8.04%）高于≥150 ug/g 组异常率（4.35%）；妊娠中期，＜150 ug/g 组 TSH 异常率（12.31%）高于≥150 ug/g 组异常率（为 9.68%），差异均有统计学意义。

结论 当地的妊娠妇女在妊娠早中期，应高度重视碘营养状况，按时检测甲状腺功能及尿碘尿肌酐比值，当尿碘尿肌酐比值低于 150 ug/g 时，应适当食用富碘食品，当甲状腺功能出现异常时，及时治疗，降低不良妊娠结局的发生。

PU-3789

Aptio-CS5100 流水线自动审核系统的建立及应用

赵太强
电子科技大学附属医院•四川省人民医院

目的 建立 Aptio-CS5100 凝血分析流水线自动审核规则，有效收集分析前、中、后数据并综合判读，以提高检验报告 TAT 并保证检测结果的准确性。

方法 参照国家卫健委卫生行业标准 WS/T 616-2018、美国 CLSI AUTO-10A 指南以及 ISO15189:2012 认可准则要求，制定自动审核规则，通过自动化流水线中间体软件 Centralink 、实验室信息系统(LIS) 和智能化连接的 CS5100 凝血分析仪与西门子 Aptio 流水线轨道，搭建凝血分析自动审核系统。经初步摸索，共设定标本状态判断规则(SS)、质控判断规则(QS)、仪器状态判断规则(IS)、结果范围判断规则(NS)、历史结果判断规则(DS)、逻辑判断规则(LS)六类审核规则，数据要素全面涵盖分析前、中、后整个检验过程，并通过 2019 年 9 月至 2019 年 12 月约 5 万份凝血分析结果验证自动审核规则。多次调整、改进并最终确定暂行规则后，比较 2020 年 1 月至 2020 年 5 月试运行期间 31835 份凝血分析结果与 2019 年全人工审核同期检验单，对自动审核系统的实施效果进行评价。

结果 经多轮调整改进，最终确立 SS、QS、IS、NS、DS 和 LS 六类共计 42 条规则，用于凝血酶原时间(PT)、活化部分凝血活酶时间(APTT)、凝血酶时间(TT)、纤维蛋白原浓度(FIB)、D 二聚体(D-Dimer)、纤维蛋白(原)降解产物(P-FDP)和抗凝血酶Ⅲ活性(AT3)七项凝血常规分析结果的自动审核。2020 年 1 月至 2020 年 5 月 5 个月的验证期间 31835 份凝血分析结果，自动审核通过率为 76.1%，通过结果与人工审核符合率为 100%，即假阴性率为 0%。未通过自动审核触发的规则及比例分别为 SS 12.1%、QS 1.2%、IS 8.7%、NS 50.4%、DS 21.3%和 LS 6.3%；其中 NS 和 DS 占较高比例是因为我院信息系统未标准化临床诊断信息和同步用药情况，故自动审核规则设置趋严谨，留待调阅病例资料后人工审核。2020 年 1 月至 2020 年 5 月与 2019 同期相比，TAT 中位数从 115min 降为 72min，缩短 37.3%；同时脂血、溶血和血浆凝固等异常标本识别和处理比例大幅增加，员工满意度亦有所提高。

结论 借助自动审核系统，真正实现了凝血流水线的智能化、自动化管理，提高检测效率，降低分析前误差，缩短 TAT，保证检测结果准确性，保证患者生命安全，降低医疗风险。

PU-3790

79 例血小板减少症病因及临床分析

朱云波
芷江侗族自治县人民医院

目的 探讨血小板减少症的病因,提高此类疾病的临床分析能力，尽早明确诊断。

方法 对 2019 年 1 月-2020 年 12 月，在本院住院的 79 例外周血血小板减少查因的患者，对其实验室血小板计数、外周血血涂片、骨髓细胞形态检查结果及临床资料进行回顾性分析。
结果 1、病因构成：79 例患者，特发性血小板减少性紫殿 23 例，再生障碍性贫血 4 例，急性白血病 5 例，慢性肝病 10 例、脾功能亢进 6 例、巨幼细胞性贫血 5 例、妊娠合并血小板减少症 2 例，药物性血小板减少 3 例、重症感染 5 例、骨髓增生异常综合征 4 例、弥漫性血管内凝血（DIC）1 例、艾滋病 2 例、甲状腺功能亢进 1 例、不明原因 8 例。2、急性白血病外周血，伴有血红蛋白下降、白细胞增高、骨髓增生极度活跃、肝脾肿大。巨幼细胞性贫血外周血血小板减少，伴有血细胞巨幼变。
结论 1.血小板减少症病因复杂多样、见于血液系统疾病、非血液系统疾病及不明原因血小板减少。血小板减少往往以一些伴发症状及并发症症状表现，不是单纯的以某种疾病存在。非血液系统疾病及不明原因血小板减少，临床并不少见，应予以重视鉴别诊断，以免延误治疗时间。2.实验室血小板计数、外周血血涂片、骨髓细胞形态检查联合诊断、与临床全面分析、可进一步明确血小板减少的病因、提高诊断率。

PU-3791

非淋巴细胞/淋巴细胞比值在系统性红斑狼疮患者中的临床意义

张琳琳
四川省医学科学院·四川省人民医院

目的 探讨系统性红斑狼疮（SLE）患者中性粒细胞（NLR），单核细胞（MLR），嗜酸性粒细胞（ELR）和嗜碱性粒细胞（BLR）与淋巴细胞的比值及临床意义。
方法 收集本院 350 例 SLE 患者和 200 例健康体检者血常规检验和临床信息。非参检验分析 NLR、MLR、ELR 和 BLR 在各组的表达差异，Spearman 相关性分析其与年龄、血沉、C 反应蛋白和免疫球蛋白的相关性。ROC 曲线分析 NLR、MLR、ELR 和 BLR 对 SLE 的诊断价值。
结果 SLE 患者 NLR[3.05（1.88-5.53）]，明显高于对照组[1.72（1.33-2.34）]；MLR[0.32（0.24--0.46）]明显高于对照组[0.21（0.18-0.25）]；ELR[0.027（0.008-0.056）]明显低于对照组[0.045（0.029-0.081）]；BLR[0.011（0-0.025）]明显低于对照组[0.021（0.01-0.026）]，差异有统计学意义（P 均<0.05）。NLR 与 CRP 明显正相关（r=0.2, P<0.001）,与 IgG、IgM 明显负相关（r=-0.131,-0.158,P=0.019，0.005）；MLR 与 CRP 明显正相关（r=0.162, P=0.003）,与 IgM 明显负相关（r=-0.134,P=0.017）；ELR 与 IgG、IgA 明显正相关（r=0.118、0.114, P=0.035,0.042）；BLR 与 CRP 明显正相关（r=0.113, P=0.041）。 ROC 曲线分析示 NLR 诊断 SLE 的曲线下面积（AUC）为 0.627（0.591-0.663），MLR 诊断 SLE 的 AUC 为 0.643（0.608-0.678），ELR 诊断 SLE 的 AUC 为 0.691（0.656-0.725）（P 均<0.01）；BLR 诊断 SLE 的 AUC 为 0.505（0.466-0.544）（P=0.794）。
结论 SLE 患者 NLR,MLR 明显升高，而 ELR,BLR 明显降低；NLR,MLR,BLR 可能反映 SLE 患者炎症状态；NLR,MLR 和 ELR 对 SLE 有较好的诊断价值。

PU-3792

NLS-RARα 在 APL 中的研究进展

叶娇
德阳市人民医院

急性早幼粒细胞性白血病（APL）属于急性髓系白血病，其特征是 15 号染色体与 17 号染色体分别断裂并易位形成了 PML-RARα 融合蛋白，血液学特征是粒细胞阻滞于早幼粒细胞阶段。APL 发病迅速，由于全身性弥漫性血管内凝血（DIC）等严重并发症导致早期死亡。ATRA 是 20 世纪

80 年代后期最具革命性的，被认为是近来用于白血病细胞分化治疗的最合适和最有效的药物之一。遗憾的是，ATRA 对于所有髓系白血病类型并不是非常有效，寻找新的诊断和治疗靶点已经刻不容缓。

PU-3793

强效血浆置换术治疗血栓性血小板减少性紫癜的临床指标观察

李艳红[1,3,4]、武坤[2,3,4]
1. 昆明医科大学第一附属医院
2. 昆明医科大学第一附属医院医学检验科
3. 云南省检验医学重点实验室
4. 云南省实验诊断研究所

目的 观察血栓性血小板减少性紫癜（TTP）患者经强效血浆置换术治疗后的临床检验指标，分析疗效和生存状况，探讨该治疗方法的临床意义。
方法 2017 年 2 月至 3 月，对我院血液科收治的 1 例血栓性血小板减少性紫癜患者行强效血浆置换术，并结合免疫抑制及营养支持进行综合治疗。
结果 本例 TTP 患者经过连续 11 次的血浆置换，结合其他相关治疗，最终痊愈出院。出院一年后，复查血常规检查、生化及凝血功能检查等指标，均接近或处于正常水平，随访至 2021 年 05 月未复发。
结论 TTP 患者病情危重，一旦确诊或高度怀疑，应尽早行强效血浆置换治疗，对降低死亡率，提高患者生存质量至关重要。关键词：强效血浆置换；血栓性血小板减少性紫癜；临床检验

PU-3794

应血栓弹力图分析慢性肾脏病患者高凝状态的危险因素

吴思弦、袁浩、周毅峰、龙贞义、彭亚梦、彭芳
湖南省人民医院

目的 应用血栓弹力图(TEG)分析慢性肾脏病(chronic kidney disease, CKD)患者凝血变化特征，及影响 CKD 患者高凝状态的危险因素。
方法 选取 2018 年 8 月~2019 年 5 月湖南省人民医院收治的 CKD 患者 128 例，比较不同阶段 CKD 患者和对照组（n = 21）的常规凝血试验和血栓弹力图(TEG)指标。根据 TEG 最大振幅(MA)将 CKD 患者分为高凝组（maximum amplitude (MA) > 68 mm，n = 66）和非高凝组（MA ≤ 68 mm，n = 62），比较两组间实验室指标，分析 CKD 患者高凝状态影响因素及相关性。
结果 （1）与对照组相比，CKD 不同阶段患者纤维蛋白原 (Fib)、D-二聚体水平明显增高，CKD 3-4 期、CKD 5 期未透析及 CKD 5 期透析患者反应时间(R)、K-时间降低，而 MA、α-角和凝血指数均升高。（2）高凝组与非高凝组在估算的肾小球滤过率（eGFR）、糖尿病比例、脑卒中史、中性粒细胞百分比、中性粒细胞淋巴细胞比值、红细胞计数、血红蛋白（Hb）、血小板计数（PLT）、血清肌酐、血清胱抑素-C、血清白蛋白、脂蛋白（a）等方面均存在显著差异（P<0.05）。其中 eGFR、PLT、和 Hb 水平是 CKD 患者高凝状态的独立影响因素。
结论 CKD 患者相对正常对照处于高凝状态。eGFR，PLT 和 Hb 可能是 CKD 患者高凝状态的危险因素。

PU-3795

The role of NLRP3 inflammasome in lymphoma

Kun Wu 、Mingxia Shi
First Affiliated Hospital of Kunming Medical University

The role of chronic inflammation in tumor progression has been demonstrated in previous studies. The activation of inflammasomes is mediated by the assembled signal of multi-protein complexes and the activation of inflammation-related caspase and maturation of inflammatory factors such as Interleukin-1 and Interleukin-18. Nucleotide binding oligomerization domain-like receptor family 3 (NLRP3) is the most well-studied type of inflammasome, which is closely related to the occurrence and development of many diseases such as inflammation and tumors. In recent years, several studies have explored the potential role of NLRP3 in lymphoma. In this review, we summarize current knowledge of NLRP3 in lymphoma and discuss its feasibility as a novel target.

PU-3796

贫血样本用于自动推片与手工推片在数字化细胞形态阅片仪上的评价分析

黄小天
电子科技大学附属医院.四川省人民医院医学检验中心

目的 探讨和分析贫血样本的自动推片和手工推片的质量控制，分别对外周血白细胞分类相关性分析。
方法 选取我院贫血样本 45 例，分别进行自动推片和手工推片，并采用数字化细胞形态阅片仪的外周血推片质量分析软件 SmearChecker 检测其单细胞层长度，采用数字化细胞形态阅片仪采集的红细胞概览图计数单层红细胞层不重叠的红细胞数量，并对数字化细胞形态阅片仪白细胞形态分析预分类后再经人工分类审核后的结果，分别于自动血细胞分析仪和人工显微镜镜检结果作比较进行线性回归分析。
结果 自动推片法制备的样本，相对于手工推片制备的样本，其单细胞层长度更长且合格率更高、红细胞概览图不重叠数量更多，数字化细胞形态分析仪白细胞分类结果与自动血细胞分析仪和人工显微镜镜检结果相关性更高。
结论 贫血样本在自动推片法制备的外周血推片质量和稳定性更高，有效的保证数字化细胞形态分析仪白细胞分类结果与自动血细胞分析仪和人工显微镜镜检结果相关性。

未成熟血小板比率对评估造血干细胞移植效果的分析

丁爽
徐州医科大学附属医院

目的 探讨采用未成熟血小板比率(IPF)监测造血干细胞移植(HSCT)患者造血功能恢复的临床价值。
方法 采用 Sysmex XN-1000 全自动血细胞分析仪检测 120 例白血病患者 HSCT 后的 WBC、PLT、中性粒细胞绝对计数(ANC)、网织红细胞百分比 (RET%)及 IPF，并对结果进行对比分析。
结果 80 例患者移植后 IRF、ANC、RET%、WBC、PLT 分别在 16.2、19 .0、18 .6、20.4、25 .0 d 达到恢复指标。有 95.0%（76 /80）的患者 IRF 最早达到造血功能恢复的指标。IPF 达到造血功能恢复指标的时间要早于 WBC、PLT、ANC 及 RET%（P<0.05）。ANC 及 RET%达到造血功能恢复指标的天数要早于 WBC 及 PLT（P <0.05）。ANC 与 RET%间比较差异无统计学意义（P>0.05）。
结论 IRF 是 HSCT 后造血功能恢复较敏感的指标，可用于 HSCT 后造血功能恢复的监测、病情观察及指导临床治疗。

PU-3799

妊娠期易栓症患者经抗凝治疗后对凝血功能指标的调节作用

庄文玉
潍坊市中医院

目的 研究妊娠期易栓症患者经抗凝治疗后对凝血功能指数的调节作用。
方法 本次 54 例研究对象均来自 2019 年 1 月—12 月在我院接受治疗的妊娠期易栓症患者，均进行抗凝治疗。对比患者治疗前与治疗后凝血功能指数。
结果 治疗后 PT 和 APTT 指数比治疗前低，差异具有统计学意义（P＜0.05）。
结论 妊娠期易栓症患者经抗凝治疗后，凝血功能有明显的改善。

PU-3800

D-D，FDP 结果倒置原因分析

邢丽丽
西安医学院第一附属医院

目的 分析日常凝血检验中 D-D，FDP 结果倒置产生的原因和解决方案。
方法 选取我院凝血标本 4000 例中 38 例 D-D，FDP 结果倒置标本，按结果异常程度的不同进行分类分析。
结果 D-D，FDP 倒置产生主要集中在 FDP 结果低值时，另外类风湿因子的存在，标本溶血脂血也可导致 D-D，FDP 倒置。

1.分析为什么会出现这种情况，我们首先要从 D-D、FDP 来源说起。FDP 为纤维蛋白原及纤维蛋白在纤溶酶作用下的降解产物。纤维蛋白原在纤溶酶的作用下产生三个球形的产物 D、E、D 和 Bβ1-42。Aα 链上的极性附属物（含 A、B、C、H 片段）。统称为纤维蛋白原降解产物。交联纤维蛋白在纤溶酶的作用下，形成有极性的附属物的多聚体、D 二聚体、r-r 二聚体，或有些成分的片段以及 XYDE 片段。理论上 D 二聚体应该是 FDP 众多片段的一种。
》我科室 DD 的检测方法采用的是微粒凝集定量检测方法（免疫比浊法）。其原理是利用鼠抗人单克隆抗体、（8D3）共价包被的聚乙烯颗粒凝集。D 二聚体交联的区域具有立体对称的结构，即单克隆抗体作用的抗原表位出现两次。因此，一个抗体有足够能力触发凝集反应，从而浊度的升高可以用比浊法检测。FDP 检测方法也是免疫比浊法，其原理是利用鼠抗人 FDP 单克隆抗体胶乳颗粒发生抗原抗体反应，产生凝集以致浊度上升。通过测定浊度的变化量求出 FDP 的浓度。FDP 是一个混合物，那么其试剂中的单克隆抗体也是混合物，并非单一的抗体（具体抗原表位不详），由于设计的不同抗体的亲和力不相同，导致了在检测时两者并不完全具有可比性，在临床上仅作为参考。
2．我科室 FDP 定标采用多点定标，校准品含有不同浓度的人源性纤维蛋白和纤维蛋白原降解产物，采用因子稀释液做为校准品 0。包括 0，7.5，15.2，31，62，124 五种浓度，0 浓度到 7.5 浓度之间有较大的浓度空白区间。FDP 低浓度超过线性范围，结果准确性偏低。因此，在 FDP 低浓度时会产生 D-D，FDP 倒置现象。
3.病人体内存在较高浓度的 IgG，如类风湿因子等可能干扰检测。因为测定 D-D 采用免疫比浊法，将 D-D 的抗体包被在乳胶颗粒上，类风湿因子是一种变性的 IgG，它与形成的免疫复合物发生聚集，使结果偏高。FDP 因其检测片段较多，特异性不强，干扰物质对 FDP 的影响不是很大。因此，较高浓度的干扰物质会产生 D-D，FDP 倒置现象。
结论 D-D，FDP 倒置是由于方法学的缺陷及干扰因素导致的，但也有一定的临床价值。出现这种情况时，怀疑干扰导致时，可采用连续稀释方式排除干扰影响，同时结合 FDP 项目来辨别是否为真的增高。

PU-3801

17 例 CD 患儿的临床分析

鄂建飞、赵铭、杨浩、詹璐、郑茂
德阳市人民医院

目的 通过分析 17 例乳糜泻患儿临床特征以及血清特异性抗体 EMA、DGP 检出情况，提高临床对 CD 诊治的认识。
方法 选取 2018 年 1 月至 2020 年 10 月 CD 患儿 17 例作为观察组，选取健康儿童 30 例作为对照组，回顾性分析患者临床资料。
结果 17 例 CD 患儿腹泻次数平均每日 4 次。9 例（52.9%）患者表现为稀糊便，其中 5 例（29.4%）可见明显脂肪滴；5 例（29.4%）为糊状便，2 例（11.8%）为稀汁便。粪便苏丹Ⅲ染色阳性 7 例（41.2%）。伴随消化系统症状腹胀 12 例（70.6%）、纳差 11 例（64.7%）、腹痛 10 例（58.8%）。观察组 EMA-IgA 检测阳性 16 例（94.1%），EMA-IgG 检测阳性 14 例（82.4%），DGP-IgA 和 DGP-IgG 检测阳性 16 例（94.1%），均显著高于健康对照组，差异有统计学意义（P＜0.05）。DGP 检测效能指标最好，敏感性 94.1%，特异性 100%，阳性预期值 100%，阴性预期值 96.8%。
结论 乳糜泻导致的吸收不良主要表现为腹泻和腹胀。DGP 检测是血清特异性抗体检测的重要补充。

PU-3802

陕西地区 8724 例外周血染色体核型分析

杨冰
西安金域医学检验所有限公司

目的 探讨陕西地区遗传性疾病染色体异常的类型和发生率，旨在为临床染色体病的诊断及遗传咨询提供指导。
方法 选取陕西地区 8724 例遗传咨询者作为研究对象。抽取外周静脉血并通外周血淋巴细胞培养及秋水仙素处理，使其停止在分裂中期，经 G 显带后进行染色体核型分析，并统计异常核型的类型和发生率。
结果 在 8724 例外周血染色体核型分析中共检出异常核型 768 例，检出率为 8.80% 。其中染色体数目异常 259 例（33.72%），染色体结构异常 206 例（26.82%），染色体多态性变异 303 例（39.45%）。
结论 染色体核型异常是导致智力低下、发育迟缓、不孕不育、流产及胚胎停育、闭经等的重要原因之一。 临床上应重视对上述疾病的染色体核型检查，对寻找病因、指导优生优育、临床遗传咨询具有重要意义。

PU-3803

IgM 和 IgG 双克隆型华氏巨球蛋白血症一例报道并文献复习

李建新[1]、赖裕轶[2]、聂李平[1]、徐安平[1]、周宇[1]
1. 北京大学深圳医院
2. 南宁市第一人民医院

华氏巨球蛋白血症（Waldenstrom’s macroglobulinemia,WM）是由淋巴样浆细胞恶性增生，合成分泌大量单克隆巨球蛋白 IgM 所致的较为少见的疾病，在非霍奇金淋巴瘤中所占比例<2%。90%的患者检测出 MYD88 L265p 基因突变，可能为该疾病的致病原因。该病好发于老年人，临床表现为贫血、乏力、出血、脾肿大，淋巴结也可肿大，还可有感染、雷诺现象、高粘滞综合征，神经系统症状、视力下降、肾功能损害等。一般地，通常在患者血清中仅能检测到单克隆性 IgM 蛋白，IgM 和 IgG 双克隆 M 蛋白阳性病例极其罕见。本文报道一例 IgG-Kappa 和 IgM-Kappa 双克隆 M 蛋白同时表达的 WM 病例。

PU-3804

浅入探索肝功能不全与血小板减低的关系

孟双双、侯向萍
新疆生产建设兵团第一师阿拉尔医院

目的 通过对在医院就诊的肝功能不全患者的检查结果，进行统计分析，寻找肝功能不全患与血小板减低的关系。
方法 收集 2020 年 1 月至 2021 年 5 月肝功能不全患者病例，按年龄将其分为中青年组（18-45 岁）与中老年组（46-95 岁），将患者的常规生化检查数据（包括谷丙转氨酶、谷草转氨酶、碱性磷酸酶、GGT 等指标），与血小板结果做收集整理，应用 SPSS 统计分析软件对所得数据进行分析，看是否成线性关系，并于临床做进一步的追踪调查。
结果 收集 2020 年 1 月至 2021 年 5 月共 417 例肝功能不全患者，其中中青年组 106 例（25.42%，106/417），中老年组 311 例（74.58%，311/417），中青年组伴血小板减少 11 例（10.38%，

11/106），中老年组伴血小板减少 198 例（63.67%，198/311），分析检查数据得出：1.中老年组肝功能不全患者的严重程度与常规生化指标（包括谷丙转氨酶、谷草转氨酶、碱性磷酸酶、GGT 等）基本成正相关，肝功能不全越严重，生化指标越高。2.中老年组肝功能不全的患者比起中青年组肝功能不全的患者出现血小板减低的情况更为普遍，中老年组肝功能不全患者血小板比中青年组肝功能不全患者血小板明显减低，差异显著（P<0.05）。3.中老年组肝功能不全患者的严重程度与血小板减低的程度基本成线性关系，随着肝功能不全严重程度的增大，血小板减低的程度显著（P<0.05）。

结论 血小板减低的程度基本可以对中老年肝功能不全患者的严重程度起到提示作用，有助于临床对肝功能不全患者的预后治疗。

PU-3805

急性非心源性缺血性中风后复发中风的危险因素分析

张丽敏
首都医科大学附属北京天坛医院

背景 相当比例的急性非心源性缺血性脑卒中患者在标准治疗后经历复发性缺血事件。

目的 我们旨在早期识别复发性缺血事件预测的危险因素。

方法 纳入 286 例出现症状不到三天的非心源性缺血性脑卒中患者。

评估氯吡格雷治疗 7 天内和 1 一年内的出现任何复发事件患者的血管危险因素、入院时的常规实验室数据、血栓弹力图测试等指标。患者被分为病例组（出现临床不良事件的患者，包括缺血性中风、短暂性脑缺血发作、心肌梗塞和血管相关死亡率）和对照组（无事件患者）。缺血复发事件由受试者工作特征曲线和多变量逻辑回归分析确定。

结果 43 例患者（病例组）出现临床不良事件。入院时病例组患者的患者的平均血小板体积(MPV)、血小板/淋巴细胞比 (PLR)、淋巴细胞计数 (LY) 和纤维蛋白原 (Fib)和对照组相比，有明显升高(P<0.001)。氯吡格雷后治疗 7 天后，病例组 ADP 诱导的血小板聚集率（ADP%）水平较低，而病例组的最大振幅（MA）水平高于对照组（P<0.01）。LY、PLR、Fib、MA、ADP%和 MPV 的受试者工作特征（ROC）曲线下面积（AUC）分别为 0.602、0.614、0.629、0.770、0.800 和 0.808。逻辑回归分析表明，MPV、ADP% 和 MA 确实是预测因素。

结论 MPV、ADP%和 MA 是急性非心源性缺血性中风术后缺血事件复发的危险因素。应尽可能快的向这些患者提供紧急评估和个体化药物治疗

PU-3806

血浆病毒载量对 HIV，HBV 共感染患者肝脏影响的研究

赵苛岑
陆军军医大学第一附属医院（西南医院）

分析血浆病毒载量对 HIV、HBV 共感染患者肝脏的影响。

方法 选取 2018 年 5 月-2020 年 6 月我院收治的 HIV 感染合并乙型肝炎患者 80 例为研究组，A 组为 40 例患者一直服用抗病毒药物，B 组为 40 例较晚服用抗病毒药物，分析患者的血浆病毒载量，谷丙转氨酶(ALT)、谷草转氨酶(AST)、总胆红素(TBIL)、白蛋白(ALB)水平，分析血浆病毒载量与肝功能的相关性。

结果 A 组 ALB 水平高于 B 组，而 AST、HIV RNA 载量、ALT、TBIL 水平低于 B 组(P<0.05）；在 A 组患者中，一直注射抗病毒药物的患者 HBV DNA 载量、HIVRNA 载量及 ALT、AST、TBIL 水平最低，而 ALB 水平最高，随着注入抗病毒药物的增加， HBV DNA 载量、HIV RNA 载量及 ALT、AST、TBIL 水平逐渐下降，ALB 逐渐升高，差异均有统计学意义(P<0.05）；以 A 组患者资料为样

本，进行血浆 HIV 病毒载量与肝功能指标的 Pearson 相关检验分析：血浆 HIV 病毒载量与 ALT、AST、TBIL 呈正相关，与 ALB 呈负相关（P＜0.05）。
结论 血浆病毒载量对 HIV 感染的影响具有正相关性，对乙肝患者肝脏呈负相关性，HIV 病毒载量升高，HIV 感染加重，肝受损严重

PU-3807

A case of a severe FXI deficiency in a Chinese pregnancy woman

Yingyu Wang、Ping Ma
The Affiliated Hospital of Xuzhou Medical University

Congenital factor XI deficiency is a rare disorder characterized by low coagulant activity, associated with a variable injury-related bleeding diathesis. However, the severity of bleeding does not correlate with plasma FXI coagulant levels. This makes management of these patients difficult. Here, we present a case of 35-year-old pregnancy woman who was born from an consanguineous family. She was found to have a markedly prolonged activated partial thromboplastin time during antenatal examination. Further study reveled the activity and antigen levels of factor XI in the proband were 4 and 11%, respectively. Thus diagnosis of severe FXI deficiency (cross-reacting material negative, type I) can be made. she did not show any bleeding tendency in the past. Notablely, she gives birth to a daughter four weeks later, and no post-partum hemorrhage occurred also.

血栓弹力图在鉴别诊断血友病 A 和抗磷脂综合征中的作用

刘禹、许冠群、王学锋、武文漫
上海交通大学医学院附属瑞金医院

目的 分析探讨血栓弹力图(TEG)在鉴别诊断血友病 A(HA)和抗磷脂综合征(APS)中的作用。
方法 收集 2010 年 1 月至 2021 年 6 月上海交通大学医学院附属瑞金医院收治的 HA 患者 38 例（其中包括 23 例遗传性 HA 和 15 例获得性 HA）和狼疮抗凝物质阳性的 APS 患者 133 例。分别对 HA 患者进行凝血因子Ⅷ活性测定，对 APS 患者进行狼疮抗凝物质测定，同时对两组患者进行 TEG 检测。比较各组间和亚组间各指标的差异，并绘制 TEG R 时间的受试者工作特征曲线(ROC)。
结果 HA 和 APS 两组间 TEG R 时间的差异有统计学意义(Z=-7.181,p＜0.001)，曲线下面积(AUC)为 0.882(95%CI:0.816～0.948)，cut-off 值为 12.80min，其诊断灵敏度为 73.68%，特异性为 93.23%。遗传性 HA 与获得性 HA 两组间 TEG R 时间的差异有统计学意义(Z=-3.784,p＜0.001)，AUC 为 0.858(95%CI:0.734～0.982)，cut-off 值为 18.50min，其诊断灵敏度为 93.33%，特异性为 82.61%。
结论 TEG R 时间可用于 HA 和 APS 的鉴别诊断中。

PU-3809

微流控凝血分析仪自动化 APTT 纠正试验性能评估

宋鉴清
中国医科大学附属第一医院

目的 微流控凝血分析仪自动化 APTT 纠正试验在临床应用中的性能评估。
方法 比较普施康 MC500 仪器的自动化 APTT 纠正试验与用希森美康 CS-5100 进行的手工 APTT 纠正试验结果是否一致；分析判读结果与临床诊断是否相符。
结果 使用 SPSS23.0 软件进行统计学分析，用两种方法测定并计算的两组 RI-0h 值具有相关性（回归方程 Y=0.97X+7.05;相关系数 r=0.618）。仪器自动化 APTT 纠正试验和手工 APTT 纠正试验两种方法对凝血因子缺乏血浆样本判定结果的临床符合率分别为 62.5%和 37.5%，对狼疮阳性血浆样本判定结果的临床符合率分别为 17.2%和 65.6%，对凝血因子八抑制物阳性样本判定结果的临床符合率均为 100%。
结论 普施康 MC500APTT 自动化 APTT 纠正试验结果与利用希森美康 CS-5100 进行的手工 APTT 纠正试验操作结果具有一致性，但对狼疮阳性血浆样本结果判读的临床符合率低于手工 APTT 纠正试验。

PU-3810

因肝功能衰竭诱导血栓性血小板减少性紫癜案例分析 1 例

王妍[1]、赵慧茹[2]、邢丽丽[1]、马瑜婷[1]、袁博[1]
1. 西安医学院第一附属医院
2. 北京积水潭医院

目的 分析 1 例风湿性心脏病患者因肝功能衰竭导致血栓性血小板减少性紫癜发生，以提高对 TTP 的鉴别诊断。
方法 选取某医院收治的风湿性心脏病患者 1 例，该患者行冠脉搭桥+主动脉球囊反博植入术后，因血小板不明原因减少局部紫癜形成伴 D 二聚体升高 2 日等临床症状，对该病例进行完整鉴别分析，从而总结 TTP 的临床诊断要点。
结果 该病例进行了 DIC、HIT 等相关鉴别实验后，提示该病例是因患者心功能衰竭至肝脏灌注不足，血管性血友病因子裂解酶（ADAMTS13）分泌异常而至 TTP 发生。
结论 血管性血友病因子裂解酶对 TTP 的鉴别诊断具有临床意义，血浆置换可改善患者临床结局。

Establishment of the risk prediction model for significant bacteriuria in adult patients with automated urine analysis

jianmin li
Taian Central Hospital

Introduction Urinary Tract Infections (UTIs) have been proven to be the most encountered bacterial infection in humans. We hope to establish a prediction model for significant bacteriuria by comprehensively analyzing the relevant parameters of age, gender and urine automatic analysis data.
Methods A retrospective study was performed at Tai'an central Hospital. All samples included in the study were tested for urine culture and urine automatic analysis. Data analysis was conducted with the SPSS.

Results The binary logistic regression module is used to establish the forecast formula, which gender, age, leukocyte count, bacterial count, leukocyte esterase and nitrite were included. Receiver Operating Characteristic (ROC) curves showed that the area under ROC curve (AUC) of the prediction model was 0.878, bigger than the AUCs of the other six independent variables. The sensitivity and specificity of prediction model were 61.68% and 95.98% respectively. The positive predictive value and the negative predictive value of the predictive model is 87.13% and 85.02% respectively.
Conclusions The prediction formula obtained in our study can achieve good prediction effect for significant bacteriuria, which can effectively avoid the treatment delay or antibiotic abuse caused by the subjective judgment of doctors.

PU-3812

血浆凝固曲线波形分析临床应用的最新进展

旷永君、伍柏青
江西省人民医院

凝固曲线波形分析(Clot waveform analysis,CWA)是近年发展起来的一种基于凝血试验过程并对凝固曲线进行分析的新技术，其除了报告凝血时间之外，还能提供被测标本整体凝血状态的许多有用信息。关于血友病 A(Hemophilia A,HA)患者的诊断和治疗，以及弥漫性血管内凝血和脓毒症的早期诊断及预后，新型冠状病毒肺炎(Corona Virus Disease 2019,COVID-19)和狼疮抗凝物(Lupus anticoagulant,LA)的诊断等潜在临床应用方面，均有许多研究成果发表。大量研究展示了凝固曲线分析提高患者管理的能力，特别是这种工具价格低廉、能够快速分析，而且通过带有光学检测系统的凝血分析仪就可以获得。本文通过广泛回顾与 CWA 研究相关的文献，综述其潜在的临床应用，希望能对临床疾病的诊断、治疗提供帮助。

PU-3813

SAA 与 CRP 联合检测应用于早期感染预判及鉴别感染类型的临床效果评价

钱朵朵、陈燚琼、蔡玉婵
同济大学附属杨浦医院

目的 探讨 SAA(血清淀粉样蛋白 A)与 CRP(C-反应蛋白)在早期感染、不同感染类型、感染严重程度不同时，绘制两者升高曲线并判断 SAA 与 CRP 在早期感染与不同感染类型患者中的实际临床应用价值。
方法 同时选取白细胞总数正常但诊断为初发感染患者 9 例；白细胞总数大于医学参考范围的已知中期感染患者 12 例；已达白细胞总数危急值（>30*109/L）患者 7 例。使用 QuikRead go 仪器测定选取标本 CRP 值及 Genrui PA200 测定 SAA 值；判断两者测定值是否会伴随感染的程度增加而升高、升高速度、升高幅度是否一致，即灵敏度、敏感性、特异性指标方面的评价；升高曲线做图横坐标为 CRP 浓度，纵坐标为 SAA 浓度，并计算 SAA/CRP(SCR)来判断感染的类型。
结果 早期初发感染患者的 CRP 升高 3 例，未升高 6 例、SAA 均升高，升高幅度均大于 CRP；已知中期感染患者 CRP 升高 8 例，未升高 1 例、SAA 均升高，升高幅度已远大于 CRP；重度感染患者 SAA 与 CRP 均已升高，都有很大程度的升高。画图计算 SCR 发现，病毒感染患者 CRP 早期不升高或仅稍许升高；而 SAA 早期升高，且升高幅度大，并随病毒感染严重程度直线快速上升。细菌感染患者 CRP 与 SAA 均早期升高、但随着细菌感染的进展，SAA 值升高幅度将低于 CRP 升高幅度，出现较明显的背离现象（即 SCR 比值将不会一直增加），差异具有统计学意义（P<0.05）。

结论 SAA 对于反映早期感染及病毒感染的灵敏度、特异性优于 CRP（即 SAA 阴性可排除细菌和病毒的感染，而 CRP 阴性仅排除细菌感染）；SAA 同 CRP 一同适用于细菌早期感染的诊断，且两者比值 SCR 能更清楚地区分轻、中、重度细菌和病毒感染。大大提到了临床的正确诊断率，降低了临床的误诊与漏诊。

尿微量白蛋白测定在糖尿病早期肾损伤诊断中的价值

徐红燕[2]、杨晓平[1]
1. 中国人民解放军医院第九七O医院
2. 中国人民解放军医院第九七O医院

目的 这次研究的主要目的是为了解糖尿病早期肾损伤的诊断中尿微量白蛋白（mALB）的作用。
方法 收集 2019 年 6 月至 2019 年 10 月在中国人民解放军联勤保障部队第九七〇医院的糖尿病患者、糖尿病肾病患者及健康者的病例共 137 例，糖尿病患者 64 例，糖尿病肾病共 73 例，对取本院军人健康管理体检中心的 30 例健康者作为对照组，采用免疫投射比浊法检测尿微量白蛋白的水平，同时用胶乳免疫比浊法对血液中的胱抑素 C（Cys-C）和 β2-微球蛋白（β2-MG）的含量。根据近期来医院进行检查的糖尿病患者的检查结果进行统计学分析，判断早期肾损伤的指标。
结果 经非参数分析，三组数据之间均有显著差异（P<0.05），具有统计学意义。糖尿病肾病组、糖尿病组和正常对照组三组变量之间进行对比，有显著差异，糖尿病肾病组的三项检查结果均高于剩于两组。除正常对照组外，其他两组进行对比，有显著差异，且糖尿病肾病组明显。
结论 通过尿微量白蛋白、胱抑素 C 和 β2-微球蛋白联合检测，可得知尿微量白蛋白对检测糖尿病早期肾损伤具有重要价值。

PU-3815

迈瑞 BC-7500 全自动血液细胞分析仪的性能验证及评价

陶晓燕[1,2]、柳洁[1]、黄燚[1]、牟勇[1]、傅珺[1]
1. 电子科技大学附属医院·四川省人民医院
2. 中南大学湘雅医院

目的 验证迈瑞 BC-7500CRP 全自动血液细胞分析仪的分析性能。
方法 参照参照国际血液学标准委员会（ICSH）、WS/T 406-2012《临床血液学检验常规项目分析质量要求》及美国临床和实验室标准化委员会相关文件，对 BC-7500 CRP 全自动血液细胞分析仪的本底计数、携带污染、精密度、正确度、准确度、线性范围和实验室内的结果可比性等指标进行性能验证。
结果 迈瑞 BC-7500 CRP 全自动血液细胞分析仪的本底计数和携带污染均符合标准；仪器的批内精密度和批间精密度良好；准确度、正确度均通过验证；线性范围宽，符合标准；实验室内不同仪器间的结果具有可比性。
结论 迈瑞 BC-7500 CRP 全自动血液细胞分析仪在本实验室能达到厂家声明的分析性能，检验结果的准确可靠，是一种较理想的全血细胞分析仪。

SYSMEX XN-350 血球仪在脑脊液和胸腹水白细胞计数中的可行性探讨

孟荣
西安医学院第一附属医院

目的 探讨 SYSMEX XN-350 血液分析仪(简称 SYSMEX XN-350)的体液模式在脑脊液和胸腹水白细胞计数中应用的可行性。
方法 分别采用手工显微镜镜检法和 SYSMEX XN-350 对 100 例脑脊液和胸腹水标本进行白细胞计数，结果 XN-350 检测体液中高、中和低值有核细胞的变异系数(CV) 均低于仪器设定标准，重复性好;与手工显微镜镜检法相比，SYSMEX XN-350 所测结果差异无统计学意义(P＞0.05); XN350 分析仪 WBC 和 RBC 测定结果与手工计数法有良好的相关性（ r ＞0.98），各项指标的验证结果均符合厂商的技术指标要
求。
结论 XN-350 体液检测模式精密度高，线性范围宽，与手工显微镜计数有较好的符合性，其操作简单易行，结果稳定可靠，适用于日常临床脑脊液标本的检测.但如果仪器进行样品检测时报警，应当手工镜检复核，以提高结果的准确性和可靠性。

PU-3817

用 RET 和 RDW-CV 可初步鉴别缺铁性贫血与地中海贫血

马丽菊[1]、尹艳[2]、邵文萍[1]、万秋涵[1]
1. 昆明医科大学第一附属医院
2. 昆明医科大学

目的 从自动血细胞分析仪一次检验结果中，寻找能快速初步鉴别缺铁性贫血与地中海贫血的外周血液学指标，为临床早期诊断治疗提供有价值的线索。
方法 回顾性分析昆明医科大学第一附属医院 2020 年 1 月至 2021 年 4 月门诊及住院病人缺铁性贫血 72 例、地中海贫血 52 例及健康体检 31 例，对血常规中红细胞平均体积(mean corpuscular volume，MCV)、红细胞平均血红蛋白量（mean corpuscular hemoglobin，MCH）、红细胞体积分布宽度（red cell volume distribution width，RDW-CV）、网织红细胞（reticulocyte count，RET）等各参数进行统计分析，探究三组间上述红细胞指标的差异与关系。
结果 本研究发现：（1）贫血程度方面，缺铁性贫血组共 72 例，其中轻度贫血 22 例（30.56%）、中度贫血 47 例（65.28%）、重度贫血 3 例（4.16%）；地中海贫血组共 52 例，其中轻度贫血 35 例（67.31%）、中度贫血 15 例（28.85%），重度贫血 2 例（3.84%）。缺铁性贫血组以中度贫血占优势，地中海贫血组以轻度贫血为主。（2）轻度贫血时， MCV、MCH 在两贫血组均明显低于对照组（P＜0.05），而缺铁贫组 MCV、MCH 大于地贫组（P＜0.05）； RDW-CV 在两贫血组明显大于对照组（P＜0.05），两贫血组 RDW-CV 无差异（P=0.221）；RET 在对照组、缺铁贫组明显小于地贫组（P＜0.05），但对照组与缺铁贫组无明显差异（P=0.308）。(3)中度贫血时，MCV、MCH 在两贫血组亦明显低于对照组（P＜0.05），但两贫血组间无明显差异（P =0.702，P=0.149）；RDW-CV 在两贫血组明显大于对照组（P＜0.05），缺铁贫组 RDW-CV 明显小于地贫组（P<0.05）；两贫血组 RET 均明显高于对照组，但两贫血组间无明显差异（P=0.079）。
结论（1）检测 MCV、MCH、RDW-CV、RET，能够协助诊断缺铁性贫血与地中海贫血。（2）小细胞低色素贫血时，在轻度贫血中，RET 明显高于参考范围、而 MCH、MCV 小幅升高时，地贫的可能性更大；中度贫血者，若 RDW-CV 明显增加，则地贫的可能性为大。（3）重度贫血时，缺铁贫的 MCH、MCV、RET、RDW-CV 均低于地贫。

PU-3818

含氯消毒剂（84）在泌尿系感染（革兰氏阴性双球菌感染）检验中的应用

洪国勇
贵州金域医学检验中心

目的 观察含氯消毒剂（84 消毒液）在泌尿系统感染（革兰氏阴性双球菌感染）检验中的应用及效果。
方法 对 137 例革兰氏阴性双球菌引起的感染患者尿标本进行分组观察，对患者尿标本对含氯消毒剂（84 消毒液）敏感性进行统计分析。
结果 含氯消毒剂（84 消毒液）在尿标本中反应水平与革兰氏阴性双球菌感染呈现正相关，随着感染程度增高，含氯消毒剂（84 消毒液）在尿标本中的反应越明显。

PU-3819

COVID-19 腹泻患者实验室指标分析及感染致结肠组织单细胞基因表达变化的研究

宋晓东[1,2]、夏欣一[2]
1. 连云港市第一人民医院
2. 中国人民解放军东部战区总医院

目的 通过回顾性研究，统计分析新冠相关腹泻患者与非腹泻患者的临床特点、检测指标、疾病病程、疾病结局等差异；通过分析尸检患者结肠组织单细胞基因表达变化探讨新冠患者腹泻的可能发病机制以及粪口传播途径的可能。
方法 收集 2019 年 12 月至 2020 年 4 月在武汉火神山医院住院期间伴随腹泻症状病例，剔除其他明显致病因素导致的腹泻病例，如消化道肿瘤、使用抗生素后导致的一过性腹泻后共 343 例，设置为腹泻组。通过倾向性匹配评分消除了年龄、性别、并发症等混杂因素设置了对照组。统计分析两组间病情严重程度、病程、治疗结局、检查指标差异。在腹泻组中，比较隐血阳性组与阴性组的疾病严重程度、病程，临床转归等差异。此外，对一份腹泻患者冷冻建库的尸检结肠组织做单细胞测序，结果与公共数据集作比较，找出存在的分子与基因表达差异。
结果 腹泻组患者性别分布无差异，年龄分布以中老年为主，相比对照组病危重度评分要高。腹泻组病人大便常规结果多为正常，粪便隐血阳性 83 例，临床转归比隐血阴性组要差，其余检查指标腹泻组相比非腹泻组无统计学差异（P>0.05）。新冠腹泻病人结肠尸检测序结果 ACE2、AQP1、AQP3、AQP8 等表达与公共数据集中结果有差异，ACE2 表达的差异表明了新冠病毒可以通过 ACE2 受体结合直接入侵肠上皮细胞，提示病毒粪口途径传播的可能性；而 AQP1、AQP3、AQP8 表达差异则验证了患者腹泻多为非水样性腹泻这一特点。
结论 新冠患者伴随腹泻症状的出现可能加重患者病情，影响病情转归。应当重视新冠相关腹泻症状的早期发现和大便隐血指标的检测，尽早进行临床干预同时警惕粪口途径的传播。

PU-3820

Bone marrow particle enrichment analysis for the laboratory diagnosis of multiple myeloma: A case study

Congming Zhang、Yanan Zhang
The Third Xiangya Hospital of Central South University

Background Bone marrow smear and biopsy are the main Methods for the diagnosis of multiple myeloma (MM), bone marrow infiltration, and metastasis in lymphoma and cancer. However, several factors, including the focal growth of tumor cells, inappropriate puncture sites, and hemodilution of bone marrow aspirates, lower the rate of target cell detection. To solve this problem, we developed a novel method—bone marrow particle enrichment analysis—and here, we describe this procedure and its use in the diagnosis of a rare case of MM.
Methods An 88-year-old man with primary gastric gamma delta T-cell lymphoma (γδTCL) was found to have anemia. As the cause of anemia could not be determined, hemodilution was suspected, warranting the re-examination of the bone marrow aspirate. Re-puncture could not be performed because of the patient's age and unwillingness to undergo this procedure. Hence, we used a novel approach to enrich bone marrow particles and isolate marrow cells, and subsequently performed morphological and flow cytometric analysis.
Results Examinations performed after bone marrow particle enrichment revealed the presence of myeloma cells, and the patient was diagnosed with primary gastric γδTCL accompanied by MM.
Conclusions Bone marrow particle enrichment analysis may be applied to overcome the problems caused by hemodilution of bone marrow aspirates and to improve the rate of tumor cell detection. The application of this method for the diagnosis of hematological disorders should be explored further.

PU-3821

Differential diagnosis of thalassemia and iron deficiency anemia using CellaVision Advanced Red Blood Cell software

Fei Wang
Peking Union Medical College Hospital

Background Morphological changes of red blood cells (RBCs) in patients with thalassemia and iron deficiency anemia (IDA) had different patterns, with potential value of differential diagnosis. However, quantitative analysis of RBC morphologic changes manually is time-consuming and subjective, which limits its use in differential diagnosis. The aim of this study is to evaluate the CellaVision Advanced RBC Software as a prescreening tool of differential diagnosis of thalassemia and IDA in routine screening of blood smears.
Methods Forty-seven thalassemia and Forty-six IDA cases were recruited. CellaVision DM96 Advanced RBC Software was used to analyze RBC morphology.
Results Specific patterns of quantitative changes of RBC shapes were found between thalassemia and IDA patients. Thalassemia patients had more target cells, teardrop cells and stomatocytes while IDA patients had more hypochromatic cells, ovalocytes and echinocytes. Target cells as a single parameter, was the best morphological cell type to distinguish thalassemia from IDA with area under the curve (AUC) of 0.79, following hypochromatic cells with AUC of 0.70. Combined target cells and hypochromatic cells together by T/H ratio (target cells %/hypochromic RBC %) showed better differential diagnosis ability than every single parameter with AUC of 0.88. Cut-off value of 1.755 for T/H ratio showed a sensitivity of 80.43 and a specificity of 81.48, respectively, for thalassemia vs IDA.

Conclusions Target cell/hypochromasia ratio by CellaVision Advanced RBC Software is a relatively simple and economic screening index that gives direction for further diagnostic testing of thalassemia and IDA.

PU-3822

甲状腺结节患者的凝血功能研究

陈俊丽、王佳宁
中国医科大学附属第一医院

目的 探讨凝血指标与甲状腺激素水平的相关性及他们在甲状腺结节患者病情进展中的变化规律，研究甲状腺结节患者凝血功能的特点及其相关机制。
方法 选取 2020 年 7 月至 2021 年 3 月中国医科大学附属第一医院收治的甲状腺结节患者 110 例设为患者组，其中包括甲状腺良性结节 55 例，甲状腺恶性结节 55 例。随机选取同期入院健康体检者 140 例设为对照组。通过测定各组血浆凝血酶原时间（PT）、活化部分凝血活酶时间（APTT）、凝血酶时间（TT）、纤维蛋白原（FIB）和 D-二聚体（D-D）水平，及血清促甲状腺激素（TSH）、游离甲状腺素（FT4）和游离三碘甲状腺原氨酸（FT3）水平，比较分析良恶性患者凝血功能状态及其与甲状腺功能的相关性。
结果 1. 凝血指标比较
患者组 PT 水平显著低于健康对照组（P＜0.01），且良恶性组之间 PT 水平无统计学差异；患者组 APTT 水平低于健康对照组（P＜0.05），且良恶性组之间 APTT 水平无统计学差异；患者组 FIB 水平显著高于健康对照组（P＜0.01），且良恶性组之间 FIB 水平无统计学差异；患者组 TT 水平变化与健康对照组之间无统计学差异（P＞0.05）；患者组 D-二聚体水平变化与健康对照组之间无统计学差异（P＞0.05）。
2. 相关性分析
甲状腺良性结节患者的凝血指标与甲状腺激素不存在相关性。甲状腺恶性结节患者的 FIB 与 FT4 存在弱负相关（P＜0.05）；PT 与 FT3 存在显著弱负相关（P＜0.01）；APTT 与 FT3 存在弱负相关（P＜0.05）。
结论 1. 与正常健康者相比，甲状腺结节患者普遍存在凝血功能的紊乱，血液处于高凝状态，有血栓形成倾向。
2. 甲状腺恶性结节患者血浆 PT、APTT、FIB 与甲状腺相关激素之间存在一定相关性，但相关性不强，提示甲状腺功能状态的异常能够对甲状腺恶性结节患者的凝血功能产生一定影响，但作用不大，可能还不需要进行临床特殊干预。

PU-3823

厦门地区育龄妇女常规优生血清学筛查结果分析

陈海明[1,2]、王涛[1,2]、黄宇[1,2]、王前明[1,2]
1. 厦门大学附属第一医院检验科
2. 厦门市基因检测重点实验室

目的 分析厦门地区育龄妇女常规优生血清筛查结果，为本地区的优生保健工作提供数据参考。
方法 采用多重微珠流式免疫荧光法对 2018 年 1 月－2020 年 12 月在厦门大学附属第一医院就诊的 3070 例育龄妇女进行 TORCH 血清特异性抗体检测，并对其结果进行回顾分析。
结果 TORCH-IgM 总阳性率为 11.04%（339/3070），单项病原体阳性率为 10.59%（325/3070），合并两种以上感染阳性率为 0.46%(14/3070),其中以 HSVⅡ-IgM 阳性率最高，为 6.5%，其次分别是 CMV-IgM（1.7%）、HSVⅠ-IgM（1.6%）、RV-IgM（0.8%），TOX-IgM 最低（0.5%）；

TORCH-IgG 中 HSVⅠ-IgG 、CMV-IgG、RV-IgG、HSVⅡ-IgG、TOX-IgG 阳性率分别为 86.4%、82.1%、65.6%、11.6%、0.7%。此外 TORCH 感染具有一定季节性，夏、秋两季为 HSVⅡ病毒感染的高发季节；RV 病毒夏季感染率较高，分别与春、冬季相比，差异有统计学意义（P＜0.05）。在不同年龄分组阳性率分布方面，TORCH-IgM 在各年龄组间无明显差异（P＞0.05）；高龄组 TOX-IgG、CMV-IgG、HSVⅠ-IgG 、HSVⅡ-IgG 阳性率及合并感染率均明显高于低龄组，组间差异有统计学意义（P＜0.05），而低龄组 RV-IgG 阳性率明显高于高龄组，组间差异有统计学意义（P＜0.05）。

结论 厦门地区育龄妇女人群中存在一定比例的 TORCH 感染，应加强孕前检测及成人风疹疫苗接种宣传教育力度，建议育龄妇女孕前及围产期都应进行 TORCH 筛查，以便尽早进行临床干预，以防不良妊娠，实现优生优育。

PU-3824

血栓弹力图应用于预测冠脉介入术后心血管不良事件的临床价值

陈卫红
湖北省中西医结合医院

目的 观察血栓弹力图应用于预测 ACS 患者 PCI 术后心血管不良事件的临床价值。

方法 以自 2015 年 1 月-2016 年 4 月于我院就诊并进行 PCI 的 320 例 ACS 患者为研究对象，包括急性心肌梗死患者 146 例，不稳定心绞痛患者 174 例，所有患者 PCI 术后进行 TEG 检测，统计分析不同组患者 R、K、Angle、MA 和 CI 等 TEG 参数指标水平差异情况，随访患者 PCI 术后 24 个月内冠脉再狭窄、支架内血栓、非致死性心肌梗死、再次血运重建、心源性死亡等 MACE 发生情况，分析 ACS 患者 TEG 参数指标与 PCI 术后 MACE 的相关性。

结果 在全部进行 PCI 的 320 例 ACS 患者中，随访 24 个月内 MACE 发生率为 21.88%（P<0.05），AMI 组患者 PCI 术后 MACE 发生率（24.66%）高于 UAP 组患者水平（19.54%），但不具有统计学意义（χ2=1.216，P=0.270>0.05）；AMI 组与 UAP 组患者 R、K、Angle、MA 和 CI 等 TEG 参数指标水平差异不具有统计学意义（P>0.05）；MACE 组患者 R 和 K 指标数值显著低于非 MACE 组患者水平，而 MACE 组患者 PCI 术后 Angle、MA 和 CI 指标数值显著高于非 MACE 组患者水平（P<0.05）；R 和 K 数值均与 ACS 患者 PCI 术后 MACE 的发生呈负相关性（P<0.05），而 Angle、MA 和 CI 数值均与 ACS 患者 PCI 术后 MACE 的发生呈正相关性（P<0.05）。

结论 TEG 参数指标水平与 ACS 患者 PCI 术后 MACE 的发生密切相关， TEG 对 ACS 患者 PCI 术后 MACE 具有一定的预测价值，可用于指导 PCI 术后治疗和不良反应的预防，临床应予以重视。

PU-3825

儿童 ADP 诱导的血小板最大聚集率与血栓弹力图 MA 值的对比分析

苗文佳、李刚
北京儿童医院

目的 比较 ADP 诱导血小板最大聚集率与血栓弹力图 MA 值检测儿童血小板聚集功能差异。

方法 收集 2019 年 1 月至 2020 年 8 月期间我院血液专业门诊就诊患儿 124 例，对二磷酸腺苷诱导 LTA 血小板最大聚集率与 TEG 的最大振幅 MA 值进行相关性分析，探讨两种方法差异产生原因。

结果 LTA 检测血小板聚集功能的阳性率 40.3%高于 TEG(22.6%)，差异有统计学意义（R<0.05）。ADP 诱导的血小板最大聚集率与 MA 值具有弱相关性（r=0.248，R<0.05）。

结论 LTA 与 TEG 存在一定的相关性，各有优势及自身局限性，相互之间不可替代。

PU-3826

载脂蛋白 A1 抗体作用于人精子后抑制其活力并影响小鼠体外受精

池秀平、孟美玲、王新颖、赵书平
泰安市中心医院

目的 载脂蛋白 A1 抗体对人精子活力和小鼠受精率的影响。
方法 基础研究 收集 2020 年 10 月份来泰安市中心医院健康查体的精液标本 20 例，经过密度梯度离心(40%/80%)留取高活力精子进行实验。设空白对照组、兔多克隆 IgG 组（40 μg/ml）、APOA1 抗体处理组即不同浓度 APOA1 抗体（10、20 和 40 μg/ml）处理高活力精子标本，37 ℃温箱孵育 1、2 和 4 h 后，通过计算机辅助系统(CASA)观察人精子前向运动变化。采用免疫荧光法检测 APOA1 蛋白在小鼠精子的表达。40 μg/ml 的 IgG 抗体和 APOA1 抗体孵育小鼠精子 1h 后，进行体外受精实验，观察受精率的差异。精子前向运动的变化采用独立样本 t 检验，小鼠体外受精率的差异采用卡方检验。
结果 APOA1 抗体作用于人高活力精子后，随着抗体浓度增加和孵育时间延长，精子前向运动逐渐下降。精子前向运动孵育 1h 后空白对照组（66.58±5.47）与 APOA1 抗体浓度 20 μg/ml 组（50.8±10.98）和 40 μg/ml 组（47.28±9.88）间差异具有显著统计学意义，t 值分别为 t=2.865，3.822，P 分别为 P <0.05， P <0.01。孵育 2 h 后空白对照组（72.14±9.01）与 APOA1 抗体浓度 10 μg/ml 组（58.16±9.46）、20 μg/ml 组（51.2±11.3）和 40 μg/ml 组（44.4±10.48）间具有统计学差异，t=2.393，3.240，4.482，P 分别为 P<0.05，P<0.05，P<0.01。孵育 4 h 后空白对照组（69.16±6.48）与 APOA1 抗体浓度 10 μg/ml 组（51.9±11.75）、20 μg/ml 组（41.2±13.9）和 APOA1 抗体浓度 40 μg/ml 组（34.9±13.72）间差异具有显著统计学意义，t=2.870，4.076，5.043，P 分别为 P<0.05，P<0.05，P<0.01。小鼠精子中 APOA1 蛋白位于精子头部，小鼠体外受精实验 IgG 组卵裂率为 81%，APOA1 抗体处理组为 35%，差异具有显著统计学意义，2=48.664，p<0.001。
结论 APOA1 蛋白在维持精子活力中有一定作用，其抗体作用于精子后会抑制体外受精率。

PU-3827

门诊患者阴道分泌物病原菌的检出率及其年龄、季节分布特征

杨双双
重庆医科大学附属第一医院

目的分析我院门诊患者阴道分泌物的病原菌分布以及其与年龄和季节的关系；
方法统计 2018 年 11 月～2020 年 11 月门诊患者阴道分泌物的革兰染色镜检结果，计算阴道加德纳菌、滴虫、假丝酵母菌（出芽孢子和/或假菌丝）三种病原菌的检出率及其混合检出率，进一步分析其检出率的年龄和季节分布特征；
结果研究期间共检测阴道分泌物 42327 例，检出假丝酵母菌 6941 例（16.40%），阴道加德纳菌 3283 例（7.76%）、阴道毛滴虫 309 例（0.73%）以及混合感染 529 例（1.25%）。三种病原菌的检出率表现出显著且不同的年龄分布特征，但仅假丝酵母菌具有显著的季节分布特征，以冬季检出率最高；
结论我院门诊患者阴道分泌物病原菌以假丝酵母菌为主，在<20 岁门诊患者和冬季最为常见。

PU-3828

基于机器学习的阿尔兹海默病诊断模型的建立研究

余抒、李如飞
重庆市重钢总医院

目的 通过机器学习算法提取特异性指标参数特征，拟合血清蛋白标志物、临床智能评分（MMSE）、影像学纹理值参数，采用随机森林建立阿尔兹海默病（Alzheimer's disease, AD）诊断模型，为 AD 的早期精准诊断提供实验依据。
方法 本研究从样本库中随机抽取 170 例 AD 及 170 例非 AD 样本进行队列研究，采用区域增长法得到 11 个 MRI 纹理值参数；同时，采用高效液相芯片技术检测 34 种血清蛋白表达，通过多元线性回归分析蛋白组间差异，将具有统计学差异（$p<0.05$）的蛋白纳入建模体系；拟合血清生物标志物、临床智能评分、影像学诊断多维参数，采用随机森林算法进行建模，将各标志物和因素按照重要性系数从高到低进行排序，采用迭代的方法依次将各标志物或者因素加入模型，并利用样本集训练模型的卡分阈值(Threshold, T)选取模型参数。采用 SPSS 17.0 统计学软件分析、比较模型的预测能力，选择受试者特征曲线(receiver operating characteristic curve，简称 ROC 曲线)下面积(AUC)最大为最优组合模型。
结果 研究得到以 8 个蛋白为基础的诊断模型，分别为 Leptin、IL13、IL1α、IP10、Resistin、IL3、PAL1、TNFα，来自细胞因子、代谢因子以及生长因子家族，具备不同的生物学特性和功能，通过差异表达分析，疾病组与对照组差异显著，具有统计学意义。随机森林的分类树经过 ROC test 分析后，发现含 MMSE 的模型之间没有显著差异（$p > 0.05$），其中 p 值最小的比较组合为 0.0622596，即模型 A（8 个指标+MMSE+MRI）和模型 B（MMSE+自然信息），模型 A 的错误率分析仅为 4.05%，已达到诊断建模中的错误率低限，特异性和敏感度分别达到 97.6%和 88.6%，ROC 曲线下面积为 0.9846(95%置信区间：0.95-0.99)，为最优组合。
结论 通过机器学习算法—随机森林，在高维复杂变量中分析模型的分类精度、泛化能力和稳定性，该研究从统计学分析、参数优化、模型效能多方面开展 AD 的诊断学模型研究，建立了随机森林算法的数学模型，同时发现 8 个关键血清蛋白质在判断是否有患病趋势的诊断中具有潜在价值。本研究提供了基于血清蛋白标志物在 AD 诊断中的应用前景，同时也首次将随机森林这样的数学算法应用到适合中国人群的大规模筛查中。

PU-3829

UF5000 尿液分析仪在肿瘤患者尿路感染中的应用价值探讨

翟丽[1]、张永瑞[1]、任苒[2]、高莉丽[1]
1. 云南省肿瘤医院
2. 昆明医科大学学生

目的 泌尿道感染（UTI）作为泌尿系统常见的疾病之一，本课题所研究的是应用受试者工作特征曲线（ROC）来探讨尿液分析仪 Sysmex-UF5000 的相关检测项目——白细胞（WBC）计数以及细菌（BACT）计数在肿瘤患者 UTI 中的应用价值。
方法 标本来自是 2020 年 10 月至 2021 年 3 月昆明医科大学第三附属医院门诊及住院疑似尿路感染的肿瘤患者的清洁、无终止中段尿，分别进行定量尿培养和 Sysmex-UF5000 检测 WBC 与 BACT 计数。
结果 1.127 例尿标本中细菌培养阳性 55 例，阳性率 43.31%，病原菌多为革兰氏阴性菌。 2.大肠埃希菌的直线回归方程为：$y = 0.969x - 0.295$，金黄色葡萄球菌的直线回归方程为：$y = 0.9754x + 0.0481$，即定量尿培养与 sysmex-UF5000BACT 计数两者检测所得结果之间的相关关系良好。 3.以定量尿培养作为金标准，与 sysmex-UF5000 检测 BACT 计数和 WBC 计数的测定值均取对数后进行 ROC 曲线的绘制，曲线下面积（AUC）分别为 0.87 和 0.71；选取最佳尤登指数处的 BACT

计数>=452.2/ul，WBC 计数>=124.95/ul 作为最优临界值。以该值作为临界值时，BACT 计数的敏感度(Sen)为 76.4%、特异度(Spe)为 97.2%、诊断准确度(Acc)为 88.19%、阴性似然比（NLR）为 0.24、阳性似然比（PLR）为 27.29、阴性预测值（NPV）为 84.34%、阳性预测值(PPV)为 95.45%；其 WBC 计数的敏感度(Sen)为 52.7%、特异度(Spe)为 81.7%、诊断准确度(Acc)为 69.29%、阴性似然比（NLR）为 0.58、阳性似然比（PLR）为 2.88、阴性预测值（NPV）为 69.41%、阳性预测值（PPV）为 69.05。
结论 Sysmex-UF5000 可用于尿液中各类细菌的计数，检测速度快，能够有效缩短报告时间。为临床提供了简单便捷、快速有效的诊断指标，可指导早期临床经验用药及合理应用抗生素，缩短诊疗时间。

PU-3830

不同地区 COVID-19 患者的临床特征

高骞
中南大学湘雅医院

目的 研究表明湖南与武汉地区 COVID-19 患者临床特征存在显著差异，了解不同地区 COVID-19 患者之间临床特征的差异有助于医生结合实际情况进行更有针对性的诊断与治疗。了解不同地区 COVID-19 患者之间临床特征的差异，比较在疾病发展过程中患者临床特征的变化。
方法 比较 320 例武汉地区患者与 794 例非武汉患者之间临床特征的差异；对所收集到的 21 例湖南省患者进行分类，分为重症患者组和非重症患者组，比较自就诊 30 天后患者各项指标之间变化趋势的差异。
结果 武汉与非武汉地区的临床特征总体来说具有显著的差异，其中武汉地区有更多的患者会出现疲劳与呼吸困难症状，实验室检查表现为淋巴细胞降低、中性粒细胞增加、凝血酶原时间和 D-二聚体异常、心肌酶异常；非武汉地区有更多的患者会出现咽痛与肌肉酸痛的症状、实验室检查表现为中性粒细胞减少；武汉地区表示肝肾功能的实验室指标、感染相关生物标志物、胸部 CT 的表现与非武汉地区没有显著差异。重症与非重症患者的大多数临床指标的变化趋势是具有显著差异性的。其中重症患者表现为更低的淋巴细胞分类计数水平；嗜酸性粒细胞增多在疾病好转时出现；重症患者具有更高的丙氨酸氨基转移酶、肌酸激酶、肌酐、D-二聚体水平。
结论 长沙与武汉地区 COVID-19 患者临床特征不同

PU-3831

全自动血细胞分析仪红细胞碎片参数检测性能评价

李轶勋、王丽英、夏春燕、陈睿、斯南卓玛
昆明医科大学第一 附属医院

目的 红细胞碎片（FRC）是全自动血液细胞分析仪提供的一项新参数，其与血栓性微血管病等密切相关。本文将对血液细胞分析仪红细胞碎片的检测性能进行评价。
方法 参考中华人民共和国卫生行业标准 WST 406-2012《临床血液学检验常规项目分析质量要求》，通过携带污染率、精密度、线性、正确度、灵敏度、特异度等指标，对 SYSMEX XN 系列全自动血液细胞分析仪红细胞碎片的检测性能进行评价。所有数据采用 Excel 软件进行分析整理。
结果 SYSMEX XN 系列全自动血细胞分析仪检测红细胞碎片的携带污染率为 0.11%；批内精密度：各实验浓度下其变异系数（CV）分别为 8.75%（FRC：42.15×109/L ）、6.38%（FRC：83.42×109/L ）、4.57%（FRC：228.74×109/L）、5.31%（FRC：796.89×109/L）；线性验证：线性回归方程为 Y =0.9939X +10.961，相关系数为 R2 =0.99；正确度验证：以人工镜检为金标准，仪器法与其比较，其相关系数为 R2 =0.82，灵敏度为 92%，特异度为 82%。

结论 SYSMEX XN 系列全自动血液细胞分析仪检测红细胞碎片快速、简便，携带污染率低，精密度尚佳，线性范围满足要求，与人工镜检法相比具有较好的相关性，特异度和敏感度也较高。血液细胞分析仪可作为外周血红细胞碎片的快速筛查手段，但其检测的精密度仍需进一步提高，且由于方法的局限性，阳性标本需要在显微镜下进行确认。

PU-3832

PLT-F 通道在 EDTA-K2 依赖性血小板聚集病例中的价值

施琦
同济大学附属杨浦医院

目的 血细胞分析仪是检验最常用的仪器之一，血小板技术检测则是其中一项重要检测指标，对多种临床疾病的诊断、治疗具有重要的意义。而在血小板检测中易受溶血、红细胞碎片、抗凝剂等诸多因素的影响，其中又以依赖 EDTA-K2 抗凝剂所引起的假性血小板减低更易被忽视。目前检验科最常用的血细胞分析仪为 SYSMEX 系列，分别有 PLT-I、PLT-O、PLT-F 三种通道计数血小板，本文探讨 SYSMEX XN9000 血细胞分析仪的 PLT-F（荧光血小板）通道在 EDTA-K2 依赖性血小板聚集病例中的价值。
方法 随机选取门诊及病房中出现 EDTA-K2 依赖性血小板聚集的抗凝血标本 10 份，须同时留取同一病人的枸橼酸钠抗凝血标本并进行推片染色。将各标本在相同情况、时间段内分别在 PLT-I 通道和 PLT-F 通道进行检测，同时显微镜下观察血小板聚集情况，进行手工计数校准。
结果 显微镜下血小板呈微聚集的标本 PLT-I 通道与 PLT-F 通道结果相差较大(差异具有统计学意义)，其中 PLT-F 通道结果更接近枸橼酸钠抗凝标本的结果；显微镜下血小板呈大片聚集的 EDTA-K2 标本两通道结果相差不大，且与枸橼酸钠抗凝标本结果差异较大。
结论 SYSMEX XN9000 血细胞分析仪的 PLT-F 通道可以排除由疾病或药物引起的微小、一过性 EDTA 依赖性血小板聚集的干扰，当出现血小板不明原因降低时，应采用 PLT-F 通道进行复查，并推片染色观察并采用手工计数法进行校准。

探讨血小板指标在 HBV 肝炎肝硬化进程中的变化

王海霞
重庆医科大学附属第一医院

目的 探讨 HBV 肝炎肝硬化进程中血小板数量（PLT）、平均血小板体积（MPV）、血小板分布宽度（PDW）、血小板最大聚集率的变化。
方法 根据《慢性乙型肝炎防治指南》的纳入排除标准，选择我院住院病人 226 例，其中慢性乙型肝炎非复制期组 27 例，慢性 HBV 携带者组 50 例，非活动性 HBV 携带者组 26 例，HBeAg（+）慢性乙型肝炎组 31 例，HBeAg（-）慢性乙型肝炎组 37 例，慢性乙型肝炎肝硬化代偿期组 21 例，慢性乙型肝炎肝硬化失代偿期组 34 例。采用 SPSS17.0 软件包对各组间 PLT、MPV、PDW 指标进行组间差异性分析，$P<0.05$ 具有统计学意义，并进行受试者工作曲线分析。另外，收集慢性乙型肝炎住院患者 66 例，其中 HBV 感染携带肝功正常组 36 例，慢性乙型肝炎组 18 例，慢性乙型肝炎肝硬化组 11 例。采用江苏英诺华公司 PL-12 血小板功能分析仪检测血小板聚集功能。
结果 1. PLT 在疾病进程中呈降低趋势，但肝功能正常（慢性乙型肝炎非复制期、慢性 HBV 携带者与非活动性 HBV 携带者）组间、慢性乙型肝炎（HBeAg+与 HBeAg-）组间、慢性乙型肝炎肝硬化（代偿期与失代偿期）组间均无显著性差异（$P>0.05$）；肝功正常组、慢性乙型肝炎组、慢性乙型肝炎肝硬化组间差异具有统计学意义（$P<0.05$）。

2. PLT 临界值在肝功正常组与慢性乙型肝炎组间为 181.5×109/L（AUC=0.634）（图 1A），慢性乙型肝炎肝硬化组与肝功正常组间为 126.5×109/L（AUC=0.951）
3.MPV、PDW 仅在慢性乙型肝炎肝硬化组增高，MPV 临界值为 11.25fl（AUC=0.596），PDW 临界值 13.35（AUC=0.63）。
4.ADP、AA 最大聚集率在 HBV 携带肝功能正常组与慢性乙型肝炎组组间差异较小（P<0.05），在慢性乙型肝炎肝硬化组最低（P<0.05）
结论 在 HBV 感染进程中，PLT 呈下降趋势；当发展为慢性乙型肝炎肝硬化时 MPV 和 PDW 增高，最大聚集率最低。

PU-3834

吉林地区 34466 例粪便筛查中肝吸虫感染情况分析

潘一娜
吉林大学第一医院

目的 分析吉林省肝吸虫主要分布情况，为肝吸虫筛查防治提供依据。
方法 对 2021 年 1 月至 2021 年 5 月，我院收治的 34466 例粪便常规检查中 65 例肝吸虫阳性的患者进行回顾性分析。在阳性患者中，分析肝吸虫感染城市间的感染率差异，比较长春市、白城市、松原市、白山市、吉林市、通化市及四平等市不同城市间阳性患者所占比率、不同性别所占比率、就诊科室人数、年龄所占比率进行分析。
结果 粪便筛查共 34466 例，肝吸虫阳性率为 0.19%（65/34466)。分析肝吸虫感染城市间的感染率差异，阳性患者中比较不同城市的所占比率。来自白城市阳性患者所占比率为 49.2%（32/65）,主要分布在大安市占 29.2%（19/65）,其次是镇赉县占 13.9%（9/65)；来自长春市阳性患者所占比率为 24.6%（16/65）,主要分布在长春市区（15.4%,10/65），其次九台市占 4.6%（3/65）；来自松原市阳性患者所占比率为 12.3%（8/65）;通化市 6.2%（4/65）;白山市 4.6%（3/65）;吉林市 0.2%（1/65）;四平市 0.2%（1/65）。按性别分男性的阳性率占比 80%（52/65）,女性阳性率占比 20%（13/65）,男性明显高于女。按就诊科室分布心血管中心 22 例、肝胆胰内科 5 例、肿瘤中心 8 例、神经内科 6 例、肾病科 6 例、内分泌、老年病、干部病房和呼吸科各 3 例，小儿消化、风湿科和胃肠内科各 2 例，小儿呼吸、ICU 和全科医学各 1 例。按年龄组分，小于<11 岁组 1.55%(1/65)、11-20 岁组 3.1%(2/65)、21-30 岁组 1.5%(1/65)、31-40 岁组 3.1%(1/65)、41-50 岁组 15.4%(1/65)、51-60 岁组 33.8%(22/66)、61-70 岁组 35.4%(23/67)、>70 岁组 6.2%(4/67)，整体随年龄增长呈增高趋势，尤其是 41 岁以后的年龄组升高幅度大。
结论 整体肝吸虫感染率虽低，但感染存在地域趋势，只是白城市感染率明显高于其他城市，几乎是省内其他城市的总和。感染人数分布在各个年龄段，已中老年感染人群为主，也不乏儿童感染，男性明显高于女性。通过统计，绝大多数患者并不是出现消化系统相应症状直接就诊于与消化系统有关的科室，而是因不同疾病前往相应科室就诊，通过粪便常规检查筛查出虫卵，只有少数几例是以消化系统问题甚至出现肝吸虫病继发病症急性发作前来就诊。注重肝吸虫虫卵的筛查，尤其是高发地域，高发年龄群的重点筛查，在面对不明诱因消化系统疾病时，更应关注粪便筛查的重要性，做到尽早发现尽早治疗。

PU-3835

免疫无标记型急性淋巴细胞白血病的临床特点

陈颖洁
山东大学第二医院

目的 了解免疫无标记型急性淋巴细胞白血病!"##$的临床特点。
方法 对 ++, 例形态学 上诊断为 "## 的病例，取其外周血或骨髓，分离出单个核细胞，应用 "3""3 法作免疫表型分析，对免疫 无标记型病例的临床特点、化疗疗效及预后进行了观察。
结果 +(例患者未表达任何系统性分化标记， 或仅表达 45*-、6#"758 或 45’ 等非系限性抗原。与分化型 "## 相比，免疫无标记型 "## 肝、脾、淋巴 结肿大及纵隔肿块发生率与白细胞数量均较高，化疗完全缓解率!48$较低!!9)&)2$，存活期较短!!9)&)%$。
结论 免疫无标记型 "## 有其临床上的特殊性，预后较差。

PU-3836

90 例急性髓系白血病患者免疫表型与 FAB 分型相关性分析

陈颖洁
山东大学第二医院

本研究通过分析急性髓系白血病(AML)患者免疫表型的特点,探讨急性髓系白血病免疫标记与 FAB 分型的关系，旨在建立准确完善的诊断体系。 90 例初诊患者均行骨髓穿刺，经细胞形态学诊断为急性髓系白血病，根据 FAB 分型分为 6 个亚型：2 例 M1、31 例 M2、13 例 M3、15 例 M4、28 例 M5、1 例 M6；同时采用四色流式细胞术检测 90 例 AML 患者相关抗原表达。结果显示，AML 患者最常见表达髓系抗原 MPO、CD117、CD33、CD13，同时伴有少量淋系抗原表达。流式细胞术将 90 例 AML 分为 2 例 M0、2 例 M1、25 例 M2，13 例 M3，15 例 M4，32 例 M5，1 例 M6；**结论** 急性髓系白血病诊断中 FAB 分型与免疫表型分析具有高度一致性，其在白血病 MICM 综合诊断体系中占有重要地位，综合细胞形态学、免疫表型分析及遗传学，对 AML 患者诊断、分型及预后评估具有重要意义。

国产与进口 vWF 抗原检测试剂盒的性能评价

何利娜、高爱民、蔡华雅、赵旭初
北京九强生物技术股份有限公司

目的 采用胶乳免疫比浊法对国产血管性血友病因子抗原（vWFAg）进行测定，以验证其性能是否满足厂家声明，以及是否能够达到或超越进口试剂盒的性能要求。
方法 对北京九强生物技术股份有限公司生产的 vWFAg 试剂盒的精密度、测量标物和线性进行验证评价，并分别与进口沃芬和 Stago 的 vWFAg 试剂盒对临床样本测值进行比较。
结果 九强公司生产的 vWFAg 试剂盒在 TOP ACL 750 仪器上检测 3 个不同水平的质控样本批内不精密度分别为 0.8%、0.9%和 0.9%，日间不精密度分别为 2.8%、3.6%和 3.2%，测量标物的平均结果为 103.0%，线性评价回归方程 y=328.12x-1.3657（R2=0.9976）；进口沃芬 vWFAg 试剂盒检测 3 个不同水平批内不精密度分别为 1.9%、1.7%和 2.2%，日间不精密度分别为 2.6%、3.4%和 3.9%；测量标物的平均结果为 94.6%；线性评价回归方程 y=273.94x+4.5157（R2=0.985）；九强 vWFAg 试剂盒在 TOP ACL 750 上检测临床样本的结果和沃芬进口试剂盒结果的相关性

y=0.9722x＋2.8806，R2=0.9857；在 Stago R MAX 仪器上，九强 vWFAg 试剂盒与 Stago 试剂盒的相关性 y=1.0373x-3.4503，R2=0.9827。

结论 北京九强生物技术股份有限公司生产的免疫比浊法 vWF 试剂盒与进口沃芬 vWF 试剂盒在 TOP ACL 750 全自动血凝分析仪上测量批内精密度更优，日间精密度结果相当，九强试剂盒和沃芬的比对相关性较好；线性优于进口沃芬试剂盒。此外，九强 vWFAg 试剂盒与进口 Stago 的测值相关性也较好。九强 vWFAg 试剂盒性能已经达到或超越了进口试剂盒。

2. 深圳市中医院
3. 中南大学
4. 中南大学湘雅医院

Myelodysplastic syndrome (MDS) is a group of heterogeneous hematologic malignancies. Understanding the molecular mechanisms of the specific roles of long noncoding RNAs in MDS would create novel ways to identify diagnostic and therapeutic targets. Here, we found that BC200 was highly expressed in MDS patients compared with normal individuals. Knockdown of BC200 inhibited MDS cell proliferation, colony formation and cell cycle progression in vitro and suppressed the growth of MDS cells in vivo. Mechanistic investigations revealed that BC200 functioned as a miRNA sponge to positively regulate the expression of MYB through sponging miR-150-5p and subsequently promoted malignant proliferation of MDS cells. Conversely, we found that BC200 was a direct transcriptional target of MYB, and knockdown of MYB abolished the oncogenic effect of BC200/miR-150-5p. Taken together, our results revealed that the BC200/miR-150-5p/MYB positive feedback loop promoted the proliferation of MDS cells and is expected to be a potential biomarker and therapeutic target in MDS.

关于 XE–2100 血细胞分析仪淋巴细胞分类复检规则的验证

夏春燕、马晓波
昆明医科大学第一附属医院

目的 对本实验室淋巴细胞百分比的复检规则进行验证，探索适合本实验室关于淋巴细胞分类异常报警的人工镜检标准。

方法 选取本院 2016.3-2017.3 期间血常规标本 522 例，其中关于淋巴细胞百分比异常增高报警 230 例，无淋巴细胞百分比异常报警 292 例。从可靠性、真实性方面对两种结果进行分析。

结果 ①ROC 曲线下面积为 0.967。②仪器对淋巴细胞百分比异常报警的灵敏度为 97.39%、特异度为 96.92%、假阳性为 3.08%、假阴性为 2.61%、一致性为 97.13%、Kappa 值为 0.94。③参照 Rümke 表关于白细胞分类计数 95%可信区间，计算仪器检测与人工镜检分类结果的符合率。第一组（<50）:91.3%、第二组（50~59）:91.3%、第三组（60~69):92.7%、第四组（>70）:68.8%。

结论 本实验室制定的复片规则能很好的指导临床工作，在此基础上，当淋巴细胞百分比异常增高

在 50%-69%的范围内有较高的符合率，在排除异常报警（异型淋巴细胞、有核红细胞、原始细胞等）的情况下，在此范围内可涂片镜检，无需进行人工分类。

PU-3840

达肝素钠对进展期胃肠道恶性肿瘤患者凝血及纤溶系统功能的影响

陈卓诚[1]、杨伟[2]
1. 深圳市罗湖医院集团医学检验实验室
2. 深圳市罗湖医院集团罗湖区人民医院

目的 探讨达肝素钠注射液对进展期胃肠道恶性肿瘤患者凝血及纤溶系统功能的影响。
方法 选取 2018 年 09 月～2021 年 04 月在深圳市罗湖医院集团肿瘤内科治疗的进展期胃肠道恶性肿瘤患者 60 例，根据血栓预防治疗指南，Caprini 评分＞3 分者予达肝素钠注射液: 5000IU，1 次/d，常规皮下注射抗凝 10d。分别于达肝素钠治疗前 d0、治疗 d5、d10 后抽取外周静脉血，采用凝固法通过凝血测试仪检测凝血酶时间(TT)、凝血酶原时间(PT)、纤维蛋白原(FNG)、活化部分凝血酶时间(APTT)。采用免疫比浊法检测 D-二聚体(D-D)水平。通过化学发光仪器 HISCL-5000 检测血栓调节蛋白(TM)、凝血酶抗凝酶复合物(TAT)、组织型纤溶酶原激活抑制复合物(PIC)、纤溶酶-α2-抗纤溶酶复合物(t-PAIC)水平。
结果 治疗前 d0 与治疗 d5、d10 后不同时间点各检测指标比较，结果显示: D-二聚体(D-D) [(2.40±0.22) mg/L vs (1.64±0.15)、(1.70±0.15) mg/L]，血栓调节蛋白(TM) [(19.48±5.52) TU/ml vs (16.77±4.75)、(17.17±5.04) TU/ml]，凝血酶抗凝酶复合物(TAT) [(7.50±1.24) ng/ml vs (6.52±1.06)、(6.61±1.05) ng/ml]，组织型纤溶酶原激活抑制复合物（t-PAIC）[(14.31±3.98) ng/ml vs (13.18±3.88)、(13.14±3.81) ng/ml]水平均较治疗前 d0 均显著降低，差异具有统计学意义(P<0.01)。达肝素钠注射液预防使用 d10 比使用 d5 出现的不良事件增多，差异具有统计学意义(P<0.05)。
结论 监测凝血和纤溶标志物有助于早期发现患者血液高凝状态，达肝素钠注射液明显下调机体凝血和纤溶标志物分子水平。

PU-3841

Platelet to lymphocyte ratio is associated with in-hospital mortality in patients admitted to the emergency department

军 周
First affiliated Hospital of Nanjing Medical University / Jiangsu Provincial people's Hospital

Background The objective of this study was to test the hypothesis that an elevated platelet to lymphocyte ratio (PLR) at admission is associated with and increased risk of mortality in patients admitted to the emergency department (ED).
Methods We performed a retrospective analysis of patients admitted to the ED between January 2016 and February 2019. We included patients who were older than 60 years who visited the ED with medical problem. Baseline PLR values were measured at the time of admission. The primary outcome was all-cause in-hospital mortality.
Results A total of 500 patients were included in this study. The median age was 71 years (IQR 65–91), and 267 patients were male. The PLR value was higher innonsurvivors than in survivors. Multivariate showed that PLR was associated with all cause in-hospital mortality after adjusting for confounding factors.
Conclusions These results show that the PLR at admission is associated with in-hospital mortality among patients (>60 years) ED

探索人工智能阅片仪在血细胞形态教学中的应用

李庆、李轶勋
昆明医科大学第一附属医院

血液细胞形态识别是医学检验专业学生日后从事血液病诊断工作必须掌握的知识和技能，同时也是教学的重点和难点。如何提高学生对血液细胞形态学学习兴趣以及识别能力，成为教学的重点和难点。若采用传统的教学模式，老师对细胞形态进行讲解，学生应用显微镜对血液细胞形态进行观察学习，这种教学模式容易让学生难以理解和掌握。目前，人工智能阅片仪已广泛应用于各大教学医院，基于人工智能的新技术、新设备逐步在医学检验领域崭露头角。2019 年底，在新型冠状病毒肺炎疫情下，各学校将课程转移至线上教学，教师可以通过人工智能阅片仪收集典型图片，结合微信、QQ、APP 等移动教学平台进行教学，积极响应疫情防控要求。本文将在血液细胞形态学教学领域，探索运用人工智能阅片仪建立参考细胞图库、典型病例细胞图库等教学资源库，进行病例讨论式教学以及利用人工智能阅片仪的细胞分类软件进行学生实践能力考核，增强师生互动。教学研究结束后，与传统教学模式相比，客观上学生的理论知识成绩、细胞识别能力均得到提高，主观上学生对课程的满意度、自主学习的能力、临床思维的能力也得到了提升。

PU-3843

A simple model predicting in-hospital death in patients with type A acute aortic dissection

Ning Dong
Jiangsu People's Hospital

Background Type A actue aortic dissection (TAAAD) is a destructive cardiovascular disease, with high morbidity and mortality rates. Identifying the high-risk TAAAD patients at an early stage is an urgent need.
Methods A retrospective study of 160 patients was conducted. The admission data was retrospectively gathered. Logistic regression analysis and receiver operator characteristic curve (AUC) was utilized.
Results Compared with the survivor group, the nonsurvivor group was older, had higher D-dimer levels, red blood cell distribution width (RDW) levels and platelet distribution width (PDW) levels and lower fibrinogen levels, platelet levels and plateletcrit levels. Multivariate analysis displayed that four independent factors, age (hazard ratio (HR): 7.877, 95% confidence interval (CI) 2.740-22.641, P<0.001), D-dimer (HR: 3.791, 95% CI 1.520-9.452, P=0.004), RDW (HR: 3.300, 95% CI 1.109-9.825, P=0.032), PDW (HR: 3.755, 95% CI 1.436-9.815, P=0.007) were incorporated into the model. The predict accuracy of the model (AUC 0.857, 95% CI 0.852-0.863, P<0.001) was best.
Conclusions Age, D-dimer, RDW and PDW are independent markers of in-hospital death in TAAAD patients and the newly established model has better performance in predicting high-risk patients. This model can be used as a quick screening tool to assess the prognosis of patients in individualize.

新型尿液分析仪 UF5000 在疑似尿路感染病人中快速筛查应用研究

李江
湖南省人民医院

目的 评估新型自动化尿有形分析仪 UF-5000 在筛查疑似尿路感染患者尿培养阴性的分析性能，并研究新细菌革兰染色信息(Bact-info)用于评估尿路感染细菌革兰染色阴 / 阳性与尿培养结果的相关性。
方法 收集 1162 名疑似尿路感染的患者的晨起的第一次尿或随机尿或清洗后的中段尿，并在 2 小时内完成各项检测。将每个样本分成两份，一管用于尿培养，另一管用 UF-5000 尿有形成分仪分析。收集患者的检测结果数据资料，分析 UF-5000 在快速筛查疑似尿路感染病人的中的应用价值。
结果 在 1162 例尿培养标本中，239 例为阳性(20.6%)，923 例为阴性(79.4％)。在 1162 例相应的 UF-5000 分析的标本中，315 例为阳性（27.10%），847 例为阴性（72.90%）。在评估 UF-5000 尿有形成分分析仪快速筛查疑似尿路感染病人的性能方面，UF-5000 检测细菌的敏感度为 100%，特异度为 91.77%，阳性预测值为 75.87%，阴性预测值为 100%，诊断效率为 93.46%，阳性似然比为 12.15，阴性似然比 0。使用 UF-5000 的 BACT-info 信息正确识别了 72.7％(101/139)的病例，Cohen’S kappa 一致性为 0.781(x2=32.61，p<0.001)。UF-5000 细菌菌落计数结果与标准尿培养结果之间呈现较好的等级相关性。
结论 UF-5000 分析尿液有很高的敏感度和阴性预测值，且特异性和阳性预测值都不低，有望成为临床快速筛查疑似尿路感染病人的首选，可以减少不必要的抗生素使用，提高医院的诊断水平和患者的就医质量。

HNL、PCT、CRP、IL-6 在血流感染中的应用

朱益佳
南京大学医学院附属鼓楼医院

目的 探讨人中性粒细胞载脂蛋白（HNL）、降钙素原（PCT）、C 反应蛋白（CRP）、白介素-6（IL-6）在诊断血流感染中的应用价值。
方法 选取血培养阳性的患者（血流感染组）79 例和健康体检人群（健康对照组）92 例，检测所有患者的中性粒细胞载脂蛋白（HNL）、降钙素原（PCT）、C 反应蛋白（CRP）、白介素-6（IL-6）的水平。采用受试者工作曲线（ROC 曲线）评价各项指标诊断血流感染的效能。联合分析 HNL、PCT、CRP、IL-6 在血流感染中的应用价值。
结果 血流感染组 HNL、PCT、CRP、IL-6 水平显著高于健康对照组（P<0.000 1 ）。
结论 HNL、PCT、CRP、IL-6 联合应用在诊断血流感染患者中具有较好的价值。

临床医学检验中血液细胞检验质量控制要点分析

陈洁
山东第一医科大学第一附属医院（山东省千佛山医院）

目的 探究在临床医学检验中，标本检测温度、存放时间对血液细胞检验质量产生的影响。

方法 将我院 2018 年 4 月～2019 年 3 月内的 70 例健康人群作为研究对象展开，对比不同放置时间（恒定温度 24～25 度）、不同检测温度下（恒定时间 30 min）的血液细胞结果。

结果 相对于 3 h，30 min 内检测结果是最准确，p<0.05;相对于 19-20℃，27-28℃，检测温度在 24-25℃时的结果最准确，P<0.05。

结论 标本检测温度以及存放时间等因素均会对血液细胞检测结果产生影响，所以要求我们必须做好各环节工作，将采集完成后的标本存放在适宜的环境内，在 30 min 内进行检验，并且要确保检测温度在 24～25 度左右，从而保证检验结果准确性。

PU-3847

应用四项新型凝血指标评估妇科肿瘤手术患者的凝血功能

罗玲清、陈燕
福建省肿瘤医院

目的 检测妇科肿瘤患者手术前、后凝血及纤溶分子标志物的变化及探讨其临床意义。

方法 以 55 例健康体检者为对照组，92 例妇科肿瘤患者为研究组（良性肿瘤组 38 例、恶性肿瘤 54 例）。研究组于术前、术后 1d、3 d、5 d、7 d 分别采血，采用高敏化学发光免疫分析方法检测上述标本中凝血酶-抗凝血酶复合物（TAT）、纤溶酶-α2-抗纤溶酶复合物（PIC）、组织型纤溶酶原激活剂及其抑制剂-1 复合物（tPAI·C）、血栓调节蛋白（TM）的表达水平。

结果 恶性肿瘤组术前的四项指标水平均较健康对照组及良性肿瘤组升高（P<0.05），良性肿瘤组术前仅 TAT 及 TM 水平高于健康对照组（P<0.05）；恶性肿瘤组术后 1d、3d、5d 的 PIC 及 TAT 水平均高于术前（P<0.05），tPAI·C 仅在术后第 1d 较术前高（P<0.05），但 TM 水平术前术后无差异（P>0.05），但均高于正常组；良性肿瘤组术后四项指标仅在术后第一天短暂性的升高，术后 3d 即恢复至术前水平或者正常水平。除了术后第一天的 TM，恶性肿瘤组 tPAI·C、TM、TAT、PIC 表达均明显高于同一时期的良性肿瘤组。

结论 妇科恶性肿瘤患者机体内存在着明显的凝血与纤溶系统功能的异常，TAT、PIC、tPAI·C、TM 等指标的动态检测和分析有利予血栓前状态的判断，对预警血栓形成具有重要意义。

PU-3848

P13K/mTOR 信号通路参与调控 KG1a 细胞 NKG2D 配体的表达

何川疆、许爱敏
喀什地区第一人民医院

目的 自然杀伤细胞活化性受体(NKG2D)配体的低表达是白血病干细胞(LSC)逃避免疫杀伤的关键因素，磷脂酰肌醇 3-激酶/雷帕霉素靶蛋白(PI3K/mTOR)信号通路在 LSC 中高度活化，探讨 PI3K/mTOR 信号通路是否参与调控 LSC 中 NKG2D 配体的表达。

方法 采用 PI3K/mTOR 信号通路抑制剂 NVP-BEZ235 对人急性骨髓白血病细胞 KG1a 细胞进行干预后，采用细胞技术试剂盒 CCK-8 检测 KG1a 细胞增殖，采用流式细胞术检测 KG1a 细胞周期及凋亡，采用实时荧光定量聚合酶链反应(RT-qPCR)及免疫印迹(Western blot)检测细胞中 NKG2D 配体 MICB、ULBP1、ULBP2 和 ULBP3 的表达。

结果 抑制剂 NVP-BEZ235 显著抑制 KG1a 细胞的增殖，并将 KG1a 细胞周期阻滞于细胞周期 G0/G1 期；NVP-BEZ235 抑制剂干预后，KG1a 细胞 NKG2D 配体 MICB 信使核糖核酸(mRNA)相对表达量显著升高，ULBP1、ULBP2、ULBP3、 mRNA 及蛋白表达量也显著升高。

结论 PI3K/mTOR 调控 LSC 的增殖及周期，且其能够调控 NKG2D 的表达，该结果为通过 PI3K/mTOR 抑制靶向治疗耐药的 LSC 提供了数据支持。

PU-3849

CA 15-3 和 KL-6 在 ILD、CTD 中的相关性和诊断价值比较

李伟[1,2]、石柯[1]
1. 中南大学湘雅医院老年医学科检验室
2. 兰州大学第二医院检验医学中心

目的 KL-6 和 CA 15-3 均属于 Mucin-样糖蛋白，两者在某些疾病中的表达具有相关性，KL-6 目前多用于间质性肺疾病（Interstitial lung disease，ILD）的辅助诊断，而 CA 15-3 目前在临床上广泛应用，检测技术成熟，结果相对可靠，且成本远远低于 KL-6。本研究旨在探讨 CA 15-3 在结缔组织病（Connective tissue disease，CTD）和 ILD 中与 KL-6 的相关性及对这两类疾病诊断效能的差异。
方法 收集 2020 年 11 月至 2021 年 4 月期间在我院首次诊断为 CTD 或 ILD 患者的血液标本作为实验组，其中 CTD 患者 176 例、ILD 患者 56 例，另收集同期 150 例非 CTD、非 ILD 和非肿瘤的体检人群血液标本作为对照组。分别利用化学发光法和免疫比浊法检测每例血液样本中 CA 15-3 和 KL-6 的含量，进行统计学分析，探讨两者在三组人群中的表达、相关性和诊断价值。
结果 ILD 组患者的血清 CA 15-3 和 KL-6 的浓度均显著高于 CTD 组（P<0.001）和体检组（P<0.001），且 CTD 组患者的血清 CA 15-3 和 KL-6 的浓度均显著高于体检组（P<0.001）；线性回归分析表明体检组、ILD 组和 CTD 组人群中血清 CA 15-3 和 KL-6 的浓度均呈正相关（P<0.001），R2 值分别为 0.165，0.770 和 0.708；ROC 分析表明，血清 KL-6 和 CA53 均能很好的区分 ILD 患者和体检人群，AUC 分别为 0.87（95% CI: 0.85-0.90, P <0.0001）和 0.85（95% CI: 0.84-0.88, P <0.0001），而对 CTD 诊断的 AUC 分别为 0.84（95% CI: 0.82-0.87, P <0.0001）和 0.83（95% CI: 0.80-0.86, P <0.0001）。
结论 CA 15-3 和 KL-6 浓度在 ILD 和 CTD 人群中具有强的相关性，且诊断效能接近，可以作为替代 KL-6 诊断 ILD 和 CTD 的潜在生物标志物。

PU-3850

卵巢癌患者血小板参数的变化情况分析

郭俊英、陈燕
福建省肿瘤医院

目的 探讨血小板七项参数 PLT、PDW、MPV、PCT、P-LCR、PNR 、PLR 在卵巢癌患者化疗前后的变化。
方法 收集在福建省肿瘤医院诊断为卵巢癌的患者、卵巢癌后进行化疗的患者以及体检人员的临床资料。通过各类检验方法回顾性分析各组间血小板七项参数的差异性。
结果 PLT、MPV、P-LCR 的临界值分别为 225.000、9.750、22.550 时，对卵巢癌的临床分期具有一定的预测价值。PLT、PCT、PLR 的临界值分别 312.500、0.265、179.935 时，对卵巢癌的诊断具有一定的预测价值。卵巢癌患者 PLT、PCT、PLR 较体检组的高，接受化疗后 PLT、PCT、PLR 显著低于化疗前。血小板参数受不同病理类型，肿瘤直径、不同年龄段等的影响并不大。
结论 血小板的各项参数(PLT、PCT、PLR)在卵巢癌的诊断以及分期，化疗效果等方面可以起到判断预测效果，各项差异有统计学意义。

PU-3851

红细胞冷凝集对血常规多项参数结果的影响分析

高嫣妮、陈燕
福建省肿瘤医院

目的 研究红细胞冷凝集对血细胞分析各项检测参数检测结果的影响及处理办法。
方法 选取本院 2017 年 12 月—2018 年 3 月冷凝集标本 83 例，用 SysmexXN-9000 全自动血细胞分析仪检测 37℃水浴前、后的红细胞计数（RBC）、血细胞比容（Hct）、红细胞平均容积（MCV）、红细胞平均血红蛋白含量（MCH）、血红蛋白浓度（Hb）、红细胞平均血红蛋白浓度（MCHC）、白细胞计数（WBC）、血小板计数（PLT）等参数，再进行结果比较。
结果 RBC、HCT、MCV、MCH、MCHC 的结果水浴前后对比差异有统计学意义（P＜0.05），而 Hb、WBC 和 PLT 水浴前后结果无统计学意义(P＜0.05)。
结论 冷凝集标本会引起血细胞分析过程中多项参数检测结果严重失真并出现直方图、散点图异常及仪器报警提示。因此，在血细胞分析检测时应保证实验室温度，检验人员应加强质量控制，仔细审核分析检验结果，及时发现冷凝集标本，立即进行 37℃水浴 30min 后，即刻上机检测。同时应注意运送过程中的保温，对标本及检验试剂和用具作适当的加温处理，有助于解除标本凝集，从而使血常规各参数的检测结果得到校正。

PU-3852

N6-methyladenosine RNA as a potential diagnostic biomarker for breast cancer in peripheral blood

Han Xiao
Zhongda Hospital Southest University

Objective Breast cancer (BC) is one of the most commonly diagnosed malignancies and is the second most common cause of cancer deaths in women. In general, early BC has a 5-year survival rate of >80% with a good prognosis during the early stages and with basic treatment. In the past few decades, several Methods have been used to clinically diagnose BC. These include breast ultrasonography, mammography, exfoliative cytology, and tumor markers that include carcinoembryonic antigen (CEA), cancer antigen 125 (CA125), and carbohydrate antigen 153 (CA153) . However, the sensitivity or specificity is not sufficient to screen for BC, or especially, for the early diagnosis of BC. Therefore, a simple, sensitive, and effective diagnostic method is needed to detect BC at an early stage and obtain a better prognosis. Functions of m6A change the expression of target genes and affect the corresponding physiological functions. However, whether the m6A modification in peripheral blood RNA can be a novel diagnostic biomarker for BC has not been investigated.
Methods In this study, peripheral blood samples from 62 female patients with BC (including 53 tumor resection and 9 without surgery), 41 female patients with BBD (benign fibroadenoma of breast or mastopathy), and 41 female NCs who sought a routine health check-up during the same period and who did not have any breast diseases or other cancerous diseases. All patients were recruited at the Zhongda Hospital of Southeast University. All samples were initially diagnosed and untreated (including surgery, chemotherapy, and radiotherapy). m6A in total RNA was measured using a colorimetric method with EpiQuik™ m6A RNA Methylation Quantification Kit. qRT-PCR was performed to quantify the expression levels of METTL14 and FTO.
Results The m6A in the peripheral blood RNA of patients with BC was significantly higher than that in the NCs ($p < 0.0001$) and patients with BBD ($p < 0.0001$). These results indicated that the upregulation of peripheral blood m6A in patients with BC can differentiate patients with BC from the patients with BBD or NCs. m6A in patients with BC with carcinoma in situ was significantly

different from that in stage I, II, and Ⅲ + Ⅳ in peripheral blood RNA. The area under the curve (AUC) for m6A was 0.887 (95% confidence interval; [CI]: 0.826 to 0.948; $p < 0.0001$) and the optimal cutoff value was 0.070 (sensitivity 91.94%, specificity 65.85%), as determined using the highest Youden index. ROC curve analysis of other clinical tumor indicators revealed an AUC of 0.599 (95% CI: 0.489 to 0.709) and 0.572 (95% CI: 0.461 to 0.683) for CEA and CA153, respectively. These results indicated that the diagnostic value of m6A alone was better than that of CEA or CA153. Additionally, the AUC for the combination of m6A, CEA, and CA153 improved to 0.914 (95% CI: 0.861 to 0.966; $p < 0.0001$) with a specificity of 89.2% specificity with compromised sensitivity 80.3% as the optimal cutoff value for 0.0992. We examined the mRNA expression of m6A methylases and demethylases. The upregulation of METTL14 and downregulation of FTO may be related to the increased dynamic m6A modification in peripheral blood RNA of patients with BC.
Conclusion In conclusion, m6A in peripheral blood can be a potential novel diagnostic biomarker for BC.

PU-3853

凝血五项指标在肝癌各期的临床意义

魏斯斯
西安金域医学检验所

目的 探讨凝血五项指标的变化与不同临床分期肝癌之间的关系
方法 对 120 例肝癌患者与 50 例对照人群的凝血指标进行检测，其中 PT、FIB、APTT 采用凝固法，D-D、FDP 采用免疫比浊法。
结果 在肝癌各期中，II 期与 I 期相比，PT、FDP、FIB 呈递增趋势，APTT、D-D 呈递减趋势，III 期与 II 期相比，PT、APTT、FIB、FDP、D-D 五项指标均呈上升趋势，IV 期与 III 期相比，FIB 仍呈递增趋势，而 PT、APTT、FDP、D-D 四项指标呈下降趋势。
结论 凝血五项指标在肝癌各期的变化大不相同，临床上可将凝血指标的变化作为评价肝癌不同分期的依据之一。

PU-3854

Systematic and comprehensive analysis of the expression of cytokines related to COVID-19 in testicular cells and the interaction network between cells

Haihong He、Fan Yu、Tingting Huang、Yiwen Zhou
Clinical Laboratory Medical Center, Shenzhen Hospital, Southern Medical University

COVID-19 has become a global pandemic, with more than 75 million people infected with SARS-Cov-2 and more than 1.6 million deaths. Some COVID-19 patients have symptoms of scrotal discomfort and orchitis. Inflammatory cytokine storm (CS) is widespread in COVID-19 patients. It has been confirmed that 13 cytokines are elevated in COVID-19 patients. CS can cause testicular cell damage and immune microenvironment disorders, thereby affecting male fertility Ability, but the expression of cytokines in testicular cells and their role in cell-to-cell communication are rarely related. We integrated 10 single-cell sequencing data of testicular cells, and annotated 20 cell clusters using marker genes combined with the Human Cell Landscape (HPL) database. Twelve types of testicular cells were identified, and we found that 4 types of cytokines (IL8, CCL2, CCL3, TNF) might play a role in the immune process of testicular cells. Next, the pseudo-chronological trajectory of the testicular cells was successfully constructed, and

it was found that IL8 and CCL3 may play an important role in the development of the testicular Macrophage and Endothelial cells, thereby affecting the immune microenvironment of the testicular cells. Furthermore, the functions of 8 key cytokines (IL1, IL2, IL4, IL6, CCL, CSF3, TNF, IFN-Ⅱ) in the interaction network between cells were then identified. Based on the network analysis of imported cytokines directly acting on testicular cells, IL2 is believed to act directly or indirectly on all testicular cells and play an important role in testicular cell communication.

PU-3855

吉林地区维生素 D 水平研究进展

王晶晶
吉林金域医学检验所有限公司

目的 维生素 D（VD）是脂溶性类胆固醇激素，与人类健康最为密切的是维生素 D2 和维生素 D3，维生素 D2 是来自于人工合成制剂或某些植物性食物的外源性维生素 D；维生素 D3 既可来自于奶、蛋、鱼、肉等动物性食物，也可来自于皮肤内源合成；在体内有活性作用的主要是 1，25-OHD。本文通过了解 480 位人群维生素 D（VD）含量水平状况及其影响因素，分析导致 VD 不足的原因，为后续研究和临床防治提供依据。
方法 选取 2020 年 6 月至 2020 年 12 月送检我公司，项目为维生素 D 的样本 480 例，采用蛋白沉淀及液液萃取等方法对样本进行前处理，运用高效液相色谱串联质谱仪，经过三重四极杆对其进行筛选，根据相应离子在检测器产生的信号强度及所绘制的标准曲线来定量待测物的浓度。
结果 在 480 例样本中，有 355 例表现为 VD 水平均为缺乏，缺乏率为 74%，其余 125 例孕妇、儿童的 VD 水平相对正常；同时，冬季的 VD 缺乏率高于夏季的 VD 缺乏率。
结论 维生素 D 为人体重要的微量元素，维持体内钙磷及骨代谢平衡，并参与某些蛋白质转录的调节，发挥激素样作用参与体内免疫调节，能够降低慢性疾病如糖尿病、心血管疾病的发病率，降低癌症风险等生理作用。目前，人们对维生素 D 的重视程度不足，所以导致 VD 的缺乏率高达 74%，同时，由于孕妇和儿童为特殊人群，可能会进行相关 VD 的补充，饮食方面也会进行相关注意，所以 VD 的水平多为正常。冬季室外温度较低，外出时间减少，日照时间变少，VD 水平也较为缺乏。平时应在饮食方面多多注意并增加一些户外活动，或者进行维生素补剂的补充以做到早发现、早预防、早治疗，保证身体健康。

PU-3856

FA280 全自动粪便分析仪临床应用价值分析

黄雪琴、林珊、陈卓诚、黄日雄、莫红梅
深圳市罗湖医院集团医学检验实验室

目的 为进一步缩短粪便常规检查项目实验室内 TAT，提高寄生虫检出率，采用全自动粪便分析仪。
方法 回顾性分析我院 2020 年 4 月-2021 年 5 月 17939 例门诊及住院患者粪便常规检测项目实验室内 30min、60minTAT 达标率及寄生虫检出率，与 2019 年 3 月至 2020 年 3 月未使用全自动粪便分析仪之前的 15086 例门诊及住院患者该项目实验室内 30min、60minTAT 达标率，寄生虫检出率比较，分析使用全自动粪便分析仪的价值。
结果 使用全自动粪便分析仪前门诊患者实验室内 30min TAT 达标率为 58.49%，使用后 83.33%，使用前住院患者实验室内 30min TAT33.52%，使用后 47.16%；60min 门诊患者从 88.68%到 100%，住院患者从 61.45%到 80.36%。寄生虫虫卵检出率从使用前 0.06%到 0.34%，包囊/滋养体检出率则是 0.05%和 0.06%。粪便常规检测项目实验室内 30min、60minTAT 达标率在使用全自动粪便分析仪后，均有明显提升，有效缩短了患者等候时间。使用前门诊患者实验室内 TAT 中位

数是 21min， 95 百分位数是 49min，住院患者实验室内 TAT 中位数是 25min，95 百分位数是 73min，使用后门诊患者实验室内 TAT 中位数是 18min，95 百分位数是 33min，住院患者实验室内 TAT 中位数是 23min，95 百分位数是 43min，实验室内 TAT 得到显著提升。检出虫卵的种类主要有肝吸虫卵、蛲虫卵、钩虫卵、蛔虫卵；检出包囊有蓝氏贾第鞭毛虫包囊、滋养体、肠道滴虫、结肠内阿米巴包囊。

结论 使用全自动粪便分析仪，在不增加人员岗位的前提下，极大提高了粪便常规检查项目门诊及住院患者的 30minTAT、60minTAT 达标率，并且显著提高了肠道寄生虫虫卵的检出率，对提高实验室的质量管理有重要价值。

PU-3857

外周血中性粒细胞与淋巴细胞比值（NLR）和血小板与淋巴细胞比值（PLR）联合鳞状细胞癌抗原（SCC）在早期宫颈鳞癌诊断中的价值探讨

王红旭
重庆医科大学附属第一医院

目的 通过对早期宫颈鳞癌患者和健康女性的血常规结果和鳞状细胞癌抗原检测结果进行分析,探究中性粒细胞-淋巴细胞比值(NLR)和血小板-淋巴细胞比值（PLR）以及鳞状细胞癌抗原（SCC）在早期宫颈鳞癌癌中的诊断价值。

方法 收集 2017 年至 2020 年重庆医科大学附属第一医院确诊的早期宫颈鳞癌患者 165 例（实验组）和同期健康体检女性 150 例（对照组）的病历资料。比较两组 NLR、PLR、SCC 水平，采用受试者工作特征曲线(ROC 曲线)分析各指标单独检测和联合检测对宫颈癌的诊断效能。

结果 早期宫颈鳞癌患者 NLR、PLR 和 SCC 水平明显高于对照组（$P<0.05$）； NLR 诊断早期宫颈鳞癌的截断值为 2.63 曲线下面积为 0.569，灵敏度为 28.3%，特异度为 86.4%；PLR 诊断早期宫颈鳞癌的截断值为 126.72，曲线下面积为 0.615，灵敏度为 56%，特异度为 63.9%；SCC 诊断早期宫颈鳞癌的截断值为 1.35，曲线下面积为 0.729，灵敏度为 42.8%特异度为 97.6%;NLR 与 SCC 联合诊断早期宫颈鳞癌的曲线下面积 0.755；PLR 与 SCC 联合诊断早期宫颈鳞癌的曲线下面积为 0.785；PLR，NLR 和 SCC 三者联合诊断的曲线下面积为 0.786.

结论 NLR、PLR 和 SCC 对早期宫颈癌具有一定的诊断价值，联合检测可有效提高诊断效能。

PU-3858

新冠康复者血浆用于两例危重患者治疗的血细胞参数变化分析

陈伟[1]、梁剑琦[1]、刘艳[2]、黄小晔[1]、彭丽[1]
1. 娄底市中心医院
2. 娄底市妇幼保健院

目的 探讨康复期血浆用于 SARS-CoV-2 感染危重患者治疗血常规参数的变化趋势。

方法 实验室确诊新冠肺炎并伴急性呼吸窘迫综合征(ARDS)危重患者病例 2 例，经抗病毒治疗后病情进展迅速、病毒载量持续高的重症肺炎，Pao2/Fio2 <300，机械通气。治疗方案：盐酸阿比朵尔(200mg，一天 3 次)、干扰素吸入(500 万 U，一天 2 次)、磷酸氯喹(500mg，一天 2 次)和其他支持治疗。2 例患者均接受新冠康复者血浆输血，血浆 SARS-CoV-2 特异性抗体(IgG)结合效价大于 1:200(酶联免疫吸附试验终点稀释效价)，中和效价大于 40(终点稀释效价)，患者自入院起每天上午 9 时采集患者血液标本监测血常规变化情况，在治疗方案无改变的前提下比较输血前后 6 天血常规的变化趋势。

结果 自 2020 年 2 月 19 日至 2020 年 2 月 24 日每天输入 200ML 康复者血浆，共 1200ML。病例 1 输血前后 WBC、淋巴细胞比率、NLR（中性粒细胞/淋巴细胞）、PLT 均值为：13.7 和 12.16、3.77 和 6.83、29.26 和 13.96、218 和 102。病例 1 输血前后 WBC、淋巴比率、NLR、PLT 均值为：10.8 和 10.7、2.48 和 3.73、40.28 和 26.44、114 和 62。两个病例在输血前后 WBC 总数无明显的变化趋势，而淋巴比率在接受康复血浆输注后明显上升，NLR 和 PLT 明显下降。
结论 康复血浆输注对新冠危重患者有一定的临床疗效，血常规常用参数淋巴细胞比率、PLT 及经过转换的 NLR 对新冠危重患者的动态监测及预后评估具有积极的临床意义。

PU-3859

结直肠癌血清 lncRNA 诊断公式的建立及对结直肠癌预后评估

段伟丽、王传新
山东大学第二医院

目的 筛选并验证结直肠癌（CRC）血清中差异表达的 lncRNAs，建立 CRC 血清 lncRNA 诊断模型，并探讨其在 CRC 预后监测中的意义。
方法 对 CRC 及癌旁正常组织进行基因芯片分析,并结合相关文献，选出候选 lncRNAs。采用 qRT-PCR 技术，在 80 对 CRC 及癌旁组织中检测候选 lncRNAs，将差异表达具有统计学意义的候选分子在 120 例 CRC 患者及 120 例对照者血清中进一步验证，最终确定在组织及血清中均存在显著差异表达的 lncRNAs。基于 logisitic 回归建立 CRC 血清 lncRNA 诊断模型，采用受试者工作曲线（ROC）分析结直肠癌血清 lncRNA 模型的诊断效能。通过 Kaplan-Meier 和 Cox 比例风险回归模型对 CRC 患者进行生存曲线分析和监测复发的独立预后因素分析。
结果 筛选出 18 个候选 lncRNAs，经 qRT-PCR 验证，4 个 lncRNAs（BANCR, NR_026817,NR_029373 和 NR_034119）在 CRC 组织及血清中均存在显著差异表达（均 $p < 0.001$），其中 BANCR 表达上调， NR_026817, NR_029373 和 NR_034119 表达下调。4 个 lncRNAs 的受试者工作曲线下面积（AUC）分别为 0.638, 0.708, 0.812 和 0.724。通过 Logistic 多元回归分析建立 4 个 lncRNAs 的结直肠癌血清 lncRNA 诊断模型（AUC 为 0.891）。Kaplan-Meier 分析显示， NR_029373 和 NR_034119 越低，结直肠癌患者生存率越低（$p = 0.013$ 和 0.044）。Cox 回归分析显示,NR_029373 和 NR_034119 可作为结直肠癌的独立预后指标 (p 分别为 0.013 和 0.038)。
结论 结直肠癌血清 lncRNA 诊断模型（BANCR, NR_026817, NR_029373 和 NR_034119）对结直肠癌早期诊断具有一定的临床意义。
NR_029373 和 NR_034119 可作为结直肠癌监测的独立预后指标。

PU-3860

稳定同位素代谢标记技术联合质谱多重反应监测技术在 5、7、55 型腺病毒鉴定中的应用

徐忠伟、朱文清、王天添、范开元
中国人民武装警察部队后勤学院

目的 利用质谱多重反应监测（Multiple Reaction Monitoring，MRM）技术实现对 5、7、55 型人腺病毒的准确鉴定。
方法 分别合成 5、7 和 55 型人腺病毒六邻体基因，将目的片段构建于 pGEX-4T-1 载体上，BL21 感受态感受质粒，利用细胞培养条件下稳定同位素代谢标记技术（stable isotope labeling by amino acids in cell culture, SILAC）培养细胞，分别采用轻度、中度和重度 SILAC 培养基培养大肠杆菌，培养基中赖氨酸和精氨酸的浓度分别为 0.798 和 0.398 mmol/L；轻度标记培养基含有赖

氨酸 $^{12}C_6{}^{14}N_2$-Lysine（Lys0）和精氨酸 $^{12}C_6{}^{14}N_2$-Arginine（Arg0）；中度标记培养基含有赖氨酸 4,4,5,5-D^4-Lysine（Lys4）和精氨酸 $^{13}C^6$-Arginine（Arg6）；重度标记培养基含有赖氨酸 $^{13}C_6{}^{15}N_2$-Lysine（Lys8）和精氨酸 $^{13}C_6{}^{15}N_4$-Arginine（Arg10）；培养至大肠杆菌生长至对数生长期，1 mmol/L IPTG 低温诱导蛋白表达，提取相应标记蛋白，通过 GST 表达纯化富集表达六连体蛋白。采用胶消化策略分别消化 3 种不同标记策略的纯化蛋白，消化产物等量混合脱盐后经毛细管色谱柱分离以 MRM 模式进行 LC-MS 方法检测。
结果 成功构建 pGEX-4T-1-hexon 载体，通过 SILAC 方法实现大肠杆菌的完整代谢标记，成功诱导表达腺病毒六邻体蛋白，通过 MRM 技术实现对轻、中、重度标记六邻体蛋白标志性肽段鉴定。
结论 成功实现三种 SILAC 条件下大肠杆菌中 5 型、7 型、55 型人腺病毒六邻体蛋白的完整标记，为 5 型、7 型、55 型人腺病毒感染的快速分型检测提供了新的鉴定策略。

PU-3861

尿红细胞位相的检测及临床应用

崔晓凤
山东第一医科大学第一附属医院（山东省千佛山医院）

目的 使用超高倍显微镜系统人工对尿沉渣进行红细胞形态分析，提供给临床测量数据，以便临床对相应的病人进行病情监测。
方法 尿红细胞位相检查是利用超高倍显微镜系统在镜下利用形态学人工对尿液中的红细胞形态分析的一种方法。一般认为，正常人尿中有红细胞者约 4%，其中红细胞数 0.5---5.0×10^{12}/ml,多为正常红细胞。如尿中发现畸形红细胞（其大小、形态呈多形性，血红蛋白含量异常）占 75%以上，且红细胞数≥800ml 者，可诊断为肾小球性血尿，为提高超高倍显微镜鉴别血尿诊断价值的临床应用，我们对 50 例不同来源的血尿进行超高倍显微镜镜检分析。
结果 28 例肾小球性血尿中，多形性红细胞阳性率 80%（22/28），混合性阳性率 20%（6/28）；22 例非肾小球性血尿中均一性阳性率 85%（19/22），混合性阳性率 15%（3/22）。
结论 综上所述，尿红细胞位相检查可根据尿液中红细胞形态（均一性、非均一性、混哈性）判定血尿的来源，有助于某些疾病的鉴别诊断。一般均一性血尿病变部位在膀胱、尿道，非均一性血尿病变部位在肾脏，混合性血尿提示病变涉及整个泌尿生殖系统。

PU-3862

中国客家人群中 AML 患者血清乳酸脱氢酶水平与早期死亡之间的关联分析

肖作淼、陈先春、肖德俊、罗诗、陈昌坤
赣州市人民医院

目的 有证据说明了 LDH 水平与急性髓系白血病（AML）不良预后相关，但与 AML 患者的早期死亡之间的关系依旧不清楚。
方法 连续收集 2013 年至 2021 年期间所有收治的初诊急性髓系白血病（非 APL）病例。通过多元回归分析血清乳酸脱氢酶（LDH）（以 Log2 及 2 倍正常参考高值的形式来分析）与早期死亡的相关性，并将常规项目之白血胞、血红蛋白、血小板，血清标志物如肝、肾、心肌损伤标志物等参数进行逐步调整分析。
结果 有 368 例年龄大于 16 岁的初诊急性白血病患者入组。早期死亡率为 29.1%(107/368). 早期死亡率在正常参考值 2 倍上限值组(LDH≥570U/L)为 35.2% (44/125)，高于非正常参考值 2 倍上限值组的 25.9% (63/243)（LDH<570U/L），但现两者间没有统计学差异。在多参数回归分析中 OR 值

和 95%置信区间分别为 1.70(1.18,2.35) and 2.38 (1.21,4.69),交互作用分析显示所分析的参数对 LDH 与早期死亡影响无关性。
结论 中国客家 AML 人群中具有早期死亡高风险，LDH 之 Log2 及正常参考值 2 倍上限值组(LDH≥570U/L)有较高的相关性，需要更多试验进行验证。

PU-3863

血液分析仪在脂血状态下血小板计数准确性的临床性能评价

张伟红
广州市第一人民医院

目的 对希森美康 XE-5000 血液分析仪在脂血标本下进行血小板计数准确性的临床性能评价。
方法 选取无红细胞碎片，100fL>平均红细胞体积（MCV）>82fL,12.5fL>平均血小板容积（MPV）>9.4fL 的脂血标本 45 例及正常对照 90 例，分别用希森美康 XE-5000 和 XN-2000 血液分析仪进行电阻抗法（PLT-I），光学法（PLT-O），XN-2000 光散射法（PLT-F）测定血小板，并且进行血小板人工计数，然后将标本离心，2000rpm,5 分钟，吸取血浆，并在贝克曼库尔特 AU5800 全自动生化分析仪进行血清指数测定，确定脂血程度。血小板数值参照人工计数法所测定的血小板数将脂血组与对照组分成低（PLT<100×10^9/L）、中（100≤PLT×10^9/L≤300）、高（PLT＞300×10^9/L）三组，分别与人工计数测得值比较，以此来评价血小板三种测定方法的准确性。
结果 低值脂血标本组中，XE-5000 PLT-O 和 PLT-I 通道血小板计数中位数分别为 31 ×10^9/L、43×10^9/L，XN-2000 PLT-I、PLT-O 和 PLT-F 通道血小板计数中位数分别为 30 ×10^9/L、29×10^9/L、24×10^9/L，人工计数血小板中位数为 20×10^9/L。经 SPSS 秩和检验，低值脂血标本 XE-5000 仪器上的 PLT-O 中位数显著高于人工计数法（P<0.05），具有显著性差异。XE-5000 PLT-I、XN-2000（ PLT-O、PLT-I、PLT-F）方法检测血小板中位数与人工计数无显著性差异（P>0.05）。
结论 在低值脂血标本中，XE-5000 血液分析仪 PLT-O 通道检测结果与人工血小板计数具有显著性差异（P<0.05），具有统计学意义。其他检测方法与人工计数没有显著性差异（P>0.05），无统计学意义。在脂血标本检测低值血小板时，XE-5000 电阻抗法的准确性比光学法高，与人工计数相符，而 XE-5000 光化学法易引起血小板假性增高。

PU-3864

一例 Ph+CML 罕见型 BCRABL1 融合基因患者的诊断与治疗

程沈菊、李轶勋
昆明医科大学第一附属医院

目的 通过临床表现、细胞形态学、分子生物学及细胞遗传学对一例疑难病例进行诊断并观察其治疗效果。
方法 运用细胞形态学，分子生物学及细胞遗传学等检测方法与临床相结合进行诊断和疗效分析。
结果 确诊一例罕见型 e13a3（b2a3）和 e14a3（b3a3）双阳性慢性粒细胞白血病，经 TKIs（伊马替尼）治疗后有效。
结论 该病例为 Ph+e13a3（b2a3）和 e14a3（b3a3）融合基因双阳性的慢性粒细胞白血病，通过 TKI 治疗后使患者达到了较好的治疗效果，自行停药后复发并急变，且 T315I 突变耐药。

PU-3865

浆膜腔积液常规联合细胞学分析图文报告的应用价值研究

李晴[1]、刘俊平[2]
1. 西南医科大学附属医院
2. 重庆医科大学检验医学院

目的 建立、运行并不断优化本地区浆膜腔积液常规联合有形成分分析的质量体系，在常规检测的基础上 新增有形成分图文分析报告，并结合临床病理诊断结果，深入探讨该方法体系的临床应用价值。
方法 收集西南医科大学附属医院自 2019 年 1 月至 2020 年 4 月共计 622 例常规送检的浆膜腔积液标本，在完成传统常规检测后进行离心、有形成分沉淀物推片、瑞特-姬姆萨复合染色镜检，以临床诊断为金标准，分析常规细胞学检查结果，对于明显特征的肿瘤细胞给予异常细胞和异型细胞（计为阳性）以及核异质细胞等分级格式提示临床。
结果 1、 622 例浆膜腔积液中，病理诊断为恶性肿瘤 172 例，运用常规检测联合有形成分分析法检出阳性 142 例，真阳性 139 例，灵敏度(80.81%)、特异度(99.26%)、阳性预测值（97.88%）、阴性预测值（92.41%）、诊断符合率(93.76 %)。2、结核性浆膜腔积液淋巴细胞增生积分(2.70±0.754)明显高于肿瘤组(1.16±0.452)及非特异性炎症组(1.11±0.309), P <0.001。3、脓性积液 37 例，图文示含脓细胞、细菌、真菌、脂肪滴和胆色素结晶等。
结论 1、该类新报告体系模式可作为一种有效的恶性肿瘤的早期筛查方法，还能为结核和其他炎症性积液的液鉴别诊断提供一定的依据。2、该法与病理脱落细胞学互有优缺，优势互补。3、本体系对于转移量较少的肿瘤细胞，体积较小的低分化癌细胞、白血病细胞以及其他病理有形成分均有较好的识别和临床提示价值。

PU-3866

郴州市某医院 10728 例粪便寄生虫检测结果分析

彭玉凤
郴州市第一人民医院

目的 分析郴州市某医院粪便常规寄生虫检出率和感染特点，为临床肠道寄生虫病的防治工作提供帮助。
方法 采用生理盐水对郴州市某医院就诊患者粪便标本进行涂片镜检，统计分析粪便检出寄生虫种类及感染特点等。
结果 10728 例粪便有 173 例检出寄生虫，肠道寄生虫总感染率为 1.61%；共检出 7 种寄生虫，包括人芽囊原虫（166 例，1.55%）、蓝氏贾第鞭毛虫（5 例，0.05%）、脆弱类双核阿米巴（5 例，0.05%）、微小内延阿米巴（1 例，0.01%）、布氏嗜碘阿米巴（1 例，0.01%）、粪类圆线虫（1 例，0.01%）、肠道滴虫（1 例，0.01%），其中 3 例（0.03%）标本为混合感染。人芽囊原虫、蓝氏贾第鞭毛虫、脆弱类双核阿米巴构成了肠道寄生虫感染的主要虫种，占总感染人数的 97.73%（172 / 176）。肠道寄生虫感染率女性（2.14%）高于男性（1.24%），差异有统计学意义（χ2=17.00，P<0.01）。不同年龄组人群肠道寄生虫病表现为中间年龄感染率低、两端年龄感染率高，但各年龄组人群寄生虫感染率差异无统计学意义（χ2=12.45，P>0.05），感染率较高的年龄组为 20～岁组(2.99%)、>80 岁组(2.86%)、10～岁组(2.10%)、和 70～岁组(1.98%)。
结论 人类肠道寄生虫总感染率较低，感染人群存在性别差异；肠道寄生虫感染以人芽囊原虫、蓝氏贾第鞭毛虫、脆弱类双核阿米巴等食源性寄生虫或机会致病性原虫为主，为临床肠道寄生虫病的防治指明了方向。

PU-3867

全自动凝血仪特殊凝血项目的临床前性能验证与评价

邹梦雪、程云
南方医科大学珠江医院

目的 对全自动血凝分析仪的特殊凝血项目进行临床前的性能验证及评价，为临床血栓与止血相关疾病提供可靠的检验结果。
方法 根据《临床血液学检验常规项目分析质量要求》、《临床化学设备线性评价指南》和《临床实验室检验项目参考区间的制定》等标准，对本实验室 ACL TOP 700 全自动凝血分析仪测定 PC，PS，VWFAg,Ⅷ,IX,La，抗Ⅹa，AT 等特殊项目的精密度、准确度、携带污染率、线性以及正常参考范围进行性能验证。
结果 精密度、准确度、携带污染率、线性等均符合要求
结论 ACL TOP 700 全自动凝血分析仪对血栓与止血特殊项目检测的准确度、不精密度、携带污染率、线性范围及正常参考范围验证等性能验证评价效果良好，符合临床使用要求，可为临床血栓与止血相关疾病提供可靠的检验结果。

PU-3868

尿干化学法和尿沉渣镜检法检测红细胞的比较

史永胜、金英玉
哈尔滨医科大学附属第一医院

目的 对比研究尿干化学法和尿沉渣镜检法检测红细胞结果。
方法 随机收集 1000 份来自医院门诊以及住院患者的新鲜尿液标本，其中男性标本和女性标本各 500 例，其中，年龄上限为 85 岁，下限为 16 岁。将尿液标本充分混匀后先进行尿干化学分析，然后以 1500r/min，离心 5 分钟，取沉渣于载玻片上进行镜检。
结果 以显微镜镜检为准，两种方法检测红细胞结果符合率为 92.4％，尿干化学检查红细胞假阳性率为 18.63％，假阴性率为 3.66％。采用配对 2 检验统计分析。
结论 尿干化学法检测红细胞虽然方便快捷，敏感性高，但是会出现一定的假阳性和假阴性结果，所以临床检查时不能单独应用，必须结合尿沉渣镜检，以减少漏诊和误诊。

PU-3869

血浆 D-二聚体和 FDP 联合检测在诊断 DIC 中的应用价值

史永胜、金英玉
哈尔滨医科大学附属第一医院

目的 用于研究血浆 D-二聚体 (DD) 和纤维蛋白(原)降解产物 (FDP) 联合测定，在弥散性血管内凝血 (D1C) 诊疗中的临床意义。
方法 选取哈尔滨医科大学附属第一医院的健康体检人群 25 例，DIC 患者 23 例，分别作为健康对照组和 DIC 组。抽取受检者血浆，检测血浆中 DD 和 FDP 的水平。用 Sysmex CA-7000 血凝仪分别检测两组受检者血浆 DD 和 FDP 的水平，并进行统计学处理和分析。
结果 DIC 组的 DD 和 FDP 水平显著高于健康对照组，其差异具有统计学意义（P＜0.05）；随着治疗的进展，DIC 患者的 DD 和 FDP 水平呈现下降的趋势。
结论 检测血浆 DD 和 FDP 的水平有利于早期诊断 DIC、监测疾病进程，对 DIC 诊治与判断临床诊疗疗效具有重要临床意义。

PU-3870

全自动尿有形成分分析仪 UF-5000 联合相差显微镜对血尿来源的鉴别

王晨[1]、张鑫悦[2]
1. 中国医科大学附属第一医院
2. 中国医科大学

目的 探讨尿沉渣分析仪 UF-5000 对肾小球和非肾小球血尿来源鉴别诊断的应用价值。
方法 选取 2021 年 3 月—5 月在中国医大一院肾内科和泌尿外科住院患者共 117 例，使用 UF-5000 对获得的患者晨尿或随机尿进行尿沉渣检测。分别检测尿 70%红细胞前向散射光强度(RBC-P70Fsc)、尿红细胞前向散射光分布宽度(RBC-Fsc-DW)、未溶红细胞(NL RBC)、溶解红细胞(Lysed RBC)、大红细胞(Large RBC)、小红细胞(Small RBC)等红细胞信息，并使用相差显微镜检测红细胞形态，计算红细胞变形率。用临床诊断结果作为标椎，计算比较全自动尿有形成分分析仪 UF-5000 和相差显微镜之间的敏感度和特异度。采用受试者工作特征（ROC）曲线，分别计算尿液沉渣分析仪 UF-5000 红细胞信息（RBC-Info）、相差显微镜下红细胞变形率的曲线下面积（AUC）。使用 MedCalc 进行 ROC 曲线间的比较。
结果 与肾小球源性血尿组对比，RBC-P70Fsc（ch）、NL RBC 计数（/μL）以及 Large RBC 计数（/μL）在非肾小球源性血尿组显著增高（p<0.001），而相差显微镜镜下红细胞变形率显著降低（p<0.001）。用 UF-5000 尿沉渣分析仪 RBC-Info 非均一性判断为肾小球源性血尿，均一性判断为非肾小球源性血尿可以得出敏感度为 55%，特异度为 57.9%；将 RBC-Info 非均一性和混合性均判断为肾小球源性血尿可将敏感度提高到 96.7%。相差显微镜非均一性判断为肾小球源性血尿，均一性判断为非肾小球源性血尿可以得出敏感度为 75%，特异度为 63.2%。RBC-P70Fsc 的 AUC 为 0.938（p<0.05）、NL RBC 的 AUC 为 0.782（p<0.05）、Large RBC 的 AUC 为 0.892（p<0.05）、相差显微镜镜下红细胞变形率的 AUC 为 0.994（p<0.05）。UF-5000 的 RBC-Info 联合使用的 AUC 为 0.943（p<0.05）。根据 ROC 曲线可知使用相差显微镜的敏感度为 96.5%，特异度为 98.3%（p<0.05）；将仪器指标联合使用的敏感度为 86%，特异度为 93.3%（p<0.05）；两组间 UF-5000 与相差显微镜联合使用的敏感度为 98.2%，特异度为 98.3%（p<0.05）。经 ROC 曲线间的比较，仪器结果与单独使用相差显微镜对结果的判断有一定的差异，而两种方法的联合使用与单独使用相差显微镜的对结果的判断并没有显著性差异。
结论 UF-5000 尿沉渣分析仪和相差显微镜联合检测对临床诊断明确血尿来源定位有一定的价值。

PU-3871

粪钙卫蛋白、CRP、IL-6 水平变化与克罗恩病患者黏膜愈合状态的 关系及其应用价值

马继荣、沈薇、顾怡、沈文艳、周景艺
上海交通大学医学院附属仁济医院

目的 探讨粪钙卫蛋白（FC）、C 反应蛋白（CRP）、白介素 6（IL-6）在克罗恩病（CD）患者黏膜愈合状态中的水平变化及应用价值。
方法 选取 2019 年 6 月至 2020 年 6 月我院收治的 CD 患者 52 例，依据内镜结果分为黏膜愈合与黏膜未愈合组，检测 FC、CRP、IL-6 水平。建立单项检测的 ROC 曲线，确定各指标的最佳诊断临界值（cutoff 值），并通过二元 Logistic 回归评价多变量检测模型的诊断价值。
结果 黏膜未愈合 CD 患者 IL-6、CRP、FC 水平均显著高于黏膜愈合组 (P<0.05)。回归方程结果显示 FC 是判断 CD 肠道黏膜愈合与否的独立影响因素（P<0.05）。单项血清 IL-6、CRP 和 FC 检测判断肠道黏膜未愈合的 ROC 曲线下面积(AUC)分别为 0.71（95% CI 0.77~0.97）、0.88（95% CI

0.88~1.00）、0.85（95% CI 0.66~0.92）(p<0.01)。FC+CRP 和 FC+IL-6 双项检测时其 AUC 分别为 0.91（95% CI 0.83-0.99）和 0.84 (95% CI 0.73-0.94) (p<0.01)。FC+IL-6+CRP 三项联合检测时其 AUC 为 0.92（95% CI 0.85~1.00）(p<0.01)，大于单项检测和双项检测多项联合检测。三项联合检测预测值的 cut-off 值为 0.75 时其敏感度和特异性分别为 77%和 100%。
结论 FC+CRP+IL-6 三者联合检测能较好判断 CD 患者肠道黏膜愈合情况。

PU-3872

健康个体动脉血与静脉血血细胞分析之间存在的差异

付春燕、张婷
四川省人民医院

研究背景 在国内外 ICU 中均存在长期使用动脉置管采血后检测，其中的原因有 ICU 重症患者已留置动脉导管，且通过动脉导管抽取血标本更方便，同时可以减轻患者痛苦，减少感染机会，ICU 重症患者已经较难建立其它静脉通道。此前已有研究表明，与静脉血参数相比，动脉血参数如白细胞、红细胞和血红蛋白的测量间差异更大。获得可靠、准确的实验结果的前提是正确采集血标本，现在静脉采血法进行全血细胞计数分析在临床上比较常用。因此，我们要比较正常健康人动脉血与静脉血之间的血细胞计数参数结果是否存在差异。
材料与方法 本研究与 2021 年 2 月至 2021 年 3 月于四川省人民医院检验科采集正常健康人动脉血与静脉血血标本，采用 4ml 紫头管 EDTA-K2 7.2mg 抗凝的真空采血管，静脉血抽取肘部静脉，动脉血抽取桡动脉，利用 Sysmex XN1000/迈瑞 BC-6800 原装配套试剂进行检测。检测指标包括:红细胞计数（RBC）；血红蛋白（HGB）;白细胞计数（WBC）；红细胞平均容量（MCV）；红细胞平均血红蛋白浓度（MCHC）；红细胞压积（HCT）;血小板（PLT）。其后利用非参数检验，t 检验检测动脉血与静脉血之间存在的差异。P<0.05 有统计学意义。
结果 本研究中发现，红细胞计数（P>0.05）、血红蛋白（P>0.05）、白细胞计数（P>0.05）、红细胞平均容量（P<0.05）、红细胞平均血红蛋白浓度（P<0.05）、红细胞压积（P>0.05）、血小板（P>0.05）,红细胞平均容量、红细胞平均血红蛋白浓度 P<0.05 有统计学差异。
总结 在健康个体的动静脉血中，血细胞计数的检测结果显示，大多数参数如白细胞、红细胞、红细胞压积和血小板，在测量之间的差异比用静脉血测量的差异更大。从统计学上来说，静脉血中的血细胞计数比动脉血更有效。因此，必要时可建立动脉血血细胞计数参考区间。

PU-3873

血清外泌体 miR-377-3p 和 miR-381-3p 能够作为结直肠癌诊断标志物

王莉[1,2]、谢丽[1]、唐有勇[1,2]
1. 山东省肿瘤医院
2. 山东第一医科大学

血清外泌体 microRNAs(ExmiRNAs)为癌症诊断提供了一种理想的非侵入性方法。在这项研究中，我们评估了两种结直肠癌患者血清中的 ExmiRNAs 作为早期结直肠癌(CRC)的诊断工具。用 qNano、透射电子显微镜和 Western blot 对外泌体进行了表征鉴定。用 RT-qPCR 方法检测 CRC 患者(n=175)和健康献血员(n=172)血清中差异表达的 miRNAs。通过受试者工作特性(ROC)分析测定其诊断值。结果表明，在结直肠癌患者中，ExmiR-377-3p 和 ExmiR-381-3p 的表达均显著降低。ExmiR-377-3p 和 ExmiR-381-3p 的 ROC 曲线下面积分别为 0.798 和 0.792。当这两个 ExmiRNA 联合在一起时，AUC 值增加到 0.807。ExmiR-377-3p 和 ExmiR-381-3p 均可用于区分早期结直肠癌(I 期和 II 期)和健康对照。ROC 曲线显示 AUC 分别为 0.794 和 0.805。当它们联合时，AUC 值

增加到 0.814。另外，用癌胚抗原(CEA)或糖链抗原 19-9(CA19-9)检测结直肠癌进展时，发现 AUC 值分别为 0.739 和 0.707。综上所述，循环血清外泌体 miR-377-3p 和 miR-381-3p 可作为结直肠癌早期诊断的有效、无创性生物标志物，联合应用效果进一步提高。

PU-3874

红细胞九分图及红细胞新参数在辅助诊断小细胞性贫血中的价值初探

郭平、艾力
上海交通大学医学院附属瑞金医院

目的 探索血细胞分析仪红细胞九分图及红细胞新参数在辅助诊断小细胞性贫血中的应用价值。
方法 选取小细胞性贫血 273 例（缺铁性贫血 102 例、α 地中海贫血 63 例、β 地中海贫血 108 例）及健康对照 111 例为研究对象。使用 BC-6800 Plus 血细胞分析仪进行检测，收集仪器红细胞九分图及红系相关参数（共 68 项，此处略）。对红细胞九分图及红细胞参数进行 ROC 曲线分析以及 logistic 回归分析，比较各参数单独或联合诊断缺铁性贫血、α 地中海贫血、β 地中海贫血的价值。
结果 红细胞分布宽度、九分图区域五的红细胞分布宽度标准差与红细胞碎片绝对数分别鉴别缺铁性贫血与 α 地中海贫血、缺铁性贫血与 β 地中海贫血、α 地中海贫血与 β 地中海贫血时效能好。联合运用九分图区域四的红细胞体积、平均红细胞体积与九分图区域八的红细胞体积鉴别缺铁性贫血与 β 地中海贫血时，鉴别效率比传统的红细胞参数更高。对红细胞参数进行 logistic 回归模型分析得到鉴别的新公式 Mb＝－0.376×MCV＋0.444×(ERP4-RBC-Vol-P)＋0.577×(ERP8-RBC-Vol-P)－35.19 在鉴别缺铁性贫血与 β 地贫中的应用价值最高，其 AUC、截断值、敏感度、特异度分别为 0.98、0.45、0.96、0.98。
结论 联合应用红细胞新参数及新公式对不同小细胞性贫血具有较高的鉴别价值。

PU-3875

慢性粒细胞白血病的骨髓细胞形态和化学染色的个案分析

孙艳
新疆生产建设兵团第一师医院

探讨骨髓细胞形态学和化学染色在慢性粒细胞白血病诊断中的价值。
方法 综合观察我院二例比较特殊的诊断为慢性粒细胞白血病的住院病人，收集时间是 2020 年 1 月至 2021 年 6 月，方法比较这三类患者的血常规和骨髓细胞形态及化学染色与慢性粒细胞白血病诊断标准的差异，讨论慢性粒细胞白血病的形态学筛查，血常规白细胞不是明显增高，嗜碱性粒细胞稍高，骨髓象增生不是明显活跃，NAP 积分没有减低能不能排除慢性粒细胞白血病。
结论 血象白细胞不是明显增高，嗜碱性粒细胞稍高，骨髓象增生不是明显活跃，NAP 积分没有减低，能不能排除慢性粒细胞白血病，骨髓涂片中增生程度、粒系增生程度、原始细胞、幼粒细胞、嗜碱粒细胞、嗜酸粒细胞、单核细胞、幼红细胞、NAP 积分有差异, 可与外周血常规互相补充, 提高鉴别诊断的价值。

慢性粒细胞白血病患者大多数诊断于慢性期，20%~40%在诊断时无症状，bcr/abl 融合基因是诊断慢性粒细胞白血病的金标准，在一些偏远或者基层不能及时做染色体基因检测的医院，最开始的筛查血液形态学检查尤为重要，医生需要通过形态学检测做出初步筛查，再进一步选择染色体基因的检测。TKI 治疗时代已来，有研究显示 TKI 对 CML-CP 患者的疗效以及患者的生活质量都远高于 CML-AC 和 CML-BC 的患者。大部分慢性粒细胞白血病患者诊断于慢性期，但是仍然有小部分患者，在初始的慢性期漏诊了，在加速期、急变期临床症状出现，形态改变也更典型，才会考虑慢性粒细胞白血病的可能，再通过去查 bcr/abl 融合基因确诊。

PU-3876

MiR-150-5p 靶向抑制 Myb 调控 MDS 细胞增殖作用机制研究

袁顺玲
中山大学附属第五医院

研究背景 骨髓增生异常综合征（Myelodysplastic syndrome，MDS）是一种造血干细胞发生异质性克隆的血液系统肿瘤。它的主要特征是血细胞分化发育异常、骨髓无效造血并伴有向急性髓系白血病（acute myeloid leukemia, AML）转化的风险。MDS 的发生和进展是一个多基因、多步骤的病理过程，病因不明确，发病机制仍不清楚, MDS 的临床治疗效果仍不理想。因此，进一步深入研究 MDS 疾病的发生分子机制，寻找新的治疗靶标或研制新的药物是 MDS 的诊治紧迫任务。microRNA 是体内具有重要调控功能的非编码 RNA，研究发现 miR-150-5p 在多种癌症表达减低，且扮演抑癌基因角色。然而，miR-150-5p 在 MDS 细胞中的表达、临床意义以及作用仍不清楚。
研究方法 通过 GEO 数据库和 qRT-PCR 研究 miR-150-5p 在 MDS 患者和细胞系中的表达。体外培养人 MDS 细胞株 SKM-1 和 MDS-L，通过 CCK-8 和流式细胞术检测了 miR-150-5p 在 MDS 细胞增殖，细胞凋亡和周期中的作用。通过生信分析预测和荧光素酶报告基因实验检测 miR-150-5p 靶向调控 Myb。进一步使用上述方法研究 Myb 在 MDS 患者和细胞系中的表达，检测 Myb 在 MDS 细胞增殖，细胞凋亡和周期中的作用。最后，在 MDS 细胞中采用 CCK-8 检测了 Myb 对 miR-150-5p 调节细胞增殖的作用。
研究结果 我们发现与正常个体相比，miR-150-5p 在 MDS 患者和细胞系中低表达。过表达 miR-150-5p 能够抑制 MDS 细胞增殖，促进细胞凋亡和抑制细胞周期进程。机制研究表明，miR-150-5p 直接靶向抑制 Myb 的表达。而 Myb 在 MDS 患者和细胞系中高表达，敲低 Myb 能够抑制 MDS 细胞增殖，促进细胞凋亡和抑制细胞周期进程。同时，过表达 Myb 消除了 miR-150-5p 对 MDS 细胞增殖的抑制作用。
结论 我们的结果表明，miR-150-5p 在 MDS 中表达减低，使其对原癌基因 Myb 靶向抑制解除，高表达 Myb 导致 MDS 细胞恶性增殖。miR-150-5p/Myb 有望成为 MDS 基因治疗的潜在靶标。

血型鉴定室内比对及人员比对

徐娜
苏州市独墅湖医院（苏州大学附属独墅湖医院）

目的 建立和实施血型鉴定的室内比对以及人员比对，以确保不同的检测仪器及试剂卡对于同一项目的检验结果具有可比性以及不同人员的操作之间的差异在可接受范围之内。
方法 仪器比对：由经验丰富的工作人员对已知血型为 A 型 RH(D)阳性、B 型 RH(D)阳性、O 型 RH(D)阳性、AB 型 RH(D)阳性、O 型 RH(D)阴性的 5 份标本分别在奥森多全自动血型仪和长春博讯试剂卡上面进行血型检测。
人员比对：由参与比对的 2 位工作人员对 A 型 RH(D)阳性、B 型 RH(D)阳性、O 型 RH(D)阳性、AB 型 RH(D)阳性、O 型 RH(D)阴性的 5 份标本分别进行奥森多全自动血型仪上机检测，长春博讯试剂卡检测和试管法的操作。
要求：ABO 正定型结果一致，ABO 反定型结果一致，RH(D)血型结果一致，符合率计算**方法** 符合率=检测结果符合样本数/总样本数。
结果 本实验的符合率均为 100%。人员比对：本实验室工作人员血型鉴定结果与实际的检测结果符合率均为 100％，ABO 血型及 RH（D）血型人员比对验证结果为“通过”。仪器比对： 5 份标本 2 种仪器试剂卡进行比对，与原始结果进行比较，合格率均为 100％，该项目仪器比对验证结果为“通过”。

结论 进行奥森多全自动血型仪和长春博讯试剂卡的比对，实验室工作人员 3 种方法之间的比对，实验室血型项目检测结果可靠，实验室人员操作符合要求，实验设备均符合相应要求，检测结果可用于临床供血标本的血型检测，保障临床用血安全。

杜氏利什曼原虫与组织胞浆菌、马内菲青霉菌形态学鉴别

朱爱民
娄底市中心医院

杜氏利什曼原虫、组织胞浆菌和马内菲青霉菌在骨髓涂片中病原体形态相似，易造成误诊，并常导致严重后果。现通过我院 3 个病例对这三种病原体的形态学鉴别进行简要阐述，给骨髓细胞形态室检验技师提供帮助。

杜氏利什曼原虫无鞭毛体与组织胞浆菌、马内菲青霉菌分别是黑热病、组织胞浆菌病、马内菲青霉菌病的病原体，这三种疾病均为少见的感染性疾病，不但临床症状极为相似，如发热、肝脾淋巴结肿大，全血细胞减少等。且在骨髓涂片中病原体形态也相似，容易混淆，导致误诊[1]。

近十年来，我院骨髓细胞形态室发现荚膜组织胞浆菌 6 例，马内菲青霉菌 3 例，杜氏利什曼原虫 1 例（后转省人民医院确诊），现找出其中 3 个病例与大家分享：

肺癌患者凝血指标变化及其临床意义

石琼、马萍
徐州医科大学附属医院

目的 探讨肺癌患者凝血功能指标的变化及其临床意义。
方法 选择我院 2016 年 1 月—2017 年 12 月均经病史、临床表现、CT 和病理检查确诊的肺癌患者 98 例作为研究对象，另选我院同期 60 例健康体检者作为健康对照组，检测凝血酶原时间（PT）、部分凝血酶原时间（APTT）、纤维蛋白原（FIB）、凝血酶时间（TT）、D-二聚体（D-D）和抗凝血酶-III（AT-III）的变化。
结果 与健康对照组相比，肺癌患者的 PT、APTT、TT 均明显延长，FIB、D-D 明显增高，而 AT-III 明显减低。
结论 PT、APTT、TT 结果延长，表明肺癌患者凝血功能紊乱；FIB、D-D 结果增高可致血栓形成和肺癌的转移，提示凝血功能指标的检测对于肺癌患者的治疗有一定的临床意义。

PU-3880

血常规散点图检出 3 例非霍奇金淋巴瘤病例讨论及分析

张楠[1]、郝云静[2]、刘翠清[2]、王金伟[2]、刘成[2]
1. 河北省中医院/河北中医学院附属医院
2. 河北省中医院

血常规是血液病筛查的最基础检查，血常规结果是否准确，一要看血常规个项目的数值，还有非常重要的一点就是要看血常规的散点图和直方图。血常规散点图包括 Diff 通道散点图，Baso 通道散点图，现在比较先进的机型还有 NRBC 通道散点图。其中，Diff 通道散点图与白细胞五分类密切相关，它通过测量细胞体积、内含物复杂程度、细胞核 DNA/RNA 含量，将白细胞分为淋巴细胞、单核细胞、中性粒细胞（含嗜碱性粒细胞）、嗜酸性粒细胞四大类。如果外周血出现异常细胞，因

其细胞体积、细胞质中内含物、细胞核 DNA/RNA 含量的变化，会分布在散点图的不同位置，因此在审阅血常规结果时一定要看散点图，笔者近几个月从血常规散点图初诊 3 例淋巴瘤患者，除此之外，笔者还发现一例浆细胞白血病患者有相似的散点图，Diff 散点图仅是通过细胞大小、细胞质内含物多少、细胞 DNA/RNA 含量的多少来判断是哪种细胞，因此不同的疾病可能会出现相似的散点图，同样笔者也观察了多例传染性单个核细胞增多症异型淋巴细胞比例明显增多的散点图、急性淋巴细胞白血病散点图、急性髓细胞白血病散点图，同样发现对于不同的疾病可能会出现相似的散点图，而同种类型的疾病也可能会出现不同的散点图，这就需要我们在显微镜下认真辨识细胞的形态。同样对于全自动血液分析仪的研发者来说提出一个新的挑战，今后的血液分析义是否可以标记不同细胞表面的某个细胞标志物，从而能更清楚的区分不同类型的细胞。

PU-3881

CRP、SAA 和 PCT 水平在慢性乙肝合并感染患者中的诊断价值

郑国娜
临沂市人民医院

目的 分析判断血清 C-反应蛋白（CRP）、血清淀粉样蛋白 A（SAA）和降钙素原（PCT）水平在慢性乙型肝炎合并感染患者中的临床诊断价值，为慢性乙型肝炎患者临床感染的控制提供科学依据。
方法 选取 2019 年 3 月—2021 年 3 月我院收治的 210 例慢性乙肝感染患者为研究对象，根据有无感染分为感染组和未感染组。 检测所有患者血清 CRP 、SAA 和 PCT 水平，绘制 ROC 曲线，评价其特异性和敏感性。
结果 感染组和未感染组慢性乙肝患者的血清 PCT、SAA、CRP 水平均高于正常参考值，与未感染组相比，感染组患者的 PCT 、SAA 和 CRP 水平显著增高（P <0.01）。使用 Logistic 回归方程计算 SAA、PCT、CRP 联合诊断的概率，再绘制 ROC 曲线，计算联合 AUC 值：CRP 联合 PCT 的 AUC 值为 0.878（P=0.000）， 敏感度：83.9%，特异度：84.5%；CRP 联合 SAA 的 AUC 值为 0.810（P=0.000），敏感度：69.8%，特异度：92.2%；PCT 联合 SAA 的 AUC 值为 0.814（P=0.000），敏感度：73.4%，特异度：92.1%；CRP、PCT、SAA 三者联合后的 AUC 值为 0.855（P=0.000），敏感度：70.1%，特异度：97.5%。与 CRP 相比，PCT 诊断细菌感染的特异性、敏感性均相对更高，SAA 对于病毒性感染比 CRP 更敏感，升高幅度更明显。
结论 血清 CRP、SAA 和 PCT 水平在慢性乙型肝炎合并感染患者中明显高于正常个体，与 CRP 比较，PCT 诊断细菌感染的临床效能更高,SAA 诊断病毒感染更敏感。联合检测有助于早期鉴别细菌和病毒感染，合理指导抗生素使用，并在治疗后，准确评估疗效。

尿细菌计数在尿路感染的快速诊断中的应用

侯利霞、汪春新
安徽医科大学附属阜阳医院

目的 探讨尿细菌计数在尿路感染快速诊断中的应用。
方法 收集 2018 年 3 月-2020 年 8 月住院患者 1081 例中段尿标本，采用 Sysmex UF4000 尿液分析仪计数尿中细菌数，并与尿培养结果比较，以评价尿细菌计数对排除尿培养阴性标本的意义及对提示细菌革兰染色信息的评价。
结果 1081 例标本中，尿培养阳性率为 10.0%（108/1081），当总标本中细菌计数的 cut-off 值为 57.4 个/μl 时，尿细菌计数对尿路感染快速诊断的敏感性为 96.3%，特异性为 73.2%，阴性预测值为 99.4%，阳性预测值为 28.6%，与尿培养的一致性为 75.6%，可以减少 66.0%的尿培养。去除

污染后，在 81 例培养阳性标本中，仪器提示的细菌革兰染色信息与尿培养的一致性为 61.7%（50/81），一致性系数为 0.716（X2=31.256，P<0.001）。
结论 尿细菌计数可用于快速排除尿路感染；而且对于尿路感染患者，能预测尿路感染的细菌革兰染色类型，帮助临床合理选择抗菌药物。

PU-3883

外周血白细胞群落数据与肾移植后急性排斥反应的相关性研究

殷睿映
郑州大学第一附属医院

目的 为了研究外周血白细胞的细胞群落数据与肾移植手术后急性排斥反应的相关性，并进一步挖掘对评估急性排斥反应的发生可能发挥作用的参数。
方法 根据肾移植手术后三个月内是否发生排斥反应为依据，将共 68 名患者作为研究对象分为两个组别，其中发生急性排斥组（ARE）32 例，非急性排斥组（non-ARE）36 例。收集移植手术后的外周血细胞分析数据、白细胞群落数据、肾脏功能相关的生化指标以及病历基本信息，使用 SPSS 软件统计分析两组患者之间白细胞群落数据的差异，以及其与急性排斥反应的发生之间的相关性。
结果 在 ARE 和 non-ARE 两组之间，外周血中性粒细胞、淋巴细胞和单核细胞的细胞群落数据参数均有显著的差异（包括 Ne-V-sd, Ne-UMS-sd, Ly-V, Ly-MS, Ly-UMS, Ly-LS and Mo-UMS）。其中，Ne-UMS-sd 和 Ly-UMS 对 ARE 的发生与否具有最强的区分作用。这些具有差异的参数中，Ly-UMS 的受试者曲线下面积（AUC）最大，为 0.756。同时，Ne-UMS-sd 联合 Ly-UMS 的受试者曲线下面积达到 0.823。在 ARE 组，Ne-UMS-sd 和 Ly-UMS 均呈现与估算肾小球滤过率（eGFR）的负线性相关性，其 r 值分别为-0.527（p=0.002）和-0.436（p=0.013）。
结论 外周血白细胞群落数据中的参数 Ne-UMS-sd 和 Ly-UMS 可能对于诊断肾移植后急性排斥的发生具有一定的参考意义。

PU-3884

一例 EDTA 依赖性血小板假性减低患者的结果分析

陈婕
西安医学院第一附属医院

血小板减少为临床常见症状,表现为由于各种原因导致的血小板计数结果低于参考值下限。当血小板减少时可出现一系列症状,如皮肤淤血、鼻出血、口腔黏膜出血等,严重者可出现内脏出血、脑出血甚至危及生命。乙二胺四乙酸二钾（EDTA-K2）为血液分析的常用抗凝剂,但有时会引起血小板聚集,使血小板计数假性减少,临床诊断为 EDTA 依赖性假性血小板减少症（EDTA-PTCP）。我院 2021 年 5 月收治 1 例血小板减少的患者,首次血常规检测所得血小板计数结果较低，仪器报警“血小板聚集”，触发我室复检规则，对血小板进行复检。显微镜下可见血小板呈小簇状聚集，于是联系临床给患者重新抽取枸橼酸钠管和 EDTA 管立即检测。结果发现 EDTA 管结果正常，且仪器未报警，之后 15 分钟，30 分钟，1 小时后再用 EDTA 管分别检测及显微镜复检，血小板数值呈明显下降趋势，镜下可见血小板聚集逐渐加重。所以 EDTA 依赖的血小板假性减低随着血液离体的时间延长，表现出聚集程度加重。

The morphological Characterization and mechanism exploration of EDTA-Dependent Extensive Platelet satellitism and Phagocytosis

Ping Guo
Department of Clinical Laboratory Medicine, Ruijin Hospital affiliated to Shanghai Jiaotong University School of Medicine

Platelet satellitism and phagocytosis by neutrophils are rare phenomena induced by the anticoagulant EDTA. In a 55-year-old female, the prominent platelet satellitism and extensive phagocytosis was revealed accidently in the absence of pseudothrombocytopenia usually presented by the subjects with both artificial laboratory phenomena. The extensive binding and phagocytosis of platelet by neutrophil were further confirmed by flow-cytometry. Following the dynamic of platelet satellitism formation and extent of platelet phagocytosis showed that the attachment of platelets with neutrophils and phagocytized by latter occurred simultaneously and the processes were closely associated. The mechanism underlying the platelet satellitism and phagocytosis in the presence of EDTA is still unclear and believed to be antiplatelet autoantibodies related. Consistently, mixing the platelet poor plasma isolated from the investigated subjects with blood cells collected from blood type matching healthy individuals elicited similar time dependent platelet satellitism and phagocytosis albeit at lower magnitude, indicating plasma components of the investigated subject mediating the processes. Although the anti-GP IIb/IIIa antibodies were detected at high titers in the subject investigated, the mixture experiments performed in similar fashion with plasma acquired from patients with Idiopathic thrombocytopenic purpura positive for anti-GP IIb/IIIa antibodies failed to reproduce neither platelet satellitism nor phagocytosis, suggesting that the apparent platelet satellitism and phagocytosis presented in the subject attributed to autoantibodies other than antibodies directed against platelet alone. Although no pathological conditions have been revealed to be associated with the platelet satellitism and phagocytosis induced by EDTA, the phenomena require concerted processes and warrant further studies to clarify.

PU-3886

凝血和纤溶指标与静脉血栓形成的相关性

姚嘉怡
复旦大学附属中山医院青浦分院

目的 静脉血栓栓塞（VTE）包括深静脉血栓形成（DVT）和肺血栓栓塞（PTE）。研究静脉血栓栓塞患者血清中凝血和纤溶相关指标的表达水平，探讨其对于 VTE 的诊断价值。
方法 2020 年 1 月至 2021 年 6 月，以我院 100 例发生静脉血栓栓塞的患者为 VTE 组（其中 50 例深静脉血栓形成患者为 DVT 组，50 例肺血栓栓塞患者为 PTE 组），以 50 例健康人为健康对照组。检测血清凝血和纤溶相关指标（APTT、PT、FIB、TT、DD、FDP）水平，分析其与 VTE 发生的关系。
结果 VTE 组血清 APTT、PT、FIB、DD、FDP 高于和健康对照组（P 均小于 0.05），其中 PTE 组血清 PT、APTT、DD、FDP 高于健康对照组（P 均小于 0.05），DVT 组血清 APTT、FIB、DD、FDP 高于健康对照组（P 均小于 0.05）；PTE 组与 DVT 组相比，各项凝血和纤溶指标无显著性差异（P 均大于 0.05）。
结论 静脉血栓栓塞患者 APTT、PT、FIB、DD、FDP 升高，早期监测凝血和纤溶标志物可预防血栓的发生。

PU-3887

UF5000 尿沉渣分析仪细菌参数对尿路感染的研究探讨

李东阳、吴雁
天津市泰达医院

目的 评价 UF5000 尿沉渣分析仪的细菌参数（BACT-INFO、细菌散点图）在筛查尿路感染中的作用。
方法 2021 年 3 月-4 月收集 100 例疑似尿路感染患者的中段尿尿液标本，采取尿培养、希森美康 UF5000 尿沉渣分析的方法，统计 UF5000WBC、BACT、BACT-Info、细菌散点图（CB_FLH_P×CB_FSC_P），并以尿培养为金标准。并统计比较 BACT-Info 与尿培养结果的一致性。
结果 相比之下 UF5000 的 BACT-Info、细菌散点图与中段尿细菌培养的结果表明，革兰阴性菌符合率为 94%，革兰阳性菌符合率为 87%，细菌总符合率为 75%。
UF5000 尿沉渣分析仪细菌分型（BACT-Info）和细菌散点图可以作为快速诊断尿路感染的辅助方法。
结论 UF5000 尿沉渣分析仪的细菌参数（包括：细菌分型（BACT-Info）和细菌散点图）作为早期诊断尿路感染的依据，符合率达到 75%，具有良好的诊断价值，可以减少一些不必要的尿培养成本，结合尿沉渣分析结果及细菌散点图可提前预判细菌分型，为患者临床用药提供早期指导。

肝素抗凝与 EDTA 抗凝在血小板计数中的比对

黄坚[1]、彭郑林[2]
1. 联勤保障部队第九 00 医院
2. 福建医科大学校医院

目的 血小板计数异常与正常的标本，在乙二胺四乙酸二钾（EDTA-K2 ）与肝素锂抗凝剂中的计数情况的比对。随机观察本院 69 例血常规检验的标本血小板计数在乙二胺四乙酸二钾、肝素锂抗凝管的计数情况，与金标准草酸铵手工法进行比较，探究血小板计数假性减低时的标本，能否可以直接用肝素锂抗凝管抽血进行检测，结果与金标准是否一致。
方法 随机选取 69 例标本，用乙二胺四乙酸二钾、肝素锂抗凝管采集静脉血，先用德国西门子 SIEMENS AVDIA 2120I 血细胞分析仪进行血常规检验，再用金标准手工计数法充池计数血小板，随后进行推片，用瑞氏-姬姆萨染液染色 8 分钟后镜检观察有无血小板聚集。
结果 在 69 例患者标本中，46 例患者采用肝素锂抗凝管抽血时镜下观察有血小板聚集的现象发生，占标本总数的 66.6%，乙二胺四乙酸二钾抗凝管抽血检测的有 1 例标本镜下观察有血小板聚集的现象，占标本总数的 1.5 %。其中急诊科 20 例肝素锂抗凝静脉血标本在 15 分钟内完成检测，有 4 例发生聚集；49 例肝素锂抗凝静脉血标本在 2 小时内检测，有 42 例标本发生聚集。
结论 在血小板计数中，乙二胺四乙酸二钾抗凝比肝素抗凝更接近手工计数结果，血常规检验血小板计数还是推荐用乙二胺四乙酸二钾抗凝剂抽血进行检验。如果在乙二胺四乙酸二钾抗凝出现血小板假性聚集，枸橼酸无法纠正假性聚集时，可以使用肝素锂纠正，检测时间在抽完血 15 分钟内完成。

PU-3889

一种使用数字显微镜(Morphogo)识别骨髓中异常淋巴细胞的机器学习工具

唐古生[1]、付鑫炎[2]、王贞[3]、陈明义[4]
1. 海军军医大学第一附属医院（上海长海医院）
2. 杭州智微信息技术有限公司医学部
3. 中南大学湘雅医院血液科
4. 德克萨斯大学西南医学中心血液科

目的 骨髓形态学分析是血液病诊断的重要步骤。人工计数骨髓涂片分析耗时，工作量大且存在观察者间的偏差。本研究旨在探讨基于数字病理方法与先进的机器学习相结合的 Morphogo 系统区分骨髓涂片中异常和正常淋巴细胞的可行性及其意义。
方法 本研究入组分析了 53 例经临床及实验室形态学、流式细胞术等综合检查确诊为淋巴系统肿瘤伴骨髓浸润患者的骨髓涂片的高分辨率图像。为了提高系统识别骨髓淋巴细胞的范围和精度，我们通过人工智能训练开发了一种结合淋巴细胞图像的细胞大小、细胞核/质颜色和纹理以及几何细胞学特征的算法，对淋巴细胞进行识别和分类。从 43 例训练组患者骨髓涂片显微镜下选择合适视野，由 Morphogo 系统采集了 4579 个淋巴细胞进行反复训练识别，其中形态学专家确认淋巴细胞/淋巴瘤细胞的有 4432 个。进一步对区分正常淋巴和异常淋巴细胞训练后，采用 10 例患者骨髓涂片作为测试集进行算法识别异常淋巴瘤细胞的性能确认。
结果 通过人工智能（AI）的识别系统对测试集 10 例患者的骨髓涂片采集的 3616 张细胞图像中的 5454 个细胞进行识别分类，共识别出 833 个异常淋巴细胞，4621 个非淋巴细胞。经细胞病理医生审核，确认 825 个为异常淋巴细胞，4551 个为非淋巴细胞。对异常淋巴瘤细胞识别的灵敏度，特异度，准确率分别是 92.18%，99.82%，98.57%，阳性预测值和阴性预测值为 99.04%和 98.49%。
结论 Morphogo 自动识别异常淋巴细胞为诊断骨髓淋巴瘤细胞提供了可行性。进一步训练和改进算法将有助于进一步细分特定谱系亚组病理学，从而提供一个强大的、更快的恶性疾病筛查诊断工具。骨髓细胞形态学有望实现 AI 阅片部分或全部替代骨髓人工形态学镜检。

PU-3890

Altered Peripheral B lymphocyte subsets in patients with hepatocellular carcinoma

jiaoxiang wu[1]、yue wang[2]、hanxiao sun[1]、jie shu[1]、yajie wang[1]、meiyu tan[1]、lida zhou[1]、biao huang[3]、qiuhui pan[4]、huiming sheng[1]
1. Tong Ren Hospital, Shanghai Jiaotong University School of Medicine
2. Shanghai 10th people's hospital affiliated to Tong Ji University school of medicine
3. Immunoassay laboratory, College of Life Sciences and Medicine, Zhejiang Sci-Tech University
4. Department of Clinical Laboratory Medicine, Shanghai Children’s Medical Center, School of Medicine, Shanghai Jiaotong University

Background Although B lymphocytes are widely known to participate in the immune response, the conclusive roles of B lymphocyte subsets in the antitumor immune response have not yet been determined.
Aims To investigate the association between altered B cell subsets and hepatocellular carcinoma (HCC).
Materials and Methods Single-cell data from GEO datasets were first analyzed, and then a B cell flow cytometry panel was used to analyze the peripheral blood of 83 HCC patients and 33 healthy controls recruited to participate in our research. We explored three B cell subsets in the peripheral blood of all subjects: interleukin-10-producing regulatory B cells (B10 cells), marginal zone B cells (MZB cells), and follicular B cells (FoB cells).

Results The B cell subsets in HCC patients were changed. In particular, patients with HCC had a higher frequency of B10 cells and a lower percentage of MZB cells than healthy controls. In addition, FoB cells were increased in patients who had stage III or IV disease compared with patients with stage I or II disease. Moreover, we explored the paired presurgery and postsurgery data of 15 patients who underwent tumor excision and found that the frequency of B10 cells decreased but the frequency of FoB cells increased after surgery.
Conclusions The results suggest that altered B cell subsets are associated with the development and prognosis of HCC. B cell subsets may have predictive value in HCC patients and could be potential targets for immunotherapy in HCC.

PU-3891

A Rare Cause of hypofibrinogenemia with high level anticyclic citrullinated peptide

Hanxiao Sun、Jiaoxiang Wu、Binbin Xuan、Jie Shu、Huiming Sheng
Department of Laboratory Medicine, Tongren Hospital, Shanghai Jiao Tong University School of Medicine

It was reported that patients with systemic amyloidosis tend to bleed with an activated coagulation system, and show significant fibrinolysis with a high or normal level of fibrinogen. Herein, we report our experience in managing an unusual case of amyloidosis with hypofibrinogenemia and a high level of serum anticyclic citrullinated peptide(Anti-CCP). A 74-year-old woman who presented with a ten-day history of lumbago and extreme weakness of lower limbs under no obvious inducement, was admitted to the Hematology ward with a diagnosis of coagulation disorders. Eight years ago she received radiotherapy for early-stage lung cancer. Global coagulation and a comprehensive coagulation factor screen were performed, while deranged hemostasis had been observed with a decrease fibrinogen concentration of 0.3g/L (reference interval, RI 2-4 g/L). High levels of serum albumin A (SAA, 161.955, 51.4-207.3 mg/L, RI 0-10 mg/L), Anti-CCP, and rheumatoid factor (RF) were detected. The amyloid deposit was detected in the bone marrow which suggested the possibility of amyloidosis. In order to rule out hereditary fibrinogen Aα-chain amyloidosis, Sanger sequencing was applied to analyze the fibrinogen Aalpha chain gene (c1600-1721) and no mutation was detected. The patient was given plasmapheresis and immunosuppressant intermittently in the following 3 months. However, fibrinogenopenia was not alleviated (≤1 g/L, medium: 0.7 g/L), along with a high level of serum anti-CCP（>500 U/ml). Next, we carried out liquid chromatography-mass spectrometry (LC-MS) analysis to measure the post-transcriptional modification of fibrinogen by Easy-nLC1200-Q-Exactive Plus instrument (ThermoFisher Scientific) and analyzed by Human_uniprot database (https://www.uniprot.org/, precursor mass tolerance: 10ppm, fragment ion mass tolerance: 0.02Da), because a rare subtype of amyloidosis was caused by deposition of misfolded fibrinogen resultant from fibrinogen citrullination, and thereby affects the hemostatic homeostasis. A total of 6 serum samples, 3 from Rheumatoid arthritis (RA) patients and 3 from healthy human beings (non-RA), were applied as controls and measured simultaneously with the sample from our patient mentioned above. According to the clustering analysis for the Area values of citrullinated protein, we found the type and number of citrullinated proteins in our patient serum were remarkably different from both RA and non-RA controls (by WocEA1.0). Two citrullination sites in fibrinogen Aα-chain were detected only in our patient, and one site (K.EVVTSEDGSDCPEAMDLGTLSGIGTLDGF Cit RH) was only reported once in previous studies. Since the sequencing and immunofixation results had ruled out the hereditary fibrinogen Aα-chain amyloidosis and AL amyloidosis (light chain), systemic AA amyloidosis was diagnosed for this patient.

In conclusion, AA amyloidosis should be considered in patients with elevated plasma anti-cyclic citrullinated peptides, especially when the symptoms of coagulation disorders are presented. And great progress has been made in the treatment of systemic amyloidosis. Early diagnosis and correct classification of amyloidosis are imperative before specific therapy can be

implemented. Combined sequencing and LC-MS measurement could be a powerful tool for the accurate diagnosis of amyloid subtypes.

PU-3892

血清 ITGBL1 水平对乙型肝炎病毒相关原发性肝细胞癌的诊断价值分析

叶菲[1]、石峰椿[2]、张欣欣[2]、于德敏[2]
1. 瑞金医院传染科
2. 上海交通大学医学院附属瑞金医院

目的 既往研究表明整合素 β 样 1 蛋白（Integrinbeta-like1，ITGBL1)在乙型肝炎病毒（HBV）相关肝硬化或者肝癌组织表达明显升高，并且在肝癌的侵袭和转移以及 EMT 的发生有重要作用。本研究评估了血清中 ITGBL1 水平预测感染 HBV 相关 HCC 的诊断能力，旨在鉴定一种 HBV 相关 HCC 特异性血清生物标志物。

材料和方法 采用回顾性研究方式收集了自 2017 年至 2020 年 716 例受试者其中试验组共 299 例患者、验证组共 417 例患者。将所有患者分为 4 组：HBV 相关性肝细胞癌患者、HBV 相关肝硬化患者、慢性乙型肝炎患者、健康对照人群。采用酶联免疫吸附测定（ELISA）方法检测各组血清中 ITGBL1 的表达水平，采用二元 Logistic 回归分析，探究高危人群（包括慢乙肝患者和 HBV 相关肝硬化患者）发生 HBV-HCC 的高危独立影响因素，并在验证组中进行验证。同时结合研究对象的各项临床数据,使用灵敏度，特异性和受体工作特征曲线（AUC）下的面积评估 ITGBL1 的诊断性能，进一步分别以 400ng/mL（AFP400）、20ng/mL（AFP20）作为 AFP 的诊断临界值将血清中 ITGBL1 与 AFP 进行了诊断效能的比较。

结果 使用 ELISA 方法对血清样品检测和分析，HBV-HCC 患者的血清 ITGBL1 水平明显低于肝癌高危人群(CHB 和 HBV-LC)，CHB 患者与健康对照组之间无明显差异。通过对高危人群和 HBV-HCC 患者的临床参数进行单因素和多因素 logistic 回归分析，结果确定血清 ITGBL1 水平是高危人群发生肝癌的独立危险因素。鉴别高危人群与 HBV-HCC 时，血清 ITGBL1 的最佳诊断临界值为 54.30ng/mL(试验组：AUC 为 0.773，95%CI 为 0.716-0.823，敏感性 66.98%，特异性 71.62%；验证组：AUC 为 0.732，95%CI 为 0.682-0.778，敏感性 62.41%，特异性 74.07%)。进一步分析血清 ITGBL1 在鉴别早期 HBV-HCC 与高危人群(试验组：AUC 为 0.787，95%CI 为 0.723-0.842，敏感性 62.75%，特异性 79.73%；验证组：AUC 为 0.764，95%CI 为 0.710-0.813，敏感性 67.69%，特异性 74.07%)中的诊断准确率高于 AFP20(临界值 AFP=20ng/mL)(试验组：AUC 为 0.638，95%CI 为 0.567-0.704，敏感性 45.10%，特异性 82.43%；验证组：AUC 为 0.718，95%CI 为 0.662-0.770，敏感性 49.23%，特异性 94.44%)。尤其对于 AFP 阴性(<20ng/mL)的 HBV-HCC 患者，血清 ITGBL1 仍保持较高的诊断价值(试验组：AUC，0.756，95CI%，0.683-0.819，68.18%和 68.85%；验证组：AUC,0.744，95CI%，0.686-0.796，81.13%和 55.88%)。当血清 ITGBL1 联合 AFP20 时，无论是在诊断 HBVHCC 或者早期诊断 HBV-HCC 方面均获得优异的诊断价值。

结论 血清中 ITGBL1 可作为 CHB 患者发生肝癌风险潜在有效的非侵入性生物标志物，在与 AFP 联合后，即使对于 AFP 低水平的 HCC 也具有较好的诊断效能，表现出较好的临床应用前景。

PU-3893

INSMI 过表达可作为前列腺癌患者预后的重要标志物

唐丽娟
云南省第二人民医院

前列腺癌作为一种世界范围内的男性常见恶性肿瘤，我国的其癌症发病率逐年上升，其中 30%为临床局限型，而另外的 70%均为晚期或广泛转移的无法接受局部的根治性治疗患者，预后较差，这就对我国前列腺癌患者的早期诊断和治疗提出了更高的要求。本次研究综合了来自 GEO 的 10 个前列腺癌微阵列数据集及 TCGA 的前列腺癌数据集，数据显示前列腺患者中 INSMI 表达上调，INSMI 过表达与 COL17A1 相关，而 INSMI 过表达与 SCGB1A1 相关。然而，INSMI 上调对前列腺癌患者的总生存期(OS)有影响，表现为 OS 减低。本研究数据表明 INSMI 过表达可影响前列腺患者预后，然而 INSMI 通过何种机制调节患者预后有待后续分子体外及动物体内实验研究。

PU-3894

浆膜腔积液高荧光细胞比率联合血清 CA199、CA125、CA153 对恶性肿瘤的诊断价值

林花[2]、赵瑞[1]
1. 昆明医科大学第二附属医院检验科
2. 昆明医科大学第二附属医院检验科

目的 比较浆膜腔积液中的高荧光细胞比率、血清 CA199、CA125、CA153 在恶性肿瘤和良性病变中的浓度差异，探讨单项及联合检测诊断恶性肿瘤的价值。
方法 选取 2020 年 5 月至 2021 年 2 月于昆明医科大学第二附属医院住院治疗及门诊确诊的恶性肿瘤病人 68 例，良性病变病人 132 例，检测其浆膜腔积液高荧光细胞比率(HF-BF%)和血清 CA199、CA125、CA153 浓度，进行两组间比较并绘制 ROC 曲线，分析单项及联合检测对恶性肿瘤的诊断价值。
结果 1、恶性肿瘤组的 HF-BF%、CA199、CA153 浓度高于良性病变组，差异有统计学意义（$p<0.05$），CA125 在两组之间的差异无统计学意义（$p>0.05$）。2、单项的诊断效能较低，AUC 均小于 0.700，单项诊断恶性肿瘤的灵敏度依次为 CA125>HF-BF%>CA199>CA153，特异度依次为 CA153>CA199>HF-BF%>CA125。3、有三种两两联合检测方式的 AUC>0.700，分别是 HF-BF%+CA199、HF-BF%+CA153 及 CA199+CA153，其中 HF-BF%联合 CA153 的诊断效能最佳，其 AUC 为 0.730，灵敏度为 57.4%，特异度为 82.6%。4、三项联合检测对恶性肿瘤的诊断效能明显提高，其中 HF-BF%+CA199+CA153 的 AUC 为 0.749，灵敏度为 60.3%，特异度为 83.3%，但四项联合检测的 AUC 为 0.750，灵敏度可到 60.3%，特异度 84.1%，与 HF-BF%+CA199+CA153 相比无明显提升。
结论 单项指标检测时，HF-BF%、CA199、CA153 诊断效能均较差，单项 CA125 对恶性肿瘤的诊断无明显价值，但 HF-BF%+CA199+CA125+CA153 四项联合检测对恶性肿瘤的诊断有重要价值，因其灵敏度和特异性与 HF-BF%+CA199+CA153 三项联合无明显差异，从经济角度考虑，HF-BF%+CA199+CA153 三项联合检测是一种更优选择，探究更高效合理的联合检测组合有助于提高诊断的灵敏度及准确度。

PU-3895

Continuous changes in biological levels of complete blood count in a high altitude area of China

Xuan Luo 、Lei Feng、Xuejing Bai、Jiangxian Zhu、Guancheng Zhao、Mengna Wu、Zefeng Yan
Department of Laboratory, People's Hospital of Yuxi City （Department of Laboratory, The Sixth Affiliated Hospital of Kunming Medical University）

Objectives We aimed to establish a new reference interval of blood cell parameters by classifying and counting blood Cells of 16- to 85-year-old healthy volunteers and observing continuous changes with age.
Methods We analyzed the blood cell parameters of 42,678 cases (men, 24,406; women, 18,272), and compared the blood cell parameters of men and women in different age groups using an independent samples t-test. Using limits of 2.5%–97.5%, a 90% confidence interval was used to develop new reference intervals.
Results Counts of blood cell parameters, including white blood Cells, neutrophils, lymphocytes, monocytes, eosinophils, basophils, red blood Cells, hemoglobin, hematocrit, distribution width of red blood Cells and platelets, were found to differ between men and women in different age groups. These parameters were used to establish a new reference interval of blood Cells.
Conclusion The blood cell parameters of both men and women changed with increasing age. The reference interval that we established will provide more accurate basic evidence for clinical diagnosis and treatment of diseases.

PU-3896

急性髓系白血病患者血清腺苷脱氨酶测定的意义

韩静颖
山东第一医科大学附属省立医院

目的 探讨血清腺苷脱氨酶(ADA)在急性髓系白血病（AML）的变化规律及发生发展中的意义。
方法 收集 75 例急性髓系白血病（AML）患者、63 例治疗前急性髓系白血病（AML）患者、62 例治疗后急性髓系白血病（AML）患者和 86 例健康对照者外周血血清，利用 PNP-XTO-POD 偶联连续监测法测定血清腺苷脱氨酶(ADA)的值，利用速率法测定谷草转氨酶（AST）、谷丙转氨酶（ALT）和谷氨酰转肽酶（GGT）的值。检测正常组与 AML 组血清 ADA 水平，比较治疗前组和治疗后组 ADA 水平变化，利用受试者工作特征曲线(ROC 曲线)确定 ADA 最佳截点并将治疗前 AML 患者分为低 ADA 组（ADA<13.50U/L） 和高 ADA 组（ADA≥13.50U/L），分析两组间年龄、性别、AST、ALT 和 GGT 差异。
结果 AML 患者 ADA 数值增高；治疗前组显著高于治疗后组 ADA；采用 ROC 曲线，将治疗前患者分为高 ADA 组和低 ADA 组，与 ALT、AST 和 GGT 有显著差异（P<0.05）。
结论 AML 患者的 ADA 水平显著高于正常对照者，治疗后 ADA 显著低于治疗前，采用 ROC 曲线，高 ADA 组 ALT、AST、GGT 显著升高提示血清 ADA 在 AML 疾病辅助诊断中有重要意义。

PU-3897

红细胞分布宽度的变化在早期胃癌中的意义

韩静颖
山东第一医科大学附属省立医院

目的 探讨早期胃癌患者红细胞分布宽度（RDW）的变化及临床意义。
方法 选取 90 例早期胃癌患者术前抽血检测血常规、CA125、CA199 等相关指标，并选取 89 例体检健康志愿者（正常对照组），比较 2 组中 RDW 水平，并绘制受试者工作特征曲线（ROC 曲线），确定 RDW 最佳截点，根据早期胃癌患者 RDW 水平分为低 RDW 组（RDW<12.5）和高 RDW 组（RDW≥12,5）。分析 RDW 与年龄、性别、CA125、CA199 的关系。
结果 早期胃癌患者 RDW 水平高于正常对照组，差异有统计学意义（P<0.001）；绘制 ROC 曲线，将早期胃癌患者分为低 RDW 组和高 RDW 组，高 RDW 组与年龄有差异（P<0.05）；与性别、CA125、CA199 无差异（P>0.05）。
结论 早期胃癌患者的 RDW 水平高于正常对照组；高 RDW 组与年龄有差异，与性别、CA125、CA199 无差异。说明 RDW 在早期胃癌的诊断中可作为一项辅助筛查指标 。

PU-3898

SIEMENS-AVIDA 2120 血细胞分析仪对新生儿白细胞计数的研究应用

程少杰
中国人民解放军联勤保障部队第 900 医院

目的 探讨 SIEMENS-AVIDA 2120 血细胞分析仪计数新生儿外周血白细胞的准确性，消除有核红细胞影响，并对其临床应用作以评价。
方法 选取我院新生儿病区 98 例新生儿静脉血样本，应用 SIEMENS-AVIDA 2120 血细胞分析仪和人工镜检法对每份样本中的白细胞进行计数，仪器法采集新生儿血液于 EDTA-K2 抗凝管中充分混匀，用质控品对 SIEMENS-AVIDA 2120 血细胞分析仪进行室内质控，在结果在控的情况下应用 SIEMENS-AVIDA 2120 血细胞分析仪，于 2h 内检测完毕；人工镜检法准确吸取 20ul EDTA-K2 抗凝全血，加入含有 0.38mL 白细胞稀释液的试管中，充分混匀，充入细胞计数池中，计数四个大方格中的白细胞数，同时制备血涂片，经瑞 - 吉氏染液染色后由专业检验人员在显微镜下直接计数，在血涂片体尾交界处，选择细胞分布均匀、细胞着色较好的部位，计数 100 个白细胞，同时记录 NRBC 的数量，并根据白细胞校正公式校正计算白细胞总数；两种方法各检测两次取均值比对，采用 SPSS 22.0 统计学软件分析数据，计量资料用(x±s)表示，采用配对 t 检验，做出统计学分析。
结果 在选取的 98 例受检样本中，白细胞计数结果低于 15.0×109/L 有 45 例，(15.0～20.0)×109 / L 有 39 例，大于 20×109/L 有 14 例。当白细胞计数低于 15.0×109/L 时，两种检测方法比较差异无统计学意义(P>0. 05)；在(15.0～20)×109/L 时，两种检测方法比较差异无统计学意义(P >0. 05)； 高于 20.0×109/L 时，两种检测方法比较差异有统计学意义(P <0. 01) 。
结论 SIEMENS-AVIDA 2120 型血细胞分析仪在对新生儿外周血白细胞计数的过程中，当遇到高值白细胞时出现有核红细胞概率增大，仪器会自动纠正 WBC 结果，有效降低复检率，具有较好的准确性。

PU-3899

脂血标本对血常规结果的影响及校正方法探讨

鲁君艳、姜志刚、王鹏
永州市中心医院

目的 研究不同浓度脂血标本对全自动血液分析仪血常规检测结果的影响，并比较血浆置换法与公式校正法消除脂血标本影响的校正效果。
方法 选取 32 例健康体检者无脂血、溶血、黄疸的标本作为对照组，进行血常规及三酰甘油（TG）检测。32 例标本每份平均分成三管，低速离心分离血浆，三管标本分别吸出 10、20、40μl 血浆，再加入同等量的脂肪乳制备脂血标本，进行血常规及 TG 检测。根据 TG 浓度水平分轻、中、重度脂血（A、B、C）三组，将检测结果与对照组进行比较分析。脂血标本经血浆置换法和公式校正法进行校正，校正后结果与对照组及脂血组结果进行比较分析。
结果 A 组血常规参数与对照组比较，结果略有升高，差异无统计学意义（P＞0.05），B 组中 HGB、MCH、MCHC 水平与对照组相比，差异均有统计学意义（P＜0.05）。C 组中 HGB、MCH、MCHC、WBC、HCT、MCV 水平与对照组相比，差异均有统计学意义（P＜0.05）。三组中 RBC、PLT 水平与对照组相比，差异都无统计学意义（P＞0.05），脂血标本经血浆置换法和公式校正法处理后基本可消除乳糜微粒对检测结果的影响，校正后结果与对照组比较差异无统计学意义（P＞0.05）。
结论 不同浓度脂血会对全自动血液分析仪血常规结果产生不同的影响，尤其是 HGB 结果，中、高浓度脂血影响更明显。脂血标本经血浆置换法和公式校正法处理后基本可消除乳糜微粒对检测结果的影响，但血浆置换法步骤繁琐，公式校正法更为简便易行。

PU-3900

BC-6800 Plus 血细胞分析仪血小板光学通道在纠正血小板假性减少中的应用

郭平
上海交通大学医学院附属瑞金医院

目的 评估 BC-6800 Plus 血细胞分析仪光学血小板通道对乙二胺四乙酸（EDTA）依赖性血小板假性减少样本的血小板聚集解离效果。
方法 经知情同意后收集血细胞分析仪出现“血小板聚集”报警信息且镜检确认血小板聚集的 EDTA 抗凝样本及其对应枸橼酸钠抗凝样本 20 例，同时收集经确认无血小板聚集健康对照 EDTA 抗凝样本及其对应枸橼酸钠抗凝样本 20 例。采用 BC-6800 Plus 血细胞分析仪阻抗通道（PLT-I）与光学血小板通道（PLT-O）检测上述样本。采用配对 t 检验比较 EDTA 抗凝样本与枸橼酸钠抗凝样本 PLT-I 与 PLT-O 通道间血小板计数的差异是否存在统计学意义，并计算 EDTA 抗凝样本血小板计数解离率与提升率。解离率=EDTA 抗凝样本 PLT-O 血小板计数/枸橼酸钠抗凝样本 PLT-O 血小板计数×100%；提升率=（EDTA 抗凝样本 PLT-O 血小板计数- EDTA 抗凝样本 PLT-I 血小板计数）/EDTA 抗凝样本 PLT-I 血小板计数×100%。
结果 健康对照 EDTA 抗凝样本与枸橼酸钠抗凝样本 PLT-I 与 PLT-O 通道间血小板计数的差异无统计学意义（P＞0.05）；血小板假性减少患者 EDTA 抗凝样本 PLT-I 通道血小板计数显著低于 PLT-O 通道（P＜0.05）及枸橼酸钠抗凝样本 PLT-O 通道结果（P＜0.05）。20 例样本中血小板计数解离率＞70%的有 17 例，血小板提升率中位数 173%。
结论 BC-6800 Plus 血细胞分析仪的光学血小板通道可有效纠正 EDTA 依赖的血小板假性减少，初步满足临床应用需求。

PU-3901

血管内皮生长因子反义寡核苷酸对小鼠肺癌的抑制作用

王颖、林春艳
哈尔滨医科大学附属第一医院

目的 探讨血管内皮生长因子 (Vascular endothelial growth factor， VEGF) 反义寡核苷酸的基因治疗方法。
方法 于 2001 年 5 月至 2002 年 1 月在哈尔滨医科大学第一临床医学院实验动物中心制作 C57BL/6 小鼠皮下肺癌模型 30 只，分为血管内皮生长因子反义寡核苷酸 (antisense oligodeoxynucleotide,ASODN)治疗组、VEGF 正义寡核苷酸(oligodeoxynucleotide ,SODN)治疗组及对照组。接种 Lewis 肺癌细胞后 24 小时内，用 ASODN 及 SODN 皮下注射进行治疗，对照组只注射生理盐水，观察小鼠肿瘤的生长情况以及组织形态学改变。标本常规石蜡切片，HE 染色，用免疫组化方法检测 VEGF 蛋白表达及微血管密度。通过 RT-PCR 检测 VEGFmRNA 的表达。
结果 对照组、VEGF 反义寡核苷酸治疗组、VEGF 正义寡核苷酸治疗组平均瘤重分别为（7.83±0.78）g、（4.49±0.43） g 和(7.73±0.69)g。VEGF 反义寡核苷酸治疗组、VEGF 正义寡核苷酸治疗组抑瘤率分别为 42.7%、5.9%。VEGF 反义寡核苷酸能明显抑制 VEGF 蛋白及 VEGFmRNA 的表达。
结论 原位注射 VEGF 反义寡核苷酸能抑制小鼠肺癌生长。

PU-3902

急性粒细胞性白血病中的 NOTCH 基因变异很少

毕莉、李琳
哈尔滨医科大学附属第一医院

在 12 例急性粒细胞白血病患者与 8 例急性粒细胞性白血病细胞株中寻找 Notch1 基因变异。应用 nested-PCR 法，银染色-sscp，direct sequencing 法分析。在患者 9 的白血病细胞中 PEST 部位发现点突变(7316C/T)，氨基酸也随之发生变异(Pro2439Leu)。本基因变异是首次在 AML 细胞中发现的 Notch1 基因变异。由于在此患者的完全缓解的骨髓细胞中没有发现本突变，因此本突变不是 SNP。有关本变异的具体作用机制还有待于进一步探讨。

PU-3903

应用 ROC 曲线评价三种 APTT 试剂对 LAC 的初筛价值

李琳、毕莉
哈尔滨医科大学附属第一医院

目的 探讨三种 APTT 试剂作为狼疮抗凝物质（LAC）初筛实验的临床价值。
方法 收集自 2017 年 11 月 1 日至 2018 年 3 月 31 日期间哈尔滨医科大学附属第一医院就诊 63 例 LAC 阳性患者作为观察组，同时期的 58 例 LAC 阴性患者作为对照组。采用三种试剂对其血浆进行 APTT 检测，并对结果进行分析比较。
结果 与对照组相比，观察组的三种试剂的 APTT 均较高并都有显著的统计学差异。ROC 曲线分析结果显示，三种试剂 ACTIN、FSL、SynthAsil 的线下面积分别为 0.726、0.777、0.800，均>0.7 而且 P 值都<0.0001；诊断敏感度分别为 0.581、0.613、0.468。
结论 APTT 依然是最为经济有效的狼疮抗凝物质阳性初筛试验。三种试剂中 SynthAsil 试剂对于 LAC 阳性的诊断效能最高。

PU-3904

多发性骨髓瘤患者首发临床特征、实验室检测及影像学检查分析

王甩艳[1]、木尼热•凯沙[2]
1. 深圳市罗湖医院集团医学检验实验室
2. 广东医科大学医学技术学院

目的 探究多发性骨髓瘤（MM）的首发临床特征，再结合实验室检测及影像学的检查，以此提高MM的诊断率。
方法 回顾性分析就诊深圳市罗湖区人民医院27例多发性骨髓瘤患者的临床资料，分析总结患者首发症状、实验室检测结果及影像学检查的特点。
结果 27例MM患者中首发临床表现有骨折、骨痛有13例，乏力有5例，肾功能不全有4例，贫血有2例，胸闷有1例，上肢麻木有1例，淀粉样变性有1例。首诊科室依次为骨外科、脊柱骨科、血液内科、肾内科、心血管内科、肿瘤内科、普外科等 。实验室检测结果可知有15例血红蛋白浓度降低，其中 2 例重度贫血，7 例中度贫血，6 例轻度贫血；血清肌酐增高有 11 例；血清钙增高有 4 例；β2-微球蛋白升高有4例，降低有5例；CRP升高有4例；外周血涂片中可见浆细胞有7例；成熟红细胞呈“缗钱”状排列有 14 例；骨髓增生活跃或明显活跃，浆细胞占有核细胞总数 10%以上，可多达80%。免疫固定电泳 M 蛋白分型为 IgG-Kappa 型 M 蛋白 8 例，IgG-Lambda 型 M 蛋白 6 例，IgA-Kappa 型 M 蛋白 5 例，IgA-Lambda 型 M 蛋白 5 例，轻链 Kappa 型 M 蛋白 1 例，轻链 Lambda 型 M 蛋白 2 例，阴性 2 例，其中同时有两种免疫表型有 2 例。流式细胞术免疫表型分析表明所有的骨髓瘤细胞均表达 CD38 和 CD138，93%的患者不表达 CD19，75%不表达 CD45，59%表达 CD56，33%表达 CD28， CD117、CD20 和 CD13 的阳性表达率均较低，分别为 22%、15%和 7%，cKappa 和 cLambda 的阳性表达率分别为 59.25%和 51.85%。通过 X 线、CT 检查结果可知主要有骨质破坏伴有病理性骨折，一般疾病出现为腰椎、盆骨、肋骨及股骨。
结论 了解 MM 患者首发临床表现，并依据实验室检查结果和影像学检查对临床初步诊断 MM 有很重要的作用，从而也可降低误诊误治率。

PU-3905

尿液干化学结果影响因素的探讨

董莉芹、刘兆杰
哈尔滨医科大学附属第一医院

目的 工作中我们认为所用仪器应掌握影响尿液干化学测定结果的多种因素及解决的方法。只有这样才能达到测定结果准确，以便发挥仪器应有的效能。
方法 新鲜尿液中酸碱度及蛋白质的变化直接影响比重的测定，尿蛋白浓度增高，病人尿比重偏高，尿试带实际上是测的尿中离子浓度尿比重偏高，尿纸条检测的是离子强度，尿液中的非离子化合物（如葡萄糖、造影剂等）对测定结果也有一定影响。
结果 pH 随温度的升高而降低；尿液中含有比色素还原能力更强的物质时，可见尿糖结果偏低，甚至可以出现假阴性；尿液中酸碱度及蛋白质的变化直接影响比重的测定；药物对尿中蛋白质的测定都有影响；当各种因素导致红细胞破裂时，可引起干化学结果和镜检结果不一致；细菌繁殖可以导致丙酮消失；用维生素 C 或亚硝酸盐时，可使尿胆红素、尿胆原测定出现假阴性结果；尿细菌生长，亚硝酸盐检测出现假阳性结果；尿中以淋巴细胞为主，白细胞检测会出现假阴性结果；当尿中有其他还原剂时，可使维生素 C 检测结果偏高。
结论 根据我们在多年的工作中对尿十项的经验总结，日常工作中易受尿液标本中化学成分干扰，所以对待特殊病人的尿液标本应该将试带与手工操作相结合，对于化学全阴性标本应采用显微镜检查，以免漏检。

PU-3906

心脑血管病患者中阿司匹林抵抗的探讨

张云平、付璐
哈尔滨医科大学附属第一医院

目的 研究哈尔滨地区心脑血管病患者中发生阿司匹林抵抗（AR）概况，并探讨其预测因子。
方法 110 例病情稳定的心脑血管病住院患者，每日服用阿司匹林 100mg，连服 10 天，第 11 天晨起采取空腹静脉血，分别以二磷酸腺苷（ADP）`花生四烯酸（AA）为诱导剂，检测血小板聚集功能。
结果 患者中 AR 发生率为 0，阿司匹林半敏感（ASR）者占 7.3%,女性较多（男：女，75.6%vs40.5%,p=0.002），吸烟者亦较多（37.5%vs17.5%,p=0.001）。
结论 阿司匹林用于抗血小板治疗及预防动脉粥样硬化事件的心脑血管患者中，若有 AR 或 ASR 存在可选用其他安全有效的抗血小板制剂，预测 AR 及抗血小板治疗个体化，将是抗血小板治疗的发展方向。

PU-3907

采血小板不良反应的原因及分析

徐海燕、杨秋月
哈尔滨医科大学附属第一医院

目的 提高血小板采集数量和质量，从而降低输血传播疾病的概率和输血反应率。随着血细胞分离机性能的不断提高，可从献血者血循环中一次采集 1～2 个治疗单位的血小板，这样，既可解决机采供者的短缺，缓解对医院供不应求的矛盾，还可节约耗材、试剂，降低成本。
方法 采集前将供者血小板计数、性别、身高、体重等数据输入机内设定程序，抗凝剂 ACD-A：全血为 1 : 11，预采血小板产品单治疗量≥2.5×1011/L，容积：单治疗量 220 ml。严格执行机采血小板操作规程。
结果 医护人员应具备熟练的采血技术，并选择粗大、弹性好的静脉
结论 保证一次穿刺成功，以减少献血者疼痛，缩短采集时间。

PU-3908

尿常规显微镜手工法与分析仪检验分析

徐海燕、张娜
哈尔滨医科大学附属第一医院

目的 手工法检验尿常规结果分析，进一步了解分析仪和传统的显微镜手工法在尿液分析中的优缺点，使检验工作者在实际工作中正确对待两种方法的应用，指导检验人员科学地把两种结合起来。
方法 用尿液分析仪检测只记录，尿蛋白、白细胞、红细胞结果，微量以上为阳性，微量以下为阴性。然后用加热醋酸法检测尿蛋白，再用离心试管取 10 ml 混匀的尿液以 1 500 r/min 离心 5 min，倾去上清液，留取 0.2 ml 沉渣，涂片镜检，记录尿蛋白、红细胞和白细胞结果，微量以上为阳性，微量以下为阴性。
结果 两种方法合理应用，取长补短，遇到可疑情况，还应及时询问病人，查找原因
结论 以便为临床疾病的诊断和治疗提供正确检验结果。

PU-3909

直方图中间型细胞异常情况浅析

杨秋月、徐海燕
哈尔滨医科大学附属第一医院

目的 血细胞计数已普遍使用于各医院实验室，尤其是三分类的血球计数仪更为普遍。这种计数仪的原理是电阻抗法，此原理是基于细胞在测试系统中产生的脉冲大小，与仪器内设定的阈值比较而得出的数据。
方法 用 EDTAK2 抗凝静脉血，其含量为 1.5 mg/ml 全血。将 EDTAK2 配成 150 g/L 的溶液，预先制备具塞塑料抗凝管，于每日清晨抽静脉血 0.5 ml 混匀抗凝，室温放置，并于 0.5—5.0 h 内测定。
结果 白细胞直方图中间细胞异常的分析，由于仪器型号不同，试剂不同等原因可能/一定会存在一定的差异。关键在于出现中间细胞异常时的合理处理，涂片染色镜检是最好的方法。
结论 在中间细胞正常时，若临床提示，如过敏症，传单增等疾病时，临检人员也应涂片镜检，以免异常细胞漏检。

PU-3910

抗凝剂引起血小板减少的成因

杨秋月、张娜
哈尔滨医科大学附属第一医院

目的 血液学一般检查最常用的检测仪器是血细胞分析仪，它以检测速度快、精确度高、操作简便的优势为临床提供着有用的实验指标，对疾病的诊断和治疗有重要的意义。
方法 血细胞计数用 EDTAK2 作抗凝剂，用量为 EDTAK2H2O 1.5 mg/ml～2 mg/ml 血液。近年来因 EDTA 引起血小板聚集发生血小板假性减少并不少见，下面是 1 例血小板减少患者，经试验分析为 EDTA 依赖性假性血小板减少（EDTAPTCT）。
结果 采用抽血后立即检测、手工计数血小板及血涂片镜检或采用其他种类抗凝剂来鉴别。
结论 有文献报道，当 EDTA 依赖性血小板减少时，可用其他抗凝剂作血小板计数，可避免血小板假性减少。

PU-3911

XN 系列血液分析仪 Q-flag 报警在判断血小板聚集中的应用

张景道、张晗钰、张金彪
河北省沧州中西医结合医院

目的 根据 XN1000 血球仪中 PLT clumps 的 Q-flag 报警值判断低值血小板结果的可靠性
方法 通过对 XN1000 血球仪分析的低值血小板标本进行推片镜检，积累标本 WDF 与 WNR 通道产生的 Q-flag 报警值的分布及对应的血小板聚集情况，做出敏感性和特异性分析并绘制 ROC 曲线
结果 1、200 例血小板聚集阳性的低值血小板标本 Q-flag 报警值分布区间为 20-300 2、收集 Q-flag 报警值小于 40 的 200 例低值血小板标本人工镜检，得出 Q-flag 报警值＜20 时标本未发生血小板的聚集的特异度为 100% 3、收集 400 例 Q-flag 报警值＞20 的低值血小板标本人工镜检，得出不同 Q-flag 报警值分组情况下检出标本阴性和阳性率差异有统计学意义（X^2=97.547,*P*=0.000）且随着 Q-flag 报警值增高，血小板聚集的阳性率增高，趋势性卡方检验有统计学意义（X^2=0.494，*P*=0.000），当 Q-flag 报警值＞250 时，血小板聚集阳性的敏感度为 95.0%。4、ROC 曲线提示以

Q-flag 报警值预测血小板聚集情况的最佳临界值为 100，此时 AUC 为 0.900，敏感度 86.5%，特异度为 75.6%。
结论 XN1000 血球仪 Q-flag 报警值可帮助检验工作者判断低值血小板结果是否需要纠正，从而减少工作量。

PU-3912

钙卫蛋白在结肠癌中的研究与应用

李晶
天津医科大学肿瘤医院

目的 研究粪便钙卫蛋白（FC）、癌胚抗原（CEA）、糖类抗原 19-9（CA19-9）、C 反应蛋白（CRP）在结直肠癌中的诊断价值。
方法 回顾性分析 2020 年 12 月至 2021 年 3 月天津市肿瘤医院确诊的 60 例结直肠癌患者（患病组）和 40 例排除结肠癌的健康人（对照组）病例资料，内容包括了粪便钙卫蛋白（Calprotectin）、联合癌胚抗原（CEA）、糖类抗原 19-9（CA19-9）、C 反应蛋白（CRP）。采用受试者工作特征曲线（ROC 曲线）分析钙卫蛋白对结直肠癌患者的诊断价值。
结果 患病组粪便钙卫蛋白检测结果高于对照组，差异存在统计学意义（P＜0.05）。钙卫蛋白、血清 CEA、血清 CA19-9 及血清 C 反应蛋白检测结直肠癌 ROC 曲线图中，AUC 分别为 0.794、0.631、0.750、0.611，其中 FC 的 ROC 曲线下面积最大，诊断价值最佳。且 FC 的 cut off 值为 36.66 比报告中的 0-50 更为准确；在 Dukes 分期中钙卫蛋白 A 期与 B、C、D 三期之间 FC 水平 $p < 0.05$,B、C、D 三期之间 FC 水平 $p > 0.05$，B、C、D 三期 FC 阳性率明显优于 A 期阳性率，但三期之间差异无统计学意义。而 CEA、CA19-9、CRP 阳性率差异无统计学意义；FC、CEA、CA19-9、CRP 的阳性率差异，在不同部位的结肠癌中没有统计学意义；FC 联合 CA19-9 与单独 FC 检测比较时 AUC 有所提高，但提高程度并不明显。FC 联合 CEA、CA19-9、CRP 与单独 FC 检测比较时 AUC 提高较多，且结果有明显差异。；FC 联合 CA19-9 和 FC 联合 CEA、CA19-9 及 CRP 联合法检测结直肠癌可以提高其敏感性,且四种方法联合检测较单种检测方法差异有统计学意义。
结论 检测粪便钙卫蛋白对结直肠癌有一定意义。临床中可考虑粪便钙卫蛋白联合和癌胚抗原、糖类抗原 19-9、C 反应蛋白提高诊断结直肠癌检测的准确度。若为减少工作量，可考虑选择粪便钙卫蛋白联合糖类抗原 19-9 进行检测，也具有较好的诊断效能。

PU-3913

静脉血 WBC 和超敏 CRP 测定在儿童感染性疾病诊断的临床探讨

张文忠
资阳市第一人民医院

目的 探讨超敏 C 反应蛋白(hs-CRP)、白细胞(WBC)检测在小儿感染性疾病中的诊断价值。
方法 选择 300 例临床确诊的感染患儿，分别测定 CRP、WBC 结果并进行统计学分析.
结果 细菌感染组患儿 hs-CRP、WBC 检测值显著高于正常对照组健康儿童(P＜0.05);细菌感染组患儿 hs-CRP、WBC 检测值高于病毒感染组(P＜0.05);病毒感染组患儿 hs-CRP 和 WBC 检测值稍高于正常对照组儿童,差异无统计学意义(P＞0.05).细菌感染组患儿 CRP、WBC 的阳性检出率均明显高于病毒感染组(P＜0.05).
结论 hs-CRP 结合 WBC 检测有助于儿科感染性疾病的早期诊断,并对于细菌感染和病毒感染的鉴别诊断为指导临床合理使用抗感染药物和判定疗效具有重要价值.

PU-3914

探讨妊娠期血小板减少症对孕产妇及新生儿的影响

吴章菊
资阳市第一人民医院

目的 探讨妊娠期血小板减少症对孕产妇及新生儿的影响.
方法 回顾性分析 2013 年 1 月—2020 年 1 月我院收治的 23 例妊娠期血小板减少症孕产妇及新生儿的临床资料.
结果 19 例妊娠期特发性血小板减少及全部血小板计数>50*109/L 的患者均于产后的 3-5 日内恢复正常血小板计数水平,4 例血小板计数≤50*109/L 者产后一周左右恢复正常.新生儿血小板减少 3 例(13.04％).
结论 妊娠期血小板减少症孕产妇分娩后其血小板计数可自行恢复,不会增加产后出血率以及影响临床分娩结局,但正确鉴别和处理妊娠期血小板减少症可以避免对产妇及新生儿造成的不良影响.

PU-3915

异常早幼粒细胞 Auer 小体发生率的影响因素分析

张景逍、张金彪、张晗钰、翟文燕、王晓静
河北省沧州中西医结合医院

目的 探讨急性早幼粒细胞白血病（APL）患者存在 Auer 小体的异常早幼粒细胞的比例具有差异的影响因素并分析 Auer 小体发生率在评估 APL 患者预后中的意义
方法 收集 2018 年 5 月至 2020 年 5 月河北省沧州中西医结合医院确诊的共 38 例急性早幼粒细胞白血病患者，计数出现 Auer 小体的异常早幼粒细胞的比例作为 Auer 小体发生率。采用非参数秩和（Mann-Whitney U）检验比较不同 PML/RARα 融合基因类型、CD56 与 HLA-DR 的表达、性别、年龄中 Auer 小体发生率的差异；采用皮尔逊相关系数检验分析异常早幼粒细胞各项流式表达率（CD13、CD33、CD117、CD38、CD64）及初诊 WBC、HB、PLT 计数和 PML/ABL 定量与 Auer 小体发生率之间的相关性，采用简单线性回归对 Auer 小体发生率进行单因素分析；综合各项统计数据初步分析 APL 患者的初诊异常早幼粒细胞 Auer 小体发生率对患者预后的影响，以 $P<0.05$ 为差异有统计学意义。
结果 1、CD56 阴性组患者的 Auer 小体发生率大于阳性组($P<0.05$)，PML/RARα 融合基链 L 型患者 Auer 小体发生率大于 S 型($P<0.01$)，差异均有统计学意义。2、线性相关分析显示 WBC 与 Auer 小体发生率的相关系数有统计学意义（$P=0.02$；r= -0.376）；将 WBC 引入线性回归分析，回归方程为：Y= -0.001X+0.079，可认为初诊 WBC 与患者 Auer 小体发生率存在负相关关系，但回归方程需要更大的样本量进行修正。
结论 CD56 的表达、PML/RARα 融合基因类型与患者初诊白细胞计数均可影响初诊 APL 患者 Auer 小体的发生；结合以往研究，本文三项研究结论对患者预后的指向一致即初诊 APL 患者异常早幼粒细胞 Auer 小体的高发提示患者预后良好。

PU-3916

血液检验在贫血鉴别诊断中的临床价值

王佳军
资阳市第一人民医院

目的 分析血液检验在贫血鉴别诊断中的临床价值。
方法 选择近一年我院接收的 90 例贫血患者作为案例，随机分为甲组和乙组，分别是地中海贫血和缺铁性贫血，同时收取健康体检的 50 例受检者作为丙组，对三组研究对象实施血液分析，对结果分析。
结果 对三组患者的数据资料分析后得知，丙组的参数趋于正常，对比后差异明显。
结论 血液检验在临床贫血诊断中有突出的作用，可以准确的对贫血的类型进行分析，整体作用明显。

PU-3917

SOX 家族在乳腺癌中的表达及预后的综合分析

孙继德
重庆医科大学附属第一医院

目的 SOX 家族是一组保守的转录因子，被认为是多种癌症类型的调控因子。越来越多的证据表明 SOX 家族参与了乳腺癌的肿瘤发生。本研究旨在分析 SOX 家族的 20 个成员在乳腺癌患者中的转录和生存数据。
方法 在本研究中，我们通过 Oncomine、基因表达谱交互分析(GEPIA)、Kaplan-Meier Plotter、人类蛋白图谱(HPA)和 cBioPortal 等一系列数据库研究 SOX 家族在乳腺癌患者中的不同表达谱和预后价值。
结果 我们发现乳腺癌患者中 SOX4 和 SOX12 的 RNA 表达水平高于正常人，而乳腺癌患者中 SOX5、SOX7-8、SOX10 和 SOX17-18 的 RNA 表达水平低于正常人。SOX6、SOX9、SOX11、SOX13、SOX15、SOX17-18、SOX30 的表达水平与肿瘤进展期相关。Kaplan-Meier Plotter 数据库的生存分析显示，SOX2、SOX4、SOX6、SOX11 和 SOX15 的高转录水平预测所有乳腺癌患者的总体生存期较低。相反，在这些患者中，高水平的 SRY、SOX10 和 SOX13 与高总生存率相关。
结论 我们的研究表明，SOX2、SOX4、SOX6、SOX11 和 SOX15 可能是乳腺癌患者潜在的治疗靶点，而 SRY、SOX10 和 SOX13 可能是乳腺癌新的预后生物标志物。

PU-3918

FA280 型粪便自动处理仪的临床性能评价

刘颖
重庆医科大学附属第一医院

目的 评价 FA280 型粪便自动处理仪对各种有形成份的识别能力及对便隐血的检出能力。
方法 选取镜检确认阳性（每种有形成分）新鲜临床粪便标本各≥50 例和镜检确认阴性新鲜临床粪便标本≥50 例，按照全国临床检验操作规程（第 4 版）要求进行手工涂片镜检，同时按照仪器标准操作流程进行上机检测，分别记录手工镜检结果及仪器检测结果并分析阳性符合率、阴性符合率、总符合率和各自的置信区间。随机选取新鲜临床粪便标本 200 例（阳性标本≥30%），分别按照试剂卡（沃文特和深蓝公司）手工检测的标准操作规程和仪器检测的标准流程检测。分别记录手工法及仪器法检测结果并进行统计分析。

结果 有形成分检出率红细胞在 0-2/HP、0-3/HP、0-4/HP 的检出率分别为 52.5%、77.5%、95%，白细胞在-2/HP、0-3/HP、0-4/HP 的检出率分别为 60%、80%、87.5%；红细胞浓度为 100 个/μL 和 300 个/μL 的 CV 值分别为 9.25%和 10.59%；有形成分和便隐血的携带污染率均为 0；便隐血可以检测血红蛋白浓度为 0.2μg/mL~2000μg/mL 的样本；便隐血的重复性好且与深蓝试纸条有较高的符合率；有形成分与人工镜检相比较的阳性符合率和阴性符合率均较高。
结论 FA280 型粪便处理仪具有较好的有形成分识别能力及对便隐血的检出能力。

PU-3919

女性不孕者阴道分泌物病原体感染情况分析

李小琴
重庆医科大学附属第一医院

目的 分析不孕女性生殖道病原体感染现状，了解支原体药敏情况，为临床的诊治提供参考依据。
方法 回顾性分析 2020 年 1 月-2020 年 11 月于重庆医科大学附属第一医院生殖中心的不孕女性患者 211 例临床资料。分为原发性不孕组和继发性不孕组，根据年龄分为<35 岁组和≥35 岁组（高龄女性不孕组），对所有患者进行阴道分泌物及宫颈分泌物的检查。
结果 不孕患者生殖道感染率为 54.0%；211 例患者中，未观察到革兰阴性双球菌感染，仅有 1 例滴虫感染，发生率为 0.47％；霉菌感染率为 5.21％；细菌性阴道病发生率为 7.58％；人乳头瘤病毒（HPV）感染率为 10.4%；解脲支原体（Uu）感染率为 37.44％；解脲支原体（Uu）和人型支原体（Mh）混合感染发生率为 4.74％，本研究未观察到单一人型支原体感染。霉菌感染、细菌性阴道病、Uu+Mh 感染的发生率在不同年龄段、以及原发不孕和继发不孕组患者中无明显差异；HPV 感染率在≥35 岁患者组（26.8%）明显高于＜35 岁患者组(6.5%)（P<0.05）；原发不孕组 Uu 感染率明显高于继发不孕组（P<0.05）。Uu 敏感率较高的药物为美满霉素、强力霉素、克拉霉素、阿奇霉素，耐药率较高的药物为诺氟沙星、环丙沙星、氧氟沙星； Uu+Mh 混合感染敏感率较高药物为美满霉素、强力霉素，耐药率较高的药物为诺氟沙星、阿奇霉素、壮观霉素、氧氟沙星、罗红霉素、环丙沙星、司帕沙星、左氧氟沙星、克拉霉素。
结论 不孕女性生殖道感染率较高，需加强生殖道感染检查，高龄不孕女性应重视 HPV 筛查。临床治疗支原体感染可首选美满霉素、强力霉素。

PU-3920

血常规和 CRP 检测结果应用

贾克鹏、王倩、程绍民、李新、张真
禹城市人民医院

目的 探讨 CRP 和血常规中白细胞计数联合检验在临床上的应用价值。
方法 CRP 和血常规均采用 PMC 血球计数仪，CRP 采用比浊法，血常规采用五分类计数法。
结果 细菌感染患者 CRP 升高程度更大(78.95%>50mg/L)，病毒感染患者 CRP 升高幅度较低（69.81%≤50mg/L），WBC 在细菌感染、急性心梗、外科术后均增高。
结论 CRP 与血常规中的白细胞计数联合检验有助于临床医生对患者病情进行初步诊断, 减少不必要的抗生素的应用, 有利于患者得到更好的治疗。

PU-3921

单纯血小板增多的 CML 研究分析

马骋赟
山东第一医科大学附属省立医院临床医学检验部

目的 原发性血小板增多症（ET）主要以外周血血小板显著升高，骨髓巨核细胞增生及特殊形态为特点，而慢性髓系白血病（CML）以外周白细胞升高，血涂片见幼粒细胞，骨髓有核细胞增生极度活跃，且多有脾脏肿大，仅有少数 CML 表现为单纯血小板增高，因此初诊时极易和原发性血小板增多症混淆，本研究主要探讨单纯血小板增的 CML 的特例。
方法 选择在山东省立医院 2015 年 1 月至 2021 年 6 月住院 100 例血液科抽取骨髓患者作为研究组，体检健康志愿者 100 例作为对照组，分别抽取血常规进行检验，观察研究组和对照组血常规以及骨髓涂片染色情况，进一步研究组超声以及染色体核型分析；
结果 总体进行分析发现，经过统计来看，仅有两例血常规白细胞仅轻度升高，外周血涂片偶见幼粒细胞，超声未见脾肿大，进一步完善分子生物学检查 BCR-ABL1 融合基因阳性，诊断为 CML，因仅以单纯血小板增多为临床表现，故最终诊断为单纯血小板增多的 CML，其他血小板增高案例并未检测到融合基因故诊断为 ET，差异之间有统计学意义（P<0.05）。
结论 以单纯血小板增多的 CML 患者发生无年龄差异，起病隐匿外周血血小板升高，部分患者可见幼粒细胞，有嗜酸嗜碱粒细胞升高，NAP 积分可呈现升高、不变、降低不同变化，多无脾脏肿大，与 ET 较难区分，早期易误诊，本研究主要强调对于所有血小板升高的患者，临床应进行 BCR-ABL1 融合基因以及染色体的检查，以便早期对患者进行对症治疗。

PU-3922

凝血因子 VIII 在血液透析患者高凝诊断中的应用价值

郭勇晖
南方医科大学珠江医院

目的 评估凝血因子 VIII 在血液透析患者高凝状态诊断中的应用价值，为预测获得性易栓症提供有价值的临床评估指标和可以应用的医学决定水平。
方法 通过对血液透析患者凝血因子 VIII 的检测以及临床表现的评价，比较发生血栓事件的患者凝血因子 VIII 的活性与未发生血栓事件患者之间的差异，探索凝血因子 VIII 在血液透析患者高凝状态诊断中的应用价值。
结果 只有 30.3%（44/145）的患者凝血因子 VIII 的活性在正常范围，而发生一次或多次血栓事件的患者为 17.9%（26/145）。
结论 肾病综合征患者由于肾功能严重受损，凝血因子 VIII 蓄积，凝血功能异常，体内呈高凝状态，在凝血因子活性高于 200%时，提示患者可能达到易栓状态，其发生血栓事件的可能性高，值得临床予以注意和预防。

PU-3923

检测外周血自然杀伤细胞、辅助性和调节性 T 细胞在不明原因复发自然流产中的临床意义

宋宏岩
南京大学医学院附属鼓楼医院

目的 通过检测不明原因复发性自然流产患者外周血中自然杀伤性细胞（NK 细胞）、辅助性 T 细胞（Th1/Th2）和调节性 T 细胞（Treg 细胞）的表达水平，探讨 NK、Th1、Th2 和 Treg 细胞在 URSA 中的临床意义。
方法 应用流式细胞术分别检测 385 例 URSA 患者外周血中 NK 细胞占淋巴细胞比例、CD3+CD4+INF-γ+细胞占 CD4+细胞（Th1）的比例、CD3+CD4+IL4+细胞占 CD4+细胞（Th2）的比例和、CD4+CD25+Foxp3+占 CD4+细胞（Treg）的比例和 NK 细胞占淋巴细胞比例。
结果 流产两次 URSA 患者 Treg 表达水平高于流产两次以上 URSA 患者（P<0.05）。175 例 Th1 正常的 URSA 患者 Treg（2.46%±0.84%）高于 165 例 Th1 高值的 URSA 患者 Treg（2.24%±0.78%）（P<0.05）。259 例 Th2 正常的 URSA 患者 Treg（2.26%±0.75%）低于 117 例 Th2 低值的 URSA 患者 Treg（2.47%±0.88%）（P<0.05）。259 例 Th2 正常的 URSA 患者 NK（20.16%±8.48%）高于 117 例 Th2 低值的 URSA 患者 NK（17.64%±7.73%）（P<0.01）。
结论 检测 URSA 患者外周血中的 NK、Th1、Th2 和 Treg 细胞表达水平有助于临床诊断及了解病情发生发展。[ml1] 结论有些宽泛，与结果缺乏较强的逻辑

PU-3924

临床医学检验中影响血液细胞检测质量的控制方法

李瑶
资阳市第一人民医院

目的 本文主要研究临床医学检验中影响血液细胞检测质量的有关因素及其控制方法。
方法 选取我院 2020 年 3 月-2021 年 3 月自愿进行血液细胞检测的 240 名普通人进行研究，这些人群的血型必须是一样的，随机进行分组研究（分为四组），然后对比对这些人群的白细胞、红细胞、血小板以及血红蛋白的含量进行比较。
结果 对照组 A 与研究组 A 结果进行对比，白细胞、红细胞、血小板以及血红蛋白的含量具有明显的差异性，且研究组 A 的含量更趋向于正常值（P<0.05），对照组 B 与研究组 B 比较白细胞、红细胞、血小板以及血红蛋白的含量具有明显的差异性，研究组 B 的含量更趋向于正常值（P<0.05）。
结论 抗凝剂的浓度以及过期的血液样本会影响血液细胞检测的质量，为了提高检测质量，需要配比准确的抗凝剂，并在规定的时间内检验血液样本。

PU-3925

人工镜检测尿红细胞与 MT600 尿分析仪方法学比较的探讨

李兴博
资阳市第一人民医院

目的 对尿液分析仪检测尿潜血反应和显微镜镜检红细胞（RBC）的结果进行分析比较。
方法 对 400 份门诊患者留取的随机尿液立即按照仪器操作说明进行尿液分析仪检验和尿沉渣显微镜检查。

结果 尿液分析仪潜血反应阳性，镜检有红细胞的有 210 例，镜检无红细胞的有 50 例。尿液分析仪潜血反应阴性镜检有红细胞的有 140 例，镜检无红细胞的有 120 例。两种方法结果出现差异。
结论 临床工作中尿液分析仪潜血反应与显微镜检查红细胞应联合进行，尤其是显微镜检查至关重要，不可忽视。

PU-3926

染色体 Dup(1q)异常在 MDS 中的细胞遗传学研究

史沛芹
连云港市第一人民医院

目的 观察 Dup(1q)染色体异常的核型变化在 MDS 中临床表现及细胞分子遗传学分析。
方法 应用 R 显带技术对患者进行核型分析；用流式细胞仪检测免疫表型；运用基因探针进行荧光原位杂交分析；定量 RT-PCR 融合基因测定白血病 43 种融合基因,高通量测序靶向检测髓系细胞白血病 42 种相关基因检测，
结果 核型分析结果显示患者异常克隆，其核型为 46,xy,dup(1)(q12q41)[10]。免疫分型检测血液肿瘤 30 种单抗，淋巴细胞 54.8%表型未见明显异常，骨髓活检红巨两系造血旺盛，轻度病态造血。荧光原位杂交融合基因阴性，定量 RT-PCR 融合基因未见阳性表达。高通量测序靶向检测 ASXL1,ETV6,FLT3,SH2B3,ZRSR2 基因突变。
结论 1 号染色体长臂的全部或部分重复异常在恶性血液病 MDS ，AML,淋巴瘤，ALL，MM 等中并不罕见，但常涉及其他染色体异常，作为唯一异常表现少见，回顾资料在 MDS 中作为唯一核型异常表现仅报告 15 例。1q21;1q32 作为两个重要的脆性位点，这种不稳定性可能源于该区域染色质的组织导致了起源和选择在肿瘤过程中具有功能意义的差异，引起染色体基因的缺失和扩增，对肿瘤的发展有显著的影响，这种不稳定性的分子遗传学分析，无疑对 MDS 及其他恶性血液病的发生具有重要意义，但染色体 Dup(1)作为唯一异常在 MDS 预后中能否成为独立危险因素，与基因突变有何影响，发病机制与预后的关系但仍需进一步研究 。

PU-3927

杜氏利什曼原虫与组织胞浆菌、马内菲青霉菌形态学鉴别

朱爱民
娄底市中心医院

杜氏利什曼原虫、组织胞浆菌和马内菲青霉菌在骨髓涂片中病原体形态相似，易造成误诊，并常导致严重后果。现通过我院 3 个病例对这三种病原体的形态学鉴别进行简要阐述，给骨髓细胞形态室检验技师提供帮助。

杜氏利什曼原虫无鞭毛体与组织胞浆菌、马内菲青霉菌分别是黑热病、组织胞浆菌病、马内菲青霉菌病的病原体，这三种疾病均为少见的感染性疾病，不但临床症状极为相似，如发热、肝脾淋巴结肿大，全血细胞减少等。且在骨髓涂片中病原体形态也相似，容易混淆，导致误诊[1]。

近十年来，我院骨髓细胞形态室发现荚膜组织胞浆菌 6 例，马内菲青霉菌 3 例，杜氏利什曼原虫 1 例（后转省人民医院确诊），现找出其中 3 个病例与大家分享：

Proteomic Screening of potential N-glycoprotein biomarkers for colorectal cancer by 2D-LC-MS/MS

Jin Wang、Jinjin Wang、Aifeng Liang、Guangang Tian、Mengjiao Yuan、Qing Ke、Yijun Cai、Qian Gong
Qingpu Branch of Zhongshan Hospital, Fudan University

Background and aims: Colorectal cancer (CRC) is one of the most common malignant tumors. At present, colonoscopy is a routine procedure in the diagnosis of CRC, but it is traumatic. Carcinoembryonic antigen, CA199, and CA242 are common serum markers for the diagnosis of CRC; however, they do not demonstrate satisfactory specificity and sensitivity for the diagnosis of CRC. Hence, it is necessary to screen many valuable serum biomarkers for CRC, proteomics Methods have been used to investigate PTMs such as glycosylation of proteins with prominent roles in the occurrence and development of tumors.
Methods This study screens altering glycosylated proteins of CRC tissues using high-performance liquid chromatography-mass spectrometry quantitative glycoproteomics, and then these candidate biomarkers for CRC are further validated by serum glycoproteomics.
Results The results of glycoproteomics and bioinformatics analysis suggest that these molecules are mainly involved in many biological processes, including collagen fibril organization and skeletal system development. the changing trends of 3 protein glycosylation were consistent with MS results of CRC tissues, including APOB, MPO, ICAM. Areas under the ROC curve (AUC) results confirm that APOB, MPO, ICAM as potential diagnostic markers of CRC have great sensitivity and specificity.
Conclusion The APOB (3411 site), MPO (355 site), ICAM1 (145 site), may serve as a potential tumor marker for CRC.

PU-3929

ApoE 基因多态性及血脂水平与动脉瘤性蛛网膜下腔出血的相关性

白垚
重庆医科大学附属第一医院

目的 探讨 ApoE 基因多态性及血脂水平与动脉瘤性蛛网膜下腔出血（Aneurysmal subarachnoid hemorrhage ,aSAH）的关系；
方法 采用病例对照研究方法，病例组为 2018 年 5 月～2020 年 4 月就诊于重庆医科大学附属第一医院的 aSAH 患者，对照组为同期住院患者，收集并统计分析 ApoE 基因多态性及血脂水平与 aSAH 的关系；
结果 1、ApoE 基因型和等位基因频率在 aSAH 组和对照组中无统计学差异(P >0.05)。2、病例组血清甘油三酯水平低于对照组（P <0.05）。3、ε2 /ε3 型受试者中，病例组血清低密度脂蛋白胆固醇水平高于对照组（P < 0.05），ε3 /ε3 型受试者中，病例组血清甘油三酯水平低于对照组（P < 0.05）；
结论 ApoE 基因多态性可能与 aSAH 之间存在关联，ApoE 基因多态性可能通过血脂水平影响 aSAH。

血液系统疾病造血干细胞移植后肝损伤的相关因素分析

黄敏
山东第一医科大学附属山东省立医院

目的 分析造血干细胞移植后肝脏损伤的相关因素，以便早期预防与诊断移植患者出现的肝损伤，以改善移植患者的预后情况。
方法 收集造血干细胞移植的病人 121 例，其中自体造血干细胞移植 30 例，异基因全相合造血干细胞移植 41 例，异基因半相合造血干细胞移植 50 例。记录患者是否出现发热、乏力、纳差、肝区疼痛、等肝功能相关症状，临床缓解情况。患者肝功能相关指标、肝炎病毒感染指标、巨细胞病毒、EB 病毒等实验室以及影像学相关指标结果至移植后 1 年。
结果 进行造血干细胞移植的患者中发生移植物抗宿主病、真菌感染、败血症、移植种类不同、原发病不同造成的肝功能损害不同。HBsAg(+)患者相较于 HBsAg(-)者对于肝功能的损害并没有明显不同，但是 HBV-DNA 水平增高患者发生重度以上肝损害的机率明显增高，年龄、性别以及从确诊到移植的时间间隔对患者肝脏功能没有明显影响。不同肝功能组的一年生存率及一年无事件生存率均有明显差异。
结论 造血干细胞移植患者的预后与肝功能损害程度紧密相关，早期预防与诊断移植患者出现的肝损伤可以提高移植后患者的生存质量。

PU-3931

Study on Nosocomial Infection and its Risk Factors in Patients with Acute Leukemia

min huang
Shandong Provincial Hospital Affiliated to Shandong First Medical University

Objective To investigate the characteristics of nosocomial infection in patients with acute leukemia and provide basis for its prevention and treatment .
Methods A retrospective review of the medical records of 311 patients with acute leukemia admitted between October, 2001 and October, 2003 was performed. 144 cases were regarded as nosocomial infection group（NI group）, the other 167 cases without any infections as non-NI group. The data were analyzed with the single factor X2 test and multifactor logistic-regression analysis.
Results The incidence of nosocomial infection was 46.3%(144/311), mainly consisting of respiratory tract, blood and oral infection. No recognized sites could be found in certain patients with nosocomial infection. The most common pathogens were gram-negative bacilli(46.6%), which were relatively sensitive to Imipenem/Cilastatin Sodium(TIENAM), Amikacin, Ceftazidine. The gram-positive cocci were relatively sensitive to Vancomycin and Ceftazidine. The analyzed results show that age, corticosteroids therapy, absolute neutrophil count in peripheral blood, cycles of chemotherapy, length of hospitalization, stages of treatment, the latest infections and seasons of hospitalization were found as independent risk factors of nosocomial infection.
Conclusions The incidence of nosocomial infection in patients with acute leukemia is high. In order to reduce the death rate, improve level of therapy and prolong survival periods of these patients, positive measures should be taken to prevent and treat nosocomial infection. The conditional pathogenic bacteria are the main pathogens in nosocomial infections in patients with acute leukemia, and most of them are resisted to antibiotics. As infections in these patients are usually severe and complicated, with poor prognosis, so antibiotics selection upon experiences should be taken rapidly. General principles of antimicrobial therapy should also be applied, including administration in time, high-effective, broad-spectral and bactericidal drug combination.

Adequate dosage and duration of antimicrobial therapy are also important. Age, corticosteroids therapy, absolute neutrophil count in peripheral blood, cycles of chemotherapy, length of hospitalization, stages of treatment, the latest infections and seasons of hospitalization are independent risk factors for nosocomial infection in patients with acute leukemia.

PU-3932

Clinical utility of circulating tumor cells in patients with esophageal cancer

Yang Li、Rao Fu、Tingting Zhang、Dawei Yang
Liaocheng People's Hospital

Purpose As one of the aggressive gastrointestinal tract cancers, esophageal carcinoma (EC) has the 10th morbidity and 6th mortality rate in the world in 2020. This study was conducted to investigate the diagnostic and prognostic value of circulating tumor cells (CTCs) in patients with EC.
Methods Peripheral blood was collected from one hundred and twenty-nine newly diagnosed EC patients, seventeen benign diseases, and seventy-five healthy donors for CTCs analysis using negative enrichment-immunostaining fluorescence in situ hybridization (NE-iFISH) approach. The correlation between CTCs and clinicopathological characteristics was then investigated. Moreover, overall survival (OS) and progression-free survival (PFS) were analyzed to evaluate the prognostic value.
Results CTCs detecting using NE-iFISH approach could differentiate EC patients from benign or healthy controls at a threshold of 2 per 3.2 mL peripheral blood with the sensitivity and specificity rate of 70.54% and 96.74%, respectively (AUC = 0.826, 95% CI 0.770-0.874, P < 0.001). CTC count was associated with tumor depth (P = 0.012), but there was no correlation with any other clinicopathological characteristics. Kaplan-Meier analysis showed that OS was significantly shorter for patients with CTCs ≥ 3 compared with patients with CTCs < 3. Univariate analysis showed that gender, vascular invasion, distant metastasis, tumor depth, lymph node metastasis, and TNM stage were significant prognostic factors for patients with EC. Multivariate analysis demonstrated that distant metastasis (HR 3.262, 95% CI 1.671-6.369, P = 0.001 for PFS; HR 3.759, 95% CI 1.867-7.571, P < 0.001 for OS) was significant prognostic factor for patients with EC.
Conclusions Our results suggest that CTCs detected using NE-iFISH could be helpful for the diagnosis of EC. CTCs ≥ 3 was an independent prognostic biomarker that indicates a worse prognostic for patients with EC.

PU-3933

晚期妊娠凝血功能检测的临床价值分析

陈春杰
宁津县人民医院

目的 分析晚期妊娠孕妇中凝血功能检测的临床价值。
方法 选择正常的非妊娠妇女 60 例为对照组，选择晚期妊娠孕妇 60 例为观察组，分析两组的凝血酶时间、血小板、纤维蛋白原等。
结果 观察组和对照组在血小板、凝血酶时间比较差异无统计学意义，但观察组纤维蛋白原明显高于对照组。
结论 孕妇在晚期妊娠时，体内会有高凝状态，因此在孕妇产前、分娩时一定要监测孕产妇的凝血指标，这对预防产后出血及血栓形成有重要意义。

PU-3934

单核细胞/淋巴细胞比值对溃疡性结肠炎的诊断价值

程迎迎、张桂红、闫静
南京中医药大学附属医院，江苏省中医院

目的 检测外周血中单核细胞/淋巴细胞比值（monocyte-lymphocyte ratio, MLR）在溃疡性结肠炎（ulcerative colitis, UC）及对照组中的表达水平，比较 MLR 与临床常用炎症指标 C 反应蛋白(C-reaction protein, CRP)单独和联合应用诊断 UC 患者的 ROC 曲线。评价 MLR 作为 UC 诊断标志物的效能。
方法 收集 2018 年 1 月至 2018 年 12 月在江苏省中医院住院的 UC 患者 99 例，另选取同期肠易激综合征（irritable bowel syndrome, IBS）患者 72 例作为对照组。收集患者临床资料，检测比较对照及 UC 患者 MLR 差异，采用 ROC 曲线的方法计算 MLR 最佳临界值及曲线下面积，并与临床常用指标白细胞(white blood cell, WBC)、C 反应蛋白(C-reaction protein, CRP) 、红细胞沉降率(erythrocyte sedimentation rate, ESR) 、血小板(platelet, PLT)、中性粒细胞/淋巴细胞比值（NLR）和血小板/淋巴细胞比值（PLR）进行比较，分析 MLR 等指标对诊断 UC 的效率差异。
结果 UC 组患者外周血中 MLR 明显高于 IBS 组（0.43 vs 0.26, p<0.01）；MLR 用于诊断 UC 的 cut-off 值为 0.35，灵敏度和特异度分别为 85%和 62%，曲线下面积（area under curve, AUC）为 0.766（95%CI: 0.695~0.837），优于 WBC(AUC: 0.687, 95%CI: 0.604~0.770)、PLT(AUC: 0.745, 95%CI: 0.670~0.819)、NLR(AUC: 0.758, 95%CI: 0.685~0.832)和 PLR(AUC: 0.759, 95%CI: 0.689~0.830)，稍逊于 ESR(AUC: 0.783, 95%CI: 0.715~0.851)和 CRP(AUC: 0.830, 95%CI:0.770~0.891)；MLR 联合 CRP 的诊断价值(AUC: 0.832, 95%CI: 0.772~0.893)优于独立的 MLR 和 CRP。
结论 与对照组相比，MLR 在 UC 患者外周血中的水平升高，差异具有统计学意义。MLR 诊断 UC 的效率优于常用指标 WBC、PLT、NLR 和 PLR，其与 CRP 联合应用可提高 UC 的诊断效能，可以作于诊断 UC 的额外标志物。

PU-3935

血小板相关因子及凝血因子与乳腺癌等转移的相关性研究

宋志纯
丽水市人民医院

目的 探讨乳腺癌细胞在介导因子血小板的作用下转移关系。
方法 采用回顾性调查方法，以同期 100 例健康体检者为对照。分析 248 例乳腺癌患者血小板增多与转移的关系。
结果 乳腺癌组血小板计数较正常组高，差异具有统计学意义（P<0.01）。临床分期乳腺癌肿瘤转移组又显著高于未转移组, 差异具有统计学意义（P<0.05）。
结论 血小板与乳腺癌转移关系密切，肿瘤细胞可激发并活化血小板，同时血小板可促进肿瘤细胞转移。测定血小板及其功能可作为恶性肿瘤患者的疗效监测的参考指标。

PU-3936

胃癌肿瘤标志物联合检测在胃癌诊断中的研究进展

王晶晶
吉林金域医学检验所有限公司

目的 胃癌是我国高发的恶性肿瘤之一,无特异性临床症状，早诊断、早治疗是临床提高生存期和降低病死率的关键。目前，肿瘤标志物联合检测在胃癌早期诊断中具有较好的应用前景，成为临床研究的热点。本文综合 CEA、CA19-9、 CA72-4 等的现状和最新研究进展，分析肿瘤标志物联合检测在提高胃癌早期诊断效率中的作用。
方法 通过查阅大量文献，了解各大医疗机构及第三方医检机构对胃癌肿瘤标志物的检测种类、频次及效果，分析胃癌肿瘤标志物检测的最新进展。
结果 常见胃癌肿瘤标志物包括：癌胚抗原（CEA）是目前研究最广泛的消化道肿瘤标志物之一。糖链抗原 72-4（CA72-4）是一种黏蛋白类癌胚抗原，其水平高低主要与肿瘤的位置大小、临床分期、转移有关，是胃肠道的一种非特异性肿瘤标志物。糖链抗原 19-9（CA19-9）是判断胃癌患者预后情况的重要指标。
结论 单一的肿瘤标志物检测没有足够的灵敏度和高特异性而存在一定的局限性，因此，选用不同性质、相对敏感的指标进行联合监测可以实现互补，能够明显提高胃癌的检出率。肿瘤标志物在胃癌的初期诊断、临床分期以及预后判断和疗效观察中发挥了较大的作用。大多数肿瘤标志物对肿瘤的诊断仅仅只有相关性并无特异性，所以肿瘤标志物的联合检测对胃癌的诊断意义重大，而且这种检测方法患者的接受能力强，具有较高的诊断价值。

PU-3937

浆细胞白血病 1 例并文献复习

李康
德州市人民医院

浆细胞白血病是一种罕见的浆细胞恶性增殖性疾病，以外周血中出现大量浆细胞为特征。WHO 的诊断标准为外周血中浆细胞至少 ＞ 20% 或绝对值 ＞ 2.0 × 109 /L。浆细胞白血病恶性程度高，缓解期短，生存期低，主要原因为其独特的发病机制及特有的分子遗传学异常。现报告浆细胞白血病 1 例，并结合文献进行复习。

PU-3938

全自动血细胞分析仪与血涂片细胞形态联合用于血常规检验的临床研究

刘可
乐至县人民医院

目的 分析全自动血细胞分析仪以及血涂片细胞形态联合用于血常规检验中的临床效果。
方法 选取我院接受血常规检验的 150 例患者作为本文的观察对，选取时间为 2018 年 3 月至 2018 年 9 月间，并将其按照检测方式的不同分成两组，一组为参照组，接受单一的血液涂片细胞形态进行检验，另一组为实验组，接受全自动血细胞分析仪联合血液涂片细胞形态进行检验，两组各有患者 75 例，并对血常规检验阳性率进行对比。

结果 实验组患者的血常规检验的阳性率为 20.00%（15 名），参照组患者的血常规检验的阳性率为 5.33%（4 名），从血常规检验的阳性率上看，实验组的阳性率明显高于参照组，两组对比差异显著，具有统计学意义（x2=7.292，p=0.007）。
结论 对行血常规检验的患者采取全自动血细胞分析仪联合血涂片细胞形态检查，可有效提高检查效果，值得推广。

PU-3939

血常规联合 C 反应蛋白检验对小儿细菌感染与小儿病毒感染的鉴别价值分析

刘可
乐至县人民医院

目的 分析血常规联合 C 反应蛋白检验对小儿细菌感染与小儿病毒感染的鉴别价值。
方法 选取我院 2017 年 12 月至 2019 年 1 月间收治的细菌感染患儿 40 例作为观察组，再将我院同期收治的病毒感染患儿 40 例作为对照组，对这两组患儿均采取血常规联合 C 反应蛋白进行检验，并分析两组的检验情况。
结果 从白细胞计数（WBC）以及 CRP 浓度水平上比较，两组的统计学对比结果为（p<0.05），差异具有统计学意义；从阳性率上对比，血常规联合 C 反应蛋白检验的阳性率明显优于血常规检验阳性率以及 C 反应蛋白检验阳性率，差异显著（p<0.05）；而血常规检验的阳性率与 C 反应蛋白检验的相比无统计学意义，（p>0.05），具有统计学意义。
结论 采取血常规联合 C 反应蛋白检验可提高小儿细菌感染以及小儿病毒感染的诊断准确性，具有较高的临床应用价值。

PU-3940

血常规检验在鉴别缺铁性贫血与地中海贫血的应用分析

熊杨
资阳市乐至县人民医院

目的 探讨贫血患者贫血类型鉴别中选用血常规检验的价值。
方法 纳入 2018 年 1 月-2019 年 12 月收治 25 例缺铁性贫血患者为观察 1 组、25 例地中海贫血观察 2 组，同期选择 25 例健康体检者为对照组，均实施血常规检验，分析检查结果、阳性率。
结果 （1）检查结果：观察组 MCH、MCV、Hb 低于对照组，RDW 高于对照组，且观察 1 组 MCH、Hb 低于观察 2 组，RDW、MCV 高于观察 2 组，组间对比 P<0.05。（2）阳性率：观察组高于对照组，组间对比 P<0.05。
结论 血常规检验在缺铁性贫血与地中海贫血鉴别中效果确切，可根据 MCH、Hb 等指标明确诊断，值得借鉴。

PU-3941

伴有体质性染色体异常的血液肿瘤患者四例及文献复习

张之芬
山东第一医科大学附属省立医院

目的 探讨血液病患者体质性核型与所患疾病的关系。
方法 骨髓细胞瑞氏染色、染色体 G 显带、融合基因、免疫分型检查。
结果 四例血液肿瘤患者，除了伴有与血液疾病有关的染色体异常外，还发现有体质性染色体异常。慢性粒细胞性白血病（CMML）患者获得了供体的体质性 t（4; 19）（q21; p13），一名急性早幼粒细胞白血病（APL）患者是 XYY 携带者， 慢性粒细胞白血病（CML）患者和另一位 APL 患者是 9 号染色体臂间倒位（inv（9））携带者。经过系统治疗，患者血液病缓解后，与血液肿瘤相关的染色体异常消失了，而体质染色体异常仍然存在。
结论 我们的病例提示体质性染色体异常与血液肿瘤无明显相关性，确定的结论需要更多的病例以进一步研究。

PU-3942

尿沉渣全自动分析仪与显微镜检测法在尿常规检验中的应用效果比照观察

宋晓君
乐至县人民医院

目的 分析尿沉渣全自动分析仪与显微镜检测法在尿常规检验中的应用效果对比。
方法 选取我院 2018 年 1 月中 2018 年 6 月间收治的 100 例患者的尿常规检验资料作为研究样本，并分别采取尿沉渣全自动分析仪以及显微镜检测法进行检验，并对比两种检验的结果。
结果 通过尿沉渣全自动分析仪检测出的白细胞阳性率为 33.00%，通过显微镜检测法检测出的白细胞阳性率为 50.00%，从白细胞的检测阳性率上看，尿沉渣全自动分析仪明显低于显微镜检测法，对比差异显著（x2=5.952，p=0.015）；通过尿沉渣全自动分析仪检测出的红细胞阳性率为 44.00%，通过显微镜检测法检测出的红细胞阳性率为 30.00%，从红细胞的检测阳性率上看，尿沉渣全自动分析仪明显高于显微镜检测法，对比差异显著（x2=4.204，p=0.040）。
结论 尿沉渣全自动分析仪以及显微镜检测法各有优势，建议临床可联合使用。

PU-3943

脂浊对 SYSMEX XN-9000 检测血红蛋白的影响

张连杰
苏州市独墅湖医院（苏州市独墅湖医院）

目的 探讨脂浊对 SYSMEX XN-9000 血液分析仪对测定 Hb（hemoglobin，血红蛋白）的影响。
方法 选取 45 例高脂 EDTA-K2 抗凝静脉血，进行血浆置换。用 SYSMEX XN-9000 血细胞分析仪重新测定，将 Hb 测定的结果与置换前进行比较，同时根据 HCT 值和血清 TG（triglyceride，甘油三酯）浓度算出全血 TG 浓度，统计分析不同脂浊程度对 SYSMEX XN-9000 测定 Hb 的影响差异。
结果 脂浊会使 SYSMEX XN-9000 测定的 Hb 结果假性增高，但 SYSMEX XN-9000 也有一定的抗脂浊干扰能力：当全血 TG 浓度<9.49mmol/L 时，血浆置换后测得的 Hb 结果与在乳糜血状态下测得的结果差异较小，差异无统计学意义（P>0.05）；而当全血 TG 浓度>9.49mmol/L 时，置换前后

结果差异显著，乳糜血状态下测得的 Hb 结果明显增高，差异有统计学意义（P<0.05），且随全血 TG 浓度的递增差异越大。
结论 脂浊在一定范围内会使 Hb 结果假性增高，当全血 TG 浓度>9.49mmol/L 时，需采取一定的措施如血浆置换等加以纠正，从而为临床提供正确的血常规分析结果。

PU-3944

BC-7500 CRP 微量模式检测系统性能验证及应用评价

张连杰、于鸿滨、陈艳、韩秀、韩清珍、王琳
苏州市独墅湖医院（苏州大学附属独墅湖医院）

目的 对迈瑞 BC-7500 CRP 血细胞分析仪微量模式检测系统进行性能验证，并探讨其在临床检测应用中的注意事项。
方法 根据 WS/T406-2012《临床血液学检验常规项目分析质量要求》和 WS/T246-2005《白细胞分类计数参考方法》的要求，对其进行性能验证，验证内容包括：本底计数、携带污染率、精密度（批内和日间）、正确度、白细胞分类参数正确度、线性范围、不同吸样模式间的可比性。
结果 本底计数三次检测结果均为 0；携带污染率除 RBC 为 0.12%外，其余参数携带污染率为 0；批内和日间精密度远小于行业标准，稳定性良好；正确度验证各参数合格率均≥80%，与靶机具有良好的一致性和可比性；仪器白细胞 5 分类结果与人工相比，所有参数合格率均≥80%；不同吸样模式间比对 5 个样本合格率为 80%，满足行标要求；线性范围验证所得回归曲线斜率均在 1±0.05 范围内，相关系数 r2 都大于 0.95。
结论 对 BC-7500 CRP 微量模式检测系统性能评价合格，其各项指标性能良好，符合厂家声明的要求，是目前市场上一款良好的能胜任末梢血分析的血细胞分析仪。但在临床检测中，为了提高检测结果的准确性，也有相应的注意事项。

PU-3945

正确采集检验标本的重要性

李梅、董莉芹
哈尔滨医科大学附属第一医院

目的 疾病诊疗治疗过程中临床医生拿到与病人病情不符的检验结果时，最先想到的是检验工作人员是否正确检验标本，而忽略了检验标本前的准备工作和标本的正确采集。
方法 检验标本均由护理人员采集、送检。检验者按有关收取标本的规定对检验标本进行查对验收，并通过观察标本外观、询问采集时间、检测分析、复查及联系医护人员等途径发现和确定不合格标本并详细登记。
结果 为临床提供准确、可靠的实验诊断依据，更好地为患者服务。
结论 因此，为确保检验结果的准确性和客观性，临床医护人员应更多的了解和学习标本采集的注意事项，加强基本功和理论知识的培训，加强责任心。

PU-3946

2 例抗凝血类灭鼠药中毒病例分析与思考

李庆
昆明医科大学第一附属医院

通过对抗凝血类灭鼠药中毒引起的人体继发性凝血功能障碍的临床表现及实验室检查结果的整理与研究，探讨和分析其临床诊断与治疗的有效性。
方法 通过对 2 例抗凝血类灭鼠药中毒患者研究，并对其临床资料、实验室检查结果以及相关文献进行回顾性分析。
结果 2 例均以反复鼻衄、血尿为首发临床症状，实验室检测凝血因子 7、9 的活性强度下降，而 5、8 因子的功能正常，PT、APTT 时间延长，TT、FIB、FDP、DD2、ATⅢ结果正常。
结论 1.本组研究资料中，两名患儿均来自农村，中毒原因均为误食，其中一名出现全家中毒的情况，这可能与父母文化程度不高导致对孩子的监管和日常安全教育不足有关。2.抗凝血类灭鼠药中毒的首要表现是凝血功能障碍和全身散在活动性出血，医生面对不明原因且反复鼻衄、口唇出血的患者时，应考虑是否为抗凝血类灭鼠药中毒，并仔细询问病史，完善相关实验室检查。3. 维生素 K1 对于解灭鼠药毒有特殊的治疗效果，其治疗剂量因根据患者的出血情况作调整，常规治疗是每隔 12 小时通过静脉滴注给予患者 10mg 维生素 K1，出血严重者可输注新鲜冰冻血浆 400ml。4.维生素 K1 的使用疗程应长达 2-3 个月，不然出院后停药则极易出现病情复发或加重。

PU-3947

提高门诊桡动脉血气分析的采血一次性成功率

李牧
复旦大学附属中山医院青浦分院

目的 提高门诊桡动脉血气分析采血的成功率。
方法 采用随机、对照的临床试验设计。将门诊 100 例需桡动脉采血的患者作为研究对象。随机分为两组，各 50 例，对照组采用针筒垂直法进行桡动脉采血，试验组采用一次性动脉采血器进行桡动脉采血。比较 2 组一次穿刺成功率，疼痛程度，动脉血气分析结果的差异性。
结果 两种采血方法血气分析结果无明显差异(P>0．05)，但一次性动脉采血器采血时间短、成功率高，病人疼痛低(P<0．01，P<0．05)。
结论 使用一次性动脉采血器采集血气分析标本检测数据准确、操作简便、成功率高。

PU-3948

尿液潜血的方法学比较

刘琰、鲁平
哈尔滨医科大学附属第一医院

目的 显微镜检查对鉴别肾小球性与非肾小球血尿有重要的临床价值，故有学者提出显微镜检查是尿液红细胞检验的“金标准”，是尿液分析仪无法替代的。
方法 尿液分析仪检测尿潜血 于混匀的 10ml 新鲜尿液中浸入尿试纸条 1s 后取出，上仪器进行测定，自动打印结果。
结果 报告分为：-、+/-、+、++、+++、++++。使用 URiSCANTM 尿液分析仪及其配套的尿分析试纸条。结果尿液分析仪法测定的阴性结果与镜检不一致的也应复查，以确保测定结果的准确可靠。

结论 迄今为止，没有一台仪器的检测结果能完全替代显微镜，尿沉渣镜检以其独特的临床价值仍是尿液分析中不可缺少的检查手段。

PU-3949

脑梗死患者红细胞体积分布宽度的变化及临床意义

李祯
山东第一医科大学附属省立医院

目的 探讨脑梗死患者红细胞分布宽度(red cell distribution width ,RDW)水平的变化及临床应用。
方法 收集 265 例脑梗死患者和 160 例健康对照组外周血，检测脑梗死组和健康对照者 RDW 水平，利用受试者工作特征曲线(ROC 曲线)确定 RDW 最佳截点并将脑梗死患者分为低 RDW-CV 组（RDW<12.65%）和高 RDW 组（RDW≥12.65%），分析两组间年龄、性别、活化部分凝血酶时间（activated partial thromboplastin time，APTT）、凝血酶原时间（prothrombin time，PT）、D-二聚体（d-dimer，D-D）差异。
结果 脑梗死患者 RDW 水平显著高于健康对照组，差异有统计学意义（Z=-6.518，P<0.001）；采用 ROC 曲线，将患者分为低 RDW-CV 组（RDW<12.65%）和高 RDW-CV 组（RDW≥12.65%），高 RDW 组患者的 APTT、PT 水平显著高于低 RDW 组（APTT Z=-2.331，P=0.020；PT Z=-2.062，P=0.039），而 D-D 水平差异无统计学意义（Z=-1.141，P=0.254）。
结论 脑梗死患者的 RDW 水平显著高于正常对照者，高 RDW 组 APTT、PT 水平显著升高提示 RDW 在脑梗死疾病辅助诊断中有重要意义。

PU-3950

尿液细胞学检测的方法学解析

刘琰、王琳琳
哈尔滨医科大学附属第一医院

目的 临床上最常用的重要的检测项目之一，主要用于泌尿生殖系统疾病、肝胆疾病、代谢性疾病及其他系统疾病的诊断和鉴别诊断、治疗监测及健康普查。干化学分析仪已广泛应用于临床，流式技术的沉渣分析仪也逐步应用于临床。本文探讨流式尿沉渣定量分析仪、Clinitek 200 尿干化学分析仪、涂片显微镜镜检进行对照研究。
方法 我院来诊患者随机 200 例，用一次性洁净尿杯收集患者尿液 15 ml 左右，先进行尿干化学测定，再进行涂片显微镜镜检，最后做尿沉渣定量分析(用双盲法判读)，操作由丰富临床经验的专业技术人员在 1 h 内完成。流式尿沉渣定量分析仪测定红细胞(RBC)、白细胞(WBC)的正常值为 RBC 0 个/μl~1 个/μl，WBC 0 个/μl~3 个/μl，Clinitek 200 尿干化学分析仪 RBC、WBC 正常值为阴性，涂片显微镜镜检正常值为 RBC 0 个/μl~1 个/HP，WBC 0 个/μl~2 个/HP，超出正常值范围则视为阳性。
结果 三种方法检测 RBC、WBC 的检出率较一致，对 RBC 而言检出率高低分别为 Clinitek 200＞sysmex1000i>涂片镜检，对 WBC 而言检出率高低分别为 sysmex1000i ＞Clinitek 200＞涂片镜检。
结论 在临床应用上把 3 种方法有机地结合起来，干化学的快捷简便和流式沉渣定量的准确性及自动化、手工镜检的金标准，从而可增加检测结果的敏感度和准确性，为临床对泌尿系、循环系、内分泌系的清晰鉴别诊断、疗效观察及预后观察提供可供参考的实验数据。

PU-3951

胃癌患者中性粒细胞与淋巴细胞比值及血小板与淋巴细胞比值的变化及临床意义

李祯
山东第一医科大学附属省立医院

目的 探讨胃癌患者中性粒细胞与淋巴细胞比值(neutrophil-to—lymphocyte ratio，NLR)及血小板与淋巴细胞比值(platelet-to-lymphocyte ratio，PLR)水平的变化及临床应用。
方法 收集 224 例胃癌患者和 135 例健康对照组外周血，检测胃癌组和健康对照者 NLR 和 PLR 水平，利用受试者工作特征曲线(ROC 曲线)确定 NLR 和 PLR 最佳截点并将胃癌患者分为低 NLR 组（NLR<2.975）和高 NLR 组（NLR≥2.975）;PRL 组（PLR<157.74）和高 PLR 组（NLR≥157.74）分析两组间年龄、性别、癌胚抗原（carcino-embryonic antigen CEA）、(carbohydrate antigen,CA199)、(carbohydrate antigen,CA724)的差异。
结果 NLR、PLR 胃癌患者水平显著高于健康对照组，差异有统计学意义（NLR Z=-6.588，P<0.001；PRL Z=-7.446，P<0.001 ）；采用 ROC 曲线，将患者分为低 NLR 组(NLR<2.975) 、高 NLR 组（NLR≥2.975）和低 PLR 组(PLR<157.74) 、高 PLR 组（PLR≥157.74）。高 NLR 组患者的 CA724 水平显著高于低 NLR 组（Z=-2.983，P=0.003），而 CEA、CA199 水平差异无统计学意义（CEA Z=-1.266，P=0.205；CA199 Z=-0.869，P=0.385 ）。高 NPLR 组患者的 CA724 水平显著高于低 PLR 组（Z=-2.057，P=0.04），而 CEA、CA199 水平差异无统计学意义（CEA Z=-1.111，P=0.267；CA199 Z=-0.956，P=0.339 ）。
结论 胃癌患者的 NLR 和 PLR 水平显著高于正常对照者，高 NLR 和 PLR 组 CA724 水平显著升高提示 NLR 和 PLR 在胃癌疾病辅助诊断中有重要意义。

PU-3952

血细胞参数在多发伤患者中的指导作用

王琳琳、刘琰
哈尔滨医科大学附属第一医院

目的 由于创伤急救技术的不断提高和急救系统不断完善，严重创伤患者伤后急速病死率已明显下降，但是伤后危及生命的并发症的发生率和各种伤残率却无明显减少。正确判断多发伤患者的创伤严重程度和预后是目前危重病医学领域中创伤诊治方面所面临的一个重要课题，亦是进一步降低多发伤患者病死率的关键。本研究试图通过观察多发伤患者外周血血细胞参数的动态变化,探讨其在多发伤发生、发展及预后中的作用。
方法 多发伤患者 34 例，于创伤后 24h 内采集静脉血，作为第 1 天标本，并分别在入院后的第 3 天和第 7 天清晨空腹采血。工作特征曲线(ROC 曲线)分析曲线下面积(AUC)；AUC 0.5～0.7 诊断价值较低，0.7～0.9 中等诊断价值，0.9 以上有较高诊断价值。采用 SPSS 11.5 统计软件，数据以(x±s)表示，多组均数间的比较采用单因素方差分析。
结果 本研究显示，WBC、HB、PC/WBC 比值在第 1、3、7 天差异有显著性，另外，PC/WBC 比值均数逐步上升。本研究利用 ROC 曲线下面积评价外周血血细胞参数在评估多发伤患者预后不良时的准确性，结果显示，PC/WBC 在第 3 天 AUC 为 0.820 (0.634～1.006)，第 7 天为 0.948 (0.844～1.051)
结论 应用血细胞参数对创伤患者进行评价具有广阔的前景。并且观察 PC/WBC 在第 3 天和第 7 天的 AUC 对临床诊疗具有较高的应用价值。

PU-3953

骨髓细胞染色体核型分析在恶性血液病的诊断治疗预后中的重要意义

李祯、张之芬
山东第一医科大学附属省立医院

目的 研究分析骨髓细胞染色体核型分析在恶性血液病的诊断治疗及预后中的临床应用情况。
方法 选取我院 2016 年 12 月到 2017 年 12 月收治的恶性血液病 100 例，在各患者治疗前均进行骨髓图片相关检查，流式细胞，融合基因及骨髓细胞染色体核型分析。
结果 本组 100 例患者中染色体核型异常者为 58 例，阳性率约为 58%。其中急性白血病 21 例.骨髓增生异常综合征 9 例，慢性粒细胞白血病 14 例，多发性骨髓瘤 4 例，淋巴细胞白血病 10 例，再生障碍性贫血 0 例。
结论 骨髓细胞染色体核型分析在恶性血液病的诊断治疗及预后中效果明显，具有重要意义值得广泛应用。

PU-3954

尿液显微镜手工方法比较分析仪法

王琳琳、鲁平
哈尔滨医科大学附属第一医院

目的 手工法检验尿常规结果分析，进一步了解分析仪和传统的显微镜手工法在尿液分析中的优缺点，使检验工作者在实际工作中正确对待两种方法的应用，指导检验人员科学地把两种结合起来。
方法 我们对 500 份尿样分别用两种方法进行检测对其结果分析，一种方法用尿液分析仪检测记录尿蛋白、白细胞、红细胞结果，微量以上为阳性，微量以下为阴性。另一种方法用加热醋酸法检测尿蛋白，再用离心试管取 10 ml 混匀的尿液以 1 500 r/min 离心 5 min，倾去上清液，留取 0.2 ml 沉渣，涂片镜检，记录尿蛋白、红细胞和白细胞结果，微量以上为阳性，微量以下为阴性。
结果 分析仪检测尿蛋白和白细胞的阳性率（8.85%和 10.20%）不及手工法阳性率（9.10%和 11.85%）高，但分析仪检验红细胞的阳性率（11.85%）高于手工法红细胞阳性率（9.80%）。阳性结果不能相吻合，两种方法虽然存在一定的差异，但经统计学处理（P>0.05）差异无显著性。
结论 结果说明两种方法均可为临床使用。分析仪检测尿蛋白阳性率低于手工法阳性率，分析仪检测白细胞阳性率不如显微镜检测尿中白细胞阳性率高。但分析仪对尿中红细胞的检测比显微镜阳性率高。两种方法合理应用，取长补短，以便为临床疾病的诊断和治疗提供正确检验结果。

PU-3955

迪瑞尿液分析工作站 FUS3000 尿沉渣复检规则的制定

王学军、续薇
吉林大学第一医院

目的 对尿液分析 16 条自动审核规则进行验证,分析应用适宜性并进行完善。
方法 收集来自吉林大学第一医院检验科 2021 年 5 月 6 日至 2021 年 5 月 20 日期间的尿液分析常规样本共 324 例。进行人工镜检及 Sysmex UC-3500 尿液全自动干化学分析仪、Sysmex UF-5000 尿液有形成分分析仪双盲法检测。计算假阴性率、假阳性率、真阴性率、真阳性率及自动审核通过正确率,并与自动审核规则建立时验证数据进行率的比较。

结果 自动审核通过率、真阴性率、真阳性率及通过正确率高于规则建立组,假阴性率及假阳性率低于规则建立组。
结论 应用 16 条尿液分析自动审核规则能够保证尿液分析检验结果的准确及工作效能,具有较好的应用适宜性。

PU-3956

青浦区胃癌患者凝血-纤溶系统标志物检测的功能研究

王金金、高霏、林见敏、袁梦娇、龚倩
复旦大学附属中山医院青浦分院

目的 观察胃癌患者在肿瘤不同分期的凝血-纤溶系统标志物的变化,以探索其在胃癌患者中的诊断、预后判断中的意义。
方法 对 70 例胃癌（实验组）患者和 30 名体检健康者（正常对照组）的进行检测。检测项目包括 PLT、PT、APTT、TT、FIB、D-D 以及凝血酶一抗凝血酶复合物 (TAT)、血浆血栓调节蛋白(TM) 、纤溶酶一 α2 抗纤溶酶复合物(PIC)、组织型纤溶酶原激活剂-纤溶酶原激活物抑制剂-1 复合物(t—PAI-C)等反映凝血-纤溶系统分子标志物指标。
结果 胃癌患者组 FIB 和 D-D 高于正常对照组，二者间比较差异有统计学意义(P < 0. 05)；在胃癌患者组中 PLT、PT、APTT、TT 与正常对照组比较差异无统计学意义（p>0.05）；在胃癌患者中 TM、TAT、PIC、t-PAI-C 与正常对照组比较差异均有统计学意义（P<0.05）；
结论 胃癌患者体内存着凝血，纤溶系统的常规止凝血指标和分子标志物指标的改变，这些凝血纤溶标志物的指标改变可作为胃癌病情进展、疗效观察以及预后判断的指标之一。

PU-3957

三种仪器法和显微镜法在低值血小板计数中的比较

焦瑞宝、陈继中
安徽省铜陵市人民医院

目的 探讨三种仪器法和显微镜法在低值血小板计数时之间的差异及相关性。
方法 选取 2020 年 8 月至 9 月在铜陵市人民医院住院、血小板减少症患者 104 例，利用 Sysmex XN-A1 型全自动血液分析仪红细胞通道（RBC/PLT-I 通道）、网织红细胞通道（RET/PLT-O 通道）、血小板通道（PLT-F 通道）共三种通道同时检测血小板，并采用显微镜法人工计数血小板。按照电阻抗法（PLT-I）计数结果进行分为四组,A 组 [(PLT≤15)×109/L] 18 例；B 组 [(16＜PLT≤30)×109/L] 28 例；C 组 [(31＜PLT≤45）×109/L] 23 例；D 组 [（46＜PLT≤60）×109/L] 35 例；采用配对资料 t 检验，分析三种仪器法与显微镜法差异及相关性。
结果 除了 C 组 PLT-O 与 PLT-M 比较，差异有统计学意义（t=2.857，*P＜0.01），其他组内三种仪器法与显微镜法间配对检验，差异均没有统计学意义（P＞0.05）；A 组 PLT-I 与 PLT-O、PLT-F、PLT-M 之间相关系数（r）分别为 0.912、0.917 和 0.940；PLT-O 与 PLT-F、PLT-M 之间 r 分别为 0.981 和 0.960；PLT-F 与 PLT-M 之间 r 为 0.984；B 组 PLT-I 与 PLT-O、PLT-F、PLT-M 之间 r 分别为 0.654、0.663 和 0.680；PLT-O 与 PLT-F、PLT-M 之间 r 分别为 0.983 和 0.955；PLT-F 与 PLT-M 之间 r 为 0.982；C 组 PLT-I 与 PLT-O、PLT-F、PLT-M 之间 r 分别为 0.659、0.680 和 0.666；PLT-O 与 PLT-F、PLT-M 之间 r 分别为 0.964 和 0.952；PLT-F 与 PLT-M 之间 r 为 0.942；D 组 PLT-I 与 PLT-O、PLT-F、PLT-M 之间 r 分别为 0.352、0.344 和 0.311；PLT-O 与 PLT-F、PLT-M 之间 r 分别为 0.924 和 0.868；PLT-F 与 PLT-M 之间 r 为 0.907。

结论 B、C、D 三组患者 PLT-I 与 PLT-O、PLT-F、PLT-M 均呈中、低度相关；而 PLT-O、PLT-F、PLT-M 三种方法在四组内始终保持高度相关。四种计数方法各有优缺点，临床上需在适当时候采取恰当方法确保检测结果客观准确。

PU-3958

尿红细胞研究型参数在血尿鉴别诊断中的作用

焦瑞宝、陈继中
安徽省铜陵市人民医院

目的 探讨 Sysmex UF-1000i 尿有形成分分析仪提供尿红细胞研究型参数在血尿鉴别诊断中的作用。
方法 回顾性收集 2020 年 5 月至 8 月在铜陵市人民医院住院肾脏病患者 21 例，设为肾病组；泌尿系统结石等患者 37 例，设为尿结石组。比较分析两组患者尿液 10 项红细胞相关参数的差异性。
结果 肾病组的溶血 RBC%中位数(17.2%)为明显高于尿结石组(2.4%)，肾病组未溶血 RBC%低于尿结石组，差异均有统计学意义（P＜0.001）；小 RBC%肾病组中位数（83.6%）明显高于尿结石组（10.4%），差异有统计学意义（P＜0.001）；肾病组的尿 70%红细胞前散射光强度（RBC-P70Fsc）中位数（64.0ch），明显低于尿结石组（122.0ch）差异有统计学意义（P＜0.001）；肾病组和尿结石组红细胞前散射光分布宽度（RBC-Fsc-DW）比较，差异没有统计学意义（P＞0.05）。
结论 利用这些参数可对血尿的鉴别诊断起到很好的帮助作用，并且在肾脏病的疾病监测与随访中具有重要的意义。建议将上述红细胞参数纳入尿液常规分析报告单，为临床有需要的科室提供参考信息。

PU-3959

铜陵市 29 例新型冠状病毒肺炎患者流行病学及实验室检测结果分析

焦瑞宝、陈继中
安徽省铜陵市人民医院

目的 分析铜陵市 29 例新型冠状病毒肺炎（COVID-19）患者流行病学资料及实验室检测结果。
方法 回顾性收集 2020 年 1 月至 2 月在铜陵市人民医院住院治疗 29 例新冠肺炎，设为新冠肺炎组，选择在本院住院、诊断为其他肺炎患者 31 例设为其他肺炎组，另设置 28 例征兵体检男性作为健康对照组，拟对三组的血常规中白细胞总数及五分类绝对值及百分比进行对比研究。
结果 29 例新冠肺炎患者 21 例来自武汉，2 例来自上海，6 例为本地常住人口；潜伏期 1~19d，中位数及四分位数为 5（3，9）d，住院日为 5~29d，平均为（16.2±7.3）d；无家庭聚集接触史 18 例（占 62.07%），有家庭聚集接触史 11 例（占 37.93%）；29 例新冠肺炎患者 24 例（占 82.76%）出现症状，无症状筛查发现者 5 例（占 17.24%）；新冠肺炎组血常规中白细胞总数（WBC）、淋巴细胞绝对值（L#）、嗜酸粒细胞百分比（E%）及绝对值（E#）、嗜碱粒细胞百分比（B%）及绝对值（B#）均低于正常健康组，差异有统计学意义（P＜0.05）;新冠肺炎组的 WBC、中性粒细胞绝对值（N#）、单核细胞绝对值（M#）、B#低于其他肺炎组，两个肺炎组的单核细胞百分比（M%）大于正常健康组，差异有统计学意义（P＜0.05）。
结论 铜陵市 2020 年 1 月至 2 月发生的新冠肺炎具有疫源性，且具有明显家庭聚集性，流行病学特征明显。与其他肺炎和健康对照组比较，新冠肺炎可引起白细胞总数及淋巴细胞绝对值减少，但是这些改变是非特异性的，对诊断新冠肺炎具有帮助，特异性诊断还需要依靠新冠病毒核酸检测。

PU-3960

新生儿网织红细胞仪器法系列参数参考区间的调查

焦瑞宝、陈继中
安徽省铜陵市人民医院

目的 调查新生儿网织红细胞系列参数的正常参考区间。
方法 回顾性收集 2019 年 1 月至 12 月在铜陵市人民医院新生儿科住院的新生儿患者 424 例，采用参考区间取 95%置信区间（P2.5,P97.5）调查参考值，并按照性别不同、日龄不同进行组间比较，探讨网织红系列参数的变化情况。
结果 424 例新生儿所有 6 项参数均呈非正态分布，网织红细胞百分比（RET%）95%置信区间为（0.66~5.80）%，网织红细胞绝对值（RET#）95%置信区间为（25.72~284.56）×109/L；男性与女性新生儿 RET#和 RET%比较，女性均高于男性，差异有统计学意义（P＜0.05）；按日龄分组，组 1（≤7d）、组 2（8~14d）、组 3（15~28d）比较，网织红细胞系列参数 RET#、RET%、HFR、LFR、IRF 组间比较，差异均有统计学意义（P＜0.05）；组 1 与组 2 比较，只有 RET#、RET%差异有统计学意义（P＜0.05）；组 2 与组 3 比较，只有 IRF 差异有统计学意义（P＜0.05）。
结论 新生儿网织红细胞仪器法系列参数参考区间不完全与成人及儿童相同，期待早日建立新生儿网织红细胞仪器法系列参数，服务于临床。

PU-3961

2017-2020 年某综合性医院输入性疟疾流行病学及实验检测结果分析

焦瑞宝、陈继中
安徽省铜陵市人民医院

目的 分析某综合性医院近四年输入性疟疾流行病学及实验室检测结果。
方法 回顾性收集 2017 年 1 月至 2020 年 8 月在铜陵市人民医院门诊或住院就诊的输入性疟疾 16 例门诊或住院患者，设为疟疾组，另选择我院住院、无境外流行病学史、临床症状疑似疟疾而未检测疟原虫、由其他原因引起发热的患者 23 例设为发热非疟疾组，并设置 30 例健康征兵人员设为健康对照组。拟对三组实验室检测结果进行对比分析。
结果 16 例输入性疟疾均为男性，年龄为 31~71 岁，平均年龄为（48.0±8.2）岁；年度分布：2017 年 3 例，2018 年 3 例，2019 年 10 例，2020 年前 8 月 0 例；其中 3 月和 6 月分别有 3 例，7 月和 12 月分别有 2 例；国家及地区分布为刚果（金）1 例，加蓬 1 例，赞比亚 6 例，尼日尼亚 8 例；疟原虫虫种分布为间日疟原虫 1 例（占 6.25%），卵形疟原虫 2 例（占 12.50%），其余 13 例（占 81.25%）均为恶性疟原虫；16 例患者 RBC、HGB 和 HCT 共出现 5~7 例下降，占比在 31.25%~43.75%之间；血小板下降更为厉害，15 例患者下降，占比为 97.75%，其中轻度、中度和重度分别为 6、6 和 3 例，占比为 37.5%、37.5%和 18.75%。疟疾组、发热非疟疾组及健康对照组比较，淋巴细胞百分比及绝对值、单核细胞百分比及绝对值以及嗜酸粒细胞绝对值比较，差异均有统计学有意义（P＜0.05 或 0.001）。红细胞三项参数和血小板三组间比较，差异均有统计学意义（P＜0.001）。
结论 输入性疟疾感染对血细胞影响主要表现在红细胞和血小板计数上，常明显造成红细胞相关参数的下降，以及血小板计数明显降低，而血小板计数过低可能是重症疟疾的表现形式之一，需重点关注。

PU-3962

阴道分泌物对尿常规临床检验结果的影响及对策研究

邹航
安岳县人民医院

目的 因女性阴道口与尿道口较近，阴道分泌物能够影响尿常规检查结果,对女性患者采取阴道分泌物抑制尿液采集法检验，对其检测结果的影响予以探究。该检测方法能够对肾小球肾炎，糖尿病，血液病等疾病的治疗提供有利的依据.
方法 57 例患者选自 2018 年 2 月-2019 年 2 月期间。将上述患者随机分为实验组 29 例（阴道分泌物抑制尿液采集法）；参照组 28 例（传统尿液采集法）。对比 2 组尿常规指标。
结果 实验组红细胞（RBC）、白细胞（WBC）、 上皮细胞（Epithelial Cell）、亚硝酸盐（Nitrite）检出率低于参照组；实验组蛋白质、pH 值、比重以及尿糖指标与参照组对比差异具备统计学含义（P<0.05）。
结论 本次研究中对患者采取阴道分泌物抑制尿液采集法。可有效确保尿常规检测的准确度，该方法可推广应用。

PU-3963

不同品牌血细胞分析仪结果可比性研究

战然
山东第一医科大学第一附属医院（山东省千佛山医院）

目的 实验室分别采用迈瑞 BC-5180 与 Sysmex XN-10 血细胞分析仪进行新鲜血检测，对两者结果的一致性和相关性进行分析，提高实验室检测结果的准确性。
方法 以参加室间质评的 Sysmex XN-10 为参考仪器，选取 20 例标本（覆盖白细胞、红细胞和血小板高、中、低值）分别采用迈瑞 BC-5180 与 Sysmex XN-10 进行血细胞分析，记录结果并分析。
结果 两台仪器 8 项检测比对项目（白细胞、红细胞、血红蛋白、红细胞压积、平均红细胞体积、平均血红蛋白含量、平均血红蛋白浓度、血小板）的比对符合率≥80%，两组检测结果的差异无统计学意义。
结论 迈瑞 BC-5180 血细胞分析仪检测结果稳定准确，与 Sysmex XN-10 结果相比一致性良好，可用于实验室检测及临床诊断。

PU-3964

外周血未成熟粒细胞检测在菌血症诊断中的作用研究

焦瑞宝、陈继中
安徽省铜陵市人民医院

目的 探讨外周血未成熟粒细胞检测在菌血症中变化及对菌血症的预测效能。
方法 回顾性收集 2020 年 2 月至 8 月在铜陵市人民医院住院、血培养阳性 108 例患者（设为菌血症组）血常规及未成熟粒细胞检测结果，并设置健康对照组 65 例，比较两组血常规中白细胞计数(WBC)、中性粒细胞百分比（NEUT%）、中性粒细胞百分比/淋巴细胞百分比(NLR)及未成熟粒细胞百分比（IG%）。
结果 菌血症组的 WBC、NEUT%、NLR 及 IG%均高于健康对照组，Z 值分别为-4.662、-8.370、-8.761 和-9.781，差异均有统计学意义（P＜0.05）；以健康对照组为参照，WBC、NEUT%、NLR、IG%四项参数对菌血症患者的 ROC 曲线下面积（AUC）分别为 0.712、0.880、0.898 和 0.943，

临界值分别为 9.44×109/L、71.0%、3.19 和 0.45%，四项指标对预测菌血症有效性均具有统计学意义（P＜0.001）;其中 AUC、约登指数及敏感度以 IG%为最高。
结论 菌血症患者 WBC、NEUT%、NLR、IG%均呈不同程度的上升，对于预测菌血症具有不同效能，其中 WBC 最低，IG%最高。

PU-3965

凝血四项指标、FDP、D-二聚体在妊娠期糖尿病患者中的相关性研究

翁立艳
资阳市安岳县人民医院

目的 探讨凝血四项指标、纤维蛋白(原)降解产物(FDP)及 D-二聚体(DD)在妊娠期糖尿病孕晚期患者中的相关性研究。
方法 选择 2018 年 2 月—2021 年 2 月收治的妊娠期糖尿病晚期孕妇 120 例作为妊娠期糖尿病组,正常妊娠孕妇 120 例作为正常妊娠组,体检健康妇女 120 例作为正常对照组。妊娠期糖尿病组和正常妊娠组于孕晚期检测凝血功能指标、DD、FDP,正常对照组于体检时检测以上指标。凝血功能指标、D-D 及 FDP 比较采用单因素方差分析,两两比较采用 LSD-t 检验,P0.05 为差异有统计学意义。
结果 妊娠期糖尿病组、正常妊娠组、正常对照组这三组 PT、APTT、TT、FIB 及 D-D、FDP 比较差异有统计学意义(均 P0.05),妊娠期糖尿病组以上指标变化最明显(均 P0.05)。
结论 妊娠期间对凝血功能及 D-D、FDP 进行检测,可为预防血栓提供参考，因此对于这些孕妇应常规检测凝血功能。对于患有妊娠期糖尿病的孕妇，应着重监测其凝血功能。

PU-3966

我院血常规检测及复检的程序在日常工作中的应用

陈婕
西安医学院第一附属医院

血液分析仪是目前临床血液一般检查最常用的检测仪器，仪器的品牌与型号也是多种多样的，我院现用的全自动血液分析仪是 SYSMEX XN2800、SYSMEX XN3000、SYSMEX XN350。但尽管如此，仍然有时会出现某些检测项目的结果异常，而这些异常有可能并不是标本本身的真实结果，为了能够准确无误的发放报告，此时必须要对标本进行复检。

PU-3967

血清鳞状细胞癌抗原联合铁蛋白、癌胚抗原检测在宫颈癌临床研究进展

周婷婷
吉林金域医学检验所有限公司

目的 宫颈癌是由宫颈上皮内瘤变缓慢进展而来，是女性生殖系统第二大恶性肿瘤。临床对于早期宫颈癌患者主要以冷冻技术、线圈电切、子宫全切等治疗方式，可有降低宫颈癌复发率，经治疗 5 年生存率高达 69%-95%。但由于在患宫颈癌早期无明显临床症状，部分患者在发现明显阴道流血或接触性出血后到院就诊，大部分患者经确诊属后以属于晚期，错过最佳治疗时机。目前，临床一

直认为多种肿瘤标志物联合检测和提高宫颈癌的准确性，且对临床治疗提供可靠疗效判定以及预后评价。但是对多种肿瘤标志物的最佳联合检测方式尚无确切定论，为此本文就血清鳞状细胞癌抗原（SCCA）、铁蛋白（SF）以及癌胚抗原（CEA）联合检测宫颈癌，旨在为临床诊断提供新思路。
方法 选取 98 例疑似宫颈癌患者作为观察组，正常健康对照组 95 例作为对照组，采用酶联免疫吸附法检测 SCCA、SF、CEA 水平。
结果 观察组血清 SCCA、SF、CEA 以及联合检测水平均高于对照组（*P<0.05*），且三者联合检测特异性与灵敏度均高于单一检测（*P<0.05*）。
结论 肿瘤标志物是反应肿瘤生长与生存的一组蛋白质，水平可提示肿瘤的发生与发展。SCCA 主要分布在鳞状上皮细胞细胞质。SF 是由肿瘤细胞分泌，CEA 属于一种高分子可溶性糖蛋白，参与胚胎细胞的有关基因调控其水平不仅与肿瘤大小、性质和部位有关，且与病情进展有关。SCCA、SF、CEA 三者联合检测具有较高的灵敏度和特异性，可作为宫颈癌辅助诊断的首选标志物。同时也是宫颈癌临床分期、病理分型、疗效评价重要指标。

PU-3968

血清肿瘤标志物联合检测在非小细胞肺癌中的研究进展

李雨艳
吉林金域医学检验所有限公司

目的 肺癌为全球性发病率极高的恶性肿瘤，其肿瘤细胞具有异质性和生物学复杂性，但由于影像学检查无法明确肺癌分期，病理组织学检测虽然具有较高的特异性，但是取材存在一定的难度，导致敏感性不高，为此血液肿瘤标志物逐渐成为临床理想目标。为弥补肿瘤标志物单一检测的特异性和敏感性的不足，提高临床诊疗水平，本文探讨血清肿瘤标志物联合检测在非小细胞肺癌中的研究进展。
方法 选取 121 例疑似非小细胞肺癌患者作为观察组，正常健康对照组 98 例作为对照组。采用癌抗原 125(CA125)、癌胚抗原（CEA）、非小细胞肺癌相关抗原(CYFRA21-1)联合检测其血清内 CA125、CEA、CYFRA21-1 水平。
结果 经检测后，观察组 CA125、CEA、CYFRA21-1 水平均高于对照组（*P<0.05*）。且患者临床分期越高，且肿瘤标志物水平越高（*P<0.05*）。CA125、CEA、CYFRA21-1 联合检测阳性率高于单一检测（P<0.05）。
结论 癌抗原 125(CA125)作为肿瘤糖类抗原，储存于细胞中，当其血清浓度降低，可提示组织发生恶性病变或肿瘤侵入组织所引起的组织破坏而入血，助于高发病风险的非小细胞癌患者的检测。癌胚抗原（CEA）属于酸性糖蛋白，是由胰腺、肝脏、小肠合成，当血清中 CEA 水平为正常水平 3 倍或以上，提示肿瘤有全身转移的可能性。非小细胞肺癌相关抗原(CYFRA21-1)是上皮细胞表达细胞片段，主要分布于复层肿瘤细胞胞质内，血清含量降低时，提示恶性肿瘤细胞凋亡，肿瘤体积缩小。血清肿瘤标志物联合检测对非小细胞肺癌临床诊断、复发监测、预后以及疗效分析有重要的意义，可提高诊断敏感性与诊断率。

PU-3969

基于 Tim4-PS 捕获分离系统的微流控芯片 HBEV-Chip 检测肿瘤源性小细胞外囊泡用于泛癌筛查

杨柳、邓昆
重庆医科大学附属第三医院（捷尔医院）

目的 为了快速分离高质量的肿瘤源性小细胞外囊泡即磷脂酰丝氨酸阳性小细胞外囊泡（PS+sEV）用于泛癌筛查

方法 直接用 Tim4 对鱼骨状微流控芯片功能化捕获的 PS+sEV，通过钙离子螯合剂 EDTA 释放通道内捕获的 PS+sEV，构建基于 Tim4-PS 捕获分离系统的鱼骨状微流控芯片(即 HBEV-Chip)；基于质谱鉴定的小细胞外囊泡蛋白质组学运用生物信息分析 PS+sEV 与肿瘤的相关性；在 8 例结直肠癌、8 例胰腺癌、8 例非小细胞肺癌、6 例健康人的血浆中验证 PS+sEV 作为泛癌筛查标志物的诊断效能；

结果 1.构建 HBEV-Chip 的最适合功能化蛋白 Tim4 的浓度为 125ng/mL，洗脱液 EDTA 的为 20mM，最佳血浆上样量为 200uL；2.HBEV-Chip 的捕获效率为 90.43 ± 2.12%，释放效率为 78.36 ± 11.73%；HBEV-Chip 获取 sEV 的纯度为 75.32 ± 2.25%，sEV 蛋白含量占比为 70.38%，超速离心获取的 sEV 的纯度为 67.48 ± 3.18%，sEV 蛋白含量占比为 68.81%；3.PS+sEV 与肿瘤发生发展的信号通路即 Cdc42 protein signal transduction, neuropilin signaling pathway, and Wnt signaling pathway 具有高度相关性（P<0.01）；4.PS+sEV 含量在结直肠癌、胰腺癌、非小细胞肺癌血浆中含量为 2.92×108 ± 2.61×107 particles/mL, 3.64×108 ± 5.26×107 particles/mL, 4.48×108 ± 4.62×107 particles/mL,在对照组血浆中为 2.10×108± 2.24×107 particles/mL，存在显著统计学差异（P<0.05），进一步综合为肿瘤组 PS+sEV 含量为 4.23×108±6.04×107 particles/mL，统计学差异更为显著（P<0.01）。根据 PS+sEV 含量绘制 ROC 曲线的相应 AUC 值为 0.85。

结论 构建了一种优于传统小细胞外囊泡分离方法的 HBEV-Chip，其快速分离的 PS+sEV 可作为泛癌筛查物，为临床泛癌筛查和实验室肿瘤功能研究提供了一个多功能平台。

PU-3970

尿液 mALB,α1-M 和 NAG 联合检测在糖尿病患者肾脏早期损伤诊断研究进展

路放
吉林金域医学检验所有限公司

目的 患 2 型糖尿病患者中，25%以上存在不同严重程度损伤，而 DN 发病机制较为复杂，微量白蛋白尿是糖尿病肾病早期主要表现，被临床最为重要诊断依据广泛应用在临床中。然而，由研究报道，部分糖尿病肾病患者的微量白蛋白尿（mALB）可存在自行缓解消失等现象，且无微量蛋白尿患者出现肾病理改变，严重者出现肾实质或功能性改变，由此说明微量白蛋白年灵敏度和特异性有待考究，不能作为糖尿病肾脏早期损伤的标志物，因此寻找由价值的尿液标志物检测方式成为临床研究热点。为此本文通对糖尿病肾病尿液检测标志物联合检测的最新研究进展进行深入探讨，旨在为临床早期诊断和治疗提供可靠依据。

方法 搜集 92 例糖尿病伴肾脏早期损伤患者以及 119 例同期健康体检者尿液标本作为研究样本，采用乳胶增强免疫比浊法检测患者 mALB,α1-M 以及 NAG 水平。

结果 糖尿病伴肾脏早期损伤患者 mALB,α1-M 以及 NAG 浓度均高于健康对照组（*P<0.05*）。三者联合检测灵敏度和特异性均高于单一检测（*P<0.05*）。

结论 糖尿病肾病是糖尿病最严重的微血管并发症之一，是糖尿病发展到一定阶段的必然损伤，也是是终末期肾病的主要危险因素。在国外，糖尿病肾病已经成为血液透析治疗的首要病因。α1-微球蛋白（α1-M）为低分子糖蛋白，由淋巴细胞和肝脏合成。指标升高表示为肾功能不全，可作为早期肾损伤的敏感性指标。尿液 N-乙酰 β-D-氨基葡糖苷酶（NAG）可反应肾实质病变，可用于早期肾损伤病程观察与监测。三者联合检测能够提高检测水平，提高检测灵敏度和特异性。

PU-3971

陕西地区 2810 例遗传咨询者外周血染色体核型分析

李文妮
西安金域医学检验所有限公司

目的 分析陕西地区 2810 例遗传咨询者的染色体异常与疾病的关系，探讨细胞遗传学检查在临床诊断中的应用价值。
方法 采用外周血淋巴细胞培养法，基础 G 显带法进行染色体制备。采取患者外周血进行淋巴细胞培养， 37℃培养箱恒温培养 72h，按常规方法进行染色体制备及 G 显带分析。每例计数 20 个中期分裂象，分析 5 个核型，如有异常加大计数分析。必要时加做 C 带和 N 带分析。
结果 陕西地区 2810 例遗传咨询者中检测出染色体异常 262 例，异常核型比率为 9.3%，其中染色体多态性 100 例，占 38.2%，性染色体异常 37 例，占 14.1%，唐氏综合症为 49 例，占 18.7%，其余常染色体异常 76 例，占 29%。遗传咨询者常见病因有不良孕产史、习惯性流产、无精子、少精子和弱精子、原发或继发闭经史、智力低下、不孕不育症、先天畸形、第二性征异常等。
结论 染色体异常是导致生育障碍、智力低下、新生儿缺陷的主要原因，因此对高危人群进行染色体检查，对优生优育及提高人口素质具有重要意义。

PU-3972

一株糖尿病患者体内分离到的 Dysgonomonas 菌及其物种分类

高小娟、韦洁宏、郝同雨、李萌萌
深圳市罗湖医院集团医学检验实验室

本研究首次从糖尿病伴并发症及肺部感染患者的血液中分离得到一株少见菌。对其进行富集培养后，用布鲁克 MALDI-TOF 进行物种鉴定时，未匹配到准确度较高的菌株。然后使用菌落 PCR 的方法扩增得到其 16S rRNA，通过 Sanger 测序的方法得到其序列信息，然后在 NCBI 上检索到该菌株属于 Dysgonomonas 属微生物，其与 Dysgonomonas oryzarvi 、Dysgonomonas mossii 相似度最高，一致性分别为 99.64%、99.57%。D.oryzarvi 是从微生物燃料电池中分离得到，具有将有机物中的化学能直接转化成电能的功能。D. mossii 是从一位乙肝复发性肝细胞癌患者的血培养中分离得到。本文分离得到的 Dysgonomonas 菌株命名为 D.oryzarvi Wh21。Wh21 在哥伦比亚血平板上生长的克隆表面光滑，形态呈针尖儿状。革兰氏染色鉴定出该菌株属于革兰氏阴性杆菌，其在有氧和厌氧的环境下皆可以生长，属于兼性厌氧菌。在透射电镜下观察到的形态大小为 0.45-0.55×0.95-1.52μm，短杆状，无鞭毛。使用二代测序的方法得出其包含多种抗生素的耐药基因 rpoB2、APH(3')-Ia、tet(C)、optrA 等，分别与利福霉素、氨基糖苷类抗生素、氟喹诺酮类抗生素、大环内酯类抗生素耐药性相关。本研究发现的 D.oryzarvi Wh21 属于一种少见菌，在免疫力低下的患者的血液中分离得到，属于机会致病菌。

PU-3973

The urinary peptidome as a noninvasive biomarker for screening of kidney disease

Zewen Li
Zhu jiang hospital, southern medical university, Guangzhou

Introduction Chronic kidney disease (CKD) is a worldwide-prevalent public health problem, with a low awareness rate. In clinical practice, the existing laboratory tests barely meet the needs of

early screening for KD. Urine peptides are derived from the circulation by the kidney and excreted under physiological conditions. With detectable change before failure of the glomerular filtration barrier, it has gradually emerged as one of the most attractive topics in biomarker discovery. Urinary peptidome has potential as an indicator of screening for kidney disease (KD) in healthy individuals.
Problems the question remains as to whether urinary peptidome could be used in healthy individuals to make early diagnose for kidney disease.
Results In the present study, we conducted one discovery cohort and two independently validation cohorts. By using next generation MALDI-TOF MS, urinary peptidome patterns in KD participants was characterized and kidney-related peptide risk score (PRS) was applied to prospectively screen for KD. We observed significant and consistent shifts in urinary peptidome between KD and control participants among three cohorts. Using 423 kidney-related urine peptides based on the discovery cohort, we conduct a kidney related peptide risk score (PRS) for representing and quantifying KD. Extrapolating this index to an independently validation cohort, we found higher PRS in KD patients and the association between PRS and kidney-related risk factor and clinical manifestations. Appling this index to a median of 6.5 years follow-up cohort, we observed a consistent trend between groups and associations with risk factors and clinical manifestations indicating PRS may act as a biomarker of KD. Furthermore, at the point of enrollment of the perspective cohort, PRS had prospectively significant increased in those participants who developed KD after a median of 6.5 years follow-up and the participants with highest quartile PRS had 86% (RR: 1.86, 95%CI: 1.01-3.43, P = 0.043) higher risk for KD compared with the lowest quartile.
Conclusion we proposed that PRS could be applied as one indicator to assess the risk of kidney disease

PU-3974

血涂片中胀亡淋巴细胞形态与临床

李德来、赵广明、沈兴娅、杨立顺
天津市北辰区中医院

目的 描述胀亡淋巴细胞形态，检测血涂片中胀亡淋巴细胞并应用于临床。
方法 对血常规分析提示有异常血细胞者做形态学复检，对疑似 IM 及胀亡淋巴细胞明显增高者纳入本调查资料，对细胞进行拍照、分析、描述胀亡淋巴细胞的形态学特点及与临床的相关性。
结果 1.胀亡淋巴细胞胞体及胞核明显胀大、胞核常胀出胞体并常起泡、核变薄、核边聚、核膜破裂、核染色质分散、核染色质均质化或不全均质化溶解、胞膜通透性增强、细胞质渗透到胞体外、细胞质内起泡等。2.胀亡淋巴细胞常检出于：⑴见于 IM，35 例 IM 病例中有 16 例检出以胀亡淋巴细胞为主的异淋细胞；⑵其它胀亡淋巴细胞增高病例，如腹痛、脑梗死等；⑶围产期妇女有较高的检出率。3.相关问题：⑴在胀亡淋巴细胞增高的病例中常可检出胀亡中性粒细胞、胀亡单核细胞、胀亡嗜酸性粒细胞和胀亡嗜碱性粒细胞；⑵35 例 IM 病例中未检出幼稚样异淋细胞。
结论 胀亡淋巴细胞是不可忽视的异淋细胞，常规血涂片瑞-姬氏染色，在油镜下可完成胀亡淋巴细胞检测，适于临床应用。

PU-3975

The Podocyte Count Detected by an Improved Immunocytochemical Method has Higher Diagnostic Efficiency than Enzyme-Linked Immunosorbent Assay and Serum Cystatin C to Evaluate the Early Stage Damage of Glomerular

Li Li
Provincial Hospital Affiliated to Shandong First Medical University

Backgroud In renal diseases, earlier injury to glomerular may lead to the abscission of podocyte. The number of podocyte in urine may reflect the severity of glomerular damage. Podocalyxin (PCX) was considered as a podocyte marker. Many Methods were used to detect podocyte. Applications of these Methods were limited by tricky, expensive and low accuracy. Here we improved an immunocytochemical method to count the number of podocyte in urine.
Methods In this study, we counted the numbers of podocyte in urine by our improved method and detected the PCX levels in urine by enzyme-linked immunosorbent assay (ELISA) in glomerulopathy patients and healthy controls. The serum levels of cystatin C (CysC), blood urea nitrogen (BUN), creatinine (CR), uric acid (URIC), and β2-Microglobulin (β2-MG) in all subjects were detected. Correlation analysis and diagnostic efficiencies comparisons between immuocytochemical method, ELISA and the biochemistry index were also performed.
Results The podocyte counts in patients were significantly higher than controls. Podocytes counts positively correlated with PCX concentrations and the serum CysC. The podocyte count had higher diagnostic efficiency than PCX concentrations detected by ELISA and serum CysC.
Conclusion The podocyte count detected by our improved method had higher diagnostic efficiency than ELISA and serum CysC.

PU-3976

网织血小板检测在妊娠合并 ITP 与妊娠期血小板减少症鉴别诊断中的价值

宋广浩
南京大学医学院附属鼓楼医院

目的 探讨网织血小板比率（RP%）在妊娠合并特发性血小板减少性紫癜（ITP）与妊娠期血小板减少症（GT）鉴别诊断中的作用。
方法 选取 2019 年 1 月至 2020 年 1 月南京鼓楼医院收治的妊娠合并 ITP 患者 25 例（ITP 组），GT 患者 80 例（PT 组）与同期体检中心健康体检孕妇 30 例（对照组）作为研究对象，比较 3 组外周血 RP%的变化。采用受试者工作特征（ROC）曲线评价 RP%诊断妊娠合并 ITP 与 GT 的效能。
结果 ITP 组 RP%显著高于 GT 组及健康对照组（P<0.001； P<0.001），而 GT 组 RP%与对照组比较，差异无统计学意义（P=0.23）；以健康对照组为对照，RP%诊断 ITP 与 GT 的 AUC 分别为 0.867，0.557；以 GT 组为对照，RP%鉴别诊断 ITP 的 AUC 为 0.820，最佳临界值为 5.40%，敏感性为 76.00%，特异性为 82.50%；RP%与 PLT 联合检测鉴别诊断 ITP 的 AUC 为 0.905，敏感性为 88.00%，特异性为 81.25%。
结论 RP%在妊娠合并 ITP 患者中高表达，在妊娠合并 ITP 与 GT 患者的鉴别诊断中具有较高的临床运用价值。

PU-3977

Estrogen promotes B cell activation in vitro through down-regulating CD80 molecule expression

Li Li
Provincial Hospital Affiliated to Shandong First Medical University

Backgroud Estrogen is the main female hormone of women. It has diverse effects on cell growth, differentiation and homeostatic functions. Accumulated evidence has indicated that estrogen may regulate multiple immune functions and the immune status of women. However, there is little report on the effect of estrogen on mature B cell functions.
Method In this study, we observed the effect of 17b-estradiol (E2) on the proliferation, apoptosis, antibody production and differentiation of splenic B cells of mice in vitro. Splenocytes of female BALB/c mice were isolated and cultured with E2.
Result E2 treatments decreased the expression of CD80 molecule on splenic B cells but enhanced the total IgG antibody production of splenocyte, without promoting the differentiation of B cells to plasma cells. E2 protected splenic B cells from the serum-deficiency-induced apoptosis but had no influence on the proliferation of B cells.
Conclusion These results suggest that estrogen may promote the activity of B cells through down-regulating the expression of CD80 molecule on B cells.

PU-3978

伴 WT1、MLL-PTD、EVI1 基因幼儿急性巨核细胞白血病的诊断与遗传学分析

赵理平
广东省珠海市妇幼保健院

目的 对一例伴 WT1、MLL-PTD、EVI1 基因幼儿急性巨核细胞白血病(acute megak-aryoblastic leukemia，AMKL)进行诊断与遗传学分析。
方法 采集 EDTA-K_2 抗凝静脉血进行血常规及血细胞形态分析；抽取骨髓进行细胞形态学、免疫表型、染色体核型及融合基因分析(骨髓 MICM)。
结果 血常规白细胞计数（WBC）12.3×109/L、血红蛋白（Hb）73g/L、血小板计数（PLT）13×109/L；血细胞形态分析发现幼稚细胞胞体大小似原始幼稚淋巴细胞，呈圆形或不规则形，部分可见明显伪足；胞浆嗜碱性，着色不均，内有颗粒；核染色质细致，可见核仁 1-3 个，此类细胞约占 40%；骨髓细胞形态分析符合急性白血病，过氧化物酶（POX）染色阴性，酯酶双染色 AS-DNCE 阴性，α-NBE 阴性；流式结果可见约 52%的原始细胞，伴明显的巨核细胞相关标记表达(cCD41+，CD61+部分，CD36+)；染色体核型 46,XX,der(3)add(3)(p21)add(3)(q25),add(9)(q22),-13,+mar[4]/46,XX,
del(13)(q12q22)[3]/46,XX[3]；融合基因 WT1 过表达、MLL-PTD 阳性、EVI1 阳性。
结论 急性巨核细胞白血病具有独特且复杂的实验室检查特点及遗传学特征。临床需加强对 AMKL 的形态学认识，积极开展 MICM 检查，在分子遗传水平上进一步深入研究，以提高对 AMKL 的诊断水平。

PU-3979

红细胞分布宽度与冠状动脉病变相关性的初步研究

陈克平
东南大学附属中大医院

目的 探析红细胞分布宽度变异系数（RDW-CV）和红细胞体积分布宽度标准差（RDW-SD）与冠状动脉病变程度相关性，辅助患者的诊断与治疗。
方法 检索 2017 年 8 月至 2017 年 10 月间在本单位接受冠脉造影检查的患者共 258 例，收集其冠脉造影结果、肝功能、肾功能、病毒八项等临床基本资料，以及血细胞分析等检测指标。根据冠脉造影结果，计算 CAD 患者 Gensini 积分狭窄程度与动脉病变支数，借助 t 检验等统计学方法处理数据。
结果 CAD 与非 CAD 患者 RDW-CV 和 RDW-SD 水平 P 值均大于 0.05，差异无统计学意义;冠状动脉狭窄程度（最大值）与 RDW-CV 和 RDW-SD 无统计学意义。3. CAD 患者冠状动脉狭窄程度>25%时，病变支数（单支病变，多支病变）与 RDW-CV 存在相关性; CAD 患者冠状动脉造影 Gensini 积分与 RDW-CV 水平存在相关性。
结论 RDW-CV 水平与冠脉病变支数及 Gensini 积分相关。

PU-3980

A novel differential diagnosis method by flow cytometry from hypoproliferative MDS with Aplastic anemia

Li Li
Provincial Hospital Affiliated to Shandong First Medical University

Backgroud Myelodysplastic syndromes (MDS) are a group of clonal haematopoietic stem cell diseases characterized by cytopenia, dysplasia in one or more of the major myeloid lineages.Some hypoproliferative MDS (hypoMDS) patient is difficult to identified from aplastic anemia (AA) patient.
Method In our study, four-color flow cytometry was used to analyze the proportion of bone marrow myeloid progenitor cells, lymphocytes, neutrophils and nucleated red blood cells of patients without lymphoid and hematopoietic system tumors and AA (as control group), hypoMDS patients, puncture dilution and AA patients. The lymphocyte to granulocyte ratio (LGR), myeloid progenitor cell to lymphocyte ratio (BLR), lymphocyte to nucleated red blood cell ratio (LER) and granulocyte to nucleated red blood cell ratio (GER) were also analyzed.
Results The results showed that the proportion of bone marrow myeloid progenitor cells combined with BLR can effectively identify the control population, hypoMDS patients, puncture dilution patients and AA patients.
Conclusion This method only needs a small amount of monoclonal antibodies and bone marrow samples. The sample processing time is short and the result analysis is simple, which is very conducive to clinical laboratory application.

PU-3981

Genetic variants of cyclin-dependent kinase 5 regulatory subunit associated protein 1-like 1 and transcription factor 7-like 2 are not associated with polycystic ovary syndrome in Chinese women

Li Li
Provincial Hospital Affiliated to Shandong First Medical University

Backgroud Polycystic ovary syndrome (PCOS) is a common disorder in women that shares many genetic features with type 2 diabetes mellitus. Novel risk loci for type 2 diabetes, single nucleotide polymorphism (SNP) rs7756992 in cyclin-dependent kinase 5 (CDK5) regulatory subunit associated protein 1-like 1 (CDKAL1), rs290487 and rs11196218 in transcription factor 7-like 2 (TCF7L2), were recently identified. The aim of this study was to test whether these loci are also associated with PCOS.
Method We recruited 826 patients with PCOS and 620 healthy controls for case–control analysis. The genotypes of these three SNPs were identified. The relationships between PCOS-related clinical endocrine and metabolic features and genotypes were also analyzed. Genotype distribution of these three loci in case and control groups showed no deviation from the Hardy-Weinberg equilibrium. No significant differences in genotype and allele frequencies were found between patients with PCOS and healthy controls.
Results No associations were observed between genotypes of the three SNPs and the clinical endocrine and metabolic features of patients with PCOS in case group after adjustment for body mass index.
Conclusion We concluded that rs7756992 in CDKAL1, rs290487 and rs11196218 in TCF7L2 have no associations with PCOS or PCOS-related clinical features.

PU-3982

凝血酶原时间与血小板检验方式对肝硬化疾病患者诊断的价值研究

张丽丽
资阳市雁江区人民医院

目的 探讨在肝硬化诊断的过程中采用凝血酶原时间与血小板检验方法对患者的诊断效果及价值研究。
方法 我院 2018 年 3 月至 2020 年 6 月进行检查诊断的肝硬化疾病病人 50 例作为观察组，同期在我院实施健康体检的 50 例作为对照组。采集静脉血进行检验，比较分析两组研究对象的血小板参数以及凝血酶原时间。
结果 观察组病人血小板压积比对照组明显要低，血小板计数比对照组要小，血小板体积和血小板宽度比对照组明显要大，凝血酶原时间比对照组明显要长（P<0.05）。
结论 在肝硬化疾病病人实施凝血酶原时间与血小板检验，其应用的价值显著，能够精确的检测病人的肝功能损伤程度，值得应用于推广。

PU-3983

双鞘液与惯性聚焦的联合作用提高循环肿瘤细胞的分离效率和纯度

李博文、魏昆、孙献歌、苏宁、李文满、尚美云、黄庆
陆军特色医学中心（大坪医院）

目的 外周血循环肿瘤细胞(*circulating tumor cells, CTC*)含量极少，因此 CTC 的分选富集是鉴定分析的必要前提。尽管微孔过滤器等临床上普及开展技术在 CTC 的分选富集领域展示出良好应用性能，但仍存在分选富集效率低、细胞纯度和活性差、检测成本高且耗时等问题。为克服上述不足，本研究拟研制有效提高 CTC 分选富集效能的基于惯性聚焦原理的双螺旋微流道。
方法 (1)通过 COMSOL 多物理场仿真软件计算和优化微流道参数，构建双螺旋微流道。(2)采用 10.4 和 16.5μm 两种不同粒径的荧光微球分别模拟外周血的血细胞和 CTC，优化微流道各入口的流速等相关物理参数。(3)不同浓度(*1.0×10*^{5}、1.0×10^4、1.0×10^3/mL)Hela、MCF-7 和 K562 肿瘤细胞株经免疫荧光染色后分别加入健康成人外周血，模拟含有 CTC 的临床肿瘤患者样本，评价双螺旋微流道分选富集 CTC 的多项方法学参数。(4) 收集不同临床肿瘤患者全血样本进行分选富集，检验双螺旋微流道的实用性。
结果 (1)双螺旋微流道主通道的最佳宽度和深度分别是 500 和 170μm，可分选富集粒径尺寸~12μm 以上的细胞(如：CTC)或粒子。(2)与现有的单螺旋微流道相比，双螺旋微通道分选的两种颗粒间隔扩大了四倍以上，模拟 CTC 的 16.5μm 荧光微球的分选效率、回收率和纯度均值分别达到了 98%、96%、90%。(3)模拟肿瘤患者外周血标本的 CTC 分选通量为 $1x10^8$ 个细胞/分钟，CTC 纯度高达到 88%，细胞活性~100%。(4)从临床患者(*n=12*)的 2ml 全血中分选出 5~57 个 CTCs。
结论 本研究所述双螺旋微流道直接进行全血分选，可有效降低 CTC 丢失、活性低等风险，并具有良好的分选纯度和回收率等性能，操作简便快捷，整体耗时远低于现有技术，对临床肿瘤的诊断、转移复发监测、疗效评估具有良好的应用前景。

PU-3984

实验室拒收不合格标本及纠正对策分析

张丽丽
资阳市雁江区人民医院

目的 分析临床基础实验室对不合格标本拒收的原因，并采取有效的纠正对策；
方法 采用回顾性分析，对我院临床基础实验室 2020 年 3047 份不合格标本拒收原因进行分析，并提出纠正对策；
结果 从结果来看，当年标本不合格比率为 0.82%，1 月不合格率为 1,2%，6 月不合格率为 1.3%，其他月份的不合格率均低于 1%；不合格原因为无采集时间、标本凝固、标本量不足、非本实验室标本、医嘱停止、样本号被占用及其他（包含信息错误、条码不清等）。
结论 针对不合格标本原因采用沟通、绩效考核及培训等对策进行纠正，有助于控制检验前的质量，提高检验效率。

PU-3985

红细胞参数与网织红细胞参数在巨幼细胞贫血与溶血性贫血鉴别诊断中的应用价值

张丽丽
资阳市雁江区人民医院

目的 研究红细胞参数与网织红细胞参数在巨幼细胞贫血患者（MA）与溶血性贫血患者（HA）病情鉴定中的判定价值。
方法 将我院收治的 70 例巨幼细胞贫血患者和溶血性贫血患者（各 35 例）作为研究组，35 例正常体检人员作为对照组，比较两组人员红细胞参数 MCV、MCH、MCHC、RDW 和网织红细胞参数 RET%、IRF、HLR%的差异。
结果 研究组患者网织红细胞参数 RET%、IRF、HLR%和 RDW 均高于对照组，且 MA 网织红细胞参数参数均低于 HA（P<0.05）；研究组患者红细胞参数 MCV、MCH、MCHC 均低于对照组，且 MA 患者红细胞参数 MCV、MCH、RDW 高于 HA（P<0.05）有统计学意义，而 MCHC 参数 MA 患者与 HA 患者差异不显著。
结论 红细胞和网织红细胞参数可用于临床判断区别 MA 患者和 HA 患者，能为患者病情诊断提供依据，值得推广。

PU-3986

细针穿刺细胞学对甲状腺肿物分类的研究分析

贺爱丽、陶贵华
德州市第二人民医院

目的 通过甲状腺肿物穿刺细胞学涂片的分析，对甲状腺肿物各种临床常见疾病进行分类研究。
方法 甲状腺肿物细针穿刺或 B 超引导下细针穿刺，瑞氏一姬姆萨复合染液染色进行分类诊断，对手术病人与病理组织学对照,对良性反应性疾病病人进行跟踪随访。
结果 根据多年细胞学经验进行总结，对甲状腺各类常见疾病进行分析、研究、比对、得出正确结论。
结论 技术操作越熟练，诊断经验越丰富，操作过程实行全程质量控制，提高诊断结果的正确性。甲状腺是人体最大的内分泌腺， 位于颈前部,紧贴在喉与器官上端。其主要功能是合成和分泌甲状腺激素，当甲状腺肿大，出现肿瘤，达到一定程度时可压追气管，使气管软化，出现呼吸困难，吞咽困难等症状。甲状腺针吸细胞学检查，操作简便，不需麻醉，安全，经济实用，制片阅片快速，对于病人来说痛苦小，易于接受，极少有并发症，诊断较准确。适用于肿瘤的诊断和随访及筛查,能够早期发现癌症，其诊断的敏感性和特异性均较好。甲状腺肿物的针吸细胞学检查，为临床治疗提供可靠的依据，而且操作越熟练，经验越丰富，对于较小的病灶，我们均采用 B 超或 CT 引导下穿刺,也取得了较好的效果，具有重要意义。对于操作中的每一个环节我们都实行了质量控制，并采取了一个病例，多人同时阅片，同时诊断，对于疑难病例，到上级医院请专家会诊等形式。一个正确的诊断结果,需要多年经验的积累,不断地学习，随着免疫组化等新技术的开展,我们的形态学将会更上一个新的台阶。

PU-3987

血常规检验结果准确性的影响因素探讨

杨超
资阳市雁江区人民医院

目的 对影响血常规检验结果准确性进行分析，并提出有效的整改措施。
方法 以我院临床血液检验室 2020 年 1 月-2020 年 2 月送检血常规 3600 例为研究对象，结合临床诊断，对存在误差样本再次复检，统计存在误差的次数，分析影响准确性的因素。
结果 从结果来看，有 360 例检验假结果值，占比 10%；仪器因素为 64 例，占比 17.78%；生理因素 164 例，占比 45.56%；人为因素 132 例，占比 36.66%；因此生理因素影响最大，必须要高度重视。
结论 血常规检验属于复杂多变的过程，影响因素比较多，有时难免出现疏漏，因此应该采取相应整改措施，有效避免或减低这些因素影响准确性，才能确保血常规检验的可靠性与准确性。

PU-3988

联合应用干化学法和尿沉渣镜检的应用研究

汪德宇
资阳市雁江区人民医院

目的 分别应用干化学法和联合尿沉渣镜检对尿液进行检查，比较两种方法的阳性率及总体符合率，探讨尿液检查过程中联合应用尿沉渣镜检的必要性。
方法 随机选择我院门诊及住院病人共 600 例的新鲜尿液，每份标本均在 2 小时内分别单独应用干化学法和联合尿沉渣镜检对尿液进行检查，并以红细胞、白细胞为例，对所得结果进行统计学分析、对比。
结果 从统计分析结果可以看出单独应用干化学法和联合应用尿沉渣镜检两种方法对红细胞、白细胞的总体检出率及符合率有一定的差异，除此以外，在这 600 例尿液标本中用镜检法还检出 14 例管型、9 例病理性结晶、37 例上皮细胞等，而这些有形成分是尿干化学法无法检测的。
结论 联合应用干化学法和尿沉渣镜检，二者结果互为参照，并密切结合临床，才能得到客观、准确的评价。

PU-3989

岳阳地区 1150 例辅助生殖技术患者外周血染色体核型分析

蒋华科、向阳海、徐锦波、龚燕飞
岳阳市一人民医院

目的 对辅助生殖技术患者进行细胞遗传学分析，探讨这类患者与染色体异常的关系，为临床诊疗和遗传咨询提供依据。
方法 回顾分析 2019 年 3 月至 2021 年 5 月在岳阳市一人民医院生殖中心进行辅助生殖技术的 1150 例患者，进行外周血淋巴细胞培养、染色体制备及核型分析，并统计异常核型的类型及发生率。
结果 1150 例辅助生殖技术患者共检出染色体异常 26 例，异常核型检出率 2.26%（26/1150），其中男性染色体异常 1.86%(11/591)，明显低于女性的 2.68%(15/559)。性染色体异常 15 例，占异常核型的 57.69%（15/26），其中性染色体数目异常 11 例，包括 47,XXY 克氏综合征 5 例、45,X 特纳综合征 3 例、47,XXX 超磁综合征 3 例，性染色体结构异常 4 例；常染色体异常 9 例，占异常

核型的 34.62%（9/26），包括平衡易位 4 例，倒位 3 例，罗氏易位 1 例，染色体插入 1 例，染色体重复 1 例；检出其他染色体异常性反转 1 例，标记染色体 1 例。共检出染色体多态变异 192 例，多态率 16.69%（192/1150），其中男性多态占 73.44%（141/192），显著高于女性多态 26.56%（51/192），染色体多态变异以 Y 染色体长臂异染色质区长短和 D/G 组短臂、随体区变异检出率最高。

结论 染色体异常是不孕不育及不良孕产史的重要影响因素，临床上对辅助生殖技术患者进行染色体检查，为临床诊断与辅助生殖技术提供依据。

PU-3990

肺部感染与血小板减少的相关性研究

唐光织
资阳市妇幼保健院

目的 探讨肺部感染与血小板减少的相关性。

方法 收集临床肺部感染的患者共 232 例(所有病例肺部感染诊断明确，并排除血液系统疾病及其他可能引起血小板减少的继发因素)。分别统计血小板正常组人数与血小板减少组人数。入选血小板减少组的肺部感染人群满足至少两次血常规检查血小板计数<100×109/L。收集同期间相关样本数量健康人群 235 例作为对照组。分别统计血小板正常组人数与血小板减少组人数。采用 Sysmex-XN550 全自动血液分析仪分别检测外周血血小板的数量，并对其检测结果进行统计学分析。

结果 肺部感染患者血小板计数减少发病率为 19%，而对照组血小板计数减少率为 6%，感染患者血小板减少发生率明显高于对照组，差异有统计学意义，因此血小板减少与肺部感染有关。C 反应蛋白、降钙素原、纤维蛋白原检测结果与血小板计数成负相关。

结论 肺部感染可能会引起血小板数目减少，血小板数目与 C 反应蛋白、降钙素原、纤维蛋白原呈负相关。

PU-3991

白细胞、C-反应蛋白和降钙素原三项联合检测对预测婴幼儿肺炎临床诊断的临床价值

黄杰
资阳市雁江区人民医院

目的 探讨白细胞（WBC）、C-反应蛋白（CRP）和降钙素原（PCT）三项联合同时检测对预测婴幼儿肺炎临床诊断的重要价值。

方法 对 2015 年 1 月至 2015 年 12 月，我院 868 例 0-3 岁的不同肺炎病原体感染患儿进行 WBC、CRP、PCT 测定。

结果 比较阳性比率结果 868 例病人标本中，细菌性肺炎 436 例，病毒性肺炎 241 例。其中细菌性肺炎 WBC、CRP、PCT 阳性比例分别为 51.6%、60.3%、87.6%，病毒性肺炎 WBC、CRP、PCT 阳性比例分别为 26.5%、9.5%、15.0%，两组比较有统计学意义。在细菌感染组中 WBC 的灵敏度为 51.6%，特异度为 73.4%；在细菌感染组中 CRP 水平的灵敏度为 55.3%，特异度为 90.5%；在细菌感染组中 PCT 灵敏度为 87.6%，特异度为 85.1%。

结论 WBC、CRP、PCT 水平均可作为早期诊断婴幼儿肺炎感染类型的重要指标。且对早期诊断与评估预后有重要意义。

高荧光强度网织红细胞占比与终末期肾病患者生存质量的关系

苏洋、曹杰贤
昆明医科大学第一附属医院

高荧光强度网织红细胞（HFR）是晚幼红细胞发育成为成为成熟红细胞的最初阶段，是骨髓造血活性较敏感的指标。红细胞生成素（EPO）系主要由肾脏产生的糖蛋白，为促进骨髓红系祖细胞生长、增殖、分化、发育为成熟红细胞的主要刺激因子，同时加速网织红细胞的释放，EPO 与 HFR 之间有着密切联系。肾病进展至终末期会导致 EPO 生成减少，对骨髓红系刺激降低，骨髓造血活性减弱，严重影响患者生存质量。HFR 占比检测对于临床应用 EPO 治疗终末期肾病导致的贫血有极其重要的意义。

PU-3993

应用静脉采血法及末梢采血法为患者进行血常规检验对提升检验准确率的价值分析

杨姗
资阳市雁江区中医医院

目的 分析静脉采血法及末梢采血法在血常规检验中的对提高检验准确率的价值。
方法 以我院 2019 年 1 月至 2020 年 1 月间接受体检的 98 例健康人员作为此次的观察对象，将采取静脉采血法所得检验结果设为实验组，将末梢采血法所得检验结果设为对照组，所有患者先行静脉采血，再行末梢采血，并对检验结果进行对比分析。
结果 从红细胞相关指标检测结果上看，实验组的 HGB、HCT、MCHC 以及 PLT 水平较高，与对照组相比差异具有统计学意义（$p<0.05$）；从血小板相关指标检测结果上看，实验组的 WBC 水平明显较低，与对照组相比差异显著（$p<0.05$）；观察白细胞相关指标检测结果，实验组的 NE 水平明显较低，对比具有统计学差异性。
结论 静脉采血法以及末梢采血法在血常规检验中均可得到较为准确的结果，但是静脉采血法更为准确，值得推广。

PU-3994

阴道分泌物对尿常规临床检验结果的影响及干预研究

陈婷
资阳市雁江区中医医院

目的 分析阴道分泌物对尿常规临床结果的影响。
方法 以 2019 年 3 月至 2020 年 3 月间在我院接受尿常规检验的 38 例女性临床资料作为此次的研究样本，所以观察对象均接受尿常规检验，共计采集两份标本，其中 38 例为常规采集尿液标本，并命名为参照组，其余 38 例在参照组的基础上，做阴道分泌物剔除处理，并命名为研究组，分析两组尿液标本检验结果。
结果 观察两组的各指标检出率，结果显示（$p<0.05$），研究组的蛋白质、红细胞、白细胞以及上皮细胞检出率均较低，对比具有统计学差异性（$p<0.05$）；观察两组各项指标检出水平，结果（$p<0.05$），研究组的 pH、尿糖以及蛋白质均较低，对比具有统计出差异性。
结论 临床尿常规检验结果会受阴道分泌物的影响，导致检验结果准确性下降。

PU-3995

肿瘤患者治疗前后 TBNK 淋巴细胞亚群变化情况及临床意义

常艳红
吉林金域医学检验所有限公司

目的 探讨肿瘤患者治疗前后 TBNK 淋巴细胞亚群变化情况及临床意义。
方法 统计吉林金域医学检验所有限公司，在 2020 年 1 月-2021 年 1 月接收的肿瘤患者 3500 例治疗前后的样本检测 TBNK 淋巴细胞亚群的数据结果，比较患者在治疗前后 TBNK 淋巴细胞亚群的变化情况并进行统计分析。
结果 正常人 CD3 范围为 67.88±9.22，CD4 范围为 39.52±3.66，CD8 范围为 29.50±2.11，通过统计分析发现，3500 例肿瘤患者在治疗前的 T 细胞 CD3 的范围为 46.23±12.47，CD4 的范围为 22.43±9.44，CD8 的范围为 28.64±7.59，结果明显低于正常水平（P＜0.05）。接受治疗后，肿瘤患者 T 细胞 CD3 的范围为 55.64±9.07，CD4 范围为 36.87±6.40，CD8 范围为 26.98±6.28 比例有显著的提升（P＜0.05）。不难发现，治疗后有效果的患者 CD4/CD8 较治疗前有所升高（P＜0.05）。
结论 淋巴细胞亚群是检测细胞免疫和体液免疫的重要指标，反映的是机体当前的免疫功能和状态情况。由于肿瘤患者的细胞免疫功能处于免疫抑制状态，患者对识别和杀伤突变细胞的能力下降，故 T 细胞（CD3、CD4、CD8）比例明显低于正常人。随着治疗的进程，治疗有效果的患者 T 细胞会有所上升，而治疗无效果的患者 T 细胞反而会下降。表明通过检测 TBNK 淋巴细胞亚群变化，可以来监测治疗效果是否有效以及判断预后都有一定的帮助。目前肿瘤的发病率越来越高，临床急需一种检测手段来辅助诊断，而 TBNK 淋巴细胞亚群的变化情况就是反应机体当下的免疫情况，故可以广泛应用于临床，来辅助诊断及监测肿瘤患者的病情。

PU-3996

限制性输血方式对创伤性脑损伤患者 临床转归的预后影响

黄通位
资阳市雁江区中医医院

目的 对创伤性脑损伤患者应用限制性输血方式后临床转归的预后影响进行研究分析。
方法 选取我院 2014 年 10 月—2016 年月 10 月收治的 138 例创伤性脑损伤患者作为研究对象，按照入院顺序将其随机分为对照组和观察组，各 69 例。对照组应用开放性输血方式，观察组患者应用限制性输血方式。对比分析两组患者的临床转归和预后影响情况。
结果 对照组不良反应发生率为 24.64%，观察组的不良反应发生率为 4.35%，观察组比对照组明显低。对照组有 6 例患者治愈，观察组有 19 例患者治愈，观察组明显高于对照组。两组患者在康复治疗、看护、机械通气治疗等方面无明显差异。
结论 应用限制性输血方式对创伤性脑损伤患者进行治疗，能取得较好的治疗效果，能降低不良反应发生率，提高治愈率，临床转归预后较好，临床上具有较高的应用价值。

PU-3997

临床检验中影响尿液检验的因素分析

王潘
资阳市雁江区中医医院

目的 分析临床检查中影响尿检结果的因素，提出有效的预防和干预措施。

方法 随机抽取 200 例患者进行尿常规检查。所有患者均按检测要求采集晨尿作为检测样本，采集后尽快送实验室。采用尿液分析仪进行尿常规检查，结合患者的身体状况和后期临床诊断结果判断尿常规结果的准确性。本文详细分析总结了影响尿样采集、保存和检查分析结果的因素，并提出了有效的干预措施，以提高尿检的可靠性，为临床实践提供准确的依据。
结果 200 例中 15 例异常，占 7.50%（15/200）。最容易引起误差的环节是尿样检测 66.67（4/15），其次是尿样采集 26.67（4/15），影响较小的因素是尿检申请 0 和尿样转移申请 6.67（1/15）。
结论 影响尿检结果准确性的关键因素包括：尿检申请、尿样采集、转移和检测。影响这个过程的因素很多。只有患者和医务人员才能规范操作，这样才能保证尿检过程中不出差错，得到最准确的尿检结果，才能帮助医生准确鉴别疾病，希望引起重视。

PU-3998

临床检验中便常规检验的临床应用价值分析

王潘
资阳市雁江区中医医院

目的 分析临床检验中便常规检验的临床应用价值。
方法 120 例进行便常规检验患者,随机分为查虫卵试验组与便潜血试验组,每组 60 例。查虫卵试验组患者采用查虫卵试验进行检验,便潜血试验组患者采用便潜血试验进行检验。对比两组诊断有效率、疾病检出率、疾病诊断符合率。
结果 便潜血试验组患者诊断总有效率为 93.33%,高于查虫卵试验组的 80.00%,差异有统计学意义（P<0.05）。便潜血试验组患者疾病总检出率为 93.33%,高于查虫卵试验组的 80.00%,差异有统计学意义（P<0.05）。
结论 临床检验中便常规检验的临床应用价值突出,潜血试验的诊断效果更好,值得临床医护人员高度重视并推广利用。

Evaluation of Serum Exosomal LncRNA-Based Biomarker Panel for Diagnosis and Recurrence Prediction of Bladder Cancer

Shujun Zhang、Chuanxin Wang
The Second Hospital of Shandong University

Background Long non-coding RNAs (lncRNAs) embedded in circulating exosomes may serve as diagnostic biomarkers for a variety of tumors. We aimed to develop a panel consisting of serum exosomal lncRNAs for diagnosis and recurrence prediction of bladder cancer (BC).
Methods Exosomes were isolated from serum of BC patients and healthy controls and validated by transmission electron microscopy (TEM), nanoparticle tracking analysis (NTA) and Western blotting analysis. qRT-PCR was performed to analyze the expressions of 11 candidate lncRNAs using a training set (n=200) and a validation set (n=320). Receiver-operating characteristic (ROC) curves were employed to evaluate the diagnostic performance of the identified lncRNAs. Multivariate logistic regression model was used to construct an lncRNA panel. Moreover, we determined the correlation between lncRNAs and recurrence-free survival (RFS) of patients with non-muscle-invasive bladder cancer (NMIBC) by Kaplan-Meier analysis, univariate and multivariate Cox analysis.

Results Three lncRNAs (PCAT-1, UBC1 and SNHG16) were significantly up-regulated in serum exosomal samples of BC patients, and a panel was established based on these three lncRNAs. The three-lncRNA panel provided high diagnostic accuracy for BC with an the area under the ROC curve (AUC) of 0.857 and 0.826 in the training set and validation set, respectively, which was significantly higher than that of urine cytology. The corresponding AUCs of this panel for patients with Ta, T1 and T2–T4 were 0.760, 0.827 and 0.878, respectively. Kaplan-Meier analysis showed that NMIBC patients with high UBC1 expression had significantly lower RFS (p=0.01). Univariate and multivariate Cox analysis demonstrated that UBC1 was independently associated with RFS (p = 0.018).
Conclusions Our study established a distinctive three-lncRNA panel with considerable diagnostic value and identified lncRNA UBC1 as a potential biomarker for prediction of NMIBC recurrence.

PU-4000

遗传性蛋白 S 缺陷症家系的临床表现及遗传背景研究

李蕾、吴希、武文漫、丁秋兰、王学锋
上海交通大学医学院附属瑞金医院

目的 蛋白（PS）作为活化蛋白 C（APC）和组织因子途径抑制物（TFPI）的辅因子在体内发挥重要的抗凝功能。PS 缺陷症是我国 VTE 患者最主要的危险因素之一，受累患者众多。然而，国内尚缺少针对 PS 缺陷症的大样本研究。本研究对 55 个 PS 缺陷症家系的临床表现，危险因素及遗传背景进行研究。
方法 收集 55 个 PS 缺陷症家系的临床资料，检测止凝血相关指标，对 55 例遗传性 PS 缺陷症患者的临床特征、实验室表型和基因检测结果进行总结；通过凝血酶生成实验检测 32 例 PS 缺陷症患者的 APC 和 TFPI 辅因子功能；采用二代测序联合 AccuCopy 拷贝数检测技术对包含 PROS1 在内的 35 个基因组成的易栓症基因检测 panel 进行点突变、小插入/缺失或大插入/缺失的检测，并对检出的突变进行致病性分析。
结果 该研究的 55 例 PS 缺陷症家系的先证者中，52.7%的患者经历多次或多部位血栓发生，以下肢 DVT 或 PE 为主（82.7%），40%的患者合并其他遗传性或获得性 VTE 危险因素，这些患者首次发生 VTE 的年龄更小且 VTE 复发的比例更高。共有 50 例患者被检出携带致病性的 PROS1 突变，高于国际报道的 50%的突变诊断率；共发现 38 种不同的 PROS1 杂合突变，其中有 17 种为国际首次报道；首次发现三种中国人群特有的 PROS1 热点突变（E67A, R561W 和 Y560*）；通过凝血酶生成实验首次发现两种不影响 PS 的 APC 辅因子活性但导致 TFPI 辅因子活性减弱的 PROS1 突变（R233K 和 G308E）；体外蛋白表达及功能试验进一步证实 R233K 和 G308E 突变型 PS 的表达和分泌正常、APC 辅因子活性正常但 TFPI 辅因子活性仅分别为野生型的 80%和 69%；未来对自然发生的导致 TFPI 辅因子活性减弱的 PS 突变进行深入研究有助于揭示 PS 发挥 TFPI 辅因子抗凝功能的可能机制，对完善目前 PS 缺陷症的临床诊断具有重要意义。
结论 作为国内较大规模的 PS 缺陷症研究，本研究首次对中国 PS 缺陷症患者临床特征、合并其他血栓危险因素的情况、实验室表型和基因型特征进行了详细总结；PS 缺陷症患者合并其他遗传性或获得性血栓危险因素时，首发静脉血栓的年龄更年轻且血栓复发比例更高；首次发现了三个不同于其他种族的 PROS1 热点突变（E67A，R561W 和 Y560*）；首次发现两种不影响 PS 的 APC 辅因子活性但导致 TFPI 辅因子活性减弱的 PROS1 突变（R233K 和 G308E），未来对自然发生的导致 TFPI 辅因子活性减弱的 PROS1 突变进行深入研究有助于揭示 PS 发挥 TFPI 辅因子抗凝功能的机制并进一步完善目前 PS 缺陷症的临床诊断。

PU-4001

结直肠癌外周血单个核细胞 DNA 甲基化检测可实现结直肠癌的早期诊断

谢艳
山东大学第二医院

目的 本研究初步建立起结直肠癌外周血单个核细胞（PBMC）DNA 甲基化图谱，对外周血 PBMC 进行提取，筛选出用于结直肠癌诊断的 cg 位点，探究其作为肿瘤标志物的诊断效能，为阐明甲基化位点在结直肠癌发生发展中的作用机制研究提供思路。
方法 研究前期对结直肠癌患者及健康对照者外周血 PBMC 进行 850K 芯片分析，初步筛选出在差异最大的 10 个位点作为候选。通过焦磷酸测序在训练集（20 对结直肠癌患者及 20 对健康对照者）样本中检测候选 cg 位点的甲基化情况。同时采用受试者工作特征曲线（ROC）分析外周血 PBMC 中差异甲基化位点对结直肠癌的诊断效能。训练集样本中表达趋势与测序结果一致的 cg 位点进入验证阶段。随后在另一独立样本集，即验证集样本（30 对结直肠癌患者及 30 对健康对照）中检测候选 cg 位点的甲基化情况，并评估其诊断价值。在模型建立阶段，除去关联性分子，建立诊断 pancel，并评估其诊断价值。
结果 在训练和验证阶段，我们通过焦磷酸测序证实 cg06469890、cg27077475、cg09072601 在结直肠癌外周血 PBMC 均低甲基化。在训练集样本中， 3 个位点对结直肠癌的诊断效能分别为 0.75、0.72、0.80；在验证集样本中， 3 个位点对结直肠癌的诊断效能分别为 0.74、0.75、0.79。最后构建诊断 logestuc 诊断模型。
结论 本研究通过分析、验证结直肠癌外周血 PBMC 的 cg 位点甲基化情况，并建立诊断 pancel，对结直肠癌的诊断具有良好的敏感性和特异性，可以较好地区分结直肠癌患者和健康对照者，因此可作为结直肠癌诊断的潜在生物标志物。

PU-4002

一种基于流体力学的单细胞捕获微流道的研究

孙献歌、李博文、魏昆、尚美云、苏宁、李文满、黄庆
陆军特色医学中心（大坪医院）

目的 本文基于流体力学最小流阻原理设计了单细胞捕获微流道，单个细胞快速高效的捕获在相应的位置，获得高效的单细胞捕获效率满足单细胞分析的需要。
材料与方法 （1）采用 COMSOL 多物理场仿真软件模拟了三维微通道中速度场分布，获得细胞捕获前和捕获后的流率比值，优化微通道的几何参数，并通过软光刻技术制备 PDMS 材质的单细胞捕获微流道。（2）采用注射泵 1.0×10^5 个/mL K562 细胞悬液以一定的流速注入微通道内进行细胞捕获，验证该微通道单细胞捕获的可行性以及评价构建的单细胞捕获微流道的捕获效率以及捕获细胞的活性。
结果 （1）仿真得到微流道的主通道的宽度 25um，高度 25um，捕获通道圆形区域的半径 50um，捕获区域的长度 12um，宽度为 7um，适用于捕获尺寸大于 10 um 的细胞。（2）细胞捕获过程中，细胞优先流向流阻较小的捕获区域被捕获，同时细胞捕获后捕获通道的流阻急剧增加，随后的细胞将绕过该捕获区域流向主通道，从而基于通道流阻的动态变化实现单细胞的捕获形成单细胞阵列。（3）细胞实验表明该单细胞捕获微通道能够高效且快速地完成单细胞捕获，单细胞捕获效率可高达 85%，并且捕获的细胞保持良好的细胞活性，证实了该微通道捕获单细胞的可行性。
结论 该单细胞捕获微流道无需复杂的集成，蛇形弯曲通道的设计能够增加主通道的流阻，同时圆形结构的设计能够减少捕获通道的流阻，不仅有效缩小了整个微流控装置的尺寸，可快速高效地实现高通量的单细胞捕获，在单细胞分析中具有潜在的应用价值。

PU-4003

罕见先天性嵌合体血型所致混合视野的分析

梁路石
东南大学附属中大医院

目的 对一例微柱凝胶法 ABO 血型鉴定反定型为 B 型（与标准 Ac 凝集强度为 4+、与标准 Bc 和 Oc 均不凝集）、正定型出现混合视野（与单克隆抗-B 凝集强度为 4+ mixed field、与单克隆抗-A 不凝集）的样本进行进一步检测，加以分析以明确原因。
方法 结合临床资料，对本例中出现混合视野的可能原因逐项鉴别。采用试管法复检 ABO 血型，检测亲和力，并增加与抗-H 的反应。应用毛细管离心技术，对远、近心段红细胞分别进行 ABO 正定型检测。对与单克隆抗-B 血清不凝集部分的红细胞以及凝集部分且经二硫苏糖醇处理后的红细胞分别进行 ABO 正定型的检测。对本例样本进行分子生物学检测。
结果 患者非血液系统疾病、无输血史。试管法 ABO 血型鉴定反定型结果同微柱凝胶法，正定型与单克隆抗-A 不凝集，与单克隆抗-B 多次离心后出现“油煎蛋”样混合凝集外观。与单克隆抗-B 表现为正常亲和力。与抗-H 呈强阳性反应。毛细管离心后近心端和远心段结果相同，均仍表现出与原始结果相同的混合视野。与单克隆抗-B 不凝集部分的红细胞再次检测为 O 型，与单克隆抗 B 凝集部分的红细胞经二硫苏糖醇处理后再次检测为 B 型。该样本经过 ABO 测序虽未检测到 3 个以上等位基因，但发现 B 基因特征突变点位置出现小峰，B 基因扩增强度较其他基因更弱，说明 B101 等位基因的拷贝数比 O01 等位基因低，不同于 B101/O01 杂合。
结论 血液病、造血干细胞移植、非同型输血均可导致血型鉴定出现混合视野，可通过临床资料以及毛细管离心技术进行排除。先天性嵌合体血型是导致混合视野的一个罕见原因，本例为 B/O 嵌合体血型在排除上述后天因素后需要与 B3 亚型进行鉴别，B3 亚型亲和力显著减低，基因检测可发现特征性突变。正确对嵌合体血型进行识别对输血安全及亲子鉴定有重要意义。

PU-4004

遗传性易栓症患者非血栓急性期时血浆标志物的变化及意义

李蕾、吴希、武文漫、丁秋兰、王学锋
上海交通大学医学院附属瑞金医院

背景 遗传性抗凝蛋白缺陷症患者具有多部位或反复血栓形成倾向，因此，及时准确地诊断静脉血栓栓塞形成（VTE）对该类患者的管理和治疗至关重要。
方法 选取 100 例未在 VTE 急性期的遗传性抗凝蛋白缺陷患者（TPs）和 100 例健康对照（HCs），检测以下指标：凝血酶-抗凝血酶复合物（TAT），纤溶酶-α2-纤溶酶抑制剂复合物（PIC），组织型纤溶酶原激活物/纤溶酶原激活物抑制物-1 复合物（t-PAIC）和可溶性血栓调节蛋白（sTM），比较上述指标的组间差异。
结果 虽然 TPs 组的 TAT，PIC，t-PAIC 和 sTM 的水平显著高于 HCs 组，但是 70％TPs 的上述四种生物标志物结果属于正常参考范围。26％的 TPs 检测到 PIC 升高（伴或不伴 TAT 升高），这表明患者体内存在纤溶和凝血功能的激活。与无 VTE 史的 TPs 相比，有 VTE 史的 TPs 血浆中 sTM 水平显著降低，而其他三个生物标志物仅显示出轻度升高。与发生反复血栓事件的 TPs 相比，发生单次血栓事件的患者 tPAI-C 水平明显降低，而 TAT，PIC 和 sTM 水平与血栓事件次数无关。
结论 大多数遗传性易栓症患者在 VTE 非急性期时，体内的凝血、纤溶和内皮功能处于代偿状态；男性易栓症患者发生凝血和纤溶系统同时激活的可能性高于女性患者，而女性患者更容易出现内皮细胞损伤。四种生物标志物（TAT、sTM、PIC 和 t-PAIC）的单次检测结果难以预估易栓症患者的血栓形成风险，未来的研究应重点关注其在易栓症患者 VTE 非急性期的动态监测，探究该四项生物标志物在 VTE 的早期诊断、推测病情进展和监测预后中的作用。

PU-4005

某品牌微柱凝胶卡漏检 cisAB 型 1 例

梁路石
东南大学附属中大医院

目的 对一例某品牌微柱凝胶法全自动血型仪判读为正常 AB 型而玻片法提示为疑似 AB 亚型（AB_{weak}）的标本进行进一步鉴定并加以分析。
方法 采用试管法复检 ABO 血型并增加与抗-A_1 和抗-H 的反应，检测亲和力并进行分子生物学检测
结果 试管法与抗-A 凝集强度为 4+，与抗-A_1 不凝集，与抗-B 凝集强度为 2+，自身对照为阴性，通过二次离心、4℃孵育等增强实验检出弱的不规则抗-B，血清学格局为 A_2B_x。H 抗原增强，与对照 O 细胞与抗-H 的凝集强度相近。与单克隆抗-B 标准血清凝集时间显著延长，表现出低亲和。基因型为 CisAB01/O01。
结论 微柱凝胶卡存在因填充的单克隆抗体效价过高和/或使用了增强剂以致检测体系灵敏度过高的问题，其可能导致部分亚型的弱凝集表现为正常凝集强度而不能被正确识别，是一种易被忽视的且可能直接导致临床不良后果的 ABO 亚型漏检原因，一味追求高效价、高灵敏度是误区，必须引起重视。当前 ABO 血型鉴定质控品及质控规则存在漏洞，仅设置强阳性和阴性为靶值不能识别出这种失控状态。若单独使用单一品牌微柱凝胶卡检测 ABO 血型即使正反定型一致、质控在控仍可能出现错误结果，存在安全隐患。玻片法 ABO 血型鉴定与非常规试验的亲和力检测手法相似，一定程度上可以通过反应出的弱凝集或相异于微柱凝胶卡的凝集结果和低亲和表现而提示出 ABO 亚型的可能，合理的利用“不灵敏”的玻片法作为微柱凝胶卡的补充，是解决此问题的一个选择。

PU-4006

不同程度的溶血对同型半胱氨酸检测结果的影响

王波、张明亮
合肥金域医学检验实验室有限公司

目的 探讨标本溶血对同型半胱氨酸（Homocysteione，Hcy）检测结果的影响。
方法 选取 2020 年 3 月-2020 年 6 月送检合肥金域医学检验实验室同型半胱氨酸 20 例，其中血清 10 例，肝素抗凝全血 10 例，20 例标本均无溶血、脂血、黄疸，溶血标本采用两种方法制备。方式 1：分别为将 10 例正常血清采用 BecKman Coulter AU5800 全自动生化分析仪检测 HCY 结果，然后用血红蛋白液按不同浓度配置成溶血程度为 5g/L、10g/L、15g/L、20g/L、25g/L、30g/L 的系列血清标本；方式 2：将 10 例肝素钠抗凝全血标本离心后采用 BecKman Coulter AU5800 全自动生化分析仪检测 HCY 结果，然后采用注射器抽打混匀，根据美国临床和实验室标准化协会(CLS I)的文件要求制备轻度溶血及重度溶血的血清标本。采用 BecKman Coulter AU5800 全自动生化分析仪检测上述 40 例血清 Hcy 浓度变化，并与正常血清标本 Hcy 浓度进行对比。
结果 两种方法制备的溶血标本相对与未溶血标本均处于增高趋势，差异具有统计学意义 $P<0.05$
结论 检验工作中，影响临床结果准确性的有很多因素，其中以溶血最常见，了解标本溶血对检验结果的影响及溶血后的处理方法，可以更好地进行检验工作，并提高检验结果的准确性和可信性。

高通量易栓症基因检测 PANEL 的临床应用研究

李蕾、吴希、武文漫、丁秋兰、王学锋
上海交通大学医学院附属瑞金医院

目的 易栓症是指由于遗传性或获得性危险因素导致患者易发静脉血栓栓塞症（VTE）的一类疾病，其中遗传性抗凝蛋白缺陷症是亚洲静脉血栓患者最主要的危险因素。及时准确的表型和基因诊断不仅对易栓症患者的血栓预防和诊疗至关重要，还为发现新的致栓机制奠定基础。研发高效、准确、简单、实用的易栓症遗传性危险因素的基因检测方法，有助于我国易栓症患者的病因诊断和治疗指导。本研究遵循“临床诊断-家系调查-表型检测-基因分析-分子发病机制探究”的研究模式，对 411 例易栓症患者的表型及遗传背景进行分析。

方法 收集上海交通大学医学院附属瑞金医院血栓与止血门诊 411 例静脉血栓患者的临床及家系资料，并对其进行遗传性及获得性易栓症表型检测；通过文献研究和人类孟德尔遗传学数据库检索，遴选出 35 种与血栓发生相关的基因，组成易栓症基因检测 Panel，采用二代测序及 CNVplex®高通量拷贝数检测技术对该 Panel 进行点突变、小缺失/插入及拷贝数变异检测。

结果 411 例静脉血栓患者中有 267 例携带基因突变，突变检出率为 65.0%。其中，62.2%的患者携带单一基因突变，13.5%携带单基因的复合杂合突变，另有 24.3%携带 2 种及以上的基因突变。在 267 例携带基因突变的患者中，有 220 例患者携带抗凝蛋白基因（SERPINC1、PROS1 和 PROC）的突变，有 47 例患者携带其他 22 种基因（F2、F5、F9、F12、PROCR、THBD、SERPIND1 及 PLG 等）的突变，其中部分突变（F2 基因 R596Q 及 R541W、F9 基因 R384Q 突变及 JAK2 基因 V617F 突变等）被证实与静脉血栓发生相关。拷贝数检测发现，有 31 例患者存在拷贝数变异，以 PROS1 及 PROCR 基因为主。另外，在 82 例存在获得性血栓危险因素（抗磷脂综合征、手术或妊娠等）的患者中，61.0%的患者携带遗传性血栓危险因素。56 例患者实验室表型检测结果均为正常，而易栓症基因检测 Panel 结果显示，其中 20 例患者携带致病性基因突变。72 例患者因处于血栓急性期或口服抗凝药物期间，无法进行表型检测，经易栓症基因检测 Panel 分析发现，其中 32 例患者携带致病性基因突变。

结论 本研究建立的易栓症基因检测 Panel 可以快速、有效及准确地对遗传性静脉血栓危险因素进行筛查。对存在获得性血栓危险因素的患者仍有必要进行遗传分析。根据基因检测结果，可评估患者及其家系成员血栓发生风险的大小，制定相应的预防治疗方案，预防血栓的发生或复发，减少血栓后综合征的发生，值得在临床上广泛推广应用。

BNP、MYO、D-D 水平对慢性心衰患者心衰程度的临床意义分析

刘琳琳
陆军军医大学第二附属医院（新桥医院）

目的 探讨血浆 BNP、MYO、D-D 水平及 LVEF 对慢性心衰患者心衰程度的临床意义分析。

方法 选择 2016 年 1 月—2018 年 1 月于新桥医院心内科住院的慢性心力衰竭患者 77 例作为心衰组，根据美国纽约心脏病学会（NYHA）心功能分级标准，本研究中心功能Ⅰ级患者 15 例，心功能Ⅱ级患者 19 例，心功能Ⅲ级患者 22 例；心功能Ⅳ级患者 21 例；选取同期体检的健康老年人 80 例作为对照组。比较各组 B 型利钠肽（BNP）、肌红蛋白（MYO）、D-二聚体（D-D）水平及左心室射血分数（LVEF），分析 BNP、MYO、D-D 水平、LVEF 的相关性。

结果 心衰组 BNP、MYO、D-D 水平高于对照组，差异有高度统计学意义（P < 0.01）。心功能分级由Ⅰ级到Ⅳ级，血浆 BNP、MYO、D-D 水平逐渐升高，LVEF 逐渐降低，差异有高度统计学意义（P < 0.01）；按心脏射血分数<55%、55%-65%、>65%分组，血浆 BNP、MYO、D-D 水平逐渐升高，LVEF 逐渐降低，差异有高度统计学意义（P<0.01）；心力衰竭患者血浆 MYO、D-D 水平与 BNP 均呈正相关（r = 0.65、0.74），与 LVEF 均呈负相关（r =-0.52、-0.66），差异有统计学意义（P< 0.01）；ROC 曲线分析显示，血浆水平联合检测诊断心功能Ⅲ级、Ⅳ级 CHF 的灵敏度、特异度、约登指数、ROC 曲线下面积较各指标单项诊断时高。
结论 心力衰竭患者的 BNP、MYO、D-D 水平明显升高，且三者与心功能分级呈正相关，与 LVEF 呈负相关，因此可作为评估心力衰竭严重程度的重要指标。

PU-4009

TCT 联合 HPV 分型检测对宫颈癌筛查的应用价值探讨

鲍渝霞
昆明医科大学第一附属医院
云南省实验诊断研究所
云南省检验医学重点实验室

目的 比对薄层液基细胞学（TCT）检查、人乳头瘤病毒（HPV）分型检测及二者联合检测在宫颈病变筛查中的差异，经宫颈病理学组织检查确诊，探讨上述两种方法及其联合使用在宫颈病变筛查中的诊疗价值。
方法 收集 2018 年—2020 年里，我院收治并行 HPV、TCT 和宫颈活检的 173 例患者检查资料，以组织学检查为确诊标准，回顾性分析两种检测方法在宫颈病变中的早期筛查效果。
结果 173 例患者，组织活检呈阳性 166 例，阴性 7 例。HPV 检测呈阳性 145 例（阳性率 83.82%）；TCT 阳性 139 例（阳性率为 83.24%）。当两者联合检测时，其阳性率（93.6%）和与病理诊断的符合率（95.95%）均大于 HPV、TCT 单独检测，且其假阴性率、假阳性率相较独立检测均明显减低。
结论 HPV+TCT 联合检查提高早期宫颈病变筛查的准确度、阳性率和阳性预测值，并降低其筛查的假阴性率、假阳性率；对早期宫颈病变及宫颈癌的发现具有重要意义，在临床诊治方面应用价值高，推荐广泛应用。

PU-4010

血浆凝血因子活性测定临床应用的初步调查

鲍渝霞
昆明医科大学第一附属医院
云南省实验诊断研究所
云南省检验医学重点实验室

目的 通过对昆明医科大学第一附属医院 2015 年 5 月至 2016 年 3 月做血浆凝血因子活性检测的标本数量统计调查，探讨临床医师对血浆凝血因子活性检测的应用状况。
方法 调查性研究，对我院做凝血因子活性检测的标本数量分别做总体、分组、分布情况做统计分析。
结果 调查期间，70894 份凝血检测标本中仅有 253 份检测血浆凝血因子活性，占总数的 0.36%。所有检测凝血因子活性标本中，凝血四项正常的占 15.2%，凝血四项异常的占 84.98%。凝血因子活性检测主要集中在血液内科 45.45%，儿科 13.04%，EICU 12.65%，急诊输液 10.28%，方便门

诊 9.09%,其他科室占 9.49%。20 例确诊为血友病 A 的住院患者住院期间做 FⅧ检测一次的有 4 例，大于两次的有 16 例。

结论 1.临床医师对血浆凝血因子活性测定的临床意义不甚了解，在临床工作中使用极少。2.临床科室中血浆凝血因子测定主要集中在小部分科室，如血液内科及儿科，其余应常规检测凝血因子活性的科室，如血管外科、消化内科等，在调查期间凝血因子活性因子测定标本极少。3.临床对血友病患者凝血因子检测仍存在不规范现象。

PU-4011

血清外泌体 circRNAs 的测序分析示 circ-PNN 可作为结肠直肠癌潜在的生物标志物

谢艳、王传新、杜鲁涛
山东大学第二医院

目的 本研究初步建立起结直肠癌血清外泌体 circRNAs 差异表达谱，对血清外泌体进行提取、鉴定，筛选出用于结直肠癌诊断的 circRNAs 分子，探究其作为肿瘤标志物的诊断效能，为阐明 circ-PNN 在结直肠癌发生发展中的作用机制研究提供思路。

方法 研究前期对结直肠癌患者及健康对照者血清外泌体 circRNAs 进行测序分析，初步筛选出在多个测序样本中均具有表达的 circRNAs 分子作为候选分子。随后，我们通过沉淀剂法从结直肠癌患者及健康对照者血清中分离并提取外泌体。并通过透射电子显微镜、免疫印迹技术、纳米粒径分析技术对所提取外泌体进行鉴定。针对候选 circRNAs 分子环化位点设计 divergent 引物，通过琼脂糖核酸凝胶电泳验证引物的特异性，sanger 测序检测 circRNAs 环化位点，放线菌素 D 实验证明 circRNAs 较 mRNAs 稳定性强。随后，通过实时荧光定量 PCR(RT-qPCR)技术在训练集（88 对结直肠癌患者及 88 对健康对照者）样本中检测候选 circRNAs 分子的表达情况。同时采用受试者工作特征曲线（ROC）分析血清外泌体中差异表达的 circRNAs 分子对结直肠癌的诊断效能。训练集样本中表达趋势与测序结果一致的 circRNAs 分子进入验证阶段。随后，在另一独立样本集，即验证集样本（58 对结直肠癌患者及 58 对健康对照）中检测候选 circRNAs 表达情况，并评估其诊断价值。最后，我们用 Targetscan 和 Miranda 等软件预测出和 circ-PNN 有结合靶点的 miRNAs 分子及其下游 mRNAs，并通过 RT-qPCR 验证 miRNAs 与 circ-PNN 在结直肠癌血清外泌体中表达水平之间的关系。

结果 在训练阶段，我们通过 RT-qPCR 实验技术分析证实 circ-PNN 在结直肠癌血清外泌体中高表达。在训练集和验证集中， circ-PNN 对结直肠癌的诊断效能分别为 0.855 和 0.826。最后我们构建出 circRNA-miRNAs-mRNAs 互作网络图，并验证得出结直肠癌患者血清外泌体 hsa-miR-6833-3P、hsa-let-7i-3p and hsa-miR-1301-3P 的表达水平与 circ-PNN 呈负相关。

结论 本研究通过分析、验证血清外泌体的 circRNAs 高通量测序结果，发现 circ-PNN 在结直肠癌外泌体中高表达，对结直肠癌的诊断具有良好的敏感性和特异性，可以较好地区分结直肠癌患者和健康对照者，因此可作为结直肠癌诊断的潜在生物标志物。

PU-4012

急性脑梗死患者氯吡格雷抵抗现象的临床研究

朱兵兵、刁艳君、刘家云
空军军医大学西京医院

目的 研究急性脑梗死患者的氯吡格雷的发生率，探讨其临床相关因素。

方法 收集急性脑梗死 102 例患者，服用氯吡格雷 75mg/d，连续 7 天进行治疗，抑制血小板聚集，预防血栓再发。服用最后一天于 24h 内空腹抽取静脉血，使用血小板功能分析仪（Verify Now）检测其血小板抑制情况，
结果 102 例急性脑梗死患者中氯吡格雷抵抗发生率为 26%。抵抗组和参照两组患者的性别构成比、糖尿病史、高血压史，血脂的 差异均有统计学意义(P ＜0. 05) ，氯吡格雷抵抗组中以男性居多，高血压，高血脂患者出现氯吡格雷抵抗的比例明显升高。
结论 氯吡格雷抵抗在急性脑梗死服用氯吡格雷的患者中是存在的，氯吡格雷在临床使用中患者响应程度存在个体差异，本研究显示在男性，有糖尿病史、高血压史，高血脂的患者应警惕氯吡格雷抵抗的发生，在临床治疗过程中如果发现氯吡格雷抵抗存在应及时调整用药。对服用氯吡格雷的患者进行血小板功能分析，明确药物是否达到预期治疗效果，避免心脑血管不良事件的发生。

PU-4013

急性脑梗死患者 CYP2C19 基因多态性与凝血指标相关性研究

朱兵兵、刁艳君、刘家云
空军军医大学西京医院

目的 探讨急性脑梗死患者 CYP2C19 基因多态性与凝血指标的相关性。
方法 选取我院 2019.4-2020.4 年急性脑梗死患者常规服用氯吡格雷超过 1 个月的 108 例为研究对象，采用 DNA 微阵列芯片法检测其 CYP2C19 基因型，运用 CS5100 分析仪凝固法检测凝血指标 PT APTT FIB，免疫比浊法检测 D-dimer FDP。观察 CYP2C19 基因多态性与凝血指标的相关性。
结果 108 例急性脑梗死患者中快代谢型（快代谢组，CYP2C19*1/*1）患者为（49）例，占比 45.4%；中代谢型（中代谢组，CYP2C19*1/*2、CYP2C19*1/*3）为（35）例，占比 32.4%；慢代谢型（慢代谢组，CYP2C19*2/*2、CYP2C19*2/*3）最少，为（24）例，占比 22.2%。
慢代谢组 FIB 及 D-dimer FDP 水平高于快代谢组及中代谢组，差异有统计学意义（P＜0.05）。
慢代谢组 PT APTT 水平低于高于快代谢组及中代谢组。
结论 使用常规剂量的氯吡格雷治疗存在个体化差异，CYP2C19 基因慢代谢型急性脑梗死患者，可考虑更换新的药物或增加剂量进行治疗。CYP2C19 基因型与 PT APTT FIB 和 D-dimer FDP 凝血指标具有一定相关性，检测急性脑梗死患者的 CYP2C19 基因多态性与凝血指标相结合，可以评估患者预后及心脑血管事件风险，为临床诊断提供思路。

PU-4014

临床常用药物对血浆纤维蛋白原水平的影响分析

颜楠
空军军医大学西京医院

目的 通过观察与探讨临床上两种常用蛇毒类凝血酶制剂，白眉蛇毒血凝酶（邦亭）、东菱迪芙(巴曲酶)与两种肝毒性药物，丙戊酸(valproate，VAP)、培门冬酶(pegaspargase，PEG—ASP)四种药物在用药治疗前后有显著差异的凝血指标纤维蛋白原（FIB）水平的变化，为临床提供用药指导参考，并对因该四种药物导致严重低纤维蛋白血症可能发生出血风险的病人向临床医生做出提示。
方法 回顾性分析 2018 年 10 月 31 日至 2020 年 l0 月 31 日在空军军医大学附属西京医院住院治疗的 200 例 FIB 降低(<1．5g／L)的患者的临床资料变化。分为有产物组与无产物组。将泌尿外科与耳鼻喉科使用蛇毒类凝血酶制剂药物的病例 70 例定为有产物组（其中使用邦亭的患者 38 例，使用巴曲酶的患者 32 例）；再将神经科与血液科使用肝毒性药物的病例 130 例定位无产物组（其中使用 VAP 的患者 60 例，使用 PEG—ASP 的患者 70 例）。分别于患者使用药物治疗前后检测常规凝血六项指标，做好记录并观察其水平变化。

结果 两组病例用药治疗前与治疗后的凝血相关指标结果比较。FIB 水平在用药治疗前后比较差异有统计学意义（P＜0.05）。
结论 FIB 水平在使用该四种药物前后的显著差异变化可以为临床提供用药指导参考，并且可以帮助提醒临床医生一定要掌握其适应症及使用剂量并且严密观察临床表现及凝血功能,避免导致严重的低纤维蛋白血症引起的出血风险。当遇有严重的凝血功能改变时，应及时减少药物用量或是停止用药，有必要时使用 FIB 浓缩物、新鲜冰冻血浆或输注冷沉淀等方法以纠正凝血功能的异常状态，以避免临床发生严重的出血性事件。

PU-4015

CircKLHL8, a potential biomarker of gastric cancer, promotes the proliferation and metastasis of gastric cancer cell lines by sponging hsa_miR_29a_3p through PI3K-AKT signaling pathway

Mei Tao
Affiliated Hospital of Nantong University

Background Gastric cancer (GC) is a malignant tumor with insidious onset and more prevalent in East Asian populations. It ranks the fifth most frequent cancer and is the third leading cause of cancer mortality. Upper gastrointestinal endoscopy is the gold standard for GC diagnosis, with a high detection rate. Since this method is invasive and has the risk of bleeding and perforation, it is necessary to search for non-invasive markers for auxiliary diagnosis. Circular RNA (circRNA) is a novel non-coding RNA with a circular structure. CircRNAs are expected to be potential biomarkers due to their high abundance and good stability. Our aim is to find an effective and non-invasive method to distinguish gastric cancer (GC) patients from healthy persons and other stomach diseases such as gastritis patients.
Methods Structure characteristic of circKLHL8 was verified by Sanger sequencing, Actinomycin D assay and RNase R assay. Relative expression of circKLHL8 in GC cells, plasma and tissues was detected by quantitative real-time polymerase chain reaction (RT-qPCR). Besides, we conducted CCK8 assay and clone formation assay to confirm the ability of proliferation in vivo. Transwell assays including migration and invasion were used to show the ability of metastasis. Finally, data were analyzed by Graph Prism software 6.0 and SPSS software 20.0. The data were shown as the means±SD obtained in triplicate assays.
Results Our present work shows that circKLHL8 (has_circ_0002538) is more stable than their linear transcript. CircKLHL8 is markedly up-regulated in 72 pairs of GC tissues, 82 GC plasma samples and 60 gastritis plasma samples, while down regulated in 39 postoperative plasma specimens from GC patients. The receiver operating characteristic (ROC) curve analysis shows that circKLHL8 appears to be more sensitive and specific at diagnosing GC patients from both healthy (sensitivity: 79%, specificity: 88%) and gastritis individuals (sensitivity: 75%, specificity: 82%) than CEA and CA199. The combination of circKLHL8, CEA and CA199 rather than a single index improves the diagnostic efficiency in GC. CircKLHL8 levels in GC tissues and plasma are also associated with clinical characteristics and severity, including age, histological differentiation, the T stage, lymphatic metastasis as well as TNM stage in GC patients. Moreover, in-vitro experiments show that circKLHL8 facilitates the proliferation and metastasis of GC cells via sponging hsa-miR-29a-3p through PI3K-AKT signaling pathway.
Conclusions Overall, this study provides new evidence that circKLHL8 can be a diagnostic biomarker of GC and reveals the potential carcinogenic mechanisms of circKLHL8, providing a novel target for GC treatment.

PU-4016

干化学法检测尿微量白蛋白与尿肌酐比值与生化免疫透射比浊法/酶法检测结果的对比分析

王玲玲、曹宝华
中山大学附属第三医院

目的 尿液分析是临床上最常见的三大常规之一，采用干化学试纸检测尿微量白蛋白与尿肌酐的比值（albumin-to-creatinine ratio, ACR）对临床上快速筛查早期肾脏损伤和糖尿病等疾病具有重要意义。本文通过对比分析干化学检测 ACR 与生化标准方法免疫透射比浊法/酶法的结果，评价干化学法测定 ACR 的准确性，建立临床使用干化学法快速筛查早期肾损伤等疾病的可行方法。
方法 收集 121 例新鲜尿液标本，离心后平均分为两份，一份采用日立 7600 及免疫透射比浊法/酶法检测尿微量白蛋白与尿肌酐的比值（ACR），并作为标准方法；另一份采用 Sysmex UC3500 尿液分析仪和其配套 NY-UC-11A 干化学试纸条检测尿 ACR。通过计算其敏感度、特异度、误诊率、约登指数等评价干化学法检测 ACR 的能力；通过 Kappa 检验评价结果的一致性。
结果 与免疫透射比浊法/酶法相比，干化学法检测 ACR 的灵敏度为 92.31%，特异度为 85.37%，误诊率为 14.63%，漏诊率为 7.69%；约登指数为 0.78；阳性预测值 75.00%，阴性预测值 95.89%；阳性似然比为 363，阴性似然比为 0.09；Kappa= 0.732，P<0.001。
结论 结果证明干化学和免疫透射比浊法/酶法检测尿 ACR 诊断结果具有较高的一致性，且干化学法具有较高的灵敏度，可以快速提示临床对阳性结果及时采取进一步检查。总之，干化学法检测尿微量白蛋白与尿肌酐比值的方法可作为临床早期快速筛查糖尿病前期和早期肾脏损伤的可靠筛选工具。

PU-4017

浅谈体液常规细胞学检查在痛风性关节炎诊断中的应用

唐丽红、柴树红
乌鲁木齐市友谊医院

目的 探讨体液常规细胞学检查在痛风性关节炎中的临床意义。
方法 常规送检的关节腔积液离心浓集细胞，制片，染色，镜检进行形态学检查。
结果 关节腔积液常规细胞学检查检出尿酸钠结晶。
结论 在关节腔积液中查见尿酸钠结晶，可及时为临床对患者的病情诊断提供可靠依据，并且通过早发现早诊断早治疗使患者获得更好的治疗效果。

PU-4018

血常规及凝血指标对骨创外科患者下肢深静脉血栓形成的预测价值

唐莹莲
云南省第二人民医院

目的 探究骨创患者血常规和凝血指标对其下肢深静脉血栓形成的预测价值 。
方法 收集 2018 年 1 月至 2020 年 12 月期间骨创外科发生下肢深静脉血栓的患者 160 例(DVT 组)，随机筛选同期没有发生下肢深静脉血栓的患者 170 例(非 DVT 组)为对照组。采用 t 检验、Mann-Whitney U 检验比较两组血常规（白细胞计数、中性粒细胞计数、淋巴细胞计数、中性粒细胞/淋巴细胞、单核细胞计数、红细胞计数、红细胞分布宽度、血红蛋白、血小板计数、血小板计数/淋巴

细胞、红细胞分布宽度/血小板计数）和凝血指标（D-二聚体、纤维蛋白(原)降解产物、凝血酶原时间、活化部分凝血活酶时间、纤维蛋白原），对两组有差异的影响因素进行 logistic 回归分析。
结果 两组患者中性粒细胞/淋巴细胞（NLR）、血小板计数/淋巴细胞（PLR）、红细胞分布宽度/血小板计数（RPR）、D-二聚体、纤维蛋白(原)降解产物（FDP）差异均存在显著性（P<0.05），多因素 logistic 回归分析显示中性粒细胞/淋巴细胞（NLR）、血小板计数/淋巴细胞（PLR）、纤维蛋白(原)降解产物（FDP）升高可能是骨创患者发生下肢深静脉血栓的主要危险因素。
结论 中性粒细胞/淋巴细胞（NLR）、血小板计数/淋巴细胞（PLR）、纤维蛋白(原)降解产物（FDP）三项指标对于预测骨创患者下肢深静脉血栓的形成有一定的提示作用。

PU-4019

Serum glycocholic acid-to-total bile acids ratio is negatively associated with non-alcoholic fatty liver disease: a retrospective cross-sectional study

Hu Li、Jin Ma、Li Chen、xinxin Zhang
Department of Infectious Disease, Research Laboratory of Clinical Virology, Ruijin Hospital, Shanghai Jiaotong University, School of Medicine

Background Bile acids play an essential role in the progression of non-alcoholic fatty liver disease (NAFLD). This study aimed to investigate the association of serum glycocholic acid (GCA) level, total bile acids (TBA) level, and the GCA-to-TBA ratio with NAFLD in the general population.
Methods A total of 6708 individuals were recruited retrospectively from our hospital, and 2859 (42.6%) were diagnosed with NAFLD. NAFLD diagnosis was based on evidence of fatty liver by abdominal ultrasonography without excessive alcohol consumption or other known liver diseases. Demographic characteristics and biochemical data were compared between individuals with NAFLD and those without NAFLD. Multivariate logistic regression analysis was performed to determine the association of serum TBA level, GCA level, and GCA-to-TBA ratio with NAFLD.
Results The serum TBA and GCA levels were significantly higher in individuals with NAFLD than in those without NAFLD [2.8 (2.0-4.2) μmol/L vs. 2.5 (1.8-3.7) μmol/L, and 1.30 (1.10-1.53) μg/mL vs. 1.28 (1.08-1.50) μg/mL, respectively, all p<0.001], whereas the serum GCA-to-TBA ratio was lower in individuals with NAFLD than in individuals without NAFLD [0.44 (0.33-0.60) vs. 0.48(0.36-0.64), p<0.001]. Logistic regression analysis showed GCA-to-TBA ratio was negatively associated with NAFLD after adjusting for confounding factors [odds ratio: 0.81, 95% confidence interval (CI): 0.71-0.92, p<0.001]. The area under the receiver operating characteristic of GCA-to-TBA ratio-based model for NAFLD diagnosis was 0.84 (95% CI: 0.83-0.85).
Conclusion The serum GCA-to-TBA ratio is negatively associated with NAFLD and may serve as a risk indicator.

PU-4020

初步研究谷氨酸的摄入对血小板聚集率的影响

何穗芬[1]、郭勇晖[1]、刘思洁[2]
1. 南方医科大学珠江医院
2. 南方医科大学

研究目的 血小板活化时对谷氨酸的摄入显著升高，已知此作用由血小板膜上的兴奋性氨基酸转运体（excitatory amino acid transporters，EAATs）所介导，鉴于 EAATs 对血小板活化的作用和意义至今尚不清楚，本研究设计在体外抑制正常血小板的 EAATs 活性，以探究谷氨酸的摄入对血小板聚集功能的影响。

方法 以健康成人的血小板为研究对象，使用非选择性 EAATs 抑制剂——DL-TBOA（D, L-threo-β-benzyloxyaspartate）预处理富血小板血浆（platelet rich plasma，PRP），分别选择凝血酶（thrombin，TH）、花生四烯酸（arachidonic acid，AA）、二磷酸腺苷(adenosine diphosphate，ADP)、胶原（collagen，Coll）和肾上腺素（Epinephrine，EPI）为诱导剂，以散射比浊法为原理的血小板聚集仪检测血小板的最大聚集率，进而初步探讨 EAATs 介导的谷氨酸摄入对血小板聚集反应的作用和意义。
结果 a）越高浓度的 DL-TBOA 对 TH 诱导的血小板聚集率抑制作用越强；b）TH 诱导下，男性的血小板聚集功能对 DL-TBOA 的可耐受浓度较女性明显降低；c）当正常血小板暴露于 8 mM DL-TBOA 时，ADP、Coll 和 EPI 诱导的血小板聚集反应可被完全抑制，AA 诱导的血小板最大聚集率也明显降低。
结论 EAATs 参与调控血小板的聚集反应，其介导的谷氨酸摄入可能是血小板实现正常聚集的必要条件。

北京某地区 5 岁以下腹泻患儿 A 群轮状病毒感染分析

凌云映[1]、赵国军[2]
1. 北京华信医院（清华大学第一附属医院）
2. 河北北方学院

目的 回顾性分析本院儿科门诊 5 岁以下腹泻患儿 A 群轮状病毒感染的好发季节、年龄分布、性别差异，以了解 A 群轮状病毒感染的现状，为预防、鉴别诊断和治疗婴幼儿腹泻提供参考依据。
方法 收集来自 2017 年 1 月至 2019 年 12 月 6367 例儿科门诊 5 岁以下腹泻患儿的粪便样本，用胶体金方法进行 A 群轮状病毒抗原检测并显微镜观察便常规，采用 SPSS22.0 软件进行分析，阳性率的比较采用卡方检验，轮状病毒阳性率与便常规镜检检测结果采用 Kappa 一致性检验。
结果 在 6367 腹泻患儿标本中有 2313 例 A 群轮状病毒呈阳性，阳性率为 36.33%，男女阳性率分别为 35.63%和 37.28%，差异无统计学意义（P>0.05）；0~<1 岁、1~<2 岁、2~<3 岁、3~<4 岁、4~<5 岁 A 群轮状病毒阳性率分别为 32.15%、42.22%、37.06%、26.83%、17.93%，其中 0~<1 岁、1~<2 岁、2~<3 岁腹泻患儿 A 群轮状病毒阳性率明显高于其他年龄组，尤其以 1~<2 岁的阳性率最高，差异有统计学意义（P<0.05）；A 群轮状病毒感染季节分布明显，以 11、12、1、2、3 月为发病高峰，阳性率分别为 42.41%、51.04%、50.21%、48.45%、40.34%；轮状病毒阳性便常规性状以黄色糊状为主，占 52.01%，水样便或蛋花汤性状便次之，占 32.34%；经 Kappa 一致性检验，A 群轮状病毒阳性率与便常规中的红细胞、白细胞的检出率一致性差，与脂肪滴的检出率有较弱一致性。
结论 A 群轮状病毒感染是婴幼儿腹泻的重要原因，该地区 11~12 月和 1~3 月为高发期，3 岁以下是其易感人群，其粪便中脂肪滴的检出率与轮状病毒阳性率有相关性。

PU-4022

VWF 相关检测作为肝脏疾病预后指标的价值探讨

杨铭康[1,2]、刘禹[1]、许冠群[1]、梁茜[1]
1. 上海交通大学医学院附属瑞金医院检验科
2. 上海交通大学医学院检验系

目的 全面评估血管性血友病因子（von Willebrand factor，VWF）及其相关检测与肝脏疾病严重程度的相关性，为该类疾病患者预后及转归提供有价值的非侵入性实验室参考指标。

方法 收集 2020 年 12 月至 2021 年 3 月上海交通大学医学院附属瑞金医院收治的肝病患者共计 147 例，其中轻症组肝病患者 68 例（包括慢性肝炎（未检出肝硬化）组 35 例，肝硬化代偿组 33 例），重症组肝病患者 79 例（包括肝硬化失代偿组 40 例，肝衰竭组 39 例）。检测 VWF 抗原水平（VWF:Ag）、VWF 与胶原结合能力（VWF:CB）、VWF 前肽水平（VWFpp）、VWF 多聚体结构分析、VWF 糖基化修饰差异，并分析各指标与肝脏疾病严重程度的相关性。
结果 VWF:Ag 检测值分别为慢性肝炎（未检出肝硬化）组 162.80%（123.60% ~ 196.10%）、肝硬化代偿期组 163.00%（132.70% ~ 218.25%）、肝硬化失代偿期组 269.35%（212.55% ~ 345.65%）、肝衰竭组 232.30%（171.00% ~ 368.20%），且重症患者组 VWF:Ag 水平显著高于轻症患者组[260.90%（191.5% ~ 349.7%）vs 166.00%（133.03% ~ 209.75%），P＜0.05]。VWF:CB/VWF:Ag 比值在各组间差异无统计学意义（P>0.05）。重症患者组 VWFpp/VWF:Ag 显著高于正常对照组[1.459（1.153 ~ 1.840）vs 1.057（0.907 ~ 1.127），P＜0.05]，提示重症患者组 VWF 清除加快，且可能与 VWF 糖基化修饰变化有关（O 型糖链末端脱唾液酸以及半乳糖残基的暴露）。ROC 曲线分析显示， VWF:Ag 检测值诊断重症肝病的 AUC 为 0.783（95% CI:0.708~0.859，P＜0.05），当界值为 218.3%时，其诊断的敏感度为 68.4%，特异度为 84.8%，阳性预测值 92.7%，阴性预测值 48.7%，诊断准确率为 72.7%。
结论 随着肝病进展，患者的 VWF:Ag 水平表现为进行性升高，且伴 VWF 清除速率加快。相比常规肝功能指标，血浆 VWF 水平在肝病诊断与预测疾病进展过程具备更优的性能。

全自动血凝仪 ACT TOP 700 性能验证

覃月华
南方医科大学珠江医院

近年来，随着现代医学对血栓与出血方面不断地深入认识，临床实验室对该方面有关的检测项目指标不断增多[1]。全自动血凝分析仪在各大医院应用广泛，为临床实验室在血栓与出血方面疾病的预防、诊断以及治疗提供了更加精准的指标。根据 ISO15189《医学实验室质量和能力的专用要求》规定，实验室全自动设备应通过性能验证，并符合相关检验所需要求，方可使用。本研究根据对 ACT TOP 部分凝血项目进行精密度、准确度、携带污染率、线性以及同型号仪器间比对等结果进行系统性的验证。结论各项目中样本针携带污染率 K1 小于 10%，精密度 CV≤15%，均符合要求，参考区间验证基本通过。

血栓弹力图相关参数与短暂性脑缺血后进展为脑梗死的相关性分析

张静、吕毅、陈派强、李明月、高秀叶
郑州颐和医院

目的 短暂性脑缺血发作(TIA)是临床常见的缺血性脑血管疾病，反复的 TIA 可发展为脑梗死，具有较高的致残率和致死率。其纤溶障碍和血液高凝状态是 TIA 进展或反复发作的主要因素。血栓弹力图（下文简称 TEG）能够一定程度上动态反应凝血因子、纤维蛋白原、血小板功能及纤溶情况等，是评价凝血功能状态较为敏感的指标，本文主要探讨 TEG 相关参数与短暂性脑缺血后进展为脑梗死的相关性。
方法 收集 2019 年 12 月至 2020 年 12 月本院诊治的 96 例 TIA 患者，所有患者均经过 MRI 或 CT 确诊，并对以上患者随访 3 个月，按疾病进展分为脑梗死组与非脑梗死组。所有患者均在就诊 24h 之内进行 TEG 检测，比较 2 组 TEG 各参数指标：凝血因子反应时间（R）、血细胞凝块形成时间

（TK）、血细胞凝块形成速率（Angle）及最大振幅（MA）差异，并进行相关性分析。采用 SPSS18.0 医学统计软件进行统计分析，计数资料采用 χ2 检验；计量资料以()表示，比较采用 t 检验，；以 P＜0.05 表示差异具有统计学意义。
结果 脑梗死组的 R 值和 TK 较非脑梗死组低(P<0.05)，Angle 和 MA 较非脑梗死组高(P<0.05)；R 值和 TK 值与脑梗死发生呈负相关性(P<0.05)，Angle 和 MA 与脑梗死呈正相关(P<0.05)。
结论 R 值和 TK 值越长，发生脑梗死风险越低，Angle 和 MA 越低，发生脑梗死风险越低。由此表明，TEG 检测对脑卒中、脑梗死及血栓塞等疾病具有重要的指导价值。临床上应将 TEG 检测和凝血功能检查相结合，更全面有效用于缺血性脑血管疾病的诊断及病情的评估。

获得性血友病 A 的临床分析

刘禹、许冠群、丁秋兰、毛恩强、王学锋、盛慧球
上海交通大学医学院附属瑞金医院

目的 提高临床医师对获得性血友病 A(AHA)的认知。
方法 结合 2019 年 9 月至 2020 年 12 月收治于上海交通大学医学院附属瑞金医院的 3 例 AHA 患者的临床诊治过程及相关文献报道，对 AHA 的临床症状、实验室检查结果、治疗方案及转归情况等进行总结及讨论。
结果 3 例患者均无血友病家族史，无明确诱因下出现皮肤瘀斑、肌肉血肿及肉眼血尿等出血症状。实验室检查结果示活化部分凝血活酶时间(APTT)延长，凝血因子Ⅷ活性(FⅧ:C)下降及凝血因子Ⅷ(FⅧ)抑制物阳性。经止血治疗及抑制物清除治疗后，2 例获得完全缓解，1 例获得部分缓解。
结论 AHA 发病率低，常伴有不同程度的出血症状，给予抑制物清除治疗，以提高其治愈率。

乳腺癌标志物研究进展

张莹
山东大学第二医院

乳腺癌是全球女性死亡率第一的恶性肿瘤。癌胚抗原（CEA）、糖类抗原（CA）15-3、CA125 等血清肿瘤标志物异常表达提示肿瘤的发生风险。CA15-3 过表达被认为与乳腺癌的疾病进展有关,不同临床分期乳腺癌患者血清 CA15-3 的阳性检出率对诊断临床分期有显著优势,灵敏度和特异度较低。但目前认为,某项血清肿瘤标志物单独检测对乳腺癌的阳性检出率较低,对早期筛查及诊断的意义不大,因此,多主张血清肿瘤标志物联合检测以对乳腺肿瘤进行早期筛查和早期诊断。本文将讨论已在临床一定范围内得到应用的肿瘤标志物以及新发现的用于指导乳腺癌临床决策及治疗方案的肿瘤生物标志物与乳腺癌诊断、治疗及预后相关的临床研究。

Bioinformatics Analysis of High Frequency Mutations in Myelodysplastic Syndrome-related Patients

Kun Wu 、Shenju Cheng、Mingxia Shi
First Affiliated Hospital of Kunming Medical University

Myelodysplastic syndrome (MDS) is a group of hematological malignancies that may progress to acute myeloid leukemia.Bioinformatics-based analysis of high-frequency mutationgenes in MDS-related patients is still relatively rare, so we carry out research in order to explore whether high-frequency mutation genes in MDS-related patients can play a reference role in clinical guidance and prognosis. Next generation sequencing (NGS) technology was used to detect 32 mutations of 64 MDS-related patients. We classified the patients'genes and analyzed them by gene ontology (GO) analysis,Kyoto encyclopedia of genes and genomes (KEGG)analysis,protein-protein interaction (PPI) analysis, and combined with gene survival curve of high-frequency mutations. Wediscoveredsome high frequency mutation genes such as ASXL1,DNMT3A,KRAS, NRAS, TP53,SF3B1, and SRSF2. Theoverall survival (OS) of these genes decreased significantly after mutation. These genes play a significant role in biological processes not only play a role in MDS, but also in the occurrence and development of other diseases.Through retrospective analysis, genes associated with MDS-related diseases were found and their effects on the disease were predicted, which provided theoretical basis for clinical and scientific research and opened up the research scope of MDS.

迈瑞 6800 血细胞分析仪在肿瘤患者异型淋巴细胞检出中的应用价值

邓瑶、吴菡、曾丹丹
四川省肿瘤医院

目的 探讨迈瑞 6800 血细胞分析仪异型淋巴细胞报警提示在肿瘤患者异型淋巴细胞检出率中的应用价值.
方法 对 2019 年-2020 年四川省肿瘤医院迈瑞 6800 血细胞分析仪检测到"异型淋巴细胞"报警提示的 712 例肿瘤患者外周血标本和"异型淋巴细胞"未报警的 695 例肿瘤患者外周血标本进行人工涂片复检，将复检结果与仪器异型淋巴细胞报警信息，HFC%百分率进行分析。
结果 迈瑞 6800 血细胞分析仪对肿瘤患者异型淋巴细胞临床检测敏感度为 97.3%,检测特异性为 92.9%，其中阳性检出率为 92.7%,阴性预测值为 97.4%。经复检显示异型淋巴细胞标本组的 HFC%明显增多，且 HFC%>3%，异淋检出率大于 93.5%。
结论 迈瑞血细胞分析仪根据"异型淋巴细胞"和 HFC%高值检出异型淋巴细胞具可靠性，与人工镜检相结合可以更好地应用临床。

PU-4029

肿瘤患者血液异型淋巴细胞检测结果的实验分析

邓瑶、李贤兵、邓克刚、吴菡
四川省肿瘤医院

目的 探讨肿瘤患者血液中异型淋巴细胞比例增高的临床意义。

方法 回顾性分析 2018 年至 2020 年来四川省肿瘤医院首诊的五类癌症（胃癌、食管癌、结直肠癌、宫颈癌、肺癌）患者的血常规结果，按 HFC%＞3%为异型淋巴细胞比例增高，分析这些癌症患者异型淋巴细胞增高的比例。并收集 81 例异型淋巴细胞增高的食管癌及胃癌患者以及 45 例健康体检者的 EDTA 抗凝全血，采用流式细胞技术分析其淋巴细胞亚群。
结果 2018 年至 2020 年五项癌症共 74293 例，其中胃癌患者 3033 例，异型淋巴细胞增高的患者比率为 12.793%；食管癌患者 2882 例，异型淋巴细胞增高的患者比率 9.924%；结直肠癌 17445 例，异型淋巴细胞增高的患者比率 1.800%；宫颈癌患者 23778 例，异型淋巴细胞增高的患者比率 0.833%；肺癌患者 27155 例，异型淋巴细胞增高的患者比率 0.961%。淋巴细胞亚群分析显示：81 例异型淋巴细胞增高的胃癌和食管癌患者的 B 细胞和 NK 细胞的比例分别为（16.36±10.98）%和（13.1±6.64）%，明显高于健康对照组（P＜0.05），而 T 细胞比例及 CD4/CD8 的比值与健康对照组之间的差异无统计学意义（P＞0.05）。
结论 胃癌和食管癌患者较其他类型癌症患者较易发生异型淋巴细胞比例增高，与病毒感染引起的异型淋巴细胞比例增高主要以 T 细胞增加不同，此类患者的淋巴细胞亚群分析以 B 细胞和 NK 细胞增加为主。

PU-4030

A pro-survival role of ADCY7 in chronic myeloid leukemia

wenjun tian
shandong provincial hospital

Chronic myeloid leukemia (CML) is a principle section of chronic leukemia with blood system disorder happened mainly in adults. It has been reported that the inverse function of adenylyl cyclase 7 (ADCY7) in acute myeloid leukemia (AML). However, expression of ADCY7 in (CML) further to explore. To verify the mechanism of ADCY7, K562 cells, a human myeloid leukemia cell line, were transfected with ADCY7 interference plasmid (ADCY7-KD group). Our results indicated that interference of ADCY7 decreased the proliferation and invasion in CML cells compared to the NC group, but had no effect on cell cycle and apoptosis. Thus, targeting ADCY7, which in turn affects the expression of its downstream channels, represent an effective treatment strategy for CML patients. These results prompt us that ADCY7 participate in CML cell pathogenesis, such as cell proliferation and invasion. ADCY7 may be a promising candidate for clinical and pro-clinical treatment.

PU-4031

网织红细胞参数对慢性肾病患者缺铁性贫血诊断的临床检验价值

宋威
天津市第一中心医院

目的 探讨网织红细胞（RET）相关参数对网织红细胞参数对慢性肾病患者缺铁性贫血诊断的临床检验价值。
方法 选取我院 2020 年 1 月至 2021 年 1 月收治的 40 例慢性肾脏疾病伴缺铁性贫血患者作为观察组，同时选取 40 例慢性肾脏病不伴缺铁性贫血患者作为对照组，评价两组患者网织红细胞参数情况。
结果 观察组患者的 LFR 指数高于对照组，而 RET%、HFR、RET-He、IFR 水平低于对照组（P＜ 0.05）。Logistic 回归分析显示 Ret-He（β=0.28,OR=1.41,95% CI:1.18～1.69） 与 ACD 合并 IDA 独立相关（P<0.05）。Ret-He 预测 ACD 合并 IDA 的曲线下面积（AUC）为 0.96（95%CI:0.95～0.97）。

结论 对于慢性肾病伴缺铁性贫血患者，网织红细胞（RET）相关参数对其诊断具有一定临床价值，Ret-He 可作为其预测指标。

336 例乙肝肝硬化患者止凝血参数检测结果分析

段正军、李彩东、李惠军、梁新宇、刘学梅、田鹏飞、陈俏丽、雷志萍、张旭强、靳克俭、张雅琦
兰州市第二人民医院

目的 探讨乙肝肝硬化患者止凝血参数检测结果。
方法 选取 2019 年 1 月～2021 年 3 月入院的 336 例乙肝肝硬化患者作为观察对象，通过检测 PLT、MPV、PDW、PCT；以及 WBC、RBC、血红蛋白含量（HB）；另检测凝血酶原时间（PT），凝血酶原比率（PT-Ratio），凝血酶原活动度（PT%），国际标准化比值（INR），活化部分凝血活酶时间（APTT），凝血酶时间（TT），纤维蛋白原（FIB）等并与 60 例正常对照组进行比较。
结果 乙肝肝硬化组中 PLT、PCT 水平显著低于正常对照组；而 PDW、MPV 水平显著高于正常对照组，有显著性差异（P#<0.01；P*<0.05）。另外，乙肝肝硬化组的 WBC、RBC、HB 水平显著低于正常对照组，有显著性差异（P▲<0.05）。在凝血参数中 PT、PT-Ratio、INR、APTT、TT 时间明显延长；FIB、PT%明显降低，与正常对照组比较有显著性差异（P<0.05）。
结论 对乙肝肝硬化患者进行上述临床参数检测可以早期发现凝血机制障碍，各参数的变化间接反映着肝损伤的程度，有助于乙肝肝硬化患者病情的预后和治疗。

PU-4033

WBC-D 及 WBC-N 与有核红细胞的相关性研究

周荣
东南大学附属中大医院

目的 对迈瑞 BC7500 血液分析仪，在血细胞分析中存在有核红细胞时，DIFF 和 WBN 两种通道测得白细胞结果进行分析探讨。
方法 收集 2021 年 4 月到 6 月我院新生儿血常规 NRBC%>1%的标本 64 例，采用 DIFF 通道和 WBN 通道进行血细胞分析，对 TNC-D WBC-D 差值 和 TNC-N WBC-N 差值两组数值进行统计分析。
结果 DIFF 通道测得 TNC-D WBC-D 的差值和 WBN 通道测得 TNC-N WBC-N 的差值结果有统计学意义(P<0.05)。
结论 仪器在血细胞分析中，存在有核红细胞时，WBN 通道能识别有核红细胞并去除有核红细胞，而获得准确的白细胞数值;DIFF 通道不能识别有核红细胞，会误判成白细胞数，但给出的参数 WBC-D 数值与 WBC-N 数值有着一致性。说明仪器自动根据 WBN 通道识别的细胞数据对 WBC-D 结果进行了优化处理。

PU-4034

中性粒细胞/淋巴细胞比值等参数在 SLE 活动性评价中的应用

胡伟
南京大学医学院附属鼓楼医院

目的 分析 NLR、MLR、PLR 和淋巴细胞数在 SLE 活动性评价中的作用。

方法 本研究对我院 2016 年 1 月至 2018 年 6 月收治的 145 例系统性红斑狼疮患者和 150 例健康对照者进行回顾性分析。分析 NLR、MLR、PLR 和淋巴细胞计数结果与 SLEDAI 的相关性。
结果 NLR、MLR、PLR 和淋巴细胞计数均与对照组有显著性差异。而“SLEDAI≤9”与“SLEDAI>9”患者相比，淋巴细胞计数和 PLR 之间而非 NLR 和 MLR 有统计学差异。进一步的回归分析得出 PLR 为“R=0.17，p=0.04”，淋巴细胞计数与 SLEDAI 的相关性为“R=-0.41 和 p<0.0001”分数。对这四个参数的 ROC 曲线分析表明，淋巴细胞计数显示最大的 AUC（0.75,95%可信区间：0.67-0.83）。
结论 淋巴细胞计数与 SLEDAI 的相关性优于 NLR、MLR 和 PLR，因此它更适合于 SLE 疾病活动性的评价。

PU-4035

A novel O allele with a mutation c.859G>T was identified in an ABO discrepancy individual

Hang Lei
Ruijin Hospital, Medical School of Shanghai Jiao Tong University

BACKGROUND Mutations of ABO gene may cause the dysfunction of ABO glycosyltransferase that can result in weak ABO phenotypes. Here, we identified one novel weak ABO subgroup alleles and explored the mechanisms that caused subgroup phenotype.
Methods and Materials. The routine serologic tests were performed by tube method and adsorption-elution test. All the coding regions of the ABO gene were amplified and sequenced. The haplotypes of the ABO gene were identified by cloning.
RESULTS The serologic results of ABO typing showed a discrepancy between the forward and reverse typing, The subject was suspected as O subgroup. According to the directly sequencing and cloning results, there was a heterozygote of ABO*O.01.01 and a novel O allele on the ABO* O.01.02 with a mutation c.859G>T.
CONCLUSION A novel allele with c.859G>T on the ABO*O.01.02 was identified in a Chinese pregnant woman. In this woman, weak A antigen was detected in peripheral RBCs, and the mechanisms underlying this phenomenon need to be clarified in future

PU-4036

南京地区成人 RET 参数参考区间的建立

王贤
南京大学医学院附属鼓楼医院

目的 分析并建立南京地区成人的网织红细胞（RET）参数的参考区间。
方法 选取 1188 例本院健康体检的健康成年人，空腹抽取 EDTA-K2 抗凝静脉血，用 SYSMEX-5000 全自动血液分析仪对所有标本进行 RET 参数测定。参照中华人民共和国卫生行业标准（WS/T405 -2012）《血细胞分析参考区间》中的推荐方法，建立 RET 参数的参考区间。
结果 RET-He、LFR、MFR、HFR 检测数据为非正态分布，其 95%参考区间采用百分位点法（P2.5～P97.5）表示。RET-He、LFR、MFR、HFR 按照性别分组，组间比较,差异有统计学意义；RET-He、LFR、MFR、HFR 按照不同年龄段分为三组，各年龄组间两两比较，差异有统计学意义。
结论 首次建立了南京地区成年人 RET 参数的参考区间,为本地区 RET 检测的临床应用提供了准确的依据。

PU-4037

血栓标志物对骨性关节炎（OA）患者全膝关节置换术（TKA）后深静脉血栓（DVT）形成的诊断价值

袁博
西安医学院第一附属医院

目的 探讨新型血栓标志物对骨性关节炎（OA）患者全膝关节置换术（TKA）后深静脉血栓（DVT）形成的诊断价值。
方法 79 例 OA 患者行 TKA 术，根据术后 DVT 的形成分为血栓组（39 例）和对照组（40 例），检测其血栓调节蛋白（TM）、凝血酶抗凝酶复合物（TAT）、纤溶酶-抗纤溶酶复合物（PIC）、组织型纤溶酶原激活剂-抑制剂 1 复合物（t-PAIC）和 D 二聚体（D-D）的表达， ROC 曲线评估其对 DVT 的诊断效能。
结果 血栓组中 TAT (34.91±15.84)ng/ml 和 D-D (2.70±2.69)ng/ml 高于对照组的 TAT (27.75±12.10)ng/ml 和 D-D (1.68±1.79) ng/ml，而 TM (10.94±2.51)mg/ml 低于对照组 (13.33±5.51)mg/ml，P＜0.05；PIC 和 t-PAIC 无统计学意义(P＞0.05)。TM、TAT、D-D 单独诊断术后 DVT 的 ROC 曲线下面积（AUC）分别为 0.654、0.631、0.630；TM、TAT、D-D 联合诊断术后 DVT 的 AUC 为 0.687，敏感性为 52.63，特异性为 79.49。
结论 TM、TAT、D-D 联合检测对 OA 患者 TKA 术后 DVT 的形成具有良好的辅助诊断价值，可作为 DVT 的早期诊断标志物用于临床。

PU-4038

A novel mutant-Cys328-terminator in severe coagulation factor XIII deficiency:A case report

Ruimin Cai 、Yi Li、Wenyang Wang、Qiang Feng
Taian City Central Hospital

Factor XIII (FXIII) deficiency is an extremely rare bleeding disorder, which is due to mutations in the FXIIIA subunit gene,commonly. We evaluated a patient with umbilical cord bleeding after birth,an intracerebral haemorrhage at age 6, hematuria and cephalohematoma, who suffered from a lifelong haemorrhagic diathesis. The clot solubility test showed that the clot of patient was dissolved in the urea solution after 10h. Genetic testing identified a novel homozygous mutation, c.984C>A, resulting in a premature stop codon in exon 8 of the F13A1 gene, that was p.Cys328stop. The results of clusterX software showed that Cys328 of exon 8 of F13A1 is highly conservative among species.

PU-4039

外周血形态复检规则设定在白血病中的应用

高晓玲、吴惠玲、黄琪富、马巧芬
玉溪市人民医院医学检验科（昆明医科大学第六附属医院医学检验科）

目的 探讨白血病初诊血细胞参数、散点图变化特征，设定推片规则，进行外周血细胞形态观察，及早发现白血病，防止漏检、漏诊及误诊。
方法 回顾分析 2016 年 9 月至 2019 年 2 月我院已确诊白血病 97 例，按白细胞数分为（1）白细胞增多组：白细胞＞10.0×109/L，（2）白细胞正常组：4.0×109/L≤白细胞≤10.0×109/L，（3）白细胞减少组：白细胞＜4.0×109/L，观察首次血细胞参数白细胞(WBC)、血小板(PLT)、有核红细胞

(NRBC)、幼稚粒细胞（IG）、单核细胞(M)、嗜碱性粒细胞（B）、无白细胞分类（DC）结果或DC不全及散点图，设定推片规则是否能推片。
结果 按设定推片规则：白细胞增多组 63 例，推片率为 96.83%（61/63），2 例未触碰规则占（3.17%），一例淋巴细胞百分比为 90.64，另外一例细胞参数及散点图均正常；白细胞正常组 14 例，推片率为 100%（14/14）；白细胞减少组 20 例，推片率为 100%（20/20）。
结论 通过设定推片复检规则，进行外周血细胞形态观察，能有效的筛查出白血病。

PU-4040

细胞形态学异常用于骨髓增生异常综合征的诊断价值研究

詹学良
玉溪市人民医院医学检验科（昆明医科大学 第六附属医院医学检验科）

目的 探讨细胞形态学异常用于骨髓增生异常综合征的诊断价值。
方法 选取 2012 年到 2016 年于我院就诊的骨髓增生异常综合征患者共 42 例，将其作为观察组；另选择同期非克隆性疾病患者 42 例，将其作为对照组。比较两组患者外周血极其骨髓细胞的形态特征。
结果 依据原粒细胞、幼粒细胞、幼红细胞、及巨核细胞系形态异常状况分析外周血细胞形态学病态检查结果时，观察组患者的形态异常发生比例明显高于对照组，且组间数据对比存在显著差异，具统计学意义（P＜0.05）；另从骨髓粒细胞系指标、红细胞系指标及巨核细胞系指标分析骨髓细胞形态特征时，观察组患者的相关比例发生率均明显高于对照组，且组间数据对比亦存在显著差异，数据对比具统计学意义（P＜0.05）。
结论 细胞形态学异常是临床上诊断骨髓增生异常综合征最基础和重要的手段，能够为临床诊断和治疗提供有效依据，具有临床推广及应用价值。

PU-4041

肺炎支原体、冷凝集致红细胞参数假性降低 1 例探讨

刘艳[2]、普永冰[1]、普好业[1]
1. 玉溪市中医医院
2. 玉溪市中医医院

在临床检验工作中发现有很多因素会干扰血细胞分析仪计数，出现异常检测结果。本文发现 1 例肺炎支原体感染及冷凝集引起红细胞参数计数假性降低的病例，即在 37°C 水浴不同孵育时间上，冷凝聚对于白细胞和血小板及其分类影响不大，而对于红细胞计数结果明显偏低，由此所致 HCT.MCV.MCH. MCHC 结果均显示异常，引起检验人员注意。

PU-4042

D-二聚体增高的原因分析

王进
玉溪市人民医院医学检验科（昆明医科大学第六附属医院医学检验科）

目的 探讨 D-二聚体增高的原因，为血栓性疾病的诊断和鉴别提供参考依据。
方法 回顾性分析我院 2019 年一季度 7875 例 D-二聚体增高的标本，分析其增高的原因。
结果 合并 FDP 增高 FDP>DD 的有 3672 例，占 46.04%；FDP 正常范围且 FDP>DD 的有 4271 例，占 53.55%；DD>FDP 的有 32 例，占 0.40%。

结论 D-二聚体作为交联纤维蛋白的降解产物，阴性可排除深静脉血栓和肺栓塞，增高可认为是活动性静脉血栓形成的标志，由于检测方法的局限性和对项目意义认识的局限性，会给血栓性疾病的诊断及治疗带来困扰，明确其增高的原因对血栓性疾病的诊断和鉴别诊断具有重要意义。

PU-4043

AVE-562 全自动粪便分析仪临床应用评价

陈穆群、张兴锋
玉溪市人民医院医学检验科（昆明医科大学第六附属医院医学检验科）

目的 评价 AVE-562 全自动粪便分析仪检测粪便标本的临床应用价值。
方法 采用手工镜检法和 AVE-562 全自动粪便分析仪同时检测 3006 例患者的粪便标本，以手工镜检法为金标准[仪器自动隐血（OB）检测与珠海贝索 OB 试纸条人工检测结果比较，对粪便常规检测结果进行比较分析，计算 AVE-562 全自动粪便分析仪检测的敏感性、特异性、准确率。
结果 仪器自动 OB 检测与珠海贝索 OB 试纸条一致率为 97.85%（kappa=0.918）。以手工镜检法为金标准，AVE-562 全自动粪便分析仪检测红细胞（RBC）、白细胞（WBC）的敏感性分别为 86.05%、80.95%；特异性分别为 99.63%、99.80%；准确率分别为 99.44%、99.54%；kappa 值分别为 0.810、0.827。
结论 AVE-562 全自动粪便分析仪粪便常规检测 RBC、WBC 等指标与手工镜检法一致性较好，仪器操作简单，自动化程度高，有较高的临床应用价值。

PU-4044

沃文特 F280 全自动粪便分析仪的临床应用评价

王成
深圳市罗湖医院集团医学检验实验室

目的 评估沃文特 F280 全自动粪便分析仪检测粪便标本的临床应用价值。
方法 收集 2020 年 3 月份至 5 月份我院 2364 份粪便样本，分别用手工镜检法与 F280 全自动粪便分析仪进行检测,以手工镜检为金标准,通过灵敏度、特异度、符合率及方法间一致性指标评估 F280 的临床应用价值。
结果 F280 全自动粪便分析仪检测的理学性状、红细胞（RBC）、白细胞 （WBC）、脂肪球、酵母样真菌、虫卵和隐血的灵敏度分别为 83.97%、95.51%、97.53%、97.92%、92.59%、88.89%和 98.92%；特异度分别为 99.5%、99.61%、99.87%、99.55%、99.61%、98.89%和 99.77%；符合率分别为 98.5%、99.32%、99.28%、99.45%、99.53%、98.6%和 99.7%；Kappa 值分别为 0.87、0.91、0.90、0.95、0.82、0.32、0.98。
结论 F280 全自动粪便分析仪在 F160 的基础上有所提高，结果可靠，工作效率高，生物安全风险低，有较高的临床应用价值。

PU-4045

血浆置换法校正乳糜血干扰血常规测定结果 15 例结果分析

周利、陈剑、李春梅、黄奕然、冯磊
玉溪市人民医院医学检验科（昆明医科大学第六附属医院医学检验科）

目的 探讨乳糜血对血常规结果的干扰及处理方法。

方法 收集 2018 年 12 月至 2021 年 5 月我院收治的 15 例乳糜血干扰血常规结果标本，采用等量血浆置换法重测对结果进行校正，并对校正前后标本进行分析。
结果 校正前后 RBC、Hb、MCH、MCHC 结果有显著性差异，校正后结果明显低于校正前。
结论 乳糜血对血常规结果 RBC、HGB、MCH、MCHC 有明显干扰，对 WBC、PLT 结果干扰较小，在检验工作中应对重度乳糜血标本采用等量血浆置换法进行结果校正。

PU-4046

外周血细胞形态学在儿科疾病诊断中的价值

刘梦云、林喜荣、莫红梅
深圳市罗湖医院集团

目的 分析外周血细胞形态学在儿科疾病诊断中的价值。
方法 选取 2019 年 11 月-2020 年 1 月我院儿科住院部及门急诊的 444 例患者为研究对象，对其进行外周血细胞形态观察，分析统计结果。
结果 444 例患儿外周血细胞形态，同一例可包含几种异常结果。正常血象共 37 例；红细胞异常 39 例，确诊地中海贫血 25 例、缺铁性贫血 14 例；原始细胞 1 例，确诊急性淋巴细胞白血病；中性粒细胞比例增高 179 例，中性粒细胞核左移 13 例，中性粒细胞毒性改变 63 例，均提示细菌感染；异型淋巴细胞增多 40 例，包括流感 10 例、传染性单核细胞增多症 10 例、肺炎支原体感染 20 例；淋巴细胞比例增高 123 例，考虑病毒感染；血小板增多 136 例；血小板减少 3 例；单核细胞比例增高 60 例；嗜酸粒细胞比例增高 20 例；嗜碱粒细胞增高 1 例。
结论 外周血细胞形态观察可为临床诊断儿科疾病提供有力线索，具有重要的临床价值。

PU-4047

巢式聚合酶链反应在白血病微小残留病检测中的应用

何穗芬、刘思洁
南方医科大学珠江医院

目的 探讨巢式逆转录聚合酶链反应（reverse transcription-polymerase chain reaction，RT-PCR）在白血病微小残留病检测中的应用价值。
方法 回顾多篇文献，综合分析巢式 RT-PCR 在各类白血病检测、危险度分析、预后判断等方面的应用价值。
结果 应用巢式甲基化特异性 PCR（nMS-PCR）可以准确检测恶性血液病细胞株 APC 基因的甲基化状态；应用巢式 RT-PCR 能够对白血病多种融合基因进行检测并可显著提高微小残留病（minimal residual disease，MRD）的检出敏感性；应用一步法 RT-PCR 和两步法 RT-PCR 两种巢式 PCR 检测骨髓移植后 CML 微小残留病，一步法 RT-PCR 检测出阳性的最长移植时间较两步法长；
结论 MRD 检测方法需要灵敏度高和有效覆盖范围广，因而聚合酶链反应（polymerase chain reaction，PCR）目前被广泛使用。已知巢式逆转录聚合酶链反应（巢式 RT-PCR）具有省时高效的优点，是分子生物学检测方法的代表。MRD 指白血病患者经诱导缓解治疗后达到临床缓解标准，但体内残留的微量白细胞无法使用形态学方法检出，是白血病复发的根源。巢式 RT-PCR 可半定量白血病治疗后的微小残留，敏感度可达 1/106，是监测 MRD 的良好方法。并且 nMS-PCR 检测与 APC 基因甲基化相关的基因突变的敏感度比 MS-PCR 更高。综上，巢式 RT-PCR 能够提高 MRD 检出敏感度，反映白血病个体治疗效果及预后，对于制定个体化治疗方案具有重要意义。

PU-4048

Sysmex XN-9000 全自动血细胞分析流水线复检规则及 3R 规则在综合医院应用的评估

权衡[1]、伍均[2]
1. 上海市第一人民医院
2. 上海市第一人民医院嘉定分院

目的 建立本实验室的 Sysmex XN-9000 全自动血细胞分析流水线的复检规则及 3R 规则并进行验证评估，以提高工作质量和效率。
方法 依据国际血液学学会推荐的“41 条复检规则”和国内 XE-2100 血液分析仪复检标准制定协作组推荐的“23 条复检规则”及 XN-9000 的性能初步建立本实验室的复检规则及 3R 规则,在此规则指导下对 1032 例样本进行分析，统计涂片复检率，对此规则进行评估并不断优化，规则建立后，选择 500 例样本（主要为血液病和肿瘤化疗患者病例）进行验证，评价规则的可行性和有效性。
结果 初步建立了本实验室的 25 条血常规复检规则及 sysmex XN-9000 的 11 条 3R 规则，对评估检测结果进行统计分析，真阳性率 21.70%（224 例），假阳性 4.85%（50 例），真阴性 72.00%（743 例），假阴性 1.45%（15 例），无病理性细胞漏检。对验证检测结果进行统计分析，结果显示准确率为 93.70%；推片复检率为 18.99%（196 例），假阳性率 4.85%（50 例），假阴性 3.00%（15 例）。
结论 本复检规则下假阴性率为 3.00%，符合国际规定的标准（小于 5.00%），所建立的复检规则和 3R 规则有效地提高了检测效率，减少了漏检率、误检率，符合本实验室质量及工作效率的要求。

PU-4049

136 例儿童急性白血病流式细胞术免疫分型分析

凡慧慧
永州市中心医院

目的 了解儿童急性白血病中的抗原表达特点。
方法 采用流式细胞术四色荧光标记，CD45/SSC 双参数散点图设门方法，对 136 例儿童急性白血病患者进行免疫分型检测分析，并将免疫分型结果与形态学分型结果比较分析。
结果 136 例儿童急性白血病中，ALL 检出 83 例，ALL 中各抗原的表达情况:CD19>CD10>CD20>CD7>CD3>CD13>CD33、CD16，其中 B-ALL 74 例，占 89.16%，T-ALL 9 例，占 10.84%，My+ALL 发生率 7.23%；AML43 例，AML 中各抗原的表达情况：CD13>CD33>CD117>CD19>CD7>CD14，Ly+AML 发生率 46.51%；HLA-DR 和 CD34 在 AML 和 ALL 中表达无显著差异，CD117 在 AML 和 ALL 中的表达有显著性差异（P<0.001）；流式细胞术免疫分型与 FAB 分型的符合率为 88.24%，免疫分型检出 5 例 B-M 混合，3 例 T-M 混合。
结论 流式细胞术免疫分型在白血病分型中有重要的作用，是 FAB 的重要补充和修正,尤其对于 MAL、抗原交叉表达和形态、化学染色特征不明显的病例有重要的意义；CD117 有助于儿童 AML 和 ALL 的鉴别诊断。

PU-4050

腹痛难忍，原是鞭虫

凡慧慧
永州市中心医院

患者，女， 45 岁，因“右侧腹痛 4 天余，无发热，无便血和黑便， 肛门排气排便通畅” 入院。查体：急性痛苦面容，腹膨隆（肥胖），未见胃肠型和蠕动波，右侧腹肌稍紧张，右侧上腹有压痛，反跳痛不明显，未触及肿块，肝脾肋下未及， Murphy 征（—）。 CT 示：升结肠及横结肠右侧水肿明显。 WBC9.56 10^9/L，N76.2%，嗜酸粒不高， CRP25.4mg/L。患者在全麻腹腔镜下行肠粘连松懈+右半结肠切除术+腹腔冲洗引流术（超声刀）， 于横结肠远端断端吻合前见横结肠中段及远端有较多细条状寄生虫，取出绝大部分寄生虫送检至我科。术后标本剖视见升结肠一穿孔，直径 0.3cm，右半结肠腔内密密麻麻满布数千条上述寄生虫。 我科夜班值班人员收到标本后取虫制片观察，发现数条寄生虫成虫缠绕一起，难以分开，虫体较长约 3-5cm，两端粗细不均， 拍照后上传检验科科室群讨论，先后排除了蛔虫、蛲虫、粪类圆线虫、钩虫等肠道常见的寄生虫。最后我科周老师建议寻找雌虫的尾部是否有虫卵，以虫卵来鉴别更有效。因晚班一个人值班，工作量大且经验有限，同临床协商后次日清晨发报告。第二天，在周老师的指导下，成功找到雌虫并戳破虫体找到虫卵，最后鉴定为鞭虫成虫及鞭虫虫卵。同时建议临床送检粪便寄生虫检查， 3 日后在粪便中找到鞭虫虫卵

PU-4051

D-二聚体动态监测对多发性骨髓瘤患者治疗效果及预后影响分析

杨瑞芳
天津医科大学肿瘤医院

目的 监测多发性骨髓瘤患者在疾病诊断和治疗过程中 D-二聚体含量，探讨 D-二聚体检测及使用硼替佐米后对治疗效果评价和预后的意义。
方法 本研究收集 61 例多发性骨髓瘤患者的多项病历信息（均来自于天津医科大学附属肿瘤医院），20 名健康人入院时临床指标作为对照组。经过临床、骨髓、流式细胞学、免疫固定电泳等检查确诊为多发性骨髓瘤。采用法国生物梅里埃的 VIDAS 检测仪，通过定量全自动 ELISA 法检测多发性骨髓瘤患者血液中 D-二聚体的含量。使用 SPSS 25.0 软件分析包进行实验数据的统计学分析。其中计量单位用均数±标准差表示，以 P＜0.05 差异具有统计学意义。
结果 在经过对比分析后结果显示多发性骨髓瘤患者血液中 D-二聚体含量 FDP 含量要明显高于健康对照组，具有统计学意义（P 值＜0.05）。AT-Ⅲ含量较对照组明显减低，具有统计学意义（P 值＜0.05）在 DS 分期分期中Ⅱ期和Ⅲ期患者 D-二聚体和 FDP 含量明显高于Ⅰ期患者，差异有统计学意义（P 值＜0.05）。根据对比肌酐含量未升高的复发概率明显降低，差异具有统计学意义（P 值＜0.05）。初发时 D-二聚体含量升高的患者在使用硼替佐米治疗后血液中 D-二聚体含量有明显的降低，差异具有统计学意义（P 值＜0.05）。但对于初发时 D-二聚体水平高低与生存期变化未得出统计学意义。D-二聚体升高患者 FISH 结果阳性例数明显增多。
结论 多发性骨髓瘤患者血液中 D-二聚体含量明显升高，并且在疾病发展过程中存在动态变化，随着疾病分期增加 D-二聚体含量升高，D-二聚体含量与患者病情密切相关。硼替佐米对多发性骨髓瘤患者 D-二聚体有一定降低作用，尤其对 D-二聚体高浓度患者有较好的疗效。D-二聚体的变化与疾病归转密切相关，D-二聚体有望作为多发性骨髓瘤患者治疗和预后的危险因素。

PU-4052

中性粒细胞与淋巴细胞比值、血小板平均体积等炎症指标在 T2DM 中的变化分析

龙璐
中南大学湘雅医院

目的 探讨中性粒细胞与淋巴细胞比值（neutrophil-to-lymphocyte ratio，NLR）、血小板平均体积（mean platelet volule,MPV）、中性粒细胞绝对值等指标在 2 型糖尿病（Type 2 diabetes mellitus，T2DM）中的诊断价值。
方法 选取中南大学湘雅医院住院确诊为 2 型糖尿病的 544 例患者作为研究对象，设为 T2DM 组。其中男 289 例，女 255 例。另选同一时间段在中南大学湘雅医院接受体检的 126 例正常人为健康对照组。比较两组间 NLR、MPV、中性粒细胞绝对值和淋巴细胞绝对值水平等指标。采用全自动血液分析仪检测的血常规以及生化常规项目。
结果 (1)T2DM 疾病组全血中性粒细胞比例（NEUT%）水平显著高于健康对照组（P＜0.01），而 T2DM 疾病组全血中淋巴细胞比值（LY%）低于对照组有统计学意义。T2DM 组中性粒细胞计数为（69.26±9.066），高于于对照组的（54.53±5.701）；观察组 MPV 为（10.59±1.54）fL，高于对照组的（10.09±0.69）fL；而 T2DM 淋巴细胞为（20.12±4.02），低于对照组的（35.59±5.81）差异均有统计学意义（P<0.05）；(2)在 T2DM 组中，NLR、MPV 水平随着病程越长而显著升高（P＜0.01）；(3)通过相关性分析可得出随着患者患病时间越长，其微血管病变和炎症反应也明显加强。
结论 1.全血中的 NLR、MPV 随着疾病的进展而增高，在疾病的监测治疗方面有一定临床价值。2.logistics 回归分析得出 NLR、MPV 为 2 型糖尿病的危险因素。

PU-4053

智慧型仿生纳米药通过有氧糖酵解重编辑介导线粒体结局：一种有前景治疗淋巴瘤的新方法

赵强强、桂嵘、聂新民
中南大学湘雅三医院

目的 化疗药物引起的毒性和耐药性已成为治疗肿瘤的瓶颈。基于纳米载体的抗癌药物的递送被认为是解决前述问题的理想途径。
方法 本研究设计构建了一种新的抗淋巴瘤纳米药物 CD20 适配子-RBCm@Ag-MOFs/PFK15(a-RAMP)，它由两部分组成：1.金属-有机框架 Ag-MOFs(AM)负载肿瘤有氧糖酵解抑制剂 PFK15(P)，形成核心部分(AMP)；2.将靶向分子 CD20 适配子(A)插入红细胞膜(RBCm)，形成外壳部分(A-R)。在 CD20 适配子指导下的 A-RAMP 在体外和体内均主动靶向 B 细胞淋巴瘤。
结果 A-RAMP 不仅明显抑制对肿瘤生长的影响，而且对治疗的裸鼠未见明显副作用，表明 A-RAMP 能准确靶向肿瘤细胞，重编程有氧糖酵解并通过 Ag + 和 PFK 15 发挥协同抗肿瘤作用。进而探讨 A-RAMP 通过凋亡途径和靶向代谢组学在体内的抗肿瘤机制。
结论 A-RAMP 作为一种智能、安全、有效、协同的抗淋巴瘤制剂具有广阔的应用前景。

PU-4054

2-Mercaptoethanol (2-ME)-based IATs or Polybrene method mitigates the interference of daratumumab on blood compatibility tests

Xiaohong Cai
Ruijin Hospital, Shanghai Jiaotong University School of Medicine,Shanghai

Objectives Treating red blood cells (RBCs) with dithiothreitol (DTT) is a wildly-recommended to overcome the interference of the daratumumab (DARA) with blood compatibility testing. Nevertheless, DTT can be hard to obtain in the clinical laboratory, while its use in routine practice may be time-consuming. In the following study, we explored the feasibility of using a commercial 2-mercaptoethanol (2-ME) working solution or the time-saving Polybrene method to mitigate DARA interference.
Methods Antibody screening and cross-matching were performed using 2-ME or DTT-based indirect antiglobulin tests (IATs) and Polybrene method (with human IgG anti-E same IATs titer as DARA as positive control) on 37 samples. Most clinically important blood group antigens on RBCs were detected after treatment with 2-ME or DTT.
Results Treating RBCs with 2-ME eliminates the DARA interference with the antibody screening or cross-matching; yet, K antigen is denatured during treatment. DARA does not interfere with antibody screening and cross-matching via Polybrene method, while 2+ agglutinations of anti-E antibody with the same titer (IATs method) as DARA could be observed in the positive controls via this method.
Conclusion 2-ME-based IATs or Polybrene method could replace DTT-based IATs to mitigate DARA interference.

PU-4055

仿生修饰的纳米银构建及其靶向抗淋巴瘤的应用

赵强强、桂嵘、聂新民
中南大学湘雅三医院

目的 淋巴瘤是人体众所周知的恶性肿瘤。虽然人们开发了许多抗癌药来提高患者的生存率，但约40%的患者持续复发或难治，这是一个需要补救措施的关键问题。因此，有必要确定替代治疗方法，以降低该病的死亡率。
方法 为此，以 AgNPs 为纳米颗粒的核心同时以靶向分子叶酸插入红细胞膜为外壳，制备了一种新型的抗淋巴瘤纳米复合物 FA@RBCm-AgNPs。
结果 红细胞膜(RBCm)的仿生特性赋予 F-RAN 良好的生物相容性以及逃避网状内皮系统清除的能力。此外，用叶酸修饰 F-RAN，主动、选择性地鉴定肿瘤细胞。体内外实验证明，F-RAN 在促进淋巴瘤凋亡的同时，能抑制淋巴瘤细胞，诱导干细胞凋亡，且无明显副作用。
结论 因此，F-RAN 可作为淋巴瘤的一种新的治疗方法。

PU-4056

Correlation between the prognosis of peripheral blood nucleated red blood cells in patients with tumor intensive care

Shusheng Hu
Clinical Laboratory Department,Tianjin Medical University Cancer Institute and Hospital

Objective To explore the case characteristics of peripheral blood nucleated red cells (NRBC) in tumor intensive care patients and the correlation analysis between NRBC and prognosis of tumor intensive care patients, so as to provide data support for doctors to judge prognosis of current tumor intensive care patients and reduce the mortality of patients.
Methods Intensive care patients in the tumor hospital of tianjin medical university from January to December 2018 were selected, and patients with peripheral blood NRBC>0 during intensive care were retrospectively studied, and the patients were divided into death group and survival group. Collect the basic information of the tumor in intensive care patients (age, gender), the condition of prognosis (dead or alive), survival time, monitoring during the period of peripheral blood in patients with NRBC absolute value (NRBC#) and peripheral blood NRBC ratio (NRBC %) to the highest level, clinical diagnosis of the comparative analysis between groups, using logistic regression analysis to determine the NRBC can the independent risk factors of death in patients with as, choose Kapian - meier method explored survival time for patients, Then, ROC curve was used to evaluate the predictive efficacy of NRBC# and NRBC% as prognosis of cancer intensive care patients.
Results Among 183 patients with peripheral blood NRBC>0, 53 died and 130 survived in tumor intensive care. NRBC# and NRBC% in the death group were significantly higher than those in the survival group (P<0.05). Logistic regression analysis showed that NRBC# and NRBC% were risk factors for death in tumor intensive care patients. Kapian - meier survival analysis results show: the peripheral blood in patients with high of NRBC ´ at 0.1×/L for the boundary is divided into two groups, NRBC < 0.1×/L and NRBC > 0.1×/L survival time with statistical significance (P < 0.01). NRBC# and NRBC% have statistical significance in predicting the prognosis of tumor intensive care patients, and the area under the ROC curve is 0.773 and 0.777, respectively (P<0.01). NRBC# to the prognosis of patients with intensive care in the diagnosis of tumor boundary value of 0.0350´/L (sensitivity and speciality rate were 64.2% and 81.5%, respectively), the best diagnostic boundary NRBC % value of 0.1500/100 white blood cells (WBC), sensitivity and were 84.9% 63.8%), NRBC# acuity 0.0350´/L or NRBC % 0.1500/100WBC can be used as a judgment in intensive care patients with poor prognosis of tumor "red line".
Conclusion NRBC is a risk factor for the death of patients with severe tumors, and with the gradual increase of NRBC in peripheral blood, the risk of death of patients with severe tumors also increases gradually, and NRBC may be used as a clinical indicator to judge the prognosis of patients.

PU-4057

同源肿瘤细胞膜伪装纳米递药系统的构建及其抗淋巴瘤的应用

赵强强、桂嵘、聂新民
中南大学湘雅三医院

目的 非霍奇金淋巴瘤(NHL)在细胞遗传学、免疫表型和临床特征上具有很大的异质性，目前化疗作为主要的治疗方式。虽然采用单克隆抗体靶向药物显著提高了其总体疗效，但仍有许多患者遭受耐药或复发的困扰。为了解决这些临床难题，寻找治疗 NHL 的替代和可靠的治疗策略势在必行。

方法 本研究提出了基于载中药异欧前胡素(ISOIM)的介孔二氧化硅纳米颗粒(MSNs)的纳米平台的构建，该纳米平台被称为 CCM@MSNs-ISOIM 的癌细胞膜(CCM)所伪装。
结果 该纳米递药系统具有免疫逃逸、抗吞噬作用、高载药率、pH 反应、良好的生物相容性和主动靶向肿瘤部位、阻断淋巴瘤细胞周期和促进线粒体介导的细胞凋亡等特点。
结论 本研究为寻找淋巴瘤新的临床治疗方法提供了理论依据。

PU-4058

Whole transcriptome analysis of platelet concentrates during storage

Hasiyati Heililahong
Ruijin Hospital, Shanghai Jiaotong University School of Medicine,Shanghai

Background Platelets, while anucleate, contain RNA. Whole transcriptome analysis applies to platelet biology during storage, providing insights into platelet function change and the mechanisms of platelet storage lesion.
Objective To explore the changes in the whole transcriptome expression profile of platelet concentrates during storage and the potential biological functions of the differential expression of mRNA, lncRNA and circRNA in platelet storage damage.
Methods Apheresis platelets were collected from three healthy blood donors, each 50 mL of Apheresis platelets, stored with shaking at (22±2) ℃, and using RNA- sequencing technology(RNA-seq)detects the changes in the expression profiles of long no coding RNA (lncRNA), circular RNA (circRNA) and mRNA in machine-harvested platelets stored for 0, 2, and 4 days; GO analysis and KEGG analysis are used to predict the functional distribution of differential expression of mRNAs, and cis-regulation analysis is used to predict that lncRNAs and circRNAs regulate adjacent protein-coding genes molecular mechanisms of expression; GSEA analysis is used to analyze the differential expression of gene pathway.
Results RNA-sequencing: Compared with platelet storage for 4th day and 0 day, the expression levels of 222 mRNAs changed significantly, 59 continually increased and 146 continually decreased; 44 468 lncRNAs had obvious expression levels, and the expression levels of 43 species increased and 28 species decreased; Besides, the 4th day compared with the 0 day, the expression levels of 198 species of circRNA changed significantly, 14 species changed continually. GSEA, GO and KEGG analysis: Differentially expressed mRNA, lncRNAs and circRNA may be involved in physiological processes such as platelet activation, platelet aggregation, endocytosis, apoptosis, metabolism, DNA repair, cell cycle, actin fiber aggregation, and regulation of the actin skeleton; we observed that among the up-regulated lncRNA, STXBP5-AS1 and ZNF667-AS1 were reported to be related to apoptosis, and can provide important basis and entry points for the study of platelet storage damage and apoptosis in vitro.
Conclusion Platelets contain a large amount of mRNA, lncRNA and circRNA, and its expression changes with the prolonged platelet storage time. Generally speaking, the number of down-regulated RNAs is larger, and the magnitude of the down-regulation is larger. Some changes in mRNA, lncRNA and circRNA may be closely related to the physiological functions of platelets, and play a role in platelet storage leison.

PU-4059

仿生纳米疗法：基于中性粒细胞膜的核壳结构纳米药靶向治疗淋巴瘤

赵强强、桂嵘、聂新民
中南大学湘雅三医院

目的 非霍奇金淋巴瘤(NHL)是淋巴组织的恶性疾病。目前化疗仍是治疗 NHL 的主要方法。R-CHOP 可明显提高患者生存率。遗憾的是，DOX 是 R-CHOP 中的主要细胞毒性药物，它可导致不良反应。因此，发现 NHL 新的治疗方案尤为重要。
方法 本研究设计并构建了新型抗肿瘤纳米颗粒复合物 Nm@MSNs-DOX/SM。以载多柔比星(DOX)和抗炎药山栀苷甲酯(SM)的介孔二氧化硅纳米粒(MSNs)为纳米粒的核心。中性粒细胞膜(Nm)可包被多个纳米核作为外壳。
结果 DOX 联合 SM 可增强抗肿瘤作用，并诱导淋巴瘤细胞凋亡，抑制与肿瘤发生有关的炎症因子的表达依赖于 Bcl-2 家族介导的线粒体通路的调控，如 TNF-α、IL-1β 等。因此，对肿瘤微环境(TME)进行了重塑，并放大了 DOX 的抗肿瘤作用。此外，Nm 具有良好的生物相容性，能增强 Nm@MSNs-DOX/SM 的 EPR 效应，增加主动靶向肿瘤的作用。
结论 Nm 修饰的药物递送系统 Nm@MSNs-DOX/SM 是一种很有前途的靶向化疗和抗炎治疗纳米复合物，可作为一种特异性、高效的抗淋巴瘤治疗药物。

粪便中检出灵芝孢子、酵母样真菌 3 例与常见寄生虫卵的鉴别分析

陈剑、周利、黄奕然、冯磊
玉溪市人民医院医学检验科（昆明医科大学第六附属医院医学检验科）

目的 探讨粪便镜检下灵芝孢子、酵母样真菌与常见寄生虫卵大小、形态以及临床表现的区别。
方法 将灵芝孢子粉保健品、两例口服灵芝孢子粉保健品患者及一例粪便真菌感染患者的粪便分别以 0.9%氯化钠溶液涂片镜检，在显微镜下观察灵芝孢子的大小及形态特点，并结合临床表现与常见寄生虫卵标本图例进行比较。
结果 灵芝孢子、酵母样真菌与寄生虫卵有相似之处，但也各有特点。
结论 在检验工作中，粪便中查到大量类寄生虫卵实体时，应认真观察, 仔细分析,详细询问患者的病史、生活习惯、服药情况及饮食结构，再密切联系临床表现，结合显微镜下的大小、形态及特征来做出鉴别。

肺栓塞 25 例临床分析

陈剑[2]、周利[1]、于属灵[1]、白张弘蕾[1]、冯磊[1]
1. 玉溪市人民医院医学检验科（昆明医科大学第六附属医院医学检验科）
2. 玉溪市人民医院医学检验科（昆明医科大学第六附属医院医学检验科）

目的 探讨极易误诊误治的肺栓塞早期诊断及干预治疗。
方法 对我院 2 年来已确诊的 22 例肺栓塞进行回顾性分析。

结果 经抗凝、溶栓治疗，其中 19 例 3-6 月低分子肝素抗凝治疗，2 例终身抗凝，4 例大面积栓塞溶栓治疗。23 例好转及治愈占 91%，2 例恶化及死亡占 8%。
结论 临床工作中应注意肺栓塞可能，发现疑似病例要早诊断、早干预、早治疗，能很好的提高治愈率。

PU-4062

The proteasome inhibitor bortezomib disrupts tumor necrosis factor-related apoptosis-inducing ligand (TRAIL) expression and natural killer (NK) cell killing of TRAIL receptor-positive multiple myeloma cells

Xiaoli Feng
Clinical laboratory center of the second hospital of Shandong university

Bortezomib, a potent 26S proteasome inhibitor, is approved for the treatment of multiple myeloma (MM) and clinical trials are under way to evaluate its efficacy in other malignant diseases. However, cytotoxic effects of bortezomib on immune-competent cells have also been observed. In this study, we show that bortezomib downregulates cell surface expression of tumor necrosis factor-related apoptosis-inducing ligand (TRAIL) on primary human interleukin (IL)-2-activated natural killer (NK) cells. Pharmacological inhibition of the transcription factor, NF-kappaB also profoundly decreased TRAIL expression, suggesting that NF-kappaB is involved in the regulation of TRAIL expression in activated human NK cells. Furthermore, perforin-independent killing of the human MM cell lines RPMI8226 and U266 by NK cells was markedly suppressed following bortezomib treatment. In addition, blocking cell surface-bound TRAIL with a TRAIL antibody impaired NK cell-mediated lysis of the TRAIL-sensitive MM cell line, RPMI8226. In conclusion, the proteasome is likely to be involved in the regulation of TRAIL expression in primary human IL-2-activated NK cells. Proteasome inhibition by bortezomib disrupts TRAIL expression and TRAIL dependent and/or independent pathway-mediated killing of myeloma cells, suggesting that bortezomib may potentially hamper NK-dependent immunosurveillance against tumors in patients treated with this drug.

PU-4063

一例双克隆的慢性淋巴细胞白血病的实验室检查特征分析并文献复习

李良梅
四川金域医学检验中心有限公司

目的 探讨一例双克隆的慢性淋巴细胞白血病的实验室检查结果分析并文献复习。
方法 对一例双克隆的慢性淋巴细胞白血病的临床资料、骨髓细胞形态学、骨髓活检、颈部淋巴结活检、流式细胞学及分子生物学检查的结果分析。
结果 骨髓细胞形态学分析提示成熟小淋巴细胞占 93.5%；骨髓活检与颈部淋巴结活检免疫表型符合 CLL/SLL，骨髓流式检测到约 82.54%单克隆 B 淋巴细胞，表达 CD19、CD20、CD5，部分表达 CD23、CD200、CD22、CD79b、HLA-DR，不表达 CD10、FMC7、CD103，但是 CD19 阳性 B 细胞分两群，一群 CD19 相对较弱，sKappa 轻链呈限制性表达；一群 CD19 相对较强，sLambda 轻链呈限制性表达；表型符合 CD5+CD10-成熟小 B 细胞淋巴瘤/白血病。分子生物学检测到 TP53 基因突变，突变位于 exon8,突变频率 76.4%，位点测序深度 2415X；检测到 IGHV 单

克隆重排（2 个克隆），一个克隆突变程度＞2%，另一克隆突变程度≤2%；结合临床表现及 MICM 相关检查结果，综合诊断为 CLL。
结论 表达双克隆的慢性淋巴细胞白血病较为罕见，当肿瘤细胞同时表达 Kappa、Lambda 轻链时，需根据肿瘤细胞表型的差异进行精确设门，仔细辨别其克隆性，以免导致疾病漏诊或误诊。疾病的临床表现、完善的免疫表型、形态学及病理活检、分子生物学等相关检查有助于该类疾病的精准诊断及预后评估。

PU-4064

红细胞分布宽度对系统性红斑狼疮疾病活动度的评估价值

谢婷彦、丘世飏
中南大学湘雅医院

目的 探讨红细胞分布宽度（RDW）与系统性红斑狼疮（SLE）疾病活动度之间可能存在的关系。
方法 收集 70 例 SLE 患者及 60 例健康体检者 RDW、ESR、CRP 及 24h 尿蛋白结果等相关临床数据，对 SLE 患者进行 SLEDAI-2K 评分并按评分划分为活动期和缓解期两组，观察 RDW 在各组中的差异，分析 RDW 与 SLEDAI-2K 评分、ESR、 CRP 及 24h 尿蛋白之间的相关性，绘制 ROC 曲线探索 RDW 对 SLE 疾病活动性的评估价值。
结果 RDW 值在 SLE 活动期高于缓解期，且均显著高于健康对照组，三组之间两两比较，差异均具有统计学意义（P＜0.05）；RDW 与活动期组 SLEDAI-2K 分值、CRP、ESR 呈正相关（r=0.588、0.405、0.382，P<0.05），与 24h 尿蛋白之间无明显相关关系；RDW 对 SLE 病情活动性评估的 ROC-AUC 为 0.840，当 RDW 取 13.9%为诊断界值时，评估效价最高。
结论 RDW 的测定对评估 SLE 疾病活动度具有一定的临床应用价值。

PU-4065

肝素酶纠正的血栓弹力图对肝素应用后凝血功能监测的临床研究

康海全、马萍
徐州医科大学附属医院

目的 通过肝素酶纠正的血栓弹力图（hmTEG）研究不同肝素残留情况对凝血功能的影响。
方法 回顾分析徐州医科大学附属医院 2019 年 1 月-2020 年 12 月心胸外科患者术后肝素残留检测样本 89 例（术前凝血功能均正常）。分别分析①非肝素残留组、肝素残留组、肝素过量组三组内 CK-TEG 和 CKH-TEG 的 R、K、α 角、MA、CI 五组参数间有无差异。②非肝素残留组、肝素残留组、肝素过量组三组间 CKH-TEG 的 R、K、α 角、MA、CI 五组参数间有无差异。
结果 非肝素残留组中，CK-TEG 和 CKH-TEG 各参数比较，K 值、α 角、MA 值、CI 值差异无统计学意义,R 值差异有统计学意义(P<0.001)。 肝素残留组中，CK-TEG 和 CKH-TEG 各参数比较，MA 值差异无统计学意义，R 值、K 值、α 角、CI 值差异均有统计学意义(P 值均<0.001)。肝素过量组中，CK-TEG 和 CKH-TEG 各参数比较，R 值、K 值、α 角、MA 值、CI 值差异均有统计学意义(P 值均<0.001）。非肝素残留组、肝素残留组、肝素过量组三组间 CKH-TEG 各参数比较 R 值、K 值、α 角、MA 值、CI 值组间整体均有统计学差异(P 值分别为<0.001、0.002、0.002、0.042、<0.001)。经组间两两比较发现，MA 值三组间无差异，R 值、K 值、α 角、CI 值在肝素残留组和肝素过量组均与在非肝素残留组差异显著(P<0.05)。
结论 非肝素残留组肝素仅影响凝血因子功能，肝素残留组肝素影响凝血因子功能和纤维蛋白原功能，肝素过量组肝素影响凝血因子功能、纤维蛋白原功能和血小板功能。纠正肝素影响后，肝素残留组和肝素过量组相较于非肝素残留组凝血因子功能、纤维蛋白原功能、综合凝血功能仍明显减弱。

PU-4066

巨核细胞异形性改变与骨髓增殖性肿瘤诊断分型相关性研究

张凤、郑朱鑫、陈丹红、李景岗、刘声平、高飞
福建医科大学附属协和医院

目的 收集 88 例 MPN 患者及 187 例中老年正常对照骨髓涂片，研究骨髓巨核细胞增多程度及形态特征在 MPN 四种常见亚型 CML、PV、ET、PMF 中是否具有特征性改变，为骨髓涂片中巨核细胞计数、形态特征在 MPN 诊断分型提供一定参考。
方法 纳入符合标准的 88 例确诊 MPN 患者及 187 例正常对照组的骨髓涂片。染色后计数全片巨核细胞及 20mm×15mm 框内巨核细胞总数，并分类 200 个巨核细胞。分类计数骨髓粒系、红系、单核细胞及 NAP 化学染色等骨髓细胞分类计数结果，对巨核细胞发育阶段及形态异型性分类计数并统计。
结果 计数骨髓涂片单位面积内与全片巨核细胞有同等意义，四种 MPN 巨核细胞较对照组数量增多，但差别无统计学意义，巨核细胞各发育阶段百分比在正常对照组及 4 型 MPN 中差异无统计学意义。4 型 MPN 亚型 1~5 分叶颗粒型巨核细胞均低于正常对照组，PV 组 6-10 分叶颗粒巨核细胞较正常对照及其他 3 型 MPN 明显增多；细胞质/细胞核空泡型巨核细胞在 4 型 MPN 中增多而正常对照组罕见，可用于 MPN 初筛；巨核细胞核质比明显缩小为 ET 特征性改变，占 40%，其他组罕见。
结论 骨髓涂片巨核细胞计数及发育阶段分类在 MPN 患者诊断价值有限，巨核细胞形态分类可辅助 PV、ET 诊断。

PU-4067

蠊缨滴虫致慢性咽炎感染一例

朱云波
芷江侗族自治县人民医院

本例患者咽痒、哽噎感、轻咳吐白色泡沫痰半年；取痰液加生理盐水直接涂片，在光学显微镜下观察，可见活动的蠊缨滴虫；针对病原体予以甲硝唑治疗后，患者症状消失。目前，蠊缨滴虫导致慢性咽炎的病例较少，且基层检验人员对蠊缨滴虫的形态认识不足，在临床诊治过程中需提高警惕和认识，以防漏诊。

PU-4068

阿加曲班治疗进展性缺血性卒中疗效的影响因素分析

唐小童
中国人民解放军北部战区总医院

目的 在进展性缺血性卒中患者中探讨影响阿加曲班给药 2 小时后 APTT 水平及疗效的因素。
方法 我们对 50 例急性缺血性卒中患者基本信息及入院/出院 NIHSS 评分进行统计。计算阿加曲班给药 2 h 后 APTT 升高水平，以反应阿加曲班抗凝治疗是否有效。根据入院时年龄、性别、体温、收缩压、舒张压、吸烟史、饮酒史、肝肾功、合并疾病情况进行分类比较。
结果 发现以 3.0μg/kg/分钟的初速度静脉泵入阿加曲班时，以 ATPP 值提高 1.5 倍为目标值,给药后 2 小时 APTT 比值达标患者与不达标患者，年龄存在显著差异（63.81±10.65 vs 56.62±10.14，P<0.05）。采用二元逻辑回归，把肝功和性别纳入模型，年龄仍与 APTT 达标情况具有相关性（b=0.08,sE=0.04, OR=1.09, CI=10.1-1.17, P<0.05）。结果显示首次 APTT 是否达标与 NIHSS

评分改善程度无显著差异。性别、体温、收缩压、舒张压、吸烟史、饮酒史、肝肾功、合并疾病情况对阿加曲班早期起效的影响无统计学差异。
结论 阿加曲班用于治疗急性缺血性卒中时，给药后 2 h APTT 是否达标与年龄相关，提示对于青年及老年前期患者可以给予更快的给药速度，以尽快发挥抗凝作用。

PU-4069

TAT 和 tPAI·C 联合 D-二聚体用于肺癌转移患者的诊断价值

吴楠楠[1]、项羽坤[2]、侯敏[1]
1. 天津胸科医院
2. 天津医科大学

目的 比较肺癌转移与非转移患者间血栓四项的差异，探讨血栓四项联合 D-二聚体在肺癌患者转移中的诊断价值。
方法 收集 2020 年 10 月至 2020 年 12 月于天津市胸科医院就诊的 288 例患者，其中包括 201 例肺癌患者、57 例肺良性疾病患者及 30 例健康对照者，分别检测血浆血栓四项血浆血栓调节蛋白(TM)、凝血酶－抗凝血酶复合物(TAT)、组织型纤溶酶原激活物－纤溶酶原激活物抑制剂复合物(tPAI·C)、纤溶酶－α2 纤溶酶抑制剂复合物(PIC)及 D-二聚体水平，绘制 ROC 曲线判断 TAT 和 tPAI·C 联合 D-二聚体用于肺癌转移患者的诊断价值。
结果 转移组 TAT、PIC 水平明显高于非转移组（P＜0.01），ROC 曲线显示 D-二聚体、TAT、tPAI·C 对肺癌转移的诊断价值。TAT 和 tPAI·C 联合 D-二聚体诊断的 AUC 高于单项检测(0.835 vs. 0.809、0.781、0.774)。
结论 TAT 和 tPAI·C 联合 D-二聚体可作为诊断肺癌转移的新标记物。

PU-4070

地中海贫血与缺铁性贫血患者的血常规结果的研究

朱志强
南方医科大学珠江医院

目的 对厚街镇缺铁性贫血与非复合型地中海贫血患者的血常规结果分析，根据其血液学指标的主要分布情况，探究其在地贫与缺铁贫的鉴别和地贫初筛的临床意义。
方法 将 52 例缺铁性贫血患者设定为缺铁贫组，52 例非复合型地中海贫血患者设定为地贫组，52 例健康体检者设定为对照组。比较 3 组血细胞参数 HB、HCT、MCV、MCH、RDW 水平并确立各参数的可信区间（95%）分布。
结果 经方差分析 SNK-q 检验的两两比较，地贫组、缺铁贫组、对照组的 HB、HCT、MCV、MCH、RDW 均有统计学差异（P＜0.05）；根据均数的可信区间分析，地贫组、缺铁贫组与对照组的可信区间(95%)无交叉重叠。
结论 红细胞参数在缺铁性贫血的临床鉴别和地中海贫血的初筛诊断有重要意义，可根据其血常规参数值大小作出初步的筛查。

PU-4071

Acquired hemophilia A secondary to autoimmune pancreatitis with elevated IG4

Qiang Feng[1]、JIANMIN LI[2]
1. Taian Central Hospital
2. 山东省泰安市中心医院

Acquired hemophilia A (AHA) is a rare disease resulting from autoantibodies against factor VIII (FVIII) that leads to bleeding. AHA associated with IgG4 related diseases is even rarer. The patient was diagnosed with IgG4 associated autoimmune pancreatitis in January 2019, and the condition improved after two hospitalizations. However, 22 months later, the patient was admitted to hospital due to generalized bleeding points. After laboratory tests, he was diagnosed with AHA. He recovered quickly after hormone therapy and plasma exchange. Although IgG4 is associated with IgG4-related disease and AHA, its relevance to the etiology of both diseases is not well understood.

PU-4072

M 蛋白阳性临床特点分析

林艳、林倩、刘亭莉、何春容、杨清
成都市第三人民医院

目的 探讨血清蛋白电泳筛查在筛查 M 蛋白中的意义及 M 蛋白阳性病例临床特点分析。
方法 收集 2019 年 3 月至 2021 年 2 月住院病人的血清蛋白电泳中，异常尖峰图形病例样本，通过免疫分型确认其中 M 蛋白为阳性的病例，并整理分析病人临床资料。
结果 与同期 100 例住院对照病人的临床资料相比 ，M 蛋白阳性病例在在血红蛋白浓度，白细胞比例，总蛋白定量，白蛋白定量，白球比，免疫球蛋白 IgG、IgA、IgM 定量，尿蛋白/肌酐并无显著差异。
结论 血清蛋白电泳在筛查 M 蛋白阳性病例方面，相对多发性骨髓瘤、单克隆球蛋白疾病的其他生化指标，具有无法比拟的优势。

PU-4073

冷凝集素对血常规结果的影响及处理方法

戚佩谊
南方医科大学珠江医院

血细胞分析结果的准确直接影响临床疾病的诊断和治疗，但准确与否，除了标本采集、仪器性能、操作人员等因素外，还有一个重要原因即某些血液标本自身存在干扰血细胞分析仪检测结果准确性的因素，如冷凝集、脂血、溶血、寄生虫感染等。冷凝集素是一种红细胞自身免疫性抗体，绝大多数为 IgM，少数为 IgG 或 IgA。在正常生理条件下，冷凝集素可以低活性存在于健康人的血清中，其滴度不超过 1:16，因此不会出现血细胞凝集现象，但是当温度低于某一温度时，冷凝集素浓度将升高，处于循环中的自身抗体可与红细胞表面抗原结合，使血液凝集，4-27 ℃为其在体外的最适温度，4℃时出现明显红细胞凝集现象。

目前常见的冷凝集消除方法

1. 水浴法：将标本置于 37℃水 浴箱中水浴 30 分钟后立即上机检测。

2. 血浆置换法：将标本低速（500r/min）离心 2 分钟，用加样器取出约 3/4 的血浆，用已预温 10 分钟的生理盐水等量置换血浆，充分混匀，如此置换 3 次后上机检测。

3. 提高室温法：将室内温度提高至 25～30℃并稳定 1 小时，同时将标本置 37℃水浴箱中水浴 30 分钟后上机检测。

PU-4074

血液分析仪在急慢性白血病检验中的应用价值

周重阳
滨州医学院烟台附属医院

目的 研究血液分析仪在临床中对急慢性白血病检验的应用价值，避免白血病患者漏检，为临床分析和同步病情指导提供有效信息 。

方法 选用 2019 年 5 月到 2020 年 5 月期间本医院确诊的成年急性白血病患者 15 位作为急性白血病组，慢性白血病患者 15 位作为慢性白血病组，和同期进行健康体检的 15 位作为参照组，所有研究对象采取静脉全血后使用血液分析仪进行检验，对检验结果进行统计学分析，比较三组测定的实验数据得出结论。

结果 急性白血病的白细胞数为(90.1±0.4)×109/L，C 反应蛋白为(113.4±5.3)mg/L 均高于对照组，急性白血病血红蛋白为(35.5±6.2)g/L 低于对照组，俩组对比均具有统计学意义，P＜0.05。慢性白血病的白细胞数为(105.2±0.4)×109/L，C 反应蛋白为(185.6±4.2)mg/L 均高于对照组，慢性白血病血红蛋白为(34.3±7.3)g/L 低于对照组，俩组对比均具有统计学意义，P＜0.05。急慢性白血病的白细胞计数，C 反应蛋白，血红蛋白三组数据之间不具有统计学意义，P＞0.05。

结论 血液分析仪对于急慢性白血病临床检验具有极高的应用价值，能较为准确的诊断出急慢性白血病，具有自动化程度高，检测参数多，精密度高，速度快，智能化程度高等优点，可作为急慢性白血病检查的首选方法，为患者临床治疗提供有效参考。

PU-4075

医院获得性肺血栓栓塞症的临床特征和危险因素分析

梁湘辉[2]、杨奥烽[3]、赵声远[1]、唐红英[4]
1. 中南大学湘雅医院检验科
2. 中南大学湘雅医院检验科
3. 中南大学湘雅医学院
4. 中南大学湘雅医院生殖医学中心

目的 了解医院获得性肺血栓栓塞症（Hospital-acquired Pulmonary Thromboembolism，HA-PTE）患者的临床特征；探究 HA-PTE 的危险因素及其导致的医疗和经济负担；评估实验室检验项目对于 HA-PTE 的预测价值。

方法 回顾性收集并分析某三甲医院 2018 年度 HA-PTE 患者的临床资料并采用 1：1 配对的病例-对照研究，收集 HA-PTE 患者（病例组）和匹配的非 HA-PTE 患者（对照组）的临床资料和实验室检验数据。应用条件 Logistics 回归模型对 HA-PTE 的危险因素、导致的医疗和经济负担以及实验室检验项目的预测价值进行分析。

结果 该中心 2018 年确诊 HA-PTE 患者共 68 例，男性多于女性（54.41%vs45.59%），高龄患者（≥65 岁）占 47.06%。循环系统疾病为最常见的基础疾病（88.24%）。内外科患者数相同（48.53%），2.94%来自 ICU。患者总住院时长为 1-52 天（中位天数 17 天），19.1%的患者曾入住 ICU。最常见的侵入性操作为外科手术（48.53%）和留置导尿管（48.53%）。患者的总医疗花销为 6106.04-357176.5 元。入住 ICU（OR=7.800，95%CI 1.687-36.061，P=0.009）和抗生素使

用史（OR=2.964，95%CI 1.282-6.855，P=0.011）为 HA-PTE 的危险因素。HA-PTE 患者的总住院时长和总医疗花销显著高于非 HA-PTE 患者（P<0.001/P=0.008）。HA-PTE 患者的纤维蛋白（原）降解产物浓度显著高于非 HA-PTE 患者（P=0.002）。
结论 ICU 入住史和抗生素使用史是 HA-PTE 的危险因素。HA-PTE 会给病人带来更重的医疗和经济负担。纤维蛋白（原）降解产物浓度对于 HA-PTE 具有预测价值。

PU-4076

全自动尿有形成分分析仪的使用过程遇到的问题

才玥
吉林大学第一医院

目的 为了了解 sysmex UF-5000 全自动尿有形成分分析仪的主要性能，探讨应用过程中出现的问题。
方法 采用随机选择标本的方法，对该仪器主要检测参数红细胞、白细胞、上皮细胞、管型及细菌等影响因素进行测试。
结论 sysmex UF-5000 全自动尿有形成分分析仪作为尿有形成分检查的仪器，可为临床提供快速准确的结果。

全自动尿有形成份分析仪 UF-5000 用蓝色半导体激光束照射经过核酸荧光染色后在鞘流贯流分析池中形成的鞘流样本，并通过对从各粒子产生的前方散射光、侧向散射光、消偏振的侧向散射光以及侧向萤光信号转换成的光电信号进行分析，从而对各个粒子进行识别。

流式细胞计数法: 流式细胞术（FCM）采用将激光照射至细胞等粒子的方法测定产生的散射和荧光以确定粒子的特性。对细胞中的特定物质进行荧光染色，将细胞置于悬浮状态并包裹在鞘液中，继而通过喷嘴排出。然后用紧密聚焦的激光束照射到细胞上，这会产生散射光和荧光。使用这些光信号作为参数，可以生成基于光强度的一维直方图以及基于荧光强度和散射光强度的二维散点图，从而对细胞进行详细的测定。前向和侧向散射的入射激光被称为散射光，散射光的强度可指示细胞的大小和表面状况。根据从细胞中染色元素发出的荧光可基于荧光标记抗体和荧光颜料的属性对细胞表面、胞浆属性和细胞核（RNA 和 DNA 数量）等细胞特性进行定量测定。基于流式细胞仪原理，全自动尿有形成份分析仪 UF-5000 可将尿液中的粒子分离为 RBC （红细胞） 、WBC（白细胞）、EC （上皮细胞）、Squa.EC （上皮细胞）、CAST （管型）和 BACT （细菌）等，并予以定量标示。

PU-4077

乳腺癌外周血循环肿瘤细胞的检测及临床意义

李小月
安庆市第一人民医院

目的 探讨乳腺癌患者外周血循环肿瘤细胞水平及其与临床病理特征的关系。
方法 选取本院 2018 年 1 月至 2018 年 12 月经病理组织学证实的乳腺癌患者 16 例，清晨空腹抽取其肘正中静脉血 10ml，24h 内检测。用氯化铵裂解血液中的红细胞，离心弃上清留取 5ml，再将磁珠微粒加入沉淀中充分结合白细胞，用分离溶液分离出被磁珠结合的白细胞。并行免疫荧光原位杂交检测，有两个或者两个以上的探针信号即为肿瘤细胞， 记录肿瘤细胞个数，计算 CTCs 阳性率并分析其与临床病理特征的关系。 选取同期的 16 例乳腺良性病变患者作为阴性对照组，用同样的方法检测肿瘤细胞数，并进行统计学分析。

结果 乳腺癌组外周血 CTCs 阳性率为 87.5%（14/16），明显高于对照组外周血 CTCs 阳性率 6.25%（1/16），差异具有统计学意义（p＜0.05)；乳腺癌患者 CTCs 水平不仅与年龄无关，同时与乳腺癌 ER、PR、HER-2 表达均无关（p＞0.05)。
结论 乳腺癌患者外周血中 CTCs 水平与年龄及临床病理特征无关，乳腺癌早期阶段外周血中便可检出 CTCs，提示可能在肿瘤早期阶段即发生微转移。

PU-4078

STA Compact Max 全自动凝血仪检测 PLG、AT-Ⅲ、PC、PS 的性能验证

宋洪平、解兴欣、方美懿、唐喻春、王灵禧、赵璐、王榕
重庆金域医学检验所有限公司

目的 评价 STA Compact Max 全自动凝血仪检测 PLG、AT-Ⅲ、PC、PS 四个项目性能。
方法 参照美国临床和实验室标准化协会(CLSI)系列指南文件、科室质量体系文件和仪器厂家标准对 STA Compact Max 全自动血凝仪的精密度、线性范围、携带污染率、参考区间进行性能验证。
结果 STA Compact Max 检测 PLG、ATIII、PC、PS 的项目批内精密度 ATⅢ≤5.0%，PLG≤6.25%，PC≤5.0%，PS≤6.25%，批间精密度 ATⅢ≤6.67%，PLG≤8.33%，PC≤6.67%,PS≤8.33%。四个项目不准确度均小于 10%。PLG 线性验证试验理论值和实测值的回归方程 Y=0.9994X+3.0452,r2=0.9973,，ATⅢ线性验证试验理论值和实测值的回归方程为 Y=1.0102X-1.415,r2=0.9994,PC 线性验证试验理论值和实测值的回归方程为 Y=0.9931X-2.3756,r2=0.9978,PS 线性验证试验理论值和实测值的回归方程为 Y=1.0471X-1.1268,r2=0.9895。均符合斜率在 1±0.05 范围内,相关系数 r2≥0.95，验证结果表明 PLG、ATIII、PC、PS 实测值和理论值之间线性关系良好。实验仪器携带污染率合格，实验结果 3SD1-X2+X1>0,满足 X2-X1<3SD1。参考范围验证结果 PLG、ATIII、PC、PS 无离群值，PLG 的 R 值为 0.9，超出 95%置信区间的点数 0 个；ATIII 的 R 值为 1.0，超出 95%置信区间的点数 0 个；PC 的 R 值为 1.0，超出 95%置信区间的点数 0 个；PS 的 R 值为 1.0，超出 95%置信区间的点数 0 个。
结论 STA Compact Max 全自动凝血仪检测 PLG、AT-Ⅲ、PC、PS 项目性能验证均符合质量要求，方法学的稳定保证了检测结果的准确可靠，可以满足临床检测的要求。

PU-4079

全自动阴道分泌物分析仪性能评价方式的建立

王琪
东南大学附属中大医院

目的 对全自动阴道分泌物检测仪 AVE320 的有形成分检测，及配套的联合检测试剂盒进行性能评价。
方法 有形成分的日内重复性：从临床上取得有形成分浓度高的样本若干份，混合均匀后，均分成 10 管依次检测。记录仪器检测结果。有形成分的日间重复性：使用仪器配套的高低 2 个水平的质控品，按要求将其混匀后分别进行检测，每天检测 4 次，连续检测 5 天。记录每天的结果。有形成分的正确度验证：同批号质控高低值混匀后各检测 10 次，记录结果。 有形成分的方法学比对：连续 4 天，每天抽取 5 个新鲜样本进行仪器的有形成分识别和人工镜检，计算两者的符合率，所选择样本中阳性占 80%。有形成分的携带污染率：人工镜检筛选出有形成分浓度高的样本 10 份。将样

本混合并混匀，分装在五只试管内。取去离子水，分装在五个试管内。10 份标本穿插检测，记录所有结果。
联检试纸阴性阳性符合率：使用同批试纸条，将 AVE320 阴、阳性质控品，分别检测 10 次，计算符合率。联检试纸条日间重复性：使用同批试纸条，连续 5 天，将 AVE320 阴、阳性质控品，记录所有结果。联检试纸的批间重复性：随机抽取 5 个新鲜样本，使用两个不同批号的试纸， 每个批号每个样本做 5 次，记录所有结果。联检试纸的携带污染率：人工镜检选出有形成分浓度高 10 个样本。混合并充分混匀，分装在五只试管内。取去离子水，分装在五个试管内。将 10 份标本穿插检测，记录所有结果。
结果 本组实验初步建立了用于评估 AVE320 全自动阴道分泌物检测仪的方案。形态学项目：红、白细胞、杂菌、杆菌、鳞状上皮细胞，线索细胞、滴虫、霉菌的日内、日间重复性实验、正确度验证、方法学比对、携带污染率，联检试纸：PH 值，过氧化氢、白细胞酯酶、b-葡萄糖醛酸苷酶、唾液酸苷酶、乙酰氨基葡萄糖苷酶，的阴阳性符合率，日间、批间重复性，携带污染率，均符合仪器本身技术要求和临床应用检测技术指标实际要求。可为临床提供准确可靠的检测结果。

PU-4080

肾移植后微小病毒 B19 感染导致纯红细胞再生障碍贫血 2 例实验室结果分析

李倩、杨昆荣
昆明市第一人民医院甘美医院

目的 通过相关实验室指标特点，探讨肾移植术后人类微小病毒 B19 感染导致的纯红细胞再生障碍性贫血（PRCA)诊断，提高纯红再障的诊断率。
方法 2021 年 3 月共诊断肾移植术后人类微小病毒 B19 感染导致的纯红细胞再生障碍性贫血 2 例。排除出血、溶血等情况，对患者的临床资料、血常规、骨髓象等检查，提示典型 PRCA 表现，微小病毒 B19DNA 阳性。
结果 2 例纯红再障患者均有贫血的症状和体征，一例血红蛋白中度减低，一例血红蛋白重度减低，网织红细胞严重减低，血小板正常，骨髓中红系严重减少。
结论 肾移植术后出现顽固性贫血，应考虑 HPV B19 感染导致的 PRCA。骨髓细胞学检查及 HPV B19DNA 检测结果是诊断纯红再障的依据。

PU-4081

血清外泌体 hsa_circ_0007989 在胃癌中作用机制及临床价值研究

侯杰
江苏大学

目的 本研究的目标是在胃癌患者血清外泌体中寻找差异表达的环状 RNA，探讨其作为胃癌早期诊断标志物的价值，深入探讨在胃癌发生发展中的作用机制以及作为治疗靶点的可行性。
方法 收集 3 对健康体检者及胃癌患者的血清，进行外泌体环状 RNA 表达谱芯片分析。通过血清外泌体及组织样本的大规模临床标本验证选定差异表达的环状 RNA，ROC 曲线及生存曲线分析用于评价其诊断效能。在体外胃癌细胞系模型和体内动物模型中过表达及沉默环状 RNA 研究其生物学功能。机制方面，我们通过生物信息学预测可能结合的 miRNA。RNA 免疫共沉淀实验和双荧光素酶报告基因实验验证。回补实验探讨环状 RNA 通过调节 miRNA 的下游途径发挥其生物学作用。

结果 外泌体环状 RNA 表达谱芯片分析显示有 2798 个差异性表达的环状 RNA ，其中 187 个上调，2611 个下调。50 对胃癌组织和 25 例血清外泌体标本结果表明 hsa_circ_0007989 呈现下调趋势，其 ROC 曲线下面积分别为 0.64 及 0.78，提示 hsa_circ_0007989 具有一定诊断价值，。沉默 hsa_circ_0007989 后胃癌细胞增殖、迁移能力增强，凋亡比例下降。生物信息学预测显示 hsa_circ_0007989 存在潜在的 miRNA 结合位点，有可能通过结合 miRNA 发挥调控作用。
结论 血清来源的外泌体环状 RNA hsa_circ_0007989 在胃癌早期诊断方面有一定优势，体外实验初步显示其具有抑制胃癌作用，可能成为胃癌诊断与治疗的新靶点。

PU-4082

临床肝癌患者 PD-L1 表达水平与索拉非尼药效的相关研究

牛蕾蕾
山东大学第二医院

目的 肝癌发病率位居全球癌症前列，临床试验表明多靶点激酶抑制剂索拉非尼(sorafenib)是唯一可以有效延长中晚期肝癌患者总生存期的药物，遗憾的是，大多数肝癌患者对索拉非尼存在原发性耐药，大大降低了索拉非尼的临床疗效和利用率，加之该药价格昂贵，因此，找到可以指示索拉非尼药效的肿瘤分子标记物变得尤为重要。
方法 在本研究中，我们搜集了 65 例于 2012-2015 年间经手术切除后接受索拉非尼化疗的肝癌患者的临床资料，利用免疫组化技术检测肝癌组织中 PD-L1 的表达水平，并将染色结果划分为阴性，弱阳性，阳性与强阳性，将阴性与弱阳性的肿瘤组织定义为 PD-L1 低表达，阳性与强阳性的肿瘤组织定义为 PD-L1 高表达，利用生存 分析观察索拉非尼在 PD-L1 表达水平不同的肝癌患者中的疗效。
结果 约 38.5%(25/65)的患者肿瘤组织为 PD-L1 低表达，61.5%(40/65)的患者肿瘤组织为 PD-L1 高表达。在 PD-L1 低表达组，患者总生存期为 15.6 个月; 而在 PD-L1 高表达组，患者总生存期为 12.7 个月。生存分析结果显示该差异具有统计学意义($p<0.05$)。
结论 PD-L1 或许可以作为潜在的肿瘤分子标记物，有助于临床医生将对索拉非尼敏感的患者从中筛选出来，进而接受有效的治疗，检测肿瘤组织中 PD-L1 的表达可以预测患者对索拉非尼的敏感性。

PU-4083

长链非编码 RNA MGC27382 检测水平指示肺癌患者预后的相关研究

牛蕾蕾
山东大学第二医院

目的 流行病学资料表明非小细胞肺癌高病死率与肿瘤组织持续异常增殖及远处转移有关，因此，找到调控这两方面的作用机制并以此为靶点治疗非小细胞肺癌是目前人们关注的热点，长链非编码 RNA 与肿瘤细胞增殖、侵袭转移密切相关，在本研究中，我们期望明确长链非编码 RNA 在这其中的作用。
方法 利用 RT-qPCR 技术，我们检测了长链非编码 RNA MGC27382 在 30 组肿瘤组织和癌旁组织中的表达水平，利用慢病毒过表达/敲除系统构建 MGC27382 的稳转/稳敲细胞株，利用 western blot 实验检测上调/下调 MGC27382 对细胞周期蛋白和 AKT/GSK3β 的调控，利用 MTT 和 Transwell 实验检测 MGC27382 表达水平对细胞增殖和侵袭能力的影响。

结果 实验结果表明 80%（24/30）的非小细胞肺癌低表达 MGC27382，过表达 MGC27382 能抑制 cyclin D1、cyclin E 以及 AKT/GSK3β 信号通路的表达，此外，MGC27382 稳转细胞株的增殖能力和侵袭能力减弱。
结论 MGC27382 在非小细胞肺癌中低表达，上调 MGC27382 抑制细胞增殖和侵袭，靶向 MGC27382 或许有助于提高非小细胞肺癌患者预后。

PU-4084

嗜血细胞综合征与 EB 病毒感染的相关分析

石洪琼
昆明医科大学第一附属医院

目的 探讨嗜血细胞综合征与 EB 病毒感染的相关分析。
方法 选取 2014 年 12 月～ 2017 年 8 月本院收治的嗜血细胞综合征(HPS)患者 31 例，对其 EB 病毒感染情况进行回顾性分析。
结果 31 例患者中 EB 病毒阳性有 22 例。
结论 EBV- HPS 是 HPS 中常见的一种类型，在临床工作中应该引起高度重视。

PU-4085

多发性骨髓瘤实验室诊断分析

马晓波
云南省昆明医科大学第一附属医院

目的 研究多发性骨髓瘤(Multiple Myelome，MM)细胞形态学及其他实验室相关指标特征, 提高对多发性骨髓瘤的认识。
方法 回顾性分析 22 例多发性骨髓瘤患者的实验室检查资料, 其中瘤细胞比例按照 Greipp 标准〔1〕, 重新进行评估。
结果 22 例多发性骨髓瘤中, 贫血者 20 例，血沉增快 15 例,平均为 106.5 mm /h。。, 蛋白尿 9 例平均为(++)，尿酸>90 umol/L 者 22 例。尿本周氏蛋白的检查者 6 例。尿轻链比值异常 17 例，血清轻链比值异常 22 例。22 例患者进行了骨髓穿刺镜检，浆细胞比例>=10%者 21 例，原始浆细胞型及幼稚型浆细胞 22 例(100%),其中原始浆及幼稚浆细胞>15%者 12 例。红细胞缗钱状排列 22 例， 12 例进行了骨髓活检，骨髓增生活跃，浆细胞片状分布 11 例，17 例患者进行了影像学 CT 检查，14 例患者骨代谢异常，虫噬状骨质破坏及不规则骨质吸收破坏。
结论 多发性骨髓瘤细胞形态学诊断结合实验室相关指标检查, 能够提高多发性骨髓瘤诊断的准确性, 为临床诊断提供可靠依据。

PU-4086

25 例低纤维蛋白原的肛肠科患者的回顾性分析

张婴嫱
联勤保障部队第 903 医院

目的 探讨因白眉蛇毒血凝素的应用，肛肠科低纤维蛋白原患者的低纤维蛋白情况，为临床用药提供指导意见。
方法 回顾分析 25 例低纤维蛋白原患者的用药、性别、年龄及低纤维蛋白情况。

结果 应用白眉蛇毒血凝酶治疗两天左右患者出现不同程度的低纤维蛋白原血症:其中 17 例明显降低（<1.0 g/L 但≥ 0.50 g/L），8 例达危急值（<0.5 g/L）。25 例患者中，男 16 例，占 64%；女 9 例，占 36%；年龄 22-78 岁，其中大于 70 岁 2 例，40-70 岁 19 例，小于 40 岁 4 例。
结论 白眉蛇毒血凝素应用广泛，但易导致纤维蛋白原降低,临床应用中要合理使用，特别注意给药期间凝血功能的监测,保证患者用药安全。

PU-4087

CRP、胆红素等指标在新生儿黄疸早期检测的临床意义

张敏
滨州医学院烟台附属医院

目的 研究探讨血清淀粉样蛋白 A（SAA）、γ-谷氨酰基转移酶(γ-GGT)、C-反应蛋白(CRP)检测浓度与胆红素实验室检测浓度之间存在什么关系以及早期检测有什么临床意义。
方法 选取 2019 年 7 月到 2020 年 1 月期间，滨州医学院烟台附属医院的新生儿 144 例，其中高胆红素血症 114 例，健康新生儿 30 例，分析各组新生儿的血清淀粉样蛋白 A（SAA）、γ-GGT、CRP 浓度的改变与 TBIL 浓度、DBIL 浓度的之间的关系。
结果 高胆红素血症组患儿 CRP、γ-GGT、TBIL、DBIL 检测指标的浓度均高于健康新生儿组，差异有统计学意义（P<0.05）。SAA 浓度实验组和对照组差异无统计学意义（P>0.05）。病理组 CRP 浓度、γ-GGT 浓度与 TBIL、DBIL 呈正相关（P<0.05），SAA 浓度与 TBIL 浓度呈正相关，与 DBIL 浓度呈负相关。
结论 实验组 CRP、γ-GGT 浓度的改变与胆红素浓度的改变之间的关系是呈正相关的，且对临床早期新生儿黄疸病程的监测及诊疗方案具有重要的参考意义；而 SAA 与胆红素之间的关系仍需要我们进一步研究证实。

PU-4088

IL-6 表达水平与非霍奇金淋巴瘤的相关性研究

方文硕
滨州医学院烟台附属医院

目的 研究非霍奇金淋巴瘤 (NHL)患者血清 IL-6 含量变化，并探讨其临床意义。
方法 利用电化学发光免疫分析检测 110 例非霍奇金淋巴瘤患者及 70 例健康对照组血清中 IL-6 的含量，并分析其与非霍奇金淋巴瘤的临床分期、肿瘤负荷的关系。
结果 患者组血清中 IL-6 含量较正常对照组均明显升高，差异有显著性 （P＜0.01）。根据 NHL 临床分期标准对研究组患者进行临床分期，Ⅲ、IV 期患者血清中 IL-6 水平较Ⅰ期和Ⅱ期明显升高（P ＜ 0.01），Ⅱ期患者血清 IL-6 含量亦比Ⅰ期患者高，其差异有显著性（P ＜ 0.01），IV 期患者血清 IL-6 显著高于 III 期患者血清 IL-6 含量（P ＜ 0.01）。随着临床分期增加，患者血清中 IL-6 含量呈递增趋势，各期间比较均有显著性差异 (P<0.01)。
结论 细胞因子 IL-6 的免疫失调与人类非霍奇金淋巴瘤的发病机制有非常紧密的关系。IL-6 血清表达水平与非霍奇金淋巴瘤的病程有重要相关性， NHL 患者血清中 IL-6 的含量，能够反映患者的肿瘤负荷，对非霍病情的判断具有重要意义。

PU-4089

LJ-5000 粪便分析仪与手工法检测对比分析

赵丹
滨州医学院烟台附属医院

目的 观察 LJ-5000 全自动粪便分析仪与手工操作结果的相一致性，评价全自动粪便分析仪的临床实用性。
方法 使用 LJ-5000 自动化粪便分析仪对 1000 份住院患者的粪便标本进行检测，包括标本的理学性状、病理有形成份和粪便隐血试验。同时，通过有经验的检验人员使用显微镜和手工方法对两种方法进行比较，比较两种方法结果的一致性，并以人工显微镜检验作为本次检验的金标准，与自动化粪便分析仪的结果进行比较，分析自动化粪便分析仪的临床实用性。
结果 自动化粪便分析仪与手工法的粪便理学性状检测结果之间无统计学差异（P＞0.05）；使用自动化粪便分析仪检出红细胞 150 例、白细胞 123 例、脂肪滴 70 例、霉菌 67 例、虫卵 6 例，检测结果与手工方法的镜检结果无统计学差异（P＞0.05）；自动化粪便分析仪隐血试验阳性 369 例，与手工法符合率为较相符。
结论 LJ-5000 自动化粪便分析仪检测结果与手工法检测结果一致性较好，并且有检测过程标准化、流程化，实验过程和工作环境更加洁净卫生，操作简便等优点，可以取代手工法进行推广使用。

PU-4090

对人工镜检作为 AML 患者外周血原始细胞复检“金标准”的思考

孙德华
南方医科大学南方医院

目的 本研究首次建立患者真实疾病情况的评价标准，以当前主流血液细胞分析仪和人工镜检为评价对象，分析其在 AML 患者诊疗过程不同阶段中对外周血原始细胞的检出能力及其差异。
方法 参考 NCCN 指南 AML 患者诊疗过程模型，制定患者疾病状态阳性和阴性判断标准，回顾性分析南方医院血液科 303 例 AML 患者的外周血样本，其中阳性组 76 例、阴性组 227 例。对明确分组的样本，使用人工镜检和 BC-6800Plus 血液分析仪这两种实验室外周血原始细胞筛查的方法进行检测并比较评估各自优劣性。
结果 以人工镜检为 Blast 检出的“金标准”进行分析， BC-6800Plus 血液细胞分析仪的 Blast 报警灵敏度可达 90.6%；以临床对患者疾病状态的定性判断为参照进行分析时，BC-6800Plus 对 Blast 的检出灵敏度分别为 97.4%，显著高于人工镜检 78.9%（P<0.05），当扩大人工镜检细胞到 500 时，灵敏度可显著提高至 94.7%；而在 Blast 检出特异性上，人工镜检特异性为 91.6%，显著高于 BC-6800Plus 的 68.3%（P<0.05）；在初始诊断和巩固治疗阶段，血液细胞分析仪对 41 例 AML 初诊样本和 5 例 AML 复发样本无一漏检，而人工镜检 12.5%（5/41）初诊假阴性样本和 20%（1/5）复发假阴性样本；应用 ROC 对 BC-6800Plus 和人工镜检的诊断效能进行评价，AUC 依次为 0.916 和 0.881，灵敏度和特异性分别为 97.4%和 68.3%、73.7%和 98.1%。
结论 高端血液细胞分析仪在 Blast 检测上具有高灵敏度的特性，能通过报警实现对 AML 患者外周血原始细胞的高效检出，为临床早期疾病早期预警提供依据；人工镜检可通过提高白细胞数量从而弥补原始细胞检出灵敏度低的问题，值得临床实验室思考常规人工镜检方法作为原始细胞复查“金标准”时的合理性及替代方法的可能性。

PU-4091

多发性骨髓瘤骨髓微环境中 B 细胞发育模式的研究

位金洺
滨州医学院烟台附属医院

目的 通过研究多发性骨髓瘤（Multiple myeloma，MM）患者骨髓微环境中 B 细胞各亚群的分布特点及发育模式，了解该疾病的发病机制，并讨论针对该疾病的可能存在的研究靶点。
方法 采用流式细胞学对其骨髓中各细胞群体进行测定和分析以明确 MM 患者骨髓微环境中 B 细胞的发育模式。通过对微环境中 NK 细胞和活化的 NK 细胞进行分析，明确 B 细胞和 NK 细胞在 MM 患者的疾病进展和预后中的作用。
结果 1.相对于“非 MM 患者”对象，MM 患者骨髓幼稚（Naive）B 细胞占总 B 细胞（CD19+）的比例明显减低，而记忆（Memory）B 细胞和活化（Activated）B 细胞占总 B 细胞的比例增高；2. MM 患者骨髓微环境中 NK 细胞占有核细胞的比例与“非 MM 患者”人群相比没有明显差异，但 MM 患者的活化 NK 细胞（CD27+ NK）比例明显低于正常人。3.与初诊时相比，经治疗后获得缓解的 MM 患者骨髓中的幼稚（Naive）B 细胞可出现一定升高，活化（Activated）B 细胞降低。
结论 MM 患者骨髓微环境 B 细胞分化发育异常，且整体处于免疫无应答状态；虽然记忆（Memory）B 细胞和活化（Activated）B 细胞的比例虽然较正常人有所增高，但并不能执行免疫功能，且增高的记忆 B 细胞可能与 NK 细胞的免疫抑制有关。

PU-4092

以急性胰腺炎为特征的肝吸虫病一例

闫平
吉林大学第一医院

目的 探讨肝吸虫性急性胰腺炎的临床特征，分析漏诊原因并提出减少漏诊的方法。
方法 对我院收治的 1 例因急性胰腺炎住院治疗的临床资料进行回顾性分析。
结果 本例患者因 4 天内无明显诱因出现上腹部疼痛,首次就诊于韩国首尔国立医院并住院接受治疗,诊断为急性胰腺炎，后回国于我院继续检查治疗。连续三天对患者粪便进行检查，其中两次查出肝吸虫虫卵，后详问病史，患者十余年前有食生鱼史，考虑肝吸虫病诊断明确,此前行腹部 CT 见肝内外胆管扩张，炎性可能，均考虑与肝吸虫病有关，予对症治疗后好转出院。电话随访半年,患者未再复发。
结论 肝吸虫感染诱发急性胰腺炎的病例并不常见,易发生漏诊情况,而全面细致分析病情,正确认识肝吸虫病,了解急性胰腺炎发作的诱因有利于减少肝吸虫病的漏诊。而粪便对肝吸虫卵筛查的重要性往往被轻视，关注急性胰腺炎的患者粪便筛查也是减少肝吸虫漏诊的关键。

PU-4093

乳腺癌化疗后继发急性髓系白血病 2 例

林慧君、候云龙
河南周口骨伤医院

目的 报道乳腺癌治疗后继发性白血病 2 例。
方法 报道 2 例乳腺癌继发急性髓系白血病患者的临床资料。
结果 2 例患者均为急性髓系细胞白血病(AML)，均有乳腺癌化疗史，其中 1 例化疗方案含环磷酰胺和表柔比星，潜伏期为 7 个月，继发急性髓系白血病 M2a,患者治疗效果好，嘱定期复查。另外 1

例潜伏期为 1 年半，行 IA(去甲氧柔红霉素和阿糖胞苷)化疗方案，继发急性髓系白血病 M4EO，该患者放弃治疗，要求自动出院。
结论 放化疗是目前肿瘤患者主要的治疗方案，而放化疗又是诱发白血病的主要因素，临床实际工作中应该严格掌握化疗药物的应用指征和剂量，从而降低治疗相关性白血病的发病率。

PU-4094

疟疾阳性病例血象分析及血片中疟原虫的镜检

曹阳阳
滨州医学院烟台附属医院

目的 归纳疟疾患者血象变化的一般规律，熟悉显微镜下查找并区分疟原虫，为早期临床治疗及预后判断提供参考数据和技术支持。
方法 回顾性分析 6 例疟疾患者一天的和 1 例疟疾患者数天的病例、检验报告单、厚薄血涂片信息。
结果 前 6 例患者 TBIL、DBIL、ALT、AST、γ-GT、BUN、Cr 个别患者有所升高，WBC 正常或降低，Lymph#、Lymph%、PLT、MPV、PCT 有所降低，Gran#及 Gran%变化高低不同，HGB、RBC 出现 2 例升高者，PDW 都升高，后 1 例患者随着治疗，各指标趋于正常。
结论 当 TBIL、DBIL、ALT、AST 越高，RBC、HGB、PLT 越低，患疟疾的可能性就越大。

PU-4095

肺癌患者外周血 ctDNA 和外泌体中 SHOX2 基因甲基化水平比较及临床应用价值评估

聂娜、沈燕
郑州大学第一附属医院

肺癌是全球范围内癌症死亡的主要原因。目前，临床上对肺癌的诊断和治疗方面取得了一定的成就，但在全球控制肺癌的发展中仍然存在许多问题。因此，早发现和早治疗仍是现在面临的重要问题。人矮小同源盒基因 2（shortstaturehomeobox2，SHOX2）属于 SHOX 基因家族成员，许多研究表明 SHOX2 基因甲基化与肺癌有关。本研究探讨以外泌体样本作为检测 SHOX2 基因甲基化的可行性，从而建立一种简便快速的检测方法。通过检测肺癌患者外周血 ctDNA 和外泌体中 SHOX2 基因甲基化，分析 SHOX2 基因在 ctDNA 和外泌体中甲基化水平是否一致。检测肺癌患者血清中 NSE、CYFRA21-1、ProGRP、CEA 和 SCC 水平，分析 SHOX2 基因甲基化联合五项血清肿瘤标志物检测在肺癌诊断中临床敏感性和鉴别小细胞肺癌和非小细胞肺癌的准确性。分析患者临床病理特征与外泌体中的 SHOX2 基因甲基化有无关联。研究发现，肺癌患者外周血 ctDNA 和外泌体中 SHOX2 基因甲基化水平检测结果较一致，其水平的增高与肺癌有关，外泌体中 SHOX2 基因甲基化与 NSE、CYFRA21-1、ProGRP、CEA、SCC 联合检测可提高诊断效能。这将为临床上肺癌的辅助诊断、治疗判断和预后监测提供依据。

PU-4096

有核红细胞数量与重症 ICU 死亡率的相关性研究

郑建蕊、郭翀
昆明医科大学第一附属医院

目的 分析外周血中有核红细胞(NRBC)与重症 ICU 患者死亡率的相关性 。
方法 回归性研究，收集 2020 年 1-8 月份在昆医大附一院重症 ICU 住院且做过血常规检查以及 NRBC 阳性的数据，收集患者的基本信息，包括性别，年龄，临床诊断，出院或者死亡，以及血常规检查中 NRBC#、NRBC%的最大值。
结果 收集到 NRBC 阳性的重症 ICU 患者共 133 例。分为死亡组和出院组。采用 Logistic 多因素回归对年龄、NRBC#、NRBC%分析，发现 NRBC # 、NRBC% 以及年龄为死亡的独立危险因素，每增加 1 个单位的 NRBC 计数，患者的死亡风险成 5.902 倍增长；每增加 1 个单位的 NRBC 百分比，患者的死亡风险成 0.440 倍增长。 利用 ROC 曲线对 NRBC#、NRBC%对预后评价效率进行评估。NRBC NRBC#和 NRBC%的曲线下面积分别为 0.704 和 0.683。当 NRBC#的临界值为 0 .025 0 × 10 9 /L 时，Sen 和 Spe 分别为 88%和 52.8%，当 NRBC%的临界值为 0 .350/100WBC 时，Sen 和 Spe 分别为 76% 和 61.1% 。 所以，当 NRBC # ≥ 0 .025 0 × 10 9 /L 或者 NRBC% ≥ 0 .350 时，可能会被作为判断患者预后的临界值 。
结论 本次研究结果表明，患者的 NRBC 水平高的死亡率也高，本次研究的患者死亡率为 18.8%。患者的死亡风险及预后评估与患者的性别无关，与患者的年龄有关，患者年龄越大，则死亡风险就越大，预后越差外周血 NRBC 数量的增高预示了患者可能预后不良、死亡风险增加、对临床早期发现不良预后有一定的指导意义。对急危重症特别是 NRBC 升高的患者，应密切监测，可对 NRBC 数量进行常规监测，及时发现患者的病情变化，以便进行相关治疗，从而降低死亡风险，预防不良后果的发生几率。

PU-4097

不同血液检测指标在冠心病临床诊治中的应用价值

赵中建
江苏省人民医院（南京医科大学第一附属医院）

目的 分析冠心病患者不同血液检测指标的价值。
方法 选取我院 2019 年 1 月至 2020 年 2 月期间接诊的冠心病患者 63 例，作为观察组，选择同时期健康体检者 63 例，作为对照组。两组均接受血液检测，分析不同血液检测指标两组的差异性。
结果 观察组血小板参数（包括血小板分布宽度、平均血小板体积、血小板体积、红细胞分布宽度）与对照组相比，（P＜0.05）具有统计学意义；观察组的心肌肌钙蛋白参数（包括心肌肌钙蛋白 T、高敏心肌肌钙蛋白 T、肌酸激酶同工酶、心肌肌钙蛋白 I）与对照组相比，（P＜0.05）具有统计学意义。
结论 不同血液检测指标在冠心病临床诊治中具有重要意义，可以为冠心病的临床症状提供有效依据，值得进行使用和推广。

PU-4098

血常规标本采集对检验结果的影响

文秋洁
雅安市人民医院

目的 了解静脉血与末梢血对血细胞检测结果的影响，探讨其检测结果的差异性。
方法 对 30 例住院患者同时采集静脉血和末梢血，用全自动细胞计数仪测定血常规，将所得两组数据进行重复性实验和比对实验，经统计学分析，比较静脉血和末梢血的差异。
结果 全自动细胞计数仪测定静脉血和末梢血血常规结果显示，两组白细胞（WBC）、红细胞（RBC）、血红蛋白（HGB）、血小板（PLT）均有极显著差异。
结论 血细胞分析应以静脉血为主，应对引起末梢血结果的诸多因素予以重视。

PU-4099

分析初发急性白血病凝血和纤溶指标

唐明霞
雅安市人民医院

目的 本文主要对急性白血病患者的凝血改变情况以及纤溶指标改变情况进行探讨和分析，以便为急性白血病患者提供最佳的治疗方法。
方法 本文选取本院 2019 年收治的 66 例急性白血病患者以及同期到医院体检的 50 例体检者作为研究对象，其中急性白血病患者为研究组，体检者为对照组，采用全自动凝血分析仪对实验组患者以及对照组的体检者的凝血酶时间以及凝血酶原时间进行分析，除此之外，还检验两组患者纤维蛋白原和 D-二聚体含量。
结果 急性白血病患者的出血倾向比较明显，并且治疗期间纤溶处于亢奋状态，检验急性白血病患者的 PT、FIB、D-二聚体等指标，有助于对急性白血病患者存在出血倾向的诊断，对病情的判断以及采取科学的治疗方法有着重要意义。

PU-4100

Research progress of correlation of platelet and its signaling pathway in the occurrence and development of acute myeloid leukemia

jianying zhang
East Hospital of Sichuan Provincial People, Hospital

Platelet is an important component of the hematopoietic system, which has special physiological functions and participates in the pathological process of many serious diseases.While its generation signaling pathway thrombopoietin(TPO) and its receptor MPL not only affects the normal platelet production, but also is closely related to the occurrence, development and prognosis of a variety of myeloid tumors. However, abnormal platelet and TPO / MPL signaling pathway occur in many hematologic malignancies or in the early stage of hematologic malignancies,these abnormalities are involved in or reflect the pathogenesis of hematological malignancies, which may affect the prognosis of hematological malignancies.Therefore, TPO / MPL signaling pathway and myeloid hematologic malignancies have a relationship of mutual promotion, development and interaction. This article reviews molecular mechanism of platelet production and its function, and the research progress of TPO

/MPL in myeloid malignancies, hoping to find a new target for the treatment of myeloid malignancies, even whether thrombocytopenia can play an early warning role in the occurrence of hematologic malignancies.

PU-4101

不同程度脂血标本对血常规血小板计数和血红蛋白检测结果的影响

孟静
山东大学第二医院

目的 探讨不同程度脂血标本对血常规血小板计数和血红蛋白含量检测结果的影响。
方法 全自动血细胞分析仪检测 EDTA-K2 抗凝全血脂血标本 100 例。分别采用电阻抗和血涂片镜检的方法检测血小板计数，采用比色法检测血红蛋白含量。对 100 例不同程度的脂血标本进行处理前后的血小板计数和血红蛋白检测结果进行比较。
结果 100%的标本血小板计数和血红蛋白检测结果处理前后结果相差悬殊。血小板计数假性增高 200-500%；血红蛋白假性增高 75-150%。
结论 脂血标本的血常规血小板计数和血红蛋白含量检测结果需矫正后发布到临床。

PU-4102

红细胞参数和网织红细胞参数在新生儿缺血缺氧性脑病中的变化及意义

孔虹、韦丽坚
中国医科大学附属盛京医院

目的 探讨新生儿缺血缺氧性脑病(Hypoxic-ischemic encephalopatly, HIE)中红细胞参数（FRC、MCV、MCH、MCHC、HGB、RDW、MicroR 和 MacroR）和网织红细胞参数(RET、IRF、HFR、MFR、LFR)的变化及临床意义。
方法 选择中国医科大学附属盛京医院已确诊为 HIE 的新生儿 52 例作为观察组，正常健康新生儿 44 例作为对照组，应用 Sysmex XN9000 全自动血液分析仪检测外周血红细胞参数和网织红细胞参数，将患者的参数与健康新生儿的参数进行比较，分析 HIE 患儿红细胞参数和网织红细胞参数的变化。
结果 经全自动血液分析仪检测发现，观察组红细胞参数中 RDW-CV、FRC 和 MicroR 比对照组高,HGB、MCV、MCHC、MacroR 比对照组低，差异具有统计学意义（$p<0.05$）；观察组网织红细胞参数 RET#、IRF 比对照组高，LFR 比对照组低，差异具有统计学意义（$p<0.05$）。
结论 全自动血液分析仪检测血细胞参数速度快、操作简单、准确度高，分析红细胞参数和网织红细胞相关参数的变化在临床 HIE 的筛查和辅助诊断方面具有一定的价值，但 HIE 的确诊需要多种手段联合检测。

PU-4103

雅安地区网织红细胞血红蛋白含量参考区间的初步建立

黄滔[1]、刘雨欣[2]、陈涛[1]、郑悦[1]、何霞[1]
1. 雅安市人民医院检验科
2. 雅安职业技术学院药学与检验学院

目的 初步建立和验证雅安地区健康成人网织红细胞血红蛋白含量（Ret-He）的参考区间。
方法 回顾性分析我院 2018 年 9 月至 2020 年 11 月体检人群，严格按照纳入和排除标准选取了 3105 位体检健康对象。使用 Sxsmex XN1500 全自动血液分析仪检测 Ret-He，按照性别、年龄和地区分组比较，最后采用非参数方法建立 95%参考区间，IBM SPSS 20.0 软件的 bootstrap 程序计算 P2.5 和 P97.5 处的 95%置信区间。
结果 Ret-He 呈现男性高于女性，其差异有统计学意义（P<0.05）；不同年龄组间的差异无统计学意义（P=0.194）；不同地区间的差异有统计学意义（P<0.05）,但两两比较后发现其差异均无统计学意义（P>0.05），故本地区应该单独建立男性和女性的参考区间，不同年龄和地区使用合并参考区间。健康成年男性和女性的参考区间分别为：26.5～37.2，25.1～36.1。
结论 本研究成功建立和验证了雅安地区 Ret-He 参考区间，对诊断和治疗贫血相关疾病有重要意义。

PU-4104

网织红细胞血红蛋白含量的测定在缺铁性贫血中的应用

尹正
中国医科大学附属盛京医院

目的 探究网织红细胞血红蛋白含量，在缺铁性贫血诊断的应用价值，以便于尽早确定贫血类型，准确的对缺铁性贫血进行治疗和预后服务。
方法 随机抽取 50 例缺铁性贫血患者、50 例非缺铁性贫血患者和 50 例健康体检人群。其中缺铁性贫血和非缺铁性贫血为实验组，健康体检人群为对照组。使用 HXL_XE2100-a 作为检验仪器进行检验，测量试验组和对照组的红细胞计数（RBC）、红细胞平均体积（MCV）、红细胞平均血红蛋白含量（MCH）、红细胞血红蛋白含量（HB）、平均红细胞血红蛋白浓度（MCHC）及网织红细胞血红蛋白含量（RET-HE），运用 spss26.0 统计软件对测量结果进行分析统计评价。
结果 对三组试验对象 RET-HE、MCV、MCHC、MCH、Hb、RBC 结果分析，A 组的（RET-HE、MCV、RBC.、MCH、MCHC）与其他两组相比是有差异的，差异具有统计学意义（P＜0.05）。A 组的 HB 含量与 B 组相比，差异无统计学意义（P＞0.05），与 C 组相比，差异有统计学意义（P＜0.05）。对 A 组数据进行灵敏度、特异性、准确度、阴性预测值和阳性预测值分析计算，RET-HE 的灵敏度与特异性均高于其他数据。使用 A 组数据绘制 ROC 曲线，RET-HE 曲线下面积最高为 0.928.
结论 RET-HE 在贫血的诊断中具有一定的临床应用价值，尤其对缺铁性贫血缺铁性病人的早期诊断具有重要的临床意义。

PU-4105

复发性流产患者中血小板参数与血小板聚集率的相关性

佟威威、华志阳
中国医科大学附属盛京医院

目的 分析复发性流产患者中，血小板参数与血小板聚集能力的相关性。探讨血小板参数预测复发性流产患者高血凝状态的应用价值。
方法 根据 LIS 系统数据，共选取 218 例诊断为复发性流产患者，依靠其花生四烯酸诱导的血小板聚集率分组，分为聚集率大于 80%组、70%-80%组与小于 70%组。再根据患者二次检测结果，血小板聚集率大于 20%为治疗抵抗组，血小板聚集率小于 20%为治疗有效组。比较两组的血小板参数差异。将治疗前患者的血小板参数与治疗后患者血小板参数进行差异性分析。最后，将治疗前患者的血小板参数与治疗有效的患者治疗后的血小板参数进行差异性分析。使用 SPSS 组间进行 T 检验与方差分析，判断差异是否具有统计学意义。
结果 血小板聚集率大于 80%组、70%-80%组和小于 70%组的血小板数量，组间具有显著差异，结果具有统计学意义（F=11.40，P＜0.01）。血小板聚集率大于 80%组、70%-80%组与小于 70%的血小板压积，组间差别有统计学意义（F=14.45，P＜0.01）。治疗有效组与治疗抵抗组，血小板数量（P＜0.01），差异具有统计学意义。治疗组与非治疗组差异不明显，无统计学意义。
结论 临床使用血小板参数预测血小板聚集能力具有可行性；可以通过血小板参数预测复发性流产患者的治疗效果；治疗前后血小板参数差异未有明显统计学意义，后续希望使用更多数据再次验证。

PU-4106

实验室指标、骨髓细胞形态学及流式细胞术对多发性骨髓瘤的诊断价值分

周颖、杨晓东、刘金彪
三峡大学附属仁和医院

目的 探讨实验室指标、骨髓细胞形态学及流式细胞术对多发性骨髓瘤（MM）的诊断价值。
方法 选取三峡大学附属仁和医院 32 例经临床诊断确诊的 MM 患者为研究对象，通过实验室检查血红蛋白、红细胞沉降率、球蛋白及免疫球蛋白含量，同时显微镜下观察骨髓中瘤细胞形态特征，结合骨髓流式细胞免疫表型进行分析。
结果 32 例 MM 患者中，轻度贫血者占 9.37%，中度贫血者占 71.87%，重度贫血者占 18.76%；红细胞沉降率升高的达 96.87%；血清球蛋白含量升高的达 84.38%，血清球蛋白含量正常的占 9.37%，血清球蛋白含量减低的占 6.25%；血清免疫球蛋白为 κ 轻链型的比例大于 λ 轻链型，差异有统计学意义（P<0.05）；MM 患者骨髓增生程度较多为增生活跃，且疾病分期越高，骨髓增生程度越活跃，形态学检测骨髓瘤细胞中位数比例为 37.00%（8.00%-95.00%），流式细胞术检测中位数 27.66%（4.10%-88.67%）；对骨髓瘤细胞抗原 CD138、CD38、CD56、CD27、CD19、cKappa、cLambda 进行分析，结果发现：32 例 MM 患者 CD138、CD38 阳性表达率均为 100%，其他抗原阳性表达阳性率为 CD56 93.75%、CD27 56.25%、CD19 21.87%，κ 轻链型占 37.50%，λ 轻链型 31.25%。
结论 由于多发性骨髓瘤（Multiple myeloma，MM）恶性程度高，临床症状复杂，容易漏诊和误诊，临床诊断 MM 时如结合血红蛋白、红细胞沉降率、球蛋白及免疫球蛋白含量、骨髓细胞形态学检查给到一定的提示作用，若联合流式细胞术检查，则诊断和鉴别诊断的水平一定可以得到提高。

PU-4107

NLR、MLR 在急性胰腺炎中的诊断价值研究

冉桥生
陆军军医大学第二附属医院检验科

目的 探讨中性粒细胞/淋巴细胞比值（Neutrophil to lymphocyte ratio，NLR）、单核细胞/淋巴细胞比值（Monocyte to lymphocyte ratio，MLR）检验检测指标在急性胰腺炎（acute pancreatitis，AP）中的诊断价值。
方法 回顾性选取 2018 年 1 月至 2019 年 10 月在陆军军医大学第二附属医院急诊科病区确诊为 AP 的住院患者 110 例作为病例组，选取陆军军医大学第二附属医院健康体检中心性别和年龄与病例组相匹配的健康体检人员 110 例作为对照组，对病例组就诊首次血常规测定项目与对照组血常规测定项目进行分析比较，并进行 Spearman 相关性分析和 ROC 曲线的绘制。
结果 1）AP 组与健康对照组比较， MPV、NLR、MLR 差异有统计学意义（P<0.05）。 2）Spearman 相关性分析，NLR、MLR 与白细胞（White blood cell，WBC）、中性粒细胞（Neutrophils，NEUT）、单核细胞（Monocytes，MON）、红细胞分布宽度（Red blood cell distribution width，RDW）均呈正相关（P<0.05）。3）ROC 曲线结果分析，NLR、MLR 共同联合检测诊断 AP 时，ROC 曲线下面积（Area under curve，AUC）为 0.963，敏感性和特异性较好（敏感性为 92.7 %，特异性为 94.6 %）。
结论 NLR 和 MLR 均可作为急性胰腺炎快速诊断的有效检测指标，且 2 项指标联合检测诊断价值较好，为急性胰腺炎的临床诊断提供了一种价格低廉、简便快速的实验室诊断方法。

江西省首例输入性新冠病毒 B.1.1.7 变异株感染患者的救治防控体会

刘洋、张伟、向天新
南昌大学第一附属医院

目的 探索输入性新冠病毒 B.1.1.7 变异株感染病例的临床特点及救治防控体会。
方法 对 2021 年 3 月 16 日江西省九江市第三人民医院收治的 1 例输入性新冠病毒 B.1.1.7 变异株感染患者的发病过程、临床表现、实验室检查、影像学改变及救治防控等进行总结。
结果 患者鼻咽拭子新冠病毒核酸检测阳性，经过中国 CDC 全基因组测序确认为输入性的新冠病毒 B.1.1.7 变异株，确诊为新冠病毒 B.1.1.7 变异株感染病例。患者男，34 岁，72kg 体重，由津巴布韦回国途中感染新冠病毒 B.1.1.7 变异株。早期为无症状感染者，后经发热、头痛进展为新冠肺炎（普通型），干扰素雾化吸入治疗，口服阿比多尔，口服江西特色抗新冠中药，丙种球蛋白静脉治疗。病程进展较快，病程第 3 天胸部 CT 呈现多发性感染灶，体温升高至 39.2℃，静脉应用甲强龙 40mg（0.56mg/kg/d）。被子、枕头、面罩存在大量病毒残留，环境消杀彻底。病程第 7 天病情有所好转，肺部病灶部分吸收。病程第 11 天，病毒核酸转阴，各种炎性及酶学指标恢复正常，肺内病灶明显吸收；病程第 14 天患者好转出院。
结论 新冠病毒 B.1.1.7 变异株潜伏期长，核酸载量增长快，病情进展速度快，环境病毒核酸残留污染严重，环境消杀与核酸监测齐头并进；早期各种指标监测及预判其重型化是治疗的重点，糖皮质激素对肺部病灶吸收有一定疗效，使用剂量有待进一步探讨。

PU-4109

红细胞分布宽度和血小板分布宽度对判断弥漫大 B 细胞淋巴瘤患者疗效和预后的价值

柳洪周
成都市第三人民医院

目的 探讨红细胞分布宽度（RDW)和血小板分布宽度（PDW）在弥漫大 B 细胞淋巴瘤(DLBCL)患者疗效及预后中的价值。
方法 回顾性分析 116 例 DLBCL 患者初诊时的 RDW、PDW 与临床特征及疗效预后的关系，根据 RDW、PDW 正常参考范围将患者分为低 RDW 组(≤15％)和高 RDW 组(>15％)、低 PDW 组(PDW≤14fL)和高 PDW 组(PDW>14fL)，比较 2 组患者疗效、总生存期（OS）及疾病无进展生存期（PFS），单因素和多因素回归分析各指标与疗效及预后的关系。
结果 高 RDW 组较低值组患者在疗效(P<0.001)、OS(P=0.017)和 PFS(P=0.038)均较差。高 PDW 组与低 PDW 组相比，高值组在疗效(P<0.001)、OS(P=0.014)和 PFS(P=0.030)均较差。多因素回归分析显示，高 RDW 和高 PDW 是影响 DLBCL 患者疗效的独立危险因素(OR=2.232，95％CI=1.181, 3.834，P=0.030)和(OR=2.560，95％CI=1.363, 4.728，P=0.027)。
结论 高 RDW 和高 PDW 与 DLBCL 患者的化疗疗效和不良预后相关。

Metabolomic profiling of cerebrospinal fluid reveals an early diagnostic model for central nervous system involvement in acute lymphoblastic leukemia

Zhiqiang Song[1,2]、Gusheng Tang[1]、Mian Wang[1]、Diya Lv[2]、Guihua Lu[1]、Jie Meng[1]、Zhenyu Zhu[2]、Jianmin Yang[1]、Yue Liu[2]、Yifeng Chai[2]
1. Changhai Hospital
2. 第二军医大学药学系

Central nervous system involvement (CNSI) is a common disease in patients with acute lymphoblastic leukemia (ALL). Currently, the pathogenesis of CNSI remains unknown and the robust biomarker for early diagnosis of CNSI is absent. An untargeted cerebrospinal fluid (CSF) metabolomics study was performed to identify the biomarkers that could early discriminate between ALL patients with CNSI and without CNSI in two independent ALL cohorts. In addition, we tracked the changes of the identified biomarkers in different stages of patients with CNSI, including before CNSI, CNSI and remission after treatment. 33 significantly altered metabolites of CNSI were identified, which were primarily associated with phenylalanine, tyrosine and tryptophan biosynthesis, synthesis and degradation of ketone bodies, D-Glutamine and D-glutamate metabolism, alanine, aspartate and glutamate metabolism, phenylalanine metabolism, citrate cycle (TCA cycle), tyrosine metabolism, arginine biosynthesis and butanoate metabolism. Then, CNSI evaluation score (CES) based on five biomarkers was constructed to predict the risk of CNSI, which could diagnose CNSI with positive prediction values of 97.2% and 86.1% in training and validation sets, respectively. Finally, we further validated the CES by tracking the changes of the CES in different stages of patients with CNSI, showing good ability of monitoring the development of CNSI. Our results revealed the metabolic changes of CSF related to CNSI and the CES could predict the CNSI well. This unique CSF metabolomics study help us understand the pathogenesis of CNSI and diagnose CNSI in early stage.

Relation of neutrophil-to-lymphocyte ratio and platelet-to-lymphocyte ratio to survival in patients with laryngeal squamous cell carcinoma

Xi Zhang
Department of Clinical Laboratory, Caner Hospital of Yunnan Province, the Third Affiliated Hospital of Kunming Medical University

Aims Although previous researches have demonstrated that preoperative complete blood count (CBC) and inflammation-associated blood cell markers may correlate with prognosis in patients with laryngeal squamous cell carcinoma (LSCC). However, the independent prognostic value of neutrophil-to-lymphocyte ratio (NLR) and platelet-to-lymphocyte ratio (PLR) based on multivariate analysis still remains controversial and needed be elucidated. we investigated the possible effect and particular prognostic importance of NLR and PLR in LSCC.
Methods Information including preoperative CBC parameters，clinical/ pathological materials and 5-year follow-up data were obtained retrospectively in 151 LSCC patients underwent primary surgery from December 2008 to October 2015. Cutoffs for NLR and PLR were optimized by receiver operating characteristic (ROC) curve. Overall survival (OS) was confirmed by Cox proportional hazards models and Kaplan-Meier method. Survival curves were obtained by Kaplan-Meier survival analysis and compared by log-rank test. Correlation of NLR and PLR with clinic/pathological parameters was analyzed using non-parametric tests.
Results In our study, PLR with cutoff 97.72 and NLR with cutoff 2.22 had independent prognostic significance for OS, while both PLR-high and NLR-high predicted a poor prognosis. In addition, NLR was strongly associated with cervical lymph node metastasis, preoperative neutrophil/Lymphocyte count, platelet distribution width (PDW) and stage, whereas PLR was also strongly associated with cervical lymph node metastasis, preoperative neutrophil/Lymphocyte count and PDW.
Conclusion Preoperative NLR and PLR can be used as independent factors affecting the survival of laryngeal cancer patients after operation, and have an important significance for the prognosis evaluation of laryngeal cancer.

加热灭活血清样本对新型冠状病毒不同检测方法所测抗体滴度的影响

张如意、胡秀梅、郑磊、王前
南方医科大学南方医院

目的 评估传统 56℃加热 30 分钟灭活血清样本后对 ELISA 法检测 SARS-CoV-2 IgM 及 IgG 抗体的影响
方法 收集 2020 年 2 月 26 日至 2020 年 3 月 6 日在武汉市汉口医院就诊的新型冠状病毒肺炎确诊患者住院患者血清 62 例，作为病例组。健康医护人员血清标本 18 例作为对照组。留取双份血清标本，一份 56℃ 30 min 热灭活，另一份未灭活。采用商品化新型冠状病毒（SARS-CoV-2）抗体检测试剂盒（ELISA 法）对分别对灭活前后的血清标本进行特异性 IgM 和 IgG 抗体检测。采用配对 kappa 检验对血清灭活前后 SARS-CoV-2 IgM 和 IgG 抗体检测检测结果差异进行统计学分析。
结果 灭活后的 IgM 及 IgG 水平整体高于灭活前，但其诊断阳性率并无明显改变；灭活前后 IgM 的阳性符合率、阴性符合率及总体符合率分别为 100.00%（55/55）、96.00（24/25）、98.75%

（79/80）（κ=0.971，P＜0.001）；而灭活前后 IgG 的阳性符合率、阴性符合率及总体符合率分别为 98.21%（55/56）、91.67%（22/24）及 98.75%（79/80）（κ=0.910，P＜0.001）。
结论 加热灭活法不影响 SARS-CoV-2 抗体的检测，可在临床中应用采用加热灭活的方法对病毒进行灭活以减少检测人员的感染风险。

PU-4113

白细胞介素-6 联合 PCT 与 CRP 评估儿童脓毒血症患者预后的价值

周觅
山东大学第二医院

目的 探讨血清 IL-6、PCT 与 CRP 变化在儿童脓毒血症中的临床意义,探寻儿童脓毒血症患者预后的评估价值.
方法 选取我院 2020 年 1 月～2020 年 10 月儿内重症监护室收治的 145 例脓毒血症患者,根据患者一个月内存活情况分为存活组(130 例)和死亡组 15 例),比较两组入院时 IL-6、PCT 与 CRP 水平、入院 3 天 IL-6、PCT 与 CRP 水平,采用受试者工作特征(ROC)曲线评价患者入院时 IL-6、PCT 与 CRP 对脓毒血症预后的评估价值.
结果 存活组入院时 PCT 与 CRP 水平低于死亡组,差异有统计学意义(P＜0.05);存活组患者入院时及入院 3 天 IL-6 水平均高于死亡组,并且迅速恢复正常,差异有统计学意义(P＜0.05);但是死亡组 IL-6 后续升高后一直维持一定水平难以恢复正常；两组入院时 IL-6、PCT 水平与入预后水平呈正相关(P＜0.05);ROC 曲线显示,IL-6、PCT 与 CRP 减少值单独及联合评估患者预后的曲线下面积分别为 0.829、0.848、0.933,两者联合诊断的曲线下面积、灵敏度、特异度、阳性和阴性预测值均高于单一指标.
结论 IL-6、PCT 与 CRP 联合检测对脓毒血症患者病情危重程度及预后的评估具有重要意义,可作为患者病情评估及预后的指标.

PU-4114

82 例初诊多发性骨髓瘤的临床特征及实验室检查分析

刘杭敏[1]、于鹏飞[2]、李谦[3]、曹颖平[1]
1. 福建医科大学附属协和医院检验科
2. 福建省级机关医院检验科
3. 福建医科大学医学技术与工程学院

目的 探讨影响初诊多发性骨髓瘤患者总生存的便捷有效预后因素。
材料和方法 筛选我院 2017 年 1 月至 2020 年 12 月初诊多发性骨髓瘤患者的病历资料共 82 例。1.确定 NLR、MLR 与总生存期的 ROC 截断值；2.单因素分析性别、年龄、白蛋白、乳酸脱氢酶、钙、肌酐、NLR、MLR、血红蛋白、血小板、β2 微球蛋白、ISS 分期、FISH 结果异常与总生存预后的关系；3.将有统计学意义的单因素变量纳入多因素分析。应用 SPSS23．0 统计软件处理所有资料数据，以 P<0.05 为差异有统计学意义。
结果 1.82 例患者年龄范围 40-88 岁（61.87±9.99 岁），其中男患者 46 例，女患者 36 例。首发症状骨痛 51 例，贫血 16 例，其他 15 例。IgG-κ 型 21 例，IgG-λ 型 22 例，IgA-κ 型 12 例，IgA-λ 型 9 例，κ 型 5 例,λ 型 9 例，不分泌型 2 例。ISSⅠ期 15 例，Ⅱ期 24 例，Ⅲ期 43 例。2.外周血 NLR 的 ROC 曲线截断值为 1.75，曲线下面积 0.509，敏感性 62.5%，特异性 43.1%（95%CI(0.358～0.660）。外周血 MLR 的 ROC 曲线截断值为 0.225，曲线下面积 0.614，敏感性 70.8%，特异性 56.9%（95%CI(0.471～0.758）。3.单因素分析显示性别、年龄、白蛋白、乳酸脱氢酶、浆细胞比

例、血清钙、血肌酐、血红蛋白、血小板、NLR、FISH 与总生存期 OS 之间无统计学差异（P>0.05），MLR、LDH、β2 微球蛋白、ISS 分期与总生存期 OS 之间有统计学差异(P<0.05)。4. 以 MLR、LDH、β2 微球蛋白和 ISS 分期因素进行 COX 模型分析，结果显示 MLR≥0.225 是影响 MM 患者 OS 的独立不良预后因素(P<0.05)。

结论 本研究表明 MLR≥0.225 是预测 MM 患者总生存期降低的独立危险因素，可以为临床更早更准确评估 MM 患者预后提供客观依据。

PU-4115

粪便隐血定量和肿瘤标志物诊断结直肠癌的临床研究

高丹、韦汇祯
中国医科大学附属盛京医院检验科

目的 探讨粪便隐血定量和肿瘤标志物检测结直肠癌的临床应用价值。

方法 本课题通过收集 2020 年 4 月至 2021 年 4 月中国医科大学附属盛京医院消化内科、肛肠肿瘤外科住院患者中的通过内镜检查及病理活检的患者的粪便标本及血清标本，分别做粪便隐血定量及肿瘤标志物检测，分析不同病理诊断类型中粪便隐血定量、癌胚抗原（CEA）、糖抗原 19-9（CA19-9）、糖抗原 72-4（CA72-4）这些指标的变化。以病理活检的患者为实验组，以同时期体检的健康人作为对照组,对统计的数据进行统计学分析。

结果 单独检测粪便隐血定量、CEA、CA19-9、CA72-4 在 CRC 组、良性肿瘤组、IBD 组及对照组中阳性率相对较低，粪便隐血定量联合肿瘤标志物检测的阳性率增高，在 CRC 组、良性肿瘤组、IBD 组及对照组的阳性率分别为 100%、36.7%、70%、0%。粪便隐血定量联合肿瘤标志物检测的灵敏度为 100%，单独粪便隐血定量、CEA、CA19-9、CA72-4 检测的灵敏度分别为 76.9%、73.1%、65.4%、53.8%。联合检测的特异度为 46.7%，阳性预测值 44.8%，阴性预测值 100%。

结论 粪便隐血定量联合肿瘤标志物检测可以提高检测的敏感性，在结直肠癌的诊断中具有重要的临床应用价值。

血清淀粉样蛋白联合白细胞、C 反应蛋白在小儿呼吸道感染诊断中的应用

谭珊[2]、王诗琪[1]
1. 湖南师范大学医学院
2. 湖南省人民医院

目的 分析血清淀粉样蛋白联合白细胞、C 反应蛋白在小儿呼吸道感染诊断中的应用。

方法 选取 2020 年 5 月至 2021 年 4 月内，湖南省人民医院收治的 100 例呼吸道感染儿童作为观察组，观察组包括细菌感染组 50 例，病毒感染组 50 例，同时选取同期在我院接受健康体检的 50 例健康儿童作为对照组，比较其 SAA、CRP 以及 WBC 的检验结果。

结果 观察组 CRP、SAA、WBC 阳性率分别为 51.00%、82.00%、46.00%。细菌感染组、病毒感染组 SAA、CRP、WBC 均高于对照组,细菌感染组 SAA、CRP、WBC 高于病毒感染组,数据有统计学差异,差异有统计学意义(P<0.05)。三项指标联合检验阳性结果分布：观察组 WBC、CRP 双项联合检验结果阳性率为 67.00%；WBC、CRP、SAA 三项联合检验阳性率为 86.00%。

结论 血清淀粉样蛋白联合白细胞、C 反应蛋白水平变化能够更好地反映小儿感染的病情变化，发挥良好的临床作用。

PU-4117

ALIFAX-Roller 20 全自动血沉仪性能评价及生物参考区间建立

邓中华[1]、孙文豪[1]、陈宇[2]、陈玮[1]、彭剑桥[1]、曹友德[1]
1. 湖南省人民医院（湖南师范大学附属第一医院）
2. 湖南师范大学医学院

目的 评估 ALIFAX Roller 20 全自动血沉仪检测性能并建立该方法不同性别及年龄人群的生物参考区间。
方法 选取 9 份临床样本连续检测评估仪器的重复性；采用质控品连续检测 20 天评估仪器的日间精密度；严格按照纳入排除标准收集健康体检人群静脉血标本上机检测，计算各人群生物参考区间，正态分布数据选（X±1.65S）为该人群生物参考区间，非正态分布数据选 P95 作为该人群生物参考区间；生物参考区间建立后，随机选取 20 份健康体检样本进行生物参考区间的验证，符合率达 90%则验证通过。收集 50 份临床样本，分别采用魏氏法和 Roller 20 同时进行血沉检测，比较两种检测方法的相关性。
结果 重复性评估结果显示 CV 小于 6%。日间精密度评估结果显示 CV 小于 5%。各性别和年龄组 Roller 20 全自动血沉仪检测生物参考区间分别为：男性，0-10 岁 2-23mm/h、11-20 岁为 2-24 mm/h，21-30 岁为 2-23 mm/h，31-40 岁为 2-24 mm/h，41-50 岁为 2-22 mm/h，51-60 岁为 2-31 mm/h，> 60 岁为 2-37 mm/h；女性，0-10 岁为 2-25 mm/h，11-20 岁为 2-25 mm/h，21-30 岁为 2-25 mm/h，31-40 岁为 2-28 mm/h，41-50 岁为 2-32 mm/h，51-60 岁为 2-34 mm/h，> 60 岁为 2-38mm/h；参考区间经验证，符合率 95%；Roller 20 全自动血沉仪法与魏氏法检测结果相关性分析显示两种方法检测相关系数为 R=0.932。
结论 ALIFAX-Roller 20 全自动血沉仪检测重复性和日间精密度良好，不同性别和年龄段人群的血沉生物参考区间稍有差异，女性高于男性，年龄越大血沉值越高。本研究建立的生物参考区间经验证可用于临床。

PU-4118

血栓弹力图联合常规凝血检测对 60 岁以上人群心脑血管疾病的评估价值

于鹏跃、赵凤莲、庞孟煜、王莹、张晓华、赵丽娟
The Second Hospital of Jilin University

目的 探讨 60 岁以上人群心脑血管疾病血栓弹力图(thrombelastoraphy,TEG)各项指标与常规凝血检测指标的相关性，以及上述指标对心脑血管疾病的评估价值。
方法 选取 2016 年 1 月至 2018 年 12 月期间就诊于吉林大学第二医院，年龄≥60 岁，脑血管疾病患者 113 例，心血管疾病患者 172 例，健康体检者 83 例，收集其治疗前的血栓弹力图、凝血常规、血小板计数等检测数据并进行回顾性分析。
结果 1.脑血管疾病组的活化部分凝血活酶时间(APTT)、血小板计数和平均血小板体积(MPV)高于对照组，心血管疾病组的 TEG-K、MPV 和 MPV/PLT 高于对照组，凝血酶原时间(PT)和纤维蛋白原(Fib)低于对照组；
2.脑血管疾病组和心血管疾病组 TEG-R 均与 APTT 呈正相关（相关系数分别为 0.295 和 0.176)，TEG-K 与 Fib 呈负相关(相关系数分别为-0.293 和-0.310)，TEG-α 与 Fib 呈正相关（相关系数分别为 0.345 和 0.271），TEG-MA 与 PLT 计数正相关(相关系数分别为 0.540 和 0.420)，TEG-MA 与 Fib 正相关（相关系数分别为 0.417 和 0.418）,TEG-MA 与 MPV/PLT 呈负相关(相关系数分别为-0.444 和-0.295)；
3.两组间 D-dimer 的分布趋势无明显差别，脑血管疾病组 FDP 高于心血管疾病组，而 D-dimer/FDP 低于心血管疾病组。

结论 1.大于 60 岁的心脑血管疾病人群中 TEG 检测指标与传统凝血常规指标存在明确的相关性，其中 Fib 对于 TEG-MA 的贡献可能高于文献所提到的 20%；
2.D-dimer 与 FDP 的联合检测对于 60 岁以上人群心脑血管疾病的凝血状态评估更具有价值；
3.MPV/PLT 和 D-dimer/FDP 可以作为机体止凝血功能的评价指标。

中性粒细胞／淋巴细胞比值与狼疮肾炎肾损伤的相关性研究

刘宇思
中国医科大学附属第一医院

目的 探讨中性粒细胞／淋巴细胞比值与狼疮肾炎肾损伤的相关性。
方法 选取在中国医科大学附属第一医院就诊的系统性红斑狼疮（SLE）患者 88 例。根据有无合并肾损伤将 88 例 SLE 患者分为 SLE 无 LN 组（43 例）和 LN 组（45 例）。另外，在同期本院体检中心选取性别、年龄相匹配的 55 名体检人员作为健康对照组。收集三组受试者完整的病史资料、相关检验指标，包括年龄，尿素，肌酐，血胱抑素 C（CysC），肾小球滤过率（eGFR），中性粒细胞计数，淋巴细胞计数，中性粒细胞比例，淋巴细胞比例，计算 NLR。并收集 SLE 患者的 C 反应蛋白（CRP），补体 C3，补体 C4，24 h 尿蛋白定量（UTP），尿微量白蛋白（UPRO），ds-DNA 抗体水平。采用单因素方差分析和 Kruskal-Wallis H 检验比较三组各项指标的差异性，通过 Spearman 分析 NLR 与狼疮肾炎肾损伤的相关性。采用 logistic 回归分析 NLR 与 LN 的关系，通过受试者工作特征曲线（ROC）评估 NLR 对 LN 的诊断效能。
结果 三组受试者的 NLR 值比较，差异具有统计学意义（P<0.05）。SLE 组的 NLR 值均高于健康对照组，且 LN 组的 NLR 高于 SLE 无 LN 组，差异均有统计学意义（P 均<0.05）。在 LN 患者中，NLR 与 UPRO 和 UTP 呈正相关（r 分别=0.386，0.309， P 均<0.05），与补体 C3 呈负相关（r=-0.325， p<0.05）。logistic 回归分析显示，NLR 是 LN 发病的危险因素（OR=1.618，P<0.05）。ROC 曲线分析结果表明，NLR 鉴别诊断未累及肾脏的 SLE 患者和 LN 患者的曲线下面积（AUC）为 0.732，最佳截断值为 2.07，灵敏度为 88.9%，特异度为 51.2%。
结论 外周血 NLR 与 LN 肾损伤密切相关，可作为评估 LN 肾功能损伤的指标。

PU-4120

Application of ion mobility spectrometry and data-mining to profile vaginal cleanliness: a hospital-based study in Xiamen

Zhenguo Lin[1]、guolin Hong[2,3]
1. 厦门大学公共卫生学院
2. 厦门大学附属第一医院检验科
3. 厦门市基因检测重点实验室

Objectives Vaginal cleanliness is an important clinical indicator for the evaluation of vaginal microecological state and the diagnosis of vaginal inflammatory diseases. We came up with a quick on-site solution to characterize the pattern of vaginal cleanliness and explore the related potential clinical significance based on ion mobility spectrometry for mini clinics or community hospitals, where the microscopic examination as the detection of vaginal cleanliness is not easy to be achieved.
Methods Testing of the vaginal secretions of 100 participants with vaginal cleanliness Grade 2, Grade 3, and Grade 4 was conducted by ion mobility spectrometry. Based on the ion mobility spectrometry sum spectra, we used the data-mining workflow composed of the principal

component analysis, Boruta, t-SNE, Radviz, heatmap, self-organized mapping, decision tree and Spearman correlation to profile the pattern characterization of vaginal cleanliness.
Results TC4, TC6 and TC10 as 3 key principal components were extracted and screened from the ion mobility spectrometry sum spectra. Then the pattern recognition and characterization analysis showed that vaginal cleanliness Grade 3 and Grade 4 tending to have smaller TC4 were similar in pattern, but they were relatively evidently different from vaginal cleanliness Grade 2 tending to have smaller TC6. And there was a negative correlation between TC4 and vaginal cleanliness ($p < 0.001$), a positive correlation between TC6 and vaginal cleanliness ($p < 0.001$), and a negative correlation between TC10 and vaginal cleanliness ($p < 0.05$).
Conclusion The clinical application of ion mobility spectrometry can provide a new idea for vaginal cleanliness detection.

PU-4121

细胞学检查对乳腺癌的诊断价值

刘婕
山东大学第二医院

目的 对细胞学检查诊断乳腺癌的价值进行系统综述。
方法 计算机检索 Pubmed,中国知网数据库、万方数据库,系统检索国内外公开发表的细胞学检查诊断乳腺癌的临床研究。
结果 临床上常用的细胞学检查包括细针抽吸细胞学和乳头溢液涂片细胞学。细针抽吸细胞学是诊断乳腺病变的基本方法之一，作为对患者临床病情初步评估的一种方法，对指导是否行手术治疗具有重要意义。乳头溢液进行细胞学检查适用于对临床评估有导管内恶性高风险病变患者进行诊断。
结论 细胞学检查是一种敏感性及特异性较高，易操作且经济的检查方法。

PU-4122

人外周血单个核细胞非同源端连接修复活性体外测定方法的开发与应用

浣西莎
中南大学

背景 非同源端连接(Non-homologous end joining, NHEJ)是维持遗传完整性和 DNA 双链断裂(DNA double-strand breaks, DSBs)修复的关键。体外 NHEJ 活性检测方法可测定 DSBs 修复活性，被认为是一种有价值的人类生物标志物。但由于缺乏标准化、操作流程复杂，且对细胞量的要求高(＞1-5 × 108)，体外 NHEJ 活性检测通常仅用于细胞系实验，很少用于临床血液样本的直接检测。
目的 建立一种检测人体血液样本非同源端连接修复活性的常规实验室方法。
方法 建立和优化适用于人外周血单个核细胞检测的体外 NHEJ 修复活性检测方法，并将其应用于健康人及鼻咽癌患者标本检测。
结果 所建立的方法将分析所需的细胞数量减少到 2×106，采用优化后的方法基于 179 例健康献血者样本建立了正常人的参考区间。对鼻咽癌患者的样本进行分析，结果表明，鼻咽癌患者的 NHEJ 体外活性平均值显著低于健康对照组($P<0.05$)。此外，经过 3 个月的随访，我们的研究发现，NHEJ 在 PBMCs 中的活性与正常组织的辐射副作用相关($P<0.01$)，而与治疗效应无明显关联($P>0.05$)。这是首次直接使用血液样本提取细胞，并评估 NHEJ 在大样本人群中的活性。

PU-4123

冠状动脉粥样硬化性心脏病患者凝血酶激活的纤溶抑制物（TAFI）及其编码区基因 CPB2（Thr325Ile）多态性的研究

徐成伟
山东大学第二医院

目的 探讨 TAFI 及其编码基因单核苷酸多态性与冠状动脉粥样硬化性心脏病之间的联系。
方法 应用 PCR-RFLP 检测 210 例冠心病患者和 190 例正常对照者的 TAFI 基因型，应用发色底物法和 ELISA 法分别测定 TAFI 的活性及抗原，并进一步分析基因多态性与 TAFI 的活性及抗原之间的关系。
结果 TAFI 的活性及抗原在心肌梗死组、心绞痛组和对照组中的浓度分别为（51.4±9.3）ug/ml、（145.6±33.5）%，（47.6±8.4）ug/ml、（128.3±28.7）%及（26.4±6.5）ug/ml、TAFI Ag（79.2±25.8）%。经方差分析，心肌梗死组及心绞痛组血浆中 TAFI 抗原与活性水平均较对照组显著增高（p＜0.0001），而冠心病组之间则无统计学意义（p＞0.05）。CPB2 基因的 3 种基因型（Thr325Thr、Thr325Ile、Ile325Ile）频率分布在心肌梗死组、心绞痛组和对照组分别为 32（32%）、53（53%）、15（15%），31（28.2%）、58（52.7%）、21（19%）和 64（33.6%）、92（48.4%）、34（17.8%），等位基因 C、T 频率在心肌梗死组、心绞痛组和对照组分别为 117（58.5%）、83（41.5%），120（54.5%）、100（45.5%）和 220（57.9%）、160（42.1%），三组之间基因型及等位基因频率分布无统计学差异且均符合 Hardy-Weinberg 平衡。在冠心病组和对照组不同的基因型对 TAFI 活性没有影响（p＞0.05）；对 TAFI 抗原含量的影响，则以 Thr325Thr 纯合基因型者血浆 TAFI 抗原浓度最高（p＜0.05）。
结论 TAFI 具有抑制纤溶的作用，可能是冠心病发病的危险因子。TAFI 编码区 CPB2 基因的多态性对血浆中 TAFI 抗原水平有明显影响，但与冠心病的发生没有明显的相关性。

PU-4124

肺癌患者凝血与纤溶系统分子标志物的检测及其临床意义

徐成伟
山东大学第二医院

目的 探讨血浆血栓调节蛋白（TM）、凝血酶抗凝血酶复合物（TAT）、组织型纤溶酶原激活物-纤溶酶原激活物抑制剂-1 复合物（t-PAI-C）、纤溶酶-α2 纤溶酶抑制剂复合物（PIC）等 4 项指标与肺癌病情发展及预后的关系。
方法 采用化学发光酶免疫法测定 158 例肺癌患者（NSCLC 患者 113 例，SCLC 患者 45 例）、53 例肺良性疾病患者及 60 例健康对照者血浆 TAT、TM、t-PAI-C、PIC 水平，分别比较肺癌组、肺良性疾病组与健康对照组，肺癌组有无转移，以及肺癌患者手术前后 4 项指标的差异。
结果 肺癌组血浆 TAT、TM、t-PAI-C、PIC 水平均显著高于肺良性疾病组和健康对照组（P<0.01），但肺良性疾病组与健康对照组比较无显著性差异（P>0.05）；NSCLC 患者血浆 TAT、TM、t-PAI-C、PIC 水平均显著高于肺良性疾病组和健康对照组（P<0.01），SCLC 患者血浆 TAT、TM、PIC、t-PAI-C 水平均显著高于肺良性疾病组和健康对照组（P<0.01）；肺癌转移组血浆 TAT、TM、t-PAI-C、PIC 水平均显著高于无转移组（P<0.01 或 P<0.05），其中 SCLC 组有无转移组血浆 t-PAI-C 水平未见显著性差异（P>0.05）；肺癌手术后 7～10 天血浆 TAT、TM、t-PAI-C、PIC 水平较术前明显下降，差异具有统计学意义（P<0.001）。
结论 肺癌患者存在不同程度的血管内皮损伤及凝血与纤溶系统功能紊乱，导致患者体内高凝状态容易并发血栓形成。检测血浆 TAT、TM、t-PAI-C、PIC 水平有助于评判恶性肿瘤并发血栓栓塞症的病情进展、疗效观察及预后判断。

PU-4125

2 型糖尿病患者 TAFI、PAI-1、t-PA、F1+2 与尿微量蛋白之间关系的研究

徐成伟
山东大学第二医院

目的 探讨 TAFI 和 PAI-1 在 2 型糖尿病患者中纤溶抑制的作用机理，并分析 TAFI、PAI-1、t-PA、F1+2 等凝血、纤溶的指标与尿微量蛋白之间的关系。
研究对象和方法 64 例 2 型糖尿病患者以尿蛋白排泄量分微量蛋白尿组（MAU）和正常蛋白尿组（NAU）2 组。凝血酶激活的纤溶抑制物（TAFI）、纤溶酶原激活物抑制剂-1（PAI-1）、组织型纤溶酶原激活剂（t-PA）及凝血酶原片段 1+2（F1+2）等凝血纤溶指标测定用酶联免疫吸附双抗体夹心法（ELISA），并分析上述指标与尿微量蛋白、血压、血糖、血脂、功能参数之间的关系。
结果 与对照组比较，血浆 TAFI 仅在 MAU 组显著性升高（P＜0.05）；血浆 t-PA 在 T2DM 的两组中增高均无显著性；而血浆 PAI-1 和 F1+2 在 NAU 和 MAU 组均显著性增高，差异具有统计学意义（P＜0.01）。但 TAFI、PAI-1、t-PA、F1+2 在 NAU 和 MAU 两组之间无显著性差异。
结论 2 型糖尿病患者的纤溶功能降低主要是由于 PAI-1 的作用，随着蛋白尿的出现，其进一步的低纤溶状态则是由 TAFI 介导的，故 TAFI 和 PAI-1 在抑制纤溶系统功能上的作用是独立的。

PU-4126

2 型糖尿病合并下肢骨折患者凝血分子标志物的变化及其与血栓形成的关系

徐成伟
山东大学第二医院

目的 探讨骨折对 2 型糖尿病患者凝血活性的影响及其与发生血栓性疾病的关系。
方法 测定 90 例 2 型糖尿病合并下肢骨折患者、90 例 2 型糖尿病患者及 90 例性别、年龄、体质指数均具有可比性的健康对照者的血浆纤维蛋白原（Fib），D-二聚体（D-dimer），血管性血友病因子（vWF）、血小板膜颗粒糖蛋白 140（GMP-140）、凝血酶原片段 1+2（F1+2），凝血酶激活的纤溶抑制物（TAFI）及组织因子途径抑制物（TFPI）等含量或活性水平，并进行组间比较。
结果 糖尿病合并骨折组 Fib、D-dimer、vWF、GMP-140、F1+2 和 TAFI 测定值分别是（5.3±1.4）g/L、（1350.1±88.3）ng/mL、（161.9±6.6）IU/dL、（21.8±2.5）μg/L、（1.6±0.5）nmol/L、（30.5±3.8）μg/mL，糖尿病组的相应测定值分别为（4.1±1.2）g/L、（880.5±35.6）ng/mL、（123.6±5.5）IU/dL、（18.9±2.3）μg/L、（1.3±0.3）nmol/L、（28.3±2.9）μg/mL，对照组的相应测定值分别为（2.5±0.6）g/L、（145.7±22.5）ng/mL、（96.8±4.5）IU/dL、（13.8±2.1）μg/L、（0.8±0.2）nmol/L、（26.4±2.5）μg/mL，前两组的测定值均较对照组显著增高，且糖尿病合并骨折组较糖尿病组显著增高（P<0.001）；糖尿病合并骨折组血浆 TFPI 活性为（16.2±1.3）U/ml，糖尿病组为（17.3±2.1）U/mL，均低于对照组（18.5±2.7）U/ml，且糖尿病合并骨折组较糖尿病组降低，差异均有显著性（F=26.68，P<0.001）。
结论 骨折可导致糖尿病患者的凝血活性增强，高凝状态加剧，进而更容易发生血栓栓塞性疾病。

PU-4127

Expression of serum free light chain in patients with lymphoma in Western China

Juan Zhang、jiaqiang wang、dan li
Sichuan Provincial People's Hospital

In abroad, Serum immunoglobulin free light chain (FLC) elevations in patients with Hodgkin lymphoma (HL) and non Hodgkin lymphoma (NHL) are associated with an inferior outcomes. However, there is limited data on serum FLC in lymphoid malignancies in China, especially, in west China. In this article, we will focus on lymphoma FLC in the west China.We analyzed the FLC results and the association of elevated FLC with clinical characteristics in 122 cases from Sichuan Provincial People's Hospital with newly diagnosed lymphoma. We found that the FLC elevation was common in lymphoma, but varied by types of FLC secretion (monoclonal or polyclonal), lymphoma types, geography and race. Furthermore, the patients with elevated FLC had adverse clinical characteristics more frequently, such as old age, more males, higher AMC and ALC, and etc. We demonstrated that the FLC was a new, useful, easily measured, serum biomarker in west china lymphoma population.

PU-4128

血清铁蛋白与血常规水平变化在诊断孕中期贫血中的意义

梁福燕
联勤保障部队 970 医院

目的 分析育龄期妇女的孕中期的血清铁蛋白和血常规检测项目之间水平变化，找到孕中期血清铁蛋白与血常规报告中各个数值之间变化的相关性，为预防孕期因血容量增大而引起的贫血及临床诊断、治疗孕中期贫血提供帮助并总结数值变化规律在孕中期贫血中的意义。
方法 选取 42 例孕中期贫血的孕妇作为研究对象，提取她们在怀孕前和孕中期的血清铁蛋白（SF）和血常规[红细胞比容（HCT）、红细胞计数 (RBC)、平均红细胞血红蛋白浓度 (MCHC)、 平均红细胞体积 (MCV)、血红蛋白（HB）、红细胞体积大小变异系数（RDW-CV）]数据，计算出怀孕前与怀孕中期的各项指标差值，以血常规报告的六组数据作为自变量，整理好借助 SPSS 数据分析软件，以此建立出各数值变化与血清铁蛋白变化的线性模型。阐述了孕中期血常规报告中六项指标，血清铁蛋白，孕中期贫血间的相关性，总结各变量之间的相互影响和意义。
结果 通过 SPSS 软件进行数据分析的线性建模，得出红细胞计数（RBC）、平均红细胞血红蛋白浓度（MCHC）与血清铁蛋白呈正性正相关（P＞0.05），红细胞比容（HCT）、血红蛋白（HGB）与血清铁蛋白呈负性正相关（P＞0.05），平均红细胞体积(MCV)和血清铁蛋白呈负性负相关（P＞0.05）。
结论 血常规报告中的六组数据都与孕中期贫血的血清铁蛋白存在一定的线性关系，所以在确诊孕中期贫血时可借助相关血常规报告中的检测指标及血清铁蛋白数据提示孕妇贫血，及时补充铁剂。

PU-4129

系统性红斑狼疮患者狼疮抗凝物和凝血功能检测的应用价值

刘红春、黄国虹
新疆维吾尔自治区人民医院

目的 探讨狼疮抗凝物(LA)及凝血功能指标在系统性红斑狼疮(SLE)患者血栓形成中的应用价值。
方法 收集 64 例 SLE 患者和 60 例健康体检者临床资料，比较 SLE 患者与健康对照组 LA 标准化比值、凝血功能指标（活化部分凝血活酶时间(APTT)、凝血酶原时间(PT)、纤维蛋白原(FIB)、D 二聚体(D-D)、抗凝血酶Ⅲ(AT-Ⅲ)）水平的差异，分析 LA 和凝血功能指标对 SLE 患者血栓形成的影响，研究在 SLE 血栓患者中各凝血指标与 LA 的相关性。
结果 SLE 患者中 LA 阳性占比为 31.25%，与健康对照组相比，SLE 患者组 LA 标准化比值、APTT、D-D、AT-Ⅲ水平均高于正常对照组，差异有统计学意义（P＜0.05）。SLE 血栓率为 18.75%，发生血栓事件的 SLE 患者的 LA 标准化比值和 APTT 水平均高于 SLE-非血栓组，差异有统计学意义（P＜0.05）。Pearson 直线相关分析结果显示，APTT 与 LA 呈正相关（r=0.63，P＜0.05），AT-Ⅲ与 LA 呈中度负相关（r=-0.58，P=0.05）。
结论 SLE 与 LA 及凝血功能部分指标密切相关，LA 比值增高和 APTT 延长造成 SLE 患者血栓形成风险增加，早期测定 SLE 患者的 LA 和凝血功能水平，有利于对 SLE 患者高凝状态的预防，为 SLE 患者并发血栓的早期诊断提供参考指标。

PU-4130

成都市正常妊娠女性血小板及相关参数参考范围的建立

杨婷
四川省人民医院东院

目的 检测成都地区不同孕期的正常妊娠女性血小板及其相关参数，建立该地区孕早、中、晚期女性的血小板及其相关参数的参考范围。
方法 选取 2019 年至 2020 年在四川省人民医院产科进行孕期检查的正常妊娠女性 819 例进行回顾性研究，其中孕早期 270 例，孕中期 289 例，孕晚期 260 例，同时选取 333 例健康体检的非妊娠育龄妇女作为对照。以上选取的妊娠及非妊娠女性的全血血小板计数（PLT）、血小板平均体积（MPV）、血小板分布宽度（PDW）及大血小板比例（p-LCR）水平结果均采用 Sysmex-XN 血细胞分析仪检测所得。对检测结果进行分析，比较正常妊娠妇女与非妊娠妇女以及各孕期之间血小板及相关参数的差异，建立该地区妊娠妇女 PLT、MPV、PDW、p-LCR 的参考范围。
结果 正常妊娠女性与正常非妊娠女性的 PLT、MPV、PDW、p-LCR 比较，差异有统计学意义（P＜0.05）。正常妊娠女性孕早期与孕中、晚期的 PLT、MPV、PDW、p-LCR 比较，差异均有统计学意义（P＜0.05）；孕中期与孕晚期的 PLT、MPV、p-LCR 比较，差异均有统计学意义（P＜0.05）；但孕中期与孕晚期的 PDW 比较，差异无统计学意义（P＞0.05）。正常妊娠女性孕早、中、晚期 PLT 参考范围分别为（112.0～312）、(103～294）、（93～284），MPV 参考区间分别为（9.1～14.1）、（9.1～14.6）、（9.0～14.3），PDW 参考区间分别为（9.0～21.9）、(9.4～23.5）、（9.4～23.5），p-LCR 参考范围分别为（17.5～57.9）、（18.1～58.4）、（18.1～57.5）。
结论 正常妊娠女性与正常非妊娠女性的血小板及相关参数有明显变化，且孕早期与孕中期、孕晚期也有所差异，各地区应建立适合本地区的正常妊娠女性血小板及相关参数参考范围。

PU-4131

异型淋巴细胞在 CMV 感染患儿中的临床应用

张富蕊
滨州医学院烟台附属医院

目的 为了探讨异型淋巴细胞变化水平在巨细胞病毒感染患儿中的诊断价值，异型淋巴细胞的水平是否与巨细胞病毒感染患儿具有相关性，对临床是否有诊断价值。
方法 实验组为滨州医学院附属医院在儿童门诊及病房 CMV 感染患儿 100 例，年龄在 4 岁左右，无其他血液系统等并发症；对照组为滨州医学院附属幼儿园健康儿童，年龄在 6 岁左右。对所有实验对象进行外周血涂片染色镜检，筛查异型淋巴细胞的数量对异型淋巴细胞数目统计分类，两组间数据比较采用卡方检验。同时运用流式细胞技术检测患儿组外周血淋巴细胞中的 pp65 抗原进行对比分析。
结果 巨细胞病毒感染的婴幼儿发病后，机体免疫系统紊乱，异形淋巴细胞水平增高，X2 值为 95.998，P<0.01。
结论 异型淋巴细胞变化水平与巨细胞病毒感染有相关性。异型淋巴细胞的检出对于婴幼儿感染巨细胞病毒具有明确的诊断价值，异型淋巴细胞的检查方法对于诊断巨细胞病毒感染具有一定的临床意义，准确性较高，是值得作为辅助临床诊断婴幼儿感染 CMV 的一项技术。

PU-4132

基于血小板参数建立区分肺结节良、恶性模型的真实世界研究

祖瑞铃
四川省肿瘤医院

目的 利用真实世界数据，基于血小板参数建立用于区分肺结节良、恶性的模型，对该模型的诊断效率进行验证，并与其他临床模型进行比较。
方法 纳入 2018 年至 2020 年在四川省肿瘤医院就诊的肺结节患者，所有纳入患者的治疗和相关检查均由临床医生决定，本研究者不做任何干预。回顾性收集纳入患者的 CT、临床和血小板数据，使用 XGBoost 构建预测模型。利用 ROC 曲线、IDI、NRI 和 NB 对模型进行评估并与其他模型比较。
结果 纳入人群被随机分入训练组和测试组，其中训练组包括 295 名肺结节患者（213 名恶性结节），测试组包括 124 名患者（90 名恶性结节）。最终年龄、血浆样本中的血小板计数 (pPLT)、富血小板血浆样本中的血小板比容（pPCT）、结节大小、全血样本中的血小板比容（bPCT）被纳入 XGBoost 模型。与 VA、MC、BU 模型相比，XGBoost 模型在 AUC 上有更好的表现（0.6365, 95%CI: 0.5786-0.6944; 0.6504, 95%CI: 0.5907-0.7101; 0.6232, 95.60425 ，分别为 95%CI:0.6946-0.7971)，从 NRI (0.1906, 95%CI:0.0955 - 0.2857; 0.2053, 95%CI: 0.1177 - 0.29217, 0.29217, 0.29217; 0.2928）和 IDI（分别为 0.07；95% CI，0.06-0.08；0.1274，95%CI：0.0909 - 0.1638；0.06，95% CI，0.05-0.06）来看，XGBoost 模型在对良、恶性结节的重新分类上要优于其他模型。根据决策曲线所示，XGBoost 模型也可以为患者带来更多益处。
结论 在本研究中，基于血小板参数的 XGBoost 模型被证明是一种区分恶性结节和良性结节的准确方法。

PU-4133

如何减轻患者静脉穿刺的疼痛

官余蕊
山东大学第二医院

1、建立有效沟通,给予心理支持,减轻患者的恐惧感
患者紧张的心理状态和对以往静脉穿刺时疼痛记忆,会使患者在采血过程中产生恐惧感。因此,护士在与患者的沟通过程中要面带微笑,语气温和,言词简单易懂,减少患者的紧张情绪,争取在轻松愉快的沟通过程中进行穿刺。因患者分散了注意力,对穿刺时的疼痛敏感性也随之降低。
2、提高穿刺技术,减轻患者疼痛
2.1 改进穿刺方法,减轻穿刺引起的疼痛
采用常规静脉穿刺法采血时,进针角度小(针头与皮肤成 30 度角) ,针头在血管旁边直刺或斜刺后再进入血管, 因此针头与皮肤接触面积较大,同时针头所穿过的皮肤组织较多,牵涉组织及神经末梢也相对较多,表皮到达血管的距离相对较长。
如果操作者进针速度越慢,对神经末梢刺激时间也就越长,表皮受损范围越大,所以患者疼痛感明显。同时, 由于穿刺时血管受推动压力的作用,易滑动,从而在一定程度上会降低穿刺的成功率,这样既增加了患者的痛苦又延长穿刺时间。要减轻穿刺引起的疼痛,就要减弱刺激,缩短刺激时间和减少刺激面积。即减少皮肤机械性损伤面积和缩短针尖斜面在皮内的刺激时间。采用改良的采血方法,即加大进针角度(头皮针与皮肤成 40~60 度角) ,针尖沿静脉上方直接快速进入静脉腔, (血管越充盈粗大则进针穿刺角度越大, 且穿刺速度越快),见回血后即接上真空采血管。这种方法可直入主题,由皮肤直接进入血管,不需要潜行进入针头,避免针头在皮下穿梭损伤皮下组织和加重痛感。
2.2 采用辅助措施,减轻患者疼痛感
采血前,将止血带较常规扎得稍紧,可起到麻痹扎止血带下段肢体神经的作用,有效减轻痛感。
3、采用合适的采血针,减轻患者恐惧感
采血时,根据患者血管情况,选用大小合适的采血针。一般情况下成人使用 6 号采血针,而小儿则使用 5 号半的头皮针。小号针头因其针尖斜面小,尖锋利,刺破皮肤时阻力小,刺破血管时机械切面小,对血管内膜损伤轻,在人的痛阈内完成操作从而减轻患者痛苦。

PU-4134

儿童末梢采血的技巧

孟义
山东大学第二医院

在我们日常采血工作中，儿童末梢采血是必不可少的，但是儿童自主配合特别低，有的小朋友一看到采血的工作人员就非常抗拒，有的直接跑，有的攥住拳头不松开，有的藏进妈妈的怀抱。面对孩子的反抗，所以在采集过程中，相比成人采血成功率低，因此在实践工作中总结了一些技巧。
向患儿家长核对患儿的信息，核对项目，执行执行单。
准备合适的试管，执行单贴在试管上，检查乳胶吸头，取一次性微量吸管，采血针。
嘱咐家长抓好儿童手腕，并告知家长用大拇指按住儿童大拇指根部。
用 75%酒精消毒，待干。
用左手大拇指和食指固定采血部位使皮肤紧绷，右手用一次性末梢采血器扎入指腹，然后立即拔出。
用无菌干棉签擦去第一滴血。
用一次性微量吸管吸血，如果血流不畅，可用左手大拇指和食指稍微施压使血流流出，用无菌干棉签按压伤口止血。
用乳胶吸头将一次性微量吸管中的血液排进试管中，颠倒混匀，切勿大力振荡。

PU-4135

急性髓细胞白血病中 CEBPA 基因突变特点分析

韩雪莹、朱丽蒙、张慧、张暨
郑州金域临床检验中心有限公司

目的 探究 CCAAT/增强子结合蛋白 α (CEBPA)在急性髓系白血病（AML）中的突变特点、CEBPA 胚系突变对 AML 预后的影响及胚系验证的必要性；
方法 收集郑州金域 2018 年 5 月至 2021 年 5 月用高通量测序方法检测 AML 相关基因突变（检测范围：30 基因全外显子）的患者数据共 803 例，通过生信分析就人员突变位点筛选、临床意义分级发现其中发生 CEBPA 突变患者共 329 例，患者年龄范围 11-92 岁。分析 CEBPA 双等位基因突变、单突变等不同突变模式下伴随基因的分布情况。在 CEBPA 突变的患者中，经验证得出具有家族遗传史的案例为 2 例，并分析胚系突变的发生特点及临床影响。
结果 329 例阳性患者中双突变为 212 例，单突变为 117 例，主要以双突变形式存在（65%）。且突变发生的年龄范围主要集中在 31-70 岁之间，占比达到 79%。CEBPA 双突变的患者中，更易伴随 GATA2、TET2、WT1、DNMT3A 基因的突变。在伴随基因分类中，双突变的高危标志基因伴随率为 23.88%，CEBPA 单突变患者的高危基因伴随率为 37.84%。这些高危分子标志的累积叠加可能进一步导致不良预后。伴 CEBPA 突变的遗传相关 AML 通常表现为显性遗传且完全外显，但胚系突变的来源不局限于之前研究发现的 N 端，DNA 结合区域也会有致病胚系突变的检出。
结论 CEBPA 单突变比双突变患者具有更多的预后不良相关基因突变，可能与 CEBPA 两种突变的致病性差别而导致预后差异相关。CEBPA 的胚系突变会导致家族性 AML 的发生，且在伴随其他致病体细胞突变时会加快疾病出现进程，对 CEBPA 突变检出阳性的患者，要对符合胚系突变特征的阳性位点进行胚系验证，提高检出率和正确率，如果先证者得到验证，需进一步进行家族突变谱筛查，以提供家族 AML 风险管理和早期诊断的依据。

PU-4136

302 例胎儿超声异常的遗传病因学分析

李毅、查斌斌、张帅、范晓宇、孙晶
泰安市中心医院

目的 从细胞和分子水平探讨胎儿超声异常的遗传病因学。
方法 选取 2004 年 6 月～2019 年 7 月 302 例以胎儿超声指标异常为指征进行侵入性产前诊断的病例，对其染色体及微阵列检查结果进行回顾性总结分析。
结果 302 例胎儿超声异常中，染色体核型异常 62 例，总异常检出率 20.53%；羊膜腔穿刺胎儿染色体异常检出率 26.77%（53/198）；脐血穿刺胎儿染色体异常检出率 8.65%（9/104）。超声指标异常染色体异常检出率依次为：结构畸形合并软指标异常 33.33%＞软指标异常 27.21%＞结构畸形 15.79%；胎儿颈部淋巴水囊瘤病例，染色体异常检出率最高为 58.33%，其次为颈项透明层增厚，异常核型检出率为 38.36%。合并三项及以上软指标异常组中，胎儿染色体异常检出率 36.36%高于单纯一项或两项组，伴有胎儿超声指标异常的高龄孕妇组染色体异常检出率高于低龄孕妇组。65 例同时进行染色体核型及染色体微阵列分析的病例中，核型正常而染色体微阵列分析异常 13 例，其中 6 例致病性微缺失微重复综合征。
结论 孕早中期超声筛查有助于更早地检出染色体异常胎儿，超声指标异常种类和数量越多及孕妇高龄合并胎儿超声指标异常时，发生染色体异常的机率增高；21-三体、性 CS 异常及 18-三体是最常见的超声异常胎儿的染色体异常类型；颈项透明层增厚、颈部淋巴水囊瘤等指标对染色体异常有重要提示价值，染色体微阵列分析在分子水平对染色体核型分析提供有力补充。

PU-4137

氧化石墨烯结合适配体酶切循环用于细胞外囊泡的快速检测

黄蓉蓉
南京鼓楼医院

目的 结合信号放大机制实现胃癌细胞外囊泡的定量检测，为胃癌的早期筛查、临床诊断和预后评估提供快速、灵敏、简便、成本低廉的新方法。
方法 一种以氧化石墨烯（Graphene oxide，GO）为检测平台的胃癌细胞外囊泡荧光检测法，首先将 GO 作为载体用于吸附修饰荧光基团的适配体，此时荧光信号被猝灭，当待测样品中存在细胞外囊泡时，适配体与细胞外囊泡结合而从氧化石墨烯上脱离，当氧化石墨烯吸附适配体后，适配体碱基与氧化石墨烯之间的 π-π 堆积相互作用能保护其不被脱氧核糖核酸酶 I（Deoxyribonuclease Ⅰ，DNase Ⅰ）降解，当待测样品中存在靶细胞外囊泡时，适配体与细胞外囊泡结合并从氧化石墨烯表面脱离，此时适配体能被 DNase Ⅰ降解并释放细胞外囊泡，游离的细胞外囊泡重新与氧化石墨烯上吸附的适配体结合，引发下一轮酶切反应。上述酶切循环能产生大量的短链核酸片段，由于短链核酸与氧化石墨烯之间的分子间作用力较弱，无法吸附到氧化石墨烯表面，因此能维持强烈的荧光的信号，且信号强弱与细胞外囊泡浓度呈正相关，通过检测反应体系最终的荧光信号，可以达到定量靶细胞外囊泡的目的。
结果 经过分析，当胃癌细胞外囊泡浓度在 3.2 × 107 ~ 1 × 1011 个/mL 的范围内时，检测体系的荧光强度与细胞外囊泡浓度呈现良好的线性关系，此时的线性方程为荧光值 F = 2570 × logC − 16007，其中 C 为细胞外囊泡浓度，单位为个/mL，线性相关系数 R2 = 0.9728，LOD 为 1.69 × 106 个/mL。
讨论 我们制备的氧化石墨烯结构稳定且包含大量的含氧官能团，传感器在引入酶切循环后信号增幅明显（约 4 倍），传感器的线性方程线性相关系数 R2 = 0.9728，检测限为 1.69 × 106 个细胞外囊泡/mL。

PU-4138

WBC、CRP、SAA、ESR 联合检测在冠心病诊断中的应用

喻岚
华中科技大学协和深圳医院

目的 探讨 WBC、CRP、SAA、ESR 在冠心病诊断中的临床价值，讨论这四个血液指标之间的关系，联合检测是否能够提高冠心病的阳性率。
方法 收集在深圳南山人民医院行冠状动脉造影的冠心病患者、来院进行体检的健康者的病例资料及血液标本 117 例。通过筛查，将符合本次实验研究标准的 75 例冠心病患者的病历资料及血液样本纳入冠心病组；42 例健康体检者的病历资料及血液样本纳入对照组；冠心病组再根据冠状动脉狭窄累积病变支数分为单支病变组 27 例、双支病变组 20 例及三支病变组 28 例。最后分别检测各分组中的 WBC、CRP、SAA 及 ESR。
结果 冠心病组与对照组的 WBC、CRP、SAA 存在显著性差异，具有统计学意义（P<0.05）;但冠心病组与对照组的 ESR 差异无统计学意义。检测项目 WBC、CRP、SAA、ESR 具有一定的相关性(P＜0.01)，CRP 与 SAA 成高度相关。各项项目检测指标的阳性率：SAA > CRP > WBC > ESR。
结论 冠心病与 WBC、CRP、SAA 具有一定的相关性，可通过检测这三个指标提早发现冠心病；SAA 与 CRP 具有高度相关性，且各项指标之间阳性率比较结果为 SAA 高于其他指标，表明 SAA 具有较好临床诊断价值；联合检测这四个指标可以提高冠心病的检出率。

PU-4139

浅谈环境温湿度对染色体 G 显带制片影响

陈超、翟贺
吉林金域医学检验所有限公司

目的 探讨环境温湿度对染色体 G 显带制片的影响，从而改善外周血 G 显带制片中出现的问题，提高制片质量、TAT 时间及降低退单率。
方法 随机选取近一周的 70 例外周血 G 显带样本进行接种，培养箱培养 72h 后细胞处于分裂的不同时期，加入秋水仙素可获得大量的中期分裂相细胞。用固定液甲醇:冰乙酸（3:1）进行固定，目的是维持染色体的固有形态及细胞膜。固定后获得一定沉淀细胞将细胞调制合适浓度进行滴片，在三种不同温度及湿度下对 70 例样本进行滴片，A 组：温度 25°C 湿度 50.0％-55.0％；B 组：温度 25°C 湿度 45.0％-50.0％；C 组：温度 27°C 湿度 50.0％-55.0％，滴片后统一放在 75°干燥箱内烤片 1h 烤片后进行吉姆萨染色。镜下随机选取 100 组分裂相观察其染色体形态及条带，记录较好的分裂相组数。
结果 对三种不同温湿度下的 70 例样本进行镜下分析后，结果如下图。A 组环境下较好分裂相为 61 组、B 组环境下较好分裂相为 73 组、C 组环境下较好分裂相为 57 组。
结论 在 B 组：温度 25°C 湿度 45.0％-50.0％的环境下，低倍镜下可看见中期分裂相，进而转至高倍镜及油镜下观察，可见染色体较为饱满，分布均匀，着色较好，沿染色体长轴可显出深浅不同的 G 带横纹条带清晰（如图）。且 B 组所得较好分裂相占比 73%，远高于 A 组 61%与 C 组 57%。由此可见，环境温湿度对制片有一定的影响，且温度 25°C 湿度 45.0％-50.0％的环境下制片效果最佳。

PU-4140

发热伴血小板减少综合征（SFTS）危重型案例一篇

张源达
江苏省人民医院（南京医科大学第一附属医院）

目的 分析实验室指标对诊断发热伴血小板减少综合征疾病的重要价值。
方法 跟踪分析一例发热伴血小板减少综合征（SFTS）危重型患者从初步诊断到最终确诊的过程。分析患者资料包括主诉、临床表现及体征、实验室指标（血液细胞学、生化、心肌标志物、凝血功能等常规指标，入院后炎症指标、免疫球蛋白等完善性检查指标，以及病原微生物学、分子生物学等特异性检查指标）、影像学检查。本案例重点分析常规实验室指标对初步诊断及最终确诊的指导价值。
结果 患者女，67 岁，入院前一周余无明显诱因下出现发热，最高达 39℃，伴全身乏力，经当地医院抗生素抗病毒药物治疗后，体温恢复正常。2021-3-18 患者突发意识障碍，言语不清，行走困难，遂至我院就诊。相关实验室检查及影像学检查结果见附件。根据患者主诉，结合患者发热、腹股沟可触及肿大淋巴结、血小板下降等相关临床症状，临床初步考虑为发热伴血小板减少综合征。根据急诊脑脊液检测结果，病毒性脑膜炎诊断明确。发热伴血小板减少综合征病毒 RNA 检测结果为阳性最终确诊为发热伴血小板减少综合征(SFTS)。
结论 发热伴血小板减少综合征是由新型布尼亚病毒感染所引起的经蜱传播传播的自然疫源性疾病，临床主要表现为发热、血小板减少、白细胞减少、消化道症状及多脏器功能损伤等，病情严重者可出现抽搐、昏迷、休克、全身弥漫性血管内凝血等，甚至导致死亡。该患者因合并有病毒性脑膜炎，以及慢性胆囊炎、慢性乙型病毒性肝炎等基础性疾病，实验室指标反映多脏器功能受损，病情较为复杂，增加了最终确诊的难度，而入院初期的一系列常规实验室指标检查的综合指向性较为符合 SFTS 的临床特征，进而为特异性实验室指标确诊指明了思路，提高了临床诊疗效率。

PU-4141

全血红细胞相关参数在肠梗阻的诊断和鉴别诊断中的应用价值研究

何亚琼、束国防
东南大学附属中大医院

目的 探究全血红细胞相关参数在肠梗阻的诊断和鉴别诊断中的应用价值。
方法 收集我院 2019 年 1 月—2021 年 5 月诊断为肠梗阻的住院病人共 170 例，作为研究组，根据肠梗阻的程度和病情，分为不完全性肠梗阻（109 例）、完全性肠梗阻（32 例）和粘连性肠梗阻（29 例）。选取同期健康人 100 名，作为对照组。采用非参数 K 检验比较各组平均红细胞体积(MCV)、平均红细胞血红蛋白含量(MCH)、平均红细胞血红蛋白浓度(MCHC)及红细胞体积分布宽度((RDW-CV、RDW-SD)的水平。
结果 研究组 MCV、MCH、MCHC、RDW-CV、RDW-SD 的水平明显低于正常对照组，且差异均有统计学意义（P<0.05）.不完全性肠梗阻患者的 MCHC 水平明显高于完全性肠梗阻患者，差异有统计学意义（P<0.05）。不完全性肠梗阻患者的 MCV、MCH、MCHC 水平高于粘连性肠梗阻患者，而 RDW-CV 低于粘连性肠梗阻患者，差异均有统计学意义（P<0.05）。
结论 不同类型肠梗阻患者的红细胞相关参数具有不同特征，红细胞参数水平能够为临床肠梗阻的诊断和鉴别提供较为有效的参考依据。

PU-4142

FUS-2000 全自动尿液分析仪性能验证的结果分析

肖婷
陆军军医大学第一附属医院（西南医院）

目的 探讨已使用过 4 年的 FUS-2000 全自动尿液分析仪性能，验证其是否能满足国家相关规定的要求，以便在临床正常使用。
方法 依据《中华人民共和国医药行业标准》YY/T 0475-2011 验证尿干化学模式试纸条的重复性检测、准确度测试、携带污染率、生物参考区间；依据《中华人民共和国医药行业标准》YY/T 0996-2015 验证尿有形成分模式的检出限、准确性、重复性、携带污染率、线性范围、识别率、假阴性率、可报告范围、生物参考区间。
结果 FUS-2000 全自动尿液分析仪尿液干化学纸条 12 个项目的重复性变异系数均小于 1%；准确度测试 12 个项目均满足要求；携带污染率阴性样本未出现阳性结果；尿干化学生物参考区间符合要求。尿有形成分准确性绝对偏差为 1.64%；红白细胞检出限 10/ul；红细胞低值、高值浓度重复性的变异系数分别为 8.7%、6.1%；白细胞低值、高值浓度重复性的变异系数分别为 8.4%、4.9%；携带污染率为 0.00%；红细胞的线性范围的相关回归方程 y=0.9928x+10.5563；红细胞的可报告范围为 10-16000*256/ul；白细胞符合率为 96%、红细胞符合率为 92%、管型符合率为 90%；假阴性率为 5.5%；尿有形成分生物参考区间符合要求。
结论 FUS-2000 全自动尿液分析仪性能验证的结果尿有形成分假阴性率不符合要求，其它参数符合国家要求。假阴性的结果会让临床漏诊一些疾病，所以应停止使用该仪器，及时查找原因并采取纠正措施，纠正后并重新进行性能评价，性能验证通过后才能再次应用于临床。总之在临床工作中我们应按要求在规定的时间内做好仪器的性能验证，以便了解其最佳的性能状态，为临床提供准确的报告，减少漏诊及误诊。

PU-4143

尿路感染诊断中尿常规检验的临床意义与结果分析

徐亚敏
山东第一医科大学第一附属医院（山东省千佛山医院）

目的 观察尿路感染诊断中尿常规检验的结果,分析其临床价值.
方法 选取我院 2020 年 9 月-2020 年 12 月收治的 100 例疑似尿路感染患者作为观察组,100 例健康体检人员作为对照组,对两组研究对象均进行尿常规检测和尿细菌培养,比较两组研究对象中白细胞计数以及亚硝酸盐阳性率,尿液细菌培养阳性率，以及检出的革兰阳性球菌和革兰阴性杆菌的百分比.
结果 观察组白细胞计数(5.98±1.32)个/HP,亚硝酸盐阳性 69 例,阳性率 69%;对照组白细胞计数(0.44±0.32)个/HP,亚硝酸盐阳性 0 例,阳性率为 0,观察组白细胞计数及亚硝酸盐阳性率明显高于对照组,差异具有统计学意义(P〈0.05).观察组尿液细菌培养阳性 90 例,阳性率 90.00%，其中有 17 例患者检出革兰氏阳性球菌,有 73 例患者检出革兰氏阴性杆菌,阳性球菌检出率显著低于阴性杆菌检出率(P<0.05);对照组尿液细菌培养均为阴性,阳性率为 0;观察组尿液细菌培养阳性率明显高于对照组,差异具有统计学意义(P〈0.05).
结论 对尿路感染患者进行尿常规检验,疾病检出率较高,对临床诊断具有一定的价值,可为临床医师诊断病情提供依据，值得进一步研究.

PU-4144

血清淀粉样蛋白 A（SAA）的临床应用

黄金英
柳州市妇幼保健院

目的 血清淀粉样 蛋白 A（SAA）在肝脏中合成，是一个炎症标志物，特异性及敏感性均高于传统 C 反应蛋白（CRP），健康人在 10mg/L 以下，当细菌、病毒感染、心血管疾病、肿瘤、类风湿性关节炎以及移植排异等多种疾病时增高。SAA 在病毒和细菌感染中均可升高，而 CRP 在病毒感染中几乎不升高或升高不明显。对于微弱的炎症刺激，SAA 也较 CRP 更敏感。所以 SAA 是反映感染性疾病早期炎症的敏感指标，也因此受到临床研究学者们的青睐，与 CRP 的组合检测更能体现优势互补，对细菌、病毒感染鉴别更有临床增值意义。
方法 采用乳胶增强免疫比浊技术，首先将血液样本和试剂 1 充分混匀，试剂 1 中含有的溶血剂会破碎血细胞，防止血细胞形成的浊度对检测结果的影响。然后向试剂 1 和样本的混合液中加入试剂 2，试剂 2 由抗体标记的乳胶构成。加入试剂 2 后，抗 SAA 抗体标记的乳胶和血液中的 SAA 抗原结合形成抗原抗体复合物，使反应液体出现浊度。利用测量仪对浊度进行测定从而检测抗原含量。
结果和结论 血常规、CRP、SAA 为代表的早期检测指标，在疾病感染中的应用各有优缺点，多指标联合连续监测，有助于感染性疾病的早期诊断、疗效判断以及预后评估 。作为疾病感染的三大常规,通过联合检测可以有效、快速的进行细菌感染和病毒感染的诊断，能让医生更好的针对性用药，指导抗菌药物的合理利用。易于在各级医院中开展,有效的诊断、合理的用药可以缩短病程，有助于患者的恢复。

PU-4145

Red blood cell distribution width as a diagnosis biomarker of acute mesenteric ischemia: a meta-analysis

Luyao Yang[1]、Qingying Hu[2]
1. Chengdu University of Traditional Chinese Medicine
2. Hospital of Chengdu University of Traditional Chinese Medicine

Background Red cell distribution width (RDW) is a standard parameter in routine hematological examination. Some studies have revealed that RDW could serve as a prognostic marker of several diseases, such as acute mesenteric ischemia (AMI). However, different studies have reported various diagnostic values. In our paper, we present a systematic review and meta-analysis conducted to evaluate the diagnostic accuracy of RDW for AMI.
Methods We systematically searched the PubMed, FMRS, and EMBASE databases, the Cochrane Database of Systematic Reviews, the Chinese Biomedical Literature Database, the China Academic Journals Full-text Database, and the Chinese Scientific Journals Database for potential studies. Studies were included if they were related to red cell distribution width (RDW) and acute mesenteric ischemia and reported diagnostic outcomes. Diagnostic value analysis was used to summarize the overall diagnostic performance of RDW.
Results Six studies were included in the meta-analysis. The ranges of the metrics of diagnostic performance of RDW for AMI were as follows: sensitivity, 0.41~0.76; specificity, 0.49~0.92; positive likelihood ratio, 1.9~5.2; negative likelihood ratio, 0.36~0.60; and diagnostic odds ratio, 4~13. The assessments revealed significant risk of bias (Chi-square: Q=26.588, df=2.00, P=0.000) and inconsistency (I-square: I2 = 92%, CI = 86~99). The asymmetry test indicated significant publication bias (P<0.05).
Conclusions As a diagnostic biomarker, AMI may not be effective, and there are several limitations to the reviewed studies.

PU-4146

免疫监控在肿瘤免疫治疗不良反应中的应用价值

袁小庚[1]、赵晓武[1]、王涛[2]
1. 郑州金域医学检测中心
2. 河南省中医药大学第一附属医院

目的 免疫检查点抑制剂治疗肿瘤过程中发生的免疫相关不良反应（Immune-Related Adverse Events，irAE）严重者会威胁患者生命，为了及早的判断病情、指导药物应用及预后评估，需要评估患者的免疫状态，包括淋巴细胞亚群和细胞因子水平的检测。
方法 对 60 例应用 PD1 抑制剂的非小细胞肺癌（NSCLC）患者， 在治疗前及治疗每周期（21 天），应用流式细胞术的方法检测淋巴细胞亚群变化水平，应用流式荧光的方法检测血清细胞因子的水平。
结果 1、流式细胞术的方法检测淋巴细胞百分比和绝对值检测（T/B/NK、CD3＋CD4＋T、CD3＋CD8＋T、CD4/CD8 比值）评估患者用药前及初次用药后机体的整体免疫状态；
2、通过检测 T 淋巴细胞活化亚群检测（标记:CD69/CD25/HLA-DR）（T 早期、中期、晚期活化指标）和功能/耗竭 T 细胞检测（标记 CD3/CD4/CD8/CD28）（功能 T 细胞，分化/耗竭 T 细胞），评估用药前患者机体免疫细胞的活化水平，指导用药时机及预测用药后发生免疫相关不良反应的风险。
3、细胞因子检测（14 因子）（IFN-γ、IL-1B、IL-2、IL-4、IL-5、IL-6、IL-8、IL-10、IL-12p70、IL-17A、IL-17F、IL-21、TNF-γ、TNF-β），评估免疫相关不良反应发生的风险及指导用药。

结论 监测 NSCLC 患者应用 PD1 抑制剂发生免疫相关不良反应，尤其是发生细胞因子风暴的重症患者其免疫因素的作用，为肿瘤免疫治疗不良反应的发生及临床效果的预测，提供诊断检测指标，避免病情恶化并为临床能够及时用药处理、降低不良事件发生具有重要指导作用。该项检测一定程度上填补了肿瘤免疫治疗相关不良反应的空白，为临床预防、监控和治疗提供新思路。

PU-4147

一例 CD103 阳性伴 HCL 相关基因阴性的小 B 细胞淋巴瘤的诊断及鉴别

邹丽萍
四川金域医学检验中心有限公司

目的 探讨一例 CD103 阳性伴 HCL 相关基因阴性的病例诊断及鉴别诊断并文献复习。
方法 对病例的临床资料、骨髓细胞形态学、流式细胞学、遗传学及分子生物学结果进行综合分析。
结果 患者全血细胞减少、脾大，血清免疫固定电泳为 IgM-Lambda；骨髓涂片成熟小淋巴细胞增生为主占 90%，部分可见绒毛状突起。骨髓流式免疫分型检测到单克隆 B 淋巴细胞占淋巴总数的 40.77%，FSC 小至中等，表达 CD19、CD20、HLA-DR、FMC7,部分表达 CD103、CD11c，不表达 CD5、CD10、CD25、CD23、CD200、CD34、CD117，胞膜免疫球蛋白 Lambda 轻链呈限制性表达。骨髓活检结果提示符合成熟 B 细胞淋巴瘤/白血病。染色体检查提示为正常核型，分子生物学检测 HCL 相关基因突变 ARID1A、BRAF、CCND3、EZH2、JAK3、KDM6A、KMT2C、KRAS、MAP2K1、NF1、NRAS、TP53、U2AF1 均为阴性；结合临床表现及 MICM 相关检查结果，综合诊断为 SLVL。
结论 HCL、HCL-v、SLVL、LPL、PLL、T-ALL 均可出现 CD103 阳性；当 CD5-CD10-成熟小 B 细胞淋巴瘤/伴 CD103 阳性时，需鉴别 HCL、HCL-v、SLVL；出现单克隆 IgM 需鉴别 LPL、SLVL；完善相关检查并结合临床表现有助于此类疾病的鉴别与诊断。

PU-4148

新冠肺炎康复者恢复期血浆治疗 COVID-19 患者清除体内病毒核酸效果

段丽、林国跃、蔺志强、王泉、秦莹、木尼热·库尔班、李远达、屈晓娟、赵豆豆、张弛、何雪
新疆医科大学第八附属医院检验科

目的 探讨康复者恢复期血浆治疗 COVID-19 患者后体内核酸基因 ORF1ab、N 转阴变化规律以及临床治疗效果。
方法 应用康复者恢复期血浆对临床 75 例快速发展型、重型和危重症 COVID-19 患者进行输血治疗，未输血组 200 例作对照，同时检测观察这 2 组 COVID-19 患者体内核酸基因 ORF1ab、N 清除状况、住院时间及临床效果，并统计比较分析。
结果 99 例快速发展型、重型和危重症 COVID-19 患者接受康复者恢复期血浆治疗，共输注血浆 107250ml，平均每人 1083.33ml，其中快速发展型使用康复期血浆最多占 47.0%，重型和危重型分别为 25.9%和 27%，而危重型还使用大量普通冰冻血浆、红细胞悬液、血小板和冷沉淀治疗。临床输血有效率 100%,治愈率 100%，总输血率达 9.31%（99/1064），无严重输血不良反应。输血组新冠肺炎核酸基因 ORF1ab、N 清除率（63.89%）明显高于未输血组（26.50%）（$p<0.005$）；且同期第 7-14d 基因 ORF1ab 和 N（-）转阴率（22.67%）、基因 ORF1ab（-）转阴率（17.33%）、基因 N（-）转阴率（21.33%）较未输血组（分别是 10.50%、7.50%、8.50%）较明显的高，差异均具有统计学意义（$p<0.01$）。输血组内 COVID-19 快速发展型、重型和危重型

3 型患者之间，随着病情发展程度加重患者住院天数越来越长差异均有显著性（P＜0.05）；未输血组内快速发展型与重型患者之间，随病情发展程度严重其住院天数也越来越长，差异有显著性（P＜0.05）。输血组快速发展型和重型患者住院天数均较未输血组患者明显缩短，差异有统计学意义（P＜0.05）。

结论 应用新冠肺炎康复者恢复期冰冻血浆治疗 COVID-19 患者，可有效增强重型和危重型住院患者免疫功能、加快病毒清除及核酸转阴率，有明显促进病情早日好转的作用。

PU-4149

基于新冠肺炎康复者恢复期血浆治疗 COVID-19 患者增强其体内免疫抗体 IgM 和 IgG 浓度变化研究

段丽、林国跃、蔺志强、秦莹、李远达、张弛、屈晓娟、白山、王子璠、王钒
新疆医科大学第八附属医院检验科

目的 探讨康复者恢复期血浆治疗 COVID-19 患者体内抗体 IgM、IgG 变化及治疗效果。

方法 对 COVID-19 患者进行康复者血浆治疗、观察，并检测抗体 IgM、IgG ct 值，与未输血组比对分析。

结果 （1）99 例快速发展型、重型和危重症 COVID-19 患者共输注康复者血浆 107250ml，平均每人 1083.33ml，其中快速发展型使用血浆 47.0%，重型和危重型分别为 25.9%和 27%，临床有效率 100%,治愈率 100%，总输血率 9.31%，无严重输血不良反应。（2）康复者血浆 229 袋（200ml）抗体检测平均抗体 IgG ct 值 31.61±23.28（1:64），IgM 为 7.19±11.94（1:8）。（3）在输血组中，输注血浆后患者体内抗体 IgG 和 IgM 的 ct 值（68.70±69.14 和 47.89±64.63）分别高于输血前（4.46±13.99 和 4.46±13.99），二者比较差异均具有显著性（p＜0.05）；在未输血组中，患者出院时体内抗体 IgM 和 IgG ct 值分别显著高于患者入院时体内抗体含量 ct 值（p＜0.05）；总体上输血组 IgM 和 IgG 抗体 ct 值含量明显高、浓度大，比未输血组分别高出 1-3 倍，但均无统计学差异（p＞0.05），但输血组重型患者出院时抗体 IgG 和 IgM 含量均明显高于未输血组出院时差异有统计学意义（P＜0.05）。（4）输血组内和未输血组内 COVID-19 快速发展型、重型和危重型 3 型患者之间住院天数都随病情发展程度加重越来越长，输血组快速发展型和重型患者住院天数均较未输血组患者明显缩短，差异有统计学意义（P＜0.05）。

结论 应用新冠肺炎康复者恢复期血浆治疗 COVID-19 患者可大幅提高重型和危重型患者抗体含量，有效增强免疫功能，缩短住院时间，加快病情早日好转的作用。

PU-4150

血栓弹力图对恶性肿瘤患者凝血功能的检测及意义

宁茜
天津医科大学肿瘤医院

目的对血栓弹力图对恶性肿瘤患者凝血功能的检测效果进行分析,并探讨实际应用价值与意义。血栓弹力图（thrombelastography, TEG）为一种凝血功能检测手段,能够全面地反映血液凝固及纤维蛋白溶解的过程,目前临床上主要将其应用于凝血功能监测、凝血障碍疾病的诊断、指导成分输血和监测抗血小板药物疗效。本文对 TEG 在恶性肿瘤患者中 VTE 发生的预测价值进行综述。

PU-4151

2015-2019 我院成分输血的情况分析

普菊华
昆明市中医医院

目的 通过对我院临床成分输血的分析，指导临床科学、合理用血，节约血 源，提高输血疗效，减少不良反应，最大限度地降低经血液传播疾病的发生。
方法 对我院近 5 年（2015～2019 年）成分用血情况进行统计。
结果 成分输血(红细胞类、 单采血小板、血浆、冷沉淀)使用量逐年增加, 但与现代国内外输血相比, 我院在血浆、 冷沉淀、血小板的使用上还存在着一定的差距和不合理性。
结论 加强成分输血管理, 降低血浆使用率,合理应用冷沉淀、血小板，开展自体输血

PU-4152

临床检验分析前质量控制因素分析

李云芬
昆明市中医医院

临床检验分析质量控制，分检验前、检验中、检验后三个主要环节，有数据表明，临床检验结果错误大多与临床检验分析前质量控制有关，由于影响临床检验分析前质量控制的相关性因素较多，贯穿于医生、患者、护士、检验人员的全流程，任何一个环节出了问题，都不可能得到合格的检验结果，因此高度重视临床检验分析前质量控制，最大限度的减少检验前不合格标本流入的数量，提高检验准确率，对于提升医院医疗服务质量，减少患者不必要支出，塑造良好医风医德有着十分重要的意义。

PU-4153

白带常规联合 BV Set 试剂盒诊断细菌性阴道病的临床分析

纪凤卿、陈君颖、滕菁 （通讯作者）
厦门市中医院

目的 分析研究白带常规联合 BV Set 试剂盒诊断细菌性阴道病的临床分析。
方法 取我院 2019 年 11 月—2020 年 7 月收治的阴道炎患者 600 例作为研究对象，将这 600 例阴道炎患者全部采用白带常规检查和 BV Set 试剂盒检查，最后将 600 例阴道炎患者的检查结果进行比较分析。
结果 根据研究表明发现，采用 BV Set 试剂盒检查的患者的阳性率为 7.00%，采用白带常规检查的患者的阳性率为 5.00%，差异无统计学意义（P > 0.05）；根据研究表明发现，BV Set 试剂盒检查中过氧化氢阳性率为 576（96.00%），唾液酸酶阳性率为 42（7.00%），白细胞酯酶阳性率为 180（30.00%）；并且过氧化氢阳性 576 例标本，其在白带常规各级清洁度患者中均有分布，其中 I 度、II 度、III 度、IV 度阳性率分别为 4.00%、20.00%、24.00%、52.00%。
结论 采用白带常规检查和 BV Set 试剂盒检查联合能够有效提高细菌性阴道病的检出率，从而提高患者的生活质量，为患者带来益处，值得大力推广。

PU-4154

低蛋白血症伴低 Hb 的高龄老人血清可溶性尿酸水平分析

蒋理、蔡针针
江苏省人民医院（南京医科大学第一附属医院）

目的 探讨自然寿命地区普通人群中高龄老人可溶性尿酸水平与营养相关指标的相关性分析。
方法 回顾性分析 2017 年 1 月至 2019 年 12 月来我院健康管理中心参加体检的 80 岁以上老人 4686 例，分析血清尿酸(UA)、白蛋白（Alb），血红蛋白（Hb）水平及各指标间相关性分析。
结果 女性低尿酸比率明显低于男性，差异有统计学意义（P<0.05)。按白蛋白水平四分位数分组。高蛋白组（Q4 组）尿酸水平高于低蛋白组（Q1 组），两组尿酸水平差异显著（P<0.01）；且低蛋白组低尿酸比率明显高于高尿酸组，差异显著（P<0.01）。按 Hb 水平四分位数分组。高 Hb 组（Q4 组）尿酸水平高于低 Hb 组（Q1 组），两组尿酸水平差异显著（P<0.01）；且低 Hb 组低尿酸比率明显高于高 Hb 组，差异显著（P<0.01）。分析低蛋白组、低 Hb 组及 Hb、ALB 均低组与正常组之间尿酸水平及低尿酸比率的差异，Hb、ALB 均低组尿酸均值最低、低尿酸比率最高，差异有统计学意义。
结论 表明营养状态差的高龄老人其尿酸水平也会低下，提示我们关注高龄老人营养状况的同时也要关注其尿酸水平，可以适当补充能升高尿酸的食物。

PU-4155

南京市区未孕育龄女性医务人员贫血患病率的初步调查

蒋理、蔡针针
江苏省人民医院（南京医科大学第一附属医院）

目的 初步调查南京市区未孕育龄女性医务人员贫血患病率。
方法 选择 2020 年 3 月至 7 月在我院进行健康体检的 18~45 岁未孕女性共 5672 人，分析贫血相关指标。其中 2798 例未孕育龄女性医务人员为实验组，其余 2874 例未孕育龄非医务职业女性为对照组。
结果 未孕育龄女性医务人员贫血总体患病率为 7.22%，其中 18~24 岁年龄段患病率为 4.91%，25~29 岁年龄段患病率为 6.18%，30~34 岁年龄段患病率为 7.52%，35~39 岁年龄段患病率为 9.96%，40~45 岁年龄段患病率为 8.06%；未孕育龄非医务职业女性贫血总体患病率为 14.20%，对应的年龄段患病率分别为 9.83%、10.89%、14.41%、20.07%、16.15%。两组的总体及各年龄段患病率差异均有统计学意义（P<0.05）。贫血类型均以小细胞低色素性贫血为主，贫血严重程度均以轻度贫血为主。
结论 南京市区未孕育龄女性医务人员贫血患病率低于同地区未孕育龄非医务职业女性，表明职业背景对贫血患病率有一定的影响，其具体机制有待进一步探讨。

PU-4156

PLR、D-二聚体和 CA125 对上皮性卵巢癌诊断的研究

蔡针针、蒋理
江苏省人民医院（南京医科大学第一附属医院）

目的 探讨血小板（Platelet，PLT）/ 淋巴细胞（Lymphocyte）、D-二聚体（D-dimer）和糖类抗原 125（CA125）在上皮性卵巢癌诊断中的应用价值。

方法 回顾性分析南京医科大学第一附属医院 2015 年 1 月−2020 年 12 月收治的上皮性卵巢癌患者 136 例[年龄：57.00(49.00,64.00)]、卵巢良性疾病患者 126 例[年龄：40.00(29.00,51.00)]。首先采用单因素分析和多因素 Logistic 回归分析与上皮性卵巢癌诊断相关实验室指标。其次用 ROC 曲线分析 PLR（PLT/Lymphocyte)、D-dimer、CA125 单独检测和联合检测对上皮性卵巢癌的诊断效能，最后分析上皮性卵巢癌患者 PLR、D-dimer、CA125 水平与其临床病理特征的关系。
结果 经 Logistic 回归分析，患者年龄、PLR、D-dimer 和 CA125 水平为上皮性卵巢癌独立危险因素。PLR、D-dimer 和 CA125 联合检测时诊断效能最好（AUC=0.955, 95%CI 0.922～0.977)。在上皮性卵巢癌组中，PLR 和 D-dimer 水平与肿瘤大小显著相关（P<0.05)；晚期患者与早期患者相比，PLR、D-dimer 和 CA125 水平均显著升高（P<0.05)；腹水<1000ml 的上皮性卵巢癌患者，PLR 水平明显低于腹水≥1000ml 的患者（P<0.05)；PLR、D-dimer 和 CA125 水平与上皮性卵巢癌淋巴结转移有关，有淋巴结转移的患者 PLR、D-dimer 和 CA125 水平均升高（P<0.05)。
结论 联合 PLR、D-dimer 和 CA125 有利于上皮性卵巢癌的诊断。

PU-4157

C 反应蛋白和淋巴细胞比例对重症急性胰腺炎患者的预后价值

陈颖、黎青
江苏省人民医院（南京医科大学第一附属医院）

目的 重症急性胰腺炎（SAP）是重症监护病房（ICU）的一种高死亡率常见病。疾病 严重程度的早期评估对于 SAP 预后很重要。 因此，我们旨在评估 C 反应蛋白（CRP）与淋巴细胞（LY）比率对 SAP 患者的预后价值。
方法 收集 2016 年 1 月至 2020 年 12 月期间，共有 154 例 SAP 患者被送入 ICU。根据患者 30 天的预后，将这些患者分为生存组和非生存组。用普门全自动特定蛋白分析仪检测血清中的 CRP，用血细胞分析仪测量外周血中的淋巴细胞。对这些危险因素进行逻辑回归分析， 用 ROC 曲线和 Kaplan–Meier 曲线评估 CRP / LY 的预后价值。
结果 单因素分析显示两组间的 CRP / LY 显著不同。 多元 logistic 回归分析显示 CRP / LY 可作为预测 SAP 患者住院死亡率的独立危险因素。CRP/ LY 的 ROC 曲线下面积为 0.831（敏感性：70.1％，特异性：88.2％）。根据 Kaplan–Meier 曲线分析，CRP / LY> 4.481 的患者的院内累积生存率明显高于 CRP / LY≤4.481 的患者。
结论 CRP / LY 是预测 SAP 患者住院死亡率的独立，有效且有前途的生物标志物。

PU-4158

对孕妇在妊娠晚期的纤维蛋白原参考区间的研究

马亮、李洁
江苏省人民医院（南京医科大学第一附属医院）

目的 探讨并建立适用于全自动血凝分析仪希斯美康 CS5100 的健康妊娠晚期孕妇的纤维蛋白原（FIB）浓度的参考区间。
方法 收集 2019 年至 2020 年在江苏省人民医院河西分院产科门诊进行正常产检的妊娠妊娠晚期孕妇 907 例，使用希斯美康 CS5100 全自动血凝分析仪检测血浆 FIB 浓度。运用 SPSS 22.0 软件，对结果数据进行正态性分析并建立新的参考区间，将新的参考区间与原参考区间进行一致性检验并计算 Kappa(K)值。将 907 例样本分为高龄组（>34 岁，250 例）和适龄组（19~34 岁，657 例），分别分析两组数据并对两者的结果进行 t 检验以比较不同年龄段的参考区间有无差异。
结果 使用 Kolmogorov-Smirnov 法对数据进行检测，P＜0.001，数据分布符合正态分布，靶值 3.87，标准差 0.75。参考范围按均值±1.96 标准差计算，本次研究的参考值范围为 2.40~5.34 g/L。

使用 McNemar-Bowker 法对新参考区间与原参考区间（2~4 g/L）进行卡方检验，Kappa=0.060，P＜0.05，认为两个参考区间的一致性较差。对适龄组和高龄组分别进行分析，并对两组结果进行两独立样本的 t 检验，t=0.576，P=0.564＞0.05，认为适龄组和高龄组间的差异无统计学意义。
结论 正常健康人群纤维蛋白原浓度的参考区间不适用于妊娠晚期孕妇，因此需要单独建立孕晚期妇女 FIB 的参考区间，以提高临床对孕妇生理状态评估的准确性。

PU-4159

新生儿外周血有核红细胞检测的结果分析

葛高霞、蔡针针
江苏省人民医院（南京医科大学第一附属医院）

目的 分析新生儿外周血有核红细胞（NRBC），来探讨其临床应用价值。
方法 观察本院住院的 1000 例新生儿患者，利用 XN-9000 血液分析流水线，测定新生儿静脉血 NRBC 的比例、绝对值计数。
结果 69.8%（698/1000）的新生儿外周血检出 NRBC,且与性别无关。诊断为新生儿窒息的患儿外周血 NRBC 检出率 98%； 检出 NRBC 的患儿胎龄低于未检出 NRBC 的患儿（P＜0.01）；NRBC 的比例和绝对值，早产儿高于足月儿（P＜0.01），低体重高于体重正常的新生儿。
结论 早产儿、低体重儿、新生儿窒息的外周血 NRBC 比例和绝对值计数均会升高，测定新生儿外周血 NRBC 可以评估新生儿健康状况。

PU-4160

新生儿的末梢血与静脉血在血常规检验结果的比较分析

葛高霞、黎青
江苏省人民医院（南京医科大学第一附属医院）

目的 比较分析新生儿末梢血与静脉血的血常规检验结果的差异，为临床新生儿血常规检验的标准化操作提供理论和实验依据。
方法 选取在我院出生的健康足月新生儿 94 例，同时采集末梢血和静脉血在全自动血细胞分析仪上进行检测，并对检测结果中白细胞计数（WBC）、中性粒细胞计数（NE）、淋巴细胞计数（LY）、单核细胞计数（MO）、嗜酸性粒细胞计数（EO）、嗜碱性粒细胞计数（BA）、红细胞计数（RBC）、血红蛋白含量（HGB）、红细胞压积（HCT）、血小板计数（PLT）10 项主要指标进行统计分析。
结果 新生儿末梢血与静脉血的 WBC、NE、RBC、HGB、HCT 和 PLT 6 项指标平均水平差异具有统计学意义（P<0.05）；LY、MO、EO、BA 4 项指标平均水平差异无统计学意义（P>0.05）。
结论 新生儿末梢血并不能完全反映循环系统血液的整体情况，因此临床遇到结果存疑时，建议进行静脉采血复查，以免造成误诊。

PU-4161

HELLP 综合征 78 例临床特征分析

蔡针针、葛高霞
江苏省人民医院（南京医科大学第一附属医院）

目的 探讨 HELLP 综合征患者临床特征及实验室检查指标变化，以便疾病早期诊断和及时干预。

方法 选取 2015 年 1 月至 2019 年 12 月于我院住院的 HELLP 综合征患者 78 例为病例组；对照组随机选取同期无妊娠合并症的健康分娩产妇作为对照组，收集患者年龄、妊娠信息、孕周、出血情况、临床表现、母婴结局、并发症、分娩后恢复情况等临床资料，以及血常规、肝酶、心肌酶、胆红素、白蛋白、凝血功能等实验室指标。
结果与对照组相比,HELLP 组入院时 RBC、PLT、PCT、PLR 均偏低，WBC、PDW、NE、NLR 值偏高，两组数据进行非参数检验，差异有统计学意义（P＜0．05）。与对照组相比，HELLP 组 AST、ALT、TBIL、IBIL、Cr 均明显升高，血清白蛋白降低，非参数检验 P 均＜0.05，差异具有统计学意义。HELLP 组较对照组 PT 及 APTT 均延长，FIB 偏低（P＜0．05），差异有统计学意义。
结论 HELLP 综合征患者在血常规、生化指标上有其独特的改变，往往需要多学科协助诊治。 在临床工作中，需要我们对患者异常的临床表现及化验指标变化提高警惕，对疾病进行早期诊断，以便及时干预，改善母婴预后。

PU-4162

由 APTT 纠正试验不能纠正发现抗磷脂抗体综合征 1 例

孟荣
西安医学院第一附属医院

抗磷脂抗体综合征（antiphospholipid antibody syndrome）是指由抗磷脂抗体（antiphospholipid antibody，APL 抗体）引起的自身免疫性疾病。APL 抗体是一组作用于磷脂、磷脂结合蛋白或两者的复合物，主要由狼疮抗凝物(lupus anti-coagulant，LA)、抗心磷脂抗体(anti-cardiolipid antibody，ACL 抗体)和抗 β2 糖蛋白 I（β2GP I）抗体组成。与 APL 抗体有关的临床表现主要为血栓形成、习惯性流产、 血小板减少和神经精神症状等，部分患者还可出现网状青斑、心瓣膜赘生物及溶血性贫血。本实验室通过常规凝血六项筛查出 APTT 异常增高患者一例，且通过 APTT 纠正实验不能纠正，提示临床患者体内存在自身抗体或抗磷脂抗体，进一步追踪检查，及时诊断出 1 例临床症状不典型的抗磷脂抗体综合征患者.

PU-4163

科宝 S120 型尿液有形成分分析仪检测 RBC、WBC 的性能评估

杨华、杨晓东、秦诗睿
三峡大学附属仁和医院

目的 对科宝 S120 型尿液有形成分分析仪检测 RBC、WBC 的性能进行评价，证实其性能满足临床要求。
方法 按照国家实验室 ISO15189 认可要求，分别对 S120 型尿液有形成分分析仪检测 RBC、WBC 的精密度、准确度、携带污染率、检出限、稳定性能、线性范围进行评价。
结果 RBC、WBC 的批内及日间精密度分析结果显示，批内及日间变异系数均小于 10%；质控品的测定值与理论值比较，RBC 高值和低值的平均相对偏差分别为 3.53%、4.0%，WBC 高值和低值的平均相对偏差分别为 4.71%、4.0%；RBC 的携带污染率为 0.02%，WBC 的携带污染率为 0.01%；红细胞、白细胞的检出率均为 95%；仪器在 2h 内测定 RBC、WBC 的重复性，稳定性良好；RBC、WBC 线性回归方程及相关系数分别为：y=0.9897x-8.3347 和 0.9993、 y=1.0013x-13.21 和 0.9994 。
结论 S120 型尿液有形成分分析仪检测 RBC、WBC 的各项性能良好，完全可满足临床实验室要求。

PU-4164

全自动血液推片系统对异型淋巴细胞形态学复检的影响

王科勇
西安医学院第一附属医院

目的 分析全自动推片机不同推片角度和速度下对异型淋巴细胞形态学复检的影响。
方法 选取 2019 年 9 月至 2020 年 9 月间淋巴细胞百分率>50%且异淋散点图异常的 50 例门诊患者，单纯淋巴升高者 30 例，健康对照 30 例，均采集 EDTA 抗凝全血标本。每份样本手工和仪器各制备血涂片 1 张，同时随机选取 20 例阳性标本使用推片机在 20°（100mm/s，150 mm/s）和 30°（100mm/s，150 mm/s）条件下制备血涂片 4 张并染色。对异型淋巴细胞进行计数，以人工涂片为标准进行比较分析。
结果 数据分析显示，仪器自动推片异型淋巴（10.36±3.15）明显高于手工推片（5.24±1.85），统计具有显著性差异（P<0.05）。而对照组仪器与手工推片异淋为（0.46±0.13 VS 0.40±0.16），淋巴升高组（1.42±0.24 VS 1.04±0.19），两种方法均无统计学差异（p>0.05）。且随着推片角度增大，异型淋巴细胞计数逐渐升高。
结论 推片角度会对仪器涂片的淋巴细胞形态产生影响，导致异淋假性升高，从而干扰血细胞形态学复检，因此在日常工作中需要优化涂片参数，减小对复检的影响。

PU-4165

探讨新、旧尿液复检规则对降低假阴性率的重要作用

唐良洪
宝鸡高新医院

目的 对本科室目前使用的尿液复检规则进行再评估，以此为依据重新建立更为严格的尿液复检规则并验证，对提高镜检率，降低假阴性率有重要的作用。
方法 对 2019 年 11 月 14 日至 2019 年 11 月 24 日共 1500 分临床尿液样本在优利特 1600 尿干化学分析仪和 sysmexUF-1000i 尿有形成分分析仪进行检测，并对这 1500 份尿液标本分别按照新、旧复检规则进行镜检，计算真阴性率、假阴性率，真阳性率、假阳性率。以验证新的复检规则在降低假阴性率方面的有重要性。
结果 旧规则 880 份阳性标本中，真阳性标本 682 份，真阳性率为 95.5%，假阳性标本 198 份，假阳性率为 22.8%。阴性标本 620 份，真阴性标本 587 份，真阴性率 94.7%，假阴性标本 33 份，假阴性率 4.6%。新规则 880 份阳性标本中，真阳性标本 743 份，真阳性率为 98.8%，假阳性标本 137 份，假阳性率为 18.3%。阴性标本 620 份，真阴性标本 611 份，真阴性率 98.5%，假阴性标本 9 份，假阴性率 1.19%。
结论 本实验室制定的新旧复检规则满足行业标准假阴性率≤5%的要求，新的复检规则假阴性率和假阳性率均比旧的复检规则低，结果更准确可靠。

PU-4166

Sysmex XN-2800 全自动血细胞分析复检规则的验证

杨亚琼
宝鸡高新医院

目的 对本实验室 Sysmex XN-2800 全自动血细胞分析设立的复检规则进行验证，确保检验结果的准确性，提高工作效率。

方法 依据国际血液学复检专家组推荐的 41 条自动 CBC 和 DC 复检规则和国内协和医院 Sysmex 系列涂片复检规则[1]，根据本实验室具体情况制定了本实验室的显微镜复检规则，选择 2020 年 4 月 1 日至 4 月 27 日期间的临床样本共计 324 例，涵盖本院主要疾病，阳性标本 163 份，阴性标本 161 份。以血细胞分析复检规则为评估基础，同时做显微镜核实，并以显微镜镜检结果为金标准，对检测结果进行统计分析。
结果 本次复检规则阳性标本共计 163 份，假阳性标本 16 份，真阳性标本 147 份。阴性标本 161 份，检出异型淋巴细胞共计 4 份，异淋比例大于 5%的标本为零份，检出有幼稚细胞的标本为 7 份，其中晚幼粒大于 3%的标本占 1 份，血小板聚集的标本占 6 份。共计假阴性标本 7 份。
结论 本实验室血细胞形态复检规则验证假阳性率为 9.8%，假阴性率为 4.3%，达到“＜5%假阴性率”的行业要求[2]，验证通过。

PU-4167

阴道分泌物对尿常规检验结果的影响分析

李程华
空军军医大学西京医院

目的 研究阴道分泌物对尿常规检验结果的影响。
方法 选取我院 2020 年 11 月-2020 年 12 月 280 例妇产科门诊患者，随机分为两组，实验组和对照组，每组患者 140 例，对照组的患者采用常规留取尿液的方式采集尿液标本，实验组的患者在检验人员的指导下，规范留取中段尿液，然后进行尿常规检测，并比较实验组和对照组尿液中的红细胞、白细胞、尿蛋白和上皮细胞的检测结果并进行统计学分析。
结果 尿常规检验结果显示，实验组患者尿液的红细胞和白细胞的检出率分别为 16％和 8％，明显低于对照组患者尿液的红细胞和白细胞的检出率（32％和 36％），两组尿常规检验结果之间的差异是显著的（P<0.05）。另外，实验组尿蛋白和上皮细胞的检出率分别为 7％和 19％，显著低于对照组的 23％和 39％，两组差异明显（P<0.05），具有统计学意义。
结论 阴道分泌物对尿常规检验结果有一定程度的影响，因此，为了提高尿常规检验结果的准确性，应规范尿液标本的留取方式，减少阴道分泌物对检验结果的干扰。

PU-4168

头孢哌酮钠舒巴坦钠对凝血的影响一例分析

朱兵兵、刁艳君、刘家云
空军军医大学西京医院

患者男性，49 岁，右下肢肿胀一周入院，既往有高血压 5 年，2007 年因外伤行肝破裂修补术，双侧下肢无畸形，双侧下肢完整无外伤创口，右侧下肢较对侧肿胀，无浅静脉曲张，无皮肤色素沉着，双侧足背，胫后动脉搏动良好。左侧下肢无异常。

实验室检查 下肢静脉超生提示左侧胫后静脉，肌静脉内径增宽伴血栓形成，2 月 4 日随收入院予以治疗，入院后进行检查血常规，血凝，生化指标均基本正常，给予克赛治疗，2 月 6 日进行凝血功能检查，PT 15.3s APTT 56.3s ,患者出现皮肤的瘀斑瘀点，随后停用克赛，2 月 8 日患者复查凝血结果有所恢复，PT 13.6s ，APTT 45.9 s ，由于患者存在抗凝指征，于是改用普通肝素泵入，2 月 10 日凝血功能检查，发现 APTT 延长至 106.6 s ，随后停用了肝素，患者 2 月 10 号进食后出现腹痛，发热 37.8，查体：全腹压痛，右上腹明显，Murphys 症（+） 彩超：胆囊大小约 7.6x3.4cm,壁增厚，胆汁淤积，诊断为：急性胆囊炎。治疗：头孢哌酮钠舒巴坦钠（舒普森） 3g q8h。2 月 11 日检测 APTT 为 73.6，再次复查 71.4 s ，APTT 出现居高不下的情况。

PU-4169

SYSMEXCS5100 全自动血凝分析性能验证

朱兵兵、刁艳君、刘家云
空军军医大学西京医院

目的 对 SYSMEXCS5100 全自动血凝分析仪进行性能验证。
方法 按照 ISO15189 的要求，参照美国临床实验室标准化协会（CLSI）和美国临床实验室改进法案 CLIA'88 的质量要求，本文针对 7 个常规检测项目：PT（凝血酶原时间），INR(国际标准化比值)，APTT（活化部分凝血活酶时间），FIB（纤维蛋白原含量），TT（凝血酶时间）,D-dimer（D 二聚体）的精密度、正确度、线性范围、携污率、参考区间进行性能评价。
结果 批内精密度小于 CLIA'88 标准限值要求的四分之一，合格；批间精密度小于 CLIA'88 标准限值要求的三分之一，合格；正确度不超过 CLIA'88 标准限值要求的二分之一的要求；各检测项目引用的线性范围、参考区间符合要求。
结论 CS5100 全自动分析仪检测符合质量要求，可以为临床提供可靠的依据。

PU-4170

采血人员职业暴露调研

刘康悦
山东大学第二医院

目的 了解我采血人员职业暴露发生情况，提出预防控制措施。
方法 对该院 2016 年 1 月一 2019 年 12 月采血中心发生的职业暴露情况进行统计分析。
结果 4 年共有 213 名采血人员发生职业暴露 70 例，职业暴露发生率为 32.8%,其中实习人员职业暴露发生率达 45.89%,工作年限四年的采血人员职业暴露发生率 为 49.54%。发生职业暴露的采血人员岗位主要是门诊采血中心(占 39.27%),暴露类型以采血针头刺伤、血液和体液污染皮肤黏膜为主，占 75. 87%。2016-2019 年我院采血人员职业暴露发生率分别为 52. 50% (21/40)、43.47% (20/46) .26. 23% (16/61) .21.21% (14/66),呈下降趋势(f = 12. 286,FV0. 01)。发生职业暴露后按医院感染管理科要求上报仅 23 例，漏报率达 68. 06% (49/72),正确规范处理率达 80. 56% (58/72)。
结论 应加强采血人员医院感染管理教育培训，提高安全防护意识，规范处理流程，强化上报意识,减少采血人员的职业暴露和暴露后感染的发生。

PU-4171

神奇的"眼镜核"

张铮
江苏省人民医院（南京医科大学第一附属医院）

探讨临床一例疑似血液科病人的外周血象结果，通过外周血象特征分析 Pelger-Huet 畸形与慢性粒单核细胞的关系。该患者散点图 WDF 图异常，单核淋巴区为灰区，中性粒细胞散点群左移，可能存在幼稚粒细胞。DI-60 读片仪中外周血涂片显示中性粒细胞颗粒减少，核发育不良，呈杆状或仅分为 2 叶，杆状核形则类似花生样，肾形或哑铃形，眼镜形，分叶核的分叶之间以细丝状连接，细胞质较为致密、深染，聚集成小块或条索状，其间有空白间隙。（Pelger-Huet 畸形）该患者后续骨髓细胞检查提示粒系病态单核比例增高，可见幼稚单核细胞，慢性粒单核细胞白血病待定。

PU-4172

一例 EB 病毒感染相关的低白细胞血症

王茸茸
江苏省人民医院（南京医科大学第一附属医院）

目的 一例 EB 病毒感染相关的低白细胞血症案例
方法 抽取患者外周血 2ml 于 EDTA 抗凝管中，在 SYSMEX XN-2000 上机检测血常规，并在 SP-10 自动推片仪上推片、瑞氏染色后用 DI60 阅片仪镜检。
结果 患者 1.29 血常规结果 WBC 0.94×109/L，HGB 98g/L，PLT 77×109/L，镜下见核左移、幼稚粒细胞，偶见疑似原幼细胞，实际为反应性淋巴细胞
结论 白细胞降低可能与用药和病毒感染相关，血培养结果阴性可排除细菌感染。三系减低、发热、幼稚型反应性淋巴细胞易误认为原始细胞，通过骨髓和流式分型可排除血液病，最终确诊为 EB 病毒感染。所以病毒感染往往与血液病难以鉴别，流式分型很重要。

PU-4173

全自动尿液分析仪检测尿液中管型的结果分析

杨若凡
空军军医大学西京医院

目的 探讨全自动尿液分析仪检测尿液中管型的准确性。
方法 选取 300 例新鲜尿液标本，采用 Sysmex UF-5000i 全自动尿液分析仪和显微镜检法分别检测，以显微镜检结果为标准，进行分析。
结果 300 例标本中，全自动尿液分析仪检测尿液中管型的阳性率为 53%,显微镜检查的阳性率为 31.67%，全自动尿液分析仪检测尿液中管型的假阳性率为 38.54%,假阴性率为 15.79%。
结论 全自动尿液分析仪对尿液中管型的检测存在一定的误差，必要时应用显微镜复检，以保证检验结果的准确性。

PU-4174

血栓弹力图联合氯吡格雷基因检测在颅内未破裂动脉瘤的应用

黄晨蕾、余潇、李小宁
皖南医学院弋矶山医院

目的 探讨血栓弹力图联合氯吡格雷基因检测在颅内未破裂动脉瘤中应用的意义
方法 选取皖南医学院第一附属医院神经外科 2019.01-2019.12 行支架辅助弹簧圈栓塞（stent-assisted coiling，SAC）治疗颅内未破裂宽颈动脉瘤患者 126 例，行 TEG 和氯吡格雷基因药物检测，通过对 CYP2C19 基因和 ABCB1-3435C 基因的四个位点进行临床分型并联合 ADP 抑制率的结果制定合理的抗血小板用药方案，来减少支架植入所引起的并发症。
结果 68 例患者基因型正常且 ADP 抑制率≥30%，予以常规剂量双抗治疗；58 例患者基因型异常且 ADP 抑制率＜30%，更改双抗治疗方案后 ADP 抑制率≥30%后予以手术。其中 2 例患者出现术中动脉瘤破裂和支架内血栓的并发症。
结论 临床上仅使用氯吡格雷基因检测来指导 SAC 术后抗血小板治疗是不足的，而 TEG 是检测抗血小板药物疗效的重要方法，两者联合对支架辅助弹簧圈栓塞治疗颅内未破裂动脉瘤的个体化双抗治疗用药有着指导作用。

PU-4175

临床常用蛇毒类凝血酶制剂对部分凝血指标的影响分析

颜楠
空军军医大学西京医院

目的通过观察与探讨泌尿外科相关疾病术后用于止血的注射用白眉蛇毒血凝酶（邦亭）与耳鼻咽喉头颈外科用于改善微循环障碍治疗突发性耳聋的东菱迪芙(巴曲酶)，二者在用药治疗前后有显著差异的凝血指标纤维蛋白原含量（FIB）与纤维蛋白/纤维蛋白原降解产物（P-FDP）水平的变化为临床提供用药指导参考，并对因该两种药物导致严重低纤维蛋白血症可能发生出血风险的病人向临床医生做出提示。

PU-4176

两种肝毒性药物对纤维蛋白原浓度的影响分析

颜楠
空军军医大学西京医院

目的通过观察与探讨神经内、外科抗癫痫药物丙戊酸(valproate，VAP)与用于血液病化学治疗药物培门冬酶(pegaspargase，PEG—ASP)两种药物在用药治疗前后有显著差异的凝血指标纤维蛋白原（FIB）水平的变化，为临床提供用药指导参考，并对因该两种药物导致严重低纤维蛋白血症可能发生出血风险的病人向临床医生做出提示。方法回顾性分析 2017 年 10 月 31 日至 2019 年 l0 月 31 日在空军军医大学附属西京医院住院治疗的 130 例 FIB 降低(<1．5g／L)的患者的临床资料变化。其中神经内、外科使用抗癫痫药物 VAP 药物的患者 60 例，血液科使用化疗药物 PEG—ASP 的患者 70 例，并且分为神经内、外科组与血液科组。分别于患者使用药物治疗前后检测常规凝血六项指标做好记录并观察其水平变化。

PU-4177

探讨两代尿沉渣分析仪在血尿来源鉴别中的应用

闫宏斌
空军军医大学西京医院

目的 探讨全自动尿沉渣分析仪 sysmex UF-1000i 和 sysmex UF5000 在鉴别血尿来源中的应用价值。
方法 用 sysmexUF-1000i 和 sysmex UF5000 分别检测 189 例和 301 例不同来源血尿样本的红细胞。
结果 应用 UF-1000i 检测变异性尿红细胞对肾小球性血尿诊断的敏感性为 85%,特异性为 78%。应用 UF- UF5000 检测变异性尿红细胞对肾小球性血尿诊断的敏感性为 89%,特异性为 88%。
结论 两种尿沉渣仪在血尿来源鉴定上具有一定的过筛作用，UF5000 的初筛能力优于 UF1000i。

PU-4178

反复呼吸道感染患儿血微量元素含量分析

徐晓丽、刘家云、周磊、刁艳君、何娟、袁冲
空军军医大学西京医院

目的 探讨反复呼吸道感染（RRI）患儿血微量元素缺乏情况，为合理补充微量元素，防治小儿反复呼吸道感染提供临床指导。
方法 选取 2020 年 1 月-2020 年 12 月西京医院儿科门诊就诊的 RRI 患儿 112 名作为观察组，其中男 62 名，女 50 名，1-3 岁 63 名，3-6 岁 37 名，6-12 岁 12 名，平均年龄（2.6±0.5） 岁；同期选取儿童保健门诊健康儿童 100 名作为对照组，其中男 56 名，女 44 名，1-3 岁 51 名，3-6 岁 34 名，6-12 岁 15 名，平均年龄（2.5±0.3）岁。两组患儿均取空腹末梢血，由专人采用北京博晖生产的五通道原子吸收光谱仪进行检测，检测项目为铜、锌、钙、镁及铁水平

PU-4179

C 反应蛋白、白细胞在社区获得性肺炎病原鉴别诊断中的临床应用价值

徐晓丽、刁艳君、刘家云、周磊、何娟、袁冲
空军军医大学西京医院

目的 社区获得性肺炎是儿童常见感染性疾病，鉴别细菌性、还是非细菌性肺炎对临床合理应用抗生素、有效治疗社区获得性肺炎有重要意义。本文旨在探讨 C 反应蛋白（CRP）联合血常规的白细胞检测，在鉴别诊断儿童社区获得性肺炎病原中的临床应用价值。
方法 选取 2019 年 9 月—2020 年 3 月在西京医院儿科住院的 101 例社区获得性肺炎患儿，出院时确诊为细菌性感染患儿 56 例为细菌组，非细菌性感染患儿 45 例为对照组，两组患儿均在用药前取静脉血液测定血清 CRP 浓度和血液常规。阳性判断标准： CRP>5mg／L；WBC>10.0×109／L。

PU-4180

探讨血浆蛋白 C、S、抗凝血酶Ⅲ和狼疮抗凝物检测在复发性自然流产中的价值

肖凤静、朱兵兵、 晁真真、刁艳君
空军军医大学西京医院

目的 探讨血浆蛋白 C、S（PC、PS）、抗凝血酶Ⅲ（ATⅢ）和狼疮抗凝物（LA）检测在复发性自然流产患者中的应用价值。
方法 选取 65 例复发性自然流产患者、50 例同一时期正常产检孕妇以及 50 例健康查体女性，分别进行血浆 PC、PS、ATⅢ和 LA 检测并进行统计学分析。
结果 与健康体检组相比，复发性流产患者组的 PC、PS、ATⅢ活性降低，差异有统计学意义($P < 0.05$)，复发性自然流产患者组 LA 阳性检出率明显增高，差异均有统计学意义($P < 0.05$)；与正常产检孕妇组相比，复发性自然流产患者组的 LA 阳性检出率增高，差异无统计学意义($P > 0.05$); 复发性自然流产组的 PC、PS、ATⅢ活性降低，差异有统计学意义($P < 0.05$)。

结论 复发性自然流产患者具有高凝倾向，与血栓前状态有关，联合检测血浆 PC、PS、ATⅢ和 LA 等指标对复发性自然流产患者的血栓前状态筛查以及改善妊娠结局具有重要的临床指导意义。

PU-4181

血栓弹力图与常规凝血实验和血小板参数的相关性分析

马跃飞
福建医科大学附属第一医院

目的 探讨血栓弹力图（TEG）与常规凝血实验（CCT）和血小板参数的相关性及其在评估凝血状态中的应用价值。
方法 选择住院患者 300 名，采集空腹静脉血同时进行 TEG、CCT 和 PLT 参数检测，分析 TEG 各指标与 CCT、PLT 参数的相关性；筛选临床明确诊断的高、低凝血功能状态的患者共 209 例，比较 TEG 与 CCT、PLT 检测的敏感性。
结果 反应时间(R)与 PT、APTT、TT 均成正相关(r=0.429，0.695，0.351；P<0.01)，与 APTT 相关系数最高。凝块形成时间(K)与 FIB、PLT、PCT 成负相关。最大切角(α)与 FIB、PLT、PCT 成正相关，与 MPV 成负相关。最大振幅(MA)与 FIB、PLT、PCT 均成中度正相关(r=0.676，0.647，0.675；P<0.01)，与 FIB 相关系数最高。当 PLT>280×109 个/L 时，MA 与 MPV 无相关性；当 PLT<160×109 个/L 时，MA 与 MPV 呈低度相关，相关性略高于 PLT（r=0.323 vs r=0.299）。R 在 PT、APTT 延长的样品中的阳性率分别为 33.3%、41.7%；K、α、MA 在 FIB< 1.8 g/L 和 PLT<150×109 个/L 时的阳性率分别为 47.4%、31.6%、63.2%和 18.5%、11.1%、25.9%。TEG 在高凝组检测敏感性高于低凝组，在两组中的敏感性均高于 CCT、PLT。
结论 TEG 与 CCT、PLT 参数存在相关性；MA 主要反应 PLT 功能；TEG 对异常凝血状态的敏感性高于 CCT 和 PLT。正确理解 TEG 与 CCT、PLT 的相互关系，有助于临床对凝血功能异常疾病的诊断、治疗和预后判断。

PU-4182

不同类型流感病毒患者的血常规分析

郭文静
江苏省人民医院（南京医科大学第一附属医院）

目的 探讨不同类型流感病毒患者的炎性指标 。
方法 选取 2019 年 1 月—2020 年 6 月在江苏省人民医院住院的流感患者 300 例作为观察组，随机选择同期 100 例健康体检者作为对照组，分析两组血常规的差异。观察组中甲型流感患者 100 例，乙型流感患者 100 例，甲乙流同时感染患者 100 例，分析甲型流感组、乙型流感组、甲乙型流感组 3 组患者的血常规特点。
结果 观察组患者白细胞计数 (P＜0. 05) 、中性粒细胞绝对值及其百分比(P＜ 0. 01) 均高于对照组，差异有统计学意义; 而淋巴细胞绝对值及其百分比 (P＜0. 01) 明显低于对照组(P＜0. 05) 。
结论 血常规结果对流感的鉴别诊断具有一定的指导意义

PU-4183

浆细胞富集的 FISH 技术在多发性骨髓瘤检测中的意义

高菲
四川金域医学检验中心有限公司

目的 探究浆细胞富集的荧光原位杂交（fluorescence in situ hybridization, FISH）技术在多发性骨髓瘤（Multiple Myeloma, MM）检测中的意义。
方法 收集统计分析 2018 年至 2021 年 4 月送检我实验室明确诊断为 MM 的骨髓样本 406 例，应用探针组合（1q21、P53、IGH/FGFR3、IGH/MAF）进行 FISH 检测。其中 211 例应用 CD138 磁珠分选进行浆细胞富集后行 FISH 检测，为富集组（A 组），195 例直接进行 FISH 检测，为非富集组（B 组）；从 A、B 组筛选骨髓涂片结果浆细胞比例<15%的样本分别为低比例富集组（C 组)42 例和低比例非富集组（D 组）23 例。分析 A、B 两组及 C、D 两组细胞遗传学异常检出率及各个探针异常检出率。
结果 A 组异常检出率(63.51%)显著高于 B 组(31.28%)，C 组检出率(50.00%)显著高于 D 组检出率（13.04%），差异有统计学意义；对于各探针而言，A 组 1q21、P53、IGH/FGFR3 异常检出率（分别为 54.03%、9.48%、14.22%）显著高于 B 组（28.72%、3.59%、7.18%），差异有统计学意义；A 组 IGH/MAF 异常检出率（1.90%）高于 B 组（0.51%）；而在浆细胞比例<15%的 C、D 两组，C 组 1q21 的异常检出率（38.10%）显著高于 D 组检出率（3.0%），差异有统计学意义；C 组 P53、IGH/FGFR3、IGH/MAF 异常检出率分别为 19.0%、9.52%、0%，而 D 组均未检出（异常检出率为 0%）。
结论 浆细胞富集的 FISH 技术检测在多发性骨髓瘤诊断中可以显著提高细胞遗传学异常检出率，尤其是对骨髓涂片中浆细胞比例低于 15%的患者，该方法的应用可以大幅提高其阳性检出率，对临床诊断、治疗与预后评估有重要意义，应常规进行开展。

PU-4184

Sysmex XS-800i 血细胞分析仪血小板计数性能评价

马跃飞、杨滨
福建医科大学附属第一医院

目的 评价 Sysmex XS-800i 血细胞分析仪血小板（PLT）计数性能。
方法 遵照行业指南验证 Sysmex XS-800i 血细胞分析仪 PLT 计数的精密度、线性、携带污染率和正确度;以显微镜计数法为参考方法对仪器低值 PLT 检测一致性、小红细胞（RBC）和大 PLT 的干扰性和仪器报警有效性进行评价。
结果 精密度、线性、携带污染率、正确度均符合行业标准。对于 11×10955×109 L-1 范围内的低值 PLT,Sysmex XS-800i 检测相关性（r=0.923 9）优于 ADVIA 2120i（r=0.908 0）;平均红细胞体积（MCV）<70fL 或 MCV<75fL 且 PLT 直方图异常时、平均血小板体积（MPV）>x+2s 即 MPV>12fL 时,仪器检测 PLT 结果均有显著性差别（P<0.05）。特异性较高的报警为"RBC 大小不一"和"小 RBC",分别为 89.47%和 83.87%;阳性预测值较高的报警为"RBC 大小不一"（92.00%）。
结论 Sysmex XS-800i 血细胞分析仪的 PLT 计数性能符合行业标准要求;对低值 PLT 计数准确性良好,但抗小 RBC、大 PLT 干扰能力较差。日常使用应结合仪器各相关报警的有效性,建立合适的人工镜检复检规则。

PU-4185

某品牌阴道分泌物检测仪检测结果的比对性分析

李永辉
山东第一医科大学第一附属医院

目的 对某品牌阴道分泌物检测仪的检测结果与手工法（显微镜镜检结果和三联法）结果进行比对分析，研究其在阴道感染疾病中的临床价值。
方法 随机选择 2020 年 7 月在我院进行阴道分泌物检查的 100 例标本作为研究对象，分别对其进行仪器检测与手工法检查，对结果进行记录统计并分析。
结果 仪器法结果重在有统一的标准，手工法受主观因素影响较大，尤其是对于临界结果。仪器法结果中，白细胞酯酶的阳性率为 56%，唾液酸苷酶的阳性率为 18%，过氧化氢阳性率为 43%，乳酸杆菌阳性率 38%；手工法结果中，白细胞酯酶的阳性率 48%，唾液酸苷酶的阳性率为 15%，过氧化氢阳性率为 40%，线索细胞的阳性率为 13%，乳酸杆菌阳性率 45%。
结论 阴道分泌物检测仪检测结果可以作为诊断阴道感染性疾病的依据，同时仪器法相较手工法来说，具有操作简单快捷、生物安全防护性强的特点，值得在检验科室及临床科室推广和应用。

PU-4186

CellaVision DM96 自动成像系统在异常外周血分类计数中的应用

华诗
电子科技大学附属医院•四川省人民医院临床医学检验中心

目的 探讨 cellavision DM 96 自动成像系统在异常外周血分类计数中的应用价值。
方法 连续收集四川省人民医院检验科临检组 2020 年 12 月份共计 300 份异常且需要进行细胞分类复查的外周血标本, 通过 SP-1000i 全自动推片染色仪自动涂片染色。首先，用 DM96 对外周血中白细胞进行预分类，由经验丰富的形态学辨认人员审核再分类，以再分类结果作为“最终结果”；同时对每一份标本进行人工显微镜镜检，分类结果作为“金标准”；最后用 SPSS23.0 对“最终结果”与“金标准”两组数据进行差异性性分析。
结果 中性粒细胞、淋巴细胞、单核细胞通过 t 检验 P>0.05 无统计学差异,嗜酸性粒细胞、嗜碱性粒细胞通过非参数秩和检验 P>0.05 无统计学差异,未成熟粒细胞、原始幼稚细胞通过非参数秩和检验 P<0.05 有统计学差异。 CellaVision DM96 系统外周血分类结果与显微镜手工分类有着很好的相关性, Pearson 相关性分析其中中性分叶核粒细胞、中性杆状核粒细胞、淋巴细胞及嗜酸性粒细胞的相关系数分别达到 0.91、0.93、0.95 和 0.92。
结论 DM96 在异常外周血分类计数中能提供准确、可信的分类数据，有助于提高实验室形态学报告的一致性及工作效率，同时对于有核细胞较少的血片 DM96 阅片较显微镜人工镜检可以很大程度缩短细胞分类时间，具有较好的临床应用价值；但由于仪器阅片的机械化，DM96 读取细胞的区域对分类结果影响较大，血片制作染色还需要标准化，且需与传统的人工显微镜镜检相结合。

PU-4187

618 例住院患者血栓弹力图与常规凝血七项相关性分析

华诗
电子科技大学附属医院•四川省人民医院临床医学检验中心

目的 回顾性分析我院 618 例住院患者 TEG 检测结果，比较不同科室其检测结果与常规凝血七项分析结果的相关性，探讨其在评估患者凝血状态中的应用价值。
方法 通过 LIS 系统(Laboratory Information System)收集 2019 年 9 月 1 日～2019 年 12 月 31 日同时检测血栓弹力图（thromboelastogram，TEG）、常规凝血七项（PT、APTT、 FIB、 TT、D-Dimer、FDP 及血常规血小板（platelet，PLT））的住院患者检测结果共计 618 例，对检测结果进行 Pearson 相关性分析。
结果 618 例住院患者 TEG 检查中 R、K、Angle、MA、CI 皆与 APTT、D-D（MA 除外）和 FDP 相关；K、Angle、MA、CI 皆与 FIB、PLT 相关。按科室分类统计分析：293 例神经外科患者 TEG 检查中 R、K、Angle、MA 和 CI 皆与 FIB（CI 除外）、PLT（R 除外）相关；R、CI 与 PT 和 APTT 相关；此外，K 还与 TT、DD 和 FDP 相关。149 例肝胆外科患者 TEG 检查中 R、K、Angle、MA、CI 与 APTT、FIB、FDP（K 除外）和 PLT（R 除外）相关；R、CI 与 DD 相关，MA 还与 TT 相关。131 例胸外科患者 TEG 检查中 R 仅与 APTT 相关；K、Angle 仅与 FIB 相关；MA、CI 与 APTT（MA 除外）、FIB、TT、PLT 相关。45 例中医骨科患者 TEG 检查中 R、Angle 与常规凝血检查 7 项均无相关，K、CI 与 FIB、FDP 相关， MA 与 FIB、PLT 相关。
结论 TEG 检查与常规凝血七项检查的结果具有相关性，不同科室患者因所患疾病、患者凝血功能影响因素等的不同，两种检测方法结果的相关性也不尽相同，因此两者不能互相代替，在临床上两种方法结合使用，能够更加准确了解患者凝血功能，为临床的诊疗工作提供更大的帮助。

PU-4188

基于队列的急性缺血性脑卒中预后评价的研究

和珂莉
常德市第一人民医院

随着我国人口老龄化的增高，缺血性脑卒中已成为危害我国中老年人身体健康和生命的 主要疾病之一。临床工作中预测 AIS 患者的病情进展的一个挑战在于显著的个体差异，根据患者早期的变化，预测预后情况是一个亟待解决的难题。
目的 评价 S-100β 蛋白的切点对缺血性脑卒中预后评价价值；建立更简易、高效的预后评价系统；通过高通量测序比较分析预后差异性基因， 来完善缺血性脑卒中预后评价方式。帮助临床更好的判断患者的病情的严重程度，尽早 识别高死亡风险的患者，进而实现及时的给予患者最佳的临床处理来改善疾病的预后。
方法 本研究采用患者住院病历随访和电话随访等方式，随访终点为发病后 90 天止。收集脑卒中患者一般资料，临床治疗资料，实验室相关检查资料以及预后及不良结局事件并对患者血清 S100B 蛋白含量的测定采用 ELAISA 法测定。连续变量以均值±SD。表示,分类变量用频率(%)描述。组间均值的比较采用单因素方差分析,率的比较采用卡方检验。采用平滑曲线拟合 分析 S-100β 水平与脑梗塞预后的相关性。采用 ROC 曲线评估 S-100β 对评定脑梗塞预后的诊断价值,ROC 曲线 AUC 越大,诊断价值越大。 比较 ROC 曲线上每个 S-100β 切点的敏感性、特异性、阳性预测值、 阴性预测值和约登指数。约登指数等于敏感性+特异性-1,定义约登指 数最大的点为最佳诊断切点。统计分析采用双侧检验,以 P<0.05 为差异具有统 计学意义。
结果 统计分析正在进行中。

结论 S-100β 是一个较好脑卒中预后评价指标，通过测序筛选出了相关预后差异性基因。帮助临床更好的判断患者的病情的严重程度，尽早识别高死亡风险的患者，进而实现及时的给予患者最佳的临床处理来改善疾病的预后。

PU-4189

64 例单克隆丙种球蛋白血症临床分析

张月、何淑娅
四川省肿瘤医院

目的 了解 M 蛋白的分型及其临床意义，提高对 M 蛋白的认识，减少漏诊和误诊率。
方法 本文回顾性分析 2016 年和 2017 年两年期间就诊于四川省肿瘤医院的初诊 M 蛋白阳性者，对 M 蛋白进行分型，并分析其来源。
结果 64 例 M 蛋白阳性者中 IgG 型 22 例（占 34.3%），IgA 型 11 例（占 17.2%），IgM 型 2 例（占 3.1%），IgD 型 6 例（占 9.4%），游离轻链型 12 例（占 18.8%），双克隆型 10 例（占 15.6%），64 例 M 蛋白阳性者中，MM 51 例，非 MM 13 例：MGUS 1 例，髓外浆细胞瘤 5 例，非霍奇金淋巴瘤 4 例，浆母细胞淋巴瘤 1 例，骨髓转移癌 1 例。
结论 M 蛋白不仅出现在 MM 中，还可以出现在 WM、MGUS、非霍奇金淋巴瘤中，MM 患者的 M 蛋白主要是以 IgG 型为主，IgA 型其次，IgM 型、IgD 型、IgE 型、双克隆型极少量。

PU-4190

微小颗粒急性早幼粒细胞白血病（M3V）骨髓形态学及实验结果分析

李玉芹
四川省医学科学院·四川省人民医院

目的 探讨微颗粒急性早幼粒细胞白血病（M3V）形态学特点。
方法 收集 2016 年 1 月-2020 年 12 月 102 例符合 APL 诊断标准的初诊 APL，按 FAB 和国内分型分为 M3a、M3b 和 M3v 三组，对三组患者的外周血常规、凝血全套、骨髓象及骨髓细胞形态学特征进行分析比较。
结果 M3V 与 M3a 和 M3b 的 WBC、Hb、PLT 比较，WBC 均值 M3V>M3b>M3a，M3v 与 M3a 比较,有统计学差异(P<0.05)；凝血全套中 PT M3v 与 M3a 有统计学差异，D2 聚体 M3v 与 M3b 有统计学差异；骨髓检查 M3v 原粒高于 M3a 和 M3b,异常早幼粒低于 M3a 和 M3b；具有内外浆细胞比例 M3v 高于 M3a，与 M3b 相似，具有瘤状突起细胞比例 M3v 高于 M3a 和 M3b，含 Auer 小体细胞比例 M3v 低于 M3a 和 M3b，M3v 细胞核畸形易见，与典型 M3a 和 M3b 相似。
结论 微小颗粒急性早幼粒细胞白血病（M3v）细胞形态学特征不及 M3a 和 M3b 典型，易与 M2a、M4、M5 混淆，因此我们在做骨髓分析时应仔细观察细胞形态特征，寻找 M3 细胞的特征性证据，结合细胞化学染色及 ICM 进行综合诊断，以避免 M3 的漏诊和误诊。

PU-4191

RDW 在胃癌诊断及转移中的应用价值研究

唐亮、赵静静、王京京、彭亮
上海市松江区中心医院

目的 探讨红细胞分布宽度（red blood cell distribution width，RDW ）在提示胃癌及转移中的临床应用价值。
方法 回顾性分析上海市松江区中心医院 2019 年 1 月至 2020 年 12 月 130 例初诊胃癌患者的病历资料和外周血 RDW 数据， 对全部 130 例患者根据有无转移分为转移组和无转移组，并进一步对其中有转移者的根据转移程度分为近端转移组与远端转移组。 多组间计量资料的比较用单因素方差 ANOVA 分析,绘制受试者操作特征（receiver operating characteristic curve, ROC）曲线分析 RDW 对胃癌及转移的诊断价值。
结果 胃癌组患者的 RDW 水平为[13.81±1.91]%，显著高于良性胃病组[12.37±0.67]%，差异有统计学意义（P＜0.001)；胃癌转移组患者的 RDW 水平为[14.51±2.19]%，显著高于胃癌未转移组[13.02±1.12]%，差异有统计学意义（P＜0.001)；胃癌远端转移组患者的 RDW 水平为[15.30±2.51]%,显著高于胃癌近端转移组[13.64±1.35]%，差异有统计学意义（P=0.001）。方差分析趋势性检验的线性项（Linear Term）, F =195.193，P＜0.001，可认为随着胃癌的发生、转移及转移程度加重，RDW 值呈上升的线性变化趋势。ROC 曲线分析表明，RDW 诊断胃癌的曲线下面积(AUC)为 0.810 ，此时诊断的敏感度为 64.1%，特异度为 84.3%；RDW 鉴别诊断胃癌是否转移的 AUC 为 0.744，此时诊断的敏感度为 53.6%，特异度为 85.2%；RDW 鉴别诊断胃癌是否远端转移的 AUC 为 0.710，此时诊断敏感度为 83.3%，特异度为 57.6%。
结论 外周血 RDW 值的变化对胃癌的诊断及是否发生转移情况有一定的应用价值。

PU-4192

结外 NK/T 细胞淋巴瘤患者治疗前红细胞分布宽度与预后的相关性研究

廖钰霖
四川省肿瘤医院

目的 探讨结外 NK/T 细胞淋巴瘤（extranodal natural killer/T-cell lymphoma,ENKTL）患者治疗前红细胞分布宽度值（red blood cell distribution width, RDW）与预后的关系。
方法 回顾性分析四川省肿瘤医院收治的结外 NK/T 细胞淋巴瘤患者 191 例，收集患者的临床资料和血液分析、CPR 及生化检测等数据并随访，使用受试者工作曲线(ROC)确定 RDW 的阈值，将患者分为低 RDW 和高 RDW 两组，比较两组的临床特征及总生存期（OS）的差异。
结果 低 RDW 组（≤46.2）5 年累计生存率高于高 RDW 组（>46.2），差异有统计学意义，P<0.05。单因素及多因素分析显示，RDW 是结外 NK/T 细胞淋巴瘤预后的独立因素。
结论 结外 NK/T 细胞淋巴瘤患者治疗前高 RDW 和高 CRP 与不良预后显著相关，RDW 以及 CRP 是结外 NK/T 细胞淋巴瘤预后的独立因素。

Confirmed Cryoglobulinemia and Hyperviscosity Syndrome Secondary to Multiple Myeloma-IgA Kappa from Routine Blood Test: a Case Report

于培霞[1]、Junfeng Zhang[2]、Weiwei Tian[1]、Yaolong Kang[1]
1. 山西医学科学院山西白求恩医院
2. 山西省健康教育中心

Cryoglobulins and hyperviscosity syndrome (HS) occur in multiple myeloma (MM), which are considered clinical emergencies. A case of cryoglobulinemia and HS associated with advanced MM was reported, which is initially confirmed by aspiration failure in a routine blood test with sufficient sample,which could not be analyzed because of high viscosity and poor liquidity. A peripheral blood smearshowed numerous non-cellular clouds,which were identified as cryoglobulins.This case provides an effective way to deal with this kind of abnormal sample and laboratory evidence to establish diagnosis of cryoglobulinemia and HS secondary to MM.

PU-4194

Sirdah 公式在红细胞参数异常群体筛查中的应用

薛丽[1]、张丽霞[2]
1. 江苏省人民医院（南京医科大学第一附属医院）
2. 江苏省人民医院

目的 评价 Sirdah 公式在红细胞参数异常群体筛查中的价值。
方法 收集南京医科大学第一附属医院 183218 例体检人群血常规结果，分析红细胞（RBC）升高，血红蛋白（Hb）正常或降低，平均红细胞体积（MCV）降低为特征的红细胞参数异常人群，随机选取 100 例进行铁蛋白测定，运用 RBC、Hb 和 MCV 联合参数以及 Sirdah 公式（MCV-RBC-3×Hb）分别与铁蛋白水平作 ROC 曲线。选取 50 例进行外周血红细胞形态分析和血红蛋白电泳测定。
结果 红细胞参数异常人群共 1535 例，占研究人群 0.84%。根据 100 例铁蛋白结果和 RBC、Hb 和 MCV 联合参数以及 Sirdah 公式值做 ROC 曲线，AUC 分别为 0.955（0.901-0.991）和 0.946（0.910-1.000）（P＝0.527），选取 Sirdah 公式 cut off 值 24.1，敏感性为 100%，特异性为 76.19%。40 例样本根据 Sirdah 值分为两组，<24.1 组外周血红细胞形态分析可见靶形红细胞 20 例，HbA2 升高 8 例，>24.1 组可见靶形红细胞 18 例；HbA2 升高 3 例。
结论 Sirdah 公式可用于红细胞参数异常人群确诊前的大规模筛查，可用于轻型地中海贫血和缺铁性贫血的鉴别诊断。

PU-4195

A Rare case of Pseudo Grey Platelet Syndrome: EDTA-dependent Aggregation and Degranulation of Platelets in a Patient with Bladder Urothelial Carcinoma

Lixia Zhang
The First Affiliated Hospital of Nanjing Medical University

A 64-year-old man was hospitalized with bladder urothelial carcinoma and cholecystectomy. The patient’s routine admission examination revealed platelet aggregation. The platelet count

was only 9 ×109/L in EDTA tube and corrected to 95×109/L in sodium citrate tube detected by hematology analyzer. Although sodium citrate and heparinusually prevented the aggregation of platelets in EDTA-dependent pseudothrombocytopenia patients, heparin anticoagulants failed in this case (Fig 1 A). It was interest that the EDTA anticoagulant caused the degranulation of platelets (Fig 1 B), which is a rare artifact pseudo grey platelet syndrome due to the degranulation of platelets caused, in vitro, by EDTA. This phenomenon is likely to disturb the platelet numeration and it is essential not to mistake it for a grey syndrome platelet, which is a constitutional thrombopathy with macrothrombopenia, in order to avoid specialized tests, or even misdiagnosis. As far as we know, pseudo grey platelet syndrome is first reported in patient with malignant in this case.

PU-4196

哮喘时肺内细胞因子 25 表达改变的研究

汪沛
空军军医大学西京医院

由于近年来环境污染的持续存在，哮喘的发病率居高不下，已成为严重危害国民身体健康的疾病之一，也是我国儿童常见的呼吸道疾病。目前哮喘的发病机制学说众多，但气道重塑是哮喘较为公认的病理改变之一。IL-25 是重要的气道上皮细胞源性细胞因子，可参与哮喘的发生发展。研究者及其他研究者报道哮喘时患者血清中白细胞介素 25（IL-25）含量增加，IL-25 可促进大鼠气道平滑肌细胞的增殖活性，是导致气道重塑的重要因素之一。但是哮喘患者及卵清白蛋白（OVA）致敏的动物模型中 IL-25 表达增加的分子机制尚不明确。本研究在前期研究的基础上，以 OVA 致敏的哮喘大鼠模型和人支气管上皮细胞为研究对象，探讨 IL-25 表达增加的分子机制，明确表达调控的转录因子，为进一步阐明哮喘的发病机制提供实验依据。

PU-4197

Variations on Leukocyte Volume, Conductivity and Scatter Parameters During Sample Storage

Lixia Zhang
The First Affiliated Hospital of Nanjing Medical University

Introduction To evaluate the reliability of leukocyte volume, conductivity and scatter (VCS) parameters during storage of blood samples.
Methods A total of 32 voluntary blood samples were collected in EDTA-K2tubes and measured on Beckman Coulter hematology analyzer. The complete blood count (CBC) with differential tests(including the leukocyte VCS parameters) were performed at 1 (as soon as possible), 15, 30, 60 and 120 minutes after sampling blood. Morphological analysis of peripheral blood at different time from one case was identified by CellaVision DI60 analyser.
ResultsNo obvious morphological changes were observed under light microscope in different storage time. With the prolongation of sample storage time, the position and shape of each cell scatter group changed until to 30 minutes. After that, the change was slight. VCS parameters changed significantly during sample storage. Different trends were found in different type of leukocytes over storage time. The storage time of 30-60 minutes was relatively stable from an overall viewpoint, which was a suitable time point to evaluate VCS parameters.
ConclusionA uniform, optimal storage time should be adhered to ensure the reliability of VCS test results in evaluating VCS parameters in the scenarios of clinical practice.

PU-4198

热射病患者肾功能损伤及凝血功能障碍的血清学指标监测在治疗中的应用

屈慧、皇海
空军军医大学西京医院

目的 探讨热射病患者的血清学指标。
方法 回顾性分析 2016 年 6 月-2020 年 8 月收入本院急诊或麻醉 ICU 诊断为热射病的 11 例患者的资料，分析实验室检查的血清学指标，回顾疾病的治疗及转归。
结果 1, 11 例患者均为男性，劳力型热射病 6 例，年龄 19~26 岁， 平均（21.333±2.944） 岁。经典型热射病 5 例， 年龄 48~70 岁， 平均（58.2±7.981）岁。入院时间均在每年的 6 月至 8 月。两组一般资料比较，差异有统计学意义（P＜0.05）。2,患者入院后 11 例（100%）出现血清肌酸激酶（CK）增高，血清乳酸脱氢酶（LDH）增高，血清肌红蛋白增高。10 例（90.9%）患者肾功能异常，血清肌酐升高，8 例（72.7%）凝血功能障碍，纤维蛋白原降解产物 FDP、D-Dimer 升高，部分活化凝血酶原时间 APTT 延长，纤维蛋白原 FIB 消耗减低，血小板降低。3，患者转归情况劳力型热射病平均住院时间（14.833±9.745）d，经典型热射病平均住院时间（6.2±7.381）d，两组住院时间比较，差异有统计学意义（P＜0.05）。好转出院 11 例， 治愈率 100%。
结论 热射病患者血清肾功能指标和凝血功能指标的动态监测可以评估预后，提高对热射病的认识，早期识别和恰当处置对改善预后有帮助。

PU-4199

化学发光免疫测定技术检测对甲状腺肿瘤患者甲状腺球蛋白水平及检出准确度、敏感性的影响

屈慧、皇海
空军军医大学西京医院

目的 探讨化学发光免疫测定技术检测对甲状腺肿瘤患者甲状腺球蛋白水平及检出准确度、敏感性的影响，为临床提供参考。
方法 选取我院 2019 年 1 月至 2020 年 12 月收治的 100 例甲状腺肿瘤患者作为研究对象，采用化学发光免疫和放射免疫两种检测方法，对研究对象进行检测分析，将病理结果视为金标准，对比两种检测方法甲状腺球蛋白水平和个数，比较两种检测方法的准确度、敏感性和特异性。
结果 化学发光免疫检测法，检测出的甲状腺球蛋白水平高于放射免疫检测法，甲状腺球蛋白个数多于放射免疫检测法，差异有统计学意义（P＜0.05）。根据病理结果金标准，化学发光免疫检测法的准确度为 89.00%，敏感性为 92.31%，特异度为 77.27%；放射免疫检测法的准确度为 74.00%，敏感性为 76.47%，特异度为 60.00%，化学发光免疫检测法均高于放射免疫检测法，差异有统计学意义（P＜0.05）。
结论 化学发光免疫测定技术，应用在甲状腺肿瘤患者的甲状腺球蛋白水平的检测中效果明显，检出准确度、敏感性和特异度高，值得临床广泛推广及应用。

华支睾吸虫病的诊断、流行和防控

周锡铧、毕燕玲
广东省人民医院

华支睾吸虫病是分布最广、感染率高、发展最严重的食源性寄生虫病之一,危害着人民的健康与财产。是目前我国和部分东南亚国家重要的公共卫生问题。可引起人类肝吸虫病的肝吸虫包括华支睾吸虫、麝猫后睾吸虫和猫后睾吸虫，但流行于我国的华支睾吸虫感染人数最多，特别以广东、广西两地区尤为严重，这与当地的一种传统饮食文化和习俗有关，当地喜欢吃鱼生或未煮熟的淡水鱼。尽管政府对肝吸虫防控工作投入了大量的人力、物力和财力，但华支睾吸虫感染率居高不下，说明肝吸虫防控工作任重道远。本文针对华支睾吸虫病原学检测和诊断、传播和流行、以及防控等进行综述，指出了未来华支睾吸虫病防控工作的重点和难点。

PU-4201

不同类型肿瘤化疗药物治疗后患者外周血血小板聚集分析

王黎
江苏省人民医院（南京医科大学第一附属医院）

Our previous study showed that platelet clumps usually occur in patients with malignancies. The aim of this study was to evaluate the significance of platelet clumps in patients receiving various chemotherapy drugs. In 1235 patients with platelet clump interpretive program messages and 70 other patients with malignancies with significant PTCP. 70.4% of patients with platelet clump IP messages were found to have malignancies. PTCP occurred after chemotherapy in 50% of the 70 patients. We suggest that increased platelet activation in the tumor may induce platelet clumps; These clumps may occur in the early stage and be promoted by chemotherapy drugs. Thus, the phenomenon of platelet clumps may be a sensitive and real-time indicator of cancer development.

浅谈如何做好检验血液标本的采集工作

刘婵婵
山东大学第二医院

在临床检验血液标本工作过程中有三个阶段：分析前（申请单、患者准备、采血标本、标本存放和运送等）、分析中（标本测定、结果计算等）和分析后（检验结果的发出至临床应用）。为保证检验结果的准确性， 分析前质量管理至今未引起足够重视， 有研究表明， 实验前误差频率占总误差的 46.0%~68.2%，为保证减少误差，血液标本采集的方法显得尤为重要。血液标本的采集是检验人员常规的操作之一，正确掌握血液标本采集，是为临床提供准确可靠的诊断依据的根本，在工作中应掌握标本类型、采集部位及影响标本质量的因素检验前质量控制是检验医学中心开展 ISO 15189 医学实验室质量和能力认可的一项重要内容。

PU-4203

一次性采血针与注射器采血在婴幼儿股静脉采血中的应用

于淇
山东大学第二医院

目的 比较一次性采血针与注射器采血两种方法采婴幼儿股静脉血标本采集的效果比较。
方法 将 106 例危重患者按抛硬币法分为观察组和对照组，分别采用一次性采血针和一次性注射器采血，比较两组在婴幼儿股静脉采血时血管损伤情况及血液标本合格情况。
结果 对照组采血成功率为 54.7%（29/53），血液标本溶血率为 24.5%（13/53）；观察组采血成功率为 79.2%（41/53），溶血率为 1.9(1/53)，两组比较差异均有统计学意义（P＜0.05）。
结论 使用一次性采血针进行婴幼儿股静脉采血成功率高，减少了对婴幼儿血管的损伤和疼痛感，有效保证了血液标本采集的质量。

PU-4204

浅谈静脉采血和末梢采血两种采血方法对血常规检测结果的影响

鞠振宇
山东大学第二医院

目的 浅谈静脉采血和末梢采血两种采血方法对血常规检测结果的影响，为选择正确的血常规采血方法提供依据。
方法 选择 2018 年 6 月—2020 年 2 月在山东大学第二医院住院的 236 例患者，同时采集每例患者的静脉血和末梢血血样，使用血细胞自动分析仪进行血常规各项结果检测，通过对比判断哪种采血方法更具有优越性。
结果 末梢采血和静脉采血血样的血常规各项结果比较， 差异均有统计学意义 （P＜0.05）， 末梢采血血样的白细胞 （WBC） 高于静脉采血， 红细胞（RBC）、 血红蛋白 （HGB）、 血小板（PLT）、 血细胞比容 （HCT） 和红细胞平均体积 （MCV） 均低于静脉采血。
结论 末梢采血血常规检测结果与静脉采血血常规检测结果不一致，末梢采血法受多种因素影响不如静脉采血结果更有意义，静脉采血应作为血常规结果检测的主要采血方法。

PU-4205

Sysmex 尿液流水线筛查细菌性尿路感染的仪器报警信息和几种筛查方案的准确性评价

荆晶[1]、张志珊[2]、林振忠[2]、吴一波[2]、赵媛[1]、陈雅斌[2]
1. 空军军医大学西京医院
2. 福建省泉州市第一医院检验科

目的 研究 Sysmex UC3500 尿干化学分析仪和 UF5000 尿液有形成分分析仪组成的尿液流水线在筛查细菌性尿路感染中的作用。评价 UF5000 提示尿路感染的仪器报警信息、以及建立的几种筛查方案的准确性。
方法 选取 2000 例疑似尿路感染患者的中段尿尿液标本，同时进行细菌培养、Sysmex UC3500 和 UF5000 尿液流水线检测，分别记录细菌培养结果、UC3500 上白细胞酯酶（LEU）、亚硝酸盐（NIT）和 UF5000 上白细胞计数（WBC）、细菌计数（BACT）的检测结果。Kappa 一致性检验评价尿路感染仪器报警信息、LEU、NIT 和细菌培养结果的一致性；根据菌落生长数量将细菌分为 3 组（阴性组、104CFU/ml 组和 105CFU/ml 组），比较各组之间 WBC、BACT 水平的差异；绘制

ROC 曲线，计算 WBC、BACT 用于判断尿路感染的 cut-off 值。以 WBC、BACT 大于 cut-off 值做为阳性值，设计 6 种筛查方案：⑴单独 WBC 参数阳性；⑵单独 BACT 参数阳性；⑶WBC、BACT 两项参数同时阳性；⑷WBC、BACT、LEU 三项参数同时阳性；⑸WBC、BACT、NIT 三项参数同时阳性；⑹WBC、BACT、LEU、NIT 四项参数同时阳性。另外选取 600 例中段尿尿液标本对 6 种筛查方案筛查尿路感染的准确性进行性能评价。

PU-4206

Sysmex UF5000 全自动尿沉渣分析仪能提高上皮细胞检测的准确性

荆晶[1]、张志珊[2]、林振忠[2]、吴一波[2]、赵媛[1]、陈雅斌[2]
1. 空军军医大学西京医院
2. 福建省泉州市第一医院检验科

目的 研究 Sysmex UF5000 和 UF1000i 全自动尿沉渣分析仪检测尿液标本的 RBC、WBC、CAST、EC、X'TAL、YLC 等参数的一致性以及结果的准确性评价。
方法 选取 1059 例尿液标本同时在 UF5000 和 UF1000i 仪器上进行比较，并进行人工显微镜检查，记录三种模式下 RBC、WBC、CAST、EC、X'TAL、YLC 等参数的检测结果。以人工镜检作为金标准，对两台仪器的敏感性、特异性、阳性预测值、阴性预测值等准确性性能进行评价，并计算各参数检测结果和镜检结果是否一致的 Kappa 值。Deming 回归、一致性相关系数和 Kappa 一致性检验分别对 UF5000 和 UF1000i 的定量参数（RBC、WBC、CAST）和定性参数（X'TAL、YLC）进行一致性检验。并对各仪器的假阳性影响因素进行比较分析。
结果 UF5000 和 UF1000i 在 RBC、WBC、X`TAL 检测上与人工镜检的一致性较强（Kappa 值=0.597-0.784），但 CAST、YLC 和人工镜检一致性差（Kappa 值=0.143-0.332）。各检测参数上均有较好的特异性、阴性预测值和符合率（83.95 %-99.61 %），假阴性率低（0.38 %-7.27 %）。UF5000 相对 UF1000i 上多项参数准确性能有所提升，特别是 EC 检测的准确性能（敏感性、阳性预测值等）、一致性提升明显（Kappa 值从 0.317 到 0.752）。仪器之间的一致性比较，仅 RBC、WBC 检测参数表现出较好的一致性（RBC：r=0.9842，CCC=0.9693；WBC：r=0.9955，CCC=0.9711）。

血浆蛋白 C 及蛋白 S 的临床应用

江岩
空军军医大学西京医院

血浆蛋白 C（PC）、蛋白 S（PS）是维生素 K 依赖的一种蛋白，在凝血调节过程中起重要的作用。其缺乏会使人体的凝血及纤溶平衡受影响,使凝血亢进,从而易发生血栓性疾病。因此血浆蛋白 C、蛋白 S 检测对疾病的诊断预防及观察预后有重要价值。本文对血浆蛋白 C、蛋白 S 的临床应用作一综述。

PU-4208

消化病医院血细胞分析复检规则的建立后的持续改进

贾晶媛
空军军医大学西京医院

目的 以国际 41 条为准则，在我院门诊血细胞复检规则的基础上进行调整和优化，通过对数据进行分析，制定适合院中院消化病医院的血细胞复检规则。使用一年后对复检规则进行评估,以达到持续改进的目的。
方法 1.挑选 200 例血细胞相关分析阳性标本，使用消化病医院血细胞分析仪检测，进行规则判断以查看阳性标本是否存在漏复检现象。2.在 SYSMEX 仪器的 Laboman 中查看复检规则进而分析规则中假阳性率较高的规则。进行评估是否需要修改复检规则。3.通过日常工作查看复检规则是否存在问题，及时进行补充。
结论 通过验证复检规则未发生挑选阳性标本的漏检情况，未发现假阳性率过高的规则，日常工作中未发现标本漏检的情况。复检规则的持续改进可以为我们日常的血细胞分析复检工作进行保驾护航，缩短阴性标本 TAT 时间，提高阳性标本的复检质量，提高工作效率，使患者在较短的时间内取得较为准确的报告，保证工作的质量和安全。

PU-4209

不同保存方法对尿沉渣检测结果的影响

何娟、刘家云
空军军医大学西京医院

目的 探讨不同尿液保存方法对尿沉渣检测结果的影响。
方法 选取 2020 年 7 月至 8 月于我院进行尿常规检测的患者新鲜尿液标本 100 例，每例标本分为两份，分别于冷藏（2~8℃）环境下、室温（18～28℃）环境下，在收到标本后 0h、2h、4h、6h 进行尿液沉渣检测，比较不同保存方法下尿液红细胞、白细胞、上皮细胞、细菌检测结果。
结果 室温保存 2 h 及冷藏保存 2h 的尿沉渣检测结果与 0h 检测结果比较，差异均无统计学意义（P>0.05），室温保存 4h、6 h 的尿沉渣检测结果与 0h、2h 检测结果比较，具有统计学意义（P<0.05），冷藏保存 4h、6 h 的尿沉渣检测结果与 0h、2h 检测结果比较，具有统计学意义（P<0.05）。
结论 不同保存方法会对尿沉渣检测结果有一定影响，为保证尿液检测结果确定性，应于收到尿液标本后应于 2h 内完成检测。

血液分析仪提示疟原虫感染的 2 例病例探讨

高倩
空军军医大学西京医院

疟疾是一种经按蚊传播的常见于热带、亚热带和温带地区的急性发热性疾病，是一个严重威胁着人类健康的公共卫生问题，中国维和医务人员以及军队在国际交流学习时需要注意警惕[1-3]。疟原虫为孢子虫，在脊椎动物的细胞内寄生，种类很多，但寄生于人体的疟原虫共有四种，分别是间日疟原虫，恶性疟原虫、三日疟原虫和卵形疟原虫，我国主要是间日疟原虫和恶性疟原虫，三日疟原虫和卵形疟原虫罕见[4, 5]。疟疾的治疗是全世界关注的问题，中国科学家屠呦呦及其研究团队从黄花蒿中分离得到抗疟疾的药物—青蒿素，在世界治疗疟疾的过程中发挥了重要的作用[6, 7]。

本研究通过血液分析仪器提示疟原虫感染的 2 例病例分析，探讨合理应用仪器信息进行疟原虫检测，避免漏诊或误诊。

尿液干化学分析仪 UC-3500 及其适配试纸条性能评估

程翔、王刚强、何娟、卢佩、李程华、杨若凡、郑善銮、刁艳君、刘家云
空军军医大学西京医院

目的 评估尿液干化学分析仪 UC-3500 及其适配试纸条的性能，探讨其临床应用可靠性。
方法 根据中华人民共和国医药行业干化学尿液分析仪（YY/TO475 2011）和尿液分析试纸条（YY/TO478 2011）的行业标准，对仪器的重复性、稳定性、携带污染率，适配试纸条的准确度、重复性、检出线、分析特异性、批间差进行验证，验证项目包含酸碱度（PH）、比重（SG）、白细胞（LEU）、隐血（ERY）、亚硝酸盐（NIT）、蛋白质（PRO）、葡萄糖（GLU）、胆红素（BIL）、尿胆原（URO）、酮体（KET）；随机挑选门诊病人新鲜尿液标本 620 例在干化学尿液分析仪 AX-4030 平行检测，计算两种仪器 PH，SG 的成对差异百分率及其余项目阳性检出率及符合率；结果仪器的稳定性、重复性、携带污染率及与适配试纸条的准确度、重复性、检出线、分析特异性、批间差、稳定性均符合行业标准要求；干化学尿液分析仪 UC-3500 与 AX-4030 PH 均值差异百分率<10%，SG 均值差异百分率<1%，一致性符合要求， LEU，ERY，NIT，PRO，GLU，BIL，URO，KET 一般符合率>80%，Kappa>0.4，结果一致性良好。
结论 干化学尿液分析仪 UC-3500 及其适配试纸条性能良好，可满足临床需要。

PU-4212

凝血试验分析前质量控制中采血因素的影响及对策

晁真真
空军军医大学西京医院

目的 讨论凝血实验分析前质量控制中采血因素的影响及对策。
方法 将前来我院进行体检的 60 名健康体检者作为研究对象，收集比例不同的采血量与溶血，即 1:10、1:9、1:8、1:5 和 1：3，其中标准组血液收集比例为 1:9，观察组为 1:10、1:8、1:5 和 1：3。对比分析凝血检验效果。
结果 观察组的检验效果由于标准组，差异有统计学意义（P＜0.05）；溶血组的 PT、TT、APTT 与标准组相比，差异有统计学意义（P＜0.05）；Fib 与 AT-Ⅲ两组对比后无差异（P＞0.05）。
结论 凝血试验质量与采血人员的认知情况和操作技术有着直接关系，应引起采血人员的高度重视。

Dysentery Caused by Balantidium coli in China

Peixia Yu、JianRong Rong、Yan Zhang、Jingjing Du
Shanxi Bethune Hospital & Shanxi Academy of Medical Sciences

Balantidium coli human infection predominantly occurs in tropical and subtropical regions in the world. Human case is extremely rare in China. This report details a case of B. coli infection in a 68-year-old man in China, who presented with a 1-week history of abdominal pain, tenesmus, diarrhea with blood and mucus stools. He also reported symptoms of nausea, vomiting and anorexia and a 4-month history of working as a pig farmer. Routine wet-preparation stool

examination showed both red blood cells and white blood cells 4+/ high power field. Surprisingly, Large mobile trophozoites of Balantidium coli exhibiting rapid rotary-type and boring motion were captured and their somatic cilia was visible (Video. S1 in the Supplementary Appendix). The tapering anterior end has a cytostome and the posterior end is broadly rounded (Panel A). Many trophozoites were observed in the Wright-Giemsa stained smear on lower power (Panel B). A smaller round micronucleus nestled against a larger kidney-shaped macronucleus within the trophozoite was displayed. (Panel C). Diagnosis of dysentery caused by B. coli was established. Treatment of oral metronidazole for 2-weeks led to a full recovery. There was no recurrence after 6-months of follow-up. Our case indicates possible occurrence of Balantidium coli-related disease in cooler climates. This case is presented not only because of its rarity but also for future references.

血栓弹力图分析前影响因素的探讨

马跃飞
福建医科大学附属第一医院

目的 探讨分析前因素对血栓弹力图（TEG）检测的影响。
方法 采集健康志愿者和住院患者标本,分析标本状态如溶血/脂血、检测时间、标本采集量和人员等因素对 TEG 检测的影响。
结果 标本溶血和脂血导致反应时间（R）降低、凝块形成时间（K）升高、最大切角（α）降低、最大振幅（MA）降低,除脂血标本的 K 值外,各参数差异有统计学意义（P <0. 05）。R、K、α 在 5 min～30 min 内呈现趋势性变化（P <0. 05）。MA 在 60 min 内成"∧"型波动。R 在 30 min 后、MA 在 1 h 后、K 和 α 在 2 h 后检测结果差异无统计学意义（P> 0. 05）。与正常采集量 2. 0 ml 相比,标本量 2. 3 ml 时 K 值升高,差异有统计学意义（P <0. 05）,其他参数在 1. 7 ml～2. 3 ml 差异无统计学意义（P> 0. 05）。不同实验人操作时各参数的变异系数（CV）均高于同一实验人。
结论 溶血、脂血对结果影响较大,TEG 应在 1 h～4 h 内检测,不同实验人应严格遵循相同的操作程序。

Identification of RHOBTB2 aberration as an independent prognostic indicator in acute myeloid leukemia

Xiaoning Zhang
Shandong Provincial Qianfoshan Hospital

Rho-related BTB domain (RhoBTB) proteins belong to Rho guanosine triphosphatases (GTPases). Their putative role implicated in carcinogenesis has been supported by accumulating evidence. However, their expression pattern and potential role in acute myeloid leukemia (AML) remain unclear.

We profiled RHOBTB mRNA expression via the Gene Expression Profiling Interactive Analysis 2 (GEPIA2) database. Survival analysis was conducted with GEPIA2 and UALCAN. Univariate and multivariate Cox regression analyses were performed to validate RHOBTB genes as independent prognostic indicators in the LAML cohort from The Cancer Genome Atlas (TCGA). Data regarding expression in different subtypes and relationships with common disease-related genes were retrieved from UALCAN. Co-expressed genes were screened out and subsequently subjected to functional enrichment analysis.

We observed aberrant transcription levels of RHOBTB genes in AML patients. RHOBTB2 was identified as a prognostic candidate for overall survival (OS), independent of prognosis-

related clinical factors and genetic abnormalities. Moreover, RHOBTB2 expression was increased in non-acute promyelocytic leukemia (APL) subtypes, patients without FLT3 mutation and PML/RAR fusion, and imparted a positive correlation with the expression of FLT3, FHL1, and RUNXs. Co-expressed genes of RHOBTB2 were enriched in functional pathways in AML.

Our findings suggest that RHOBTB2 might be a novel biomarker and independent prognostic indicator in AML and provide insights into the leukemogenesis and molecular network of AML.

vWF 与 TM 联合检测在糖尿病肾病诊断中的应用价值

范小斌
广东省人民医院

目的 探讨血管性血友病因子（vWF）和血栓调节蛋白（TM）联合检测在糖尿病肾病（DN）诊断中的应用价值。
方法 选择 2018 年 12 月至 2019 年 12 月入住广东省人民医院的 31 例 2 型糖尿病（T2DM）患者的临床资料进行回顾性研究，患者分为单纯糖尿病组（DM）和糖尿病肾病组（DN），收集患者抗凝治疗前凝血功能相关指标的检查结果进行组间比较并分析其特征。
结果 DN 组的 vWF 和 TM 水平分别是 206.50±88.52%和 20.06±8.70TU/mL，单纯 DM 组的 vWF 和 TM 水平 114.80±47.43%和 10.38±2.52TU/mL，DN 组患者的 vWF 和 TM 水平均明显高于单纯 DM 组，两组差异具有统计学意义（P＜0.05），DN 组患者的 APTT 水平（38.13±5.12s）明显比单纯 DM 组（43.40±6.82s）低（P＜0.05），两组在其他凝血功能指标 PT、FIB、TT、AT-Ⅲ、FDP、PLG、、D-DI 水平上的差异均无统计学意义（P＞0.05）；vWF、TM 值诊断 DN 的 ROC 曲线下面积分别为 0.835 和 0.885；cut-off 值分别为：150 %和 10.9 TU/mL；灵敏度分别为：75.0%和 93.8%；特异度分别为 80.0%和 73.3%，采用联合检测后，灵敏度和特异度分别为 75.0%和 100.0%。
结论 血浆 vWF 和 TM 联合检测对于诊断 DN 效能良好，有一定的临床应用价值。

Neutrophil-to-lymphocyte ratio (NLR) and platelet-to-lymphocyte ratio (PLR) as promising biomarkers to predict clinical outcome of gastric cancer

Fuyan Han
Department of Clinical Laboratory, The Second Hospital of Shandong University

Objectives The neutrophil-to-lymphocyte ratio (NLR) and platelet-to-lymphocyte ratio (PLR) have been presented to be a prognostic indicator in several types of cancer. The purpose of the present study was to detect whether the preoperative NLR and PLR can be used to distinguish patients with (GC) from the healthy controls and predict the progression and prognosis of the GC.
Methods The NLR and PLR values of 222 patients wgastric cancerith GC were retrospectively analyzed comparing with 153 healthy controls which were enrolled in the Second Hospital of Shandong University from January 2013 to April 2018. In addition, the clinicopathological features, survival curves and prognosis of the patients with GC were compared between the high and low groups according to the NLR and PLR cutoff values.
Results Significant higher NLR and PLR were detected in patients with GC compared to the healthy controls (all P<0.05). A higher NLR was significantly associated with male, older age, a larger tumor diameter, Lymph node metastasis, advanced pStage and elevated CEA (all P<0.05). A higher PLR was also significantly associated with older age, a larger tumor diameter, deeper

tumor infiltration, Lymph node metastasis, advanced pStage and elevated CA199 (all P<0.05). A patient who had a distance metastasis was inclined to have an elevated NLR after surgery (P=0.012). The patients with a higher NLR possessed a significantly poorer OS and DFS compared to those with a lower NLR (P=0.017 and P=0.005, respectively). Similarly, the patients with a higher PLR showed a significantly worse OS and DFS than those with a lower PLR (P<0.001 and P<0.001, respectively) . Univariate and multivariate survival analysis showed that PLR could act as an independent prognostic factor for OS (P=0.027) and DFS (P=0.041) in GC.
Conclusion The preoperative NLR and PLR were simple and convenient predictive factors for the progression and prognosis of patients with GC. The PLR could act as an independent prognostic indicator for OS and DFS in GC.

PU-4218

Neutrophil-to-lymphocyte ratio (NLR) and red blood cell distribution width (RDW) as promising biomarkers to predict clinical outcome of esophageal cancer

Fuyan Han
Department of Clinical Laboratory, The Second Hospital of Shandong University

Backgroud Recent studies have borne out claims that inflammation has a vital role in the development and progression of many diseases, including cancers. It has been reported that neutrophil-lymphocyte ratio (NLR) and red blood cell distribution width (RDW) could act as independent prognostic factors for several malignant tumors. The present study aimed to evaluate the diagnosis and prognosis values of preoperative inflammatory indicators, including NLR and RDW in esophageal cancer (EC).
Methods We retrospectively analyzed the clinical data of 284 EC patients and 220 early esophageal cancer (EEC) undergoing potentially curative esophagectomy in the Second Hospital of Shandong University between January 2011 and April 2015. Meanwhile, we chose 101 age and sex-matched healthy volunteers as the control group. We compared the clinicopathological features, survival curves and prognosis of the EC patients between the high and low groups according to the cutoff values of NLR and RDW.
Results Significant higher preoperative NLR and RDW values were detected in patients with EEC and EC compared to the healthy controls (P<0.05). A high RDW were significantly associated with an older age and distance metastasis (P<0.05). NLR and RDW values after surgery in EC group were significantly higher than those before surgery (P<0.001 and P<0.001, respectively). For EEC group, a higher RDW value only showed a significantly worse disease-free survival (DFS) (P=0.041). For EC group, an increased NLR indicated a significantly association with poor overall survival (OS) (P=0.035) and DFS (P=0.011). Preoperative NLR can act as an independent prognostic indicator for EC.
Conclusion The preoperative NLR and RDW are convenient, practical easily measured biomarkers of clinical diagnosis and prognostic assessment of patients with EC. Furthermore, NLR was more effective than RDW acting as an independent prognostic biomarker for EC.

肺泡灌洗液细胞学分析在肺炎患者中的临床意义

朱红艳
西安市第三医院

探讨支气管肺泡灌洗液（Bronchoalveolar lavage fluid,BALF）细胞学分析在肺炎患者中的临床意义。

方法 收集从 2019 年 7 月至 2021 年 2 月期间于西安市第三医院诊断为肺炎，住院期间所做项目包括 BALF 细胞学检查、血常规（Blood routine examination,血 RT）、C-反应蛋白（C-reactive protein, CRP）、降钙素原（Procalcitonin, PCT）,以及一般细菌培养的患者 160 例,比较它们之间的差异。

PU-4220

中性粒细胞参数在肺部感染性疾病中的临床应用研究

陈小剑、林潮庆、蒋伟燕、陈碧
温州医科大学附属第二医院、育英儿童医院

目的 探讨中性粒细胞参数(NEUT-X、NEUT-Y)在肺部感染性疾病中的变化及其应用价值。
方法 收集 123 例肺部感染患者的外周血液样本，其中 20 例为病毒感染组，103 例为细菌感染组，另收集 133 例健康体检者（对照组）的外周血样本，在 Sysmex XE-5000 上对其 NEUT 参数进行检测。
结果 肺部感染组与对照组相比 NEUT-Y 参数结果差异有统计学意义(P＜0．05)，NEUT-X 参数结果差异无统计学意义(P > 0.05)；细菌组 NEUT-X、NEUT-Y 值较对照组均升高，差异有统计学意义(P<0.05)；细菌组 NEUT-Y 值与病毒组比较，差异有统计学意义(P<0.05)；细菌组中 WBC>10×109/L 组别 NEUT-X、NEUT-Y 升高程度高于 WBC<10×109/L 组；>70%组 NEUT 参数均高于≤70%组。
结论 中性粒细胞参数 NEUT-Y 值对有无肺部感染的判断有价值；由细菌感染引起的肺炎其 NEUT-X、NEUT-Y 值均升高。

PU-4221

Evaluation of immature platelet fraction as a novel biomarker in psoriasis: association with platelet activation

Zhijia Fan、Li Wang、Dandan Li、Zhicheng Wang
Department of Laboratory Medicine, Huashan Hospital, Fudan University, Shanghai

Background Platelet activation that involved in the pathophysiology of psoriasis could link persistent inflammation and the formation of thrombus contributing to the increased risks of cardiovascular complications. The studies about markers of platelet activation in the association with psoriasis activity have still been controversial and there is a paucity of data examining which markers are appropriate. We aim to evaluate the association between platelet activation and psoriasis severity by investigating the values of novel activation markers.
Methods A total of 120 patients with psoriasis and 120 sex-matched healthy controls were enrolled in the study. K2-EDTA anticoagulated peripheral venous blood specimens were tested on a Sysmex XN 9000 hematology analyzer. The levels of immature platelet fraction (IPF), immature platelet count (IPC), mean platelet volume (MPV), and platelet distribution width (PDW) were estimated in all study populations. The relationships between these platelet indexes and disease severity measured by the Psoriasis Area and Severity Index (PASI) were assessed. Univariate and multivariate logistic regression analyses, with adjustment for potential confounding factors such as age, gender, age at onset, history of hypertension, diabetes, arthritis, smoking, and alcohol, were performed to evaluate whether platelet parameters could be associated with the psoriasis severity.
Results A marked increase in white blood cell (WBC) count suggested the inflammatory response of patients. And we observed significant platelet activation in psoriasis, as demonstrated by the elevation in platelet indexes, the psoriasis group showed higher values of

IPF, IPC, PDW, and MPV with statistical significance when compared with those in the control group. Platelet activation markers except for MPV had positive correlations with PASI. And in the multivariate analysis, following adjustment for confounding factors, only IPF and IPC could emerge as available markers to evaluate the severity of psoriasis, whereas MPV and PDW were no longer significantly associated with psoriasis severity. After treatment, the PASI score markedly decreased accompanied by the significant reduction of IPF and IPC.
Conclusion Our results indicate that there is significant platelet activation in psoriatic patients measured by specific platelet indexes, especially when linked to the increasing disease severity. Different levels of platelet markers are found in psoriasis with an increase in mean platelet volume and platelet distribution width and, particularly the immature platelet parameters, which could contribute to increased risks of cardiovascular complications. IPF may be the most sensitive biomarker of all studied platelet parameters. Given the simple convenience of this parameter for routine clinical laboratories, considerably more work will be needed to confirm the value of IPF in the management of psoriasis, and there should be also some further research to explore such as the mechanisms of platelet activation in psoriasis.

PU-4222

淋巴细胞计数对新型冠状病毒肺炎的临床诊断价值

杜岩青、秦中华、张丽霞
天津市海河医院检验科

目的 通过评价感染指标淋巴细胞计数（LYM#）在新型冠状病毒肺炎的诊断效能，以期为新冠肺炎的临床诊断提供参考。
方法 收集 2020 年 1-2 月在天津市海河医院收治的 84 例新冠肺炎确诊患者的临床资料，根据疾病临床分型分为普通组（n=61）和重症组（n=23），30 例体检健康者作为健康组。考察新冠肺炎患者外周血细胞分析的特征并进行 ROC 分析，考察其 AUC 面积、cut-off 值、灵敏度和特异度。
结果 新冠肺炎患者 NEU%显著上调，WBC、LYM#、LYM%显著下调（P 均<0.05），重症型患者 RBC（女性）、NEU%、中性粒细胞/淋巴细胞比值（NLR）显著高于普通型，LYM#和 LYM%显著低于普通型（P 均<0.05）。普通型患者 LYM#的 ROC 曲线的 AUC 面积、灵敏度、特异度、cut-off 值分别为 0.9626、88.52%、93.33%、1.75，重症型患者上述指标分别为 0.9942、100%、93.33%、1.69。
结论 LYM#与新冠肺炎疾病进展具有较强的相关性，具有一定的临床诊断价值。

Sysmex UC3500 联合 UF5000 尿液流水线审核报告流程的建立和验证

陈雅斌
福建医科大学附属泉州第一医院

目的 建立并验证 Sysmex UC3500 联合 UF5000 尿液流水线的审核报告流程。
方法 选取 1000 例尿液标本在 Sysmex UC3500 和 UF5000 尿液流水线上进行检测，同时进行人工显微镜检查。建立尿液审核报告的流程和触发显微镜镜检的复检规则，以人工镜检的结果作为金标准，计算流程的复检率、真阳性率、真阴性率、假阳性率和假阴性率，在此基础上进行规则的改进。进一步选取 300 例尿液标本验证改进后的审核报告流程，并进行性能评价。
结果 1000 例标本中复检率 23.00 %，未触发复检规则标本真阳性率 21.20 %、真阴性率 50.40 %、假阳性率 1.30 %、假阴性率 4.10 %。根据结果进行了规则的追加，改进后复检规则共 8 条。300

例验证标本中复检率 27.66 %，未触发复检规则标本真阳性率 21.67 %、真阴性率 47.67 %、假阳性率 0.67 %、假阴性率 2.33 %。规则改进后复检率有所提高，但假阴性率降低，避免了肾脏相关疾病的漏诊率。假阳性干扰因素分析中，结晶、细菌、上皮细胞和粘液丝是主要的干扰因素。假阴性标本主要集中在 RBC 和 WBC 检测项目上，建立和验证实验中分别有 11 例和 2 例的肾相关疾病。
结论 本实验室建立的尿液流水线审核报告流程假阴性率<5 %，符合 ISO15189 实验室认可和通用的复检规则评估标准，适用于本实验室在临床工作中审核尿液报告。

311 例体检者尿液结晶检测结果及其与性别、年龄的关系分析

王春苗、龚彩平、杨玉静、周茂华
广东省人民医院（广东省医学科学院）

目的 分析尿液结晶检测阳性率与性别、年龄的关系，为泌尿系结石的预防工作提供依据。
方法 随机收取广东省人民医院 2020 年 6 月~11 月 311 例体检者晨尿，采用人工镜检对尿液结晶进行诊断和分类，并进行性别分组、年龄分组的比较分析。
结果 311 例尿液样本中，结晶阳性 27 例，阳性率 8.69%，所检测出结晶主要是草酸钙结晶，占 88.89%，其他结晶占 11.11%。男性组尿液结晶检测阳性率明显高于女性组（x2= 4.954，P<0.05）。随着年龄增长，尿液结晶检测阳性率呈上升趋势，并且老年组尿液结晶检测阳性率明显高于青年组，差异有统计学意义（x2= 10.979，P<0.05）；尿液结晶检测阳性率在青年组与中年组、中年组与老年组之间差异无统计学意义（x2=0.996；x2= 2.682，P 均>0.05）。
结论 尿液结晶检测阳性率在不同性别、年龄存在一定的差异，该研究为泌尿系结石的预防工作提供一定的参考依据。

PU-4225

双重荧光染色在妇科阴道炎诊断中的应用价值

李翠、应春妹
复旦大学附属妇产科医院

目的 探讨双重荧光染色系统在妇科门诊患者阴道分泌物常规检测中的应用价值
方法 搜集复旦大学附属妇产科医院黄浦分院 2020 年 12 月至 2021 年 5 月妇科门诊阴道炎患者，同时用传统显微镜湿片法和双重荧光染色系统对阴道炎患者阴道分泌物进行检测分析。依据显微镜下形态报告孢子、假菌丝、线索细胞、滴虫、脓细胞、杂菌 6 项检测项目；并用卡方检验分析该染色系统相较传统显微镜湿片法的一致性及优势。
结果 5625 例阴道炎患者中，菌群失调病例 694 例，占 12.3%，显著高于直接镜检的 315 例，p<0.001；
念珠菌性阴道炎（含孢子及假菌丝）1490 例，占 26.5%，显著优于直接镜检法的 1226 例，p<0.001；
细菌性阴道炎病例 1602 例，占 28.5%；滴虫性阴道炎 77 例，占 1.4%，显著优于直接镜检法的 1017 例，p<0.001；
非特异性阴道炎 2012 例，占 35.8%，与直接镜检法的 2004 例一致性较好，无明显差异，p>0.05。
结论 妇科阴道炎患者中单纯性白细胞增多病例占比较高；双重荧光染色系统简便高效，可清晰显示致病菌及患者阴道分泌物菌群分布情况；双重荧光染色系统作为一项新技术，可提高妇科阴道炎患者阴道疾病诊断，值得在妇科门诊中应用推广。

PU-4226

SAA and CRP are potential indicators in distinction and severity assessment for children with Influenza

seyin zou[1]、jinjie liu[2]、zhiyong yang[1]、danxia xiao[1]、donglin cao[1]
1. Guangdong Second Provincial General Hospital
2. 广东医科大学

Purpose Laboratory indicators are essential to diagnosing and monitoring influenza infection.The clinical values of C-reactive protein (CRP) and serum amyloid A (SAA) to distinguish non-severe from severe children with influenza are rarely reported.
Methods Baseline characteristics and laboratory results were collected and analyzed. Receiver operating characteristic (ROC) curve analysis was used to combined detection of indicators for children with influenza, and the scatter-dot plots was used to compare the differences between non-severe and severe children.
Results 263 influenza cases were included, 183 of those with influenza A and the remaining 80 with influenza B. There was no statistical difference in the sex ratio between the influenza A group and influenza B group (P = 0.54). The mean age was significantly higher among children with influenza A than those with influenza B(P = 0.003). Children with influenza B had more bronchitis and pneumonia (P < 0.05),while children with influenza A had more other serious symptoms (P = 0.015). Among children aged under 4 years, a significant difference was observed in lymphocyte count, neutrophil count ,NLR(neutrophil-to-lymphocyte ratio),CRP and SAA between children with influenza(A and B) and healthy individuals, but there were no statistically significant differences among children with influenza A and those with influenza B. Of children over 4 years old, significant differences were observed in lymphocyte count, neutrophil count ,NLR,CRP and SAA among children with influenza A and healthy individuals; while only lymphocyte count and NLR did significant differences among children with influenza B and healthy children; Moreover, the neutrophil count, NLR, CRP, and SAA were significantly higher in children with influenza A than those with influenza B(P < .05). Compared with NLR and SAA, the ROC curve analysis showed that the combined of NLR and SAA for distinguishing healthy children from children with influenza A was better than detection of NLR or SAA alone; compared with lymphocyte count and SAA, the ROC curve analysis showed that joint detection of lymphocyte count and SAA could better separate healthy children from children with influenza B than single indicator detection, no matter with <4y group or ≥4y group. Both the levels of CRP and SAA were significantly higher in children with influenza A and severe influenza B infection than healthy controls, and they also showed a significant difference among children with severe influenza A and B infection(P < .05), but there were no statistical differences between the non-severe influenza B group and control group. In addition, both CRP and SAA in children with influenza A were significantly higher in the severe group than those in the non-severe group(P < .05);while the levels of CRP among children with influenza B didn't show a significant elevation in the severe group, compared with the non-severe group (P > .05).However, the neutrophil count, lymphocyte count, and NLR were not statistically different among non-severe and severe children both in influenza A and B group.
Conclusions There were several differences in clinical symptoms and laboratory indicators among children with influenza A and B. SAA and CRP could be potential indicators in distinction and severity assessment for children with influenza, but the age should be taken into account when using in children with influenza B.

血清 cTnT 与 NT-proBNP 联合检测在肝癌化疗相关心肌损伤中的早期预测价值研究

周楚琦
南华大学附属第一医院

目的 探究血清超敏心肌肌钙蛋白(cTnT) 与脑利钠肽前体(NT-proBNP) 联合检测在肝癌化疗相关心肌损伤中的早期预测价值。
方法 选择于本院 2017 年 1 月至 2019 年 6 月收治的中晚期肝癌患者 135 例作为研究对象。患者进行彩色多普勒超声检查并记录左室射血分数(LVEF) ，根据超声诊断结果分为对照 A 组（无心肌损伤事件发生）和实验 B 组（有心肌损伤事件发生）。采用化学发光法检测化疗前后血清 cTnT 与 NT-proBNP 水平。绘制受试者工作曲线（ROC），通过曲线下面积（AUC）评价血清 cTnT、NT-proBNP 以及联合检测在肝癌化疗相关心肌损伤中的早期预测价值。
结果 B 组中 cTnT 与 NT-proBNP 阳性率均高于 A 组水平，差异具有统计学意义（P<0.05）；cTnT、NT-proBNP 及联合检测诊断肝癌化疗相关心肌损伤的 AUC 分别为 0.913，0.900，0.921，其中联合检测诊断价值最佳。
结论 血清 cTnT、NT-proBNP 在肝癌化疗相关心肌损伤早期诊断中具有一定价值，且二者联合检测对肝癌化疗相关心肌损伤诊断最佳。

UA-5800 和 AE-4020 尿液分析仪尿蛋白试纸条结果的一致性及其与尿蛋白/肌酐比值（ACR）的相关性研究

王悦[2]、杨唯唯[2]、张聪[2]、张晨[2]、赵博禹[1]、王国洪[2]
1. 吉林市中心医院
2. 北京肿瘤医院

目的 比较迈瑞公司 UA-5800 和日本爱科来公司 AE-4020 尿液分析仪试纸条检测尿蛋白的一致性并验证其测定的敏感性和特异性。
方法 随机收集 2016 年 10 月某肿瘤专科医院门诊及住院尿液标本共 721 例，同时采用 UA-5800 和 AE-4020 尿液分析仪行尿蛋白定性检测，其后采用生化分析仪检测尿白蛋白含量和肌酐水平，计算尿白蛋白/肌酐比值（ACR）。以 ACR≥30 mg/g Cr 作为尿蛋白阳性的诊断标准，以尿试纸条阴性组 ACR<30 mg/g Cr 的阴性率作为特异性，以尿试纸条结果微量、1+、2+和 3+组 ACR≥30 mg/g Cr 的阳性率作为敏感性。
结果 UA-5800 和 AE-4020 的尿蛋白定性结果具有一致性（κ=0.65），两者检测尿蛋白的特异性分别为 85.19%和 83.41%。UA-5800 和 AE-4020 检出蛋白尿的敏感性在尿蛋白微量组、1+组、2+组和 3+组分别为 35.53%和 34.27%、86.79%和 73.69%、100%和 100%、100%和 92.31%。
结论 国产 UA-5800 和日本 AE-4020 尿分析仪尿蛋白干化学检测具有较高的一致性和良好的诊断蛋白尿的特异性和敏感度。二者均具有良好的蛋白尿筛查性能。

PU-4229

A simple electrochemical sensor for PCSK9 detection based on signal-on responses using aptamer with methylene blue label at specific internal thymine

Guolin Yuan
Department of Laboratory Medicine, Shiyan Taihe Hospital, Hubei University of Medicine

Proprotein convertase subtilisin/kexin 9 (PCSK9) serves a key regulatory function in the metabolism of low-density lipoprotein (LDL)-cholesterol (LDL-C) through interaction with the LDL receptor (LDLR) followed by its destruction that results in the elevation of the plasma levels of LDL-C. Hence, design an effective method to detect serum PCSK9 is meaningful for the prevention, monitor and diagnosis of cardio- vascular diseases. In this work, a novel, ultrasensitive electrochemical immunosensor has been fabricated for the determination of PCSK9 in human serum. Glassy carbon electrode was used as the working electrode on which gold nanoparticles (AuNPs) was electrodeposited. This approach provided a high content of Au surface suitable for the direct covalent binding of PCSK9 aptamer. Usually, the redox tag is placed on aptamer terminal, however, sometimes the terminal label may be insensitive to target-binding and fail to generate sensitive responses. The redox tag methylene blue (MB) labeled on different sites of aptamer may experience distinct changes in local environment, distance to electrode, or interactions with aptamer bases during affinity binding, which affect the current signal. Thus, it is possible to construct aptamer electrochemical sensors with sensitive and significant responses to targets by screening a series of sites (here we use internal thymine T) of the aptamer and placing MB tag on a specific site of the aptamer. With this strategy, we successfully fabricated an electrochemical aptamer sensor by using a DNA aptamer with MB on an internal T site (e.g., 10th T) and a thiol moiety at 5' terminal. This sensor generated remarkable signal-on responses to PCSK9 and enabled detection of PCSK9 in human serum samples. The results for real sample analysis in human serum demonstrated that the newly constructed aptamer sensor provided a rapid and simple assay with low detection limits for clinical applications and provide a novel strategy for the detection of serum molecular.

血小板可否作为肿瘤生物标志物？

苏海翔、王涛、郭欢、江秀娟
甘肃省医学科学研究院，甘肃省肿瘤医院

目的 了解肿瘤环境中诱导的血小板（TEP）作为 RNA 生物标记物在癌症检测应用中的研究进展。
方法 文献检索。
结果 血液是肿瘤相关生物标志物的丰富来源，一些以血液为基础的生物分子如 cfDNA、cfRNA、蛋白质、CTC 和外泌体等已被探索用于新肿瘤标志物开发。TEP 被认为是局部和全身对肿瘤反应后的一类血小板亚群。剪接的 TEP-RNA 信号可以提供肿瘤存在、位置和分子特征的具体信息。目前已有对来自肺癌、脑癌和乳腺癌患者血液样本进行 TEP-RNA 测试结果的文献报道，表明来自癌症患者的 TEP-RNA 与来自炎症和非肿瘤疾病患者的不同。
结论 TEP-RNA 可能作为液体活检诊断的生物来源分子，用于早期癌症的检测，促进无创性监测技术的进步。但有关肿瘤导致血小板内 RNA 剪接的机制以及这类特定血小板亚群是如何影响肿瘤发生发展的，还有待研究。

朱晓、娄加陶
上海市胸科医院

恶性肿瘤现如今在中国的发病率和死亡率仍然高居不下，除了手术以外，主要的治疗手段有放射治疗以及化学药物治疗。当其杀死肿瘤细胞的同时对正常组织和细胞也会造成不良影响。主要影响之一的骨髓抑制可以通过观察外周血细胞形态来发现，其主要的异常形态有细胞体积巨型变或小型变、中毒颗粒、核右移、核左移、低分叶、未成熟细胞、退行性变化、异型淋巴、核分叶异常及大颗粒淋巴、破碎细胞、有核红细胞、红细胞形态异常、大血小板。而形成骨髓抑制的机制有损伤 DNA 导致细胞凋亡、衰老以及骨髓细胞周期异常；损伤造血微环境中的微血管、造血生长因子（HGF）及骨髓基质细胞。通过观察外周血细胞形态出现的异常改变可以发现骨髓抑制损伤情况并为临床医生提供参考依据做出相应的改善治疗措施。

有核红细胞与感染的关系的研究进展

徐阳飚、李欣、娄加陶
上海市胸科医院

有核红细胞是未成熟的红细胞。除新生儿期外，有核红细胞极少出现在正常人的外周血中。外周血中出现有核红细胞往往提示病理状态。感染时，患者机体存在炎症反应，组织细胞缺氧刺激促红细胞生成素的合成，导致有核红细胞释放增加。近年来，多项研究揭示了外周血有核红细胞与感染的关系。有核红细胞的数量与阶段分类对于各类疾病感染及其严重程度的辅助诊断与预后判断有重要的意义。现将国内外有核红细胞与感染的关系的研究综述如下。

PU-4234

CD73 在急性淋巴细胞白血病、急性髓系白血病及伴原始细胞增多的骨髓异常增生综合征中的表达特点及临床意义

肖思颖、李海艳、刘格格、彭德志、王佳佳、韦杰
济南金域医学检验中心有限公司

本研究旨在探究 CD73 在不同类型白血病中的表达情况。采用多参数流式细胞术分析 33 例急性 B 淋巴细胞白血病（B-ALL）、51 例急性髓系白血病（AML）、24 例伴原始细胞增多的骨髓增生异常综合征（MDS-EB）中 CD73 的阳性表达率。结果表明在 B-ALL 中 29（87.88%）例表达 CD73，AML 中 4（7.84%）例表达 CD73，MDS 中 1（4.17%）例表达 CD73，B-ALL 与 AML 及 MDS 有显著的统计学差异，AML 与 MDS 无明显统计学差异，CD73 可以作为白血病分型确定 B 系、髓系系别的辅助指标。

The clinical value of neutrophil to lymphocyte ratio in the diagnosis and treatment of Crohn's disease

Chu Chu
The First Affiliated Hospital, Nanjing Medical University, Nanjing, Jiangsu Province, China

Background To evaluate the clinical value of neutrophil to lymphocyte ratio in the diagnosis and treatment of Crohn’s disease.
Methods Between March 2018 and April 2020, patients diagnosed with CD at the First Affiliated Hospital of Nanjing Medical University were identified. A total of 128 patients with definite diagnosis, and 123 healthy people as the control group at the same time. The data of these patients were extracted retrospectively from their medical record. counts of white blood cells (WBC), counts of Neutrophils (NE), counts of lymphocyte (LY), hypersensitive C-reactive protein (hs-CRP), erythrocyte sedimentation rate (ESR) were recorded at the same time of colonoscopy. The IBM SPSS 20.0 software was used for the statistical analysis of data.
Results Levels of NLR in CD with ileocolon lesions were significantly higher than those in CD patients with ileum lesions (3.13 vs 2.72) (Z=-2.326, P=0.02). Levels of NLR in CD with colon lesions were higher than those in CD patients with ileocolon lesions (4.07 vs 3.13) (Z=-2.409, P=0.04). The levels of NLR, WBC, hs-CRP in activity stage were significantly higher than those in remission stage (P < 0.05), ESR levels in activity stage was higher than that in remission stage. the optimal cutoff point for the NLR level in order to predict the diseases was 2.18, and a highest AUC equal to 0.762 (0.700-0.823, P < 0.001). the optimal cutoff point for the WBC level in order to predict the diseases was 5.51 109/L, and a highest AUC equal to 0.634 (0.565-0.703, P < 0.05), the optimal cutoff point for the hs-CRP level in order to predict the diseases was 3.02 mg/L, and a highest AUC equal to 0.676 (0.606-0.746, P < 0.05), the optimal cutoff point for the ESR level in order to predict the diseases was 8.5 mm/h, and a highest AUC equal to 0.726 (0.660-0.793, P < 0.05).
Conclusions Neutrophil to lymphocyte ratio can be used as a sensitive and reliable noninvasive marker in the course of Crohn’s disease.

PU-4236

血栓弹力图分析在晚期重度子痫前期中的应用价值

卢帅军、汪芳、朱虹、王卫华
宁波大学医学院附属医院

目的 分析血栓弹力图在晚期重度子痫前期患者中的特点并与常规凝血项目对比，探讨其在监测晚期重度子痫前期患者凝血功能中的应用价值。
方法 选择 2018 年 10 月至 2020 年 7 月在宁波大学医学院附属医院收治的妊娠晚期重度子痫前期患者 75 例，其中 31 例血小板计数＜100×109/L，44 例血小板计数≥100×109/L，相同孕期正常孕妇 50 例作为对照组。收集各研究对象的血栓弹力图（TEG）、凝血功能检测以及血常规的检测结果。
结果 重度子痫前期组的 TEG 各参数与对照组相比，均有显著差异（P＜0.01）；重度子痫前期合并血小板减少组与重度子痫前期组及正常对照组相比，R 值和 K 值均显著增大（P＜0.01），α 角、MA 值和 CI 值则均显著减小（P＜0.01）。正常妊娠组的 PT 值高于[华为 1] 重度子痫前期组，差异具有统计学意义（P＜0.01），但该参数在正常参考范围内，其余凝血检测的各项参数在三组间均无统计学意义（P＞0.05）。ROC 曲线分析显示，R 值和 K 值（AUC 分别为 0.92、0.82）对诊断重度子痫前期的参考价值优于 APTT、D 二聚体、Fbg[华为 2] 、AT[华为 3] （AUC 分别为 0.55、0.51、0.55 和 0.61）。
结论 晚期重度子痫前期合并血小板减少患者的凝血功能差，出血风险大，TEG 参数在鉴别和监测此类患者中相比常规凝血检测具有更大优势。

PU-4237

尿液细胞形态学在 1 例急性髓系白血病肝脾及泌尿系统浸润患者诊断中的指导作用

杜园园
长治医学院附属和平医院

目的 探讨尿液细胞形态学检查在 1 例急性髓系白血病肝脾及泌尿系统浸润患者诊断中的指导作用。
方法 回顾性分析 1 例以血尿为症状的急性髓系白血病肝脾及泌尿系统浸润患者的诊治过程，患者，33 岁男性，入院前 1 周出现头晕、恶心，未重视，3 天前患者剧烈呕吐后出现右侧鼻腔出血，出血量较多，不易自止，自行填塞治疗，继而出现排黑便 2 次，总量约 500ml，输注新鲜冰冻血浆 200ml 后转诊我院急救中心，以“白血病”收住入院。分别行相关实验室指标检查、尿液细胞形态学检查、超声及骨髓细胞形态检查等。
结果 入院查血常规：WBC 33.0×109/L，RBC 2.13×1012/L，HGB 65.6g/L，PLT 15.6×109/L，尿常规：尿液外观：红色浑浊，尿蛋白 2+，尿血红蛋白定性试验 2+，RBC 34759 个/μL，WBC 1729 个/μL；粪便隐血试验：3+；泌尿系彩超示：肝脾大、双肾及膀胱肿大。膀胱刺激症明显，考虑膀胱炎症。行尿液细胞形态学检查发现可见大量原始幼稚细胞，考虑白血病浸润可能；随后做骨髓室尿液沉渣涂片可见原始血细胞，比例占 65%，部分胞浆含有 Auer 小体。
结论 该患者白血病病史，病情较重，后期出现持续肉眼血尿、膀胱刺激症状、肝脾大、双肾及膀胱肿大等表现，尿液细胞形态学检查发现异常细胞，结合病史、相关检查及骨髓细胞检测，考虑急性白血病肝脾及泌尿系统浸润。提示尿液细胞形态学检查在该例患者中具有一定的临床实用性及诊断优势。

COVID-19 感染导致凝血功能障碍的机制研究

张舒阳、王宏
江苏省人民医院（南京医科大学第一附属医院）

多项研究显示，绝大多数 COVID-19 感染患者具有凝血功能障碍，而出凝血相关疾病是导致死亡的重要原因之一。本文结合 COVID-19 的临床特征和感染的高危因素，收集了多项相关研究的实验室检查结果，包括凝血功能指标和炎症细胞因子水平等，总结了可能存在的凝血功能障碍机制。

PU-4239

血清 PCT、CRP 在小儿脓毒症早期诊断中的价值

万芙荣
山东第一医科大学第一附属医院

目的 探讨血清 PCT、CRP 水平在小儿脓毒症早期诊断中的价值。
方法 随机选取我院 2018 年 1 月-2020 年 1 月收治的 SIRS（全身炎症反应综合症）患儿外周血标本 90 例，作为观察组。于同期选择 100 例非脓毒症患儿标本，作为对照组。采用荧光法定量法检测血清 PCT 水平，采用免疫比浊方法检测血清 CRP 水平。
结果 观察组患儿血清 PCT、CRP 测定水平与对照组比较均显著升高，差异有统计学意义（P<0.05），其中 SIRS 休克组患儿 PCT、CRP 水平显著高于严重 SIRS 组和对照组（P<0.05），严重 SIRS 组患儿 PCT、CRP 水平亦高于对照组（P<0.05）。
结论 联合检测血清 PCT、CRP 水平可用于早期诊断小儿脓毒症，有利于疾病的分层诊断，值得临床推广。

PU-4240

血栓弹力图在缺血性脑卒中临床诊治中的应用价值

闫彬[1]、刘坤[2]
1. 南阳市中心医院
2. 河南大学附属南石医院

目的 探讨血栓弹力图（TEG）检测在缺血性脑卒中中的临床价值。**方法** 收集 183 例急性缺血性脑卒中（AIS）患者，分为不同的亚组比较 TEG 的差异。
结果 （1）与≤50 岁 AIS 患者相比，51-70 岁 AIS 患者和≥71 岁 AIS 患者的 K 值显著降低，而 Angle 值和 CI 值则显著升高，且年龄越高，K 值越低、Angle 值和 CI 值越大，差异有统计学意义（*P*<0.05）。（2）≤50 岁的 AIS 患者的 TEG-K 值与 PLT 值之间成负相关（*r*=-0.281，*P*=0.013）；Angle 值与 PLT 值之间成正相关（*r*=0.277，*P*=0.015）；MA 值与 PLT 值、FIB 值之间成正相关（*r* 分别为 0.496、0.365，*P* 均<0.001）；CI 值与 PLT 值之间成正相关（*r*=0.272，*P*=0.017）；G 值与 PLT 值和 FIB 值之间成正相关（*r* 分别为 0.496、0.362，*P* 均<0.001）。（3）与未合并冠心病的 AIS 患者相比，合并冠心病的 AIS 患者的 K 值显著地降低，而 Angle 值则显著升高；与无脑卒中病史的 AIS 患者相比，有脑卒中病史的 AIS 患者的 K 值显著降低，而 Angle 值、MA 值、CI 值和 G 值则显著升高，差异均有统计学意义（*P*<0.05）。（4）大动脉粥样硬化型和小动脉闭塞型在 TEG 各项参数之间的差异无统计学意义（*P*>0.05），但大动脉粥样硬化型脑卒中患者的住院天数要显著长于小动脉闭塞患者住院天数（19.04±13.25 vs. 14.01±8.01），两者之间的差异有统计

学意义（*P*=0.031）。（5）TEG 参数对 AIS 的预测价值较低，AUC 最大的是 G 值（AUC=0.648，*P*=0.001），其次是 MA 值（AUC=0.647，*P*=0.001）。
结论 高龄 AIS 患者机体的高凝状态更为显著，≤50 岁的 AIS 患者的血栓弹力图和常规凝血指标之间的相关性较弱，且 TEG 参数对 AIS 发生的预测价值较弱。

PU-4241

血栓弹力图与传统凝血指标在深静脉血栓形成中的相关性及应用研究

闫彬、胡天喜、杜伟鹏
南阳市中心医院

目的 探讨血栓弹力图（TEG）在深静脉血栓形成（DVT）中的临床价值。
方法 收集在我院确诊的 60 例下肢静脉曲张和 142 例 DVT 患者。评估 TEG 和传统凝血指标在 DVT 中的相关性和一致性分析 TEG 的临床价值。
结果 DVT 患者的 R 值与 APTT 和 TT 呈正相关（*r*=0.289，*r*=0.337，P 均<0.05）；K 值与 TT 呈正相关（*r*=0.375，*P*<0.001），而与 PLT 和 FIB 呈负相关（*r*= -0.434，*r*=-0.503，*P* 均<0.05）；Angle 值、MA 值、CI 值、G 值均分别与 PLT 和 FIB 呈正相关（*r*=0.437，*r*=0.508，*r*=0.530，*r*=0.679，*r*=0.382，*r*=0.469，*r*=0.560，*r*=0.638，*P* 均<0.05），而与 TT 呈负相关（*r*= -0.353，*r*=-0.348，*r*=-0.409，*r*=-0.388，*P* 均<0.05）。TEG 对低凝和高凝状态的检出率分别为 23.94%、6.34%，而传统凝血指标分别为 3.52%、1.41%，其检出率之间的差异有统计学意义（*P*<0.05）。TEG 中 R 值判断 PT>14s 的敏感度和特异度分别是 38.5%和 95.3%，AUC 为 0.671（*P*=0.043）；K 值预测 PLT<125×10^9/L 的敏感度和特异度分别是 68.4%和 66.7%，AUC 为 0.709（*P*=0.003）；Angle 值、MA 值、CI 值和 G 值均对 TT<14 s、FIB>4 g/L 显示的高凝状态有预测价值，AUC 分别为 0.670、0.715、0.671、0.815、0.716、0.698、0.681 和 0.794（*P* 均<0.05）。
结论 TEG 和传统凝血指标检测在 DVT 中的相关性和一致性较弱，但 TEG 在预测传统凝血指标异常方面价值较大，且更易检出 DVT 患者凝血状态的改变。TEG 检测将有助于推动 DVT 患者的精准化抗凝治疗。

PU-4242

血常规和凝血常规联合检测对重症新型冠状病毒肺炎的诊断效能

闫彬、段金霞、杜伟鹏
南阳市中心医院

目的 探讨血常规和凝血常规联合检测在重症新型冠状病毒肺炎（COVID-19）患者中的诊断效能。
方法 回顾性分析在我院就诊的 53 例 COVID-19 患者，纳入其血常规和凝血常规各项指标，分为 35 例非重症组（包括轻型和普通型）和 18 例重症组。
结果 （1）与非重症组患者相比，重症组患者的年龄更大，合并糖尿病和冠心病的比例更高；（2）重症组患者的白细胞和中性粒细胞计数水平显著高于非重症患者，而淋巴细胞计数则显著低于非重症患者，差异有统计学意义。重症患者的 PT 值、FIB 值和 D-二聚体水平都显著高于非重症组患者，两组之间的差异有统计学意义（*P* 均<0.05）；而 TT 值显著低于非重症组患者（15.60±2.41 vs. 17.23±1.53，*P*=0.002），两组之间的差异有统计学意义。（3）白细胞、中性粒细胞和淋巴细胞单独检测对判断重症 COVID-19 患者的 AUC 曲线分别为 0.690、0.779 和 0.853，约登指数分别为 0.384、0.498 和 0.575（*P* 均<0.05）；PT 值、FIB 值、TT 值和 D-二聚体值单独检测对判断重症 COVID-19 患者的 AUC 分别为 0.699、0.922、0.759 和 0.83，约登指数分别为 0.463、0.748、0.51 和 52.54（*P* 均<0.05）。（4）中性粒细胞计数和淋巴细胞计数与 TT 值、FIB 值和 D-二聚体

联合检测能够显著提高对重症 COVID-19 患者的诊断效能（联合检测的 AUC 均>0.800，*P* 均<0.001），其中淋巴细胞计数和 FIB 值联合检测的 AUC 曲线最大可达 0.942，灵敏度和特异度分别为 88.89%、94.29%（*P*<0.001）。

结论 血常规和凝血常规的联合检测能够更好地帮助临床医师判断 COVID-19 患者病情程度，尤其是淋巴细胞计数和 FIB 值的联合检测能够尽早地帮助识别重症患者，从而及时采取措施预防病情恶化。

PU-4243

精子 DFI、精子 HDS 测定联合精液常规在男性不育患者中的应用

程少杰
中国人民解放军联勤保障部队第 900 医院

目的 观察分析男性不育患者精液常规检查及精子 DFI、精子 HDS 测定结果分析,为临床男性不育患者诊治提供参考依据。

方法 选取 2020 年 6 月至 2020 年 12 月我院收治的男性不育患者 70 例作为观察组,选取同期进行健康体检的正常男性 50 例作为对照组,两组受检者均行精液常规检查和精子 DFI、精子 HDS 测定,统计分析两组受检者的精液常规检查的异常项目及精子 DFI、精子 HDS 测定相关性变化。

结果 观察组的精液液化时间大于对照组,精子活动力、精子存活率、精子计数均低于对照组,异常精子率高于对照组,差异均有统计学意义(P<0.05); 精子 DFI、精子 HDS 与精子活动力、精子存活率负相关,即精子 DFI、精子 HDS 越高, 精子活动力、精子存活率越低;与不动精子率正相关,即精子 DFI、精子 HDS 越高,不动精子所占比列相对应的也越高。

结论 男性不育患者的精液常规检查结果主要体现在精子活力下降、精子存活率降低、精子计数降低、液化时间延长等方面,但是存在不可控因素如患者留取精液标本时未完全收集全部精液，液化时间延长但精液常规其他指标正常，对临床判断造成一定影响，患者在精液常检测同时联合测定精子 DFI、精子 HDS 测定有助于更全面反应精子质量，在男性不育的诊断治疗有重要意义。

PU-4244

Hemoglobin to red blood cell distribution width ratio predicts in-hospital mortality in patients with type A acute aortic dissection

Yaman Wang、jun zhou
Jiangsu Provincial People's Hospital (First Affiliated Hospital of Nanjing Medical University)

Objective Acute type B aortic dissection (BAAD) is a life-threatening emergency, which is associated with high morbidity and mortality rates. The aim of this study was to assess the value of serum hemoglobin (HB) to red blood cell distribution width (RDW) ratio (HRR) in predicting in-hospital mortality in type B AAD patients.

Methods A total of 126 type B AAD patients were included in this retrospective investigation from April 2017 to November 2019. Admission blood routine parameters were gathered and HRR was computed. The outcome was all cause in-hospital mortality within 30 days.

Results The average levels of serum HRR were significant higher in survivor group than those in non-survivor group (10.54 ± 1.73 vs 8.62± 2.36, p <0.001) and serum HRR was an independent factor associated with in-hospital mortality (hazard ratio (HR): 5.158; 95% confidence interval (CI): 1.501–17.719; p = 0.009). In addition, the area under the ROC curve (AUC) was 0.773 (95% CI 0.640–0.886, p < 0.001).

Conclusion Admission serum HRR can be used as an independent predictor of in-hospital mortality in patients with type B AAD.

PU-4245

红细胞参数检验在贫血鉴别诊断中的价值

江家红、李洁
江苏省人民医院（南京医科大学第一附属医院）

目的 探讨红细胞相关参数在贫血鉴别诊断中的价值。
方法 选取 15 例地中海贫血和 20 例缺铁性贫血作为实验组,另选 40 例健康人群作为对照组,对比两组红细胞参数。
结果 实验组 HB、MCV、RBC、MCH 均低于对照组,而实验组的 RDW 水平显著高于对照组,但是实验组中,缺铁性贫血患者 RDW 和 MCV 水平高于地中海贫血,而 RBC 和 HB 水平低于地中海贫血患者,且 P<0.05。
结论 红细胞参数可作为贫血鉴别诊断的指标,还可以鉴别地中海贫血和缺铁性贫血,从而为贫血的治疗提供依据。

PU-4246

食管胸膜瘘 1 例并文献复习

汪勇、张晓辉
苏州大学附属第一医院

患者凡某，男性，63 岁，主诉“咳嗽 1 月余，加重气短 1 天”于 4 月 28 日入院。既往 2020 年 10 月因进食后哽噎行胃镜检查发现食管新生物，病理示鳞状细胞癌，多次行放化疗及免疫治疗，末次化疗时间 2021 年 4 月 15 日，末次放疗时间 2021 年 1 月 13 日。2021 年 3 月 9 日查颈胸腹增强 CT：提示多发转移。入院查体：体温 36.5℃，脉搏 135 次/分，呼吸 25 次/分，血压 93/62mmHg（1.3μg/kg/min）；听诊右肺呼吸音低，两肺可闻及散在湿性啰音；胸部 CT 示：右侧液气胸；右肺渗出液；左肺肺气肿；右侧主支气管内痰栓可能。实验室检查：代谢性酸中毒；CRP 增高；心功能不全；肾功能不全；电解质代谢紊乱；4 月 29 日穿刺胸水，性状乳糜样、乳糜试验阳性、离心沉渣染色镜检发现鳞状上皮细胞，细菌及杆菌，提示食管胸膜瘘；结合病史以及相关检查，利用亚甲蓝鼻饲试验确诊食管胸膜瘘。患者经过治疗一般情况较好至 18 日出院随访。讨论：食管胸膜瘘是指各种原因导致食管与胸膜腔异常沟通而形成瘘管，污染的消化液及食物残渣经纵隔进入胸腔，导致纵隔、胸腔和肺部的化学性炎症和细菌性感染；可以通过食管造影、亚甲兰试验、胸部Ｘ线检查、胸部 CT、MRI、内镜检查进行诊断。本例患者胸水中发现有限的蛛丝马迹，第一时间与临床沟通，早期诊断和及时正确的处理提高治愈率。体液细胞学检查越来越受临床重视和喜爱，应该大力推广以及提高与临床的沟通水平。细微处发现线索，更好服务临床！

PU-4247

超敏 C-反应蛋白联合凝血功能检测对于新生儿败血症诊断价值探讨

张立涛、李洁
江苏省人民医院（南京医科大学第一附属医院）

目的 探讨超敏 C-反应蛋白(hsCRP)联合凝血酶原时间(PT)、活化部分凝血酶时间(APTT)对于新生儿败血症的诊断价值。
方法 收集 2016 年 1 月至 2021 年 1 月江苏省妇幼保健院儿科新生儿收治的 95 例败血症患儿作为研究对象，根据血培养的结果，将血培养阳性患儿归为败血症 A 组(38 例)，血培养阴性患儿归为败血症 B 组(57 例)，另选取同期出生的 48 例正常新生儿归入对照组。检测并比较 3 组受试对象 hsCRP、PT 和 APTT 值；绘制受试者工作曲线(ROC)，计算各检测指标 ROC 曲线下面积(AUC)以及灵敏度、特异度、阳性预测值和阴性预测值，用二项分类 Logistic 回归法建立新的变量 CPR+ PT+ APTT，继续绘制 ROC 曲线，计算新变量的 AUC、灵敏度、特异度、阳性预测值和阴性预测值。
结果 对照组、败血症 A 组、败血症 B 组的 CPR、PT 和 APTT 实验室检测结果均依次升高(F=10.616、6.155、5.243,P=0.000、0.000、0.000),差异具有统计学意义。4 项指标中，CPR+ PT+ APTT 的 AUC 最高(0.94)，灵敏度最高(93.42％)，特异度最高(91.66％)，阳性预测值最高(92.60％)，阴性预测值最大(78.55％)。
结论 在血培养未能及时诊断新生儿败血症的情况下，联合检测 CPR+ PT+ APTT，可以为临床进行败血症早期诊断提供重要依据。

PU-4248

炎症指标在早期诊断大肠癌手术吻合口漏中的作用

田春迎、于秀艳
吉林省肿瘤医院

目的 白细胞（WBC）、血沉、降钙素原（PCT）和 C 反应蛋白（CRP）是诊断术后感染的常用炎症指标。吻合口漏是大肠癌手术后一种令人担忧的并发症，早期诊断可改善临床结局。关于吻合口漏的诊断已经做了大量的研究，但是关于吻合口漏的早期诊断，尚无有效的炎症指标作鉴别诊断。本研究的目的是调查 WBC、血沉、PCT 和 CRP 在早期诊断大肠癌手术吻合口漏中的应用价值。
方法 本研究选取 2018 年 5 月至 2020 年 12 月在我院接受大肠癌手术的 126 例患者作为研究对象，主要研究终点为吻合口漏，回顾性分析患者相关临床病理参数、在术后第 1 天至第 5 天抽取的血样中确定 WBC、血沉、PCT 和 CRP 数值。统计分析使用 SPSS 20.0 版进行。定量变量的比较使用 t 检验和 Pearson 相关分析，定性变量用 χ2 检验，采用受试者工作曲线（ROC）分析并计算曲线下面积（AUC），以评估诊断的预测值。
结果 在 126 例大肠癌病例中，10 例患者发生了吻合口漏。吻合口漏患者的 PCT 和 CRP 水平显著高于非吻合口漏患者，差异具有统计学意义（P<0.05），而吻合口漏患者的 WBC 水平更高，但差异无统计学意义（P>0.05），血沉的比较无明显差异。PCT 可以将吻合口漏患者和非吻合口漏患者区分开（AUC：0.952），而 CRP 不能很好的区分吻合口漏患者和非吻合口漏患者（AUC：0.583）。CRP 截止浓度为 172mg/L 时可产生 89％的敏感性，83％的特异性和 99％的阴性预测值（NPV）。PCT 截止浓度为 2.34ng/mL 时，灵敏度为 88％，特异性为 95％，阳性预测值为 46％，NPV 为 98％。
结论 血清 PCT 和 CRP 能够有效鉴别诊断大肠癌手术后吻合口漏，具备早期诊断价值。

PU-4249

血细胞参数对儿童病毒性肺炎病情判断价值评估

李娟、甘月滨、张晶、陈甜花、黄回滨
厦门市妇幼保健院

目的 探讨血细胞参数对病毒性肺炎轻型与重型，急性期与恢复期鉴别的价值。
方法 选取该院收治的 95 例病毒性肺炎患者，按照病情轻重程度分为轻型组（20 例），重型组（75 例）。采用 t 检验与非参数秩和检验分析比较两组患者在发病早期血细胞参数的差异性以及重型病毒性肺炎患儿急性期与恢复期血细胞参数的差异性；应用受试者工作特征（ROC）曲线分析不同指标对病情的预测价值。
结果 (1)疾病早期，与轻型组相比，重型组患儿淋巴细胞计数(Lym）、血小板计数（PLT）显著升高（P<0.05），中性粒细胞计数（Neu）、血小板分布宽度（PDW）、Neu 与 Lym 比值（NLR）显著降低（P<0.05）; (2) 与恢复期相比，重型病毒性肺炎急性期白细胞计数（WBC），Neu，C 反应蛋白（CRP）和 NLR 显著升高（P<0.05），Lym 显著降低（P<0.05）;(3) ROC 曲线分析结果显示，NLR 诊断重型病毒性肺炎的曲线下面积（AUC）为 0.763,敏感度和特异度分别为 75%和 72%;由 Neu 和 NLR 联合预测重型病毒性肺炎的恢复期的 AUC 为 0.718，敏感度和特异度分别为 72%和 70%.
结论 Neu，Lym 和 NLR，可辅助判断病毒性肺炎病情轻重程度和药物治疗效果。

PU-4250

Can we reduce the interference of vitamin C and PH in urinalysis?

danqin feng[1]、jinbiao lin[2]、jianguo cai[3]、xiaoli chen[4]、huiming ye[5,6]
1. Women and Children's Hospital, School of Medicine, Xiamen University
2. Women and Children's Hospital, School of Medicine, Xiamen University
3. Women and Children's Hospital, School of Medicine, Xiamen University
4. Women and Children's Hospital, School of Medicine, Xiamen University
5. Women and Children's Hospital, School of Medicine, Xiamen University
6. School of Medicine, and Department of Laboratory Medicine, School of Public Health, Xiamen University

Objectives To evaluate the interference of vitamin C and PH in urinalysis, and minimize the risk to make the effective communication.
Design and Methods 732 leftover urine samples in which the concentration of vitamin C was 0.0mmol/L and either of the test-strip results (Glucose, Blood, Bilirubin, Leucocyte, Nitrite, Protein, Ketone) was positive that were collected. The interference test checked out using these leftover urine samples. When the chemical protein module was positive, the sulfosalicylic acid test performed to confirm the positive Results
Results About 27% of urine samples were vitamin C positive. Adequate vitamin C would interfere with the chemical result of GLU, BIL, and BLD, but not KET, PRO, WBC, NIT(p-value<0.05). False-positive protein occurred at any samples, but higher when urine PH is greater than or equal to 8.0.
Conclusion To minimize the risk of vitamin C and PH in urinalysis, the laboratory should pay more attention to its conditions. Also, do more to help guarantee the accuracy of the urinalysis results and to give more comments to doctors to achieve effective communication.

脓毒血症患者血栓弹力图与凝血指标和血小板参数的相关性分析

陈思宇
成都市双流区第一人民医院四川大学华西空港医院

目的 分析脓毒血症患者血栓弹力图、凝血指标及血小板参数的变化及其相关性。
方法 以 2019 年 6 月至 2020 年 6 月成都市双流区第一人民医院重症医学科的 54 例脓毒血症患者为研究对象进行回顾性横断面调查研究,其中男性 40 例,女性 14 例;年龄 39-96 岁,平均(68.72±14.45)岁。收集患者住院期间一般资料、TEG 指标为凝血反应时间(R 值,反应凝血因子情况)、纤维蛋白原时间(K 值，反应纤维蛋白原的功能和水平)、最大血块强度(MA 值,反应血小板功能)、α 角（α 角）、凝血指标及血小板相关参数。根据血栓弹力图的 CI 指标结果将纳入的患者分为正常组(-3≤ CI≤+3)、低凝组(CI＜-3)和高凝组(CI＞+3)。采用 Pearson 相关方法分析 TEG 与凝血指标和血小板参数之间的相关性。
结果 低凝组患者，R 值和 K 值都明显延长，α 角和 MA 值明显缩短。高凝组患者 R 值和 K 值明显缩短，而 α 角和 MA 值则明显延长。 低凝组患者血小板计数（PLT）明显低于正常组和高凝组（P＜0.05），高凝组患者的 P-LCR 明显高于低凝组和正常组（P＜0.05）。高凝组患者 D-二聚体明显高于低凝组和正常组。脓毒血症患者 TEG 各指标与凝血常规检测指标间无相关性；而与血小板参数具有一定的相关性（K 值与 PLT、P-LCR 呈负相关；α 角与 PLT、P-LCR 呈正相关，与 PDW 呈负相关；MA 与 P-LCR 呈正相关）。
结论 TEG 更能有效监测脓毒血症患者凝血功能改变，并对脓毒血症严重程度具有鉴别能力，能够识别高凝、低凝状态，客观评价脓毒血症患者病情严重程度，指导临床风险评估和疾病的治疗。

大鼠出生后第一周血清蛋白质组学研究

魏利龙、周允、曹永彤
中日友好医院

背景 血浆是最复杂的体液之一，包含大量物质，这些物质是通过主动分泌或从组织和细胞渗漏释放出来的。因此，血浆变化在很大程度上可以反映机体状态。为了研究早期生命中血浆蛋白的变化，本实验使用 LC-MS / MS 技术比较了新生大鼠和生后第一周大鼠的血浆蛋白质组。
方法 分别收集 6 只新生鼠和 6 只出生后一周大鼠的血浆蛋白。对血浆蛋白进行 LC-MS/MS 质谱鉴定，获得血浆蛋白的定量信息。采用双侧 T 检验，寻找显著差异的蛋白。对差异蛋白进行功能分析。
结果 在两个发育阶段的大鼠血浆中共鉴定出 570 种蛋白质。通过非标记定量比较了生后第一周大鼠和新生大鼠的血浆蛋白质组。 发现 75 种蛋白质显着增加，而 22 种蛋白质显著减少。通过差异蛋白质 GO 数据库分析，可以很容易地分离出两个发育阶段的血浆蛋白质组。通过使用 Ingenuity Pathway 分析工具， LXR ／ RAR 反应通路、急性期反应信号传导、补体系统、一氧化氮生成和活性氧物种等通路被显着活化。
结论 与新生大鼠相比，出生一周后大鼠的血浆蛋白质组明显不同。这些变化将使新生鼠更容易存活。这是首次使用 LC-MS / MS 研究新生大鼠血浆蛋白质组发育的研究，可为研究动物发育提供基础和线索。

PU-4253

改良细胞形态学联合生物学标志物在结核性胸膜炎中诊断价值

杜园园
长治医学院附属和平医院

目的 探讨联合胸腔积液改良细胞形态学检查、腺苷脱氨酶检测(ADA)、结核感染 T 细胞检测(TB-IGRA)、结核基因检测(TB-DNA)和结核抗体检测(TB-Ab)对结核性胸膜炎的诊断价值评价。
方法 选取 2019 年月 6 月至 2020 年 6 月临床病例 230 例(包括结核组 120 例，非结核组 110 例)，进行胸腔积液细胞形态学检查、腺苷脱氨酶检测(ADA)、结核感染 T 细胞检测(TB-IGRA)、结核基因检测(TB-DNA)和结核抗体检测(TB-Ab)，分析其单项检测结果及联合应用诊断效能。
结果 改良细胞形态学检查、ADA、TB-IGRA、TB-DNA 和 TB-Ab 五项指标组成不同组合中，五项指标组合并联检测的诊断结核性胸膜炎的敏感性最高(达 97.50%)；三项指标组合细胞形态学+TB-IGRA+ADA 并联检测敏感性较高(94.17%)；两项指标组合细胞形态学+TB-IGRA 并联检测敏感性较高(91.67%)，均高于单一指标检测敏感性，差异有统计学意义($\chi2=174.885$，$P<0.001$)；串联检测组合中，五项指标组合串联检测对诊断结核性胸膜炎的特异性最高(达 99.09%)；三项指标组合 TB-IGRA+TB-DNA+TB-Ab 串联检测特异性较高(92.73%)；两项指标组合细胞形态学+TB-DNA 检测特异性较高(90.00%)，均较单一指标检测时特异性明显提高，差异有统计学意义($\chi2=35.242$，$P<0.001$)。且各组合之间比较均有统计学差异($\chi2=36.073$、107.085，$P<0.001$)。
结论 改良细胞形态学检查、ADA、TB-IGRA、TB-DNA 和 TB-Ab 并联检测可提高对结核性胸膜炎诊断敏感性，串联检测可提高其特异性，并可根据实际情况合理选择多项指标的不同检测组合，具有很好的诊断效能及临床实用性。

血小板与淋巴细胞比值与消化道肿瘤的相关性研究

刘菁菁、何挚、吴国球
东南大学附属中大医院

目的 本研究通过观察血小板与淋巴细胞比值（PLR）与消化道肿瘤的相关性，探讨 PLR 对于消化道肿瘤的诊断价值，为临床消化道肿瘤的诊断提供帮助。
方法 收集 316 例明确诊断的消化道肿瘤纳入实验组，收集 367 例同期表观健康人群纳入对照组。分析患者临床资料，比较 2 组 PLR 水平差异，采用临床受试者工作特征（ROC）曲线计算 PLR 最佳临界值及曲线下面积（AUC）。
结果 消化道肿瘤组患者外周血 PLR 明显高于对照组（$P<0.05$）。PLR 用于诊断消化道肿瘤的最佳临界值为 159.61，灵敏度和特异度分别为 77.2%和 89.0%，AUC 为 0.925。
结论 消化道肿瘤患者 PLR 显著提高，PLR 对消化道肿瘤患者具有较好的诊断价值。

PU-4255

血小板与淋巴细胞比值对急性胰腺炎的诊断价值

何挚、刘菁菁、吴国球
东南大学附属中大医院

目的 本研究通过观察血小板与淋巴细胞比值（PLR）与急性胰腺炎的相关性，探讨 PLR 对于急性胰腺炎的诊断价值，为临床急性胰腺炎的诊断提供帮助。

方法 收集 104 例明确诊断的急性胰腺炎纳入实验组，收集 112 例同期表观健康人群纳入对照组。分析患者临床资料，比较 2 组 PLR 水平差异，采用临床受试者工作特征（ROC）曲线计算 PLR 最佳临界值及曲线下面积（AUC）。
结果 急性胰腺炎组患者外周血 PLR 明显高于对照组（P＜0.05）。PLR 用于诊断急性胰腺炎的最佳临界值为 148.215，灵敏度和特异度分别为 76.9%和 87.5%，AUC 为 0.912。
结论 急性胰腺炎发生时，PLR 显著升高，PLR 对急性胰腺炎患者具有较好的诊断价值。

PU-4256

血小板与淋巴细胞比值与宫颈癌的相关性研究

何挚、刘菁菁、吴国球
东南大学附属中大医院

目的 本研究通过观察血小板与淋巴细胞比值（PLR）与宫颈癌的相关性，探讨 PLR 对于宫颈癌的诊断价值，为临床宫颈癌的辅助诊断提供帮助。
方法 收集 167 例宫颈癌患者纳入实验组，收集 183 例同期表观健康人群纳入对照组。分析患者临床资料，比较 2 组 PLR 水平差异，采用临床受试者工作特征（ROC）曲线计算 PLR 最佳临界值及曲线下面积（AUC）。
结果 宫颈癌组患者外周血 PLR 明显高于对照组（P＜0.05）。PLR 用于诊断宫颈癌的最佳临界值为 168.38，灵敏度和特异度分别为 78.4%和 86.7%，AUC 为 0.848。
结论 宫颈癌患者的 PLR 水平显著高于正常人群，PLR 对宫颈癌患者具有较好的预测及辅助诊断价值。

PU-4257

血小板与淋巴细胞比值对类风湿性关节炎的诊断价值

何挚、刘菁菁、吴国球
东南大学附属中大医院

目的 本研究通过观察血小板与淋巴细胞比值（PLR）与类风湿性关节炎（RA）的相关性，探讨 PLR 对于 RA 的诊断价值，为临床 RA 的诊断提供帮助。
方法 收集 152 例类风湿性关节炎患者纳入 RA 组，收集 170 例同期表观健康人群纳入对照组。分析患者临床资料，比较 2 组 PLR 水平差异，采用临床受试者工作特征（ROC）曲线计算 PLR 最佳临界值及曲线下面积（AUC）。
结果 RA 组患者外周血 PLR 明显高于对照组（P＜0.05）。PLR 用于诊断 RA 的最佳临界值为 161.33，灵敏度和特异度分别为 64.5%和 88.2%，AUC 为 0.861。
结论 PLR 与 RA 活动性密切相关，对 RA 患者具有较好的诊断价值。

PU-4258

血小板与淋巴细胞比值及中性粒细胞与淋巴细胞比值对慢性肾衰竭的诊断价值

刘菁菁、何挚、吴国球
东南大学附属中大医院

目的 本研究通过观察血小板与淋巴细胞比值（PLR）及中性粒细胞与淋巴细胞比值（NLR）与慢性肾功能衰竭（CRF）的相关性，探讨 PLR 及 NLR 对于 CRF 的诊断价值，为临床 CRF 的诊断提供帮助。
方法 收集 409 例慢性肾功能衰竭患者纳入 CRF 组，收集 449 例同期表观健康人群纳入对照组。分析患者临床资料，比较 2 组 PLR、NLR 水平差异，采用临床受试者工作特征（ROC）曲线计算 PLR 及 NLR 最佳临界值及曲线下面积（AUC）。
结果 CRF 组患者外周血 PLR、NLR 均明显高于对照组（P＜0.05）。PLR 用于诊断 CRF 的最佳临界值为 122.445，灵敏度和特异度分别为 73.0%和 56.2%，AUC 为 0.716，NLR 用于诊断 CRF 的最佳临界值为 2.28，灵敏度和特异度分别为 84.1%和 47.2%，AUC 为 0.673。
结论 PLR 及 NLR 对 CRF 患者均有一定的诊断价值，且 PLR 略优于 NLR。

PU-4259

Application of SF-Cube 2.0 technology in platelet count in patients with EDTA-dependent pseudothrombocytopenia

Zhi He、Guofang Shu、Huixia Lu
Zhongda Hospital, Southeast University

Background To explore the application of SF-Cube 2.0 technology in platelet count in patients with EDTA-dependent pseudothrombocytopenia (EDTA-PTCP).
Methods Twenty-two out-patients and in-patients with EDTA-PTCP in our hospital were selected from February 1, 2020, to August 31, 2020. With the permission of each patient, blood samples of EDTA and sodium citrate anticoagulant tubes were collected. EDTA anticoagulant samples were tested by using the "complete blood cell count and white blood cell differential count"(CD) mode, and "complete blood cell count, white blood cell differential count, and reticulocyte count" (CDR) mode of the Mindray BC-6800Plus automated hematology analyzer, and the platelet counts were compared with the sample of sodium citrate anticoagulant from this patient.
Results As SF-Cube 2.0 technology (implemented by using the CDR mode of the Mindray BC-6800Plus) was used, the platelet count of EDTA-PTCP sample was consistent with that of sodium citrate anticoagulant, which was significantly higher than that of CD detection mode.
Conclusions SF-Cube 2.0 technology can effectively correct the platelet counts in people with known or suspected EDTA-PTCP.

PU-4260

血小板与淋巴细胞比值对溃疡性结肠炎的诊断价值

何挚、刘菁菁、吴国球
东南大学附属中大医院

目的 本研究通过观察血小板与淋巴细胞比值（PLR）与溃疡性结肠炎（UC）的相关性，探讨 PLR 对于 UC 的诊断价值，为临床 UC 的诊断提供帮助。

方法 收集 114 例溃疡性结肠炎患者纳入 UC 组，收集 105 例肠易激综合征(IBS)患者纳入 IBS 组，收集 120 例同期表观健康人群纳入对照组。分析患者临床资料，比较 3 组 PLR、白细胞计数（WBC）及 C-反应蛋白（CRP）水平差异，采用临床受试者工作特征（ROC）曲线计算 PLR 最佳临界值及曲线下面积（AUC）。
结果 UC 组患者外周血 PLR 均明显高于 IBS 组和对照组（P＜0.05）。PLR 用于诊断 UC 的最佳临界值为 135.395，灵敏度和特异度分别为 90.4%和 66.2%，AUC 为 0.819，诊断价值优于 WBC（AUC 为 0.731）和 CRP（AUC 为 0.703）。
结论 PLR 对 UC 患者的诊断价值优于 WBC 及 CRP 等传统炎症指标。

PU-4261

TEG 联合 D-Dimer/FDP 比值检测在脓毒症并发 DIC 患者中的研究

赵启波
昭通市第一人民医院

目的 探讨 TEG 联合 D-Dimer/FDP 比值对脓毒症并发 DIC 预后的预测价值.
方法 选取 2020 年 1 月-2021 年 1 月我院收治的 107 例脓毒症患者,其中 41 例患者发生 D1C(DIC 组),66 例未发生 DIC(非 DIC 组).追踪 DIC 组临床结局,分为死亡组(14 例)和存活组(27 例)..受试者工作特征曲线(ROC)分析 TEG 各参数和 D-Dimer/FDP 比值预测 DIC 患者预后的价值.
结果 DIC 组 R、K、LY30、FDP 高于非 DIC 组(P＜0.05),α 角、MA 值、C1、D-Dimer、D-Dimer/FDP 比值低于非 DIC 组(P＜0.05).=死亡组 R[(9.21±0.72)min vs.(6.53±1.42)min]、K[(5.32±2.42)min vs.(3.85±0.69)min]、LY30[(7.42± 1.63) % vs.(5.29±1.52) %]、FDP[(10.64±1.67)mg/L vs.(8.54±2.34)mg/L] 高于存活组 (P ＜ 0.05),D-Dimer[(0.40±0.03)mg/L vs.(0.49±0.03)mg/L]、D-Dimer/FDP 比值(0.10±0.02 vs.0.16±0.03)]低于存活组(P＜0.05).ROC 分析结果显示 MA 值、α 角、D-Dimer/FDP 比值具有预测脓毒症并发 DIC 患者预后的价值,联合三项指标预测脓毒症并发 DIC 患者预后的 AUC 为 0.960(95％CI:0.909?1.000),大于 MA 值、α 角、D-Dimer/FDP 比值(P＜0.05).
结论 TEG 联合 D-Dimer/FDP 比值有利于监测脓毒症并发 DIC 患者凝血状态,对病情评估和预后判断均有较高价值.

PU-4262

环境温湿度变化对染色体滴片效果的影响研究

陈士威
吉林金域医学检验所有限公司

目的 分析环境温湿度变化对染色体滴片效果的影响，推断环境温湿度与分裂相伸展和分散之间的关系，为选择合适的滴片环境，提高染色体制片质量提供参考依据。
方法 选取 2020 年 1 月至 2020 年 3 月送检我公司的 5 例合格样本，通过人工干预，采用空调、加湿器、除湿机、水浴箱以及电磁炉烧水等方式控制环境温湿度，分别在湿度小于 50%、温度小于 22℃；湿度 50%-60%、温度 22℃-26℃；湿度大于 60%、温度大于 26℃三种不同环境下滴片，进行对比验证。
结果 湿度小于 50%，温度小于 22℃时的 5 例样本，所滴玻片干燥很快，分裂相还未完全伸展开玻片已干，分裂相成团，染色体重叠较多，分散效果差，且染色体本身短小。湿度大于 60%，温度大于 26℃时的 5 例样本，所滴玻片干燥很慢，染色体长度和粗细合格，染色体重叠较少，但有胞

浆，且分裂相过于分散，个别分裂相内染色体丢失。通过人工干预，湿度在 50%-60%，温度 22℃-26℃时的 5 例样本，分裂相分散程度适宜，染色体伸展较好，长度和粗细也较好。

结论 环境对染色体滴片效果起着决定性作用，冬夏季温差较大，环境温湿度差别大，滴片效果有所不同。通过实验对比结果可以看出，使环境保持在湿度 50%-60%，温度 22℃-26℃时，制片质量最好。因此，可以通过对失控的环境进行有效的人为干预，控制滴片环境温湿度，有效提高染色体制片质量，降低退单率，使染色体诊断更为精准，出结果更为迅速。

Sysmex XN-9000 全自动血细胞分析流水线血小板聚集警示值的研究探讨

林乘龙、肖伟欢、张嘉琳
广东省人民医院

目的 探讨 Sysmex XN-9000 全自动血细胞分析流水线血小板聚集的最佳警示值。

方法 选取 2020 年 10 月至 2021 年 4 月广东省人民医院血常规标本 105 例份，采用 XN-9000 的 WNR、WDF、PLT-F 检测通道、人工镜检判断血小板聚集情况。以人工镜检结果为金标准，分析 XN-9000 警示值对血小板聚集的判断价值，两种方法的相关性。绘制受试者工作特征（ROC）曲线，研究探讨 XN-9000 血小板聚集的最佳警示值。

结果 XN-9000 检测 105 例份血常规标本中，WNR 通道血小板聚集阳性 7 例份，阴性 98 例份；WDF 通道阳性 9 例份，阴性 96；PLT-F 通道阳性 36 例份，阴性 69 例份；人工镜检阳性 14 例份，阴性 91 例份。WNR 通道警示判断血小板聚集特异性最好为 94.51%；PLT-F 通道敏感性为 78.57%，在三个通道中最高。且经 Pearson 相关分析，对于血小板聚集报警 PLT-F 通道与手工镜检确认聚集的相关性呈正相关（r=0.469，P<0.05）。 以手工镜检做对照，ROC 曲线分析显示 PLT-F 通道 AUC 为 0.784，在三通道中，以 PLT-F 通道最优。

结论 XN-9000 中 PLT-F 通道警示值判断血小板聚集的可信性较高。最佳血小板聚集报警阈值为 80。

流式细胞术两种不同试剂检测淋巴细胞亚群的结果比较

鞠颖慧、吴蕙、陈朴、王蓓丽、潘柏申、郭玮
复旦大学附属中山医院

目的 评估国产试剂与进口试剂在流式细胞术检测外周血淋巴细胞亚群的差异性，比对其效果。

方法 收集三家医院共 200 例入院患者的全血标本，分别使用美国 BD 公司进口试剂和北京同生时代公司国产试剂，采用流式细胞术检测其淋巴细胞亚群百分比及绝对计数，分析两者检测结果的相关性和一致性。

结果 与 BD 试剂相比，同生时代试剂在检测 CD3+细胞、CD3+CD8+细胞、CD3+CD4+细胞、CD19+细胞、CD16+CD56+细胞的百分比结果上无显著差异(P＞0.05), 相关性分析结果显示两者结果之间呈现良好线性相关（R＞0.95，P<0.05）。

结论 流式细胞术国产试剂与进口试剂间检测结果具有良好的相关性，可用于临床淋巴细胞亚群分析。

PU-4265

全自动血液分析仪检测浆膜腔积液常规细胞计数的可行性研究

王冲、朱捷、顾梅秀、郭玮、王蓓丽
复旦大学附属中山医院

目的 探讨 Sysmex XN-9000 全自动血液分析仪体液模式在浆膜腔积液标本细胞计数及白细胞分类的检测中代替人工计数法的可行性。
方法 收集本院住院患者共 284 例浆膜腔积液标本（168 例胸水、65 例腹水、25 例腹透液及 26 例心包积液标本），分别使用显微镜人工计数法和 Sysmex XN-9000 血液分析仪检测法进行红细胞（RBC）和白细胞（WBC）计数以及白细胞分类。采用 t 检验及方差检验，以显微镜人工计数法为金标准，对血液分析仪检测浆膜腔积液细胞计数及白细胞分类的准确性进行评估。
结果 WBC 人工计数法 400~15000 个/ul 的标本，相关性较好，R2 为 0.993，P 为 0.000；RBC 人工计数法数值 400~150000 个/ul 的标本，相关性较好，R2 为 0.994，P 为 0.000；252 例白细胞分类的标本，仪器法结果与金标法结果的符合率高，两种方法相比，单个核细胞、多个核细胞、嗜酸性粒细胞的 P 值均 <0.01。
结论 Sysmex XN-9000 血液分析仪检测体液细胞具有快速、准确、重复性好等优势，在 RBC、WBC 一定线性范围内可以取代人工计数法计数。

MYC protein expression does not correlate with MYC abnormalities but predicts an unfavorable prognosis in de novo acute myeloid leukemia

Pu Chen[1]、Lucas Redd[2]、Prasad Koduru[2]、Franklin Fuda[2]、Weina Chen[2]
1. Department of Laboratory Medicine, Zhongshan Hospital, Fudan University
2. Departments of Pathology, University of Texas Southwestern Medical Center, Dallas, TX, USA

Aims MYC is a crucial proto-oncogene that has not yet been extensively studied in acute myeloid leukemia (AML). We investigated the significance of MYC protein expression by immunohistochemistry (MYC-IHC) regarding its correlation with MYC abnormalities and prognosis in de novo adult AML.
Methods MYC-IHC in bone marrow of patients with untreated AML (n= 58) was assessed and scored as MYClow (0-40% of blasts) or MYChigh (> 40% of blasts) and correlated with MYC abnormalities by fluorescence in situ hybridization (FISH) and prognosis in the context of cytogenetic risk stratification. Residual myeloid disease at the end of induction was assessed by flow cytometry.
Results MYClow and MYChigh were detected in 24 (41%) and 34 cases (59%), respectively. Extra copies of MYC was present in 12% cases and was not correlated with level of MYC-IHC. No cases had MYC translocation or amplification. Compared to MYClow patients, MYChigh patients had a shorter overall survival in all cytogenetic risk groups (68 vs. 21 months, p=0.006) and in the intermediate risk group (61 vs. 21 months, p = 0.046). MYChigh patients had a tendency towards detected residual disease at the end of induction in all cytogenetic risk and intermediate risk groups.
Conclusions Regardless of the underlying mechanisms of MYC dysregulation, high level of MYC protein is expressed in the majority of AML and correlated to worse prognosis. Further studies on MYC dysregulation in leukemogenesis and therapy targeting MYC aberration are warranted.

PU-4267

贝克曼 Power Express 流水线血细胞分析人工智能审核的应用及规则验证

王东红、郭锐芳
长治医学院附属和平医院

目的 制定贝克曼 Power Expres（PE）血细胞分析流水线自动审核规则，并对自动审核系统进行验证。
方法 选取 1056 份乙二胺四乙酸二钾(EDTA-K2) 抗凝的静脉全血标本，在贝克曼 DXH800 上进行检测并对所有标本进行人工镜检，根据仪器检测结果及人工镜检结果对自动审核规则预期方案进行评估，另选取 21990 份标本结果使用自动审核软件(Remisol Advance Data Manager) 进行样本审核，统计自动审核通过率及未通过的样本构成；并对 1056 份样本采用自动审核软件和样本审核与全部采用人工审核的实验室内周转时间中位数及 90%位数进行对比。
结果 通过检测 1056 份标本，其中假阴性率为 0.85，低于国际血液学复检专家组要求的 5% 的最大允许范围。其假阴性主要集中于核左移、血小板聚集、有核红细胞及红细胞形态 4 个项目。用自动审核软件对 21990 份标本结果进行分析，通过自动审核的标本占 62.5% ，需人工审核确认的占 37.5% ，主要包括: 白细胞(WBC) 超出范围、红细胞平均体积（MCV）超出范围、血小板(PLT) 超出范围、HB 超出范围、未成熟粒细胞报警提示、原始细胞等仪器旗标报警。
结论 采用自动审核软件对样本审核可以确保较低的假阴性率，减少差错，大大提高检验医生的工作效率，缩短报告时间，提高了患者满意度。

重型和危重型 COVID-19 患者体内免疫细胞及细胞因子反应状况

林国跃[2]、宋玉霞[1]、舒占钧[1]、蔺志强[1]、何雯雯[1]、段丽[1]、赵豆豆[1]、何雪[1]、张蕊[1]
1. 新疆医科大学第八附属医院（新疆新冠肺炎医疗救治定点医院）
2. 解放军第 474 医院

目的 探讨新疆地区 COVID-19 不同临床分型患者体内炎性免疫细胞和细胞因子的反应水平及其临床意义。
方法 收集整理 2020 年 1 月 31 日-2 月 19 日在新疆维吾尔自治区第六人民医院定点救治的 46 例 COVID-19 患者临床与实验数据资料，按照《新型冠状病毒感染的肺炎诊疗方案》（试行第七版）诊断标准分型，总结 COVID-19 患者临床流调基线特征，分析比较患者病情严重程度时体内多种免疫细胞及细胞因子免疫状况。
结果 新疆乌鲁木齐市 COVID-19 流行病学特点以输入性汉族为主 40 例（87.0%），其他各民族也有感染，多为聚集性接触发病；COVID-19 患者的 CRP、PCT 和 WBC 检测结果在重症型和危重型组中比普通型组、疑似组明显的高，差异均具有统计学意义（P＜0.001），CRP 定量检测和 CRP 升高的病例数，WBC 计数和 WBC 计数降低病例数及 N 降低病例数在≥45 岁组明显高于＜45 岁组（P ＜0.05），而淋巴细胞百分率在 ≥45 岁组中明显低于 ＜45 岁组（P ＜0.05）；淋巴细胞亚群 CD3+T、CD4+T、CD8+T、CD45+T、CD4+T/CD8+T 和细胞因子 IL-4、IL-6、IL-10、IL-17、TN-α、INF-γ 6 项检测结果在重症型和危重型组中明显高于普通型及疑似组，组间比较存在显著差异（P ＜0.001）。
结论 实时监测 CRP、PCT、白细胞和淋巴细胞及细胞因子等指标对 COVID-19 临床病情严重程度具有明确的分型诊断作用；免疫细胞和细胞因子渐进快速升高可及时预警病情重症化发展与转归以及指导临床精准救治。

PU-4269

定点医院输血科救治危重症 COVID-19 患者输血保障作用

秦莹 1[1]、段丽 [1]、木尼热·库尔班 [1]、蔺志强 [1]、付玉华*[2]、李菲 [3]、陈苒 [4]、邓茜 [5]、林国跃*[1]
1. 新疆医科大学第八附属医院（新疆新冠肺炎医疗救治定点医院）
2. 新疆维吾尔自治区儿童医院输血科
3. 新疆维吾尔自治区人民医院输血科
4. 新疆维吾尔自治区第三人民医院输血科
5. 新疆维吾尔自治区第八人民医院检验科

目的 总结探讨定点医院输血科在保障新冠肺炎康复者血浆救治 COVID-19 危重症患者中的重要作用及保障能力。
方法 通过回顾性分析新疆第二波新冠疫情 1064 例新冠肺炎住院患者救治，99 例“临床快速发展型、重型和危重型”康复者恢复期血浆治疗创新性保障做法和一些有益经验，并统计分析。
结果 输血科分批接收来自武汉、大连、哈尔滨等国内支援的新冠康复者恢复期血浆 4 批次合计 122650ml，完成交叉配血 891 人次，ABO 和 Rh 血型鉴定各 1782 人次，不规则抗体 891 人次，临床发血 297 人次。对临床 99 例危重症 COVID-19 患者开展新冠肺炎康复者恢复期血浆的治疗以及 5 例血浆置换，共输注新冠康复者血浆 107250ml，平均每人 1083.33ml；乌市血液中心提供的新鲜普通冰冻血浆 39570ml，平均 399.7ml；红细胞悬液 144.5 单位，以及血小板 31 治疗量、冷沉淀 73.3 单位，免疫球蛋白 150 支的保障治疗任务；发生轻型输血反应 6 例，无严重输血不良反应；临床输血有效率 100%,治愈率达到 100%，总输血率达 9.31%（99/1064）。
结论 对 COVID-19 危重症患者使用康复者恢复期血浆和红细胞悬液救治输血科发挥了特殊时期重要的保障作用，保证了临床输血高效、及时和安全。

COVID-19 患者临床病情发展中重要血液学指标动态监测分析

林国跃 [1]、张弛 [1]、屈晓娟 [1]、宋玉霞 [1]、舒占钧 [1]、蔺志强 [1]、张蕊 [1]、秦莹 [1]、段丽 [1]、木尼热·库尔班 [1]、赵豆豆 [1]、何雪 [1]、王珂 [2]
1. 新疆医科大学第八附属医院（新疆新冠肺炎医疗救治定点医院）
2. 广东省广州市天河区黄埔大道石牌村广东省结核控制中心

目的 探讨 COVID-19 患者病程进展中体内血液细胞免疫动态变化及诊断意义。
方法 应用流式细胞等技术连续动态监测 COVID-19 住院患者外周血重要血液学免疫指标动态变化和心、肺、凝血功能等主要指标反应水平，统计比较分析。
结果 （1）连续监测入院当天、第 7 天、第 14 天、第 21 天、出院前的外周血象，结果白细胞、血小板系统所有血液学指标均有显著改变（$P < 0.05$）；其中白细胞入院第 7d 升高最大，出院前比入院当天要高；EOS 和 EOS% 在入院时最低，在第 21d 和出院前均升高明显；BASO 和 BASO% 在入院 14d 升幅最大；LYMPH 和 LYMPH % 在入院第 14d 与 21d 升高明显，且出院时明显高于入院时；MONO 及 MONO% 在入院 14d 升高最大，出院前高于入院当天。PLT 及 PCT (%) 在入院当天最低，在第 14d 升至最高；MPV (fL)及 PDW (fL)在入院时最高，出院时最低；NLR 和 PLR 在第 7d 最高，出院前已恢复到入院时水平。（2）WBC 在重症和危重型组中明显高于普通型、疑似组，并且在≥45 岁组明显高于＜45 岁组（$P<0.05$）；而中性粒细胞（%）在疑似组高于重症和危重型组，淋巴细胞百分率（%）在重危型组较低。（3）心功能指标 AST、ALT、LDH、CK 和 CKMB（除 cTnI、Myo 外），肺功能 PCO2、PO2 和 LAC，肾功能 UREA 和 CRE 和凝血功能 D 二聚体（DD）、PLT、FIB、TT、PT-INR、DD、PT-%和 PT-R（除 PT、APTT、TT 外）等重要指标在重型和危重型组明显高于在轻型组（$P<0.001$）；AT3 在轻型组显著高于重症和危重型组（$P<0.001$）。

结论 COVID-19 患者病情严重程度与血液学重要指标白细胞系统、血小板凝血系统关系密切，连续动态监测这些常见的免疫细胞指标变化对临床诊断、分型、病情预后判断等具有重要的指导作用。

PU-4271

血常规红细胞参数在贫血鉴别诊断的检验价值分析

张巍
郴州市第一人民医院

目的 分析血常规红细胞参数在贫血鉴别诊断的检验价值；
方法 此次研究对我院收治的 50 例贫血（贫血类型：地中海贫血 17 例，缺铁性贫血 33 例）患者进行诊断研究，并将同期 50 例体检者患者作为比较对象，分别纳入观察组和对照组，全部患者均取患者 2m1 静脉血，使用 EDTA 抗凝剂，使用全自动血液分析仪进行样本红细胞参数检测，比较两组红细胞参数结果，并对地中海贫血和缺铁性贫血患者红细胞参数进行分析；采用 SPSS21 软件进行统计学分析，计量资料采用均数±标准差表示，正态分布资料采用 t 检验，非正态分布资料采用秩和检验。组间样本率比较采用 X2 检验，采用 Logistic 回归分析对进行影响因素分析。均采用双侧检验，P<0.05 为差异有统计学意义。红细胞参数的预测价值通过受试者操作特征曲线（ROC 曲线）评估。
结果 观察组的血红蛋白 Hgb、红细胞平均体积 MCV、红细胞数量 RBC 低于对照组的血红蛋白、红细胞平均体积、红细胞数量，观察组的红细胞体积分布宽度 RDW 高于对照组，结果存在显著差异（P<0.05），地中海贫血患者的红细胞平均体积、红细胞数量和红细胞体积分布宽度高于缺铁性贫血患者，而血红蛋白低于缺铁性贫血患者，结果具有明显差异（P<0.05）；
结论 将血常规血红蛋白应用于贫血患者诊断中，可有效判断患者是否患有贫血，同时通过红细胞平均体积、红细胞数量和红细胞体积分布宽度等参数检验结果，利于进行贫血类型判断，该检验方式对患者贫血诊断具有指导作用。

PU-4272

PCT 与 CRP 联合检测对血流感染的诊断价值

黄津[1]、陈爽[2]
1. 天津市天津医院
2. 天津医科大学临床医学院

目的 探讨前降钙素（PCT）和 C-反应蛋白（CRP）在感染性疾病中的诊断价值，并观察两者联合监测对血流感染的诊断价值，为感染性疾病的早期、快速诊断提供科学依据。
方法 回顾性分析 2020 年 7 月 1 日至 2021 年 1 月 1 日在天津市天津医院进行治疗的 168 例疑似预防感染的患者病例资料，根据其血培养研究结果可以分为血培养试验阳性组和阴性组，其中血培养阳性组 71 例；血培养阴性组 97 例，同时收集血培养采集当天该患者血液标本中 PCT 和 CRP 浓度数据，采用 t 检验比较两个指标在两个实验组之间的差异，采用受试者工作特征曲线（ROC 曲线）分析每一个指标对血流感染诊断的应用价值。
结果 阳性组 CRP 和 PCT 水平分别为：（68.98±36.87）mg/L 和（18.15±28.18）ng/ml；阴性组 CRP 和 PCT 水平方面分别为：（17.51±16.67）mg/L 和（0.24±0.28）ng/ml，阳性组 CRP 和 PCT 水平均明显高于阴性组（P<0.05），CRP 诊断血流感染的敏感度为 77.5%、特异度为 93.8%、ROC 曲线下面积（AUC）为 0.811。血清中 PCT 水平诊断血流感染的敏感度、特异度、约登指数以及 AUC 分别为 84.5%、90.7%、0.752、以及 0.908；采用两者联合监测其敏感度、特异度、约登指数和 ROC 曲线下面积分别为 84.5%、97.9%、0.824、0.928，与单项检测相比(P<0.05),差异具有统计学意义。

结论 PCT 和 CRP 可作为感染性疾病的诊断指标，联合检测 PCT 和 CRP 可更快、更准确地早期诊断血流感染，从而有效、及时地指导临床合理用药。

PU-4273

Analysis of clinical application of automatic feces processing and analysis system FA280

Tingting Long[2]、Hong Jiang[1]
1. West China Hospital of Sichuan University
2. West China Hospital of Sichuan University

Objective To explore the application value of automatic feces processing and analysis system FA280 in routine feces inspection.
Methods The 904 routine results of fecal samples tested in FA280 in our laboratory were collected from April 20, 2020 to April 25, 2020. Combined with the review of manual identification images and the review of "direct smear microscopy", the clinical value of the automatic fecal detector was evaluated.
Results The instrument results of FA280 to identify the color and appearance of feces were consistent with manual results (Kappa value were 0.72 and 0.75, respectively). The detection rates of red blood cells, white blood cells, fungi and fat droplets reported by FA280 were all higher than the results of manual when recognizing the image information collected by the instrument, with the coincidence rates were 98.78%, 96.35%, 94.69% and 99.66%, respectively, and the Kappa values were 0.814, 0.718, 0.588 and 0.986, respectively. The sensitivity and specificity of FA280 for parasite detection were 88.89% and 87.93%, respectively, which were only 87.17% consistent with the artificial results, and the consistency is poor (Kappa value was 0.112). The coincidence rate between FA280 and the manual method was up to 99.78% when reading the results of occult blood reagent card, with very good consistency (Kappa value was 0.994).
Conclusion The results of automatic feces processing and analysis system FA280 are basically consistent with the results of manual identification in routine feces inspection, with a great clinical application value for sample screening.

PU-4274

Determination of plasma β-amyloids by rolling circle amplification chemiluminescent immunoassay for noninvasive diagnosis of Alzheimer’s disease

Danhua Wang、Yibei Dai、Xvchu Wang、Pan Yu、Shufang Qu、Lingyu Zhang、Ying Cao、Zhenping Liu、Ying Ping、Weiwei Liu、Zhihua Tao
the Second Affiliated Hospital of Zhejiang University School of Medicine

A rolling circle amplification chemiluminescence immunoassay (RCA-CLIA) was developed for precise quantitation of Aβ inplasma. Capture antibodies conjugated with magnetic beads and detection antibodies with collateral single-stranded DNA(ssDNA) were bound to Aβ42/Aβ40 antigens to form a typical double-antibody sandwich structure. The RCA reaction wastriggered by the addition of ssDNA, which generated products with a large number of sites for the binding of acridinium ester(AE)–labeled detection probes, thereby realizing the purpose of the amplification. The RCA-CLIA method had higher sensitivitythan conventional CLIA without loss of specificity. Under optimum conditions, the linear range of Aβ42 and Aβ40 detectionwas 3.9–140 pg/mL and 3.9–180 pg/mL, respectively, with corresponding low detection limits of 1.99 pg/mL and 3.14 pg/mL,respectively. Plasma Aβ42 and Aβ40 were detected in the blood of 21 AD patients and 22

healthy people, wherein this ratiocould significantly distinguish AD patients from healthy individuals with a sensitivity of 90.48% and specificity of 63.64% for acutoff value of 154. The Aβ42/Aβ40 ratio of plasma acts as an accurate indicator for AD diagnosis; therefore, detection ofplasma Aβ using the RCA-CLIA exhibits great potential in noninvasive diagnosis and progressive assessment of AD.

PU-4275

不同浓度诱导剂对血小板最大聚集率的影响

王宏
江苏省人民医院（南京医科大学第一附属医院）

目的 观察不同浓度的两种常用血小板聚集诱导剂二磷酸腺苷（ADP）和花生四烯酸（AA）对血小板最大聚集率检测结果的影响
材料与方法 收集阿司匹林用药者和正常人的枸橼酸钠抗凝标本，使用 Sysmex CS5100 全自动血凝仪检测血小板聚集率，两种诱导剂的浓度分别为：ADP 选择 2.0uM、2.5uM、5.0uM；AA 选择 0.5uM、1.0uM、1.5uM。
结果 不同浓度诱导剂对阿司匹林用药者的血小板聚集率影响很大，但是对于正常人不同浓度诱导剂影响很小。对于 ADP，5.0uM 和 2.5uM 相关性（R2=0.785）要高于 5.0uM 和 2.0uM（R2=0.585）。对于 AA，1.5uM 和 1.0uM 相关性（R2=0.895）要高于 1.0uM 和 0.5uM（R2=0.700）。
结论 血小板最大聚集率结果和所选择的诱导剂浓度有关。

PU-4276

微流控模型对血栓形成的研究

林晶英
成都上锦南府医院

目的 本研究旨在通过查阅与体外微流控技术及动脉血栓相关的文献，研究血栓形成与血管几何形状和剪切力变化的血流动力学关系，对比总结 2D 与 3D 打印微流控模型的区别及优缺点，同时对微流控模型在血栓形成等方面的应用研究进行详细叙述。
方法 使用 PubMed 和知网数据库检索了 2007 至 2021 年的中英文文章，截至 2021 年 5 月，所有搜索均为最新。使用的搜索词包括“microfluidic”、“platelet aggregation”、“剪切力”、 “动脉血栓”等。
结果 经查阅文献发现，目前较为常见的 3D 打印技术主要有微立体光刻、双光子聚合效应、基于数字光处理 3D 打印技术及熔融沉积技术等，有着体积小、速度快、成本低及通量高等特点。通过模拟健康血管和狭窄冠状动脉的微流控模型发现，血小板聚集通常发生在狭窄顶部及血栓形成下游的低剪切区，聚集体的稳定依赖于膜系绳的动态重组。此外，稳定的盘状血小板聚集在血栓形成中起主要作用，而可溶性激动剂在血小板聚集的不可逆阶段起次要作用。微流控技术可广泛应用于多个方面，在动脉血栓方面可研究血栓形成的原理及形成的预测，在血小板聚集方面得出血小板聚集程度与剪切微梯度的大小密切相关。血小板黏附功能方面发现血小板系绳形成是一个动态的过程，包括初始形成、伸长和收缩重构的不同阶段。血凝块力学分析方面发现，通过控制、测量组织形成，可以在血管内剪切微梯度存在的情况下再现凝块形成的动态过程，并实时监测凝块力学的性质变化。在剪切力研究方面，剪切力的变化会导致血小板的激活聚集以不同方式出现。抗血栓药物的选择方面，可利用微流控技术筛选评估各类药物疗效。

结论 微流控技术的出现，极大地促进了对血栓形成的研究，而决定血栓形成的因素主要在于流体流速梯度、微小的再循环、固有的凝血途径和剪切率的增加等。对比总结国内外 3D 微流控模型的研究发现，微流控技术有着广泛的应用范围。

PU-4277

血栓弹力图评估肝癌患者手术前凝血状态的临床研究

王浩
天津市肿瘤医院（天津医科大学肿瘤医院）

目的 应用血栓弹力图(thrombelastogram，TEG) 评估肝癌患者手术前凝血状态。
方法 选择 2020 年肝癌手术的患者 100 例作为手术组，同时选取同时期入院进行体检的健康人 50 例作为对照组，比较术前手术组和对照组患者术前常规凝血四项和 TEG 指标，包括凝血酶原时间（PT）、活化部分凝血活酶时间（APTT）、纤维蛋白原（FIB）、凝血酶时间（TT）、血凝时间（R 值）血块形成时间（K 值）血凝速率（a）和血块强度（MA）。
结果 手术组和对照组 R 值相比，差异无统计学意义（P>0.05）。手术组的 K 值显著低于对照组（P<0.05），a 和 MA 显著高于对照组（P<0.05）， TEG 图像显示 手术组 100 例肝癌患者中 73%的肝癌患者为高凝状态，5%的患者表现为低凝状态。凝血四项结果显示手术组 100 例肝癌患者中 35%的患者表现为高凝状态。
结论 肝癌患者的血液多数处于高凝状态 TEG 和凝血四项均能对肝癌患者手术前血液的高凝状态进行分析，血栓弹力图(TEG)更为敏感。

PU-4278

肺癌患者 AB0 血型、血管性血友病因子及血栓风险的关联

葛鹏
天津医科大学肿瘤医院

目的 探讨肺癌患者血浆 vWF 水平与 O 型/非 O 型血以及血栓风险的关联性。
方法 回顾性分析 2017-2018 年天津市肿瘤医院收治的 82 例肺癌患者、17 例正常健康者的血凝常规指标 vWF、D-D 含量以及 CEA、C19-9 浓度。采用两独立样本资料的 t 检验分析比较两组研究变量的差异。再将病例组和对照组按血型分为 O 型血和非 O 型血，分析比较两组 vWF 是否有差异。
结果 病例组的肺癌患者 D-D、vWF 水平高于健康对照组，结果有显著性差异，P<0.05.病例组和对照组中的非 O 型血人 VWF 水平高于 O 型血人，P<0.05. 病例组中的肺癌患者 vWF 水平高于对照组，其 CEA、CA19-9 水平亦高于正常人，P<0.05。
结论 肺癌患者比正常健康人患血栓的风险更高，非 O 型血的人存在血浆中 vWF 水平升高的风险。而 vWF 水平升高容易导致肺癌的发生和转移。

PU-4279

Electrophoresis- and dialysis-based method for isolating serum derived extracellular vesicles

Meng Yang、Fuxiang Chen
Shanghai Ninth People's Hospital, Shanghai JiaoTong University School of Medicine

Objective There are tremendous scientific and clinical interests in extracellular vesicles (EVs) for cancer diagnosis and therapy over the past decades. Isolation of EVs is the prerequisite for

downstream researches. In this paper, electrophoresis was combined with molecular weight cut-off (MWCO) of 300 kDa dialysis bag (named ELD) for serum EVs isolation.
Methods Under electric field, the particles of biological fluids were endowed with different mobility depending on their sizes and charges. With 300 kDa dialysis tubing, contaminant biomolecules passed through the membrane. The fresh electrophoresis buffer was changed, and electric direction was reversed per 30 min for avoiding membrane pore blocked by EVs.
Results Using ELD, we could isolate serum derived EVs, which were characterized with western blot, nano sight, transmission electron microscopy (TEM). Then, we compare the protein content of serum derived EVs isolated by ELD and ultracentrifugation (UC), and the results indicated that ELD has 140 proteins common with UC which contributed 74% (140/188), and 84% (140/ 165) of total proteins respectively. To demonstrate the application of the ELD method in cancer diagnosis and therapy, we selected the following two cases: microRNA-155 derived from serum EVs was used for oral squamous cell carcinoma (OSCC) diagnosis, and data indicated the area under a receiver operating characteristic (ROC) curve is 0.7592 compared with 35 healthy control and OSCC patient.
Conclusion ELD is a robust method for the isolation of serum derived EVs isolation and will have extensive applications in the growing field of EVs.

PU-4280

超敏 C 反应蛋白和纤维蛋白原在急性冠状动脉综合症患者的水平研究

范小斌
广东省人民医院

目的 探讨急性冠状动脉综合征患者血清超敏 C 反应蛋白(hs-CRP)和纤维蛋白原(FIB)血浆水平测定及临床意义。
方法 选取我院 56 例急性冠状动脉综合征患者、51 例稳定型心绞痛患者、50 例健康正常人（对照组）作为研究对象。通过免疫比浊法测定各组 hs-CRP 和 Clauss 磁珠法测定 FIB 水平作比较。
结果 急性冠状动脉综合征患者血清 hs-CRP 和血浆 FIB 水平显著高于稳定型心绞痛患者组及对照组。急性冠状动脉综合征患者血清 hs-CRP 和 FIB 呈正相关性。
结论 hs-CRP 和 FIB 可以作为急性冠状动脉综合征事件的指标。

PU-4281

某三甲医院三年住院患者肠道寄生虫检出状况回顾调查

谢恒
四川大学华西医院

目的 通过对四川大学华西医院 2017—2020 年住院病人大便常规寄生虫检出情况的回顾性分析，了解四川地区乃至西南地区的肠道寄生虫感染情况，为有效预防和控制肠道寄生虫感染提供实验室数据。
方法 对 2017 年-2020 年四川大学华西医院住院病人的大便常规寄生虫检查阳性的病例进行记录，统计肠道寄生虫的检出率和各感染虫种的检出率。同时收集患者的血常规结果，观察钩虫感染患者贫血相关参数的变化以及蠕虫感染患者嗜酸性粒细胞计数的情况。
结果与讨论 1 肠道寄生虫感染的总检出率是 0.64 %；各虫种的检出率分别为：钩虫卵检出率 0.34% 占比 53.8%；人芽囊原虫检出率 0.12%占比 19.02%；蓝氏贾第鞭毛虫包囊检出率 0.07%占比 10.32%；肝吸虫卵检出率 0.05%占比 7.6%；带绦虫卵检出率 0.03%占比 4.89%；结肠内阿米巴包囊检出率 0.01%占比 2.17%；鞭虫卵检出率 0.01%占比 1.63%；蛔虫卵检出率 0.004%占比 0.54%。

2.感染病例的年龄段分布主要集中在 50-79 岁之间；女性占 48%，男性占 52%。
3 钩虫贫血特点呈低色素小细胞贫血，本次调查钩虫感染患者的红细胞检查参数中血红蛋白降低者占 62.6%；红细胞计数降低者占 66.7%；55.5%感染者平均红细胞压积降低；平均红细胞体积(MCV)降低者占 20.2%。由于钩虫病贫血程度与感染轻重相关，所以红细胞相关参数可作为感染程度的参考指标。
4 肠道蠕虫感染患者中嗜酸性粒细胞升高者占 16.7%，大多数感染者该指标在参考范围内，故嗜酸性粒细胞升高是否能作为蠕虫感染有价值的参考指标还有待商榷。
结论 我国人口基数巨大，即使感染率不高，但总体感染人数依然庞大。寄生虫病作为危害我国居民身体健康重要公共卫生问题，加强对寄生虫病防治宣传和教育，定期开展寄生虫病调查是非常必要的。

PU-4282

婴幼儿末梢血稀释样本放置时间对血细胞分析结果的影响

谢曦
天津医科大学朱宪彝纪念医院

目的 了解婴幼儿末梢血稀释标本放置时间对血细胞分析结果的影响，降低婴幼儿采血量少对检验工作所带来的不便，为临床提供可靠数据。
方法 选取 2018 年 8 月到 2019 年 3 月期间天津医科大学第二医院 50 例 0-5 岁患儿末梢血，按照一定比例（1：7）与稀释液混匀，在室温下（20-25℃）分别于即刻,10 分钟，30 分钟，60 分钟，2 小时用 Sysmex XN1000 分析仪在预稀释模式下检测各血细胞值，利用 t 检验进行统计学分析。
结果 室温下，随着婴幼儿末梢血稀释标本放置时间的延长，血红蛋白(HGB)、平均红细胞体积（MCV)、平均血红蛋白含量（MCH）、平均血红蛋白浓度（MCHC）略有变化，但无统计学意义(P＞0.05)，白细胞(WBC)、红细胞(RBC)在 2 小时有统计学意义(P<0.05)血小板(PLT)、血小板压积(PCT)、平均血小板体积（MPV），各参数差异均有统计学意义(P<0.05)。
结论 婴幼儿末梢血稀释标本在室温下放置时间长短对血常规检测中的一些参数有影响，尤其是 PLT 相关（PCT、MPV）的指标差异较大。合理安排时间，减少婴幼儿稀释末梢血放置时间对血常规的影响，应在 10-60 分钟内完成测试。

PU-4283

迈瑞血细胞分析仪检测全血超敏 CRP 方法的性能评价

孙召东
江苏省连云港市第一人民医院

目的 对迈瑞 BC-5390 CRP 血细胞分析仪检测超敏 CRP 结果的性能评价
方法 对超敏 CRP 的精密度和携带污染率进行评价，同时评价溶血程度及红细胞压积变化对超敏 CRP 检测的影响，并对迈瑞血细胞分析仪检测超敏 CRP 结果与 beckman coulterImmage800 特定蛋白仪的超敏 CRP 结果过进行比对
结果 血细胞分析仪检测超敏 CRP 的批内精密度分别为 2.02（=3.8mg/l）和 1.83(=43.5 mg/l) ；批间精密度分别为 2.45（=6.0mg/l）和 2.01(=44.2mg/l)，携带污染率为 0.08%；溶血对超敏 CRP 的检测的影响，轻度溶血(HGB=6g/L)偏差为 2.2%，中度溶血(HGB=12g/L)偏差为 5.4%，重度贫血(HGB=23g/L)的偏差为 11.8%；高红细胞压积（HCT>50%）标本和低红细胞压积（HCT<30%）标本与正常红细胞压积（30%<HCT>50%）标本检测全血超敏 CRP 的结果偏差在允许的范围之内；血细胞分析仪全血超敏 CRP 与特定蛋白检测血清超敏 CRP 的回归曲线是 y = 1.1186x - 0.4142，

相关系数 R2= 0.9908，具有良好的相关性，医学决定水平处，两者的结果偏差均在允许的范围之内。
结论 血细胞分析仪检测全血超敏 CRP 的性能够满足临床使用要求，结果与血清超敏 CRP 有良好的一致性，且不受到红细胞压积的影响，但要重度溶血对全血超敏 CRP 检测有影响，因此应该避免溶血标本。

PU-4284

进入西藏高原人群血常规参数的调查研究

史清海[1]、米哲[2]
1. 新疆军区总医院
2. 陆军第 957 医院

目的 高原自然环境的主要特点是低压缺氧、高寒，对人体血细胞的生成与功能将产生极大影响。本研究目的是调查进入西藏高原人群静脉血血常规参数指标的变化情况，为科学保障进藏人群健康提供依据。
方法 选取不同时段进入海拔 4300 米西藏高原的 5717 名人群作为调查对象，进入高原时间为 6-8 个月，同时选取平原人群 2820 例作为对照组，分别空腹采集静脉血，进行血常规检测并进行统计学分析。
结果 与平原人群比较，进入高原 8 个月后静脉血白细胞计数(WBC10^9/L)6.55±2.12、中性粒细胞计数(NEUT10^9/L)3.51±1.98、红细胞计数(RBC10^12/L)5.97±0.70、血红蛋白(HGBg/L)192.1±18.9、红细胞压积(HCT%)56.7±6.7 均上调，结果均有统计学差异。
结论 高原低氧环境显著增加人体血液红细胞数量和血红蛋白含量，增加程度与海拔高度、进驻高原时间有关；中性粒细胞数量增加，表明机体存在应激或炎症反应。

PU-4285

Establishment of reference intervals for the systemic immune-inflammation index, neutrophil to lymphocyte ratio, platelet to lymphocyte ratio and lymphocyte to monocyte ratio in healthy adults in Eastern China: a multi-centre study

Fumeng Yang、Qian Liu
The Second People's Hospital of Lianyungang

Background We preliminarily established the reference intervals for the systemic immune-inflammation index (SII), neutrophil to lymphocyte ratio (NLR), platelet to lymphocyte ratio (PLR) and lymphocyte to monocyte ratio (LMR) in healthy adults in Eastern China to guide the interpretation and application of these indicators in clinical practice.
Methods In total, 29,947 ostensibly healthy subjects (five regions) from December 2020 to March 2021 were included in this study. The distributions of the SII, NLR, PLR and LMR were analysed using the Kolmogorov-Smirnov test. According to the C28-A3 guidelines, the 2.5th and 97.5th percentiles (P2.5 to P97.5) of the SII, NLR, PLR and LMR were used to establish the reference intervals based on nonparametric Methods
Results All SII, NLR, PLR and LMR data were non-normally distributed. The levels of the SII, NLR, PLR and LMR in healthy adults were significantly different between males and females (all $P<0.05$). However, there were no significant differences in the SII, NLR, PLR or LMR among the different age groups, regardless of sex (all $P>0.05$). Therefore, the reference intervals for the SII,

NLR, PLR and LMR were established based on the Sysmex testing platform for males (162×109/L~811×109/L; 0.89~3.26; 63.15~191.34; 3.18~9.61) and females (165×109/L~792×109/L; 0.87~3.16; 69.04~205.62; 3.46~10.96).
Conclusions Reference intervals for the SII, NLR, PLR and LMR in adults in Eastern China were established based on the Sysmex detection platform and Big Data. It will be beneficial to promote the inclusion of these parameters in conventional complete blood count (CBC) reports and their widespread use in clinical practice.

PU-4286

C57 小鼠外周血单个核细胞 MHC 表达与 Lewis 肺癌发展关系的研究

景丽萍、庄学伟
山东省立第三医院

目的 通过动物实验探讨以外周血单个核细胞 MHC 为代表的宿主 MHC 表达在肿瘤发展和转移中的作用以及 Th1/Th2 漂移与肿瘤的相关性。
材料与方法 50 只 C57BL/6J 纯系小鼠随机分为：A 组即正常对照组，B 组即荷瘤对照组，C 组即环磷酰胺组+荷瘤组,D 组即干扰素-γ+荷瘤组，E 组即荷瘤+干扰素-γ 组。用药前采用流式细胞仪测外周血淋巴细胞表面 H-2Ks 和 H-2Db 表达。然后对 C 组和 D 组分别腹腔注射环磷酰胺和干扰素-γ7 天，其余两组用等量生理盐水。再测外周血淋巴细胞表面 H-2Ks 和 H-2Db 表达后，接种 Lewis 肺癌细胞株，C 组和 D 组停药而改用等量生理盐水，同时 E 组开始腹腔注射干扰素-γ7 天。14 天后处死再测外周血淋巴细胞表面 H-2Ks 和 H-2Db 表达；用 ELISA 法测各组各时期血浆细胞因子 IL-2、IL-4、TNF-α。
结果 ①环磷酰胺和干扰素-γ 影响小鼠外周血淋巴细胞 H-2Ks 表达。②接种肿瘤后，环磷酰胺组瘤重明显重于对照组，有显著差异（P<0.01）；干扰素及治疗组瘤重明显轻于对照组，有显著差异（P<0.01）。③接种肿瘤后，与接种对照组相比，环磷酰胺组肺转移灶数明显多于对照组，有显著差异（P<0.01）；干扰素组及治疗组肺转移灶数无显著差异（P>0.05）④接种肿瘤后，Th1 型细胞因子（IL-2）降低和 Th2 型细胞因子（IL-4）升高，TNF-α 显著升高（P<0.01）。
结论 肿瘤发生前宿主 MHC 状态与肿瘤发生发展密切相关，宿主 MHC 表达下降促进肿瘤的生成进展，宿主 MHC 表达增强时，肿瘤形成、发展和转移受到抑制。肿瘤发生后，Th1/Th2 模式向 Th2 漂移，机体的抗肿瘤免疫应答受抑制。

PU-4287

尿液手工方法与仪器分析的优劣

刘琰、王琳琳
哈尔滨医科大学附属第一医院

目的 手工法检验尿常规结果分析，进一步了解分析仪和传统的显微镜手工法在尿液分析中的优缺点，使检验工作者在实际工作中正确对待两种方法的应用，指导检验人员科学地把两种结合起来。
方法 我们对 500 份尿样分别用两种方法进行检测对其结果分析，一种方法用尿液分析仪检测记录尿蛋白、白细胞、红细胞结果，微量以上为阳性，微量以下为阴性。另一种方法用加热醋酸法检测尿蛋白，再用离心试管取 10 ml 混匀的尿液以 1 500 r/min 离心 5 min，倾去上清液，留取 0.2 ml 沉渣，涂片镜检，记录尿蛋白、红细胞和白细胞结果，微量以上为阳性，微量以下为阴性。

结果 分析仪检测尿蛋白和白细胞的阳性率（8.85%和 10.20%）不及手工法阳性率（9.10%和11.85%）高，但分析仪检验红细胞的阳性率（11.85%）高于手工法红细胞阳性率（9.80%）。阳性结果不能相吻合，两种方法虽然存在一定的差异，但经统计学处理（P>0.05）差异无显著性。
结论 结果说明两种方法均可为临床使用。分析仪检测尿蛋白阳性率低于手工法阳性率，分析仪检测白细胞阳性率不如显微镜检测尿中白细胞阳性率高。但分析仪对尿中红细胞的检测比显微镜阳性率高。两种方法合理应用，取长补短，以便为临床疾病的诊断和治疗提供正确检验结果。

PU-4288

外伤患者血细胞参数的指导意义

王琳琳、鲁平
哈尔滨医科大学附属第一医院

目的 由于创伤急救技术的不断提高和急救系统不断完善，严重创伤患者伤后急速病死率已明显下降，但是伤后危及生命的并发症的发生率和各种伤残率却无明显减少。正确判断多发伤患者的创伤严重程度和预后是目前危重病医学领域中创伤诊治方面所面临的一个重要课题，亦是进一步降低多发伤患者病死率的关键。本研究试图通过观察多发伤患者外周血血细胞参数的动态变化,探讨其在多发伤发生、发展及预后中的作用。
方法 多发伤患者 34 例，于创伤后 24h 内采集静脉血，作为第 1 天标本，并分别在入院后的第 3 天和第 7 天清晨空腹采血。工作特征曲线(ROC 曲线)分析曲线下面积(AUC)；AUC 0.5～0.7 诊断价值较低，0.7～0.9 中等诊断价值，0.9 以上有较高诊断价值。采用 SPSS 11.5 统计软件，数据以(x±s)表示，多组均数间的比较采用单因素方差分析。
结果 本研究显示，WBC、HB、PC/WBC 比值在第 1、3、7 天差异有显著性，另外，PC/WBC 比值均数逐步上升。本研究利用 ROC 曲线下面积评价外周血血细胞参数在评估多发伤患者预后不良时的准确性，结果显示，PC/WBC 在第 3 天 AUC 为 0.820 (0.634～1.006)，第 7 天为 0.948 (0.844～1.051)
结论 应用血细胞参数对创伤患者进行评价具有广阔的前景。并且观察 PC/WBC 在第 3 天和第 7 天的 AUC 对临床诊疗具有较高的应用价值。

PU-4289

尿沉渣细胞学检测方法与仪器分析的对比

王琳琳、徐海燕
哈尔滨医科大学附属第一医院

目的 临床上最常用的重要的检测项目之一，主要用于泌尿生殖系统疾病、肝胆疾病、代谢性疾病及其他系统疾病的诊断和鉴别诊断、治疗监测及健康普查。干化学分析仪已广泛应用于临床，流式技术的沉渣分析仪也逐步应用于临床。本文探讨流式尿沉渣定量分析仪、Clinitek 200 尿干化学分析仪、涂片显微镜镜检进行对照研究。
方法 我院来诊患者随机 200 例，用一次性洁净尿杯收集患者尿液 15 ml 左右，先进行尿干化学测定，再进行涂片显微镜镜检，最后做尿沉渣定量分析(用双盲法判读)，操作由丰富临床经验的专业技术人员在 1 h 内完成。流式尿沉渣定量分析仪测定红细胞(RBC)、白细胞(WBC)的正常值为 RBC 0 个/μl~1 个/μl，WBC 0 个/μl~3 个/μl，Clinitek 200 尿干化学分析仪 RBC、WBC 正常值为阴性，涂片显微镜镜检正常值为 RBC 0 个/μl~1 个/HP，WBC 0 个/μl~2 个/HP，超出正常值范围则视为阳性。
结果 三种方法检测 RBC、WBC 的检出率较一致，对 RBC 而言检出率高低分别为 Clinitek 200＞sysmex1000i>涂片镜检，对 WBC 而言检出率高低分别为 sysmex1000i ＞Clinitek 200＞涂片镜检。

结论 在临床应用上把 3 种方法有机地结合起来，干化学的快捷简便和流式沉渣定量的准确性及自动化、手工镜检的金标准，从而可增加检测结果的敏感度和准确性，为临床对泌尿系、循环系、内分泌系的清晰鉴别诊断、疗效观察及预后观察提供可供参考的实验数据。

PU-4290

脑脊液脱落细胞学在恶性黑素瘤脑转移瘤诊断中的价值

许志宇
复旦大学附属华山医院

脑脊液脱落细胞学在脑恶性肿瘤的细胞学诊断中具有较高特异度和灵敏度，而脑脊液细胞离心涂片技术的应用，再配合细胞免疫化学染色的筛选，使脑恶性肿瘤的诊断更具有诊断明确、高效等优势，值得临床应用的推广。

回顾分析一例复旦大学附属华山医院一例恶性黑色素瘤脑转移病人的脑脊液脱落细胞学，从临床病史以及其他实验室检查，确定患者颅内脑积水，蛛网膜下腔异常信号，在主治医生经验抗病毒、抗结核治疗无效后，送检一份脑脊液细胞学检查，在使用脑脊液细胞离心涂片技术后，能够将脑脊液中数量并不多的恶性肿瘤细胞或异型细胞聚集涂片，增加脑脊液细胞学检查阳性率。配合瑞氏染色，通过观察异性细胞形态及数量，可寻找出恶性黑色素瘤细胞特有的异型细胞胞浆中中等或大量的黑色素颗粒，再使用其他细胞免疫化学染色后，可观察出该类异型细胞 HMB45 染色阳性，S100 染色阳性，为临床缩小诊断方向。配合临床身体检查及脑脊液二代测序，明确诊断，积极治疗。

脑脊液脱落细胞学对于脑膜癌，脑转移癌等易脱落的脑部肿瘤，具有较高的敏感性、特异性和选择性，同时具有安全性、快速性，配合脑脊液脱落细胞流式细胞术、脑脊液肿瘤标志物等检测，能够有助于提高诊断的阳性率和鉴别能力

PU-4291

Use of mean reticulocyte volume improves the accuracy in diagnosing iron deficiency in pregnant women

Fengfeng Zhao
Department of Clinical Laboratory of Zhongda Hospital, Southeast University

Objective To evaluate the application value of mean reticulocyte volume (MRV) in diagnosing iron deficiency in pregnant women.
Methods (1) 20 healthy volunteers were selected to test MRV on the 1st, 4th, 7d,15d,21d and 30d. (2)282 cases of iron deficiency pregnant women (the study group) and 442 healthy pregnant women (the control group) were selected from our hospital to test the levels of mean reticulocyte volume (MRV), reticulocyte hemoglobin equivalent (RHE), red blood cell volume distribution width-standard deviation (RDW-SD) , mean corpuscular volume (MCV), mean corpuscular hemoglobin (MCH), mean corpuscular hemoglobin concentration (MCHC) and serum ferritin(SF) (SF < 12μg /L as the basis for the iron deficiency).
Results (1) Compared with the 1st, the level of 20 healthy volunteers MRV had no significant difference on the 4th, 7d,15d,21d and 30d (the value of T test respectively is 0.544、1.644、1.482、1.482、1.239, P > 0.05). (2) MRV, RHE, RDW-SD , MCV, MCH, MCHC, and HCT of the two groups had significant differences(the value of T test respectively is 16.971, 16.829, 7.356 ,7.367, 7.807, 4.726, 3.659, P < 0.01). The area under the Receiver Operating Characteristic (ROC) curve respectively is 0.840, 0.837, 0.676, 0.654, 0.639, 0.602,0.571.
Conclusions MRV is a very stable incidence in healthy people, and has a much higher application value for diagnosing iron deficiency in pregnant women.

PU-4292

血液分析仪 XN-2000 中高荧光强度有核细胞对胸、腹腔积液性质的鉴别价值

俞萍丽
福建医科大学附属协和医院

目的 探讨血液分析仪研究参数中高荧光强度有核细胞（HF）对浆膜腔积液肿瘤细胞的筛选效能。
方法 收集本院胸腹腔积液标本 48 例，经仪器检测后收集其 WBC（白细胞总数）、MN %（单个核细胞百分比）、PMN%（多个核细胞百分比）、TC-BF（有核细胞总荧光强度）、HF-BF%（高荧光强度有核细胞百分比）和 HF-BF#（高荧光强度有核细胞绝对值）几个指标，运用两均数比较的 t 检验、独立样本的 U 检验，结合受试者工作特征曲线（ROC）[1]分析二分类变量指标对良恶性积液的鉴别价值。
结果 对积液性质的判别中，WBC、MN%、和 TC-BF 的差异不具有统计学意义（P>0.05）,而 HF-BF#、HF-BF%和 PMN%的差异具有统计学意义（P<0.05）。ROC 曲线分析表明 HF-BF#和 HF-BF%对鉴别积液性质诊断效能较好，PMN%对鉴别积液无诊断效能。对预测概率做 ROC 曲线分析，得到 HF-BF#的曲线下面积(AUC)为 0.813，P<0.05，灵敏度为 0.652，特异性为 1.00。得到 HF-BF%的 AUC 为 0.786，P<0.05，灵敏度为 0.826，特异性为 0.760。两种模型均体现出一定的诊断效能。
结论 在体液模式下，XN-2000 中 HF-BF#和 HF-BF%对积液中肿瘤细胞具有较为良好的筛查效能。

PU-4293

血液学指标在福建地区 α-地中海贫血筛查中的价值

谢屿平、曹颖平
福建医科大学附属协和医院

目的 分析福建省不同地区 α-地中海贫血（α 地贫）的基因类型与构成比，比较相应的血液学表型特征，探讨平均红细胞体积（MCV）、平均红细胞血红蛋白量（MCH）、血红蛋白量（Hb）、红细胞分布宽度/红细胞计数（RDW/RBC）对该地区 α 地贫初筛的价值。
方法 通过 Gap-PCR 法检测 α 地贫缺失型突变，反向点杂交法检测非缺失型突变位点，对 α 地贫基因型进行分型确定，并分析确诊的 α 地贫患者血液学数据，通过分析 ROC 曲线确定本地区 α 地贫的最佳截断值，分析血液学指标在 α 地贫中的筛查价值。
结果 纳入的 772 例 α 地贫患者中，共发现 16 种基因突变类型，以--SEA/αα 缺失型突变 521 例最为常见（67.49%）。与对照组相比，同性别不同分型的患者 MCV、MCH、Hb 之间的均值差异均有统计学意义，而 RDW/RBC 值在男性患者中标准型和 HbH 病 2 组与对照组相比差异有统计学意义，女性 α 地贫患者中仅有 HbH 病组与对照组差异有统计学意义。MCV<81.25 fl、MCH<27.30 pg、Hb 男性<128.5 g/L， Hb 女性<123.5 g/L 为本实验室 α 地贫的最佳截断值，具有较高的特异性与敏感性。
结论 由于地域异质性以及各个医院设备环境的不同，不同实验室应建立适宜本地区的 α 地贫初筛截断值。今后本实验室可选择 MCV<81.25fl、MCH<27.30pg、Hb 男性<128.5g/L、Hb 女性<123.5g/L 作为临床筛查 α 地贫初筛值。

PU-4294

对 Beckman Coulter 型号流式细胞仪的电压监测、管理及优化

董敏
四川省医学科学院·四川省人民医院

目的 通过监测 Beckman Coulter 的电压，达到对此仪器重要部分的管理。
方法 取一支干净试管，加入 0.5ml 蒸馏水，再加入 10 滴贝克曼公司提供的 Flow Check 粒子，于涡旋器上振荡混匀，配置成一定浓度的 Flow Check 悬液。配好后，置于暗盒中，避光，并置于 4℃冰箱冷藏保存（最长放置时间不超过 1 周）。每日于 Beckman Coulter 开机稳定后，拿出配置好的 Flow Check 悬液，置于室温半小时复温，再于涡旋机混匀后，上机。监测流速、各个通道的电压等指标，连续监测两周后，发现微粒流速变化差异较大，且时快时慢，分析后排除 Flow Check 浓度对流速的影响。考虑可能是仪器压力阀故障或者样品针内壁老化所致。与工程师商讨后，首先进行了压力阀的更换。采用上述方法继续监测微粒的流速，在监测两日后发现流速依旧波动，且个别检测项目用低速模式根本无法检测，在用清洁液冲洗后，在低速模式依旧测不出 Flow Check 悬液的流速。在此基础上更换了一根全新的样品针，继续上述方法监测。
结果 监测至今，Flow Check 悬液的流速可稳定在厂家提供的参考范围内。
结论 稳定的微粒流速与稳定的电压密切相关，甚至可影响阴性、阳性细胞群体分群在流式分析图中的展示。所以电压的监测及管理在日常检测中是非常基础且重要的。

PU-4295

对流式技术检测个别项目中抗体用量优化的尝试

董敏
四川省医学科学院·四川省人民医院

目的 适当减少检测细胞免疫功能计数中的抗体用量，可在一定程度上节约成本。
方法 按照细胞免疫功能检测标准方案，准备 10 支干净流式检测试管，分为 5 组，编号为 1A、1B、2A、2B……5A、5B，按顺序放在试管架上。在所有带有”A”编号的试管中加入复合抗体 CD3/CD4/CD8/CD457.5ul，在所有带有”B”编号 CD16/CD56/CD457.5ul，再分别加入 5 组相对应的全血样本，用量均为为 25ul，避光孵育 15min 后，取出试管架，在每支试管中加入提前配置好的溶血剂（迈瑞公司的商品化溶血剂 50ml 加入至 450ml 灭菌用蒸馏水中，使其充分混匀），使红细胞溶解，避光静置 5min 后上机检测，分析数据，作为标准的检测结果。然后依次减少抗体用量，分别设置梯度为 7ul、6.5ul、6ul、5.5ul、5ul，按照上述同样方法孵育、检测、分析。
结果 对加入不同用量抗体的每组样本做统计学分析（成对 T 检验方法），发现当抗体用量为 6.5ul、6ul、5.5ul 时，与标准方案相比，淋巴细胞计数值的差异没有统计学意义（$t<0.05$）（小样本量），考虑此时抗原抗体的结合都达到了饱和或过饱和程度，从成本优化的角度选择抗体用量为 5.5ul 的组别。
结论 在进行细胞免疫功能检测时，抗体用量可从最初用量 7.5ul 减至为 5.5ul，且在不影响最终结果的基础上适当降低了成本。

PU-4296

基于白细胞群落参数机器学习模型鉴别诊断活动性结核病与潜伏性结核的研究

邓少丽、孙婷婷
陆军特色医学中心（大坪医院）

背景 结核病是严重危害人类健康的重大传染病，现有的结核实验室诊断尚不能满足临床需求，临床广泛开展的 γ-干扰素释放试验（IGRAs）对结核杆菌感染具有较高的灵敏度和特异性，但不能鉴别潜伏性结核感染者和活动性结核，机器学习和深度学习方法在结核病的诊断中体现了巨大的潜力和优势。
目的 白细胞群落参数（cell population data ,CPD）是血细胞分析仪测量分析而来的不同类型白细胞体积、导电率及各角度光散射参数，我们前期结果提示，结核患者中 CPD 参数中单核细胞相关指标变化最为明显，单核细胞联合淋巴细胞、中性粒细胞 CPD 参数还可用于鉴别影像学难以区分的肺结核、肺炎及肺癌。我们拟基于 CPD 参数采用机器学习算法，建立鉴别诊断活动性结核病与潜伏性结核的模型，提高鉴别诊断准确率。
方法 纳入活动性结核患者、潜伏性结核感染者及健康对照组各 300 例，收集 CPD 数据（每例样本收集中性粒细胞、淋巴细胞、单核细胞等 70 项 VCS 参数），分别采用利用 Python 基于 logistic 分析、支持向量机（SVM）分类器、随机森林(RF)模型和最邻近分类算法（KNN）的机器学习算法，将各组随机选取 70%数据作为训练组，30%数据作为测试组，分别建立四种机器学习的结核病诊断模型，分析四种经典算法的鉴别准确率。
结果 四种经典机器学习法鉴别鉴别诊断活动性结核病与潜伏性结核的准确率都达到 85%以上。其中基于 logistic 分析的准确率最高，达到 93.65%。SVM 分类器、RF 模型和 KNN 机器学习算法的准确率分别为 88.88%，88.88%和 87.30%。
结论 机器学习模型对鉴别诊断活动性结核病与潜伏性结核有较高准确率，且诊断时间短，可用于辅助临床鉴别诊断结核病。

PU-4297

粪便钙卫蛋白与炎症性肠病的研究进展

刘韶语
潍坊医学院附属医院

目的 本研究以钙卫蛋白在体内的分布和生物学特性为依据，探讨粪便钙卫蛋白检测在炎症性肠病中的作用。
方法 本研究收集自 2019 年 1 月至 2021 年 1 月期间本院经结肠镜检查和组织病理检查确诊的 100 例溃疡性结肠炎和 100 例克罗恩病分别为第一组的 A1 和 B1，50 例术后恢复期的为第二组的 A2 和 B2，50 例经体检健康的人群为第三组，均进行粪便钙卫蛋白的检测。入选者均排除了严重的上消化道疾病,均无重大身心疾病。近期无免疫抑制剂及糖皮质激素使用史,无长期服用非甾体类抗炎药用药史,并排除酗酒者、孕妇。采集新鲜粪便标本 10-20g,进行钙卫蛋白的检测。
结果 一组的钙卫蛋白水平均高于二组和三组；二组的钙卫蛋白水平高于三组但低于一组；经正态检验，均为非正态分布，溃疡性结肠炎的粪便钙卫蛋白中位数 575ug/g，克罗恩病的粪便钙卫蛋白水平中位数为 175ug/g，健康人群中的钙卫蛋白中位数为 4.9ug/g。
结论 粪便钙卫蛋白作为一种新型的炎症标志物，在粪便中含量丰富, 不受环境、温度的影响, 可长期保持相对稳定而不被各种酶和细菌所破坏。经研究表明，在溃疡性结肠炎和克罗恩病中，钙卫蛋白水平呈明显升高。因其检验方便，成本低，弥补了结肠镜检查和组织活检侵袭性大，患者耐受低，花费高的缺点，这种简便的检测手段在临床炎症性肠病的研究中一定会有很大的发展潜力。

PU-4298

48 例传染性单核细胞增多症患儿高荧光强度淋巴细胞百分比检测的临床意义

刘娟
吉林大学第一医院

目的 高荧光强度淋巴细胞百分比检查对传染性单核细胞增多症的诊断意义，高荧光强度淋巴细胞百分比与异型淋巴细胞比例，EB 病毒含量的相关性。传染性单核细胞增多症(infectionmononucleosis,IM)是儿童常见病毒感染性疾病，诊断主要依据典型临床表现，外周血异型淋巴细胞比例增高和 EBV 抗体检测。尽管 IM 外周血异型淋巴细胞增高很常见，但也常见于其他病毒感染性疾病，不具有特异性。EBV-lgM 抗体检测为临床诊断 IM 最常用的方法，但受病程、患者年龄及机体免疫状况影响，具有一定假阴性率。本研究采用高强度荧光淋巴细胞百分比检测 IM 患儿，探讨高强度荧光淋巴细胞百分比对儿童 IM 的诊断意义
本研究采用高强度荧光淋巴细胞百分比检测 IM 患儿，探讨高强度荧光淋巴细胞百分比对儿童 IM 的诊断意义。
材料与方法 研究对象：48 例于本院收 治的 IM 患儿，其中男 23 例，女 25 例，男比女为 0.92：1。
研究方法 对 IM 患儿进行血常规检测，检测血液中高荧光强度淋巴细胞百分比；血细胞形态检查，检测患儿异型淋巴细胞比例；同时进行 EB 病毒含量检测。
统汁学处理 ：采用 SPSS18.0 进行显著性检验，用单因素方差分析及 t 检验。
结果 48 例 IM 患儿，高荧光强度淋巴细胞百分比有 47 例明显升高，高于正常参考值； 外周血细胞形态学检查中 bi36 例异型淋巴细胞比值大于 10%；EB 病毒含量升高与高荧光强度淋巴细胞百分比升高结果具有一致性。
结论 高荧光强度淋巴细胞百分比检测是一种更加省时省力的方法，能够在第一时间对 IM 患者进行筛查，对临床诊断具有重要意义。

PU-4299

1 例多次输血导致交叉配血失败的病案分析

袁改玲、李蓉
新疆生产建设兵团第五师医院

目的 探讨自身性疾病与多次反复输血引发直接抗人球蛋白实验阳性的患者关于输血的安全性。
方法 回顾性分析 1 例自身患有急性髓系白血病 M2 型且存在溶血性链球菌感染的患者接受输注去白细胞的悬浮红细胞治疗过程中的病程变化，结合临床用药及其诊疗方法对本病例进行分析。
结果 患者血型为 AB 性 RH+血，在住院期间曾多次间断进行输血治疗，均无输血反应，在反复输血 5 次后，再次要求输注 3U 的去白细胞的悬浮红细胞，在红细胞抗体筛查及血型均无异常结果的前提下，交叉配血次侧在显微镜下出现弱凝集反应，肉眼不可见，用微柱凝胶法查直接抗人球蛋白出现阳性反应。
结论 对于本身有基础性疾病，有多次输血史的患者在交叉配血后建议复查直接抗人球蛋白，以确保输血安全。

PU-4300

血小板/白蛋白比值，血小板/血红蛋白比值及 C-反应蛋白/白蛋白比值与糖尿病患病相关性分析

徐阳、刘莉君
西安交通大学第二附属医院

目的 探究血小板/白蛋白比值（Platelet/albumin ratio, PAR），血小板/血红蛋白比值（Platelet/hemoglobin, PHR）及 C-反应蛋白/白蛋白比值（C-reactive protein/albumin, CAR）与糖尿病之间相关性。
方法 基于中国健康与营养调查 CHNS2009 数据，通过 ID 进行性别、年龄匹配，纳入具有血清学检测结果的 8258 例人群样本数据，根据空腹血糖和 Hb1Ac 分为糖尿病组与对照组。
结果 糖尿病组中血尿酸、总胆固醇、甘油三酯及 LDL-C 较对照组显著升高，HDL-C 则显著降低。其次，糖尿病组中 PAR 与 PHR 相比对照组均无明显差异，而 CAR 则显著升高（0.48±0.18 vs. 0.08±0.23, P<0.001），并与空腹血糖（r=0.1818，P<0.001）、HbA1c（r=0.1866，P<0.001）及 HOMA-IR（r=0.1881，P=0.003）均呈显著正相关，但 CAR 并非糖尿病的独立危险因素。此外，红细胞计数（B=1.324，95%CI: 1.182-1.483，P<0.001）和白细胞计数（B=1.230，95%CI: 1.166-1.298，P<0.001）升高可能是糖尿病患病的独立危险因素。
结论 CAR 与糖尿病存在一定相关性，但并非其独立危险因素；血脂异常和白细胞、红细胞计数升高可能是糖尿病患病的独立危险因素，但仍需进一步研究。

PU-4301

尿干化学分析和尿沉渣定量分析在尿细胞测定中的价值对比

战伟
大连大学门诊部

目的 探讨尿干化学分析和尿沉渣定量分析在尿细胞测定中的价值。
方法 把尿沉渣离心镜检作为金标准，用 Mejer-700 尿液干化学分析仪、IQ200 尿沉渣定量分析仪和离心镜检三种方法，分别测定 500 例患者尿液标本的 RBC 和 WBC 值，分析上述两种仪器在尿液 RBC 和 WBC 测定方面的准确度、灵敏度和特异性。
结论 干化学分析法和尿沉渣定量分析法测定尿标本中红细胞和白细胞的准确度、灵敏度、特异性和阳性率相比，差异无统计学意义 (P＞0.05)。联合应用两种测定方法，在准确度、灵敏度和特异性上均高于两种方法独自测定 (P＜0.05)。
结果 干化学分析和尿沉渣定量分析在测定尿液细胞时均有不足。但二者联合应用，可增加测定的准确度和灵敏度，提高工作效率并减少误差。

PU-4302

TEG5000 血栓弹力图仪采用原装进口试剂与国产试剂的比对研究

李蕾、马静、杨旭、王晓琳、王培昌
首都医科大学宣武医院

目的 探讨 TEG5000 血栓弹力图仪使用原装进口试剂与国产试剂检测结果的相关性、一致性及临床可替代性。

方法 选取 30 例临床血浆样本，用 TEG5000 和重庆鼎润血栓弹力图仪以及两家公司生产的试剂进行平行交叉测定,分为 A 组、B 组、C 组，并分析三组数据 R、K、Angle、MA 四个参数的相关性和一致性。
结果 A 组、B 组与 C 组 R、K、Angle、MA 四个参数均具有高度相关性（r>0.9）；且 B 组、C 组与 A 组有良好一致性，二者相差幅度为临床可接受；TEG5000 采用国产试剂检测结果，与生物参考区间的符合率≥90%。
结论 TEG5000 血栓弹力图仪采用国产试剂可以替代进口仪器试剂进行血栓弹力图检测，能为临床诊疗提供可靠、准确、有价值的数据。

PU-4303

激光散色法测定血红蛋白的临床应用

窦敏、林燕辉
福建省立医院

目的 观察激光散色法测定血红蛋白能否解决脂血对血红蛋白的影响，从而替代实验室常用的血浆置换法。
方法 1.收集 30 例非脂血标本，分为 HB 低值组、HB 中值组、HB 高值组，分别用激光散射法和比色法测 HB，并对两者进行比较。2.非脂血标本 150 例，分为 HB 低值组、HB 中值组、HB 高值组，分别用不同浓度脂肪乳进行血浆置换，对置换后激光散色法 HB 与置换前比色法 HB 进行比较分析。3.脂血标本 90 例，分为 HB 低值组、HB 中值组、HB 高值组，对激光散色法 HB 与血浆置换后比色法 HB 进行比较。
结果 1.三组非脂血标本激光散射法 HB 与比色法 HB 偏倚均<6%（-0.58±2.34，0.16±1.52，1.15±1.56），在允许总误差范围内。2.低值组 TG8.2mmol/L 激光散射法 HB 结果与置换前非脂血标本比色法 HB 偏倚<6%（-2.93±1.25），中值组 TG<16.4mmol/激光散射法 HB 结果与置换前非脂血标本比色法 HB 偏倚<6%（-3.98±1.43），高值组 TG<65.6mmol/L 激光散射法 HB 结果与置换前非脂血标本比色法 HB 偏倚<6%（-3.50±2.24）。3.三组脂血标本激光散射法 HB 与血浆置换法 HB 结果差异无统计学意义（P>0.05），且两者具有很好的相关性（r2=0.968，0.948，0.87）。
结论 激光散色法能够有效降低脂血对血红蛋白测定的影响，能替代传统的血浆置换法，具有较高的临床应用价值。

PU-4304

肾病合并糖尿病患者血栓分子标志物水平分析

王贝
东南大学附属中大医院

目的 观察糖尿病肾病患者血浆 TM、TAT、PIC 及 tPAI-C 水平.
方法 选 2020 年 1 月—2020 年 12 月本院收治的 288 例肾病患者（A 组），265 例糖尿病患者（B 组）, 78 例肾病合并糖尿病患者（C 组），另选同期 200 例体检健康者作为对照组（D 组）。采用化学发光免疫分析两步法检测各组受检者血浆血栓调节蛋白(TM)、凝血酶-抗凝血酶复合物(TAT)、纤溶酶-a2 抗纤溶酶复合物(PIC)和组织型纤溶酶原激活剂抑制剂复合物(tPAI-C)水平并比较组间差异。
结果 各组 TM、TAT、PIC 和 tPAI-C 水平比较差异均有统计学意义，且均呈 D 组<A 组< C 组趋势，差异均有统计学意义(P<0.05 或 P<0.01)；A 组和 B 组各指标无统计学差异。
结论 肾病合并糖尿病患者均存在凝血和纤溶系统异常，监测血浆 TM、TAT、PIC 和 tPAI-C 水平对评估患者出凝血状态有重要临床意义。

PU-4305

动态监测抗凝血酶Ⅲ、D-二聚体、超敏 C 反应蛋白在脓毒症患者诊疗中的应用

王贝
东南大学附属中大医院

目的 通过动态监测抗凝血酶Ⅲ（AT-Ⅲ）、D-二聚体（DD）、超敏 C 反应蛋白(hs-CRP)的水平变化，以评价其在脓毒症患者诊断、治疗及预后判断的应用价值。
方法 选取 2018 年 1 月-2020 年 3 月我院重症医学科脓毒症患者 80 例，及非脓毒症患者 100 例为研究对象。脓毒症组按入室时降钙素原（PCT）水平分为 PCT＜2.00 ng/ml 组、2.00 ng/ml≤PCT＜10 ng/ml 组、PCT≥10 ng/ml 组。监测 AT-Ⅲ、DD、hs-CRP 水平。
结果 脓毒症各组治疗 AT-Ⅲ、DD、hs-CRP 水平与非脓毒症相比有显著性差异（P<0.01）；脓毒症 3 组在治疗后 3d、7d、14d、21d 的 AT-Ⅲ、DD、hs-CRP 水平与治疗后 12h 相比均有显著性差异（P<0.01）；
结论 通过连续监测脓毒症患者治疗期间的 AT-Ⅲ、DD、hs-CRP 水平，有助于指导脓毒症患者的治疗和预后判断，降低脓毒症患者并发症的风险。

PU-4306

降钙素原、超敏 C 反应蛋白、D-二聚体、抗凝血酶 III 与急性心肌梗死程度相关性

王贝
东南大学附属中大医院

目的 观察急性心肌梗死患者(AMI)降钙素原（PCT）、超敏 C 反应蛋白（hs-CRP）、D-二聚体（DD）、及抗凝血酶 III（AT-III）水平变化，探讨其临床意义。
方法 以 90 例 AMI 患者为 AMI 组，90 例健康体检者为正常组。比较 2 组受试者，轻度与中重度 AMI 患者血浆 PCT、hs-CRP、DD、AT-III 水平，并进行相关性分析。
结果 AMI 组血浆 DD、PCT、hs-CRP 水平显著高于正常组，其 AT-III 水平显著低于正常组（P<0.05）。轻度组 PCT、hs-CRP、 DD 水平低于中重度组（P<0.05），其 AT-III 水平高于中重度组（P<0.05）。Pearson 相关分析显示，DD、PCT、hs-CRP 水平与 AMI 病情呈正相关（r=0.825、r=0.712、 r=0.742)，AT-III 与 AMI 病情呈负相关（r=-0.729）。
结论 AMI 患者存在明显凝血功能异常、炎性因子高表达状态；PCT、hs-CRP、DD、AT-III 水平变化对 AMI 患者病情预测、预后评估等均具有价值。

PU-4307

流式细胞术和骨髓细胞形态学联合检测在非霍奇金淋巴瘤诊断与分型中的临床价值

佘仕金
乐山市人民医院

目的 分析流式细胞术（FCM）和骨髓细胞形态学（BMA）联合检测在非霍奇金淋巴瘤（NHL）诊断与分型中的临床价值。
方法 回顾性选择 2017 年 1 月至 2019 年 1 月在我院和四川省人民医院血液科诊治的 NHL 患者 138 例的 FCM 及 BMA 的检测结果，分析 FCM 联合 BMA 分析不同程度、不同形态淋巴瘤骨髓侵犯的临床价值。
结果 BMA 检测阳性率明显高于骨髓涂片（$\chi2=7.046$，$P=0.008<0.05$）与 FCM（$\chi2=4.062$，$P=0.043<0.05$），而 FCM 联合 BMA 检测阳性率明显高于 BMA（$\chi2=4.158$，$P=0.041<0.05$）、FCM（$\chi2=16.025$，$P=0.000<0.01$）。FCM 与 BMA 方法检测结果均为阳性者 18 例（13.04 %），以高比例瘤细胞骨髓浸润者为主；均为不确定者为 10 例（7.25 %），主要为二者均不能定的低比例轻度异形淋巴样细胞；均为阴性 86 例（62.32 %）；结果不一致的病例 24 例（17.39 %），主要为轻度瘤细胞骨髓浸润的病例。FCM 联合 BMA、FCM 以及 BMA 三者在临床分期 I→IV 期与 II→IV 期修正结果比较，无统计学意义（$P>0.05$）；而 FCM 联合 BMA 在临床分期 III→IV 期修正结果明显高于 BMA（$\chi2=4.164$，$P=0.041<0.05$）、FCM（$\chi2=4.726$，$P=0.029<0.05$），而 FCM、BMA 在临床分期 III→IV 期修正结果比较，无统计学意义（$P>0.05$）。
结论 FCM、BMA 检测方法不同形态淋巴瘤细胞侵犯的敏感性不同，有良好的一致性在高比例瘤细胞骨髓浸润者中，而在轻度瘤细胞骨髓浸润这表现出明显差异。FCM 联合 BMA 检测阳性率明显高于 BMA、FCM，以及在临床分期 III→IV 期修正结果明显高于 BMA、FCM。

PU-4308

Flipped Quick-Response Code Enables Reliable Blood Grouping

Hong Zhang、Ruining Liu、Yang Luo
重庆大学医学院智慧检验与分子医学中心

Background Rapid and reliable blood grouping plays an essential role in various biomedical and forensic scenarios. However, identification of weak blood group agglutinations remains challenging due to the inevitable environmental interference and low precision during the process of result readout.
Methods Herein, we invented a disposable and handheld microfluidic platform of flipping QR-code identification with prompt error-discrimination (FLIPPED) features for accurate blood grouping by using a commercially available smartphone. For better identification of weak agglutination samples, a linear regression curve between the blood HCT value and resultant color change was established via machine learning. Additionally, an automatic correction algorithm was designed to remove any potential errors from scanning angles and ambient light intensities.
Results Ultimately, a reliable blood typing platform was devised, which can detect ABO, Rh, MNS, P, Kell, Kidd, and Lewis blood groups within 30 s to 3 min. An accuracy of 100% was observed in a total of 450 clinical blood samples in varied ambient conditions, validating the robustness of the proposed FLIPPED assay. Additionally, no any mistyping was observed for blood samples with different HSA concentrations, bilirubin levels, and total cholesterol levels.
Conclusion The proposed FLIPPED blood grouping assay possesses the characteristics of enhanced and simplified workflow along with wireless transmission, offering the potential for

being developed into a highly compact, automatic, efficient, and low-cost universal platform for quantitative analysis of a variety of biological and pathological biomarkers.

PU-4309

外周血中反应性淋巴细胞的特点及临床意义分析

郑春毅[1]、张国恺[2]、陈泽杰[2]
1. 潮州市人民医院
2. 广东省潮州市人民医院

目的 研究分析外周血中反应性淋巴细胞（atypical lymphocyte）的形态特点和存在临床意义的分析。
方法 按照实验室要求，当血液分析仪直方图出现异常报警信号和淋巴细胞结果异常警示、图形时[1]，我们及时对外周血细胞进行涂片，染色分类检查。
结果 我们单位一年期间约有 3000 例外周血标本进行涂片染色人工分类检查，经过祥细分类复查，发现其中有 160 例标本分类可见有反应性淋巴细胞。
结论 在病理情况下反应性淋巴细胞可以出现在外周血涂片中，如当机体有病毒感染（如 EB 病毒、新型冠状病毒、SARS 冠状病毒、流感病毒、呼吸道合胞病毒、巨细胞病毒、腺病毒、肠道病毒 71 型、柯萨奇病毒、轮状病毒、非肿瘤性皮肤病等）、原虫（如弓形虫）感染、药物反应、结缔组织病、过敏性疾病、多种免疫刺激疾病、炎症与感染性疾病等，外周血都可出现反应性淋巴细胞，及时发现对症治疗，反应性淋巴细胞可慢慢恢复为正常细胞。

PU-4310

Establishment of improved review criteria for hematology analyzers in cancer hospitals

Xiaoyan Wang、xu wang、peng ge、xiaoqiang zhao、chong chen、shusheng hu、li ren
Tianjin Medical University Cancer Institute and Hospital

Background Although hematologic review criteria for general hospitals have been established, they may be insufficient for cancer hospitals. This study aimed to establish the appropriate review criteria for hematology analyzers in cancer hospitals.
Methods A total of 1003 samples from our hospital were randomly selected for blood smear preparation and microscopic review. The review criteria of the International Consensus Group for Hematology Review (ICGH) and Chinese consensus group were used to obtain the review, true-negative (TN), true-positive (TP), false-negative (FN), and false-positive (FP) rates, as well as the triggered rules. Our review criteria were established by comparing flag or numeric value information of TP and FP samples,
adjusting rules to obtain better efficiency, a low slide review rate, and an acceptable FN rate.
Results Overall, 197 (19.64%) samples showed positive smear findings. Compared to the ICGH criteria, the slide review rate of the newly established criteria declined from 51.25% to 39.28%, and the TP and TN rates increased from 17.85% and 46.06% to
23.13% and 55.83%, respectively. The FN rate of the newly established criteria was 3.69%. Another set of samples used to validate the newly established criteria yielded the review, FN, and FP rates as 33.49%, 1.86%, and 25.58%, respectively.
Conclusion The newly established review criteria for hematology analyzers enabled the prompt identification, smear, and further verification of doubtful specimens, without a significant increase in the workload, thus improving the efficiency of the
review process. This study provided data support for other cancer hospitals to establish review criteria.

PU-4311

乳糜血对血细胞检测的影响

朱时帅、史永胜
哈尔滨医科大学第一附属医院

目的 研究乳糜血对血细胞检测结果的影响，并探讨去除此种影响的方法。
方法 随机选取 300 例（男 200 例，女 100 例）非乳糜血标本进行血常规检测；将标本用脂肪乳进行血浆置换，混匀后进行血常规检测；将标本随机分为生理盐水组和血常规稀释液 EPK 组，每组 100 例，分别将乳糜血标本用等量生理盐水和 EPK 进行血浆置换两次，并分别进行血常规检测。用 SPSS22.0 对各组数据进行统计分析。
结果 1.乳糜血标本的白细胞计数（WBC）、血红蛋白含量（Hb）、血细胞比容（Hct）、平均红细胞容积（MCV）、平均红细胞血红蛋白量（MCH）、平均红细胞血红蛋白浓度（MCHC）与原始血标本检测值之间有显著差异（P<0.05）; 2.生理盐水组和 EPK 组血浆置换一次的检测值与原始血标本检测值有显著差异（P<0.05），而置换两次的检测结果与原始结果之间无显著差异；3.红细胞计数（RBC）在各组之间均无显著差异。
结论 1.严重乳糜血会对白细胞计数（WBC）、血红蛋白含量（Hb）、血细胞比容（Hct）、平均红细胞容积（MCV）、平均红细胞血红蛋白量（MCH）、平均红细胞血红蛋白浓度（MCHC）的检测结果产生干扰；2.用生理盐水或血常规稀释液 EPK 进行血浆置换两次后可消除此种干扰。

PU-4312

能量代谢在脓毒症急性肾损伤中的研究进展

史永胜、金英玉
哈尔滨医科大学第一附属医院

脓毒症已成为急性肾损伤患者的主要原因，慢性肾功能不全患者感染常导致肾功能进一步恶化(1)。目前更多的关注是预防急性肾损伤。当患者出现严重电解质紊乱，如水钠潴留、氮质血症、肝肾综合征等危及生命的病理生理改变时，肾脏替代治疗是唯一的选择。肾脏接收 20%的心输出量。但其耗氧量相当于机体耗氧量的 10%(2)。此外，肾脏线粒体和耗氧量仅次于心脏。线粒体功能受到缺血缺氧、毒素刺激、重金属离子、化疗药物等各种因素造成的细胞代偿范围和细胞损伤的严重影响和损害。因此，ATP 合成减少，导致细胞能量代谢紊乱，随后细胞死亡(3)。急性肾损伤期间线粒体发生巨大变化，特别是早期线粒体功能不能得到纠正，导致线粒体功能失衡，可能导致细胞能量代谢紊乱和各种病理生理变化(4)。近年来，除了细胞坏死和凋亡外，其它程序性细胞死亡途径，如铁螯合、自噬和焦亡也被发现在急性肾损伤发病机制中发挥重要作用(5)。这些细胞死亡途径与线粒体功能障碍密切相关。因此对线粒体损伤的完整分子理解已成为发展急性肾损伤新疗法的探索领域。在不同的环境状态下，线粒体可以对不同的状态做出反应，并融合成棒状或者环状结构。在这种情况下，线粒体网络保持密切连接，几乎所有细胞中的线粒体始终处于融合分裂的动态平衡(6)。然而，直到最近几年，肾小管上皮细胞线粒体动力学的特异性改变才变得更加突出，这可能与线粒体动力学大部分是在心肌细胞纤维骨架上进行的有关。既往研究表明肾小管上皮细胞含有大量线粒体融合分裂相关蛋白(7)。推测线粒体融合和分裂在维持心肌细胞稳态中也可能发挥重要作用。能量代谢过程中 ATP 耗竭可引起线粒体分裂，最近的研究表明，包括线粒体体积释放在内的线粒体损伤与多种细胞事件有关，包括自噬、焦亡或者程序性细胞死亡机制，而不限于凋亡(8)。

PU-4313

脑脊液流式细胞术检测微小残留病的临床意义

罗燕飞
广东省人民医院

目的 探讨脑脊液流式细胞术监测微小残留病在急性白血病复发预测及指导治疗中的临床意义。
方法 采用流式细胞术对 2015 年 1 月到 2016 年 10 月的 62 例急性白血病患者进行追踪检测，分析脑脊液及骨髓 MRD 与白血病复发之间的关系。
结果 62 例患者中有 11 例患者脑脊液 FCM 检查为阳性的检出率为 17.74%，其中发生复发的有 6 例（54.55%），脑脊液 MRD 阴性 51 例，其中 8 例（15.69%）复发，两者复发率具有统计学意义（$\chi 2=7.82, P<0.05$）。脑脊液 MRD 阳性预测白血病复发的时间比骨髓 MRD 阳性早 85.67 天。
结论 监测白血病患者脑脊液 MRD，在监测复发以及估计预后中具有重要临床价值。

PU-4314

不同 CRP 水平的细菌性肺炎患者凝血指标的变化研究

金亚雄、黄珣钡、牛倩、江虹
四川大学华西医院

目的 分析细菌性肺炎患者凝血指标（PT、APTT、FIB、TT）的水平变化，并通过观察炎症指标 CRP(C-reactive protein)水平与凝血指标的相关性来评价凝血功能的变化在肺炎病程发展中的临床意义。
方法 收集四川大学华西医院 2019 年 10 月至 2020 年 3 月期间确诊为细菌性肺炎的患者 147 例作为疾病组，根据患者入院第一次 CRP 的水平将疾病组分为 3 组：低水平组（5-50mg/l）、中水平组（50-100mg/l）和高水平组（>100mg/l）；另外收集同期我院健康体检者 33 例作为健康对照组。观察各组 CRP、PT、APTT、FIB、TT 的水平变化。
结果 PT、APTT、FIB 在各组中的水平差异具有统计学意义（$P<0.05$），并且低、中、高水平组的 PT、APTT、FIB 水平均高于健康对照组，差异具有统计学意义（$P<0.05$）。疾病组总体 CRP 水平与 PT、APTT、FIB 均呈正相关（r 分别为 0.294、0.420、0.401，$P<0.05$）。
结论 联合检测 PT、APTT、FIB 与 CRP 能有助于炎症严重程度的观察，动态监测凝血指标可以更准确的判断疗效。

PU-4315

细胞因子与 D-二聚体在慢性阻塞性肺疾病发病过程中作用

周宇捷、孙烨、任建平
山西省中医院

慢性阻塞性肺疾病是一种持续性气流受限的疾病，该病发病率高，严重影响患者的生存质量，并给病人家庭带来承重的经济负担。由于该病具有异质性，因此根据其临床表现、影像学变化等将其分为不同的表型，其中肺功能型和全身炎症反应型为主要表型。目前临床多通过肺功能检查评估病情发病情况，但该检查不能全面反映病情的发展，且对于急性加重期病人无法进行肺功能检查。研究发现 COPD 的发生发展是由于机体免疫力-抗炎能力失衡引起的，且在疾病的进展期炎症因子会明显升高，但对于抗炎因子在疾病中扮演的角色不是很清楚。此外由于缺氧等因素对血管内皮细胞的损伤，机体的 D-二聚体也会发生明显变化。本文主要通过阐述对细胞因子及 D-二聚体对 COPD 影响，了解 COPD 患者细胞因子变化对疾病的影响。

PU-4316

体液标本乳糜定性试验阳性结果分析

张春莹、陈月梅、谢恒、邓山鹰、蒋能刚
四川大学华西医院

目的 通过对乳糜定性试验结果进行统计分析, 总结成人乳糜性积液形成的病因。
方法 统计 2014-2018 年华西医院进行乳糜定性试验的住院患者的体液标本结果及病例资料，回顾分析体液标本的乳糜定性试验阳性检出率，阳性患者科室分布及主要疾病特征。
结果 共收集进行乳糜定性试验的住院患者体液标本 1295 例，包括腹腔积液 190 例（14.67%）、胸腔积液 797 例（61.54%）、随机尿 145 例（11.20%）、心包积液 7 例（0.54%）、引流液 143 例（11.04%）、其他标本 13 例（1.00%），乳糜定性试验阳性标本 997 例，阳性检出率 76.99%。除尿标本的阳性检出率较低为 33.79%外，以上标本检出率为 80-100%。阳性患者主要集中分布于心脏外科、胃肠外科、呼吸内科、泌尿外科、肺癌中心、ICU 等科室。
结论 不同的标本类型在科室分布中有一定的聚集性，外科术后最易出现积液乳糜性，心脏外科出现乳糜性腹腔积液最常见。

PU-4317

血液分析仪仪器参数在血小板复检中重要性研究

陈思、毛志刚、王双、郑沁
四川大学华西医院

目的 血小板准确计数有利于临床对疾病的准确诊治。目前，血小板分析中阻抗法测血小板常用，但结果易受红细胞碎片、小红细胞、大血小板等多种因素影响，需采用其他方法，如荧光法对血小板计数进行复检。本研究拟探讨红细胞参数和血小板参数对血小板计数的影响，寻找合适的参数和阈值，以确定血小板计数复检的标准。
方法 收集 2019 年 1-2 月间，四川大学华西医院实验医学科 2133 例标本，每例标本均使用阻抗法、光学法和荧光法三种方法进行血小板检测。计算阻抗法和荧光法血小板差值或差值比率，差值或差值比率大于 12.5%即需复检。使用回归分析寻找红细胞、血小板参数对血小板复检测的影响因素。
结果 2133 例标本中，507 例标本需用荧光法复检。低 MCV、高小红细胞计数(OR, 1.39; 95%CI: 1.08 to 1.79; p=0.011)和碎片红细胞水平(OR, 6883; 95%CI: 1472 to 32184; p<0.001)对血小板检测结果影响较大。复检组样本 PDW、MPV、P-LCR、PCT 和 IPF%均高于其他样本。ROC 分析显示，RBC 参数 RBC、microR#、FRC#具有更好的诊断效能，AUC 分别为 0.712 (95%CI: 0.687-0.736)、0.731 (95%CI: 0.707-0.754)、0.744 (95%CI: 0.720- 0.769)。
结论 自动化血细胞分析中 RBC 参数 RBC、microR#、FRC#对血小板结果影响较大，根据这些参数指标确定血小板复检所需的检测阈值，对血小板计数进行复检，以保证检测结果的准确性。

全自动血凝仪 ACT TOP 700 性能验证

覃月华
南方医科大学珠江医院

目的 近年来，随着现代医学对血栓与出血方面不断地深入认识，临床实验室对该方面有关的检测项目指标不断增多[1]。全自动血凝分析仪在各大医院应用广泛，为临床实验室在血栓与出血方面疾病的预防、诊断以及治疗提供了更加精准的指标。根据 ISO15189《医学实验室质量和能力的专用

要求》规定，实验室全自动设备应通过性能验证，并符合相关检验所需要求，方可使用。本研究根据对 ACT TOP 部分凝血项目进行精密度、准确度、携带污染率、线性以及同型号仪器间比对等结果进行系统性的验证。
方法 从精密度，精确度，携带污染率，线性可报告范围验证，参考区间验证等多角度验证和评价全自动血凝仪 ACT TOP 700 的性能。

PU-4319

γδT 淋巴细胞增殖性疾病的临床及实验室特征分析

蒋能刚
四川大学华西医院

目的 分析累及骨髓的 γδT 淋巴细胞增殖性疾病的实验室检查和临床特征。
方法 采用流式细胞术对 γδT 细胞增殖性疾病的患者骨髓标本进行免疫表型分析，其结果与细胞形态学、外周血血象及临床特征进行分组比较分析。
结果 在累及骨髓的 17 例 γδT 淋巴细胞增殖性疾病中，按照 2016 年 WHO 的描述，临床诊断为肝脾 T 细胞淋巴瘤（HSTL）的 8 例；诊断为大颗粒淋巴细胞白血病（LGLL）的 6 例；无明确临床诊断的 3 例。8 例 HSTL 中位年龄 30 岁（22-41 岁），临床均表现为发热、脾大，LDH 均明显升高（均值 561±211 IU/L）；外周血 7 例血小板数量降低，4 例白细胞数量降低，5 例为轻至中度贫血，骨髓细胞形态 5 例发现中等偏大的性质不明细胞；免疫表型除特征性表达 TCRγδ 外，多表达 CD56（7/8），不表达 CD57，异常细胞占淋巴细胞比例差异较大（2％-98％）。6 例大颗粒淋巴细胞白血病中位年龄 55 岁，与 HSTL 组比较有明显差异；仅 1 例脾长大，无发热，LDH 均值 201±67 IU/L，明显低于 HSTL 组；2 例为三系减少， 4 例为单纯红细胞减少，骨髓细胞形态学有 3 例描述成熟淋巴细胞形态改变，均伴有核红细胞减少。免疫表型除特征性表达 TCRγδ 外，部分表达 CD56（3/6），多表达大颗粒淋巴细胞相关标志 CD57（4/6），异常 γδT 细胞占淋巴细胞比例均明显增加（51％-86％）。此外，各类 γδT 淋巴细胞增殖性疾病 CD2、CD7 均表达，且表达强度与正常 T 淋巴无明显差异， CD5 均以阴性表达为主（HSTL 组阳性 1/8，LGLL 组阳性 1/6）。
结论 侵及骨髓的 γδT 细胞增殖性疾病临床表现形式以恶性程度较高的肝脾 T 细胞淋巴瘤和惰性的大颗粒淋巴细胞白血病为主。二者间可通过流式细胞免疫表型分析和临床特征进行明确区分。

PU-4320

地中海贫血与缺铁性贫血患者的血常规结果的应用研究

朱志强
南方医科大学珠江医院

目的 对缺铁性贫血与非复合型地中海贫血患者的血常规结果分析，根据其血液学指标的主要分布情况，探究其在地贫与缺铁贫的鉴别和地贫初筛的临床意义。
方法 将 52 例缺铁性贫血患者设定为缺铁贫组，52 例非复合型地中海贫血患者设定为地贫组，52 例健康体检者设定为对照组。比较 3 组血细胞参数 HB、HCT、MCV、MCH、RDW 水平并确立各参数的可信区间（95%）分布。
结果 经方差分析 SNK-q 检验的两两比较，地贫组、缺铁贫组、对照组的 HB、HCT、MCV、MCH、RDW 均有统计学差异（P＜0.05）；根据均数的可信区间分析，地贫组、缺铁贫组与对照组的可信区间(95%)无交叉重叠。
结论 红细胞参数在缺铁性贫血的临床鉴别和地中海贫血的初筛诊断有重要意义，可根据其血常规参数值大小作出初步的筛查。

PU-4321

血鉴别诊断中血液检验

吕艳丽
南方医科大学珠江医院

目的 研究贫血鉴别诊断中血液检验的应用价值与有效性，为临床诊断提供必要指导。
方法 随机将 2017 年 3 月～2019 年 3 月本院 25 例贫血患者作为实验组，同期选择 25 例健康体检者作为对照组，对比两组参与者血液检验结果。
结果 实验组 MCV 为（74.79±0.48）、RBC 为（3.71±0.44）、MCH 为（10.11±1.32）、Hb 为（86.61±4.48）、RDW 为（22.46±1.57），前四项指标均比对照组高，最后一项指标高于对照组，差异具备统计学研究意义（P＜0.05）。
结论 诊断贫血的过程中，选择血液检验方式，可有效提高诊断结果的准确性，临床应用相对广泛。

凝血因子 VIII 在血液透析患者高凝状态诊断中的应用价值

郭勇晖
南方医科大学珠江医院

目的 评估凝血因子 VIII 在血液透析患者高凝状态诊断中的应用价值，为预测获得性易栓症提供有价值的临床评估指标和可以应用的医学决定水平。
方法 通过对血液透析患者凝血因子 VIII 的检测以及临床表现的评价，比较发生血栓事件的患者凝血因子 VIII 的活性与未发生血栓事件患者之间的差异，探索凝血因子 VIII 在血液透析患者高凝状态诊断中的应用价值。
结果 只有 30.3%（44/145）的患者凝血因子 VIII 的活性在正常范围，而发生一次或多次血栓事件的患者为 17.9%（26/145）。
结论 肾病综合征患者由于肾功能严重受损，凝血因子 VIII 蓄积，凝血功能异常，体内呈高凝状态，在凝血因子活性高于 200%时，提示患者可能达到易栓状态，其发生血栓事件的可能性高，值得临床予以注意和预防。

Improving performance of recently introduced flow cytometry-based approach of malignant cell screening in serous cavity effusion

Jingfang Sun、Shuang Ding、Liqiang Zhu、Yun Liu、Qingqing Jiang、Shuang Song、Weimin Chen、Shibao Li、Ping Ma
Affiliated Hospital of Xuzhou Medical University

Introduction Microscopy has been recognized as the “gold standard” cellular analysis of serous cavity effusion. However, this method is time consuming, labor intensive, and requires accomplished skills. Here, we investigated the efficiency of hematology analyzer in screening malignant cells in serous cavity effusion.
Methods A total of 991 serous cavity effusion samples and 370 validation specimens collected from different departments were sent to the clinical laboratory for routine cell count using the automated hematology BF mode and exfoliative cytology simultaneously. High-fluorescent cells(HFCs) were measured as the relative count (HF%) and absolute count (HF#) by BF mode.

Receiver operating characteristic curve (ROC) analysis was combined with scattergram rules to screen malignant cells.
Results HF# and HF% in malignant samples (subgroup) were significantly higher than those in benign samples, and the HF# and HF% levels were different between ascites and pleural effusion (PE). The area under the curve values were also different between ascites and PE. Positive of malignant cells was very high when the ascites or PE sample touching Rule 1 positive and either Rule 2 negative or positive. The cut-off levels of HF# were 5.5 HFC/μL on the basis of Rules 1 and 2 negative, whereas 83.5 HFC/μL on the basis of Rule 1 negative but Rule 2 positive in ascites. By contrast, the cut-off levels of HF% were 0.55 HFC/100 WBC on the basis of Rules 1 and 2 negative, whereas 4.95 HFC/100 WBC on the basis of Rule 1 negative but Rule 2 positive in PE.
Conclusions Serous cavity effusion will be increasingly analyzed using the automated hematology analyzer BF mode in the future because of its rapidness and convenience. The combined application of HFC with scattergram rules is a feasible and useful approach to screen malignant cells in serous cavity effusion.

血液分析仪法血小板计数假性增高因素的探讨与处理

孙静芳、陈卫民、丁爽、蒋清清、刘云、王炜
徐州医科大学附属医院

目的 分析血液分析仪血小板假性增高的原因，探讨其解决办法以准确发放血小板计数报告。
方法 回顾性分析 14 例血小板假性增高的病例，对 14 例样本均进行血涂片显微镜镜检观察血小板数量及分布、PLT-O 和手工法复检血小板。
结果 14 例样本均为血小板假性增高，血小板直方图均出现异常，血涂片显微镜镜检结果与仪器计数结果不符，PLT-O 与手工计数法结果之间无统计学差异。
结论 血小板直方图异常时，请注意鉴别是否存在干扰血小板计数的因素，注意镜检，必要时进行 PLT-O/PLT-F 或者手工计数血小板以确保血小板结果的准确发放。

胶体金法检测粪便钙卫蛋白在炎症性肠病中的应用价值

单智惠
海军军医大学第二附属医院（上海长征医院）

目的 采用半定量的胶体金快速检测方法检测粪便中的钙卫蛋白，以探讨粪便钙卫蛋白与 IBD 活动度的关系，从而为 IBD 患者的管理提供有意义的检测指标。
方法 71 份 IBD 患者的粪便样本全部来源于上海长征医院样本库，同时收集 10 例健康人粪便样本作为对照，纳入的 IBD 患者均为 2015 年至 2020 年本院消化内科收治并确诊的病例。根据患者的疾病情况分为缓解组、活动组和健康对照组。活动组 44 例，缓解组 27 例，健康对照组 10 例。对比 IBD 患者与健康对照组的粪便钙卫蛋白含量及对比活动组与缓解组患者的粪便钙卫蛋白含量，并计算粪便钙卫蛋白用于诊断 IBD 的灵敏度、特异性。
结果 以 60 μg/g 作为临界值，IBD 患者与健康人的粪便钙卫蛋白含量差异有统计学意义（P<0.05）；与健康人相比，IBD 患者的 FC 含量明显升高；以 60 μg/g 作为临界值时，活动组与缓解组 IBD 患者的钙卫蛋白含量有显著差异（P<0.05），活动组的粪便钙卫蛋白含量高于缓解组；粪便钙卫蛋白用于诊断 IBD 的灵敏度为 67.61%，特异性为 80.00%。
结论 采用胶体金的方法检测粪便中的钙卫蛋白，可判断疾病的活动度，且具有耗时短、经济方便、痛苦小等优点。

2. 香港理工大学
3. 南通大学附属医院
4. 安徽省立医院

Hematologicalbiomarkers that reflect host nutritional and inflammation status have beenidentified to be independent prognostic factors in various malignancies.The aim of the present study was to determine the predictive value of preoperativealbumin (ALB), fibrinogen (FIB), pre-albumin (pALB), Albumin to fibrinogenratio (AFR) and pre-albumin to fibrinogen ratio (PFR) for the prognosis ofpatients with glioma. X-tile software was used to identify cut-off values ofthese parameters. Kaplan-Meier survival analysis, univariate and multivariateanalyses based on Cox proportional hazards regression model were used todetermine whether these markers were associated with the prognosis of patientswith glioma. In addition, the Harrell concordance index with variables was usedto evaluate the prognostic accuracy. The results indicated that PFR (HR = 2.827,95% CI: 1.353-6.122, *p* = 0.006) is the only independent prognosticfactor in patients of glioma along with clinicopathological grade and age. C-indexof predicted nomogram including PFR (0.719) for glioma patients was higher thanthat without PFR (0.699). Our findings demonstrated that circulating preoperativePFR, rather than the other four parameters, might be a potential negativeindependent prognostic biomarker for glioma individuals.

胸腹水中高荧光强度的有核细胞计数在肺癌筛查中的临床应用

蒋清清
徐州医科大学附属医院

目的 探讨高荧光强度的有核细胞计数联合肺癌相关肿瘤标志物在肺癌筛查的临床应用.
方法 利用 Sysmex XN-2000 血液体液分析仪体液模式测定浆膜腔积液(胸腹水)标本中的高荧光细胞计数(HF-BF#)和百分比(HF-BF%),同时送检验科科细胞室进行液基细胞学检查和核医学科肿瘤标志物筛查（包括血清和胸腹水两种）,以病理科报告为诊断标准,对所有数据进行统计学处理,建立 ROC 曲线,评估胸腹水高荧光细胞初筛恶性肿瘤的应用价值.
结果 144 份标本通过误差条图我们发现同一患者的胸腹水的 CEA 和 CA125 检测值明显要高于血清的检测值，通过受试者工作特征(ROC)曲线分析标本,参数 HF-BF#(×106/L)最佳临界值为 61.5，此时参数 HF-BF#对恶性细胞检出的灵敏度为 72.2%,特异度为 75%。若将 HF-BF#(×106/L)临界点设在 309.0，此时参数 HF-BF#对恶性细胞检出的特异度可以达到 91.7%。
结论 Sysmex XN-2000 体液分析模式对浆膜腔积液标本进行肿瘤细胞筛查可以起到很高的参考价值,特别是参数 HF-BF#具有较高的特异性,可为临床诊断提供重要价值。

脑梗死患者颈动脉病变程度与血常规检测结果相关性研究

王冬丽
漯河医学高等专科学校第三附属医院

目的 研究脑梗死患者颈动脉病变程度与血常规检测结果的相关性。
方法 本次研究对象为 2018 年 1 月至 2019 年 12 月收治的 100 例脑梗死患者、同期的健康体检者 100 名，依次纳入观察组、对照组，均进行血常规检查，对比两组的血常规检查结果；再根据颈动脉内中膜厚度(IMT)超声检测结果进行分组，将各组的血常规检查结果进行比较。
结果 观察组患者的 WBC、RBC、PLT、HCT、MCV、RDW、MPV 与对照组相比差异具有统计学意义（P＜0.05）；斑块形成患者的 PLT、HCT、RDW、MPV 高于内膜增厚患者，不稳定斑块患者的 RBC、PLT、MPV 水平高于稳定斑块者，差异具有统计学意义（P＜0.05）。
结论 脑梗死患者的血常规检测结果能对疾病的发生及颈动脉病变程度进行判断。

Reference Intervals for a Panels of 20 Plasma Steroids in Chinese Han Adults

Yanhua Zheng、Xujing Kong、Xiaomin Fan、Jun Yao、Huiying Sun、Baorong Chen
Beijing Kingmed Clinical Laboratory

Systemic steroid hormone measurements can assist diagnosis of endocrine hypertension, reproductive and developmental abnormalities. This study was aimed to establish reference intervals for a panel of 20 plasma steroids in Chinese Han adults. A total of 192 healthy volunteers (80 males and 112 females aged 18-63 years) were enrolled. Individuals with endocrine diseases or other systemic diseases or tumors were excluded in this study. Plasma steroids concentrations were measured by mass spectrometry, and data were analyzed by SPSS software. Graphical representation of the data was carried out with Graph prism software. According to the “CLSI guidelines for defining, establishing, and verifying reference intervals in the clinical laboratory”, reference intervals for the panel of 20 plasma steroids were established. Except for pregnenolone, corticosterone, 17 hydroxypregnenolone, 11 deoxycortisol, cortisol, dehydroepiandrosterone and estriol, the other steroids were significant associated with gender ($P < 0.05$). Thus, reference intervals of most steroids were established by gender in this study. Plasma levels of steroid profiles obtained in this study could be clinically used as reference intervals for diagnosis and subtyping of patients with endocrine hypertension or developmental abnormalities.

PU-4330

Prevalence and genotype distribution of HPV infection among 214,715 women from Southern China, 2012-2018: baseline measures prior to mass HPV vaccination

Lipei Luo、Li Wang、Shuling Min
ChenZhou NO.1 people's Hospital

Background The epidemiology on the human papillomavirus (HPV) among females in Southern China is not well-established. Baseline data on the prevalence of HPV infection in China prior to mass prophylactic HPV vaccinationwould be useful. Thus, this study aims to determine the type-

specific HPV prevalence and distribution amongfemales from Southern China prior to mass HPV vaccination.
Methods A retrospective cross-sectional study employing 214,715 women attending ChenZhou NO.1 People'sHospital for cervical screening during 2012–2018 was conducted prior to widespread HPV vaccination. HPVgenotype was detected using nucleic acid molecular diversion hybridization tests. The overall prevalence, age-specific prevalence, type distribution, and annual trend were analyzed.
Results The overall HPV prevalence was 18.71% (95% confidence interval [CI], 18.55–18.88%) among SouthernChina females. During 2012–2018, the prevalence of HPV infection showed a downward tendency, from 21.63%(95% CI, 21.07–22.20%) in 2012 to 18.75% (95% CI, 18.35–19.16%) in 2018. Age-specific HPV distribution displayed apeak at young women aged less than 21 years (33.11, 95% CI, 31.13–35.15%), 20.07% (95% CI, 19.70–20.44%) amongwomen aged 21–30 years, 17.29% (95% CI, 17.01–17.57%) among women aged 31–40 years, 17.23% (95% CI, 16.95–17.51%) among women aged 41–50 years, 21.65% (95% CI, 21.11–22.20%) among women aged 51–60 years, and25.95% (95% CI, 24.86–27.07%) among women aged over 60 years. Of the 21 subtypes identified, the top threeprevalent high-risk HPV (HR-HPV) genotypes were HPV52 (5.12%; 95% CI, 21.11–22.20%), − 16 (2.96%; 95% CI, 2.89–3.03%), and − 58 (2.51%; 95% CI, 2.44–2.58%); the predominant low-risk HPV (LR-HPV) genotypes were HPV81 (1.86%;95%CI, 1.80–1.92%) and − 6 (0.69%; 95% CI, 0.66–0.73%) respectively. Incidence of HR-HPV only, LR-HPV only andmixed LR- and HR-HPV were 15.17, 2.07 and 1.47% respectively. Besides, single HPV infection accounted for 77.30%of all positive cases in this study.
Conclusions This study highlights 1) a high prevalence of HPV infection among females with a decreasingtendency towards 2012–2018, especially for young women under the age of 21 prior to mass HPV vaccination; 2)HPV52, − 16 and − 58 were the predominant HPV genotypes, suggesting potential use of HPV vaccine coveringthese HPV genotypes in Southern China.

PU-4331

WGS analysis of of Carbapenem-Resistant Klebsiella pneumoniae ST11 strains in a tertiary hospital in southern China: Molecular characteristic, Antimicrobial Resistance, and Virulence

Yili Chen[1]、Lu Ai[1]、Yaqin Peng[1]、Pingjuan Liu[1]、Penghao Guo[1]、Kang Liao[1]、Runshi Yang[2]
1. The First Affiliated Hospital of Sun Yat-sen University
2. 广东省科学院微生物研究所

Sequence type 11 (ST11) carbapenem-resistant Klebsiella pneumoniae (CRKP) has become the dominant clone in China. It may cause severe infections which are difficult to treat with current antibiotics, and has attracted world-wide attention. In this study, the microbiological traits, antimicrobial resistance, and virulence of the Carbapenem-Resistant Klebsiella pneumoniae ST11 strains were investigated by WGS analysis.
Methods CRKP strains were consecutively collected in the First Affiliated Hospital of Sun Yat-sen University during 2019. Antimicrobial susceptibility testing was performed according to CLSI2020-M100. All of the strains were subjected to whole genome sequencing (WGS) using the short-read Illumina HiSeq platform for detecting genes of Carbapenemase, ESBL, OmpK35/36, virulence and analysing multi locus sequencing type(MLST) . Clonal relatedness was determined based on single nucleotide polymorphisms (SNPs).
Results A total of 64 strains of CRKP were collected in this study, including 47 strains of ST11, accounting for 73.4%. Among the 47 strains of ST11, they were mainly isolated from sputum samples, accounting for 48.9% (23 / 47). The results of antibiotics susceptible test showed that these strains were the most sensitive to tigecycline, colistin and ceftazidime / avibactam, which were 98.9%, 97.9% and 93.0% respectively. Overall, blaKPC-2 (97.9%) was the predominant

carbapenemase gene. One of the blaKPC-2 carring strains belonged to a KPC-2 variant, showing resistant to ceftazidime / avibactam. Notably, one isolate coharbored blaKPC-2 and blaNDM-1, and one isolate coharbored blaKPC-2 and blaNDM-4. Moreover, the carriage of ESBL genes was prevalent, and 76.6% of the strains carried CTX-M gene. The two KL virulence types KL47 and KL64 of CRKP ST11 accounted for 42.6% vs 57.4% respectively. Phylogenetic structures of the 47 strains of ST11 CRKP from present study showed that there was high homology among the same virulence type strains.
Conclusions Our study highlights the importance of coordinated efforts between clinical and molecular microbiologists and infection control teams to rapidly identify, investigate and contain nosocomial outbreaks. Routine surveillance with advanced sequencing technology should be implemented to strengthen hospital infection control and prevention measures.

PU-4332

Upregulation of PEDF predicts poor prognosis and promotes esophageal squamous cell carcinoma progression by modulating the MAPK/ERK signaling pathway

Ting Zhang[1]、Zui Chen[1]、Di Che[2]、Xiaoqiong Gu[2]、Banglao Xu[1]
1. Guangzhou First People's Hospital
2. 广州市妇女儿童医疗中心

Purpose Analyze the expression of pigment epithelium-derived factor (PEDF) in esophageal squamous cell carcinoma (ESCC) tissues and investigate the mechanism by which PEDF promotes esophageal cancer cells metastasis to search biomarker for the diagnosis and prognosis of ESCC.
Methods Sequencing data of invasive and non-invasive cells of esophageal carcinoma from the GEO database were used for analysis. Immunohistochemical staining of survival esophageal cancer pathology sections was utilized to visualize PEDF changes. The expression of PEDF in kyse140 and kyse510 ESCC cells was overexpressed or knocked down by plasmid or siRNA interference, respectively. ESCC cells migration and invasion changes were analyzed using transwell assay, scratch assay and invasion assay. The expressions of epithelial-mesenchymal transition (EMT) related proteins and key proteins of signaling pathways were detected by Western blotting. Cells overexpressing PEDF were treated with PD98059 or U0126 to observe the alteration of related indicators.
Results In the microarray analysis of GEO data, PEDF expression was significantly higher in the invasive group of ESCC cells compared with the non-invasive group. Immunohistochemical staining showed that the expression of PEDF was positively correlated with distant metastasis and TNM stage of ESCC, and patients with high PEDF expression ($P = 0.0001$) had a lower 5-year overall survival rate than those with low PEDF expression. PEDF was an independent risk factor for poor prognosis in patients with ESCC. Transwell assay, scratch assay and invasion assay showed that PEDF could promote the migration and invasion of ESCC cells. Western blotting showed that PEDF could downregulate the epithelial marker E-cadherin, α-catenin, and upregulate the mesenchymal marker N-cadherin, suggesting that PEDF could activate the EMT process. Overexpression of PEDF increased the expression of p-ERK in the group of proteins associated with EMT related signaling pathways, but the expression of p-Akt, and Akt were not changed. After inhibiting MAPK/ERK signaling pathway by adding PD98059 or U0126, the progression of EMT in ESCC cells evoked by overexpression of PEDF was reversed.
Conclusions PEDF promotes esophageal squamous cell carcinoma cells invasion and metastasis by regulating cell epithelial-mesenchymal transition through the MAPK/ERK pathway, and PEDF may serve as a potential biomarker for the diagnosis and prognosis evaluation of ESCC.

PU-4333

Aspergillus but Not Candida: Fatal Fungus Infection in Critical COVID-19 Patients

Yang Yang、Xinyi Xia
Institute of Laboratory Medicine, Jinling Hospital, Nanjing University School of Medicine

Objectives Earlier researches focused little attention on COVID-19 co-infection with fungus while some experts suggested COVID-19 patients should be routinely screened for bacteria and fungi infection after COVID-19 being confirmed. Here, we enrolled 236 patients with COVID-19 to present a detailed analysis of their clinical situation of fungal infection.
Methods A total of 236 COVID-19 patients from Huoshenshan Hospital were included in this study, and three common fungi (candida, aspergillus, cryptococcus neoformans) were mainly detected by specific serological identification. By combining above fungi detection results and clinical data, the basic characteristics, laboratory indicators, viral nucleic acid, antibody level were compared among COVID-19 patients.
Results Firstly, based on specific serological identification results, 236 patients were divided into serologically positive group including 80 (34%) patients and serologically negative group including 156 (66%) patients, serologically positive group contained 32 only candida positive, 31 only aspergillus positive, 17 candida with aspergillus positive patients, and there was no positive result in cryptococcus neoformans detection. It is noteworthy that 5 mortality in serologically positive group were all related to aspergillus infection while candida infection rarely caused death, aspergillus was most common in non-survivors while candida was most common in survivors. Additionally, in terms of laboratory indicators, interleukin-6 (IL6) showed a significant higher level in serologically positive group than that in negative group, while other indicators (white blood cell count, neutrophil absolute value, eosinophil absolute value, basophil absolute value, procalcitonin, hypersensitive c-reactive protein, total protein, blood glucose), viral nucleic acid loads, and antibody level are higher but not significant in serologically positive group than those in serologically negative group. Finally, imaging evidence was presented such as the “new moon sign” ,which is a specific pulmonary imaging characteristic of aspergillus infection. Histopathological biopsy was also presented from a COVID-19 patient co-infected with aspergillus, in which a large number of distinct mycelia were observed in the patient’s lung biopsy.
Conclusions According to our study, 5 non-survivors of COVID-19 with fungal infection were almost associated with aspergillus infection. Aspergillus infection, instead of candida infection might be fatal for critical ill patients with COVID-19. The main drawback is that identification results of fungus infection in our study are difficult to reach the clinical diagnostic level, because the gold standard of clinical diagnostic in invasive fungus infection must be a positive histopathology result. However, there is still of great significance to carry out routine rapid screening for fungal infection especially for critical COVID-19 patients to enable early treatment to be implemented and improve their clinical prognosis.

PU-4334

Efficacy and safety of tocilizumab treatment COVID-19 patients: A case-control study and meta-analysis

Weijun Jiang、Xinyi Xia
Department of Reproduction and Genetics, Institute of Laboratory Medicine, Jinling Hospital, Nanjing University School of Medicine, Nanjing 210002, P.R. China

Objective As the pandemic progresses, the pathophysiology of COVID-19 is becoming more apparent, and the potential for tocilizumab is increasing. However, the clinical efficacy and safety of tocilizumab in the treatment of COVID-19 patients remain unclear.

Methods Amid the shortage of robust evidence regarding the use of tocilizumab in COVID-19 patients, we aimed to evaluate the efficacy and safety of tocilizumab treatment to COVID-19 patients in a case-control study and meta-analysis, which will help inform clinical management of COVID-19 patients. The study was conducted, including 95 patients treated with tocilizumab plus standard treatment, and matched controls with 95 patients treated with standard treatment therapy by propensity score from Februarys to April 2020. We searched PubMed, Web of science, and MedRxiv using the search terms severe acute respiratory syndrome coronavirus 2, COVID-19, SARS-CoV-2, 2019-nCoV interleukin-6 inhibitors; tocilizumab, and coronavirus for studies published from January 1, 2020, to June 1, 2021.
Results Of all patients, 63 (66.32%) cases and 56 (58.95%) controls had coexisting conditions, including hypertension, hyperlipidemia, hyperuricemia, diabetes, chronic cardiac disease, cancer, etc. Our case-control study found a lower mortality rate in the tocilizumab treatment group than in the standard treatment group (9.47% versus 16.84%), but the results were not statistically significant. We also found that the mortality rate in tocilizumab treatment groups was significantly lower than the standard treatment group in the stratified ICU analysis (OR= 0.52, 95%CI= 0.44-0.61, P= 0.048 and OR= 0.31, 95%CI= 0.10-0.99, P= 0.044). In the subgroup without secondary infection, the tocilizumab treatment group's mortality rate was significantly lower than in the standard treatment group (OR= 0.35, 95%CI= 0.12-1.00, P= 0.040).
In total, 49 studies (including 6568 cases and 11660 controls) met the inclusion criteria and were selected for the meta-analysis. In the overall analysis, we performed the meta-analysis that significantly decreased mortality after patients received tocilizumab (OR= 0.81, 95%CI= 0.69-0.95, P= 0.008). We also revealed significant associations within some subgroups. For mortality, the number of patients did not reach the optimal information size. However, the blue cumulative Z curve crossed both the traditional boundary and the TSA boundary, showing no more tests are needed to reach a positive conclusion in advance. No significant associations were observed between tocilizumab and elevated secondary infection risk, discharge, adverse events, and mechanical ventilation in the overall analysis.
Conclusion Tocilizumab significantly decreased mortality and increased discharge in COVID-19 patients, but no increased secondary infection risk, adverse event, and mechanical ventilation in a meta-analysis. Our data suggest that clinicians should pay attention to tocilizumab therapy as an effective and safe treatment for COVID-19 patients.(Part of the study was revised by Infectious Diseases and Therapy)

PU-4335

The role of LINC01088 in prediction and treatment of recurrent spontaneous abortion

Hui Zhao
The second hospital of Shandong University

Objective Recurrent spontaneous abortion (RSA) is defined as two or more consecutive pregnancy losses and could be attributed to genetic causes, infection and other unknown factors. Due to the lack of early prediction and effective clinical treatment, RSA has become one of the important causes of infertility. Therefore, to explore the etiology and pathogenesis of RSA is the key to prevention and treatment of RSA. LncRNAs reveal critical roles in regulation of gene expression of many diseases. However, there are few studies on the role of lncRNAs in RSA. Therefore, it is urgent to explore effective lncRNAs as markers for early prediction and treatment of RSA, so as to provide a basis for the diagnosis and treatment of RSA and the development of related drugs.
Methods Quantitative real-time PCR was used to detect the expression of LINC01088 in villus tissue. The receiver operating characteristic curve (ROC curve) was further drawn and the area under the curve (AUC) was calculated. Then CCK-8, EdU and clone formation assays were used to detect the effect of LINC01088 on the proliferation of trophoblast cells. The effect of

LINC01088 on cell cycle and apoptosis of trophoblast cells was detected by flow cytometry. The influence of LINC01088 on invasion and migration of trophoblast cells and villus tissue was detected by Transwell and explants culture. The cytoplasmic and nuclear RNA of trophoblast cells were isolated, and quantitative real-time PCR was performed to determine the localization of LINC01088 in trophoblast cells. We used RNA pull-down to detect the proteins bound to LINC01088. The influence of LINC01088 on nitric oxide/nitric oxide synthase system was detected by western-blot and nitric oxide detection kit. The signaling pathways and molecules were detected by western-blot.

Results The expression of LINC01088 in villus tissue of RSA patients was higher than in normal pregnancy group and LINC01088 has good sensitivity and specificity in the diagnosis of RSA. In vitro LINC01088 reduced the proliferation, invasion and migration ability of trophoblast cells. LINC01088 could inhibit the cell cycle process and promote the apoptosis of trophoblast cells. In trophoblast cells, LINC01088 was mainly localized in the nucleus and could bind to arginase 1 and enhance the stability of arginase 1 protein. Meanwhile, LINC01088 inhibited the protein level expression of endothelial nitric oxide synthase, resulting in synchronous decrease of nitric oxide level. The activated JNK/P38 MAPK signaling pathways were observed after overexpressed LINC01088.

Conclusions Our study demonstrated for the first time that the expression level of LINC01088 is closely related to RSA, and the sensitivity and specificity of LINC01088 in the diagnosis of RSA is very high. LINC01088 inhibited the proliferation, invasion and migration of trophoblast cells and promoted the apoptosis of trophoblast cells. Furthermore, LINC01088 in trophoblast cells indirectly inhibited eNOS/NO system via binding and increasing arginase-1. The reduction of NO ulteriorly activated JNK and p38 MAPK signaling pathways and ultimately caused the dysfunction of trophoblast cells and the occurrence of RSA. Our findings supported that LINC01088 might be a potential diagnostic and therapeutic target for RSA.

PU-4336

OXA-181-Producing Carbapenem-Resistant Klebsiella pneumonia Sequence Type 16 Isolated from Active Intestinal screening of a MICU patient in South China

Yili Chen[1]、Kang Liao[1]、Runshi Yang[2]
1. The First Affiliated Hospital of Sun Yat-sen University
2. 广东省科学院微生物研究所

Carbapenemase-producing Enterobacteriaceae (CPE) are important factors to the global public health problem of antibiotic resistance. Oxacillinase (OXA)-181 is the second most common worldwide type of the OXA-48-like carbapenemase. Generally, OXA-48-like enzymes have low activity towards carbapenems, high hydrolyzing activity against penicillins and are not impressionable to β-lactamase inhibitors.

In this report, we present the first case of an OXA-181-producing carbapenem-resistant Klebsiella pneumoniae (K334) isolated from Enteric Colonization of a MICU patient in South China. K334 showed susceptible to extended-spectrum cephalosporins and aztreonam, but highly resistant to imipenem; and meropenem. By PCR amplification and sequencing, we confirmed that the K334 strain carried OXA-181 gene. Meanwhile, this strain also carried extended-spectrum β-lactamase(ESBL) genes(SHV-26) with the loss of OmpK36 in porin genes. Multilocus sequence typing (MLST) indicated that it belonged to sequence type 16(ST16). Further WGS using the Oxford Nanopore MinION and the Illumina NextSeq platform and subsequent de novo hybrid assembly revealed that K. pneumoniae K334 harbored a 5.22 Mb circular chromosomal DNA and three plasmids. The blaOXA-181 gene was located on a 51,479 bp plasmid designated as pK334_OXA181 of incompatibility group IncX3, this plasmid also carried quinolone resistance gene qnrS1.

This study reported for the first time that OXA-181-producing carbapenem-resistant Klebsiella pneumonia ST16 isolated from enteric colonization of a MICU patient in South China, suggesting that since the gastrointestinal tract is a major reservoir of antibiotic resistance genes, screening of fecal samples for blaOXA-181 is recommended to prevent its possible rapid dissemination via the IncX3-type plasmid.

Tumor-derived exosomes, myeloid-derived suppressor cells, and tumor microenvironment

Xinyu Tian
Nanjing Drum Tower Hospital

Plenty of immune cells infiltrate into the tumor microenvironment (TME) during tumor progression, in which myeloid-derived suppressor cells (MDSCs) represent a heterogeneous population of immature myeloid cells with immunosuppressive activity. Tumor cells and stromal cells facilitate the activation and expansion of MDSCs in TME via intercellular communication, and expanded MDSCs suppress anti-tumor immune responses through direct and indirect mechanisms. Currently, exosomes, which are a kind of extracellular vesicles (EVs) that can convey functional components, are demonstrated to participate in the local and distal intercellular communication between cells. Numerous studies have supposed that tumor-derived exosomes (TEXs), whose assembly and release can be modulated by TME, are capable of modulating the cell biology of MDSCs, including facilitating their activation, promoting the expansion, and enhancing the immunosuppressive function. Therefore, in this review, we mainly focus on the role of TEXs in the cell-cell communication between tumor cells and MDSCs, and discuss their clinical applications.

PU-4338

The SaeRS two-component system contributes to the age-dependent nasal colonization of Staphylococcus aureus

Qian Liu
Renji Hospital

Staphylococcus aureus is an important human commensal bacteria colonizing the human body, especially the nasal cavity. The nasal carriage can be a source of S. aureus bacteremia. However, it is not completely understood what bacterial factors contribute to nasal colonization of S. aureus. By analyzing S. aureus isolated from the nasal cavity of three age groups, the children, young adults, and seniors, we found that the SaeRS two-component system is an important determinant of nasal colonization in the nasal cavity of seniors. The senior group isolates of S. aureus showed rather distinct sequence type composition, as compared with other age group isolates.The senior group isolates showed not only a lower gene carriage of enterotoxins a, c, and q and hemolysin B (hlb) but also lower hemolytic activity against human red blood cells. Of regulators affecting hemolysin production, only the SaeRS TCS showed an age-dependent decrease of activity. The decreased virulence of the senior group isolates of S. aureus was confirmed in the mouse skin infection model, where the senior group isolates showed the lowest survival. However, in the murine nasal colonization model, the sae-deletion mutant showed higher colonization. S. aureus was not significantly killed by nasal secretions from either young adults or seniors; however, it survived better in the senior nasal secretions. These results indicate that senior nasal cavity environment favors colonization of S. aureus with lower virulence, to

which the reduced activity of the SaeRS TCS contributes. Also, they illustrate an example of bacterial colonization adapts to the changing host environment.

PU-4339

syphilis test results analysis

Yongsheng Shi、yingyu jin
The first affiliated hospital of Harbin medical university

Objective In July 2019-12 at the end of a total of 8440 cases of patients with preoperative patients and medical analysis of monitoring results of syphilis, and discuss its popular trend, clinical manifestation ,treatment and prevention.
Methods Enzyme-linked immunosorbent (ELISA) method in 8440 cases of patients with syphilis specific antibody (TP-Ab) detection.
Results To detect the positive patients a total of 180 cases, 2.1% detection rate.acquired syphilis in 171 cases, 9 cases of congenital syphilis.The number of acquired syphilis in the 21-40 years old age group significantly more than other age groups, 33.9% of the positive number.Congenital syphilis accounted for 5% of the number of positive Numbers are mostly distributed in pediatrics.
Conclusion Positive rate of syphilis was gradually on the rise, in recent years should be attached great importance to, and vigorously publicized safety education, improve the understanding of syphilis and damage, reduce the syphilis harm to the society, family and individual

PU-4340

The role of LINC01088 in diagnosis and treatment of recurrent spontaneous abortion

Hui Zhao
The second hospital of Shandong University

Objective Recurrent spontaneous abortion (RSA) is defined as two or more consecutive pregnancy losses and could be attributed to genetic causes, infection and other unknown factors. Due to the lack of effective clinical treatment, RSA has become one of the important causes of infertility. Therefore, to explore the etiology and pathogenesis of RSA is the key to prevention and treatment of RSA. LncRNAs reveal critical roles in regulating gene expression. However, there are still few studies on the role of lncRNAs in RSA. Therefore, it is necessary to explore more effective lncRNAs as markers for clinical diagnosis and treatment of RSA, so as to provide a basis for the diagnosis and treatment of RSA and the development of related drugs.
Methods Quantitative real-time PCR was used to detect the expression of LINC01088 in villus tissue. The receiver operating characteristic curve (ROC curve) was further drawn and the area under the curve (AUC) was calculated. Then CCK-8, EdU and clone formation assays were used to detect the effect of LINC01088 on the proliferation of trophoblast cells. The effect of LINC01088 on cell cycle and apoptosis of trophoblast cells was detected by flow cytometry. The influence of LINC01088 on invasion and migration of trophoblast cells and villus tissue was detected by Transwell and explants culture. The cytoplasmic and nuclear RNA of trophoblast cells were isolated, and quantitative real-time PCR was performed to determine the localization of LINC01088 in trophoblast cells. We used RNA pull-down to detect the proteins bound to LINC01088. The influence of LINC01088 on nitric oxide/nitric oxide synthase system was detected by western-blot and nitric oxide detection kit. The signaling pathways and molecules were detected by western-blot.
Results The expression of LINC01088 in villus tissue of RSA patients was higher than normal pregnancy group. The sensitivity and specificity of LINC01088 in the diagnosis of RSA are high. LINC01088 reduced the proliferation, invasion and migration ability of trophoblast

cells. LINC01088 could inhibit the cell cycle process and promote the apoptosis of trophoblast cells. In trophoblast cells, LINC01088 was mainly localized in the nucleus and could bind to arginase 1 and enhance the stability of arginase 1 protein. LINC01088 inhibited the protein level expression of endothelial nitric oxide synthase, resulting in synchronous decrease of nitric oxide level. The activated JNK/P38 MAPK signaling pathways were observed after overexpressed LINC01088.

Conclusions Our study is the first to find that the expression level of LINC01088 is closely related to RSA, and the sensitivity and specificity of LINC01088 in the diagnosis of RSA is very high. LINC01088 inhibited the proliferation, invasion and migration of trophoblast cells and promoted the apoptosis of trophoblast cells. Furthermore, LINC01088 in trophoblast cells indirectly inhibited eNOS/NO system via binding and increasing arginase-1. The reduction of NO ulteriorly activated JNK and p38 MAPK signaling pathways and ultimately caused the dysfunction of trophoblast cells and the occurrence of RSA. Our findings supported that LINC01088 might be a potential therapeutic and diagnostic target for the treatment of RSA.

PU-4341

Circulating Cytokines and Lymphocyte Subsets in Patients Who Have Recovered from COVID-19

Xin Li、chaolu Hasi
First Hospital of Shanxi Medical College

To investigate the immune status of people who previously had COVID-19 infections, we recruited two-week postrecovery patients and analyzed circulating cytokine and lymphocyte subsets. We measured levels of total lymphocytes, CD3+ T cells, CD4+ T cells,CD8+ T cells, CD19+ B cells, and CD56+ NK cells and the serum concentrations of interleukin- (IL-) 1, IL-4, IL-6, IL-8, IL-10,transforming growth factor beta (TGF-β), tumor necrosis factor alpha (TNF-α), and interferon gamma (IFN-γ) by flow cytometry. We found that in most postrecovery patients, levels of total lymphocytes (66.67%), CD3+ T cells (54.55%), CD4+ Tcells (54.55%), CD8+ T cells (81.82%), CD19+ B cells (69.70%), and CD56+ NK cells (51.52%) remained lower than normal,whereas most patients showed normal levels of IL-2 (100%), IL-4 (80.88%), IL-6 (79.41%), IL-10 (98.53%), TNF-α (89.71%),IFN-γ (100%), and IL-17 (97.06%). Compared to healthy controls, two-week postrecovery patients had significantly lower absolute numbers of total lymphocytes, CD3+ T cells, CD4+ T cells, CD8+ T cells, CD19+ B cells, and CD56+ NK cells, along with significantly higher levels of IL-2, IL-4, IL-6, IL-10, TNF-α, IFN-γ, and IL-17. Among postrecovery patients, T cells,particularly CD4+ T cells, were positively correlated with CD19+ B cell counts. Additionally, CD8+ T cells were positively correlated with CD4+ T cells and IL-2 levels, and IL-6 positively correlated with TNF-α and IFN-γ. These correlations were not observed in healthy controls. By ROC curve analysis, post recovery decreases in lymphocyte subsets and increases in cytokines were identified as independent predictors of rehabilitation efficacy. These findings indicate that the immune system gradually recovers following COVID-19 infection; however, the sustained hyperinflammatory response for more than 14 days suggests a need to continue medical observation following discharge from the hospital. Longitudinal studies of a larger cohort of recovered patients are needed to fully understand the consequences of the infection.

PU-4342

Clonal dissemination of KPC-2-producing Klebsiella pneumoniae ST11 and ST48 clone among multiple departments in a tertiary teaching hospital in Jiangsu Province, China

Ruru Bi
The Affiliated Dushuhu Public Hospital of Soochow University

The world-wide prevalence of carbapenem-resistant Klebsiella pneumoniae (CRKP) has been posing a threat to the public health. In this study, a total of 82 non-duplicated CRKP isolates were analyzed for the prevalence of resistant determinants including carbapenemase, extended spectrum β-lactamase (ESBLs), and AmpC as well as integrons and cassette regions by PCR and DNA sequencing. The genetic relatedness was investigated by pulsed field gel electrophoresis (PFGE) and multi-locus sequencing typing (MLST). Overall, blaKPC-2 (n = 75) was the predominant carbapenemase, accompanied with high prevalence of blaSHV (92.7%) and blaCTX-M (90.2%). PFGE profiles and MLST analysis revealed that 65 out of 68 KPC-2-producing CRKP ST11 isolates were involved in clone dissemination among multiple departments with the department of neurology ICU being the major one. Moreover, first report on clonal dissemination of KPC-2-producing CRKP ST48 clone in four departments and NDM-5-producing CRKP ST337 clone was also identified. Class I integron were detected in 17 (20.7%) of 82 isolates with aadA2 being the most common cassette. And a novel cassette array of integron, aac(6')-II-blaCARB/PSE-1 was identified. Taken together, KPC-2-producing CRKP ST11 and ST48 clone were widely disseminated in multiple departments of our hospital, which triggers the need for urgent and active surveillance and implementation of infection control measures.

PU-4343

SC-514 protects acute liver failure induced by LPS/D-Gal in mice

Zhentang Jing
The second hospital of shandong university

Objective To determine whether SC-514 is involved in the protective effect of LPS/D-Gal on acute liver failure in mice.
Methods A certain dose of LPS/D-Gal combined application can cause acute liver failure and even death in two different strains of BALB/c and C57BL/6 mice. BALB/c and C57BL/6 were divided into groups, and the inhibitory effect of SC-514 on LPS/D-Gal-induced acute liver failure in mice was explored through biochemical, pathological and molecular biological research
Methods Results The pretreatment of SC-514 can significantly reduce the mortality of mice with acute liver failure induced by LPS/D-Gal or prolong the death time of mice, reduce the pathological damage of the test group at the same time, and reduce the gluten C of the test group at the same time. Biochemical levels of aminotransferase (ALT) and aspartate aminotransferase (AST). Further studies have shown that SC-514 can inhibit the production of tumor necrosis factor TNFα in mice induced by LPS/D-Gal, and TNFα is the main factor that promotes apoptosis in LPS/D-Gal-induced acute hepatitis models; and SC Under the action of -514, the apoptosis rate of hepatocytes in the experimental group was significantly reduced.
Conclusion SC-514 inhibits the production of TNFα, reduces the impact of cytokine storm on liver cells, and reduces the mortality of experimental mice with acute liver failure. It is suggested that the reasonable application and development of SC-514 can reduce the liver injury and fatality rate induced by LPS/D-gal.

PU-4344

USP48 suppresses tumor growth by interacting with Gasdermin E and initiating pyroptosis

Yidan Ren、Yunshan Wang
The Second Hospital of Shandong University

Background Ubiquitination is an important item in post-translation. Its most well-known function is to guide the degradation of proteins. Ubiquitination is reversible and can be reversed by a large group of proteases called deubiquitinating enzymes (DUBs). USP48 is an important member of the USP family of deubiquitinating enzymes. Pyroptosis is a kind of programmed cell death, which is characterized by the activation of inflammatory caspase and the cleavage of Gsdermin protein. There is a close relationship between pyroptosis and cancer. In-depth study on the mechanism of pyroptosis and its relationship with cancer is helpful to understand the occurrence and development mechanism of cancer.
Methods In this study, we applied high-throughput small hairpin RNA (shRNA) screening technology to obtain a number of genes that have significant regulatory effects on cell pyroptosis, and found that USP48 has the most significant regulation on pyroptosis. The role of USP48 in pyroptosis was further clarified by detecting the indicators of pyroptosis. Use proteomics and protein mass spectrometry analysis techniques to analyze the downstream regulatory proteins of USP48, confirm the regulation of GSDME by USP48, and use immunoprecipitation experiments to confirm the physical interaction between USP48 and GSDME, and clarify that USP48 is involved in the regulation of pyroptosis molecules mechanism. Animal models of pancreatic cancer were used to clarify the role of USP48 in the development of pancreatic cancer. Single-cell RNA sequencing and flow cytometry were used to further confirm the effect of USP48 on pancreatic tumor immunity.
Conlusion In this study, we confirmed that USP48 can regulate the expression of GSDME to promote pyroptosis. pyroptosis is a natural immune response, which is closely related to tumor immunity. Pancreatic cancer cells have a very unique tumor immune microenvironment. In this study, we are scolded to confirm that USP48 can promote pancreatic cancer cell immunity through promoting the occurrence of pyroptosis, and ultimately inhibit the occurrence of pancreatic cancer.

PU-4345

USP48 is upregulated by Mettl14 to attenuate hepatocellular carcinoma via regulating SIRT6 stabilization

Yidan Ren、Yunshan Wang
The Second Hospital of Shandong University

Exploiting cancer metabolism for the clinical benefit of hepatocellular carcinoma (HCC) patients is a topic under active investigation. Ubiquitin-specific peptidase 48 (USP48), a member of the ubiquitin-specific protease family, is involved in tumor growth, inflammation, and genome stability. However, the role of USP48 in HCC tumorigenesis remains unknown. In this study, we report that expression of USP48 is downregulated in diethylnitrosamine-induced liver tumorigenesis in mice as well as in human HCC. USP48 physically bound and stabilized SIRT6 by K48-linked deubiquitination at the K33 and K128 sites of SIRT6, which impeded metabolic reprogramming to hamper HCC tumorigenesis. Moreover, methyltransferase-like 14 (Mettl14)-induced m6A modification participated in the regulation of USP48 in HCC by maintaining USP48 mRNA stability. Our work uncovers the tumor suppressive function of the Mettl14-USP48-SIRT6 axis via modulation of glycolysis, providing new insights into the critical roles of metabolic activities in HCC and identifying an attractive target for future treatment studies.

PU-4346

Evaluation of dynamic changes in peripheral blood lymphocyte and platelet counts in the diagnosis of influenza infections

Qingzhen Han、ruru bi、lin wang
Suzhou Dushu Lake Hospital (Dushu Lake Hospital Affiliated to Soochow University)

The dynamic changes in peripheral blood LYM and PLT counts in the diagnosis of influenza infections were evaluated. A total of 158 patients with influenza infections, 144 patients with bacterial infections, 83 patients infected with other viruses and 152 healthy controls were enrolled in Suzhou, Jiangsu Province from 2016 to 2019. Dynamic detection of LYMs and PLTs was conducted in three different stages (before, during and after treatment). The diagnostic and prognostic values were also estimated. The PLT and LYM counts in all groups were decreased. PLT counts gradually increased during treatment in patients with influenza. The AUCs of the relative PLT and LYM counts were higher than those of the absolute counts (PLT: 0.9358 vs 0.6375, LYM: 0.7447 vs 0.7068), with relative PLT counts having the largest AUC (0.9358). Moreover, the rate of increase in PLT count can predict the prognosis of patients with influenza infections. Compared with LYM counts, dynamic changes in peripheral blood PLT counts exhibited better performance in determining the diagnosis and prognosis of influenza infections.

PU-4347

Bacterial epidemiology and antimicrobial resistance profiles in children reported by the ISPED program, China, 2016-2020

Pan Fu 、Chuanqing Wang
Huashan Hospital, Fudan University

Infectious disease Surveillance of Pediatrics (ISPED) program was established in 2015 to monitor and analyze the trends of bacterial epidemiology and antimicrobial resistance in Chinese children. Clinical bacterial isolates were collected from 11 tertiary children hospitals in China during 2016 to 2020. Antimicrobial susceptibility testing was carried out using Kirby-Bauer method or automated systems interpreted according to the criteria of Clinical and Laboratory Standards Institute (CLSI) 2019 breakpoints, while penicillin susceptibility of streptococcus pneumonia was detected by E-test. A total of 288,377 isolates were collected, of which 42.1% and 57.9% were gram-positive and gram-negative organisms, respectively. The top-ten predominant bacteria were E.coli, S.pneumoniae, S.aureus, H.influenzae, K.pneumoniae, M.catarrhalis, S.pyogenes, S.epidermidis, P.aeruginosa and A.baumannii. In 2020 COVID19 pandemic year, we observed a significant reduction in the ratio of respiratory tract samples (from 56.9% in to 44.0%). A comparable reduction was also seen for the primary bacteria mainly isolated from respiratory tract, including S.pneumoniae, H.influenzae and S.pyogenes. Multi-Drug Resistant Organisms (MDROs) in children were commonly observed and presented higher drug resistance than sensitive strains. The rates of carbapenem resistant K.pneumoniae (CRKP), A.baumannii (CRAB) and P.aeruginosa (CRPA), and Methicillin resistant S.aureus (MRSA) were 19.7%, 46.4%%, 12.8% and 35.0%, respectively. Those of CRKP, CRAB and CRPA strains all showed a decreasing but fluctuating trend between 2015 and 2020. Compared with those of non-neonatal patients, carbapenem resistance Enterobacteriaceae (CRE) and CRPA posed the potential threaten to neonates. MDROs showed a very high level of antimicrobial resistance and

became the potential threaten to children, suggesting that effective monitoring and controlling of the antimicrobial resistance among children are thus required in China

PU-4348

PLUNC could inhibit the migration and invasion of NPC cells through inhibiting the activation of the Wnt/β-catenin signaling pathway

Meilin Chen[1]、yuqin yang[1]、yanbing qiu[1]、yijun liu[1]、yumei huang[1]、zhicheng wang[1]、xiayu li[1]、ying liu[1]、qing zhou[1]、ge gao[1]、chaoyang zeng[2]、wei xiong[2]、guiyuan li[2]、wenling zhang[1]
1. The Third Xiangya Hospital of Central South University
2. 中南大学肿瘤研究所

Objective To study whether PLUNC could regulate the migration and invasion of nasopharyngeal carcinoma (NPC) through Wnt/β-catenin signaling pathway and provide more sufficient evidence for PLUNC as a candidate tumor suppressor gene for NPC.
Materials and Methods NPC cell lines (5-8F and HNE2) were transiently transfected with overexpressed PLUNC and shRNA PLUNC plasmids. The scratch test and the transwell test were used to detect the migration and invasion ability of NPC cells. Western blot was used to detect the expression of key molecules of EMT and Wnt/β-catenin pathway, then the key molecules of EMT and Wnt/β-catenin pathway were detected after Wnt pathway inhibitor XAV-939 was added to NPC cells. Immunofluorescence test and western blot were also used to detect the expression of β-catenin protein in the NPC nucleus.
Results PLUNC could inhibit the migration and invasion ability of NPC cells and the key molecules'expression in EMT and Wnt/β-catenin pathway in NPC cells. The expression of β-catenin in the nucleus and p-GSK-β, β-catenin, TCF4, Twist, MMP9 protein decreased after overexpressing PLUNC, while the expression of β-catenin in the nucleus and p-GSK-3β, β-catenin, TCF, Twist, and MMP9 protein increased significantly after interference PLUNC expression. Moreover, XAV-939 reinforce the tumor inhibition ability of PLUNC. Immunofluorescence test suggested that PLUNC could inhibit β-catenin into the nucleus of NPC cells, but the result was opposite after interference with the expression of PLUNC.
Conclusion PLUNC inhibited the migration and invasion of NPC cells through inhibiting the activation of the Wnt/β-catenin signaling pathway.

PU-4349

Construction and application of a miRNAs prognostic risk assessment model of gastric cancer

Shuang Shi
The Second Hospital of Shandong University

Objective To identify microRNAs (miRNAs) biomarkers related to the prognosis of gastric cancer patients, and construct a miRNA risk assessment model for survival prediction.
Methods The miRNA expression profile of gastric cancer patients and relevant clinical data were obtained from the Cancer Genome Atlas (TCGA) database. Differentially expressed miRNA were identified with "DESeq2" package. The miRNA related to prognosis were screened with univariate Cox regression and Kaplan-Meier analysis, which were analyzed with multivariate Cox regression to construct a prognostic risk assessment model. A receiver operating characteristic (ROC) curve was drawn with "time ROC" package to evaluate the effectiveness of the model. Finally, the messenger RNAs (mRNAs) that miRNA might bind to were predicted with online database, and

the possible functions were predicted with gene ontology (GO) and Kyoto Encyclopedia of Genes and Genomes (KEGG).
Results With log2 |Fold Change |＞1 and P＜0.05 as the standards, 248 differentially expressed miRNA in gastric cancer tissues were identified. Univariate Cox regression and Kaplan-Meier analysis screened out 6 differentially expressed miRNA which had significant correlation with prognosis to construct a prognostic risk assessment model. The risk score =0.04835 × miR-181b-1 + 0.11206 × miR-548d-1 + 0.06800 × miR-675 + 0.07587 × miR-708 + 1.17521 × miR-4640 + 0.08989 × miR-4709. Kaplan-Meier analysis showed patients with high risks had a poor prognosis (P＜0.001). The area under the ROC curve (AUC) of the 5-year overall survival rate was 0.776, indicating the model was able to predict the prognostic risk. GO and KEGG analysis showed miRNA were involved in a few signaling pathways of gastric cancer.
Conclusion A miRNAs prognostic risk assessment model was successfully constructed based on bioinformatics analysis, which was proved by Kaplan-Meier analysis and ROC curve to have good prediction effects on the survival of gastric cancer patients.

PU-4350

Pyroptosis, Metabolism and Tumor Immune Microenvironment

Tiantian Du
The Second Hospital of Shandong University

In response to a wide range of stimulations, host cells activate pyroptosis, a kind of inflammatory cell death (ICD) which is provoked by the cytosolic sensing of danger signals and pathogen infection. In manipulating the cleavage of gasdermins (GSDMs), researchers have found that gasdermin proteins serve as the real executors and the deterministic players in fate decisions of pyroptotic cells. Whether inflammatory characteristics induced by pyroptosis could cause damage the host or improve immune activity is largely dependent on the context, timing and response degree. Here, we systematically review current points involved in regulatory mechanisms and the multidimensional roles of pyroptosis in several metabolic diseases and the tumor microenvironment (TME). Targeting pyroptosis may reveal potential therapeutic avenues.

PU-4351

RNA-Seq Profiling of Serum Exosomal Circular RNAs Reveals Circ-PNN as a Potential Biomarker for Human Colorectal Cancer

Yan Xie
The second hospital of Shandong University

Circular RNAs (circRNAs) are emerging as cardinal areas of focus in the non-coding RNA field. Growing evidences have revealed exosomal circRNAs as potential biomarkers for detection of various cancers. However, the clinical importance of most serum exosomal circRNAs in colorectal cancer (CRC) have rarely been investigated. In this study, we examined the possible clinical application of serum exosomal circRNAs in the diagnosis of CRC. Firstly, we conducted RNA sequencing (RNA-seq) analysis using fifty CRC and fifty healthy control serum samples to identify CRC-related circRNAs. The sequencing data showed 122 differentially expressed circRNAs including 100 up-regulated and 22 down-regulated circRNA transcripts in CRC patients. Then, eight most dysregulated circRNAs were selected for validation by reverse transcription-quantitative polymerase chain reaction (RT-qPCR) assay. Validation analysis revealed that the

serum exosomal circ-PNN (hsa_circ_0101802) levels were significantly up-regulated in CRC cases compared with those in the healthy control groups. Receiver operating characteristic curve (ROC) analysis suggested that circ-PNN had significant value in CRC diagnosis with areas under the ROC curve (AUC) of 0.855 and 0.826 in the training and validation sets, respectively. We also found that the AUC of serum exosomal circ-PNN for early-stage CRC was 0.854. Finally, a network map based on circ-PNN was constructed to determine its potential miRNA-mRNAs binding. We also demonstrated that the expression of hsa-miR-6833-3P, hsa-let-7i-3p and hsa-miR-1301-3P were negatively correlated with circ-PNN in CRC patients. Collectively, our findings indicated that serum exosomal circ-PNN might be a potential non-invasive biomarker for the detection of CRC and may play a crucial role in the pathogenesis of CRC.

PU-4352

A m6A-mediated LNPPS suppresses tumorigenesis of bladder cancer via regulating the PDCD5/p53/MDMD2 signaling pathway

Yifan Wang
The Second Hospital, Cheeloo College of Medicine, Shandong University

Long non-coding RNAs (lncRNAs) play critical roles in tumor initiation and progression. However, little is known about the functional role of lncRNAs in the p53-related tumor inhibition. Here, through transcriptomic profiling analysis of primary bladder cancer (BC) tumor and adjacent non-tumor tissues, we discovered a lowly expressed lncRNA, which we named as LNPPS (LncRNA for PDCD5 and p53 stability), could inhibit BC cell viability by inducing programmed cell death 5 (PDCD5)/p53-related apoptosis in vivo and in vitro. Mechanistically, LNPPS, serving as a scaffold, could connect PDCD5 and p53 with nucleotides located at 121 to 251 and 252 to 306 of LNPPS, respectively. Furthermore, LNPPS protected PDCD5 from proteasomal degradation through blocking its K20 ubiquitination. On the other hand, the greatly increased interaction between PDCD5 and p53 displaced p53 from Mouse double minute 2 homolog (MDM2)-p53 ubiquitination complex, resulting in upregulation of p53 and the related apoptosis level. Moreover, LNPPS could induce the accumulation of PDCD5 and p53 in nucleus and plays a synergistical effect on protein degradation. Finally, we confirmed that the suppressed LNPPS was mediated by the lower level of m6A modification. To conclude, our present findings highlighted the suppressive role of LNPPS in BC tumorigenesis via the regulation of PDCD5-p53-MDM2 axis, suggesting its great potential to serve as effective therapeutic target for patients with BC.

PU-4353

The value of NLR as a marker of renal damage in patients with H type hypertension

Zhenni Chen[1,2]、Biqiong Ren[1,2]
1. The second people's Hospital of Hunan Province
2. 湖南中医药大学临床医学院

Objective To explore the relationship between neutrophils to lymphocyte ratio (NLR) and renal function impairment in patients with H-type hypertension, and to reveal the clinical application value of NLR.
Methods 618 hypertension patients were divided into two groups according to the level of serum Hcy: the hyperhomocysteinemia group (Hcy ≥ 15 μmol/L) and the non-H hypertension group (Hcy < 15 μ mol/L). The glomerular filtration rate was calculated by CKD-EPI equation suitable for

Chinese population. The total leukocyte count (WBC), neutrophil value (n), neutrophils to lymphocyte ratio (NLR), estimated glomerular filtration rate (eGFR), and the level of serum Creatinine, Uric acid, Urea between the two groups were compared. Meanwhile, HHcy group was divided into HHcy-L group (15 ≤ Hcy < 20 μ mol/L) and HHcy-H group (Hcy ≥ 20 μ mol/L). Compared with non-H type hypertension group, according to WBC, NLR level three quantile interval, each group was divided into WBC low value, middle value, high value group and NLR low value, middle value, high value group, for statistical analysis.
Results 1) there were significant differences in Cr, Urea, UA and eGFR between HHcy group and non-H type hypertension group ($P < 0.001$); there were no significant differences in WBC and neutrophil absolute values between HHcy group and non-H type hypertension group ($P > 0.05$), but there were significant differences in NLR ($P < 0.01$); 2) There was no correlation between WBC and renal injury in HHcy group and non-H hypertension group ($P > 0.05$). NLR was significantly correlated with renal injury in HHcy-L group and HHcy-H group ($P < 0.05$, $P < 0.01$); 3) The results of ROC curve analysis showed that in HHcy-H group, when NLR was 2.247, Jordan index was the highest (0.3962), corresponding sensitivity was 0.7746, specificity was 0.6216, area under ROC curve was 0.6799 [95% CI (0.4610, 0.7594)]; 4) linear regression analysis showed that eGFR in HHcy-L group was negatively correlated with serum NLR level ($r = - 0.185$, $P < 0.05$), There was a significant negative correlation between eGFR and NLR in HHcy-H group ($r = - 0.430$, $P < 0.001$); 5) logistic regression analysis showed that the risk of renal injury increased by 10% ($P < 0.001$) for each 1 μ mol/L increase of Hcy, and 51% ($P < 0.05$) for each 1.0 increase of NLR in HHcy-H group.
Conclusion the degree of renal injury in HHcy patients is significantly higher than that in non-H type hypertension patients. NLR can be used as a marker of renal injury in H-type hypertension patients except for renal function index. However, the WBC and neutrophil does not have such a suggestive effect. NLR should be included in the blood routine test report as an important index.

PU-4354

A rare case of Aspergillus terreus Endogenous Endophthalmitis in a Nonimmunocompromised Patient and Laboratory Research

Ying Zhao
Peking Union Medical College Hospital

Background Aspergillus terreus is a common soil saprophyte which is also clinically important, causing infections ranging from superficial infections, such as onychomycosis, to invasive aspergillosis (IA) in severe immunocompromised hosts. Endophthalmitis caused by A. terreus is rarely reported in the literature. We report a case of endogenous endophthalmitis caused by A. terreus in a nonimmunocompromised patient with hypertension, taking regular medications and blood pressure controlled in the normal range, but without prior intraocular eye surgery or history of immunosuppression.
Material/**Methods** A vitreous biopsy was taken for culture and direct smear microscopy and further identified the isolate from culture positive plates by phenotype observation and molecular Methods In vitro antifungal susceptibility test were done by Etest.
Results Fungal spores and septate hyphae were found in vitreous direct smear (Figure 1). Tiny hair-like colonies grew on SDA after 7days' culture but the colony morphology is still atypical after 10 days' culture (Figure 2). We found attached spores by using scotch tape to stick the colonies on the side to (Figure 3). After 2 times generation (nearly a month), the strain showed typical colony (Figure 4) and microscopic morphology (Figure 5). The isolate was final identified as A. terreus according to morphology and the results of phenotypic and molecular identification. The isolate's MICs (μg/mL) to itraconazole, voriconazole, amphotericin B were 0.25, 0.125, and 2, respectively.

Conclusions Early diagnostic and therapeutic vitrectomy is useful for obtaining sufficient samples for organism identification and also to reduce organism load and inflammatory mediators in the eye. Timely reporting the results of direct smear to clinical physician is very meaningful for the initial selection of antimicrobial agents. For the phenotype atypical but clinical important filamentous fungi, using ITS sequence analysis and other molecular identification Methods can help to identify the fungal pathogen promptly.

PU-4355

Successful treatment of plantar warts using topical Zijinding, a traditional Chinese medicine preparation: A case series

Ying Zhao
Peking Union Medical College Hospital

Introduction Plantar warts are associated with high transmissibility and morbidity. Among the available therapeutic options, none is uniformly effective or virucidal. Salicylic acid is the first-line therapy but approximately one-third of lesions could not resolve and become recalcitrant despite repeated treatment. Cryotherapy is widely accessible with low cost but may be complicated by pain, blister formation, hemor- rhage, infection, excessive granulation tissue formation, and hyper -/hypo-pigmenta- tion. Hence, alternative treatment modalities are essential.

Methods Three patients with debilitating plantar warts refractory or intolerant to cryotherapy were treated with a course of Zijinding (a traditional Chinese medicine preparation) paste prepared with white vinegar.

Results All three patients showed excellent clinical response with Zijinding applica- tion with evolution of lesions to scabs and subsequently healthy skin within 1.5 to 5 months of treatment. Treatment was well tolerated and had no significant side ef- fects with excellent compliance recorded for all three patients. There was no relapse for at least 10 months after stopping the treatment.

Conclusion Topical Zijinding could be a promising alternative modality for the treat- ment of plantar warts. Further clinical trials on the comparison of Zijinding and other treatment modalities of plantar warts are warranted. Further studies are required to investigate the mechanism of action of Zijinding and to isolate the active ingredient. KEYWORDS plantar warts, traditional Chinese medicine, Zijinding

PU-4356

Etiological Analysis Of Pemphigus Complicated With Infection

Ying Zhao
Peking Union Medical College Hospital

Background Pemphigus is a group of potentially lethal autoimmune blistering skin diseases. It is characterized by the production of pathogenic autoantibodies directed against different proteins of the desmosome, leading histologically to intraepidermal cleavage, and clinically to vesicles and erosions on the epithelium of the mucous membranes and/or the skin. Patient usually needs long-term treatment with glucocorticoids and immunosuppressants, which increasing the risk of

infection. In order to understand the infection situation of pemphigus patients, explore the etiology of infection, the clinical data of 76 patients with pemphigus in our department were analyzed retrospectively.
Materials/**Methods** 76 cases of pemphigus from Jan 2017 to Nov 2019 and their clinical microbiological examination results were analyzed retrospectively.
Results 164 specimens (including 53 wound secretion, 30 respiratory tract specimen, 11 midstream urine, 17 oral swab,10 pus, 10 throat swab, 5 peripheral blood, et al) were sent to clinical microbiology laboratory for etiological examination. 178 strains (including 76 gram positive bacteria, 55 gram negative bacteria, 46 fungi, 1 mycobacterium) were isolated from these specimens. The most common gram positive bacteria are Staphylococcus aureus (30), Coagulase negative Staphylococcus (22,including 14 Staphylococcus epidermidis), and Enterococcus faecalis (4). The most common gram negative bacteria were Klebsiella pneumoniae (12), Pseudomonas aeruginosa (11), Escherichia coli (6) and Acinetobacter baumannii (6). The most common fungi were Candida spp.(42, including 17 Candida albicans, 8 Candida tropicalis, 5 Candida parapsilosis). 5 patients got bloodstream infection and all of them were condition improved and discharged because of timely and effective treatment. One patient got multiple infection with Pseudomonas aeruginosa in the pus and his blood and Listeria monocytogenes in his blood and CSF.
Conclusions Pemphigus is often complicated with infection, which has been reported previously. Most often infection was skin and mucous membrane infection, followed by lung infection and urinary tract infection. In this study, skin infection was the most infection, Staphylococcus aureus and yeast from the colonization bacteria of skin and mucous membrane are the most common pathogens. Infection control is the key point of pemphigus treatment, and early detection of special infection is of great significance to reduce mortality.

PU-4357

TRPV6 promotes breast cancer metastasis by upregulating ADAMTS6

xiang xu、jun wu
Shanghai General Hospital Jiading Branch, Shanghai Jiao Tong University School of Medicine, Shanghai

Objective Calcium signaling plays important roles in cell adhesion, migration and invasion of tumor cells. However, the mechanism is still indistinct. This study aims to explore the effect of cellular calcium on breast cancer cell metastasis and reveal the intrinsic mechanism.
Methods First, we measured cellular calcium concentration in breast cancer cells with stable calcium channel TRPV6 over-expression. Wound healing and Transwell assay were then operated in breast cancer cells with stable TRPV6 over-expression and low-expression. The cellular location of NFATC2 was detected in breast cancer cells with stable TRPV6 over-expression by Western blot and immunofluorescence. The target genes of NFATC2 were predicted in website BioUML. The wound healing and Transwell assay were performed to evaluate the cell migration ability.
Results Kaplan–Meier analysis of the effect of TRPV6 mRNA expression on the overall survival of breast cancer patients revealed that TRPV6 is closely associated with poor prognosis in patients with breast cancer. Activation of calcium channel TRPV6 promoted migration and invasion ability of breast cancer cells. NFATC2, whose cellular location was regulated by cellular calcium concentration, transferred from cytoplasm to nucleus followed by TRPV6 over-expression in breast cancer cells. Moreover, the expression of ADAMTS6, one of the target genes of NFATC2, increased in high expression of TRPV6 in breast cancer cells. Meanwhile, the expression of ADAMTS6 is correlated positively with the migration ability of breast cancer cells.
Conclusion These observations suggested that TRPV6 promotes breast cancer metastasis by upregulating ADAMTS6.

Application of Next-generation sequencing in the differential diagnosis of Dubin-Johnson syndrome

Jianfeng Shen[1]、wenbing yue[1]、sumin yang[1]、jing li[2]、min zhang[1]
1. Zhengzhou Jinyu Clinical Laboratory Co., Ltd.
2. 新郑市人民医院

Objective To analyze the genetic etiology of a patient with clinical manifestations of jaundice, yellow sclera, persistent hyperbilirubinemia, hyperplastic anemia suggested by bone marrow smear and suspected diagnosis of Dubin-Johnson syndrome by pathological biopsy, and to sort out the idea of differential classification of hyperbilirubinemia.
Methods Proband peripheral blood genomic DNA target capture all exons group which application of next-generation sequencing through bioinformatics data analysis , compare to our database of the general population, evaluate correlation between genes and disease by OMIM database and HPO, literature search by by HGMD literature database pro, select the possible pathogenic mutations. At the same time, bioinformatics software was used to predict the function of the variation and the conserved variant was evaluated. Finally, Sanger sequencing was conducted to verify the suspected pathogenicity variation in the family.
Results High-throughput sequencing results showed that the protestors with clinical manifestations of hyperbilierythroxin carried ABCC2 gene p. Glu647* and p.Arg1210Leu, Sanger sequencing confirmed that their parents carried ABCC2 gene variation. The proband carried a complex heterozygous variant of ABCC2 gene, which was mutually trans, and was consistent with the genetic pattern of Dubin-Johnson syndrome (AR). Mother, sister and older son had a heterozygosity with p.Glu647* and a father and younger son had a heterozygosity with p.Arg1210Leu. According to the guidelines of the Clingen Working Group on Interpretation of Sequence Variations, the p.Glu647* mutation was determined to be pathogenic and could theoretically cause Loss of function (through meaningless-mediated mRNA degradation or premature termination of encoded amino acid sequences) leads to disruption of the protein translation process, truncated protein production and loss of biological function p.Arg1210Leu is an unknown mutation of clinical significance, which has not been included in domestic and foreign literatures. The ABCC2 gene variant p.Arg1210Leu carried by the patient and p.Glu647* constituted a complex heterozygosity. p.Arg1210Leu was located in the ABCC2 protein domain and the site was very conserved which may affect the function of ABCC2 gene.
Conclusion The ABCC2 gene p.Glu647* and p.Arg1210Leu are the suspected pathogenic causes of this patient, and the mutation of p.Arg1210Leu was found for the first time in Dubin-Johnson syndrome.

PU-4359

Transcription factor AR regulates prostate cancer 3D genome

Xiaoyu Liu、haiyang guo
The second hospital of shandong university

Background Chromatin organization is critical in the regulation of tumor-specific gene expression. Transcription factor AR plays an important role in prostate cancer development, but there is a lack of AR function in the prostate cancer 3D genome organization.
Aims To determine the function and mechanism of AR in prostate cancer 3D genome
Methods Computational prediction was used to assess the potential of AR in the formation of liquid condensate via phase separation. AR ChIP-Seq was used to determine the enrichment of genomic binding at the regions that were important for three-dimensional interaction of chromatin.

Prostate cancer cells and PDXs were utilized to investigate the function of AR. AR HiChIP assay was performed to access the role of AR in the regulation of genomic three-dimensional interaction. LLPS experiments were conducted to determine the phase separation ability of intrinsically disordered region (IDR) in AR protein. We further assessed the capability of AR IDR in regulating prostate cancer specific chromatin three-dimensional interaction by CRISPR/Cas9-induced knock-in mutations at AR IDR.
Results AR protein has a strong IDR domain; The AR IDR domain is required for the prostate cancer-specific chromatin interaction; The AR IDR domain is also required for the formation of liquid condensate via phase separation; AR-associated chromatin loops regulate prostate cancer-specific gene expression.
Conclusion Based on these findings, we proposed that AR mediates the remodeling of high-order chromatin architecture and oncogene expression in prostate cancer by liquid-liquid phase separation (LLPS).

PU-4360

Genetic Study of an X-linked Agammaglobulinemia pedigree caused by an BTK mutation

Chenxi Wei[1]、Rujing Yang[2]、Xiaogeng Yuan[1]、Shihui Yu[3]、Jianping Qin[1]、Xinxian Tian[2]、Min Zhang[1]
1. Zhengzhou KingMed Center for Clinical Laboratory
2. 郑州大学第三附属医院（河南省妇幼保健院）
3. 广州金域医学检验中心有限公司

Background X-linked agammaglobulinemia (XLA) is a gamma globulin deficient, X linked recessive disorder. XLA is characterized by failure to produce mature B lymphocytes and be associated with a failure of Ig heavy chain rearrangement. The clinical feature shows recurrent bacterial infections in affected males in the first two years of life. The most common infection before diagnosis is recurrent otitis and virus infection can't be found. XLA is known to be associated with Bruton tyrosine kinase (BTK), also known as ATK or BPK. The defective BTK impairs early B-cell development in XLA, resulting in a significant reduction of mature B cells in peripheral blood. This study was designed to research the genetic pathogenesis of agammaglobulinemia in a family with two young patients who had repeated infection, which might benefit for both clinical diagnosis and family counseling.
Methods Data were collected from the patients' family including: clinical information, blood immune globulin level, as well as classification and subgrouping of B lymphocytes. Gene mutations were screened with whole exome sequencing (WES) and guideline through next-generation sequencing (NGS), verified with Sanger sequencing.
Results The IgG/IgA/IgM levels of two sick children were significantly lower than those of the girl with similar age and their mother in family. Flow cytometry result showed that numbers of CD19+ B lymphocytes were obviously lower than girl and their mother in family. A novel causative variant BTK NM_000061:c.1627T>C (p.Ser543Pro) was found in the family pedigree by WES. Two patients had this hemizygous variant, 5 female family members carried heterozygous variant with no phenotype and other members not detected. The phenotype and variant were co-segregated in family. This variant was not found in massive population database, such as gnomAD, ESP6500 etc. The variant located in the kinase domain which was not associated with benign variants, variant location close to Ser543 had been reported to be pathogenic or likely pathogenic. Most of the bioinformatical analyses predicted this variant as deleterious in biological function and the REVEL score was as high as 0.841. The decrease of immunoglobulin, reduction of B lymphocytes and mode of inheritance of disorder in patients are well defined phenotype matching with the XLA clinical diagnosis guideline.
Conclusion Based on results and guideline, BTK NM_000061:c.1627T> C (p.Ser543Pro) was found retrospectively to be a pathogenic variant. The patients were diagnosed as XLA. The

pathogenic variant should be the major cause of XLA in these patients´ pedigree. Our finding could provide fertility guidance for this family's members.

PU-4361

Association between ABO blood groups and clinical outcome of coronavirus disease 2019: Evidence from two cohorts

Weixiao Fan、Xianfei Zeng
Xi'an area medical diagnostic lab center

Objective To examine the correlation between blood type distribution and SARS-CoV-2 infection, progression, and prognosis of COVID-19.
Methods Two retrospective cohorts diagnosed with COVID-19 were enrolled in this study between February 5 and March 20, 2020. The first cohort comprised patients with mild symptoms admitted in three hospitals in Xi'an, Beijing, and Wuhan. The second cohort comprised critically ill patients from the two hospitals in Xi'an and Wuhan. COVID-19 was defined according to the World Health Organization interim guidance. COVID-19 was confirmed by a positive real-time reverse transcriptase polymerase-chain-reaction test of SARS-CoV-2 on nasal and pharyngeal swab specimens from suspected patients.
Continuous variables were expressed as median (25th and 75th percentiles), while categorical variables were expressed as percentages. The Mann–Whitney U-test or the Kruskal–Wallis test, as appropriate, were used to compare the medians of continuous variables between or among groups. Categorical data were tested using a $\chi 2$ test or Fisher's exact test. The unadjusted associations of ABO blood type and SARS-CoV-2 infection, development of ARDS or AKI, and death were tested separately among the cohorts using Pearson's $\chi 2$ test. Odds ratios (ORs) and 95% confidence intervals (CIs) were calculated to describe the possible effect on the occurrence and development of COVID-19. Statistical analyses were performed using SPSS (version 22.0) for Windows. A p-value of <0.05 was considered significant.
Given the limitations of a single factor analysis, we used multivariable logistic regression to further adjust the association of ABO blood type with occurrence of ARDS, AKI, or death for potential confounders, including the common risk factors of age, sex, pre-existing pulmonary disease, history of cardiovascular disease, diabetes mellitus, hypertension, and chronic kidney disease in the critical cohort. The history of diabetes mellitus was selected as a crucial confounder that needs to be adjusted because diabetes was reported to be protective against the development of ARDS, but as a risk factor for AKI and death.
Results The proportion of blood group A in patients with COVID-19, being 35.76% in the mild cohort and 39.22% in the critical cohort, was significantly higher than that in the reference population ($p=0.000$ and $p=0.005$, respectively). These results imply that the blood group A population may be more vulnerable to SARS-CoV-2 infection. In addition, blood type A was associated with increased risk of SARS-CoV-2 infection compared with the non-A blood type, with an OR value of 1.40 (1.01-1.96) and 1.63 (1.10-2.42) in the mild and critical cohorts, respectively. However, similar results were not obtained for B and O blood types. These observations further demonstrated that the blood group A population may be more susceptible to SARS-CoV-2 infection. Besides, age was associated with a higher risk for ARDS, AKI and death while blood type distribution was not a relevant factor of ARDS, AKI, and mortality in COVID-19 patients.
Conclusion The current retrospective study of two cohorts confirmed that blood type A populations are more susceptible to SARS-CoV-2 infection. Additionally, our study identified that age is a risk factor for the development of ARDS or death in critically ill patients with COVID-19. However, the outcomes including ARDS, AKI, and death are poor irrespective of ABO blood group distribution in critically ill patients with COVID-19.

PU-4362

Determination of CR-HvKP and Hv-CRKP by mouse lethality test

Dakang Hu
Huashan Hospital, Fudan University

Objective To investigate epidemiology of carbapenem-resistant hypervirulent Klebsiella pneumoniae (CR-HvKP) and their traits.
Methods Totally 436 Klebsiella pneumoniae (K. pneumoniae) strains were collected from 7 hospitals in mainland China between 2017.01 and 2018.02. Sequencing types, serotypes, antibiotic-resistance gene (blaKPC) and virulence genes (wzy-K1, allS, entB, irp2, iroN, iucA, fimH, mrkD, p-rmpA2, c-rmpA, p-rmpA and peg-344) were analyzed among 436 strains. Additionally, string test, capsule stain, Periodic Acid Schiff stain, fitness analysis, quantitative real-time PCR and mouse lethality test were also performed.
Results Diverse detection rates were found for the 13 virulence genes, ranging from c-rmpA (0.0%) to entB (100.0%). According to molecular criteria, 127 (29.1%), 186 (42.7%), 9 (2.1%) and 26 (6.0) strains were putatively denoted as HvKP, blaKPC(+)-KP, blaKPC(+)-HvKP and Hv-blaKPC(+)-KP. Mouse lethality test confirmed 2 blaKPC(+)-HvKP strains (JS184 and TZ20) and none Hv-blaKPC(+)-KP. JS184 showed K2 serotype, thin capsule, positive exopolysaccharides and string test. TZ20 presented K20 serotype, thin capsule, negative exopolysaccharide and string test. Compared with the positive control NTUH-K2044, qRT-PCR confirmed equal manC and galF expressions, growth curves in JS184 and TZ20.
Conclusions Molecular determination of CR-HvKP and Hv-CRKP brings remarkable bias compared with mouse lethality test. The exact prevalence of CR-HvKP is slight, which of Hv-CRKP is slighter.

PU-4363

UHRF1 ameliorates podocyte injury in mice with adriamycin-induced focal segmental glomerulosclerosis

Quanxin Li
Department of Clinical Laboratory, The Second Hospital of Shandong University

Focal segmental glomerulosclerosis(FSGS) is a common glomerular disease in children andadult nephrotic syndrome(NS) and it is one of the main causes of end stage renal disease(ESRD). Podocyte injury is the main pathological manifestation of FSGS. Recently, studies have shown that UHRF1 is involved in the development of renal disease. Epigenetic regulator UHRF1 is a regulator of DNA methylation and histone ubiquitination, and plays a important role in embryonic development and tumor genesis, but its role in kidney disease is poorly understood. Our previous work confirmed that the expression of UHRF1 in FSGS podocytes significantly decreased and aggravated podocyte injury, and the overexpression of UHRF1 significantly reduced podocyte apoptosis and inhibited the expression of Notch1. This study explores the role and regulation mechanism of UHRF1 in FSGS.
Methods In this study, the role of UHRF1 in FSGS podocyte injury and the molecular regulation mechanism of autophagy signaling pathway in podocytes were studied deeply by means of constructing podocyte UHRF1 knockout mice using Cre-loxP technology.Furthermore, the overexpression of UHRF1 by adeno-associated virus as a vector was further explored as a preliminary treatment for FSGS.
Results The expression of UHRF1 was decreased in renal tissues of FSGS, knockout of UHRF1 could further aggravate adriamycin-induced renal injury, overexpression of UHRF1 could alleviate podocyte injury in FSGS, and UHRF1 could regulate podocyte injury by regulating autophagy of

podocytes. In FSGS, the absence of UHRF1 aggravates podocyte injury by regulating podocyte autophagy, and UHRF1 may be a potential target of FSGS therapy.

PU-4364

Risk factors and mortality for patients with Bloodstream infectious of Carbapenem resistance Klebsiella pneumoniae in a tertiary hospital in southern China

Yili Chen、Yao Chen、Pingjuan Liu、Zhongwen Wu、Penghao Guo、Kang Liao
The First Affiliated Hospital of Sun Yat-sen University

Background Recently, bloodstream infection (BSI) caused by Klebsiella pneumoniae (KP), especially carbapenem-resistant KP (CRKP), results in higher and higher morbidity and mortality. We sought to explore the risk factors of mortality and evaluate existing therapy.
Methods A total of 274 patients with KP-BSI who were treated in the First Affiliated Hospital of Sun Yat-sen University from 1 January 2018 to 31 December 2020 were enrolled in the study. We divide patients into the carbapenem-sensitive group and the carbapenem-insensitive group according to the drug sensitive test about carbapenems to identify the risk factors related to the CRKP-BSIs. The outcome was defined as death within 28days since the first positive blood culture, survivor and nonsurvivor subgroups were compared to explore the predictors of mortality.
Result In this study, 242 patients suffered CSKP-BSI and 32 CRKP-BSI. We found CRKP infection were independently associated with cardiovascular disease (OR: 6.475, 95%CI: 1.373-30.525, P=0.018), the empirical use of cephalosporins (OR: 4.452, 95%CI: 1.183-16.744, P=0.027), pathogen isolated from other parts (OR: 4.667, 95%CI: 1.234-17.651, P=0.023), the department of patients when KP isolation (OR: 24.447, 95%CI: 5.257-113.702, P<0.001). Additionally, we found that carbapenems resistance (OR: 3.564, 95%CI: 1.096-11.586, P= 0.035), admission to ICU (OR: 5.935, 95%CI: 2.141-16.451, P=0.001) were independent risk factors for the death of KP BSI by comparing clinical and demographic characteristics of survivor and nonsurvivor.
Conclusion Our findings may be helpful for the reduction of the mortality of patients with KP BSI and the prevention of developing CRKP BSI in hospitals.

PU-4365

Evaluation of a commercial immunoassay for autoantibodies in Chinese Han systemic sclerosis population

Chenxi Liu、yongzhe li
Peking Union Medical College Hospital

Objective Systemic sclerosis (SSc) is a systemic autoimmune disorder that leads to vasculopathy, tissue fibrosis, and production of autoantibodies. A lack of reliable biomarkers has been a challenge for clinical diagnosis of the disease. To undertake this challenge, we employed a protein array-based approach to identify and validate SSc-specific autoantibodies using a previously described a two-phase strategy.
Methods Phase I involved profiled autoimmunity using HuProt arrays (20,240 human proteins) with 90 serum samples collected from the following subjects: 40 patients with SSc, 30 patients diagnosed with autoimmune conditions such as rheumatoid arthritis (RA; n = 6), systemic lupus erythematosus (SLE; n = 7), Sjögren's syndrome (SS; n = 7), dermatomyositis (DM; n = 5), polymyositis (PM, n = 5), and 20 healthy subjects. Bioinformatics analysis allowed us to identify

113 candidate autoantigens that were significantly associated with SSc. To validate these candidates in Phase II, we constructed a focused array with 113 identified antigens, and used this to profile a much larger cohort comprised of serum samples collected from 400 patients with SSc, 160 patients with autoimmune conditions, 40 chronic disease controls, and 100 healthy controls. Finally, we used Western blot analysis to validate the serum of validated proteins with high signal values (>3 standard deviations of the mean compared to the healthy group).
Results This two-phase strategy allowed us to identify and validate small nuclear ribonucleoprotein polypeptide A (SNRPA) as a novel SSc-specific serological biomarker. The observed positive rate of anti-SNRPA antibody in patients with SSc was 11.25%, which was significantly higher than that of any disease control group (3.33%) or healthy controls (1%). The elevated activity of anti-SNRPA in the sera of patients with SSc was further validated with traditional Western blotting.
Conclusion In conclusion, anti-SNRPA autoantibody serves as a novel biomarker for SSc diagnosis and may be promising for clinical applications, especially as a good supplementary marker in the clinical applications of anti-Scl-70 antibody.

PU-4366

Association of GTF2I, NFKB1, and TYK2 Regional Polymorphisms with Systemic Sclerosis in a Chinese Han population

Chenxi Liu、yongzhe li
Peking Union Medical College Hospital

Objectives Systemic sclerosis (SSc) is an uncommon autoimmune disease that varies with ethnicity. Single nucleotide polymorphisms (SNPs) in the GTFSI, NFKB1, and TYK2 genes have been reported to be associated with SSc in other populations and in individuals with various autoimmune diseases. This study aimed to investigate the association between these SNPs and susceptibility to SSc in a Chinese Han population.
Method A case-control study was performed in 343 patients with SSc and 694 ethnically matched healthy controls. SNPs in GTF2I, NFKB1, and TYK2 were genotyped using a Sequenom MassArray iPLEX system. Association analyses were performed using PLINK v1.90 software.
Result Our study demonstrated that the GTF2I rs117026326 T allele and the GTF2I rs73366469 C allele were strongly associated with patients with SSc (P = 6.97E-10 and P = 1.33E-08, respectively). Patients carrying the GTF2I rs117026326 TT genotype and the GTF2I rs73366469 CC genotype had a strongly increased risk of SSc (P = 6.25E-09 and P = 1.67E-08, respectively), and those carrying the NFKB1 rs1599961 AA genotype had a suggestively significantly increased risk of SSc (P = 0.014). Moreover, rs117026326 and rs73366469 were associated with SSc in different genetic models (additive model, dominant model, and recessive model) (P < 0.05) whereas rs1599961 was associated with SSc in the dominant genetic model but not in the addictive and recessive models (P = 0.0026). TYK2 rs2304256 was not significantly associated with SSc in this study.
Conclusion GTF2I rs117026326 and rs73366469 SNPs were strongly associated with SSc in this Chinese Han population. NFKB1 rs1599961 showed a suggestive association with SSc, and no significant association was found between TYK2 rs2304256 and SSc in this Chinese Han population.

PU-4367

Several Genetic Variants Associated with Systemic Sclerosis in a Chinese Han Population

Chenxi Liu、yongzhe li
Peking Union Medical College Hospital

Background Systemic sclerosis (SSc) is a connective tissue disease with ethnic differences. Single-nucleotide polymorphisms (SNPs) in the ARID3A, CXCR5 and TNFSF8 genes have been reported to be associated with various autoimmune diseases. The aim of this study was to investigate the association between these SNPs and susceptibility to SSc in a Chinese Han population.
Methods A case-control study was conducted in 343 patients with SSc and 694 ethnically matched healthy controls. SNPs in ARID3A, CXCR5 and TNFSF8 were genotyped using a Sequenom MassArray iPLEX system, and allele association analyses were performed using the PLINK v1.90 software.
Results Our study demonstrated that the ARID3A rs10415976 G, CXCR5 rs77871618 T and TNFSF8 rs1555457 T alleles were suggestively associated with patients with SSc (P = 0.049, P = 0.024 and P = 0.003, respectively). Patients carrying the ARID3A rs350146 TT and TNFSF8 rs1555457 TT genotypes had a significant increased risk of SSc (P = 0.03 and P = 0.004, respectively). Moreover, rs10415976, rs77871618 and rs1555457 were associated with SSc in an additive genetic model (P < 0.05). rs62132345 and rs1555457 were associated with SSc in the dominant genetic model (P < 0.05). rs350146 was associated with SSc in the recessive genetic model (P = 0.029).
Conclusions ARID3A rs10415976, ARID3A rs350146 and CXCR5 rs77871618 were suggestively associated with SSc and TNFSF8 rs1555457 was strongly associated with SSc in the Chinese Han population in this study.

PU-4368

A meta-analysis of genome-wide association studies for Sjögren's syndrome identified novel loci and ansestral-specific effects

Chenxi Liu、yongzhe li
Peking Union Medical College Hospital

Sjögren's syndrome (SS) is a common autoimmune disease with a strong genetic background. To systematically identify susceptibility loci of SS, we combined four genome-wide association studies (GWAS) and performed a meta-analysis of GWAS. The subjects were mainly East Asian and European. We identified the susceptibility loci (Pmeta < 5e-8) across the major histocompatibility complex (MHC) class I, III and II regions and found HLA-C in MHC class I and EHMT2 in MHC class III as new susceptible loci for SS. Some of the MHC loci showed population heterogeneity between East Asia and Europe. We identified 12 non-MHC loci associated with SS, including FCGR2A, STAT4, IL12A, PTTG1, PRDM1, IKZF1, IRF5, BLK, DDX6-CXCR5, IQGAP2, GTF2I and TNIP1. The first 9 loci were significant in all subjects, the next 2 loci were significant in East Asia, and the last locus was significant in Europe. The four loci (FCGR2A, PTTG1, PRDM1 and IQGAP2) were novel for SS. Ingenuity pathway analysis (IPA) was performed, and the results showed that most molecules were involved in pathways such as the cellular immune response and humoral immune response, while the differences in pathways and networks between East Asia and Europe were small. Our study provided the overall susceptible loci of SS.

PU-4369

Intranasal immunization with a rNMB0315 and combination adjuvants induces protective immunity against Neisseria meningitidis serogroup B in mice

Zhenyu Li
Hengnan People's hospital

Objective Neisseria meningitidis (N. meningitidis) is a human-specific pathogen and a major cause of meningitis and septicemia with a high case fatality rate. N. meningitidis may penetrate the nasopharyngeal mucosal membrane and cause severe meningitis, a mucosal immune response plays a key role in the defense against meningococcal infections. Our previous study demonstrated that N. meningitidis serogroup B 0315 (NMB0315) was a vaccine candidate against N. meningitidis serogroup B (NMB) through parenteral immunization. In this study, immunopotentiators (C48/80 or CpG-ODN) were loaded into chitosan nanoparticle (Chi NP) to form combination adjuvants (Chi-CpG NP and Chi-C48/80 NP) and adopted to enhance the immunogenicity of NMB0315 through intranasal immunization.
Methods Transmission electron microscopy (TEM) was used to observe the morphology, the particles's zate potential and polydispersity index by Zetasizer Nano-ZS. The female BALB/c mices were intranasally immunized with rNMB0315+Chi-C48/80 NP, rNMB0315+Chi-CpG NP and the serum, nasal washes and vaginal washes samples were collected to detect the rNMB0315 specific serum antibodies IgG, IgG1 and IgG2a, as well as sIgA antibody levels in vaginal wash and nasal wash by indirect ELISA. Splenic lymphocyte cultured supernate was used to detect the levels of cytokine IFN-γ, IL-4 and IL-17A by using ELISA kits according to the manufacturer's instructions. The bactericidal titer of the immune serum was detected by serum bactericidal assay (SBA) and the immune protective effect was investigated with the recombinant protein vaccine in vivo.
Result TEM analysis showed that the Chi-CpG NP and Chi-C48/80 NP were spherical, with an average mean diameter of 150~200 nm; zeta potential were 11.25±0.052mv and 19.54±0.069 mv; polydispersity index were 0.286 and 0.415, respectively. In addition, rNMB0315 loading efficacy on nanoparticles, Chi-C48/80 NP(85.5％) was higher than Chi-CpG NP (71.2％) . The Chi-CpG NP and Chi-C48/80 NP are effective mucosal adjuvants for the induction of significantly higher rNMB0315-specific IgG, IgG1, IgG2a and sIgA antibodies. Meanwhile, Chi-CpG NP and Chi-C48/80 NP could change the ratio of IgG1/IgG2a, inducing a more balanced cellular/humoral immune response. Chi-CpG NP and Chi-C48/80 NP also boosted interleukin-4 (IL-4), interferon-γ (IFN-γ) and interleukin-17 A (IL-17A) production by splenocytes, showing that Th1 and Th2, Th17 cells were induced in vivo. At day 42, the serum bactericidal titers of rNMB0315 group, rNMB0315+Chi-CpG NP group and rNMB0315+Chi-CpG NP group reached 1:2, 1:4 and 1: 8 respectively, the protection rates of the three groups were 60%, 75% and 85% respectively against the N. meningitidis strain MC58.
Conclusion The combination adjuvants could be applicable to the development of a mucosal vaccine against Neisseria meningitides serogroup B (NMB).

PU-4370

Epidemiology of and risk factors for mortality due to carbapenemase-producing organisms (CPO) in healthcare facilities

Shengyuan Zhao[1,2]、Sharon Kennedy[3]、Meghan Perry[4]、Julie Wilson[5]、Margo Chase-Topping[6,7]、Eleanor Anderson[8]、Mark Woolhouse[2,9]、Michael Lockhart[3]

8. NHS Greater Glasgow and Clyde, Glasgow, UK
9. Centre for Immunity, Infection and Evolution, School of Biological Sciences, University of Edinburgh, Edinburgh, UK

Aim To evaluate clinical and molecular epidemiology and mortality associated with CPO among patients in Scotland since its first report in 2003.
Methods All CPO from clinical and long-term healthcare surveillance cultures across Scotland in 2003-2017 were reviewed retrospectively. Polymerase chain reaction was used to detect genes coding for carbapenemases. A generalized linear mixed model was used to identify risk factors for mortality.
Results In total, 290 individuals with CPO were identified. The overall incidence increased over time (P<0.001) from 0.02 to 1.38 per 100,000 population between 2003 and 2017. A total of 243 distinct CPO isolates were obtained from 269 isolations in 214 individuals with available metadata. The majority of the isolates were Enterobacterales (206/243, 84.8%), and Klebsiella pneumoniae (65/206, 31.6%) and Enterobacter cloacae (52/206, 25.2%) were the most common species. VIM (75/243, 30.9%) and NDM (56/243, 23.0%) were the most common carbapenemases. The crude 30-day mortality rate was 11.8% (25/211), while the case fatality rate was 5.7% (12/211). Age >60 years [adjusted odds ratio (aOR) 3.36, 95% confidence interval (CI) 1.06-10.63; P=0.033], presence of non-fermenters (aOR 4.88, 95% CI 1.64-14.47; P=0.005), and systemic infection or organ failure (aOR 4.21, 95% CI 1.38-12.81; P=0.032) were independently associated with 30-day mortality.
Conclusion The incidence of CPO in Scotland is low but increasing. Awareness is required that inpatients aged >60 years, patients with systemic infection or organ failure, and patients presenting with non-fermenters are at higher risk of death from CPO.

PU-4371

Changes of ER, PR and HER-2 status during the treatment of breast cancer patients and their clinical significance

Linzhang Li、Xueying Yu、Ying Cai、Chengwu Han、Jun Shen、Yongtong Cao
Department of Laboratory Medicine, China-Japan Friendship Hospital

Objective For initial diagnosis of early breast cancer patients, in the original site before and after neoadjuvant chemotherapy, use recurrence of a transfer transfer of ER, PR, HER-2 state for data statistics and analysis, to observe the above index expression level whether there are differences in different periods, and analysis the ER, PR, HER-2 state change with neoadjuvant therapy efficacy and long-term prognosis, in order to provide more reference for the clinical treatment of breast cancer.

Methods It was collected that basic data, uncture pathology and postoperative pathology data, treatment plan and process, efficacy evaluation and follow-up data of 153 cases of breast cancer patients treated at the tumor center of our hospital on March 1, 2009 and December 31, 2018. Statistical software SPSS 22.0 was used to analyze the changes of ER, PR and HER-2 status in the treatment of breast cancer, and to analyze the changes of molecular expressions of breast cancer during preoperative neoadjuvant chemotherapy and disease recurrence, as well as their effects on the efficacy and prognosis.

Results Among the 63 patients receiving preoperative neoadjuvant chemotherapy, the expression level of ki-67 after neoadjuvant chemotherapy was lower than that before neoadjuvant chemotherapy, and the difference was statistically significant, while the difference of ER, PR and HER-2 was not statistically significant. Among the 90 patients initially diagnosed with at least one recurrence and metastasis at early stage, the changes of ER, PR and HER-2 status before and after recurrence and metastasis were statistically significant ($P<0.001$). Among the 90 patients with breast cancer recurrence and metastasis, the survival analysis results indicated that the tumor ER status and tumor size were the factors affecting DFS, and the difference was statistically significant ($P<0.05$). Among the 90 patients with breast cancer recurrence and metastasis, ER status, HER-2 status and Ki-67 expression were independent risk factors affecting DFS ofbreast cancer patients ($P<0.05$), and ER status was independent risk factor affecting OS of breast cancer patients ($P<0.05$).

Conclusion After neoadjuvant chemotherapy, the expression level of ki-67 was significantly lower than before, and preoperative ER, PR and HER-2 were not related to the efficacy of neoadjuvant therapy. In patients with breast cancer recurrence and metastasis, the ER, PR and HER-2 states of the recurrence lesions were changed compared with the states of the original lesions, in which the PR was mainly changed from positive to negative.

PU-4372

Small mixtures reveal a diagnostic new vision——three cases associated with APTT mixing study

Yuna Du、Boqing Wu、Zhengyu Xie、Chen Yiguo、Li Rong*
Jiangxi Provincial People's Hospital

Mixed test is a test method by mixing the plasma of patients with the mixed plasma of normal people according to the specific proportion, and then re-testing the relevant items. The procedure of the APTT mixing study consists of a 1:1 mixture of patient plasma and normal mixed plasma to detect APTT immediately or after incubation, and obtained seven values of APTT, respectively are APTT1-7.

Evaluation of results mainly depends on the values of APTT3, APTT6 and APTT7. If APTT3, APTT6, and APTT7 are all corrected, means the patient has a deficiency of clotting factors, doesn't have the inhibitor. If APTT3 and APTT7 are corrected, APTT6 minus APTT7 exceeds 3 seconds, it indicates the presence of time and temperature dependent inhibitor. If APTT3 and APTT7 are uncorrected, APTT6 minus APTT7 doesn't exceed 3 seconds, indicates the presence of inhibitor, but the inhibitor isn't time and temperature dependent. If APTT6 minus APTT7 exceed 3 seconds, it suggests the inhibitor is time and temperature dependent. In addition, we can also use the correction results of immediate or incubation mixed plasma as a diagnostic auxiliary index, which named as Rosner Index(RI). When RI less than 10% indicates the absence of factors, exceeds 15% indicates the presence of coagulant inhibitors.

Next, we'll confirm the clinical significance of APTT mixing study through several cases.

Case 1, a patient with prolonged APTT, results of the APTT mixing study showed APTT3, APTT6 and APTT7 were uncorrected, Rosner Index was greater than 15%, and APTT6 minus APTT7 exceeded 3 seconds, suggesting the presence of time and temperature dependent inhibitor. The activity of coagulation Factor 8 was only 0.6%, and the inhibitor was 487BU, so the diagnosis is Hemophilia A with inhibitor, needed to be treated with recombinant coagulation factor 7.

Case 2, a patient with abnormal APTT, APTT mixing study results were uncorrected, which is similar to the results in Case 1. The activity of coagulation factor 9 was only 0.1%, and the activity of coagulation factor 11 and 12 were also affected. The amount of coagulation factor 9 inhibitor was about 8BU. Therefore, the diagnosis is Hemophilia B with inhibitor and the treatment of this patient also required recombinant coagulation factor 7.
Case 3 is a patient who admitted to hospital with broken bone, preoperative examination showed abnormal APTT. So we carried out the APTT mixing study to explore the reason, results showed a decrease in activity of coagulation factors 8, 9, 11 and 12. After dilution of patient's plasma, the activity of these coagulation factors increased slightly, the content of lupus anticoagulant is 1.88. So the final diagnosis is lupus anticoagulant positive patient.

In conclusion of above 3 cases, we find APTT mixing study is simple and easy in operation and needn't special condition. But obviously, the clinical significance of APTT mixing study is very helpful for diagnosis and treatment. Therefore, it's worth popularizing this mixing study, especially in grassroots units.

PU-4373

Comprehensive analysis of the aberrant lncRNA-miRNA-mRNA network associated with Lung adenocarcinoma

Jing Wang
Yantai Yuhuangding Hospital

Background Recently, there has been enlarged attention in lncRNAs owing to their varied functions in cancers. A growing studies have reported that lncRNAs exercise roles in tumors by functioning as miRNA sponges or competing endogenous RNAs (ceRNAs) cooperate with miRNAs to connect with mRNA. However, it is not clear that functional roles and regulatory mechanisms of lncRNA-intervened ceRNA in lung adenocarcinoma (LUAD), and their use for potentially predicting the prognosis of LUAD.
Methods The expression profiles of mRNA, lncRNA of 535 LUAD sample tissues and 59 adjacent non-tumor lung tissues, and miRNA expression information of 521 LUAD sample tissues and 46 adjacent no tumor lung tissues were achieved from the The Cancer Genome Atlas (TCGA) database. Meanwhile, Gene Ontology (GO) analysis were performed using DAVID database and R/Bio conductor package of GO plot, KEGG pathway analysis were performed using R packages RSQLite and org.Hs.eg.db, visualized using Cytoscape software.
Results We identified a total of 1665 lncRNA, 127 miRNA, and 2503 mRNA as differentially expressed profiles. We constructed an aberrant lncRNA-mRNA-miRNA ceRNA network in LUAD, it was composed of 140 DElncRNA, 22 DEmiRNA, and 36 DEmRNA. According to the overall survival analysis, 36 out of 140 lncRNA, 16 out of 33 mRNA, and 2 out of 22 miRNA functioned as prognostic biomarkers for patients with LUAD (P value < 0.05). We got he top five GO and KEGG pathway significant enrichment and targeting mRNA of 36 DEmRNA associated with LUAD.
Conclusion Taken above, using integrated bioinformatics analysis, we have identified lncRNA-related ceRNA network in LUAD, which could improve our understanding of the cause and underlying molecular events, and these candidate genes and pathways could be therapeutic targets for LUAD.

PU-4374

Identification of potential genes with prognostic value in smoking Lung Adenocarcinoma by bioinformatics analysis.

dajie zhou
Yantai Yuhuangding Hospital

Background Lung adenocarcinoma occupies the majority of NSCLC. Smoking is one of the most important factors leading to lung cancer. While it is far to know that the signal pathway and driven genes in smoking lung adenocarcinoma.
Methods In this study, we extracted 433 samples of smoking lung adenocarcinoma and 75 cases of non-smoking lung adenocarcinoma from the Cancer Genome Atlas (TCGA) database. Gene Ontology (GO) analysis were performed using DAVID database and R/Bio conductor package of ggplot2, KEGG pathway analysis were performed using KEGG online database and R packages RSQLite and org.Hs.eg.db. Differential expressed genes in smoking and non-smoking lung adenocarcinoma were candidate genes and GO/KEGG enrichment analyzed.
Results We identified a total of 374 mRNA were differentially expressed (|log2 fold change| ≥2.0 and $P < 0.01$). A total of 71 mRNA were down-regulated, 303 mRNA were up regulated. Then, these differentially expressed genes contain 28 significant Go functions ($P< 0.05$) and 11 significant enrichment KEGG pathways ($P< 0.05$). Then, we matched 238 proteins of the 374 different expression genes in the PPI network. We got one most significant module in the PPI network, containing 30 proteins correlated to smoking lung adenocarinoma. The survival analysis of these genes encoding proteins revealed that three proteins, HIST1H4A, HIST1H2BF and HIST1H2BO, were significantly associated with survival status. These proteins belong to histone family, histone modification acts on a variety of biological processes.
Conclusion These data suggested that these three genes may be used as therapeutic targets and diagnostic biomarkers of smoking lung adenocarcinoma.

PU-4375

Inhibin B expression in Head and Neck Cancer tissues and correlation with tumor immune cell infiltration

Ying Wu[1]、Nuoya Ma[1]、Yuanyuan Wu[1]、Qing Zhu[1]、Min Xu[2]、Gouying Zou[1]
1. 湖南省第二人民医院检验科
2. 湖南省第二人民医院病理科

Objective To investigate the expression of inhibin B(inhibin B, INHB) α subunit (inhibin α, INHA) and βB subunit (inhibin βB, INHBB) in Head and Neck Cancer tissues and the relationship with tumor immune cell infiltration.
Methods The expression levels of INHA and INHBB in Head and Neck Cancer tissues and their correlation with clinicopathologic indicators were analyzed clearly by Oncomine and UALCAN database. The survival curve of INHA and INHBB expression in patients with Head and Neck Cancer was plotted by Kaplan-Meier Plotter, and the relationship between INHA, INHBB and tumor immune cell infiltration was detected with TIMER database. The degree of INHA and INHBB expression in nasopharyngeal carcinoma tissues and chronic nasopharyngitis tissues was verified by immunohistochemistry. In the meantime, the relationship between INHBB and clinicopathologic indicators was also analyzed.
Results Compared with normal tissues, the expression of INHA and INHBB was significantly higher in Head and Neck Cancer tissues. Analysis of the UALCAN database showed that INHA expression was extremely associated with clinical stage, tumor grade, and lymphatic metastasis, while INHBB was only associated with clinical stage and tumor grade. The overall survival (OS) and recurrence-free progression (RFS) were significantly shorter in patients in high INHA and

INHBB expression group than that in low expression group ($p < 0.05$). At the same time, INHA and INHBB also promoted the invasion of tumor immune cells ($p < 0.05$), and the expression of INHA and INHBB in Head and Neck Cancer was related to each other(partial. cor = 0.282, P = 1.94 e-10), which were examined via TIMER database. Immunohistochemistry results showed there was no significant difference in INHA expression and INHBB had a low expression in nasopharyngeal carcinoma tissues, when compared with chronic nasopharyngitis tissues. In addition, the expression of INHBB was associated with lymphatic metastasis ($p = 0.001$) and clinical stage ($p = 0.026$) in nasopharyngeal carcinoma.

Conclusion Data mining based on multiple databases found that INHA and INHBB are highly expressed in Head and Neck Cancer tissues than that in normal tissues, but transcriptional expression of INHA in nasopharyngeal carcinoma tissues is not significantly different from that in chronic nasopharyngitis tissues, and INHBB is underexpressed in nasopharyngeal carcinoma tissues, which indicates that the expression of inhibin B could be heterogeneous in different diseases. It is also related to clinicopathologic parameters, which could be expected to be potential biomarkers for diagnosis and prognosis as well as immunotherapeutic targets of Head and Neck Cancer in the future.

PU-4376

IFNγ/PD-L1 signaling improves the responsiveness of anti-PD-1 therapy in colorectal cancer-an in vitro study

Wenli Yuan[1]、Deyao Deng[1]、Hanyu Li[1]、Xinghui Hu[1]、Xueqin Shang[1]、Xia Hou[1]、Hongchao Jiang[2]、Hongchun He[1]

1. The second hospital of Yunnan Province
2. The Kunming Children's Hospital

Programmed cell death 1 ligand 1 (PD-L1) can be upregulated on cancer cells via interferon gamma (IFNγ) in the tumor microenvironment. IFNγ/PD-L1 signaling is associated with the response to immune checkpoint blockade in melanoma patients. Our previous investigation indicated that the microsatellite instability-high (MSI-H) cell line might exhibit selective hyperresponsiveness to IFNγ treatment, which contributes to increased PD-L1 expression and may be a mechanism of response to anti-PD-1 therapy in colorectal cancer. The present study evaluated the expression of PD-L1 in a set of MSI and microsatellite stability (MSS) cell lines with IFNγ treatment. The differential signaling molecules associated with signal transducer and activator of transcription (STAT) contributing to hyperresponsiveness to IFNγ exposure were also investigated. Furthermore, we established a coculture assay containing CT26 cells with higher expression of PD-L1 and peripheral blood mononuclear cells (PBMCs) in vitro. Changes in cancer cell viability as well as apoptosis status in response to anti-PD-1 therapy were demonstrated. We further observed changes in the percentage of CD4+ and CD8+ lymphocytes after PD-1 immunotherapy in the coculture assay. Finally, the average extent of inflammation and adaptive immunity factors in the assay was also investigated. This in vitro study revealed that the MSI cell line might exhibit hyperresponsiveness to IFNγ exposure, and IFNγ induced upregulation of PD-L1 mainly through increased STAT1 and decreased STAT3 signaling. IFNγ/PD-L1 signaling participated in the response to anti-PD-1 therapy mainly through the CTL profile. Our findings reinforce previous knowledge of the fact that the response to immune checkpoint blockade occurs mainly in patients with a preexisting intratumoral IFNγ/PD-L1 signal, thus suggesting potential therapeutic strategies to enhance responsiveness to PD-1 blockade immunotherapy in most patients with colorectal cancer.

PU-4377

Fibrinogen Clauss and prothrombin time derived method ratio can differentiate dysfibrinogenemia from hypofibrinogenemia and hyperfibrinogenemia

Meiling Luo、Liqun Xiang、 Jie Yan、Lin Liao、Yangyang Wu、Xuelian Deng、Donghong Deng、Peng Cheng、Faquan Lin
The First Affiliated Hospital of Guangxi Medical University

Objectives To determine whether the ratio of Fibrinogen Clauss and prothrombin-time–derived method (FgClauss/PT-der or FgPT-der/Clauss) can distinguish congenital dysfibrinogenemia (CD) from hypofibrinogenemia and hyperfibrinogenemia.
Methods The Clauss, prothrombin-time–derived method, and other coagulation tests were assessed in a total of 220 people, 66 CD patients, 54 hypofibrinogenemia patients, 50 hyperfibrinogenemia patients, and 50 normal control subjects. All of the indexes were derived from measurements obtained using an ACL-TOP 700 Coagulation Analyzer. The fibrinogen Clauss and prothrombin-time–derived method ratio was also calculated.
Results FgClauss in the CD group significantly decreased than that in the other groups (P=0.000). However, there was no statistically significant difference between the FgPT-der of the CD group and that of the normal control group (P=0.99). FgClauss/PT-der was significantly lower (P=0.000) and FgPT-der/Clauss significantly higher (P=0.000) in the CD group than in other groups. The area under the ROC curve of FgClauss/PT-der for diagnosis of CD was 1, and the optimal critical diagnosis point was 0.47. When the FgClauss/PT-der was < 0.47, the sensitivity and specificity for the diagnosis of CD were 100% and 100%,respectively. The area under the ROC curve of FgPT-der/Clauss for diagnosis of CD was 1, and the optimal critical diagnosis point was 1.7. When the FgPT-der/Clauss was > 1.7, the sensitivity and specificity for the diagnosis of CD were 100% and 100%, respectively.
Conclusion Fibrinogen Clauss and the prothrombin-time–derived method ratio can be considered an ideal index to distinguish congenital dysfibrinogenemia (CD) from hypofibrinogenemia and hyperfibrinogenemia.

PU-4378

Combined ERK and MK2 inhibition exerts synergistic antitumor activity and overcomes acquired drug resistance in pancreatic cancer

Qing Wei[1]、Qiong Li[1]、Min Li[2]
1. Renji Hospital, School of Medicine, Shanghai Jiaotong University
2. 上海交通大学医学院附属仁济医院

Introduction Pancreatic cancer is one of the most aggressive solid malignancies, marked by aberrant activation of signaling through the RAS-RAF–MEK–ERK (MAPK) pathway. Targeting the MAPK pathway terminal master kinases (ERK1/2) is currently a promising approach investigated in clinical trials in different types of cancers. Ulixertinib is an ERK1/2 kinase inhibitor with potent antineoplastic activity.
Methods Firstly, we measured cytokine profiles using a PCR array to investigate the pathways that were activated by MEK or ERK inhibition in PDAC cells. Flow cytometry analysis and western blot were performed to discovery the contribution of TNFα/TNFR1 signaling and its main downstream pathways to determining cell fate. Then MAPKAPK2 (MK2) was knocked down by shRNA and apoptosis was detected in shMK2 versus WT cells following treatment with Ulixertinib by flow cytometry analysis. Combination index was performed to examine the effect of combined

inhibition of ERK/MK2 signaling on growth suppression in PDAC cells. Furthermore, the mechanism by which TNFα was activated by ERK inhibition was explored using reverse phase protein array (RPPA) pathway mapping and then confirmed by qPCR analysis. Finally, mice bearing xenograft tumors were treated with combined inhibitors of ERK/MK2 to analyze tumor regression.
Results We demonstrated that Ulixertinib can significantly trigger the expression and release of tumor necrosis factor-alpha (TNFα) in PDAC cells. TNFα can transduce distinct signaling pathways leading to either apoptosis or survival. The downstream MK2/Hsp27 was targeted for cell survival. Then we revealed that combined inhibition of ERK and MK2 exerted synergistic anti-tumor activity both in vitro and in vivo. Mechanistically, TAK1 activation is involved to mediate TNFα activation.
Conclusion We conclude that combination of pharmacologic inhibitors that concurrently block both ERK and MK2/HSP27 axis has therapeutic potential against PDAC and it should be evaluated in a preclinical and clinical studies.

PU-4379

Development of a Loop-mediated Isothermal Amplification Assay for the Rapid Detection of Six Common Respiratory Viruses.

Nianzhen Chen
Shanghai East Hospital, School of Medicine, TongJi University

Purpose Due to the highly contagious and spreads quickly of respiratory infectious diseases (ADR), the availability of rapid, sensitive, and reliable diagnostic Methods is essential for disease control. Here, we develop an approach based on loop-mediated isothermal amplification (LAMP) for the detection of influenza A virus (Flu A), Flu A subtypes H1N1and H3N2, influenza B virus (Flu B), respiratory syncytial virus (RSV) subtypes A and B, human adenovirus (HAdV), parainfluenza virus (PIV) subtypes 1 and 3, and human rhinovirus (HRV) simultaneously.
Methods We designed primers specific to detect respiratory viruses above, optimized the RT-LAMP assay, and evaluated it for its sensitivity and specificity of detection using real-time monitoring based on SYBR - Green I. We also evaluated the result of our RT-LAMP assay on 638 nasopharyngeal (NP) swab specimens collected from padiatric patients were signs and symptoms of respiratory infection with the commercial RT-PCR by Cohen's Kappa. The samples with inconsistent results between RT-LAMP and RT-PCR were verified by Sanger sequencing.
Results The developed RT-LAMP assay displayed a detection limit of 1×102 copies/ml RNA close to that of RT-PCR, no cross-reactivity was observed in the 10 kinds of viruses studied. The results obtained with 638 clinical samples indicate that the developed method has high specificity (0.988 - 1) and sensitivity (0.863 - 1) for viruses studied, and the Kappa value of all viruses were more than 0.85 revealed an excellent agreement between the two Methods To further demonstrate the advantage of the RT-LAMP assay, in the collected specimens, the antigens of Flu A and Flu B also were detected by commercial Colloidal Gold kit, only 85 and 131 were detected as Flu A and Flu B positive respectively. In meeting the demand of rapid diagnosis, compared to the RT-PCR, we note that the κ value of RT-LAMP for Flu A and Flu B were 0.881 and 0.927 respectively, while the values of the commercial Colloidal Gold kit were only 0.813 and 0.700 respectively. Also, the sensitivity of commercial Colloidal Gold kit was lower than the RT-LAMP, resulting in many positive specimens being missed.
Conclusions we developed a RT-LAMP-based method, optimized for the detection of common respiratory viruses. It will be a powerful tool for rapid and reliable clinical diagnosis of ADR in primary hospitals.

PU-4380

Evaluation of a rapid and simplified protocol for direct bacterial identification from positive blood cultures by using matrix assisted laser desorption ionization time-of-flight mass spectrometry (MALDI-TOF MS)

Yufeng Dai、Chuanhao Jiang
The second xiangya hospital of central south university

Early and rapid identification of microorganisms is critical for reducing the mortality rate caused by bloodstream infections (BSIs). The accuracy and feasibility of directly identifying pathogens in positive blood cultures by matrix assisted laser desorption ionization time-of_x0002_flight mass spectrometry (MALDI-TOF MS) has been intensely confirmed. In this study, we combined density centrifugation and extra chemical lysis-extraction to develop an optimized method in the blood culture process, which significantly improved the effectiveness of direct identification by MALDI-TOF MS. The accuracy was evaluated by 2,032 positive blood culture samples (115 species of microorganism). The overall MALDI_x0002_TOF MS based identification rate with scores ≥ 1.700 was 87.60%. 94.06% of gram_x0002_negative bacteria were identified consistently to the genus level, followed by anaerobes (93.33%), gram-positive bacteria (84.46%), and fungi (60.87%). This protocol could obtain results within 10–20 min at a cost of less than $0.1 per sample, which saved up to 24 h in identifying 87.60% of the microorganism from positive blood cultures. This rapid and simplified protocol facilitates the direct identification of microorganism in positive blood cultures, and exhibits the advantages of cost-effective, time-saving, and easy-to-use. It could provide the causative organism of the patient to clinicians in time for targeted treatment and reduce mortality.

PU-4381

Immunodominant regions prediction of nucleocapsid protein for SARS-CoV-2 early diagnosis: a bioinformatics and immunoinformatics study

Yufeng Dai、Hongzhi Chen、Lingli Tang
The second xiangya hospital of central south university

COVID-19 caused by SARS-CoV-2 is sweeping the world and posing serious health problems. Rapid and accurate detection along with timely isolation is the key to control the epidemic. Nucleic acid test and antibody-detection have been applied in the diagnosis of COVID-19, while both have their limitations. Comparatively, direct detection of viral antigens in clinical speci-mens is highly valuable for the early diagnosis of SARS-CoV-2. The nucleocapsid (N) protein is one of the predominantly expressed proteins with high immunogenicity during the early stages of infection. Here, we applied multiple bioinformatics servers to forecast the potential immunodominant regions derived from the N protein of SARS-CoV-2. Since the high homology of N protein between SARS-CoV-2 and SARS-CoV, we attempted to leverage existing SARS-CoV immunological studies to develop SARS-CoV-2 diagnostic antibodies. Finally, N229-269, N349-399, and N405-419 were predicted to be the potential immunodominant regions, which contain both predicted linear B-cell epitopes and murine MHC class II binding epitopes. These three regions exhibited good surface accessibility and hydrophilicity. All were forecasted to be non-allergen and non-toxic. The final construct was built based on the bioinformatics analysis, which could help to develop an antigen-capture system for the early diagnosis of SARS-CoV-2.

PU-4382

Epidemic and pathogenic characteristics of Parvovirus B19 in Kidney Transplant Recipients in China

Qian Huang、yanan wang、xiaowei ma、Min Li
Renji Hospital Affiliated to Shanghai Jiaotong University School of Medicine

Parvovirus B19 (B19V) is a human pathogen that can cause a variety of diseases. B19V infection may persist in immunosuppressed patients, especially in kidney transplant (KT) recipients, who are unable to respond effectively to humoral or cellular immunity. There is a lack of the epidemiological studies on the course and clinical characteristics of B19V infections in KT recipients. By characterizing infections caused by B19V in KT recipients in Shanghai, China, we found that the infection rate of B19V in KT recipients was high (10.17%), which can cause anemia, lymphopenia, liver and kidney function damage. Due to the lack of adequate protective antibodies, immunodeficient patients are still at risk of secondary infection. All the B19V isolates detected in this study belonged to type Ⅰa. The genetic relationship of these B19V strains was very close, indicating that there is an epidemic of B19V in the hospital environment. Our present study also showed that B19V exhibits point mutations after a period of infection and the occurrence of point mutations may contribute to the immune escape of B19V, while the mechanism remains to be further studied. In conclusion, the patients with immunodeficiency should be alert to B19V infection, and the combination of symptomatic treatment and intravenous immunoglobulin (IVIG) treatment, coupled with the adjustment of the use of immunosuppressants, can effectively control B19V infection.

PU-4383

Establishment of early diagnosis models for cervical precancerous lesion using cervical cancer screening data sets

Bo Meng
广州金域转化医学院有限公司
昆明金域医学检验所有限公司

Background Human papilloma virus (HPV) DNA test was applied in cervical cancer screening as an effective cancer prevention strategy. The viral load of HPV generated by different assays attracted increasing attention on its potential value in disease diagnosis and progression discovery. TCT test could provide information about cervical lesion stages and infection status. However, neither of the test could provide absolute accurate test result so far. Since nowadays, many patients choose to do both HPV DNA test and TCT test, to combine the most information from both test results could provide more accurate test results compared only from one.
Methods In this study, three HPV testing data sets were retrieved from our data sets and respectively assessed and compared, including Hybrid Capture 2 (HC2) (n=31954), Aptima HPV E6E7 (n=3269) and HPV Cobas 4800 (n=13342). Viral load values generated by each method, bacteria infection status from TCT result and age, ect. were collected as variable factors. Logistic regression models for diagnosing early cervical lesions of the three data sets were established and compared. The best variable factor combination (VL+BV) and dataset (HC2) were used for further six machine learning models establishment. The performance of these models was evaluated and compared, and the best performed model was validated.
Findings Our results showed that viral load value was significantly correlated with cervical lesion stages in all three data sets. Viral Load and Bacterial Vaginosis were the best variable factor combination for logistic regression model establishment, and models based on the HC2 dataset

performed best comparing with the other two datasets. Machine learning method Xgboost generated the highest AUC value of models, which were 0·915, 0·9529, 0·9557, 0·9614 for diagnosing ASCUS higher, ASC-H higher, LSIL higher, and HSIL higher staged cervical lesions, indicating the acceptable accuracy of the selected diagnostic model.
Interpretations Our study demonstrates that HPV viral load and BV status were significantly associated with early stages of cervical lesions, and the best-performed models can serve as a useful tool to help early diagnose cervical lesions. This study is a big data based retrospective analysis study. It not only provide new diagnosing tool for accurate screening cervical cancer but also strongly testified the value of big data set of clinical diagnostic result. More studies were suggested to be carried out on the long time generated data set to discover more valuable findings to help improving clinical diagnostic accuracy.

PU-4384

Genome-Wide lncRNA Microarray Profiling Identifies Novel serum-based lncRNA biomarkers of Triple Negative Breast Cancer

Yongyin He[1]、Bin Xiao[2]、Ting Lei[1]、Zhenzhan Kuang[1]
1. General Hospital of Southern Theatre Command of PLA
2. 清远市人民医院

Background Circulating long non-coding RNAs(lncRNAs) serve as potential serum-based biomarkers for cancer diagonsis. Here, we identified the clinical value and biological function of lncRNA T376626, which could be used for Triple negative breast cancer(TNBC) detection.
Method Genome-wide lncRNA microarray was used to screen promising serum-based lncRNA biomarkers using 12 serum samples of breast cancer with different molecular subtypes and three healthy control. The expression of candidate serum lncRNAs were validated in 190 subjects. The diagnostic value of serum lncRNA T376626 was determined by the receiver operating characteristic(ROC) curve and serum stability experiment. We also evaluated the effect of hypoxia and serum deprivation on the expression of serumlncRNA T376626. RNA Fluorescent In Situ (FISH) and RNAScope ISH assay were conducted to examined the expression and location of lncRNA T376626 in TNBC cells and BC tissue. Kaplan-Meier analysis was conducted to evaluate the relationship between lncRNA T376626 and the overall survival(OS) rate of BC patients. The relationship between lncRNA T376626 expression and clinical pathological characteristic of BC patients were analyzed. CCK8 assay, colon forming assay, wound healing assay and transwell assay were performed to investigate the biological function of lncRNA T376626 in two TNBC cell lines. Cell apotosis, cell cycle and epithelial-mesenchimal transition (EMT) related biomarkers were quantified by western blot. The lncRNA T376626 binding proteins were screened and identified by RNA pulldown and RNA immunoprecipitaton.
Results The serum levels of lncRNA T376626 was significantly higher in TNBC, lower in non-TNBC groups and the lowest in healthy control. The expression of lncRNA T376626 was also increased in BC tissues and cell lines. The higher levels of lncRNA T376626 were found to be associated with higher pathological differentiation stage, more aggressive molecular subtype and poor prognosis of BC patients. ROC curve showed that the area under curve(AUC) was 0.857 and the sensitivity and specificity were 76.50% and 90.60% for lncRNA T376626. Besides, lncRNA T376626 was stable in serum and could be secreted under hypoxic environment. Overexpression of lncRNA T376626 significantly promoted TNBC cells proliferation, migration and invasion possibly through regulating several cell cycle, cell apoptosis and EMT biomarkers. A total of 131 lncRNA T376626-binding proteins were mainly enriched in biological processes such as mRNA splicing, cell adhesion and RNA alternative splicing. Two Laminin subunit, LAMB3 and LAMC2 were further identified to be lncRNA T376626-binding proteins.

Conclusion LncRNA T376626 may serve as a TNBC serum-based diagnostic and prognostic biomarker and play an oncogenic role in TNBC progression

PU-4385

The diagnostic and prognostic value of circulating tumor cells on multiple cancers by imFISH analysis

Xiaowen Dou、Min Li、Dan Xiong、Xiuming Zhang
Shenzhen Luohu People's Hospital

Objective To investigate the clinical value of imFISH on multiple cancers.
Methods A retrospective analysis was performed in Medical Laboratory Centre of Shenzhen Luohu Hospital Group covering from June 2018 to November 2020. A total of 235 cases involving 13 cancers were reviewed. The most confirmed cases were 80 breast cancers, 53 lung cancers, 31 colorectal cancers and other cancers. The correlation was evaluated between CTC analysis by imFISH (the detection rate and enumeration data) and different time periods, clinical stages, as well as the classical tumor biomarkers. Besides, the relationship between nuclear profile of CTCs and clinical prognosis were reviewed.
Results The positive rate of CTCs in all cancers was 65.53%, while the ratio of 81.25% was found in recurrent and metastatic patients. No statistical significance was observed between the untreated group (54.17%) and the treated group (61.79%) ($c2=0.833$, $P=0.361$). The CTC enumeration in two predominate cancers showed the positive rate was 41.25% (33/80) in breast cancers and 73.58% (39/53) in lung cancers and the significant difference with $c2=13.425$, $P<0.05$ was observed. The positive rate in post-treatment of breast and lung cancer was found with a decreased trend. Except for common tumor biomarkers including CEA, CA153, CA125 ($P>0.05$), there were significant differences in the positive rate of CTCs with lesion size, lymph node metastasis, distant metastasis and clinical staging ($P<0.05$). A dynamic CTC monitoring in six cancer patients showed that the characteristics including the nuclear shape and number provided a valuable insight into different stages of disease progression related to the clinical prognosis.
Conclusion The CTCs detection with imFISH is related to clinical characteristics, and the nuclear profile is correlated with clinical prognosis. The detection of CTCs has a certain clinical value in predicting tumor recurrence, metastasis and treatment prognosis.

PU-4386

MicroRNA expression profling after recurrent febrile seizures in rat and emerging role of miR-148a-3p/SYNJ1 axis

Jian Xu、Mingqiang Sun、Xiaodong Li
Maternal and Child Health Hospital of Weifang Medical University

Febrile seizures (FSs) are common neurological disorders in both infants and children, although the precise underlying mechanism remains to be explored, especially in the expression pattern and function of microRNAs (miRNAs). In this report, we aimed to screen new potential miRNAs and examine the role of miR-148a-3p in hippocampal neurons in FS rats via Synaptojanin-1 (SYNJ1). Thirty rats were randomly divided into the normal and FS model groups, which were investigated by miRNA array. This process identifed 31 diferentially expressed (20 upregulated and 11 downregulated) miRNAs and potential miRNA target genes. In addition, hippocampal neurons were assigned into fve groups for diferent transfections. Apoptosis was

detected by TUNEL and fow cytometry. SYNJ1 was identifed as a target gene of miR-148-3p. In vitro experiments revealed that inhibition of miR-148a-3p decreased neuronal cell apoptosis. Moreover, overexpression of miR-148a-3p resulted in activation of PI3K/Akt signaling pathway and the apoptosis of hippocampal neurons. MiR-148a-3p inhibitor could reverse the above events. Taken together, our data demonstrated that the hippocampal miRNA expression profles of a rat model of FS provide a large database of candidate miRNAs and neuron_x0002_related target genes. Furthermore, miR-148a-3p acted as a apoptosis enhcaner via the activation of the SYNJ1/PI3K/Akt signaling pathway, highlighting a potential therapeutic target in the treatment of infants with hyperthermia-induced brain injury

PU-4387

FLT3 internal tandem duplication mutation up-regulates protein tyrosine phosphatase C1-TEN in AML blast

Mansheng Luo、Yan Lin
The Affiliated Ganzhou Hospital of Nanchang University

Context Due to the interactions between C1-TEN and other protein tyrosine kinase, this study aims to explore whether this phosphatase correlates with the FLT3-ITD mutation on AML blast.
Materials and Methods Primary blasts were separated from bone marrow of AML patient, after which qRT-PCR was carried out to detect C1-TEN mRNA. Two AML cell lines, namely HL-60 and MV4-11, were subject to treatments by tyrosine kinase inhibitor Sorafenib and or PKC412 for 18 h, respectively. The sensitivity of these cell lines towards these two TKI was analyzed through MTT, while the expression of FLT3 and C1-TEN was examined via qRT-PCR. Moreover, Western blot was used to analyze C1-TEN and FLT3 activation in terms of translation. In another experiment, CCK-8 assay was employed to assess the effect of C1-TEN suppression on FLT3-ITD phosphorylation of MV4-11.
Results Primary blasts were revealed to highly express C1-TEN in FLT3-ITD mutant AML but moderately in FLT3-WT AML. With respect to TKI sensitivity, HL-60 (FLT3-WT) performed tolerance while MV4-11 (FLT3-ITD) showed obviously sensitive to the TKI tested in this experiment. Another outcome demonstrated that FLT3 mRNA decreased on MV4-11 after both TKI treatments while this phenomenon did not occur on HL-60. Western blot revealed C1-TEN inhibitory effects of these TKI on MV4-11 but not HL-60. In addition, this study turned out that C1-TEN blocking could coordinate with TKI to sensitize MV4-11 cell line, but fail to influence FLT3 activation when used alone.
Conclusion In short, evidenced by the results obtained in this study and related reports elsewhere, we reason that on FLT3-ITD AML blast protein tyrosine phosphatase C1-TEN may be regulated by FLT3-ITD mutation, furthermore contribute to TKI's inhibitory effects, which has not be reported elsewhere till now, even though the mechanism undermining remains to be elaborated.

PU-4388

Effect of sample size and the traditional parametric, nonparametric, and robust Methods on the establishment of reference intervals: Evidence from real world data

Chaochao Ma、Ling Qiu
Department of Clinical Laboratory, Peking Union Medical College Hospital, Peking Union Medical College & Chinese Academy of Medical Science

Sample size and statistical Methods are critical for establishing reference intervals (RIs) but they tend to be overlooked. In this study, we used R (3.6.3) to stratify the reference individuals by sex, and then stratified them using the random sampling method. Fourteen sub-data sets with a sample size of 40, 80, 120, 160, 200, 500, 800, 1000, 1500, 2000, 2500, 3000, 3500, and 4000 were extracted, respectively. The sex ratios of all sub-data sets were 1:1. Transformed parametric (using log transformation), nonparametric, and robust approaches as described in the Clinical and Laboratory Standards Institute guidelines were adopted to establish the RIs and the 90% confidence interval of the thyroid-stimulating hormone (TSH) using data from the sub-data sets. The Bland-Altman plot was used to evaluate the consistency of the upper and lower limits of the RIs established using the three Methods The upper and lower limits of TSH RI tended to be stable starting from the data set with a sample size of 1500. The RIs established using the three Methods were more consistent when using a sample size greater than or equal to 2000

PU-4389

A novel compound heterozygous mutation of MTO1 gene associated with complex oxidative phosphorylation deficiency type 10

Qing Luo、Xia Wen、Jiahong Zhou、Zhiyu Lv、Jinbo Liu
Affiliated Hospital of Southwest Medical University

Background The Mitochondrial tRNA Translation Optimization 1 (MTO1) gene, closely related to defective mitochondrial oxidative phosphorylation, is an evolutionarily conserved protein expressed in high energy-demanding tissues, associated with complex oxidative phosphorylation deficiency type 10 (COXPD10) in humans. While related cases and studies are still scarce and have not been reported in the Chinese region. In this study, we reported the first patient from China carrying a compound heterozygous mutation from each of his parents by whole-exome sequencing technology combined with computer analysis. And bioinformatics software as well as protein constructs were used to predict the pathogenicity of the variants.
Material and Methods Detailed clinical assessment was applied to the patient. Based on next-generation sequencing technology, we performed whole-exome sequencing of patient and parents. Sanger sequencing was used for the validation. And bioinformatics software (SIFT, PolyPhen-2, MutationTaster and Mutation Assessor) to predict the pathogenicity of the variants as well as protein construct ed using SwissModel, which were visualized by the PyMOL software package.
Results The patient was diagnosed with a possible association with mitochondrial disease according to the clinical manifestations and physical examination. A novel frameshift mutation c.344delA (p.Asn115Thrfs*11) and a novel point mutation c.1055C>T (p.Thr352Met) in the MTO1 gene were identified. By predicting biochemical tools that may be pathogenic, they were found to be predisposed to pathogenic potential. The allele frequencies of the two variants in the gnomAD database were much smaller than in the normal population. And the variant c.344delA was categorized as “likely pathogenic” and the variant c.1055C>T was categorized as “uncertain”

according to the ACMG guidelines. The p.Asn115Thr was conserved in the remaining eight speciesm, while p.Thr352Met was conserved in the remaining seven species, while in S. cerevisiae the amino acid site was Ile. The c.344delA (p.Asn115Thrfs*11) variant is a base deletion variant resulting in a frameshift mutation that is predicted to introduce a stop codon after an aberrant sequence of 11 amino acids. The mutation causes early termination of translation of the MOT1 protein and the mutant protein changes from the normal 693 amino acids to 126 amino acids and becomes a truncated enzyme. The c.1055C>T (p.Thr352Met) variant is located in the loop region and changes from a polar uncharged threonine (hydrophilic) T to a non-polar methionine (hydrophobic) M. Most of the loops are located on the surface of protein molecules and contain more hydrophilic amino acids, which have a flexible conformation and can be used as binding sites for proteins as well as catalytic sites for enzymes; this variant may lead to a change in the hydrophilicity of this loop region and thus affect the activity of the enzyme. Two structural domains, MnmG_N (38-435), GidA-ASSOC_3 (438-657), were found when the structure was predicted using Interpro software.

Conclusion We presented two novel and possibly pathogenic variants in the MTO1 gene in a Chinese Han family，which is the first report in China. Although MTO1 related mutations is rare, it is still necessary to screen MTO1 gene in patients with mitochondrial disorders, especially using next generation sequencing technology. The functional validation of the two variants reported here is particularly important, which is what we will subsequently work on.

PU-4390

NDM-1-positive K.pneumoniae at a teaching hospital in southwestern China: Clinical Characteristics, Antimicrobial Resistance, Molecular characterization, Biofilm assay and Virulence

Kai Yang[1]、Shumin Liu[1]、Huanqin Li[2]、Na Du[2]、Jing Yao[2]、Qiuyue He[1]、Yan Du[1]
1. The First Affiliated Hospital of Kunming Medical University
2. Department of Clinical Laboratory, The No. 1 Affiliated Hospital of Yunnan University of Chinese Medicine, Kunming, China

Background The emergence of the NDM-1-positive Klebsiella pneumoniae (K. pneumoniae) strains has led to limited therapeutic options for clinical treatment. Understanding the Clinical Characteristics, Antimicrobial Resistance, Biofilm assayand the virulence genes of these isolated strains is of great significance.

Methods Polymerase chain reaction (PCR)was used to screen isolated NDM-1-positive K.pneumoniae. The clinical information of the patients was collected from medical records. The NDM-1-positiveK.pneumoniaeisolates were subjected to antimicrobial susceptibility testing and multi-locus sequence typing. 60 strains of NDM-1-negative K.pneumoniaeisolated during the same period were collected as the control group for the virulence analysis. The virulence phenotype of the strains were preliminarily evaluated by string testand crystal violet semi-quantitative biofilm formation experiment. PCR combined with gene sequencing was used to detect common high toxicity Capsule genes (K1, K2, K5, K20, K54, K57) and common virulence-related genes (entB, ybtS, ureA, ycf, WabG, FimH, uge, iutA, KfuB, aerobactin, rmpA, magA, Alls, IrnN and VatD).

Results In the 30 non-duplicated NDM-1-positive K.pneumoniaeisolates, 43.33% (13/30) of the patients had a history of a stay in the neonatal intensive care unit (NICU). All of the isolates exhibited multidrug resistance. 9 STs were identified, 77% (10/13) trains from NICU were ST11. NDM-1-positive K.pneumoniaestring testwere all negative, and 35% (21/60) NDM-1-negative K.pneumoniaewere positive. The ratios of NDM-1-positive K.pneumoniaeisolates biofilm formation ability according to strong, medium and weak classification were 67%, 23% and 10%, respectively. NDM-1-negative K.pneumoniaeisolates were 60%, 25% and 15%,

respectively.There was no statistical difference between the two groups (t=0.61, P = 0.2723).The virulence-associated genes with more than 80% of detection rates among the 30 NDM-1-positive K.pneumoniaeisolates included entB(100%, 30/30),ybtS (93.33%, 28/30), ureA(90%, 27/30), ycf(83.33%, 25/30), wabG(90%, 27/30). KfuBandiutAwere detected at prevalence of 3.33% and 13.33%. vatD, allS, iroN, aerobactin,and rmpAwere not detected. In the NDM-1-negative K.pneumoniae, all other 14 virulence genes except VatDwere detected. After statistical analysis, FimH, WabG, ycf, iutA, kfuB, aerobactin, rmpA, and Allsvirulence genes, P <0.005, there was a statistical difference.

Conclusion NDM-1-positive K.pneumoniaeexhibited multidrug resistance, MLST typing is mainly ST11, there is small clonal dissemination in NICU in the hospital, and the NDM-1-positive K.pneumoniaevirulence genes carrier rate is lower thanthe NDM-1-negative K.pneumoniaevirulence genes carrier rate.

PU-4391

Mechanism of circ-0007766 acting as a miRNA sponge to regulate HER2 expression

Yi Zhu
Department of Laboratory Medicine, The Sixth Affiliated Hospital of Guangzhou Medical University, Qingyuan People's Hospital

BACKGROUND & OBJECTIVE Circular RNA(circRNA)， an endogenous non-coding RNA(ncRNA), which is widely found in eukaryotic transcriptome and is closely related to gene expression regulation. As a molecular sponge, circRNA is a supplement to the traditional regulation of gene expression. Many studies have found that the occurrence and development of a variety of tumors are related to circRNA, and the mechanism of circRNA in tumor development has become a hot topic.

METHODS By comparing the circRNA sequencing data of MDA-MB-231 and SK-BR-3 cells, the differentially expressed circRNAs in HER2+ breast cancer were screened out, and the ceRNA regulatory network was selected. QPCR and Western blot were used to preliminarily determine the regulatory relationship. The circRNA-binding proteins were pulled down and analyzed by mass spectrometry, and then verified by WB and RIP experiments. The expression of EMT-related proteins in cells was detected by WB.

RESULTS According to the sequencing results, the circRNA hsa_circ_0007766 significantly overexpressed in HER2-positive breast cancer cells was selected. CIRC_0007766 was highly expressed in breast cancer cell lines.Fluorescence in situ hybridization (FISH) experiments showed that circ-0007766 was mainly localized to the cytoplasm. The results of qPCR and WB showed that circ_0007766 could regulate ERBB3 and ERBB4 in the ERBB family. CircRNA pull down assay showed that circ-0007766 could pull down proteins associated with epithelial mesenchymal process (EMT).

CONCLUSIONS The expression of circRNA circ-0007766 in breast cancer cells is significantly higher than that in normal breast cells, especially in HER2+ breast cancer cells, which can regulate the expression of the erbB family and bind to EMT-related proteins to affect the process of EMT.

PU-4392

EDTA plasma is suitable for measurement of B-type natriuretic peptide on the mindray CL-6000i

Wei Zhao、Yongtong Cao
china-japan friendship hospital

Background and aims The differences of B-type natriuretic peptide (BNP) concentration and stability are controversial among different BNP immunoassays. In this study we explored the BNP differences and stability and evaluated BNP accuracy in different collection tubes on the mindray CL-6000i.
Methods A prospective study was performed on 36 patients at Jinzhai District People's Hospital. BNP concentrations in heparin/glass, EDTA/glass and EDTA/PET tube were measured at 0.5h, 1h, 2h and 4h after sample collection. The differences were evaluated by Wilcoxon's paired test and Bland–Altman plot. The stability was estimated by Kruskal-Wallis H test. The BNP accuracies were investigated by recovery test.
Results BNP concentrations in EDTA/glass tube were mean 31.4% higher than those in heparin/glass tube, and similar with those in EDTA/PET tube (3.04% lower). The stability of BNP significantly decreased in heparin/glass tube and residual BNP levels over 1h, 2h and 4h are 95.67%±7.49%, 86.46%±9.27% and 73.38%±8.33% respectively ($p<0.001$). However, residual BNP levels in EDTA/glass and EDTA/PET tube over 4h were 98.16%±3.65% and 100.22%±2.77%. BNP recovery rates in heparin/glass, EDTA/glass and EDTA/PET were 77.46%, 86.04% and 88.23% respectively.
Conclusions Plasma in EDTA/glass and EDTA/PET are suitable for BNP measurement on the mindray CL-6000i.

PU-4393

ITIH4, as an inflammation biomarker, mainly increases in bacterial bloodstream infection

Yating Ma、Chengbin Wang
301 PLA Hospital

Background Bloodstream infection (BSI) is usually accompanied with the changes of varieties of inflammation proteins. In our previous study, we identified that inter-α-trypsin inhibitor heavy chain H4 (ITIH4) was highly expressed in the infection arms than the normal control arm. However, the correlated verification and mechanism remain obscure.
Methods Escherichia coli infected mice model and clinical serum samples were used to validate the concentration of interleukin-6 (IL-6), tumor necrosis factor-α (TNF-α), interleukin-10 (IL-10), as well as ITIH4, in ELISA method. Cytokines (IL-6, TNF-α, IL-10 and lipopolysaccharide (LPS)) were used to stimulate the HepG2 cell model to explore which cytokines influence the expression of ITIH4. JAK/STAT inhibitor was treated before IL-6 and LPS stimulation. Westernblot, as well as real-time PCR were performed to detect the expression of ITIH4 in liver tissue from protein and transcription levels. Immunohistochemistry analysis was used to observe the expression of ITIH4 in mice liver tissue.
Results In mice model, IL-6, TNF-α, as well as IL-10 increased in the infection arms than the normal control arm. ITIH4 in serum and liver tissue of mice model increased from 1 h to 128 h, which were remarkably different from that of the normal control arm. Besides, ITIH4 increased in the bacterial infection arm greatly than the fungemia arm, mycoplasma pneumoniae (MP) arm and febrile arm in clinical serum samples. Furthermore, using the HepG2 cell line, we demonstrated that ITIH4 was up-regulated at both protein and mRNA levels upon dose- and time-response treatments with IL-6, as well as LPS. Moreover, IL-6 or LPS mediated induction of ITIH4

expression could be significantly decreased by treatment with an JAK/STAT inhibitor in protein or mRNA level. No changes were observed after TNF-α or IL-10 stimulation.
Conclusion ITIH4 might be a critical inflammatory biomarker which correlated with the development of BSI, especially with bacterial bloodstream infection. It is expected that this study would provide some insights into potential functional mechanisms underlying BSI.

Cell Count-based Parameters and Algorithms for Thalassaemia Minor Screening in the Southern Chinese Population

Jialong Xu、Yinge Wu
the First Affiliated Hospital of Shantou University Medical College

Introduction Microcytic anemia is frequently caused by iron deficiency or thalassaemia. And thalassaemia syndrome is potentially mistaken for microcytic or hypochromic anaemia，such as the iron-deficiency anaemia (IDA). Differentiation between the thalassemic and non- thalassemic microcytic anemia have an important clinical implication, for each has entirely different cause, pathogenesis, treatment and prognosis. Moreover, some patients with thalassaemia present with normocytic traits and current criteria for thalassaemia screening are based solely on erythrocyte mean corpuscular volume (MCV) <80 fl, which implies that thalassaemia carriers with MCV values >80 fl would be missed. Here, we aimed to establish differential functions (DFs) derived from basic RBC parameters and an algorithm for detecting microcytic or normocytic thalassaemia in epidemiological screening.
Methods The receiver operating characteristics (ROC) curve analysis was used to determine the diagnostic performance of the RBC parameters and proposed formulae in differentiating thalassaemia and non-thalassaemia. DFs combined the two blood count parameters with the highest performance, based on the area under the curve (AUC) value, into mathematical formulas, using logistic regression. Notably, the normocytic population consists of three cohorts: normocytic TT cohort, healthy cohort, and normocytic non-TT anaemia cohort. To improve the thalassaemia differential efficiency, we first excluded the non-TT anaemia participants. ROC curve analysis was conducted among the RBC parameters to discriminate the normocytic non-TT patients from the healthy or normocytic TT participants. And the parameters with the highest AUC value was used as the first preconditional step for separating the non-TT anaemia participants from the healthy or normocytic TT participants, and subsequently normocytic TT participants will be distinguished from the healthy subjects. Moreover, the diagnostic efficacy of DFs was also evaluated and validated in 767 participants, and reliability (including adjusted agreement [AA] and Kappa values) and validity (including sensitivity, specificity, likelihood ratio, and Youden's Index) were calculated.
Results Among microcytic participants, the proposed DFs showed good diagnostic performance (in females: AUC=0.892 [DF1==0.015×RDW-CV/RBC-0.096×RDW-SD/RBC+1.29]); in males: AUC=0.861 [DF2=0.025×RDW-SD/RBC-0.035×MCV/RBC+1.415]). Youden's Index, AA, and Kappa values for microcytic thalassaemia detection were 0.72, 0.86, and 0.72 and 0.63, 0.81, and 0.63 for females and males, respectively. In normocytic population, the parameter RDW-CV/RBC with the cutoff value=3.54 have the high performance (AUC= 0.94) to separating the non-TT anemia participants from the healthy or normocytic TT participants. Subsequently, to discriminate normocytic TT from healthy participants, DF3=0.38×MCH-0.02×MCHC+17.37 achieved AUC=0.857 in females, whereas DF4=0.007×MCV-0.113×MCH+2.829 achieved AUC=0.969 in males. The Youden's Index, AA, and Kappa values for the proposed DFs for thalassaemia detection were 0.69, 0.84, and 0.67 and 0.76, 0.91, and 0.71 in females and males, respectively.
Conclusion The proposed DFs derived from basic RBC parameters, performed well in the detection of thalassaemia minor among participants with microcytic and normocytic trait. Overall,

our mathematical formulae can be used as a laboratory-based criteria for the selection of samples for thalassaemia testing, which is a simple and inexpensive way to decrease the risk of conceiving a foetus with severe thalassaemic syndrome.

PU-4395

Mechanism of circ-0007766 acting as a miR1972 sponge to regulate HER2 expression

Yi Zhu
General Hospital of Southern Theatre Command of PLA

BACKGROUND & OBJECTIVE Circular RNA(circRNA)， an endogenous non-coding RNA(ncRNA), which is widely found in eukaryotic transcriptome and is closely related to gene expression regulation. As a molecular sponge, circRNA is a supplement to the traditional regulation of gene expression. Many studies have found that the occurrence and development of a variety of tumors are related to circRNA, and the mechanism of circRNA in tumor development has become a hot topic.
METHODS By comparing the circRNA sequencing data of MDA-MB-231 and SK-BR-3 cells, the differentially expressed circRNAs in HER2+ breast cancer were screened out, and the ceRNA regulatory network was selected. Exploring the expression and prognostic value of the TCP1 ring complex in hepatocellular carcinoma and Overexpressing its subunit 5 promotes HCC tumorigenesis

Jiahui Liu、Ling Huang、Quan Zhou、Zhaohui Sun
General Hospital of Southern Theatre Command of PLA

T-complex protein-1 ring complex (TRiC), also known2 as CCT: Chaperonin Containing T-complex protein-1, belongs to chaperonins required for folding nascent proteins. Increasing evidence has indicated TRiC complex played an important role in the development and progression of various tumors but limited studies in hepatocellular carcinoma (HCC). We comprehensively evaluated the expression pattern and biological function of TRiC complex subunits based on public data obtained from The Cancer Genome Atlas and Human Protein Atlas. We found the expressions of TCP1, CCT2/3/4/5/6A/7/8 were significantly upregulated in HCC tissues at both transcript and protein level, which predict shorter overall survival (OS). Moreover, high mutation rate was found in several CCT subunits, and patients with altered CCT genes had poorer clinical outcomes. Functional enrichment analysis showed that the biological processes of co-altered genes significantly concentrated on protein folding and microtubule-based process while co-expressed genes with CCT subunits were mainly involved in ribosome and spliceosome. Then, CCT5, a subunit of TRiC, knockdown and overexpression were performed in HCC cell lines. Functional assays demonstrated that CCT5 was closely related to HCC cell proliferation, cycle

transition, migration and invasion. In conclusion, our study suggested that the subunit of TRiC complex may be a potential biomarker for the diagnosis of HCC and play an important role in the occurrence and development of HCC.

Clinical and pathological differences of left and right colorectal cancer and prognostic survival analysis

Xuan Wu[1]、yuanjiang Shang[1]、weifeng Wang[1]、zili Ma[1]、lixia Wu[1]、ke Li[1]、hailin Zheng[1]、Lei Chen[2]、weixin Xu[3]、weiwei Liu[4]
1. Shanghai Tenth People's Hospital
2. 上海市第三军医大学附属东方肝胆外科医院
3. 上海医药卫生大学附属嘉定区中心医院检验科
4. 上海市第十人民医院检验科

Background Colorectal cancer (CRC) was divided into left colon cancer (LCC) and right colon cancer (RCC) as early as 1990. LCC and RCC are two completely different diseases in many aspects such as epidemiology, pathology, and cytogenetics. Hence, they should be distinguished in terms of treatment and treated correctly.
Aim This study aimed to explore the clinical and pathological differences in LCC and RCC, find protein molecules specifically or differentially expressed, and explore the factors affecting prognosis and survival.
Methods In this study, from 2010 to the end of 2018, 277 patients with CRC were enrolled, including 159 patients with LCC and 118 patients with RCC. The LCC and RCC are compared with each other, and the existing statistical analysis tools are applied to conduct comprehensive analysis.
Results This study included 164 male and 113 female patients. The mortality rate of LCC was significantly lower than that of RCC ($P = 0.000$). Patients with LCC were generally younger ($P = 0.001$), but lymph nodes were more likely to metastasize and the number of metastases was greater ($P = 0.0077$). In addition, Cox risk regression analysis also showed that the patient's gender, number of lymph node metastases, CA199, and MSH2 were the risk factors affecting the prognostic survival time ($P < 0.05$).
Conclusions The survival rate of LCC was higher and the number of lymph node metastases and the degree of infiltration were lower compared with those of RCC. Gender, number of lymph node metastases, CA199, and MSH2 were risk factors affecting the prognostic survival time.

PU-4398

A pseudo-targeted metabolomics study based on serum bile acids profiling for the differential diagnosis of breast cancer

Haoran Wang[1,2]、Lianjie Zhang[1]、Chengyu Xu[1]
1. Suzhou Dushu Lake Hospital
2. 重庆医科大学

Objective Breast cancer (BC) has become the leading cause of cancer death among females [1]. Therefore, it is critical for the differential diagnosis between BC and benign breast diseases (BBD) [2]. The characteristics of serum bile acids (BAs) profiling in patients with BBD and BC were elucidated so that potential biomarkers could be find out for the differential diagnosis of BC.
Methods A pseudo-targeted approach was used to perform BAs metabolomics analysis in serum of 28 patients with BBD and 46 patients with BC by ultra-high performance liquid

chromatography/hybrid quadrupole time-of-flight mass spectrometry (UPLC-QTOF-MS). Partial least squares-discriminant analysis (PLS-DA) was used to establish a differential diagnostic model for BC, and the receiver operating characteristic (ROC) curve and logistic regression analysis were used to screen out bile acids as biomarkers for the differential diagnosis of BC.
Results Compared with the BBD group, the serum BAs profile in BC group was quite different, as shown in Fig. 1. The level of chenodeoxycholic acid (CDCA) of BC group was higher than that of BBD group, while the levels of dihydroxy tauro-conjugated BA (Tdi-1) and sulfated dihydroxy glyco-conjuga ted BA (Gdi-S-1) of BC group were lower than those of BBD group. The sensitivity and specificity of PLS-DA model for classification of patients were 100% and 92.3%, respectively. The combined biomarker, CDCA and Tdi-1, had high efficacy for the differential diagnosis (area under the curve was 0.954, 95% CI: 0.880-1.000) of BC. Besides, the diagnostic performance was superior to traditional biomarkers in the differential diagnosis of BC with or without comorbidities. Results are shown in Tab. 1.
Conclusion The profile of serum BAs in women with BC was quite different from that in patients with BBD. Serum BAs profiling analysis could be used as an effective tool for the differential diagnosis of BC.

PU-4399

数字 PCR 检测血流感染常见病原菌的临床应用研究

刘芳瑞、吕琳婷
上海交通大学医学院附属仁济医院(东院)

背景
血流感染是指细菌、真菌等病原微生物入侵血循环，在血液中繁殖,释放毒素和代谢产物,并诱导细胞因子释放,引起全身感染性疾病。目前血流感染的主流病原菌有大肠埃希菌、肺炎克雷伯菌、鲍曼不动杆菌、铜绿假单胞菌以及各类葡萄球菌。大多入侵为呼吸道感染、泌尿系统感染以及腹腔感染。近些年由于抗生素和介入治疗的使用，血流感染的发病率呈持续增高趋势。目前检测血流感染最重要的检查手段是血培养。但血培养周期时间长、用血量大、且无法定量，早期诊断及准确的抗菌治疗对降低疾病死亡率至关重要。
目的 运用领航数字 PCR 系统检测临床血浆样本中的病原菌，以测评该技术的临床应用价值。
方法 采用领航基因五色荧光数字 PCR 系统检测 169 份临床血浆样本，并与传统血培养方法进行比较，计算数字 PCR 技术检测血流感染的敏感度、特异性和符合率。
结果 本次实验检测的 169 份样本中，血培养阳性 27 例，阴性 142 例，阳性率 16%；数字 PCR 阳性 15 例，阴性 154 例，阳性率 8.9%。与传统血培养鉴定技术相比，领航五色荧光数字 PCR 系统检测血流感染样本的敏感度为 24%，特异性为 97.2%，阳性预测值为 60%，阴性预测值为 88%，总体符合率为 88.8%。数字 PCR 系统鉴定阳性的病原菌包括绿假单胞菌（1 例）、大肠埃希菌（5 例）、肺炎克雷伯菌（4 例）、鲍曼不动杆菌（2 例）、屎肠球菌（3 例）、粪肠球菌、嗜麦芽窄食单胞菌（5 例）、表皮葡萄球菌（3 例）。但由于血培养阴性而数字 PCR 检测阳性的病原菌主要集中在嗜麦芽假单胞菌和表面葡萄球菌，所以不能排除污染的可能性。
结论 数字 PCR 技术是一种新型血流感染的检测技术，检测时间短，具有较好的特异性，但敏感性还有待提高，未来或许可以成为临床早期诊断与优化感染治疗的新方法。

检验过程的生物安全风险管理和实践体会

公衍文
山东大学第二医院

目的 总结实验室检验过程生物安全风险管理的实践体会，以期能够提供可以落地有效的风险管理办法。
方法 风险管理是质量管理的根本落脚点，但在实施过程中，多数实验室未能将静态评估和动态监测结果结合起来，一味地依靠所谓的头脑风暴，导致风险管理流于形式，没能识别出真正可能存在的风险，相应的风险控制措施也就没有效果，无法实现持续改进。我们将静态风险评估（基于工作流程和操作，明确每个岗位和操作在实验室环境、生物安全柜、个人防护措施等方面选择，并在此基础上评估存在的风险，以及风险的严重程度和可识别能力）和动态监测（安全管理组定期检查监测安全措施执行情况、风险管控措施执行情况，以及生物安全实验室良好工作行为遵守情况，统计风险可能发生的频次）相结合，计算 RPN 指数，进行客观的风险评估。
结果 共识别出高风险 5 项，中风险 11 项，低风险 25 项。对高风险立即实施针对性的纠正措施，并作为后续监测的重点，评估措施的有效性；对中风险项目，评估其可能的发展趋势，必要时采取预防措施，并监测措施的有效性；对低风险项目，继续列入日常监测项目，持续关注。
结论 检验过程风险管理必须将静态评估和动态监测结合起来，才能真正有效。

PU-4401

运用 PDCA 循环法在三级医院检验科三年质量管理上的研究

周慧聪
南京大学医学院附属泰康仙林鼓楼医院

目的 运用 PDCA 循环法管理检验科检验前、检验后质量指标，探索检验科质量管理方法，提高检验科的工作质量，更好的服务患者。
方法 1、由科主任确定检验科“年度重点质量管理项目”，制定“质量目标”，包括“体液标本采集时间缺失率<10%”、“血液标本采集时间缺失率<10%”、“不合格标本比例<1%”、“门诊患者实验室内周转时间超时率<5%”。2、将上述数据“快捷统计功能”维护到检验科 LIS 系统里，可以按照“时间”、“标本来源”等检索条件获取每月数据。3、每月 5 号前由专人统计并分析上述质量指标涉及的数据，形成图表，清晰可见，内容包含以上四项质量管理项目在上月的数据。4、召开“检验科月度质量小组会议”，分析导致质量目标不佳的原因，由专人根据会议内容撰写“质量小组活动记录”，内容包括“针对本月的质量分析及改进项目”、“针对下月的改进目标和措施”、“对上月质控活动改进措施的落实和成效评价”。5、从人、机、料、法、环五方面进行根因分析，针对不同问题积极整改并与临床沟通，增强培训及考核力度。6、每月按照上述方法进行质量管理，循环往复，计算三年来质量管理成效。
结果 2020 年全年较 2018 年全年体液标本采集时间缺失率下降 31.24%；血液标本采集时间缺失率下降 82.59%；不合格标本率下降 40%；门诊患者实验室内周转时间超时率下降 54.14%。2019 年及 2020 年全年质量目标均在目的范围内。
结论 PDCA 循环法运用到检验科质量管理中可以起到很好的作用，可以大大提高检验科的质量目标，此方法可以运用到更多的检验科质量管理项目中，使检验质量不断进步。

PU-4402

泛癌分析显示同源重组缺乏评分可作为免疫治疗反应者的预测指标

杨璨[2,3]、唐雪梅[1]、张心菊[2]、吴之源[1,2,3]、关明[1,2,3,4]
1. 复旦大学附属华山北院中心实验室
2. 复旦大学附属华山医院中心实验室
3. 复旦大学附属华山医院检验科
4. 复旦大学附属华山北院检验科

目的 肿瘤微环境(TME)的免疫背景是免疫学干预成功的决定性因素，但对免疫敏感性 TME 和免疫治疗反应者识别的 DNA 水平的生物标志物的探索较少。同源重组缺陷(HRD)疤痕是肿瘤基因组不稳定的一个新兴特征，可以触发免疫反应。本研究旨在全面研究主要癌症类型的 HRD 疤痕（评分），并揭示它们与肿瘤微环境和免疫治疗反应的联系。
方法 使用来自癌症基因组图谱(TCGA)的 9088 个肿瘤的基因组学、转录基因组学和免疫表型数据对 HRD 评分进行了功能分析。与 HRD 相关的癌症类型由 HRD 评分累积频率分类来定义。对 HRD 高或低基因型的肿瘤突变负荷(TMB)和新抗原进行比较。肿瘤微环境(TME)用 CIBERSORT、xCell、MCP-counter、EPIC 和 quanTIseq 这五种算法进行了数字分析。微卫星不稳定性(MSI)、TMB 和 HRD 的敏感性和特异性。
结果 来自 TCGA 的 32 种癌症的 9088 名肿瘤患者的 HRD 评分分析显示，7 种主要癌之间的广泛关联，包括膀胱癌、乳腺癌、头颈鳞癌、肺腺癌、肺鳞细胞癌、卵巢癌和肉瘤。HRD 评分高的肿瘤有白细胞浸润和淋巴细胞分数增加，并表现出免疫敏感的 TME。最后，通过 TIDE 模型，我们证实了 HRD 评分的高基因型是 TCGA 乳腺癌队列中免疫反应的潜在预测因子。
结论 HRD 评分高的肿瘤具有免疫敏感的 TME。HRD-高基因型是乳腺癌患者免疫治疗反应的重要指标。

Genetic testing and clinical relevance of patients with thoracic aortic aneurysm and dissection in northwestern China

Liu Yang、jinjie li、yanjun diao、lei zhou、yijuan xin、rui li、juan wang、jiayun liu
Air force medical uiversity xijing hospital

Thoracic aortic aneurysm and dissection (TAAD) is a life-threatening pathology that remains a challenge worldwide. Up to 40% of TAAD cases are hereditary with complex heterogeneous genetic backgrounds. The purposes of this study were to determine the diagnostic rate of patients with TAAD, investigate the molecular pathological spectrum of TAAD by next-generation sequencing (NGS), and explore the future preclinical prospects of genetic diagnosis in patients at high-risk of study.
METHODS:NGS was used to screen 15 genes associated withgenetic TAAD in 212 patients from northwestern China. Clinical data of patients were gathered by Electrocardiography, transthoracic echocardiography and computed tomography.
RESULTS:Of the 212 patients, 67 (31.60%) tested positive for a (likely) pathogenic variant, 42 (19.81%) had a variant of uncertain significance (VUS), and 103 (48.58%) had no variant (likely benign/benign/negative). A total of 135reportable variants were detected in our test, among which 77(57.04%) are first reported in this paper.

核心抗体定量在乙肝相关慢加急性肝衰竭中的表达水平及与预后的关系

李静[1]、龚启明[2]、谢培琳[1]、林君玉[1]、陈嘉[1]、韦栋[1]、于德敏[1]、韩悦[1]、张欣欣[1]
1. 上海交通大学医学院附属瑞金医院临床病毒室
2. 上海交通大学医学院附属瑞金医院感染科

目的 研究乙肝相关慢加急性肝衰竭（HBV-ACLF）患者血清核心抗体定量（qAnti-HBc）的表达水平及与预后的关系。
方法 选取上海交通大学附属瑞金医院 2014 年 1 月-2019 年 12 月 HBV-ACLF 患者 168 例（88 例为训练集，80 例为验证集），和同期慢性乙型肝炎（CHB）患者 216 例（对照组），比较两组 qAnti-HBc 水平。进一步比较 HBV-ACLF 患者生存组与死亡组 qAnti-HBc 水平，建立预后模型，并在验证集验证。动态观察 16 例 HBV-ACLF 组患者入院后 1 月内，3 月，6 月，9 月，12 月时 qAnti-HBc 的变化。
结果 HBV-ACLF 组血清 qAnti-HBc 水平明显高于 CHB 组。HBV-ACLF 患者中，qAnti-HBc 水平在生存组明显高于死亡组，血清 qAnti-HBc 水平与 MELD 评分呈轻度负相关。HBV-ACLF 组患者中合并其他感染患者相比未合并者血清 qAnti-HBc 水平明显降低；合并肝性脑病患者相比未合并者 qAnti-HBc 水平明显降低；合并肝肾综合征患者相比未合并者 qAnti-HBc 水平明显降低；在有无肝硬化患者中无明显统计学差异。ROC 曲线提示血清 qAnti-HBc 水平对 HBV-ACLF 的预后预测价值与 MELD 评分相当。 进一步建立包含 qAnti-HBc 在内的预测模型，预测价值明显优于 MELD 评分，且在验证组中加以验证。16 例 HBV-ACLF 患者在入院 1 月内 qAnti-HBc 水平无明显变化，3 月时显著下降，6 月时再次下降，后趋于稳定。
结论 HBV-ACLF 患者 qAnti-HBc 水平显著高于 CHB 患者，在 HBV-ACLF 患者中，生存组明显高于死亡组，qAnti-HBc 水平对 HBV-ACLF 患者预后的预测价值与 MELD 相当。随着 HBV-ACLF 患者病情好转，于第 3 月和第 6 个月时明显下降，后趋于稳定。

PU-4405

结肠癌微环境中免疫细胞浸润模式及其预后评估

梁艳玲[1,2]、吴智聪[1,2]、马尊雅[3,4]、陈华[3]、吴妮莎[2]、邓凡[3]、曾方银[2]
1. 南方医科大学南方医院检验科
2. 南方医科大学第五附属医院检验医学科
3. 南方医科大学基础医学院细胞生物学教研室
4. 南方医科大学基础医学院基础医学

目的 结直肠癌（colorectal cancer，CRC）是主要的致死性恶性肿瘤之一。其中，结肠癌是结直肠癌中的最常见类型。目前，免疫疗法已被临床验证为许多肿瘤有效治疗的选择。肿瘤浸润免疫细胞作为肿瘤免疫微环境中的主要成分，其与结肠癌患者预后之间的关联尚未明确。本研究旨在探索结肠癌微环境中免疫细胞的浸润模式及其预后价值，为临床个体化治疗提供新方向。
方法 利用 CIBERSORT 软件包从癌症基因组图谱 TCGA（The Cancer Genome Atlas）数据库、GEO（Gene Expression Omnibus）数据库共筛选 38 例正常结肠组织样本及 316 例结肠癌组织样本，基于标准化后的基因表达谱对 22 种浸润免疫细胞进行提取和量化，分析免疫细胞在正常组织和癌组织中的浸润差异。利用多因素 COX 回归构建 Nomogram 风险预测模型。
结果 本研究发现活化的 CD4+记忆性 T 细胞、M0 巨噬细胞、M1 巨噬细胞在结肠癌组织中浸润显著增多，幼稚 B 细胞、浆细胞、单核细胞及未活化的肥大细胞显著减少。高水平活化的肥大细胞及调节性 T 细胞浸润与肿瘤转移和分期进展密切相关（$p<0.05$），低水平活化的 CD4+记忆性 T 细胞

和滤泡辅助性 T 细胞与肿瘤淋巴结播散及分期进展相关（p<0.05）。利用患者年龄、性别、临床病理分期、TNM 分期、组间分析具有差异的免疫细胞构建 Nomogram 风险预测模型，模型预测 1 年、3 年和 5 年生存率的 ROC 曲线 AUC 分别为 0.828、0.794 和 0.754。将 COAD 患者按照风险评分分为高低风险组并进行 Kaplan-Meier 分析，结果显示高风险组 COAD 患者预后较差（p<0.001），提示模型具有良好预测效能。
结论 结肠癌患者中免疫细胞的浸润差异可能在疾病进展中具有重要作用，其预后模型可能为结肠癌患者的生存评估提供理论和数据支持。

PU-4406
肺腺癌外泌体 miR-1290 靶向抑制 SOCS3 调控巨噬细胞极化

吴逸宁、王雪滢、顾嘉慧、徐建
江苏省人民医院（南京医科大学第一附属医院）

目的 肺腺癌严重威胁人类健康。阐明肺腺癌的发病机制，寻找免疫治疗的新方法，对改善预后十分重要。本研究旨在明确肺腺癌外泌体 miR-1290 对巨噬细胞极化的调控作用及其分子机制，为靶向 miR-1290 的治疗提供理论依据。
方法 利用重组慢病毒构建 miR-1290 稳定敲低的肺腺癌细胞株并分离及鉴定其外泌体。流式细胞术和 Transwell 细胞侵袭实验检测与敲低 miR-1290 的外泌体共培养后巨噬细胞表型和功能的改变。通过裸鼠皮下瘤模型在体内验证肺腺癌外泌体 miR-1290 对巨噬细胞极化的作用。采用双荧光素酶报告基因实验、qRT-PCR 和 Western blot 鉴定 miR-1290 的靶基因 SOCS3。改变 miR-1290、SOCS3 的表达水平或与肺腺癌外泌体共培养后，qRT-PCR 和 Western blot 检测巨噬细胞极化标志物及相关信号通路分子的表达变化。
结果 与敲低 miR-1290 的肺腺癌外泌体共培养抑制巨噬细胞向 M2 型极化并减弱其促肺腺癌细胞侵袭的能力。敲低肺腺癌外泌体 miR-1290 可减少裸鼠皮下移植瘤中浸润的 M2 型巨噬细胞数量并减小肿瘤体积。过表达 miR-1290 可活化巨噬细胞 STAT3 通路，同时促进其向 M2 型极化；阻断 STAT3 通路削弱 miR-1290 促巨噬细胞 M2 型极化的效应。miR-1290 能特异性结合 SOCS3 的 3'UTR，靶向抑制 SOCS3 的表达。敲低 SOCS3 可活化 STAT3 并促进巨噬细胞向 M2 型极化；回补 SOCS3 可抵消 miR-1290 上调对 STAT3 活化及 M2 型极化的促进作用。敲低 miR-1290 的肺腺癌细胞外泌体可上调巨噬细胞中 SOCS3 表达, 进而抑制 STAT3 通路及 M2 型极化。
结论 肺腺癌外泌体 miR-1290 通过调控 SOCS3-STAT3 轴, 促进巨噬细胞向 M2 型极化。

PU-4407
Effects of Different Doses of rAAV5-mCherry on the Transcriptome of Hippocampal Pyramidal Neurons in Male Mice

刘忆思
南方医科大学珠江医院

Recombinant adeno-associated virus (rAAV) vectors have been widely used in neuroscience for gene transduction, and high-dose rAAV induces unexpected side effects. However, little is known about the mechanisms underlying rAAV-induced toxicity in brain cells. Here, we evaluated the effects of three different doses of rAAV5 vectors, which are widely used for functional studies in the brain, on hippocampal pyramidal neurons in male mice. There was a strong correlation between rAAV dose and toxicity. As the dose increased, rAAV5-mCherry upregulated genes related to immune and inflammatory responses and neuronal apoptosis and downregulated

genes associated with synaptic and axonal compartments and mitochondria, suggesting that higher doses of rAAV-5-mCherry may induce pyramidal neuronal fragility and impair synaptic transmission. Thus, the dose should be taken into consideration when rAAV vectors are used for gene transduction studies.

Development and validation of a prediction model for malignant pulmonary nodules

Zhen Ren、Hongmei Ding、Zhenzhen Cai
The First Affiliated Hospital of Nanjing Medical University

Background: To develop and validate a preoperative prediction model for malignancy of pulmonary nodules (PNs).
Methods: Data from 409 patients who underwent PN resection at the First Affiliated Hospital of Nanjing Medical University between June 2018 and December 2020 were retrospectively collected. Then, the patients were nonrandomly split into[Y. Mu1] a training cohort and a validation cohort. Logistic regression analysis was used to identify variables significantly associated with malignant pulmonary nodules (MPNs) that were then included in the nomogram. We evaluated the discrimination and calibration ability of the nomogram by using R software.
Results: MPNs were confirmed in 215 (52.6%) patients by a pathological examination. Multivariate logistic regression analysis identified six risk factors independently associated with MPN: Gender [Female, odds ratio (OR) =2.487; 95% confidence interval (CI): 1.313–4.711; P = 0.005], location of nodule (upper lobe of lung, OR = 2.576; 95%CI: 1.380–4.806; P = 0.003), density of nodule (pure ground glass, OR = 16.899; 95%CI: 7.572-37.716; P < 0.001; part-solid nodules, OR = 24.096; 95%CI: 10.153–57.186; P < 0.001), nodule size (OR = 1.100; 95% CI: 1.058–1.145; P < 0.001), GAGE7 (OR = 1.085; 95%CI: 1.011–1.165; P = 0.023) and GBU4-5 (OR = 1.126; 95%CI: 1.054–1.204; P < 0.001). The concordance index was 0.88 (95%CI: 0.83–0.91) and 0.92 (95%CI: 0.85–0.97) in the training and validation cohorts, respectively. The calibration curves showed good agreement between the predicted risk by the nomogram and real outcomes.
Conclusions: We have developed and validated a preoperative prediction model for MPNs. The model could aid physicians in clinical treatment decision making.

PU-4409

核受体 NR2F6 介导乳腺癌铂类药物耐药的分子机制研究

黄玲
广州医科大学附属第六医院

目的 NR2F6 与多种癌症预后不良有关，再此探讨核受体亚族 2，F 组第 6 号成员（NR2F6）对乳腺癌细胞顺铂耐药的影响及其可能的作用机制。
方法 Western blot 和 real-time PCR 检测乳腺癌正常上皮细胞 MCF-10A，5 种乳腺癌细胞 MCF7,MDA-MB-231,UACC812,SK-BR3,BT474 和乳腺癌顺铂耐药细胞株 MCF-7/DDDP 中 NR2F6 的表达水平。CCK8 法检测上述细胞的半抑制浓度 IC50，探究 NR2F6 的表达水平是否与 IC50 有关，根据 NR2F6 表达水平选择 MDA-MB-231 细胞构建 NR2F6 稳转细胞，MCF7 构建敲低细胞，Western blot 法验证细胞是否构建成功。CCK8 细胞增殖，流式凋亡实验，划痕，transwell 法验证 NR2F6 对乳腺癌细胞增殖、侵袭、迁移的影响，CCK8 法验证顺铂的最适浓度，在顺铂作用下，重复上述实验验证顺铂作用下 NR2F6 对乳腺癌细胞增殖、侵袭、迁移的影响。CCK8 法检

测过表达细胞及其亲本细胞，敲低细胞及其亲本细胞的半抑制浓度 IC50。运用 RNA-seq，蛋白质质谱，CHIP 筛选下游分子行进一步机制研究，并进一步行 rescue 实验，双荧光素酶报告基因实验验证其下游基因。
结果 NR2F6 过表达可增加顺铂对 MDA-MB-231 细胞的杀伤活性，而 NR2F6 敲低可降低顺铂对其杀伤活性，根据 RNA-seq 及蛋白质质谱筛选并验证下游基因 BCL2A1。
结论 NR2F6 可通过下调 BCL2A1 增加乳腺癌细胞对顺铂的敏感性。

PU-4410

泛素连接酶 TRIM7 通过调控 HIF-1α 信号抑制肾透明细胞癌的转移与侵袭

袁超、赵敬杰
山东大学第二医院

目的 肾透明细胞癌是一种具有独特发病机制的恶性肿瘤，发生机制尚未完全阐明。我们前期研究结果表明，泛素连接酶 TRIM7 在肾透明细胞癌中低表达。本课题将探讨泛素连接酶 TRIM7 抑制肾透明细胞癌发生发展的机制研究。
方法 本课题结合细胞模型、动物模型和临床病理标本，明确 TRIM7 在肾透明细胞癌中的作用；利用干扰 shRNA、RNA-seq 等分子生物学手段和基因组学方法研究 TRIM7 对 HIF-1α 信号通路的影响，进而阐明 TRIM7 影响肾透明细胞癌发生的分子机制。
结果 我们收集了 40 例 ccRCC 患者的石蜡切片和 25 例 ccRCC 患者的新鲜癌组织，免疫组化、qRT-PCR 和 Western Blot 的结果显示 TRIM7 在 ccRCC 组织中显著低表达。过表达 TRIM7 基因可以抑制乏氧条件下细胞转移和侵袭，并显著降低 HIF-1α 的蛋白水平。我们将不同量的 TRIM7 野生型过表达质粒和 CA 突变体与恒量的 Src 过表达质粒共转染 HEK293 细胞，野生型 TRIM7 可以显著降低 Src 的蛋白水平，而泛素连接酶活性缺失的 CA 突变体对 Src 蛋白水平没有影响；与 CA 突变体相比，野生型 TRIM7 可以明显缩短 Src 的半衰期；蛋白酶体抑制剂 MG132 可以废除 TRIM7 对 Src 蛋白水平的影响。
结论 本研究明确了 TRIM7 在肾透明细胞癌中的作用，揭示了 TRIM7 调控 HIF-1 信号通路的分子机制，将为肾透明细胞癌的防治提供新的策略。

Dysregulated Glutamate Transporter SLC1A1 Propels Cystine Uptake via Xc_x0001_ for Glutathione Synthesis in Lung Cancer

Wenzheng Guo[1,2]、Kaimi Li[3]、Beibei Sun[4]、Shuhai Lin[5]、Jiong Deng[2]
1. 上海市东方医院 检验科 Department of Laboratory Medicine，Shanghai East Hospital, Tongji University School of Medicine
2. 上海交通大学医学院 Shanghai Jiao Tong University School of Medicine
3. 北京协和医学院 Peking Union Medical College Hospital, Chinese Academy of Medical Sciences and Peking Union Medical College
4. 上海交通大学转化医学中心 Translational Medical Research Center, Shanghai Jiao Tong University
5. 厦门大学生命科学学院 School of Life Sciences, Xiamen University

Cancer cells need to generate large amounts of glutathione (GSH) to buffer oxidative stress during tumor development. A ratelimiting step for GSH biosynthesis is cystine uptake via a cystine/ glutamate antiporter Xc_x0001_. Xc_x0001_ is a sodium-independent antiporter

passively driven by concentration gradients from extracellular cystine and intracellular glutamate across the cell membrane. Increased uptake of cystine via Xc_x0001_ in cancer cells increases the level of extracellular glutamate, which would subsequently restrain cystine uptake via Xc_x0001_. Cancer cells must therefore evolve a mechanism to overcome this negative feedback regulation. In this study, we report that glutamate transporters, in particular SLC1A1, are tightly intertwined with cystine uptake and GSH biosynthesis in lung cancer cells. Dysregulated SLC1A1, a sodium-dependent glutamate carrier, actively recycled extracellular glutamate into cells, which enhanced the efficiency of cystine uptake via Xc_x0001_ and GSH biosynthesis as measured by stable isotope-assisted metabolomics. Conversely, depletion of glutamate transporter SLC1A1 increased extracellular glutamate, which inhibited cystine uptake, blocked GSH synthesis, and induced oxidative stress-mediated cell death or growth inhibition. Moreover, glutamate transporters were frequently upregulated in tissue samples of patients with non–small cell lung cancer. Taken together, active uptake of glutamate via SLC1A1 propels cystine uptake via Xc_x0001_ for GSH biosynthesis in lung tumorigenesis.

PU-4412

An Extraction free Isothermal System for Rapid Detection of Eight Common Pathogens Causing Lower Respiratory Tract Infections

Yuying Si、Lieying Fan
Shanghai East Hospital

Lower respiratory tract infections (LRTIs) are a leading cause of morbidity and mortality worldwide and lack of a rapid diagnostic method. To improve the diagnosis of LRTIs, we established an available loop-mediated isothermal amplification (LAMP) assay for the detection of eight common lower respiratory pathogens, including Klebsiella pneumoniae, Pseudomonas aeruginosa, Acinetobacter baumannii, Staphylococcus aureus, Escherichia coli, Haemophilus influenza, Streptococcus pneumoniae, and Moraxella catarrhalis. Furtherly, we established a rapid, high throughput and extraction free detection planform for LRITs using direct nucleic acid releasing strategy without extra nucleic acid extraction steps and encapsulated assay agents saved multiple labor. The whole progress can be shortened to 45min from sample in to results out. 528 sputum samples collected from patients with suspected LRTIs were detected by LAMP assays (8 tests in each sample, a total of 4224 tests), which compared with standard culture method (SCM), and then samples with inconsistent results were verified by Sanger sequencing and High-throughput sequencing (NGS). The results showed that all the Kappa coefficients between LAMP assay and SCM for detecting eight kinds of bacteria exceeded 0.4 as well as $P < 0.001$, indicated fair to good agreement. Besides, LAMP method (44.51%) detected more multiple infections than SCM (12.69%), and 367 inconsistent tests between the two methods were verified by Sanger sequencing. Results showed that 231 tests (62.94%) were concordant with LAMP, presenting higher sensitivity and detection rate than SCM, especially for multiple infection samples. 50 inconsistent samples were randomly selected for NGS and the diagnostic efficiency of LAMP assay was as follows: specific 94.49%, sensitive 75.00%, positive predictive value 90.44%, negative predictive value 84.47%, positive likelihood ratio 13.62, and negative likelihood ratio 0.26. In summary, an extraction free and high throughput LAMP platform was established to detect eight common pathogens causing LRTIs, which was significant for point of care testing and can be implemented in primary hospitals.

肺炎链球菌疫苗蛋白 ΔA146Ply 的矿化纳米颗粒在鼻咽部感染中的研究

吴静雯
成都市第三人民医院

目的 本文旨在研究肺炎链球菌蛋白疫苗 ΔA146Ply 的矿化纳米颗粒在鼻咽部感染中的免疫保护作用。
方法 利用大肠杆菌原核表达系统，通过分子克隆技术表达肺炎链球菌疫苗蛋白 ΔA146Ply 及含有生物矿化肽的疫苗蛋白 ΔA146Ply-PA44，分别经 Ni2+柱纯化、去除内毒素。将 ΔA146Ply-PA44 置于富含 Ca2+和 PO43-的弱碱性溶液中处理后制备成纳米级的生物矿化颗粒（ΔA146Ply-PA44@CaP）。以 ΔA146Ply、ΔA146Ply-PA44@CaP 及 PBS 分别免疫小鼠后取其末梢血检测特异性抗体效价；于末次免疫后取小鼠脾细胞，再刺激并检测上清液中细胞因子分泌量。末次免疫后经鼻腔攻毒肺炎链球菌 CMCC31693，于 3 天后取肺泡灌洗液计数鼻腔及肺部细菌载量，同时取其肺部行 HE 染色评估炎症情况。
结果 以 ΔA146Ply、ΔA146Ply-PA44@CaP 及 PBS 分别免疫小鼠后，测得 ΔA146Ply-PA44@CaP 免疫组小鼠产生的特异性抗体效价较 ΔA146Ply 及 PBS 组均有显著升高；ΔA146Ply-PA44@CaP 免疫组小鼠脾细胞再刺激后产生的细胞因子 IL-4，IFN-γ 较 ΔA146Ply 及 PBS 免疫组均有显著增高。末次免疫后经鼻腔攻毒肺炎链球菌 CMCC31693，于 3 天后取肺泡灌洗液计数鼻腔及肺部细菌载量，结果显示 ΔA146Ply-PA44@CaP 免疫组小鼠肺泡灌洗液中细菌载量较 ΔA146Ply 及 PBS 免疫组明显减少，同时小鼠肺部 HE 染色提示，ΔA146Ply-PA44@CaP 免疫组的小鼠肺部炎症反应较 ΔA146Ply 及 PBS 免疫组明显较弱。
结论 以上结果提示肺炎链球菌蛋白疫苗 ΔA146Ply 的矿化纳米颗粒能诱导小鼠产生较强免疫保护效应并可有效抵抗肺炎链球菌的鼻咽部定植及感染。

2. 山东大学附属省耳鼻喉医院

目的 分析两个遗传性非综合征型耳聋家系的临床听力学特征，并利用遗传性耳聋基因目标区域捕获测序技术鉴定致聋基因,并评价致病突变作为分子标志物的诊断价值及意义。
方法 通过家系调查，收集到两个感音神经性聋家系的临床资料，整理并分析该家系成员的临床听力学和遗传学特征，对家系成员进行调查并绘制系谱图。我们利用进行耳聋基因目标区域捕获技术和大规模平行测序技术，对先证者的 DNA 标本进行了已知耳聋基因突变筛查。继而对获得的测序结果进行分析，确定候选基因。利用 Sanger 测序技术对所有家系成员进行候选基因突变验证，并对氨基酸保守性进行分析。结合临床患者资料，评价 POU4F3 基因 2 个新突变作为分子标志物的价值。
结果 根据绘制的系谱图，该耳聋家系遗传方式为常染色体显性遗传。该家系耳聋特征为双侧对称性的全频感音神经性耳聋，发病特点为语后发病、进展性听力损失。耳聋基因目标区域捕获测序技术分析结果提示，耳聋基因 POU4F3 存在 2 个新突变 c.704_705del (p.T235fs) 和 c.593G>A(p.R198H)，分别为这两个耳聋家系的致病病因。这 2 个位点在多物种之间保守，Sanger 测序确认 2 个新突变与家系耳聋表型共分离，在 200 个正常人群中未发现。

结论 耳聋基因 POU4F3 存在 2 个新突变 c.704_705del (p.T235fs) 和 c.593G>A(p.R198H)，分别是两个耳聋家系的致病病因，在诊断常染色体显性遗传性耳聋致病病因中具有重要意义和临床价值。

流式细胞术检测多发性骨髓瘤患者 NK 细胞及其表面 PD-1 表达的初步研究

王亚奇[1]、张琳[1]、岳保红[2]
1. 郑州大学第五附属医院
2. 郑州大学第一附属医院

目的 本研究旨在探讨多参数流式细胞术（multiparameter flow cytometry，MFCM）检测多发性骨髓瘤患者 NK（CD3-CD56+）细胞及其细胞表面 PD-1 表达，从而为病人的诊断、治疗和预后提供依据。
方法 回顾性分析 2018 年 07 月至 2020 年 11 月收治的多发性骨髓瘤患者的临床资料，随访至少半年时间，并将研究对象分为对照组、初诊组、复发难治组。
结果 97 例患者均经组织病理活检及免疫组化确诊为多发性骨髓瘤，其中男性 55 例，女性 42 例，发病年龄为 60 岁（40~84 岁）。流式细胞术检测显示，相比于对照组，初诊组、复发难治组 NK 细胞的比例增高，但是初诊组 NK 细胞增高没有统计学意义（$P > 0.05$），复发难治组 NK 细胞比例显著增高，差异具有统计学意义（$P < 0.05$）。复发难治组患者骨髓中 NK 细胞与初诊组相比比例增高，差异具有统计学意义（$P < 0.05$）。进一步对 PD-1 在 NK 细胞表面的表达情况进行分析，流式细胞术检测结果显示相比于对照组，在复发难治组多发性骨髓瘤患者骨髓中 NK 细胞上的 PD-1 表达增高，差异有统计学意义（$P < 0.05$）。并且复发难治组多发性骨髓瘤患者骨髓中 NK 细胞上 PD-1 的表达比初诊组增高，差异有统计学意义（$P < 0.05$）。
结论 流式细胞术检测到 PD-1 在多发性骨髓瘤患者的 NK 细胞上表达，并且 PD-1 在多发性骨髓瘤患者骨髓中的表达与疾病的进展相关，PD-1/PD-L1 通路可能与多发性骨髓瘤的预后有关。

伴有-5/del(5q)和/或-7/del(7q)的骨髓增生异常综合征的（相关）基因表观遗传学研究

虞亚菲
中国人民解放军总医院第一医学中心

目的 骨髓增生异常综合征(MDS)是一种克隆性血液学疾病，以造血细胞发育不良、外周血细胞减少和易发生急性髓系白血病(AML)为特征。5 和 7 号染色体的全部或部分缺失[-5/del(5q)和-7/del(7q)]被认为是最常复发的遗传异常，包括骨髓增生异常综合征(MDS)和急性髓系白血病(AML)在内的 10-20%的髓系恶性肿瘤。有研究认为，5、7 号染色体常见缺失区域(common deleted regions, CDRs)的肿瘤抑制基因的单倍性是 MDS 和 AML 的发病机制之一。而表观遗传变化，包括启动子区高甲基化和翻译后组蛋白修饰，可能使肿瘤抑制基因失活，从而导致肿瘤的发生。本研究拟应用高通量测序（NGS）技术，对[-5/del(5q)和-7/del(7q)]阳性患者的常见缺失区域（CDRs）相关基因启动子区的甲基化水平检测，分析表观遗传变化，进一步评估其在携带 del(5q)和/或-7/del(7q)的 MDS/AML 患者中的临床意义。
方法 通过常规细胞遗传学、荧光原位杂交（FISH）筛选出-5/del(5q)和/或-7/del(7q)阳性骨髓标本，对 5、7 号染色体 CDRs（5q32-q33，7q31、7q34、7q35-q36）的候选基因启动子区进行生物信息学预测及验证，并应用二代测序（NGS）方法进行基因启动子区甲基化验证，并结合血液常规及

血细胞形态、骨髓细胞形态与骨髓活检病理、染色体核型分析等相关临床检查，进行单因素和多因素分析，Kaplan－Meier 法和 COX 回归模型分析其生存情况。

预期结果和结论 通过高通量测序技术提取靶向基因特异的甲基化状态，并结合相关临床检查，不同分组之间的预后进行单因素和多因素分析，分析其生存情况。建立和完善 MDS 发生和发展分子评估模型，为 MDS 患者的潜在遗传机制提供了新的见解。
