结果 血清外泌体总量，外泌体 PLAP 浓度和外泌体内 miR-210 随着孕期的进展均逐步增加。与正常孕妇相比，在孕中期和孕晚期，PE 血清中外泌体的总量升高（$P<0.05$）；PE 孕妇血清外泌体中 PLAP 水平在孕早期，孕中期和孕晚期中均较正常孕妇组高（$P<0.05$）；从孕早期开始，PE 孕妇血清外泌体中 miR-210 水平即比正常孕妇组高（$P<0.05$）；孕妇血清外泌体 PLAP 表达量和 miR-210 相对表达水平具有正相关关系（r/P =0.691/0.001）。
结论 孕妇胎盘来源外泌体和外泌体内 miR-210 的水平可能在早期预测和诊断子痫前期中发挥一定的作用。

C1QBP regulates apoptosis of renal cell carcinoma via modulating xanthine dehydrogenase (XDH) mediated ROS generation

Dan Yue
天津医科大学医学检验学院

Complement component 1 Q subcomponent binding protein (C1QBP) is a multifunctional protein and plays a vital role in the progression and metabolism of cancer. Our previous study has revealed that the low expression of C1QBP in renal cell carcinoma (RCC) and knockdown of C1QBP promotes the adhesion and invasion of RCC cells. However, its functions in metabolism, oxidative stress, and apoptosis of RCC cells have not yet been explored. Metabolomics assay was applied to investigate the role of C1QBP in RCC metabolism. C1QBP knockdown and overexpression cells were established via lentiviral infection and subjected to apoptosis and ROS assay in vitro. RNA stability assay was applied to characterize the mechanism of C1QBP regulating XDH transcription. In vivo, orthotopic tumor xenografts assay was performed to investigate the role of C1QBP progression. Metabolomics investigations revealed that C1QBP dramatically diminished the hypoxanthine content in RCC cells. C1QBP promoted the mRNA and protein expression of hypoxanthine catabolic enzyme xanthine dehydrogenase (XDH). Meanwhile, C1QBP regulated the XDH gene expression at the pre-transcriptional level by regulating XDH transcriptional stimulators IL-6, TNF-α, and IFN-γ. Moreover, the expression of C1QBP and XDH was lower in RCC tumors compared with the para-tumor normal tissues, and their down-regulation was associated with higher levels of Fuhrman grade. In RCC cells, C1QBP significantly increased reactive oxygen species (ROS) levels, apoptosis, and the expression of apoptotic proteins such as cleaved caspase-3 and bax/bcl2 via regulating XDH. In conclusion, C1QBP promotes the catabolism of hypoxanthine and elevates the apoptosis of RCC cells by modulating XDH-mediated ROS generation.

Crybb2 基因敲除小鼠晶状体环状 RNA 测序分析

高谦、厉倩
上海市宝山区吴淞中心医院

目前，关于晶状体中 circRNAs 表达谱的信息很少。 βB2-晶状体蛋白 (CRYBB2) 是哺乳动物晶状体中含量丰富的蛋白质，其异常表达可导致白内障的产生。本研究旨在探索 Crybb2 敲除小鼠晶状体中 circRNA 的表达谱。

方法和结果 我们从野生型 (WT) 和 Crybb2-/- 小鼠的晶状体中提取总 RNA，将 RNA 逆转录为 cDNA 并对其进行测序。此外，我们进行了生物信息学来识别和分析差异表达的 circRNA 并预测它们的潜在功能。我们通过定量 RT-PCR 验证了一些差异表达的 circRNA。我们使用 RNA-seq 鉴定 49,494 个 circRNA，与 WT 晶状体相比，在 Crybb2-/-小鼠晶状体中，149 个 circRNA 上调，172 个下调。利用前 300 个 miRNA-circRNA 相互作用对，我们构建了一个 circRNA-miRNA 相互作用网络。此外，那些差异表达的 circRNAs 参与了各种生物过程，如晶状体纤维细胞发育、钙通道复合体、晶状体结构成分。它们参与了几个重要的通路，例如经典的 Wnt 信号通路。定量 RT-PCR 验证了 Crybb2-/- 小鼠晶状体中一些不同表达的 circRNA。

结论 Crybb2 敲除显著调节了小鼠晶状体中 circRNA 的表达谱，这可能有助于阐明 circRNA 在年龄相关性白内障中的作用。

The direct interaction between Rab5a and Rab4a enhanced EGF-stimulated proliferation of gastric cancer cells

Di Wang[1]、Ming Guan[2]
1. Department of Laboratory Medicine, Huashan Hospital North, Shanghai Medical College, Fudan University
2. 复旦大学附属华山医院

Background Gastric cancer is one of the leading causes of cancer-related death worldwide. Although targeted therapies such as antibodies against HER2 or VEGFR-2 have been widely used in the treatment of metastatic cancer, the overall outcomes are poor. Therefore, elucidation of the mechanism underlying cancer progression is important to improve prognosis. Overexpression of the Rab5a gene has been confirmed to correlate with tumorigenesis of many cancers, but the mechanism underling, especiallly of gastric cancer, is still unclear.
Aim To investigate the effects of Rab5a overexpression on the tumorigenesis of gastric cancer.
Methods First, the expression levels of Rab5a and Rab4a in primary tumorous tissues of gastric cancer patients diagnosed between 2015 and 2018 were analyzed. Then we constructed HGC-27 cell lines overexpressing GFP-Rab5a or RFP-Rab4a and investigated the interaction between Rab5a or Rab4a using Western blotting, co-immunoprecipitation, confocal microscopy and colocalization analysis. Finally, EGF-stimulated proliferation of these cell lines was analyzed using CCK-8 cell viability assay.
Results Compared with normal gastric tissues, the expression levels of Rab5a and Rab4a increased progressively both in paracancerous tissues and in advanced cancerous tissues. EGF could promote the proliferation of HGC-27 cells, especially Rab5a-overexpressing HGC-27 cells. Notably, Rab5a and Rab4a co-overexpression promoted the proliferation of HGC-27 cells to the greatest extent. Further analysis identified a direct interaction between Rab5a and Rab4a in HGC-27 cells.
Conclusion Co-overexpression of Rab5a and Rab4a in gastric cancer may promote the endosomal recycling of EGFR, which in turn contributes to poor prognosis and tumor progression in gastric cancer patients. Inhibit Rab5a or Rab4a expression might be a promising therapy for refractory gastric cancer.

硫辛酸对改善 PFOS 所致雄性大鼠生殖能力影响机制的研究

张智燕
内蒙古科技大学包头医学院第一附属医院

目的 探讨全氟辛酸（Perfluorooctane sulfonate, PFOS）对雄性大鼠生殖毒性作用，并分析硫辛酸（Lipoic acid, LA）对 PFOS 致雄性大鼠生殖毒性的改善作用。
方法 6 周龄雄性 SD 大鼠 40 只，随机分为 5 组（每组 8 只）：正常对照组；LA 对照组：100 mg/(kg•bw•d)；PFOS 染毒组：10 mg/(kg•bw•d)；低剂量 LA 组：PFOS 10 mg/(kg•bw•d)+LA 50 mg/(kg•bw•d)；高剂量 LA 组：PFOS 10 mg/(kg•bw•d)+LA 100 mg/(kg•bw•d)。干预 7 周后，腹主动脉取血，留取睾丸、附睾，计算脏器系数；采用计算机辅助精子分析系统进行精子数量的检测；HE 染色进行睾丸组织的病理学检查；分光光度法检测睾丸内琥珀酸脱氢酶（SDH）、乳酸脱氢酶（LDH）活性；ELISA 法检测大鼠血清中睾酮（T）和卵泡刺激素（FSH）含量；Western Blotting 法检测各组大鼠睾丸组织中 FSHR 蛋白表达水平。
结果 与正常对照组和 LA 对照组相比，PFOS 染毒组大鼠附睾和睾丸系数均增高($P<0.05$)，附睾精子数量降低($P<0.05$)；睾丸组织病理学观察显示，PFOS 染毒组较正常对照组大鼠生精小管内生精细胞层次减少，生精细胞排列紊乱，生精上皮出现较多的空泡化改变，而各剂量 LA 干预组病变明显减轻。与正常组大鼠相比，PFOS 染毒组大鼠血浆 SDH、LDH 酶活力均下降($P<0.05$)，而经 LA

干预后可以明显逆转这种变化，且差异有统计学意义(P<0.05)。此外，PFOS 染毒组大鼠与正常对照组相比，睾丸内 T 水平降低，FSH 水平升高，睾丸组织 FSHR 蛋白表达量显著降低(P<0.05)，而 LA 干预后可明显看到紊乱的激素水平得到改善，同时也抑制了睾丸组织 FSHR 蛋白的这种变化。**结论** PFOS 对雄性大鼠具有生殖毒性效应，而适量的 LA 补充可以改善 PFOS 所致的生殖损伤。

Characterisation of the novel clinical isolate X-4 containing a new tp0548 sequence-type

Dan Liu
Center of Clinical Laboratory, Zhongshan Hospital, School of Medical, Xiamen University, Xiamen, China,

Objectives To precisely define and characterise a new clinical isolate,we performed further genome-scale molecular analysis.
Methods The pooled segment genome sequencing method followed by Illumina sequencing was performed.
Results This novel sequence-type contained a unique nucleotide substitution 'T' at position 167 and belonged to the SS14-like clade of TPA strains, as determined by phylogenetic analysis. Multi-locus sequence analysis of nine chromosomal loci demonstr ated that the X-4 isolate was clustered within a monophyletic group of TPA strains.
Conclusion The novel tp0548 sequence-type was determined to belong to a new TPA isolate, X-4. The identification of variable length in homopolymetic tracts (G/C and A/T) could provide a snapshot of the genes that potentially involved in genotype–phenotype variations. These findings provide an unequivocal characterisation for better understand.

PU-0042

厦门市医疗机构开展基因检测服务现况

刘莉莉
厦门大学附属中山医院

目的 对厦门市医疗机构开展"基因检测"服务情况进行调查，为今后基因检测工作提供依据。
方法 厦门市临床检验质量控制中心设计调查表对医疗机构进行调研。
结果 厦门市医疗行业基因检测工作主要由非营利性医疗机构承担，开展项目较全面，可检测标本种类较广；大部分参研实验室参加各级室间质评，遵守法律法规和行业准则，但目前福建省没有适用于医疗机构基因检测实验室的监管办法；厦门市基因检测行业存在从业人员培训渠道有限、技术与人才分布不均、机构间发展不均衡等问题。
结论 福建省基因检测工作急需出台专业监管办法，同时增加培训渠道，重视多层次人才培养，加大对基层、非公立医疗机构实验室的扶持。

PU-0043

流感病毒两种检测方法结果一致性的比较

邢志芳、刘瑞来、关明
复旦大学附属华山医院

目的 胶体金法和 PCR 荧光探针法同时用于流感病毒的检测，比较两种检测方法结果的一致性。

方法 选择 2019 年 11 月 1 日至 12 月 31 日来复旦大学附属华山医院北院儿科就诊的 300 例流感疑似患者，均采集双份鼻拭子样本，分别用胶体金法和 PCR 荧光探针法同步检测，对于检测结果不一致的样本采样测序发进行验证，并分析外周血中性粒细胞、淋巴细胞和血清淀粉样蛋白 A（SAA）等感染性指标变化对于甲、乙型流感病毒感染临床诊断的价值。
结果 胶体金法检测出 18 例甲型流感病毒阳性患者，42 例乙型流感病毒阳性患者，PCR 荧光探针法检出 45 例甲型流感病毒阳性患者，乙型 124 例流感病毒阳性患者。胶体金法检测甲型流感病毒的灵敏度为 40%，特异度为 100%，胶体金法检测乙型流感病毒灵敏度为 33.87%，特异度为 98.3%。
结论 抗原检测法灵敏度低于 PCR 荧光探针法，甲型流感病毒胶体金法与 PCR 荧光探针法检测结果有一致性，乙型流感抗原检测法与 PCR 荧光探针法结果一致性差。甲、乙型流感在性别、CRP、SAA 数值差异无统计学意义。甲、乙型阳性患儿和阴性患儿的白细胞计数差异有统计学意义、中性粒细胞计数和淋巴细胞计数中位数均低于流感阴性组的患儿。两两结果比较显示：乙流的中性粒细胞计数与流感阴性组的差异有统计学意义，但是在甲流差异无统计学意义。

PU-0044

UCHL1 表达对结肠癌细胞系 HCT8 蛋白表达的影响

钟佳伶
四川省医学科学院·四川省人民医院

目的 UCHL1(ubiquitin C-terminal hydrolase-L1)是去泛素化酶家族的成员之一。实验前期结果显示，具有泛素水解酶活性的 UCHL1 表达对结肠癌细胞系 HCT8 的成瘤能力、转移和迁移能力均产生明显影响。本研究利用 pcDNA3.1 真核表达系统和双相电泳技术探讨具有泛素水解酶活性的 UCHL1 表达对 HCT8 细胞蛋白表达的影响。
方法 构建 pcDNA3.1-UCHL1 质粒，再通过 Overlap PCR 构建了泛素水解酶活性缺失的 pcDNA3.1-UCHL1-C90S 突变体质粒。分别转染空载质粒 pcDNA3.1、pcDNA3.1-UCHL1、pcDNA3.1-UCHL1-C90S 到 HCT8 细胞中，经 G418 筛选后获得稳定转染细胞系 HCT8/pcDNA3.1、HCT8/UCHL1 和 HCT8/UCHL1-C90S。采用强还原剂裂解液提取细胞蛋白并进行醋酸铵沉淀纯化，得到蛋白样品。用双向电泳方法对样品中的蛋白进行分离，采用 Imagemaster-v501-trial-2D 分析软件对图像进行分析，寻找差异表达的蛋白，再用 MALDI-TOF-MS 法对蛋白质进行鉴定。
结果 分析筛选出在 HCT8/pcDNA3.1 与 HCT8/UCHL1 之间，以及 HCT8/UCHL1、HCT8/UCHL1-C90S 之间均存在差异的蛋白共 11 个。最后质谱鉴定成功 9 个，其中 7 个蛋白表达上调，2 个蛋白表达下调。
结论 通过该方法，能够得到具有泛素水解酶活性的 UCHL1 在 HCT8 细胞中表达后所带来的蛋白质水平的表达差异，建立了双向电泳分析蛋白质组学研究的平台，为研究 UCHL1 在结肠癌细胞系 HCT8 中参与的细胞通路打开了局面。

抗 CCP 抗体、RF、CRP 和 ESR 在 RA 诊断中的应用价值

张萌
郑州大学第一附属医院

目的 检测抗环瓜氨酸肽抗体(抗 CCP 抗体)、类风湿因子(RF)、C 反应蛋白(CRP)和红细胞沉降率(ESR)的水平，并探讨其联合检测在类风湿关节炎(RA)诊断中的临床应用价值。
方法 收集 100 例 RA 患者（RA 组）、50 例体检健康者（对照组）的抗 CCP 抗体、RF、CRP、ESR 四项血清学指标检测结果。分析四项指标在 RA 诊断过程中的临床价值。

结果 与对照组相比，RA 组中抗 CCP 抗体、RF、CRP 和 ESR 检测结果及阳性率均明显升高，且有统计学差异（P<0.05）；抗 CCP 抗体诊断 RA 的特异度高于 RF，RF 诊断 RA 的灵敏度高于抗 CCP 抗体，抗 CCP 抗体、RF、CRP 和 ESR 联合检测具有较高的特异度，达到 99.92%。
结论 抗 CCP 抗体、CRP、RF 及 ESR 联合检测对 RA 的诊断具有较高特异度，有助于 RA 的临床诊断，有较高的应用价值，值得临床推广应用。

基于生物信息学分析氮杂胞苷调控食管腺癌的关键基因

李美美、张楠楠
郑州大学第一附属医院

目的 用生物信息学的方法分析抗肿瘤药物氮杂胞苷(Azacytidine)对食管腺癌起调控作用的关键基因。
方法 从 GEO 数据库中下载数据 GSE57130，获得氮杂胞苷处理食管腺癌细胞系 OE33 的数据集，通过 GEO2R 对差异表达基因进行分析，通过 NetworkAnalyst 分析获得调控关键基因差异表达的转录因子和 miRNA。
结果 从数据集 GSE57130 中获得 13 个差异表达基因 ASS1，GDF15，ANXA10，UCA1，NT5E，HOPX，ABCA1，LINC00704， PYGB，UBD，GSDMB，C15orf48，CD55。获得调控关键基因的转录因子 214 个，包括转录因子 ATF1,BCL6，EGR1，KLF1，STAT3 等，调控关键基因的 miRNA 204 个，例如 hsa-mir-5692a，hsa-mir-8069，hsa-mir-202-5p 等。
结论 进一步从分子水平理解抗肿瘤药物氮杂胞苷对食管腺癌的调控作用。

PU-0047

原发性胆汁性胆管炎患者血浆中环状 Rnas 的微阵列表达谱分析

王永峰、明亮
郑州大学第一附属医院

目的 环状 RNA (circRNAs) 在几种疾病的发生中起着至关重要的作用。疾病，然而，它们在原发性胆汁性胆管炎中的作用 仍不清楚。在这里，我们旨在确定血浆中的 circRNA 表达谱来自 PBC 患者并进一步探讨 circRNA 在诊断 PBC 中的价值。
方法 circRNA 微阵列用于确定血浆样本中的 circRNA 表达谱来自 6 名 PBC 患者和 6 名健康对照者。统计分析发现差异表达 circRNA，并且这些 circRNA 在 29 名 PBC 患者和 30 名健康人中通过 qRT-PCR 验证。 MicroRNA (miRNA) 目标预测软件确定了推定的 miRNA 反应元件（MRE），用于构建 circRNA-miRNA 相互作用图差异表达的 circRNA。
结果 我们的结果表明有 18 个上调与 PBC 患者血浆中的 4 个下调的环状 RNA 相比，健康的个体。在差异表达的 circRNA 中， hsa_circ_402458 （ P=0.0033 ）， hsa_circ_087631 和 hsa_circ_406329 (P=0.0185) 上调，hsa_circ_407176(P=0.0066) 和 hsa_circ_082319 在 PBC 组与健康组相比下调。特别是 hsa_circ_402458 在未接受 UDCA 治疗的 PBC 患者比接受 UDCA 治疗的 PBC 患者(P=0.0338)。 hsa_circ_402458 的受试者工作特征曲线下面积诊断 PBC 为 0.710（P=0.005）。对于 hsa_circ_402458，两个推定的 miRNA 靶标 hsa-预测了 miR-522-3p 和 hsa-miR-943。
结论 circRNA 失调可能发挥作用在 PBC 发病机制中的作用，并且 hsa_circ_402458 显示出作为候选生物标志物的前景。

PU-0048

Molecular Characterization Based on MLST and ECDC Typing Schemes and Antibiotic Resistance Analyses of Treponema pallidum subsp. pallidum in Xiamen, China

shumin He
厦门大学附属中山医院

Objective In total, 49 clinical samples were analyzed using two typing schemes, Enhanced Centers for Disease Control and Prevention (ECDC) and multilocus sequence typing (MLST), to describe the molecular characteristics of circulating Treponema pallidum isolates in Xiamen between 2016 and 2017.
Methods Forty fifive samples were fully typed by ECDC, and 14 different subtypes were detected.
Results Interestingly, the allelic profifile 1.3.1 widespread in Europe and North America was not detected in this region. Additionally, A2058G mutation in 23S rRNA was found in all detectable samples (38/38), and no mutation in 16S rRNA was observed (36/36).
Conclusion This study showed that the genotypes of T. pallidum isolates in Xiamen between 2016 and 2017 were different from those in other geographic areas. The resistance-related variants of T. pallidum isolates identifified in this study could provide awareness for clinicians in the treatment of syphilis.

PU-0049

不同提取系统提取病毒核酸的比较研究

阴晟、王敏、崔扬飞、王敏
中南大学湘雅二医院

目的 通过对天隆，中元和硕世三种全自动核酸提取系统对全血和尿液两种类型的临床样本提取出的核酸的质量进行分析比较，分析三种提取系统的临床适用性。
方法 首先用 16 个全血标本和 16 个尿液标本对三种提取系统提取效果进行评估，按照三种提取系统和试剂盒的说明书进行加样和提取，用 ThermoNanoDrop 2000 核酸蛋白分析仪检测所提取的核酸的浓度与纯度，再比较天隆和硕世提取系统提取 EBV,CMV 和 BKV 三种临床标本的 Ct 值的差异，结果用 SPSS25.0 进行处理。
结果 全血标本和尿液标本，天隆，中元和硕世所提取的核酸浓度范围在 16.8-356.1ng/ul， 6.1-146.8ng/ul， 17.2-75.5ng/ul，1.8-5.0 ng/ul，0-22.3 ng/ul，1.3-4.8 ng/ul，差异具有统计学意义（P<0.05）；全血和尿液标本平均核酸纯度天隆，中元和硕世分别为 1.88±0.01，1.87±0.02 和 1.91±0.01，1.32±0.02，1.19±0.10 和 4.04±0.87，差异具有统计学意义（P<0.05）；天隆和硕世所测得 EBV，CMV 和 BKV Ct 值之间平均差异分别为 0.020-0.064 和 0.38。
结论 三种核酸提取系统对于全血标本和尿液标本所提取出的核酸纯度和浓度之间是有差异的，但都满足临床要求，而其中天隆对于核酸提取能力较其他两个系统更强。

PU-0050

胰腺癌患者风险预测评分的研发和验证

贾苗苗、许青霞
河南省肿瘤医院

目的 本研究旨在研究和验证胰腺癌 (PC) 患者总生存期 (OS) 的有效预测模型。
方法 本研究对 600 名患者进行了回顾性分析。我们使用随机森林图来确定胰腺癌患者总生存期的重要预后因素。然后使用校准图和一致性指数（C-index）来评估列线图模型的预测准确性。
结果 我们使用随机森林图选择三个最重要的特征，它们与胰腺癌患者的总生存期显着相关。我们的 OS 模型的 C 指数在两个队列中分别为 0.733（95% CI：0.673~0.793）和 0.772（95% CI：0.691~0.853）。根据模型风险评分，将患者分为低危组和高危组两组。 Kaplan-Meier 曲线显示，两个亚组与主要队列和验证队列中的 OS 显著相关。随后，我们建立了 OS 的列线图，包括两个队列中的风险评分、TNM 分期。它在初级中实现了比风险评分模型 0.733（95% CI：0.673~0.793）更高的 C 指数 0.783（95% CI：0.730~0.836）（P = 0.005）。
结论 建立的风险评分模型和列线图可以对胰腺癌个体患者进行更准确的预后预测。

PU-0051

Long noncoding RNA NORAD function in tumor progression of colorectal cancer

Lili Wang
Qilu Hospital of Shandong University

Purpose To elucidate the role and clinical significance of long noncoding RNA-activated by DNA damage (NORAD) in colorectal cancer (CRC).
Methods Sixty pairs of tumorous and adjacent nontumorous tissues derived from CRC patients were subjected to quantitative real-time polymerase chain reaction to determine the expression level of NORAD. The serum levels of NORAD expression were also measured in an independent cohort of CRC patients as well as patients with benign diseases and healthy controls. Comparative analyses were performed to investigate the relationships between NORAD levels in tissues and clinicopathological features of CRC. Receiver operating characteristic (ROC) curve analysis was used to assess the diagnostic value of NORAD in patients with CRC. Furthermore, the potential functions of NORAD in the development of CRC were explored in vitro, using the HCT116 and SW1116 CRC cell lines.
Result NORAD expression was significantly up-regulated in the tumorous tissues of CRC patients ($P < 0.001$) compared to the adjacent nontumorous tissues. Higher NORAD expression was associated with advanced CRC. Moreover, serum levels supported that NORAD could distinguish CRC patients from healthy controls and patients with benign diseases, indicating a potential diagnostic role in CRC. The ROC curve analysis showed a diagnostic efficacy with area under the curve of 0.800 (95% confidence interval: 0.737-0.853). Mechanistic investigations indicated that NORAD silencing reduced CRC cell proliferation, migration and invasion.
Conclusion NORAD may serve as a novel predictor in CRC and may be a potential target for future therapy.

PU-0052

β-catenin phosphorylation regulated by APC in colorectal cancer

Lili Wang
Qilu Hospital of Shandong University

AIM To study the role of mutated adenomatous polyposis coli (APC) with first direct analysis of the endogenous β-catenin phosphorylation activity in colorectal cancer.
METHODS By comparing parental SW480 cells that harbor a typical truncated adenomatous polyposis coli (APC) form, cells expressing full-length APC and APC-depleted cells, we provide the formal demonstration that APC is necessary for β-catenin phosphorylation, both for priming of the protein at residue serine 45 and for the subsequent phosphorylation of residues 33, 37 and 41.
METHODS Truncated APC still sustains a surprisingly high phosphorylation activity, which requires the protein to bind to β-catenin through the APC 20-amino-acid (20AA) repeats, thus providing a biochemical explanation for the precise truncations found in cancer cells. We also show that most of the β-catenin phosphorylation activity is associated with a dense insoluble fraction. We finally examine the impact of full-length and truncated APC on β-catenin nuclear transport. We observe that β-catenin is transported much faster than previously thought.
CONCLUSION APC plays an important role in β-catenin cellular transport as a nuclear shuttle protein, which might have an effects on he nuclear function of β-catenin in tumor cells.

PU-0053

Clinical Value and underlying mechanisms of upregulated LINC00485 in hepatocellular carcinoma

Xinyu Zhu、Yanlin Feng、Dingdong He、Zi Wang、Fangfang Huang、Jiancheng Tu
ZHONGNAN HOSPITAL OF WUHAN UNIVERSITY

Aims This study aimed to reveal the functional role of LINC00485 in hepatocellular carcinoma (HCC).
Methods 210 serum samples from Zhongnan Hospital of Wuhan University were employed to evaluate clinical value of LINC00485. Bioinformatics analysis was adopted to explore its potential mechanisms.
Results LINC00485 was confirmed to be upregulated in HCC tissues and serum samples. Survival analysis and receiver operating characteristic curve revealed its prognostic and diagnostic roles. The combination of serum LINC00485 with AFP can remarkably improve diagnostic ability of HCC. Exploration of the underlying mechanism demonstrated that LINC00485 might exert pro-oncogenic activity by LINC00485—three miRNAs—four mRNAs network.
Conclusions our study unveiled that upregulated LINC00485 could act as a potential diagnostic and prognostic biomarker and provide a novel insight into the molecular mechanisms of LINC00485 in HCC pathogenesis.

PU-0054

HOXC11 作为结直肠癌潜在预后标志物的研究

陈涌泉[1]、林宇宁[2]
1. 厦门弘爱医院
2. 福建医科大学附属厦门弘爱医院

目的 同源异型盒（HOX）基因家族参与了肿瘤的发生，HOXC11 属于同源框 C（HOXC）基因簇，在多种癌症的发生发展中起着重要作用。然而，其在结直肠癌中的表达及临床价值尚不清楚。本研究拟初步探讨 HOXC11 作为结直肠癌潜在预后标志物的临床应用价值。
方法 下载 TCGA 数据库结直肠癌数据（肿瘤组 480 例、癌旁 41 例），采用 Kruskal-Wallis 检验、Wilcoxon 符号秩次检验和 logistic 回归分析 HOXC11 表达与临床病理特征的关系；采用受试者特性曲线（ROC）曲线，用面积曲线下（AUC）评分描述 HOXC11 的诊断效能，采用 Kaplan-Meier 法和 Cox 回归分析法评价影响预后的因素；基因集富集分析（GSEA）分析鉴定 HOXC11 的重要功能。
结果 结直肠癌组织中 HOXC11 表达增加与 N 分期（P<0.001）、M 分期（P<0.001）、主要治疗结果（P<0.001）、淋巴侵犯（P<0.001）和癌胚抗原（CEA）有关（P<0.001）。ROC 曲线显示 HOXC11 具有显著的诊断和预后能力（AUC=0.734）。
结论 HOXC11 的表达与结直肠癌的生存率显著相关，可能是结直肠癌的一个有前途的预后生物标志物。

PU-0055

结直肠癌细胞中解螺旋酶 DHX32 分泌途径的初步研究

陈涌泉、张忠英
厦门弘爱医院

目的 RNA 解螺旋酶是一类参与核糖体的合成、转录、剪切、翻译等与 RNA 多项功能相关的水解酶，其在肿瘤组织中异常表达与肿瘤的发生、发展相关。2009 年，本课题组在筛选结直肠癌特异性标志物时，首次发现解螺旋酶 DHX32 在结直肠癌组织中表达水平高于癌旁，并且能促进癌细胞的增殖、迁移及侵袭，以及通过 Wnt/β-catenin 通路促进结血管生成，有望作为潜在的肿瘤标志物，但是其在血液中的表达情况未知，分泌途径亦未见报道。因此，本研究的目的是在结直肠细胞中对 DHX32 胞外分泌现象进行确定并对其分泌途径进行初步探索。
方法 通过对 SW480 细胞株上清进行免疫共沉淀，再对产物进行鉴定以确定 DHX32 的分泌现象。用经典分泌途径的抑制剂对 SW480 细胞进行处理，以及通过免疫荧光共聚焦分析 DHX32 与高尔基体标志物和内质网的标志物是否有共定位，以确定 DHX32 能否通过经典分泌途径进行分泌。用 ABC 转运蛋白分泌途径的抑制剂对细胞进行处理，以确定 DHX32 是否通过非经典分泌途径-ABC 转运蛋白分泌途径进行分泌；通过 ELISA 检测裂解后的外泌体是否有反应性，以确定 DHX32 是否也可以通过外泌体途径进行分泌。
结果 免疫沉淀结果表明，实验组中能够鉴定到目的条带，但是对照组中没有，验证了 DHX32 存在于细胞上清中。经典分泌途径抑制剂阻断实验结果表明，与对照组相比，实验组中，DHX32 在上清中表达量下降，说明抑制剂能够阻断 DHX32 的分泌，并且对照组与实验组中 LDH 浓度无差异，表明抑制剂能够阻断 DHX32 的分泌。在免疫荧光共聚焦中，DHX32 与高尔基体和内质网的标志物有共定位，进一步说明了 DHX32 通过通过经典分泌途径进行分泌。在 ABC 转运蛋白分泌途径抑制剂阻断实验中，与对照组的相比，细胞上清中 DHX32 的表达量没有差异，同时实验组和对照组中 LDH 的浓度没有差异，说明不能阻断 DHX32 的分泌，即 DHX32 不通过 ABC 转运蛋白非经典分泌途径分泌。外泌体实验中，ELISA 能够鉴定到反应性，说明 DHX32 有可能通过外泌体途径进行分泌。

结论 本研究表明，DHX32 虽然没有预测到经典的信号肽序列，但是其也可以通过经典分泌途径进行分泌，具体的分泌机制有待进一步探明；在非经典分泌途径的研究中，DHX32 不通过 ABC 转运蛋白分泌途径分泌，但是有可能通过外泌体途径进行分泌。

济南地区 2705 例耳聋相关基因变异检测及分析

赵敬杰、刘玲、刘军莉、袁超
山东大学第二医院

目的 分析济南地区人群耳聋相关基因位点变异的频率、分布及其与听力损失间的关系，明确区域人群中的基因变异情况。
方法 应用微阵列芯片法检测 2705 名受检者 GJB2 基因、GJB3 基因、SLC26A4 基因和 MT-RNR1 基因上的热点变异，利用 Mutation Surveyor 软件检测 386 名 Sanger 测序结果中的其他位点变异，根据听力诊断结果将受检者划分为听力损失组和正常听力组，对携带热点变异与听力损失间的关系、各位点变异频率、基因型分布及其在两组间的差异进行分析。
结果 听力损失组的热点变异携带率高于正常听力组，热点变异携带者的听力受损率高于未携带者（P<0.001）。热点变异中 c.235del 的变异率最高，其次是 c.919-2A>G。c.176_191del 和 c.235del 的组间基因型分布差异有统计学意义（P<0.05、P<0.001）。GJB2 基因变异的发生率最高。c.79G>A 和 c.341A>G 属于常见多态，两者存在较弱的连锁不平衡，但其单体型未见统计学差异。c.109G>A 的 MAF 高于 5%，纯合型都致病，其组间基因型分布差异有统计学意义（P<0.001）。c.357C＞T 同义变异是 GJB3 基因上的常见多态。MT-RNR1 以均质和良性变异多见。多个少见变异仅在听力损失组中检出。
结论 基因变异是听力受损的重要因素，听力损失人群中易检出致病的热点变异。GJB2 基因位点易发生变异。常见多态在人群中广泛存在，而少见变异和致病变异易分布在听力损失人群中。

Non-invasive prenatal testing for trisomies 21, 18 and 13: clinical experience from 5341 pregnancies in Kunming area

Qiuyue Xu、yong duan、yang su
Department of Clinical Laboratory,the Frist Affiliated Hospital of Kunming Medical University

Objectives Cell-free fetal DNA has been widely used in prenatal genetic testing during recent years. We explored the feasibility of non-invasive prenatal testing (NIPT) for analysis of common fetal aneuploidies among pregnancies in Kunming area.
Methods 5341 pregnant women who underwent NIPT screening in the First Affiliated Hospital of Kunming Medical University from January 2017 to December 2020 were selected.21/18/13 trisomy,sex chromosome aneuploidy (SCA),copy number variations (CNV) and other autosomal aneuploidywere compared.The correlation of fetal free DNA concentration (cffDNA) with age,gestational age,body weight and BMI was analyzed.
Results Among 5341 NIPT screening cases, 4813 cases were followed up, with a follow-up rate of 90.11% ,The average gestational age of pregnant women was (31.02 ± 4.69) years, and the average gestational age of NIPT was (18.46 ± 4.35) weeks.Among 4813 pregnant women,94 cases had high risk of NIPT,78 cases had prenatal diagnosis (amniocentesis karyotype analysis),and 26 cases had positive diagnosis.Among them,3 cases of NIPT showed high risk of XO,which was inconsistent with karyotype analysis,so the detection rate was 29.49% (23 / 78).Among the 23 confirmed karyotypes,9 cases were T21,2 cases were T18,2 cases were T13,4 cases were SCA,5 cases were CNV,and 1 case was other autosomal aneuploidy (T7).The

sensitivity and specificity of trisomy 21/18/13,T21,T18,T13,SCA,CNV and other autosomal aneuploidy Were 100%,99.92%;100%,99.98%;100%,99.98%;100%,99.96%;100%,99.52%;100%,99.83%;100%,99.58% respectively.The positive predictive value and false positive rate of trisomy 21/18/13,T21,T18,T13,SCA,CNV and other autosomal aneuploidy were 76.47%,0.08%;90.00%,0.02%;66.67%,0.02%;50.00%,0.04%;14.81%,0.48%;38.46%,0.17% and 4.76%,0.42% respectively.CffDNA was positively correlated with gestational age,negatively correlated with age and body weight,but not correlated with BMI.

Conclusion The accuracy of NIPT in screening T21,T18 and T13 is higher than that of SCA,CNV and other autosomes. At the same time,the risk of fetal trisomy 21 is higher in fetuses of elderly pregnant women.

PU-0058

高敏乙肝病毒 DNA 定量检测在低病毒载量肝病患者中的应用

金郑宝
中国人民解放军联勤保障部队第九〇〇医院

目的 评价基于 Smart32 自动核酸提取仪和 ABI ViiA7 荧光定量 PCR 仪的高敏乙肝病毒 DNA 定量检测体系的检测性能是否符合临床的检测要求，探究在低病毒载量肝病患者中高敏乙肝病毒 DNA 定量检测是否更具应用价值。

方法 采取 Smart32 全自动核酸提取仪提取乙肝病毒核酸以及 ABI ViiA7 荧光定量 PCR 仪进行高敏乙肝病毒 DNA 检测，评估该高敏乙肝病毒核酸检测体系的性能，评价项目包含精密度、最低检测限和准确度。将 154 例低病毒载量肝病患者的血清进行高敏乙肝病毒 DNA 定量检测，ALT 定量检测，HBeAg 定量检测及乙肝两对半定性检测。根据高敏乙肝病毒 DNA 检测结果将 154 例患者分为 HBV DNA<30 IU/ml 与 HBV DNA30～500IU/ml 两组，分析低载量乙肝病毒 DNA 与丙氨酸氨基转移酶（ALT）异常率及乙肝两对半血清学检出模式的关联。

结果 精密度：四种浓度分别为 5x107、5x106、5x105、5x104IU/mL 的参考品分别检测 20 次的 Ct 值的 CV 值均<10% 。最低检测限：该高敏乙肝病毒核酸检测系统的最低检测限为 10IU/ml。准确度：使用福建省室间质评的 5 份标本进行检测,检测值与靶值的对数值之间的偏差≤±0.4 lg。154 例患者的高敏乙肝病毒 DNA 检测值在 30～500 IU/ml 有 55 例，占 35.71%，检测值<30 IU/ml 有 99 例，占 64.29 %。乙肝病毒 DNA 在 30～500 IU/mL 的患者与<30 IU/mL 的患者相比，ALT 异常率更高，差异具有统计学意义（$\chi2=5.580$，$P=0.026$）。乙肝病毒 DNA 载量<30 IU/ml 和 30～500 IU/ml 两组患者之间的各乙肝两对半血清学模式分布差异无统计学意义（$\chi2=6.028$，$P=0.110$）

结论 高敏乙肝病毒 DNA 定量检测系统精密度高、最低检测灵敏度好、准确度高，适合临床 PCR 实验室开展。高敏乙肝病毒 DNA 定量检测对低病毒载量乙肝患者更适用，可以为临床医生在为低病毒载量肝病患者进行病情诊断、指导用药和病情监测时提供值得信赖的依据。

艾滋病核酸检测方法的特点及应用

林蝶
大理大学第一附属医院（云南省第四人民医院）

现今艾滋病仍是威胁人类健康一大传染性疾病。随着艾滋病感染患者的不断增多，艾滋病检测技术的发展也在不断地进步，并向着高灵敏度、高特异性、简便快速及检测方法的多样性发展，在防止艾滋病的大规模流行以及在艾滋病早期诊断和治疗方面发挥着重要作用。与 HIV 抗体检测相比较，艾滋病核酸检测在提高艾滋病检测的特异性、降低假阳性的概率、缩短艾滋病病毒的检测窗口期、提高艾滋病诊断和治愈率方面占相对优势。本文主要就实验室几种常见艾滋核酸检测方法作一综述。

IL-5、Snail 和 E-cadherin 蛋白与胃窦癌相关性的研究

符自清、向波、易平、王永杰
吉首大学第一附属医院（湘西土家族苗族自治州人民医院）

目的 研究胃窦癌中 IL-5、转录因子 Snail 和黏附因子 E-cadherin 的表达水平，并进一步探讨三者与胃窦癌的浸润、转移及分化程度等因素之间的相关性。
方法 收集某三甲医院 122 例手术切除的胃窦癌组织和 32 例癌旁组织标本。采用免疫组化技术分别检测胃窦癌组织和癌旁组织中 IL-5、Snail 与 E-cadherin 的表达情况。分析三者在不同分化程度的胃窦癌组织中的表达，以及与相关临床病理因素及预后间的关系。
结果 胃窦癌组织中 IL-5 表达水平较癌旁组织上调，阳性表达率分别为 61.5%和 27.8%，差异有统计学意义（P<0.05）；胃窦癌组织 IL-5 表达上调与 TNM 分期（P<0.05）、分化程度（P<0.05）密切相关；而 IL-5 表达与性别、年龄、肿瘤体积、是否远处转移、吸烟史及饮酒史均无关（P 均>0.05）；胃窦癌组织 Snail 阳性率 60.2%，显著高于癌旁组织 31.3%（P<0.05）；Snail 的表达与胃窦癌不同分化程度、淋巴结转移有关（P<0.05）。胃窦癌组织 E-cadherin 的阳性率为 32.3%低于癌旁组织 65.2%（P<0.05），其表达与胃窦癌不同分化程度、淋巴结转移、分期有关性（P<0.05）。Snail 与 E-cadhrin 的表达在胃窦癌组织中体现出负相关性（P<0.05）。
结论 我们推测 IL-5、Snail 蛋白表达上调与 E-cadherin 蛋白表达抑制可能与胃窦癌浸润和转移的事件相关，三者均可作为其重要生物学标志，联合检测可利于胃窦癌早期诊断以及预后评估。

PU-0062

Predictive Protein Biomarkers for Response to Neoadjuvant Chemoradiation in Locally Advanced Rectal Cancer

Jianan Wang、Chengbin Wang
Department of Clinical Laboratory Medicine, The General Hospital of People’s Liberation Army

Background Colorectal cancer is the third most common and the fourth most lethal cancer in the world. In the majority of cases, patients are diagnosed at an advanced stage or even metastatic, thus explaining the high mortality. The standard treatment for patients with locally advanced rectal cancer (LARC) is neoadjuvant chemoradiotherapy (nCRT) with 5-fuorouracil (5-FU) followed by surgery. Most patients with LARC present incomplete pathological response to nCRT, the

resistance rate to this treatment remains high with approximately 30% of non-responders. Despite the efforts to predict treatment response using tumor-molecular features, as differentially expressed genes, no molecule has proved to be a strong biomarker. The tumor proteomic analysis is a promising strategy for biomarkers identification, which can be used to identify a predictive model to forecast treatment response outcomes and figured out response relevant proteins in nCRT.
Methods We performed LC-MS/MS-based proteomic analysis to select potentially proteins and then used in silico approach to further validate the differential proteins screened out from our training cohort . 42 patients diagnosed with LARC and treated with 5-FU based nCRT between 2010-2018 at Chinese PLA General Hospital were enrolled in the study. All of these cases had available paired pre-treatment formalin-fixed paraffin-embedded (FFPE) biopsies and post-CRT FFPE surgical specimens from the same patients and histologically confirmed adenocarcinoma. According to Tumor Regression Grade (TRG), patients were divided into three treatment response groups: poor-responders (PR, AJCC TRG2+3), moderate responders (MR, AJCC TRG1) and total responders (TR, AJCC TRG0), and to compare the proteomes of these diferent groups. From 42 paired FFPE biopsies and surgical specimens, we extracted and analysed the tumor proteome of these patients.
Results Comparing TR and PR group, we have identified 91 differentially abundant proteins between biopsies, 165 between surgical specimens of two groups. Next, comparing biopsies and surgical specimens of each group through paired t-test, we screened out 1467 and 771 proteins changed after nCRT in TR and PR group, respectively. 848 proteins with different change directions(from biopsies to surgical specimens) in TR and PR group were defined as response relevant proteins which might provide some indications to explain different response in TR and PR group. Then, 129 proteins were figured out in intersections between differentially expressed proteins and response relevant proteins, which might play a role in tumor resistant to nCRT and predict the patient response to the therapy. Among these proteins, we have identifed 43 genes expressed significantly different in rectal cancer tissue and normal tissue using GEPIA2 database(mainly involved in TFIID-class transcription factor complex binding, ATPase binding, RNA polymerase II transcription factor binding, etc), and there were 11 genes related to the overall survival of rectal cancer patients(favorable: SF3B6, NUP153, ARGLU1, GNL3, MTHFD1L, PTCD3, SLC27A2; unfavorable: SPTB, TMOD1, CD63, S100A13). A set of 16 proteins(over-expressed in PR group: PLEKHA6, CHMP4B, VWA1, LMNA; over-expressed in TR group: PTPN6, SF3B3, HDAC2, NDUFA5, PHGDH, TIMM44, AHSA1, GNL3, POLR2A, MTHFD1L, PTP4A1, NUP35) was independently validated in a gene expression dataset for chemoradiosensitivity of colorectal cancer cells from GSE20298 to be related to nCRT resistance, enrichment analysis found that these 16 proteins were related to nuclear envelope (NE) reassembly, nucleus organization, and generation of precursor metabolites and energy.
Conclusions From this retrospective study, protein differences between different response groups to nCRT in LARC patients were highlighted using FFPE proteomic analysis, they might be the novel biomarkers for diagnosis and guiding therapeutic strategies of rectal cancer. These results will pave the way for a larger cohort for better sensitivity and specificity of the signature to guide decisions in the choice of treatment.Furthermore, the findings will provide an insight about the proteins and molecular pathways involved in the response to treatment of LARC patients.

PU-0063

分子诊断技术在结核病诊疗中的应用进展

彭瑾
大理大学第一附属医院（云南省第四人民医院）
无

结核是由结核分枝杆菌引起的一种世界性慢性传染病，通常对肺及淋巴系统造成感染破坏，其它多器官，多系统亦可受累，主要经呼吸道传染，起病隐匿、进展缓慢、传染性强。灵敏、准确及

快速的诊断方法是有效控制结核病传播的重要手段。对于结核病的诊断，主要通过临床表现、免疫学、微生物学及影像学检测结果进行综合分析，随着分子诊断的快速发展，为结核病的诊治提供了新思路，目前，多种新的分子诊断技术已经或即将应用于临床，获得了 WHO 的认证推荐，应用前景广，基于核酸分子杂交、基因测序的分子诊断技术取得了巨大的进展 ，而很多新的分子诊断技术也处于快速发展中，有些成熟的技术已取得了较为广泛的应用，分子诊断技术的发展及应用进一步增强了结核病的诊疗，对于及早发现、及早治疗结核病起了积极的推进作用。

PU-0064

一种高灵敏检测 miRNA 的荧光生物传感方法

孙玉洁、张玉林、张国军
湖北中医药大学

目的 构建一种新型基于双链特异性核酸酶（DSN）放大和磁吸减少内滤光效应（IFE）的聚多巴胺磁纳米颗粒(MNPs@PDA)的荧光共振能量转移（FRET）生物传感器用于 miRNA 的检测。
方法 在碱性缓冲液中，加入盐酸多巴胺和磁性纳米颗粒避光混悬制备 MNPs@PDA，并采用拉曼光谱仪、红外光谱仪、透射电镜进行表征。FAM 标记的 DNA 探针在无靶标 miRNA 存在的情况下，因 π-π 堆积作用吸附在 MNPs@PDA 表面，发生 FRET 导致荧光淬灭。在靶标 miRNA-141 存在的情况下，标记探针与 miRNA 互补杂交形成 DNA-RNA 杂合双链，因构象改变，便从 MNPs@PDA 表面发生解吸附。DSN 选择性地消化 DNA-RNA 杂交链中的 DNA，使探针被酶切成短小的片段，同时靶 miRNA 被释放出来。探针碎片因为长度短，与 MNPs@PDA 亲和力弱，于是荧光信号恢复。而释放的靶 miRNA 再次与下一个标记探针杂交，上述过程循环发生，从而导致荧光信号成几何级数放大。此外，由于 IFE 的存在，分散在溶液中的 MNPs@PDA 会减弱荧光信号。而将 MNPs@PDA 通过磁力吸引到比色皿的底部，进一步增大了荧光信号。通过检测荧光信号，实现对 miRNA 的定量检测。
结果 优化后的体系检测条件为 MNPs@PDA 浓度为 10 μg/mL、DSN 酶的工作温度为 50℃、DSN 酶的浓度 0.2 U/mL，酶反应时间为 90 分钟。在优化条件下，miR-141 在 5 pM~ 5 nM 范围内，其浓度的对数与体系荧光信号呈线性关系，检测限低至 0.42 pM。将非互补核酸序列 miR-21、RS ssDNA、SM RNA 与 miR-141 分别加入反应体系进行检测，能成功区分出靶标 miR-141，说明了该传感器良好的选择性。此外，分别检测前列腺癌细胞株 PC-3 细胞和前列腺上皮细胞株 RWPE-1 细胞来源的 RNA，癌细胞来源的 miRNA-141 表达上调，表明该平台对生物样本的适用性。
结论 基于 DSN 放大和 MNPs@PDA 的荧光生物传感器用于 miRNA 的检测，具有操作简单、稳定性好、特异性强、灵敏度高等优点，可以实现对生物复杂样品中 miRNA 的检测，未来采用多种荧光标记的探针有望应用于多种 miRNA 的同时检测。

荧光定量聚合酶链反应技术在结核病诊断中的应用

李若兰
石河子大学医学院第一附属医院

结核病是临床常见的一种传染性疾病。实验室检测结果的准确性直接影响到结核病的临床诊断与治疗转归，并且是临床治疗的主要依据之一 。因此，尽可能提升实验室检出准确率与有效率，改进检测技术的应用价值，促使患者早期诊断、早期治疗，有效控制患者疾病，预防患者病情蔓延是非常有必要的。但传统检验方法需要较长时间才能得出结果，且结核分枝杆菌的临床检出率比较低，无法满足临床的诊断、治疗需求。近年来，结核病诊断中应用荧光定量聚合酶链反应（PCR）技术，可通过 PCR 体外扩增法准确检出结核分枝杆菌 DNA，且检测时间比较短。

PU-0066

Aberrant methylation of PAX5 in human prostate cancer and its relation to clinicopathologic features

Shibao Li
The Affiliated Hospital of Xuzhou Medical University

Backgrounds PAX5, a number to the PAX gene family, is frequently silenced in various carcinomas and linked to tumor progression. However, the expression profile of PAX5 and its regulatory mechanism in human prostate cancer (PCa) remains unknown. Here, we explored the expression and an epigenetic change of PAX5 in PCa and determined whether these findings were correlated with clinicopathologic characteristics of PCa.
Methods The expression profile of PAX5 in both mRNA level and protein content was investigated via qRT-PCR, Western blotting, and immunohistochemistry in 3 PCa cell lines (LNCaP, PC-3 and DU145), a cohort of frozen prostate tissues including 47 primary PCa, 9 paired noncancerous and cancerous prostate tissues and a tissue microarray sets including 100 paraffin-embedded prostate samples (3 normal tissues, 36 cases of adjacent tissues and 61 cases of tumor). Subsequently, the methylation status of PAX5 gene promoter was analyzed using bisulfite sequencing(BSP) and methylation-specific PCR(MSP) . Finally，the response of PCa cell lines, differing in the initial PAX5 mRNA content, to epigenetic modifier, 5-aza-2-deoxycytidine, was detected by qRT-PCR.
Results Down-regulation of PAX5 mRNA expression was observed in 30 of 47 (63.8%) PCa compared with normal adjacent tissues. Meanwhile, the methylation of PAX5 gene promoter was detected in 25 of 47 (53.2%) PCa. Immunostaining analysis showed that PAX5 protein was negative or weakly positive in 39 of 61 (63.9%) prostate cancer samples. PCa patients with high Gleason scores have a higher frequency of PAX5 methylation than those with low Gleason scores. Furthermore, expression of PAX5 mRNA can be restored by the demethylated drug 5-aza-2'-deoxycytidine in DU145 cells.
Conclusions Our study provides evidence that the epigenetic inactivation of PAX5 may be a novel candidate biomarker of PCa and play an important tumor-suppressor role in PCa progression.

基于回文 DNA 的纳米机器人用于复杂分子突变的识别及诊断

袁睿[1]、辇伟奇[2]、丁世家[3]、罗阳[1]
1. 重庆大学
2. 重庆大学附属肿瘤医院
3. 重庆医科大学

表皮生长因子受体 (EGFR) 基因突变的可靠鉴别和诊断在肺癌治疗中具有关键作用。然而，目前对 EGFR 外显子的特定缺失方式的快速和准确识别仍然具有挑战性。在此，我们提出了一种基于回文结构辅助自退火转录扩增（PASTA）策略，用于可靠地检测循环 DNA 中 EGFR 外显子突变。首先，我们设计了一个回文 DNA 发夹纳米机器人，其由回文序列、 T7 启动子区域、目标识别区域和转录模板组成；当靶标单链 DNA 存在时，纳米机器人可以迅速自组装形成靶标-发夹/发夹-靶标的二聚体结构；随后在引入 DNA 聚合酶和 T7 RNA 聚合酶后，将发生回文结构介导的延伸和体外转录，同时产生大量 RNA 产物。最后，这些产物可以使用亚甲蓝染料辅助电化学生物传感器准确读出。以循环 15n-del EGFR 突变为模型验证该策略，在 1 fM 至 100 pM 范围内具有较好的线性关系，最低检测限可低至 0.78 fM 。该方法的有效应用也可作为分子亚型检测的通用平台。

PU-0068

SEMA3B-AS1 在食管鳞癌中的鉴别诊断价值

李世宝
徐州医科大学附属医院

目的 探讨 SEMA3B-AS1 在食管鳞癌(esophageal squamous cell carcinoma，ESCC)鉴别诊断中的价值及其临床意义。
方法 本研究共纳入 41 例食管鳞癌患者与 31 例食管良性疾病患者，收集患者外周血，使用实时荧光定量聚合酶链反应(quantitative polymerase chain reaction，qRT-PCR)检测患者血清中 SEMA3B-AS1 表达水平，分析其与患者临床病理特征的关系。受试者工作曲线(receiver operator characteristic curve, ROC 曲线)评估 SEMA3B-AS1 在食管鳞癌的鉴别价值。
结果 食管鳞癌患者的血清 SEMA3B-AS1 表达水平明显高于食管良性疾病组，差异具有统计学意义（P < 0.01）；SEMA3B-AS1 的表达水平与患者的肿瘤直径大小和淋巴结转移有关(P<0.05），而与患者年龄、性别、TNM 分期、神经侵犯、分化程度均无显著相关性(P>0.05）；ROC 曲线结果显示：SEMA3B-AS1 鉴别食管癌和食管良性肿瘤的曲线下面积（AUC）为 0.886（95%CI：0.8144~0.9579，P 值＜0.0001），敏感度为 76.47%，特异度为 90.32%。。
结论 食管鳞癌患者的血清 SEMA3B-AS1 表达水平明显高于食管良性疾病患者，且其表达水平与患者肿瘤直径大小与淋巴结转移正相关，提示 SEMA3B-AS1 是一个潜在地鉴别食管鳞癌与食管良性疾病患者的标志物。

PU-0069

Regulation of estrogen signaling and breast cancer proliferation by PSMD14

Xiao Yang
Xinxiang Medical University

Breast cancer is the number one malignant tumor in women, among which estrogen receptor positive accounts for 65%-70%. Clinically, patients with estrogen receptor positive breast cancer can receive endocrine therapy. However, resistance to endocrine therapy has become a clinically urgent problem. A large number of previous studies have proved that the post-translational modification of the estrogen receptor is significantly related to endocrine therapy resistance. The preliminary screening of the deubiquitinating enzyme siRNA library suggested that the PSMD14 protein is a key deubiquitinating enzyme that regulates the stability of the estrogen receptor protein and the activity of the estrogen signaling pathway. PSMD14 silence can significantly inhibit breast cancer estrogen receptor protein levels and breast cancer cells proliferation. PSMD14 can interact with estrogen receptors and regulate the stability of estrogen receptors. Therefore, we hypothesized that PSMD14 is a key deubiquitinating enzyme that regulates the estrogen signaling pathway and breast cancer cells proliferation. This project uses molecular biology experiments, cytology experiments, animal experiments, and clinical samples to explore the mechanisms of PSMD14 regulating breast cancer progression and endocrine therapy resistance via regulating the estrogen pathway, with a view to helping to provide new ideas for the treatment of breast cancer and the reversal of endocrine therapy resistance.

PU-0070

microRNA-4458 regulates insulin resistance in hepatic cells by targeting the insulin-like growth factor 1 receptor

周敬敬
芜湖市第一人民医院

Background The objective of the research was to investigate the roles of miR-4458 in the regulation of insulin resistance in hepatic cells and to explore the underlying molecular mechanisms.
Methods The blood samples were collected from the T2D patients and the health controls, and the liver tissues were collected from the DM and control rats. The relationship between IGF1R and miR-4458 was predicted by TargetScan and verified by the dual luciferase reporter gene system. qRT-PCR was used to measure the mRNA expression of miR-4458, IGF1R, G6Pase and PEPCK. The protein expression of IGF1R, p-AKT and AKT were measured by Western blot analysis.
Results miR-4458 was high expressed in T2D patients. We predicted and verified that IGF1R was a direct target of miR-4458, and the mRNA expression of IGF1R was reduced in type 2 diabetes patients.
Conclusion miR-4458 regulated the insulin resistance in hepatic cells by regulating the IGF1R/PI3K/AKT signal pathway, which will be a potential target for the treatment of diabetes.

PU-0071

血清 Linc01503 在食管鳞状细胞癌中的表达及鉴别诊断价值

李世宝
徐州医科大学附属医院

目的 研究长链非编码 RNA Linc05103 在食管鳞状细胞癌（esophageal squamous cell carcinoma，ESCC）患者血清中的相对表达水平，探讨其对 ESCC 鉴别诊断的价值。
方法 收集 34 例食管良性病变样本、47 例未放化疗的食管鳞癌样本及 126 例已放化疗的 ESCC 的血清样本。运用实时荧光定量聚合酶链反应(quantitative polymerase chain reaction，qRT-PCR)技术检测各组血清中 Linc01503 的表达水平，并分析其与临床病理参数的相关系，同时 ROC 曲线分析血清中 Linc01503 对食管鳞状细胞癌的鉴别诊断价值。
结果 Linc01503 在 ESCC 组表达水平明显高于食管良性病变组(P<0.05)，Linc01503 在 ESCC 放化疗前后的表达差异无统计学意义(P>0.05)。ROC 曲线分析结果显示：区分 ESCC 和食管良性炎症的曲线下面积为 0.875(95%CI 0.798~0.953，P<0.001)，敏感度 91.5%，特异度 73.5%。
结论 Linc05103 在 ESCC 患者外周血中的表达较食管良性病变显著提高，提示 Linc05103 具有鉴别 ESCC 和食管良性炎症的价值。

PU-0072

Identification of Type I Interferon-stimulated Genes and Their Clinical Significance in Pancreatic Adenocarcinoma.

Duo Zuo 、Ren Li
Tianjin Medical University Cancer Institute and Hospital

Objective The main reasons for the poor prognosis of pancreatic adenocarcinoma (PA) are rapid early-stage progression, late-stage metastasis and chemotherapy resistance. Identification of

novel diagnostic and prognostic biomarkers of PA is urgently needed. Furthermore, many studies have been done on identifying potential diagnostic and prognostic biomarkers for pancreatic adenocarcinoma (PA) via bioinformatics analyses but few have noticed some genes enriched in the defense response to virus and the type I interferon (IFN) signaling pathway. Oncolytic viruses (OVs) are emerging immunotherapeutics for the majority of cancers. However, researchers have found that some PA patients develop drug resistance due to the type I IFN responses of the host that restrict viral replication. Therefore, there is an urgent need to identify specific defects in genes involved in IFN signaling pathways as potential biomarkers to classify candidate patients for oncolytic therapy to make the strategy effective.

Methods Three mRNA microarray datasets were obtained from the GEO database to select differentially expressed genes (DEGs). Gene Ontology (GO) and Kyoto Encyclopedia of Genes and Genomes (KEGG) pathway enrichment analyses for hub genes were performed using DAVID. Correlations between expression levels of hub genes and cancer-infiltrating immune cells were investigated by TIMER. Cox proportional hazard regression analyses were also performed. Serum hub genes were screened by the HPA platform and verified for diagnostic value by enzyme-linked immunosorbent assay (ELISA). For immunohistochemistry (IHC)analysis, categorical variables were analyzed using the chi-square test. The Kaplan–Meier method and log-rank test were used to estimate the survival time of PA patients. For ELISA analysis, differences between the PA group and the healthy control group were assessed by the Mann–Whitney U test. Receiver operating characteristic curve (ROC) were established to assess sensitivity, specificity, and AUCs with 95% confidence intervals (CI).

Results We identified 59 hub genes among 752 DEGs and found 24 hub genes enriched in the type I IFN signaling pathway and 19 hub genes enriched in the defense response to virus by GO enrichment analysis, such as radical S-adenosyl methionine domain containing 2 (RSAD2), IFN-stimulated gene 15 (ISG15), 2'-5'-oligoadenylate synthetase 2 (OAS2), and IFN gamma inducible protein 16 (IFI16). We also found that these hub genes were associated with immune cells infiltration in the microenvironment of PA. Furthermore, alteration of RSAD2 was associated with poor overall survival (OS), progression-free survival (PFS), and disease-specific survival (DSS) of PA patients. Additionally, the ISG15 protein levels were evaluated to differentiate cancerous tissues from adjacent noncancerous tissues using ROC curve analysis (AUC = 0.729, 95% CI: 0.594-0.838). The protein encoded by ISG15, which exists in peripheral blood, was validated as a potential diagnostic biomarker that distinguishes PA patients from healthy controls (AUC=0.902, 95% CI: 0.819-0.961).

Conclusion Our study suggested that RSAD2 was associated with immune cell infiltration in the PA microenvironment, which provides new insight for OV therapy. ELISA indicated that serum ISG15 could be a potential novel diagnostic biomarker for PA.

2018-2020 年丽水地区不同年龄人群甲型流感病毒检测结果与分布特征分析

张强
丽水市人民医院

目的 分析丽水地区疑似病例甲型流感病毒检测结果，了解丽水地区甲型流感流行特征，为后续流感早期诊治及防控工作方案制定提供依据。

方法 对 2018 年-2020 年到丽水市人民医院就诊的 3204 例流感疑似病例，采集病人咽拭子标本，采用 Real-time RT-PCR 进行甲型流感病毒核酸检测，根据不同性别和年龄等进行统计分析。

结果 在 3204 例疑似病例中，阳性病例 907 例，甲型流感的总的阳性率是 28.3%（907/3204），男性阳性率为 26.95%（482/1788），女性阳性率为 30.01%（425/1416）；不同性别之间阳性率比较差异无统计学意义（P>0.05）。在不同年龄组中，儿童组甲流阳性率最高为 45.79%，其次是

老人组为 27.8%，最低是青年组为 23.23%，不同年龄组阳性率比较差异有统计学意义（P<0.05）。甲型流感高发时间为每年的 1 月、2 月和 12 月，确诊患者分布科室以呼吸内科、EICU、儿科居多，依次为 24.14%、12.45%、11.79%。
结论 对于呼吸内科、EICU、儿科甲流患者比较集中科室需要设置隔离屏障，防止院内感染，丽水地区婴幼儿和学龄儿童属于甲型流感易感人群，需重点防护。

PU-0074

新型冠状病毒（2019-nCoV）社区核酸筛查假阴性结果分析及对策

陈逸平[1]、刘敏[2]
1. 湖南省人民医院
2. 湖南师范大学医学院

目的 总结分析 2020 年国务院应对新型冠状病毒肺炎疫情联防联控机制（医疗救治组）在北京和新疆已开展的单管单采样与单管混采共 513336 例新型冠状病毒核酸筛查的结果，深入分析可能导致假阴性结果的原因并提出应对策略。
方法 从社区核酸筛查数据中筛选出核酸检测结果为阳性的病例进行回顾性分析，通过比较多轮筛查的结果，并找出具有代表性意义的病例进行讨论。结合实际情况从样本取材、样本质量、样本保存、检测方法等多个方面进行分析。
结果 共检出阳性病例 27 例（一轮：0、二轮：19、三轮：7、四轮：1）。
结论 规范操作流程、实行严格的质量控制、联合检测均可以有效的提高阳性检出率。

PU-0075

高危型 HPV 与 TCT 联合检测对宫颈癌的价值评估

葸静、赵重阳、杨宝珍
宁夏金域医学检验所

目的 研究 HPV 分型与 TCT 联合检测对宫颈癌的价值评估。
方法 选取 2021 年 1 月至 2021 年 4 月送检至宁夏某第三方 920 例样本，同时进行人乳头瘤病毒（HPV）和宫颈液基薄层细胞学检测（TCT）检测，以病理活检为金标准。
结果 HPV 及 TCT 检测阳性率分别是 35.9%、8.5%，其中两者联合的阳性率为 5.5% ；两者联合检测敏感度、特异度、准确性分别为 99.6%、86.2%、90.1%；
结论 研究表明，HPV 及 TCT 联合检测相对于单一检测具有高的灵敏度，对宫颈癌及癌前病变的筛查具有一定的诊断价值。

PU-0076

miR-30-5p 及 SOCS1 在食管癌组织中的表达及临床意义

黄义、黄友军、颜彦
郴州市第一人民医院

目的 研究微小 RNA （microRNA,miR）-30-5P 和细胞因子信号传导抑制因子(suppressor of cytokinesignaling1, SOCS1)在食管癌组织中的表达及临床意义。

方法 应用实时定量 PCR 及免疫印迹检测我院 2018 年 6 月至 2020 年 6 月期间诊治的 85 例食管癌患者癌及癌旁组织中 miR-30-5p 及 SOCS1 的表达。统计学分析癌组织中 miR-30-5p 及 SOCS1 表达与临床病理参数关系。Pearson 线性相关分析癌组织中 miR-30-5p 与 SOCS1 表达的相关性，生物信息学预测两者之间相互作用位点。Kaplan-Meier 生存分析（Log-rank 检验）miR-30-5p、SOCS1 表达与患者预后的关系。
结果 与癌旁组织相比，食管癌癌组织中 miR-30-5p 表达较高，而 SOCS1 表达较低（P<0.05）。miR-30-5p 与 SOCS1 的表达与肿瘤分期、病理分级及淋巴结转移有关（P＜0.05），与性别、年龄、肿瘤大小及肿瘤位置无关（P 均>0.05）。癌组织中 miR-30-5p 与 SOCS1 的表达呈明显负相关（r=0.547,P=0.000），生物信息学预测 SOCS1 mRNA 的 3'UTR 区存在与 miR-30-5p 相互结合的位点。miR-30-5p 高表达、SOCS1 低表达患者的 3 年总体生存率分别显著低于 miR-30-5p 低表达、SOCS1 高表达患者（P 均＜0.05）。
结论 食管癌组织中 miR-30-5p 表达升高，而 SOCS1 表达降低，两者与肿瘤分期、病理分级及淋巴结转移及患者的生存预后有关，共同促进食管癌的恶性进展。

实验室诊断中的人工智能

董程[1]、段勇[2]
1. 凉山彝族自治州第二人民医院
2. 昆明医科大学第一附属医院

通过机器学习分析大数据为同化和评估大量复杂的医疗数据提供了相当大的优势。然而，为了在医疗保健中有效地使用机器学习工具，必须解决几个限制，并考虑一些关键问题，如其临床实施和医疗保健服务中的伦理。与传统生物统计学方法相比，机器学习的优点包括灵活性和可扩展性，这使得机器学习可用于许多任务，如风险分层、诊断和分类，以及生存预测。机器学习算法的另一个优势是能够分析不同的数据类型(如人口数据、实验室发现、成像数据和医生的自由文本笔记)，并将它们纳入疾病风险、诊断、预后和适当治疗的预测中。尽管有这些优势，机器学习在医疗保健服务中的应用也提出了独特的挑战，需要数据预处理、模型训练和针对实际临床问题的系统改进。同样重要的还有伦理方面的考虑，包括医学法律方面的影响、医生对机器学习工具的理解以及数据隐私和安全。在这篇综述中，我们讨论了医疗保健领域的大数据和机器学习的一些好处和挑战。

PU-0078

Harnessing CRISPR/Cas System for Nucleic Acid Fluorescence Labeling

Lang Yi
xiangya hospital central south university

The CRISPR/Cas system is widely used in gene editing and gene regulation by simultaneously delivering the Cas9 protein and guide RNA (sgRNA) into the cell. The recent studies showed that the dead Cas9 (dCas9) protein, which lacking endonuclease activity, can conjugate fluorescent protein or tag protein as a universal nucleic-acid labeling tool for specific DNA or RNA sequences labeling in living cells or fixed cells. Furthermore, by assembling RNA aptamers MS2 or PP7, different fluorescent proteins can be recruited to the dCas9/sgRNA complex for monochromatic of polychromatic DNA fluorescence labeling. CRISPR system based platform for gene imaging is simple, flexible, and having good application prospect. Thus, here we summarize the applications of the CRISPR/Cas system in DNA or RNA imaging.

PU-0079

基于 LC-MS/MS 法检测的妊娠中期血清 25(OH)D2、25(OH)D3 水平与不良妊娠结局的相关性

冯跃
绵阳市中心医院

目的 有研究表明，25(OH)D2 可能会影响 25(OH)D3 的生物效能。目前妊娠中期 25(OH)D2 水平与不良妊娠结局的相关性的尚未见报道，且 25(OH)D3 与不良妊娠结局的研究有限。故本研究旨在研究妊娠中期血清 25(OH)D2、25(OH)D3 水平与主要不良妊娠结局的相关性。
方法 纳入 2018 年 6 月至 2021 年 5 月，本院接受妊娠监督并分娩的，无产前的基础性疾病的自然受孕者。采用液相色谱-串联质谱(LC-MS/MS)的方法检测其血清 25(OH)D2 与 25(OH)D3 水平。25(OH)D=25(OH)D2+25(OH)D3。维生素 D 状态根据 25(OH)D 水平分为两组(充足与不足组: 25(OH)D≥20ng/ml; 缺乏组:25(OH)D<20ng/ml)。不良妊娠结局患者设为观察组，非该不良妊娠结局者为对照组。
结果 共纳入受试者 2966 例。受试人群妊娠中期 25(OH)D2 水平为 1.52(0.87-3.07) ng/ml，25(OH)D3 水平为 24.16±9.72 ng/ml，维生素 D 缺乏的比例为 27.6%。高危妊娠患者 25(OH)D3 (p=0.009)、25(OH)D (p=0.017)水平显著高于对照组。轻度贫血患者 25(OH)D 2(p=0.001)、25(OH)D3 (p=0.012)、25(OH)D (p=0.001)水平组显著低于对照组，中度贫血患者 25(OH)D3 (p=0.004)、25(OH)D (p=0.003)水平组也显著低于对照组。高尿酸血症患者 25(OH)D3 水平显著高于对照组(p=0.032)，D2/D3 水平则显著低于对照组(p=0.012)。脐带扭转患者 25(OH)D2 (p=0.023)、D2/D3(p=0.012)水平则显著低于对照组。此外，维生素 D 缺乏组的高危妊娠(p=0.001)、妊娠期糖尿病(p=0.002)发生的比例显著低于对照组。而轻度贫血发生的比例显著高于对照组(p=0.014)。此外，logistic 回归结果显示，相比于维生素 D 不足或充足，维生素 D 缺乏是高危妊娠的保护因子(OR=0.702, p=0.002),却是轻度贫血的危险因子(OR=1.259, p=0.014)。
结论 妊娠中期血清 25(OH)D、25(OH)D3、D2/D3 水平可能与部分不良妊娠结局相关。妊娠中期血清低 25(OH)D3、25(OH)D 水平可能增加轻度与中度贫血风险，却也可能增加高危妊娠的风险。低 25(OH)D2、D2/D3 水平可能增加脐带扭转风险。而高 25(OH)D3，低 D2/D3 水平则可能增加高尿酸血症风险。

PU-0080

miR-200 家族对卵巢癌的诊断价值

王丽雯
云南省肿瘤医院

目的 卵巢癌是第二常见的妇科恶性肿瘤（仅次于宫颈癌），其潜伏期长，在潜伏内很少甚至没有表现出临床症状，直到当疾病进展到转移，表现出不同的组织学亚型和相应的临床症状，因此对于诊断和治疗具有巨大的挑战。越来越多的证据表明 miR-200 家族与卵巢癌之间存在联系，影响其诊断、治疗及预后。针对 miR-200 家族与卵巢癌的关联性研究，本研究我们进行卵巢癌循环中血清 miR-200 家族（miR-200a/b/c，miR-141/429）进行定量检测，同时采用卵巢巧克力囊肿和正常体检健康大于 40 岁的女性作为对照组，分析 miR-200 家族对卵巢癌的诊断价值。
方法 采用 QRT-PCR 的方法，实验组为卵巢癌，良性对照组为卵巢巧克力囊肿，正常对照组为正常体检健康大于 40 岁的女性，进行循环中血清 miR-200 家族（miR-200a/b/c，miR-141/429）进行定量检测。运用 SPSS 22.0 统计软件，两两比较对实验组和对照组进行统计学分析，分析 miR-200 家族与卵巢癌的相关性，运用 ROC 曲线分析诊断价值。

结果 本次研究中量化了卵巢癌血清中 miR-200a、miR-200b、miR-200c、miR-141 和 miR-429 的表达水平，结果显示 miR-200 家族的所有亚型均可区分了健康女性中卵巢癌患者，卵巢巧克力囊肿中卵巢癌患者，其中 miR-200a 与 miR-200b 的血清水平的诊断价值最高。
结论 循环血清中 miR-200 家族（miR-200a/b/c，miR-141/429）的所有亚型对卵巢癌，与卵巢巧克力囊肿和正常女性有很好的区分度，是良好的诊断调控基因，可能涉及与上皮-间质转化、肿瘤干细胞转化、细胞的增殖与凋亡有关。miR-200 家族在卵巢癌中的诊断、治疗及预后价值还需要大样本的临床数据进一步挖掘，其更具体的分子机制和调控网络也迫切需要更多的研究成果加以完善。

PU-0081

炎症微环境中 JAK2/STAT3 通过上调 Sirtuin1 抑制滑膜细胞的焦亡

蒋大勇
电子科技大学附属医院.四川省人民医院临床医学检验中心

目的 探究滑膜炎组织中的炎症微环境是否可以激活 JAK2/STAT3 信号通路，以及是否可以调控 Sirtuin1 的表达，并进一步揭示滑膜细胞凋亡的机制。
方法 通过常规病理染色，免疫荧光以及实时定量 PCR 观察患者滑膜组织的病理结构，中性粒细胞和巨噬细胞的招募以及多种炎症因子 IL-1β，IL-6, TNF-α，IL-4 的 mRNA 水平。通过提取滑膜组织中的原代滑膜细胞进行 JAK2/STAT3 信号通路活化的验证以及细胞活力的检测；通过 TNF-α 刺激 MH7A 细胞模拟构建滑膜炎的炎症微环境，借助抑制剂对各自信号通路的的干扰，western blot 实验探究 JAK2/STAT3 与 Sirtuin1 信号通路的上下游关系以及对滑膜细胞凋亡的影响以及 CCK8 检测细胞活力；通过 TNF-α 刺激 MH7A 细胞模拟构建滑膜炎的炎症微环境，实时定量 PCR 实验探究细胞焦亡特征因子 IL-18 和 IL-1β 的 mRNA 水平变化；通过 TNF-α 刺激 MH7A 细胞模拟构建滑膜炎的炎症微环境，western blot 实验探究细胞焦亡特征蛋白 caspase1/4/5，Gastdermin 和 NLRP3 的水平变化。
结果 HE 染色结果发现炎症滑膜组织病理结构紊乱；实时荧光定量 PCR 检测发现炎症因子 IL-1β，IL-6, TNF-α，IL-4 的 mRNA 水平在炎症滑膜组织中显著升高；免疫荧光可见中性粒细胞和巨噬细胞的大量招募，western blot 检测发现炎症微环境可以激活 JAK2/STAT3 信号通路，并上调 Sirtuin1 表达，继而促进滑膜细胞的增殖；在 MH7A 细胞实验中，JAK2 被抑制后，我们发现 STAT3 表达下降，同时 Sirtuin1 与 Ki67 也被下调；并且抑制 Sirtuin1 可以抑制滑膜细胞增殖并促进滑膜细胞焦亡，表征细胞焦亡的主要细胞因子 IL-18、IL-1β、caspase1/4/5，Gastdermin 和 NLRP3 蛋白均下调。
结论 我们的研究发现 JAK2/STAT3 信号通路在滑膜炎中活化，并上调 Sirtuin1 通路来促进滑膜细胞增殖并抑制滑膜细胞焦亡，而下调 Sirtuin1 可以抑制滑膜细胞的增殖并促进焦亡，因此，调节 Sirtuin1 的表达可能成为治疗滑膜炎的新靶点。

PU-0082

Analysis of the Serum Metabolome Variations for Identification of Potential Biomarkers for Anti-tumor Effect of Imatinib by Untargeted Metabolomics

Bei Xu
Mianyang Central Hospital

Background Gastrointestinal stromal tumors (GISTs) are the most common mesenchymal tumors of the gastrointestinal tract. Imatinib, a tyrosine kinase inhibitor, is a small molecule

protein kinase inhibitor, which can block one or more protein kinases. It is used in the treatment of chronic myeloid leukemia and malignant gastrointestinal stromal tumors. Although Imatinib displays bright prospects in tumor treatment, including GISTs, its molecular mechanism has not been well-explored.Metabolomic technologies, especially untargeted metabolomic approaches, often provide additional information about the global profiling of the metabolome and are used to explore new mechanisms of carcinogenesis. Metabolomic technology is also a powerful tool for the discovery of key differential metabolites that can be used as biomarkers in various tumors, such as breast cancer, epithelial ovarian cancer, and lung cancer, et al.
This study was designed to assess the possible mechanisms of Imatinib against GISTs by untargeted metabolomics.
Methods 41 patients were divided into four groups: high concentration Imatinib group (H), medium concentration Imatinib group (M), low Imatinib concentration group (L) and healthy subjects (C). All subjects were analyzed for serum metabolites using non-targeted metabolomics based on ultra-performance liquid chromatography-tandem mass spectrometry (UPLC-MS/MS). The original data file obtained was firstly converted into mzML format by ProteoWizard software. Peak extraction, alignment and retention time correction were performed by XCMS program. The "SVR" method was used to correct the peak area. Filter the peaks with deletion rate > 50% in each group of samples. After that, metabolic identification information was obtained by searching the databases of Metlin, MoNA, and HMDB. Finally, statistical analysis was carried out by R program. Statistical analysis includes univariate analysis and multivariate analysis. Univariate statistical analysis includes Student's t-test and variance multiple analysis. Multivariate statistical analysis includes principal component analysis (PCA), partial least squares discriminant analysis (PLS-DA) and orthogonal partial least squares discriminant analysis (OPLS-DA).
Results In recent years, the methodology for LC-MS technology is deeply developed. More details have been revealed about the target metabolite. For example, quantitative LC-tandem MS (LC-MS/MS) analysis has been used for the study of comprehensive structural glycomic characterization. LC-MS might be more widely used in clinic work in the future to observe the specific molecular changes in liquid biopsy. The serum metabolomic profiles between the Imatinib H, M, L groups and healthy control group were significantly different, and 150 different metabolites were identified among the four groups. Metabolic pathway analysis of these differential metabolites found that the top three significantly changed metabolic pathways were drug metabolism-cytochrome P450, ascorbate and aldarate metabolism, and vitamin digestion and absorption metabolism.There are 6 metabolites enriched in these three metabolic pathways. In detail, compared with those in thehealthy groups, the levels of citalopram and (2R,3S)-2,3-Dihydroxy-5-oxohexanedioate in the Imatinib group were increased markedly, while the levels of rac-Didemethylcitalopram, Pyruvic acid, Threonic acid and Nicotinamide were reduced significantly.
Conclusion The serum metabolomic profiles between the Imatinib group and the HC group are significantly different. Imatinib has indicated favorable pharmacological effect on serum biochemical indexes. Metabolomics is a promising approach to unraveling anti-tumor effect by partially regulating the perturbed pathways, which provide insights into anti-tumor mechanisms of Imatinib.

Dickkopf 家族蛋白在非小细胞肺癌中的作用机制研究进展

董程[1]、段勇[2,3]
1. 凉山彝族自治州第二人民医院
2. 昆明医科大学第一附属医院
3. 云南省重点实验室

非小细胞肺癌(Non-small cell lung cancer,NSCLC)占所有肺癌的 80%～85%,是全世界发病率和致死率极高的恶性肿瘤。最初 NSCLC 对现有治疗的反应良好,但最终还是产生了耐药性。因此,

有必要探索有效且新颖的治疗方法。随着对 NSCLC 研究的深入,发现 Dickkopf 家族蛋白(DKKs)的信号传导在 NSCLC 发展中扮演重要角色,DKKs 是 Wnt/β-catenin 信号通路的重要调节因子,并与 NSCLC 细胞增殖、转移和侵袭密切相关。本文主要介绍了 DKKs 家族成员在 NSCLC 中的作用机制,讨论了 DKKs 在 NSCLC 治疗中的潜力,为进一步防治 NSCLC 提供了新思路。

PU-0084

Vitamin D deficiency in children with short stature: Accurate evaluation of serum vitamin D components using high performance liquid chromatography-tandem mass spectrometry

Bei Xu
Mianyang Central Hospital

Objective Vitamin D is one of essential nutrient for short stature children. However, levels of vitamin D status of these patients are sparsely reported. In this study, we tested various vitamin D components, and used different **Methods** to evaluate the true vitamin D storage of short stature children in vivo.
Methods A case-control study including 99 short stature children and 186 healthy controls was performed. Serum levels of 25-hydroxyvitamin D2 [25(OH)D2], 25-hydroxyvitamin D3 [25(OH)D3], 3-epi-25-hydroxyvitamin D3[3-epi-25(OH)D3, C3-epi] and free 25(OH)D [f-25(OH)D] were accurately measured. Total 25(OH)D [t-25(OH)D], 25(OH)D2/25(OH)D3 ratio, as well as C3-epi/25(OH)D3 ratio were then respectively calculated.
Results Serum levels of 25(OH)D3and f-25(OH)D in short stature subgroups 2 (school age: 7~12 years old) and 3 (adolescence: 13~18 years old) were significantly lower than those of healthy controls (all $P<0.05$), whilst C3-epi levels and C3-epi/25(OH)D3 ratios were all markedly higher in three short stature subgroups (all $P<0.05$) compared to healthy cohorts. The true sufficient storage capacities of vitamin D in short stature subgroup 1, subgroup 2 and subgroup 3 were only 42.8%, 23.8%, and 9.0% by Method 3 [25(OH)D2/3+25(OH)D3], which was lower than those of 57.1%, 28.6%, and 18.2% by Method 1 [25(OH)D2+25(OH)D3+C3-epi] and 45.7%, 28.5%, and 13.6% by Method 2 [25(OH)D2/3+25(OH)D3+C3-epi]. In both short stature and healthy control cohorts, 25(OH)D2 levels were found to be weak negatively correlated with 25(OH)D3, and higher 25(OH)D3 levels were strong positively associated with higher levels of C3-epi. Furthermore, f-25(OH)D levels were also found positive association with 25(OH)D3 and C3-epi in both cohorts.
Conclusion Short stature children had more severe vitamin D deficiency than healthy subjects. Though the results of vitamin D storage in short stature children evaluated by various **Methods** are different, simultaneous detection of 25(OH)D2, 25(OH)D3, C3-epi and f-25(OH)D levels could accurately evaluate the vitamin D storage in vivo.

PU-0085

miR-338-3p 调控肺癌生长和转移的作用及在宣威肺癌患者血浆中的表达研究

陶清元[1]、段勇[2]、熊秋霞[2]
1. 云南大学附属医院
2. 昆明医科大学第一附属医院

目的 课题组前期研究发现 miR-338-3p 在宣威非小细胞肺癌组织中表达显著下调并在人群中做了初步验证，本研究聚焦 miR-338-3p 影响 A549 细胞和宣威肺癌细胞增殖、凋亡以及迁移侵袭的能力，探究 miR-338-3p 过表达调控肺癌细胞生长和转移的作用。检测宣威地区非小细胞肺癌患者以及非肿瘤患者血浆标本中 miR-338-3p 的表达情况，探索 miR-338-3p 作为非小细胞肺癌早期诊断指标的可能性。

方法 将 miR-338-3p mimics 转染到 A549 细胞和宣威肺癌细胞中，创建 miR-338-3p 过表达的细胞模型。MTT 检测肺癌细胞的活力；PI 实验检测肺癌细胞的细胞周期；AnnexinV/PI 实验肺癌细胞发生凋亡的情况；Transwell 实验检测肺癌细胞的迁移能力。收集宣威非小细胞肺癌患者血浆标本 30 例、非肿瘤患者血浆标本 20 例， RT-qPCR 对标本中 miR-338-3p 的相对表达量进行测定， F 检验分析外周血中 miR-338-3p 的表达差异。收集患者的相关临床资料，Mann Whitney 检验分析 miR-338-3p 表达量与相关临床资料的相关性。

结果 miR-338-3p mimics 转染两种肺癌细胞后，细胞的活力都明显下降，A549 细胞的活力下降为 77.79%，宣威肺癌细胞下降为 69.24%。A549 细胞周期阻滞在 S 期，而宣威肺癌细胞周期阻滞在 G2/M 期。都明显诱导了细胞凋亡的发生，A549 细胞早期凋亡细胞的比例是 6.52%，宣威肺癌细胞早期凋亡细胞的比例是 2.66%（P <0.001）。miR-338-3p 过表达对肺癌细胞迁移有明显的抑制作用，都可以明显抑制肺癌细胞的迁移能力（ P <0.001 与 P <0.01）。肺癌患者组血浆标本中 miR-338-3p 的表达量显著降低，而且 miR-338-3p 的表达量与肺癌分期显著相关，与 I/II 期肺癌组相比，III/IV 期肺癌组 miR-338-3p 表达量显著降低(P< 0.05)。miR-338-3p 表达量与淋巴结转移显著相关，淋巴结转移组 miR-338-3p 表达量显著低于无淋巴结转移组(P < 0.05)，但与年龄、性别以及是否吸烟无关。

结论 1、MiR-338-3p 过表达能不同程度的抑制 A549 肺癌细胞与宣威肺癌细胞的增殖、迁移，且都能促进两种肺癌细胞的凋亡。但也导致 A549 肺癌细胞周期停滞在细胞周期的 S 期，而宣威肺癌细胞周期停滞在细胞周期的 G2/M 期。2、相对于非肿瘤患者，宣威非小细胞肺癌患者血浆中 miR-338-3p 的表达量显著降低，且相对表达水平与肿瘤分期、是否有淋巴结转移显著相关。

PU-0086

临床结核病患者中利福平表型药敏和分子药敏结果不一致的回顾性分析

胡培磊[1,2]、王珏[1,2]、陈振华[1,2]、刘彬彬[1,2]、陈忠南[1,2]、龚道方[1,2]、余艳艳[1,2]、郭婧玮[1,2]、谭云洪[1,2]
1. 湖南省胸科医院
2. 湖南省结核病防治所

目的 分析导致临床结核病患者的利福平表型药敏和分子药敏结果不一致（即分子药敏为利福平敏感而表型药敏为利福平耐药）的影响因素，以提高临床结核病利福平耐药实验室诊断的准确性。

方法 基于湖南省胸科医院结核病实验室信息系统，回顾性分析 2014 年-2019 年 Bactec MGIT 960 和 Xpert MTB/RIF 的检测数据，找出 Xpert MTB/RIF 检测结果为利福平敏感而 Bactec MGIT 960 检测结果为利福平耐药的病例，并对已保藏的患者的分离菌株进行复苏和菌种鉴定；然后分别采用

Bactec MGIT 960 和分子线性探针对鉴定为结核分枝杆菌复合群的菌株进行表型和分子药敏检测；最后，对两种药敏结果经确认存在差异的菌株进一步进行 rpoB 基因全长测序、最低抑菌浓度（MIC）及固体比例法药敏试验测定。

结果 在 31038 例同时进行 Bactec MGIT 960 和 Xpert MTB/RIF 检测的患者中，共得到 58 例 Bactec MGIT 960 为利福平耐药而 Xpert MTB/RI 为利福平敏感患者的患者。经菌株复苏，最终成功获得 43 例患者的分离菌株，包括 37 株结核分枝杆菌复合群菌株（MTBC）、5 株非结核分枝杆菌菌株（NTM）和 1 株为结核分枝杆菌复合群和非结核分枝杆菌混合菌株（MTBC/NTM）。在 37 株 MTBC 菌株中，11 株（29.7%）再次经 Bactec MGIT 960 测试为利福平敏感，且 rpoB 测序显示 RRDR 区无突变，支持以往 Xpert MTB/RIF 的检测结果，提示以往 Bactec MGIT 960 检测存在失误；另外的 26 株经 Bactec MGIT 960 检测为利福平耐药，且其中有 18 株的 RRDR 区存在利福平耐药相关突变，提示以往 Xpert MTB/RIF 的检测存在失误。在剩余的 8 株 MTBC 中，仅有 2 株存在敏感菌株和耐药菌株的混合现象，而在最终剩余 6 株 MTBC 中，3 株在 rpoB RRDR 区域之外存在 V170F 突变，1 株存在 I491F 突变，2 株菌株 rpoB 未检测到任何突变，有待全基因组测序进一步揭示。

结论 导致分子药敏为利福平敏感而表型药敏为利福平耐药的影响因素较为复杂，基于菌株的回顾性研究而提供的参考价值有限。尽管如此，实验室检测相关失误应为主要因素。在排除实验室检测相关失误的基础上，进一步基于菌株的实验验证分析可揭示与利福平耐药相关的罕见的突变位点，从而帮助我们理解利福平表型药敏和分子药敏结果不一致的分子机制。

miRNA 与宿主基因（综述）

刘华、贾正仙
昆明医科大学第一附属医院

MicroRNA(miRNA)是一组长度介于 20 到 24bps 的内源性非编码 RNA，有人使用 TCGA 数据集研究了这些 miRNAs 与宿主基因之间的共表达关系，不仅发现了常见的共表达模式，还揭示了肿瘤特异性甚至亚型特异性的关系，这对于理解 miRNA 的转录调控和转录后调控以及进一步发展 miRNA 在癌症中的治疗是非常有帮助的，miRNA 的定位是 miRNA 研究的热点之一，因为它是决定 miRNA 如何被调控的主要因素，基因内 miRNA 及其宿主基因的定义，基因内 miRNA 与宿主基因之间的相互作用，基因内 miRNA 与宿主基因之间的相互作用

结论 miRNA 表达失调在人类疾病中尤其是在癌症中起着重要作用。miRNA 与宿主基因之间存在密切的功能联系和复杂的相互作用;因此，有必要研究其同源宿主基因背景下的 miRNA 调控。由于大多数 onco/ts-miRs 是基因内 miRNA，我们研究了基于 TCGA 的这些 miRNA 与宿主基因的共表达关系数据集。常见的和特定于癌症的共表达关系将会促进治疗方法的设计，以沉默/激活 onco/ts-miRs 有效的表观遗传同源宿主基因的改变。

Correlation between multi-type human papillomavirus infections and viral loads and the cervical pathological grade

Yanfang Li[1]、HaiRu Wang[2]、YaBin Hou[3]、ChongHua Hao[1]、Xuan Jing[1]、YanJun Zhang[1]
1. Shanxi Provincial People's Hospital
2. 山西白求恩医院
3. 山西医科大学

Objective To investigate the relationship between single/multiple HPV infections and cervical lesions, and the correlation between viral load and the degree of cervical lesions.
Methods A total of 27 284 patients who underwent testing for HPV were retrospectively screened and 3728 women were enrolled who tested positive for HPV when examined by liquid-based ThinPrep cervical smear cytology test and diagnosed by histopathology at the Shanxi Provincial People's Hospital between May 2017 and March 2019. The genotype and viral load of HPV were determined by fluorescence quantitative polymerase chain reaction. Based on the pathological grade, the cervical lesions were stratified into three groups: chronic cervicitis/cervical intraepithelial neoplasia (CIN) I; CIN II/CIN III; and cervical cancer.
Results There were significant intergroup differences in the distribution of single and multiple HPV infections. There was a positive correlation between the viral load and cervical pathological grade when the infections were caused by HPV 16, 18, 31, 33, 51,52, 53, and 58.
Conclusion Multi-type HPV infections are more likely to aggravate the degree of cervical lesions than single-type infections. The HPV type-dependent viral load is associated with the cervical pathological grade.

二维 PCR 检测 1、2、3 类整合子

朱雯雯、朱玉、王童、魏取好
上海市奉贤区中心医院

目的 整合子是细菌基因组中常见的通用基因获取系统，能捕获并表达外源基因，同时，整合子可位于质粒、转座子或染色体上，造成耐药基因的广泛传播。根据整合酶氨基酸序列，将整合子分为 5 类，临床常见的是 1、2、3 类。本研究旨在开发了一种基于碱基淬灭探针技术的二维 PCR 技术，是一种结合 PCR 和熔融曲线分析的多重 PCR 检测方法，可以同时检测 3 种主要整合子。
方法 通过检测 104 拷贝/μl 的 3 种整合子质粒样品及其混合物来评估特异性，检测 10-108 拷贝/μl 的 3 种整合子质粒样本检测最低检出限和评估灵敏度，每个样本做 3 个复孔，去离子水做阴性对照，为了评估二维 PCR 应用于临床检测的价值与潜力，运用二维 PCR 检测 105 株临床变形杆菌样本，检测结果阳性标本进行测序验证，测序结果经 NCBI 的 BLAST 验证，评估二维 PCR 结果的准确性，同时采用临床常用的筛查整合子的普通 PCR 方法筛查 105 株变形杆菌的 1、2、3 类整合子，对两种方法的检测结果做一致性比较，评估二维 PCR 的特异性。
结果 结果显示二维 PCR 各型引物只能检测出对应的型别的质粒，各型之间无交叉反应，1、2、3 类整合子对应的溶解温度在 46。C、55。C、66。C 附近，结果非常容易区分，最低检出限实验显示 1、2、3 类整合子质粒的最低检出限分别为 10、102、102 拷贝/反应,测序结果表明二维 PCR 的特异性为 100%。

结论 通过质粒水平方法学实验以及临床样本检测评估，证明二维 PCR 能同时检测 3 种主要的整合子，具有特异性好、灵敏度高、成本低 、检测通量高、反应时间短等优点，可用于临床进行大规模整合子筛查及整合子分型。

FBXO22 对急性髓系白血病发病机制的研究

李玉云[1]、马丽[1]、王珏[2]、耿建[1]、张英杰[1]、曹蕴[1]
1. 蚌埠医学院
2. 蚌埠医学院第一附属医院

急性髓系白血病(AML)是一种以不成熟髓细胞异常增殖为特点的血液学恶性肿瘤，分化和成熟功能受损。因其发病机制复杂，极大程度的阻碍了临床的治疗。FBXO22 作为 FBXO 蛋白家族的一员， 参与多种癌症的发生发展，但是在 AML 中作用报道甚少。本文主要利用急性髓系白血病 FBXO22 基因过表达稳转株来探讨 FBXO22 在 AML 的作用研究。

目的 本研究以 FBXO22 过表达稳转株为研究对象，探讨 FBXO22 对 AML 细胞的增殖和凋亡以及分化等能力的影响，旨在为 AML 治疗提供新的治疗靶点改善病人预后。

方法 本实验我们利用急性髓系白血病常用的细胞株 U937、K562 进行实验。1.将 HBLV-ZsGreen-PURO 过表达对照、HBLV-h-FBXO22-3xflag-ZsGreen-PURO 慢病毒稳转入 U937、K562 细胞，qRT-PCR、W B 分别检测 FBXO22 相对表达量。2.细胞株稳转 FBXO22 后采用 CCK-8、细胞周期实验检测细胞增殖情况。3.采用 W B 检测细胞 bcl-2、Caspase-9 蛋白表达情况。4.采用流式细胞仪、瑞士吉姆萨染色、硝基四氮唑蓝（NBT）还原实验、W B 实验探究 FBXO22 对白血病细胞分化的影响。5.动物实验。将免疫缺陷鼠进行 X 光射线辐照，第二天将稳转株注射到小鼠尾静脉观察白血病症状，当小鼠出现驼背或后肢瘫痪时处死，观察小鼠脾脏和小鼠转移灶情况。

结果 qRT-PCR、W B 实验结果均表明 FBXO22 过表达细胞株构建成功（P<0.05）。CCK-8 实验证明 FBXO22 过表达后细胞增殖能力减弱（P<0.05）；细胞周期实验结果显示 FBXO22 过表达后细胞聚集在 G0/G1 期，S 期减少，上述结果表明，FBXO22 通过阻滞细胞周期至 G0/G1 期来抑制 AML 细胞的增殖（P<0.05）。过表达 FBXO22 后凋亡蛋白 Caspase-9 表达水平增强，BCL2 则相反;（P<0.05）。FBXO22 诱导 AML 细胞分化。与对照组相比，流式细胞术显示 FBXO22 过表达后 CD11b 的表达水平增高；瑞士吉姆萨染色结果显示，FBXO22 过表达后细胞核变成肾型、蚕豆型； NBT 阳性细胞增多；PU.I 蛋白水平也显著升高。注射经 FBXO22 过表达转导的 U937 细胞的小鼠脾脏肿大和转移灶大小明显小于对照组（P<0.01）。

结论 FBXO22 抑制 AML 细胞增殖，且通过阻滞细胞周期至 G0/G1 期来抑制细胞增殖。FBXO22 促进 AML 细胞凋亡。FBXO22 诱导 AML 细胞分化。

Current progress in metabolomics of gestational diabetes mellitus

Yu Zeng
Nanjing Maternity and Child Health Care Hospital Affiliatedto Nanjing Medical University

Gestational diabetes mellitus (GDM) is one of the most common metabolic disorders of pregnancy and can cause short- and long-term adverse effects in both pregnant women and their offspring. However, the etiology and pathogenesis of GDM are still unclear. As a metabolic disease, GDM is well suited to metabolomics study, which can real-time monitor the changes in small molecular metabolites induced by maternal stimuli or perturbations. The application of metabolomics in GDM can be used to discover diagnostic biomarkers, evaluate the prognosis of

the disease, guide the application of diet or drugs, evaluate the curative effect and explore the mechanism. This review provids comprehensive documentation of metabolomics research **Methods** and techniques as well as the current progress in GDM research. We anticipate that the review will contribute to identifying gaps in the current knowledge or metabolomics technology, provide evidence-based information and inform future research directions in GDM.

PU-0092

Preparation and verification of a monoclonal antibody Cal26B11 against CALR mutations in MPN

Jingjing Tian、Ming Guan
Huashan Hospital,Fudan University

Purpose Calreticulin (CALR) mutations are recognized as driver mutations in myeloproliferative neoplasms (MPNs) with no JAK2 or MPL mutations and could be served as a putative therapeutic target. The purpose of this study is to obtain a high specificity and high titer of monoclonal antibody by hybridoma technique, and to establish a method based on immunohistochemistry and flow cytometry to detect CALR mutations in MPN patients.
Method A polypeptide sequence that targets the common carboxyl terminus of the mutated CALR protein was designed and synthesized. The mass spectrometry (MS) was used to determine the correctness of the polypeptide sequence. The BALB/c mice were immunized three times after the polypeptide coupled with keyhole limpet hemocyanin (KLH). Mouse spleen cells and myeloma cells (sp2/0 cells) were taken for cell fusion and positive clones were selected for cloning and strain establishment. 293T cell lines overexpressing wild type CALR, CALR type I and type II mutations verified the specificity of the monoclonal antibodies. 5 cases of bone marrow biopsy carrying CALR type I mutations, 4 cases carrying CALR type II mutations, 1 case carrying CALR type V mutations, and 18 cases carrying JAK2V617F MPN was collected for immune histochemistry. Cal26B11 was used as immunohistochemical antibody for CALR mutations in bone marrow biopsies of MPN patients. Peripheral blood from 7 cases carrying CALR type 1 and 2 cases carrying CALR type 2 were collected for flow cytometry. 12 cases from other hematological diseases or healthy people were collected as negative control. Approximately 1×10^7 Cells were added into each tube , 0.2μL CD15-FITC (Becton, Dickinson and Company, USA) ,0.2μL CD64-PE (Becton, Dickinson and Company, USA) and 1:1500 diluted Cal26B11- CFTM647 was added to each tube for flow cytometry analysis. The suspension was detected using BD FACS Canto (Becton, Dickinson and Company, USA) and analyzed with FlowJo2.
Result A 100% positive hybridoma cell secreting an anti-CALR mutant protein was obtained. The monoclonal antibody (clone No. Cal26B11) had a titer of 1:1500. It had no cross reaction with the wild-type CALR and specifically identifies the mutated CALR proteins. Cal26B11 antibody used in immunohistochemistry to detect the CALR mutations in the bone marrow biopsies of MPN patients reacted with the CALR mutations specifically. No positive signal in bone marrow tissue in other blood diseases was observed. The results are completely consistent with the Sanger sequencing, and the specificity of detection is equivalent to the commercial antibody CAL2. The average rate of CALR215+ cells were 0.57%±0.48% by flow cytometry in patients with CALR mutations and there was a significant difference between CALR mutation group and control group(p=0.0024**). The results indicated that home-made Cal26B11-CFTM647 could qualitatively distinguish CALR mutations in patients from wildtype using flow cytometry.
Conclusion A monoclonal antibody (Cal26B11) was obtained which can specifically recognizes the CALR mutations in MPN patients. The self-made Cal26B11 antibody can be used to screen CALR mutant proteins by immunohistochemistry and flow cytometry in MPN patients as the effective supplements for molecular detection.

PU-0093

基于 MPA 技术检测呼吸道 18 种病原体

胡雪姣、廖建枫、顾兵
广东省人民医院

目的 常见呼吸道致病病原体的广谱准确检测是下呼吸道感染早期准确诊断和流行病学调查的关键。本研究旨在建立一种基于多重探针扩增技术（Multiple Probe Amplification Technique, MPA）的快速分子检测方法，并评估 MPA 方法对临床标本呼吸道病原体的检测性能。
方法 建立一种单次聚合酶链反应(PCR)同时检测和鉴别 18 种呼吸道病原体的 MPA 方法，涵盖的病原体包括新型冠状病毒（SARS-CoV-2）、甲型流感病毒（IFA）、乙型流感病毒（IFB）、副流感病毒 1（PIV1）、副流感病毒 2（PIV2）、副流感病毒 3（PIV3）、副流感病毒 4（PIV4）、腺病毒（HADV）、肺炎支原体（MP）、肺炎衣原体（CP）、鼻病毒（HRV）、呼吸道合胞病毒（RSV）、博卡病毒（HBOV）、偏肺病毒（HMPV）、冠状病毒 229E、冠状病毒 HKU1、冠状病毒 NL63、冠状病毒 OC43。分析 MPA 检测方法的重复性、交叉反应性和最低检测限度。纳入 2019 年 1 月-2021 年 2 月就诊于广东省人民医院和广东省第二人民医院的疑似呼吸道病原体感染患者 1200 例，收集患者的呼吸道标本（鼻咽拭子、肺泡灌洗液、痰等）进行 MPA 检测，以测序为参考方法评价 MPA 技术对呼吸道常见病原体检测的诊断效能。
结果 MPA 技术可在一次 2 个封闭 PCR 管反应中同时检测和识别 18 种呼吸道病原体，可区分出临床混合感染以及单一感染的样本。MPA 方法对常见呼吸道病原体检测有良好的重复性（CV＜5.0%）、检测限为 103copies/mL，对分析谱以外的病原体标本无交叉反应。进一步检测 1200 例临床呼吸道样本，以测序为参考方法，MPA 的灵敏度为 92.94%，特异性为 99.91%，阳性预测值为 98.75%，阴性预测值为 99.46%，结果表明 MPA 方法具有简便、稳定、灵敏和特异等特点。
结论 MPA 方法可实现对 18 种常见呼吸道病原体的检测，有利于临床对疑似呼吸道病原体感染患者的早期诊断与及时治疗。

PU-0094

特异性核酸内切酶辅助的荧光传感器用于 miRNAs 的检测研究

张思琦
吉林金域医学检验技术所有限公司

目的 MicroRNAs 作为一类内源性非编码小分子 RNA，是一种重要的细胞调控因子，具有转录后调控基因表达的重要意义。本文的目的是制备一种具有较强荧光信号的 SiO_2-ssDNA-FS 探针，实现对 miRNAs 的定量检测。
方法 本文通过液相生物芯片技术，使用 SiO_2 微球作为检测平台，偶联 DNA 分子及荧光纳米球来制备探针，结合 DSN 酶的信号放大功能，将其应用于流式细胞术中，用于高灵敏的、多通道的 miRNAs 检测分析。单链 DNA 作为连接分子，将 FS 固定在 SiO_2 微球表面，通过酰胺键反应制备了 SiO_2 -ssDNA-FS 探针，此时 SiO_2 微球上附着了大量的 FS。当目标 miRNAs 存在时，SiO_2 -ssDNA-FS 探针与目标结合后，DSN 酶开始剪切双链中的 DNA，使得 FS 从 SiO_2 微球表面脱落，荧光减弱。之后通过流式细胞仪检测每一个 SiO_2 微球上的荧光强度，根据平均荧光强度（MFI）对目标分子进行定量检测。
结果 TEM 表征显示探针微球表面粗糙，附着了一层 FS 颗粒，流式细胞仪检测表明，SiO_2-ssDNA-FS 探针具有较强的荧光信号，SiO_2 微球上的荧光强度明显下降，检测灵敏度为 39.73 fM。同时，通过设计不同的探针序列及标记不同的荧光分子，基于流式细胞仪的多通道检测，实现了对 miRNA-21 及 Let-7d 共存条件下的检测。最后使用此方法对乳腺癌病人全血中的 miRNA-21 进行了检测，检测结果与实时荧光定量 PCR 基本一致。

结论 DNA 的扩增或易位可能引发基因的异常表达，而基因的异常表达与人类肿瘤和癌症的发生密切相关，实现对 miRNAs 生物标志物的准确、高灵敏检测对癌症的早期诊断和癌症治疗效果的监测具有重要作用。SiO_2-ssDNA-FS 探针的检测灵敏度为 39.73 fM，不仅实现了对 miRNA-21 及 Let-7d 共存条件下的检测，且具有较高的准确性及可行性。

新型冠状病毒 RT-PCR 核酸检测系统的性能验证

骆贞红、张彦懿、梁树梅、李亚平、刘华伟
成都市第三人民医院

目的 对由圣湘生物核酸提取试剂、圣湘生物新型冠状病毒核酸检测试剂（荧光 PCR 法）、圣湘 Natch 96 核酸提取仪和雅睿 MA 6000 扩增仪组成的 RT-PCR 核酸检测系统进行性能验证。
方法 阳性样本采用新型冠状病毒（SARS-CoV-2）假病毒核酸标准物质进行稀释，阴性样本采用阴性患者标本，对该核酸检测系统检测 SARS-CoV-2 阴性和阳性准确度、精密度和检出限进行验证。
结果 10 例阳性和 5 例阴性样本的 ORF1ab 基因和 N 基因准确性和重复性的符合率为 100%。 2 个不同浓度阳性样本 ORF1ab 基因重复性 CV 分别为 0.64%、1.05%；N 基因重复性 CV 分别为 0.62%、1.03%，均小于允许变异系数。最低检测限为 1.0 × 102 copies/mL。
结论 该 RT-PCR 新冠核酸检测系统重复性好，灵敏度高，最低检出限符合要求，适用于临床进行 SARS-CoV-2 核酸检测。

PU-0096

探究 CRISPR RNA 引导的 FokI 核酸酶对 bcr-abl 的靶向破坏作用及其对慢性粒细胞白血病细胞凋亡的影响

骆贞红
成都市第三人民医院

目的 通过构建 CRISPR RNA 引导的 FokI 核酸酶/gRNA 体系，并利用 CRISPR RNA 引导的 FokI 核酸酶（RFNs）转染 bcr-abl+的慢性粒细胞白血病（CML）细胞，探究 RFNs 对 bcr-abl 基因的破坏作用及对 CML 细胞凋亡的影响。
方法 利用分子克隆的方法构建靶向 bcr-abl 特异的 gRNA 表达质粒，与 FokI-dCas9 表达质粒构成 RFNs 系统，同时构建 Donor 质粒作为模板 DNA。用核转染的方式在 K562 细胞中分别导入 gRNA+Donor，RFNs-half+Donor 和 RFNs+Donor 质粒，同时设置 wild type 组作为对照。在核转染 60 小时后提取细胞基因组 DNA，通过免疫荧光、T7E1 酶切和 NotI 酶切以及 Sanger 测序分析 RFNs 对 bcr-abl 的破坏作用。通过 western blot 检测 RFNs 作用于 bcr-abl 基因后 BCR-ABL 蛋白的表达情况，以及凋亡相关分子 PARP 和 Caspase-3 的激活情况。通过 DAPI 染色和 FCM 检测 RFNs 对 CML 细胞凋亡的作用。
结果 Sanger 测序结果显示成功构建靶向 bcr-abl 的 gRNA 表达质粒。DAPI 染色显示 RFNs+donor 转染的 K562 细胞核高表达 γH2AX,证明该细胞基因发生明显双链断裂；T7E1 酶切，NotI 酶切以及 Sanger 测序结果显示将 RFNs+donor 电转入 K562 细胞能够有效插入 NotI 酶切位点，使 bcr-abl 基因发生框移突变，在下游提前遇到终止密码子，从而终止 BCR-ABL 蛋白的翻译。Western blot 证实 RFNs 作用于 bcr-abl 基因使 BCR-ABL 蛋白表达显著下调，PARP 和 Caspase-3 发生激活。DAPI 染色和 FCM 检测显示 RFNs+donor 作用于 K562 细胞后，凋亡细胞数量显著增加。
结论 构建靶向 bcr-abl 特异的 RFNs 能够有效切割 bcr-abl 融合基因，通过 HDR 的方式将外源模板中的 NotI 酶切位点成功插入 bcr-abl 基因，使其发生框移突变，提前终止 BCR-ABL 的翻译。RFNs 破坏 bcr-abl 基因后能显著降低 BCR-ABL 蛋白的表达并促进其凋亡。

PU-0097

High PD-L1 expression associates with low T-cadherin expression and poor prognosis in HPV-negative head and neck squamous cell carcinoma

Qiuju Wang
Sichuan Cancer Hospital & Institute

Aim T-cadherin is an immunoglobulin-like adhesion molecule which acts as a tumor suppressor gene, programmed cell death ligand 1 (PD-L1) is a cell surface protein that involves in the suppression of the immune system. This study aimed at exploring the correlation between T-cadherin and PD-L1, as well as their prognostic value in patients with HPV-negative head and neck squamous cell carcinoma (HNSCC).
Methods In this study, immunohistochemical staining was used to determine the protein expression of T-cadherin and PD-L1 in 104 tissue specimens of HPV-negative HNSCC. Spearman linear correlation analysis was used to determine the association between protein expression of T-cadherin and PD-L1. Kaplan-Meier analysis was used to plot overall survival (OS) and disease-free survival (DFS) curves. Cox proportional hazards regression analysis was used to conduct univariate and multivariate analysis.
Results The results showed a negative association between protein expression of T-cadherin and PD-L1 ($r=-0.775$, $P<0.01$), expression of T-cadherin and PD-L1 were associated with OS ($P=0.021$ and 0.034, respectively) and DFS ($P=0.012$ and 0.016, respectively) in patients with HPV-negative HNSCC. Cox proportional hazards regression analysis revealed that expression of T-cadherin and PD-L1 were independent prognostic predictors for OS and DFS in patients with HPV-negative HNSCC. The worst prognosis was observed in patients with T-cadherin negative/PD-L1 positive.
Conclusion In conclusion, expression of T-cadherin and PD-L1 were inversely correlated and were independent prognostic factors for patients with HPV-negative HNSCC. Expression of PD-L1 may be involved in T-cadherin-mediated poor prognosis in patients with HPV-negative HNSCC.

PU-0098

AKR1B10 promotes breast cancer cell proliferation and migration via the PI3K/AKT/NF-κB signaling pathway

jiayao qu[1]、dixian luo[2]
1. 深圳市第三人民医院检验科
2. 华中科技大学协和深圳医院（南山医院）检验科

Background Aberrant expression of Aldo-Keto reductase family 1 member B10 (AKR1B10) was associated with tumor size and metastasis of breast cancer in our published preliminary studies. However, little is known about the detailed function and underlying molecular mechanism of AKR1B10 in the pathological process of breast cancer.
Methods The relationship between elevated AKR1B10 expression and the overall prognosis and disease-free survival of breast cancer patients was analyzed by Kaplan-Meier Plotter database. Breast cancer cell lines overexpressing AKR1B10 (MCF-7/AKR1B10) and breast cancer cell lines that knock down AKR1B10 (BT-20/shAKR1B10) were constructed to analyze the impact of AKR1B10 expression on cell proliferation and migration of breast cancer. The expression levels of AKR1B10 were detected and compared in the breast cancer cell lines and tissues by RT-qPCR, western blot and immunohistochemistry. The proliferation of breast cancer cells was monitored by CCK8 cell proliferation assay, and the migration and invasion of breast cancer cells were

observed by cell scratch test and transwell assay. The proliferation- and EMT-related proteins including cyclin D1, c-myc, survivin, wist, snail, slug, ZEB1, E-cadherin, PI3K, p-PI3K, AKT, p-AKT, IKBα, p-IKBα, NF-κB p65, p-NF-κB p65 were detected by western blot in breast cancer cells. MCF-7/AKR1B10 cells were treated with LY94002, a PI3K inhibitor, to consider the impact of AKR1B10 overexpression on the PI3K/AKT/NF-κB signal cascade and the presence of NF-κB p65 in nuclear. In vivo tumor xenograft experiments were used to observe the role of AKR1B10 in breast cancer grwoth in mice.

Results AKR1B10 expression was significantly greater in breast cancer tissue compared to paired non-cancerous tissue. The expression of AKR1B10 positively correlated with lymph node metastasis, tumor size, Ki67 expression, and p53 expression, but inversely correlated with overall and disease-free survival rates. Gene Ontology analysis showed that AKR1B10 activity contributes to cell proliferation. Overexpression of AKR1B10 facilitated the proliferation of MCF-7 cells, and induced the migration and invasion of MCF-7 cells in vitro in association with induction of epithelial-mesenchymal transition (EMT). Conversely, knockdown of AKR1B10 inhibited these effects in BT-20 cells. Mechanistically, AKR1B10 activated PI3K, AKT, and NF-κB p65, and induced nuclear translocation of NF-κB p65, and expression of proliferation-related proteins including c-myc, cyclinD1, surviving, and EMT-related proteins including ZEB1, Slug, twist, but downregulated E-cadherin expression in MCF-7 cells. AKR1B10 silencing reduced the phosphorylation of PI3K, AKT, and NF-κB p65, the nuclear translocation of NF-κB p65, and the expression of proliferation- and migration-related proteins in BT-20 cells. LY94002, a PI3K inhibitor, attenuated the phosphorylation of PI3K, AKT, and NF-κB p65, and the nuclear translocation of NF-κB p65. In vivo tumor xenograft experiments confirmed that AKR1B10 promoted breast cancer growth in mice.

Conclusions AKR1B10 promotes proliferation and migration of breast cancer cells via the PI3K/AKT/NF-κB signaling pathway and represents a novel prognostic indicator as well as a potential therapeutic target in breast cancer.

PU-0099

Improving Detection Efficiency of SARS-CoV-2 Nucleic Acid Testing

Jie Zhang、Li Jiang
Sichuan Academy of Medical Sciences & Sichuan Provincial People's Hospital

BACKGROUND SARS-CoV-2 nucleic acid testing (NAT) has been routinely used for COVID-19 diagnosis during this pandemic, however, there have been concerns about its high false negative rate. We dissected its detection efficiency with a large COVID-19 cohort study.

METHODS We analyzed SARS-CoV-2 NAT positive rates of 4275 specimens from 532 COVID-19 patients in Sichuan Province with different disease severities, statuses, and stages, as well as different types and numbers of specimens.

RESULTS The total positive rate of the 4275 specimens was 37.5%. Among seven specimen types, BALF generated a 77.8% positive rate, followed by URT specimens (38.5%), sputum (39.8%), and feces/rectal swabs (34.1%). Specimens from critical cases generated a 43.4% positive rate, which was significantly higher than that of other severities. With specimens from patients at stable status, the SARS-CoV-2 positive rate was 40.6%, which was significantly higher than that of improved status (17.1%), but lower than that of aggravated status (61.5%). Notably, the positive rate of specimens from COVID-19 patients varied significantly from 85%-95% during 3 days before and after symptom onset, to 20% at around 18 days after symptom onset. In addition, the detection rate increased from 72.1% after testing one throat swab, to 93.2% after testing three consecutive respiratory specimens from each patient.

CONCLUSIONS SARS-CoV-2 NAT detection rates vary with patient disease severity and status, specimen type, number of specimens, and especially disease progression. Sampling as close to

symptom onset as possible, and consecutively collecting more than one respiratory specimen could effectively improve SARS-CoV-2 NAT detection efficiency.

PU-0100

Circulating Tumor Cell Clusters from Gastric Cancer Patients Co-Cultured in Label-free Microfluid System Predicts Cancer Metastasis and Monitors Treatment Strategies.

Yunlan Zhou、Yanhui Ma、Yi Liu、Hui Chen、Guohua Xie、Lisong Shen
Xinhua Hospital, Shanghai Jiaotong University School of Medicine

Circulating tumor cells (CTC) has been proposed to be used as non-invasive cancer liquid biopsy, but the low sensitivity of capture and detection of CTCs limits its clinical use. There are various techniques reported for the detection of CTCs, but none of them has been widely used for clinical diagnostics. We developed a microfluidic-based approach for the culture of CTC clusters using minimal preprocessing and no need for prior enrichment of CTCs. The microfluidic model had the unique advantage of recapitulating the tumor microenvironment in a comparatively easier way.

We tested microwell-based assay in gastric cancer (GC) patients and generated CTC clusters from liquid blood biopsy of patients. Clusters were maintained under tumor-like conditions and are multi-component structures comprising CTCs and tumor-associated immune cells. We found the presence of CTC clusters correlated with survival outcomes of GC patients.

Then we profiled genome wide expression of CTC clusters co-cultured with immune cells using RNA sequencing. Compared to single CTCs, CTC clusters from GC patients had differential expression of Sox2, Survivin9 and Notum, which were the stemness and proliferation-associated characteristics of CTC clusters.

CTC phenotyping revealed subpopulation of tumorigenic cells, which may present heightened tolerance of or resistance to specific chemotherapeutic drugs for GC. These subpopulations of cancer cells with favorable survival traits are valuable drug targets for novel therapies. Genome wide expression of CTC clusters also showed intra-patient heterogeneity of cancer cells upon selection pressures of therapeutic drugs.

Our data demonstrate the ability of CTCs and immune cells to form clusters has been linked to increased metastatic potential. Our work will gain insights into the biology of CTC clusters of GC, and provide potential markers for CTC clusters of GC patients. These results will lead to high resolution analyses of GC and improve personalized therapy for patients.

云南地区肾移植受者 BK 病毒感染 HLA-A 抗原分布频率及相关性分析

汪佳婕
昆明市第一人民医院

目的 研究云南地区肾移植受者 BK 病毒（BKV）感染人类白细胞抗原（human leukocyte antigen，HLA）A 抗原分布频率，探讨肾移植受者 BK 病毒感染与 HLA-A 抗原之间的相关性。
方法 以云南地区 384 例肾移植受者 BKV 感染尿液阳性（>2000 拷贝/ml）患者为研究对象，应用聚合酶链反应一序列特异性引物（PCR-SSO）技术对患者 HLA-A 抗原进行检测，用 SPSS 软件分

析肾移植受者 BKV 感染尿液阳性 HLA-A 抗原分布频率，并运用病例对照研究设计及 SPSS 软件分析比较 HLA-A 抗原与 BK 感染不同结局的关系。
结果 对照组检出的 HLA-A 等位基因有 16 种，其中占比大于 5%的基因型有 5 种，分别为 HLA-A*2（22.32%）， HLA-A*11（30.25%）， HLA-A*24（19.42%），HLA-A*33（5.28%），HLA-A*203（5.28%）；BK 病毒感染组中检出的 HLA-A 等位基因有 13 种，其中占比大于 5%的基因型有 3 种，分别为 HLA-A*2（23.33%）， HLA-A*11（32.96%）， HLA-A*24（19.26%）。
结论 云南地区人群感染 BK 病毒 HLA-A*2，-A*11，-A*24,可能与较低的 BKV 风险相关。

MassARRAY 在高尿酸血症和痛风风险预测中的应用研究

高媛[2]、张心菊[1]、关明[1]
1. 上海市华山医院中心实验室
2. 江苏省苏州市苏州高新区人民医院检验科

目的 痛风是炎症性关节炎最常见的形式之一，是一种多因素疾病，典型特征是高尿酸血症和关节等部位尿酸钠晶体的沉积。多个基因 SNPs 已确定与血清尿酸和痛风易感性相关。群体在血清尿酸浓度和痛风的遗传贡献方面表现出共同的异质性，因而需要进行跨祖先研究以确定影响痛风发病的群体特异性位点。痛风诊断标准缺乏相关的分子生物学指标，为了探讨血清尿酸与痛风的基因关系，以期根据患者的遗传特征建立疾病风险早期预测模型，探讨 MassARRAY 芯片检测技术在临床实践中应用的可行性。
方法 本课题组根据预先确定的标准，筛选全基因组关联研究(GWAS)明确的 20 个候选基因中与血清尿酸浓度和个体化用药相关的 63 个 SNPs 位点，并应用 MassARRAY 技术在 579 名中国个体(233 名痛风患者、141 名高尿酸血症患者和 205 名健康受试者)中进行基因分型。对不同组合血清尿酸（痛风与对照、痛风与 HUA、HUA 与对照)的遗传效应进行了分析，以显示遗传变异对痛风的影响。
结果 采用 Plink 软件完成哈迪-温伯格遗传平衡（Hardy-Weinberg equilibrium，HEW）检验、等位基因、基因型和不同遗传模型与痛风易感性的关联分析。采用 GMDR 软件进行基因交互作用分析。在表达量性状位点(eQTL)数据库预测痛风易感 SNPs 位点的生物信息学功能。
结论 本课题系统地研究了 63 个 SNPs 与 HUA 和痛风的遗传效应关系，并明确了尿酸相关基因特异性 SNPs 在痛风的发病风险预测中的作用。初步建立了痛风和 HUA 的疾病风险预测模型,基因检测可以作为诊断的补充方法为临床诊断提供咨询建议。

A Novel Variant Analysis of CHD3 Gene from a Family with Snijders Blok-Campeau syndrome by Whole Exome Sequencing: Expanding the Genotypic and Phenotypic Spectrum of CHD3 disease

Yuan Tian 、Linlin Zhang、Erfeng Yuan、Jinshuang Gao、Yaqing Guo、Liying Song、Haiyang Yu
The Third Affliated Hospital of Zhengzhou University

Background Snijders Blok-Campeau syndrome (SNIBCPS) is an autosomal dominant neurodevelopmental disorder characterized by global developmental delay with impaired intellectual development and delayed speech acquisition, and Snijders Blok-Campeau syndrome is caused by heterozygous mutation in the CHD3 gene on chromosome 17p13.

Methodology/Laboratory Examination DNA of the family was extracted and sequenced by whole exome sequencing.The results were validated with Sanger sequencing analyzed with Bioinformatics software.
Results Sequencing result showed that the patient has carried a heterozygous variant of c.3709T>C of the CHD3 gene. The patient's father and mother has not carried the variant of c.3709T>C of the CHD3 gene.
Discussion and Conclusion The heterozygous variant of c.3709T>C of the CHD3 gene probably underlie the disease in this child and the case related to Snijders Blok-Campeau syndrome is the first reported in China.

PU-0104

Bioinformatics analysis identifies biomarkers related to immune infiltration in white adipose tissue of obese patients with type 2 diabetes

Xuewei Tong
Hospital of Xinjiang Production and Construction Corps

OBJECTIVE To identify potential immune infiltration-related biomarkers in the white adipose tissue (WAT) from obese people with type 2 diabetes mellitus (T2DM).
METHODS Gene expression datasets (GSE16415 and GSE71416) of the WAT from the abdomen of obese patients with T2DM and those with simple obesity were downloaded from the Gene Expression Omnibus database. R was used to screen differentially expressed genes (DEGs), and Gene Ontology and Kyoto Encyclopedia of Genomes pathway analyses were performed. Candidate biomarkers were identified and their discriminative ability was evaluated. Additionally, the GSE29231 dataset was used to verify the expression levels of biomarkers as well as their diagnostic value in obese patients with T2DM. Gene set variation analysis and GeneMANIA were used. The correlation between biomarkers and infiltrating immune cells was also evaluated.
RESULTS A total of 130 DEGs were screened. Six key genes were obtained after verification, including cidea and fscn1. Immune cell infiltration analysis showed that cidea was related to tumor-infiltrating lymphocytes (TILs) and human lymphocyte antigen, while fscn1 was related to TILs and helper T cells.
CONCLUSIONS cidea and fscn1 may be biomarkers of obesity-related T2DM; further research is needed to explore their role in the molecular mechanisms of T2DM.

PU-0105

Screening and verification of differentially expressed genes in adipose tissue of obese patients with type 2 diabetes

Xuewei Tong
Hospital of Xinjiang Production and Construction Corps

Object White adipose tissue (WAT) plays an important role in the occurrence and development of type 2 diabetes mellitus (T2DM) combined with obesity, but its exact mechanism is not yet clear. In this study, based on bioinformatics technology, we screened the differentially expressed genes (DEGs) of the greater omentum WAT in T2DM patients with obesity and simple obesity, verified the tissue mRNA and protein levels of key DEGs, and analyzed the tissues of key DEGs The correlation between the expression level and the corresponding biochemical indicators aims to explore the pathophysiological mechanism of WAT in T2DM with obesity, and provide a

theoretical basis for the prediction of the risk of T2DM and the discovery of new targets for drug therapy.

Methods Download the gene expression data set (GSE16415 and GSE71416) of the intra-abdominal greater omentum WAT in T2DM patients with obesity and simple obesity through the gene expression database Use R software to screen DEGs, and perform functional enrichment analysis on DEGs through Metascape database. Combine Lasso regression and Boruta feature selection algorithm to identify key DEGs, and use the GSE29231 data set to further identify the expression levels of key DEGs in obese patients with T2DM. Gene set variation analysis (GSVA) was used to evaluate the main signaling pathways that key DEGs participate in the disease. According to the body mass index (BMI), 8 cases of normal control group (NC), 12 cases of simple obesity group (Obese, OB), and 4 cases of T2DM combined with obesity group (T2DM+OB) were selected for the study. General information of the subject, testing fasting plasma glucose (FPG), Hemoglobin A1c (HbA1c), total cholesterol (TC), triglyceride (TG), low density lipoprotein-cholesterol (LDL-C), high density lipoprotein-cholesterol (HDL-C) biochemical indicators. Use qRT-PCR and Western Blot technology to verify the mRNA and protein expression levels of key DEGs in intra-abdominal omentum WAT samples, and analyze the correlation between tissue key DEGs mRNA expression levels and biochemical indicators.

Results Bioinformatics analysis screened out 130 DEGs between obese patients with T2DM and simple obesity. Among them, 40 genes were up-regulated and 90 genes were down-regulated in T2DM patients with obesity. GO function annotations show that DEGs are mainly involved in biological processes such as the production of metabolites and energy, neutrophil-mediated immunity, cofactor biosynthesis, positive regulation of exercise, and monocarboxylic acid metabolism. KEGG signaling pathway analysis showed that DEGs are mainly involved in the tricarboxylic acid cycle, glycolysis/gluconeogenesis, pertussis, tryptophan metabolism, PPAR signaling pathway and other pathways. After combining Lasso regression and Boruta feature selection algorithms, and verifying the GSE29231 data set, CIDEA and FSCN1 genes were identified as key DEGs. GSVA results show that CIDEA gene is mainly involved in oxidative phosphorylation, lipogenesis, fatty acid metabolism and other pathways; while FSCN1 gene is mainly involved in Wnt/β-catenin signaling pathway, C3 signaling pathway, interleukin-2 signal transduction and transcription activator 5 signaling Transduction and other pathways. The general data of the study subjects showed that the body weight and BMI of the OB group and T2DM+OB group were significantly higher than those of the NC group ($P<0.05$). The results of biochemical indicators showed that the FPG, HbA1c and TG in the T2DM+OB group were significantly higher than those in the OB and NC groups ($P<0.05$), and the HDL-C in the T2DM+OB group was significantly lower than that in the OB and NC groups ($P<0.05$). The validation results of human intra-abdominal omentum WAT samples showed that the mRNA and protein expression levels of CIDEA in the T2DM+OB group were significantly lower than those in the NC and OB groups ($P<0.05$), and the OB group was significantly higher than the NC group ($P<0.05$). The mRNA and protein expression levels of FSCN1 in the T2DM+OB group were significantly higher than the NC and OB groups ($P<0.05$), and the OB group was significantly higher than the NC group ($P<0.05$). The mRNA and protein expression levels of CIDEA and FSCN1 in each group The results are consistent. Correlation analysis between the mRNA expression levels of CIDEA and FSCN1 and biochemical indicators showed that high mRNA expression of CIDEA was positively correlated with HDL-C levels and negatively correlated with TG levels ($P<0.05$); high mRNA expression of FSCN1 was correlated with FPG and HbA1c There was a significant positive correlation with TG ($P<0.05$).

Conclusion (1) This study used bioinformatics technology to determine the CIDEA and FSCN1 genes in WAT as the key differentially expressed genes between obese patients with T2DM and simple obesity. (2) CIDEA was down-regulated in the intra-abdominal greater omentum WAT in the T2DM+OB group, and up-regulated in the intra-abdominal greater omentum WAT in the OB and NC groups, suggesting that CIDEA may play a protective role in the development of T2DM and obesity. (3) FSCN1 was up-regulated in the intra-abdominal greater omentum WAT in the T2DM+OB group, and down-regulated in the intra-abdominal greater omentum WAT in the OB and NC groups, suggesting that FSCN1 may play a role in the development of T2DM and obesity.(4) The high expression of CIDEA was positively correlated with HDL-C levels and

negatively correlated with TG levels; the high expression of FSCN1 was positively correlated with FPG, HbA1c and TG levels. It is speculated that CIDEA and FSCN1 may be involved in the pathophysiological mechanism of glucose and lipid metabolism disorders in obese patients with T2DM.

PU-0106

siBCL-2 联合维生素 K2 抑制肝癌细胞 smmc-7721 机制的初步研究

姚玉亭
上海交通大学医学院附属第九人民医院检验科

目的 siBCL-2 联合维生素 K2 能够协同抑制肝癌细胞 smmc-7721。siBCL-2 的作用机理主要在于通过抑制 BCL-2 基因过表达来增强细胞凋亡，VK2 能够通过调节细胞内 p53 的表达来抑制细胞增殖。本研究拟通过对 BCL-2 和 p53 基因介导的细胞凋亡及细胞周期的检测初步探索联合治疗导致细胞生长抑制的机制。
方法 用 FCM 和 Annexin-V 观察分析 siBCL-2 联合 VK2 作用 smmc-7721 细胞后细胞周期的变化以及早期凋亡情况；用 Western blot 检测细胞株中 p53，p21，BAX 蛋白的表达；用 Real time PT-PCR 检测细胞株中自噬相关基因 Map1lc3b 的表达；以期初步探讨 siBCL-2 联合 VK2 对 smmc-7721 细胞增殖抑制的分子机制。
结果 siBCL-2 转染 36 小时和 VK2 加药 24 小时后，联合治疗组导致 smmc-7721 细胞 G2 期阻滞，但不引起早期凋亡。Western blot 检测，联合治疗组显著提高细胞内 p53 和 p21 蛋白的表达，对 BAX 的表达没影响。Real time PT-PCR 分析，联合治疗组能够显著提高自噬相关基因 Map1lc3b 在基因水平的表达。
结论 化学合成的 siBCL-2 能够抑制细胞中 BCL-2 的表达并使 p53 表达上调。同时联合化疗药物 VK2 的作用，可进一步使 p53 下游激活产物 p21 蛋白的上调更加迅速和明显，从而导致细胞周期的 G2 期阻滞，抑制肿瘤生长。siBCL-2 联合 VK2 并不引起细胞凋亡，但能够显著提高自噬相关基因 Map1lc3b 在基因水平的表达。

EphA7 基因高甲基化和宫颈癌发生发展相关性的研究

王蓉、张文帆、陆婷婷、郑佳琪、周霖
天津医科大学

目的 EphA7 基因在肿瘤的发生、发展及预后中有着重要意义。因此，本研究拟鉴定并验证 EphA7 在宫颈癌发生中的 DNA 甲基化水平及互作的转录调控因子。
方法 首先，采用甲基化特异性聚合酶链反应(MSP)方法检测宫颈癌细胞系及组织的基因启动子的甲基化水平；进而，采用荧光定量甲基化特异性聚合酶链反应(QMSP)检测了正常，癌前及癌症共 111 例的宫颈液基细胞样本(TCT)，并分析其基因甲基化检测对宫颈癌筛查的临床价值；然后，采用特异性的 CRISPR 甲基化干扰系统(dCas9-Tet1/Dnmt3a)对 EphA7 基因的甲基化进行了双向调控，并通过 RT-PCR 及 pyrosequencing 证实了 DNA 甲基化对 EphA7 基因的转录表达具有直接调控作用；此外，基于在线数据平台对 EphA7 基因启动子的转录因子进行筛选，并采用特异性的原位捕获技术，鉴定其基因启动子区域的转录因子。
结果 EphA7 在宫颈癌细胞系及组织呈现高甲基化，且其甲基化水平与 mRNA 表达负相关；在 TCT 样本中 EphA7 基因甲基化水平随着癌症进展逐渐升高($P<0.05$)，其 ROCAUC 为 0.816。CRISPR 甲基化干扰系统可以有效调控 EphA7 基因的转录表达，在宫颈癌细胞系中可提高其 mRNA 表达水

平达 6.20，7.51 倍等(p<0.05)，同样在正常 EphA7 非甲基化细胞系，其转录水平可下调 72.75%。另外，在 Siha 细胞系中也初步鉴定 SP1 和 MAZ 与 EphA7 基因结合，调控其表达。
结论 EphA7 基因甲基化是宫颈癌诊断和治疗的新型潜在生物标志物。CRISPR 甲基化干扰系统可以特异性的作用于 EphA7 基因甲基化的调控，原位捕获技术可特异性的捕获结合与靶位点的调控元件，为下一步机制的深入研究及后续的宫颈癌治疗及预后的监测奠定了良好的基础。

The study of mechanism of interaction between NLRP3 and PKR in the activation of inflammasome

Qian Feng[1,2,3]、yuling chen[4]、yuanjian song [2,3,4]
1. Affiliated Hospital of Xuzhou Medical University
2. 徐州医科大学遗传学教研室
3. 徐州市医学遗传与转化工程中心
4. 徐州医科大学

Objective Protein kinase PKR can directly bind to NLRP3 and phosphorylate NLRP3, to promote the activation of NLRP3 inflammasome. PRKRA (PKR activator A)activates PKR, through binding to DRBM domain of PKR, and their DRBMI and DRBM2 domain sequences are very similar, so it is possible that PRKRA directly interacts with NLRP3 and activates NLRP3 inflammasome. The purpose of this study is to find the domain of the interaction between PRKRA and NLRP3. and to design interfering peptides to interfere with the interaction between PRKRA and NLRP3.inhibit the activation of NLRP3 inflammasome, and relieve LPS-induced neuroinflammation .
Methods Part I: Finding the domain of the interaction between PRKRA and NLRP3 with the help of His pull down experiment Search the cDNA sequences corresponding to PRKRA and NLRP3 in the Uniprot database and order them. molecular cloning experiment. The full-length and domains of PRKRA and NLRP3 were cloned into pET-30a(+) or a modified T4 lysozyme (T4L)vector to construct recombinant plasmids, then transformed into BL21(DE3) competent cells. The recombinant protein fragments containing 6 x His tags were induced by IPTG and purified by Ni-NTA. The protein expression was detected by SDS-PAGE. The recombinant plasmid corresponding to the domain of clonal expression of NLRP3.protein was reacted with PCR, and the recombinant plasmid with FLAG tag and without6 x His tag was constructed. The PRKRA protein containing 6 x His tag and the fragment containing FLAG tag were incubated with Ni-NTA magnetic beads to detect the existence of FLAG tag in magnetic beads, and the fragment directly binding PRKRA to NLRP3 was obtained.
Part II: Interference peptides were designed by homologous modeling and molecular docking, and the interaction sites between PRKRA and NLRP3 were verified by co-crystallization.The fragment structure of direct interaction between PRKRA and NLRP3 is found by PDB (Protein Data Bank) database, and the non-existing structure is obtained by Swiss Model homologous modeling. The first 15 structures with the highest score were docked by ZDOCK software, and the amino acid distribution of the interface between PRKRA fragment and NLRP3 fragment was analyzed. According to these amino acid distribution, the interfering peptide TAT-pLRR, was obtained and the disordered peptide TAT-pLRR-Scr was obtained by disrupting the amino acid sequence. The recombinant plasmid obtained in the first part was transformed into BL21 (DE3) competent cells, and the protein expression was induced by IPTG. The protein was purified by Ni-NTAand molecular sieve, and the ultrafilter tube was condensed to 5mg/mL. Hampton kit was used to screen the crystal conditions on the sitting drop crystal plate.
Part III: to verify the function of interfering peptides in LPS-induced BV2 cells BV2 cells were divided into Control group , LPS (10 ug/mL) induced for 24 h, small peptide TAT-pLRR (40mg/mL) pretreated with 3h then LPS for 24 h, and small peptide TAT-pLRR-Scr (40mg/mL) pretreated with 3h then LPS for 24 h. The total RNA, was extracted from the adherent cells of the four groups. The mRNA levels of inflammatory cytokines IL-1 B. IL-6. IL-18, TNFa and PKR in the four

groups were detected by RT-qPCR method to evaluate the effect of interfering peptides on the transcription of inflammatory factors. The models of experimental peptides and disordered peptides were established by molecular dynamics simulation. The conformational changes of experimental peptides and disordered peptides in NaCI aqueous solution were simulated at 25 ℃ and latm. and their stability. residue flexibility and relative movement coordination ability between residues were compared, and the direction of further improvement of interferon peptides was put forward.

Results 1. The recombinant plasmids constructed with full-length PRKRA. MI+M2domain and pET-30a (+) plasmids were highly cloned and expressed in E. coli, while the recombinant plasmids constructed with LRR domain and T4 lysozyme were cloned and expressed in small quantities in E. coli. His Pull-down experiment showed that both the full length of purified PRKRA and the MI+M2 domain could bind to the LRR domain in the buffer. Gel filtration chromatography results show that the stability of MI+M2 was poor, and the full-length PRKRA exists in a form of polymer. After condensed to 5mg/mL, the crystallization conditions were screened out. Small broken crystals were observed in 0.2mL HEPES pH7.5,24% polyethylene glycol 1500condition. 2. Through homologous modeling and molecular docking, we found that(WRLPEYTLSQE) at position 140 and 150 in M1+M2 domain, and R772. W774, D802,K829. W831. R857 and Y859 of NLRP3 is the main part of the interaction between MI+M2 domain (belonging to PRKRA) and LRR (belonging to NLRP3). The designed interfering peptide sequence is WRLPEYTLSOE. which disrupted sequences toOLELYPTSEWR, which is called disordered peptide sequence. The experimental peptide and disordered peptide are added with the TAT sequence and ordered. 3. TheRT-APCR results of BV2 cells in each group showed that there was no significant change in the expression of mRNA of PKR and IL-6 among different groups, but the mRNA expression levels of IL-1 B and IL-18 in the LPS group were significantly lower than those in the Control group. The mRNA expression of IL-1 B, IL-18 and TNF a in TAT-pLRR and TAT-pLRR-Scr small peptide pretreatment group was significantly lower than that in LPS stimulation group.

Conclusion 1. The interaction between PRKRA and NLRP3 is through the MI+M2domain of PRKRA and the LRR domain of NLRP3. 2. The interfering peptide designed based on the 140150 residues of PRKRA can inhibit the transcription of IL-1B IL-18,IL-6 and TNFa at the cellular level, and has the ability to relieve inflammation.

PU-0109

Development and validation of an N6-methyladenosine regulation and mRNAsi related prognostic index for lower-grade glioma

Guihua Tang[1]、Wen Yin[2]
1. Hunan Provincial People's Hospital
2. 中南大学湘雅医院

Background N6-methyladenosine (m6A) modification is involved in tumorigenesis and progression as well as closely correlated with stem cell differentiation and pluripotency. Moreover, tumor progression includes the acquisition of stemness characteristics and accumulating loss of differentiation phenotype. Therefore, we integrated m6A modification and stemness indicator mRNAsi to classify patients and predict prognosis for LGG.

Methods We performed consensus clustering, weighted gene co-expression network analysis (WGCNA), and least absolute shrinkage and selection operator (LASSO) Cox regression analysis to identify an m6A regulation and mRNAsi related prognostic index (MRMRPI). We also explored the differences in immune microenvironment between high and low-risk populations based on this prognostic index.

Results Ten genes (DGCR10, CYP2E1, CSMD3, HOXB3, CABP4, AVIL, PTCRA, TIMP1, CLEC18A, and SAMD9) were identified to construct the MRMRPI, which was able to successfully

classify patients into high- and low-risk group. Significant differences in prognosis and immune microenvironment were found between distinct groups. A nomogram integrating the MRMRPI and other prognostic factors was also developed to accurately predict prognosis.
Conclusion These findings provide novel insights into understanding the interactions of m6A methylation regulation and tumor stemness on LGG development and contribute to guiding more precise immunotherapy strategies.

846 例孕晚期妇女 B 族链球菌感染检测及妊娠结局分析

肇玉博[1]、李然[2]、马艳侠[1]
1. 陕西中医药大学附属医院
2. 陕西中医药大学医学技术学院

目的 了解咸阳地区孕妇感染 B 族链球菌（GBS）与年龄、妊娠情况及妊娠结局等因素的相关性,为孕晚期妇女防治 B 族链球菌感染提供建议。
方法 选取 2019 年 9 月至 2021 年 3 月在陕西中医药大学附属医院产科进行 B 族链球菌检测的 846 名孕妇作为研究对象，采用实时荧光定量聚合酶链反应（PCR）的方法检测 B 族链球菌,按照患者年龄、妊娠情况及妊娠结局对检测结果进行分析。
结果 846 例妊娠孕妇 GBS 阳性率为 7.40%。其中 82.54%（52/63）GBS 阳性孕妇伴随有不良妊娠症状，脐带绕颈症状占比 66.67%（42/63）有统计学意义。21～25 岁孕妇感染 GBS 的阳性率为 12.12%、26～30 岁孕妇感染 GBS 的阳性率为 6.97%、31～35 岁孕妇感染 GBS 的阳性率为 7.86%、<20 岁和≥36 岁孕妇的 GBS 阳性率为 0%。
结论 年龄在 21～25 岁的孕妇易感染 B 族链球菌,感染 GBS 阳性孕妇的胎儿易发生脐带绕颈现象。

实时 PCR 扩增检测 SARS-CoV 及 SARS-CoV-2 的方法学建立及性能评价

韩琦[1,3]、陈天垠[3]、沈建如[1]、吴秋保[2]、冼汉福[1]、杨创慧[1]
1. 广州金域医学检验中心
2. 广州医科大学附属第一医院广州呼吸健康研究院呼吸疾病国家重点实验室
3. 海南金域医学检验中心

目的 开发一种实时聚合酶链反应方法用于对新型冠状病毒及 SARS 病毒感染的核酸诊断，并进行该方法学的性能评价。
方法 本研究使用单步实时 PCR 检测方法，采用同源 IC，该 IC 是由来自小鼠肌肉的 190bpRAB3A 癌基因片段，在该片段两端连接 SARS-CoV 与 SARS-CoV-2 同源的基因组成的重组 DNA。本方法使用四套探针三套引物。为了防止插入序列被过量同源 IC 竞争，将同源 IC 工作浓度优化为每反应 10 拷贝，使阴性对照同源 IC 的 ct 值在一个稳定范围内。从临床收集的七例阴性三例阳性新型冠状病毒核酸及一例含有 SARS 的基因片段质粒进行所建立方法学性能评价，并与圣湘新型冠状病毒核酸检测方法相比较。
结果 此方法在 SARS-CoV 及 SARS-CoV-2 诊断方面具有优越性。单次检测敏感性（100%）和特异性（100%）。与圣湘新型冠状病毒核酸检测方法相比较单项检测敏感性及特异性为 100% 。此检测和同源 IC 在一个单一的反应中，PCR 抑制可以很容易的区别于真阴性结果，
本方法不需要人工操作 PCR 扩增产物，从而大大减少交叉污染的机会。

结论 该方法作为一种实时 PCR 检测方法，可为检测临床 SARS-CoV 及 SARS-CoV-2 标本提供阳性存在的依据。该方法检测具有良好的诊断性能，准确性高可应用于临床检测，但由于样本量少无法做更详细的验证故后续需继续补充数据。

通过 SALP-seq 和机器学习分析血浆游离 DNA 遗传和表观遗传信息初探

张晓雪、夏欣一
中国人民解放军东部战区总医院

目的 血浆中的游离 DNA (cfDNA) 携带着丰富的遗传和表观遗传信息。基于 cfDNA 的液体活检目前仍限于 ctDNA 突变、甲基化修饰、外泌体等，开发新的建库和分析方法可拓展其在液体活检中的应用。
方法 首先采集 11 例食管癌患者术前、5 例食管癌患者术后和 4 例健康者的 cfDNA 样本，并采用 SALP-seq 技术构建 cfDNA 样本的 NGS 文库后进行测序，使用机器学习算法分析 cfDNA NGS 数据，利用生物信息学方法分析食管癌患者与健康人在遗传和表观遗传上的差异，以寻找新型食管癌标志物，并通过分析另外 10 例食管癌患者术前的 cfDNA 样本来验证这些标志物。
结果 本研究中开发的 SALP-seq 成功的制备了多个 cfDNA 样本的 NGS 文库，可用于有效分析大量临床血液样本。分析结果显示，不同样品中 cfDNA 的分布差异很大，EC 患者的 cfDNA 的平均 reads 密度高于术后患者和正常人的 reads 密度，表明 EC 患者比正常人具有更高的染色质开放状态；转录起始位点(TSS) 5 kb 区域的 reads 密度主成分分析(PCA)结果显示正常 cfDNA 样本与 ESCA cfDNA 样本的 reads 密度差异较大；有 49 个在所有癌症样本中显示出极低的读码密度的启动子 reads，术后这些基因的启动子 reads 密度明显增加；使用 MDA 筛选出 88 个食管癌相关区域，36.36%的区域位于远端基因间区域，25%位于近端调控区。cfDNA 在全基因组水平上的大小的计算结果显示，术前 EC 患者 cfDNA 最短，正常人 cfDNA 最长。不同 cfDNA 的 GC 含量计算结果显示术前 EC 患者的 cfDNA 的 GC 含量最低，正常人的 cfDNA 的 GC 含量最高。cfDNA 样本 SALP-seq 读数分析 ESCA 相关突变，结果显示大多数单核苷酸变异 (SNV) 位于远端基因间和内含子区域，且术前患者中存在 37 个独特的突变基因。
结论 本研究通过 SALP 技术与机器学习相结合，分析了来自食管癌患者和正常人的 cfDNA 样本，不仅发现了食管癌患者的染色质开放状态发生显著改变的基因以及染色质开放性区域的基因突变情况, 为调控食管癌发生的分子机制提供了重要见解，还探讨了应用 cfDNA 监测肿瘤发生发展的潜在价值，为新型肿瘤标志物的发现及其在液体活检中的应用提供参考，也为 cfDNA 的临床价值提供了重要的新见解。（本研究部分内容已发表于 Comput Struct Biotechnol J，IF=6.018）

53 株耐碳青酶烯药物粘质沙雷菌耐药表型分析

张燕
南京大学医学院附属鼓楼医院

目的 研究耐碳青酶烯药物粘质沙雷菌耐药机制。
方法 收集南京大学医学院附属鼓楼医院 2018 年 6 月至 2019 年 9 月临床分离 235 株非重复粘质沙雷菌，采用 Vitek 2 Compact 配套 GN13 药敏板卡和纸片扩散法进行药物敏感性检测；采用改良碳青霉烯酶灭活试验（mCIM）和 EDTA-改良碳青霉烯酶灭活试验（eCIM）对碳青霉烯酶表型筛选；采用 PCR 及测序分析检测碳青霉烯酶基因携带情况。

结果 235 株粘质沙雷菌中检出同时对美罗培南和亚胺培南耐药菌株 53 株（22.6%）。53 株碳青霉烯类耐药菌株中对头孢他啶敏感和中介分别为 23 株（43.4%）和 21 株（39.6%），对头孢曲松、氨曲南、环丙沙星、左氧氟沙星的耐药率均大于 98%，对阿米卡星、复方新诺明的耐药率分别为 1.7%和 1.6%。mCIM 均阳性，eCIM 阳性 3 株。53 株菌中检出 blaKPC-2 基因 50 株，检出 blaNDM-1 基因 1 株, 同时携带 blaKPC-2 和 blaNDM-1 基因 1 株，未检出 blaIMI、blaOXA48、blaFOX、blaIMP 和 blaVIM 基因。
结论 本院耐碳青霉烯粘质沙雷菌检出率较高，blaKPC-2 基因是介导本院粘质沙雷菌碳青霉烯类药物耐药的主要流行基因型。

A literature review on function and regulation mechanism of DKK4

Xiaoli Lou 、Yuchen Meng、Yanqiang Hou
Songjiang Hospital Affiliated to Shanghai Jiaotong University School of Medicine

Dickkopf-related protein 4 (DKK4) is a member of the dickkopf family and an inhibitor of the Wnt/β-catenin signalling pathway. This review surveyed the single nucleotide polymorphisms (SNPs), copy number variations (CNVs), hypermethylation, regulation mechanism, correlation with clinicopathological parameters and chemotherapeutic resistance of DKK4. The signal pathways involved in DKK4 mainly include Wnt/β-catenin pathway and Wnt-JNK pathway independent β-catenin. DKK4 expression was upregulated in Renal Cell Carcinoma (RCC), Colorectal Cancer, Gastric Cancer (GC), Non-small Cell Lung Cancer (NSCLC) and Epithelial Ovarian Cancer (EOC), while downregulated in Hepatocellular Carcinoma (HCC). DKK4 is not only involved in tumour growth, invasion, migration and chemotherapy resistance, but also in osteoblastogenesis and secondary hair or meibomian gland formation. DKK4 has also been linked to schizophrenia.

博乐市人乳头瘤病毒感染流行病学分析及病毒载量与宫颈癌的关系研究

彭燕
新疆生产建设兵团第五师医院

目的 探讨液基细胞学技术（TCT）、人乳头瘤病毒（HPV）感染以及 HPV 病毒载量在临床诊断宫颈疾病中的应用价值。
方法 选取新疆生产建设兵团第五师医院在 2018 年 1 月至 2021 年 4 月住院及门诊的 356 例成年女性患者进行 TCT 及 HPV-DNA 联合检测。
结果（1）HPV 检测**结果** 博乐地区 HPV 好发的高危亚型分别为 HPV16、HPV52、HPV58，好发年龄段为 41~45 岁；（2）TCT 检测**结果** 56~60 岁组 TCT 诊断结果阳性率最高，而 41~45 岁组阳性率最低；（3）TCT 与 HPV 病毒载量联合诊断**结果** 高危型 HPV DNA 载量与 TCT 阳性结果大致呈正相关关系。
结论 博乐市 HPV 感染率相对较高，并以单一感染为主，而 HPV 持续感染的人数却相对较少，提示早诊断早治疗在预防宫颈癌方面有至关重要的作用。

Protein Glycopatterns in Bronchoalveolar Lavage Fluid as Novel Potential Biomarkers for Diagnosis of Lung Cancer

Lina Liu[1,2]、Dan Li[2]、Jian Shu[3]、Li Wang[2]、Fan Zhang[3]、Chen Zhang[3]、Hanjie Yu[3]、Mingwei Chen[2]、Zheng Li[3]、Xuan Guo[2]
1. Xi'an No. 4 Hospital
2. 西安交通大学医学院第一附属医院
3. 西北大学

Objectives Lung cancer (LC) is a prevalent and life-threatening neoplasia worldwide. Although aberrant glycosylation has been observed in human serum and tissue, little is known about the alterations in bronchoalveolar lavage fluid (BALF) that are associated with LC. Our aim was to systematically investigate and assess the alterations of protein glycopatterns in BALF and possibility as biomarkers for diagnosis of LC.
Methods In this study, lectin microarrays were utilized to detect and compare the differential expression of BALF glycoproteins from patients with 80 adenocarcinomas (ADC), 77 squamous cell carcinomas (SCC), 51 small cell lung cancer (SCLC), and 73 benign pulmonary diseases (BPD). Then, lectin blotting analysis was performed to verify the results of lectin microarrays. These 281 BALF specimens were then randomly divided into test group and validation group. First, five diagnostic models (Model LC, ModelADC, Model SCC, Model SCLC, and Model LC-ES (early stage of lung cancer)) were constructed to identify benign and malignant lung diseases, ADC, SCC, SCLC and LC-ES by binary stepwise logistic regression based on the lectin microarrays data from 163 BALF samples in the test group. Subsequently, the diagnostic models constructed in the test group were then applied to a validation group to assess the discriminatory efficiencies through ROC analysis. Moreover, an independent test was performed with 120 newly collected BALF samples enrolled in the double-blind cohort to further assess the clinical application potential of the diagnostic models.
Results According to the results, there were 15 (e.g., PHA-E, EEL, and BPL) and 14 lectins (e.g., PTL-II, LCA, and SJA) that individually showed significant variations in different types and stages of lung cancer compared to BPD. Notably, the diagnostic models achieved better discriminate power (Model LC (AUC: 0.61, sensitivity: 0.918 and specificity: 0.939), Model LC-ES (AUC: 0.856, sensitivity: 0.829 and specificity: 0.810), Model ADC (AUC: 0.619, sensitivity: 0.706 and specificity: 0.586), Model SCC (AUC: 0.693, sensitivity: 0.800 and specificity: 0.667), Model SCLC (AUC: 0.718, sensitivity: 0.721 and specificity: 0.684)) in the validation cohort and exhibited high accuracies of 0.917, 0.864, 0.712, 0.671 and 0.781 in the double-blind cohort for the diagnosis of LC, LC-ES, ADC, SCC, and SCLC, respectively.
Conclusions Taken together, the present study revealed that the abnormally altered protein glycopatterns in BALF are expected to be novel potential biomarkers for the identification and early diagnosis of lung cancer, which will contribute to explain the mechanism of the development of lung cancer from the perspective of glycobiology.

9850 例女性人乳头瘤病毒筛查情况及感染特征分析

郭霞、陈艳芝、段培增、李巧清、刘璐、翟秀伟、张思荣、张学林
保山市人民医院

目的 分析保山市 9850 例女性人乳头瘤病毒（HPV）感染情况，为宫颈癌的预防和治疗提供实验室参考依据。

方法 以 2019 年 1 月 1 日至 2020 年 12 月 31 日前往保山市人民医院就诊并自愿接受 HPV-DNA 检测的女性为研究对象，用专用的宫颈脱落细胞采集器采集宫颈分泌物，采用反向点杂交法进行 HPV-DNA 分型检测，分析 HPV-DNA 亚型感染情况。
结果 本次研究共收集 9850 例样本（排除同一受检者的重复样本）。小于 20 岁女性筛查人数为 41 例，阳性率高达 43.90%（18/41）；20-29 岁女性筛查人数为 1770 例，阳性率为 17.51%（485/1770）；30-39 岁女性筛查人数最多为 3192 例，阳性率为 15.19%（485/3192）；40-49 岁女性筛查人数为 3106，阳性率为 14.20%（441/3106）；50-59 岁女性筛查人数为 1390，阳性率为 17.84（248/1390）；60 岁以上女性筛查人数为 351，阳性率为 17.66%（62/351）。不同年龄段女性 HPV 阳性率进行比较，差异具有统计学意义（P<0.05）。共检出 1564 例阳性样本，占比 15.89%（1564/9850），其中单一亚型感染者 1219 例，占比 77.94%（1219/1564），非单一亚型感染者 345 例，占比 22.06%（345/1564）；高危型感染者 1063 例，占比 67.97%（1063/1564），低危型感染者 297 例，占比 18.89%（297/1564），高低危混合感染者 204 例，占比 13.04%（204/1564）。18 种高危亚型中检出率最高的是 HPV52,占比 19.43%（304/1564）、其次是 HPV16，占比 15.47%（242/1564）及 HPV58，占比 11.13%（174/1564）。6 种低危亚型中，检出率最高的是 HPV81，占比 9.09%（142/1564）
结论 该院女性 HPV 感染率较高，以单一亚型、高危亚型感染为主，常见亚型为 HPV52、HPV16、HPV58 及 HPV81。

PU-0118

C/EBPα 高表达的肝细胞肝癌关联分子的筛选和机制研究

娄晓丽、侯彦强、杨丽媛、陈洪卫
上海市松江区中心医院

目的 研究和筛选 C/EBPα 高表达的肝细胞肝癌患者关联分子及相关机制。
方法 采用 Western-blot 检测 C/EBPα 在肝癌细胞株中的表达水平，通过 shRNA 干扰技术和 RNA-sequencing 技术筛选 C/EBPα 相关分子，通过差异分析和聚类分析得出差异分子和关联信号通路。采用 Western-blot、免疫组化检测二者的关联表达情况，应用荧光素酶实验验证 C/EBPα 对关联分子的调控机制。
结果 C/EBPα 在 HepG2 和 Huh7 高表达，C/EBPα 降低表达后，细胞增殖能力显著减弱。通过差异分析共发现上调 mRNA 1257 个和下调 mRNA 1055 个，其中差异最明显的是 DKK4 和 IGFBP1。免疫组化发现 C/EBPα 与 IGFBP1 负相关（p<0.05），C/EBPα 负调控 IGFBP1 的表达。
结论 C/EBPα 高表达的肝细胞肝癌通过下调 IGFBP1 促进肿瘤增殖。

男性特发性低促性腺激素性性腺功能减退症的分子遗传学研究

齐晨阳、夏欣一
中国人民解放军东部战区总医院

目的 男性特发性低促性腺激素性性腺功能减退症（IHH）是一种罕见的临床异质性遗传疾病，分为卡尔曼综合征（KS）和嗅觉正常的 IHH（nIHH）两种形式。以往文献报道的致病基因仅占其致病原因的 50%左右，仍有未知的致病基因和相关致病机制有待探索。本文旨在进一步扩大 IHH 基因型突变谱并为该病症的临床治疗和产前诊断提供依据。
方法 本研究纳入 40 例 IHH 患者，其中 nIHH 患者 18 例，KS 患者 22 例。检查记录患者的性腺功能相关临床数据，提取患者及部分患者家族成员的外周血基因组 DNA，进行全外显子测序

（WES），测序数据经生物信息学分析，Sanger 测序验证，突变位点致病性预测，突变位点在不同物种中的保守性比对，以确定疾病的原因，并且分析各个突变基因在总样本中的突变率。
结果 在 2 个 KS 家族中发现了 SEMA3E 错义突变(p.P323S)和 SOX10 移码突变(p.S431Rfs*69)；2 个 nIHH 家族中发现 FGFR1 无义突变(p.R661X)和 KISS1R 已知无义突变(p.R331X)。在 8 例散发无相关 IHH 患者中发现 2 个 ANOS1 移码突变(p.R282Vfs*26，p.R631Sfs*36)，2 个 FGFR1 移码突变(p.E705Gfs*16，p.F745Rfs*45)，1 个 CHD7 复合杂合突变(p.G1899R，Q1900_W1903del)，1 个 CHD7 错义突变(p.W1785C)，1 个 PROKR2 复合杂合突变(p.Y223D 和 p.R298C)和 1 个 KISS1R 已知纯合突变(p.Y103X)；经生物信息学分析，突变位点氨基酸高度保守且会影响到蛋白质的结构，预测具有导致 IHH 发生的可能性。并且分析验证了 40 例患者的总阳性检出率为 30% (nIHH 8/18 + KS 4/22)，其中 FGFR1 突变率占 7.5%(3/40)；ANOS1、CHD7 和 KISS1R 突变率分别占 5%(2/40)；SEMA3E、PROKR2 和 SOX10 突变率分别占 2.5% (1/40)。
结论 本研究鉴定出 10 种新的与 IHH 相关的基因突变位点，扩大了 IHH 基因型突变谱，为 IHH 相关基因的功能，致病机制等深入研究奠定了基础；确定了患者的致病基因，为患者的后续临床治疗和辅助生殖过程中的遗传咨询提供重要依据和有效帮助。

PU-0120

肝细胞癌预后相关 miRNA 的功能及其调节异常机制研究

秦士杰、夏欣一
中国人民解放军东部战区总医院

目的 许多 miRNAs 已被报道与肝细胞癌（Hepatocellular Carcinoma，HCC）的进展密切相关，异常调控的 miRNA 也被证明是 HCC 患者的诊断和预后因素之一，然而，miRNA 在 HCC 发生发展中的失调机制尚不清楚。
方法 TCGA 数据库中下载 HCC 样本 mRNA 及 pre-miRNA 表达数据以临床信息。对配对癌和癌旁 mRNA 进行差异表达分析，最终保留了 344 个癌症样本，其中 48 个匹配的癌旁样本。将这些样本随机分为独立的训练集（240 个样本）和测试集（104 个样本），训练集用于筛选生存相关 miRNA 并建立预后模型，测试集用于验证预后模型的可靠性和准确性。根据筛选出的相关 miRNAs 构建多基因预测模型来预测 HCC 患者的风险值，绘制不同风险分层的生存曲线来检验模型是否能够预测肝癌患者的预后。绘制 ROC 曲线，根据 AUC 曲线评价预测模型的可靠性。同时计算这些组织中差异表达 miRNA 启动子区域的甲基化程度及鉴定转录因子对 miRNA 的调控。
结果 首先发现了 7 个上调的 miRNAs（miR-9-5p miR-452-5p, miR-452-3p, miR-1180-3p, miR-4746-5p, miR-3677-3 和 miR-4661-5p）可以作为癌基因，通过抑制多个参与代谢的肿瘤抑制基因来促进肿瘤的发生，而下调的 miRNAs（miR-99-5p, miR-5589-5p, miR-5589-3p, miR-139-5p, miR-139-3p, miR-101-3p 和 miR-125b-5p）可通过抑制多个参与肿瘤相关通路的致癌基因来抑制细胞的异常增殖。其次，发现了异常调节的转录因子（如 E2F1、EBF1、FOXM1、ESR1、FOXO1、EGR1）是导致上述 14 个肝癌预后 miRNA 表达紊乱的主要原因，而不是这些 miRNA 启动子区域的 DNA 甲基化。最后，我们的发现揭示了转录因子和 miRNA 相互作用可以形成多种调控回路，协同控制 HCC 的发生和发展的机制。特别是 FOXO1 这一关键转录因子能够激活一定数量的肿瘤抑制 miRNAs，从而提高肝癌患者的生存率，提示 FOXO1 可能是肝癌患者有效的治疗靶点。
结论 本研究发现 14 个 HCC 预后相关 miRNAs 并揭示了它们在 HCC 中的异常调节机制，为 HCC 患者提供新的预后生物标志物和 FOXO1 等潜在治疗靶点。

PU-0121

快速的含内参的重组酶介导的扩增技术对 EB 病毒和巨细胞病毒的检测

高源
河北省人民医院

目的 EB 病毒(Epstein-Barr virus，EBV)和巨细胞病毒(Cytomeg-alovirus, CMV)是临床上两种常见的人类疱疹病毒，能够引起呼吸道疾病、神经系统疾病和传染性单核细胞增多症等多种疾病。重组酶介导的扩增技术(Recombinase-aided amplification，RAA)是一项具有我国自主知识产权的等温核酸扩增技术，被广泛应用于病原体核酸检测中。本研究利用人源性内参联合 RAA 技术分别建立两种人类疱疹病毒的双重非竞争性内参控制的(Non-Competitive Internal Controlled, NCIC)重组酶介导的扩增技术检测方法(NCIC-RAA)。
方法 根据 RAA 引物探针设计原理，在 EBV、CMV、管家基因 RNaseP 和 human β-globin(HHB)四种靶基因的保守区设计 RAA 引物探针。分别利用系列稀释的含有靶基因片段的标准质粒筛选最优的引物探针组合并分别建立四种靶基因的单重实时荧光 RAA 反应。随后，在已建立好的 EBV 和 CMV 单重 RAA 反应体系中引入 NCIC 的引物探针，优化和建立双重实时荧光 EBV 和 CMV NCIC-RAA 法,并对其灵敏度和特异性进行评价分析。应用本实验室收集的 250 份临床样本进行临床标本检测效能评价，并与商业化的(quantitative polymerase chain reaction，qPCR)试剂盒进行比较。
结果 EBV NCIC-RAA(RNaseP)和 CMV NCIC-RAA(HHB)方法的灵敏度分别为 2 拷贝/反应和 10 拷贝/反应，与其他病原体(人类疱疹病毒 1 型、2 型、3 型、6 型、人类乙肝病毒、人类丙肝病毒和西尼罗病毒)无交叉反应。在临床效能评价中，与商业化的 qPCR 相比，提取的 DNA 用于 EBV 和 CMV NCIC-RAA 方法的敏感性分别为 100.00%和 96.97%，特异性分别为 98.75%和 100.00%，Kappa 值分别为 0.983 和 0.979(p<0.001)。
结论 本研究所建立的两种双重实时荧光 EBV 和 CMV NCIC-RAA 检测方法灵敏度和特异性均较高,且方法操作简单,在 40 分钟内即可完成检测，适合于 EBV 和 CMV 的快速检测，为临床实验室提供了一个快速可靠的检测方法。

PU-0122

ApoE 及 SLCO1B1 基因多态性与血脂水平的相关性分析

张旭
四川绵阳四 0 四医院

目的 探究 ApoE、SLCO1B1 基因多态性与血脂水平是否存在相关性，为科学预防、控制血脂，合理使用降脂药提供科学依据。
方法 收集四川绵阳四 0 四医院 2019 年 1 月到 2020 年 12 月期间的住院患者 650 例，筛选同时期 ApoE、SLCO1B1 基因检查和血脂结果，分析基因型和基因表型分布特征，采用统计学方法比较各表型组血脂指标浓度水平的差异。
结果 ApoE 基因在 526C>T 位点和 388T>C 位点上都主要为野生型，两位点突变差异无统计学意义（P>0.05）；SLCO1B1 基因在 388A>G 位点主要为杂合突变型（AG）和纯合突变型（GG），在 521T>C 位点主要为纯合野生型（TT），两位点突变差异有统计学意义（P<0.05）；ApoE 基因表型以 ApoE3 型为主，ApoE4 型次之，E3/E3 基因型检出率最高；SLCO1B1 基因低风险型占 79.38%、中风险型占 19.39%和高风险型占 1.23%，*1a/*1b、 *1b/*1b 基因型为两种主要基因型；ApoE 三种基因表型在 TG、ApoB、LDL-C 浓度水平差异有统计学意义（P<0.05），但在 TCH、ApoA、HDL-C、HCY 浓度水平差异无统计学意义（P>0.05）；SLCO1B1 三组基因表型在 TCH、TG、ApoA、ApoB、HDL-C、LDL-C、HCY 浓度水平差异无统计学意义（P>0.05）。

结论 ApoE 和 SLCO1B1 基因型及基因表型频率分布不均，可针对不同人群进行基因筛查，为科学指导高血脂的预防提供理论依据。

PU-0123

Low CFB expression is independently associated with poor overall and disease-free survival in patients with lung adenocarcinoma

Chenglu He 、Yong Duan
The First Affiliated Hospital Of Kunming Medical University

Background The present study aimed to investigate the association between low expres-sion levels of CFB and the clinical features and survival status of patients with lung adenocarcinoma (LUAD).
Methods Patient data were based on RNA-sequencing and clinical data from The Cancer Genome Atlas database. All patients were divided into two groups based on the median expression of CFB. Kaplan-Meier curve and univariate Cox regression analyses were used to investigate the association between CFB and survival status. Gene set enrichment analysis was used to examine the effects of CFB expression on signaling pathway impairment. Furthermore, reverse transcription-quantitative PCR (RT-qPCR) and western blotting were used to verify the relative expression levels of CFB in LUAD tissues.
Results The data revealed that residual tumor classification, Karnofsky performance score and cancer stage were associated with overall survival, and that Karnofsky performance score and stage were associated with disease-free survival. The results demonstrated that high expression levels of CFB were associated with increased patient overall and disease-free survival according to both continuous and categorical models. The results of multivariate analysis identified that high expression levels of CFB were associated with increased overall and disease-free survival according to both the continuous model [hazard ratio (HR), 0.48; 95% confidence interval (95% CI), 0.25-0.93; P=0.029 for overall survival; HR, 0.29; 95% CI, 0.15-0.59; P=0.001 for disease-free survival] and the categorical model (HR, 0.46; 95% CI, 0.22-0.93; P=0.031 for overall survival; HR, 0.25; 95% CI, 0.12-0.55; P=0.001 for disease-free survival) after adjusting for corresponding covariates (residual tumour classification, Karnofsky performance score and stage).Furthermore, the results of both RT-qPCR and western blotting indicated that the relative mRNA and protein expression levels of CFB in lung tumor tissues were downregulated compared with those in adjacent non-tumor tissues.
Conlusion the present results suggested that CFB expression was an independent predictor of overall and disease-free survival in patients with LUAD.

PU-0124

乙肝大三阳患者 HBV-DNA 病毒载量与 HBeAg、PreS1、AST/ALT 水平之间的关系研究

刘君君、张炳杨
山东第一医科大学第一附属医院（山东省千佛山医院）

目的 探讨乙肝大三阳患者血清中 HBV-DNA 病毒载量与血清中 HBeAg 水平、PreS1 抗原水平、肝功能指标(AST/ALT 比值)之间的关系；
方法 回顾性分析 2017 年 7 月至 2018 年 4 月在山东省千佛山医院就诊的乙肝大三阳患者 692 例，统计其 HBV-DNA 病毒载量检测结果，同时统计其乙肝五项(HBeAg 水平)、PreS1 抗原水平、肝功

能(AST/ALT 比值)结果。将纳入研究的患者按照 HBV-DNA 病毒载量结果分为三组，病毒高复制组（HBV-DNA≥106 IU/mL, 305 例）,中低复制组（106>HBV-DNA≥102 IU/mL，375 例）, 无复制组（HBV-DNA<102 IU/mL, 即低于检测下限，12 例），借助 SPSS 16.0 统计分析软件分析三组中 HBeAg 水平、PreS1 抗原水平、AST/ALT 比值的变化以及其与 HBV-DNA 病毒载量的相关性。
结果 HBV-DNA 病毒高复制组 HBeAg>1000 COI 者占 61.97% (189/305)，HBV-DNA 病毒中低复制组 HBeAg>1000 COI 者占 12.80% (48/375)，相关性分析发现乙肝大三阳患者 HBV-DNA 病毒载量与 HBeAg 水平呈正相关(相关系数 r=0.482)；乙肝大三阳患者 HB-DNA 病毒载量与 PreS1 抗原水平相关系数 r 为-0.095，提示 PreS1 抗原水平与 HBV-DNA 病毒复制水平相关性不大；HBV-DNA 低复制组 AST/ALT 为 1.05±0.92，HBV-DNA 高复制组 AST/ALT 为 0.91±0.57，AST/ALT 比值在 HBV-DNA 高复制组下降差异有统计学意义（P<0.05）。
结论 乙肝大三阳患者 HBV-DNA 病毒载量与血清中 HBeAg 水平呈正相关，与 PreS1 抗原水平相关性差，且 HBV-DNA 高复制状态下常伴随 AST/ALT 下降的现象。

PU-0125

山东省 4833 例乙肝病毒定量与乙肝两对半检测结果分析

徐健、张守都、王青、彭德志、王佳佳
济南金域医学检验中心有限公司

目的 针对乙肝病毒乙肝五项指标检测不同模式与乙肝 DNA 定量的相关性进行分析。
方法 将近三年本实验室检测的 4833 份血清标本作为研究对象，对来源病例进行回顾性分析.所有受检对象均采集空腹血液样本 3.0ml 两管,分别进行乙肝五项指标检测以及乙肝病毒 DNA 定量检测，对乙肝五项指标不同模式与乙肝病毒 DNA 检测阳性对照结果以及 HbeAg 与乙肝病毒 DNA 拷贝数的对应关系进行分析。
结果 本组 4540 例 HbsAg 阳性血清样本中,乙肝病毒 DNA 阳性检出率为 36.28%(1647/4540)."大三阳"模式下乙肝病毒 DNA 阳性检出率为 54.08% (1047/1936),HbsAg HbeAg(+)模式下乙肝病毒 DNA 阳性检出率为 54.48% (1203/2208)，显著高于乙肝五项的其他模式,对比检验存在显著差异(P<0.05),有统计学意义."大三阳"模式下 HbeAg 与乙肝病毒 DNA 拷贝数呈显著正相关关系,与其他乙肝五项模式对比检验存在显著差异(P<0.05),有统计学意义.
结论 ①乙肝患者血液循环系统中乙肝病毒 DNA 与 HbeAg 以及 HbsAg 有相关性关系,"大三阳"模式下 HbeAg 与乙肝病毒 DNA 拷贝数呈显著正相关关系，值得临床重视。②乙肝病毒 DNA 检测较乙肝五项指标作为反映病毒复制的指标更敏感。

PU-0126

NCAM and ABCA1 Dual-labeled Exosome Contain Higher Aβ42 and MicroRNA-135a in Peripheral Blood of Alzheimer's Disease

sihai ling
Beijing Anding Hospital, Capital Medical University

Objective We aimed to establish a method to determine whether microRNA-135a (miR-135a) levels in NCAM and ABCA1 Dual-labeled serum exosomes might be serve as a marker for the diagnosis of Alzheimer’s disease.
Methods We used immunocapture **Methods** to determine the levels of NCAM and ABCA1 Dual-labeled exosomal miR-135a in cultures of white blood cells (WBCs), red blood cells (RBCs), mouse hippocampal neuron HT-22 cells, and primary mouse neuronal cells. NCAM and ABCA1

Dual-labeled exosomal miR-135a levels were also evaluated in the CSF (CSF) and serum of APP/PS1 double transgenic mice, as well as control subjects (n = 60) and study participants with subjective cognitive decline (SCD, n = 89), stage and mild cognitive impairment (MCI, n = 92), and dementia of the Alzheimer type (DAT, n = 92).
Results ABCA1 levels of exosomes harvested from the medium of HT-22 cells and neurons were significantly higher than those of RBCs and WBCs (P < 0.05). Exosomal ABCA1 from the CSF of APP/PS1 mice were transmitted to the serum of wild-type mice after injection, and high miR-193b levels were observed in both serum and CSF after injection. The NCAM and ABCA1 Dual-labeled exosomal miR-135a levels were higher in the CSF of MCI and DAT patients compared with the CSF of the control group (P < 0.05). The NCAM and ABCA1 Dual-labeled exosomal miR-135a were also slightly higher (P > 0.05) in the serum of SCD patients and significantly higher in the serum of MCI and DAT patients compared with the serum of the control group (P < 0.05).
Conclusion This study provides a method to capture specific exosomes. Detection of serum exosomes labeled with ABCA1 may facilitate the early diagnosis of AD.

1. 昆明市第三人民医院
2. 昆明医科大学第二附属医院

目的 人类免疫缺陷病毒 (Human immunodeficiencyvirus, HIV) 感染和丙型肝炎病毒 (Hepatitis C virus, HCV) 感染是世界公认的严重的公共卫生问题，两者有相似的感染途径（血液及血制品传播、性接触传播和母婴传播）容易并发感染。文章通过对 1 型艾滋病病毒（HIV-1）与丙型肝炎病毒合并感染者血浆中 miRNA 表达谱的分析，评估 miRNA 作为 HIV/HCV 合并感染者早期诊断、病情监测辅助指标的可行性, 并为阐明共感染者的发病机制提供依据。
方法 实时定量 PCR（RT-qPCR）分别检测 40 例健康对照组（对照组），40 例 HIV-1 感染未经抗病毒治疗 HCV 阴性组（HIV+组）,40 例 HIV-1 阴性 HCV 阳性组（HCV+组）及 40 例 HIV-1 感染未经抗病毒治疗 HCV 阳性组（HIV+/HCV+组）血浆 miR-29a、miR-122、miR-155、miR-200a 相对表达量的差异。
结果 与健康对照组相比 HIV+组血浆 miR-29a、miR-122、miR-155 表达升高，且差异具有统计学意义(p<0.05)；HCV+组血浆 miR-122 和 miR-155 表达均升高，且差异具有统计学意义（p<0.05）；HIV+/HCV+组血浆 miR-29a、miR-122 和 miR-155 表达均升高，且差异具有统计学意义（p<0.05）；HIV+/HCV+组较 HIV+及 HCV+组血浆 miR-122 和 miR-155 表达均升高，且差异具有统计学意义（p<0.05）；HCV+组中血浆 miR-122、miR-155 与 HCVRNA 呈正相关(p<0.05)，

与 CD4+ T 细胞计数无显著相关性（p>0.05）；HIV+/HCV+组中血浆 miR-122，miR-155 与 HIV-1RNA/HCVRNA 呈正相关(p<0.05)，与 CD4+ T 细胞计数呈负相关(p<0.05)。
结论 血浆中 miR-122、miR-155 可能参与了 HIV 和 HCV 感染的临床进展和发病机制；HIV/HCV 混合感染很可能加速了 HIV RNA 的复制, 进而因 HIV RNA 复制的增长加速了对 T 淋巴细胞亚群的损害。

PU-0129

不同检测试剂对人乳头瘤病毒检测结果一致性及对临床诊断的影响

朱亚荣
西安金域医学检验所有限公司

目的 分析不同检测试剂对人乳头瘤病毒检测结果一致性及对临床诊断的影响。
方法 1.收集 2021 年 4 月 1 日我单位基因室使用深圳亚能人乳头瘤病毒基因分型（23 型）检测试剂盒（PCR-反向点杂交法）200 例样本的检测结果,其中包括阴性结果 50 例，16 型 12 例，18 型 22 例，16 型与 18 型混合感染 16 例，非 16 型与 18 型其他型检测结果为阳性样本 100 例。2.当日对该 200 例样本使用湖南圣湘人乳头瘤病毒（16，18 型）核酸检测试剂盒（PCR-荧光探针法）进行复测。
结果 该 200 例样本使用湖南圣湘人乳头瘤病毒（16，18 型）核酸检测试剂盒（PCR-荧光探针法）检测结果为:1.50 例阴性检测结果均为阴性，符合率 100%。2.16 型 12 例，18 型 22 例，16 型与 18 型混合感染 16 例，共计 50 例样本检测结果均为阳性，符合率 100%。3.非 16 型与 18 型其他型别检测结果为阳性 100 例样本中检测为阳性样本 38 例（该 38 例阳性样本 CT 值偏大，荧光信号强度较低），符合率 62%。
结论 该 200 例样本中阴性结果、16 型、18 型、16 型与 18 型混合感染两种试剂检测结果一致，符合率 100%，使用深圳亚能人乳头瘤病毒基因分型（23 型）检测试剂盒（PCR-反向点杂交法）检测非 16 型与 18 型但其他型检测结果为阳性的 100 例样本中，使用湖南圣湘人乳头瘤病毒（16，18 型）核酸检测试剂盒（PCR-荧光探针法）检测为阳性样本 38 例，但该 38 例阳性样本 CT 值偏大，荧光信号强度较低，符合率 62%。因此对于临床样本中使用湖南圣湘人乳头瘤病毒（16，18 型）核酸检测试剂盒（PCR-荧光探针法）检测人乳头瘤病毒（16，18 型）时发现 CT 值偏大，荧光信号强度较低的临床样本应该使用其他厂家检测试剂对该临床样本进行复测，保证检测结果的准确性，从而保证临床对该患者正确的诊断与治疗。

PU-0130

肺癌患者 ACE2 和 TMPRSS2 高表达致其 COVID-19 高易感性与不良预后

韩莹、夏欣一
中国人民解放军东部战区总医院

目的 COVID-19 已在全球迅速蔓延，从分子和临床水平上对肺癌患者进行系统分析，以了解疾病的病理和临床特征。
方法 对武汉火神山医院 65 例 COVID-19 患者进行单中心回顾性队列研究（其中 13 例诊断为肺癌），并对公共数据库中肺癌手术切缘组织和正常肺组织的单细胞 RNA 测序数据进行分析。
结果 1. 肺癌手术切缘组织中，表达 ACE2 和 TMPRSS2 的上皮细胞比例高于正常组织，ACE2 的 mRNA 表达亦高于正常 (P = 0.013)，辅助因子 TMPRSS2 的表达（P < 0.001)也显著高于正常组

织，均提示肺癌组织更易受 COVID-19 侵袭；2.治疗过程中，肺癌患者更易发生重症感染（P = 0.064）。肺癌患者感染新冠肺炎后的潜伏期为 10.5（10.0-17.5）天，明显短于其他患者[30.0（14.0-35.0）；P = 0.016]。此外，肺癌患者治疗后症状缓解时间为 12 (11.0-18.0) 天，比非癌症患者 (5.8-14.0) 长 4 天 （P = 0.020），但在中/短期肺癌生存者之间，上述指标间没有观察到明显差异。可见，1.在本队列研究中，肺癌患者的死亡率 (7.7%, 1/13) 高于其他患者 (2.3%)，并且肺癌患者感染 SARS-COV-2 后的潜伏期短，缓解时间长，病情进展较快；2. ACE2 和 TMPRSS2 基因在肺癌不同病理类型（鳞癌/腺癌）以及不同分期中的表达一致，与研究队列中不同病理分型、分期的肺癌患者对 SARS-CoV-2 的易感性相同是一致的；3.肺癌患者手术切缘组织的 ACE2 和 TMPRSS2 水平高于正常组织，癌症中期患者尽管进行了癌症切除，剩余的组织仍然保留了癌细胞的特征，如基因组不稳定性和强大的局部浸润和外渗能力。

结论 本文从 ACE2 和 TMPRSS2 高表达特点和临床特征层面解释肺癌患者对 COVID-19 高易感性以及较差预后的原因，为 COVID-19 大流行背景下肺癌患者的管理提供依据。（本文部分内容已发表于 Front Oncol，IF=4.848）

结核病分子诊断技术研究进展

樊茹[1]、李晓非[1,2]
1. 大理大学
2. 昆明市第三人民医院

结核病是由结核分枝杆菌感染引起的病死率最高的且是人类发展史最长的一种慢性传染性疾病。早期有效的筛查、诊断和治疗对于全球结核病疫情防控和预防耐药菌株的出现至关重要。从目前来看，细菌学检测是诊断结核病最基本的检测技术，免疫学检测技术可作为有效辅助诊断，适用于各级实验室开展。传统诊断技术如涂片镜检、培养技术、药敏试验等，由于培养时间长、阳性率仍有待提高等局限性已无法满足早期准确、快速诊断结核病的需求，从而造成大量结核病患者漏诊和延迟诊断；特别是涂阴结核、肺外结核的临床表现和影像学特征均不是很典型且诊断技术较少，导致结核病的防控形势更加复杂、困难。全球结核病的发病率虽然正在缓慢下降，但速度仍达不到 2020 年的疫情防控战略目标，更无法实现 2035 年终止结核病的计划。基于人类基因组学、核酸扩增试验和基因测序技术的发展及多学科融合，一系列新兴的分子诊断技术不断涌现并凭借其准确、高效、高通量等优点为结核病的诊治带来了新曙光。2017 年国家卫计委重新修订的《肺结核诊断标准》中，已把 MTB 核酸检测阳性列为确诊结核病的标准之一,这大大提升了结核病诊断的准确率。国内外学者针对结核病的分子诊断技术不断探索研究，期望可以为临床制定治疗方案提供有力帮助，让患者得到及时规范的治疗。本文简要概述了近年来出现的结核病新型分子诊断技术各自的优点与局限，对临床选择合适的分子检测技术具有一定参考意义。

血浆 microRNA 与 HIV 感染及治疗关系的研究

闫新丽[1]、李晓非[1]、杨瑾[1]、吕松琴[1]、王玉明[2]
1. 昆明市第三人民医院
2. 昆明医科大学第二附属医院

目的 miRNAs 是在真核生物中发现的一类内源性的具有调控功能的非编码 RNA，在转录后水平对基因表达调控有重要影响。miRNA 在 HIV 的感染及疾病进展中发挥着重要作用，被认为是预测 HIV 感染、治疗评估及 HIV 相关疾病的新型生物学标志物，文章分析了 1 型艾滋病病毒（HIV-1）

感染者血浆中 miRNA 的表达特点 ，探讨血浆 miRNA 作为 HIV-1 感染及治疗监测生物学标志物的潜在可行性。
方法 应用 qPCR 技术检测 50 例健康对照组，50 例 HIV-1 感染未经抗病毒治疗组及 50 例 HIV-1 感染抗病毒治疗组血浆 miR-29a、miR-122，miR-155 相对表达量的差异。结合患者 HIV-1 病毒载量及 CD4+T 淋巴细胞计数指标，分析这两项指标与 miRNA 表达量的相关性。
结果 与正常对照组相比 HIV-1 感染未经抗病毒治疗组血浆 miR-29a、miR-155、miR-122 表达均升高，差异有统计学意义（$p<0.05$）；未治疗与治疗组相比较血浆 miR-29a、miR-155 和 miR-122 表达均升高，差异有统计学意义（$p<0.05$）。未治疗组血浆 miR-29a、miR-155 表达水平与 HIV-1RNA 病毒载量呈正相关（$p<0.05$），miR-122 与 HIV-1RNA 病毒载量无显著相关($p>0.05$)。miR-29a、miR-155 表达水平与 CD4+ T 细胞计数呈负相关($p<0.05$)。
结论 血浆 miR-29a、miR-155、miR-122 在 HIV-1 感染后显著升高，血浆 miR-29a、miR-122，miR-155 与 HIV-1 感染相关，可能具有成为 HIV-1 感染后新型生物学标志物的潜在意义。而抗病毒治疗可以诱导 miR-29a、miR-155 和 miR-122 表达降低，这些 miRNA 可能具有成为监测 HIV-1 感染抗病毒治疗效果观察指标的潜在价值。未治疗组血浆 miR-29a、miR-155 与 HIV-1RNA 呈正相关，表明其与 HIV-1 病毒复制相关。在未来，miRNA 可能被用作生物标志物来估计或预测受感染患者的疾病进展率 ，并为开发新的治疗策略提供依据。

生殖道病原体感染 STD-DNA 与女性不孕症及胎膜早破的相关性

李颖
东南大学附属中大医院

目的 调查育龄期女性 STD-DNA 感染现状,探讨 STD-DNA 感染与女性不孕症及胎膜早破的相关性,为不孕症的预防和诊治提供参考。
方法 收集 2016 年 10 月至 2019 年 1 月在东南大学附属中大医院进行 STD-DNA 检测的 153 例不孕症妇女，剔除多囊，卵巢功能异常、子宫因素、机械因素、免疫因素、输卵管阻塞等外部因素的影响，记录 STD-DNA 检测的结果，作为实验组。选取正常育龄女性作为对照组，进行分析。另外收集 131 例胎膜早破的产妇，排除产妇有流产史、宫内压（巨大儿、多胎等） ，排除妊娠高血压、糖尿病、贫血等，以及其他宫腔外力的影响，记录 STD-DNA 检测的结果为实验组，选取正常产妇为对照组。不孕症的诊断标准以最新的美国生殖医学学会（ASRM）[1]2015 年制订的指南为准。计量资料采用均数±标准差（x±s）描述其集中和离散程度,在满足方差齐性的条件下,计量资料采用 t 检验;计数资料中采用率和 95%置信区间（95%CI）描述分布,二分类资料采用卡方检验;不孕症的多因素分析采用二元 logistic 逐步回归进行分析。以 $P<0.05$ 认为差异具有统计学意义。
结果 (1)本次调查最终获得有效数据不孕症妇女 153 人中 STD-DNA 感染率为 64%（98/153），其中解脲支原体（UU）感染率最高，占感染人数的 84.69%（83/98），沙眼衣原体（CT）占感染人数的 17.34%（17/98）。(2)在 131 例胎膜早破产妇中，STD-DNA 感染率为 38.17%（50/131），其中 UU 感染率最高，占感染人数的 78%（39/50）。相关分析显示：不孕症实验组 $P<0.05$ 认为差异具有统计学意义,胎膜早破组 $P<0.05$ 认为差异具有统计学意义。
结论 (1)生殖道病原体 STD-DNA 感染是是女性不孕症和产妇胎膜早破的高危因素，应早期筛查，并建议患者需要定期进行检查，主动排除该因素对女性不孕症及胎膜早破的影响。（2）生殖系是外界致病菌较容易侵犯导致病变的部位。生殖道病原体感染是引起泌尿道感染的常见病因，其危害性大，传染性较强，因及时给予相应的正确治疗。

TNF-α、IL10 基因多态性与肝癌易感性的相关分析

周蓉
电子科技大学附属医院•四川省人民医院临床医学检验中心

目的 分析 TNF、IL 10 基因多态性与肝细胞癌（HCC）易感性之间的相关性。
方法 以 241 例肝细胞癌患者及 286 例健康对照者作为研究对象。抽提全血基因组 DNA，PCR 结合直接测序法测定 TNF（-238 G/A，-308 G/A）和 IL10（-592 C/A，-819 C/T）基因多态性的分布。ELISA 法检测血清中 TNF-α、IL-10、IL-2、IL-4 和 TGF-β 的水平。
结果 TNF-238 AA 基因型、等位基因 A 的频率与 HCC 的发病风险呈负相关关系（P<0.05）。IL10-592 CA、-819 CT/TT 基因型和 IL10 -819 T 等位基因与 HCC 的发病风险呈正相关关系（P<0.05）。对于 TNF -238 G/A，AA 基因型与血清 IL-2、IL-4 水平升高相关（P<0.05），而 IL10 -819 CC 基因型与 TGF-β、IL-10 水平降低密切相关（P<0.05）。我们还发现，IL10 -819 T/C 与 HCC 的严重程度有关（P<0.05）。
结论 IL10 -819 CT/TT 与 HCC 的发生发展密切相关，可能与 Th1/Th2 型细胞因子的下调、Th3 型细胞因子的上调有关。

PU-0135

D- 二聚体在胰腺癌转移中的临床意义

李建华
天津医科大学肿瘤医院

目的 探讨 D 一二聚体在胰腺癌淋巴结转移和远处转移的意义。
方法 采用全自动免疫分析系统酶联分析法检测 100 例恶性肿瘤患者及 50 例健康对照受试者血浆 D-二聚体水平并进行比较。
结果 显示各组胰腺癌肿瘤患者 D 一二聚体检测数值均较正常对照组高，有淋巴结转移，或者有远处转移的患者血浆中的 D-二聚体数值明显高于无转移组，差异有统计学意义(P<O．05)。
结论 D 一二聚体 可作为恶性肿瘤患者纤溶状态、及淋巴结转移，远处转移的重要指标。

PU-0136

基于 CRISPR-Cas9 的核酸快速检测方法建立与应用

夏欣一
中国人民解放军东部战区总医院

目的 核酸检测技术一直是分子诊断的关键，特别是在当前 COVID-19 大流行的背景下。目前核酸检测技术仍受到传统扩增和杂交技术的限制，迫切需要一种简便、快速、灵敏度高、特异性强的方法。本研究开发了一种新的基于 CRISPR-Cas9 的 DNA 检测方法，称为 CRISPR-Cas9-assisted DNA 检测（CADD）。
方法 首先针对目标 DNA 设计一对捕获 sgRNA (sgRNAa 和 sgRNAb)。SgRNAa 和 sgRNAb 有不同的 3’末端捕获序列。目标 DNA 被一对 dCas9 -sgRNA 复合物结合时，dCas9 -sgRNA-DNA 复合物可通过偶联在固体载体上的寡核苷酸和 sgRNAa 的捕获序列之间的退火而被捕获到珠粒或微孔板表面，然后通过与 sgRNAb 互补的序列偶联一种荧光或比色信号进行报告。最后，通过检测细菌、肿瘤细胞和病毒的 DNA，验证了该方法的有效性，同时设计一套针对 15 种高危 HPV 的 sgRNAs 检测临床宫颈刷标本。

结果 设计 15 种高危型 HPV 对应的 sgRNAs，发现使用特异的 sgRNAsp（sgRNA special）或混合的 sgRNAct（sgRNA cocktail）均可特异性检出靶标 HPV，证明 dCas9-sgRNA 可特异性捕获靶序列。以 HPV16 质粒为靶标进行检测证明采用磁珠荧光报告体系，靶标浓度在 100pM~10fM 范围内时 DNA 浓度与荧光强度呈线性相关。利用不同的 sgRNAsp 和 sgRNAct 检测临床样本，结果显示所有样本都可检出，与临床采用的 PCR-反向点杂交测试结果相比，使用 CADD 可 100%的检测出感染的基因型，具有良好的敏感性和特异性。此外，偶联 ELISA-CADD 检测还在这些临床样本中发现了更多的多重感染。所有检测可在室温下 30min 内完成。
结论 我们开发的这种新的基于 CRISPR-Cas9 的 DNA 检测方法 CADD，与现有的方法相比，具有简单、快速、不需预扩增等优点，该方法有望实现快速现场检测。（本文部分内容已发表于基因编辑专业期刊 CRISPR J，IF=5.343）

PU-0137

STAG2 的基因突变及蛋白异常表达与浸润性膀胱癌患者术后生存期的相关性研究

乔艳、王国良、贺慧颖、张文静、崔丽艳
北京大学第三医院

目的 骨髓基质细胞抗原 2（stromal antigen 2, STAG2）是维持姐妹染色单体结合的黏连蛋白中重要的成员。编码 STAG2 的 stag2 基因是高通量测序中新发现的膀胱癌高频突变基因，突变频率高达 20%。我们的前期研究发现，膀胱癌组织中 STAG2 蛋白的缺失与患者的预后良好显著相关，但在浸润性膀胱癌中，这一相关性还需要更大的样本量进行证明。
方法 通过 TCGA 高通量数据库，我们用 Log-rank 方法分析了 429 例浸润性膀胱癌患者的临床信息与 stag2 基因突变的相关性。另外，我们用免疫组化的方法检测了 STAG2 蛋白在 101 例浸润性膀胱癌患者肿瘤组织中的表达情况，用 Log-rank 方法分析了 STAG2 蛋白与患者临床特征及患者预后生存时间的相关性。
结果 对 429 例 TCGA 数据库的患者信息分析显示，与 stag2 基因野生型相比，在肿瘤组织中存在 stag2 基因突变的患者具有更长的生存时间（Log-rank, P=0.044）。免疫组化结果显示，57.4%的肿瘤组织中检测出 STAG2 蛋白在细胞核的正常表达，20.8%的肿瘤组织中 STAG2 在细胞核内低表达或在细胞浆中表达，此外 21.8%的肿瘤组织中 STAG2 蛋白缺失表达。Log-rank 分析显示与 STAG2 的正常表达组相比，STAG2 低表达组和 STAG2 缺失表达组具有较长的生存时间（P = 0.025）。
结论 通过 TCGA 数据库的分析和较大样本量的回顾性研究，stag2 基因突变和蛋白异常表达与浸润性膀胱癌患者手术后较好的预后相关，提示 STAG2 可以作为预后的潜在标志物。

PU-0138

52 型 58 型 53 型 HPV 在川南地区分布及其临床特征

张驰
西南医科大学附属医院

目的 了解 52 型 58 型 53 型高危人乳头瘤病毒(High risk Human papillomavirus,hr- HPV)在川南地区女性基因型的分布特点及其易感因素，为 HPV 感染的防治提供依据。
方法 采用 PCR-反向点杂交法对患者进行 HPV 基因分型并探讨影响 HPV 感染的因素。
结果 (1).2379 例川南女性就诊者中，共发现 617 例 HPV 感染者，阳性率为 25.93％；基因分型结果显示，有 23 种共 891 例 HPV 亚型被检出高危型 18 种共 750 例（占 84.18％），主要型别为：

52 型、16 型、58 型；(2).检出 52 型 58 型 53 型单一感染 431 例（占 69.85%）;多重感染 186 例（占 30.15%),包括双重—六重 5 种感染类型；(3).1290 例宫颈病变患者中，炎症组、宫颈上皮内瘤变组、宫颈癌组在 52 型 58 型 53 型 HPV 阳性率差异均有统计学意义（P <0.05）；(4).患者的年龄、阴道酸碱度、清洁度明显影响 52 型 58 型 53 型 HPV 的感染率（P <0.05），但季节、霉菌及滴虫感染对其感染率无显著影响（P >0.05）。

结论 52 型 58 型 53 型在川南地区女性 HPV 高危感染位居第 1 位、第 3 位第 4 位，占到了高危型的 50%以上，显示出与周边及全国其它地区迥异的分布特点，患者年龄、阴道酸碱度、清洁度则是其感染的重要影响因素。

PU-0139

c-Met and PD-L1 on Circulating Exosomes as Diagnostic and Prognostic Markers for Colorectal Cancer

Chenzheng Gu
Department of Laboratory Medicine, Shanghai Tongji Hospital, Tongji University School of Medicine

Background Exosomes are membrane vesicles that offer potential as blood-derived biomarkers for malign tumors in the clinical study. Colorectal cancer (CRC) ranks as the third most common cancer with a high risk of metastasis and recurrence worldwide. The present work aims to assess whether colorectal cancers release exosomes which express c-Met (Cellular-mesenchymal to epithelial transition factor) and PD-L1 (programmed cell death 1 ligand 1) and whether the detection of such expression in plasma has diagnostic or prognostic meaning for the suffering patients.

Methods By the way of ultracentrifugation, exosome isolation was performed on plasma samples from 32 patients who were primarily diagnosed with colorectal cancer and 20 healthy donors. Western blot was used to analyze the expression of c-Met and PD-L1 of exosomes which were derived from the plasma samples. Soluble PD-L1 and c-Met in plasma were measured by enzyme-linked immunosorbent assay(ELISA）, and PD-L1 and c-Met in exosome levels were measured by using Exocounter. ROC curve was used to assess the sensitivity and specificity of the model of Exo-c-Met and Exo-PD-L1.

Results The results of western blot demonstrated that the expression of Exo-c-Met and Exo-PD-L1 in CRC patients was significantly higher than in healthy donors. In terms of c-Met, The levels of Exo-c-Met were significantly higher compared with soluble c-Met in the plasma which was barely detectable. Exo-c-Met levels were higher in CRC patients with advanced tumor stage, larger tumor size (>2.5 cm) ($p<0.001$), and distant metastasis ($p<0.05$). On the contrary, soluble c-Met levels had no significant difference between CRC patients and healthy donors, and it was not correlated with any clinic-pathologic characteristics except for tumor size (>2.5 cm) ($p<0.05$). Exo-c-Met was defined, yielding a 98% sensitivity, a 70% specificity, a 91% positive predictive value, and 54% negative predictive values for disease progression. In terms of PD-L1, Exo-PD-L1 was detected in all patients whereas only 75% of tumor biopsies were PD-L1 positive. The levels of Exo-PD-L1 were also significantly higher compared with soluble PD-L1. There was the same correlation between Exosome-PD-L1 levels and the clinic-pathologic features. Exo-PD-L1 was defined, yielding an 84% sensitivity, a 79% specificity, an 87% positive predictive value, and 50% negative predictive values for disease progression.

Conclusions In conclusion, c-Met and PD-L1 in exosomes, but not in soluble, were correlated with CRC disease progression, including tumor size, metastasis, and TNM stage. As a result, c-Met and PD-L1 levels in circulating exosomes seem to be more reliable markers. Monitoring of circulating Exo-c-Met and Exo-PD-L1 may be useful for diagnosis and prognosis of Colorectal Cancer.

PU-0140

Combined detection of Sialic Acid and Hydroxyproline in diagnosis of ovarian cancer and its comparison with Human Epididymis Protein 4 and Carbohydrate Antigen 125

Peilong Li
The Second Hospital of Shandong University

Background Elevated serum sialic acid (SA) and hydroxyproline (Hyp) levels have been found in a variety of malignant cancers. The aim of this study was to simultaneously detect serum levels of SA and Hyp (SA&Hyp) in ovarian cancer, and compare its diagnostic value with classic tumor markers—human epididymis protein 4 (HE4) and carbohydrate antigen 125 (CA125).
Materials and Methods Serum levels of SA&Hyp, HE4 and CA125A were detected in a total of 767 serum samples collected from 484 patients with gynecologic diseases, 180 healthy individuals, 45 pregnant women and 58 patients with renal failure using chemical colorimetry and electrochemiluminescence immunoassay (ECLIA), respectively. Risk of ovarian malignancy algorithm (ROMA) was calculated based on HE4 and CA125 values.
Results Serum SA&Hyp levels were influenced significantly by renal failure and pregnancy but not age and menopausal status. The median concentrations of SA&Hyp, HE4 and CA125 in patients with ovarian cancer were 119.0 U/mL, 190.2 pmol/L and 366.0 pmol/L, which were significantly higher than levels in patients with benign gynecologic diseases ($P<0.001$). SA&Hyp showed a significant higher AUC than HE4 and CA125 in the diagnosis of gynecologic malignancies ($P<0.001$), while no significance was found when compared with ROMA. Specially, SA&Hyp in 48.3% subjects (29/60) diagnosed as positive before primary surgery showed negative after surgery.
Conclusions Renal failure and pregnancy are the main source for increased false positive of SA&Hyp. Compared with HE4 and CA125, SA&Hyp shows a better diagnosis value and can be used in the diagnosis and dynamic monitoring of gynecologic pelvic malignancies, while no statistical significance was found compared with ROMA.

PU-0141

LncRNA HOTAIR Contributes to 5-fluorouracil Resistance through Suppressing MiR-218 and Activating NF-κB/TS Signaling in Colorectal Cancer

Peilong Li
The Second Hospital of Shandong University

Purpose In clinical situations, acquired drug resistance and enhanced metastasis frequently follow chemotherapeutic regimens, leading to treatment failure in tumor patients. Despite the extensive research on chemoresistance, the detailed mechanism underlying this phenomenon remains unclear. Long non-coding RNA HOTAIR has been considered as a pro-oncogene in multiple cancers. However, the precise functional mechanism of HOTAIR in chemoresistance is not well known. To further explore the possible mechanisms and promote chemosensitivity of CRC treatment, we evaluated the prognostic effect of HOTAIR in patients received 5-FU-based treatment and investigated the underlying regulatory mechanism of HOTAIR in 5FU resistance.
Methods The small interfering RNAs (siRNAs) that specifically target human HOTAIR, EZH2, and VOPP1 mRNA were designated. The coding sequence of VOPP1 was amplified, cloned into PCDNA3.1 vector. The lentivirus vector containing HOTAIR short-hairpin RNA (Lv-ShHOTAIR) was amplified and cloned. Human CRC cells lines were transfected with small interfering RNAs or overexpressing precursor followed by assays to investigate the influence of HOTAIR and VOPP1

on cell proliferation, cell-cylce phase and pathways involved in molecular mechanisms of chemoresistance to 5-FU. RNA immunoprecipitation (RIP) and Chromatin immunoprecipitation (ChIP) experiments were performed to investigate the potential interaction. Western blot and immunofluorescence analysis were performed to detect the protein expression of NF-κB/TS signaling pathway. Primary tumor specimens and adjacent non-tumor sites were used to determine the HOTAIR expression distribution and explore the potential prognostic value of HOTAIR on the chemoresponse to 5-FU-based treatment in CRC patients.

Results HOTAIR negatively regulated miR-218 expression in CRC cells. RIP and ChIP assay showed that HOTAIR interacted with EZH2, and this interaction subsequently silenced miR-218-2. Both HOTAIR and miR-218 suppressed cell proliferation, and HOTAIR knockdown dramatically inhibited cell viability and induced G1-phase arrest by promoting miR-218 expression. Luciferase activity assay showed that VOPP1 was a functional target of miR-218. More importantly, the main downstream targets signaling of NF-κB, including the pathway involved in cell survival (p65-NF-κB, pAkt, pERK), cell cycle (E2F-1) and 5FU-targeted protein (thymidylate synthase, TS), were inactivated by HOTAIR through the suppression of miR-218 expression. Additionally, HOTAIR knockdown partially reversed 5FU resistance through promoting miR-218 and inactivating NF-κB signaling. Furthermore, HOTAIR restrained 5FU-induced cytotoxicity on CRC cells through promotion of TS expression.

Clinical exploration of HOTAIR indicated that the HOTAIR expression level was much higher in CRC tissues from patients who did not respond to 5FU treatment than those from patients who experienced response to chemotherapy. ROC curve analysis was performed, and these patients were stratified into a low (n=56) and a high (n=96) HOTAIR expression group with an established cut-off value (4.01). The area under the curve (AUC) and diagnostic sensitivity and specificity reached 0.716, 81.58%, and 55.26% with the established cut-off value, respectively. Furthermore, the proportion of patients not responding to chemotherapy was significantly higher in the high HOTAIR expression group than in the low expression group. Kaplan–Meier survival analysis indicated that high HOTAIR expression was associated with poor overall survival (OS) and recurrence-free survival (RFS) in CRC patients, and Cox regression univariate/multivariate analysis showed that HOTAIR expression level maintained its significance as independent prognostic factors for OS of CRC patients receiving 5FU treatment.

Conclusion Our integrated approach demonstrated for the first time that HOTAIR contributes to CRC tumorigenesis and 5FU resistance through downregulation of miR-218 and activation of NF-κB signaling. This lncRNA directly recruits EZH2 and suppresses miR-218 by binding to its promoter, which provides a mechanistic foundation for the aberrant VOPP1 activation in CRC. This pro-resistant role of HOTAIR was further validated in an independent set of CRC patients who received standard 5FU treatment. Thus, HOTAIR may be a novel prognostic biomarker and therapeutic target in CRC patients. Suppression of HOTAIR could be a future direction for enhancing chemosensitivity to 5FU-based chemotherapy regimens.

PU-0142

MicroRNA-218 is a prognostic indicator in colorectal cancer and enhances 5-fluorouracil-induced cytotoxicity through suppressing BIRC5

Peilong Li、Wang Chuanxin
The Second Hospital of Shandong University

Objective One major reason for the failure of advanced colorectal cancer (CRC) treatment is the resistance to fluoropyrimidine(FU)-based chemotherapy. The enhanced ability of tumor cells to undergo anti-apoptosis process is the main contributor to drug resistance. Various reports showed that ectopic expression and function of miRNAs play key roles to mediate apoptosis by primarily down-regulating protein expression at the post-transcriptional level. To further explore

the possible mechanisms and promote chemosensitivity of CRC treatment, we evaluated the prognostic effect of miR-218 in patients received 5-FU-based treatment and investigated the pro-apoptotic role of miR-218.
Methods Primary tumor specimens and adjacent non-tumor sites were used to determine the miR-218 expression distribution and explore the potential prognostic value of miR-218 on the chemoresponse to 5-FU-based treatment in CRC patients. Human CRC cells (HCT116 and HT29) were transfected with precursor miR-218 or negative control followed by assays to investigate the influence of miR-218 on cell apoptosis, cell proliferation and pathways involved in molecular mechanisms of chemoresistance to 5-FU.
Results The expression of miR-218 was significantly decreased in tumour tissues compared with paired normal tissues. Moreover, the CRC tissues in 68.3% (43 of 63) of cases had at least two-fold lower expression of miR-218. In addition, miR-218 expression level was much lower in patients who did not respond to 5FU treatment than those who experienced response to chemotherapy. ROC curve analysis was performed to establish the optimal cut-off value of miR-218 (6×10-3) for distinguishing the responding and non-responding patients. Under these stratification criteria, patients were stratified into high (n = 34) and low (n = 29) miR-218 expression groups. The proportion of patients that responded to chemotherapy was significantly higher in the high miR-218 expression group than in the low miR-218 expression group. Kaplan-Meier survival analysis was performed to further investigate the effect of miR-218 on 5-FU treatment for CRC. The results indicated that high miR-218 expression was associated with long overall survival and progressive-free survival rate.
Up-expression of miR-218 promoted apoptosis, inhibited cell proliferation in CRC cells. The anti-apoptotic gene-BIRC5, was identified as a direct target of miR-218 and the intrinsic apoptotic pathway triggered by miR-218 was through the silence of BIRC5. Gain and loss function assay indicated that miR-218 enhanced 5-FU-induced cytotoxcity and it has a strong synergistic effect with 5-FU on CRC cell growth. More importantly, western blotting showed that miR-218 silenced the 5-FU targeted enzyme, thymidylate synthase (TS).
Conclusion In this study, we demonstrated that high miR-218 predicted positive response to 5-FU-based treatments in CRC patients and discovered a novel mechanism mediated by miR-218 to promote apoptosis and to function synergically with 5-FU to promote chemosensitivity by suppressing TS in CRC. These suggests a unique potential of miR-218 as a tumor suppressor and a novel candidate for developing miR-218-based therapeutic strategies in CRC.

Patients with acephalic spermatozoa syndrome linked to novel TSGA10/PMFBP1 variants have favorable pregnancy outcomes from ICSI

Weina Li [1,2]、Xiaowei Xing[3]、Gang Liu[2,4]
1. Hunan Guangxiu Hi-tech Life Technology Co., Ltd
2. Reproductive and Genetic Hospital of CITIC-Xiangya
3. Center for Medical Experiments, The Third Xiangya Hospital, Central South University
4. The Institute of Reproduction and Stem Cell Engineering,Central South University

Objectives Acephalic spermatozoa syndrome is a rare form of teratozoospermia characterized by headless spermatozoa.Previous studies have found that variants in *SUN5, PMFBP1, TSGA10, BRDT*, and *SPATC1L* are associated with this phenotype.Many researchers have suggested that variants in *TSGA10* without a proximal centriole might influence early embryonic development. Do novel variants in *PMFBP1/TSGA10* influence early embryonic development and pregnancy outcomes?
Methods This retrospective cohort study included twelve infertile men with severe acephalic spermatozoa in China. We performed Computer-assisted sperm analyzer, semen leukocyte detection, Papanicolaou staining, scanning electron microscopy, transmission electron

microscopy, whole-exome sequencing, Sanger sequencing, RT-PCR, immunoblotting, immunofluorescence staining,and analyzed the various phenotypes and ICSI outcomes for each type of variant.
Results We identified 6 heterozygous variants and 4 homozygous variants in *TSGA10/PMFBP1* in 7 patients by whole-exome sequencing. Acephalic spermatozoa defects due to different genetic variations may affect only spermatozoa morphology but do not reduce the chances of fertilization, affect embryo quality at early stages or impair ICSI outcomes.
Conclusion We expanded the mutation spectrum, and patients with *TSGA10/PMFBP1* variations were all expected to have good prognoses with ICSI.

液滴数字 PCR 技术临床应用探讨

陈登奕、崔曦
襄阳市第一人民医院

目的 探讨液滴数字 PCR 技术的研究现状，发掘其临床应用前景。
方法 通过与临床常用基因检测技术比较、讨论 dd-PCR 技术检测的优劣。
结果 Dd-PCR 检测技术极大缩短了时间检测，提高了检测灵敏度，减少交叉污染，机动性更高，摆脱了传统方法对 Ct 值和标准品的依赖。
结论 Dd-PCR 在技术上的优势明显，但缺乏技术人员和临床转化，限制了其应用。

PU-0145

MALAT1 is Associated with Poor Response to Oxaliplatin-Based Chemotherapy in Colorectal Cancer Patients and Promotes Chemoresistance through EZH2/miR-218 pathway

Peilong Li、chuanxin wang
The Second Hospital of Shandong University

Purpose Chemoresistance to oxaliplatin-based therapy has been a key barrier to the efficacy of colorectal cancer (CRC) treatment. One major reason for oxaliplatin chemoresistance in CRC is the acquisition of epithelial-mesenchymal transition (EMT) in cancer cells. The long non-coding RNA MALAT1, is a highly conserved nuclear ncRNA and a key regulator for metastasis development in several cancers. However its role in oxaliplatin-induced metastasis and chemo-resistance is rarely known. In our study, we aim to investigate the prognostic role of MALAT1 in CRC patients receiving oxaliplatin-based therapy, and further explore the potential transcriptional regulation through interaction with EZH2 and miR-218 based on the established HT29 oxaliplatin-resistant cells.
Methods For chemo-response study, 221 serum samples and 48 primary tissues were collected from the patients who received standard Oxaliplatin-based chemotherapy, and 46 serum samples from patients who received standard FOLFOX chemotherapy were collected at Qilu Hospital of Shandong University between 2011 and 2015. RT-qPCR and RT-qPCR-D method previously established by ourselves were used to determine the expression of mRNA expression in primary tissues and serum, respectively. Cell migration and invasion were assessed with Boyden chambers or modified Boyden chambers according to the protocol of the manufacturer. RNA immunoprecipitation (RIP) and Chromatin immunoprecipitation (ChIP) experiments were performed to investigate the potential interaction. Finally, the survival curves of CRC patients

were estimated via the Kaplan–Meier method and the difference in survival curves was estimated using log-rank testing.
Results MALAT1 expression level was much higher in patients who did not respond to treatment than those who experienced response to chemotherapy. We then stratified patients into a low (n=37) and a high (n=16) MALAT1 expressing group with an established cut-off value (0.432) by using a ROC curve analysis. In the validation group containing 168 serum samples of CRC patients, proportion of patients not responding to chemotherapy was significantly higher in the high MALAT1 expressing group than in the low group. The diagnostic sensitivity and specificity were 75.0% (72/96) and 61.1% (44/72). Further more, the Kaplan–Meier survival analysis indicated that high MALAT1 expression was associated with shorter OS and DFS in CRC patients. CRC cell line HT29 that had acquired resistance to oxaliplatin at the clinically relevant concentration of 2 μmol/L (HT29 OxR cells) were built. MALAT1 was significantly increased in HT29 OxR cells and MALAT1 silencing reversed oxaliplatin-induced EMT. Moreover, EZH2 directly interacts with 3'end of MALAT1, which subsequently suppressed the expression of E-cadherin. CRC cells attained increased migration and invasion ability after being treated with oxaliplatin, and this increased migration and invasion ability was partially suppressed by MALAT1 or EZH2 knockdown. Importantly, our results suggest that the interaction between MALAT1 and miRNA-218 has reciprocal effects. The Kaplan-Meier survival analysis showed that patients with low MALAT1 and high miR-218 expression had the longest OS, while the high MALAT1 and low miR-218 group showed the shortest for patients who received standard FOLFOX treatment.
Conclusions In conclusion, the present work has identified that lncRNA MALAT1 was correlated with tumor metastasis and associated with poor response to oxaliplatin-based chemotherapy in CRC patients. MALAT1 mediates oxaliplatin-induced EMT and chemoresistance through EZH2 and interacting with miR-218. Thus, MALAT1 may be a novel functional biomarker and therapeutic target in CRC patients. Suppression of MALAT1 combining with miR-218 over-expression could be a future direction to develop a novel therapeutic strategy to enhance chemosensitivity to FOLFOX chemotherapy regimen.

PU-0146

血浆 EBV DNA 在非高发区人群中对鼻咽癌筛查及其临床应用价值的相关研究

贺巧[1]、李贤兵[1]、李罗娜[1]、黄叶才[2]、周杰[2]、王秋菊[1]、兰美[2]、吴立春[1]、罗皓[1]、张莉[1]、宋晓玉[1]、杨牧[3]、王东生[1]
1. 四川省肿瘤医院检验科
2. 四川省肿瘤医院放疗科
3. 四川省肿瘤医院基础研究部

目的 研究血浆 EBV DNA 检测在非高发区人群中对鼻咽癌筛查及其临床应用价值。
方法 采用荧光定量 PCR 法检测 2015-2020 年就诊于四川省肿瘤医院的 1153 例初治鼻咽癌患者治疗前血浆 EBV DNA 及 244 例性别年龄相匹配的健康正常人 EBV DNA，用 ROC 曲线分析 EBV DNA 对鼻咽癌诊断敏感性及特异性，再进一步比较不同临床分期和地域患者血浆中 EBV DNA 拷贝数分布特征。
结果 以试剂盒推荐 400copies/ml 作为临界值，初治鼻咽癌与正常健康对照相比较，血浆 EBV DNA 明显增高，诊断的敏感度是 40.85%,特异性是 100%，曲线下面积：0.704。将检测结果低于 400copies/ml 伴有 S 型扩增者根据实际扩增值作为病毒载量，重新计算敏感性及特异性分别为 82.0%和 99.2%，曲线下面积为 0.909。TNM 及临床分期越靠后，血浆 EBV DNA 阳性检出率逐渐升高。
结论 在鼻咽癌非高发区，血浆 EBV DNA 以试剂盒推荐 400copies/ml 为临界值，对鼻咽癌诊断的敏感性仅为 40.85%，临床应用价值受限，应进一步优化检出限，在保证诊断特异性的基础上提高诊断敏感性，提高临床应用价值。

不同新冠核酸检测试剂的结果比对分析

朱艳
西安金域医学检验所有限公司

目的 分析不同品牌新冠核酸检测试剂的检测性能，以评估其新冠核酸检测的应用价值。
方法 本实验室将 8 例广州邦德盛新冠定值质控物 S2（批号 2021004，浓度均值为 1.93E+04 copies/ml）稀释 10 倍至 1.93E+03copies/ml，使用深圳亚能新冠磁珠提取试剂（MNP202101036 批）提取核酸，之后分别使用圣湘生物科技股份有限公司（2021015 批）、中山大学达安基因股份有限公司（2020099 批）、上海伯杰医疗科技有限公司（20210102A 批）、北京卓诚惠生生物科技股份有限公司（C20210143 批）、中山大学达安基因股份有限公司（2021018 批-快检试剂）进行扩增，对 5 套扩增结果进行统计分析。
结果 湖南圣湘新冠核酸检测试剂 ORF 基因 Ct 值均值、SD、CV 分别为 32.04、0.44、1.37%，N 基因 Ct 值均值、SD、CV 分别为 32.04、0.35、1.08%；
中山大学达安新冠核酸检测试剂 ORF 基因 Ct 值均值、SD、CV 分别为 32.07 、0.42 、1.30%，N 基因 Ct 值均值、SD、CV 分别为 35.32 、0.56、1.58%；
上海伯杰新冠核酸检测试剂 ORF 基因 Ct 值均值、SD、CV 分别为 33.56 、0.49 、1.45%，N 基因 Ct 值均值、SD、CV 分别为 34.27 、0.44、1.29%；
北京卓诚惠生新冠核酸检测试剂 ORF 基因 Ct 值均值、SD、CV 分别为 33.39、0.46、1.39%，N 基因 Ct 值均值、SD、CV 分别为 33.41、0.37、1.12%；
中山大学达安新冠核酸快检试剂 ORF 基因 Ct 值均值、SD、CV 分别为 25.54、0.42、1.64%，N 基因 Ct 值均值、SD、CV 分别为 24.52、0.39、1.60%。
结论 5 种新冠核酸检测试剂品牌——湖南圣湘、中山大学达安、上海伯杰、北京卓诚惠生、中山大学达安快检，检测结果 CV 相近，且均≤5%，提示该试剂性能均较为稳定，可同时用于临床新冠核酸的检测。

siRNA 靶向抑制 STAT 对人胃癌细胞增殖的影响

童书青
山东第一医科大学附属省立医院

目的 胃癌是我国最常见的恶性肿瘤之一，其发生是由多基因共同作用的多步骤、多阶段的复杂过程，其中信号转导子和转录激活子(Signal transducers and- activators-of transcription，STATs)信号通路在胃癌的发生中发挥着重要作用。
本研究构建针对 STAT 的小干扰 RNA（small interfering RNA,siRNA）表达载体 STAT-siRNA，研究 siRNA 干扰 STAT 基因表达后对人胃癌细胞株细胞增殖的影响。
方法 1. 设计并合成两个 STAT-siRNA 片段，经脂质体介导分别转染胃癌细胞株。
2. RT-PCR 和 Western blot 检测转染后胃癌细胞株 STAT mRNA 和蛋白的表达。
3. MTT 法检测 STAT-siRNA 对细胞增殖作用的影响。
结果 1. 酶切鉴定、紫外分光光度计检测及测序鉴定均证实 STAT-siRNA1 和 STAT-siRNA2 表达载体构建成功。
2. RT-PCR 和 Western blot 结果显示，转染后细胞中 STAT mRNA 和蛋白的表达量均下降，与空白对照组及 si-NC 转染对照组相比，差异均具有统计学意义（P<0.05）。
3. MTT 结果显示，与 si-NC 转染对照组相比，转染 STAT-siRNA 后，细胞的增殖能力明显下降。
结论 1. 本研究构建的 STAT-siRNA 表达载体可有效抑制 STAT 在胃癌细胞株中的表达。
2. siRNA 干扰沉默 STAT 在胃癌细胞中的表达后可抑制胃癌细胞的增殖。

粪便 SDC2 甲基化检测在大肠癌的临床筛查中的应用价值

刘艳枚、彭蕾、陈晨、周鹏
清远市人民医院

目的 检测肠癌高危人群的粪便脱落细胞中 SDC2 的甲基化表达，为大肠癌早期诊断寻找一种非侵入性、检测性能良好的新型筛查方法。
方法 收集受检者粪便样本，用磁珠捕获法提取 DNA 片段，亚硫酸盐转化未被甲基化的基因片段，采用荧光定量甲基化特异性聚合酶链反应（qMSP）分析 SDC2 基因甲基化水平，根据 Ct 值判定 SDC2 基因甲基化程度，随访并结合结肠镜或 Ct 影像检查，有肠道病变者取组织病理活检。
结果 11283 例受检者中 SDC2 基因甲基化阳性 860 例（7.62%），阴性 10423 例（92.38%）。分析年龄≥50 岁的高危人群，最终获得 667 例阳性、1146 例阴性病例的完整随访资料，阳性受检者中肠癌 160 例，进展期腺瘤 51 例，SDC2 甲基化筛查肠癌和进展期腺瘤的阳性预测值达到 44.23%。阳性受检者的肠道病变检出率远高于阴性受检者。按照肠道病变情况分组，肠癌组的 SDC2 甲基化水平显著高于腺瘤组、息肉组和正常组，且有统计学意义。192 例诊断肠癌的阳性受检者中，不同性别、肿瘤大小、生长部位及分化程度的肠癌患者的 SDC2 甲基化水平皆有统计学显著差异，其中不同年龄段结直肠癌患者有显著差异；根据年龄分组，<68 年龄段和≥68 年龄段的男性肠癌患者的检出率均高于女性，其中≥68 岁年龄组中男性肠癌检出率高出女性将近一倍。
结论 SDC2 基因甲基化检测诊断大肠癌有高的准确性，该检测手段有望在肠癌筛查中发挥重要作用。随着病程延长，病变组织的病理性质逐渐向肿瘤进展，治疗难度逐步加大，因此，筛查有助于降低大肠癌的发病率，同时通过提高大肠癌早期发现比例而降低大肠癌死亡率。

炎性巨噬细胞介导的细胞互作加剧新冠肺炎 T 细胞耗竭、抑制细胞免疫的潜在机制研究

张泉
湖北省中西医结合医院

2.2 单细胞 RNA 转录组测序数据收集及分析
2020 年 6 月 Liao et al. (深圳市第三人民医院)等研究人员收集了 6 例新冠肺炎患者肺泡灌洗液，通过单细胞 RNA 测序在国际顶级医学杂志《Nature Medicine》上发表了题为“Single-cell landscape of bronchoalveolar immune cells in patients with COVID-19”的论文[1]，并公开了测序数据。我们下载，整理，清洗的该单细胞测序数据，通过下游分析探索重症新冠肺炎患者机体抗病毒免疫失衡的潜在因素。
结果 3.1 本研究纳入病例的重症组外周血 WBC、BUN、AST、D-dimer 等指标明显高于轻症组，提示新冠肺炎重症患者存在不同程度的多器官功能损伤。值得注意的是，依据上述指标建立的 logistic 回归模型，其诊断效能与 CD4+T、CD8+T 流式细胞计数呈正相关，提示新冠肺炎重症病例效应 T 细胞计数下降是疾病急性进展的重要因素。上述结果与同行已发表论文的结论一致[2]。
3.2 通过预处理单细胞测序数据，我们获得 16681 细胞，19231 个基因的转录组表达谱，其中正常对照组、轻症及重症组分别为 5723，3875 和 3733 个细胞。
3.3 细胞异质性、拟时序及细胞通讯分析。重症组巨噬细胞，单核（DC 细胞）的丰度明显高于轻症及正常对照组，而 T 细胞丰度则正好相反。此外巨噬细胞亚群的代谢活性也呈现出明显差异，TREM 基因高表达的一群巨噬细胞在时序分析的过度期占比很高，特别是在缺氧环境下该细胞亚群代谢活性也随之波动，提示该群细胞有可能是轻症患者向重症或者好转期过度的重要节点。最后，

构建细胞互作网络，我们发现 TREM 高表达的巨噬细胞释放 TGFβ，激活 CD8+T 细胞免疫抑制信号，诱导 CD8+T 细胞耗竭，抑制了该群细胞的抗病毒功能。
结论 T 细胞耗竭是新冠肺炎重症患者的重要临床特征，其背后的免疫调控机制极其复杂。高表达 TREM 的炎性巨噬细胞通过释放 TGFβ, 激活 T 细胞抑制信号，诱导 T 细胞耗竭、抑制细胞免疫是本研究主要亮点，为临床管理新冠肺炎提供了新的靶点。

PU-0151

重组酶聚合酶扩增技术用于新型冠状病毒的检测

尚美云、李若煦、苏宁、孙献歌、李博文、鲁卫平、黄庆
陆军特色医学中心（大坪医院）

目的 新型冠状病毒（severe acute respiratory syndrome coronavirus 2，SARS-CoV-2）的爆发给全球经济和健康造成了巨大损失。尽管近几个月来我国疫情防控一直处于一个平稳阶段，但仍有多起城市小规模爆发的事件发生，因此早期诊断对控制疫情发展意义重大。
方法 为了更好地监控采样过程的有效性，本研究应用重组酶聚合酶扩增技术（recombinase polymerase amplification，RPA）同时检测 SARS-CoV-2 的 ORF1ab 基因和人 ACTB 基因，然后使用假病毒对建立的双重检测体系进行确认以及灵敏度评估；使用一系列冠状病毒对其进行特异性评价；为进一步减少测试费用，低至 10μL 的单靶标反应体系被进一步测试。检测结果同时与荧光定量 PCR 比较。
结果 建立了双重 RPA 反应体系，其检测限为 100 拷贝/反应，特异性实验结果表明其他冠状病毒检测结果均为阴性。42℃条件下，扩增所需时间仅为 20 分钟。对于中高浓度的待测样本，10μL 反应体积的单靶标反应体系在 5 分钟内即可获得阳性信号。
结论 相比与荧光定量 PCR, RPA 实验检测速度更快，且实验操作过程简单，且内参基因的并入可确保检测结果的准确性。此外，小体积 RPA 反应体系的成功扩增可以进一步减少实验所需成本，若进一步结合微流控芯片能实现“单一样本进-多个结果出”的目标，可应用于偏远地区的检测。总之，该反应体系有望用于 SARS-CoV-2 确诊病例的进一步优化以及评估。

Prostate cancer classification using supervised machine learning techniques

Khan Adeel[1]、Tariq Irfan[2]、Li zhiyang[1]
1. Department of Clinical Laboratory, the Affiliated Drum Tower Hospital of Nanjing University Medical School, Nanjing 210008, China
2. Southeast University, Nanjing, China

Background Prostate cancer (PC) is a highly spread cancer among men. Early detection of PC is vital for deciding whether a patient should receive costly and invasive biopsy, that can also lead to many other complications associated with it. It is a very interesting area of research to be able to classify between benign and malignant PC using machine learning techniques, that will be helpful for clinicians in the decision making. Machine learning has revolutionized the avenue of clinical diagnosis of cancer and many other diseases. Currently most research efforts are dedicated to data mining for accuracy of the diagnosis models, with less focus on F-score. F-score is the geometric mean of precision and recall and highly valuable for judging the diagnosis model.
Methods The data was acquired from a public resource Kaggle.com (https://www.kaggle.com/sajidsaifi/prostate-cancer/version/1). Data set include 100 observations and 10 variables (8 numerical variables and 1 categorical variable). The feature selected for

differentiating between benign and malignant PC are Radius, Texture, Perimeter, Area, Smoothness, Compactness, Symmetry and Frontal Dimensions. To take both precision and recall into consideration, we proposed supervised machine learning algorithms; Random Forest (RF), Support vector machine (SVM) and K-nearest neighbor (KNN). To balance the imbalance data, we used Synthetic Minority Oversampling Technique (SMOTE). Then applied RF, SVM and KNN to the balanced data.
Results From the results we observed that the KNN algorithm outperform other algorithm in precision and recall, having a high F-score than the competing algorithms using the same dataset. The F1-score obtained for the KNN (B 0.88 M. 0.93) was higher than that of the SVM (B. 0.88 M. 0.83) and RF (B. 0.83 M. 0.88). KNN is the best suitable classifier for differentiating between benign and malignant PC.
Conclusion From our work it can be concluded that KNN showed superlative abilities for the classification between the benign and malignant PC. We also recommend the application of the KNN classifier on a large dataset, so that ultimate decision about its successful application in clinical setup is being made.

PU-0153

KIF3A 介导 N-cadherin 转运调节非小细胞肺癌侵袭转移的机制研究

杨宜娥
山东第一医科大学第一附属医院（山东省千佛山医院）

目的 本研究旨在运用全基因表达谱技术初步筛选 NSCLC 转移差异表达基因，寻找与 Wnt/Twist 通路相关的转移基因并分析其基因功能，采用 RT-qPCR 技术对目的基因进行相对定量检测与分析，并研究靶基因在 NSCLC 中的功能和作用机制，为非小细胞肺癌的浸润转移机制研究及治疗位点提供新思路。
方法 1、收集 2014 年 4 月至 10 月山东大学齐鲁医院胸外科手术切取的肺癌组织，且经病理证实为原发性非小细胞肺癌。从中选取淋巴结转移组 6 例为实验组，无淋巴结转移组 6 例为对照组。采用 Agilent 人类 4 × 44K 基因表达微阵列 v2，进行全基因组表达谱实验，并进行基因本体论（GO）分析和 Pathway 分析，筛选与 Wnt/Twist 通路相关的转移差异基因并分析其可能参与的生物学过程。2、从上述筛选出的差异基因中挑选出与肿瘤发生发展有密切关系的基因 KIF3A 作为目的基因，采用配对 t 检验检测实时定量 PCR 结果与基因芯片结果是否具有一致性。3、通过实时定量 PCR 检测四株常用肺癌细胞中 KIF3A 的表达丰度，选取 KIF3A 表达丰度高的细胞株，通过划痕实验及 Transwell 迁移实验检测敲减 KIF3A 后细胞增殖、凋亡、侵袭和转移能力的变化。
结果 1、差异基因及 GO 分析、Pathway 分析：根据倍数法筛选出差异基因 11975 个，转移上调基因 5812 个，下调基因 6163 个。2、筛选 Wnt/Twist 通路差异基因：筛选出与 Wnt/Twist 通路相关的 NSCLC 转移差异基因共 34 个，其中上调基因 18 个，下调基因 16 个，涉及细胞周期素基因、蛋白激酶 C 基因、卷曲家族受体基因、转录因子基因等。3、KIF3A 的验证：所选取的差异基因 KIF3A 在淋巴结转移组中较无淋巴结转移组均呈表达上调，且实时定量 PCR 与表达谱芯片的上调倍数对比，二者差别无统计学意义（t=0.4539, P>0.05）。4、Transwell 侵袭、迁移实验显示，KIF3A 的敲除显著抑制了肺癌 H1975 及 H520 细胞的侵袭转移能力（$p < 0.05$）。且 KIF3A 敲除后显著抑制了 H1975 及 H520 细胞的增殖，促进细胞的凋亡。
结论 1、KIF3A 实时定量 PCR 结果与表达谱芯片结果一致，全基因表达谱芯片技术能够高通量筛选出具有研究意义的差异表达基因，与人类肿瘤发生发展密切相关，在肺癌转移中表达水平上调，表明其在肺癌侵袭转移中具有重要研究价值。
2. KIF3A 的敲除抑制肺癌细胞的增殖、侵袭和转移，并促进细胞的凋亡，KIF3A 可被视为非小细胞肺癌新的致癌基因。

PU-0154

子宫内膜癌患者的血清脂质组学分析

程峰
Women's Hospital of Nanjing Medical University, Nanjing Maternity and Child Health Care Hospital

目的 子宫内膜癌（Endometrial carcinoma, EC）是全球女性最常见的恶性肿瘤之一。近年来随着人口老龄化、肥胖以及激素替代疗法的广泛推广，子宫内膜癌发病率逐年上升。然而相对于诊断为子宫内膜癌晚期或分化程度低的患者 20%的死亡率，诊断为早期子宫内膜癌患者的 5 年生存率可高达 95%。因此，早发现、早诊断对于降低子宫内膜癌死亡率具有重要的意义。本研究拟通过对 EC 患者血清进行非靶向脂质组学分析，以期找到早期 EC 的脂质标志物。
方法 收集 EC 患者及健康志愿者血清标本，经脂质提取后通过液相色谱串联质谱技术进行非靶向脂质组学分析，质谱检测数据经归一化、尺度化及数据转换等一系列数据前处理后，采用单变量及多变量相结合的模式选出 VIP(Variable Importance) > 1，FC(Fold Change) > 1.5，P < 0.05 的脂质作为候选的生物标志物。
结果 经质谱检测共得到 600 多种脂质分子，包括胆固醇脂、甘油酯、溶血磷脂酰胆碱、溶血磷脂酰乙醇胺、磷脂酰胆碱、磷脂酰乙醇胺（Phosphatidylethanolamines, PE）、磷脂酰肌醇、鞘磷脂、游离脂肪酸，胆汁酸、氧化脂质等多种脂质。VIP > 1，FC > 1.5，P < 0.05 的脂质有 63 种，而其中 PE 的变化最为显著，占差异脂质总数的 29%，包括 PE(22:6_18:0)，PE(22:6_16:0)，PE(20:5_18:1) ， PE(20:3_18:0) ， PE(20:2_16:0) ， PE(18:2_16:0) ， PE(18:2_14:0) ，PE(18:1_18:1) ， PE(18:1_16:1) ， PE(18:0_22:4) ， PE(18:0_18:2) ， PE(16:1_18:2) ，PE(16:1_16:0)，PE(16:0_22:5)，PE(16:0_22:4)，PE(16:0_20:4)，PE(16:0_20:3)等脂质，这些脂质有望作为 EC 的早期诊断标志物。
结论 EC 患者和健康人血清中脂质谱存在显著差异，而其中变化差异较大的 PE 类脂质有作为 EC 早期诊断标志物的潜力。

胃肠道肿瘤患者的中医体质辨识及 MLH1 基因多态性研究

郭建巍、陈亮、顾景辉、林楠、廖强华、苏霄翔、兰小琴、孙雪平、王琳
北京市第一中西医结合医院

目的 寻找胃肠道肿瘤高危人群的分子靶标及辨识胃肠道肿瘤患者的中医体质类型，为胃肠道肿瘤的中医防控提供理论依据。
方法 分别对 100 例胃肠道肿瘤患者（胃肠道肿瘤组）和 80 例健康人群（健康人群组）通过发放标准化中医体质量表问卷，采用被调查者自填问卷方式，对两组患者进行中医体质辨识，用 Sanger 测序进行错配修复基因 MLH1 SNP 检测。
结果 胃肠道肿瘤的发病率与性别无关，60 岁以上人群罹患胃肠道肿瘤的概率高于 60 岁以下人群。胃肠道肿瘤患者的体质类型与健康人群有明显区别，所有胃肠道肿瘤患者均表现为气虚质（P＜0.000），其他主要的体质类型分别为阳虚质（P＜0.000）、痰湿质（P＜0.000）和湿热质（P＜0.000）。MLH1 基因检测胃癌患者和肠癌患者等位基因 A 的携带率明显高于健康人群（P＜0.01），MLH1-1151T＞A(rs63750447)突变与胃肠道肿瘤的发生具有相关性。
结论 胃肠道肿瘤患者主要表现为气虚为主的混合偏颇体质，大多数患者具有阳虚质、痰湿质和湿热质。MLH1 基因检测胃肠道肿瘤人群中等位基因 A 的携带率显著高于健康人群，MLH1 1151T＞A 突变者为胃肠道肿瘤高危人群。以气虚为主线索，通过中医药调整胃肠道肿瘤高危人群的气、血、痰平衡，是中医防控胃肠道肿瘤发生、发展的一条途径。

载脂蛋白 E（ApoE）基因型检测试剂盒（基因芯片法） 性能验证

李汉华、陈学飞、闵向阳、赵旭鸿、翁文浩
同济大学附属杨浦医院

目的 对载脂蛋白 E（ApoE）基因型检测试剂盒（基因芯片法）进行性能验证。
方法 参照产品行业标准和相关文献，设计实验方法对珠海赛乐奇生物技术股份有限公司《载脂蛋白 E（ApoE）基因型检测试剂盒（基因芯片法）》的特异性、准确性、精密度、重复性等四个方面进行性能验证。
结果 本实验共测序比对 20 例样本。对于特异性符合验证 ε2ε2 型 2 例，符合率 100%。ε2ε3 型 4 例，符合率 100%。ε3ε3 型 6 例，符合率 100%。ε3ε4 型 4 例，符合率 100%。ε4ε4 型 2 例，符合率 100%。ε2ε4 型 2 例，符合率 100%。总符合率 100%。对于精密度重复性验证，对于 6 个基因型别的样本,随机选取 1 个样本,重复 20 次,20 次的实验结果一致,型别正确。对于重复性验证，随机将 1 例已知型别的样本分别重复检测，再重复检测 5 天，每天 3 次，实验结果一致,型别正确。
结论 本次实验检测结果表明，该产品的特异性、重复性符合要求，该方法具有高特异性和准确度，在临床应用中的安全性和有效性均能保证。

Development and Application of Cas13a-based Diagnostic Assay for Neisseria Gonorrhoeae Detection and Identification of Azithromycin Resistance

Hao Luo、Wentao Chen、Heping Zheng
Dermatology Hospital of Southern Medical University

Background Gonorrhea is a common bacterial sexually transmitted infection (STI) in the world, caused by *Neisseria gonorrhoeae*. The prevalence of N. gonorrhoeae has increased rapidly and remains a public health concern. Due to the use and abuse of antibiotics, antimicrobial resistance (AMR) of *N. gonorrhoeae* has emerged to all first-line therapeutic drugs used to date, including to the ceftriaxone-azithromycin combination, currently recommended as first-line therapy. Therefore, there is a need for clinicians to rapidly acquire resistance data for antibiotics, which could help manage rational drug use and further slow the development of drug resistance.
Methods We developed a Cas13a-based assay combained recombinase polymerase amplification (RPA) and CRISPR/Cas13a for *N. gonorrhoeae* detection assay (porA target) and azithromycin resistance identification assay (A2059G and C2611T point mutation in 23S rRNA gene). Firstly, we evaluated the sensitivity and specificity of this method through serial dilutions of dsDNA and a panel of urogenital tract pathogenic bacteria (n=12) and *Neisseria meningitides*. 23 urine samples were performed to validate *N. gonorrhoeae* detection in porA target and compare its capability with Roche Cobas 4800 assay. 24 isolated *N. gonorrhoeae* strains (A2059G, C2611T, wild-type strains) were used to validate this assay in identification of A2059G and C2611T point mutation of azithromycin resistance, besides, the sequencing results were used to confirm our assay. Moreover, we adopted lateral flow for SHERLOCK readout. 27 urethral swabs from patients with urethritis were used for *N. gonorrhoeae* detection and azithromycin-resistance identification to evaluate the capability.
Results In our study, 10 copies per reaction can be achieved in porA detection and C2611T identification, and 100 copies per reaction in A2059G assay, with no cross-reactions. Comparison of Cas13a-based assay (porA target) with Roche Cobas 4800 assay revealed 100% concordance in all urine samples. All tested mutant strains (8 A2059G strains and 8 C2611T strains) were

successfully distinguished by our assay and verified by testing MIC for azithromycin and sequencing the 23S rRNA gene. Lateral flow showed a visible difference between test group and NC group **Results** Finally, 62.96% (17/27) strains of swab samples were detected with no mutant strains and confirmed by sequencing.
Conclusion We successfully developed and applied this Cas13a-based assay in *N. gonorrhoeae* which exhibit excellent capability in detection and point mutation identification and we tested a panel of clinical samples and clinical isolates. The novel Cas13a-based assay for rapid *N. gonorrhoeae* detection combined with azithromycin drug resistance testing is a promising assay for application in clinical practice.

PU-0158

Resistance trends of Klebsiella pneumoniae causing Urinary Tract Infections in Chongqing, 2011-2019

Yanhui Dingyanhui
the First Affiliated Hospital of Chongqing Medical University, Chongqing, China

Purpose To analyze the characteristics and trends of drug resistance for Klebsiella pneumoniae (K. pneumoniae), isolated from urinary tract infections (UTIs), to common antibiotics used in clinics.
Methods This retrospective study was conducted at a teaching hospital in Chongqing from 2011 to 2019. Laboratory data of isolated bacteria were collected and analyzed statistically.
Results Among the 17966 non-repetitive strains isolated from the urine sample, a total of 1543 K. pneumoniae isolates were identified, with an isolation frequency secondary only to Escherichia coli (E. coli) and there was a peak in the K. pneumoniae isolates in 2013. During the period, the rate of extended-spectrum beta-lactamase (ESBL)-producing K. pneumoniae fell from 48.4% in 2011 to 32.9% in 2019，but a marked jump of resistance was seen in carbapenems from 2.2% to 18.0%. The peak of carbapenem resistance rate (22.6%) to K. pneumoniae was observed in 2017 along with a low ESBL-producing rate (30.9%). Piperacillin/tazobactam and cefepime resistance levels went up from 4.4% to 25.7% and from 18.2% to 30.5%, respectively. Its resistance rate to carbapenems and amikacin gradually grew up, showing their peaks in 2017, and then dropped year by year. Ceftazidime and Aztreonam resistance levels were relatively stable, fluctuating between 21.8% and 35.6%, 32.2% and 39.4% respectively.
Conclusion There is a significant upward trendency in carbapenem resistance rate and a downward trendency in ESBL-production rate in K. pneumoniae isolates from UTIs, but the resistance rate has gradually increased year by year and continuous surveillance is necessary in the future.

PU-0159

HLA-B27 基因亚型在葡萄膜炎患者中的分布情况

丁艳辉
重庆医科大学附属第一医院

目的 探讨葡萄膜炎患者 HLA-B27 基因亚型的分布情况。
方法 收集并分析 265 例葡萄膜炎患者 HLA-B27 基因的检查结果及发病年龄、性别等相关临床资料。
结果 265 例葡萄膜炎患者中 HLA-B27 阳性者 148 例（55.8%），其中 HLA-B*2704 亚型 92 例（62.2%），HLA-B*2705/07 亚型 54 例（36.4%）；葡萄膜炎患者 HLA-B27 基因阳性者达半数以上，其中 HLA-B*2704 占比约为 HLA-B*2705/07 的 1.7 倍，且在各年龄段均表现为优势亚型；不同亚型的葡萄膜炎患者在性别构成及发病年龄方面未表现出差异。

结论 葡萄膜炎患者的 HLA-B27 基因阳性率达 50%以上，且 HLA-B*2704 亚型在各年龄段均表现为优势亚型。

PU-0160

环状 RNA circMVP 通过 miR-136-5p 靶向 CBX4 促进胃癌恶性进展

沈蕾
南通大学附属医院

目的 检测 circMVP 在胃癌细胞及胃癌（GC）患者组织、血清中的相对表达水平；体内、体外研究 circMVP 对 GC 细胞增殖、凋亡以及迁移、侵袭能力的影响；探讨 circMVP 调控 GC 发生发展的具体机制。
方法 构建实时荧光定量 PCR（qRT-PCR）法以检测 circMVP 在胃癌细胞及胃癌（GC）患者组织、血清中的相对表达水平；核浆分离试验及荧光原位杂交（FISH）检测 circMVP 在 GC 细胞中的定位；通过 CCK-8 法、克隆形成、EDU 实验检测 circMVP 对 GC 细胞增殖的影响；通过 transwell、划痕等试验检测 circMVP 对 GC 细胞迁移和侵袭的影响；通过流式细胞术检测 circMVP 对 GC 细胞周期和凋亡的影响；慢病毒干扰载体转染 MKN-45 细胞建立稳转株，构建裸鼠移植瘤模型，生长曲线、免疫组化等验证 circMVP 在体内对肿瘤组织生长的影响；在线数据库预测与 circMVP 结合的 miRNA 及其靶基因，双荧光素酶报告实验验证其结合。
结果 qRT-PCR 检测发现 circMVP 在 GC 细胞中的表达高于正常胃黏膜上皮细胞，在 GC 组织中的表达高于癌旁组织，在 GC 患者血清中的表达高于健康体检者。
FISH 和核浆分离实验显示 circMVP 多数定位于 GC 细胞浆中。细胞功能学实验证实，在 AGS 和 MKN-45 细胞中干扰 circMVP 后，GC 细胞增殖速度减慢（P<0.05），迁移和侵袭能力下降（P<0.05），凋亡细胞增加（P<0.05），S 期细胞减少，但差异无统计学意义（P<0.05）。在 BGC-823 细胞中过表达 circMVP 后，GC 细胞增殖速度增强（P<0.05），迁移和侵袭能力增强（P<0.05），凋亡细胞减少（P<0.05）。体内裸鼠移植瘤模型证实，circMVP 敲除后，细胞成瘤能力显著下降，肿瘤生长速率减慢。双荧光素酶报告实验证实 circMVP 与 miR-136-5p 相结合，miR-136-5p 与 CBX4 有结合。
结论 circMVP 在 GC 细胞、组织和血清中均高表达，主要定位于胞浆。干扰 circMVP 表达后，抑制细胞的增殖、迁移和侵袭，促进肿瘤细胞凋亡。过表达 circMVP 表达后，促进肿瘤细胞的增殖、迁移和侵袭，抑制细胞凋亡发生。机制研究表明 circMVP 可能通过海绵 miR-136-5p 靶向 CBX4 促进 GC 的恶性进展。

基于 PCR-RDB 方法对湖北地区地中海贫血基因类型分析

邓鹏、申建维、商震、李幸幸、胡庆
武汉千麦医学检验实验室有限公司

目的 了解湖北地区地中海贫血基因类型及分布特征。
方法 对 2020 年 10 月至 2021 年 5 月武汉千麦医学检验室收集的 941 例临床标本，采用反向杂交法（PCR-RDB）进行常规的 α、β-地中海贫血检测与分析。
结果 941 例临床中确定有 114 例携带地中海贫血基因，阳性率为 12.11%（114 例/941 例）。其中，携带 α-地中海贫血基因型 60 例（缺失型 55 例、突变型 5 例），占比 6.38%；携带 β-地中海贫血基因型 55 例，占比 5.74%；α-地中海贫血复合 β-地中海贫血基因型 3 例，占比 0.32%。在 114 例地中海贫血基因型中，最常见的为-α 3.7 基因型，占比为 22.81%（26 例/114 例），其次分别为--

SEA 基因型（19.30%，22 例/114 例）、IVS-Ⅱ-654 基因型（18.42%，21 例/114 例）、CD41-42 基因型（14.04%，16 例/114 例），最低为复合型地中海贫血基因型（2.63%，3 例/114 例）。
结论 湖北地区地中海贫血基因突变类型特点为缺失型 α-地中海贫血＞突变型 β-地中海贫血＞突变型 α-地中海贫血＞α-、β-复合型，其中缺失型 α-地中海贫血主要为-α 3.7 基因型，其次为东南亚缺失型（--SEA）基因型；β-地中海贫血等位基因以最常见的为 IVS-Ⅱ-654 型，其次为 CD41-42 型，突变型 α-地中海贫血主要为 αQS；α -地中海贫血检出率较高于 β-地中海贫血检出率。

Hydrogen sulfide contributes to uterine quiescence through inhibition of NLRP3 inflammasome activation by suppressing the TLR4/NF-κB signalling pathway

Zixi Chen
Putuo Hospital, Shanghai University of Traditional Chinese Medicine

Background The NLRP3 inflammasome plays a critical role in inflammatory responses in various diseases. Our previous study showed that NLRP3 expression was significantly increased in human pregnancy tissue during term labour. Therefore, we explored whether NLRP3 participated in inflammatory responses of preterm and term labour and whether this process could be relieved by H2S, one anti-inflammatory gasotransmitter.
Methods Human myometrium was obtained from non-labouring and labouring women. Mouse myometrium was obtained from LPS-induced infectious preterm labour. Uterine smooth muscle cells were isolated from non-labouring women's myometrial tissues, transfected with siRNA, and treated cells with IL-1β, H2S donor NaHS, NF-κB inhibitor BAY 11-7082 and TLR4 inhibitorTAK-242. The NLRP3 inflammasome, CSE, CBS, TLR4, uterine contraction-associated proteins (CAPs), NF-κB activation and inflammatory cytokine expression were assessed by western blotting and RT-PCR.
Results The NLRP3 inflammasome, TLR4 and activated NF-κB expression were upregulated in human term labour, mouse preterm labour and human uterine smooth muscle cells treated with IL-1β. NLRP3 levels were negatively correlated with CSE and CBS expression. Treatment with the H2S donor NaHS delayed LPS-induced preterm birth in mice and inhibited NLRP3 inflammasome activation. In siNLRP3-transfected cells, there was a significant decrease in the expression of CAPs and inflammatory cytokines compared with IL-1β stimulation. In addition, treatment with the H2S donor NaHS inhibited NLRP3 inflammasome activation, reduced the expression of uterine contraction-associated proteins and inflammatory cytokines and reduced the activation of TLR4 and NF-κB compared with stimulation with IL-1β in human uterine smooth muscle cells. Furthermore, treatment of uterine smooth muscle cells with BAY 11-7082 and TAK-242 found that NLRP3 activation was regulated by the TLR4 and NF-κB pathways.
Conclusions H2S suppresses CAP expression and the inflammatory response and contributes to uterine quiescence by inhibiting the TLR4/NF-κB signalling pathway and downstream NLRP3 inflammasome activation. Thus, H2S contributes to uterine quiescence through inhibition of NLRP3 inflammasome activation by suppressing the TLR4/NF-κB signalling pathway.

Overexpression of small nucleolar RNA SNORD1C is associated with unfavorable outcome in colorectal cancer

Yonghui Liu[1]、Jing Sun[1]、Chengwen Zhao[1]、Minqi Gu[1]、Guihua Wang[1,2]、Shaoqing Ju[1]、Cheng Qian[1]、Xudong Wang[1,2]
1. Affiliated Hospital of Nantong University
2. 南通大学公共卫生学院

Aim This research aims to identify serum SNORD1C as a new biomarker for the diagnosis of colorectal cancer (CRC) and evaluate its clinical value.
Methods We detected the expression of small nucleolar RNA SNORD1C in the serum of CRC patients by quantitative real-time polymerase chain reaction (qRT-PCR). The receiver operating characteristic (ROC) curves were estimated, and the area under the ROC curves (AUCs) was calculated. GO and KEGG analysis of co-expressed genes was performed by DAVID, and visualized by R language.
Results The results showed that the expression level of SNORD1C in patients with CRC was significantly higher than that in normal people and patients with benign colorectal diseases ($P < 0.05$). The over-expression of serum SNORD1C was related to poor tissue differentiation and high CEA level ($P < 0.05$). Under ROC curves analysis, SNORD1C serum expression combined with CEA in blood had better prediction and judgment for the diagnosis of CRC (AUC = 0.838) compared with SNORD1C (AUC = 0.748) or CEA (AUC = 0.796) alone.
Conclusion Serum SNORD1C may be a novel and feasible biomarker for the diagnosis of CRC. High expression of SNORD1C was closely related to the patients' prognosis, especially unfavorable outcome in CRC.

PU-0164

基于 HIV-1 CRF01_AE 毒株进化规律的分子传播网络分析技术优化

柳明辰、赵彬、安明晖、韩晓旭
中国医科大学附属第一医院

目的 近年来我国 HIV 疫情仍未得到有效控制，分子传播网络分析是新兴的分子流行病研究方法，其应用广泛有助于精准干预提高成本效益。基因距离阈值是构建分子传播网络的关键，以往研究均沿用国外对 B 亚型进化规律的研究结果。与欧美地区广泛流行单一 B 亚型不同，我国多 HIV 亚型并存，CRF01_AE 为本地主要流行株，目前研究主要针对 B 亚型 HIV，缺乏对 CRF01_AE 的 HIV-1 进化规律的系统研究。
方法 收集 2000-2017 年间于中国医科大学附属第一医院艾滋病研究所的 HIV 急性期队列 CRF01_AE 单毒株感染者和"传播对"队列中 CRF01_AE 受者为单毒株感染者的真实传播对。应用深度测序方法获得 pol 的 RT 区部分序列，应用 TN93 模型计算个体内及个体间基因距离，计算进化速率。
结果 所有 CRF01_AE 亚型单毒株感染者个体内平均进化不超过 0.015s/s；所有"传播对"供受者间基因距离均小于 0.3s/s。感染≤1 年、1-2 年、2-3 年和 3-6 年的基因分化程度分别为 0.003±0.003s/s、0.004±0.002s/s、0.007±0.002s/s 和 0.009±0.004s/s；受者感染 1 年内、1-2 年、2-3 年和 3 年以上平均的基因距离为 0.008±0.006 s/s、0.012±0.007 s/s、0.009±0.003 s/s、0.015±0.009 s/s。所有 CRF01_AE 单毒株感染者平均的进化速率为 0.0024±0.001s/s/y。基于最高网络分辨率原则和个体内进化及"传播对"供受者间基因距离分布曲线显示最佳阈值范围为 0.005-0.007，最终我们设定阈值为 0.005。

结论 基于 CRF01_AE 毒株在个体内及个体间进化规律，为了解病毒在人群中的传播规律以及构建分子传播网络的阈值的设定提供了理论依据。为我国开展 HIV 分子传播网络以及基于网络干预等地区性研究提供理论基础和实践范例。

重庆地区冠心病患者 cyp2c19 基因多态性研究

唐翌姝
重庆医科大学附属第一医院

目的 探讨重庆地区冠心病患者药物代谢酶 cyp2c19 基因多态性的分布情况。
方法 采用基因芯片方法对 179 例服用氯吡格雷的冠心病患者进行基因分型，分析基因型和代谢表型的分布。
结果 共检测到 6 种 cyp2c19 基因型和 3 种代谢型。广泛代谢物纯合表型频率为 32.96% (59/179)，广泛代谢物杂合表型频率为 53.07% (95/179)，低代谢物表型频率为 13.96% (25/179)。
结论 重庆地区冠心病患者 cyp2c9 基因存在遗传多态性，等位基因频率和代谢表型频率的分布与国内其他地区相似。

PU-0166

噬菌体随机肽库淘选幽门螺杆菌 ArsS 酸信号感应区拮抗短肽和活性评价

向瑜
重庆医科大学附属第一医院

目的 幽门螺杆菌(Helicobacter pylori, H.pylori)是慢性胃炎，胃溃疡，胃癌等疾病的重要病因，目前尚无理想的防治措施。H.pylori 通过感知并适应高酸性环境在胃内存活，它的双组分信号传导系统(TCSTs)中的 ArsRS 是已知的主要的酸感受器。本研究的目的是获得 H.pylori ArsS 酸感应区的拮抗短肽，通过短肽与感应区结合，封闭 H.pylori 的酸感应信号，阻碍 H.pylori 的酸适应调节反应，使其在胃内高酸性环境中不能存活。
方法 通过 proSite 预测 H.pylori J99 ArsS N 端的酸感应区结构域，以纯化的酸感应区重组蛋白 P-ArsS-A 为诱饵，用 Ph.D7 噬菌体随机肽库淘选能与 P-ArsS-A 特异性结合的短肽。
结果 获得 8 个能与 P-ArsS-A 结合的阳性噬菌体克隆，展示了 5 条短肽序列。经体外 MIC 检测和菌落计数试验验证，P03（MMSYPKH）和 P06（LTPMPNW）均能明显抑制 H.pylori J99 生长（P＜0.050)，P03 对 H.pylori J99 的 MIC 为 8μM，P06 的 MIC＞16μM，P03 的抑菌作用强于 P06。
结论 通过分子对接将 P03 和 P06 与 ArsS- N 端结合，两条短肽共有 TYR25，ASN39,ARG73,GLU74 四个相同的结合位点，而 P03 与 ArsS 还额外形成了较强的氢键连接。

新冠患者病情预测新工具——血浆 DNA 内标法定量技术应用

穆原[1]、陈其告[2]、徐建[1]、林勇平[2]、潘世扬[1]
1. 江苏省人民医院（南京医科大学第一附属医院）
2. 广州医科大学附属第一医院

目的 探讨血浆 DNA 定量能否在新冠患者监测中用于病情进展的预测。
方法 前瞻性纳入广州医科大学附属第一医院 2020 年 3 月收治入院的 COVID-19 确诊患者，按 WHO 新冠指南进行疾病的诊疗管理，并随访至治愈出院，将 6h 时段与其 72h 后的临床资料进行比较，以评估 72h 病情是否进展作为结局变量。偏态资料以中位数（四分位间距）[M (P25，P75)]表示，率的比较采用卡方检验，等级相关采用 Spearman 秩相关分析，多元 logistic 回归用于预测模型的建立，并以 Nomogram 作模型可视化，模型预测性能评价采用非参数 ROC 分析。
结果 17 名患者中，男性 11 例，女性 6 例，年龄 27~83 岁[57 (50-72)岁]，在纳入研究时 10 例入住 ICU，7 例行气管插管，2 例行 ECMO 治疗。重型/危重型患者 APACHE II 评分、SOFA 评分及血浆 DNA 均显著高于轻型/普通型患者。血浆 DNA 水平与临床评分间相关性低（APACHE II：ρ=0.441；SOFA：ρ=0.512）。共收集到 174 个病情进展结局事件，按结局有无恶化，随机分为建模组与验证组，全部建模变量在两组间差异均无统计学意义。经多元 logistic 回归分析，血浆 DNA 与 D-二聚体与 72h 病情恶化相关。ROC 分析显示血浆 DNA 预测性能（AUC=0.883）优于 APACHE II（AUC=0.715）、SOFA（AUC=0.708）及 D-二聚体（AUC=0.684）。
结论 血浆 DNA 定量在新冠患者监测中，可于病情恶化前 72h 进行预警。

Highly reproducible and sensitive electrochemiluminescence biosensor for HPV detection based on bovine serum albumin carrier platform and hyperbranched rolling circle amplification

Yinghao He[1]、Yinhuan Liu[2]、Lingjun Cheng[1]、Yuanyuan Yang[1]、Bin Qiu[3]、Longhua Guo[3]、Yan Wang[4]、Zhenyu Lin[3]、Guolin Hong[1]
1. The First Affiliated Hospital of Xiamen University
2. 厦门大学附属福州第二医院
3. 福州大学
4. 厦门大学附属心血管病医院

Most DNA-based electrochemiluminescence (ECL) biosensors are established through the self-assembly of thiolated single-stranded DNA (ssDNA) probes on the Au electrode surface. Due to this random assembly process, a significant discrepancy among the distribution of modified DNA film on different electrodes, which greatly affects the reproducibility of biosensor. In this study, a porous bovine serum albumin (BSA) layer was first modified on the electrode surface, which can improve the position distribution and spatial orientation of the self-assembly ssDNA probe. It was then coupled with hyperbranched rolling circle amplification (HRCA) to develop the high-reproducibility-and-sensitivity ECL biosensor for human papillomavirus 16 (HPV16) E6 and E7 oncogenes detection. In the presence of the target DNA, the surface of the electrode accumulates abundant amplified products through reaction, which contain double-stranded DNA (dsDNA) fragments of different lengths, followed by plentiful dichlorotris (1,10-phenanthroline) ruthenium (II) hydrate (Ru(phen)3 2+, acting as an ECL indicator) insertion into grooves of dsDNA fragments, and a strong signal can be detected. There is a linear relationship between the signal and the target concentration range from 10 fM to 15 pM, and the detection limit is 7.6 fM

(S/N= 3). After the BSA modification step, the relative standard deviation was reduced from 9.20% to 3.96%, thereby achieving good reproducibility. The proposed ECL strategy provides a new method for constructing high-reproducibility-and-sensitivity ECL biosensors.

FISH 技术在乳腺癌 HER-2 基因扩增检测中的应用

魏琦、王永超、刘秀生、许雪
合肥金域医学检验实验室有限公司

目的 乳腺癌在女性恶性肿瘤发病率居第一位，人表皮生长因子受体 2（HER-2）基因是乳腺癌的重要分子标志物和治疗靶点。本研究主要探讨荧光原位杂交技术（FISH）在乳腺癌 HER-2 基因检测中的应用及临床意义。
方法 选取近半年合作医院送到本实验室进行乳腺癌 HER-2 基因扩增检测的 427 个标本为研究对象，这些标本原单位 HER-2 免疫组化结果均为 2+。与病理室合作，分别采用免疫组化技术（IHC）和 FISH 对蜡块标本中的 HER-2 蛋白表达以及 HER-2 基因扩增状态进行分析，由同一个病理医生判读 FISH、IHC 结果。
结果 FISH 检测 HER-2 基因扩增阳性病例共 141 例（33%）；IHC 检测 HER-2 蛋白表达（0-1+）共 37 例、（2+）共 303 例、（3+）共 87 例，对应的 FISH 结果中 HER-2 基因扩增阳性病例分别为 0 例、54 例、87 例，两者检测结果的阳性符合率分别为 100%、17.8%、100%；结果显示，除 IHC（2+）外，IHC 检测与 FISH 检测有较好的一致性。IHC 检测中 HER-2（0-1+）、（3+）的结果判断与原单位存在不一致，可能与标本固定不及时、抗体浓度不同有关。
结论 采用 FISH 法对乳腺癌患者进行 HER-2 基因扩增检测具有较高价值，临床实践中可以根据实际情况，结果 IHC 综合使用，以便指导临床治疗。

PU-0170

非小细胞肺癌 EGFR 基因突变状态分析及临床意义

魏琦、李志强
合肥金域医学检验实验室有限公司

目的 肺癌是严重危害人类健康的恶性肿瘤之一，其中非小细胞肺癌（NSCLC）占 80%-85%，近年来表皮生长因子受体（EGFR）为靶点的分子靶向治疗已成为 NSCLC 的一种新的治疗方案。本文旨在回顾性分析 NSCLC EGFR 基因外显子突变，探讨 EGFR 突变与 NSCLC 临床病理特征及其临床意义。
方法 收集近期本实验室 NSCLC 病理标本 98 例，利用突变扩增阻滞系统（ARMS-PCR）方法检测 EGFR 基因外显子突变状态，回顾性分析其临床病理特征及临床意义。
结果 受检 98 例标本中，EGFR 基因总突变率为 40.81%（40/98）。其中 18 号外显子突变率 9.52%（4/42），19 号外显子突变率占 42.85%（18/42），20 号外显子突变率占 2.38%（1/42），21 号外显子突变率 38.09%（16/42）,1 例患者为 EGFR 基因 19、21 外显子双突变。肺腺癌患者突变率为 51.19%，明显高于非腺癌 NSCLC 突变率 8.08%，差异有统计学意义（P＜0.05）；女性患者中的突变率为 55.38%，高于男性患者 30.18%；无吸烟患者突变率 50.07% ，高于有吸烟史患者突变率 24.59%，差异有统计学意义（P＜0.05）。
结论 NSCLC 患者中 EGFR 突变以 19 号外显子缺失突变和 21 号外显子 L858R 突变为主；EGFR 突变常见于女性、肺腺癌、无吸烟使的患者。

PU-0171

甲状腺乳头状癌差异表达 lnc RNA 的筛选与分析

杨敏、黄国虹、王昌敏
新疆维吾尔自治区人民医院

目的 探讨 lnc RNA 在甲状腺乳头状癌发生过程中的潜在功能，为甲状腺乳头状癌的发病机制研究、诊断及治疗提供新的理论依据。
方法 按照纳入标准及排除标准收集 5 例甲状腺乳头状癌患者癌组织及癌旁组织标本，通过高通量测序技术完成 lnc RNA 表达谱的检测，并对表达差异大于 5 倍以上的 lnc RNAs 进行靶基因预测，GO 富集分析及 KEGG 通路分析。
结果 在甲状腺乳头状癌组织及癌旁组织中存在大量差异表达的 lnc RNAs 及 mRNAs，本研究共筛选出差异表达 5 倍以上的 lnc RNAs 2444 个，其中上调 1707 个，下调 737 个；共筛选出差异表达 5 倍以上的 mRNAs 3983 个，其中上调 2228 个，下调 1755 个。对这些差异表达的 lnc RNAs 进行靶基因预测，发现有 195 个差异表达上调的 lnc RNAs 及 100 个差异表达下调的 lnc RNAs 具有靶基因。GO 富集分析结果显示与差异上调 lnc RNAs 相关性最强的功能为 protein serine/threonine kinase activity（蛋白质丝氨酸/苏氨酸激酶活性）；与差异下调 lnc RNAs 相关性最强的功能为 DNA-binding transcription activator activity，RNA polymerase II-specific（DNA 结合转录激活因子活性，RNA 聚合酶 II 特异性）。KEGG 通路分析显示上调信号通路最明显的为 pentose phosphate pathway（磷酸戊糖途径），下调信号通路最明显的为 glycerophospholipid metabolism（甘油磷脂代谢）。
结论 在甲状腺乳头状癌中存在大量差异表达的 lnc RNAs，可能通过某些信号通路参与甲状腺乳头状癌的发生、发展过程，基于上述信号通路可作进一步深入研究。

PU-0172

葡萄糖-6-磷酸脱氢酶基因突变检测试剂的性能验证

杨建林
昆明医科大学第一附属医院

目的 对本实验室应用于临床检测的葡萄糖-6-酸脱氢酶基因突变检测试剂的性能进行验证。
方法 采用 12 个 G6PD 突变型质粒、野生型全血样本，磁珠法提取核酸，多重荧光定量 PCR 标准溶解曲线法扩增，对试剂的符合率、检测限、抗干扰能力、交叉反应进行试验验证。
结果 突变型样本的 Tm 值≥±2，野生型样本的 Tm 值≤±1，Tm 的 CV 均小于≤±10%，试剂符合率达 100%，提取的核酸 DNA 浓度稀释到最低检测限于 1ng/μL，扩增突变型和野生型符合率达 100%。血红蛋白、胆红素、胆固醇、甘油三脂对试剂的检测无干扰；地中海贫血和个 G6PD 的交叉反应相互不影响。
结论 由厦门至善生物公司生产的葡萄糖-6-酸脱氢酶基因突变检测试剂的性能参数符合厂家声明，可以应用于临床检测工作。

PU-0173

Systematic review the prevalence of HIV-1 drug resistance in antiretroviral-naïve and -experienced individuals in Yunnan

Mi Zhang 、cuixian yang
Yunnan Infectious Diseases Hospital

Background Since 2007, the HIV-1 genotypic drug resistance was performed in HAART-failed patients in Yunnan, and the difference of drug resistance rate among different time points is not clear.
Methods We reviewed the HIV-1 drug resistance reports systematically in Yunnan province from the data information management system for the prevention and control of AIDS in CDC information system of China between 2010 and 2012.
Results According to the CDC information system in China, HIV-infected individuals of treated naïve, treated in one year and treated in two years enrolled 88, 448 and 336, respectively. HIV-1 drug resistance was found in five individuals (5.7%, 5/88) in treated naïve individuals. The prevalence of acquired HIV-1 drug resistance in one year and two years were 42.4% (190/448) and 48.5% (163/336) in HAART failure patients (P<0.001). In treat-naive group, V179D (9.1%), K103N (4.5%), M184V (1.1%) and Y181C (1.1%) were most common mutations in RT regions, and in the protease region only L33F (1.1%) was found. In the two HAART failure groups, we found highly significant increases in percentages of patients carrying HIV-1 variants with M184V, T69Ins, K103N or V108I mutations, but no significant increases in percentages of patients carrying HIV-1 with D67N, K70R, K65R, A62V, K101E, V106M, V179D/E, Y181C, G190A, P225H or M230L mutations.
Conclusions The HIV-1 drug resistance occurred when the treatment time extension and the strategies of monitoring HIV treatment and resistance should be enhanced. In addition, the transmitted drug resistance should be given rise to our attention and reinforced to monitor in the further.

布尼亚病毒 RNA 提取方法的优化及临床应用

李雷
南京大学医学院附属鼓楼医院

发热伴血小板减少综合征（severe fever with thrombocytopenia syndrome, SFTS）是由发热伴血小板减少综合征病毒（SFTS virus, SFTSV）引起的新发传染性疾病，2009 年，在中国的中部和东北部最早被报道。截止 2015 年，SFTS 病例在中国 23 个省、日本和韩国被报道。SFTS 主要表现为急性发热、血小板减少及白细胞减少、胃肠道和中枢神经系统症状，重症者可出现多器官功能障碍综合征（Multiple Organ Dysfunction syndrome, MODS）甚至死亡。SFTS 病死率达 12.7%-32.6%，而且目前尚无有效的治疗方法，仅有对症支持治疗。由于在全球范围广泛存在、高病死率以及缺乏有效的治疗手段，SFTS 已严重威胁人类健康。

PU-0175

Analysis of Serum Hepatitis B Virus RNA Levels Among HBsAg and HBsAb Co-positive Patients and its correlation with HBV DNA

yu xiang
Department of Laboratory Medicine, the First Affiliated Hospital of Chongqing Medical University

Background To analyze the levels of HBV RNA in serum of HBsAg and HBsAb co-positive patients and the correlation with HBV DNA, HBsAg, ALT and AST.
Methods A total of 149 HBsAg and HBsAb co-positive patients were screened out from 66, 617 outpatients who had undergone HBV serological marker test. The levels of HBV RNA and HBV DNA were determined by real-time fluorescence quantitative PCR, and HBV genotyping was performed on those patients by PCR-fluorescent probe method. The natural course of co-positive patients was divided into four phases in accordance with the natural history of HBV infection, the levels of HBV RNA, HBV DNA, HBsAg, ALT and AST in different phases were compared. Meanwhile, the correlation between HBV RNA and HBV DNA, HBsAg, ALT, AST levels were analyzed as well as the influence of HBeAg expressions on HBV RNA levels.
Results Among the 149 HBsAg and HBsAb co-positive patients, 141 patients (94.63%) were genotype B and 8 (5.37%) were genotype C. According to the status of HBeAg, the 149 HBsAg and HBsAb co-positive patients could be divided into HBeAg positive group (66 patients, 44.30%) and HBeAg negative group (83 patients, 55.70%).The serum levels of HBV RNA and HBV DNA were higher in HBeAg positive group than in HBeAg negative group, with statistically significant difference ($P < 0.01$).The serum levels of HBV RNA, HBV DNA, HBsAg, ALT and AST were significantly different in different natural phases of HBV infection (immune tolerance phase, immune clearance phase, low replication phase and reactivation phase), with statistical significance ($P < 0.01$). HBV RNA levels were positively correlated with HBV DNA ($r=0.667$, $P=0.000$), HBsAg ($r= 0.330$, $P = 0.000$), ALT ($r = 0.263$, $P = 0.001$), and AST levels ($r=0.218$, $P = 0.007$) in serum. In HBeAg positive group, HBV RNA levels were positively correlated with HBV DNA ($r=0.595$, $P=0.000$) and HBsAg levels ($r=0.508$, $P=0.000$). In HBeAg negative group, HBV RNA levels were positively correlated with HBV DNA ($r=0.530$, $P=0.000$).
Conclusion B is the dominant genotype in HBsAg and HBsAb co-positive patients; as the advancement of disease into different phases (immune tolerance phase, immune clearance phase, low replication phase), the HBV RNA levels decreased gradually with the decrease of HBV DNA levels. The HBV RNA levels in serum were positively correlated with HBV DNA, HBsAg, ALT and AST levels. HBV RNA could be used as virological indicators for antiviral therapy in HBsAg and HBsAb co-positive patients with hepatitis B; the expressions of HBeAg had an impact on the expressions of HBV RNA.

云南省 HIV-1 感染儿童一线抗病毒治疗后病毒学反弹分析

杨壁珲
云南省传染病医院云南省艾滋病关爱中心云南省心理卫生中心

目的 云南省 HIV-1 感染儿童一线抗病毒治疗后病毒学出现反弹 85 例，分析该类患儿更换和没有更换二线药物在后期治疗中的病毒学抑制和耐药情况。
结果 85 例病毒学反弹儿童(VL>400 拷贝/ml)反弹时间中位数为 2.25 年（1.63-3.26）。48 例（56.5%）患儿在病毒学反弹后转为二线药物继续治疗，28 例（32.9%）患儿在病毒学反弹后没有更换二线药物病毒学再次得到抑制，9 例（10.6%）患儿在病毒学反弹后没有更换二线药物病毒学也没有再次得到抑制。

结论 云南省 HIV-1 感染儿童经过一线抗病毒治疗后有 85 例发生病毒学反弹，其中有 1/2 的患儿更换二线药物，有 1/3 患儿没有更换二线药物病毒学再次得到抑制，其余 1/10 患儿仍在接受治疗失败的一线治疗方案。更换二线抗病毒治疗药物前，应考虑病毒学再抑制的可能性，通过服药依从性咨询、耐药检测结果和药代动力学等来评估治疗效果，以最大限度的提高一线药物的持久性和对二线药物治疗的反应性。

A novel PCR-Cas13a assay for syphilis: diagnosis, genotyping, and macrolide-resistance-associated mutation identification.

Wentao Chen、Hao Luo、Heping Zheng
Dermatology Hospital， Southern Medical University

Nucleic acid amplification test (NAAT) possesses highly sensitive and specific capabilities, which has been largely utilized for pathogen detection in clinical practice. However, the sensitivity of molecular diagnosis for syphilis is insufficient sensitivity and depends on the type of collected biological sample. Herein, we develop a novel syphilis molecular diagnosis by paring the PCR and CRISPR-Cas13a. The PCR-Cas13a assay exhibits robust sensitivity and specificity in detecting TPA from different clinical specimen sources. We also applied this assay for TPA genotyping and macrolide resistance-associated mutations detection in real-time, providing a powerful tool for syphilis molecule surveillance and antibiotic selection suggestion. Additionally, we adapted the lateral flow test strip for visualizing the result of the PCR-Cas13a assay. In summary, we provide a PCR-Cas13a assay, which exhibits robust capabilities and prospects in syphilis diagnosis.

微阵列芯片法和流式细胞术检测 HLA-B27 的结果分析

刘义庆[1,2]、白晓卉[1,2]、渠滕[1,2]、卢志明[1,2]
1. 山东省立医院
2. 山东第一医科大学附属省立医院

目的 比较欧盟微阵列芯片法和流式细胞术两种方法检测人类白细胞抗原 B27（HLA-B27）的临床应用价值。
方法 分别采用欧盟微阵列芯片法和流式细胞术两种方法检测 238 例疑似强直性脊柱炎患者血中 HLA-B27，比较和分析两种方法的检测**结果** 。
结果 90.76%样本检测结果相同，差异不具有统计学意义（P＞ 0.05），将存在差异的标本进行基因测序后，结果与微阵列芯片法的检测结果一致。
结论 两种方法检测 HLA-B27 均具有较高的灵敏度和特异度，微阵列芯片法在结果的准确性上更优于流式细胞术。

PU-0179

EB-DNA 阳性患者的疾病分布及对临床建议

许红攀
南京大学医学院附属鼓楼医院

非洲淋巴细胞瘤病毒，简称ＥＢ病毒（Epstein-Barr，EBV），是一种 DNA 病毒，属疱疹病毒科，广泛存在于自然界。在人群中的感染极其普遍，主要通过唾液传播，感染后可以终身携带病毒。EB 病毒主要感染 B 淋巴细胞、上皮细胞,故主要损伤人的免疫系统和上皮组织而导致相应的疾病，如淋巴瘤、传染性单核细胞增多症及类风湿关节炎等。

PU-0180

分析 HBsAg 和 HBsAb 共同阳性的特殊血清学模式患者血清中 HBV RNA 的表达水平及与 HBV DNA 的相关性

向瑜
重庆医科大学附属第一医院

目的 检测 HBV 感染者中 HBsAg 和 HBsAb 共同阳性的特殊血清学模式患者血清中 HBV RNA 的表达水平，并分析其与 HBV DNA， HBsAg， ALT，AST 的相关性。
方法 从 66617 例检测 HBV 血清学标志物的门诊患者中筛选出 149 例 HBsAg 和 HBsAb 共同阳性的特殊血清学模式患者，采用实时荧光定量 PCR 法检测 HBV RNA 和 HBV DNA 的表达水平，用 PCR-荧光探针法对上述特殊模式患者进行 HBV 基因分型。按照 HBV 感染的自然史分为四期，比较不同自然病程时期的 HBV RNA，HBV DNA，HBsAg，ALT，AST 的表达差异，同时分析 HBV RNA 与 HBV DNA，HBsAg，ALT，AST 的相关性及 HBeAg 表达对 HBV RNA 水平的影响。
结果 在 149 例 HBsAg 和 HBsAb 共同阳性的特殊血清学模式患者中，B 基因型 141 例，C 基因型 8 例；在 HBV 感染的不同自然病程期，HBV RNA，HBV DNA， HBsAg，ALT 和 AST 的表达水平有差异，具有统计学意义。血清 HBV RNA 与 HBV DNA 呈正相关，与 HBsAg 呈正相关，与 AST 呈正相关；上述 149 例特殊模式患者根据 HBeAg 的状态可分为： HBeAg+阳性组和 HBeAg -阴性组。 在 HBeAg+组中 HBV RNA 和 HBV DNA 的表达水平高于 HBeAg-组，差异有统计学意义。在 HBeAg+组，HBV RNA 与 HBV DNA 呈正相关，与 HBsAg 呈正相关。在 HBeAg-组，HBV RNA 与 HBV DNA 呈正相关。
结论 HBsAg 和 HBsAb 共同阳性的特殊血清学模式患者中，HBV 基因型以 B 型为优势基因；随着不同自然病程分期进程，HBV RNA 水平随着 HBV DNA 水平降低而逐渐降低；血清中 HBV RNA 水平与 HBV DNA，HBsAg，ALT，AST 水平呈正相关，HBV RNA 可作为乙型肝炎抗病毒治疗的病毒学指标；HBeAg 的表达对 HBV RNA 表达水平有影响。

PU-0181

基于传播途径改变基础上的新疆 HIV-1 亚型分子流行特征分析

黄国虹、马晶、杨敏、王昌敏
新疆维吾尔自治区人民医院

目的 基于新疆地区艾滋病传播呈现传播途径由性途径取代共用注射器吸毒，男男性接触人群感染人数快速上升的新特点基础上，了解该地区 HIV-1 亚型分子流行特征。
方法 采用横断面调查方式对 2015 年-2019 年就诊于新疆某传染病医院 500 例 HIV 阳性患者全血进行分子流行特征研究。采集研究对象抗凝全血及临床资料，分离血浆，提取 RNA 并进行 RT-PCR

和 Nest-PCR 扩增 gag、pol 和 env 基因序列片段并测序，使用 Sequencher4.1.4 软件进行序列拼接和处理后经 MEGA7.0 软件 Neighbor-joining 法进行 gag、env 系统进化树构建。
结果 500 例 HIV-1 阳性患者中，以男性居多 61.00%（305/500），40～59 岁年龄段所占比重最大 47.00%（235/500），已婚者为主 81.20%（406/500），维吾尔族占 67.00%（335/500），63.00%为中学文化程度（315/500），以异性传播为主 54.60%（273/500）。HIV-1 基因分析以 CRF_07BC 型所占比例最高，其次为 CRF_01AE 型。HIV-1 基因亚型在不同性别、不同民族、不同感染途径中均以 CRF07_BC 型为主，而在不同族别的分布的差异有统计学意义。
结论 虽然传播途径发生改变，但该地区 HIV-1 分流流行特征仍以 CRF_07BC 型为主，该研究结果为掌握本地区 HIV-1 流行最新动态及 HIV-1 防控、治疗、疫苗的研制开发提供有力的分子流行病学依据。

PU-0182

BOP1 as a novel prognostic marker and correlates with tumor microenvironment in Pan-cancers

Wei Li[1,2]、Ke Shi[2]、Chongge You[1]、Peipei Song[1]
1. Laboratory Medicine Center, Lanzhou University Second Hospital
2. Department of Geriatrics, Clinical Laboratory, Xiangya Hospital of Central South University

Objective Cancer is one of the main causes of death all over the world. Previous studies have indicated the important role of Block of proliferation 1 (BOP1) in the tumorigenesis and progression of several cancers, no systematic pan-cancer analysis of BOP1 is available. In present study, we aim to systematically identify the prevalence and prognostic value of BOP1 expression in 33 cancer types.
Methods The gene expression profiles, somatic mutation data, and related clinical data in TCGA, Genotype Tissue-Expression (GTEx) and Cancer Cell Line Encyclopedia (CCLE) were downloaded from the UCSC XENA website. The R software packages were used to evaluate the expression of BOP1 mRNA in 31 normal tissues, 33 cancer tissues and 21 tumor cell lines. The UALCAN and the Human Protein Atlas (HPA) database were utilized to verify the expression of BOP1 protein in tumors. The univariate Cox analysis and the Kaplan-Meier curves performed by R packages were used to investigate the prognostic value of BOP1 expression. Then we used a series of bioinformatics **Methods** implemented by R software packages to explore the potential oncogenic roles of BOP1, including analyzing the relationship between BOP1 and microsatellite instability (MSI), tumor mutational burden (TMB), DNA methylation, tumor microenvironment, immune checkpoints, and immune cell infiltration of different tumors. We also explored the potential signaling pathway mechanism through gene set enrichment analysis (GSEA). Finally, the reverse transcription-quantitative polymerase chain reaction (RT-qPCR), Western blotting(WB), and Transwell Assay were performed to verify related findings in lung cancer cell lines.
Results BOP1 expression was higher in 25 types of cancer tissues compared with adjacent normal tissues, but present at low levels in acute myeloid leukemia (LAML) and thyroid carcinoma (THCA). High BOP1 expression was related to worse prognosis and a higher clinicopathologic stage in most tumors. Moreover, BOP1 expression was strongly correlated with the TMB, MSI, tumor microenvironment, immune checkpoints, and immune cell infiltration in most tumors. The GSEA showed that a variety of tumor- and immune-related pathways were differentially enriched in the phenotypes of high or low BOP1 expression. The RT-qPCR analysis indicated that BOP1 was significantly augmented in lung cancer cells compared to HBE cell. Transwell Assay showed that enhanced of expression of BOP1 significantly facilitated cell migration, while its down-regulation displayed the opposite effect. Additionally, BOP1 silencing diminished snail and N-cadherin expression, and further up-regulated E-cadherin.

Conclusion BOP1 can be used as a potential prognostic molecular biomarker for predicting poor survival in various malignant tumors and may function as an oncogene with a strong role in tumorigenesis and tumor immunity.

PU-0183

肿瘤饥饿环境对肺癌细胞中 HMGB1 表达的调控及其 HMGB1 在肺癌筛查中的应用价值

郑齐锶
南京大学医学院附属鼓楼医院

目的 探讨 Hank′s 平衡盐溶液（Hank′s balanced salt solution,HBSS）诱导的饥饿环境对肺癌细胞凋亡相关分子高迁移率组蛋白 B1（HMGB1）表达的调控作用,并分析肺癌患者血清 HMGB1 水平在肺癌筛查中的应用价值。
方法 设置 HBSS 处理组（使用 HBSS 更换完全培养基后继续培养）与对照组（使用完全培养基进行培养）。利用 HBSS 处理 Lewis 肺癌细胞 12 h 后,采用分光光度法检测肺癌细胞中含半胱氨酸的天冬氨酸蛋白水解酶-3（Caspase-3）活性。利用 HBSS 处理 Lewis 肺癌细胞 0.5 h 后,采用流式细胞术检测饥饿条件下肺癌细胞中氧化应激效应分子——活性氧（ROS）的表达水平。利用 HBSS 处理 Lewis 肺癌细胞 0、4、8 和 12 h 后,使用 western blot 检测细胞内 HMGB1 蛋白的表达水平。采用 ELISA 法检测肺癌患者（n=50）血清中 HMGB1 的表达水平,并分析其与血清肿瘤标志物水平间的相关性。
结果 与对照组（0.14±0.01 U/L）相比,HBSS 刺激 12 h 后,Lewis 肺癌细胞中 Caspase-3 活性（0.24±0.01 U/L）明显升高（P<0.01）。流式细胞术检测结果表明,与对照组（MFI:63.00±4.58）相比,HBSS 刺激 0.5 h 后,Lewis 肺癌细胞中 ROS 水平（MFI:293.00±9.54）上调（P<0.01）。western blot 结果显示,HBSS 刺激 0、4、8 和 12 h 后,Lewis 肺癌细胞中 HMGB1 蛋白的表达水平明显升高（P 均<0.01）。ELISA 法结果显示,与健康人对照（3.36±0.20 ng/mL）相比,肺癌患者血清中 HMGB1 的水平（12.76±0.74 ng/mL）明显升高（P<0.05）,且与血清 CEA 水平呈正相关（r=0.44,P<0.01）。
结论 肿瘤饥饿环境能够促进肺癌细胞中凋亡相关分子 HMGB1 的表达,肺癌患者血清 HMGB1 水平与肺癌发展密切相关。

PU-0184

HCY 与 2 型糖尿病和视网膜病变关系的研究

何川疆、许爱敏
喀什地区第一人民医院

目的 探讨同型半胱氨酸（HCY）与 2 型糖尿病和视网膜病变的关系。
方法 选择喀什地区第一人民医院 2018 年 4 月-2019 年 11 月入院的 2 型糖尿病患者 200 例，设为病例组。所有患者入院后均进行眼底情况检查，根据是否诊断为视网膜病变分为视网膜病变组和非病变组；选择同期健康体检者 200 例，设为对照组；采用循环酶法试验测定各组 Hcy 水平；采用 PCR-芯片杂交法检测叶酸基因 MTHFR C677T 位点的基因型；采用化学发光免疫法检测血清叶酸、血清 VB12 水平；数据采用 SPSS Statistics 25 软件进行处理，分析血清 Hyc、叶酸、VB12 水平与 2 型糖尿病及视网膜病变关系。
结果 病例组 Hcy 水平高于对照组（P<0.05）；血清叶酸及血浆 VB12 水平低于对照组（P<0.05）；病例组叶酸基因 MTHFR C677T 位点中 CC 及等位基因频次 C 病例数均低于对照组（P<0.05）；CT、TT 病例数高于对照组（P<0.05）；Pearson 相关分析结果表明：Hcy 水平与糖尿病与视网膜

病变发生率呈正相关性（P<0.05）；血清叶酸及血浆 VB12 水平低与视网膜病变发生率呈负相关性（P<0.05）。

结论 2 型糖尿病患者 HCY 水平显著高于对照组，且 HCY 水平与视网膜病变存在强正相关性。这些发现提示：加强患者 Hcy 水平测定可为预防视网膜病变提供理论依据。

PU-0185

Long non-coding RNA RUNXOR accelerates MDSC-mediated immunosuppression in lung cancer

Xinyu Tian
Nanjing Drum Tower Hospital

Background RUNX1 overlapping RNA (RUNXOR) is a long non-coding RNA that has been indicated as a key regulator in the development of myeloid cells by targeting runt-related transcription factor 1 (RUNX1). Myeloid-derived suppressor cells (MDSCs) are a heterogeneous population of cells consisting of immature granulocytes and monocytes with immunosuppression. However, the impact of lncRNA RUNXOR on the development of MDSCs remains unknown.
Methods Both the expressions of RUNXOR and RUNX1 in the peripheral blood were measured by qRT-PCR. Human MDSCs used in this study were isolated from tumor tissue of patients with lung cancer by FCM or induced from PBMCs of healthy donors with IL-1β + GM-CSF. Specific siRNA was used to knockdown the expression of RUNXOR in MDSCs.
Results In this study, we found that the lncRNA RUNXOR was upregulated in the peripheral blood of lung cancer patients. In addition, as a target gene of RUNXOR, the expression of RUNX1 was downregulated in lung cancer patients. Finally, the expression of RUNXOR was higher in MDSCs isolated from the tumor tissues of lung cancer patients compared with cells from adjacent tissue. In addition, RUNXOR knockdown decreased Arg1 expression in MDSCs.
Conclusions Based on our findings, it is illustrated that RUNXOR is significantly associated with the immunosuppression induced by MDSCs in lung cancer patients and may be a target of anti-tumor therapy.

血清 miRNA-223 在非小细胞肺癌化疗疗效监测中应用

苏光建、陈燕
福建肿瘤医院

目的 探讨 microRNA-223（miRNA-223,miR-223）作为非小细胞肺癌（NSCLC）晚期（Ⅲ-Ⅳ期）患者化疗疗效评价指标的可行性。
方法 收集 14 例非小细胞肺癌晚期患者化疗前及化疗第一周期后血清，提取总 RNA 后采用实时荧光定量 PCR 方法检测血清 miRNA-223 水平变化，计算各个患者化疗第一周期后相对化疗前的变化量，并依据临床对患者疗效进行的化疗疗效评估（RECIST），将 14 例样本分为疾病进展（PD, progressive disease）组、疾病稳定(SD, stable disease) 组、部分缓解(PR, partial response)组，比较三组患者化疗第一周期后血清 miR-223 变化量，探讨不同组别血清 miR-223 作为 NSCLC 患者化疗疗效评估指标的可行性。
结果 数据统计显示，miRNA-223 在 PR 组中化疗后表达水平低于化疗前的水平，其相对表达含量为 0.70±0.32，在 SD 组中化疗后相对表达含量为 1.18±0.34，在 PD 组中化疗前后相对表达含量最高，为 2.84±0.87。化疗后 miR-223 相对化疗前的表达水平与患者年龄(u=23.00,P=0.848)、性别(u=10.00,P=0.157)、TNM 分期（u=20.00,P=1.000）差异无统计学意义。PR、SD、PD 组间 miR-223 化疗后水平呈趋势性变化，差异具有统计学意义（χ2=8.9,P=0.012）。

结论 血清 miR-223 在化疗一个周期后的变化水平能较好预示 NSCLC 患者的化疗疗效，提示血清 miR-223 可作为 NSCLC 患者化疗疗效评价指标之一，对于实现肺癌个性化治疗有着重要的临床意义。

PU-0187

血浆热休克蛋白 90α 和 EBV DNA 定量检测对鼻咽癌的诊断和预后评价

叶倩、陈燕
福建肿瘤医院

目的 检测鼻咽癌患者血浆中 HSP90α 和 EBV DNA 治疗前、后及健康人中的表达情况，探讨其在鼻咽癌诊断与临床病理特征关系以及疗效评价和预后评估中的作用。
方法 应用定量酶联免疫吸附法和实时定量 PCR 方法检测 92 例初治鼻咽癌患者治疗前后、放化疗后转移或复发以及持续缓解鼻咽癌患者血浆中 HSP90α 和 EBV DNA 的表达情况，并以 30 名健康体检者为对照。
结果 血浆中 HSP90α 水平为 87.28ng/ml 诊断鼻咽癌的敏感度为 92.1%，特异度为 86.0%。血浆 EB DNA 中位拷贝数为 4900/ml 对初诊鼻咽癌患者的诊断敏感性为 89.0%，特异性为 92.0%。92 例鼻咽癌患者经过治疗后均达到完全缓解或者部分缓解。鼻咽癌患者治疗前血浆中 HSP90α 和 EBV DNA 水平显著高于治疗后和健康对照者。血浆中 HSP90α 与鼻咽癌临床分期相关，与性别、年龄、病理分型（T、N）无关(P>0.05)，治疗后完全缓解患者降至健康对照者水平。部分缓解患者仍高于健康对照者水平，而完全缓解与部分缓解患者的治疗后血浆 HSP90α 降至健康对照者水平。在半年内远处转移的患者治疗后血浆中 HSP90α 和 EBV DNA 水平均明显高于未发生远处转移患者和健康对照者。血浆中 HSP90α 和 EBV-DNA 表达之间存在相关性。
结论 血浆 HSP90α 水平作为辅助诊断鼻咽癌的指标有一定的临床意义。血浆中 HSP90α 与 EBV-DNA 检测有助于判断鼻咽癌的诊断、病情监测和预后评估具有重要价值。

PU-0188

Association between genetic variation of Hippo pathway genes and clinical outcome of EGFR-TKI treated NSCLC patients

Yu Jiang[1]、WenJing Xie[1]、RongWei Chen[1]、WenXu Chen[1]、JianPing Xu[2]
1. Fuzhou Second Hospital Affiliated to Xiamen University, Fuzhou, Fujian, China
2. 福建医科大学

Background Hippo pathway play an important role in cell differentiation, organ size and carcinogenesis. However, the association between genetic variation of Hippo pathway and survival of EGFR-TKI treated NSCLC patients remains unclear.
Materials and Methods A retrospective study including 300 advanced EGFR-mutated NSCLC patients were included in this study. We selected and detected genotypes of 31 candidate functional genetic polymorphisms within Hippo pathway using MassARRAY time-of-flight mass spectrometer. We also follow-up these included patients to obtain three-years survival. Kaplan-Meier curve with log-rank test, univariate and multivariate COX regression were selected to analysize the association between them.
Results In this study, we found in clinical samples that LATS1 Rs2297928, MOB1B Rs147762156, SKT3 Rs3019295, RASSF1A Rs1989839, and YAP1 Rs1820453 were related to the clinical efficacy of EGFR-TKI in patients with stage IIIb-V NSCLC patient with mutated-EGFR.

LATS2 Rs141692953, FAT4 Rs7676612, YAP1 Rs1820453, TEAD2 Rs2288480 were significantly related to the three-year progression-free survival or overall survival of these patients. It also verified that only YAP1 rs1820453 site was significantly related to the clinical efficacy of EGFR-TKI and the survival prognosis of NSCLC patients. Among them, 62.00% of patients with TT genotype had a complete or partial response after EGFR-TKI treatment, 27.60% of patients showed stable disease, and only 10.40% of patients showed disease progression; while the percentages of patients with complete/partial response, stable disease and disease progression in TG/GG carriers were 38.10%, 42.85%, and 19.05%, respectively, and the clinical efficacy was significantly lower than that of carriers of the TT genotype ($p<0.05$). Further analysis with the patient's three-year progression-free survival and overall survival revealed that the median progression-free survival of patients with TT and TG/GG genotypes were 14.3 and 6.2 months, respectively, and the difference between the two was statistically significant (Plog-rank<0.001). After multivariate adjustment, the progression-free survival of patients with TT genotype was significantly better than that of patients with TG/GG genotype (adjusted HR=0.56, 95%CI=0.23-0.89). K-M curve, univariate and multivariate COX regression analysis also found that YAP1 rs1820453 locus TT and G allele carriers harbored significantly longer overall survival than G allele (adjusted HR=0.42, 95%CI=0.12-0.69). Also, the TT genotype at the rs1820453 locus was significantly negatively correlated with tumor invasion and lymph node metastasis.
Conclusion The findings indicated that YAP1 rs1820453 was significantly associated with clinical efficacy and survival of EGFR-TKI treated NSCLC patients, and the locus could be used as a molecular biomarker to predict the outcome of these patients.

PU-0189

标准曲线法定量检测人类和模式生物全基因组 DNA 双链断裂数目

戴寒莹、徐克前
中南大学

目的 建立标准曲线法，用于简单、快速地检测人类和模式生物全基因组 DNA 双链断裂数目(number of DNA double-strand breaks, N_{DSBs})。采用不同限制性内切酶完全酶切人类和模式生物全基因组 DNA 获得标准品，再联合生物信息学和连接介导实时荧光定量 PCR (ligation-mediated real-time quantitative PCR，LM-qPCR)技术，建立标准曲线法。同时对该方法进行条件优化，并评价其可靠性、重复性与敏感性，从而建立一种简便、可靠、可对任何已知核苷酸序列样本的 N_{DSBs} 进行定量分析的方法。
方法（1）以人类和模式生物（小鼠、拟南芥、酿酒酵母、大肠杆菌）基因组 DNA 为研究对象；（2）采用不同平端限制性内切酶（AluI、BsuRI、DraI、SspI、StuI、EcoRV、EheI）酶切基因组 DNA 模拟自然界 DSBs 损伤，获取系列标准品；（3）设计自制软件识别基因组 DNA 上特定核酸序列数，计算标准品 DSBs 数目的理论值（N_{DSBs} 的理论值）；（4）LM-qPCR 检测标准品的 Ct 值，以标准品的 lgN_{DSBs} 值为横坐标，Ct 值为纵坐标建立标准曲线，对反应条件进行优化，并研究其重复性、敏感性及特异性；（5）采用 DNA 平端化技术将待测样本中 DNA 黏性末端补平及评价；（6）采用不同剂量 X 射线、不同浓度 H_2O_2 处理标本后，使用标准曲线法检测标本的 DNA 双链断裂；（7）将建立的标准曲线法与经典的中性单细胞凝胶电泳和 γ-H2AX 流式细胞法进行比较，从而评价标准曲线法的可靠性，通过批间和批内变异系数（CV）评价其重复性。
结果（1）自制软件可在 30s 内得出限制性内切酶酶切后 DSBs 的理论值（N_{DSBs}）；（2）通过平端限制性内切酶可以完全酶切人类和模式生物基因组 DNA，得到标准品；（3）LM-qPCR 法可检测不同生物标准品的 Ct 值，计算出 5 种生物的标准曲线的拟合方程，其 $R^2>0.9$。LM-qPCR 效率为 87.9%至 115.4%，检测限 $10<N_{DSBs}<10^8$，重复性实验的平均批内 CV 为 1.101%，平均批间 CV 为 2.528%；（4）通过 Klenow 片段可以有效地对 DNA 进行补平；（5）不同处理后的标本，

随着处理水平增加，N_{DSBs} 值增加，Ct 值显著降低（P<0.001）。三种方法的结果存在显著相关关系，Pearson 相关系数 r 的绝对值均大于 0.9。
结论 标准曲线法可以定量检测人类和模式生物的全基因组 DNA 双链断裂数目，其操作简单、结果可靠、重复性好、可标准化，为检测不同标本的 DNA 双链断裂数目提供了一个全新的方法与思路。

PU-0190

山东地区 913 例丙肝患者 HCV 基因分型研究

刘义庆[1,2]、白晓卉[1,2]、渠滕[1,2]、卢志明[1,2]
1. 山东省立医院
2. 山东第一医科大学附属省立医院

目的 了解近年来山东地区丙型肝炎病毒（HCV）感染者基因型的分布特点及其与 HCV-RNA 病毒载量的相关性。
方法 抽取山东省立医院门诊及住院丙肝患者实时荧光定量 PCR 检测 RNA 阳性标本 913 例，用焦磷酸测序法进行基因分型。
结果 共检出 7 种基因亚型，1a、1b、2a、2b、3a、3b、6a 比例依次为 1.53%、59.91%、37.68%、0.11%、0.44%、0.11%、0.22%。1b 亚型病毒载量高于 2a，其他亚型病毒载量之间无显著差异。
结论 山东地区丙型肝炎病毒基因型以 1b 为主，其次为 2a，且 1b 亚型病毒载量高于 2a。

PU-0191

基于 CRISPR/Cas9 系统靶向敲减 miR-21 对鼻咽癌放疗抵抗的影响

肖振州、陈燕
福建省肿瘤医院

目的 本研究拟通过 CRISPR/Cas9 系统靶向敲减 CNE2 细胞中的 miR-21，评估对 CNE2 细胞生物学特性的影响并探讨分子机制。
方法 通过 CRISPR/Cas9 系统对放疗抗拒的 CNE2-R 和正常 CNE2 鼻咽癌细胞株进行内源性 miR-21 基因敲除，通过 T7EN1 酶切和 Real-time PCR 验证敲除效果。通过设置体外相关实验，探讨 miR-21 基因敲除对 CNE2-R 和正常 CNE2 细胞增殖状态、克隆形成、凋亡状态等生物学特性的影响，进行放疗敏感性及侵袭能力的比较。通过生物信息学分析预测 miR-21 在鼻咽癌中参与调控的信号通路，免疫印迹进一步验证。
结果 CRISPR/Cas9 载体系统可有效敲减对 CNE2-R 和 CNE2 细胞系中内源性 miR-21 基因，编辑效率接近 50%。miR-21 靶向敲减可明显抑制 CNE2-R 和 CNE2 细胞的生长增殖，克隆形成及侵袭转移等能力，并诱导细胞凋亡。生物信息学分析共找到 28 个 KEGG，并筛选出共同交集的通路。免疫印迹显示，miR-21 敲减组 PI3K/AKT/mTOR 通路相关蛋白及其磷酸化水平发生明显改变。Meta 分析结果显示，miR-21 联合其他 miRNA 分子表达谱在诊断鼻咽癌中的灵敏度、特异度、及曲线下面积（AUC）分别为 0.78、0.79 和 0.85。本项目研究结果证实，内源性 miR-21 与 CNE2-R 细胞的放疗抗拒有关，靶向敲减 miR-21 可通过阻断 PI3K/AKT/mTOR 信号通路来抑制 CNE2-R 和 CNE2 细胞的生长增殖，诱导细胞凋亡，从而增加放疗的敏感性。
结论 靶向敲减 miR-21 可通过抑制 PI3K/AKT/mTOR 信号通路抑制 CNE2-R 和 CNE2 细胞的生长增殖，诱导细胞凋亡，增加放疗的敏感性。

PU-0192

鼻咽癌患者血浆外泌体 miR-BART 水平与临床转移之间的关系

郑瑜宏、陈燕
福建省肿瘤医院

目的 检测鼻咽癌患者血浆外泌体中 miR-BART 的含量，分析和鼻咽癌 miR-BART 的表达和患者临床病理参数之间的相关性，探讨它在 NPC 侵袭转移过程中的作用。
方法 收集 24 对鼻咽癌患者的配对血浆（治疗前和发生转移时总共 48 份血浆）和 12 名健康人的血浆，通过 exoRNeasy 血清/血浆 Maxi 试剂盒对鼻咽癌患者血浆中外泌体和外泌体中总 RNA 的提取。再通过 TaqMan MicroRNA 逆转录试剂盒进行多重 RT-PCR 完成 60 份标本的 miR-BART3、miR-BART7 和 miR-BART13 的检测。用 SPASS13.0 进行数据分析，探讨鼻咽癌患者血浆外泌体中 miR-BART 的表达水平与鼻咽癌临床病理参数(年龄、远处转移和临床分期)之间和复发转移的关系。
结果 血浆外泌体中的 miR-BART3 和 miR-BART7 对鼻咽癌有诊断意义，诊断的准确率为 0.794 和 0.817（95%置信区间分别为：0.641-0.946 和 0.671-0.964）；血浆外泌体中的 miR-BART13 在 NPC 组合健康对照组间不存在相关性。不同性别血浆外泌体中的 miR-BART3、miR-BART7、miR-BART13 表达量无差别；血浆外泌体中的 BART7、BART13 表达水平与年龄不存在相关性，但年龄大于 50 岁患者血浆外泌体中的 BART3 呈现高表达；BART7 与 T 分期、N 分期、临床分期均无相关性；而 BART13 与 T 分期、N 分期及临床分期都存在相关性，但由于其表达量很低，因此无意义；BART3 则与 N 分期存在较强相关性，但是随着 N 分期越晚，miR-BART3 表达量增加。
结论 miR-BART3 和 miR-BART7 对鼻咽癌有诊断意义，诊断的准确率分别为 0.794 和 0.817；转移前后的 miR-BART3 表达量有较大差别，但二者在统计学上的差异并不十分显著；miR-BART3 在 50 岁以上的鼻咽癌患者中高表达，且二者存在相关性；miR-BART3 则与 N 分期存在较强相关性，随着 N 分期越晚，miR-BART3 表达量增加。

PU-0193

鼻咽癌不同患者血浆 EB 病毒 DNA 与肿瘤疗效关系探讨

林莺莺、陈燕
福建省肿瘤医院

目的 评价血浆 EBVDNA 在鼻咽癌筛查和早期诊断价值，探讨不同患者血浆 EBVDNA 含量与肿瘤疗效的关系。
方法 以 2017 年 1 月至 2017 年 12 月来福建省肿瘤医院就诊的鼻咽癌首诊患者为研究对象，按入组标准分为鼻咽癌首诊组 485 例和治疗组 238 例。用磁珠提取法结合实时荧光定量 PCR 测定研究对象的 EBVDNA 含量。建立 EBVDNA 检测数据库并分析首诊组患者治疗前血浆 EBVDNA 的诊断效能以及与 TNM 分期、临床分期的关系，治疗组患者在治疗过程中不同首诊血浆 EBVDNA 的下降速率和治疗后不同血浆 EBVDNA 与疗效的关系以及复发时的患者血浆 EBVDNA 变化趋势。
结果 485 例首诊患者的 ENDNA 扩增检出率为 93.6%，与健康体检者相比（5.2%），差异有统计学意义。EBDNA 诊断鼻咽癌的 ROC 曲线下面积为 0.964（0.951-0.977），敏感性为 93.6% ，特异性为 94.8% ，准确性为 88.4% ，阳性预测值 94.8%，阴性预测值为 93.6% 。患者治疗前血浆 EBVDNA 含量与 TNM 分期和临床分期正相关，TNM 及临床分期早期的患者 EBDNA 含量显著低于中晚期，首诊血浆 EBVDNA 含量>10000copies/ml 的患者通过三次放化疗的下降为 0 的病例百分比显著低于血浆 EBVDNA≤10000copies/ml 患者，差异有统计学意义。复发患者血浆 EBVDNA 呈上涨趋势。EBDNA 的复发检出率为 90%。首诊 EBVDNA 含量为 0~200copies/ml 的复发患者甚至在治疗过程中可持续检测到低含量的 EBDNA。

结论 血浆 EBVDNA 含量检测有助于鼻咽癌的筛查和早期诊断，首诊患者血浆 EBVDNA 含量越高，分期越晚。治疗过程中 EBVDNA 含量变化可反映治疗效果，治疗后 EBVDNA 含量持续复制或上升患者有较高的复发风险。

Tumor-educated platelets for non-small cell lung cancer (NSCLC): an update on recent developments

Erfu Xie
the First Affiliated Hospital of Nanjing Medical University

Recently, liquid biopsies are considered as an emerging tool for the early detection of cancer. In contrast to tumor tissue biopsies, liquid biopsies are easier to manipulation and faster to get **Results** Tumor-educated platelets (TEPs) as one of detection targets for liquid biopsies have attracted widespread attention. In this review, the following will be reviewed. Firstly, the basic knowledge, which include characteristic, formation and detection of TEPs, are described. Secondly, the application of TEPs in non-small cell lung cancer (NSCLC) are reviewed. In conclusion, TEPs could serve as an ideal means of liquid biopsy for NSCLC. However, more research on TEPs is needed before it could be widely used in clinic.

PU-0195

Islet-1 诱导 C3H10T1/2 心肌样分化过程 Akt 参与干性维持的作用研究

黄月
成都市第三人民医院

目的 探究在 Islet-1 诱导的 C3H10T1/2 心肌样细胞分化过程中 Akt 与干性因子的表达调控是否相关。
方法 在 C3 细胞中转染过表达 Islet-1 的慢病毒，构建心肌样细胞分化模型，通过反转录定量 PCR（RT-qPCR）检测蛋白激酶（Akt）及干性因子 Sox2、Nanog 的基因表达；western blotting 检测 Akt 及干性因子的蛋白表达；免疫荧光检测干性因子及 Akt 的定位改变。采用 Akt 激活剂 SC79 与抑制剂 MK2206 分别作用于 C3 细胞，western blotting 检测 p-Akt 表达情况以摸索出药物最佳浓度；以两种药物的最佳浓度分别作用于 C3 细胞后，RT-qPCR 检测干性因子基因表达，western blotting 检测干性因子蛋白表达，免疫荧光检测干性因子定位改变。
结果 转入 Islet-1 后 C3 发生了心肌样细胞分化，分化过程中 Akt 活性及入核量降低，但干性因子的基因表达、蛋白表达、细胞定位均未发生改变；摸索出的 SC79 最佳作用浓度为 4ug/ml，MK2206 最佳作用浓度为 1umol/L。激活及抑制 Akt 后，干性因子的 mRNA 表达、蛋白表达及核定位均未产生改变。
结论 在 Islet-1 诱导的 C3 心肌样细胞分化模型中，未发现 Akt 直接参与干性因子表达调控的证据，其间的发生机制有待进一步探究。

PU-0196

液体活检在肺癌诊疗中的应用进展

谢而付
江苏省人民医院（南京医科大学第一附属医院）

肺癌是最常见的恶性肿瘤之一，近年来发病率有上升趋势。液体活检是一种新兴的分子检测技术，其主要通过对患者血液或体液中循环肿瘤细胞、循环肿瘤 DNA、DNA 甲基化、微小 RNA、外泌体及肿瘤血小板等项目的检测，来进行早期肿瘤的辅助诊断和治疗决策。它不同于常规的生物标志物检测，它具有侵入性小和取样风险低的优点。越来越多的深入研究发现，液体活检在肺癌的早期诊断、精准治疗和疗效监测上有广泛的应用，但也存在许多问题丞待解决。

PU-0197

喀什地区结核分枝杆菌谱系及亚谱系的构成及分布

何川疆、许爱敏
喀什地区第一人民医院

喀什地区地处欧亚大陆中部，同时该地区与巴基斯坦、印度等结核病高负担国家接壤，因此了解本地区结核分枝杆菌（Mtb）谱系组成，可为本地区结核病的防控工作提供基础依据。本研究对 159 例 Mtb 临床株进行全基因组测序，基于单核苷酸变异（SNV）通过最大似然法（Maximum Likelihood，ML）构建系统进化树，并利用主成分分析（PCA）进行验证，结合地理信息分析不同区域 Mtb 种群结构。结果显示：喀什地区（一市六县）Mtb 临床株由 Lineage 2（46.54%, 74/159）、Lineage 3（33.96%, 54/159）和 Lineage 4（19.50%, 31/159）构成；根据谱系特异性 SNV 将 3 个谱系细分为 9 个亚系，其中 Lineage 2 包括 Lineage 2.2.2/Asia Ancestral 1（9/74）、Lineage 2.2.1-Asia Ancestral 2（10/74）、Lineage 2.2.1-Asia Ancestral 3（16/74）及 Lineage 2.2.1-Modern 型北京亚系（39/74），Lineage 3 包括 Lineage 3.2（15/54）与 Lineage 3.3（39/54），Lineage 4 包括 Lineage 4.4（1/31）、Lineage 4.5（28/31）及 Lineage 4.8（2/31），PCA 结果与其一致；筛选获得 Lineage 2 特异性 SNV 共 150 个，Lineage 3 特异性 SNV 共 54 个，Lineage 4.5 与 Lineage 4.8 特异性 SNV 各 3 个。综上所述，喀什地区 Mtb 临床株由 Lineage 2、Lineage 3 和 Lineage 4 组成，其中 Lineage 3 在巴基斯坦为主要流行菌株，但在我国仅新疆地区流行，推测可能由于彼此地区人员流动频繁，导致该谱系菌株的传入，进而有向内陆传入的趋势；基于 Mtb 谱系特异性 SNV，将上述 3 个谱系进一步分为 9 个亚系；通过筛选并获得了喀什地区 Mtb 谱系及亚系标签。本研究为喀什地区结核病的防控工作提供了理论研究。

基于数字 PCR 的新型冠状病毒超敏检测策略

胡孝林[1,2]、张洪[1,2]、陈恒屹[1,2]、刘睿宁[1,2]、罗阳[1,2]
1. 重庆大学医学院智慧检验与分子医学中心
2. 重庆大学医学院公共实验中心

An ultra-sensitive, high-throughput and fast diagnostic system for novel severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) is essential for controlling the source of infection and monitoring the progression of the disease. At present, reverse transcription polymerase chain reaction (RT-PCR) is regarded as the gold standard for COVID-19 diagnosis. However, the sensitivity and reliability of RT-PCR were questioned due to the limitation of the technology. Herein, we developed a high-throughput, multi-target one-step digital PCR assay for

COVID-19 diagnosis. This assay reduced the possibility of contamination by one-step amplification, and improved the accuracy by detecting SARS-CoV-2 specific sites (ORF, N, E gene) and human reference genes (RNP gene) synchronously. The detection limit could be up to 3 copies per reaction, which is hundreds of times higher than RT-PCR. Besides, this assay could realize the detection of 960 samples in a single reaction. This strategy provides a new opportunity for establishing an ultra-sensitive nucleic acid detection platform.

PU-0199

EB 病毒感染与 XRCC1- Arg399Gln 基因多态性在鼻咽癌发生中的交互作用研究

郭俊英、陈燕
福建省肿瘤医院

目的 探讨 VCA-IgA、EA-IgA、Rta-IgG 三种抗体在鼻咽癌中的临床应用价值，评估 XRCCl-Arg399 Gln 单核苷酸多态性在鼻咽癌发病中的风险；研究 XRCCl-Arg399 Gln 单核苷酸多态性与 EB 病毒感染的交互作用。

方法 采用 ELISA 检测 2155 例未经治疗的鼻咽癌患者及 6957 例健康体检者血清中 VCA-IgA、EA-IgA、Rta-IgG 水平；采用病例对照研究，并按照性别和年龄 1：1 配对，抽取全血基因组 DNA 进行 PCR 扩增，对扩增产物再进行酶连接检测反应扩增，最后测序分析得出 XRCC1 Arg399Gln 的基因型。

结果 VCA-IgA、EA-IgA、Rta-IgG 在鼻咽癌组中阳性率分别达 89.88%、46.59%和 63.25%；ROC 曲线分析显示，曲线下的面积 VCA-IgA>Rta-IgG >EA-IgA；危险度分析显示，VCA-IgA、EA-IgA 和 Rta-IgG 三项检测均阳性者危险度最高，其次为 VCA-IgA 和 Rta-IgG 两项阳性，三项抗体均阴性者危险度最低；VCA-IgA 抗体检测在鼻咽癌中以 41~60 岁阳性率最高（P<0.01），而 Rta-IgG 阳性率随着年龄增加而增高，另外 VCA-IgA 以非角化未分化性鳞癌阳性率最高（P<0.01）；EA-IgA 阳性率与 T 分期具呈线性相关（P<0.01），三种抗体检测阳性率分别与 N 分期、临床分期均呈线性关系（P<0.01）；EB 病毒感染能增加鼻咽癌发病风险：VCA-IgA、EA-IgA 和 Rta-IgG 抗体三项阳性时可以增加鼻咽癌风险因素，但单项 VCA-IgA 阳性是鼻咽癌发病的最强危险因素，单因素分析显示与携带 XRCC-1 Arg399Gln 的 AA 基因型相比，携带 XRCC-1 Arg399Gln 的 GG 基因型可以增鼻咽癌发病风险；XRCC-1 Arg399Gln 的 GA 基因型与 VCA-IgA 存在交互作用（OR=20.755）。

结论 三种抗体诊断价值以 VCA-IgA 最优，其次是 Rta-IgG，EA-IgA 相对较弱。鼻咽癌筛查中，以 VCA-IgA、EA-IgA 和 Rta-IgG 三项阳性危险度最高，VCA-IgA 和 Rta-IgG 两项阳性危险度次之，而三项抗体均阴性者危险度最低；XRCC-1 基因的 Arg399Gln 基因多态性能够增加患鼻咽癌的风险，且 Arg399Gln 的 GA 基因型与 EB 病毒感染具有一定的交互作用。

PU-0200

Serum miR-27a is a biomarker for the prognosis of non-small cell lung cancer patients receiving chemotherapy

Erfu Xie、shiyang pan
the First Affiliated Hospital of Nanjing Medical University

Background Lung cancer has a high incidence and a 5-year survival rate of less than 15%. Non-small cell lung cancer (NSCLC) accounts for approximately 85% of lung cancer cases. Chemotherapy and immunotherapy are the most frequently used alternative treatments for

patients with advanced-stage NSCLC in whom surgery failed. Previous studies have suggested that miR-27a is involved in cancer development and progression. The purpose of this study was to investigate the clinical value of miR-27a in the prognosis of NSCLC patients after chemotherapy.

Methods Flow cytometry was used to detect the apoptosis rate of SPC-A1 cells treated with optical cisplatin at different times. Simultaneously, the expression of miR-27a in supernatants and cells was detected. Fifty-two newly diagnosed NSCLC patients were recruited. All patients received gemcitabine and cisplatin as first-line chemotherapy and docetaxel as second-line chemotherapy. At the end of every chemotherapy cycle, a therapeutic evaluation was performed according to the RECIST criteria. The expression of serum miR-27a was detected in each cycle.

Results After treatment with 2.5 μg/mL cisplatin, the apoptosis rates of SPC-A1 cells were significantly greater than those of the paired untreated control groups at 12, 24, 48 and 72 h. The expression of miR-27a in supernatants and cells was also consistent with the apoptosis rate and changed a time-dependent manner. The chi-square test showed that an increase in miR-27a after chemotherapy was more common in patients who achieved partial response (PR) than in those who achieved no response (NR) (61.5% vs 30.8%, P=0.026). Kaplan–Meier survival analysis indicated that patients with decreased miR-27a levels had poorer outcomes than those with increased miR-27a levels (P<0.05). Furthermore, dynamic changes in serum miR-27a with a gradual increasing trend during chemotherapy predicted a good prognosis.

Conclusions Collectively, our results suggest that miR-27a is involved in the apoptosis of lung cancer cells and that serum miR-27a levels are related to the prognosis of NSCLC patients. The expression levels of miR-27a in the serum may be an independent predictor for the prognosis of NSCLC.

PU-0201

抑癌基因 ARID1A 在急性髓系白血病中的诊疗价值及抑癌机制

任天莹、陈东亮、王爽、李阳、杨大伟
聊城市人民医院

急性髓系白血病(简称急性髓系白血病，AML)是一种造血系统恶性肿瘤，由造血干细胞过度增殖引起。急性髓系白血病的发病率很高，尤其是在儿童和青少年中。近年来，随着治疗水平的不断提高，AML 存活率大幅提高，患者病情得到有效控制甚至完全缓解。然而，仍有一半以上的 AML 患者因复发或耐药而预后不良。寻找新的分子靶点，包括癌基因、抑癌基因、表观遗传学和免疫治疗靶点等，是 AML 治疗的研究热点之一。

本实验通过收集临床急性髓系白血病病人骨髓标本，根据病程进展分组，利用实时荧光定量 PCR 法分析 ARID1A 的 mRNA 表达水平，分析病程进展与 ARID1A 表达水平的相关性。利用慢病毒载体，构建 ARID1A 敲低表达白血病细胞株，作为后续细胞分析模型。MTT 法分析 ARID1A 敲低表达对细胞凋亡的影响，并利用流式细胞术分析细胞凋亡和细胞周期。体外分析 ARID1A 敲低表达后细胞对化疗药物柔红霉素和阿糖胞苷耐药性的改变。最后通过分析信号通路探究 ARID1A 参与调控白血病细胞的相关分子机制。

结果 发现 ARID1A mRNA 的低表达与急性髓系白血病的复发显著相关(P<0.001)。ARID1A 的低表达可能成为 AML 复发的一个新的生物标志物。ROC 曲线测定 ARID1A 表达对急性髓系白血病复发的诊断价值(曲线下面积为 0.978)。ARID1A 低表达导致细胞凋亡抑制，细胞周期阻滞。并发现 ARID1A 低表达可激活 TGF-β1/Smad3 信号通路并抑制凋亡分子 Caspase3。

结论 ARID1A 低表达或可能成为 AML 复发的一个新的生物标志物。在急性髓系白血病中 ARID1A 通过激活 TGF-β1/Smad3 信号通路同时抑制 Caspase3 调控白血病细胞凋亡。

Construction of a circRNA-miRNA-mRNA Network to Unveil the Mechanism of Hepatocellular Carcinoma Occurrence and Prognosis

Yingying Lin、 Jing Wu、Zhaolei Cui、Yan Chen
Fujian Cancer Hospital

Background This study aimed at understanding the mechanisms of pathogenesis and providing novel biomarkers involved in the occurrence and prognosis of hepatocellular carcinoma (HCC) by constructing a circular (circ)RNA-micro (mi)RNA-mRNA network ceRNA network.
Methods High-throughput sequencing data covering circRNA, miRNA, and mRNA expression profiling in HCC were downloaded from the Gene Expression Omnibus (GEO) database. Differentially expressed circRNAs, miRNAs, and mRNAs were identified with the cutoff adj. $P < 0.05$ and $|Log2FC| > 2$ and screened by Limma package in R language. Based on circRNA-miRNA pairs and miRNA-mRNA pairs, a ceRNA network was constructed. The possible functions of these differentially expressed circRNAs were analyzed using gene ontology (GO) and Kyoto encyclopedia of genes and genomes (KEGG) enrichment analysis.
Results Forty-nine down-regulated circRNAs, 7 up-regulated miRNAs, and 702 down-regulated mRNAs were identified differentially expressed in HCC. A ceRNA network composed of target genes was constructed, incorporating 10 circRNAs, 5 miRNAs, and 13 differently expressed genes (mRNAs). Among the target mRNAs, 6 mRNAs (CPD, ESR1, HAT1, MAPK1, PPARGC1A, SRD5A3) could be associated with HCC prognosis. The network enrichment analysis showed that sex steroid hormone regulation and MAPK activation could be key processes associated with the target mRNAs in hepatocarcinogenesis.
Conclusions Our study provides a vision for the circRNA-miRNA-mRNA regulatory network as a promising tool for the mechanism research and biomarker identification of HCC occurrence and prognosis. The selected 6 prognostic differently expressed genes are expected to uncover new targets for clinical treatments.

Polymorphic variants of CCL2, IL-10 in recipients were associated with cytomegalovirus infection after hematopoietic stem cell transplantation

Ziyao Yang、Xiaotao Zhao
Peking University People's Hospital

OBJECTIVE Cytomegalovirus (CMV) infection is an important cause of non-recurrence death in hematopoietic stem cell transplantation (HSCT) patients. Host genetics of CMV pathogenesis has recently attracted increasing interest, however, there are few reports on CMV in HSCT population. To investigate the correlation between SNPs of CCL2, IL-10 and CMV infection, which would assist in predicting the infection incidence and managing CMV infection.
METHODS This was a retrospective observational study. CMV surveillance was performed on 128 HSCT recipients by real-time polymerase chain reaction (PCR) twice a week till +100d. Then, we analyzed their SNPs of CCL2 (rs1024611, rs13900) and IL-10 (rs1800871) by PCR and Sanger sequencing. The correlation between cytokine SNPs and CMV infection was further evaluated based on virological and clinical parameters.
RESULTS Among the 128 recipients, CMV infection was found in 73 recipients till +100d. As for rs1024611, GA genotype ($p=0.003$, HR=0.109, 95% CI: 0.026-0.463) and AA genotype ($p<0.001$, HR=0.019, 95% CI: 0.003-0.133) showed significantly lower risk of CMV infection than GG

genotype. In addition, TC genotype (p=0.032, HR=4.702, 95% CI: 1.141-19.381) and CC genotype (p<0.001, HR=32.593, 95% CI: 5.290-200.806) of CCL2 rs13900 increased risk of CMV infection when compared with TT genotype. Besides, as for rs1800871, TC genotype (p=0.028, HR=1.824, 95% CI: 1.066-3.121) and CC genotype (p=0.035, HR=2.099, 95% CI: 1.054-4.181) showed significantly higher risk of CMV infection than TT genotype respectively, either. In CMV infected recipients, the highest CMV DNA load during continuous surveillance was associated with the number of high-risk genotypes the recipient carried (H=6.267, p=0.044).
CONCLUSION SNPs of CCL2 (rs1024611, rs13900) and IL-10 (rs1800871) in recipients were associated with CMV infection after HSCT.

Expression and Clinical Implications of Basic Leucine Zipper ATF-Like Transcription Factor 2 in Breast Cancer

Yingying Lin、Zhaolei Cui、Yan Chen
Fujian Cancer Hospital

Objective Basic leucine zipper ATF-like transcription factor 2 (BATF2) has been reported to participate in the occurrence and development of some malignancies. But little is known about its roles in breast cancer (BC). In this work, we aimed to explore the expression pattern and clinical implications of BATF2 in BC.
Methods We assessed the differences in BATF2 mRNA expression between cancerous and noncancerous tissues in BC using online databases. In external validations, BATF2 protein expression in BC tissues was quantitated using a tissue microarray and immunohistochemical (IHC) analysis, and BATF2 mRNA expression in serum and serum-derived exosomes of BC patients using qRT-PCR.
Results There were low-to-moderate levels of increases in BATF2 protein expressions in BC cases. BATF2 mRNA expression was negatively correlated with androgen receptor (AR) and positively correlated with BRCA2, Mki67, and TP53 expressions. Subgroup analyses showed that triple-negative breast cancer (TNBC) patients with high BATF2 mRNA expressions had a longer overall survival (OS). Our IHC analysis revealed a positive rate of BATF2 protein expression of 46.90%. The positive rates of BATF2 mRNA expressions in the serum and exosomes were 45.00% and 41.67%, respectively. Besides, the AUCs of serum and exosomal BATF2 mRNA for BC diagnosis were 0.8929 and 0.8869, respectively.
Conclusions BC patients exhibit low-to-moderate increases in BATF2 mRNA expression levels in cancerous tissues, of which low BATF2 mRNA expression serves as an indicator of a poor TNBC prognosis. The high BATF2 protein expression can be a potential indicator of a better BC prognosis. Serum and exosomal BATF2 mRNA levels also serve as promising noninvasive biomarkers for BC diagnosis.

PU-0205

Diagnostic and Prognostic Potential of Circulating and Tissue BATF2 in Nasopharyngeal Carcinoma

Yingying Lin、Zhaolei Cui、Yan Chen
Fujian Cancer Hospital

Objective At present, there is still a lack of effective markers for early diagnosis and prognostic monitoring of nasopharyngeal carcinoma (NPC). A large number of studies have shown that the basic leucine zipper ATF-like transcription factor 2 (BATF2) gene is closely related to the

occurrence and development of a variety of malignant tumors. However, the expression of BATF2 in NPC and its clinical significance is still unclear.
Methods A high-throughput tissue microarray combined with immunohistochemistry (IHC) was used to detect the expression of BATF2 proteins in NPC tissues, and to explore its relationship with clinicopathological characteristics and the prognosis of NPC. Meanwhile, a quantitative reverse transcription-polymerase chain reaction (qRT-PCR) was used to detect the expression of BATF2 mRNA in serum and serum-derived exosomes of NPC patients.
Results The IHC showed that BATF2 was mainly localized to the nucleus of NPC tissue cells. Survival analysis showed that the NPC patients with a positive BATF2 expression enjoyed a longer duration of overall survival than those with a negative BATF2 expression. The positive expression rates of BATF2 mRNA in serum and serum exosomes of NPC patients were 51.47% and 48.52%, respectively. The AUCs of NPC patients diagnosed by serum and exosomal BATF2 and healthy control groups were 0.9409 and 0.8983, respectively. The BATF2 levels of serum and exosomes of NPC patients in the treatment group were higher than those in the initial group, but lower than those in the recurrence group.
Conclusion BATF2 is expected to be a promising prognostic marker for NPC. BATF2 in serum and serum exosomes can be used as an important biomarker for diagnosis, efficacy evaluation, and recurrence monitoring of NPC.

The Novel Key Genes of Non-obstructive Azoospermia Affect Spermatogenesis: Transcriptomic Analysis Based on RNA-Seq and scRNA-Seq Data

Haihong He[1]、Fan Yu[1]、Wang Shen[2]、Yiwen Zhou[1]
1. Clinical Laboratory Medical Center, Shenzhen Hospital, Southern Medical University,
2. 江门市五邑中医院

Non-obstructive azoospermia (NOA) is one of the most important causes of male infertility. It is mainly characterized by the absence of sperm in semen repeatedly or the number of sperm is small and not fully developed. At present, its pathogenesis remains largely unknown. The goal of this study is to identify hub genes that might affect biomarkers related to spermatogenesis. Using the clinically significant transcriptome and single-cell sequencing data sets on the Gene Expression Omnibus (GEO) database, we identified candidate hub genes related to spermatogenesis. Based on them, we performed Gene Ontology (GO) functional enrichment analysis, Kyoto Encyclopedia of Genes and Genomes (KEGG) enrichment pathway analyses, protein-protein interaction (PPI) network analysis, principal component analysis (PCA), cell cluster analysis, and pseudo-chronological analysis. We identified a total of 430 differentially expressed genes, of which three have not been reported related to spermatogenesis (C22orf23, TSACC, and TTC25), and the expression of these three hub genes was different in each type of sperm cells. The results of the pseudo-chronological analysis of the three hub genes indicated that TTC25 was in a low expression state during the whole process of sperm development, while the expression of C22orf23 had two fluctuations in the differentiating spermatogonia and late primary spermatocyte stages, and TSACC showed an upward trend from the spermatogonial stem cell stage to the spermatogenesis stage. Our research found that the three hub genes were different in the trajectory of sperm development, indicating that they might play important roles in different sperm cells. This result is of great significance for revealing the pathogenic mechanism of NOA and further research.

RPA 技术快速检测 SARS-CoV-2

陈斌、梁广铁、吴斌、徐邦牢
广州市第一人民医院

目的 2019 年 12 月发现的新型冠状病毒（SARS-CoV-2）肺炎已经蔓延全球，截止目前全球累计近 1 亿人确诊，250 多万人死亡，疫情对全球公共卫生体系造成了极大的威胁。因此，需要研制出新的技术方法快速检测 SARS-CoV-2，有效控制疫情和阻断病毒的传播。
方法 本研究应用重组酶聚合酶恒温扩增技术（Recombinase Polymerase Amplification， RPA），根据 GenBank 查找 SARS-CoV-2 病毒的 N 基因，以其为靶序列设计生成出一套合适的引物和荧光探针，建议 RT-RPA 快速检测 SARS-CoV-2 的方法；使用标准质粒 RNA 模板考察该方法的灵敏度；同时，使用其他 5 种常见呼吸道冠状病毒的 RNA 模板考察该方法的特异性；最后使用临床样本比较该方法与荧光定量 RT-PCR 检测方法的结果。
结果 RT-RPA 检测 SARS-CoV-2 仅需 15 分钟；该方法的检测灵敏度为 101 拷贝/μL；该方法对其他常见呼吸道冠状病毒无交叉反应；与 RT-qPCR 结果符合率为 100%。
结论 RT-RPA 检测 SARS-CoV-2 方法具有操作简便快捷、成本低、灵敏度低和特异性高等优点，可应用于临床检测和大规模人群筛查。

外周血单个核细胞的 DNA 甲基化测序对鉴别良恶性肺结节的初步分析

刘士标
山东大学第二医院

目的 现阶段，肺癌在中国的发病率和死亡率均居第一位。相对于中晚期患者，早期肺癌的五年生存率较高。提高早期肺癌的诊断率已成为改善患者预后的较好方法。目前，低剂量螺旋 CT 是筛查早期肺癌最普遍的方法，但假阳性率较高，尤其是对于直径小于 3cm 的肺部结节，难以区分其良恶性。而穿刺活检具有侵入性，且对于微小结节的穿刺操作，难度较大。如何鉴别诊断良恶性肺结节已成为临床上亟待解决的一大难题。作为表观修饰的一种形式，DNA 甲基化被证实与肿瘤的发生发展密切相关。而外周血单个核细胞（单核细胞、T 细胞、B 细胞、NK 细胞）在肿瘤免疫中发挥着重要作用。因此，外周血单个核细胞的 DNA 甲基化测序极有可能成为鉴别良恶性肺结节的一种新型无创诊断工具。
方法 在我们的研究当中，共有 25 例经病理学诊断为恶性肺结节病人的外周血样本和 30 例年龄、性别相匹配的经病理学诊断为良性肺结节病人的外周血样本。其中，25 例恶性肺结节病人包括 15 例原位癌和 10 例Ⅰ期肺癌病人，30 例良性肺结节病人的病理类型包括错构瘤、肺泡细胞瘤、肺细支气管腺瘤、结核坏死灶、肉芽肿性炎、肺纤维结缔组织结节状增生伴碳沫沉积、非典型腺瘤样增生等，且所有病人在抽取外周血前未经手术、放疗、化疗等任何治疗。我们利用 Ficoll 分离液，根据密度梯度离心的原理，从外周血中分离出单个核细胞，于-80℃保存。我们通过 850K 芯片对以上病人的外周血单个核细胞进行 DNA 甲基化测序分析，以了解良恶性肺结节甲基化位点的差异情况，从而为良恶性肺结节的鉴别提供一种新型无创诊断工具。
结果 850K 芯片测序结果显示，以|deltaBate|≥0.06 且 adj.P.Val＜0.01 为参考界限，共筛选出 166 个差异甲基化位点。我们对 166 个差异甲基化位点的分布情况进行了分析，发现其中 42.6%分布在 Island，29.4%分布在 N-Shore，20.6%分布在 S-Shore，5.9%分布在 S-Shelf，1.5%分布在 N-Shelf。进一步，我们发现这些差异甲基化位点位于基因的不同调控区，其中 60.8%位于 Body，

20.5%位于 TSS1500，9.1%位于 5'UTR，4%位于 TS200，2.8%位于 3'UTR，2.8%位于 1stExon，可以看出绝大多数位于 Body 和 TSS1500。

结论 良恶性肺结节病人的外周血单个核细胞中存在显著差异甲基化位点，进而会影响与之对应的基因表达情况。下一步，经多中心、大样本验证，外周血单个核细胞的 DNA 甲基化测序有望成为鉴别良恶性肺结节的一种新型无创诊断工具。

The effects of miR-139-5p in heart injury

Ziyao Yang、Ming Su、Xiaotao Zhao
Peking University People's Hospital

Objective Heart failure is a serious end-stage syndrome of many cardiac diseases. Previously, we reported that miR-139-5p is an anti-hypertrophic molecular in hypertrophic cardiomyopathy. However, whether miR-139-5p is correlated with cardiac injury and heart failure remains unclear. In the present study, we investigated the role of miR-139-5p in cardiac injury and observed the changes of circulatory miR-139-5p in heart failure patients.

Methods Neonatal rat cardiac myocytes (NRCM) were transfected with miR-139-5p and co-treated with isoproterenol (ISO) or adriamycin (ADR). The expression of MYH6 and MYH7 and potential targeting genes (TCF4 and PPP2R2A) was determined using Western blot. The morphology of NRCM was observed by fluorescence microscopy, and NRCM viability was detected using CCK-8 assay. The ADR-induced heart injury mice model was established and the circulatory miR-139-5p in mice was determined using real-time qPCR. We recruited 35 cases of heart failure patients and 27 cases of healthy controls. The plasma miR-139-5p was detected using real-time quantitative PCR detecting system.

Results In ISO-treated NRCM, we observed that both MHY7 and MYH6 were up-regulated. In the presence of miR-139-5p overexpression, MYH7 was partially recovered, whereas MYH6 remained unchanged. We found that the expression of potential targeting genes: TCF4 and PPP2R2A were both downregulated by overexpression of miR-139-5p. We observed that overexpression of miR-139-5p partially rescued ADR-induced cardiomyocyte injury. However, the expression of miR-139-5p in the serum of ADR-treated mice showed no significant changes compared with the control mice. Consistently, we found that the circulatory miR-139-5p levels in heart failure patients' plasma and healthy controls were comparable.

Conclusion miR-139-5p may participate in ISO- and ADR-induced cardiac injury in heart tissues, but circulatory miR-139-5p might not be served as a biomarker for heart failure.

PU-0210

肺腺癌患者外周血单个核细胞的 DNA 甲基化测序初步分析

刘士标
山东大学第二医院

目的 当今，肺癌在全球范围内的发病率和死亡率逐年升高，预后较差。从病理学分型角度来看，腺癌占肺癌绝大部分，所以我们把目标集中在肺腺癌。目前，低剂量螺旋 CT 是筛查肺癌最普遍的方法，但有时会出现假阳性，而穿刺活检具有侵入性。作为表观修饰的一种形式，DNA 甲基化被证实与肿瘤的发生发展密切相关。而外周血单个核细胞（单核细胞、T 细胞、B 细胞、NK 细胞）在肿瘤免疫中发挥着重要作用。因此，外周血单个核细胞的 DNA 甲基化测序极有可能成为肺腺癌的一种新型无创诊断工具。

方法 在我们的研究当中，共有 35 例经病理学诊断为肺腺癌病人的外周血样本和 50 例年龄、性别相匹配的健康人外周血样本，其中 35 例肺腺癌病人具有不同的 TNM 分期（原位癌：15 例；Ⅰ期：

10 例；Ⅱ期+Ⅲ期+Ⅳ期：10 例），且抽取外周血前未经手术、放疗、化疗等任何治疗。我们利用 Ficoll 分离液，根据密度梯度离心的原理，从外周血中分离出单个核细胞，于-80℃保存。我们通过 850K 芯片对肺腺癌和健康人的外周血单个核细胞进行 DNA 甲基化测序分析，以了解肺腺癌的发生发展过程中甲基化位点的改变情况，从而为肺腺癌提供一种新型无创诊断工具。

结果 850K 芯片测序结果显示，以|deltaBate|≥0.06 且 adj.P.Val＜0.05 为参考界限，共筛选出 1415 个差异甲基化位点。我们对 1415 个差异甲基化位点的分布情况进行了分析，发现其中 27.2%分布在 N-Shore，26.3%分布在 S-Shore，22.5%分布在 Island，13%分布在 S-Shelf，11%分布在 N-Shelf。进一步，我们发现这些差异甲基化位点位于基因的不同调控区，其中 67.5%位于 Body，15%位于 5'UTR，10.3%位于 TSS1500，3.5%位于 TS200，1.9%位于 3'UTR，1.8%位于 1stExon。基于 TSS 对基因表达的重要调控，我们又针对 TSS 附近位点的甲基化水平进行了分析比较，发现：在 TSS 的相同距离处的位点，肺腺癌病人的甲基化水平显著高于健康人（P≤0.01）。

结论 在肺腺癌的发生发展过程中，外周血单个核细胞的 DNA 甲基化水平发生了明显改变，进而会影响与之对应的基因表达情况。下一步，经多中心、大样本验证，外周血单个核细胞的 DNA 甲基化测序有望成为肺腺癌的一种新型无创诊断工具。

昆明医科大学第一附属医院 260 例 HBV 耐药基因突变检测及统计分析

张艳亮[1,2]、段勇[1,2]
1. 昆明医科大学第一附属医院
2. 云南省检验医学重点实验室

目的 乙肝病毒（HBV）复制过程中存在较高的核苷酸错配率，导致 HBV 对核苷（酸）类似物药物耐药率。本文旨在对云南省昆明地区 HBV 进行耐药基因突变检测及统计分析，了解本地区 HBV 耐药基因突变的变化趋势，为临床合理用药提供理论依据。

方法 收集 2013 年 12 月~2018 年 5 月期间到昆明医科大学第一附属医院就诊并被确诊为乙肝的 260 例患者，各抽取 3mL EDTA-K2 抗凝外周血，3000 rpm 离心 10min，取血浆-80°C 冻存备用。提取 HBV DNA，针对 HBV 聚合酶逆转录酶区，采用 AB3500Dx 测序仪进行 Sanger 测序，测序结果采用 Celloud 数据库进行比对分析，确定 HBV 基因型以及是否存在位点突变，并进行统计分析。

结果 260 例 HBV 中，C 型 171 例（65.77%），B 型 89 例（34.23%），未检出其他基因型（图 1）。检测到临床意义明确的耐药位点突变的 HBV 64 例（24.62%），无临床意义明确的耐药位点突变但有临床意义尚不明确的位点突变的 HBV 186 例（71.54%），既有临床意义明确的耐药位点突变又有临床意义尚不明确的位点突变的 HBV 62 例（23.85%），有临床意义明确的耐药位点突变但无临床意义尚不明确的位点突变的 HBV 有 2 例（0.76%），无任何位点突变的 HBV 有 10 例（3.85%）（图 2）。临床意义明确的耐药位点突变数共 99 个，其中 rtM204I 28 个（28.28%）、rtL180M 28 个（28.28%）、rtM204V 20 个（20.20%）、rtA181V 6 个（6.06%）、rtV173L 6 个（5.05%）、rtA181T 5 个（5.05%）、rtN236T 4 个（4.04%）、 rtM250L 3 个（3.03%）（图 3）；临床意义不明确的位点突变共 715 个，其中 rtL169I 163 个（22.79%）、rtS223A 154 个（21.54%）、rtI224V 116 个（16.22%）、rtF221Y 87 个（12.18%）、rtT222A 67 个（9.37%）、rtQ267L 46 个（6.43%）、rtV278I 39 个（5.46%）、rtQ267H 21 个（2.93%）、rtE263D 12 个（1.68%）、rtV191I 10 个（1.40%）（图 4）。

结论 云南昆明地区 HBV 以 C、B 型为主，存在较高的耐药突变率，204 位点和 180 位点是已知耐药突变位点中突变频率最高的两个位点。大部分 HBV 的聚合酶逆转录酶基因存在临床意义尚不明确的位点突变，这些位点的统计分析为 HBV 耐药机制的阐明及新耐药位点的揭示奠定了良好基础。

恒温扩增技术及临床应用进展

王琪、刘春林
云南大学附属医院

随着分子生物学技术的迅猛发展，基于核酸检测的诊断方法已大量建立并广泛应用于各种实验室检测中。恒温扩增技术是近年新发展起来的一门新型的能够在体外进行的核酸扩增技术。基于 PCR 的基本原理和对 PCR 技术进行研究和改进，与其他的核酸扩增技术相比，无论是在实际操作还是仪器要求方面，恒温扩增技术有快速、高效、特异的优点且无需专用设备，在临床和现场快速诊断中显示了良好的应用前景，已经成为了生物分析研究领域的重点，并被广泛应用在科学研究、病原物诊断、人类基因组工程研究、法医、组织和群体生物学等各个领域。在众多的恒温扩增技术中，环介导恒温扩增、滚环扩增等技术在目前比较熟知，也已经在一定范围内得到了很好的应用，而其他一些新派生出来的恒温扩增技术，如依赖核酸序列的扩增、转录介导的扩增、链替代恒温扩增和单引物恒温扩增等技术，也在不断发展和完善中。为了更好地对这些技术的原理、特点以及临床应用进行研究和改进，使其得到完善，现对这些技术进行综述。

Study on the proportion of asymptomatic or mildly ill COVICD-19 patients and their immunological responses in Fangcang shelter hospital

ying li
Department of Laboratory Medicine, the First Affiliated Hospital of Chongqing Medical University

Background Asymptomatic or mildly ill COVID-19 patients who had no obvious symptoms were considered to be a great source of infection, whereas their proportion and immunological responses were still unknown.
Objective To Study the proportion and immunological responses of asymptomatic or mildly ill patients.
Methods Retrospectively collected clinical manifestations, IgM and IgG antibodies responses, and nucleic acid test results of 92 consecutive COVID-19 patients, in Wuhan Dongxihu Fangcang Shelter Hospital, to calculate proportions of patients with different manifestations and evaluate their respective seroconversion rates of antibodies.
Results A total of 368 nasopharyngeal swab samples were collected from 92 patients and the accumulated positive cases and rates of the first to fifth time of nucleic acid tests were 23(25.0%), 40(43.5%), 51(55.4%), 55(59.8%) and 57(62.0%), respectively (Table 1). Of 92 patients, 89(96.7%) were tested positive for both IgM and IgG on admission, and 3 were negative for both IgM and IgG but developed into both positive before discharge. Of 92 patients, 7(7.6%) patients had fever before or after admission, 27(29.4%) patients had respiratory symptoms but no fever, and 58(63.0%) had no obvious symptoms, and their positive rates of both IgM and IgG were 100%, 92.6% and 98.3%, respectively (Table 2).
Conclusion Among patients admitted to the Fangcang shelter hospital, there were a high proportion of asymptomatic or mildly ill patients. Those patients have a higher seroconversion rate of IgM and IgG on admission, which have important diagnostic value for COVID-19.

蝙蝠葛碱对肝癌细胞 Huh7 增殖和凋亡的作用及机制研究

朱鹏飞、明亮
郑州大学第一附属医院

目的 研究蝙蝠葛碱对肝癌细胞 Huh7 的增殖和凋亡的作用，探索其抗肿瘤的作用机制和与 Hedgehog 信号通路的关系。
方法 给予不同浓度的蝙蝠葛碱，采用四甲基偶氮唑蓝（MTT）法检测 Huh7 细胞增殖能力的变化；流式细胞术分析 Huh7 细胞凋亡变化；Real-time PCR、Western blot 法检测 Hedgehog 信号通路相关基因及蛋白表达水平。
结果 随着蝙蝠葛碱浓度及作用时间的增加，Huh7 细胞增殖的抑制率升高。其中 8 μg/mL 蝙蝠葛碱作用 48 h 对细胞抑制率最高（48.8%）。蝙蝠葛碱可明显诱导 Huh7 细胞发生凋亡。随着蝙蝠葛碱作用浓度的增大，细胞的凋亡率显著升高。Hedgehog 信号通路中 PTCH1、GLi1、SMO、SHH 基因的 mRNA 表达水平明显降低，并与蝙蝠葛碱的浓度呈负相关。Western blot 分析结果显示，Hedgehog 信号通路中 PTCH1、GLi1、SMO、SHH 蛋白水平明显降低，同时 cleaved Caspase 3 蛋白水平显著升高，而 Bcl-2 表达水平降低，并与蝙蝠葛碱呈浓度依赖性。
结论 蝙蝠葛碱可明显抑制肝癌细胞 Huh7 的增殖，促进其凋亡，其机制可能通过抑制 Hedgehog 信号通路发挥作用。

Comprehensive analysis of aberrantly expressed circRNAs, mRNAs, and lncRNAs in patients with non-keratinizing undifferentiated nasopharyngeal carcinoma

Dayang Chen、Dan Xiong、Wei Wu、Xiaowen Dou、Xiang Ji、Xiuming Zhang
Medical Laboratory of Shenzhen Luohu Hospital Group

Purpose Nasopharyngeal carcinoma (NPC) is one of the most common types of human cancers in east and southeast Asia. Dysregulation of long non-coding RNA (ncRNA)have huge impacts on the occurrence and development of NPC. In this study, we aim to investigate expression profiles of circRNAs, mRNAs and lncRNAs and to provide some basis for further study.Materials & **Methods** The expression profiles of circRNAs, mRNAs and lncRNAs were analyzed by microarray technology. The differentially expressed ncRNA was calculated by bioinformatics. Gene ontology and Kyoto Encyclopedia of Genes and Genomes were used to predict the functions of differentially circRNAs, mRNAs and lncRNAs. In addition, we constructed circRNA-miRNA, circRNA-mRNA and lncRNA-mRNA networks to determine functional interactions among ncRNA. Cis- and trans-acting lncRNAs involved in NPC were predicted by bioinformatics. With the implementation of the R package of “glmnet” methods, we applied Least Absolute Shrinkage and Selection Operator (LASSO) for building a diagnostic model on the training dataset. The tuning parameter was determined according to the binomial devicance estimated from 10-fold cross-validation, and we adopted the lowest binomial deviance, known as "lambda.min". The difference of RiskScore distribution was examined by Wilcoxon Rank Sum test.
Results A total of 3,048 circRNAs, 2,179 lncRNAs and 2,015 mRNAs were detected to be significant differentially expressed in NPC. The differentially expressed (DE) non-coding RNA were assessed through bioinformatics. Notably, 3,048 circRNAs, 2,179 lncRNAs, and 2,015 mRNAs were found to be significantly differentially expressed in NPC. The number of upregulated DE lncRNAs was twice more than those downregulated. Based on our data, 80.44% lncRNAs and cis-mRNAs pairs demonstrated a positive correlation. For lncRNAs and trans-mRNAs pairs, 53.7% of pairs were positively correlated. We revealed lncRNA-mediated cis-regulation as a

prevalent regulatory mode in the development of NPC. CR1, LRMP, and SORBS2 were predicted to be mediated by cis-acting lncRNA modes of action and via trans-acting lncRNA mechanisms. Additionally, A four-gene diagnostic risk model was built: 0.7889 *FERMT1 -1.4967 *STOML3 -1.0247 *MROH2A -0.5226 *AMY1C. The RiskScore has 94.4% sensitivity and 100% specificity as compared with clinical diagnosis.
Conclusion Our study provides a theoretical basis for using ncRNA as new biomarkers for predicting the tumorigenesis of NPC.

一步法巢式 PCR 方法的研究现状及在病原体高通量测序中的应用

杨传坤
东南大学附属中大医院

一步法巢式 PCR(onestepnested-PCR,OSN-PCR)把内外引物同时配置在反应管内，使得传统的两轮扩增反应中途无需再次打开管盖。在整个 OSN-PCR 中，两阶段的扩增反应是连续进行的，反应管不需要为添加新试剂而打开或更换。这种策略使得 OSN-PCR 比 N-PCR 的操作过程更简便，降低了交叉污染的风险，并减少了反应试剂的用量。

本文综述了国内外多个团队针对微生物检测的各种 OSN-PCR 方法，包括甲型肝炎病毒，人类免疫缺陷病毒Ⅰ型，结核分枝杆菌和鼠疫耶尔森氏菌等检测中比较流行的 OSN-PCR 设计策略是把内引物预先固定在管盖内壁，通常是将内引物和溴酚蓝溶液固定于管盖内壁。也有一些研究人员利用结构特殊的反应管实现内外引物的分离，这种 PCR 管的内部另有一个预制的细管，用于存放内引物溶液。还有一些 OSN-PCR 方法利用内外引物不同的 Tm 值，通常外引物被设计得比内引物更长，使其 Tm 值提高，通过改变首轮和次轮的退火温度，不用开盖即可做到两轮 PCR 的独立反应。为了保证外引物在第二轮 PCR 中完全失效，有人利用反义寡聚核苷酸来减少非特异性扩增，这种寡聚核苷酸的一部分序列与外引物匹配，可以在低退火温度条件下给外引物的 3 ’末端引入错配，彻底封闭其延伸能力，进一步保证了第二轮扩增的独立性。一步法巢式 PCR 以其操作简单和有效避免开盖污染等特点，已被广泛应用于二代测序等技术流程中，对于 PCR 技术发展具有深刻意义与广泛用前景。

克罗恩病(CD)患者对抗肿瘤坏死因子 α（anti-TNF-α）治疗无应答的分子机制分析

郑静、张铁、王萍、王立伟、韩呈武、曹永彤
中日友好医院

目的 临床疗效表明抗肿瘤坏死因子 α (anti-TNF-α)治疗能有效诱导和维持克罗恩病(CD)的缓解。然而，多达 40%的患者不能对 anti-TNF-α 药物产生应答。在本研究中，我们旨在通过生信分析，探索 CD 患者对 anti-TNF-α 治疗无应答的分子机制。
方法 从 GEO (Gene Expression Omnibus)数据库获得一系列 CD 患者接受 anti-TNF-α 治疗前后肠道活检的转录组测序数据集，分析 anti-TNF-α 治疗应答组和无应答组治疗前后的差异表达基因。采用基因集变异分析(GSVA)、基因集富集分析(GSEA)、KEGG 通路分析和蛋白互作网络分析(PPI)等方法，分析 anti-TNF-α 治疗应答相关信号通路和特征基因。
结果 分析表明，anti-TNF-α 的应答伴随着大量基因的显著调控，包括 REG1A、IL8、S100A8、S100A9、IL1B、MMP1 和 MMP3 等，它们的下调与黏膜愈合相关。而对 anti-TNF-α 的无应答的

患者 IL1B、IL17A 和 S100A8 持续高表达。值得注意的是，不管患者对 anti-TNF-α 的有无应答，anti-TNF-α 都下调 IL6、IL23p19、MMP9、CD69、CD83 和 VCAM1 等炎症介质的表达。
结论 IL1B、IL17A 可能是 anti-TNF-α 治疗无应答的关键分子，是潜在的治疗靶点。而 anti-TNF-α 药物对 IL6 和 IL23p19 的下调与治疗效果无关，提示靶向后者的治疗可能得不到治疗 CD 的效果。

富集技术在宏基因组测序技术中应用的研究进展

杨传坤
东南大学附属中大医院

高通量测序与计算机分析流程共同组成的宏基因组技术在微生物研究领域引起重大变革，影响深远。但是用以解决基于组装或编排的宏基因组，尤其是高度复杂样品或环境中与已知基因组相似度有限的物种，现有的测序与分析流程均存在一定的局限性，因此需要对于宏微生物组实施更加有效的富集技术及方法。本文中对于现有的富集微生物组细胞及基因组片段的方法进行了梳理与总结。这其中包括：超速离心技术、多核酶处理技术、全基因组扩增、单细胞测序、流式分选技术、原位富集技术、培养及微培养、序列捕获技术、免疫磁珠分离技术、背景（人原宿主及真核细菌）去除技术等。这些技术及方法极大的提高了宏微生物组序列信息的富集效率，以及随之而来的测序数据的利用率。但是，这些方法也都不同程度的存在各种各样的问题及局限性。本文针对宏病毒组鸟枪法测序（Virome shotgun sequencing,VSS），宏病毒组富集技术的发展趋势是需要能够覆盖更宽广的病毒种类，取得特异性与病毒种类覆盖度的平衡。因此，开发针对病毒基因组序列，而又不依赖于其序列信息的病毒基因组富集技术，并将之应用于二代测序技术流程，提高病毒序列检出灵敏度，对于未知病原检测及宏病毒组研究具有深刻意义与实用前景。

新型冠状病毒核酸混样检测模式的评估

杨传坤
东南大学附属中大医院

目的 对新型冠状病毒核酸混样检测样本混采模式和稀释混样模式进行评估。
方法 样本混采模式：分别把 2、4、7 个阴性咽拭子同一个阳性拭子放在一个采样容器中，然后加 3 mL 洗脱液充分洗脱样本；稀释混样模式：先把样本充分洗脱混匀，再分别把 2、4、7 个阴性咽拭子同一个阳性拭子从各自容器取 100 μL 保存液进行混合。取 200 μL 混合样本在全自动核酸提取仪进行核酸提取，然后进行实时荧光 RT-PCR 反应。
结果 不论混样模式及混样数量下，浓度越高的标本越容易被检出；样本混采模式较稀释混样模式更易检出阳性标本；样本混采模式下，混样数量对强阳性标本的检出没有影响；稀释混样模式下，混合标本数量越多，越不利于其检出。对于弱阳性标本，5 管合并及 8 管合并时出现 O 基因漏检情况。
结论 合理选择混样模式及混样数量，提高集中筛查的检测效率且不放过一个阳性标本，将有助于发现社区传播及时进行防控。

PU-0220

SNHG3 promotes migration, invasion, and epithelial-mesenchymal transition of breast cancer cells through the miR-186-5p/ZEB1 axis

Qun Wan
The Fifth Affiliated Hospital of Sun Yat-sen University

Objectives Breast cancer is the most common malignant tumor among women in the world. Currently, a variety of drugs have been used for treatment of breast cancer in clinic. However, due to its highly heterogenous morphology and complex molecular phenotype, the recurrence and metastasis of breast cancer cannot be solved, which seriously endangers the health of women. Therefore, it is of great clinical significance to search for the key molecules and pathways in the development of breast cancer.
Methods Clinical samples of breast cancer were analyzed by bioinformatics, and the correlation between SNHG3 and breast cancer was observed and verified in cell experiments. The localization of SNHG3 was observed by fluorescence in situ hybridization. The proliferation ability of breast cancer cells was measured by colony formation assay. Scratch healing assay and Transwell assay were used to detect the migration and invasion ability of breast cancer cells. The direct binding sites of SNHG3 and miR-186-5p were predicted by StarbaseV2.0 database. Combined with literature and database analysis, it was found that miR-186-5p could directly regulate the expression of target gene ZEB1. The regulatory effects of SNHG3 on miR-186-5p and ZEB1 were verified by dual luciferase reporter gene assay and Western blot. The related markers of EMT pathway were detected by qRT-PCR and Western blot. Finally, the subcutaneous tumor-forming model of nude mice was used to investigate the effect of SNHG3 on breast cancer in mice and observe tumor growth. The expression of SNHG3 was detected by qRT-PCR, and the expression of ZEB1, MMP2 and Snail was performed by Western blot. The expressions of PCNA, E-cadherin and Vimentin in the tumor were detected by immunohistochemistry.
Results Our investigation has demonstrated that SNHG3 presented abnormally high expression in breast cancer tissues and cells, and transgenic expression of SNHG3 promoted the proliferation, migration, and invasion of breast cancer cell lines. The mean volume of xenografts from SNHG3-knockdown MCF-7 cells was smaller than that of control tumor cells. Moreover, the expression of ZEB1 increased after SNHG3 overexpression and vice versa. The overexpression of ZEB1 subsequently triggered cellular migration and invasion behaviors. Analysis of the mechanism underlying these effects revealed that SNHG3 may be an effective sink for miR-186-5p and modulate ZEB1 repression, conferring an additional level to its post-transcriptional regulation.
Conclusions SNHG3 promoted the migration and invasion of breast cancer cells through miR-186-5p/ZEB1 regulation and induction of epithelial to mesenchymal transition, which shed light of SNHG3 on being a potential treatment target for breast cancer.

湖南地区 MTHFR C667T 基因多态性的分布研究

王泽友、董贤
中南大学湘雅二医院检验医学科

目的 研究湖南长沙地区亚甲基四氢叶酸还原酶（MTHFR）C677T 基因多态性分布特征，比较不同种族，不同地区及与国内外 MTHFR C677T 基因的频率的分布特点。

方法 收集 2017 年 11 月至 2020 年 12 月在湖南省长沙市中南大学湘雅二医院进行 MTHFR C677T 基因多态性检测汉族患者的基因检测结果，共计 1932 例，分析 MTHFR C677T 基因频率分布特点，分析比较不同地区，不同种族及国外 MTHFR C677T 等位基因和基因频率的分布。
结果 湖南长沙地区人群 MTHFR C677T 基因型 CC、CT 和 TT 实际例数分别为 829、815 和 288，其频率分别为 42.9%、42.2% 和 14,9%，等位基因 C 和 T 频率分别为 64% 和 36%；在国外，非洲地区 T 等位基因的频率最低为 10.3%，在欧洲最高为 34.1%；在亚洲各国的研究中，东亚国家 T 等位基因频率（中国为 44.7%，韩国为 40.3%，日本为 39.9%）高于南亚国家（印度为 11.4%，巴基斯坦为 16%，斯里兰卡为 4.5%）；对于中国各地区 MTHFR C677T 基因型分布整体来看，MTHFR C677T 基因存在明显地域分布差异， TT 基因型呈现北高南低的趋势；各地区少数民族中布依族，白族，穿青族，哈萨克族与当地汉族 MTHFR C677T 等位基因和基因型存在统计学差异（$P < 0.05$），而布依族，蒙古族与当地汉族基因频率不存在统计学差异（$P > 0.05$）。
结论 MTHFR C677T 基因多态性分布全球不同国家，国内不同地区，不同种族间具有统计学意义。

PU-0222

SNHG3 通过 miR-186-5p/ZEB1 轴促进乳腺癌细胞的迁移，侵袭和 EMT

万群
中山大学附属第五医院

目的 乳腺癌是全球女性最常见的恶性肿瘤，目前临床上有多种药物用于乳腺癌的治疗，但由于形态学上的高度异质和复杂的分子表型，仍无法解决其复发和转移问题，严重危害广大女性的健康。因此，寻找针对乳腺癌发生发展过程中的关键分子及其通路的研究具有重要的临床意义。
方法 采用生物信息学分析乳腺癌临床样本，分析 SNHG3 与乳腺癌的相关性，并在细胞实验中验证；使用荧光原位杂交技术观察 SNHG3 的细胞定位；通过克隆形成试验检测乳腺癌细胞的增殖能力；划痕愈合试验，Transwell 试验检测乳腺癌细胞迁移与侵袭能力。通过 StarBasev2.0 数据库预测 SNHG3 与 miR-186-5p 有直接结合位点，结合文献和数据库分析发现 miR-186-5p 能直接调控靶基因 ZEB1 的表达，采用双荧光素酶报告基因试验及 Western blot 验证 SNHG3 对 miR-186-5p 和 ZEB1 的调控作用；qRT-PCR、Western blot 检测 EMT 通路相关标志物的变化。最后采用裸鼠皮下成瘤模型在小鼠体内探究 SNHG3 对乳腺癌的作用，观察瘤体生长情况。通过 qRT-PCR 检测 SNHG3 的表达，Western blot 检测 ZEB1、MMP2、Snail 的表达；免疫组化检测 PCNA、E-cadherin、Vimentin 等在瘤体中的表达情况。
结果 在乳腺癌组织和细胞中 SNHG3 表达显著增高。体外实验中证实，过表达 SNHG3 促进了乳腺癌细胞的增殖、迁移和侵袭；相反，敲低 SNHG3 抑制乳腺癌细胞的迁移和侵袭。同时体内实验也证实，敲低 SNHG3 的 MCF-7 细胞成瘤体积明显减少。此外，过表达 SNHG3 后，ZEB1 表达增加，反之亦然；ZEB1 的过表达能够促进乳腺癌细胞迁移和侵袭。机制分析表明，SNHG3 通过 miR-186-5p/ZEB1 轴促进乳腺癌细胞的迁移，侵袭和 EMT。
结论 SNHG3 通过 miR-186-5p/ZEB1 调控上皮细胞向间充质转化促进乳腺癌细胞的迁移和侵袭，提示 SNHG3 可能是乳腺癌治疗的一个潜在靶点。

Association of soluble epoxide hydrolase (sEH) with diabetic nephropathy: mechanisms and potenial application

Peng Gao、Liang Ma、Meimei Zhao、Yi Liu、Xiaomu Kong、Yongwei Jiang、Xiao Cong、Yongtong Cao
China-Japan Friendship Hospital

Diabetic nephropathy (DN), one of the microvascular complications of diabetes mellitus (DM), is the primary single driver of end-stage kidney disease, which is a problem with serious consequences for society's health. A soluble epoxide hydrolase (sEH) encoded by EPHX2 gene, a member of epoxide hydrolases (EH) family, presents in almost all living organisms, including kidney. The expression and activity were reported upregulated in many kidney diseases for human and animals and it was found that the inhibition of sEH had a reno-protective effect in many experimental studies. The attention to the relationship between sEH and DN has been consistently rising in the last years. So, in this review, we aim to clearly demonstrate the potential molecular mechanisms of sEH in DN and the important role of sEH inhibitors as a potential target in the treatment in DN. We first enumerate the some typical EPHX2 single nucleotide polymorphisms (SNPs) related to DN and figure out the sEH regulated potential mechanisms in mRNA and protein level. Subsequently, we introduce the sEH inhibitors clinical researches in DN within three aspects, respectively, which includes the results of the sEH inhibitors in vivo, sEH inhibitors in DN animal models and the recent sEH inhibitors clinical trials, aiming to prove the potential role of sEH inhibitors in the treatment of DN. Furthermore, we summarize and present an overview diagram to clearly illustrate the application of sEH inhibitor as potential target in DN.

PU-0224

Intrahepatic gene expressions and immune cell infiltration characteristics of hepatitis B virus-related liver diseases

Shu Feng 、Jialing Zhong、Yongchang Yang
Sichuan Provincial People's Hospital, University of Electronic Science and Technology of China

Objective The purpose of this study is to clarify the intrahepatic gene expressions and immunological changes of healthy control population (HC), patients with HBV-associated acute liver failure (HBV-ALF), patients with chronic hepatitis B virus infection (Chronic hepatitis B, CHB), and hepatitis B virus-associated hepatocellular carcinoma (HBV-associated hepatocellular carcinoma, HBV-HCC) patients at both molecular and cellular levels. We also tried to understand the gene expressions and immune cell infiltration characteristics in different disease progress after HBV infection.
Methods By using bioinformatics, we analyzed the original microarray data of HC, HBV-ALF, CHB and HBV-HCC liver tissues. We compared each diseased group with HC, and analyzed the differentially expressed genes and KEGG pathways. The relative immune cell infiltration percentages of the four groups were calculated and compared by using CIBERSORT deconvolution. Furthermore, the immune cell types related to HBV-HCC survival were explored via single-factor Cox regression and Kaplan-Meier survival analysis.
Results The sample sizes of each group included in this study were HC (n=34), HBV-ALF (n=38), CHB (n=340) and HBV-HC (n=134). Compared with HC, the significantly changed genes in HBV-ALF were KRT19, MMP7, C9, CFHR4, etc., and the pathways were metabolic pathways related to substances such as amino acids. SKI, FETUB, SPINK1, CRP, etc. were abnormally expressed in CHB, and infectious diseases and their related immune response signaling pathways were significantly changed. AKR1B10, GPC3, HAMP, OIT3, etc. were abnormally expressed in HBV-

HCC, and tumor-related signaling pathways were notably changed. The cell components of HBV-ALF with their unique tendencies were plasma cells, macrophages, and NK cells. The immune cell components of CHB and HBV-HCC liver tissues were similar, like T cells, plasma cells, monocytes, and macrophages. However, dendritic cells were only abnormally increased in HBV-HCC liver tissues. Compared with HC, the innate immune cells with the same changing tendency in the three groups of HBV-ALF, CHB and HBV-HCC were mast cells, neutrophils and eosinophils. Kaplan-Meier survival curve suggested that abnormally increased M0 macrophages and resting dendritic cells in liver cancer tissues of HBV-HCC patients may be risk factors for reducing overall survival (HR=1.0360, P=0.0013; HR=1.0584, P=0.0175).
Conclusions This study explored the differential gene expression profiles of three HBV-related liver diseases, namely HBV-ALF, CHB, and HBV-HCC. It was found that each disease has a unique gene expression profile. The immune cell characteristics were similar in patients with CHB and HBV-HCC. However, the immune cells in the liver tissue of HBV-ALF were relatively specific. This study offered the theoretical basis for understanding the important genes and immune cells in HBV-related diseases.

PU-0225

固相吸附法与氯仿-异丙醇提取法提取丙型肝炎病毒的方法学比较

渠滕
山东第一医科大学附属省立医院临床医学检验部

目的 比较氯仿-异丙醇法和核酸提取柱法在丙型肝炎病毒(HCV)RNA 荧光定量检测中的灵敏度、重复性和抗干扰性。
方法 选取 50 例丙型肝炎患者，采集所有患者血液，分离血清。分别用两种方法提取核酸后，采用荧光定量 PCR 技术检测 HCV RNA 含量，比较两种方法对检测灵敏度、重复性和抗干扰性的影响。
结果 经研究比较发现：①血清采用氯仿-异丙醇法提取核酸，稀释 1×104 倍后，荧光定量 PCR 可以检测，继续稀释则无法检测。按照固相吸附法提取核酸，稀释 1×105 倍后，荧光定量 PCR 可以检测，继续稀释则低于检测限。②氯仿-异丙醇法提取核酸荧光定量 PCR 检测后，阳性 32 例，阳性率 64%。核酸提取柱法提取核酸荧光定量 PCR 检测后阳性 36 例，阳性率 72%。两组结果比较 P＜0.05，有显著性差异。③当血红蛋白浓度为 5g/L 时，两组抗干扰能力差别不大，P＞0.05。当血红蛋白浓度为 50g/L 时，两组结果比较 P＜0.05。
结论 与氯仿-异丙醇核酸提取方法相比，固相吸附法提取的丙型肝炎病毒-RNA 灵敏度、阳性率更高，抗溶血干扰能力更好，具有一定优势。

PU-0226

泰山紫草提取物-乙酰紫草素诱导 前列腺癌 PC3 细胞凋亡机制的研究

杨宏
泰安市中心医院

目的 泰山紫草为传统中药，是泰山四大名药之一，属硬紫草，其有效成分为多种萘醌类物质。现代药学研究证明紫草具有治疗烧伤、强心、抗炎、抗菌、抗病毒及抗肿瘤等作用。为了进一步研究泰山紫草抗肿瘤机制，本课题组的前期研究从泰山紫草中分离纯化得到了三种主要成分：乙酰紫草素、β-羟基异戊酰紫草素和异丁酰紫草素；发现乙酰紫草素能抑制多种肿瘤细胞系的生长，并可诱

导肿瘤细胞凋亡。有关紫草素（软紫草中含量较多的一种萘醌类物质）抗肿瘤的研究近几年已有文献报道，但乙酰紫草素抗肿瘤作用的研究报道较少，其分子机制尚不清楚，值得研究探讨。本研究以乙酰紫草素为诱导剂，通过 MTT 法已经筛选出前列腺癌 PC3 细胞株为乙酰紫草素细胞毒性敏感的细胞株，并从形态学和部分生化指标观察到明显的凋亡特征。进一步研究乙酰紫草素诱导前列腺癌 PC3 细胞株凋亡的分子机制，为天然新型抗肿瘤药物的开发奠定基础。
方法 MTT 法检测乙酰紫草素对前列腺癌 PC3 细胞增殖的影响；流式细胞术检测细胞周期和线粒体膜电位的变化；Annexin-V/PI 双染分析凋亡率；实时荧光定量 PCR 检测凋亡相关基因表达水平；Western blotting 检测相关蛋白的表达和激活。
结果 乙酰紫草素显著抑制 PC3 细胞的生长，其半数抑制浓度（IC50）为 8.59 ± 0.42μM，并使细胞周期阻滞在 S 期。乙酰紫草素抑制 Bcl-2 蛋白的表达，促进 Bax 的表达，引起线粒体膜电位下降，导致细胞色素 c 释放，进而通过激活内源性凋亡途径诱导 PC3 细胞死亡。
结论 乙酰紫草素能抑制 PC3 细胞增殖，且改变了 PC3 细胞的周期分布，诱导其凋亡。

PU-0227

lncRNA SNHG11 promotes colorectal cancer growth and metastasis by targeting has-miR-184/AKT2.

Xueni Xu
Nanjing First Hospital, Nanjing Medical University

Background Mounting evidence demonstrates that the dysregulation of long non-coding RNAs (lncRNAs) have profoundly been associated to the initiation and progression of colorectal cancer (CRC). Yet the further investigations regarding the regulatory mechanism of lncRNAs is elusive. In this study, we report a highly conserved lncRNA, the small nucleolar RNA host gene 11 (SNHG11), which is specially expressed in colorectal tissues and is significantly overexpressed in CRC. Here, we systematically elucidated its functions and the underlying molecular mechanisms in CRC.
Methods RNA sequencing data from the TCGA database was employed to screen the differential expression profile of lncRNAs in colorectal cancer. Starbase v3.0 dataset was used to analyze the SNHG11 expression between CRC and the corresponding normal tissues. The expression level of SNHG11 in tissues and cells was determined by quantitative reverse transcription polymerase chain reaction (qRT-PCR) and the subcellular location of SNHG11 in CRC cells was indicated by fluorescence in situ hybridization (FISH). Kaplan–Meier survival analysis and receiver operating characteristic (ROC) curve, including its area under the ROC curve (AUC) were respectively utilized to assess the prognosis and diagnostic value of lncRNA SNHG11 for CRC. Then, the biological functions of SNHG11 on CRC in vitro and vivo assay like cell proliferation, migration, invasion and apoptosis were detected by colony assay, CCK-8 assay, EdU assay, transwell assay, flow cytometry, xenograft model, immunohistochemistry, and western blot. Subsequently, The potential mechanisms of SNHG11 were explored by dual luciferase reporter assay, RNA pull-down assay, RNA immunoprecipitation (RIP).
Results Our study revealed that SNHG11 was significantly upregulated in CRC tissues and cells. FISH and subcellular fractionation observed that the vast majority of SNHG11 expressed in the cytoplasm. High SNHG11 was obviously associated with advanced TNM stage, tumor invasion depth and distant metastasis. Besides, survival analysis and ROC curve analysis indicated that SNHG11 expression was negatively correlated with overall survival of CRC patients and its potent diagnosis value for CRC. Functional experiments and bioinformatics analysis revealed that SNHG11 promoted CRC cells proliferation, migration, invasion and inhibits apoptosis in vitro and vivo. Mechanistic investigations demonstrated that SNHG11 served as a sponge for miR-184, decreasing its ability to repress AKT2 expression. Moreover, functional experiments and Western blot displayed SNHG11/miR-184/AKT2 regulatory loop was critical for CRC cell proliferation, migration, invasion and apoptosis.

Conclusions Taken together, our study demonstrated that how SNHG11 formed a regulatory network to contribute to CRC growth and metastasis and suggested that SNHG11 may act as a potential target for CRC prognosis and diagnosis.

生物信息学筛选活动性肺结核潜在生物标志物

冶学燕、刘春燕、张新
新疆生产建设兵团医院

目的 利用生物信息学技术筛选活动性肺结核（PTB）诊断和治疗监测的潜在生物标志物。
方法 通过 GEO 数据库下载 GSE19444 和 GSE19435 基因芯片数据集。利用 GEO2R 工具筛选活动性 PTB 患者与健康对照间的差异表达基因（DEG），使用 CentiScape 插件确定中枢基因（Hub 基因），并通过 GSE56153 数据集验证 Hub 基因在活动性 PTB 治疗期间的变化。
结果 两个数据集中共筛选 505 个 DEG，上调 251 个，下调 254 个。DEG 网络的 9 个子模块中模块 1 评分最高，包含的 25 个基因主要参与病毒防御、干扰素信号通路等反应。在 25 个基因中筛选了 13 个 Hub 基因，通过验证，提示上调的 IFIT3、IFI35、STAT1 和 GBP1 在初诊活动性 PTB、治疗 8 周、治疗 28 周和对照组的不同治疗阶段表达水平有显著降低趋势。
结论 筛选出的 IFIT3、IFI35、STAT1 和 GBP1 与活动性 PTB 的发生和治疗密切相关，有望成为 PTB 诊断和治疗监测的潜在生物标志物。

血浆血栓球蛋白 β 联合抗血小板因子 4/肝素抗体在血小板相关疾病中的临床意义

邱旸、崔朝杰、张庆、渠滕
山东第一医科大学附属省立医院

目的 骨髓增生性肿瘤(MPN)遇到血栓是由于多种已知的危险因素引起的。肝素诱导血小板减少症(HIT)是一种由抗血小板因子 4 (PF4)/肝素抗体介导的血栓综合征，对 MPN 血栓形成的意义尚不明确。我们推测血浆血栓球蛋白 β 联合抗 pf4 /肝素抗体可能出现在 MPN 中并促进血栓形成。
方法 对 27 例 MPN 患者(包括 76 例 PV 和 51 例 ET)的血浆血栓球蛋白 β 和抗 pf4 /肝素抗体进行分析。
结果 19.7%的 PV 和 11.4%的 ET 检测到血浆血栓球蛋白 β 和抗 pf4 /肝素抗体同时存在，而肝素暴露患者检测到的单一抗体为 0.3-3%。阳性和阴性患者在性别,年龄,血红蛋白水平,血小板计数方面的差异均无统计学意义(P 均>0.05)。总体而言，45%的 PV 患者发生血栓，13%的血浆血栓球蛋白 β 和抗 pf4 /肝素同时存在阳性，而无血栓的 PV 患者为 7.4%。观察血浆血栓球蛋白 β 和抗 pf4 /肝素抗体联合应用在不同 mpn 分类中的意义，发现其在 PV 和 ET 中联合阳性率明显高于其他组别。
结论 血浆血栓球蛋白 β 和抗 pf4 /肝素抗体是内源性的，在 MPN 中比肝素暴露时更频繁。血浆血栓球蛋白 β 和抗 pf4 /肝素 IgG 阳性 PV 的血栓风险增加，这反映了潜在的影响，需要更大的确证队列。PV 血栓形成时应评估血浆血栓球蛋白 β 和抗 pf4 /肝素 IgG，以避免抗 pf4 /肝素 IgG 阳性的 PV 使用肝素。

PU-0230

地中海贫血血液学表型和基因型相关性分析

熊君
南方医科大学珠江医院

目的 了解人群地中海贫血基因携带率，探讨地中海贫血不同基因型对血液学表型的影响以及 HbA2 的界值筛查地中海贫血的价值。
方法 收集 2016～2017 年期间来本院做地中海贫血诊断的患者或正常人的相关数据。采用回顾性分析方法，整理的数据资料包括基因诊断结果、血常规结果（MCV、MCH、HGB）以及电泳结果，计算地中海贫血基因人群总携带率以及各突变携带率，比较地中海贫血的常见基因型对血液学表型的影响程度，分析本院 HbA2 界值对诊断地中海贫血的影响。数据分析使用 Graphpad prism 6.0 。
结果 共收集本院 2234 例样本，实查正常人 1237 例以及地中海贫血携带者或患者 997 例。地中海贫血基因携带率 44.6%，人群突变携带率较高的前六种基因型依次为：(--SEA/)，24.5%；CD41-42(-CTTT)，7.7%；(-α3.7/)，7.1%；IVS-Ⅱ-654(C>T)，4.6%；CD17(AAG>TAG)，2.9%；(-α4.2/)，2.7%；-28(A>G)，1.7%。MCV、MCH 在 α-地中海贫血与 β-地中海贫血男女人群中没有差异，但是 HGB 男性比女性高；--SEA 血液学表型比(-α3.7/)和(-α4.2/)严重，(-α3.7/)和(-α4.2/)之间血液学表型没有差异；在 β- 地中海贫血中， -28(A>G) 突变影响表型较轻， CD41-42(-CTTT) 、IVS-Ⅱ-654(C>T)、CD17(AAG>TAG)之间没有血液学表型差异；(--SEA/)合并 CD41-42(-CTTT)突变血液学表型变轻。本院把 HbA2 界值提高至 2.8%降低了 α-地贫漏检率。
结论 本次调查分析真实地反映了本院地中海贫血检测的基本情况，为临床诊断地中海贫血提供可靠的参考资料。

基于 DIA 技术筛选结核性胸腔积液诊断标志物的研究

冶学燕、刘春燕、张新
新疆生产建设兵团医院

目的 采用数据非依赖采集（DIA）蛋白组学技术分析结核性胸腔积液（TPE）与其他性质胸腔积液间差异表达蛋白，旨在为 TPE 的诊断与鉴别诊断寻找潜在标志物。
方法 收集 2019 年 10 月至 2020 年 8 月于新疆生产建设兵团医院住院患者胸腔积液 102 例。采用 DIA 技术对 8 例 TPE、7 例恶性胸腔积液（MPE）和 5 例类肺炎胸腔积液（PPE）样本进行差异表达蛋白的比较分析，通过生物信息学研究手段筛选 TPE 潜在标志物并在 29 例 TPE、31 例 MPE 和 22 例 PPE 应用酶联免疫吸附试验（ELISA）验证，并评估潜在标志物在 TPE 中的诊断价值。
结果 初步筛选出 118 个 TPE 差异表达蛋白，通过蛋白-蛋白交互网络、蛋白通路和 TPE 组单独表达蛋白分析，最终筛选出了 7 个 TPE 潜在标志物（CORO1A、TUBB、SAA1、AGT、ICAM-1、HSPG2 和 IGF-2）。ELISA 结果显示，TPE 组的 CORO1A、TUBB、SAA1 和 AGT 浓度均高于 MPE 组和 PPE 组（P＜0.05），MPE 组与 PPE 组间差异无统计学意义（P＞0.05）；TPE 组中 ICAM-1 和 HSPG2 浓度均高于 MPE 组（P＜0.05），TPE 组与 PPE 组、MPE 组与 PPE 组间差异无统计学意义（P＞0.05）；IGF-2 浓度在三组间差异均无统计学意义（P＞0.05）。CORO1A、TUBB、SAA1 和 AGT 的受试者操作特征曲线（ROC）面积分别为 0.857、0.935、0.833 和 0.875，灵敏度分别为 0.724、0.862、0.724 和 1，特异度分别为 0.962、0.981、0.962 和 0.774。
结论 初步验证的 CORO1A、TUBB、SAA1 和 AGT 在 TPE 的诊断中具有较高的灵敏度和特异度，为 TPE 的诊断与鉴别诊断提供了新的方向。

PU-0232

METTL3 suppresses neuropathic pain via modulating N6-methyladenosine-dependent primary miR-150 processing

Le Zhang 、 Chuanxin Wang
The Second Hospital, Cheeloo College of Medicine, Shandong University

Purpose Neuropathic pain (NP) is a complicated, chronic pain state that is generally caused by tissue damage that affects the somatosensory nervous system. However, the therapeutic approaches for NP are not satisfactory mainly due to the lack of effective molecular targets. Therefore, finding novel predictive markers and new targets to cure NP are urgently needed. Recently, an increasing number of findings demonstrated that m6A methylation played essential roles in RNA biogenesis at post-transcriptional level. However, the potential role of m6A methylation in NP progression remains unknown. In this study, we sought to define the functional role of METTL3 in NP progression and elucidate the mechanism by which METTL3 regulates miRNA maturation to participate in NP.

Methods A spare nerve injury (SNI) was done in rats to imitate NP model. Paw withdrawal threshold (PWT) and paw withdrawal latency (PWL) were used for evaluation of hypersensitivity in NP. qRT-PCR, western blot and immune-histochemistry were performed to determine the quantity of involved genes. RNA immunoprecipitation and pulldown assays were employed for reveal the regulatory mechanism of miR-150 in NP.

Results To determine the expression of METTL3, we established NP rat model by using a SNI method. In response to the operation, PWL and PWT were significantly decreased and the concentrations of inflammatory cytokines including IL-6, TNF-α and IL-1β were significantly upregulated in SNI -NP rats while no significant change was identified in sham rats. Moreover, we found that METTL3 was significantly downregulated in NP rats compared to controls at both transcript and protein levels. Overexpressed METTL3 in rats by intrathecal administration of Lv-METTL3 significantly inhibited NP behaviors as evidenced by the elevated PWL and PWT and downregulated the concentrations of IL-6, TNF-α and IL-1β. While silencing METTL3 by constructing respective lentivirus could restore NP with decreased PWL, PWT and upregulated IL-6, IL-1β and TNF-α levels. Thereafter, we suppose that METTL3 may regulate NP progression via participating in the maturation of miRNAs by DGCR8. m6A methylation level was significantly increased in RN-SC cells by transfection of Lv-METTL3, whereas downregulated by deletion of METTL3. Consistently, m6A level in spinal cord was also regulated by METTL3 in SNI-NP rats. By performing co-immunoprecipitation, we observed a direct interaction between METTL3 and DGCR8, and this interaction could be reduced by Rnase in RN-sc cells (Fig. 3C), indicating that their binding might be modulated by miRNAs. We found that only miR-150 was significantly elevated upon upregulation of METTL3 and decreased by METTL3 deletion in spinal cord tissues. our results suggested that METTL3 induced miR-150 processing by mediating DGCR8 recognition in an m6A-dependent manner. m6A methylation is a characterized process which needs the involvement of m6A reader proteins, including YTHDFs. Thus, we revealed that YTHDF2, along with METTL3, mediated m6A methylation and regulate the processing of miR-150. As expected, inhibition of miR-150 in RN-sc cells dramatically reversed the METTL3-mediated suppression of IL-6, TNF-α and IL-1β. While miR-150 mimics could restore the shMETTL3-caused upregulation of neuroinflammation markers. Collectively, we revealed that miR-150 was essential for METTL3-modulated NP in vitro and in vivo. As METTL3 and miR-150 was tightly interacted, we sought to define whether BDNF was also regulated by METTL3. We found that overexpression of METTL3 reduced while deletion of METTL3 increased BDNF expression in RN-SC cells and SNI -NP rats. Our results verified BDNF was a direct target of miR-150 and regulated by METTL3. overexpression of BDNF in SNI rats could partly reverse METTL3-regulated suppression of NP progression, whereas deletion of BDNF interfered sh-METTL3-induced promotion of NP. Meanwhile, dysregulated BDNF also reversed the METTL3-mediated regulation on neuroinflammation. Taken together, we proved that METTL3 influence NP progression via regulating miR-150/BDNF signaling pathway. We then defined the expression

level of METTL3 in NP patients in remission after treatment, and found that METTL3 was dramatically downregulated in contrast to the level before treatment. Correlation analysis revealed a negative association between METTL3 and BDNF, miR-150 and BDNF.
Conclusion our study revealed that METTL3/YTHDF2-mediated m6A modification regulates NP progression via modulation of miR-150 processing and further suppressing BDNF expression. Moreover, serum METTL3 was upregulated in NP patients and may serve as promising diagnostic biomarker. Our study uncovers a strong evidence of METTL3-mediated m6A methylation in NP inhibition, which provides potential diagnostic and therapeutic target for NP treatment.

Performance verification of Ustar UC0102 rapid nucleic acid amplification detection analyzer for Sars-CoV-2 qualitative detection

Fan Chang
Sichuan Provincial People's Hospital, University of Electronic Science and Technology of China, Chengdu, China

Objection To verify the analytical performance of Ustar UC0102 rapid nucleic acid amplification detection analyzerfor Sars-CoV-2qualitativedetection.
Methods The accuracy, limitof detection and repeatability were validated according toChina National Accreditation Service for Conformity Assessment (CNAS) documents (CL02-A009 and GL039) and People's Republic of China Health Industry Standards document (WS/T 505-2017). In the meantime,the results obtained would be compared with the manufacturer statement.
Results Compared with the traditional fluorescent PCR method, the method compliance rate of Ustar UC0102 rapid nucleic acid amplification detection analyzer was 100%. The LoD of Sars-CoV-2 qualitativedetection was 200 copies/mL. The compliance rates of repeatability within and between batches, within and between days, within and between operators were all 100%.
Conclusion Performance verification of Ustar UC0102 rapid nucleic acid amplification detection analyzer for Sars-CoV-2 qualitativedetection was consistent with the manufacturer statement also in accordance with《Sars-CoV-2Nucleic Acid Testing Manual for Medical Institutions (Trial Version, Second Edition)》related standards, which could meet the expectant use of prevention and control to COVID-19.

干扰肽 TAT-T407 通过抑制 TRPV1-CDK5 的相互作用减轻缺血性脑卒中后神经凋亡的分子机制

冯潜[1,2,3]、李颖[1]、张震[3]、刘丹[3]、梁佳[3]、朱延东[3]、宋远见[2,3]
1. 徐州医科大学附属医院
2. 徐州医科大学遗传学教研室
3. 徐州市医学遗传与转化工程中心

目的 1. 探明干扰肽 TAT-T407 对缺血性脑卒中后运动和记忆的作用；2. 阐明干扰肽 TAT-T407 对缺血性脑卒中后运动和记忆起保护作用的可能分子机制。
方法 以雄性 C57BL/6J 小鼠为研究对象，以经典的 MCAO 模型模拟人缺血性脑卒中的疾病过程。通过旷场实验评估小鼠的自发活动，水迷宫实验评估小鼠的认知功能。采用 mNSS 评分评价小鼠神经功能缺失程度。通过 TTC 染色观测小鼠脑梗死体积，HE 染色观察杏仁核病理变，TUNEL 染色法检测细胞凋亡，IF 染色观察 CDK5 与 TRPV1 二者共定位。通过 Western blotting 检测 TRPV1、

Bcl-2，Bax，Caspase-3，Cleaved Caspase-3，Cytochrome c 以及 NOX2 的表达。采用 Co-IP 法检测 CDK5 与 TRPV1 的结合。
结果 与 sham 组相比，I/R 后小鼠同侧大脑半球有广泛梗死区。CPZ 或 TAT-T407 预处理可以明显减少 I/R 同侧大脑半球小鼠梗死体积，减小 mNSS 评分。进一步的研究表明，给予 CPZ 或 TAT-T407 肽导致梗死体积显著减少，并且这与再灌注后神经功能的改善平行相关。与 I/R 组相比，CPZ 或 TAT-T407 预处理可以明显改善在旷场实验中小鼠在运动总距离，穿格次数以及在中央区域的时间方面均表现出明显的运动行为学缺陷，改善在水迷宫实验中小鼠表现出明显的学习记忆行为学缺陷。I/R 与 sham 组相比 TRPV1 膜转位增强，Bcl-2/Bax 比值显著降低，凋亡效应分子 Cytochrome c 与 Cleaved Caspase-3 表达显著增强，氧化应激蛋白 NOX2 的表达显著增高。与 I/R 组、I/R+T407A 组相比，I/R+T407 组 TRPV1 膜转位减少，Bcl-2/Bax 比例提高，凋亡效应分子 Cytochrome c 与 Cleaved Caspase-3 表达显著减少，氧化应激蛋白 NOX2 的表达显著减低。紧接着，免疫共沉淀实验发现 TRPV1 与 CDK5 在小鼠 I/R 中结合增加，TAT-T407 预处理后 TRPV1 与 CDK5 在小鼠 MCAO 缺血模型再灌注中存在结合降低。进一步免疫荧光显示与 I/R 组、I/R+T407A 组相比，I/R+T407 组 TRPV1 与 CDK5 共定位减少，凋亡率明显下降。有趣的是，TAT-T407 效应是损伤特异性的，对假手术治疗的非缺血动物的细胞凋亡或认知功能几乎没有影响。
结论 小肽 TAT-T407 能够有效改善小鼠脑的缺血再灌注损伤，改善运动行为和认知功能，其机制是通过干扰 TRPV1 和 CDK5 的结合从而减少 TRPV1 向膜上的转移，抑制了凋亡通路的激活进而减轻了凋亡。

基于链置换反应的 RNA 检测新技术的建立

童尧、杜鲁涛、王传新
山东大学第二医院

目的 建立一种基于链置换反应的新型 RNA 检测新技术用于 mRNA 和 miRNA 检测。
方法 依据 SPHK1 mRNA 和 miR-19a 的序列设计特异性用于链置换的双链探针，对该检测方法的反应条件进行优化，合成序列单链 mimics 进行梯度稀释对该检测技术的灵敏性和特异性进行验证并绘制标准曲线。
结果 通过可行性分析发现 A2T2 可以对实验体系的荧光信号实现扩增效应，与目的分子不相关的 miRNA 单链 mimics 对实验组信号几乎没有影响。通过比较信噪比，发现 100nM A1T1、5nM A2T2 反应时间 20min 为最佳反应条件。为验证探针的性能，采用 RNA 模拟物进行梯度稀释，探究目的 RNA 浓度与荧光强度的线性关系。最佳实验条件下孵育后进行荧光强度测量发现该监测体系的线性范围在 1fM-100pM 之间。
结论 链置换反应是一种低成本反应快速、不依赖于热循环的新型 RNA 检测技术，在检测 1fM-100pM 浓度目的分子时拥有较好的稳定性与特异性，有望实施临床转化。

Hsa-piR-28395 促进结直肠癌细胞增殖与迁移侵袭

童尧、杜鲁涛、王传新
山东大学第二医院

目的 探讨 Hsa-piR-28395 在结直肠癌中的表达及其对结直肠癌细胞生物学行为的影响。
方法 采用 qRT-PCR 方法验证组织中 Has-piR-28395 在结直肠癌组织以及癌旁正常组织中的表达，同时检测正常结肠上皮细胞 CCDK841 和各结直肠癌细胞系 Hsa-piR-28395 的表达。利用 piRNA 单链 mimics 和 inhibitor 分别转染 Hsa-piR-28395 低表达和高表达细胞系，通过 RTCA、EdU 细胞

增殖实验、Transwell 和 invasion 实验检测过表达和敲减 Hsa-piR-28395 对结直肠癌细胞增殖、迁移、侵袭等生物学行为的影响。
结果 我们通过对结直肠癌组织和癌旁正常组织进行组织小 RNA 测序发现，结直肠癌组织中 Hsa-piR-28395 表达显著高于癌旁正常组织（P<0.05），同时对组织样本库中 50 对癌组织与癌旁正常组织进行 qRT-PCR 验证发现 Hsa-piR-28395 表达差异具有统计学意义。通过对不同细胞系进行 qRT-PCR 发现，相对于结直肠正常上皮细胞系 CCDK841，HCT116 和 SW1116 细胞系 Hsa-piR-28395 表达较低，SW480 和 SW620 细胞系表达高于 CCDK841。通过瞬时转染 Hsa-piR-28395 单链 mimics 和 inhibitor 进行细胞功能实验我们发现，相对于 control 组、HCT116 和 SW1116 过表达组细胞增殖、迁移能力及侵袭能力增强，差异有统计学意义（P<0.05）；SW480 和 SW620 敲减组细胞增殖速度、迁移能力及侵袭能力减弱（P<0.05）。
结论 Hsa-piR-28395 在结直肠癌中呈高表达，且过表达 Hsa-piR-28395 可促进结直肠癌细胞迁移、增殖、侵袭能力，可为结直肠癌治疗提供新的治疗靶点。

基于 DNA 水凝胶的沙眼衣原体 16S 核糖体 RNA 电化学生物传感器的开发

程玲军
厦门大学附属第一医院
厦门大学医学院

目前，临床迫切需要一种简单，定量的生物传感器来检测沙眼衣原体。本研究开发了一种快速、灵敏的沙眼衣原体 16S rRNA 电化学生物传感器，结合了 DNA 水凝胶的优异识别能力和较快的反应速率以及电化学传感技术的高特异性和高灵敏度。在没有靶标的情况下，电化学指示剂 HRP 嵌入 DNA 水凝胶中，因此无法生成信号。相反，靶标 rRNA 可以触发 DSN 反复水解 DNA 水凝胶并释放 HRP。然后，通过 BSA 载体平台捕获释放的 HRP。 HRP 催化 TMB 和 H2O2 之间的氧化还原反应，该反应由电化学工作站记录。电化学响应与沙眼衣原体的 16S rRNA 量成正比，在 10 fM 至 25 pM 范围内具有线性关系。检出限为 5.77 fM（S / N = 3），符合临床测试要求。此外，这种 DNA 水凝胶易于存储，检测时间仅需 90 分钟。因此，有望为广泛筛查生殖道病原体提供一种快速准确的定量检测方法。

miR-324-3p reverses cisplatin resistance by inducing GPX4-mediated ferroptosis in lung adenocarcinoma cell line A549

Shihua Deng
The First Affiliated Hospital of Chengdu Medical College

Purpose MicroRNAs act as crucial regulators of a diverse range of biological processes, including chemoresistance. Our study aimed to investigate the effect of miR-324-3p on lung adenocarcinoma cell line A549 resistant to cis-diamminedichloroplatinum II (DDP, aka cisplatin).
Methods The miR-324-3p expression levels in cisplatin-sensitive A549（A549） and cisplatin-resistantA549 (A549/DDP) cells were determined by qRT-PCR assay. Cell proliferation was determined with thecommercial kit CCK-8 and colony formation assay, whereas cell death was analyzed using flow cytometry. The target gene of miR-324-3p was identified and validated with

the luciferase reporter andwestern blot assays. The role of miR-324-3p in modulating cisplatin resistance was evaluated in vitro.
Results The expression of miR-324-3p was found to be significantly downregulated in the A549/DDPcells. Conversely, miR-324-3p overexpression reversed cisplatin resistance in the cells. With regard to the possible mechanism underlying this phenomenon, we identified the glutathione peroxidase 4 (GPX4)gene as the direct target of miR-324-3p, where overexpression of the gene reversed the miR-324-3p effect of sensitizing the A549/DDP cells to cisplatin. Furthermore, the GPX4 inhibitor RSL3 couldmimic the effect of miR-324-3p upregulation in increasing the sensitivity of the cisplatin-resistant cells to the drug. Significantly, miR-324-3p enhanced cisplatin-induced ferroptosis in the A549/DDP cells.
Conclusion Our findings revealed the role of the miR-324-3peGPX4 signaling axis in A549/DDP cells and how the targeting of this axis could be a potential strategy for reversing cisplatin resistance in human non small cell lung cancer (NSCLC).

PU-0239

TRPV1 调控缺血性脑卒中小鼠抑郁样行为和 PI3K-AKT-mTOR 通路的机制

冯潜[1,2,3]、李颖[1]、张震[3]、刘丹[3]、付燕燕[2]、周晓燕[2,3]、温相如[3]、宋远见[2,3]
1. 徐州医科大学附属医院
2. 徐州医科大学遗传学教研室
3. 徐州市医学遗传与转化工程中心

目的 探讨辣椒素受体（TRPV1）对小鼠神经元自噬和抑郁样行为的影响及分子机制。
方法 小鼠随机分为 Sham 组（假手术组），I/R 组（脑缺血/再灌注组），I/R+CPZ 组（CPZ 预处理的脑缺血/再灌注组）。采用线栓法建立小鼠 MCAO 脑缺血/再灌注模型，通过 mNSS 评分评价神经功能缺失程度，用悬尾实验检测小鼠的抑郁样行为，用 TTC 染色观测梗死体积，用 HE 染色观察杏仁核病理变化，用 Western blot 检测 Beclin-1、LC3、p62 及 p-mTOR 蛋白表达。使用 SPSS23.0 软件进行统计分析，两组间比较采用 t 检验，多组均数的比较采用单因素方差分析。
结果 与 I/R 组相比，TRPV1 抑制剂辣椒平（Capsazepine，CPZ）可明显改善小鼠神经功能缺损评分（t=3.097，P<0.01），并且明显改善小鼠焦虑和抑郁样行为（t=2.941，P<0.01），减少脑梗死体积（t=6.595，P<0.001），减轻小鼠杏仁核病理，下调自噬相关蛋白 Beclin-1（t=2.937，P<0.05）和 LC3（t=3.158，P<0.05）的表达水平，显著上调 p62（t=3.601，P<0.05），p-PI3K（t=7.789，P<0.01），p-AKT（t=4.152，P<0.01）和 p-mTOR（t=6.145，P<0.001）表达水平。
结论 脑缺血/再灌注激活神经元自噬，而 CPZ 可能调控 PI3K-AKT-mTOR 通路，进而抑制自噬的过度激活，从而起到神经保护和改善卒中后抑郁样行为的作用。

A Review on the Role of Micro-ribonucleic Acid in Gastric Cancer

Xinlin Li
Affiliated Hospital of Xuzhou Medical University

MicroRNAs(miRNA)are a class of endogenously-initiated non-coding RNAs that negatively regulate the expression of genes at the post-transcriptional level. MiRNA are responsible for many physiological processes，including cell growth and differentiation，maintenance of internal environmental stabilization and immune response. MiRNA exists stably in human serum and participates in many important regulation of the life process, but also confirmed that the

occurrence and development of tumors play an important role in the process. Tumor-specific circulating miRNAs have been recognized as a potential non-invasive cancer biomarker. It plays a carcinogenic or tumor suppressor role in Gastric cancer. Gastric Cancer is one of the most common digestive system tumors. Researches have demonstrated that miRNAs act as potential oncogenes in Gastric Cancer. This articleintroduces the expression and roles of miRNA in Gastric Cancer and the latest progress of their therapeutic effects.

基于电化学生物传感器检测环状 RNA 在肿瘤中的应用

魏雪菊[1,2]、洪国斋[1,2]
1. 厦门大学附属第一医院
2. 厦门市基因检测重点实验室

环状 RNA（circRNA）是最新确认的一类特殊的非编码 RNA，主要由外显子经非线性反向剪接形成。研究发现，circRNA 在人体细胞中广泛表达，在转录、转录后水平均具有调控基因表达的重要功能。有些 circRNA 具有天然微小 RNA（microRNA,miRNA）海绵作用，可通过与 miRNA 结合抑制其活性，从而调控 miRNA 靶标发挥作用。circRNA 在动脉粥样硬化，神经系统紊乱，糖尿病和肿瘤等疾病发生过程中起着较为重要的作用。因此，circRNA 的检测技术引起了人们的关注。电化学生物传感器属于化学传感器的一种，其将电化学换能器的高灵敏度与生物识别过程的高特异性结合在一起。由于电化学检测方法具有高灵敏度、高特异性、低成本等优点,因而在生化研究和临床分析等领域具有较大的应用价值。本文将对电化学生物传感器在环 RNA 检测的研究进行系统阐述。

遗传性肿瘤高通量测序结果的致病性分类与临床意义分级同步解读建议

邹秋艳[1]、喻长顺[1,2]
1. 天津金域医学检验实验室有限公司
2. 广州医科大学金域检验学院

随着高通量测序技术尤其是全外显子组测序技术的迅猛发展，肿瘤患者在辅助诊断、用药治疗和预后监测的及时性、精准性不断提高；精准的基因检测更是病种多、发病率低的遗传病患者查询病因、产前预防不可替代的诊断方法。因而，从患者个体的基因组数据库中鉴定出致病性突变，精准解读并出具有临床辅助价值的基因检测报告愈加重要且更具挑战。事实上，目前基因检测报告中基因变异的致病性分类不能与临床医生所关注的病例因果关系、临床诊断意义划等号，也不能很清晰的服务临床。此外，随着实验室数据分析人员与临床医生的频繁接触与沟通，本实验室发现依据 ACMG 指南出具的基因检测报告还存在一定的不足，该指南缺少基于病例水平的临床指导意义的分级标准，且没有功能多态性的概念描述。

为了进一步完善数据解读指南，将 NGS 检测报告更便于临床医生理解与使用，本实验室建议，在基于 ACMG 指南基因变异的致病性分类法的基础上增加“功能多态性变异”用于描述那些已知与特定的非疾病性的表型相关的变异；并且在临床意义的分级办法中增加“意外发现的具有重要临床意义的变异”，将与病例主诉无关的“意外发现”的致病性变异或与病例主诉无关的外显率较高、可引起严重损害、提前诊断可以使病例获益的致病性变异的临床意义均划分为此类。本实验室参考肿瘤体细胞变异的临床意义分级标准，提议遗传病胚系基因检测报告中补充临床意义分级，并自创 5 级分类标准。本文结合一例林奇综合征病例基因检测报告分析过程，阐述了基因检测报告中应当同时描

述基因变异的致病性分类和临床意义的分级，以提高基因检测报告的严谨性，降低基因检测报告被误读的风险。本方案的实施将进一步促进实验室分析人员与临床医生之间的相互理解，为临床遗传性肿瘤的数据解读提供新的范式，更有利于基因检测报告的解读和遗传咨询。

PU-0243

A preliminary study of risk factors for hematoma expansion and its predictive value in patients with spontaneous cerebral hemorrhage

Er Huang、Qishui Ou
The First Affiliated Hospital of Fujian Medical University, Fuzhou, China

Objective By analyzing the imaging and clinical laboratory findings of our patients with spontaneous cerebral hemorrhage. We explore the factors associated with early hematoma enlargement in patients with sICH and its predictive value for hematoma enlargement, so as to provide guidance for the occurrence and prognostic assessment of clinical sICH patients.
Methods The clinical data of 116 patients with sICH admitted to the First Hospital of Fujian Medical University were retrospectively analyzed, and the 116 patients were divided into hematoma enlargement group and hematoma non-enlargement group according to the head CT imaging findings, and the general clinical information and laboratory examination data of the patients were collected to analyze the value of factors affecting early hematoma enlargement and independent influencing factors of hematoma enlargement on the occurrence of hematoma enlargement.
Results There were significant differences in cerebrospinal fluid chlorine, hematoma shape, initial hematoma volume, admission GCS score, hematoma clearance, blood glucose, lipoprotein a, cystatin C, homocysteine, bicarbonate and procalcitonin between the two groups ($P<0.05$).Multifactorial regression analysis identified hematoma shape, hematoma removal, initial hematoma volume, admission GCS score, cerebrospinal fluid Cl, bicarbonate, and calcitoninogen as independent risk factors. Predictive effect evaluation analysis of admission GCS score ≤6.5 had the highest sensitivity for predicting the occurrence of hematoma enlargement in patients with sICH, and hematoma debridement had the highest specificity for predicting hematoma enlargement. Combining the above seven independent influencing factors had the highest predictive value for the development of hematoma enlargement in patients with sICH, with a combined diagnostic ROC curve area (AUC) of 0.801, $P<0.001$
Conclusion Cerebrospinal fluid chlorine, hematoma shape, initial hematoma volume, admission GCS score, hematoma clearance, blood glucose, lipoprotein a, cystatin C, homocysteine, bisarbonate and calcitonin were the original factors affecting hematoma enlargement in sICH patients.Cerebrospinal fluid chlorine, hematoma shape, initial hematoma volume, admission GCS score, hematoma clearance, bicarbonate and calcitonin were independent risk factors for hematoma enlargement in patients with sICH.

PAI-1、MTHFR、APOE 基因多态性与静脉血栓栓塞症的相关性研究

方笑涵、徐永艳、赵晓涛
北京大学人民医院

目的 探究纤溶酶原抑制物激活物（PAI-1）、亚甲基四氢叶酸还原酶（MTHFR）和载脂蛋白 E（APOE）的基因多态性与静脉血栓栓塞症的相关性。
方法 选择 2019 年 10 月到 2021 年 02 月中就诊于本院血管外科的住院患者或门诊已确诊的静脉血栓栓塞症患者，平均年龄为 57.7±6.4 岁，排除易栓症诊断的患者与有明显诱发因素的患者，共 215 人作为实验病例组。同时选择本院体检中心健康志愿者共 200 名作为对照组。两组患者均使用 PCR-Sanger 测序技术进行 PAI-1 rs1799762 位点、MTHFR C677T rs1801133 位点、APOE rs429358 位点和 rs7412 位点的基因多态性检测。
结果 PAI-1 三种基因型 4G4G、4G5G、5G5G 在病例组中的出现频率分别为：40.5%、49.8%、9.7%，而在对照组中三种基因型的分布为：19.5%、34.5%、46%; MTHFR 三种基因型 CC、CT、TT 在病例组中的出现频率分别为：15.8%、40.9%、43.3%，而在对照组中这三种基因型的分布分别为：43.5%、35.5%、21%; APOE 三种亚型 APOE2、APOE3、APOE4，在病例组中这三种亚型的分布频率为 14.9%、62.8%、22.3%，而在对照组中这三种亚型的分布分别为 38.0%、54.0%、8.0%，其中 PAI-1 4G 等位基因在病例组中的出现频率 65.3%，在对照组中为 36.7%; MTHFR T 等位基因在病例组中的出现频率 63.7%，在对照组中为 38.7%; APOE4 亚型在病例组中的出现频率 22.3%，在对照组为 8.0%，三组基因的病例组均明显高于对照组（P<0.01），结果具有统计学意义。
结论 PAI-1 基因 4G 基因型、MTHRF T 基因型以及 APOE4 亚型基因多态性均与静脉血栓栓塞症相关，可作为临床参考依据辅助临床医生对患者进行静脉血栓栓塞症的相关风险预测。

PU-0245

Comprehensive analysis of TPX2 in Head and neck squamous cell carcinoma with prognostic values

miaomiao chen、wenjun Cao
Eye & ENT Hospital, Fudan University

Objective Targeting protein for Xenopus kinesin-like protein 2 (TPX2) is a microtubule-associated protein required for mitosis and spindle assembly. It has been revealed that TPX2 is overexpressed in various human cancers and promotes cancer progression, while its role in head and neck squamous cell carcinoma is unknown. We aimed to demonstrate the relationship between TPX2 and head and neck squamous cell carcinoma.
Methods This study investigated the expression and roles of TPX2 in HNSC using Oncomine, The Cancer Genome Atlas, UALCAN, Human Protein Atlas, Clinical Proteomics Tumor Analysis Consortium, GeneMANIA, Tumor IMmune Estimation Resource, GEPIA databases.
Results High mRNA and protein expression of TPX2 members were found to be significantly associated with clinical cancer stages, nodal metastasis status, and patient’s gender in HNSC patients.
Conclusion Taken together, these results indicated that TPX2 could be a potential target in the development of anti-HNSC therapeutics and an efficient marker of the prognostic value of HNSC.

Long noncoding RNA LINC01119 promotes neuropathic pain by stabilizing BDNF transcript

Le Zhang 、 Chuanxin Wang
The Second Hospital, Cheeloo College of Medicine, Shandong University

Purpose Neuropathic pain (NP) is a complicated, chronic pain state that is generally caused by tissue damage that affects the somatosensory nervous system. NP is linked with multiple diseases, commonly caused by Shingles (postherpetic neuralgia, PHN), diabetes (painful diabetic neuropathy, PDN) and others including trauma, stroke or cancer. In recent years, lncRNAs were reported to play essential roles in various diseases, including cancer, cardiovascular, diabetes and neuropathy-related affaires. However, the expression pattern, biological function, and underlying mechanism of lncRNAs in NP remains unclear. Previously, we identified the essential role of BDNF in NP progression. However, how BDNF was regulated and the functional link between lncRNA and BDNF was not defined. Therefore, our study aims to uncover the essential role of LINC01119 in NP progression and further clarify the underlying regulatory mechanism at post-transcriptional level.

Methods A spare nerve injury (SNI) was done in rats to imitate NP model. Paw withdrawal threshold (PWT) and paw withdrawal latency (PWL) were used for evaluation of hypersensitivity in NP. qRT-PCR, western blot and Immunofluorescence staining were performed to determine the quantity of involved genes. RNA immunoprecipitation and pulldown assays were employed for reveal the regulatory mechanism of LINC01119 in NP.

Results LINC01119 expression was significantly upregulated in the spinal cord tissues of SNI group compared to controls, and PWL and PWT were significantly decreased in SNI rats while no significant change was identified in sham rats. Functionally, silence of LINC01119 significantly suppressed NP behaviors and downregulated the concentrations of IL-6, IL-1β and TNF-α. Mechanistically, BDNF was downregulated in spinal cord tissues after injection of sh-LINC01119, suggesting that LINC01119 may influence NP via regulating BDNF expression in spinal cord areas. In addition, BDNF was also suppressed by silence of LINC01119 in rat microglia cells. Analysis with ELISA showed that BDNF overexpression by intrathecal injection of Lv-BDNF could partially attenuate the suppressive effect of sh-LINC01119 on the expressions of IL-6, TNF-α and IL-1β in SNI rats. Consistently, the effects on NP-like behaviors caused by knockdown of LINC01119 were also abrogated by overexpression of BDNF. Besides, an RNA binding protein, ELAVL1 could directly interact with LINC01119, and this formed LINC01119- ELAVL1 complex binds to BDNF mRNA, strengthening its RNA stability and increasing the expression level of BDNF at both transcript and protein levels. Downregulation of ELAVL1 by intrathecally injection of sh-ELAVL1 induced decreased expression of BDNF in spinal cord at both transcript and protein levels, suggesting that ELAVL1 may function synchronously with the interaction of LINC01119. To demonstrate whether silenced ELAVL1 reverses LINC01119-mediated NP production, Lv-LINC01119 and sh-ELAVL1 vectors were injected intrathecally into SNI rats. The results showed that silencing ELAVL1 abrogated the LINC01119-mediated NP behaviors. Taken together, the above data suggests that LINC01119-ELAVL1 complex may directly bind to BDNF mRNA and regulate its stability, thereby causing NP progression. Clinically, By detecting the expression level of LINC01119 in serum samples, we verified that LINC01119 was significantly upregulated in NP patients compared to healthy individuals. ROC analysis indicated a high diagnostic potential of serum LINC01119 in differentiating NP and healthy population. By stratifying all populations into a high and a low LINC01119-level group based on the stratification criterion of 1.32 according to the ROC curve, we revealed that the proportion of NP patients was much higher in high LINC01119-level group when compared to that of low LINC01119 group, which further indicates LINC01119 is a promising diagnostic marker.

Conclusions To conclude, our study revealed the novel contribution of LINC01119/ELALV1/BDNF axis in NP progression. LINC01119 induces NP progression via

binding with ELAVL1 and increasing BDNF mRNA stability and expression level. Our discovery not only help us get a better understanding on the regulatory potential of LINC01119 in NP, but also useful for finding promising drug targets and developing novel therapeutic strategies to overcome NP.

单细胞测序技术在恶性肿瘤研究中的应用进展

朱俊梅
苏州市独墅湖医院（苏州大学附属独墅湖医院）

目的 简要综述单细胞测序技术在恶性肿瘤研究中的应用进展。
方法 查阅国内外近年来单细胞测序技术在肿瘤异质性研究的相关文献进行总结。
结果 随着单细胞分离技术以及基因测序技术的快速发展，单细胞测序技术已在微生物学、神经科学及肿瘤学等生物医学领域中展示出广泛的应用前景，对于癌症早期的诊断、追踪以及个体化治疗具有重要意义。相比于传统的群体多细胞测序技术，单细胞测序技术能够对单个细胞的性质和功能进行分析，揭示其异质性，解析细胞谱系及其之间的关系，且能够对数量稀少的特殊细胞的特性进行探索。作为恶性肿瘤的主要特征之一，肿瘤异质性影响肿瘤的生长、侵袭、转移和耐药性等。
目前，单细胞测序主要可分为基因组、转录组、表观基因组和蛋白质组测序。相比于单一组学技术，单细胞多组学技术可以在同一细胞中获得多个层面的组学信息，能够更全面地反应细胞特性，有利于更系统地了解肿瘤细胞异质性、多样性及生物学机制，推动肿瘤精准医学发展。
单细胞测序的关键步骤包括：单细胞分离、扩增及建库、高通量测序、数据分析。其中，单细胞的分离和扩增对测序结果的准确性具有关键性作用，也是单细胞测序的技术难点。随着技术的不断发展，扩增的覆盖度和灵敏度都在不断提高，单细胞测序技术将展现出更强的应用价值，有望开发新的单细胞测序产品，推进肿瘤的精准诊疗。
结论 单细胞测序技术能够在单个细胞的不同组学水平上反映细胞的异质性，展现肿瘤异质性以及肿瘤演化，有利于研究肿瘤的发展机制和转移机制，也为恶性肿瘤的临床诊治提供了新视角和新思路。

CircHN1 affects cell proliferation and migration in gastric cancer

张宇
南京鼓楼医院

Background Increasing evidence indicates that circular RNAs (circRNAs) are dysregulated in human cancers. The biological roles of circRNAs in gastric cancer (GC) have not been well-characterized.
Methods The GEO database was used to analyze circRNA expression profile in GC. The biological roles of circRNAs in cell proliferation, migration, and invasion were determined by cell counting, colony formation, transwell migration, Matrigel invasion. The interactions between circRNAs and miRNAs were verified by RNA immunoprecipitation and luciferase reporter assays.
Results We found that circHN1 was upregulated in GC tissues and cell lines compared to adjacent non-tumor tissues and normal gastric epithelial cells. circHN1 silencing significantly promoted GC cell growth, colony formation, migration, and invasion. MiR-1248 and miR-375 were predicted to interact with circHN1 by bioinformatic analyses and experimental verification.
Conclusion CircHN1 is aberrantly expressed in GC and affects the proliferation and migration of gastric cancer cells by acting as miRNA sponge.

PIWI-interacting RNAs serve as promising diagnostic biomarkers of lung adenocarcinoma

Juan Li、Lutao Du、Chuanxin Wang
The Second Hospital of Shandong University

Purpose Lung cancer is the malignant tumor with the highest morbidity and mortality, and lung adenocarcinoma (LUAD) is the main subtype of primary lung cancer. Recent studies have shown that piwi-interacting RNAs (piRNAs), as a type of small non-coding RNAs, may play crucial roles in the progression of cancer and serve as biomarker for tumor detection This study aimed to explore the profiles and diagnostic value of piRNAs in LUAD.
Methods Small RNAs sequencing was analyzed to investigate the tissue piRNA profiles from 5 LUAD patients. The top 10 upregulated piRNAs were selected and evaluated by reverse transcription quantitative real-time PCR (qRT-PCR) in 14 LUAD tissues and paired non-tumor tissues, as well as serum exosome samples of 70 LUAD patients and 57 healthy people. Exosomes were extracted from serum samples by ExoQuickTM kit and identified by transmission electron microscope (TEM), nanoparticle tracking analysis (NTA) and western blotting assays. Receiver operating characteristic (ROC) curve was performed to quantify the diagnostic potentials of piRNAs in LUAD. Finally, piRNAs-panel was developed by multivariate logistic regression model.
Results We found that 85 differentially expressed piRNAs by the critecia of fold change ＞2 and p ＜0.05, of which 76 piRNAs were highly expressed and 9 piRNAs were lowly expressed in LUAD tissues compared to adjacent non-tumor tissues. Among the top 10 overexpressed piRNAs, 4 piRNAs levels were verified to be significantly upregulated in LUAD tissues. Then, piR-hsa-26925 and piR-hsa-5444 were found to be obviously higher levels in serum exosomal samples of LUAD patients than health controls, and the area under the ROC curve (AUC) were 0.751 and 0.713. Furthermore, we established the 2 piRNAs-panel combined piR-hsa-26925 with piR-hsa-5444 by multivariate logistic regression analysis, which showed higher diagnostic performance with the AUC of 0.833 for LUAD.
Conclusion Our finding suggested that piRNAs were abnormally expressed in LAUD, and serum exosomal piR-hsa-26925 and piR-hsa-5444 could serve as potential biomarkers for LAUD diagnosis.

PU-0250

VN1R5 基因调控头颈部鳞状细胞癌顺铂耐药的机制

郭海艳
上海交通大学医学院附属第九人民医院

目的 本研究的目的在于深入阐明头颈部鳞状细胞癌（HNSCC）顺铂化疗耐药的分子机制，为临床逆转顺铂化疗耐药提供数据支持。
方法 通过蛋白质谱法分析顺铂敏感和顺铂耐药癌细胞中异常表达的蛋白质，qPCR 和蛋白质免疫印迹验证顺铂相关蛋白；使用 CRISPR/cas9 技术在 HNSCC 细胞中敲除 VN1R5 基因；为了探索 VN1R5 调控的下游靶点，对 VN1R5 敲除或过表达的 HNSCC 细胞进行基因微阵列分析；通过使用 Smart Silencer 沉默细胞中 lnc-POP1-1 的表达；反义寡核苷酸 (ASO)用于沉默动物实验中的 lnc-POP1-1。相反，通过慢病毒表达载体在细胞中过表达 lnc-POP1-1。
结果（1）蛋白质谱的结果显示，与顺铂敏感细胞株（HN4 和 HN30）相比，顺铂耐药细胞 HN4/DDP 和 HN30/DDP 中 VN1R5 蛋白表达水平显著升高。（2）在 HNSCC 临床样本中，与 TPF 方案敏感组织相比，VN1R5 在 TPF 方案耐药组织中高度表达。并且 VN1R5 高表达组患者 5

年生存率明显低于 VN1R5 低表达组。（3）体外实验结果显示，VN1R5 敲除导致顺铂的 IC50 值显著降低。相反，VN1R5 过表达显著增加顺铂的 IC50 值。（4）在动物实验中，VN1R5 敲除组的肿瘤体积和重量显著低于对照组。（5）基因芯片的结果证实，lncRNA lnc-POP1-1 是 VN1R5 的下游靶标。在临床样本中，Lnc-POP1-1 表达与 VN1R5 表达呈正相关。（6）lnc-POP1-1 沉默导致 HN4/DDP 和 HN30/DDP 细胞中顺铂的 IC50 显著降低。lnc-POP1-1 的过表达增加了顺铂的 IC50。（7）在动物实验中， lnc-POP1-1 敲低组的肿瘤体积和重量显著低于对照组。此外，lnc-POP1-1 过表达组的肿瘤体积和重量显著高于对照组。
结论 在这项研究中，我们鉴定了一个关键的顺铂耐药相关蛋白—VN1R5。VN1R5 通过 cAMP 途径促进 lnc-POP1-1 的转录，导致 HNSCC 细胞发生顺铂的获得性耐药。

涉及三条常染色体复杂易位病例分享

尹燕军、柯江维
江西省儿童医院

患者　女，1 天，以新生儿心肺复苏 1 小时为主诉入院。系第 1 胎第一产，胎龄 38+6 周，剖宫产，宫内窘迫史，羊水污染，出生时有窒息史，行气管插管及心肺复苏等治疗。查体发现双瞳孔欠清，角膜模糊、浑浊。完善检查心超提示房间隔缺损（II），动脉导管未闭肺动脉高压。B 超提示双肾下极于脊柱前方融合（马蹄肾？）；腹腔局部肠管干瘪，未及明显内容物。肺部 X 片提示新生儿肺炎。患者多发畸形首先考虑先天遗传病，行外周血染色体检查及全外显基因检测。

患者染色体核型为：46，XX，t(3；7；12)(3pter→3p13::7p21→7q36::3q22→3qter；7pter→7p22::12p11→12pter；3q21→3p12::12q11→12qter)见图 1。全外显子测序检测**结论** 检测与患者表型部分相关的临床意义未明变异，高通量测序数据提示 9 号染色体短臂有片段重复可能。

不同乙型肝炎患者体内 HBV-DNA 载量对血小板参数变化的影响分析

谢铠何
苏州市独墅湖医院（苏州大学附属独墅湖医院）

目的 血小板生成素（thrombopoietin，TPO）其产生部位至今无明确的结论，肝脏有可能是 TPO 产生部位之一，因此乙型肝炎患者有可能影响血小板的产生。本研究分析乙型肝炎患者体内 HBV-DNA（乙肝病毒 DNA）载量对血小板相关参数变化的影响，为临床乙型肝炎患者的治疗提供参考。
方法 随机抽取 2020 年 3 月到 2020 年 10 月徐州市中医院的门诊及住院患者禁食 12h 后的 274 份乙肝表面抗原（HBsAg）阳性血标本，检测患者血清中的乙肝病毒基因 HBV-DNA 载量，同时检测患者血小板的 6 项参数，包括血小板的计数、血小板比率、血小板的比容、平均血小板的体积、血小板分布宽度和血小板生成素。使用多功能酶标仪（奥地利 Anthos，Anthos2010）检测 TPO 的含量。将健康体检 HBsAg 阴性无基础疾病的 274 人作为正常对照组比较不同。HBV-DNA 载量组血小板参数的变化，分析不同乙型肝炎患者 HBV-DNA 载量和乙肝相关的肝硬化 Child-Pugh 分级对血清 TPO 和血小板相关参数的影响。
结果 不同乙型肝炎患者随着体内 HBV-DNA 载量的不同，血小板参数也存在着明显的差异，并且随着载量的增大，PLT（血小板）、PCT（血小板压积） 和 TPO 减少，而 P-LCR（大血小板比例）、 MPV（平均血小板体积） 和 PDW（血小板分布宽度） 增大；Child-Pugh A 级、B 级、C

级血清 TPO 均低于正常对照组；随着肝损伤的严重程度的加深，MPV、PDW 和 P-LCR 升高；慢性肝衰竭组和肝硬化组 PLT、PCT 和 TPO 低于慢加急肝衰竭组。
结论 血小板参数的变化能够在临床上更好的判断 HBV 复制的严重性，对于乙型肝炎患者的血小板参数出现严重异常者可以判断是否为病毒复制严重，及时采取抗病毒治疗，以减轻 HBV 对骨髓的抑制作用。

Weighted gene co-expression network analysis of hub genes in lung adenocarcinoma

Xuan Luo 、Lei Feng、Wenbo Xu、Xuejing Bai、Mengna Wu
Department of Laboratory, People's Hospital of Yuxi City （Department of Laboratory, The Sixth Affiliated Hospital of Kunming Medical University）

Lung adenocarcinoma (LUAD) is a tumor with high incidence. This study aimed to identify the central genes of LUAD. LUAD were analyzed by weighted gene co-expression network (WGCNA), and differentially expressed genes (DEGs) were identified. Samples were obtained from The Cancer Genome Atlas (TCGA) and Genotype Tissue Expression (GTEx) databases and included 515 LUAD samples and 347 normal samples. The WGCNA algorithm generated a total of 10 modules. The top 2 modules (MEturquoise and MEblue) with the highest correla_x0002_tion to LUAD were selected. Ten Hub genes (IL6, CDH1, PECAM1, SPP1, THBS1, HGF, SNCA, CDH5, CAV1, and DLC1) were screened in the intersecting genes of DEGs and WGCNA (MEturquoise and MEblue). Only SPP1 was correlated with LUAD poor survival, indicating that SPP1 may be a key Hub gene for LUAD. The competing endogenous RNA (ceRNA) network was constructed to analyze the regulatory relationship of Hub genes, and SPP1 may be directly regulated by 4 microRNAs (miRNAs) and indirectly regulated by 49 long noncoding RNAs (lncRNAs).

PU-0254

HPV 整合引起的宿主靶基因功能异常参与宫颈癌的发生

张瑞阳
上海交通大学医学院附属第九人民医院

本研究通过综合分析 HPV 病毒宿主整合序列，探究 HPV 在人类基因组上的整合特点，并通过对 HPV 整合影响的宿主靶基因的功能注释分析，探明 HPV 整合靶基因在宫颈癌发生中所起的作用。文献检索收集 HPV 整合位点。通过 GO 及 KEGGpathway 数据库对整合靶基因进行功能注释分析。Real-timePCR 检测整合靶基因在宫颈癌组织及细胞系中的表达，流式细胞术检测细胞周期分布，EdU 掺入实验检测细胞增殖。通过文献检索收集到 499 个 HPV 整合位点。通过对这些整合位点分析，我们发现 HPV 整合在人类基因组中染色体上的分布有热点区域，并且整合易发生在基因内部尤其是外显子区、基因密集区域和转录活跃区等与基因功能密切相关的区域，这样的整合特点为 HPV 整合影响宿主基因的表达和功能提供了前提条件。随后通过对整合靶基因进行功能条目和信号通路聚类分析发现，这些基因显著富集于肿瘤相关功能条目和信号通路，如“血管生成”、“细胞分化”、“转录调控”、“细胞增殖”、“基因表达”、“细胞死亡调控”、“细胞粘附”、“ErbB 信号通路”、“mTOR 信号通路”、“癌症信号通路”等与肿瘤发生发展相关的条目。可见，受 HPV 整合影响的整合靶基因与宫颈癌密切相关。进一步对 HPV 整合片段与整合靶基因的互作机制研究发现，HeLa 细胞中整合的 HPV 片段与下游靶基因 MYC 存在远程调控作用，且通过 CRISPR-Cas9 技术敲除整合的 HPV 片段可以下调 MYC 基因的表达，引起 HeLa 细胞发生凋亡，进一步证明了整合靶基因在宫颈癌中的重要作用。最后，为了从整合靶基因中筛选出更多的宫颈癌相关基因，通过对整合靶基因进

行定量分析发现，部分整合靶基因在宫颈癌组织中异常表达。对异常低表达的整合靶基因 MPPED2 进行功能研究发现，其可作为抑癌基因抑制宫颈癌细胞的细胞周期转换及细胞增殖。HPV 整合可通过影响整合位点周围宿主靶基因功能参与宫颈癌的发生。

靶向 PFKFB3 调控 CD4+T 细胞分化缓解实验性自身免疫性脑脊髓炎的机制研究

王清泰
福建省第二人民医院

多发性硬化症（multiple sclerosis，MS）病人会发生间断的或持续的髓鞘损伤，炎症病灶和脱髓鞘病变使其主要的病理指征。尽管人们对 MS 进行了多年研究，但其病因及病理机制尚未完全明了，目前亦无能彻底治疗 MS 的药物。PFKFB3 被证明参与多种免疫性疾病的发生。在本研究中，我们发现，在 MS 动物模型实验性自身免疫性脑脊髓炎（experimental autoimmne encephalomyelitis，EAE）小鼠中 PFKFB3 高表达，采用 PFK15 干预 PFKFB3 作用能够显著降低 EAE 小鼠疾病的严重程度，促进 EAE 小鼠的生存并改善其临床评分，但对脾脏和 CNS（central nervous system）中炎症细胞的比例并没有显著影响。进一步通过体内外研究发现，PFK15 可抑制 Th1、Th17 细胞分化而促进 Treg 细胞的分化，从而重建 EAE 疾病小鼠体内 Th1/Th17/Treg 细胞平衡，缓解 EAE 疾病进展。我们还发现，PFK15 对 Th1/Th17/Treg 细胞分化平衡的调控可能依赖于其对 mTOR 表达的调控。这些研究结果表明，靶向抑制 PFKFB3 能够在体内和体外调控 Th1/Th17/Treg 细胞分化平衡，有望成为治疗 MS 的新靶标。

PU-0256

肝细胞癌组织和癌旁组织中乙肝病毒前 S 基因分析

朱平安
深圳市盐田区人民医院

目的 分析肝细胞癌组织和癌旁组织中乙肝病毒前 S 基因，了解其变异情况。
方法 采用巢式 PCR 和琼脂糖凝胶电泳的方法对 100 份肝细胞癌组织和癌旁组织中乙肝病毒前 S 基因进行扩增和分析。选择第二轮前 S 基因目的片段,正反链测序，并与 HBV 参考序列（AY518556）进行比对。
结果 肝癌组织及癌旁组织乙肝病毒前 S 基因检出率分别为 44%、43%。10 份肝癌组织乙肝病毒前 S 基因缺失片段，其中 pre-S1 突变体占 50.00%（5/10），pre-S2 突变体占 10.00%（1/10），pre-S1+pre-S2 突变体占 40.00%（4/10）。6 份标本肝细胞癌组织和癌旁组织 HBV 前 S 基因同时阳性，HCC14、HCC64 缺失位置和片段不一致，包含 pre-S1、pre-S1+pre-S2 突变体，其它肝癌组织及癌旁组织存在点突变。癌旁组织 2 份标本 HBV 前 S 基因缺失，HCCP76、HCCP85 存在 pre-S1+pre-S2 突变体，15 个标本前 S 基因存在点突变。肝细胞癌组织 HBV pre-S73、HBV pre-S82 和癌旁组织 HBV pre-S8 存在插入突变。肝癌组织 HBV pre-S35、HBV pre-S60、HBV pre-S64、HBV pre-S73 序列内含终止密码子，提前终止翻译，导致截短前 S 蛋白和改变蛋白质结构。另外，肝癌组织测序阳性 22 份，其中 C 基因型 5 份，B 基因型 17 份，分别为 22.73%（5/22）、77.27%（17/22）；癌旁组织测序阳性 17 份，其中 C 基因型 2 份，B 基因型 15 份，分别占 11.76%(2/17)、88.24%（15/17）。
结论 肝细胞癌组织和癌旁组织乙肝病毒前 S 基因出现缺失突变和插入突变，导致截短乙肝病毒前 S 蛋白或蛋白改变，可能与肝细胞癌发生相关。

PU-0257

组蛋白去甲基化酶 JMJD3 调控辅助型 CD4+T 细胞增殖和分化在类风湿性关节炎中的作用

王清泰
福建省第二人民医院

目的 类风湿性关节炎（rheumatoid arthritis，RA）是一种慢性、全身性的自身免疫性疾病，以滑膜关节病变为主，在全世界的发病率为 1%，其主要病理改变为关节滑膜炎症，随着病情进展可出现软骨和骨破坏以及关节重构，其确切的病因和发病机制尚未完全明了，可能与遗传、感染、自身抗体和环境因素相关。近年表观遗传调控对 RA 的作用机制已引起了人们的极大关注，而组蛋白去甲基化酶 JMJD3 作为重要的表观遗传分子，可使发生双甲基化和三甲基化的组蛋白 H3K27 去甲基化，调控细胞发育分化等生命活动。本研究探讨组蛋白去甲基化酶 JMJD3 调控 RA 患者外周血 $CD4^+$ T 细胞亚群变化，以期为 RA 的临床诊治和新药靶点的开发提供思路。
方法 选择入住福建省第二人民医院（三甲医院）内分泌科 30 例确诊类风湿关节炎患者的外周血(从 2016 年 6 月至 2017 年 12 月住院期间病例)，所有入组的 RA 患者均符合 1987 年美国风湿病学会类风湿关节炎分类标准。采用欧洲抗风湿病联盟颁布的 DAS28 评定患者的病情活动度，所有 RA 的 DAS28 均大于 2.6。同时采集同期门诊 30 例健康体检者外周血作为健康对照组。
分离了 RA 病人和健康人外周血 $CD4^+$ T 细胞，用免疫印迹和 Real-time PCR 检测 JMJD3 的蛋白表达和 mRNA 表达以及其表达与 $CD4^+$ T 细胞亚群比例的相关性。建立了 T 细胞的活化和分化体系，在此体系中加入 JMJD3 的抑制剂，分析 JMJD3 对 $CD4^+$ T 细胞的影响并分析在 RA 疾病中的调控作用。4. 流式细胞术检测 $CD4^+$ T 细胞亚群活化、分化和凋亡水平。
结果 与健康人相比，RA 病人外周血 $CD4^+$ T 细胞中 JMJD3 的表达显著升高，并与 RA 疾病状态呈正相关。 在 $CD4^+$ T 细胞的活化体系中，JMJD3 的表达呈现先升后降的趋势。抑制 $CD4^+$ T 细胞中 JMJD3 后，T 细胞的活化、增殖下降，并且抑制 Th1 和 Th17 细胞亚群的分化，促进 Treg 的分化。JMJD3 的表达与 RA 中 Th1 和 Th17 细胞比例呈正相关，与 Treg 细胞比例呈负相关。
结论 JMJD3 通过表观调控 $CD4^+$ T 细胞的活化、增殖和分化，进而参与 RA 的疾病进程，我们的发现为 JMJD3 的新功能拓展了思路，为临床 RA 疾病的治疗提供了新策略和潜在靶点。

PU-0258

TARGETING SALL4 BY JQ1 IN SEROUS EPITHELIAL OVARIAN CANCER

Yue Wu、Wei Cui
Department of Clinical Laboratory, National Cancer Center/National Clinical Research Center for Cancer/Cancer Hospital, Chinese Academy of Medical Sciences and Peking Union Medical College

Background SALL4 is a stem cell factor that is involved in maintaining self-renewal and pluripotency in embryonic stem cells. Numerous studies have shown that SALL4 is abnormally highly expressed in many malignant tumors. However, in epithelial ovarian cancer, the role of SALL4 is rarely reported. Therefore, we aimed to explore the role of stem cell factor SALL4 in the development and treatment of epithelial OC.
Methods Lentiviral expression vector was constructed to establish SALL4 stable knockdown and overexpressing OC cell lines; Western blot, real-time qPCR was used to detectprotein and RNA levels, CCK-8 kit was used to detect the cell proliferation ability and the toxic effect of JQ1, flow cytometric analysis was used to assess cell cyle with propidium iodide DNA staining.
Results Comparision of normal ovarian tissues revealed elevated SALL4 mRNA levels that were greater than two-fold in 94% epithelial serous OC tissues (65/69, $P<0.001$). After knocking down SALL4 in A2780, cells showed decreased proliferation and colony formation ability. The cell cycle

analysis showed that the proportion of cells in GO/G1 phase was significantly increased, and the proportion of cells in S phase and G2/M phase was significantly decreased (P<0.05). SALL4 overexpression increased cell proliferative and colony formation ability. The cell cycle analysis showed that the proportion of cells in the GO/G1 phase was significantly decreased, and the proportion of cells in the S phase and G2/M phase was significantly increased (P<0.05).
Further, we explored the role of JQ1 on SALL4. This is the first study to investigate the role of JQ1 on SALL4. We found that treatment of A2780 with 0.05 μM JQ1 reduced 70% SALL4 RNA in only 6 h and SALL4 protein were almost gone after treatment with 2.5 μM JQ1 for 24 h. Meanwhile, low concentration of JQ1 can significantly inhibit the colony formation ability (0.05 μM) and proliferation (0.5 μM) of A2780, and A2780 can be blocked in G0/G1 phase after treatment with 0.05 μM JQ1 for 24 h. In addition, we compared the drug sensitivity to JQ1 between endogenously high SALL4 expression cell A2780 and low/no SALL4 expression cell lines (SKOV3, CAOV3, OVCAR3) . We found A2780 showed much higher inhibition rate after 0.5 μM, 2.5 μM and 5 μM JQ1 treatment for 96 h than SKOV3, CAOV3, and OVCAR3. Cell cycle results showed that no G0/G1 phase block effects were found after 0.5 μM JQ1 treatment with SKOV3, CAOV3, and HO8910 for 24 h and 48 h.
Conclusion SALL4 acts as an oncology gene role in OC. JQ1 treatment of endogenously high SALL4 cells showed similar effects as knockdown, suggesting SALL4 may beone of the targets of JQ1. Also, endogenously high SALL4 cells are more sensitive to JQ1. Overall, our studies suggest that targeting SALL4 by JQ1 may be a novel approach for ovarian cancer treatment.

Spy1 介导喉鳞癌原发性放射抗拒的作用研究

柯青[1]、龚倩[1]、邓鑫州[2]、柴晶晶[2]
1. 复旦大学附属中山医院青浦分院（上海市青浦区中心医院）
2. 湖北医药学院附属太和医院

目的 细胞周期调节蛋白 Spy1（speedy/RINGO cell cycle regulator family member A）与肿瘤的发生发展密切相关。本研究主要探讨 Spy1 的表达改变对人喉鳞癌细胞原发性放射抗拒的影响。
方法 采用 Western blot 检测喉鳞癌原发性放射抗拒细胞 Hep-2max 及敏感细胞 Hep-2min 中 Spy1 的表达；将 Spy1 的干扰质粒转染 Hep-2max 细胞，Spy1 过表达慢病毒感染 Hep-2min 细胞，然后运用荧光定量 PCR 及 Western blot 检测干扰及过表达效果；采用克隆形成实验检测不同剂量 X 线照射后细胞存活率的变化；采用流式细胞术检测经 4GyX 线照射后细胞凋亡与周期的变化。
结果 Western blot 实验表明，Spy1 在 Hep-2max 中的表达显著高于 Hep-2min；荧光定量 PCR 及 Western blot 结果显示，Hep-2max 细胞中 Spy1 shRNA-4 干扰效果最佳，感染慢病毒的 Hep-2min 细胞中 Spy1 的表达显著升高；克隆形成实验显示，Spy1 干扰组细胞存活分数（0.476±0.038）较阴性对照组（0.819±0.013）明显降低, 而 Spy1 过表达组细胞存活分数（0.967±0.021）较阴性对照组（0.753±0.012）明显升高；流式细胞术检测结果显示：Spy1 干扰组细胞凋亡率(21.70±2.35)%较阴性对照组(7.09±1.05)%显著增加；而 Spy1 过表达组细胞凋亡率(2.20±1.98) %较阴性对照组(7.27±1.65)%则明显降低； Spy1 干扰组 G2/M 期细胞比例(33.91±1.39) %较阴性对照组(17.52±1.26)%明显增加，而 Spy1 过表达组 G2/M 期细胞比例(11.22±1.07)%较阴性对照组(18.16±1.75)%则明显降低，差异均具有统计学意义（P<0.05）。
结论 干扰 Spy1 表达增强了喉鳞癌原发性放射抗拒细胞 Hep-2max 的放射敏感性，而过表达 Spy1 则使敏感细胞 Hep-2min 的放射抗拒性增强，表明 Spy1 参与调控了喉鳞癌的原发性放射抗拒，为喉鳞癌放射增敏研究提供了新的靶点。

PU-0260

肺腺癌顺铂耐药基因 UCA1 相关下游通路和分子分析

周慧新
温州医科大学附属第一医院

目的 分析肺腺癌中长链非编码 RNA UCA1 相关顺铂耐药的下游通路和分子。
方法 构建针对 UCA1 和 TXNIP 的过表达和 siRNA 载体，并使用下一代测序比较 A549 细胞的 UCA1 过表达和阴性对照细胞株。Q-PCR 检测肺腺癌组织与癌旁组织中 mRNA 的差异表达水平，以及人支气管上皮细胞 BEAS-2B 与肺癌细胞（A549、A549/DDP）中 TXNIP 表达水平。收集对数期的 A549 细胞,分为两组：NC 和 UCAI 过表达组；收集对数期的 A549/DDP 细胞，分为两组：NC 和 UCA1 敲低组，并通过 Q-PCR 检测下游 TXNIP 表达水平，CCK8 检测细胞增殖能力，并计算顺铂的半数抑制浓度(half inhibitory concentration, IC50)。GO（Gene Ontology）分析下调的 mRNAs 相对应的基因生物学过程和分子功能，最后通过蛋白互作网络（protein protein interaction network, PPI network）分析蛋白质之间的相互作用。
结果 测序结果显示有 647 个上调的和 633 个下调的差异表达的 mRNA，前 10 个上调的是 CPD、AC007192.1、TGOLN2、LGR4、TFPI、CYP1B1、TOMM6、HLA-B、SLC35F6 和 TOP2A，前 10 个下调的是 TXNIP、SESN2、STC2、HSPA1A、MMP10、CHAC1、DNAJB1、AC004922.1、ATF3 和 GABARAPL1。我们发现 TXNIP 基因表达水平是最显著下调的基因。肺腺癌组织中 TXNIP 表达水平明显低于癌旁组织。顺铂不敏感组中 UCA1 表达水平明显高于顺铂敏感组，而顺铂不敏感组中 TXNIP 基因表达水平明显低于顺铂敏感组。与 BEAS-2B 相比，A549 和 A549/DDP 细胞中 TXNIP 基因表达水平降低，并且在 A549/DDP 细胞的表达水平低于 A549 细胞。UCA1 过表达后，TXNIP 基因表达明显降低，而 A549 细胞增殖能力和 IC50 升高。敲除 UCA1 后，TXNIP 基因表达显著增加，而 A549/DDP 的增殖能力和 IC50 降低。PPI 分析结果表明，TXNIP 可与 TXN、DDIT4、NLRP3 等多种蛋白质相互作用。
结论 UCA1 通过下调肺腺癌中 TXNIP 的表达促进顺铂耐药，TXNIP 可与多种蛋白相互作用。因此，UCA1/TXNIP 轴可能影响肺腺癌对顺铂的耐药性。

PU-0261

两种 RNA 恒温扩增检测技术在儿童肺炎支原体肺炎中诊断价值的比较

李毅、周良琼、刘萍、张立群
陆军军医大学第二附属医院检验科

目的 新型荧光定量 NASBA -CRISPR 技术与实时荧光核酸恒温扩增检测技术(SAT)在肺炎支原体肺炎早期诊断中的应用比较。
方法 选取自 2020 年 5 月至 2021 年 2 月于本院初诊的肺炎支原体肺炎患儿 40 例作为观察组，另设正常对照儿童 10 例。对两组人群咽部分泌物标本分别采用量 NASBA -CRISPR 技术和 SAT 技术进行检测，使用临床评价血清比较两种测定方法的重复性、线性和临床样本符合情况。
结果 两项技术的性能参数显示：NASBA-CRISPR 的检测灵敏度和线性范围都优于 SAT 技术。且 NASBA-CRISPR 技术的样本批内变异系数 (Log10)均比 SAT 技术低。两种方法的对肺炎支原体识别特异性相同。对于临床样本的检测, NASBA-CRISPR 和 SAT 技术的相关系数为 0.893($P<0.05$)。
结论 在肺炎支原体肺炎患儿的临床检测中,采取 NASBA-CRISPR 技术和 SAT 技术均能提高临床诊断的特异性,但由于 NASBA-CRISPR 技术具有较高灵敏度，对疾病的早期诊断更有优势。但在检测方式的选择上，应注意患儿的患病时间以及院外药物服用情况,择取最合适的检测方法。

PU-0262

The Effect of Spy1 on inherent radioresistance of laryngeal squamous cell carcinoma

Qing Ke[1]、Qian Gong[1]、Xinzhou Deng[2]、Jingjing Chai[2]
1. Qingpu Branch of Zhongshan Hospital, Fudan University
2. 湖北医药学院

Objective Spy1 (speedy/RINGO cell cycle regulator family member A) is closely related to the occurrence and development of tumors. The purpose of this study was to investigate the effect of Spy1 expression on inherent radioresistance in human laryngeal squamous cell carcinoma.
Methods Western blot was used to detect the expression of Spy1 in radioresistant cell hep-2max and radiosensitive cell hep-2min. Spy1 interfering plasmid was transfected into Hep-2max cells, and Spy1 overexpressing lentivirus infected Hep-2min cells, then the interfering and overexpressing effects were detected by Real-time PCR and Western blot. The changes of cell viability after different doses of X-ray irradiation were detected by clonogenic assay, and the changes of cell apoptosis and cell cycle were detected by flow cytometry after 4 Gy X-ray irradiation.
Results Western blot showed that the expression of Spy1 in hep-2max was significantly higher than that in hep-2min. Real-time PCR and Western blot showed that the effect of Spy1 shRNA-4 interference was the best in Hep-2max, and Spy1 expression was significantly increased in Hep-2min cells by infected with lentivirus. The colony forming assay showed that the cell survival fraction of Spy1 interference group (0.476±0.038) was significantly lower than that of negative control group (0.819±0.013), while the cell survival fraction of Spy1 overexpression group (0.967±0.021) was higher than that of negative control group (0.753±0.012). The flow cytometry assay showed that the apoptotic rate of Spy1 interference group (21.70 +2.35)% was significantly higher than that of negative control group (7.09 +1.05)%, while the apoptotic rate of Spy1 overexpression group (2.20 +1.98)% was significantly lower than that of negative control group (7.27 +1.65)%. The proportion of G2/M phase cells in Spy1 interference group (33.91 +1.39) was significantly higher than that of negative control group (17.52 +1.26)%, while the proportion of G2/M phase cells of Spy1 overexpression group (11.22±1.07)% was significantly lower than that of negative control group (18.16 +1.75)%. The difference has statistically significant ($P < 0.05$).
Conclusions Interference with Spy1 expression enhances the radiosensitivity of Hep-2max, while overexpression of Spy1 enhances the radioresistance of Hep-2min, suggesting that Spy1 participates in regulating the inherent radioresistance of laryngeal squamous cell carcinoma and provides a new target for radiosensitization of laryngeal squamous cell carcinoma.

PU-0263

miR-146a 在尿路感染病原菌耐药性中指示作用的研究

崔金鹏
烟台市烟台山医院

目的 探究 miR-146a 在尿路感染病原菌耐药性中指示作用。
方法 选取自 2018 年 12 月至 2020 年 4 月间来我院收治的首次确诊的仅由一种细菌感染的尿路感染患者 125 例作为研究对象，于来诊时取静脉血 2mL 进行实时荧光定量 PCR 检测 miR-146a 含量。取其清晨空腹中段尿进行尿液培养并进行药敏试验。
结果 本研究中未发现耐药的菌株共 18 株，耐药菌株 107 株，MDR 95 株、XDR 12 株。其中金黄色葡萄球菌对红霉素、环丙沙星、四环素、克林霉素、左氧氟沙星的耐药率，屎肠球菌对红霉素、环丙沙星、克林霉素、左氧氟沙星的耐药率，粪肠球菌对红霉素、环丙沙星、四环素、克林霉素、左氧氟沙星、莫西沙星的耐药率，大肠埃希菌对头孢曲松、环丙沙星、哌拉西林、庆大霉素、氨曲

南、左氧氟沙星的耐药率，铜绿假单胞菌对环丙沙星、亚胺培南、庆大霉素、氨曲南的耐药率，肺炎克雷伯菌对头孢曲松、哌拉西林、左氧氟沙星的耐药率均高于 40%。 耐药的革兰氏阳性菌及革兰氏阴性菌尿路感染的患者血 miR-146a 表达量均显著高于不耐该药的患者，差异具有统计学意义（P<0.05）。耐药菌株标本所属患者血 miR-146a 表达量显著高于不耐药菌株，且随着耐药性的增强，血 miR-146a 的表达量逐渐增加，差异具有统计学意义（P<0.05）。

结论 miR-146a 对尿路感染病原菌耐药性具有一定指示作用，但成熟的应用于临床仍需较多研究验证与探索。

提出一种在共分离分析中 Bayes 因子的个性化估算方法

孙思哲[1]、喻长顺[2]
1. 天津金域医学检验实验室有限公司
2. 天津金域医学检验实验室有限公司；广州医科大学金域检验学院

目前，在基因变异致病性分类中，对共分离证据的使用通常使用 ACMG 发表的相关文献中贝叶斯因子（Bayes factor）的估算方法。但该方法对于年龄相关的外显率和拟表型率等参数的计算极为苛刻，同时也未将家系中不符合共分离的个体对结果的影响纳入考虑。ACMG-AMP 指南文件提出，增加共分离证据的数量可能会导致证据升级，因而在应用上需要相对统一的认定标准。在此基础上，本工作组设计了一种适用范围更宽松、对已知信息利用更充分的计算方法。根据变异与表型在个体中的组合，四种情况均可以被纳入计算范围：（1）有变异有表型。变异-表型相关的概率为变异和表型关联、不存在拟表型两个独立事件相乘，即 1/2（1-φ）（φ=拟表型率），不相关的概率为 $N_{Affected}$=1-[1/2(1-φ)]=1/2+φ/2。（2）无变异无表型。变异-表型不相关的概率为不相关且表型未外显、单纯不相关两种情况相加，即 $N_{Unaffected}$=1/2（1-β）+1/2=1-β/2。（β=外显率）（3）有表型无变异。表型-变异相关的概率为变异和表型关联、存在拟表型两个独立事件相乘，即 1/2φ，表型-变异不相关的概率为 $N_{Affected'}$=1-φ/2。（4）有变异无表型。表型-变异相关的概率为变异和表型关联、表型此刻未外显两个独立事件相乘，即 1/2（1-β），表型-变异不相关的概率为 $N_{Unaffected'}$=1-1/2（1-β）=1/2+β/2。最终，总体 BF 值被定义为：BF 值反映变异-表型相关的概率大小，BF 值越大，变异-表型相关的可能性越大。对于存在不满足完全共分离的家系，本方法开创性地将不符合共分离证据的个体一并纳入证据认定中，同时将延迟外显、拟表型等特殊证据纳入一般分析当中，充分平衡了证据准确性和方法简便性之间的关系，也扩展了共分离证据的应用范围。

Identification of prognostic signature based on the copy number variation and expression in acute myeloid leukemia

牛长春、廖璞
重庆市人民医院

Acute myeloid leukemia (AML) can be caused by multiple genetic alteration in the hematopoietic progenitors, and molecular analysis has provided large amounts of useful information for AML diagnosis and prognosis. However, integrative understanding the prognosis value of specific Copy number variance (CNV) and CNV-modulating gene expression was limited. In this study, we integrative analyzed the CNV profiling and gene expression using data from TARGET and TCGA AML cohort. CNV was observed in distinct patterns in the AML risk groups, and the expressions of 251 genes were significantly modulated by CNV overlapped in both cohorts. A total of CNV genes that associated with worse outcomes in AML were identified. This

study identified CNVs and CNV-modulating gene expression alterations, which are crucial for new modes of prognosis evaluation and target therapy.

PU-0266

Whole-exome sequencing identifies a novel nonsense mutation in EXT1 in a Chinese family with hereditary multiple exostoses

Ruirui Ren[1]、Yongan Zhou[3]、Jianping Cheng[2]
1. Affiliated Hospital of Yunnan University
2. 山西医科大学第二附属医院
3. 山西医科大学第二附属医院

Hereditary multiple exostoses (HME; OMIM: 133700) is a rare autosomal dominant skeletal disorder characterized by the formation of multiple benign cartilage-capped tumors on the bone surface. HME is generally thought to be associated with mutations in the EXT gene family. The pathogenic mutations of the EXT gene result in insufficient heparan sulfate biosynthesis, which leads to an imbalance in the proliferation and differentiation of chondrocytes in the extracellular matrix, boosts abnormal bone growth of the neighboring regions, causes multiple exostoses, and ultimately leads to possible malignant transformation. In the present study, a family who displayed typical features of HME was screened for mutations using whole-exome sequencing, Sanger sequencing, and bioinformatics analysis. We identified a novel heterozygous nonsense mutation, c.1258G>T (p.Glu420X), in exon 4 of the EXT1 gene in the proband. The mutation introduced the termination codon, resulting in the truncation of 326 amino acids at the C-terminus of the wild-type EXT1 protein consisting of 746 amino acids. The lost portion includes a glycosyltransferase domain. The mutation was also found in other affected members of the family, but not in normal family members, which is consistent with cosegregated genotypes and phenotypes. Therefore, the present study identified a novel pathogenic EXT1 mutation in a family with HME, which provides additional evidence for developing quick and accurate genetic diagnosis of HME and further enriches the mutation spectrum of HME.

PU-0267

Lmo4 对胃癌细胞转移增殖能力的作用及机制探究

陈璐
南京市浦口区中心医院

目的 探讨在胃癌、癌旁组织和胃癌细胞株中，Lmo4 的表达差异，及其对于胃癌细胞的影响。
方法 应用 qRT-PCR 和免疫组织化学技术，检测 90 例胃癌患者的癌组织及对应癌旁组织中 Lmo4mRNA 的表达差异，分析 Lmo4 表达与胃癌发展各个阶段的相关性。采用 Western blot 方法比较不同人胃癌细胞株中 Lmo4 的表达，通过 RNA 干扰技术抑制 BGC-823 胃癌细胞中 Lmo4 的表达，应用平板克隆形成实验、Transwell 迁移实验、CCK-8 实验、划痕试验及 Western blot 等方法检测 Lmo4 被沉默后对胃癌细胞的生长迁移能力的影响，以及其对细胞通路产生的影响。构建 Lmo4 过表达质粒 Lmo4-pcDNA，检测其对胃癌细胞的增殖、迁移情况及 EMT 相关蛋白的影响，并运用细胞周期试验评价 Lmo4 过表达后细胞增殖情况的变化。
结果 qRT-PCR 和免疫组织化学结果均显示胃癌组织中 Lmo4 相对表达量明显高于对应的癌旁组织（$p<0.001$），且 Lmo4 在胃癌组织中的表达与肿瘤的分型有关（$p<0.001$）、浸润程度有关（$p<0.001$），但是与肿瘤大小、年龄、性别无关。沉默 Lmo4 后的胃癌细胞的迁移能力显著减弱，

细胞克隆形成数量减少，抑制了 EMT 发生；过表达的 Lmo4 在体外可以促进胃癌细胞生长和胃癌细胞迁移，促进 EMT 的发生，并通过 TGF-β 信号通路调节。
结论 Lmo4 可能通过诱导胃癌细胞发生 EMT 而促进胃癌的转移，在胃癌的发生、发展进程中起着非常重要作用。

Detection of mosaic mutations through deep next-generation sequencing in thoracic aortic aneurysm/dissection

Guoyan Zhu 、Hang Yang、Mingyao Luo、Weizhen Zhou、Yinhui Zhang、Chang Shu、Zhou Zhou

Background Thoracic aortic aneurysm/dissection (TAAD) is an insidious and rapid onset disease with high mortality rate when it is undiagnosed or untreated in time. Marfan syndrome (MFS) is the most commonly seen syndromic thoracic aortic aneurysm/dissection (TAAD), which is caused by mutations in FBN1 gene. It was reported that about 25% of MFS patients had a de novo mutation. However, parental mosaicism was not easily distinguished from these sporadic cases, which should not be neglected. Otherwise, if the mosaic mutation spreads from asymptomatic carriers to their children, it will lead to an accidental disease. Mosaicism was also reported in symptomatic MFS patients and in other TAAD conditions. Unfortunately, the mosaic prevalence of TAAD was still unknown, which made genetic counseling and clinical diagnosis difficult. Therefore, more sensitive and special genetic tests for mosaicism in TAAD were highly required.
Methods 1085 patients affected with MFS or TAAD who had been performed a targeted genetic testing were included in our study. We reanalyzed all these panel sequencing data and retrieved those low allele frequency variants (AF<30%) which were filtered in the routine bioanalysis pipeline. Deep sequencing of single amplicon (approximately 5000×) was conducted to confirm whether they were mosaic mutations in the Life PGM Dx platform. Besides, there were 64 probands with a causative mutation and both parental blood samples. In these families, parental mosaicism was detected with the same method for them.
Results A total of four symptomatic affected patients were identified with a mosaic mutation, c.2607_2608insGAGCC, c.3284G>A, c.6509G>A in *FBN1* gene and c.631C>A in *TGFB2* gene. Notably, the low-level mosaic mutation in *TGFB2* was detected combined with a causative *FBN1* truncating mutation in patient AD2001, which should be paid close attention in the genetic counseling. Besides, there were two parental mosaic mutations (2/64) detected in the trio-families, c.2167+1G>A and c.3914G>T in *FBN1* gene. Neither of the two parental carriers with mosaic mutations had significant clinical manifestations.
Conclusions Mosaic mutation could be a more common phenomenon in TAAD than it had been realized so far. Hence, whenever children are identified with harmful mutations, the parents should be detected by genetic testing, which will provide more accurate guidance for genetic counseling. We also can't ignore the uncommon fact that mosaic mutations may be present in patients with clinically significant signs. TAAD patients for whom the significant mutations are not detected should be recommended for the panel with an adaptive parameter of the bioinformatics analysis, which can improve the detection rate of mosaicism.

PU-0269

基于 RNA 测序研究过表达 Ajuba 对 T47D 细胞基因表达谱的影响

徐北惠[1]、邹秀群[2]、徐洪[2]、王家敏[2]、侯照远[2]、倪培华[3]
1. 上海交通大学医学院附属第九人民医院
2. 上海交通大学医学院生物化学与分子细胞生物学系
3. 上海交通大学医学院附属瑞金医院检验系

目的 探究 AJUBA 基因对于雌激素受体阳性乳腺癌细胞 T47D 基因表达的影响。
方法 构建 AJUBA 稳定过表达的 T47D 细胞系。载体对照和实验组分别提取 RNA 进行 RNA-SEQ 测序，将所得序列映射到人类基因组并进行转录组重建，样品标准化后寻找实验组和对照组之间的差异基因，利用生物信息学方法进一步对所得的差异基因进行基因本体论分析（即 GO 分析）和 KEGG 通路富集性分析，同时挑选部分基因用 QRCR 技术进行基因表达验证。
结果 实验组与对照组细胞相比共找到 568 个差异基因，其中上调基因 239 个，下调基因 329 个。GO 分析中，注释到分子功能、生物学过程和细胞组成的上调差异基因分别有 3 个，23 个，8 个；下调差异基因分别有 21 个，35 个，9 个。KEGG 分析中上调基因显著富集通路有 2 个，下调基因显著富集通路有 4 个。
结论 Ajuba 过表达可以影响 T47D 细胞的一系列生物学过程和多条信号通路，可能在乳腺癌发生发展中起重要作用。

miR-29a sensitizes the response of glioma cells to temozolomide by modulating the P53/ MDM2 feedback loop

Qiudan Chen[1]、Weifeng Wang[2]、Shuying Chen[3]、Xiaotong Chen[3]、Yong Lin[3]
1. The Department of Central Laboratory, Clinical Laboratory, Jing'an District Center Hospital of Shanghai, Fudan University, Shanghai 200040, China.
2. 上海市第十人民医院
3. 复旦大学附属华山医院

Recently, pivotal functions of miRNAs in regulating common tumorigenic processes and manipulating signaling pathways in brain tumors have been recognized; notably, miR‐29a is closely associated with p53 signaling, contributing to the development of glioma. However, the molecular mechanism of the interaction between miR-29a and p53 signaling is still to be revealed. Herein, a total of 30 glioma tissues and 10 noncancerous tissues were used to investigate the expression of miR‐29a. CCK-8 assay and Transwell assay were applied to identify the effects of miR-29a altered expression on the malignant biological behaviors of glioma cells in vitro, including proliferation, apoptosis, migration and invasion. A dual-luciferase reporter assay was used to further validate the regulatory effect of p53 or miR-29a on miR-29a or MDM2, respectively,at the transcriptional level. The results showed that miR‐29a expression negatively correlated with tumor grade of human gliomas; at the same time it inhibited cell proliferation, migration, and invasion and promoted apoptosis of glioma cells in vitro. Mechanistically, miR‐29a expression was induced by p53, leading to aberrant expression of MDM2 targeted by miR‐29a, and finally imbalanced the activity of the p53-miR-29a-MDM2 feedback loop. Moreover, miR-29a regulating p53/MDM2 signaling sensitized the response of glioma cells to temozolomide treatment. Altogether, the study demonstrated a potential molecular mechanism in the tumorigenesis of glioma, while offering a possible target for treating human glioma in the future.

Poly-Gene Fusion Transcripts and Chromothripsis in Prostate Cancer

jian zhang
Shandong Provincial Hospital Affiliated to Shandong First Medical University

Complex genome rearrangements are frequently observed in cancer but their impact on tumor molecular biology is largely unknown. Recent studies have identified a new phenomenon involving the simultaneous generation of tens to hundreds of genomic rearrangements, called chromothripsis. To understand the molecular consequences of these events, we sequenced the genomes and transcriptomes of two prostate tumors exhibiting evidence of chromothripsis. We identified several complex fusion transcripts, each containing sequence from three different genes, originating from different parts of the genome. One such poly-gene fusion transcript appeared to be expressed from a chain of small genomic fragments. Furthermore, we detected poly-gene fusion transcripts in the prostate cancer cell line LNCaP, suggesting they may represent a common phenomenon.Finally in one tumor with chromothripsis, we identified multiple mutations in the p53 signaling pathway, expanding on recent work associating aberrant DNA damage response mechanisms with chromothripsis. Overall, our data show that chromothripsis can manifest as massively rearranged transcriptomes. The implication that multigenic changes can give rise to poly-gene fusion transcripts is potentially of great significance to cancer genetics.

宏基因组二代测序和 PCR 杂交技术检测新生儿血液巨细胞病毒的结果对比

刘勇
吉林大学第一医院

新生儿感染是造成新生儿发病率和死亡率增高的原因之一，能否快速确认感染病原体，成为后续对症治疗的关键，基于宏基因组新一代测序技术（mNGS）为解决这一问题提供了一个可能的突破方向。

本研究运用 mNGS、PCR 杂交技术对 21 例新生儿的血液样本进行巨细胞病毒检测，并利用荧光定量 PCR 技术进行验证。mNGS 和 PCR 杂交技术同时检出巨细胞病毒阳性的样本 7 例，mNGS 检出阳性而 PCR 杂交技术检出阴性的样本有 4 例， 利用荧光定量 PCR 技术进行验证结果全为阳性。PCR 杂交技术检出阳性而 mNGS 检出阴性的样本有 1 例，利用荧光定量 PCR 技术进行验证结果为阳性。另外， mNGS 还检出 EB 病毒阳性 2 例，B 族链球菌阳性 1 例。 本次研究中，mNGS 对新生儿血液中巨细胞病毒检出敏感性为 52%，显著高于 PCR 杂交技术 38%的敏感性。

mNGS 技术可以无目标、无差异地检测样本微生物，与传统的 PCR 检测相比，mNGS 技术的优势在于不仅可以针对特定的微生物，而且可以在单次测序中同时检测不同的病原体，发现已知和未知的病原体序列。mNGS 因其不需要分离培养病原体、可同时分析多种病原体、检测灵敏度高、周期短、应用范围广等优点而受到广泛关注。

PHF1 is an oncogene for pancreatic cancer

Yujiao Xie
the Second Hospital of Shandong University

Pancreatic cancer is one of the leading causes for cancer death worldwide. Though several vital genes were found in pancreatic cancer progressing, the epigenetics change in pancreases tumorigenesis is poorly understood. Here, we test the expression of PHD finger protein 1 (PHF1) using immunohistochemical（IHC）, qRT-PCR, and western blot. Lentiviral transduction was used to induce PHF1 overexpression or silencing in vitro, followed by monitoring cell proliferation, colony formation, and metastasis. Xenografts was employed for in vivo experiment. Finally, we found that PHF1 could promote pancreatic cell growth and migrationin vitro and vivo. In conclusion, our data indicate PHF1 is an oncogene for pancreatic cancer.

PU-0274

Serum Long Noncoding RNAs Act as Potential Novel Diagnosis and Prognosis Biomarkers in Non-small Cell Lung Cancer

Yujiao Xie
the Second Hospital of Shandong University

Objective NSCLC is the most prevalent type of lung cancer and the first cause of cancer death. Increasing evidences hint lncRNAs have close bond with tumor. We aimed to evaluate underlying lncRNAs as the biomarker for NSCLC diagnosis and prognosis prediction.
Methods 14 lncRNAs expression profiles were validated in paired NSCLC and normal samples by RT-qPCR. ROC analysis was utilized to estimate the diagnosis proficiency of the candidate lncRNAs. Moreover, Kaplan-Meier survival analysis was performed within validation set.
Results SOX2OT and ANRIL were shown to be obviously upregulated in NSCLC samples. A panel composed of two lncRNAs (SOX2OT, ANRIL) and three traditional tumor markers (CEA, CYFRA21-1, SCC) was built in training set. The AUC of this panel was superior to any biomarker alone. This result appeared in validation set yet. Intriguingly, the low expression of SOX2OT and ANRIL correlated with high survival rate. SOX2OT could be the independent prediction factor.
Conclusion Our study showed that the panel could be the valuable biomarker for NSCLC diagnosis and two lncRNAs SOX2OT and ANRIL may be ideal biomarkers for predicting NSCLC prognosis.

PU-0275

Hsa_circRNA_103092/ miR-224/ PRLR axis participates in unexplained recurrent miscarriage by inhibiting proliferation and promoting apoptosis

Yan Su[1]、Rufei Gao[2]、Chunli Li[1]
1. Chongqing Health Center for Women and Children
2. 重庆医科大学

Background Recurrent miscarriage (RM) refers to 3 or more consecutive miscarriages occurred before 24 weeks. It is a type of disease with complex etiology and unclear pathogenesis. Infectious diseases, abnormal uterine structure, endocrine dysfunction etc. are reported being

related to RM. However, there are still nearly 50% of RM patients with unclear etiology. And the specific regulation mechanism has not been identified clearly. It has been revealed that molecules such as hormones, miRNAs and transcription factors, participate in the regulation of RM. Circular RNAs (circRNAs), a class of endogenous non-coding RNAs, are stable and conserved among species, and they often exhibit developmental stage and disease-specific expression patterns. Recent studies have demonstrated that circRNAs serve as sponges for miRNAs or binding proteins to participate in biological processes. In our previous study, circRNAs microarray analysis was used to identify the differentially expressed circRNAs and mRNA in the decidua of patients with unexplained RM and unintended pregnancy control group. And 78 up-regulated and 45 down-regulated circRNAs, and 109 up-regulated and 97 down-regulated mRNAs were screened out in the decidua of patients with early RM (fold change≥1.5 and P-value <0.05). Expression of hsa_circRNA_103092 was significantly higher in the decidua of patients with unexplained recurrent miscarriage. However, the specific roles of hsa_circRNA_103092 in RM remain unclear.
Methods Bioinformatics analysis was performed to establish circRNA-miRNA-mRNA interaction network. Luciferase reporter assay was used to validate the interaction among hsa_circRNA_103092, miR-224 and PRLR in HKE293T cells. RT-PCR, immunohistochemistry and in situ hybridization were used to detect the expression of hsa_circRNA_103092, miR-224 and PRLR in the decidua tissue of patients with unexplained recurrent miscarriage. RT-PCR and western-blot was preformed to detect expression of PRLR, CyclinD3, PCNA, Bax and Bcl-2 protein in Ishikawa cell after hsa_circRNA_103092 silencing or miR-224 activation.
Results RT-PCR verified the high expression of hsa_circRNA_103092 in the decidua of patients with unexplained recurrent miscarriage. TargetScan and miRanda bioinformatics method analysis and Luciferase reporter assay showed the competing endogenous function of hsa_circRNA_103092 regulating PRLR via sponging miR-224. RT-PCR, immunohistochemistry, and in situ hybridization showed that the expression of hsa_circRNA_103092 and PRLR in the decidua of patients with unexplained recurrent miscarriage was significantly increased, while the expression of miR-224 was significantly decreased. After hsa_circRNA_103092 silencing, the expression of miR-224 in Ishikawa cells was significantly increased, while the expression of PRLR was significantly decreased. And the expression of PRLR in Ishikawa cells was significantly decreased after miR-224 activation. Moreover, after hsa_circRNA_103092 silencing, the expression level of cell proliferation-related proteins CyclinD3 and PCNA decreased significantly, which indicated low proliferation, and the expression level of apoptosis-related protein Bax increased significantly, the expression of Bcl-2 decreased significantly. After PRLR expression was down-regulated, the expression of PCNA and cyclinD3 in Ishikawa cells decreased significantly, the expression level of Bax increased, and the expression of Bcl-2 decreased significantly.
Conclusion Hsa_circRNA_103092 / miR-224 / PRLR axis participates in the regulation of recurrent miscarriage through inhibiting proliferation and promoting apoptosis.

PU-0276

长链非编码 RNA NNT-AS1 在乳腺癌中的生物信息学分析

盖婵婵[2]、曹源[1]
1. 解放军第九六〇医院
2. 解放军第九六〇医院

目的 本研究采用生物信息学方法结合公共数据库集探讨长链非编码 RNA（lncRNA）烟酰胺核苷酸反义转氢酶 RNA1（NNT-AS1）在乳腺癌中的表达及意义，并对 NNT-AS1 进行靶基因预测，为乳腺癌的相关研究提供思路。
方法 通过 UALCAN 数据库分析 NNT-AS1 在乳腺癌和正常乳腺组织中的表达情况，并通过 K-M plotter 数据库对 NNT-AS1 进行生存分析。利用 ENCORI、LncBase Predicted v.2、LncRNASNP

筛选与 NNT-AS1 相互作用 microRNAs 并取其交集，通过 TargetScan、microT-CDS 进行 NNT-AS1 的靶基因预测，构建 lncRNA NNT-AS1-microRNAs-mRNAs 调控网络，并运用 FunRich 平台对预测的靶基因进行 GO 分析和 KEGG 信号转导通路富集分析。
结果 lncRNA NNT-AS1 在乳腺癌中表达明显降低，且低表达患者的无进展生存期比高表达患者短。通过数据库筛选出 4 个可能与 NNT-AS1 结合的 microRNAs，包括 hsa-miR-320a、hsa-miR-320b、hsa-miR-320c、hsa-miR-1271-5p。microRNAs 的靶基因预测结果显示共有 387 个靶基因可能受这 4 个 microRNAs 的调控。通过整合 lncRNA NNT-AS1-microRNAs 和 microRNAs-mRNAs 网络构建 lncRNA NNT-AS1 -microRNAs-mRNAs 调控网络。通过 GO 分析以及 KEGG 信号转导通路富集分析发现这些靶基因高度富集在碱基、核苷、核苷酸、核酸代谢调节、转录因子活性等过程以及 PI3K-Akt、FoxO、Hippo 等信号转导通路。
结论 NNT-AS1 在乳腺癌中表达降低，并且其表达水平的降低与乳腺癌预后不良相关，参与多种生物过程，有望成为乳腺癌潜在的诊断标志物。

PU-0277

趋化因子 CXCL16 对脓毒症小鼠生存率、组织损伤及炎症反应的影响

李佳熹
重庆医科大学附属第一医院

目的 探讨趋化因子 CXCL16 在脓毒症小鼠中的表达，组织损伤及炎症反应过程。
方法 CLP 诱导 C57BL/6 小鼠形成脓毒症模型。收集血清，腹腔灌洗液及肝、肺、肾脏组织样本。记录小鼠生存情况;Elisa 检测趋化因子 CXCL16 及 IL-6、IL-8、IL-1O、TNF-α 和 IFN-γ 分泌量；血液分析仪及流式细胞术分析炎症细胞；病理切片观察组织损伤；Anti-CXCL16 抗体蛋白治疗脓毒症并观察效果。
结果 CXCL16 在脓毒症小鼠血清、腹腔灌洗液、组织蛋白中水平显著升高(P＜0.05)。与 CLP+PBS 组相比，CLP+CXCL16 组小鼠生存率明显降低 (P＜0.05)，中性粒细胞、巨噬细胞和淋巴细胞数量增加且促进炎症因子释放 (P＜0.05)，肝、肺、肾组织损伤加重，肝肾功能血清指标 ALT、AST、Urea 和 Creatinine 升高(P＜0.05)。与 CLP +IgG 组相比，Anti-CXCL6 组死亡率降低，组织损伤减轻，肝肾功能血清指标降低(P＜0.05)，抗体治疗具有一定效果。
结论 CXCL16 在脓毒症小鼠中表达上调，其高浓度与脓毒症免疫病理过程有关，CXCL16 能够通过加重炎症反应促进脓毒症发生发展。

PU-0278

细胞外囊泡肿瘤标志物及膜表面表面标志物筛选方法的研究进展

徐东杰、李智洋
南京鼓楼医院

肿瘤的快速诊断有助于疾病的早发现，早治疗，但是由于高特异性，高灵敏度的临床诊断标志物的缺乏，使得肿瘤的早期诊断成为难题。肿瘤来源细胞外囊泡（EVs）近年来在生物医学领域大放异彩，EVs 由多种细胞分泌，其所含的标志物信息丰富，在细胞间通信中发挥相关的作用，同时参与不同的病理过程。使其成为诊断和治疗疾病的极具潜力的生物标志物。目前的筛选方法由于在 EVs 的提取、蛋白的分离纯化技术方面的各种原因，导致重现性差、步骤耗时繁琐，严重阻碍了 EVs 表面标志物的发掘。此外，绝大多数针对肿瘤标志物的检测都只能连同正常细胞 EV 一起分析，导致肿瘤来源蛋白表达信号受到干扰。核酸适配在发现蛋白天然三维构象以及标准化制备方面有着很大的优势，以肿瘤来源的 EVs 进行筛选，结合指数富集（SELEX）获得高特异性的核酸适配体，

对肿瘤进行诊断，预后监测以及区分不同肿瘤亚型具有重要价值。本文主要综述了 EVs 与肿瘤的关系以及 EVs 膜表面蛋白标志物的筛选策略。

PU-0279

早产儿解脲脲原体感染的实验室检查及临床特点分析

刘应红
资阳市第一人民医院

目的 探讨早产儿解脲脲原体(UU)感染的临床特点。
方法 选取 2018 年 7 月-2021 年 3 月资阳市第一人民医院收治的早产儿为研究对象，出生后入院 24h 内进行下呼吸道分泌物 UU 的采集和测定，并比较分析 UU 阳性组和 UU 阴性组的实验室检查及临床差异。
结果 共纳入 453 例早产儿，其中 UU 阳性组 83 例，UU 阴性组 370 例。UU 阳性组出生平均胎龄(33.34±2.58)周、平均体质量(2.085±0.545)克，UU 阴性组出生平均胎龄(35.10±1.82)周、出生平均体质量(2.417±0.482)克，UU 阳性组胎龄和出生体质量均低于 UU 阴性组，差异有统计学意义(P＜0.01)。两组间的出生窒息发生率和 Apgar 评分比较，差异均无统计学意义(P＜0.05)。UU 阳性组母亲绒毛膜羊膜炎、胎膜早破的发生率均高于 UU 阴性组，差异有统计学意义(P＜0.05)；UU 阳性组生后 24h、72h、7d 的白细胞计数、中性粒细胞计数均高于阴性组，差异均有统计学意义(P＜0.05)。UU 阳性组的新生儿呼吸窘迫综合征(NRDS)比率、支气管肺发育不良(BPD)发生率高于 UU 阴性组，差异均有统计学意义(P＜0.05)。
结论 早产儿呼吸道 UU 阳性可能与小出生胎龄、低出生体质量相关、NRDS、BPD 相关。

PU-0280

眉山地区 7052 名育龄女性叶酸基因多态性与不孕、流产及不良妊娠结局的相关性分析

罗艳
眉山市妇女儿童医院

目的 对眉山地区育龄女性叶酸代谢基因多态性进行检测，分析 MTHFR *A1298C*、 *C677T* 和 MTRR *A66G* 基因变异与不孕、流产及不良妊娠结局的相关性。
方法 选择 2013 年 1 月 1 日～ 2020 年 12 月 30 日在眉山市妇幼保健院进行产前检查的育龄女性 7052 例，采集研究对象口腔黏膜上皮细胞，用荧光定量 PCR 检测亚甲基四氢叶酸还原酶(MTHFR) 基因 *A1298C*、 *C677T* 和甲硫氨酸合酶还原酶(MTRR) *A66G* 的基因型，分析基因多态性的分布特征与不孕、流产及不良妊娠结局的关系。
结果 统计全部标本中的 MTHFR *A1298C* 基因野生型（AA）、杂合突变型（AC）及纯合突变型（CC）基因型频率分别为 65.5%、31%和 3.5%; MTHFR*C677T*，其中野生型（CC）、杂合突变型（TT）及纯合突变型（CT）基因型频率分别占 35.8%、47.5%和 16.7%； MTRR *A66G* 野生型（AA）、杂合突变型（AG）及纯合突变型（GG）基因型频率分别为 55.6%、38.39%和 6%。MTHFR *C677T* 基因型分布与中国人群差异具有统计学意义（P<0.01）。MTHFR *A1298C*、和 MTRR *A66G* 基因型分布与中国人群差异均无统计学意义（P>0.05）。同时，对 7052 名育龄妇女进行追踪，其中不孕患者 117 名，流产患者为 68 名，畸形儿（21-三联体、唇裂、胎儿心脏畸形、无脑儿、唐氏儿、死胎）患者 14 名，不孕患者中 MTRR *A66G* 杂合突变型（AG）达 100%。流产患者中 MTHFR *A1298C* 位点野生型（AA）达 100%。畸形儿患者中，MTRR *A66G* 位点野生型（AA）达 71.4%。

结论 叶酸代谢障碍与不孕、流产及不良妊娠结局有相关性。根据叶酸代谢基因检测结果，对育龄妇女给予补充相应剂量的叶酸，对防止不孕、流产及畸形胎儿具有重要的指导意义。

PU-0281

基于杂交链式反应无清洗外泌体检测技术

徐东杰、李智洋
南京鼓楼医院

外泌体是由细胞分泌的直径为 30nm-150nm 的小泡，大量存在有各种体液环境中，如血液，尿液，唾液以及泪液。外泌体通过将亲代细胞来源的蛋白质、核酸和脂质，运送到受体细胞参与细胞间的信息交流。肿瘤来源的外泌体与肿瘤细胞具有相似性，在癌症的发展和进程中起着至关重要的作用。目前，由于外泌体粒径较小，检测困难，外泌体的识别和定量具有一定的挑战性。在本研究中，我们开发了一种荧光传感器，通过设计特异性适配体 MUC1，对肿瘤来源的外泌体进行特异性识别，暴露出杂交链式反应触发序列，结合杂交链式反应，进行信号放大。通过设计的适配体的特异结构，进行肿瘤来源的外泌体的无清洗的特异性检测。本研究为液体活检提供了一种新的方法，促进了液体活检的发展。

PU-0282

肺腺癌患者血清 TSLP 和 Bcl-2 与 IL-1α 表达水平及其临床意义

崔鲂
重庆医科大学附属第一医院

目的 探讨胸腺基质淋巴淋巴细胞生成素（thymic stromal lymphopoietin，TSLP）、白细胞介素-1α（Interleukin-1α，IL-1α）、B 淋巴细胞瘤-2（B-cell lymphoma-2，Bcl-2）在肺腺癌患者血清的表达水平及其临床意义。
方法 采用酶联免疫吸附实验（Enzyme-linked immunosorbent assay, ELISA）检测 69 例肺腺癌患者和 30 例健康人血清 TSLP、IL-1α、Bcl-2 浓度,分析血清 TSLP、IL-1α、Bcl-2 血清浓度与 TNM 分期、淋巴结转移、远处转移、肿瘤大小、肺癌肿瘤标志物的相关性。
结果 肺腺癌患者血清 TSLP、Bcl-2 浓度显著高于正常对照组（$p<0.05$）,在中晚期（II 期+III 期、IV 期）、肿瘤直径≥3cm、有淋巴结转移的肺腺癌患者中血清 TSLP 浓度增高（$p<0.05$）；肺腺癌组血清 IL-1α 浓度与对照组相比无统计学差异（$p>0.05$）；肺腺癌患者血清 TSLP、IL-1α、Bcl-2 浓度无相关性（$P>0.05$）；血清 TSLP 水平与肺腺癌患者的 TNM 分期、淋巴转移、肿瘤直径、CYFRA21-1、CEA 正相关（$P<0.05$），血清 Bcl-2 浓度与与血清 CEA 水平正相关（$P<0.05$）。
结论 TSLP、Bcl-2 在肺腺癌患者的血清中升高，均与血清 CEA 相关， TSLP、Bcl-2 在肺腺癌辅助诊断中具有一定价值。血清 TSLP 与肺腺癌患者病情发展存在相关性，检测肺腺癌患者血清 TSLP 浓度可用于评估肿瘤进展。

PU-0283

慢性乙型肝炎和肝硬化患者血清 HBV 基因型分析

何奇瑶
资阳市第一人民医院

目的 分析慢性乙型肝炎和肝硬化患者血清乙型肝炎病毒(HBV)分型分布情况。

方法 2020 年 5 月～2021 年 4 月资阳市第一人民医院就诊的慢性乙型肝炎患者 150 例，乙型肝炎肝硬化患者 25 例，肝细胞癌 15 例，采用上海之江试剂盒（qPCR 法）检测血清 HBV 基因型。
结果 在 190 例 HBV 感染者中，有 91 例(47.89％)为 B 型感染，98 例(51.57％)为 C 型感染，1 例(0.53％)为 D 型感染；慢性乙型肝炎患者与肝硬化患者血清 TBIL、ALT 和 AST 水平比较差异均无统计学意义(P>0.05)；乙型肝炎肝硬化患者和肝细胞癌患者 C 型感染比例均显著高于慢性乙型肝炎患者，差异具有统计学意义(P<0.05)。
结论 慢性乙型肝炎和肝硬化患者 HBV 感染以 B 基因型和 C 基因型为主，而肝硬化患者以 C 型感染居多，提示 C 型感染患者可能比 B 型患者更容易出现严重的肝损伤，并产生严重的临床结局。

PU-0284

AKR1A1/C4 as oncogene biomarkers and AKR1B1/B10/B15/C1/C2 as Tumor suppressor gene for the colorectal cancer

HUI LI[1]、Lei Zheng[2]、Dixian Luo[1]
1. Chenzhou first people`s hospital
2. 南方医科大学南方医院

Objective To investigate the significance of AKR1 expression level in 10 family members in clinical diagnosis of colorectal cancer.
Methods The transcriptional and survival data of AKR1s in patients with colorectal cancer(CRC) were investigated from ONCOMINE, Gene Expression Profiling Interactive Analysis(GEPIA), Kaplan–Meier Plotter, and cBioPortal databases. The mRNA and protein expression levels in normal and tumor tissues were detected by QPCR and Western-blot individually.
Results AKR1A1/C4 expression levels were found higher in colorectal cancer tissues than in normal colorectal tissues, whereas AKR1B1/B10/B15/C1/C2 expression level were lower in the former than in the latter. The expression levels of AKR1A1/C1/C2/C4 were correlated with advanced tumor stage. ROC curve analysis of AKR1B10/C4 level has high specificity（59.1%，70.7%） and sensitivity（92.1% ，73.2%） for the diagnosis of CRC(p=0.000). The correlation analysis between high and low AKR1s expression and clinicopathology showed that AKR1B15 expression level is related to Invasion depth，Akr1c2 expression level was significantly related to Invasion depth and distant metastasis. Survival analysis using GEPIA showed that AKR1 expression levels were not significantly associated with overall survival or disease-free survival in CRC patients. AKR1s functions and genes significantly related to AKR1s alterations .GO enrichment analysis predicted the function of target host genes in terms of biological process, cell composition and molecular function.AKR1s participated in Tumor-associated metabolic pathways, such as Metabolism of xenobiotics by cytochrome P450,Steroid hormone biosynthesis,Pentose and glucuronate interconversions, Glycerolipid metabolism, and Metabolic pathways.
Conclusion AKR1A1/C4 may be an oncogene marker for colorectal cancer, while AKR1B1/B10/B15/C1/C2 may be involved in the occurrence of colorectal cancer as a tumor suppressor gene.

PU-0285

4887 例患者人疱疹病毒 6 型感染情况分析

刘义庆[1,2]、张庆[1,2]、邱旸[1,2]、刘春梅[1,2]、鞠瑛[1,2]、卢志明[1,2]
1. 山东第一医科大学附属省立医院
2. 山东省立医院

目的 了解山东地区人疱疹病毒 6 型(HHV-6)的感染情况。
方法 采用整体抽样的方法收集 2016 年 12 月~2021 年 5 月来山东省立医院就诊的 4887 例可疑感染患者，用 PCR 方法进行人疱疹病毒 6 型核酸检测。并对不同年龄、性别的患者人疱疹病毒感染情况进行分析。
结果 4887 例检测的患者中，人疱疹病毒 6 型核酸检测阳性数为 956 例，总阳性率为 19.56%，女性阳性率为 19.90%，男性阳性率为 19.33%，差异无统计学意义(P ＞0.05);0 岁～3 岁感染率最高，阳性率为 36.15%，其次为 4 岁～6 岁，阳性率为 30.52%，≥16 岁者人疱疹病毒 6 型核酸阳性率最低，为 6.52%。
结论 人疱疹病毒 6 型的感染率无性别差异；各年龄段均可感染，但以儿童为主。

PU-0286

Long non-coding RNA LINC01296 as a potential prognostic biomarker in human cancers: a meta-analysis

Lijuan Rong
The First Affiliated Hospital of Zhengzhou

Purpose Long intergenic non-protein coding RNA 1296 (LINC01296) is a novel lncRNA that is reported to be abnormally expressed in various cancers and is related with poor clinical outcomes. The purpose of this meta-analysis was to evaluate the potential role of LINC01296 in predicting human cancer prognosis.
Materials and Methods The databases we searched for literature included Pubmed, Embase, Web of science, Cochrane library, and China National Knowledge Infrastructure (CNKI) up to July 2019, with no language restrictions. Ultimately, a total of 13 studies with 913 patients were included in the present meta-analysis.
Results This meta-analysis showed that high LINC01296 expression level was related to poor overall survival (OS) (HR=2.29, 95%CI: 1.76-2.96, P<0.001). We also confirmed the results using online database TCGA (HR=1.3, P<0.001). Further analysis revealed that high expression of LINC01296 was associated with the clinicopathological characteristics of the tumor, including lymph node metastasis, advanced TNM stage, higher histologic grade, larger tumor size, and older patient age.
Conclusions Our meta-analysis suggested that LINC01296 can be expected to serve as a new marker for tumor prognosis.

PU-0287

血管内皮功能损伤及修复与动脉粥样硬化的相关研究

魏红霞、张葵
南京大学医学院附属鼓楼医院

在发达国家，动脉粥样硬化性心血管疾病被称为威胁人类健康的“头号杀手”，随着经济的迅速发展，我国动脉粥样硬化性心血管疾病的发病与死亡率均呈上升趋势，已接近发达国家水平。过去

对动脉粥样硬化（AS）的研究大多集中在动脉管腔的狭窄或堵塞，而导致管腔狭窄或堵塞的主要原因是管壁出现了病变。血管壁是心血管多重危险因素作用的靶点，血管壁损害是心血管疾病发生和发展的共同病理基础。面对世界范围内与日俱增的心血管疾病患者，人们已经认识到对血管病变的干预不应该局限于通过解除管腔的局部机械阻塞而达到治疗目的，早期发现和及时干预才是延缓和控制心血管事件的根本措施。多年研究发现，以前认为的危险因素如吸烟、高血压、高血脂等已不足以解释 AS 的发生发展，而有关 AS 的内皮功能障碍和自身免疫因素越来越受到关注。因此，简便而准确的评估血管内皮损伤状态及修复对于预防 AS 性血管病变的发生发展无疑具有重要意义。

The MIR137HG/miR-2467/Twist1 regulatory network fosters malignant phenotypes in hepatocellular carcinoma

haoming shen[1]、di zhang[2]
1. Hunan Cancer Hospital & The Affiliated Cancer Hospital of Xiangya School of Medicine, Central South University
2. The Third Xiangya Hospital of Central South University

Background Hepatocellular carcinoma (HCC) is seemed as the second common cancer of cancer-related mortality worldwide. Increasing evidences have identified the malfunctioning roles of long non-coding RNAs (lncRNAs) in various human cancers. Herein, we aim to investigate the functional role and underlying regulatory mechanism of lncRNA MIR137 host gene (MIR137HG) in HCC.
Methods A cohort of 50 paired HCC tumor tissues and adjacent normal tissues were collected for measuring the expression pattern of MIR137HG by qRT-PCR assay, as well as evaluating its relationship with tumor grade or stage, and prognosis. Stable HCC cell lines with MIR137HG knockdown was established for the functional experiments, including CCK-8, immunofluorescence staining, wound healing and transwell assays, to assess cell proliferation, migration and invasion, respectively. Luciferase reporter assay was employed to validate the MIR137HG/miR-2467/Twist1 axis. Levels of epithelial-mesenchymal transition (EMT)-related biomarkers and Wnt/β-catenin signals were further detected using western blot analysis.
Results MIR137HG was significantly elevated in patients with HCC, as well as positively associated with high tumor grade, advanced tumor stage, and low survival rate. Silencing of MIR137HG exerted the suppressive effects on cell proliferation, migration and invasion. Mechanistically, MIR137HG induced up-regulation of Twist1 via sponging miR-2467, thereby activating Wnt/β-catenin pathway in HCC cells. Depletion of β-catenin blocked the biological effects of MIR137HG overexpression on HCC cells.
Conclusion Our findings identified that MIR137HG promoted malignant phenotypes of HCC cells via targeting miR2467/Twist1 axis, indicating a potential prognostic biomarker for HCC therapy.

PU-0289

血清淀粉样蛋白 A 在儿童 EB 病毒感染早期诊断中的价值

刘志强、成秀妹、柯江维
江西省儿童医院

目的 研究血清淀粉样蛋白 A(SAA)在儿童 EB 病毒感染早期诊断中的价值。
方法 2018 年 7 月至 2018 年 10 月期间本院收治的 100 例外周血 EBV-DNA 阳性患儿为病例组，同期来院健康体检的 50 例外周血 EBV-DNA 阴性儿童为对照组，进行 SAA、C 反应蛋白(CRP)和外周血白细胞计数(WBC)检测，并采用 ROC 曲线进行统计与分析。

结果 病例组 SAA、CRP、WBC、SAA/CRP 水平均高于健康对照组，差异有统计学意义（P<0.05）；病例组的 SAA、CRP、WBC 及 SAA/CRP 曲线下的面积分别为 0.911、0.803、0.766 及 0.928，三项指标联合检测曲线下面积为 0.961。
结论 SAA 对 EB 病毒感染均有较高的诊断价值，SAA、CRP、WBC 三项联合检测意义更大。

PU-0290

基于糖基化修饰组学的结肠癌组织早期特异性生物标志物的筛选

王金金、王瑾、王芳、柯青、袁梦娇、龚倩
上海市青浦区中心医院

目的 结直肠癌（CRC ）是常见的恶性肿瘤之一，早期症状隐匿，一经发现常为中晚期且五年生存率极低。目前，组织活检是诊断 CRC 的金标准，但具有创伤性和危险性；血清学标志物检测是 CRC 诊断、治疗监控和判断预后较为理想的方法。其中 CEA、CA199，CA242 是临床常见的用于诊断结肠癌的血清标志物，但这些标志物的敏感性、特异性均不佳，难以满足当前精准诊疗的要求。因此，寻找和鉴定特异性的生物标志物用于 CRC 的早期诊断、治疗监测和预后判断,是目前临床亟待解决的重要科学问题。
方法 采用串联质谱标记、N-糖基化修饰富集和高效液相色谱-质谱定量蛋白质组学技术筛选和鉴定 CRC 的生物标志物，并在组织水平进行分析。
结果 筛选特异性糖基化蛋白（ITGB、COX-2）。
结论 糖基化 ITGB 和 COX-2 可作为 CRC 潜在早期免疫诊断标志物，同时为建立一种新的 CRC 诊断技术奠定理论依据和实践基础。

探讨两种方法提取人宫颈脱落细胞中的 HPV 阳性率及主要型别的差异性

郭俊英
德州市人民医院

目的 人乳头瘤病毒是引起人体皮肤黏膜鳞状上皮增殖的一种病毒，是宫颈上皮增生和宫颈癌的主要致病因素。此文是探讨两种方法提取人宫颈脱落细胞中的 HPV 阳性率及主要型别的差异性。
方法 对本院 200 例病人的 HPV 标本分别用两种**方法** 一种是采用氧化硅纳米磁珠微球和缓冲液，通过外加磁场对磁珠吸附转移从而提取纯化；另一种是利用聚苯乙烯螯合离子交换树脂吸附金属元素离子，对悬浮液加热使 DNA 裂解释放并纯化检测。比较两种提取方法下，HPV 的感染型别以及阳性率的差异，并对其比较进行统计学分析。
结果 在本次 200 例病例中，磁珠提取法得到的结果 HPV 感染率为 18.50%（37/200），其中 HPV16、52、58 分别占比 27.02%（10/37）、18.91%（7/37）、16.21%（6/37）。加热裂解法提取法得到的结果 HPV 感染率为 20.00%（40/200），其中 HPV16、52、58 分别占比 27.50%（11/40）、20.00%（8/40）、17.50%（7/40）。Kappa 一致性分析总符合率为 96.08%，总符合率的 95%置信区间（0.95,0.97）。
结论 磁珠吸附法和加热裂解法提取的 HPV 阳性率及主要型别并无显著性差异。

PU-0292

转录因子 E2F 家族蛋白在肝癌组织中的表达特征及其与预后的相关性

沈浩明[1]、章迪[2]
1. 湖南省肿瘤医院
2. 中南大学湘雅三医院

目的 分析肝癌组织中 E2F 家族蛋白的表达特征,并探讨 E2F 家族蛋白与肝癌患者预后的关系。
方法 从癌症基因组图谱数据库查询公开的肝癌组织与癌旁组织表达量数据,样本共 424 例,其中癌旁组织样本 50 例。应用 R 软件对肝癌组织中 E2F 家族蛋白表达量与癌旁组织的差异进行统计学分析各组间两两比较差异均显著（P<0.05）。肝癌患者 E2F 表达与肿瘤分期的相关性研究中, E2F1、E2F2、E2F3、E2F4、E2F6、E2F7、E2F8 mRNA 表达的分布与肿瘤分期相关;生存分析中除 E2F4 外，其余蛋白表达量与患者生存预后呈明显相关性（P<0.05）,各蛋白的表达量越高,则患者的预后越差,生存率越低；ROC 曲线分析 E2F 家族蛋白与肝癌生存预后的相关性,E2F2、E2F7 对肝癌的预测有一定的准确性,E2F1、E2F8 对肝癌的预测有较高准确性；GO 和 KEGG 分析提示 E2F 家族关键基因主要集中在细胞周期、DNA 复制、细胞分裂相关通路中。
结论 E2F 家族蛋白中的 E2F1、E2F2、E2F3、E2F5、E2F7 和 E2F8 蛋白在肝癌组织中呈高表达,其表达水平与肝癌患者的发生发展及生存预后密切相关, E2F1、E2F2、E2F7 和 E2F8 分子可以为肝癌分子诊断与靶向治疗提供参考。

环状 RNA 与肿瘤

张宇
南京鼓楼医院

环状 RNA（circular RNAs，circRNAs）是一类具有闭合环状结构的 RNA 分子，大量存在于真核转录组中，具有一定的组织、时序和疾病特异性。circRNAs 可作为竞争性内源 RNA（competing endogenous RNAs，ceRNAs）竞争性结合 microRNA，可调控亲本基因的表达和调控可变剪切等。越来越多的研究显示 circRNAs 在多种疾病特别是肿瘤的发生发展中发挥重要作用，在肿瘤诊断、治疗和预后等方面具有巨大的潜能。本文将对目前 circRNAs 在肿瘤中的研究情况作一综述。

自噬分子 ATG14 与甲状腺乳头状癌细胞恶性行为的相关性研究

朱莹、乔焱源、陈穆群、吴惠玲、高晓玲
玉溪市人民医院医学检验科（昆明医科大学第六附属医院医学检验科）

目的 探讨自噬分子 ATG14 与甲状腺乳头状癌细胞恶性行为的相关性。
方法 采用瞬时转染 ATG14-siRNA 下调甲状腺乳头状癌细胞的 ATG14 表达水平，用 MTT 法、划痕实验及流式细胞分析等检测甲状腺乳头状癌细胞的增殖能力、侵袭能力及凋亡情况。
结果 RT-qPCR 结果显示，ATG14 在甲状腺乳头状癌细胞中高表达。MTT 结果显示，敲降 ATG14 后甲状腺乳头状癌细胞活力明显下降；流式细胞术检测结果显示，敲降了 ATG14 后甲状腺乳头状癌细胞 PTC-1 的凋亡率明显降低；细胞划痕实验结果显示，敲降 ATG14 细胞迁移能力明显增强，

细胞侵袭实验也得到相似的结果；此外，ATG14 过表达后，发现甲状腺乳头状癌细胞 PTC-1 对抗癌药物顺铂敏感性降低；而敲降 ATG14 后，甲状腺癌细胞对抗癌药物顺铂敏感性增加。
结论 ATG14 促进甲状腺乳头状癌细胞恶性行为，并且增加其对顺铂的耐药性。

PU-0295

采用自上而下的方法评定 HBV-DNA 测量不确定度

徐秋月、段勇
昆明医科大学第一附属医院

目的 对乙肝 DNA 的测量不确定度进行评价。
方法 参照 CNAS-TRL-001：2012《医学实验室-测量不确定度的评定与表达》,采用“自上而下”的方法，评定偏移和实验室内测量复现性两部分分量引入的不确定度并合成，计算相对扩展不确定度。
结果 低浓度及高浓度合成标准不确定度(对数值)分别为 0.21、0.22， 相对合成标准不确定度分别为 6.45%、3.82%。扩展不确定度分别为 0.42、0.44，相对扩展不确定度（k=2）分别为 12.9%，7.64%。PT 引入的实验室相对合成标准测量不确定度 5.58%。相对扩展不确定度为 11.16%(k = 2)。
结论 医学实验室应定期对乙肝 DNA 的测量不确定度进行评定。

PU-0296

资阳地区妇科门诊患者高危型人乳头瘤病毒感染情况分析

郭琴
资阳市第一人民医院

目的 探讨资阳地区女性高危型人乳头瘤病毒（high-risk human papilloma virus, HR-HPV）的感染情况及其与宫颈病变的相关性，为本地区宫颈癌的早期筛查及 HPV 疫苗选择提供理论依据。
方法 收集 2017 年 3 月-2021 年 4 月期间在资阳市第一人民医院妇科门诊进行宫颈癌筛查患者的 HR-HPV 检测结果，分析计算 HR-HPV 总体感染率、HR-HPV 亚型分布、不同年龄段 HR-HPV 感染特征、HR-HPV 感染与宫颈病变的相关性。
结果（1）资阳地区妇科门诊患者 HR-HPV 感染率为 17.54%（3177/18117），感染率居前 5 位的 HR-HPV 亚型依次为 HPV52、HPV58、HPV16、HPV51 和 HPV39。（2）HR-HPV 感染者以单一感染为主，占 78.06%（2480/3177），混合感染以双重感染最多见，占比 16.81%（534/3177）。（3）各年龄段分组中，小于 20 岁年龄组的 HR-HPV 感染阳性率最高（34.75%），30～39 岁年龄组的 HR-HPV 感染阳性率最低（16.28%），感染率随年龄呈"U"形分布。（4）在同时接受 TCT 检查的 1183 例 HR-HPV 感染者中，962 例未查见上皮内病变细胞或恶性细胞 （NILM），135 例查见非典型鳞状上皮细胞（ASC），86 例存在鳞状上皮内病变（SIL），NILM、ASC、SIL 患者排名前五的 HR-HPV 亚型略有差异。
结论 资阳地区女性 HR-HPV 感染率较高，HPV52、HPV58、HPV16 在总人群及伴宫颈细胞学异常的人群中的感染率均排名前三，建议至少选择可覆盖 HPV52、HPV58、HPV16 等型别的多价疫苗。

PU-0297

无创 DNA 检测技术在胎儿染色体非整倍体疾病产前筛查中的应用

万彦谷
南方医科大学珠江医院

目的 通过对无创 DNA 产前筛查（NIPT）结果进行回顾性分析，探讨 NIPT 在胎儿染色体非整倍数疾病（21 三体综合征、18 三体综合征、13 三体综合症、以及性染色体非整倍数疾病）的临床应用价值。
方法 对本院近两年报告的 NIPT 样本进行回顾性分析。采用 BGI500 平台测序，结合生物信息学分析，对 21 三体、18 三体、13 三体以及性染色体非整倍数疾病进行产前筛查。NIPT 高风险的孕妇充分知情选择后，进行羊水/脐血穿刺的染色体核型分析并随访。
结果 NIPT 结果提示高风险的为 17 例，阳性率为 0.084%。其中 11 例进行染色体核型分析，结果为 21-三体 4 例、18-三体 2 例、13-三体 1 例、性染色体异常 1 例，阳性预测值分别为 100%、100%、100%和 25%。比较 NIPT 筛查与染色体核型分析两种方法，结果无统计学差异（P＝0.810>0.05）。
结论 NIPT 对 2l 三体综合征、18-三体综合征和 13-三体综合征的检测的符合率较高，但是对性染色体异常疾病检测的符合率偏低。迄今为止，NIPT 仍只能作为产前筛查技术，其高风险的孕妇仍需进行产前诊断，以确保产前检测的准确性。

PU-0298

八基因联合检测在非小细胞肺癌中的突变分析

谭茜
岳阳市一人民医院

目的 探讨运用基于二代测序（NGS）的杂交捕获富集法检测 ALK、BRAF、EGFR、 ERBB2、KRAS、 MET、 RET 和 ROS1 八基因在非小细胞肺癌（NSCLC）的突变情况，分析其与临床病理的关系，探索八基因突变联合检测的临床应用价值。
方法 收集 2020 年 5 月至 2021 年 6 月在岳阳市一人民医院病理确诊为非小细胞肺癌患者 130 例（肺腺癌 120 例，肺鳞癌 10 例）。采取磁珠法提取 DNA，突变检测采用杂交捕获富集法，在 illumina Miseq^{DX} 测序仪上进行测序分析。
结果 非小细胞肺癌八基因联合检测的总突变频率为 80.8%（105 /130），各驱动基因突变分布为: EGFR：56.2% (73 /130) 、KRAS：9.2%（12 /130）、ALK 融合：7.7%（10 /130）、BRAF：2.3%（3/130）、MET 14 号外显子跳读突变：1.5%（2/130）、ROS1 融合：1.5%（2 /130）、ERBB2：1.5%（2 /130)、RET 重排（融合）:0.8% (1 /130)。肺腺癌突变频率（90.8%，101/120）高于肺鳞癌（40%，4/10）；男性患者中 KRAS 突变率和 ALK 融合率明显高于女性患者；而 EGFR 突变频率低于女性患者；KRAS 突变在吸烟患者的发生率显著高于无吸烟史患者。EGFR 突变率在年龄低于 60 岁和年龄高于 60 岁的患者之间无差异。另外在 2 例样本中检出双突变，突变率达到 1.5%。
结论 在 8 个驱动基因突变中，EGFR 突变和 ALK 融合与患者性别以及组织学类型密切相关；KRAS 突变与患者吸烟史密切相关，其它较为罕见驱动基因突变并未发现与组织学类型、患者性别及吸烟与否相关。杂交捕获法八基因联合检测可一次获得更多基因突变信息，可作为 NSCLC 理想的基因检测方法，为分子靶向用药提供更加全面的指导信息，从而精准指导临床治疗。

PU-0299

H7 亚型流感疫苗交叉反应的系统评价

苟晓琴
资阳市第一人民医院

目的 接种疫苗是目前用于干预流感的主要措施，但当新型的高致病性流感病毒大规模流行时，生产新型疫苗并尽快应用于临床却是一大挑战。H7 亚型流感病毒的血凝素（HA）具有相似的抗原表位，可以诱导产生交叉反应性抗体。该研究中，对一种 H7 亚型流感疫苗针对其他 H7 亚型病毒诱导的交叉反应性抗体进行系统评价。
方法 计算机在 PubMed，Cochrane Library，EMBASE，MEDLINE，中国生物医学数据库（CBM）和万方数据库中检索有关 H7 亚型流感疫苗交叉反应的随机对照试验及临床试验，检索时间截止到 2020 年 12 月。
结果 共检索到 9 篇文章，共计 811 名受试者。结果显示 H7 流感疫苗诱导的特异性保护性抗体[血清转化率（SCR）= 0.74，95％CI（0.65，0.82）; 血清保护率（SPR）= 0.81，95％CI（0.78，0.83）]。在血凝素抑制试验（HI），微量中和试验（MN）和免疫吸附试验（ELISA）中，所有 H7 流感病毒单价疫苗均与其他 H7 亚型病毒存在交叉反应。 H7N1，H7N3，H7N7 和 H7N9 疫苗可对其他 H7 亚型流感病毒产生交叉反应抗体[SCR = 0.66，95％CI（0.50，0.82）; SPR = 0.79，95％CI（0.67，0.91）]。其中 H7N1 和 H7N3 疫苗交叉反应抗体 SCR（95％CI）分别为 0.88（0.85，0.91）和 0.40（0.26，0.54）；H7N1 和 H7N7 疫苗交叉反应抗体 SPR（95％CI）分别为 0.89（0.86，0.92）和 0.93（0.81，1.06）。 所有 H7 疫苗均可诱导针对 H7N9 病毒的交叉反应抗体[SCR = 0.69，95％CI（0.52，0.86）； SPR = 0.85，95％CI（0.76，0.94）。
结论 当出现新型高致病性 H7 病毒时，可接种 H7 其它亚型疫苗进行初步防预。

PU-0300

资阳市宫颈人乳头瘤病毒感染型别分布

付英
资阳市第一人民医院

目的 了解资阳市人乳头瘤病毒(HPV)感染情况和基因类型分布，为本地区的宫颈癌防治提供依据。
方法 采用荧光 PCR 的方法对来院的 8620 例 HPV 检测者进行 HPV15 种基因分型检测。
结果 8620 例检测者中，感染 HPV 者 1852 例，阳性率为 21.48%，其中 52、58 和 16 型比例最高；总感染率和多重感染率的高峰年龄段均在＜20 岁和≥60 岁；HPV 感染模式以单一感染为主，占 77.24%，多重感染以两重感染为主。
结论 资阳市 HPV 常见基因型符合亚洲人群感染规律，感染率随年龄呈现 U 型分布。

PU-0301

Integrating serum microRNAs and electronic health records improved the diagnosis of tuberculosis

Junwei Zhao
Department of Clinical Laboratory, The First Affiliated Hospital of Zhengzhou University

Background To verify the differential expression of miR-30c and miR-142-3p between tuberculosis patients and healthy controls and to investigate the performance of microRNA (miRNA) and subsequently models for the diagnosis of tuberculosis (TB).

Methods We followed up 460 subjects suspected of TB, and finally enrolled 132 patients, including 60 TB patients, 24 non-TB disease controls (TB-DCs) and 48 healthy controls (HCs). The differential expression of miR-30c and miR-142-3p in serum samples of the TB patients, TB-DCs and HCs were identified by reverse transcription-quantitative real-time PCR. Diagnostic models were developed by analyzing the characteristics of miRNA and electronic health records (EHRs). These models evaluated by the area under the curves (AUC) and calibration curves were presented as nomograms.
Results There were differential expression of miR-30c and miR-142-3p between TB patients and HCs ($p < 0.05$). Individual miRNA has a limited diagnostic value for TB. However, when we integrated miR-142-3p and ordinary EHRs to develop two models for the diagnosis of tuberculosis, diagnostic performance has been both significantly improved. The AUC of the model for distinguishing tuberculosis patients from healthy controls has increased from 0.75 (95%CI: 0.66-0.84) to 0.96 (95%CI: 0.92-0.99) and the model for distinguishing tuberculosis patients from non-TB disease controls has increased from 0.67 (95%CI: 0.55-0.79) to 0.94 (95%CI: 0.89-0.99).
Conclusions Integrating serum miR-142-3p and EHRs is a good strategy for improving the TB diagnosis.

PU-0302

资阳地区地中海贫血基因突变类型分析

刁雪
资阳市第一人民医院

目的 分析资阳地区疑似地中海贫血患者的地中海贫血基因检测结果，了解资阳地区地中海贫血基因突变类型。
方法 选取 2020 年 5 月至 2021 年 4 月于资阳市第一人民医院收治的疑似地中海贫血患者 323 例，采用 PCR 结合溶解曲线分析法进行非缺失型 α、缺失型 α 和 β 地中海贫血基因检测。
结果 323 例受检者存在地中海贫血基因的有 98 例，阳性率为 30.34%。98 例中携带 α 地中海贫血基因 45 例，β 地中海贫血基因 51 例，α 合并 β 地中海贫血基因 2 例。45 例 α 地中海贫血基因中共检测出 4 种常见 α 地中海贫血等位基因，以东南亚缺失型 αα/--SEA 基因最多共 31 例，占比为 68.89%。51 例 β 地中海贫血基因携带者共检测出 11 种常见地中海贫血等位基因，排名前三的基因型分别是 CD17（15 例，占比 29.41%），IVS-II-654（14 例，占比 27.45%），CD41-42（12 例，占比 23.53%）。
结论 资阳地区地中海贫血基因突变类型中 α 地中海贫血等位基因以东南亚缺失型 αα/--SEA 基因最多，β 地中海贫血等位基因以 CD17 基因最多；β 地中海贫血基因检出率稍高于 α 地中海贫血基因。

PU-0303

Association between lncRNA MALAT1 polymorphisms and cancer susceptibility: a meta-analysis

Lei Zheng
The First Affiliated Hospital of Zhengzhou University

Background LncRNA metastasis associated with lung adenocarcinoma transcript-1 (MALAT1) was involved in pathogenesis and progress of diverse cancers. To investigate the association of MALAT1 and cancer susceptibility, this meta-analysis was appraised.
Methods 12 studies including 7007 cancer patients and 8791 controls were selected for this meta-analysis. Ratio radiation (ORS) and 95% confidence interval (CIS) were used to assess cancer susceptibility.

Results There was no significant association between rs3200401 polymorphism and the risk of cancer. However, rs3200401 was correlated with an increased risk of digestive cancer in allelic model (OR=1.15, 95%CI=1.04-1.28, P=0.009) and dominant model (OR=1.16, 95%CI=1.02-1.31, P=0.02). There was a borderline association between rs664589 and cancer susceptibility under the dominant model (OR=1.17, 95%CI=1.00-1.38, P=0.05). Rs619586 was associated with decreased cancer risk in all populations under four models (G vs A: OR=0.86, 95%CI=0.78-0.94, P=0.001; GG vs AA: OR=0.60, 95%CI=0.42-0.84, P=0.003; GG+AG vs AA: OR=0.87, 95%CI=0.78-0.97, P=0.009; GG vs AG+AA: OR=0.61, 95%CI=0.44-0.84, P=0.003). Moreover, rs1194338 was decreased associated with cancer susceptibility (A vs C: OR=0.89, 95%CI=0.80-0.98, P=0.01; AA vs CC: OR=0.77, 95%CI=0.62-0.96, P=0.02; AA+AC vs CC: OR=0.87, 95%CI=0.77-1.00, P=0.04; AA vs AC+CC: OR=0.82, 95%CI=0.67-1.00, P=0.05).
Conclusion Our results suggest that rs619586 and rs1194338 are associated with decreased cancer risk, while rs3200401 and rs664589 correlated with increased digestive cancer risk.

PU-0304

TCP1α 对胰腺癌细胞株的生物学影响

王乐乐
山东大学第二医院

胰腺癌目前的五年生存率为 6%，手术治疗使其比较好的治疗方法，但胰腺癌一旦被发现就已经处于晚期，因此分子靶向治疗等新的治疗方法以迫在眉睫。理想的分子靶向治疗药物能够特异地选择肿瘤细胞内某个致癌靶位点与之相结合发生作用，从而特异地抑制肿瘤细 胞的生长增殖，进而导致肿瘤细胞的死亡。癌基因成癮概念的提出为肿瘤的分子 靶向治疗研究提供了良好的生物学基础，已经成为当前抗癌药物研发及癌症治疗 的重要研究热点。在前期研究中，我们已经鉴定出多种短寿命蛋白的快速降解可 、能与癌细胞中成癮癌基因急性抑制后发生的急性凋亡有关，T 复合蛋白 1 亚基 α(T-complex protein 1 subunitalpha，TCP-1-alpha，简称 TCP1α、CCT1)就是其中的蛋白之一。TCP1α 是构成分子伴侣复合物 TRiC（也称 TCP-1、CCT）的一种亚基，当前已有多项研究显示 TRiC 亚基在多种肿瘤标本中过表达，包括肝癌、肺癌、乳腺癌、胃癌、结肠癌等，并且发现多种亚基对于肿瘤的发生发展起着至关重要的作用。但是，目前关于 TCP1α 在胰腺癌中的相关研究还知之甚少。因此，本课题将重点研究 TCP1α 在胰腺癌发生发展中的作用，为胰腺癌的发病机制及靶向治疗提供理论和实验依据。

裂殖酵母 Clr1 蛋白在 DNA 损伤应答中的机制探究

谷璐婷
南华大学附属第一医院

DNA 损伤应答是机体应对损伤作出的一系列反应。DNA 损伤应答有效的协调，在机体适应环境、细胞的分裂、分化过程中发挥了重要作用。研究 DNA 损伤应答相关的分子机制，将会加深对人类许多疾病发生发展机制的理解，为疾病的预防和治疗提供新的思路和方法。

以裂殖酵母（Fission yeast, S.pombe）为模式生物， 研究真核生物中 DNA 损伤应答相关机制，通过遗传筛选方法寻找参与 DNA 损伤应答新的蛋白。ATR/Rad3 蛋白是目前已知 DNA 损伤应答中至关重要的一个上游蛋白激酶，它参与了 DNA 损伤应答多方面的调控。在 *Rad3* 基因缺失的背景下，筛选出对 DNA 损伤药物敏感表型产生回补的突变株，再通过对突变株深度测序确定相关突变基因，其中一个可能参与 DNA 损伤应答反应的新基因为 *Clr1*。Clr1 蛋白是一个转录负调控蛋白，已报导的主要功能是参与异染色质的组装。

本研究通过遗传实验，初步证明了 Clr1 蛋白与 DNA 损伤应答具有相关性，且 *Clr1* 缺失可以回补 *Rad3* 基因缺失对 DNA 损伤药物的敏感性。通过生化实验，证明在损伤应答反应时，Clr1 蛋白会受到 Rad3 蛋白的调控，再通过泛素化途径降解。但 Clr1 作为 Rad3 的下游蛋白，在损伤应答中并不直接受到 Rad3 蛋白磷酸化调控。通过质谱鉴定，发现在进行 DNA 损伤药物处理后 Clr1 蛋白存在多个位点的磷酸化修饰。

巨噬细胞炎性蛋白 3α（MIP-3α/CCL20）结构功能及其与肿瘤关系的探讨

宋志纯
丽水市人民医院

趋化因子巨噬细胞炎性蛋白 3α（MIP-3α/CCL20）是 CC 亚家族中的一员，其在体内与其受体 CCR6 结合之后诱导 T 细胞和树突状细胞定向迁移，能够在肿瘤免疫及自身免疫性疾病中发挥重要的作用。本文旨在深入研究来增强对其病理生理学意义的认识，为相关疾病的预防及治疗提供新的方法。

PU-0307

香烟烟雾提取物改变原代人支气管上皮细胞中 lncRNA 和 mRNA 全基因组图谱

王楠
山东第一医科大学
山东大学第二医院

目的 研究香烟烟雾提取物(CSE)刺激下原代人支气管上皮细胞(HPMECs)中的 lncRNAs 的表达模式，以探究慢性阻塞性肺病（COPD）的发病机制。
方法 利用香烟烟雾提取物处理的原代人支气管上皮细胞，构建 COPD 发病模式下的的细胞凋亡模型，用 Annexin V-FITC/PI 双染细胞凋亡检测试剂盒进行染色(贝博公司；BB-4101-1)检测 HPMECs 凋亡模型构建成功。随后提取 RNA 后进行转录组测序，通过 RNA 测序和生物信息学分析并预测差异 lncRNA 调控的 mRNA，并进行 GO 功能与 KEGG 信号通路聚类。
结果 首先用 0.1%、1%和 10%CSE 刺激 HPMECs 24h，观察 CSE 对 HPMECs 的影响。流式细胞仪分析显示早期凋亡率随 CSE 浓度从 0.1%增加到 10%而增加，提示在 CSE 诱导的 HPMECs 的凋亡有剂量依赖性。经 1.0%CSE 处理后，HPMEC 凋亡率显著升高(流式细胞仪检测为 36.23±4.20%)。与 0.0%CSE 组(7.33±1.36%)和 0.1%CSE 组(19.50±2.03%)相比，差异均有统计学意义(P<0.05)。10%CSE 组细胞凋亡率(41.19±5.61%)持续升高，差异仍有显著性(P<0.05)。在随后的实验中，我们决定将细胞暴露在 1.0%的 CSE 中 24 小时。
经 1%CSE 刺激 24h 后，提取 HPMECs 总 RNA，采用基因芯片技术进行基因表达谱分析。我们以 P value< 0.05 且|log2FC|>2 为筛选标准，其中上调的 lncRNAs 有 54 个(P<0.05)，下调的 lncRNAs 有 29 个(P<0.05)，我们从生物过程(BP)、细胞成分(CC)和分子功能(MF)三个方面对差异表达的 lncRNA 预测到 mRNA 靶基因，以探讨其可能的功能作用。
结论 CSE 诱导的 HPMECs 存在一组独特的 lncRNAs 和 mRNAs 表达模式，这些异常的 lncRNAs 可能通过转录后调节 ceRNA 网络参与血管内皮细胞对香烟烟雾应激的反应，可能有助于阐明 COPD 的潜在机制。

BRCA 基因突变和血清肿瘤标志物在 HBOC 卵巢癌患者中的临床意义研究

邓红玉、刘牧奇、李瑛花、李佶刚、衡建福、沈浩明、屈斌、黄宏君、熊海玉、包莹、唐发清
湖南省肿瘤医院

目的 调查 HBOC 卵巢癌患者与其他癌症家族史卵巢癌患者 BRCA1/2 特定位点突变情况，分析临床数据及手术前后血清肿瘤标记物浓度变化，探讨其临床意义。
方法 1. 通过 Sanger 测序分析 HBOC 卵巢癌患者与患有其他肿瘤家族史患者 BRCA1 基因 c.220C>T、c.3770-3771delAG、c.4712delT、BRCA2 基因 c.3109C>T 突变情况。2. 统计分析 HBOC 卵巢癌患者与患有其他肿瘤家族史患者病例及手术前后血清肿瘤标记物浓度变化。
结果 40 例 HBOC 卵巢癌患者 4 个特定位点总体的突变率为 7.5%（3/40），其中 BRCA1 c.3770-3771delAG 的突变率为 2.5%（1/40），BRCA1c.4712delT 的突变率为 5%（2/40）。40 例其他癌症家族史卵巢癌患者无突变。术前 CA125、术后 CA125、术前 HE4、术后 HE4 血清学水平在研究组和对照组之间差异无统计学意义（*P*>0.05）；术后铁蛋白浓度变化情况与对照组有显著差异（*P*<0.05）。HBOC 卵巢癌患者 CA125、HE4 血清学水平术后均低于术前，差异具有统计学意义（*P*<0.05）。其他癌症家族史患者 CA125、HE4 血清学水平术后均低于术前，差异具有统计学意义（*P*<0.05）。HBOC 卵巢癌患者单项检验 C A125 灵敏度 87.50%最高，HE4 和 FERRITIN 特异性 94.12%最高。联合检验中 CA125+HE4+Ferritin 的联合检验诊断能力最强。
结论 1. BRCA1c.3770-3771delAG 与 BRCA1 c.4712delT 可能是中国湖南省地区 HBOC 卵巢癌患者 BRCA1/2 基因高频有害胚系突变位点。2. 肿瘤标志物 CA125、HE4 血清学水平变化可作为卵巢癌患者治疗监测及预后判断的指标，CA125+HE4+Ferritin 的联合检验诊断能力最强。3. 铁稳态调节及 FERITIN 浓度变化可能对 HBOC 卵巢癌患者诊断及治疗具有指导意义。

PU-0309

乙肝患者的血清标志物联合乙肝病毒 DNA 检测用于乙肝病毒感染诊断的价值

文琪
资阳市乐至县人民医院

目的 探究乙肝病毒（HBV）感染应用血清标志物联合乙肝病毒 DNA 检测的临床诊断价值。
方法 遴选时段 2018 年 6 月-2019 年 6 月内 120 例乙型肝炎患者，以血清 HBV 检测结果为参考设置分组，大三阳组（36 例）、小三阳组（50 例）、其他模型组（34 例），纳入对象均开展 HBV DNA 检测、血清标志物检测，检测结果分析对比。
结果 大三阳组 HBV DNA 定量检测结果明显高于小三阳组、其他模型组，且经 HBV DNA 检测大三阳组阳性率为 86.11%高于小三阳组 44.00%、其他模型 8.33%，组间对比均存在统计学差异（P＜0.05）；同时检测阳性患者共计 56 例，经血清标志标志物检测，其中 HBeAg 阳性率 4.64%、HBsAg 阳性阳性率 91.07%。
结论 对乙型肝炎患者开展 HBV DNA +血清标志物检测对乙肝病毒感染情况进行诊断，为疾病早期诊断及病情评估提供有效数据支持，以便于后期临床诊疗工作的开展。

PU-0310

低氧微环境对胰腺癌细胞转录水平的影响

刘小艳
山东大学第二医院

目的 胰腺癌(Pancreatic cancer, PC)是消化道肿瘤中死亡率最高的恶性肿瘤, 其特点是初期症状不明显、恶化快、手术切除率低、整体预后差。目前主要治疗方法是根治 性切除后加以辅助治疗，但大部分病人在诊断时已是晚期，只有 15%-25%的患者适 合手术切除。由于早期复发转移和多化疗药物耐药，即使接受了切除手术，患者的 5 年生存率只有 8%。 癌细胞恶性转移是胰腺癌发展的早期过程，是导致预后较差的 独立影响因素。因此探索导致胰腺癌发生发展的遗传或表观遗传因素，发现新的治 疗靶点和生物标志物，是提高患者生存率的关键。与其他肿瘤相比，胰腺癌是含氧量最低的实体肿瘤，低氧微环境对肿瘤的发生进展的影响非常复杂，需深入探究。
方法 体外模拟低氧微环境，寻找低氧微环境影响的特异调控基因。分别在正常氧和低氧（2% 02）条件下培养胰腺癌细胞 PANC-1 48h，qRT-PCR 和 Western blot 验证 HIF-1a 的表达水平。正常氧和低氧组分别 3 个重复，进行 RNA-seq，即转录组测序。提取细胞中总 RNA，用 RiboMinus 方法建库、采用 Hiseq 2000 平台测序；采用 DESeq2、Wilcoxon rank sum test 等分析方法，以 $p<0.05$ 且$|\log2\text{Fold Change}|>2$ 为筛选标准， 筛选出差异基因。 对差异基因分别进行 GO 功能富集和 KEGG 通路分析。
结果 RNA-seq 结果表明，与正常氧相比，在低氧条件下表达上调的基因有 1286 个，表达下调的基因有 1669 个。差异基因富集分析发现，这些差异基因主要集中在有氧应激反应，Pathway 分析表明 HIF-1 信号途径、果糖和甘露糖代谢、淀粉和蔗糖等糖代谢途径。

miR-1204 促进乳腺癌细胞上皮-间充质转化及侵袭转移的作用机制研究

刘小艳
山东大学第二医院

目的 全球范围内乳腺癌每年新诊断出的病例都高居不下，严重威胁女性健康和生活质量。 肿瘤转移是乳腺癌死亡的根本原因， 据统计，约 6%的患者在诊断时已经出现转移，约 20%-50%的早期乳腺癌患者最终将发展成转移性乳腺癌。 肿瘤转移是乳腺癌治疗的主要障碍，因此，寻找更多调控肿瘤细胞转移的关键分子对于乳腺癌的预后以及新治疗策略的开发十分重要。miR-1204 位于染色体 8q24 位点长链非编码 RNA PVT1 区 的 miRNA 基 因 簇 ，我们研究发现 miR-1204 在乳腺癌中过表达并促进乳腺细胞上皮-间充质转化，最终促进乳腺癌转移。
方法 首先利用公共数据库 METABRIC 和 TCGA 统计分析染色体 8q24 位点基因扩增情况。利用实验室收集的新鲜乳腺癌组织和恶性程度不同的乳腺癌细胞系验证生物信息分析的结果。结合患者病历和随访结果分析 miR-1204 表达水平与乳腺癌临床病理分期和生存期的关系。通过 qRT-PCR 和 WB 检测 miR-1204 对 EMT 标志分子 E-cadherin、N-cadherin 的表达影响，通过构建小鼠远端转移瘤模型，体内验证 miR-1204 促进乳腺癌细胞转移。
结果 生物信息统计分析和乳腺癌组织验证发现 miR-1204 位点在乳腺癌中高表达；体外分子实验表明 miR-1204 促进 EMT 标志分子 N-cadherin 的表达，抑制上皮标志分子 E-cadherin 的表达；小鼠远端转移瘤模型验证了 miR-1204 促进乳腺癌细胞体内远端转移，转移瘤主要集中在肺部。
结论 我们的研究发现，miR-1204 在乳腺癌中高表达，通过促进细胞上皮-间充质转化促进乳腺癌细胞远端转移。本研究丰富了 PVT1 区域的基因功能，为乳腺癌的防治提供理论基础。

PU-0312

LAMP 在肺炎及呼吸道相关病原体基因检测中的应用

王云娟
昆明医科大学第一附属医院

目的 应用环介导恒温扩增芯片法（ＬＡＭＰ）对肺炎及呼吸道感染患者的痰液或肺泡灌洗液标本，进行 13 种常见致病菌的基因检测。探讨其临床应用价值，以便临床及时、准确的诊断和治疗。
方法 采用 LAMP 技术、病原体分离与培养技术，对 2020 年 9 月至 12 月收集到的 1900 例昆明医科大学第一附属医院疑似肺炎及呼吸道感染患者的痰液或肺泡灌洗液样本，对样本进行检测。然后按标本类别、性别、年龄、科室及检测方法的不同进行分析。
结果 在 1900 例样本中，LAMP 法检出了 51.63%的病原菌检出率，传统细菌培养法检出 33.95%的病原菌检出率，LAMP 法病原体检出率明显比细菌培养法检出率高。其主要病原菌为 HIB（17.58%）、MSSA（12.74%）、Kpn（11.53%）、CSAB（9.05%）、S.p（7.63%）、PA(6.63%)和 E.coli（5.47%)。男性和女性的 MP、S.a 和 CP 感染阳性率具有显著性差异(P<0.05)。小于 20 岁组患者的 S.a 和 CP 感染阳性率高于 20-60 岁组和大于 60 岁感染阳性率，差 异具有统计学意义（P<0.05）。将病原体检出最多科室老年呼吸科、儿科和 ICU 做病原菌检出情况分析，其主要病原菌为 HIB（19.02%）、MSSA（10.83%）、Kpn（10.46%）、S.p（8.13%）和 CSAB（7.16%）。
结论 LAMP 法能快速、高效、灵敏和准确地检测常见呼吸道病原体。有助于临床在快速和可靠的实验室依据下对患者进行呼吸道感染病原体的快速诊断。

PU-0313

Y 染色体上与衰老相关的 DNA 甲基化

李谷亚男[1]、郭欢[2]、林勇[3]
1. 复旦大学附属上海市第五人民医院检验科
2. 华中科技大学同济医学院公共卫生学院
3. 复旦大学附属华山医院检验科

目的 已有研究发现常染色体上存在大量与衰老相关的 DNA 甲基化位点（CpG 位点）。衰老相关疾病的发病率和死亡率存在性别差异，提示性染色体可能在衰老的进程中起着重要作用。本研究旨在探讨男性外周血细胞 Y 染色体上与衰老相关的 CpG 位点。
方法 采用发现-验证两阶段人群研究设计。发现阶段为 419 名来自武汉-珠海队列、武汉焦炉工职业人群和十堰健康体检的男性，验证阶段为 564 名来自 3 个 GEO 数据集以及 587 名来自东风-同济队列的男性研究人群。采用 Illumina 甲基化芯片检测上述研究对象外周血细胞全基因组 DNA 甲基化水平。在数据分析过程中，采用多元线性回归模型，校正吸烟状态、饮酒状态、BMI 和外周血白细胞计数，分析实足年龄与 Y 染色体 CpG 位点甲基化水平的关联。发现阶段显著性水平定义为假阳性发现率 *FDR*<0.05，验证阶段显著性水平为 *P*<0.05。为探讨 Y 染色体上衰老相关的 DNA 甲基化对相应基因表达水平的影响，通过 Illumina 表达谱芯片检测上述十堰健康体检人群外周血的基因表达谱。为探讨 Y 染色体上衰老相关 DNA 甲基化与死亡风险的关联，采用 Cox 风险比例回归模型评估 DNA 甲基化对总体死亡风险的影响，计算相应风险比。
结果 在发现阶段，41 个 Y 染色体 CpG 位点的甲基化与实足年龄之间的关联达到显著性水平（*FDR*<0.05）。其中，18 个 CpG 位点的甲基化在验证人群中与实足年龄存在显著关联（*P*<0.05）。位于 *TTTY14* 和 *EIF1AY* 上的 CpG 位点甲基化水平分别与其相应基因表达水平之间呈显著的负向关联 [cg13845521-TTTY14: β=-0.24；cg11816202-TTTY14: β=-0.21; cg01988452-EIF1AY: β=-0.28; cg13308744-EIF1AY: β=-0.36]。cg03441493 高甲基化和 cg17816615 低甲基

化的研究对象总体死亡的风险更高 [cg03441493: HR(95%CI)=1.37 (1.04, 1.79); cg17816615: HR(95%CI)=0.70 (0.54, 0.93)]。
结论 本研究首次在中国男性人群 Y 染色体上发现与衰老相关的 DNA 甲基化。Y 染色体上年龄相关的 CpG 位点（cg03441493 和 cg17816615）与死亡风险相关。

PU-0314

tsRNA 在肿瘤中研究进展及检测方法现状

范柏月、李智洋
南京大学医学院附属鼓楼医院

目的 非编码 RNA 是生命活动重要的调控因子，tsRNA（tRNA-derived small RNAs）是近年来通过高通量测序发现的一类新的非编码小 RNA，是由成熟 tRNA 或其前体在特定的核酸酶，如血管生成素 (ANG)、Dicer、核糖核酸酶 Z(RNase Z)和核糖核酸酶 Z(RNase P)作用下，产生的长度 18~40nt 的小片段，根据初始 RNAA 和酶作用位置的不同主要分为以下亚型：①tRNA 半分子 (tRNA halves,tRH），是成熟的 tRNA 分子在多种应激条件下反密码环处被特定切割产生的半分子，长度约 30-40nt ,具有 5′-tRH 和 3′-tRH 两个亚型;②tRNA 衍生片段(tRNA-derived RNA fragment,tRF)，来源于成熟 tRNA,根据匹配区域不同主要分为 tRF-5、tRF-3、tRF-1 和 i-tRF 四亚类,分别对应 5’端至 D 环或反密码子茎环区切割处；T 环切割出至 3’端；pre-tRNA 的 3’端尾部；反密码子环和茎。现有研究表明，tsRNA 并非随机裂解的产物，而是在压力条件下特性裂解生成的，在正常生理条件下很少发生，且越来越多证据表明 tsRNA 与肿瘤的发生发展密切相关，预示其作为新型肿瘤生物标志物的巨大潜力。由于 tsRNA 上具有丰富的碱基修饰保护其躲避核酸酶的切割，在使 tsRNA 拥有更高的稳定性的同时，也增加了检测的难度，此外其较短的长度、ANG 切割产生的 5’羟基（5’-OH）末端与 3’环磷酸（3’-cP）末端、天然的二级结构均对研究造成了阻碍。本文主要对 tsRNA 的分类、特点、在肿瘤中作用研究进展及现有检测方式进行综述。
方法 对近五年的 tsRNA 相关文章进行调研总结
结果 tsRNA 与肿瘤进展密切相关
结论 tsRNA 具有作为生物标志物的潜力

PU-0315

基于滚环扩增结合分子信标检测胰腺癌小分子 RNA 的新方法

范柏月、李智洋
南京大学医学院附属鼓楼医院

目的 胰腺癌是一种常见消化道恶性肿瘤，恶性程度高，缺乏准确灵敏的早期诊断方法。tsRNA(tRNA derived small RNA)是一类由 tRNA（细胞中数量最多的非编码 RNA 之一）衍生的小 RNA，近年来大量研究表明 tsRNA 在多种癌症中异常表达，具有作为疾病诊断的标志物的潜力。定量逆转录 PCR(quantitative reverse transcription PCR, RT-qPCR)是目前最常用于检测小 RNA 的方法，灵敏度高,特异性好，但步骤繁琐、试剂昂贵、依赖能加热循环的精密仪器限制了其在临床的应用。滚环扩增（rolling circle amplification，RCA）作为恒温扩增技术反应的一种，全程在同一温度下进行,对仪器要求大大简化,反应时间短,无需逆转录,操作简单,更能满足现代分子检测技术“快速简便”的要求。综上，本研究旨在筛选特异性 tsRNA 作为胰腺癌早期诊断标志物，并建立相应的基于滚环扩增的信号放大检测方法，实现快捷、简便的检测。
方法 通过测序筛选出在胰腺癌患者血清中高表达的 tsRNA，通过 RT-qPCR 评估其临床价值；建立 Toehold 介导的滚环扩增技术结合分子信标的快速检测方法，并对其特异性和灵敏度进行研究，应用该技术对 20 对胰腺癌患者和健康人血清中 tsRNA 进行定量检测。

结果 此方法可有效地对胰腺癌高表达 tsRNA 进行扩增和检测，且特异性高，耗时短。与普通 RCA 相比，能显著区分目标分子与单碱基突变的近似序列；无需逆转录和反复热变性，2h 即可完成检测。
结论 Toehold 介导的滚环扩增技术结合分子信标能够作为检测胰腺癌 tsRNA 的快速特异的方法。

全外显子组测序技术寻找圆头精子症家系的致病基因

任会均
郑州大学第一附属医院

目的 寻找一圆头精子症家系的致病基因。
方法 对一个圆头精子症家系两患者进行精液常规分析及形态观察，利用全外显子组捕获测序及生物信息学技术对该家系基因组进行分析，采用 Sanger 测序及 qPCR 技术对致病基因的变异进行验证。
结果 该家系两患者圆头精子率分别为 97%、98%，头核深染，顶体缺乏，除顶体酶活性明显降低外，精液常规分析其余指标均正常。经全外显子组测序分析、Sanger 测序及 qPCR 验证显示兄弟两患者及其母亲均存在 DPY19L2 基因杂合点突变 c.384dup（p.Glu129*），两患者及其父亲存在覆盖 DPY19L2 基因全长的约 164.5kb 的大片段杂合缺失。
结论 该家系两患者遗传于母亲的 DPY19L2 基因点突变 c.384dup（p.Glu129*）以及父亲的 DPY19L2 基因缺失，从而表现出圆头精子症的纯合表型，符合常染色体隐性遗传规律。本研究发现一个 DPY19L2 基因的新突变位点 c.384dup（p.Glu129*），为圆头精子症发病机制的研究提供新线索。

Improved EGFR mutation detection sensitivity after enrichment by Cas9/sgRNA digestion and PCR amplification

DIXIAN LUO
HUAZHONG UNIVERSITY OF SCIENCE AND TECHNOLOGY UNION SHENZHEN HOSPITAL

The detection of circulating tumor DNA is important in cancer research and clinical practice. In the present study, we aimed to improve the sensitivity of downstream mutation detection of next-generation sequencing using the clustered regularly interspaced short palindromic repeats (CRISPR)/CRISPR-associated protein 9 (Cas9) system to selectively target wild-type fragments but with low or no cleavage activity to mutant fragments, followed by amplification using polymerase chain reaction. We selected different mutant sites of epidermal growth factor receptor gene (EGFR)-exon19 deletions in patients with lung cancer and constructed mixed templates of mutant and wild-type DNA comprising ratios of 10% to 0.01% to test the effectiveness of the enrichment method. The results showed that after CRISPR/Cas9 enrichment, a low concentration of mutant DNA fragments (0.01%) could be detected by Sanger sequencing, which represented a 1000-fold increase compared with the untreated samples. We further verified the feasibility of the introduced method and obtained similar results in clinical samples from patients with non-small cell lung cancer, indicating that this method has the potential to detect low copy number mutations at the early stage.

PU-0318

The construction of circRNA-miRNA-mRNA network and prognostic evaluation model in Bladder Cancer

Qi Mi、Peilong Li、Juan Li、Chuanxin Wang、Lutao Du
The second hospital of Shang Dong University

Objective To identify the dysregulated circRNAs in bladder cancer (BC) and construct a ceRNA regulatory network. Further to establish and evaluate a prognostic model of BC.
Methods Sequencing data of BC were obtained from Gene Expression Omnibus (GEO) and The Cancer Genome Atlas (TCGA) database. By using "|log2FC|>1, *P*-value<0.05" as the standard, the sequencing data were analyzed and the RNA differential expression profiles were drawn. Multiple databases, such as CircInteractome and TargetScan, were used to construct a ceRNA regulatory network mediated by circRNAs. GO and KEGG were applied to predict the function of ceRNA network; Subsequently, the online database String was used to explore the interaction relationship between molecules in ceRNA network; The molecules related to prognosis were screened by the univariate Cox regression and *Kaplan-Meier* analysis, and were used to construct a prognostic risk assessment model. A ROC curve was drawn with "time ROC" package to evaluate the effectiveness of the model.
Result 4 circRNAs were screened through two GEO data sets (GSE147985 and GSE92675) , namely hsa_circ_0102787, hsa_circ_0103114, hsa_circ_0102402 and hsa_circ_0104387. A ceRNA network was constructed which contains 4 circRNAs, 23 miRNAs and 86 mRNAs. Functional analysis showed that the network has tumor regulation potential, and there were closely interaction relationship between mRNAs in the network. Survival analysis found that 6 mRNAs (ABRACL, CDK1, MAP3K8, POU5F1, XAF1 and ZNF525) were related to prognosis of BC. Then, a prognostic risk assessment model was established accoriding to "the risk score=(-0.3569)*ABRACL+(-0.2644)*MAP3K8", *Kaplan Meier* analysis showed patients with high risks had a poor prognosis(*P*<0.001), the AUC of the five-years overall survival rate was 0.744.
Conclusion 4 circRNAs were screened in this study, then a ceRNAs network mediated by circRNAs was constructed. By further screened prognostic related molecules in this network, a prognostic model was established and evaluated, which provided theoretical support for the molecular mechanism research, diagnosis and prognosis evaluation of BC.

High concentrations of hypochlorous acid-based disinfectant in the environment reduced the load of SARS-CoV-2 in nucleic acid amplification testing

Xiuzhi Duan、Xuchu Wang、Yiyi Xie、Zhihua Tao
The Second Affiliated Hospital of Zhejiang University School of Medicine

During the severe acute respiratory syndrome coronavirus type 2 (SARS-CoV-2) pandemic, chlorine-containing disinfectants have been widely used in nucleic acid amplification testing laboratories. Whether the use of disinfectants affect the results of viral nucleic acid amplification is unknown. We examined the impact of different hypochlorous acid (HOCl) concentrations on the quantitative results of SARS-CoV-2 by reverse transcription polymerase chain reaction (RT-PCR). We also explored the mechanisms and models of action of chlorine-containing disinfectants that affected the detection of SARS-CoV-2. The results showed that different HOCl concentrations and different action times had an impact on the SARS-CoV-2 **Results** High concentrations of ambient HOCl have a greater impact than low concentrations, and this effect will increase with the extension of the action time and with the increase in ambient humidity. The impact of HOCl on

the detection of SARS-CoV-2 is more likely to be caused by the destruction of the primers and probes in the PCR system rather than the destruction of the enzymes or the extracted RNA required for RT-PCR. The false negative result still existed after changing the ambient disinfectant to ethanol but not peracetic acid. The use of hypochlorous acid in the environment will have an unpredictable impact on the nucleic acid test results of SARS-CoV-2. In order to reduce the possibility of false negative of SARS-CoV-2 nucleic acid test and prevent the spread of epidemic disease, environmental disinfectants should be used at the beginning and end of the experiment rather than during the experimental operation.

ARMS TaqMan real-time PCR for genotyping factor V Leiden mutation in Han Chinese

Pan Yu、Yibei Dai、Jiantao Dong、Zhihua Tao
The Second Affiliated Hospital of Zhejiang University School of Medicine

Factor V Leiden (FVLeiden) is a missense mutation of 1691 position (G1691A) in exon 10 of FV gene, and being a genetic risk for venous thrombosis. Currently, there are several PCR-based **Methods** for detecting FVLeiden mutation; however, these **Methods** have disad_x0002_vantages such as time-consuming, cumbersome steps and potentially hazardous gels. The aims of present study were to develop a simple, time-saving, accurate, and gel-free method, called amplification refractory mutation system (ARMS) TaqMan real-time PCR, for detect_x0002_ing FVLeiden mutation. We severally designed two specific reverse primers for mutant and wild-type through intentional introduction of mismatched nucleotide at the penultimate 3_x0002_ position. Although target amplicon amplification efficiency is reduced, but another cor_x0002_responding amplicon is almost completely inhibited. Then, specific TaqMan-probe was designed to detect target amplicon. Established method was used to detect 500 unselected samples in Han Chinese, the results showed 499 cases of wild-type and one heterozygote. Afterward, 50 randomly picked wild-type cases and one heterozygote were reexamined by bidirectional DNA sequencing, which is considered as “Gold standard method.” Exhilarat_x0002_ingly, the results detected by the two **Methods** were completely consistent. At last, allelic frequency of FVLeiden was calculated the in Han Chinese. Given the above results, A FVLeiden heterozygote has been found in 500 random samples in Han Chinese, and the allelic fre_x0002_quency was 0.1%. In conclusion, the ARMS TaqMan real-time PCR is an ideal detecting system for genotyping FVLeiden mutation in clinical application, and FVLeiden mutation ex_x0002_ists in Han Chinese despite extremely low prevalence

PU-0321

HDAC11 Regulates Glycolysis Through the LKB1/AMPK Signaling Pathway to Maintain Hepatocellular Carcinoma Stemness

Yidan Ren、Yunshan Wang
The Second Hospital of Shandong University

Hepatocellular carcinoma (HCC) contains a subset of cancer stem cells (CSC) that cause tumor recurrence, metastasis, and chemical resistance. Histone deacetylase 11 (HDAC11) mediates diverse immune functions and metabolism, yet little is known about its role in HCC CSCs. In this study, we report that HDAC11 is highly expressed in HCC and is closely related to disease prognosis. Depletion of HDAC11 in a conditional knockout mouse model reduced hepatocellular tumorigenesis and prolonged survival. Loss of HDAC11 increased transcription of

LKB1 by promoting histone acetylation in its promoter region, thereby activating the AMPK signaling pathway and inhibiting the glycolysis pathway, which in turn leads to the suppression of cancer stemness and HCC pro- gression. Furthermore, HDAC11 overexpression reduced HCC sensitivity to sorafenib. Collectively, these data propose HDAC11 as a new target for combination therapy in patients with kinase-resistant HCC.
Significance: This study finds that HDAC11 suppresses LKB1 expression in HCC to promote cancer stemness, progression, and sorafenib resistance, suggesting the potential of targeting HDAC11 to treat HCC and overcome kinase inhibitor resistance.

PU-0322

热灭活处理对艾滋病病毒(HIV)核酸检测的影响

张慧、刘子杰
昆明医科大学第一附属医院

目的 探讨热灭活处理对艾滋病病毒(HIV)核酸检测限的影响。
方法 将接近检测限的 HIV 血清样本，将样本稀释后进行 56℃水浴锅内灭活 30min，比较未灭活标本和灭活标本循环阈值（Ct值）及最低检测限，并进行统计学分析。
结果 在高浓度 Ct≤31 样本中未灭活和 56℃、30min 灭活处理基因扩增 Ct 值差异均无统计学意义（P＞0.05）；在中浓度 31＜Ct≤39 样本中未灭活和 56℃、30min 灭活处理基因扩增 Ct 值差异均无统计学意义（P＞0.05）； 在低浓度＞39 样本中未灭活和 56℃、30min 灭活处理基因扩增 Ct 值差异均无统计学意义（P＞0.05）。
结论 使用 56℃、30min 灭活处理和未灭活处理艾滋病病毒样本对核酸检测结果无明显影响，对 Ct 值较大标本无明显影响同时对该方法学的检测限无明显影响，实验室可以采用上述方式处理标本以保护实验人员安全。

Evaluation of the SureX HPV Genotyping Test for the Detection of High-Risk HPV in Cervical Cancer Screening

Baojun Wei、Shengkai Huang、Xueting Yu、Wei Cui
DNational Cancer Center/National Clinical Research Center for Cancer /Cancer Hospital, Chinese Academy of Medical Sciences and Peking Union Medical College, Beijing, China

Background The SureX HPV genotyping test (SureX HPV test), which targets the human papillomavirus (HPV) E6/E7 genes was compared with the Cobas 4800 and Venus HPV tests for detecting 14 high-risk HPV (HR-HPV) types in clinical referral and follow-up patients to evaluate its value for cervical cancer screening.
Methods Two different populations were enrolled in the study. The first population comprised 185 cases and was used for comparing the SureX HPV test (Health, China) with the Cobas 4800 test (Roche, USA). The second population comprised 290 cases and was used for comparing the SureX HPV test (Health, China) with the Venus HPV test (Zhijiang, China). Polymerase chain reaction (PCR) sequencing was performed for further confirmation of discordant **Results**
Results In the first population, the overall agreement rate was 95.3% for 14 High-Risk HPV types. Eight discordant cases were confirmed by PCR sequencing, which showed that the agreement rates were 75.0% between the SureX HPV test and PCR sequencing and 25.0% between the Cobas 4800 test and PCR sequencing (P<0.01). In the second population, the overall agreement rate was 94.5%. Thirteen discordant cases were confirmed by PCR sequencing, which showed

that the agreement rates were 76.9% between the SureX HPV test and PCR sequencing and 23.1% between the Venus HPV test and PCR sequencing (P<0.01). With cervical intraepithelial neoplasia grade 2+ (CIN2+) as the reference standard, the sensitivity values of the SureX HPV test and the Venus HPV test were 93.5% and 92.0%, (P>0.05), while the specificity values were 43.3% and 46.7%, respectively (P>0.05).
Conclusion The SureX HPV test had good consistency with both the Cobas 4800 and Venus HPV tests for 14 HR-HPV types. In addition, it avoided some false negatives and false positives. Therefore, the SureX HPV test can be used for cervical cancer screening.

PU-0324

Research progress of testis associated highly conserved oncogenic long non coding RNA (THOR) in tumors

wenjie pu
North SiChuan Medical College

Long non coding RNA is a class of RNA molecules with a length of more than 200 nt and lacking protein coding potential. At first, lncRNA was considered as a by-product transcribed by RNA polymerase II and had no biological function. With the development of transcriptome sequencing technology, large-scale lncRNAs have been identified. More and more evidence shows that lncRNA is involved in a variety of biological processes, including gene imprinting, genome rearrangement, chromatin modification, cell cycle regulation, transcription, splicing, mRNA degradation and translation. Abnormal expression of lncrna is associated with a variety of human diseases. Among them, testis associated highly conserved oncogenic long non coding RNA (THOR) is a very conserved non coding RNA, which is specifically expressed in testis and widely exists in a variety of human tumor tissues, such as liver cancer, gastric cancer,nasopharyngeal carcinoma, renal cell carcinoma, osteosarcoma, retinoblastoma, etc Melanoma, non-small cell lung cancer and tongue squamous cell carcinoma play an important role in their occurrence and development. This article reviews the biological function and mechanism of THOR in human cancer, in order to provide molecular basis for the potential evaluation of THOR as a target for early diagnosis and treatment of cancer.

PU-0325

Fluorescent quenching probes based SAA 1 genotyping with a fully automated system.

Jie Zhang、Yishuai Wang、Yan Zhang
DiaSys Diagnostic Systems (Shanghai) Co., Ltd.

Objective The aim of the present study is to develop and validate a reliable and simple application for genotyping serum amyloid A1 (SAA1).
Methods The specific nested PCR was performed to amplify a product of *SAA1* gene. Two quenching probes (QPs) were designed for detecting two single nucleotide polymorphism (SNP) sites, rs1136743(C/T) and rs1136747(C/T) respectively for *SAA1* genotypes. The specific nested PCR and QPs of *SAA1* genotying was introduced into a fully automated genotyping system (I-densy, ARKRAY, Inc.), which enables the genotyping of *SAA1* from whole blood.
Results Six genotypes of *SAA1* ($\alpha^{+/+}$, $\beta^{+/+}$, $\gamma^{+/+}$, αβ, αγ and βγ) could be determined by monitoring the fluorescence intensity of two QPs with melting temperature (TM) analysis. Total 121 clinical samples were *SAA1* genotyped in the fluorescent quenching probes based method with a fully automated I-densy system and were further sequence confirmed with a PCR direct sequencing approach.

Conclusion This fully automated system is a rapid and reliable strategy for the *SAA1* genotyping and for its future clinical application.

含整合酶抑制剂方案治疗云南省 HIV/AIDS 患者常规血液生化指标变化及不良反应分析

马莎、刘家法
云南省传染病医院

目的 研究接受含整合酶抑制剂（INSTIs）DTG 和 RAL 方案治疗 HIV-1 成年患者 48 周的血液和生化指标变化及不良反应情况。
方法 采用回顾性性研究的方法，以云南省传染病医院从 2008 年 1 月至 2019 年 1 月收治的使用含 INSTIs 方案治疗的 148 名 HIV/AIDS 患者为研究对象。按照不同抗病毒治疗方案分为使用含 DTG 方案组和 RAL 方案组，分析其在治疗前基线和治疗后 4 周、8 周、12 周、24 周和 48 周的血常规、血脂和肝肾功指标变化的差异；分析所有入组患者在 48 周内有记录的不良反应发生率。
结果 根据纳入和排除标准，共有 148 例患者符合研究条件，其中使用 RAL 方案有 91 例，使用 DTG 方案有 57 例。48 周 ART 过程中检测到在血液常规、血脂血糖和肝肾功能方面两种方案具有相似的疗效。血液指标方面在 ART 治疗 48 周的 PLT、HGB、RBC、MCV 和 RDW 水平随时间的变化趋势差异无统计学意义（P>0.05），但除 PLT 外，HGB、RBC、MCV 和 RDW 在 5 个随访点与基线比较差异均有统计学意义（P<0.05）；两方案治疗后各指标均数变化比较：与 RAL 组相比，DTG 组的各指标升高更明显。在血脂指标方面，在 ART 治疗 48 周内 TG、TC 和 LDL-C 随时间变化趋势的差异无统计学意义（P>0.05），HDL-C 水平随时间变化趋势两种不同治疗方案差异有统计学意义（F=5.108,P=0.002），在 5 个随访点变化与基线的差异有统计学意义（F=3.612,P=0.014），两方案治疗后均未发现血脂异常。肝脏功能主要指标 ALT、AST 和 TBIL 水平在治疗后 DTG 方案和 RAL 方案间随时间变化趋势及各指标不同随访点变化与基线比较差异都无统计学意义（P>0.05）；肾肝脏功能主要指标 Scr 和 UREA 水平随时间变化趋势差异无统计学意义（P>0.05），UA 随时间变化趋势差异有统计学意义（P<0.05）,各指标在不同随访点变化与基线比较差异无统计学意义（P>0.05）。常见的不良反应是中枢神经系统症状，DTG 组占 14%，RAL 组占 13%；其次是胃肠道不良反应，DTG 组占 11%，RAL 组占 12%。
结论 含 INSTIs 方案治疗 HIV/AIDS 在主要血液和生化指标有变化但均未发现明显异常，DTG 方案和 RAL 方案对 HIV 患者抗病毒治疗 48 周内各系统的变化相似。DTG 方案与 RAL 方案在使用 48 周内出现的不良反应没有明显差异，具有相似的安全性且两种方案发生的不良反应事件级别相似。

某地区中医医院 3025 例女性 HPV 感染情况分析

袁星竹
安岳县中医医院

目的 分析安岳县中医医院就诊的患者（含门诊、住院、体检病人）HPV 感染情况，包括感染人群比例，HPV 各亚型的分布及各年龄组分布特点，为安岳地区宫颈癌的预防和治疗提供科学参考依据。
方法 采用实时荧光 PCR 方法对 2018 年 1 月至 2021 年 5 月来我院就诊的 3025 例女性患者宫颈脱落细胞进行 HPV 分型检测。
结果 3025 例采集样本共检测出 21 种 HPV 亚型，其中 HPV 高危型 18 种（16 18 31 33 35 39 45 51 52 53 56 58 59 66 68 26 82 73），HPV 低危型 3 种(6 11 81)。3025 例采集样本中，检出 HPV

阳性样本 431 例，阳性率为 14.25%，阳性样本以单一感染，高危亚型为主。双重以上感染病人 95 人，占阳性患者 22.04%。2018 年 1 月至 2021 年 5 月 3025 例样本感染阳性率排名前三位的 HPV 亚型分别为 2018 年 52 58 51；2019 年 52 53 16；2020 年 52 58 81；样本中阳性率较高的亚型为 52 16 58，均为高危型。低危型阳性率较高的为 81 6 11。将患者按年龄分组分别 HPV 感染率为 20 岁以下(0.36%)，20-30 岁(1.95%)，30-40 岁(4.07%)，40-50 岁(4.96%)，50-60 岁(1.92%)，60 岁以上(0.99%)6 个组，进行 HPV 亚型差别统计，结果具有统计学意义。

结论 安岳地区 HPV 感染以单纯感染，高危型感染为主，女性高危型感染率明显高于低危型感染率，感染高发年龄段为 30-50 岁女性。建议加强对适龄女性定期检测 HPV 和注射 HPV 疫苗的宣传，从而做到相关疾病的早预防，早发现，早诊断，早治疗，可促进未来宫颈癌的全面防止进程。

PU-0328

2011～2020 年云南省≥50 岁 HIV/AIDS 病例 ART 失败基因型耐药研究

刘家法
云南省传染病医院

目的 本研究旨在对 2011～2020 年间云南省≥50 岁抗病毒治疗失败的 HIV/AIDS 患者进行耐药情况分析，为该人群耐药的预防和治疗提供一定参考依据。

方法 收集云南省 2011 年 1 月～2020 年 12 月期间≥50 岁抗病毒治疗失败患者的人口学信息及耐药检测结果进行综合分析。

结果 本次研究共收集到云南省 2011～2020 年间符合筛选标准的≥50 岁 HIV/AIDS 治疗失败病例 2227 例，累计治疗失败率为 7.88%，其中男性占比较大，为 68.88%；年龄中收集到最多为 50～<60 岁组，占 51.37%；传播途径主要以性接触传播为主，占 85.41%；地区上以红河州为主，占 14.14%；该人群抗病毒治疗失败的耐药率为 57.64%。 对该人群进行耐药与非耐药的特征分析发现，年龄、地区、基因亚型、治疗方案、治疗时长以及病毒载量的分布均存在差异（P<0.05），其中年龄段以 50～<60 岁的病例耐药率相对较高，为 59.26%；地区以临沧市耐药率相对较高，达到 73.08%；基因亚型主要以 CRF01_AE 耐药率相对较高，为 69.05%。治疗方案中以一线治疗方案 TDF+3TC+NVP 的耐药为主，为 72.50%。 基因亚型以 CRF08_BC 为主，占 53.78%，且各年间的主要流行亚型均为 CRF08_BC，URFs 有逐年上升的趋势，特别是云南省的边境地区。

结论 2011～2020 年云南省≥50 岁 HIV/AIDS 入组患者人数占比呈现逐年上升趋势，该人群的累计耐药率较全年龄段人群高，并且呈现一定的上升趋势，应加强对该人群的管理，加强耐药监测，防止多重耐药的发生。该人群 URFs 的分布占比较高，且有逐年增加的趋势，应进一步开展监测，分析其流行病学意义。

胃癌外泌体来源非编码 RNA- X26nt 促进肿瘤血管生成的机制研究及其作为胃癌早筛血清标志物的应用

杨俊瑶[1]、曾亮[3]、沈立松[2]
1. 上海交通大学医学院附属新华医院检验科
2. 上海交通大学医学院附属新华医院检验科
3. 清华大学

目的 胃癌早期无明显特异症状，容易漏诊，有效的血清标志物能提升早期胃癌的检出率，对胃癌的临床治疗具有重要意义。血管生成通过提供氧气和营养物质与肿瘤发生、侵袭和转移密切相关。最近，越来越多的证据表明，含有蛋白质、编码和非编码 RNA (ncRNA) 的癌症衍生外泌体在癌症中具有促血管生成功能。 肌醇需求酶 1 α 诱导的 XBP1 剪接过程中产生 26nt 长度的非编码 RNA——X26nt，在胃癌患者血清和组织中高表达。本研究探索 X26nt 作为胃癌血清标志物的潜力及其在胃癌发展过程中的作用。

方法和结果 首先，我用排阻超滤法提取胃癌（200 例）患者血清外泌体，通过巢式 QPCR 方法检测 X26nt 的表达，发现 X26nt 在胃癌患者血清中表达增高，且早期增高幅度最大，对比传统胃癌标志物，我们发现 X26nt 的敏感性更高。接着，通过探针原位杂交方法，分别检测胃癌组织中剪切型 XBP1 和 X26nt 表达，结果显示 X26nt 在胃癌组织和中的表达水平显着高于邻近组织。其次，我们通过荧光标签，验证了 X26nt 可以通过胃癌细胞外泌体递送到人脐静脉内皮细胞（HUVECs）中，功能实验证明 X26nt 促进 HUVECs 的增殖、迁移和小管形成。此外，我们通过荧光素酶报告基因检测 X26nt 通过直接结合 HUVEC 中 VE-钙粘蛋白 mRNA 的 3'UTR 降低 VE-钙粘蛋白，从而增加血管通透性。最后，通过体内实验， 我们进一步证明 X26nt 在小鼠皮下移植瘤模型中加速肿瘤生长和血管生成。

结论 我们的研究首次揭示 XBP1 来源的非编码 RNA 在胃癌中稳定存在，并通过外泌体分泌，通过促进肿瘤血管生成影响肿瘤的进展，具有很高的胃癌血清标志物应用前景。

PU-0330

Synthesis and Identification of a Novel Visual Peptide Ac-SDK (Biotin) P to Anti-Fibrosis in Rats Silicosis

Jin Wang、Qian Gong
Qingpu Branch of Zhongshan Hospital, Fudan University

Background N-Acetyl-seryl-aspartyl-lysyl-proline (Ac-SDKP) is a short peptide with an anti-silicosis effect. However, the short biological half-life and low plasma concentration of Ac-SDKP hampers discovery of specific targets in organisms and reduces the anti-silicosis effect. A novel peptide, Ac-SDK (Biotin) Proline, termed "Ac-B", with anti-fibrotic properties was synthesized.
Methods Ac-B was detected quantitatively by high-performance liquid chromatography. Phagocytosis of Ac-B by the alveolar epithelial cell line A549 was investigated by confocal laser scanning microscopy and flow cytometry. To further elucidate the cellular-uptake mechanism of Ac-B, chemical inhibitors of specific uptake pathways were used. After stimulation with transforming growth factor-β1, the effects of Ac-B on expression of the myofibroblast marker vimentin and accumulation of collagen type I in A549 cells were analyzed by western blotting. Sirius Red staining and immunohistochemical analyses of the effect of Ac-B on expression of α- smooth muscle actin (SMA) in a rat model of silicosis were undertaken.
Results Ac-B had good traceability during the uptake, entry, and distribution in cells. Ac-B treatment prevented an increase in α-SMA expression in vivo and in vitro, and was superior to

that of Ac-SDKP. Caveolae-mediated uptake of Ac-B by A549 cells led to achieving anti-epithelial–mesenchymal transformation (EMT) effects.
Conclusion Ac-B had an anti-fibrotic effect, and could be a promising agent for the fibrosis observed in silicosis in the future.

PU-0331

血小板膜糖蛋白 GPⅠa（G873A、C807T）在心脑血管疾病及糖尿病患者中基因型分布的调查

焦瑞宝、陈继中
安徽省铜陵市人民医院

目的 调查血小板膜糖蛋白 GPⅠa（G873A、C807T）在心脑血管疾病及糖尿病患者的基因型分布状况。
方法 回顾性收集 2018 年 9 月至 2019 年 9 月在铜陵市人民医院住院、出院主诊断或主要此诊断为心血管疾病、脑血管疾病和糖尿病患者 278 例临床治疗资料，其中心血管疾病组为 58 例，脑血管疾病组为 158 例，糖尿病组为 62 例，采用焦磷酸测序法测定 GPⅠa（G873A）、（C807T）的基因多态性。
结果 两者的野生型、杂合突变型和纯合突变型均同步出现同一个病例，两者三个基因型在三个疾病组中分布及等位基因分布比较，差异均没有统计学意义（c2 =5.203、0.839，P＞0.05），符合 Hardy-Weinberg 遗传平衡，结果见表 2 和表 3。但是 GPIa（G873A）野生型（GG 和 GPIa（C807T）野生型（CC）均不大于 50.00%，而 GPIa（G873A）杂合突变型（GA）和纯合突变型（AA）之和、GPIa（C807T）杂合突变型（CT）和纯合突变型（TT）之和均不小于 50.00%，且等位基因 A 型和 T 型均位于 25%~34%之间。
结论 阿司匹林药效相关基因位点 GPⅠa(G873A、C807T)在人群中存在突变现象较为常见，但基因突变存在个体间差异，不存在群体间差异。

PU-0332

Prostatic aspirated cellular RNA analysis enables fast diagnosis and staging of prostate cancer

Yiwen Sang、Xuchu Wang、Pan Y、Zhihua Tao
The Second Affiliated Hospital of Zhejiang University School of Medicine

Objective The aim of this study is to investigate the potential application of prostatic aspirated cellular RNA analysis technique for fast diagnosing and staging prostate cancer.
Methods Prostatic aspirated cells were obtained immediately after transrectal ultrasound (TRUS)-guided nee_x0002_dle biopsy. Cellular RNA such as glyceraldehyde-3-phosphate dehydrogenase (GAPDH) mRNA, prostate specific antigen (PSA) mRNA and prostate-specific RNA (PCA3) mRNA were analyzed by using Reverse Transcription_x0002_Polymerase Chain Reaction (RT-PCR). PCA3 score was calculated as the ratio of PCA3 mRNA to PSA mRNA ex_x0002_pression. Diagnostic performance of the fast-aspirated cellular RNA analysis technique for determining prostate cancer and metastatic status were evaluated by developing receiver operating characteristic curves (ROC), and the correlation between aspirated cellular RNA mRNA expressions and risk grouping was calculated, to investigate the underlying potential for PCa staging.

Results PCA3 score was significantly higher in prostatic aspirated cells obtained from cancerous tissues than noncancerous tissues. The median aspirated cellular PCA3 score was higher in patients with PCa compared to BPH, and presenting an area under the ROC curve (AUC) of 0.87 (95%CI: 0.79–0.94) for PCa diagnosis. Mul_x0002_tivariate regression analysis revealed that baseline median aspirated cellular PCA3 score (OR=9.316, 95%CI: 1.045–83.033, P<0.05) was an independent predictive factor for metastatic status in PCa patients.
Conclusion The ease of use and minimal complexity of fast prostatic aspirated cellular RNA analysis may be a valuable diagnostic technique, providing urgent diagnostic information for accurate PCa diagnosing and staging.

PU-0333

苏州地区女性 HPV 感染状况及 HPV 亚型分布情况研究

韩秀
苏州市独墅湖医院（苏州大学附属独墅湖医院）

目的 分析苏州地区女性 HPV（human papillomavirus，人乳头瘤病毒）感染情况和 HPV 亚型分布情况，为苏州地区女性宫颈癌防治提供科学依据。
方法 选取 2020 年 1 月至 2021 年 5 月于苏州市独墅湖医院妇科就诊及体检的 769 例妇女，采用江苏硕世生物科技股份有限公司的人乳头瘤病毒核酸分型检测试剂盒（荧光 PCR 法）检测 HPV 分型，分析该地区女性 HPV 感染率、感染亚型分布及年患者年龄分布的特点。
结果 769 例检测者中，HPV 阳性者有 122 例，HPV 感染率为 15.86%(122/769)，其中单一感染 88 例，二重感染 23 例，多重感染 11 例，分别占 11.44%、2.99%、1.43%。高危 HPV 亚型分布前 5 位为 HPV52、HPV58、HPV16、HPV39、HPV31，感染率分别为 3.15%、2.23%、2.23%、1.58%、1.31%。低危 HPV 亚型感染率最高为 HPV81，感染率为 1.97%。分析患者年龄分布情况，结果显示感染阳性者主要集中在 25-35 和 35-45 岁，感染率分别为 0.98% 和 25.41%。
结论 苏州地区 HPV 感染主要为单亚型感染，主要为 HPV52 和 58 亚型，16、39 和 31 次之。HPV 感染分布与年龄有关。HPV 分型检测结果可以为该地区女性宫颈癌的诊断和治疗提供参考。

A review of the Paris system for reporting urinary cytology

Wanru Ma
Affiliated Hospital of Xuzhou Medical University

In recent years, the global incidence of urothelial tumors has increased, and the clinical prognosis is poor. Early detection, screening and diagnosis are particularly important for the prognosis of urothelial tumors. Common detection **Methods** are ureteroscopy, computer tomography(CT) and urinary tract cytology. Before that, the diagnostic criteria we used were usually divided into 5 categories: 1) negative; 2) atypical urothelial cells favoring a reactive process (AR); 3) atypical urothelial cells unclear if reactive or neoplastic process (AU); 4) suspicious for HGUC; and 5) positive for HGUC. This classification scheme lacks specificity and direction. Diagnostic categories for The Paris System for Reporting Urinary Cytology were usually divided into 7 categories:1) Nondiagnostic/unsatisfactory; 2) Negative for high-grade urothelial carcinoma (NHGUC); 3)Atypical urothelial cells (AUC); 4) Suspicious for high-grade urothelial carcinoma (SHGUC); 5) High-grade urothelial carcinoma (HGUC); 6)Low-grade urothelial neoplasm (LGUN); 7) Other: primary and secondary malignancies and miscellaneous lesions. This new reporting system focused on diagnosis of the detection of HGUC and minimized the detection of Low-grade urothelial carcinoma (LGUC), since cytology has a high sensitivity of detecting the HGUC with a poor sensitivity for the LGUC.

来源于肝癌细胞的外泌体 miRNA-622 缺失促进脂肪细胞的脂解

沈钰涛、邓萱
复旦大学附属华山医院

我们发现了肝癌患者血浆中 miR-622 的表达水平与患者的脂肪质量指数呈正相关。本文阐明了 miR-622 在癌变过程当中对脂肪细胞代谢产生的影响。

方法 我们运用 qRT-PCR 检测了脂肪质量指数不同的肝癌患者的血浆，用比色法测定了脂肪细胞培养基中（分别与人肝细胞和肝癌细胞共培养）甘油和游离脂肪酸的含量。我们将外泌体从肝癌患者的血浆和肝癌细胞培养基中分离出来，用 qRT-PCR 检测了其中 miR-622 的表达水平，再用 DiI 标记外泌体与脂肪细胞共培养，测定培养基中的甘油和游离脂肪酸含量，用分子生物学方法研究了 miR-622 的功能机制及其对脂肪细胞代谢的影响。

结果 miR-622 的表达水平与肝癌患者的脂肪质量指数成正比。miR-622 在肝癌细胞及其释放的外泌体中表达下调。与人肝细胞相比，miR-622 表达降低的肝癌细胞可促进脂肪细胞的脂解，而过表达 miR-622 可逆转脂解表型。体外实验证明，从人肝细胞和肝癌细胞中分离出的外泌体可被脂肪细胞吸收内化，而 miR-622 表达含量较低的肝癌细胞外泌体可促进脂肪细胞的脂解。

结论 本研究首次讨论了来源于肝癌细胞外泌体的 miR-622 在体外模型中对脂解代谢的影响。结果表明，来源于肝癌细胞外泌体的 miR-622 可被脂肪细胞吸收并抑制脂肪细胞的脂解。因此，外泌体 miR-622 可作为一种潜在的治疗方案，以减轻与癌症相关的脂解代谢增加并抑制肝癌的进展。

PU-0336

荧光原位杂交技术在骨髓增生异常综合征中的应用

刘燕
吉林金域医学检验所有限公司

目的 骨髓增生异常综合征（MDS）是关于造血干细胞恶性克隆的一种疾病，目前，细胞形态学是诊断骨髓增生异常综合征的主要方法之一，但其与再障性贫血等区分困难。荧光原位杂交(FISH)是一种利用荧光标记的特异性核酸探针与细胞 DNA 结合，检测染色体畸变的方法，可以应用于 MDS 患者中。

方法 1、荧光探针：用于检测 5、7、20、8 和 Y 染色体异常，包括：EGR1/D5S23，D5S721（5q31，5p15.2）；D7S486/CEP7（7q31）；D20S108，MYBL2（20q12，20q13.12）；CEP8；CEPY 四种探针。

2、取全血/骨髓样本 2ml 离心，0.075M KCL 低渗液低渗、吹打、水浴，使红细胞吸水胀破，白细胞胀大，加固定液，冰醋酸：甲醇=1：3 进行固定，调悬液-滴片。镜检：待玻片晾干后 10X 物镜镜检，原则细胞分散，但不重叠。将镜检后的玻片放置晾片板上，56℃烤片 1h。2X SSC 洗涤、梯度酒精脱水，加探针过夜杂交。杂交后用 0.4%NP40 洗涤未结合的探针，然后加 4’，6-二脒基-2-苯基吲哚对细胞核进行复染，最后在荧光显微镜下计数 200 个间期细胞。

结果 5q:红色荧光标记 EGR1(5q31)探针，绿色荧光标记 D5S23，D5S721(5p15.2)探针，正常信号模式为 2G2R(注:G 为绿色信号，R 为红色信号)。

7q:红色荧光标记 D7S486(7q31)探针，绿色荧光标记 CEP7 探针，正常信号模式为 2G2R(注:G 为绿色信号，R 为红色信号)。

20q:红色荧光标记 D20S108(20q12)探针，绿色荧光标记 20q13.12(MYBL2)，正常信号模式为 2G2R(注:G 为绿色信号，R 为红色信号)。

+8:红色荧光标记 CEP8 探针，正常信号模式为 2R(注:R 为红色信号)。

-Y:红色荧光标记 CEPY 探针，正常信号模式为 1R(注:R 为红色信号)。

结论 5q-异常可见于骨髓增生异常综合征及多种恶性疾病如:真性红细胞增多症、急性髓细胞白血病等，这些疾病中 5q-存在标志预后差。
-7/7q-遗传学异常主要在 MDS 中，发生率约为 28%。-7/7q-患者 72％会转为急性白血病，预后较差。
20q-是髓系疾病中常见的再现性异常，见于 4%～5%的 MDS 和 1%～2%的 AML。
CEP8 在 CML、AML、骨髓增生障碍(MPD)、骨髓增生异常综合症(MDS)及其它非特异性造血系统疾病中 8 号三体遗传畸变的发生非常普遍。
Y 染色体缺失约在 5%的 MDS 患者中检测到，孤立的-Y 需结合形态学结果确诊 MDS，部分伴有单纯-Y 的患者免疫抑制治疗有效。

PU-0337

北京地区健康女性人乳头瘤病毒流行及基因型分布

于浩、吴洁
中国医学科学院北京协和医院

目的 人乳头瘤病毒 (HPV) 感染，尤其是高危 HPV (HR-HPV) 基因型感染与宫颈癌的发生密切相关。本研究旨在观察中国北京地区健康女性 HPV 感染的流行病学特征。
方法 收集 2016-2019 年在北京协和医院接受健康查体的 29436 名健康女性的宫颈拭子标本，使用商品化试剂盒检测 15 个 HR-HPV 和 2 个低危 HPV 基因型，分析 HPV 阳性率及基因型分布情况。
结果 共有 3586（12.18%）名参与者检测出 HPV 阳性，其中 3467 人感染了 HR-HPV。最常见检出的基因型是 HPV52、58、16、51 和 56。此外，虽然单一基因型的感染 (9.84%) 更为普遍，但在感染多种 HPV 分型的人群中，HPV16+52 是最常见的组合。此外，在不同年龄组中<25 岁的女性（20.92%）HPV 感染率最高。2016-2019 年期间不同年份 HPV 的流行率无显着差异。除郑州外，北京地区的 HPV 发病率与中国其他地区均存在显著差异（$p < 0.05$）。
结论 我们的研究结果为更好地了解北京地区 HPV 感染的流行病学特征提供潜在的参考。

PU-0338

叶酸代谢能力基因检测不同检测系统比对

李文妮
西安金域医学检验所有限公司

目的 分析两种叶酸代谢能力基因检测试剂对结果的影响，以评估其检测结果的一致性。
方法 检测试剂：苏州旷远人 MTHFR&MTRR 基因多态性检测试剂盒（荧光 PCR 法）和西安金磁 MTHFR C677T、 MTHFR A1298C、MTRR A66G 基因检测试剂盒（PCR－金磁微粒层析法）。检测**方法** 取 5 例临床样本，分别使用两种检测系统提取扩增，对比 MTHFR C677T、MTHFR A1298C、MTRR A66G 基因多态性检测结果。
结果 符合率：苏州旷远与西安金磁叶酸代谢能力基因检测试剂 MTHFR C677T、MTHFR A1298C、MTRR A66G，3 种基因位点结果比对均通过，比对结果符合率为 100%，符合比对标准，可用于临床叶酸代谢能力基因项目检测。
结论 孕妇体内若缺乏叶酸，可造成高同型半胱氨酸血症、胎儿神经管畸形。通过叶酸代谢能力基因检测，可以科学合理的补充叶酸，降低新生儿出生缺陷的风险。上述两种试剂盒均可为高同型半胱氨酸水平或叶酸代谢异常的患者提供辅助诊断及临床用药提供有效的参考。

NIPT、CMA、高分辨染色体核型制备与分析技术在珠海市产前诊断中的联合应用

赵理平
广东省珠海市妇幼保健院

目的 评估无创产前检测（non-invasive prenatal testing，NIPT)、染色体微阵列分析（chromosomal microarray analysis,CMA）、高分辨染色体核型制备与分析技术在珠海市产前诊断中联合应用的临床价值。
方法 对 26882 例符合 NIPT 筛查指征孕妇进行 NIPT 检测，对其中 205 例 NIPT 高风险孕妇进行羊水高分辨染色体核型分析及 CMA 检测。
结果 205 例 NIPT 高风险确诊 124 例，总阳性预测值 60.5% ；高分辨核型分析检出传统技术易漏诊的 3～5Mb 左右结构异常 5 例；CMA 检出正常核型结果中致病或可能致病性微缺失/微重复 3 例，单亲二体（uniparental disomy UPD）2 例，明确不确定染色体结构 1 例，因方法学局限性未检测出核型分析中 4 例倒位、5 例易位、7 例低比例嵌合体。
结论 高分辨染色体核型制备与分析技术较传统技术能有效提高产前诊断中染色体病的检出率。NIPT、CMA、高分辨染色体核型分析三种技术具有互补性，在产前诊断中联合应用可以有效提高胎儿染色体病检出率，减少出生缺陷。

阳泉地区汉族育龄女性亚甲基四氢叶酸还原酶基因多态性分析

赵俊琴、郑礼瑶
阳泉市第一人民医院

目的 调查阳泉地区汉族育龄女性亚甲基四氢叶酸还原酶基因多态性分布情况，为临床医师指导育龄女性合理增补叶酸提供科学依据。
方法 以 2018 年 1 月至 2020 年 8 月在阳泉市第一人民医院进行孕前或孕期检查的汉族女性 1892 例为研究对象，采集血液应用荧光定量 PCR 法检测 MTHFR C677T 位点的基因型，统计分析基因多态性的分布特征，并与文献已经报道的其他地区基因型频率/等位基因频率的分布情况进行统计学比较。
结果 阳泉地区汉族育龄妇女 MTHFR C677T 基因多态性检验结果符合 Hardy-Weinberg 遗传平衡，MTHFR 基因 C677T 位点以纯合突变型(TT)为优势基因型，占 50.2%；野生型(cc)占 18.0%；杂合突变型(TT)占 31.8%。不同年龄组育龄女性的 MTHFR C677T 的等位基因和基因型分布频率差异无统计学意义(P<0.05)。阳泉市育龄女性的 MTHFR C677T 等位基因和基因型分布情况同其他地区相比较，差异有统计学意义(P<0.05)。阳泉地区汉族育龄女性 MTHFR C677T 的基因型与中国七大地理分区比较来看，阳泉市的优势基因型为 TT 型，华南地区优势基因型为 CC 型，其余六大分区（华北、华东、华中、东北、西北、西南）优势基因型均为 CT 型，经比较阳泉市与七大地理分区的差异均具有统计学意义（P<0.05）。
结论 阳泉地区汉族育龄女性的 MTHFR C677T 基因多态性分布具有明显的地域性特征，推荐根据叶酸代谢基因多态性检测结果指导育龄女性合理增补叶酸剂量，预防出生缺陷。

PU-0341

Distributive characteristics of the CYP2C9 and AGTR1 genetic polymorphisms in Han Chinese hypertensive patients: a retrospective study

Keping Chen
Zhongda Hospital, School of Medicine, Southeast University

Background There is an individual variation in response to antihypertensive effect of the angiotensin II receptor antagonist. This study aimed to determine the allele and genotype frequencies of CYP2C9 and AGTR1 genetic polymorphisms and explore the potential role of these polymorphisms in guiding the selection of angiotensinⅡreceptor antagonist in Han Chinese hypertensive patients.
Methods Totally 2419 Han Chinese hypertensive patients and 126 normotensive controls were recruited in this study. Venous blood samples were collected from each patient, and the genetic polymorphisms of CYP2C9 and AGTR1 were assessed using a gene chip platform. The allele and genotype frequency of each gene and the combined genotypes in this study were analyzed respectively.
Results The gene chip analysis identified an allelic frequency of 96.51% for CYP2C9*1 and 3.49% for CYP2C9*3 in the cohort of Han Chinese hypertensive patients. Statistical analysis showed that the frequency of wild-type homozygous for CYP2C9*1/*1 was 93.30%, while the frequency of heterozygous for *1/*3 or mutant homozygous for *3/*3 was 6.41% or 0.29%. Meanwhile, we detected allelic frequencies of 95.06% and 4.94% for the A and C allele of AGTR1, respectively. While the genotype frequency of wild-type homozygous for AA was 90.41%, the frequency of heterozygous for AC or mutant homozygous for CC was 9.30% or 0.29%. Notably, we observed that 84.66% (2048/2419) of the subjects exhibited a combined genotype of CYP2C9 and AGTR1 as *1/*1 + AA, while the combined genotypes *3/*3 + AC or *3/*3 + CC were not detected in hypertension patients. Besides, no significant association was found between normotensive controls and hypertensive patients, or among the three grades of hypertensive patients.
Conclusions These data revealed the polymorphisms characteristics of CYP2C9 and AGTR1 in Han Chinese hypertensive patients, providing valuable information for genotype-based antihypertension therapy in prospective clinical studies in the future.

Analysis of ceRNA networks and identification of potential drug targets for drug-resistant leukemia cell K562/ADR

Yanyan Wang[1,2]、Zhaoping Liu[1,2]、Zhenru Xu[3]、Shunling Yuan[2]、Yanglin Ou[2]、Zeyu Luo[2]、Feng Wen[2]、Jing Liu[4]、Ji Zhang[1,2]
1. Shenzhen Traditional Chinese Medicine Hospital
2. 南华大学附属第一医院
3. 海南医学院第二附属医院
4. 中南大学

Motivation Drug resistance is the main obstacle in the treatment of leukemia. As a member of the competitive endogenous RNA (ceRNA) mechanism, underlying roles of lncRNA are rarely reported in drug-resistant leukemia cells.
Methods The gene expression profiles of lncRNAs and mRNAs in doxorubicin-resistant K562/ADR and sensitive K562 cells were established by RNA sequencing (RNA-seq). Expression of differentially expressed lncRNAs (DElncRNAs) and DEmRNAs was validated by qRT-PCR. The potential biological functions of DElncRNAs targets were identified by GO and KEGG

pathway enrichment analyses, and the lncRNA-miRNA-mRNA ceRNA network was further constructed. K562/ADR cells were transfected with CCDC26 and LINC01515 siRNAs to detect the mRNA levels of GLRX5 and DICER1, respectively. The cell survival rate after transfection was detected by CCK-8 assay.
Results The ceRNA network was composed of 409 lncRNA-miRNA pairs and 306 miRNA-mRNA pairs based on 67 DElncRNAs, 58 DEmiRNAs and 192 DEmRNAs. Knockdown of CCDC26 and LINC01515 increased the sensitivity of K562/ADR cells to doxorubicin and significantly reduced the half-maximal inhibitory concentration (IC50) of doxorubicin. Furthermore, knockdown of GLRX5 and DICER1 increased the sensitivity of K562/ADR cells to doxorubicin and significantly reduced the IC50 of doxorubicin.
Conclusions The ceRNA regulatory networks may play important roles in drug resistance of leukemia cells. CCDC26/miR-140-5p/GLRX5 and LINC01515/miR-425-5p/DICER1 may be potential targets for drug resistance in K562/ADR cells. This study provides a promising strategy to overcome drug resistance and deepens the understanding of the ceRNA regulatory mechanism related to drug resistance in CML cells.

PU-0343

The potential mechanism of PPP2R3A in rat myocardial cells and its interacting proteins

Chunyan Wu [1]、Yuan Liang[2]、Xiaohua Cui[1]、 Liju Ma[1]
1. The first affiliated hospital of kunming medical university
2. 昆明医科大学第一附属医院医学检验科

Background PPP2R3A plays a key role in the cardiac pathological and physiological processes, yet little is known about how the protein involved in normal myocardium formation and the protein-protein interaction pathways involved. To address this, we investigate the role of PPP2R3A in cardiac myocytes and identify PPP2R3A specific protein interaction partners to accelerate the developmental process of the mechanistic studies.
Methods PPP2R3A-silenced primary myocardial cell of neonatal rats and H9c2 cells were established by infecting shRNA lentiviral particles. RT-PCR and western blot were used to determine the expression of PPP2R3A and silencing efficiency. The cell viability was analyzed by CCK-8 kit, then the cell cycles and apoptosis assays were detected by flow cytometry. Novel protein-protein interactions of PPP2R3A were detected by Yeast Two-Hybrid assays using a high quality human primary cardiomyocyte cDNA library.
Results PPP2R3A-silencing rat primary cardiomyocytes and H9c2 cells were established successfully, and the expression of PPP2R3A was downregulated significantly as confirmed by RT-PCR and Western blot. PPP2R3A silencing can inhibit the myocardial cell proliferation, arrest the cell cycle in the S phase and promote the cardiomyocytes apoptosis. 19 potential candidates like COL1A2, GIPC1and BCL6 specifically interact with PPP2R3A, and COL1A2 was the highest screening frequency, covering 12.5% of the 24 clones. These partner are highly enriched in signaling pathways associated with a variety of cellular processes.
Conclusions A series of studies have discovered that PPP2R3A was closely associated with the heart failure and arrhythmia. Our data further confirmed PPP2R3A plays an important role in the cardiomyocytes and PPP2R3A in the regulation of cardiac events via its interaction partners.

采用自上而下的方法评定 HBV-DNA 的测量不确定度

冷丽
曲靖市第二人民医院

目的 对 HBV-DNA 测量不确定度的评估并确保不确定度评定的可靠性和科学性。
方法 采用“自上而下”的方法利用实验室数据从偏倚和复现性两方面来评定 HBV-DNA 测量不确定度。
结果 方法一：HBV-DNA(对数值)低浓度和高浓度合成标准不确定度分别为 0.21、0.22， 相对合成标准不确定度分别为 6.45%、3.82%。扩展不确定度分别为 0.42、0.44，相对扩展不确定度（k=2）分别为 12.9%，7.64%。方法二：室间质量评价数据引入的相对合成标准测量不确定度为 5.58%(k = 2)。相对扩展不确定度为 11.16%(k = 2)。
结论 医学实验室有必要对乙肝 DNA 的测量不确定度进行评定。

Long non-coding RNA Twist1-AS promotes proliferation and migration of colorectal cancer

Feng Zhou
The Second Affiliated Hospital of Nantong University

Objective Increasing evidence has shown that lncRNA plays a critical role in cancer biology, and may serve as biomarkers and promising therapeutic agents for human cancers; however, the role of lncRNA Twist1-AS in colorectal cancer remains unknown until now. This study aimed to examine the contribution of lncRNA Twist1-AS to the biological behaviors of colorectal cancer.
Methods Twist1 and Twist-AS gene expression was quantified in HCT116, DLD-1, HT-29, LS174T, SW480 and SH-SY5Y cells and in colorectal cancer specimens and matched adjacent noncancerous specimens. Cell proliferation was measured with the CCK-8 assay, and cell migration and invasion were assessed using Transwell migration and invasion assays. The relative gene expression was quantified using qPCR assay, and the protein expression was determined using Western blotting assay.
Results qPCR assay detected higher Twist1-AS and Twist1 mRNA expression in HCT116, DLD-1, HT-29, LS174T and SW480 cells than in SH-SY5Y cells, and quantified higher Twist1-AS and Twist1 mRNA expression in colorectal cancer specimens than in adjacent noncancerous specimens ($P < 0.01$). Downregulation of Twist1-AS was found to suppress the proliferation and migration of SW480 cells, and overexpression of Twist1-AS was found to promote the proliferation and migration of HCT116 cells. In addition, Twist1-AS knockdown caused a significant reduction in Twist1 mRNA expression and upregulation of E-cadherin, Vimentin and Fibronectin mRNA in SW480 cells, while Twist1-AS overexpression resulted in elevated Twist1, Vimentin and Fibronectin protein expression and reduced E-cadherin expression.
Conclusion lncRNA Twist1-AS promotes colorectal cancer proliferation and migration via Twist1.

PU-0346

Has2 的缺失介导雌激素受体阳性乳腺癌获得性内分泌治疗抵抗

孙小丹、刘翳雯、何怡青、杜艳、张国良、高锋、杨翠霞
上海交通大学附属第六人民医院检验科

目的 探究雌激素受体阳性乳腺癌获得性内分泌治疗抵抗的发生机制，为内分泌治疗抵抗寻求新的治疗靶点。
方法 通过加入雌激素受体调节剂他莫昔芬(tamoxifen)和雌激素受体降解剂氟维司群(fulvestrant)处理雌激素受体阳性乳腺癌细胞株（MCF7 和 T47D）六个月，分别获得 tamoxifen 和 fulvestrant 耐药细胞株；采用蛋白印迹法和荧光定量 PCR 方法比较天然乳腺癌细胞和耐受细胞中透明质酸合成酶 2(Hyaluronan synthase 2，Has2)的表达水平的差异；通过慢病毒转染构建 Has2 敲降的稳转乳腺癌细胞株，借助增殖实验观察敲降 Has2 后的癌细胞对药物的反应性变化，使用蛋白印迹法检测增殖信号相关分子表达水平的变化；通过蛋白印迹法和免疫荧光实验观察敲降 Has2 对雌激素受体的表达、分布和活性的影响。
结果 我们发现 Has2 的缺失与雌激素受体阳性乳腺癌与 tamoxifen 和 fulvestrant 的耐药性有关；敲降 Has2 的天然细胞对药物的反应性亦下降；Has2 的缺失可能通过影响雌激素受体的表达和活性，进而通过影响雌激素受体相关的增殖相关信号通路诱导内分泌获得性耐药的发生发展。
结论 Has2 的获得性缺失导致内分泌治疗抵抗的发生，且 Has2 介导了雌激素受体阳性乳腺癌发生获得性内分泌治疗抵抗。这表明 Has2 的缺失可能在获得性内分泌治疗抵抗中发挥重要作用，本研究可能为解决获得性内分泌治疗抵抗提供了潜在靶点。

外泌体及肿瘤细胞内 miR-320b 促进食管鳞状细胞癌淋巴结转移的机制研究

刘童、王传新
山东大学第二医院

目的 明确 miR-320b 在肿瘤微环境不同细胞中的生物学功能及其参与调控的靶基因和下游相关信号转导通路，为探寻淋巴结转移治疗靶点提供可靠的理论支撑。
方法 qRT-PCR 检测两个独立样本队列共 366 例 ESCC 患者血清中外泌体 miR-320b 的表达水平并进行对比分析。通过成管实验及 Transwell 实验评估外泌体 miR-320b 对 HLECs 细胞成管能力和迁移能力的影响。小动物成像系统用于探讨荷载 miR-320b 的外泌体是否可以在体内水平促进 ESCC 的淋巴结转移。通过 CCK-8、EdU 以及 Transwell 等实验评估 miR-320b 对 ESCC 细胞系的恶性表型的影响。相关挽救实验明确 miR-320b 促进 ESCC 淋巴结转移的具体分子机制及相关信号通路。Co-IP 实验证明 DGCR8 与 METTL3 之间的相互作用；RIP 和 MeRIP 实验用于探究 METTL3 在 pri-miR-320b 成熟过程中的关键调控作用。
结果 将 LN- vs LN+组对比差异 miRNA 与 N1 期 vs N3 期组对比差异 miRNA 表达谱取交集，并经过两个独立样本队列验证发现，miR-320b 在 LN+患者血清外泌体中的表达水平显著高于 LN-患者。荷载 miR-320b 的外泌体与 HLECs 细胞共培养后，受体细胞中 miR-320b 表达水平显著升高，并且通过靶向 PDCD4 来促进 AKT 的磷酸化，以不依赖 VEGF-C 途径的方式促进 HLECs 细胞的成管能力和迁移能力；体内实验证明，荷载 miR-320b 的外泌体能够促进原位肿瘤组织中淋巴管的生成，使其密度显著增加，显著提高肿瘤细胞的淋巴结转移发生率。此外，高表达 miR-320b 能够显著提高 ESCC 肿瘤细胞的增殖、迁移侵袭能力以及 EMT 相关进程。ESCC 肿瘤细胞内 miR-320b 通过抑制 PDCD4 的表达促进 AKT 通路的激活，从而增强 ESCC 细胞的增殖和迁移侵袭能力。过表达 METTL3 能够促进 miR-320b 的加工过程，降低细胞内 pri-miR-320b 的表达水平，同时增高 pre-

miR-320b 和成熟 miR-320b 的表达水平。Co-IP 实验证明 DGCR8 能够与 METTL3 相互作用，RIP 和 MeRIP 实验证明，过表达 METTL3 能够促进 pri-miR-320b 与 DGCR8 结合以及 pri-miR-320b 的 m6A 甲基化修饰。
结论 血清外泌体 miR-320b 的表达水平在 ESCC 淋巴结转移发生时显著升高，并且与淋巴结转移数量呈正相关。外泌体 miR-320b 能够被 HLECs 摄取，促进淋巴管形成和肿瘤细胞的淋巴结转移，并且 ESCC 细胞中高表达 miR-320b 能够增强肿瘤细胞的增殖和迁移侵袭能力。

Molecular biology analysis of ABO blood group variants caused by natural chimerism

Yuqing Wang[1]、CHENGRUI QIAN[2]、HANG LEI[1]、WEI ZOU[1]、DONG XIANG[2]、XUEFENG WANG[1]、XIAOHONG CAI[1]
1. Ruijin Hospital, Shanghai Jiao Tong University School of Medicine
2. 上海市血液中心

Introduction Natural blood chimerism is an important cause of ABO phenotype discrepancies; however, is not easily diagnosed by routine laboratory testing. Here, a series of natural ABO chimera cases were analyzed by the comprehensive application of a variety of molecular biological **Methods**
Methods 15 suspected individuals (including 2 pedigrees) were tested by standard tube method or column agglutination method，and supplemented with RBC absorption-release test. The ABO gene was analyzed by PCR-SSP genotype and DNA sequencing. Short tandem repeat (STR) analysis and digital droplet PCR (ddPCR) was performed as well.
Results Red blood cells from 11 individuals showed mix-field agglutination with anti-A or anti-B in blood typing; weak A or B antigen on the other four individuals' RBCs was detected by absorption-elution tests. The SSP results provided clues to support chimera deduction in four individuals. An additional ABO allele was identified in 10 individuals by DNA sequencing while 13 individuals by STR analyses. In all 15 individuals, the detection rate of DNA sequencing and STR analysis was 66.7% and 86.7%, respectively. Two probands from two pedigrees were both identified as dispermic chimerism by STR analysis. Two microchimeras were confirmed by ddPCR with extremely low chimerism rates of 0.62% and 0.073%.
Conclusion PCR-SSP/DNA sequencing, STR, ddPCR can be used to identify ABO chimeras step by step to improve the detection rate of natural blood group chimeras, including microchimeras, which have not been identified by many current laboratory **Methods**

PU-0349

异常 DNA 甲基化在胃癌临床诊断中的作用

王景
山东大学第二医院

目的 既往研究发现，异常 DNA 甲基化导致抑癌基因失活和癌基因激活在胃癌（GC）的发生发展中起着至关重要的作用。因此，我们的目的是：1) 分析外周血单核细胞 (PBMCs) DNA 中异常甲基化与胃癌风险之间的关联，以及 2) 确定胃癌与健康对照之间的候选差异甲基化标记，并建立胃基于 PBMC 的 DNA 甲基化的癌症诊断模型。
方法 我们所有的样本都是通过密度梯度离心从外周血中分离出来的单核细胞。首先，我们使用 Illumina HumanMethylation 850k 进行了甲基化分析检测，数据可用于总共 100 个样本：50 个健康对照和 50 个胃癌。然后，基于上述数据，我们筛选了显著的差异甲基化点，并最初使用焦磷酸

测序对其进行了验证。接下来，我们还将依靠焦磷酸测序和甲基化 PCR 来验证大样本中的候选标记。

结果 首先，利用 850 k 甲基化芯片的甲基化分析数据，我们获得了 6000 多个胃癌和健康对照差异的 DNA 甲基化位点。我们还发现胃癌组样本的整体 DNA 甲基化水平低于健康对照组，并且相当数量的 DNA 甲基化位点富含免疫相关通路。此外，胃癌患者 PBMCs 的 DNA 甲基化水平与患者的一些临床病理特征（如胃癌的 TNM 分期和分类）有关。在这 6000 多个位点中，我们选择了 10 个差异最显着且具有统计学意义的位点（包括 6 个高甲基化点和 4 个低甲基化点）作为进一步研究的候选标记。然后，我们从齐鲁医院和山东大学第二医院选取了 20 对胃癌和健康对照 PBMC，通过焦磷酸测序验证了上述候选标志物 DNA 甲基化水平的差异。焦磷酸测序的数据显示所有位点的甲基化趋势与 850 k 甲基化芯片的数据一致，6 个候选标记的结果具有统计学意义。出于临床应用的目的，我们选取了 4 个候选标志物（包括低甲基化点 cg15988552、cg22994883、cg26348226 和 cg02560388）进一步验证，建立胃癌诊断模型。最后，我们计划依靠焦磷酸测序和甲基化 PCR 来验证大样本的诊断模型。

结论 我们已经确定胃癌组的整体 DNA 甲基化水平显著低于正常水平。我们发现并初步验证了可能在胃癌临床诊断中发挥关键作用的候选标志物。

PU-0350

A combined RNA signature predicts recurrence risk of stage I-IIIA lung squamous cell carcinoma

li sun、juan li
The Second Hospital of Shandong University

Objective Recurrence remains the main cause of the poor prognosis in stage I-IIIA lung squamous cell carcinoma (LUSC) after surgical resection. In the present study, we aimed to identify the long non-coding RNAs (lncRNAs), microRNAs (miRNAs), and messenger RNAs (mRNAs) related to the recurrence of stage I-IIIA LUSC. Moreover, we constructed a risk assessment model to predict the recurrence of LUSC patients.

Methods RNA sequencing data (including miRNAs, lncRNAs, and mRNAs) and relevant clinical information were obtained from The Cancer Genome Atlas (TCGA) database. The differentially expressed lncRNAs, miRNAs, and mRNAs were identified using the "DESeq2" package of the R language. Univariate Cox proportional hazards regression analysis and Kaplan-Meier curve were used to identify recurrence-related genes. Stepwise multivariate Cox regression analysis was carried out to establish a risk model for predicting recurrence in the training cohort. Moreover, Kaplan-Meier curves and receiver operating characteristic (ROC) curves were adopted to examine the predictive performance of the signature in the training cohort, validation cohort, and entire cohort.

Results Based on the TCGA database, we analyzed the differentially expressed genes (DEGs) among 27 patients with recurrent stage I-IIIA LUSC and 134 patients with non-recurrent stage I-IIIA LUSC, and identified 431 lncRNAs, 36 miRNAs, and 746 mRNAs with different expression levels. Out of these DEGs, the optimal combination of DEGs was finally determined, and a nine-joint RNA molecular signature was constructed for clinical prediction of recurrence, including LINC02683, AC244517.5, LINC02418, LINC01322, AC011468.3, hsa-mir-6825, AC020637.1, AC027117.2, and SERPINB12. The ROC curve proved that the model had good predictive performance in predicting recurrence. The area under the curve (AUC) of the prognostic model for recurrence-free survival (RFS) was 0.989 at 3 years and 0.958 at 5 years (in the training set). The combined RNA signature also revealed good predictive performance in predicting the recurrence in the validation cohort and entire cohort.

Conclusions In the present study, we constructed a nine-joint RNA molecular signature for recurrence prediction of stage I-IIIA LUSC. Collectively, our findings provided new and valuable clinical evidence for predicting the recurrence and targeted treatment of stage I-IIIA LUSC.

人乳头瘤病毒在女性宫颈病变中的感染情况及 HPV 亚型分布特征分析

沈蓁
潍坊医学院附属医院

目的 分析人乳头瘤病毒（human papilloma virus, HPV）在女性宫颈病变中的感染情况及 HPV 亚型分布特征，以期为当地 HPV 感染的防治提供重要的科学依据。
方法 收集 2018 ~ 2020 年于潍坊医学院附属医院行 HPV 检测的 1850 例女性的临床资料，用宫颈细胞专用取样刷采集宫颈外口及宫颈管脱落细胞，使 用 PCR-反向斑点杂交技术检测患者宫颈细胞中的 23 种 HPV 基因亚型。回顾性分析资料的年龄特征、HPV 感染率及感染的亚型分布。
结果 在 1850 例研究对象中，HPV 检测阳性者 371 例，总体感染率为 20.05%，以高危型 HPV 感染为主，>60 岁年龄组的 HPV 感染率最高，HPV 的感染方式以单一型感染为主，HPV 亚型检出率最高的前三位分别为 HPV16、HPV52、HPV53。共检出 22 种 HPV 亚型（高危型 14 种、低危型 8 种）。高危型 HPV 以 HPV 16 型（17.22%）、HPV 58 型（12.33%）、HPV 18 型（9.25 %）常见，低危型 HPV 以 HPV 6 型（8.22 %）、HPV 11 型（7.05 %）、HPV42 型（6.37 %）常见。HPV 单一亚型感染 251 例（67.65 %），两种亚型感染 55 例（14.82 %）、三种亚型感染 40 例（10.78 %）、四种及以上亚型感染 25 例（6.73 %）。60 岁以上组 HPV 感染率最高，为 23.05 %，各年龄组均以高危型 HPV 感染为主，其中 30-40 岁高危型 HPV 感染率最高，为 16.55%；低危型 HPV 感染率最高的是 50-60 岁，为 5.33%。
结论 女性 HPV 总感染率为 20.05%，以单一高危型感染为主，常见的高危型为 HPV16、HPV52 和 HPV53。HPV 感染亚型及感染者的年龄分布具有一定的区域特征，因此，根据本地区 HPV 的感染特点，结合实际情况，提高相关年龄段人群的 HPV 筛查覆盖率，从而有效减少本地女性宫颈病变的发生率。

PU-0352

A multiplexed circulating tumor DNA detection platform engineered from 3D-coded interlocked DNA rings

Sha Yang
Southwest Hospital, Third Military Medical University (Army Medical University)

Circulating tumor DNA (ctDNA) is a critical biomarker not only important for the early detection of tumors but also invaluable for personalized treatments. Currently ctDNA detection relies on sequencing. Here, a platform termed three-dimensional-coded interlocked DNA rings (3D-coded ID rings) was created for multiplexed ctDNA identification. The ID rings provide a ctDNA recognition ring that is physically interlocked with a reporter ring. The specific binding of ctDNA to the recognition ring initiates target-responsive cutting via a restriction endonuclease; the cutting then triggers rolling circle amplification on the reporter ring. The signals are further integrated with internal 3D codes for multiplexed readouts. ctDNAs from non-invasive clinical specimens including plasma, fecal, and urine were detected and validated at a sensitivity much higher than obtained through sequencing. This 3D-coded ID ring platform can detect any multiple DNA fragments simultaneously without sequencing. We envision that our platform will facilitate the implementation of future personalized/precision medicine.

1828 例男性患者泌尿生殖道病原体感染情况分析

赵美美、姜永玮、孔晓牧、刘怡、高芃、丛笑、杨辉、马亮、曹永彤
中日友好医院

目的 了解北京地区部分男性患者生殖支原体（MG）、沙眼衣原体（CT）、淋病奈瑟菌（NG）及解脲脲原体（UU）的感染情况，为临床诊疗提供依据。
方法 收集 2019 年 12 月- 2021 年 5 月中日友好医院就诊的男性患者尿液标本共 1828 份，采用实时荧光核酸恒温扩增检测技术（SAT）对以上标本分别进行 MG-RNA，CT-RNA，NG-RNA 和 UU-RNA 检测。
结果 所有患者 MG，CT，NG 和 UU 总阳性率分别为 2.24%（41/1828），3.39%（62/1828），1.26%（23/1828）和 17.94%（328/1828），UU 的检出率明显高于其他三种病原体，差异有统计学意义（P＜0.01）。感染人群主要集中在 20～35 岁的年轻男性患者，临床诊断为泌尿生殖道炎症的男性患者检出率最高，差异有统计学意义（P＜0.01）。
结论 解脲脲原体 UU 是北京地区男性患者泌尿生殖道病原体感染的主要病种，在临床诊疗中应加强早期筛查和监测，尽早进行临床治疗。同时 SAT 检测能为临床诊断泌尿生殖道 MG，CT，NG 及 UU 的感染提供依据。

PU-0354

Genome-wide expression profiling and functional analysis of lncRNAs reveal the oncogenic role of CRNDE in acute promyelocytic leukemia and NPM1-mutant acute myeloid leukemia

Xuefei Ma、Wei Zhang、Ming Zhao、Shufen Li、Wen Jin、Xuefeng Wang、Kankan Wang
Ruijin Hospital, Shanghai Jiao Tong University School of Medicine

Background Myeloid differentiation is a precise regulation process of various functional blood cells. The differentiation block of myeloid cells caused by abnormal gene regulation, is critical for the initiation of acute myeloid leukemia (AML). The multi-hit model of AML leukemogenesis has revealed that the development of AML is not only driven by initiating events, including chromosomal translocations and mutations, but also requires other cooperating secondary events. In recent years, with the development of high-throughput techniques and bioinformatic analysis, the roles of long noncoding RNAs (lncRNAs) in gene regulation have attracted much attention. However, most of our knowledge about the cooperating events during AML development and the molecular mechanisms of myeloid differentiation mainly focus on the studies conducted on protein-coding genes, and the roles of lncRNAs involved in the multi-hit model of AML leukemogenesis are still largely unknown.
Methods We first retrieved and analyzed the RNA-seq data of 379 de novo AML samples and 21 normal counterparts from two cohorts of clinical AML patients (TCGA and BEAT AML databases) to explore lncRNAs that may contribute to the pathogenesis of AML. Next, the expression of the pathogenesis-related lncRNA, CRNDE (Colorectal Neoplasia Differentially Expressed), in AML and normal counterparts, was validated by microarray gene expression data. The cooperative function of CRNDE with PML/RARα fusion protein in acute promyelocytic leukemia (APL) was validated using PML/RARα transgenic APL murine model, qRT-PCR and ChIP-seq data. Differentiation of NB4 and OCI-AML3 cells was determined by flow cytometric analysis of CD11b expression after transfection with indicated shRNAs. The cell proliferation was detected by CCK-8 assays. We also addressed the in vivo effect of CRNDE repression using a transplantable murine APL model. Through bioinformatic prediction, and the use of RNA antisense purification assay

(RAP) and dual luciferase activity assay, we discovered the molecular mechanism of the oncogenic effect of CRNDE in APL.
Results Here, we identified one of pathogenesis-related lncRNA CRNDE, highly expressed in APL with t (15;17) translocation and *NPM1*-mutant AML through analyzing RNA-seq data from a large cohorts of AML patients and normal counterpart. Furthermore, we found that CRNDE was high expression in the disease state but not in the preleukemic stage of APL, suggesting that CRNDE might be a secondary event coordinating with PML/RARα to promote APL development. Functional analysis showed that CRNDE knockdown induced differentiation and inhibited proliferation of APL cells, and prolonged survival of APL mice. Further in vivo and in vitro mechanistic studies showed that CRNDE elicited its oncogenic effects through binding the miR-181 family and thereby regulating NOTCH2. Finally, we found that high CRNDE expression was also significantly correlated with *NPM1* mutations and contributed to differentiation block in *NPM1*-mutant AML.
Conclusions By analyzing high-throughput sequencing data, we identified a set of pathogenesis-related lncRNAs in APL and provided a new evidence that CRNDE, as an oncogenic lncRNA, regulates myeloid differentiation and/or cell proliferation in APL and *NPM1*-mutant AML. Moreover, CRNDE can promote leukemogenesis and modulate NOTCH2 level as a miRNA sponge by directly binding miR-181. Our findings shed light on the importance of oncogenic lncRNAs in the development of AML and provide a promising target for AML diagnosis and therapy.

PU-0355

Association between AGTR1 gene polymorphism and the antihypertensive effect of valsartan

Yi Liu、Xiaomu Kong、Yongwei Jiang、Meimei Zhao、Peng Gao、Liang Ma、Yongtong Cao
China-Japan Friendship Hospital

Objective To investigate whether the antihypertensive effect of angiotensin receptor blocker valsartan is associated with angiotensin II type 1 receptor (AGTR1) gene polymorphism (A1166C).
Methods Patients with hypertension who visited China-Japan Friendship Hospital from January 2016 to December 2018 and took only valsartan (80 mg/d) for maintenance therapy in the past month were retrospectively included in this study. Patients'clinical and laboratory data were collected. Real-time PCR was used to genotype the AGTR1 gene polymorphism. Based on the systolic blood pressure (SBP) and diastolic blood pressure (DBP) at the time of visit, patients were divided into good response group (SBP/DBP < 140/90 mmHg, n = 144) and poor response group (SBP/DBP ≥ 140/90 mmHg, n = 137).
Results There were 281 patients with hypertension in this study, including 203 males and 78 females. 164 (58.4%) cases were with grade 3 hypertension, and 117 (41.6%) cases with grade 1/2 hypertension. 247 (87.9%) cases had AA genotype of AGTR1 gene, while 34 (12.1%) cases had AC/CC genotypes. Compared with the patients in poor response group, patients in good response group were older, drank less alcohol, and had a higher proportion of grade 1/2 hypertension and AC/CC genotypes. In multivariate Logistic regression analysis with adjustment for covariates, age (P = 0.033, OR (95%IC) = 0.096 (0.937-0.997)), hypertension grade (P = 0.055, OR (95%IC) = 1.454 (0.991-2.134)) and AGTR1 genotype (P=0.009, OR(95%IC)=0.326 (0.140-0.759)) were the factors influencing the difference in antihypertensive response to valsartan between the two patient groups.
Conclusion Our data suggest that the AGTR1 gene polymorphism (A1166C) can affect the antihypertensive response to valsartan, and valsartan treatment seems to be more effective in hypertensive patients with AC and CC genotypes.

PU-0356

HAS2/HA/CD44 信号轴介导乳腺癌细胞可塑性变化及 PI3Kα 抑制剂耐药的机制研究

盛雨梦、刘鹭雯、何怡青、杜艳、张国良、高锋、杨翠霞
上海交通大学附属第六人民医院检验科

目的 探讨 HAS2/HA/CD44 信号轴对管腔型乳腺癌细胞可塑性变化的调控作用以及在管腔型乳腺癌细胞获得对 PI3Kα 抑制剂耐药性中的作用及机制。
方法 借助慢病毒转染技术，建立透明质酸合成酶 2（Hyaluronan synthase 2, HAS2）过表达的管腔型乳腺癌稳定细胞系，采用 Western blot 和免疫荧光方法观察 HAS2 对管腔型乳腺癌细胞上皮间充质转化(Epithelial mesenchymal transition，EMT)的调控作用；聚焦雌激素受体（Estrogen Receptor，ER）阳性管腔型乳腺癌，通过分析 TCGA 数据库以及建立 PI3Kα 耐药细胞株，分析 HAS2/CD44 在乳腺癌细胞获得对 PI3Kα 抑制剂耐药性中的作用；通过过表达 HAS2 和加入外源性透明质酸（Hyaluronan, HA）激活 HAS2/HA/CD44 信号轴，探究此信号轴在乳腺癌细胞获得对 PI3Kα 抑制剂耐药性中的作用。
结果 研究发现上调 HAS2 显著促进乳腺癌细胞 EMT 的发生；TCGA 数据库分析显示，在管腔型乳腺癌中，PIK3CA 基因突变的乳腺癌的 HAS2 表达水平显著增加，且 HAS2 与 CD44 的表达水平呈正相关关系；Western blot 结果显示 HAS2 及 CD44 在 PI3Kα 抑制剂耐药细胞中的表达显著升高；激活 HAS2/HA/CD44 信号轴，发现此信号轴的激活通过维持 AKT/mTOR 信号通路的重新活化从而介导管腔型乳腺癌细胞对 PI3Kα 抑制剂的耐药性。
结论 HAS2 诱导乳腺癌细胞 EMT 的发生，进而介导管腔型乳腺癌细胞的可塑性变化；在获得对 PI3Kα 抑制剂耐药性的管腔型乳腺癌细胞中，HAS2 与 CD44 的表达均显著增加，由此形成的 HAS2/HA/CD44 信号轴介导管腔型乳腺癌细胞获得对 PI3Kα 抑制剂的耐药性。

PU-0357

去泛素化酶 USP48 在乳腺癌中的表达及其对乳腺癌发生发展的影响

王恬恬、王传新
山东大学第二医院

目的 探讨去泛素化酶 USP48 在乳腺癌中的表达及对乳腺癌发生发展影响。
方法 利用 TCGA 数据库分析 USP48 在乳腺癌中的表达及其与患者预后生存的关系。通过稳转基因沉默技术(sh-RNA)将 USP48 敲低，探究 USP48 在乳腺癌细胞中的作用。通过将乳腺癌特异性 USP48 敲除小鼠与 MMTV-PyMT 驱动的乳腺癌自发成瘤小鼠杂交，探究 USP48 在体内成瘤中的作用。
结果 USP48 在乳腺癌组织中表达下调且低表达 USP48 与较好的预后相关。通过 sh-RNA 抑制乳腺癌 MCF-7 细胞 USP48 表达后，细胞增殖能力显著上调但迁移侵袭能力无明显变化。在体内，USP48 基因缺失加速 MMTV-PyMT 驱动的肿瘤形成，且 PyMT;USP48–/–小鼠的总生存期较 PyMT;USP48+/+ 小鼠明显缩短。
结论 去泛素化酶 USP48 在乳腺癌中表达下调且低表达 USP48 与较好的预后相关。特异性抑制 USP48 基因的表达可增强乳腺癌细胞的增殖能力并加速 MMTV-PyMT 驱动的肿瘤形成，提示 USP48 在乳腺癌发生中的保护作用。

PU-0358

长链非编码 RNA LINC02474 在结直肠癌中的表达特征及对细胞增殖的影响

杜甜甜、王传新
山东大学第二医院

目的 探讨长链非编码 RNA（lncRNA）LINC02474 在结直肠癌组织及循环外泌体中的表达特征及其对结直肠癌发生发展的影响。
方法 利用实时荧光定量 PCR（qRT-PCR）检测 LINC02474 在 30 例结直肠癌患者组织及 128 例结直肠癌患者和 128 例健康对照者血清中的相对表达量；使用电子显微镜检测分离所得外泌体的形态特征；使用纳米粒子跟踪分析（NTA）检测分离所得外泌体的粒径大小；Western blot 检测外泌体表面标志物的表达；CCK-8 实验、平板克隆形成实验和实时细胞分析系统（RTCA）检测干扰 LINC02474 后 DLD-1 细胞的增殖情况；采用生物信息学方法分析预测获得 LINC02474 的潜在靶基因。
结果 qRT-PCR 检测 30 例结直肠癌患者组织及 128 例结直肠癌患者和 128 例健康对照者血清样本均显示，LINC02474 在结直肠癌组织和血清中呈异常高表达，差异有统计学意义（组织样本：t=2.827, p=0.0064；血清样本：t=3.081, p=0.0023）。电子显微镜显示分离所得外泌体呈盘状囊泡结构，大小分布集中于 96.9nm 处，且表达表面标志物 CD9、CD63 和 TSG101。CCK-8 实验、平板克隆形成实验和实时细胞分析系统（RTCA）检测实验表明，干扰 LINC02474 的表达可以抑制结直肠癌细胞的增殖及成瘤能力，差异有统计学意义（p<0.05）。KEGG 和 GO 富集分析显示，LINC02474 的潜在靶基因多富集在 mTOR 及 MAPK 等信号通路。
结论 LINC02474 在结直肠癌患者组织和血清外泌体中呈现高表达特征，干扰其表达可以抑制结直肠癌细胞的增殖及成瘤能力。

PU-0359

Xpert 技术在艰难梭菌检测中的应用

邹红雁
吉林大学第一医院

艰难梭菌（Clostridium Difficile，CDI）是一种革兰氏阳性、产毒素的专性厌氧芽孢杆菌，1978 年首次被证实与疾病有关，可通过粪-口途径传播。CDI 已成为呈世界性分布主要肠道病原体。我国 CDI 的数据较少，这主要是因为缺乏有效的临床诊断工具，导致医疗机构人员没有普遍意识到 CDI 的严重性。Xpert 技术可检测毒素 B 相关基因 tcdB、抑制子基因 tcdC 以及二元毒素基因 cdt，tcdC 和 cdt 与高产毒菌相关，因而可预测高毒力菌株 BI/NAP1/027 型的存在。

我院对 2019 年 1 月-2020 年 12 月住院患者采用该检测技术并结合临床资料进行分析，出现抗生素相关腹泻患者（ADD）占所有抗生素治疗的住院患者 1.0%（317/30532），在这些 ADD 患者中 30.6%（97/317）检出艰难梭菌。ADD 发生频率最高是 ICU（10.7%），ADD 发生比率最高是胃肠内科（37.9%）。临床表现上 CDI 和其他因素导致的 AAD 存在差异，其他因素导致的 AAD 相比 CDI 症状较轻，CDI 患者通常有结肠炎和腹部绞痛，低烧并且白血球升高，而其他因素导致的腹泻通常没有结肠炎。一旦诊断为 AAD，临床医生即停止对患者的抗生素治疗，其中 43 位患者接受了经验性治疗，19 位患者在使用甲硝唑无效后改服万古霉素。约 40% 患者服用了益生菌，与非艰难梭菌导致的 AAD 相比，CDI 患者更多的使用了甲硝唑进行治疗。最终，85.7%(83/97)的 CDI 患者和 92.3%（203/220）的非 CDI 腹泻患者治愈， 3 位 CDI 患者期间复发 1 次。

艰难梭菌感染在我国医院的 AAD 中扮演了重要角色，但由于腹泻程度主要为轻度到中度，临床医生很难区分 CDI 和其他 AAD，建议将艰难梭菌检测纳入腹泻(尤其是 AAD)患者的常规诊断。

PU-0360

Epigenomic State Transitions Characterize Pancreatic Cancer in Mouse

Shujun Zhang、Chuanxin Wang
The Second Hospital of Shandong University

Pancreatic ductal adenocarcinoma (PDA) is one of the most lethal human malignancies. Oncogenic mutations in KRAS are present in over 90% of human pancreatic cancers along with high frequency in pancreatic intraepithelial neoplasia (PanINs), suggesting an initiating role for mutant KRAS. In contrast, missense-mutations of TP53 proteins are sufficient to drive tumor formation. Alteration of epigenetic pathways is an emerging mechanism of PDA progression. However, comprehensively epigenetic landscape at each stage of PDA progression and how mutant TP53 contribute to PDA progression via epigenetic regulatory mechanism remain largely unknown. To address this gap, we developed genetically engineered mouse models of PDA, which preserves the unique biological characteristics of normal (Pdx-1-Cre, known as wide type [WT] mice), PanIN (LSL-KrasG12D; Pdx-1-Cre, known as KC mice) and tumor (LSL-KrasG12D; LSL-Trp53R172H/+; Pdx-1-Cre, known as KPC) and used assay for transposase accessible chromatin using sequencing (ATAC-Seq), H3K27ac chromatin immunoprecipitation (ChIP-seq) and RNA sequencing (RNA-Seq) to characterize how the epigenetic landscape evolves during PDA progression and identified the intrinsic transcriptional regulators associated with mutant TP53 promoting PDA progression in a comparable context. We discover and implicate a novel TF FOSL2 in favor of immunosuppression, which we show can promote tumor growth in vivo. Importantly, we found that mtp53 could promote immune evasion by enhance the transcription of FOSL2. Collectively, our findings suggest that reprogramming of the epigenetic landscape can promote the acquisition of PDA progression traits and delineated for the first time a distinct mechanism by which mtp53 and suggest that mtp53 acts upstream of FOSL2 and regulate FOSL2 expression cistrome to promote cancer growth and evasion of tumor immune surveillance in PDA.

PU-0361

外泌体 microRNA 在食管鳞状细胞癌患者血清中的表达及其在术前淋巴结转移预测中的临床价值研究

刘童、王传新
山东大学第二医院

目的 明确外泌体 microRNA 在 ESCC 患者血清中的表达情况，构建可用于 ESCC 淋巴结转移的预测模型，并评估所构建的模型在 ESCC 淋巴结转移方面的预测效能及临床应用价值。
方法 筛选阶段，选取 10 例淋巴结转移阴性（LN-）ESCC 患者及 10 例淋巴结转移阳性（LN+）ESCC 患者血清外泌体样本进行高通量测序，筛选用于预测 ESCC 淋巴结转移相关的血清外泌体 miRNA 生物标志物。训练阶段，选取 95 例 LN-患者及 83 例 LN+患者血清样本通过 qRT-PCR 验证各候选外泌体 miRNA 的的表达水平并做差异分析；随后，根据表达量数据使用 logistic 回归分析联合血清外泌体 4-miRNA 模型和临床 CT 检查结果构建临床 nomogram 模型，并将预测模型在 91 例 LN-患者及 97 例 LN+患者血清样本中进行验证，ROC 曲线评估该模型在验证组中的淋巴结转移预测效能。ROC 曲线、拟合优度曲线、Hosmer-Lemeshow 检验以及决策曲线分析进一步评估此模型在 ESCC 淋巴结转移预测中的预测效能、校准能力以及临床获益度。本课题进一步分析了该临床模型在 T1 期 ESCC 患者中针对淋巴结转移的预测效能。
结果 筛选阶段共筛选出 4 个候选 miRNA 分子（chr 8-23234-3p、chr 1-17695-5p、chr 8-2743-5p 和 miR-432-5p）。训练阶段，与 LN-患者血清外泌体样本对比，chr 8-23234-3p、chr 1-17695-5p、

chr 8-2743-5p 在 LN+患者血清外泌体中的表达量上调而 miR-432-5p 的表达量显著下调。随后，我们使用 logistic 回归在训练组中构建 4-miRNA 预测模型用于评估淋巴结转移风险系数，随后将验证组中的表达量数据代入公式获得相应风险系数。进一步联合 4-miRNAs 预测模型和临床 CT 检查结果构建临床 nomogram 模型，ROC 曲线分析显示该模型在训练组样本和验证组样本中都显示出良好的淋巴结转移预测效能。拟合优度曲线分析显示，在训练组和验证组中，淋巴结转移实际值与模型预测值之间存在显著的相关性，并且 Hosmer-Lemeshow 检验结果显示二者无显著差异。决策曲线分析显示，训练组和验证组中临床模型在 20%-80%阈值内的临床获益率显著优于“全治疗”、“无治疗”或 CT 检查。针对 T1 期 ESCC 患者，此模型依然能够在训练组和验证组中成功识别患者中的 LN+个体。
结论 ROC 曲线、拟合优度曲线及决策曲线分析结果证明了此临床 nomogram 具有良好的鉴别能力、校正能力以及临床获益度，有望成为 ESCC 淋巴结转移术前预测的新型无创性生物标志物。

PU-0362

LINC01980 促进胃癌细胞的增殖、迁移及侵袭

史爽
山东大学第二医院

目的 揭示 LINC01980 促进胃癌(GC)进展的作用。
方法 通过生物信息学分析，筛选胃癌(GC)组织中差异表达的 lncRNAs,采用 qRT-PCR 检测 GC 组织和癌旁组织中 LINC01980 的表达水平。采用 Kaplan-Meier 法评价 LINC01980 对 GC 的预后作用。检测 LINC01980 胃癌 HGC27 细胞增殖、迁移及侵袭的调控作用。最后，通过在线数据库预测 LINC01980 的分子机制。
结果 LINC01980 在 GC 组织和细胞中表达上调。并且高水平的 LINC01980 提示胃癌患者预后较差。敲除 LINC01980 可降低 HGC27 细胞的增殖、迁移及侵袭能力。LINC01980 在 GC 中表达上调，且其高水平预示 GC 患者预后较好。
结论 LINC01980 在 GC 中表达上调，且其高表达预示预后不良。

PU-0363

新型冠状病毒疫苗接种点环境标本的检测结果分析

刘文静、屈峰、陈雨欣、林泓怡、沈瀚
南京大学医学院附属鼓楼医院

目的 探究南京鼓楼医院新型冠状病毒（新冠，2019-nCoV）疫苗接种点（以下简称“接种点”）是否存在核酸污染问题，是否会影响检验科新冠核酸的正常检测。
方法 分别于 2021 年 1 月 27 日 8：00（接种前）、12：00（接种 3 小时）、18：00（接种 9 小时）、1 月 28 日 8：00（接种完成 14 小时）采集接种点分诊区、接种台以及留观处 12 处位置共 48 份棉拭子标本，另外采集 2021 年 1 月 27 日接受 2019-nCoV 疫苗接种的 4 名检验科分子室核酸检测工作人员接种前、后的皮肤、衣物共 16 份棉拭子标本，采用实时荧光定量 PCR（RT-PCR）方法进行新冠核酸检测。
结果 64 份标本中，共有 15 份新冠核酸检测结果为阳性，其中接种台推车有 10 份标本阳性，接种台桌面有 5 份标本阳性。
结论 在本次疫苗接种点接种过程中存在核酸污染现象，但范围较局限，主要集中在接种台范围，未发现经人携带至检验科分子组的现象，因此不会影响检验科新冠核酸检测的工作。

PU-0364

Long non-coding RNA LINC00310 affects breast cancer cell growth and serves a novel diagnostic biomarker

Juan Li、Chuanxin Wang
The Second Hospital of Shandong University

PURPOSE Recent studies have revealed that long non-coding RNAs (lncRNAs) are involved in different processes of breast cancer. This study was designed to explore the oncogenic roles and diagnostic value of LINC00310 in breast cancer.
METHOD We assessed clinical attributes, prognostic value and potential targets of LINC00310 by TCGA data. The oncogenic roles of LINC00310 were evaluated in vitro and in vivo by dual-gRNA CRISPR/Cas9 system. Furthermore, we detected the expression of serum LINC00310 by qRT-PCR and evaluated its diagnostic significance for breast cancer.
RESULT LINC00310 expression was elevated as breast cancer progress, and the deregulation of LINC00310 was significantly associated with patients' survival. Experiments with KO and rescue approach revealed that LINC00310 promoted cell proliferation by regulating c-Myc expression in vitro. Nude mouse xenograft assay demonstrated that LINC00310 KO significantly suppressed tumor growth in vivo. Furthermore, we found that serum LINC00310 expression was significantly up-regulated in breast cancer patients and ROC curve analysis indicated that LINC00310 had powerful capability for distinguishing breast cancer patients from healthy individuals (the AUC 0.828).
CONCLUSION The results suggest that LINC00310 may play an oncogenic role and serve as a novel diagnostic biomarker in breast cancer.

PU-0365

miR-192-5p 通过 BCL2 通路抑制胃癌细胞的增殖和迁移机制研究

王战豪
成都市第三人民医院

目的 探讨 miR-192-5p 对胃癌细胞增殖和迁移的生物学行为的影响及相关分子机制。
方法 qPCR（Quantitative PCR）检测胃癌组织和癌旁组织及胃癌细胞系中 miR-192-5p 表达水平；基因重组技术构建敲降 miR-192-5p 的慢病毒载体细胞株，miR-192-5p mimic 转染胃癌细胞株，检测细胞株的增殖和迁移；双荧光素酶报告基因检测 miR-192-5p 的靶分子；Western blot 检测敲降 miR-192-5p 的胃癌细胞株的蛋白表达水平。
结果 胃癌细胞 AGS、SGC-7901 的 miR-192-5p 表达显著高于 BGC-823、KATO-Ⅲ、MGC-803，胃癌组织和正常组织的 miR-192-5p 的表达水平没有显著差异；敲降 miR-192-5p 后，细胞增殖和迁移能力较阴性对照组升高；而过表达 miR-192-5p mimic 后细胞增殖和迁移则明显受到抑制。双荧光素酶报告基因结果显示，BCL2 是 miR-192-5p 的靶分子。敲降 miR-192-5p 的胃癌细胞 AGS 和 SGC-7901 中 BCL2 蛋白的表达量显著增加。敲降 miR-192-5p 的胃癌细胞 AGS 和 SGC-7901 中，EMT 相关蛋白 Twist1、Snail2 表达升高，细胞凋亡及细胞周期相关蛋白 Capase3、Bax、PCNA 的表达没有差异。
结论 抑制 miR-192-5p，EMT 相关分子表达增强，并促进细胞迁移和增殖，而 miR-192-5p 模拟物则抑制胃癌细胞的迁移和增殖。miR-192-5p 可能通过对 BCL2 的靶向调控，促使胃癌细胞发生 MET，从而抑制胃癌细胞的增殖与迁移。

单细胞测序技术在脑脊髓液细胞分析中的应用

阮浩宇
江苏省人民医院（南京医科大学第一附属医院）

脑脊髓液（CSF）检测在中枢神经系统疾病的诊断和治疗中具有重要的临床价值，单细胞测序技术为 CSF 的相关研究提供了一个新的切入点。相较于传统方法，该技术可获取 CSF 中单个细胞的表达谱，有利于 CSF 中细胞类群的研究以及低丰度细胞的发现。本文总结了近年来 CSF 单细胞测序的相关研究，主要集中在神经感染性疾病、神经炎性和神经退行性疾病，以及脑膜转移，概括了单细胞测序技术在中枢神经系统疾病研究中的优势和临床价值。

PU-0367

A nomogram combining long non-coding RNA expression profiles and clinical factors predicts survival in patients with bladder cancer

Yifan Wang
The Second Hospital, Cheeloo College of Medicine, Shandong University

Bladder cancer (BCa) is a heterogeneous disease with various tumorigenic mechanisms and clinical behaviors. The current tumor-node-metastasis (TNM) staging system is inadequate to predict overall survival (OS) in BCa patients. We developed a BCa-specific, long-non-coding-RNA (lncRNA)-based nomogram to improve survival prediction in BCa. We obtained the large-scale gene expression profiles of samples from 414 BCa patients in The Cancer Genome Atlas database. Using an lncRNA-mining computational framework, we identified three OS-related lncRNAs among 826 lncRNAs that were differentially expressed between BCa and normal samples. We then constructed a three-lncRNA signature, which efficiently distinguished high-risk from low-risk patients and was even viable in the TNM stage-II, TNM stage-III and ≥65-year-old subgroups (all $P<0.05$). Using clinical risk factors, we developed a signature-based nomogram, which performed better than the molecular signature or clinical factors alone for prognostic prediction. Our three-lncRNA signature-based nomogram effectively predicts the prognosis of BCa patients, and could potentially be used for individualized management of such patients.

基于外泌体的肿瘤诊断新技术研究进展

黄晓明、牛会敏、程少杰、张胜行
联勤保障部队第九〇〇医院

外泌体是细胞分泌的纳米级囊泡，富含特定的蛋白质、脂质和核酸等内容物，具有明显的分子异质性。特定细胞释放的外泌体可以改变细胞外基质微环境，或通过向受体细胞传递信号分子以触发其病理生理功能的变化。这种外泌体介导的细胞与细胞之间的交互通信影响着肿瘤的发生与发展。研究表明，在肿瘤发生发展的极早期，原发部位的肿瘤细胞即可经其外泌体的介导促进远端靶器官预转移微环境的构建以利于循环肿瘤细胞的定植并形成微转移灶。此外，外泌体也被证实可参与肿瘤微环境的血管生成和细胞外基质重塑，它们也是肿瘤生长和转移的关键步骤。鉴于其独特的生物学特性和在机体生理和病理过程中发挥的重要功能，外泌体被认为是包括肿瘤在内的多种疾病诊断的最佳生物标志物之一；相应地，近年来外泌体检测新技术方面的探索正方兴未艾，但目前尚未建

立健全规范的检测方法。究其原因，如何减小其他生物物质如脂蛋白、凋亡小体等细胞外囊泡的干扰以增强检测结果的稳定性是目前亟待解决的现实难题；此外，筛选并鉴定与特定肿瘤发生发展密切相关的肿瘤源性外泌体中更为特异的靶标分子，并基于其开发更为敏感和高效特异的检测方法势在必行。可以预见的是，随着外泌体组学等分析技术的飞速发展，以及单分子检测等技术的开发和应用，基于外泌体的肿瘤诊断新技术将在不久的未来走入临床检验的实践中以造福广大肿瘤患者。外泌体作为肿瘤的非侵入性可检测生物标志物具有广阔的临床应用前景，本文仅就外泌体检测相关新技术及其在恶性肿瘤诊断中的应用等方面的进展作一综述。

PU-0369

鼻咽癌放化疗敏感性的预测标志物

林明樾[1,2]、浣西莎[1,2]、郭立煌[1,2]、程振波[1,2]、李贱成[1,2]、黄玥[1,2]、徐克前[1,2]
1. 中南大学湘雅三医院医学检验系
2. 中南大学湘雅医学院医学检验系

目的 探究鼻咽癌放化疗敏感性的预测标志物。
方法 收集 2019 年 6 月-10 月就诊于中南大学湘雅医学院附属肿瘤医院的 100 例鼻咽癌患者放射治疗前的外周血标本，提取患者外周血白细胞中基因组 DNA，检测 XRCC1 G339A、ERCC1 C118T 以及 hMSH5 C85T 多态性，同时分离外周血淋巴细胞进行彗星试验和 in vitro NHEJ 活性分析，检测血浆 8-羟基脱氧鸟苷（8-OHdG）反映细胞 DNA 损伤修复状况，以研究这些分子标志物在鼻咽癌放化疗中的预测作用。
结果 与 hMSH5 CC 基因型相比，hMSH5 CT 基因型鼻咽癌患者放化疗 3 个月后部分缓解率明显降低，差异具有统计学意义（$P < 0.05$），但是未发现 XRCC1 G339A 和 ERCC1 C118T 与鼻咽癌患者放化疗 3 个月后疗效有关。鼻咽癌患者放疗 3 个月后疾病稳定组的 NHEJ 活性明显高于部分缓解组，差异具有统计学意义（$P < 0.05$），但两组之间的%Tail DNA 和 8-OHdG 水平之间的差异无统计学意义（$P > 0.05$）。
结论 hMSH5 C85T 多态性与鼻咽癌患者放化疗后近期疗效显著相关，NHEJ 活性增高导致鼻咽癌患者放化疗敏感性下降。hMSH5 C85T 多态性和 NHEJ 活性分析可能是预测鼻咽癌放化疗敏感性的检测指标。

PU-0370

The role of lncRNA28 in breast cancer cells on the proliferation、apoptosis and migration

Ruiwei Li[1]、Sai He[1]、Zhifang Liu[2]
1. The Third People's Hospital Of Yunnan Province
2. 云南大学

Objective To investigate the effects of long non-coding RNA (lncRNA) lncRNA28 on the proliferation, apoptosis and migration of breast cancer cells.
Methods The expression of lncRNA28 in breast cancer tissues and breast cancer cells was detected by qRT-PCR. The molecular localization of lncRNA28 was analyzed by cytoplasmic separation method to explore the regulatory mechanism of lncRNA28. After the expression of lncRNA28 was interfered with by siRNA, the effects of lncRNA28 on cell proliferation, apoptosis, migration and invasion were detected by CCK-8, flow cytometry, wound healing assay and Transwell assay.
Results The expression of lncRNA28 in breast cancer tissues and breast cancer cells was significantly higher than that in paracancerous tissues and normal breast epithelial cells, and

lncRNA28 was mainly localized in the nucleus. Knockdown of lncRNA28 significantly inhibited the proliferation, migration and invasion of breast cancer cells.
Conclusions LncRNA28 can promote the proliferation and migration of breast cancer cells.

血清 GGT/ALT 比值与 HBV 基因 BCP 区 1762/1764 突变联合分析对 HB-HCC 的早期诊断价值研究

邱顺华
自贡市第三人民医院

目的 探讨分析血清 γ 谷氨酰转移酶（γGGT）与丙氨酸转移酶（ALT）比值联合乙型肝炎病毒（HBV）基因 BCP 区 1762/1764 突变对乙肝性肝癌（HB-HCC）的临床应用价值。
方法 按照诊疗指南，诊断 HBV 相关性疾病，收集慢性乙肝患者（CHB）、乙肝性肝硬化(HB-LC) 50 例，乙肝性肝癌(HB-HCC) 46 例。血清 HBV-DNA 水平采用荧光定量 PCR 技术检测；血清 γGGT 与 ALT 水平采用全自动生化分析仪检测。乙型肝炎病毒基因 BCP 区 1762/1764 突变采用扩增阻滞突变系统荧光 PCR 法（ARMS-PCR）检测。计量数据和计数数据均采用 SPSS17.0 软件对数据进行统计学分析。
结果 HB-HCC 组患者的血清 γGGT 水平和 γGGT/ALT 比值均高于 HB-LC 组和 CHB 组，差异均具有统计学意义（P<0.05)。HB-HCC 组、HB-LC 组、CHB 组的 HBV 基因 BCP 1762/1764 突变率分别为 91.30%、84.00%、22.22%，HB-HCC 组与 CHB 组比较具有统计学意义（P<0.05），而 HB-HCC 组与 HB-LC 组比较差异无统计学意义（P>0.05）。HBV 基因 BCP1762/1764 突变型与未突变型的 γGGT/ALT 均值比较，差异均具有统计学意义（P<0.05）。诊断 HB-HCC 的 ROC 曲线分析**结果** HBV 基因 BCP 区 172/1764 突变检测联合 γGGT/ALT 比值时，诊断灵敏度 71.7%和特异度 83.2%。
结论 γGGT/ALT 比值和 HBV 基因 BCP 区 1762/1764 突变均与 HBV 相关疾病的病情发展密切相关，同时联合分析二者对 HB-HCC 的早期诊断具有一定的临床应用价值。

Rapid one-tube detection of four prevalent mutations in the SLC25A13 gene by multicolor melting curve analysis

Tong Ou[1]、Qinlong Zeng[2]
1. Medical Laboratory of Shenzhen Luohu Hospital Group
2. 江门市妇幼保健院

Background Citrin deficiency caused by SLC25A13 gene mutations is an autosomal recessive disease with high prevalence among the East Asian population, and SLC25A13 genetic analysis is essential for definite diagnosis. Four prevalent SLC25A13 mutations including c.851_854del, c.1638_1660dup, IVS6+5G>A, and IVS16ins3kb make up over 80% of total pathogenic mutations in the Chinese population. However, suitable assays for detection of the prevalent SLC25A13 mutations are still missing in routine clinical practice.
Methods Here, four primer-probe sets targeting the SLC25A13 mutation regions were designed and a real-time PCR-based multicolor melting curve analysis (MMCA) was developed to detect the four prevalent mutations in one closed-tube reaction. We comprehensively evaluated the analytical and clinical performances of the MMCA assay using 15 artificial templates, 29 clinical samples with known genotypes and a cohort of 5,332 healthy newborns from southern China.
Results All four mutations in the artificial templates and clinical samples were accurately genotyped by their labeling fluorophores and Tm values, and the standard deviations of Tm

values were less than 0.2 °C. The limit of detection was estimated to be 500 diploid human genomes per reaction. A total of 107 carriers were screened from the newborn cohort with a carrier rate of 2%. The MMCA assay of 107 carriers and 112 random noncarriers demonstrated 100% concordance with Sanger sequencing and Long-range PCR.
Conclusions The developed assay can potentially serve as an efficient first-line screening and genetic diagnostic tool for citrin deficiency in routine clinical practice in China.

人偏肺病毒核酸检测试剂盒（PCR-荧光探针法）临床研究

姜习新、梁紫薇、王锴佳
岳阳市人民医院

目的 本临床试验采用盲法、对比试验设计。以核酸序列测定方法（Sanger 测序法）作为对照方法，将入选样本编码后，采用对照方法和待考核试剂盒分别进行盲法检测，待试验结束后揭盲，将待考核试剂盒检测结果与对照方法检测结果进行比较分析，用以评价待考核试剂盒的临床应用性能。
方法 根据《体外诊断试剂注册管理办法》和《体外诊断试剂临床试验技术指导原则》的要求进行临床试验设计。本临床试验采用盲法、对比试验设计。将入选样本编码，用对照方法和待考核试剂盒分别进行盲法检测，试验结束后揭盲，以评价待考核试剂盒的临床应用性能。
结果 本次临床试验根据临床试验方案要求，随机筛选样本 230 例，根据纳入标准入组样本 230 例，根据排除标准和剔除标准，最终纳入统计样本样本 230 例，样本类型为鼻咽拭子。本次研究采用测序方法作为对照方法。
本次临床试验中，经检测鼻咽拭子样本 230 例，对照方法检测结果为阳性的样本 31 例，检测结果为阴性的样本 199 例；待考核试剂盒检测结果为阳性的样本 33 例，检测结果为阴性的样本 197 例。二者阴阳性结果不一致的样本有 2 例。
经统计分析，与对照方法相比，待考核试剂的检测阳性符合率为 100.00%、阴性符合率为 98.99%、总符合率为 99.13%。使用 IBM SPSS22.0 软件进行 kappa 检验，kappa=0.964，P＜0.001。α=0.05 检验水准下，待考核试剂与对照方法检测结果的一致性好，且具有统计学意义。
结论 本次临床试验结果表明待考核试剂盒可靠，准确，安全，简便，稳定，具有较高的临床应用价值。

PU-0374

CMV DNA 和 CMV 抗体在器官移植病人巨细胞病毒感染诊断中的作用

谭伟清
南方医科大学珠江医院

目的 探讨巨细胞病毒（Cytomegalovirus， CMV） DNA 和 CMV-IgM 抗体在诊断器官移植病人巨细胞病毒感染中的作用。
方法 以实时荧光定量聚合酶链反应（PCR）检测 52 例器官移植患者共 56 份尿和外周血单个核细胞 （PBMC） CMV-DNA，同时以酶联免疫吸附分析（ELISA）方法检测血清 CMV-IgM 抗体。
结果 56 份血清标本中 CMV-IgM 抗体阳性 8 例 （14.3%），而尿和 PBMC 的荧光定量 PCR 检测 CMV-DNA 阳性例数分别为 17 例（30.4%）和 21 例（37.5%）。
结论 对于器官移植患者，CMV-IgM 抗体作为 CMV 现症感染的血清学标志物阳性率偏低，检测尿中 CMV-DNA 可以提高阳性率，但依然存在部分漏检的情况，而 PBMC 的 CMV-DNA 则具有较高的阳性率，应该作为器官移植术后患者 CMV 现症感染的首选指标。

PU-0375

优化新型冠状病毒核酸提取方法后的最低检测限评价

宋宇[1,3,4]、罗艳秋[2]、郭文倩[2]、刘子杰[1,3,4]
1. 昆明医科大学第一附属医院
2. 瑞丽市畹町经济开发区人民医院
3. 云南省检验医学重点实验室
4. 昆明医科大学第一附属医院临床检验诊断省创新团队

目的 评价经优化（增大核酸样本提取量）后新型冠状病毒核酸检验程序的最低检测限。
方法 将 SARS-COV-2 定值质控品稀释成 5 个浓度，每个浓度准备 16 份样本，每份样本吸取 1000μl 提取核酸后进行荧光 PCR 检测，计算每个浓度样本的检出率，分别以浓度的对数（以 10 为底）和检出率作 probit 回归分析，得到 SARS-CoV-2 ORF1ab 基因和 N 基因检出率为 95%所对应的浓度。收集 101 例新冠肺炎患者的口鼻咽拭子标本，分别以样本量 1000μl (程序 1）和 200μl（程序 2）分别提取核酸后进行荧光 PCR 检测，比较两种不同检验方法的检出率差异。
结果 SARS-CoV-2 ORF1ab 基因和 N 基因检出率为 95%时所对应的浓度分别为 19.3 copies/mL (95% 置信区间, 15.2-31.1copies/mL), 34.8 copies/mL (95% 置信区间,27.2-54.4copies/mL)。101 例临床样本经检测后，方法 1 检出 65 例阳性，方法 2 检出 54 例阳性，方法 1 的检出率显著高于方法 2。
结论 扩大样本提取量后 SARS-CoV-2 ORF1ab 基因和 N 基因的检测灵敏度明显提高。

新型冠状病毒的研究进展

汪佳婕
盘龙区北京路 1228 号

自 2019 年发现新型冠状肺炎病毒以来，对全球的健康造成了巨大的威胁，至今虽然疫情在我国已经得到了良好的控制，但准确的了解 SARS-Cov2，并快速的诊断新冠病毒至关重要。高通量测序（NGS）和实时荧光定量 PCR（qPCR）技术是目前已知的主要核酸检测技术，现基于 CRISPR 的诊断技术已经在 COVID-19 中得以运用，该技术不仅具有很高的灵敏度和特异度，且大大缩短了检测时间，为新冠病毒的快速诊断提供了有力地依据。本文从新冠病毒的起源开始，对新型冠状病毒检测方法进行概述。

PU-0377

1278 例沙眼衣原体、解脲脲原体和淋球菌核酸检测结果分析

白俊、吴定辉、雷秀琴、刘婷
四川金域医学检验中心有限公司

目的 了解四川 1278 例沙眼衣原体、解脲脲原体和淋球菌的感染情况及其特点，为 STD 预防以及临床治疗提供依据。
方法 采用实时荧光 PCR 法对 1278 例患者的泌尿生殖道分泌物的 CT、UU 和 NG 核酸进行定性检测，对检测结果进行统计分析。
结果 1278 例患者的样本中，UU-DNA 检出阳性 663 例，检出率最高，为 51.88%，CT-DNA 和 NG-DNA 的阳性例数分别为 95、71 例，阳性检出率分别为 7.43%、5.56%；女性 UU 感染率为 59.40%明显高于男性 33.69%（P＜0.01），男性 NG 感染率 12.83%明显高于女性 2.54%（P＜0.01），CT 感染率男性为 10.16%高于女性 6.31%，但无性别差异（P＞0.05）。感染类型以单一

病原体感染为主，阳性率为 52.90%（676 例阳性），其中 UU 阳性率最高为 46.56%，CT、NG 分别为 2.74%、3.60%；混合感染检出率为 5.63%，其中 CT+UU 双重感染的阳性检出率最高，为 3.68%，CT+NG、UU+NG、CT+UU+NG 阳性检出率分别为 0.31%、0.94%、0.70%。不同年龄段的感染情况显示，21-30 岁年龄段感染率最高为 24.49%，其次为 31-40 岁年龄段，阳性检测率为 19.33%,其余年龄段相对较低。

结论 1278 例沙眼衣原体、解脲脲原体和淋球菌检测结果中，三种病原体的阳性检出率不尽相同；女性 UU 感染率明显高于男性，男性 NG 感染率明显高于女性；不同年龄段之间的阳性率有较大差异，其中青壮年（21-40 岁）阳性率最高，所以青壮年应作为性传播疾病防治工作的重点对象；混合感染较为常见，尤其是 CT 合并 UU 感染，因此在性传播疾病筛查诊断时，沙眼衣原体、解脲脲原体和淋球菌三种病原体均需同时检测，为临床治疗提供依据。

Mutation Detection of Mitochondrial DNA D-loop Region in Bone Marrow Cells of Acute Myeloid Leukemia

Songling Huang 、ying zhao
Department of Clinical Laboratory, the First Affiliated Hospital of Kunming Medical University, Kunming, 650032, China

AIM The aim of this study was to detect the mutations in the D-loop region of mitochondrial DNA (mtDNA) in bone marrow cells of patients with acute myeloid leukemia and to analyze their relationship with the pathogenesis of acute myeloid leukemia.
METHODS Twenty-nine newly diagnosed patients with acute myeloid leukemia were selected to extract mtDNA from bone marrow cells and amplify the sequence of mtDNA D-loop region by PCR. The gene sequence of the amplified products was detected by direct forward and reverse sequencing. The results were compared with the revised Cambridge standard sequence and related databases (MITOMAP database, GenBank database, mtDB database).
RESULTS The results showed that the mutation rate of mtDNA D-loop region in acute myeloid leukemia was 82% (24/29 cases), and there was no significant difference in the number of mutations among patients of different ages and types of acute myeloid leukemia (P > 0.05).
CONCLUSION There are high frequency mutations in mtDNA D.1 OOP region of bone marrow cells from acute myeloid leukemia, and the mutations may be related to the pathogenesis of acute myeloid leukemia.

PU-0379

海拔高度对 2 型糖尿病患者循环内皮祖细胞及低氧诱导因子的影响

哈小琴、陈斌泽、李兵、邢媛、张媛媛、胡秦妮
中国人民解放军联勤保障部队第 940 医院（原兰州军区兰州总医院）

目的 探讨不同海拔地区 2 型糖尿病患者循环内皮祖细胞数量及相关指标的变化情况。
方法 选取低海拔地区（咸阳市）和高海拔地区（兰州市）各一家医院内被诊断的 2 型糖尿病患者（共 54 人）和健康体检者（共 40 人），收集基本信息，检测两组人群血脂、血糖、糖化血红蛋白以及低氧诱导因子-1α（HIF-1α）浓度，并用流式细胞仪测定外周血内皮祖细胞（EPCs）数量。
结果 与低海拔地区相较，高海拔地区糖尿病组和健康组循环 EPCs 数量均减少（P＜0.001），HIF-1α 水平显著增高；糖尿病患者体质指数(BMI)、腰臀比(WHR)、甘油三酯（TG）、血糖及糖化血红蛋白（HbAlc）均高于健康组（P＜0.05），而循环 EPCs 低于健康者（P＜0.001）。外周血

EPCs 数量由高到低依次为健康者、2 型糖尿病无血管并发症者、2 型糖尿病伴微血管并发症者，且差异具有统计学意义（P＜0.05）；2 型糖尿病伴大血管并发症者与 2 型糖尿病伴微血管并发症者相比无统计学意义（P＞0.05）。
结论 高海拔地区较低海拔地区人群 HIF-1α 表水平增加，循环 EPCs 数量显著减少，2 型糖尿病患者循环 EPCs 与健康者相比显著减少且与疾病程度相关。

PU-0380

海拔对 2 型糖尿病患者外周血单个核细胞迁移和粘附功能的影响

哈小琴、李兵、王晓辉、邢媛、谢艳芳
中国人民解放军联勤保障部队第 940 医院（原兰州军区兰州总医院）

目的 比较分析不同海拔地区 2 型糖尿病患者外周血单个核细胞功能变化情况。
方法 选取咸阳市和兰州市各一家医院的 2 型糖尿病患者共 54 人，同期健康体检者共 40 人。用密度梯度离心法提取外周血单个核细胞（PBMCs）；用 ELISA 检测血清中反应 PBMCs 迁移、粘附和成血管的因子的浓度：缺氧诱导因子-1a（HIF-1a）、基质细胞衍生因子（SDF-1）、白细胞介素-8（IL-8）和血管内皮生长因子（VEGF）；用荧光定量 PCR 检测 PBMCs 中趋化因子受体 2/4（CXCR2/CXCR4）和白细胞粘连蛋白（LFA-1）mRNA 的相对表达；用蛋白质印迹法检测 PBMCs 中 CXCR2 和 CXCR4 的蛋白量。
结果 血清各因子检测显示，低海拔地区较高海拔地区 SDF-1 和 HIF-1a 表达降低（P<0.05），IL-8 和 VEGF 的表达量升高（P<0.05）；T2DM 高海拔组较低海拔组 SDF-1 和 HIF-1a 的表达升高，IL-8 和 VEGF 的表达降低，差异均有统计学意义（P<0.05）。基因表达量检测显示，低海拔组内 T2DM 者较健康者各基因相对表达量降低，CXCR2 表达差异有统计学意义（P<0.001）；高海拔组 T2DM 者较健康者各基因表达量也均降低，CXCR2 和 CXCR4 基因表达量差异有统计学意义（P<0.001）。蛋白含量测定显示，低海拔组较高海拔 CXCR2 和 CXCR4 蛋白量均较高（P<0.05），健康者 CXCR2 和 CXCR4 蛋白量均高于 T2DM 患者（P<0.05）。
结论 随着海拔的升高，2 型糖尿病患者较健康者缺氧程度加重，外周血 PBMCs 迁移增强、黏附性和成血管能力减弱，调节紊乱。

PU-0381

Sphingosine-1-phosphate does not interfere with HBV replication in hepatocytes in vitro

Weimin Wu
中南大学湘雅二医院检验科

Background/Aim Sphingosine-1-phosphate (S1P) is an important bio-active lipid, and its concentration is significantly increased in the peripheral blood of patients with hepatitis B. S1P activates signaling pathways such as PI3K/Akt and MAPK/ERK by binding to different S1P receptors on the cell surface, and participates in the regulation of various cell functions. Previous studies have shown that PI3K/Akt and MAPK/ERK are involved in regulating HBV replication in hepatocytes. Our previous data showed that the S1P chaperone (apolipoprotein M) was associated with viral replication status in chronic hepatitis B patient. However, the role of S1P in HBV replication in vitro was not clear. The purpose of this study was to determine whether S1P is directly involved in regulating HBV replication in hepatocytes.
Methods HepG2.2.15 cells were treated with different concentrations of S1P and S1P receptor agonist FTY720, and then HBV DNA in the cell supernatant was measured using quantitative PCR , HBsAg and HBeAg in the supernatant were measured using chemiluminescence method.

Results After treating HepG2.2.15 with S1P (up to 3μM) and FTY720 (up to 5μM), the level of HBV DNA, HBsAg and HBeAg in the cell supernatant did not change significantly.
Conclusion Our data indicated that sphingosine-1-phosphate does not interfere with HBV replication in hepatocytes in vitro.

PU-0382

黄芪多糖联合 TPHK 防治低氧水浸复合应激致大鼠肠道损伤微生态的影响研究

杨志华、王晓辉、哈小琴、张全华
中国人民解放军联勤保障部队第九四〇医院

目的 研究携带低氧诱导因子（HIF-1α）与角质细胞生长因子（KGF）双基因真核表达载体的重组减毒沙门菌菌(TPHK) 对低氧水浸复合应激致大鼠肠道损伤微生态的影响研究肠道微生态的作用，为 TPHK 防治应激性损伤提供依据；研究黄芪多糖对低氧水浸复合应激致大鼠胃肠粘膜损伤的微生态的作用以及黄芪多糖与 TPHK 的协同作用，为中药与菌苗联合服用提供依据。
方法（1）通过服用 TPHK 菌苗和黄芪多糖水溶液，在低氧舱内模拟高原低氧水浸复合应激方法制造大鼠应激性溃疡模型，实验分为空白组(N 组)、模型组（M 组）、TPHK 组（T 组）、黄芪组(H 组)、TPHK+黄芪组（L 组）），在造模前，造模后 3 天、5 天、7 天分别取大鼠粪便进行检测，通过 S 高通量测序检测肠道微生态菌群组成与结构的变化。
结果 黄芪多糖组和 TPHK 组经灌胃治疗后，毛色光泽度好转，进食量增加，活动度增加，大便性状有所好转，以联合组恢复最好；与 M 组比较，低氧 3d 时 T、L 组 HIF-1α 蛋白未出现明显变化，低氧 5d、7d 时 T、L 组 HIF-1α 和 KGF 蛋白显著上调（$P<0.05$），L 组大鼠 HIF-1α 蛋白在 7d 时较 T 组显著下调，但仍较 M 组显著增加（$P<0.05$）；低氧 3d 以后，T、L 组 KGF 蛋白的表达与 M 组比显著上调（$P<0.05$）。此外，L 组大鼠 KGF 蛋白在 7d 时较 T 组显著下调（$P<0.05$）。结肠组织 IL-10 在第 3d 至第 7d 时，H 组、T 组及 L 组肠组织 IL-10 表达显著高于 N 组和 M 组（$P<0.01$），且应激 5d 和第 7d 时 L 组 IL-10 的表达显著高于 H 组和 T 组（$P<0.05$）。细菌属的层面分析显示低氧应激可显著降低乳酸杆菌属（Lactobacillus）的丰度， TPHK 与黄芪多糖治疗可以明显提高造模后毛螺科菌与乳杆菌两种益生菌的含量，提高其定植能力，进而发挥保护肠道微生态的作用。
结论 低氧水浸复合应激后，TPHK 与黄芪多糖联合应用能够纠正低氧水浸复合应激致肠道微生态的紊乱，对大鼠胃肠损伤有保护作用。

PU-0383

HIF-1α 和 HGF 双基因修饰大鼠间充质干细胞对高原大鼠股骨缺损模型修复的影响研究

谢艳芳、哈小琴、王晓辉、杨志华、李兵
联勤保障部队第九四〇医院

目的 利用基因治疗和细胞治疗相结合的方法促进低氧条件下高海拔地区骨缺损修复速度和愈合质量。本实验旨在利用低氧诱导因子-1α（hypoxia inducible factor -1，HIF-1α），肝细胞生长因子（hepatocyte growth factor，HGF）联合作用骨髓间充质干细胞（bone marrow-mesenchymal stem cells，BM-MSCs），为低氧条件下改善高海拔地区大鼠股骨缺损模型的修复效果建立新的治疗方案。
方法 将高海拔雌性大鼠股骨缺损动物模型随机分为 5 组：A 组（PBS 对照组）、B 组（BM-MSCs 移植组）、C 组（HIF-1α 基因修饰 BM-MSCs 移植组）、D 组（HGF 基因修饰 BM-MSCs 移植

组）、E 组（双基因修饰 BM-MSCs 移植组），建模后将相应细胞进行局部移植；分别于第 10 d、20 d、30 d 通过 X-ray 检测骨缺损修复情况；于第 20 d 分离出新生骨组织，通过 HE 染色观察其新生股骨厚度和原位杂交法检测组织中雄性 BM-MSCs 的数量及分布；于第 2 d、5 d、10 d、20d 检测股骨组织中 ALP(碱性磷酸酶的含量)；最后通过 Real-time PCR 和 ELISA 法法检测股骨组织中 HIF-1α 和 HGF 的表达情况。

结果 通过 X-ray 检测发现携带双基因的 BM-MSCs 移植组的股骨修复速度较其他组快，且其组织中 ALP 含量高于其他组（P<0.05）；通过原位杂交法检测发现当 HIF-1α 和 HGF 同时高表达时，BM-MSCs 在组织分化的细胞数量明显增多，其抗低氧能力和组织中的存活率明显升高。通过 ELISA 法和 Real-time PCR 法检测 HIF-1α 和 HGF 两种基因在局部组织内均有良好的表达，且 E 组各时间点的浓度均高于其他组（P<0.05）。

结论 将 HIF-1α 和 HGF 双基因修饰的 BM-MSCs 移植到高海拔大鼠股骨缺损动物模型中，均可以检测到 HIF-1α 和 HGF 基因在体内局部有表达，并能够与干细胞共同发挥作用促进股骨缺损的创伤修复。

PU-0384

KGF 联合 HIF-1α 对 BECN1 敲除 IEC-6 细胞缺氧的保护作用及机制

王晓辉、哈小琴、杨志华、李兵
联勤保障部队第九四〇医院

目的 探讨 KGF 联合 HIF-1α 对 BECN1 敲除后的 IEC-6 细胞在缺氧应激状态下的保护作用及相关机制。

方法 利用 CRISPR/Cas9 技术慢病毒转染构建敲除 BECN1 基因的稳定细胞系 IEC-6B-细胞。实验分为空白对照组（Blank control group, BC 组）、阴性对照组（Negative control group, NC 组）、HIF-1α 组、KGF 联合 HIF-1α 组（KH 组），各组细胞 5 %氧浓度培养 24 h。光学显微镜和透射电镜观察细胞形态学改变。CCK-8 法检测细胞存活率。ATP 含量测试盒测定细胞 ATP 含量。流式细胞分析仪检测细胞周期和细胞凋亡率。实时荧光定量 PCR 法检测自噬相关基因 BECN1、SQSTM1 及 LC3 的 mRNA 表达水平。Western blot 法检测凋亡蛋白 Bax/Bcl-2、Caspase3 及自噬相关蛋白 Beclin 1、LC3 II/LC3 I、p62 的表达。

结果 成功构建敲除 Beclin1 蛋白的 IEC-6B-细胞系。低氧处理 24h 后，各组细胞镜下可见梭形、星形及其它异常形态变化。电镜观察 NC 组细胞染色质固缩聚集，胞质内可见大量大小不一的吞噬溶酶体泡；其他各组细胞染色质分散边缘聚集，呈现细胞早期凋亡形态变化，BC 组和 KH 组细胞胞质中可见自噬泡。与 BC 组相比较，各敲除组细胞存活率均显著降低（P<0.01），其中 KH 组细胞存活率高于 NC 组、KGF 组及 HIF-1α 组（P<0.05）。BC 组细胞内 ATP 含量均显著高于其他各组（P<0.05）。与 BC 组和 KH 组比较，NC 组、KGF 组及 HIF-1α 组细胞 G0/G1 期百分比显著增加，细胞凋亡率均显著增加（P<0.05），KH 组与 BC 组之间无显著差异（P>0.05）。与 BC 组相比较，NC 组、KGF 组、HIF-1α 组及 KH 组细胞自噬基因 BECN1、SQSTM1 及 LC3 基因 mRNA 表达均显著降低（P<0.05）。与 BC 组相比较，NC 组、KGF 组、HIF-1α 组及 KH 组细胞 Beclin 1 蛋白及 LC3 II/LC3 I 的比值均显著降低（P<0.05），且 p62 蛋白表达显著增加（P<0.05），NC 组、KGF 组及 KH 组细胞 Bax/Bcl-2 的比值、Caspase3 蛋白表达相比 BC 组显著增加（P<0.05），其中 KH 组的 Bax/Bcl-2 的比值、Caspase3 蛋白表达低于 NC 组（P<0.05）。

结论 KGF 联合 HIF-1α 能促进细胞增殖、增强细胞能量代谢、减少 G0/G1 期阻滞细胞率、抑制细胞凋亡作用，对低氧应激的 IEC-6B-细胞具有保护作用。

PU-0385

新型手性固定相用于检测大鼠血浆中氟比洛芬对映体浓度

孙嘉仪
中国医科大学附属第一医院国家医学检验临床医学研究中心

基于手性固定相的液质联用技术是分离或检测体内手性药物对映体的一个非常有效的方法。这种方法可以根据预分离化合物的结构特点而有目的地制备分离效能高、性能稳定的新型手性固定相，缩短检测时间、提高检测灵敏度、减少检测成本。目的将新制备的手性固定相与液质联用技术相结合，建立大鼠血浆中氟比洛芬对映体浓度检测方法。方法采用氨基键法，通过区域选择性酯化反应、取代反应、加成反应及全衍生化，制备 4-氯苯基氨基甲酸酯取代的 β-环糊精手性固定相。采用固态核磁、红外光谱对手性固定相的化学结构进行确证；采用元素分析法测得固定相表面配体浓度；采用扫描电镜和透射电镜对其微观形貌进行表征；采用热重分析法研究合成手性固定相的热稳定性。通过考察有机改性剂的种类、比例和缓冲盐浓度对分离的影响，优化色谱条件，并将自制固定相上得到的分离结果与商品化固定相上得到的分离结果进行对比。采用固相萃取法处理血浆样品，通过比较不同种类的固相萃取小柱的提取回收率，确定最佳样品预处理方案。结果在优化的色谱条件下，氟比洛芬对映体可获得完全分离，且分离时间及分离度均优于其他商品化固定相。在大鼠血浆中的提取回收率在 92.1%-94.5%之间。测定单一对映体的线性范围在 10.0～20000.0 ng mL-1 之间，定量限为 10.0 ng mL-1。方法的准确度（RE）≤9.4，日内和日间精密度（RSD）≤7.3。结论建立的方法被成功应用于灌胃给予消旋氟比洛芬后药物在大鼠体内的立体选择性药动学研究中。为将来新型手性固定相应用于临床手性药物检测提供可能。

PU-0386

miR-128-3p 在急性冠脉综合征患者血清中的表达水平及其临床意义

刘月娥、关秀茹
哈尔滨医科大学附属第一医院

背景及目的 急性冠脉综合征（ACS）是全球死亡的主要原因之一，给人类带来严重的社会经济负担。ACS 及时准确的诊断有助于患者快速进行缺血再灌注治疗，从而减少并发症以及降低死亡率。循环 miRNAs 因具有许多优势，有望成为 ACS 的潜在生物标志物。有研究发现 miR-128-3p 可通过不同的机制参与心血管疾病的进展，但尚未有循环 miR-128-3p 在 ACS 临床研究中的相关报道。
方法 收集经冠状动脉造影（CAG）的 ACS 患者 60 例和健康体检者 30 例入院 3 小时内的血清，并收集所有受试者的完整病历资料。ACS 患者包括 24 例不稳定性心绞痛（UA）和 36 例急性心肌梗死（AMI）。及时提取总 miRNA 并进行逆转录，血清中 miR-128-3p 的表达水平采用 RT-qPCR 外参法进行相对定量，血清中炎症因子 IL-18 及 IL-1β 的含量采用 ELISA 进行绝对定量。
结果（1）ACS 组血清中 miR-128-3p 的表达水平较对照组显著降低（P<0.001）；UA 组、AMI 组 miR-128-3p 的表达水平较对照组显著降低（P<0.001），且 UA 组 miR-128-3p 的表达水平显著高于 AMI 组（P<0.001）。
（2）ACS 组 IL-1β 的含量相对于对照组显著增高（P<0.05）。
（3）ACS 组血清中 miR-128-3p 的表达水平与 Gensini 分数呈显著负相关（r=-0.6539，P<0.001）。
（4）miR-128-3p 的表达水平与 BNP、CK-MB、NLR、PT、hsCRP、cTnI、NNT 呈负相关（r=-0.288，P=0.025；r=-0.372，P=0.003；r=-0.346，P=0.007；r=-0.301，P=0.019；r=-0.465，P<0.001；r=-0.522，P<0.001；r=-0.689, P<0.001）；miR-128-3p 的表达水平与 EF、PLT 呈正相关（r=0.537，P<0.001；r=0.268，P=0.038）。

（5）miR-128-3p、cTnI、CK-MB 能可靠的区分 ACS 与对照组，AUC 值分别为 0.881、0.899、0.872。指标联合可显著提高诊断性能，miR-128-3p 与 CK-MB 联合的 AUC 值为 0.924，与 cTnI 联合的 AUC 值为 0.920。
（6）PT、DBP、miR-128-3p 均是 ACS 的独立危险因素（P<0.05）。
结论 血清 miR-128-3p 可能是 ACS 患者早期诊断、严重程度及风险评估的新型生物标志物。

PU-0387

尿沉渣 SNORA48 作为肾细胞癌的新型诊断标志物

郑白冰、张悦、尚晓玲、宋兴国、宋现让、谢丽
山东省肿瘤医院

背景 近年来，肾细胞癌发病率逐年升高，但是目前缺乏有效的用于早期诊断肾细胞癌的生物标志物。因此，本研究的目的是验证一种新的诊断肾细胞癌(RCC)的生物标志物。
材料与方法 研究纳入 TCGA 数据库中 516 例透明细胞肾细胞癌以及 71 例病例组织，并从 SNORic 数据库(http: //bioinfo.life.hust.edu.cn/SNORic)获取 SNORA48 的表达水平。然后，我们进一步在 110 例尿沉渣和 30 例血浆及其各自的对照样本中研究了 SNORA48 的表达水平。ROC 曲线用于研究 SNORA48 作为肾癌诊断标志物的诊断效能。
结果 利用 TCGA 数据库，我们发现，与癌旁组织相比，肿瘤组织中 SNORA48 的表达水平明显升高(P< 0.0001)。然后，我们进一步分析了 110 例 RCC 患者和 130 例健康志愿者尿沉渣中 SNORA48 的表达量。结果仍然表明，与正常人相比，在 RCC 尿沉渣中，SNORA48 的表达量明显增加(P< 0.0001)。ROC 曲线显示，尿沉渣 SNORA48 诊断肾癌的 AUC 为 0.71.然而，通过对 30 例 RCC 患者和 30 例健康人的血浆进行分析时，我们未发现 SNORA48 的表达在两组队列中有统计学上的差异。这预示了尿沉渣可能有优于血样本作为生物标志物的潜能。
结论 我们的研究结果表明，尿沉渣 SNORA48 可能是 RCC 患者新的、有前景的非侵入性诊断生物标志物，与肾癌发生密切相关。

PU-0388

TMEM40 在膀胱癌中作用的初步研究

张振飞
南方医科大学珠江医院

目的 深入了解膀胱癌形成的分子机制，完善针对不同膀胱癌患者特异的诊断及治疗方法，寻找膀胱癌特有的分子诊断标志物，以实现基因靶向诊治，从而降低膀胱癌患者的发病率和死亡率，提高患者术后 5 年的生存率及生存质量，是当今医学需要解决的难题。
方法 在当前的研究中我们通过 qRT-PCR 及 WB 检测了膀胱癌细胞及组织中 TMEM40 在 mRNA 及蛋白水平的表达，结果表明 TMEM40 在膀胱癌细胞与组织中表达均上调；其次，通过组织芯片的免疫组化实验，探究 TMEM40 表达水平高低与膀胱癌患者临床病理参数间的关系。
结果 在 115 例膀胱癌患者中，TMEM40 的表达与患者的临床分期、pT 分期、组织病理学分级具有明显的相关性，而与患者的年龄、性别等无显著相关。接下来，我们选取两株人膀胱癌细胞系（5637、EJ），采用不同浓度梯度的 G418 筛选 TMEM40 过表达及敲减的膀胱癌细胞，扩大培养来得到稳定表达的细胞株。最后，通过 CCK-8、EdU、Transwell、细胞周期、凋亡及裸鼠皮下成瘤等一系列功能实验，来进一步验证 TMEM40 对膀胱癌恶性表型的影响。细胞增殖实验结果表明，TMEM40 表达上调促进细胞的增殖，而 TMEM40 下调则在一定程度上抑制了细胞的增殖；Transwell 实验表明，TMEM40 表达上调促进细胞迁移、侵袭，而 TMEM40 敲减则抑制细胞迁移、侵袭；流式细胞仪检测结果表明，过表达 TMEM40 对细胞的凋亡具有一定的抑制作用，而敲减

TMEM40 则促进了细胞的凋亡；过表达 TMEM40 加快 G1/S 期变，而敲减 TMEM40 则细胞周期阻滞在 G1 期。此外，裸鼠体内成瘤实验结果表明，与对照组相比，敲减 TMEM40 能够明显抑制裸鼠体内肿瘤的生长。

结论 研究表明，TMEM40 在膀胱癌组织及细胞中高表达，其表达水平与膀胱癌的迁移、侵袭、增殖等恶性表型密切相关，过表达 TMEM40 还能够抑制 5637 和 EJ 细胞的凋亡并加快 G1/S 转变。因此，TMEM40 在膀胱癌的发生发展过程中发挥着重要的作用，有可能成为膀胱癌患者临床治疗的基因靶点及分子标志物。

高通量测序在疾病诊断中的作用

温金
山东大学第二医院

高通量测序极大地提高了我们确定和诊断人类疾病潜在原因的能力。全基因组测序和全外显子组测序的使用促进了对遗传病新基因的更快、更经济有效的鉴定。它还提高了我们识别遗传病致病突变的能力，这些突变与已知的相关基因有关。这些好处不仅适用于目的是评估成人和儿童遗传疾病风险的情况，也适用于产前基因检测和胚胎检测。高通量测序也影响了我们评估复杂疾病风险的能力，并可能继续影响疾病研究的这一领域，因为越来越多的个人进行测序，我们更好地理解整个基因组中罕见和常见的变异的重要性。

新一代测序的速度和准确性不断提高，对我们识别与疾病风险有关的基因和诊断遗传疾病的能力的速度和范围产生了显著影响，而且改进的步伐并没有放慢。更高通量的技术正在开发和测试，目的是进一步减少处理时间和测序成本。总的来说，我们对高通量测序不同应用的伦理框架和标准的发展，以及我们对各种基因改变对个人健康的影响的理解，在评估遗传疾病风险方面比测序技术的局限性多得多。随着测序技术的进步似乎可能继续超过其他领域的发展，我们将面临有趣的时刻，因为我们将看到这种差异在未来评估遗传疾病风险的努力中如何表现出来。

血浆 SNORD84 作为诊断非小细胞肺癌的新型肿瘤标志物

王世文、王康羽、宋兴国、谢丽、宋现让
山东省肿瘤医院

研究目的 肺癌是世界上发病率最高的肿瘤，每年大约会有 160 万人因肺癌死亡。根据组织类型，肺癌可分为非小细胞肺癌（NSCLC）和小细胞肺癌（SCLC），其中非小细胞肺癌约占 85%。由于其早期无明显症状，通常在晚期才被确诊。据报道，接受有效治疗的 1 期非小细胞肺癌患者一年存活率为 83%，而晚期非小细胞肺癌患者仅为 14%。因此，揭示非小细胞肺癌发生发展的分子机制，寻找新的可反映肿瘤早期发展的生物标志物尤其重要。小核仁 RNA(snoRNAs)是一类广泛分布于真核生物细胞核仁的小分子非编码 RNA，长度为 60～300 个核苷酸，主要参与 rRNA 和其他小 RNA 转录后的成熟加工过程。snoRNAs 主要分为 C /D box snoRNAs 和 H/ACA box snoRNAs 两类,C/D box snoRNAs 主要介导 rRNA 特定位点的 2’-O-甲基化,而 H /ACA box snoRNAs 主要介导 rRNA 特定位点的假尿苷化，二者均能与核糖核蛋白(RNPs) 结合形成稳定的、具有功能的 snoRNPs 复合体。近年来越来越多的证据表明 snoRNA 与肿瘤的发生、发展有关。此外，在肿瘤细胞中部分 snoRNAs 的异常表达以及可在血液中长期稳定存在的特征，也为其成为肿瘤诊断及其预后监测的生物标志物提供了可能。本研究旨在探索 SNORD84 是否可以作为诊断非小细胞肺癌的生物标志物。

研究方法 1.TCGA 数据库筛选差异表达的 SNORNA 基因。

2.数据库及 24 对 FFPE 样本验证 SNORNA 的差异表达。
3.分析 snoRNA 在血浆中的表达特点。
4.收集 107 例肺癌血浆及 110 例健康人血浆样本分离提纯游离 RNA 并通过 RT-PCR 验证 snoRNA 差异表达。
结果 1.SNORD84 在来自数据库配对癌组织与正常组织具有显著的差异表达(P<0.0001)。
2.数据库大样本及 FFPE 样本验证 SNORD84 在肺癌组织中的表达显著高于癌旁组织(P<0.0001)。
3.SNORD84 在血浆中稳定存在。
4.SNORD84 在 107 例肺癌血浆中表达显著高于在 110 例健康人血浆中的表达（P<0.05）。
结论 SNORD84 可作为非小细胞肺癌诊断的循环肿瘤标志物。

尿液中 miRNA 作为恶性肿瘤非侵入性诊断生物标志物的研究进展

吴亚婷[1,2]、李卓林[1,2]、贾如雪[1,2]、张胜行[1,2]、王水良[1,2]
1. 厦门大学附属东方医院福建省适配体技术重点实验室
2. 联勤保障部队第九〇〇医院检验科

全球每年约有 2 千万左右的恶性肿瘤新发病例，而因肿瘤致死的患者近 1 千万人；恶性肿瘤不仅严重危害着人类的健康，也极大地限制了群体的平均预期寿命。鉴于迄今为止，绝大部分中晚期恶性肿瘤患者的综合治疗效果仍然很局限，因此肿瘤的早期诊断对及时有效干预措施的采取以提高患者生存率和改善预后至关重要。肿瘤标志物作为一类与特定肿瘤发生、发展和转归密切相关的生物分子，可存在于患者组织、体液和排泄物，对其的特异检测在肿瘤的早期筛查以及患者治疗反应性的监测中发挥着重要的作用。MicroRNAs（miRNAs）是一类广泛存在且生物学功能多样的小分子非编码 RNAs；越来越多研究表明因遗传或表观遗传学改变所致的特定 miRNAs 的表达失调控在肿瘤恶性进展过程中起着重要的致癌和/或促癌作用。鉴于 miRNAs 可稳定存在血液、尿液、脑脊液或唾液等生物体液中，且与基于血液等液体活检相比，基于尿液的液体活检具有易于处理和无创取样等优势，因此尿液 miRNAs 作为潜在的新型肿瘤分子标志物的研究也吸引越来越多的关注。本综述就近年来尿液 miRNAs 在恶性肿瘤患者中作为非侵入性诊断生物标志物的研究进展作一总结，包括：miRNAs 作为肾细胞癌和膀胱癌等泌尿系统肿瘤、食管癌等消化系统肿瘤、乳腺癌等妇科肿瘤和中枢神经系统肿瘤的潜在生物标志物等方面；同时，对其未来可能的临床实际应用作了初步展望，并提出了一些亟待解决的问题以为未来的相关研究提供有益的启示。

PU-0392

Identification of differentially expressed mRNAs between breast cancer subtype tumor tissues by RNA-sequencing

Yanli Chen、Pengfei Liu、Chang Liu、Fei Xie、Xiaotao Zhao、Shu Wang
Peking University People's Hospital

Background We aim to investigate the different genes expression profiles between breast cancer subtypes. This is significant for deeper understanding of the biology, treatment and prognosis of breast cancer, especially in triple negative breast cancer (TNBC).
Methods Breast cancer tissue samples were obtained from 34 patients. Firstly, based on the ER, PR, Her2 status, the tumor samples were divided into 4 groups: luminal A subtype group, luminal B subtype group, HER-2 enriched subtype group and TNBC group. Then, to further explore the different gene expression profiles between TNBC and other breast cancer subtypes, the tumor samples were also divided into 2 groups: TNBC group and other breast cancer subtypes group.

To obtain differentially expressed mRNAs (DEmRNAs) between breast cancer subtype tumor tissues, RNA-sequencing and bioinformatics analysis were performed. Functional annotation of DEmRNAs were performed.
Results Comparing luminal A subtype and luminal B subtype, a total of 1126 DEmRNAs (325 up-regulated and 801 down-regulated) was obtained. Comparing luminal A subtype and HER-2 enriched subtype, a total of 89 DEmRNAs (6 up-regulated and 83 down-regulated) was obtained. Comparing luminal A subtype and TNBC, a total of 574 DEmRNAs (206 up-regulated and 368 down-regulated) was obtained. Comparing HER-2 enriched subtype and luminal B subtype, a total of 17 DEmRNAs (up-regulated) was obtained. Comparing luminal B subtype and TNBC, a total of 57 DEmRNAs (29 up-regulated and 28 down-regulated) was obtained. Comparing HER-2 enriched subtype and TNBC, a total of 20 DEmRNAs (19 up-regulated and 1 down-regulated) was obtained. Comparing other breast cancer subtypes and TNBC, a total of 273 DEmRNAs (172 up-regulated and 101 down-regulated) was obtained. Response to stimulus, immune system process, cell periphery and plasma membrane are significantly enriched GO terms between luminal A subtype and luminal B subtype tumor tissues. Cell cycle, cell cycle process, mitotic cell cycle and mitotic cell cycle process are significantly enriched GO terms between luminal A subtype and TNBC tumor tissues.Developmental process, anatomical structure development, tissue development and cell cycle are significantly enriched GO terms between other breast cancer subtype and TNBC tumor tissues. Mitophagy-animal, primary immunodeficiency, allograft rejection and asthma are significantly enriched KEGG pathways between luminal A subtype and luminal B subtype tumor tissues. Mitophagy-animal, cell cycle and autophagy-animal are significantly enriched KEGG pathways between luminal A subtype and TNBC tumor tissues. Glycosphingolipid biosynthesis-lacto and neolacto series is significantly enriched KEGG pathway between luminal B subtype and HER-2 enriched subtype tumor tissues. Nicotine addiction, mitophagy-animal, taste transduction and vitamin B6 metabolism are significantly enriched KEGG pathways between luminal B subtype and TNBC tumor tissues.Cell cycle, mitophagy-animal and autophagy-animal are significantly enriched KEGG pathways between TNBC and other subtype breast cancer tumor tissues.
Conclusion This research explore different gene expression profiles between breast cancer subtypes, which expected to present deeper understanding of the biology, treatment and prognosis of breast cancer, especially in TNBC.

PU-0393

Hsa_circ_0000437 enhances tumorigenesis and promotes lymphatic metastasis through exosomes via ERK signaling pathway in gastric cancer

Xianjuan Shen、Shan Kong、Shuo Ma、Lei Shen、Ming Zheng、Shaoqing Ju
Department of Laboratory Medicine, Affiliated Hospital of Nantong University

Background Circular RNAs (circRNAs) play a crucial regulatory role in the occurrence and development of cancer. Exosomes are essential for tumor growth, metastasis, and are used as novel signaling molecules in targeted therapies. Therefore, exosomal circRNAs can be used in new diagnostic and therapeutic approaches due to their involvement in the development of cancers. Exploring their roles and mechanisms of exosomal circRNAs in tumorigenesis and progression may help to identify new diagnostic markers and therapeutic targets. However, the detailed biological function, potential molecular mechanism and clinical application of exosomal circRNAs in gastric cancer (GC) remain unclear. In the present study, we investigated the role and regulatory mechanism of hsa_circ_0000437in gastric cancer (GC)
Methods circRNAs sequencing was performed to verify the significantly high expressed hsa_circ_0000437 in gastric cancer. Hsa_circ_0000437 levels in tissues, serum, cells and exosomes were analyzed using qRT-PCR assays. EdU, CCK-8, flow cytometry analysis, western

blotting and transwell were used to assess the role of hsa_circ_0000437 in cell proliferation, apoptosis, invasion and migration, respectively. The subcutaneous tumor model and popliteal LN metastasis model in nude mice were used to assess the role of hsa_circ_0000437 in vivo. ChIRP assays, parallel reaction monitoring (PRM) and western blotting were used to determine the direct binding of hsa_circ_0000437 to RNA binding protein (RBP) SRSF3. Exosomes were isolated by differential centrifugation and indentified by transmission electron microscopy (TEM) and Nano Sight NS 300 system. Fluorescent PKH67 labeled exosomes were utilized to determine the efficacy of the transfer of exosomal hsa_circ_0000437 between GC cells and recipient cells human lymphatic endothelial cells (HLECs). Tube formation assays was used to evaluate lymphangiogenesis and LN metastasis.

Results We previously performed circRNAs sequencing and verified the significantly high expressed hsa_circ_0000437 in gastric cancer that associated with lymph node metastasis. Mechanistically, hsa_circ_0000437 targets SRSF3 inhibiting PDCD4 to regulate proliferation, apoptosis, invasion and migration of GC cells. More importantly, hsa_circ_0000437 was characteristically enriched in and transferred by GC-secreted exosomes into HLECs to promote HLECs migration and tube formation in vitro, and facilitate lymphangiogenesis and LN metastasis in vivo according to both gain-of-function and loss-of-function experiments. Importantly, the exosomal hsa_circ_0000437 activated the ERK pathway in HLECs independent of VEGF-C. Finally, circulating exosomal hsa_circ_0000437 levels are closely associated with LN metastasis in GC patients.

Conclusions Our findings showed that hsa_circ_0000437 acted as a tumor oncogene in GC by forming a regulatory loop consisting of hsa_circ_0000437/SRSF3/PDCD4. GC-secreted exosomal hsa_circ_0000437 transfers into HLECs to promote lymphangiogenesis and lymphatic metastasis via ERK pathway and may be a potential GC prognosis biomarker, which can be used in precise targeted GC therapy.

Molecular biological correlation of allergic rhinitis and nasopharyngeal carcinoma

Xinying Qiu
Medical Laboratory of Shenzhen Luohu Hospital Group

Objective To obtain biomarkers of allergic rhinitis (AR) and Nasopharyngeal carcinoma (NPC) by performing bioinformatics analysis on gene chips related to allergic rhinitis in the Gene Expression Database (GEO).

Methods From June 2018 to December 2019, we downloaded data (GSE53819) involving 10 NPC patients from the publicallyavailable Gene Expression Omnibus database (http://biokb.ncpsb.org.cn/AlleRGatlas/index.), The test results of 10 patients with allergic rhinitis screened from the rhinitis database all met the requirement of ($P<0.05$)Then, we used the bioinformatics methods, including Gene Ontology (GO) analysis and Kyoto Encyclopedia of Gene, Genome (KEGG) pathway analysis and protein-protein interaction (PPI) network construction to identify key genes in AR and NPC. In the same period, the inferior turbinate mucosa tissues of 10 AR patients and 10 NPC patients controls were collected during operationinthe Department of Otolaryngology Head and Neck Surgery of Shenzhen Luohu Hospital to further verify important genes and pathways and perform real-time quantitative PCR. SPSS9.0 statistical software was used for statistical analysis .

Results A total of 36 differentially expressed genes (DEG) were selected, Among the 36 specific differential genes, four were closely related, namely SSTR1, CXCL8, CCR8, and CCL21. As can be seen from the list of enrichment analysis, inflammatory response、cytokine-cytokine receptor interaction、regulation of cytokine production，These three reactions are the most significant . Pathway and process enrichment analysis reflect which inflammatory response 、regulation of

cytokine production and regulation of cell adhesion， they all from GO Biological Processes. In the, NFKB1 、RELA 、STAT3 and JUN are significant. PPI networkand module analysis of Hub gene was carried out.KEGG pathway enrichment analysis was then performed for the DEGs in the four modules,The module 1 were significantly enriched in S.aureus infections.The module 2 were enriched in chemokine signaling pathways.viral protein interactions with cytokines. The DEGs in module 3 were mainly enriched in ubiquitin-mediated proteolysis. The DEGs in module 4 were enriched in Th1 and Th2 cell differentiation .The DEGs were inriched in chemokine signaling pathways.viral protein interactions with cytokine and cytokine receptors.Summary of enrichment analysis like Pathway and process enrichment analysis ,Th17 cell differentiation,primary immunodefiencicies,and T cell receptor signaling pathways. Both KEGG and GO analysis data were observed to be immune-related factors.

Conclusions a total of 36 genes closely related on the basis of AR and NPC was found in this study, these genes by PPI network and enrichment analysis. in addition to genetic factors, other factors should be considered, such as environment, diet, lifestyle, the immune factors and pathways through the relationship,It creates a better condition and platform for the study of the relationship between allergic rhinitis and nasopharyngeal carcinoma.To provide a better basis for clinical diagnosis and treatment.These genes are involved in the pathogenesis of AR and nasopharyngeal carcinoma, and are expected to become new AR biomarkers, paving the way for further exploration of the relationship between AR and nasopharyngeal carcinoma.

FOXC2 Attenuates LPS-Induced Cell Adhesion by Suppressing ICAM-1 Expression in HUVECs

Pan Li
Laboratory Medicine Center, Nanfang Hospital, Southern Medical University, Guangzhou, Guangdong, China.

Atherosclerosis is a chronic vascular inflammatory disease that involves diverse cell types and circulating regulatory factors, including intercellular adhesion molecule (ICAM)-1, a proinflammatory cytokine. Lipopolysaccharides (LPS) increase ICAM-1 expression and promote cell adhesion, but the mechanism is not clear. We found that LPS induced time- and dose-regulated upregulation of ICAM-1 expression and downregulation of forkhead box protein C2 (Foxc2) expression in human umbilical vein endothelial cells (HUVECs). Overexpression of Foxc2 significantly inhibited both LPS-induced ICAM-1 expression in HUVECs and LPS-induced adhesion of THP-1 cells to HUVECs. Foxc2 siRNA dramatically increased both LPS-induced ICAM-1 expression and LPS-induced adhesion of THP-1 human monocytes cells to HUVECs. We conclude that Foxc2 inhibited LPS-induced adhesion of THP-1 cells to HUVECs by suppressing ICAM-1 expression in HUVECs.

不同 HBV DNA 载量感染患者外周血肝纤维化指标差异分析

雷志萍、李彩东、田鹏飞、张旭强、陈俏丽
兰州市第二人民医院

目的 肝纤维化是一个动态、高度整合分子、细胞的过程，最终导致细胞外基质（Extracellular matrix, ECM）成分的过度积累。任何诱因引起的慢性肝病（Chronic liver disease, CLD）都有可能引起肝实质损伤和持续活动性炎症反应以及肝纤维化，HBV 感染是肝脏慢性炎症进展出现肝纤维化的主要原因之一。本文旨在探讨不同 HBV DNA 载量的慢乙肝（CHB）和肝硬化(LC)患者外周血肝纤维指标的差异。

方法 将我院就诊的 CHB 患者 60 例（男 50 例女 10 例）和 LC 患者 60 例（男 43 例女 17 例）纳入队列，PCR 方法检测 HBV DNA 载量、化学发光法检测肝纤维化透明质酸（HA）、层粘连蛋白（LN）、III 型前胶原（PCIII）、IV 型胶原（IV-C）水平，Mann-Whitney *U* 检验分析各组指标的整体差异。

结果 CHB 组和 LC 组患者整体的 HBV DNA 载量、HA 水平存在显著组间差异（*Z*=-4.35,*P*=0.000;*Z*=-4.56,*P*=0.000）、LN、PCIII 和 IV-C 水平差异无统计学意义（*P*>0.05）。HBV DNA 载量<1.00E+04 IU/mL 时，两组患者肝纤维化指标没有显著组间差异（*P*>0.05）。HBV DNA 载量 1.00E+05<1.00E+07 IU/mL 及≥1.00E+07IU/mL 时，CHB 组和 LC 组 HA 水平差异具有统计学意义（*Z*=-3.21, *P*=0.001；*Z*=-2.82,*P*=0.005）；其余指标组间差异不存在统计学意义（*P*>0.05）。CHB 组患者 HBV DNA 载量不同时，肝纤维化指标不存在显著差异（*P*>0.05），HBV DNA>1.00E+07 IU/mL 较<1.00E+04 IU/mL 的 LC 患者 PCIII 水平显著升高，差异具有统计学意义（*Z*=-2.83,*P*=0.005）；HBV DNA≥1.00E+07 IU/mL 较 HBV DNA 水平 1.00E+05<1.00E+07 IU/mL 的 LC 患者 LN 水平显著升高，差异具有统计学意义（*Z*=-2.12,*P*=0.034）。

结论 CHB 患者与 LC 患者及不同 HBV DNA 载量的 LC 患者肝纤维化指标存在一定差异，提示 HBV DNA 载量可一定程度上反应 LC 患者肝纤维化的可能。

HIV 分子传播网络指导的 MSM 传播风险模型的建立与评估

王真
中国医科大学附属第一医院

目的 2019 年底，我国关于 AIDS 防治“三个 90%”数据依次为：75.7%，89.7%，95.3%，监测数据显示，男男性行为人群中每 100 人中约有 8 人感染艾滋病病毒，重点人群的防治形势仍然严峻。传统流行病学分析存在问题，如隐私泄漏、歧视导致社会期望偏移、无法反映感染者本身的异质性等。分子网络分析是近年来兴起的分子流行病学分析方法，可根据患者携带 HIV 毒株的基因相似性推定毒株在人群间的传播。以往分子网络分析的研究主要是对 B 亚型毒株，我国 HIV 流行毒株复杂，开展分子网络研究更具挑战性，处于分子传播网络中人群的流行病学特点不明确。本研究将分子传播网络分析与流行病学因素相结合，建模型了解 HIV 传播风相关险因素，为控制 HIV 传播提供靶向干预。

方法 1、序列获取：收集 2016-2018 年沈阳市新诊断 HIV 感染者治疗前的血浆样本及基线信息。从血浆中提取出病毒 RNA，巢式 PCR 进行 HIV-1 pol 区基因片段扩增。

2、分子传播网络风险评价：敏感性分析获得 CRF01_AE 与 CRF07_BC 亚型与 B 亚型的基因距离阈值。应用 HIV-TRACE 构建三种主要流行毒株的分子传播网络，计算网络内个体链接数评价传播风险。

3、模型的建立与评估：回归分析建模，评价标准为 H-L 检验、C-statistic、AUC、诊断比值比、内部验证等。

结果 1、2016-2018 年沈阳市主要流行株及分子网络

沈阳市主要流行毒株为 CRF01_AE、CRF07_BC、B 亚型。CRF01_AE 与 CRF07_BC 最佳基因距离阈值为 0.007 替代/位点，B 亚型为 0.013 替代/位点。风险人群判断阈值为个体链接数的第三四分位数（link=2）。

2、建模对象特征

385 例调查问卷中，其中 85.2%（328/385）为 MSM，本研究对 MSM 进行分析建模，经回归分析，风险因素为：有男性偶遇/商业性伴、CD4+T 细胞计数≥350 个/ml、确诊前 HIV 检测次数≥5、不了解性伴感染状态。

3、模型的评价与验证

H-L 检验的卡方值为 4.6；AUC 为 0.763；变量重抽样 Bootstrap 样本中出现的频率均大于 50%。

结论 1、沈阳市的主要 HIV 流行株为 CRF01_AE、CRF07_BC、B 亚型，CRF01_AE 与 CRF07_BC 毒株分子传播网络的最适基因距离阈值与 B 亚型不同。
2、传播风险预测模型包含的风险因素有：有男性偶遇/商业性伴、CD4+T 淋巴细胞计数≥350 个/ml、确诊前 HIV 检测次数≥5、不了解性伴感染状态。
3、基于 HIV 分子传播网络的 MSM 人群 HIV 传播风险预测模型具有较好的预测能力。

PU-0398

基于液相色谱-质谱联用平台（LC-MS）对褪黑素与β淀粉样蛋白（Aβ）亲和力的测定

代雅倩
安徽医科大学

通过对基于液相色谱-质谱联用平台的受体结合分析方法（MS binding assays, MSBA）进行优化，对褪黑素与 β-淀粉样蛋白(Aβ)聚集体的亲和力进行测定。针对褪黑素（melatonin）、氘代同位素（褪黑素-D4，melatonin-D4）以及内标 6-碘-2-（4'-二甲基氨基-）苯基-咪唑并[1,2]吡啶（IMPY）建立液相色谱-质谱（LC-MS）联用方法和定量方法，随后进行基于质谱的饱和结合实验。成功建立了褪黑素的 LC-MS 方法及基于质谱的受体结合测定方法。实验表明褪黑素可与 Aβ 1-40 及 Aβ 1-42 特异性结合，其 Kd 值分别为（814.37±36.62）及（628.33±13.57）nmol/L。

miR-370-3p 靶向调控 FBLN5 在乳腺癌中的作用机制及临床诊断研究

王凌霞、杨欢
苏州大学附属第二医院

目的 乳腺癌作为女性最常见恶性肿瘤，其传统肿瘤标志物诊断效能较低，且病理诊断具有创伤性，诊断周期长，因而需找到一种新型非侵入性诊断标志物。本文旨在探讨 miR-370-3p 在乳腺癌中的生物学作用及分子机制并探讨其作为乳腺癌诊断标志物的可行性及临床应用价值。
方法（1）构建高、低表达 miR-370-3p 的乳腺癌细胞，体外采用克隆形成及 transwell 迁移实验检测增殖转移作用，Western blot 测定增殖转移相关蛋白表达水平；体内构建裸鼠皮下成瘤模型，检测形成肿块体积及重量。
（2）TargetScan 和 PicTar 预测并用双荧光素酶报告基因实验验证靶基因；Western blot 测定靶基因及信号通路蛋白的表达。
（3）试剂盒提取血清 exosome 并鉴定。定量 PCR 检测乳腺癌组织，血清以及血清外泌体中 miR-370-3p 表达量。ROC 曲线分析诊断效能。结合临床病理资料评价 miR-370-3p 在乳腺癌诊断中的价值及临床意义。
结果（1）miR-370-3p 高表达细胞迁移及克隆数显著增加，E-cadherin 表达量明显降低，N-cadherin, Vimentin, PCNA 表达量明显增加；反之结果相反。
（3）miR-370-3p 高表达细胞体内形成肿瘤体积、重量大于对照组，反之结果相反。
（4）miR-370-3p 靶向负调控 FBLN5 且促进 NF-κB P65 表达。
（5）miR-370-3p 在乳腺癌组织，血清及 exosome 表达量显著增加。血清中的 miR-370-3p 与淋巴结的转移程度，TNM 分期成正相关；exosome 中 miR-370-3p 与肿瘤直径大小，淋巴结的转移程度，TNM 分期成正相关。
结论（1）miR-370-3p 促进乳腺癌增殖与转移。

（2）miR-370-3p 靶向负调控 FBLN5, 活化 NF-κB 信号通路。
（3）miR-370-3p 是乳腺癌诊断的潜在新型非创伤性分子标志物，具有重要的临床应用价值。

6620 例 HPV 感染特征及高危分型分析

岳帆、侯向萍、咸敏、魏策
新疆生产建设兵团第一师阿拉尔医院

目的 通过对阿拉尔片区 35-60 周岁已婚健康妇女进行人乳头瘤病毒筛查，了解其感染状况，得出本地区妇女宫颈 HPV 感染情况及亚型分布情况，为本地区宫颈癌的防治研究提供一定的依据。
方法 采用 PCR-反向点杂交法对符合要求的 6620 名妇女进行 HPV 核酸检测及基因分型，对所得数据统计、分析，同时，并对高危型ＨＰＶ感染阳性人群进行液基薄层细胞学（ＴＣＴ）检查。
结果 在受检的 6620 名妇女中，共检出 HPV 阳性感染 969 人，感染率为 14.64%。其中高危型阳性 688 人，感染率为 10.4%；低危型阳性 155 人，感染率为 2.34%；合并型感染 126 人，感染率为 1.9%。1、在高危型感染人群中，本地区 HPV 亚型感染排在前 3 位依次为ＨＰＶ５２（19％，131／688），ＨＰＶ１６（15.98％，110／688），ＨＰＶ５８（10.17％，70／688）；在低危型感染人群中，以 HPV54(25.1%，39/155)，HPV61(18.7%,29/155)最为常见； 混合感染中以二重感染及三重感染最为常见（83.3%，105/126）， 其中 HPV52 易与 HPV16，HPV58，HPV61 发生合并感染，HPV16 型混合感染常见的基因型依次有 HPV31，HPV58，HPV51。2、受检的 6620 名妇女中维吾尔族共计 638 名，检出 HPV 阳性感染 90 人，其高危型 HPV 亚型感染以 HPV16（40%，36/90）最为常见。3、对 HPV 高危型感染者进行液基薄层细胞学（ＴＣＴ）检查，发现合并感染高危型ＨＰＶ人群宫颈上皮内瘤变发生率为 15％-20%。
结论 阿拉尔片区女性 HPV 感染高危亚型主要以 HPV52,HPV16,HPV58 为主,感染率在 45.20%(311/688)，少数民族与汉族亚型分布有一定的差异，且高危型 HPV 感染和合并感染是诱发宫颈癌的重要危险因素。运用 TCT 联合 HPV DNA PCR 检测可提高宫颈癌及癌前病变的检测效果,实现疾病准确诊断,还可帮助临床实现早诊早治的目标,保证患者的治疗效果,延长生存周期。调查显示性生活过早、性生活频率高、宫颈糜烂程度大、吸烟、缺乏免疫力等是女性人乳头瘤病毒感染危险因素。合理制定有效干预措施,大力宣传人乳头瘤病毒和疫苗的健康宣传教育工作是降低女性人乳头瘤病毒感染关键。

PU-0401

基于铁死亡相关 lncRNA 分析的皮肤黑色素瘤预后标志物的研究进展

王楠
山东第一医科大学
山东大学第二医院

目的 近年来，铁死亡作为一种潜在的癌症治疗途径受到了广泛关注。各种研究已经确定了铁死亡在杀死肿瘤细胞和抑制肿瘤生长方面的关键作用。以往的一些研究也证实了铁死亡在胃癌、头颈癌、肝癌和肺癌等治疗和预后的重要意义。皮肤黑色素瘤(Skin cutaneous melanoma, SKCM)是皮肤癌中最恶性的肿瘤类型，在疾病的早期有很强的转移倾向。因此，早期发现是很重要的，并且找到一个早期的预后指标将有助于提高 SKCM 患者的生存率。因此本文探讨 l 铁死亡相关基因与皮肤黑色素瘤(SKCM)预后的关系。
方法 从癌症基因组图谱(TCGA)数据库(https：//portal.gdc.ancer.gov/)获得皮肤黑色素瘤的 RNA 序列(RNA-seq)数据。纳入标准如下：(1)患者被诊断为皮肤黑色素瘤；(2)患者有完整的 lncRNA 数据

和临床资料。根据纳入标准，纳入 470 例皮肤黑色素瘤患者。利用 lncRNAs 和铁死亡相关基因的共表达网络筛选铁死亡相关的 lncRNAs。用单变量 Cox 回归分析铁死亡相关 lncRNAs 的预后价值。将单变量分析中 P<0.05 的铁死亡相关 lncRNA 纳入 Lasso 回归。然后，将 Lasso 的结果纳入多变量 Cox 模型，以建立风险评分。采用 Cox 回归建立独立的预后模型。并绘制 K-M 生存曲线。使用“time ROC”绘制 1 年、4 年和 7 年受试者工作特征曲线（receiver operating characteristic ,ROC)曲线，同时计算 ROC 曲线下面积（area under curve,AUC）,以确认风险评分是否为预后的独立指标。用 Cox 回归和 Lasso 回归估计铁死亡相关的 lncRNA 信号和临床病理数据对预后的影响。
结果 在纳入的 378 例皮肤黑色素瘤样本中，基于 Cox ＆ LASSO 回归算法，预测和构建了 9 个铁死亡相关的(AC009495.1、AC068152.1、EBLN3P、AC009318.2、AC107294.2、SPRY4-AS1、HCP5、AL162171.1 和 USP30-AS1)，并将皮肤黑色素瘤患者分为低风险组和高风险组。基于风险评分是皮肤黑色素瘤患者的显著独立因素(HR=1.333,95% CI=1.213-1.465,P<0.001)。
结论 本研究确定了 9 个与铁死亡相关的 lncRNA 及其标志物可能是皮肤黑色素瘤患者的分子生物学标志物和治疗靶点。

PU-0402

HPV23 分型检测与宫颈病变的相关性分析

程世亮
山东省立第三医院

目的 探讨 HPV23 分型检测与宫颈病变的相关性及临床意义。
方法 选取 2019-2021 年 年在山东省立第三医院妇产科和体检中心就诊患者 1860 例作为研究对象,采集患者宫颈细胞进行 HPV 基因检测并实施宫颈病理活检,组织切片取样行病理学检查,比较 HPV 基因亚型与病理诊断结果并进行相关性分析。
结果 1860 例患者中,正常或炎症宫颈 1616 例,宫颈上皮内瘤变(CIN) Ⅰ 级 58 例, CINⅡ 级 36 例, CINⅢ 级 88 例,宫颈癌 62 例。HPV 阳性检出率随宫颈病变程度不断加重而升高,差异均有统计学意义(P <0.05)。伴随病情不断发展,HPV16 型在不同宫颈病变中的阳性检出率逐渐升高,在宫颈癌患者中同样也是 HPV16 型阳性检出优势明显,为 77.4% (48 / 62)。 HPV 多重感染在不同宫颈病变中的检出情况:正常及炎症 11.3% , CINⅠ 级 17.2% ,CINⅡ 级 27.8% , CINⅢ 级 29.5% ,宫颈癌 9.7% ;宫颈癌中 HPV 多重感染占比明显更少,更多的是单一 HPV 基因型感染,且感染类型全部为高危型。
结论 随着宫颈病变程度不断加重, HPV 阳性检出率随之逐渐升高;宫颈癌中 HPV 基因亚型主要包括: HPV16 、 33 、 52 型。

Molecular network analysis based on baseline HIV pol sequences revealed the transmission of drug-resistant strains in a moderate HIV prevalence Chinese city

Bin Zhao [1]、Wei Song[2]、Wen Tian[1]、mingming Kang[3]、Xue Dong[2]、Xin Li[2]、Lu Wang[2]、Jianmin Liu[2]、Lin Wang[1]、Haibo Ding[1]、Xiaoxu Han[1]、Hong Shang[1]
1. NHC Key Laboratory of AIDS Immunology (China Medical University), National Clinical Research Center for Laboratory Medicine, The First Affiliated Hospital of China Medical University
2. Department of Food Safety and Nutrition, Shenyang Center for Health Service and Administrative Law Enforcement (Shenyang Center for Disease Control and Prevention), Shenyang, 110031, China
3. National Clinical Research Center for Laboratory Medicine, The First Affiliated Hospital of China Medical University

Background Timely collection and molecular network analysis based on HIV pol sequence from all newly diagnosed HIV infections are helpful to obtain the information of transmitted drug resistance (TDR) transmission to guide targeted intervention and ultimately end TDR transmission.
Methods Demographic information (n=2,577) and HIV-positive cryopreserved plasma (n=2,408) from all newly diagnosed HIV infected individuals (n=2,577)of Shenyang from 2016 to 2018 were collected. HIV pol gene was amplified and sequenced. HIV-1 Limiting Antigen Avidity was performed to identify recent HIV infections (RHI). HIV-1 TDR was determined based on Genotypic Resistance Interpretation Algorithm (HIVdb version 9.0). HIV molecular network was inferred by using HIV-TRACE.
Findings A total of 2,173 sequences (90.2%, 2,173/2,408) were acquired. The prevalence of TDR among RHI (8.7%, 65/751) was similar to that among all newly diagnosed HIV-infected individuals (8.4%, 182/2,173) and reached a moderate level (5-15%). The top 5 SDRMs were Q58E(1.9%, 42/2,173), M46I/L (1.2%, 25/2,173)， K103N/S (0.9%, 20/2,173), K103R/V179D (0.5%, 10/2,173), and K65R(0.4%, 8/2,173). HIV molecular network analysis results revealed one CRF07_BC cluster with K103N (66.7%, 8/12), two CRF07_BC clusters with Q58E (100%, 21/21; 100%, 3/3), two CRF01_AE clusters with A98G (100%, 3/3) and K103R/V179D (100%, 3/3), respectively. All of them happened in the men who have sex with men (100%).
Conclusion Our findings demonstrated that HIV molecular network monitoring based on baseline HIVDR testing for all newly diagnosed HIV infections, especially RHI was essential for the precisely targeted intervention for the transmission of TDR.

大动脉炎的遗传因素

晏颂欣
中国医学科学院北京协和医院

大动脉炎（TAK）是一种罕见的系统性血管炎，其特征在于主动脉及其主要分支的肉芽肿性炎症。参与 TAK 发病机制的细胞和生理生化过程开始被逐步了解，并发现细胞和抗体介导的自身免疫机制参与其中。此外，TAK 的潜在病因可以至少部分地通过复杂的遗传因素来解释。该疾病最广为人知的遗传易感基因位点是经典的 HLA 等位基因 HLA-B * 52，已在多个种族中得到证实。在 HLA-B * 52 以及其他经典等位基因和基因座的遗传易感性暗示 HLA I 类和 II 类可能参与 TAK 的发病机制。此外，与编码免疫应答调节因子，促炎细胞因子和体液免疫介质的有关的基因遗传关联可能与疾病机制直接相关。

PU-0405

全外显子组测序鉴定特发性炎症性肌病的罕见变异

晏颂欣
中国医学科学院北京协和医院

目的 特发性炎症性肌病（IIMs）是一组获得性、异质性、全身性疾病，主要累及骨骼肌。本研究旨在利用全外显子组测序（WES）技术研究汉族人 IIMs 中的罕见变异。
方法 对 20 例 IIMs 患者和 20 例汉族健康对照者进行 WES。为病例和对照组生成 WES 数据。变异通过质量、次要等位基因频率和对基因功能的有害性进行注释和筛选。与健康对照组以及中国国家基因库的对照组相比，在患者中确定了候选突变。为了验证，多重聚合酶链反应在另一个独立的队列中进行。
结果 在发现阶段，发现了 7 个在 IIMs 中具有预测蛋白损伤作用的罕见突变，分别存在于 FCRL1、DMBT1、DDX58、DYSF、IL31RA、JAK2、PMS2。随后对这些突变位点进行多重 PCR。DDX58 中的一个新突变（chr9:32487565 T>C）被证实与 IIMs 相关。
结论 本研究结果有助于从全外显子组水平检测和分析 IIMs 的基因突变，为理解 IIMs 的发病机制提供新的思路。

IgG4 相关疾病基因组学研究进展

晏颂欣
中国医学科学院北京协和医院

IgG4 相关疾病（IgG4-RD）是一种免疫介导的纤维炎性疾病，其特征在于受累组织中以 IgG4+浆细胞为主的致密淋巴浆细胞性浸润，常伴有一定程度的纤维化、闭塞性静脉炎和嗜酸性粒细胞增多，约 2/3 的患者伴有血清 IgG4 水平升高。尽管尚不清楚 IgG4-RD 发病机理的确切机制，但一些研究表明遗传因素与 IgG4-RD 的发病具有一定的联系。在本篇综述中，我们将总结相关的研究，分析 IgG4-RD 在基因水平中的研究进展，加深对 IgG4-RD 的认知，期望能为下一步的研究开拓新的思路。

PU-0407

Prognostic role of long non-coding RNA XIST expression in patients with solid tumors: a meta-analysis

毛慧慧
山东大学第二医院

Background The aberrant expression of long non-coding RNA (lncRNA) X inactivate-specific transcript (XIST) has been demonstrated to be involved in the tumourigenesis and the development of various cancers. Therefore, we conducted a meta-analysis to assess the prognostic role of lncRNA XIST expression in solid tumors.
Methods The databases of PubMed, EMBase, Web of Science, Cochrane library (up to Dec 31, 2017) were searched for the related studies and identified 15 eligible studies containing 1,209 patients to include in the meta-analysis. Hazards ratios (HRs) with corresponding 95% confdence intervals (CIs) were pooled to estimate the association between lncRNA XIST expression and survival of cancer patients from Asian.

PU-0408

The mechanism and regularity of quenching the effect of bases on fluorophores: the base- quenched probe method

毛慧慧
山东大学第二医院

目的 阐明碱基导致荧光猝灭的机制及规律。
方法 应用光谱技术研究荧光猝灭的可能机制；应用碱基猝灭探针技术，分析 DNA 分子内核酸碱基与荧光基团之间的电子转移和电子传输规律。
结果 碱基导致荧光猝灭的机制倾向于光诱导电子转移。在单链 DNA 中，荧光基团的电子转移到胸腺嘧啶（Thymine，T）和胞嘧啶（Cytosine，C）的轨道或来自鸟嘌呤（Guanine，G）和腺嘌呤（Adenine，A）的电子占据荧光基团的电子轨道，导致荧光基团的电子不能恢复到基态，从而导致荧光猝灭；在双链 DNA 中，荧光基团的电子在光激发的作用下沿着 DNA 链传输，无法恢复到基态，导致荧光猝灭。此外，研究显示碱基的猝灭效率依次为 G>C≥A≥T；在双链 DNA 中，碱基对的电子传输能力依次为 CG≥GC>TA≥AT（粗体和下划线标识的字母代表探针的互补链上的碱基）；最常见的荧光基团包括 FAM，HEX，TET，JOE 和 TAMRA 均受碱基的影响并且符合以上规律。
结论 在 DNA 分子内，碱基与荧光基团之间的电子转移和传输导致荧光猝灭。

报道一例 4 号染色体父源 UPD 合并 SLC4A4 基因缺陷导致近端肾小管酸中毒

刘晴晴[1]、喻长顺[2,4]、王文红[3]
1. 天津金域医学检验实验室有限公司
2. 广州医科大学金域检验学院
3. 天津市儿童医院肾脏科
4. 天津金域医学检验实验室有限公司

近端肾小管酸中毒是一种遗传性或获得性临床综合征，其表现为近端肾小管碳酸氢盐回收减少，导致正常阴离子间隙高氯代谢性酸中毒。SLC4A4 变异可引起近端肾小管酸中毒伴眼部异常，是一种常染色体隐性遗传病，主要表现为重度低钾血症、高氯血症、代谢性酸中毒、生长迟滞和眼部异常（包括青光眼、白内障和带状角膜病变）；部分可伴有恒牙釉质发育缺陷、精神运动性功能和认知功能受损及基底节钙化。UPD（单亲二倍体）是指在一个正常染色体的个体中，一个染色体区域的两个拷贝仅来自于父母一方，其发病率较低，但可继发隐性基因纯合变异或基因印迹障碍，从而导致各种各样的临床表型。UPD 可分为 hUPD 和 iUPD。从一个亲本遗传一对同源染色体（即同源染色体来自同一个亲本的两条同源染色体）是异源单亲二体（hUPD），反之仅遗传同源染色体中的一条染色体（即同源染色体来自于同一个亲本的同一条染色体）是同源单亲二体（iUPD），同源单亲二体比异源单亲二体更易发生常染色体隐性遗传病。本文描述了一名 4 岁的患儿，临床表现为难以纠正的代谢性酸中毒，高氯低钾血症，语言发育落后，眼部异常以及牙齿釉质发育不全等。临床症状符合肾小管酸中毒表现，因此对该患儿行全外显子组测序，发现 SLC4A4 基因 c.496C>T 纯合变异，并且发现 4 号染色体为单亲二倍体，结合 4 号染色体多个 SNP 位点的分型结果可知，系 iUPD(4)pat（父源性均质性单亲二倍体）。针对父母样本进行 Sanger 测序发现，父亲携带 SLC4A4 基因 c.496C>T 杂合变异，而母亲未携带此变异。SLC4A4 基因的纯合变异可以解释该病例的主要表型。综上，本文首次报道了 4 号染色体父源性均质型 UPD 合并 SLC4A4 基因纯合致病变异导致近端肾小管酸中毒。

Coloring Target and Off-target Effects of Genetically Modified Nucleases by Blue & White Colony Assays

Jing Jiang
huazhong university of sicence and technology union shenzhen hospital

More sensitive evaluation of the off-target effects of gene editing nucleases is crucial for human gene therapy. Here we report chromogenic assays designed for sensitive evaluation of gene editing activities using CRISPR/cas9 test system. Based on beta-galactosidase alpha complementation, qualitative and quantitative evaluations of the target and off-target effects of CRISPR/cas9 were well established through the color alteration of the E. coli colonies. In addition to target effect analysis, these new assays provide extremely sensitive and efficient way to profile the off-target effects with one or more bases mismatched between the targets and the gRNAs. Moreover, these assays allow the identification of gene editing effects for off-targets with one base mismatched PAM sites.

In situ spatiotemporal microRNA (miRNA) imaging in mammal cells plays an essential role in illustrating its structures and biological functions. Herein, we proposed a near infrared (NIR) light-activated nanoprobe for high-sensitive in situ controllable miRNA imaging in living cells. The NIR-activated nanoprobe employed an upconversion nanoparticle that acted as a NIR-to-UV transducer to trigger the following photocleavage toward a dumbbell DNA probe tethered on the surface of the nanoparticle. The structure change of the dumbbell probe then induced a catalytic hairpin assembly of target miRNAs, by which in situ readout of the amplified fluorescence signal was enabled. Additionally, both intracellular miRNA imaging and accurate quantification in live cells were realized without damaging the cell membranes. Compared with conventional in situ strategies, the proposed approach remarkedly increases imaging efficiency by eliminating those unfavored intercellular molecular imaging backgrounds.

Detection of simultaneous multi-mutations using base-quenched probe

毛慧慧
山东大学第二医院

The base-quenched probe method for detecting single nucleotide polymorphisms (SNPs) relies on real-time PCR and melting-curve approaches. Here, we applied the most common commercial fluorophores including FAM, HEX, CY5, CY3, TET, JOE, Texas Red and ROX for labeling probes to detect multi-mutations simultaneously according to the different fluorescence channels. Accuracy of the method was confirmed by direct sequencing.The results demonstrated that all above dyes could be influenced by bases and could be applied to detect

SNPs.Furthermore, this method was applied to detect APOM rs707921, APOM rs707922 and MCP-1 rs1024611 simultaneously, which was demonstrated successfully.

PU-0413

Down-regulation of lncRNA OGFRP1 inhibits NSCLC progression through PI3K/AKT pathway

Liping Jing、Xuewei Zhuang
Shandong Provincial Third Hospital

In the past decade, long noncoding RNAs (lncRNAs) displayed important roles in the progression of human cancer. However, function annotations for lncRNAs were still insufficient due to low expression level and tissue specificity. Here we evaluated the function of lncRNA OGFRP1 in non-small-cell lung cancer (NSCLC). We screened the most effectivesi-lncRNA (si-OGFRP1)todown-regulate the expression of lncRNA OGFRP1 in A549 cells. CCK8 assay indicated thatsi-OGFRP1 significantly inhibited cell proliferation in A549. Flow cytometry detection demonstrated that si-OGFRP1inhibited cell cycle arrest and induced apoptosis in A549. Apoptosis associated gene expression was found down-regulated by western blotting assay. Transwell assay indicated that si-OGFRP1 inhibited A549 cell migration and invasion. Then we examined the expression of key proteins in PI3k/AKT pathway. Results revealed that the expression of p-AKT, Raf, p-Erk, P70, CyclinD1 was down-regulated and P53 expression was elevated. Taken together, we demonstrated that down-regulation of lncRNA OGFRP1 inhibited the progression of NSCLC by repressing PI3K-AKT signaling pathway.

UGT2A3 差异表达在结直肠癌发生和早期诊断中的作用机制

李宏峰、赵俊芳、陈雪雯、宋林、部楠
天津市中医药研究院

背景 结直肠癌（CRC）是消化道最常见的恶性肿瘤之一，早期筛查是预防 CRC 的有效手段之一。本研究的目的是研究 UGT2A3 差异表达在在结直肠癌发生中的作用及调控机制。
方法 在 GEO 数据库下载了 8 个 CRC 数据集，并在 TCGA 中下载结直肠癌数据。采用 R 语言分析 UGT2A3 在癌组织和癌旁组织中的差异表达情况。在 TCGA 中根据 UGT2A3 的表达水平，在所有样本、正常组织、癌组织样本中分别选取表达最高和最低的前 20 例样本，比较免疫细胞丰度和免疫富集评分，并筛选差异表达基因和差异表达 miRNA，并进行差异表达基因的通路富集分析。
结果 UGT2A3 在所有 9 个数据集的癌组织中均明显下调。在各样本类型中，与高表达组相比，低表达组的 ImmuneScore、ESTIMATEScore 和 StromalScore 明显较高，且免疫细胞丰度较高（记忆 B 细胞除外）。在正常组织中，UGT2A3 的差异表达主要影响癌症相关通路，而在肿瘤组织中主要影响了代谢途径。miR-194-2、miR-224 和 miR-551b 在所有分组中均显著差异表达，被认为是 CRC 中潜在的 UGT2A3 上游调控基因。
结论 UGT2A3 以及 miR-194-2、miR-224 和 miR-551b 可以作为 CRC 潜在的诊断生物标志物。

PU-0415

Promoter Hypomethylation and Increased Expression of Syncytin-1 in Non-small Cell Lung Cancer

Liping Jing、xuewei zhuang
Shandong Provincial Third Hospital

Purpose In this study, fluctuation of syncytin-1 expression in non-small cell lung cancer (NSCLC) and relative para-cancerous tissues during its prognosis as a plausible pathological mechanism of NSCLC is discussed by statistical analysis of syncytin-1 gene methylation and expression levels.
Methods Syncytin-1 expressions in NSCLC and its relative para-cancerous tissues were verified by immunohistochemistry method. Differentiation of between 5-year survival and death group was analyzed. Survival ratio was calculated by Kaplan-Meier survival curve. Death risk assessment was executed by Cox risk regression model. 5-LTR methylation level of syncytin-1 promoter was detected by EpiTYPER method.
Results Syncytin-1 expression in NSCLC tissue is higher rather than para-cancerous tissues in significant differences with $P<0.01$ and in 5-year survival group is lower than death in significant difference with $P<0.01$ respectively. Based on the average survival period of higher syncytin-1 expression group is significantly lower than the lower one with $P<0.01$, clinical stage and syncytin-1 positive ratio were considered as top risk factors according to Cox ratio risk regression model analysis. The total methylation ratio of NSCLC tissues is lower than para-carcinoma tissues with no significant difference but the CpG-2 site methylation ratio of NSCLC tissue is lower than para-carcinoma tissues in significant difference with $P<0.05$.
Conclusions The low expression level of syncytin-1 is qualified to be an important prognosis standard. Hypomethylation of the syncytin-1 promoter region in non-small cell lung cancer promotes the expression of its gene.

集成式微流控芯片 PCR 阵列用于快速检测多重呼吸道感染病原

刘大渔
广州市第一人民医院

目的 发展一种集成式微流控芯片 PCR 阵列系统，用于资源有限环境下的多重呼吸道感染病原快速检测。
方法 研究设计并加工了一种包含仪器与微流控芯片的 PCR 阵列系统，集成了样本裂解、核酸提取/纯化、扩增/检测功能。微流控芯片通过六个隔膜阀控制流体通路的开放与闭合，以确保流体在芯片内程序性地流动，因而顺序完成一系列分析步骤。核酸 PCR 扩增在预装载引物和探针的 32 阵列微反应室中完成，可同时检测 21 种呼吸道感染病原及内质控（RNase P 基因）。扩增荧光信号被仪器实时采集，依据 Ct 值判定检测结果。研究通过标准样品分析确定了芯片法的检出限、重现性以及特异性，并通过批量临床样本检测对该芯片系统的临床应用价值进行了考察。
结果 该微流控芯片系统能够以全集成方式在 1.5 小时内完成多重呼吸道病原检测。研究通过检测系列稀释阳性对照品确认了芯片法的检出限，基于 Probit 回归分析（$P > 0.05$）计算出各靶标的检出限均在 1.0×103 copies•mL-1 水平。对各靶标的阳性对照品进行重复检测，实验结果显示芯片法对各病原体检测的 Ct 值批间相对标准偏差为 0.08%-0.69%，批内相对标准偏差为 0.9%-2.66%。对多种病原体混合的阳性参考品进行分析，结果显示各病原体之间无交叉影响，芯片法的检测特异性为 100%。批量临床样本检测结果显示芯片法与传统的实时荧光 PCR 法具有一致性。
结论 研究发展的微流控芯片多重呼吸道感染病原体检测方法具有操作简便、通量适宜和分析快速的特点和优势，是资源有限环境下实现病原体快速检测的有力工具。

湖南地区血脂异常患者 APOE 和 SLCO1B1 基因多态性及其与血脂水平的相关性研究

龙璐、易斌
中南大学湘雅医院

目的 分析湖南地区血脂异常人群 ApoE 和 SLCO1B1 基因的多态性及其对血脂水平的影响，并探究 ApoE 和 SLCO1B1 基因与各项血脂指标的相关性。
方法 收集湘雅医院 2020 年 1 月至 2021 年 2 月期间收治的 514 例血脂异常人群的总胆固醇（triglyceride, TC）、甘油三酯（total cholesterol, TG）、低密度脂蛋白胆固醇（low density lipoprotein cholesterol, LDL-C）和高密度脂蛋白胆固醇（high density lipoprotein cholesterol, HDL-C）等数据，将其作为实验组，同时选取 592 名健康体检者作为对照组，采用 PCR 荧光探针法检测实验组和对照组的 ApoE 和 SLCO1B1 基因型，分析 ApoE 和 SLCO1B1 基因的多态性和血脂水平的相关性，比较不同基因型的受试者各项血脂指标的差异。
结果 （1）ApoE 基因多态性分布：实验组 E2、E3 和 E4 基因表型频率分别为 15.18%、66.16%和 18.68%，对照组分别为 16.39%、68.07%和 15.54%，E3 表型频率均为两组最高，E3 表型的 E3/E3 基因型均为两组内最高，其频率分别为 64.20%和 66.72%，组间差异不显著（P＞0.05）。（2）SLCO1B1 基因多态性分布：实验组正常代谢型、中间代谢型和弱代谢型的频率分别为 78.79%、20.43%、0.78%，对照组分别为 79.05%、19.93%和 1.01%，正常代谢型频率均为两组最高，弱代谢型均为两组最低，正常代谢型的*1b/*1b 基因型均为两组最高，其频率分别为 47.86%和 44.26%，组间差异不显著（P＞0.05）。（3）实验组 ApoE 基因 E4 表型的患者 TC 和 TG 水平均大于 E2、E3 表型，E3 基因表型的患者 LDL-C 水平大于 E2、E4 表型，三组表型间 TC、TG 和 HDL-C 的浓度差异不显著（P＞0.05），但 E2 表型的 LDL-C 水平显著低于 E3 和 E4 表型（P＜0.05）。（4）实验组 SLCO1B1 基因正常代谢型受试者的 TC 和 LDL-C 水平大于中间代谢型和弱代谢型，弱代谢型的 TG 水平高于正常代谢型和中间代谢型并且 HDL-C 水平小于正常代谢型和中间代谢型，但三型间各项血脂指标无显著差异（P＞0.05）。
结论 血脂异常患者 ApoE 和 SLCO1B1 基因频率分布存在明显不均，血脂异常患者 ApoE 基因 E2 表型的 LDL-C 水平显著低于 E3 和 E4 表型，ApoE 基因多态性与血脂水平存在相关性，而 SLCO1B1 基因多态性则与其不存在相关性。

PU-0418

Novel multi-fluorine labeled Indanone Derivatives as Potential MRI Imaging Probes for β-Amyloid Plaques in the Brain

Yaqian Dai
The First Affiliated Hospital of Anhui Medical University

A series of novel multi-fluorine labeled indanone derivatives were synthesized successfully on the basis on indanone. In the staining experiment of AD human brain adjacent sections, compound 7d could bind to β-amyloid plaques specifically, showed obvious fluorescence in the green channel of fluorescence microscope. In the in vitro binding experiment, 7d showed a balanced affinity with Aβ1-40 (Kd=367.93±13.72) and Aβ1-42 (Kd=384.80±56.55). 7d exhibited a low toxicity (ID50>50mg/kg) in the acute toxicity experiment. The Log P value of 7d was 3.87, which meant it might have an excellent ability to pass through the blood-brain barrier. In the biodistribution experiment of normal mice, the highest brain uptake could be reached at 1 hours after intraperitoneal injection and cleared from the brain after 24 hours. The imaging capability of

7d increased with the increase in concentration in 19F-weighted mode, showed strong imaging ability at a lower concentration (1.875mg/ml).

PU-0419

甘肃地区乙型肝炎病毒分型和耐药突变分析

陈俏丽、李彩东、田鹏飞
兰州市第二人民医院

目的 分析探讨甘肃地区乙型肝炎病毒(hepatitis B virus, HBV)基因型分布特征及耐药情况，为乙型肝炎患者抗病毒用药提供指导依据。
方法 选择 2018 年 1 月—2019 年 8 月于兰州市第二人民医院就诊的 131 例乙型肝炎患者，通过 Sanger 测序法分析患者乙肝基因型和耐药突变位点分布情况，应用 SPSS 20.0 软件进行统计分析。
结果 131 例乙型肝炎患者共检出 B、C、D 三种基因型，其中 B 型 2 例(1.53%)；C 型 126 例(96.18%)；D 型 3 例(2.29%)。检出 51 例核苷酸类药物耐药，耐药率 39.69%，其中 B 型 1 例，C 型 50 例。耐药突变位点最多见于 M204V/I，以 M204V/I+M204V 联合突变多见，常在此基础上发生三位点、四位点甚至五位点突变。其中与阿德福韦酯(ADV)相关的 A181V/T、N236T、A181V/T+N236T 单药突变最常见，共 15 例(11.45%)。多药突变 36 例(27.48%)，主要以拉米夫定(LAM)和替比夫定(LDT)联合耐药为主，在此基础上多有恩替卡韦(ETV)联合耐药发生。
结论 甘肃地区 HBV 患者基因型以 C 型为主，耐药形式严峻，突变组合模式复杂多样，应及时检测患者 HBV 基因型及耐药突变位点，以评价乙型肝炎患者临床疗效并指导临床抗病毒治疗合理用药。

PU-0420

上海地区妇女宫颈脱落细胞 HPV 感染亚型变化 ——来自单中心的数据分析

孟俊
上海交通大学医学院附属瑞金医院

目的 探讨上海地区人乳头状瘤病毒(HPV) 病毒的分子流行病学特征及亚型感染状况，为预防和治疗 HPV 提供理论依据。
方法 采用多重 PCR 和毛细电泳技术对本院 2017 年 10 月-2020 年 12 月共 58883 例妇科门诊及常规体检妇科门诊的宫颈脱落细胞进行 HPV 分型检测，共检测 25 种型别。
结果 ①58883 例受试者中共检出 HPV 阳性者 9168 例，总感染率为 15.57%（9168/58883），其中单重感染者 6971 例，占比为 76.04%（6971/9168）；多重型感染者 2197 例，占比为 23.96%（2197/9168）。②感染前三位分别为 HPV52、HPV58、HPV16 型，HPV 感染率与女性的年龄因素相关，31-40 岁女性感染率最高，有部分妇女是双重感染、三重感染甚至五重感染。③慢性子宫颈炎、宫颈上皮瘤变、宫颈恶性肿瘤前三位的基因分别是 HPV52、HPV16、HPV58。
结论 高危型 HPV 的检测可发现早期宫颈病变，加强对不同年龄段女性 HPV 感染的监测筛查更有利于宫颈癌的早期预防，为上海地区 HPV 感染的防治提供科学依据。

LncRNA AC010789.1 promotes colorectal cancer progression by targeting microRNA-432-3p/ZEB1 axis and the Wnt/β-catenin signaling pathway

Weili Duan、chuanxin wang
The Second Hospital of Shandong University

Accumulating literatures have indicated that long non-coding RNAs (lncRNAs) are crucial molecules in tumor progression in various human cancers, including colorectal cancer (CRC). However, the clinical significance and regulatory mechanism of a vast majority of lncRNAs in CRC remain to be determined. The current study aimed to explore the function and molecular mechanism of lncRNA AC010789.1 in CRC progression. AC010789.1 found to be overexpressed in CRC tissues and cells. High expression of AC010789.1 was associated with lymph node metastasis and poor prognosis. Moreover, AC010789.1 silencing inhibited proliferation, migration, invasion and epithelial-mesenchymal transition (EMT) in vitro as well as tumorigenesis and metastasis in vivo. Mechanistically, we demonstrated that repression of AC010789.1 promoted miR-432-3p expression, and miR-432-3p directly binds to ZEB1. We then proved the anti-tumor role of miR-432-3p in CRC, showing that the inhibitory effect of AC010789.1 knockdown on CRC cells was achieved by the upregulation of miR-432-3p but downregulation of ZEB1. We also established that silencing AC010789.1 suppressed the Wnt/β-catenin signaling pathway. However, this inhibitory effect was partially counteracted by inhibition of miR-432-3p. In summary, these results reveal that silencing AC010789.1 suppresses CRC progression via miR-432-3p-mediated ZEB1 downregulation and suppression of the Wnt/β-catenin signaling pathway, highlighting a potentially promising strategy for CRC treatment.

肺腺癌转移相关 lncRNAs 标志物的筛选及预后评估模型的构建

张晓时[1]、杜鲁涛[2]、李晓丽[1]、王传新[2]
1. 山东大学齐鲁医院
2. 山东大学第二医院

In the present study, we aimed to develop a prognostic signature which is based on metastasis-associated lncRNAs in patients with lung adenocarcinoma (LUAD). Firstly, the potential metastasis-associated lncRNAs were identified by analyzing high-throughput data from The Cancer Genome Atlas (TCGA), and based on which, an lncRNA signature was constructed for prediction of relapse in LUAD patients using Cox proportional hazards regression analysis. Moreover, the prognostic performance of the lncRNA signature was evaluated using Kaplan-Meier survival analysis, time-dependent receiver operating characteristic (ROC) curve and Cox analysis, respectively. An lncRNA signature consisting of six most important prognostic factors (LINC01819, ZNF649-AS1, HNF4A-AS1, FAM222A-AS1, LINC02323 and LINC00672) was developed. This novel six-lncRNA signature had considerable prognostic value for prediction of relapse in LUAD patients.

鼠尾消化实验传统“经典法”和新技术“快速法”的对比及探讨

刘寒、曾超、陈璐、王君安、凌昉钦、伍均
上海市第一人民医院嘉定分院

目的 以小鼠为模型的模式动物在现代科学研究中发挥着重要的作用。目前对于小鼠的遗传学改造是扩充小鼠品系的重要途径，这也要求对小鼠的基因鉴定应该朝着更快和更准确的方向发展。传统的鼠尾粗 DNA 提取依赖蛋白酶 K，消化时间在 5 个小时左右。本文提出了一种不依赖蛋白酶 K 的快速鼠尾粗 DNA 提取法，并探讨其实验过程及其准确性。
方法 经典鼠尾消化过程，需要在弱碱体系中，经过蛋白酶 K 的水解消化和乙[1]醇洗涤获得粗 DNA 浸出液。我们提出了新的鼠尾粗 DNA 提取的方法，即在强碱、高温环境下，破坏组织裂解细胞，使其核酸片段释放出来，获得粗 DNA 浸出液。该方法不依赖蛋白酶 K 的生物消化过程，是组织和细胞在高温强碱反应下，自然将染色质成分释放出来；在经过酸性缓冲液中和之后，获得可以进行 PCR 反应的鼠尾粗 DNA 提取液。
结果 两种方法联合检测进而对比之后，我们发现，鼠尾消化实验的“快速法”极大的缩短了反应所需时间。传统的“经典法”需 5 个小时左右的时间，但是“快速法”仅仅需要 20 分钟的时间。但“经典法”消化得更为彻底，在经过“快速法”消化后，EP 管底部仍有鼠尾组织。根据两者的实验原理分析，“经典法”获得的是双链粗 DNA，而“快速法”获得的是单链 DNA。由于 DNA 的本质是反向平行的双脱氧核糖核苷酸链，所以双链和单链有等效的遗传信息。对两者获得的粗 DNA 浸出液进行 PCR 反应的结果显示，两者都可对敲除式基因和敲入式基因进行基因鉴定，结果同样稳定可靠，表现为两者条带同样清晰，亮度相似。
结论 通过实践，发现使用“快速法”鼠尾消化可以缩短小鼠基因鉴定所需时间，同时可减少蛋白酶 K 的使用，并且进一步简化实验操作步骤，有一定的应用和推广前景。

PU-0424

DTL inhibits tumor-intrinsic immunity through the cGAS-STING pathway to promote tumorigenesis

Yidan Ren、Yunshan wang
The Second Hospital of Shandong University

Background Evasion of host immunity is characteristic of cancer, the mechanisms linking oncogenic mutations and immune escape are not fully understood. DTL is one of CUL4-DDB1-related factors (DCAFs), which may be involved in tumor development. However, the potential mechanism by which DTL regulates the immunosuppressive state of tumors still needs to be further studied.
Methods Affinity-purification mass spectrometry was used to identify potential DTL interaction proteins. Coimmunoprecipitation (Co-IP) was performed to verify protein interaction between DTL and DAPK3. mRNA levels in cancer cells and tissues were detected by Quantitative real-time PCR. Lentivirus was used to establish stable overexpression and knocking down cell lines for DTL and DAPK3. Transwell and wound healing assays were used to determine migration ability of cancer cells. Matrigel assay was used to determine invasion ability of cancer cells. MTT and colony formation assays were used to evaluate proliferation of cancer cells. Data were analyzed with Chi-square and Student’s t tests. All statistical tests were two sided
Results In this study, we identified DTL as a previously unrecognized driver of anti-tumor immunity through the stimulator of interferon genes (STING) pathway of cytosolic DNA sensing. Overexpression of DTL or kinase activity impaired STING activation and interferon (IFN)-β-stimulated gene induction. DTL deficiency in IFN-β-producing tumors drove rapid growth and reduced infiltration of CD103+ CD8α+ dendritic cells and cytotoxic lymphocytes, attenuating the

response to cancer chemo-immunotherapy. Mechanistically, DAPK3 was identified as a potential substrate of DTL. Co-IP and immunofluorescence assays further confirmed the interaction between DTL and DAPK3. Moreover, DTL overexpression decreased the protein level and accelerated the degradation rate of DAPK3. Through in vitro ubiquitination experiment, we proved that DAPK3 was degraded by DTL through ubiquitination. Clinically DTL was significantly up-regulated in cancer tissues than that in normal tissues. The survival curves showed that cancer patients with higher DTL expression owned lower survival rate. Functional experiments showed that DTL not only enhanced the proliferation and migration abilities of cancer cells, but also promoted the tumorigenesis in nude mice. Rescued experiment results demonstrated that silencing DAPK3 simultaneous with DTL recovered the phenotypes defect caused by DTL knocking down.

Conclusion Thus, DTL is an important tumor-promoting ubiquitin ligase, which can inhibit tumor innate immunity and tumor immune monitoring.

生理性衰老人群肾脏组织中的 RNA 甲基化修饰表达谱研究

徐莉
中国医科大学附属第一医院

目前，人口老龄化给我国带来逐年加重的社会经济负担，健康老龄化成为亟待解决的公共卫生问题，因此研究并探索人口老龄化相关问题具有重大意义。随着年龄增长，肾脏储备功能减退，对外界刺激或损伤的应激反应能力和代偿能力下降，从而导致慢性肾脏疾病发病率增高，同时也可导致急性肾损伤。因此，探索肾衰老的细胞分子结构改变及其发生机制，阐明衰老肾脏相关疾病易感性增加的原因，并寻找有效治疗靶点及预防措施显得尤为重要。本研究选择于中国医科大学附属第一医院泌尿外科因泌尿系局限性肿瘤或肾脏外伤行全肾切除的患者肾皮质组织 6 例（＜45 岁 3 例；＞65 岁 3 例＝，使用 m6A-mRNA&lncRNA 表观转录组芯片检测中青年组和老年组肾组织 mRNA&lncRNA 中 m6A 表观转录修饰水平。RT-qPCR 检测 m6A 甲基化酶的差异性表达。结果发现，随着年龄增长，表达上调 mRNA 1051 个，表达下调 mRNA 269 个；m6A 修饰水平增高 mRNA 23 个，m6A 修饰水平降低 mRNA 113 个。GO 分析与 pathway 分析发现发生明显差异性 m6A 修饰的 mRNA 与钙、钠等离子转运通路、Wnt 信号通路、细胞外基质蛋白受体蛋白等密切相关，有望为肾脏衰老提供早期干预和治疗靶点。

小分子化合物 ABO 提高耐药性卵巢癌对铂类化疗药物敏感性的研究

许瑞
山东第一医科大学附属省立医院

因卵巢癌患者往往发展为化疗耐药，使其死亡率居妇科恶性肿瘤首位。但目前的分子靶向药无法满足临床要求，本项目组初步证明 ABO 能提高耐药卵巢癌对铂类的敏感性，利用耐药卵巢癌细胞 SKOV3/DDP 筛选了一系列具有多种生物活性的苯并噁嗪衍生物并最终寻找到一种苯并噁嗪衍生物—ABO 能够显著逆转该细胞株对顺铂的耐性。BCL2L10 是一个在卵巢癌组织中表达显著降低的因子且与 FIGO 分期显著相关。在耐药卵巢癌细胞 SKOV3/DDP 中过表达后会促进细胞凋亡，说明 BCL2L10 在卵巢癌中是一个凋亡促进因子。发现 ABO 可以诱导耐药卵巢癌细胞 SKOV3/DDP 中 BCL2L10 的表达。BCL2L10 启动子区存在一个 CpG 岛，ABO 能够降低该区域的 DNA 甲基化水平，说明 ABO 通过降低 BCL2L10 启动子的 CpG 甲基化水平从而促进其转录。为了进一步研究

ABO 对 BCL2L10 表达的调控机制，我们检测了 BCL2L10 的邻近基因长非编码 RNA-CERNA1 的 RNA 水平，发现其表达受到 ABO 的诱导。而在 SKOV3/DDP 中过表达 CERNA1 能够显著提高 BCL2L10 的表达。最终证明 ABO 通过 ANXA7 磷酸化 Smad2/3，磷酸化的 Smad2/3 入核后提高 CERNA1 的表达，CERNA1 通过与 DNMT 结合降低 BCL2L10 启动子 CpG 甲基化从而促进其表达，最终提高耐药卵巢癌细胞对铂类化疗的敏感性。

不同来源新冠核酸病毒质控品检测结果的一致性分析

黄献彬、陈宝荣、孙慧颖、郑燕华
北京金域医学检验实验室有限公司

目的 分析 4 种不同厂家的新型冠状病毒核酸检测试剂对不同来源的质控样本的检测能力，并分析其检测结果的一致性。
方法 收集国家卫生健康委临床检验中心、北京市疾病预防控制中心（CDC）及北京市朝阳区疾病预防控制中心的室间质评样本共 30 份。用磁珠法（同一种核酸提取试剂)、3 个不同厂家新型冠状病毒核酸扩增检测试剂及另 1 个厂家生产的新型冠状病毒核酸快速检测试剂进行核酸提取和扩增，根据检测结果比较相关试剂对不同来源的质控品的检测性能。
结果 30 份质评样本中有 16 份为新型冠状病毒核酸阳性样本，14 份为新冠病毒阴性样本。A、C 厂家核酸检测试剂对 16 份阳性质评样本的 ORF1ab 基因检出率为 93.75%，N 基因检出率为 100%，双基因同时检出率为 93.75%，有效检出率为 100.00%；B 厂家核酸检测试剂阳性质评样本 ORF1ab 基因检出率为 87.5%，N 基因检出率为 93.75%，双基因同时检出率为 87.5%，有效检出率为 93.75%。D 厂家快速核酸检测试剂对阳性质评样本的 ORF1ab 基因检出率仅为 18.75%，N 基因检出率为 93.75%，双基因同时检出率为 18.75%，有效检出率为 93.75%。
结论 不同核酸检测试剂对质评样本的检测能力不完全一致，且其检测效能并不能以厂家宣称的检出限作为参考。

M2 型巨噬细胞对前列腺癌细胞迁移的影响

凡慧慧
永州市中心医院

目的 检测 M2 型巨噬细胞在正常前列腺以及前列腺癌组织的分布情况，并体外探究 M2 巨噬细胞对前列腺癌细胞的迁移作用。
方法 采用免疫组织化学染色法，以 CD206+作为 M2 巨噬细胞的分子标记；应用 IL-4 细胞因子诱导出 M2 巨噬细胞，并利用 Transwell 迁移实验检测 M2 巨噬细胞对前列腺癌细胞的迁移作用。
结果 M2 巨噬细胞在前列腺癌组织中的分布高于正常前列腺组织（$P<0.05$）。体外诱导的 M2 巨噬细胞与前列腺癌细胞（DU145,PC3）共培养可促进前列腺癌细胞的迁移活动。
结论 前列腺癌组织中 M2 巨噬细胞浸润增加，在一定程度上增加了肿瘤的侵袭能力。

生姜艾叶洗剂治疗实验大鼠冻伤有效性诊断

陈欣、王战豪 、 杨清、张玲 、郑飞 、刘华伟
成都市第三人民医院

目的 检验生姜艾叶洗剂治疗冻伤的疗效。
方法 ① 40 只大鼠随机分为对照组、模型组、生姜艾叶洗剂组和冻疮膏组，每组 10 只。后三组动物制备冻伤模型，造模成功后，连续给药 10 天，观察大鼠一般情况、皮损伤情况，考察冻伤康复情况。② 通过检测血液流变学特征，及观察冻伤部位皮肤病理改变，验证生姜艾叶洗剂的治疗作用。
结果 生姜艾叶洗剂组治疗给药组总有效率显著高于对照组。
结论 生姜艾叶洗剂治疗冻伤的疗效好，无明显副作用。

外周血 Septin9 基因甲基化联合粪便隐血实验、肿瘤标志物等指标对结直肠癌早期诊断的意义

龙璐
中南大学湘雅医院

目的 探究外周血 Septin9 基因甲基化、粪便隐血试验（fecal occult blood test，FOBT）、癌胚抗原（carcinoembryonic antigen，CEA）、糖链抗原 199（carbohydrate antigen 199，CA199）、及常见的血液检查指标如中性粒细胞淋巴细胞比值（neutrophil lymphocyte ratio，NLR）、血小板与淋巴细胞比值（platelet-to-lymphocyte ratio，PLR）等指标对结直肠癌早期诊断的应用价值。
方法 选取 2019 年 1 月至 2020 年 1 月在中南大学湘雅医院住院的初诊为结直肠癌的患者 140 例为结直肠癌组，其中男性 82 例，女性 58 例。另选取同期健康体检者 110 例为对照组，其中男性 66 例，女性 43 例。取外周血进行 Septin9 基因甲基化、血常规、血清肿瘤标志物水平及粪便隐血试验的检测。SPSS 统计分析比较两组间上述指标的差异。
结果（1）与健康对照组相比，结直肠癌组 Septin9 基因甲基化及 FOBT 阳性率显著升高，RDW、NLR、PLR 及血清肿瘤标志物 CEA、CA19-9 和 CA125 水平也显著升高（P<0.05）。（2）Septin9 基因甲基化检测结直肠癌的敏感性为 86.43%，特异性为 97.27%，准确性为 91.20%，FOBT 检测敏感性为 85.72%，特异性为 98.18%，准确性为 91.20%，Septin9 基因甲基化联合 FOBT 检测敏感性为 97.86%，特异性为 95.45%，准确性为 93.63%；炎症指标检测敏感性为 65.71%，特异性为 82.73%，准确性为 73.20%，Septin9 基因甲基化联合炎症指标敏感性为 90.71%，特异性为 96.36%，准确性为 93.20%；RDW 检测敏感性为 72.86%，特异性为 75.45%，准确性为 74.00%，Septin9 基因甲基化联合 RDW 检测敏感性为 92.14%，特异性为 94.55%，准确性为 93.20%；肿瘤标志物检测敏感性为 60.00%，特异性为 100%，准确性为 77.60%，Septin9 基因甲基化联合肿瘤标志物敏感性为 92.14%，特异性为 97.27%，准确性为 94.40%。
结论 血浆 Septin9 基因甲基化、FOBT、炎症指标、RDW 及肿瘤标志物对结直肠癌有筛查和辅助诊断的作用，Septin9 基因甲基化联合其他指标对结直肠癌结直肠癌的早期诊断有重要作用。

PU-0431

肾移植患者术后 BK 病毒感染的危险因素分析

龙璐
中南大学湘雅医院

目的 研究活体肾移植术后 BK 病毒感染情况，搜集临床资料，分析肾移植术后 BK 病毒感染的危险因素。
方法 选择 2018 年 3 月-2019 年 3 月在中南大学湘雅医院进行同种异体肾移植术的患者 293 例作为研究对象，其中男性 187 例，女性 106 例，并自愿接受 BK 病毒检测，应用实时荧光定量 PCR 检测肾移植术后患者血或尿液的 BK 病毒 DNA 载量，根据检测结果将患者分成两个组：BK 病毒 DNA 阳性组（n=21，尿液或血液及尿液 BK 病毒同时阳性）、BK 病毒阴性组（n=272，血液及尿液 BK 病毒 DNA 均为阴性）。比较两组患者的性别、年龄、巨细胞感染情况、中性粒细胞与淋巴细胞的比值（NLR）、平均血小板（MPV）、血肌酐浓度、血尿素与尿酸浓度、患者有无糖尿病、患者有无肺部感染以及供肾冷缺血时间等临床因素，应用 logistic 回归分析的方法分析影响肾移植术后患者 BK 病毒感染的危险因素。
结果 肾移植患者术后 BK 病毒感染的阳性率为 7.17%，患者的年龄为 15-67 岁，平均年龄为 42.16±10.82，通过 logistic 回归分析显示：患者的年龄（P=0.014）、患者有无糖尿病（P=0.048）、有无肺部感染（P=0.003）、供肾冷缺血时间（P=0.023）与 BK 病毒感染具有显著相关性，将其列为危险因素。
结论 实时荧光定量 PCR 检测 BK 病毒操作简单、易行、灵敏度高，可作为肾移植术后 BK 病毒感染的筛查指标。本研究表明肾移植患者中高龄、有糖尿病史、术后发生肺部感染以及供肾冷缺血时间过长会增加患者 BK 病毒感染的风险。

TMEM206 knockout in mice is associated with loss of corneal transparency

Zi-Jian Yang、Shun-Chang Sun
Ruijin Hospital, Shanghai Jiao Tong University School of Medicine

Purpose To investigate a role for TMEM206 in corneal edema in mice, and to explore the potential mechanisms by which TMEM206 knockout causes corneal edema in mice.
Methods TMEM206-knockout mice were generated line using CRISPR-Cas9 system. The variable ophthalmic pathology was observed using a slit lamp microscope, the corneal edema was observed using optical coherence tomography, the corneal ultrastructure was observed using a transmission electron microscope.
Results Corneal opacity was observed in some homozygous TMEM206−/− mice whereas a similar change was not observed in heterozygous TMEM206+/− mice and wild-type littermates. TMEM206 knockout was associated with corneal edema, which in turn caused the organization disruption of collagen fibrils of the cornea in mice.
Conclusion TMEM206 knockout is associated with corneal edema in mice. TMEM206 may play an important role in chloride ion transport across the corneal endothelium or epithelium under physiological conditions with a pH between 7.2 and 7.5.

PU-0433

湖南地区等候肾移植患者 HLA 等位基因与终末期慢性肾衰竭发生和 PRA 产生的相关性分析

孙谦、苏禅娟
中南大学湘雅医院

目的 通过回顾性分析方法，对湖南地区 347 例等候肾移植慢性肾衰竭终末期患者的 HLA-A、B、DR 基因表达型别和移植前 PRA 抗体的产生情况进行研究，以探讨因为原发性肾脏疾病而导致肾脏衰竭的患者在最终并发 ESRD 进程中，HLA 免疫遗传易感性以及 PRA 产生与自身 HLA 等位基因型的相关性。
方法 对 2015～2019 年间湖南地区 347 例等候肾移植 ESRD 患者的 HLA 等位基因分型和 PRA 抗体筛查结果进行分析，其中采取 PCR-SSP 法对 HLA-A、B、DR 基因分型进行分析，采取 ELISA 法检测患者血清样本中 PRA 抗体并按 PRA 检测结果将患者分为 PRA 阴性组和 PRA 阳性组。应用 SPSS21.0 软件分析 HLA-A，B，DR 三个位点的基因频率、RR、OR 以及 PRA 阴性组和 PRA 阳性组在 HLA-A、B、DR 位点分布频率的差异和不同性别患者 PRA 阳性率的差异。
结果 ESRD 患者共表达 HLA-A 等位基因 14 个，HLA-B 等位基因 25 个，HLA-DR 等位基因 13 个，其中较高频率的等位基因型为 HLA-A2、A11、A24（9）、B60（40）、B46、B13、DR09、DR04、DR12（05）。其中病例组 HLA-A2、B48、B52（05）、B55（22）的基因频率显著高于对照组（P＜0.05）,对照组 HLA-A1101、B60（40）的基因频率显著高于病例组（P＜0.05）。PRA 阴性组和 PRA 阳性组的 HLA 基因频率分布显示，女性 PRA 阳性组基因频率明显高于男性（P＜0.05）；PRA 阳性组 HLA-A2、B38（16）的基因频率明显高于 PRA 阴性组（P＜0.05），PRA 阴性组 HLA-60（40）的基因频率明显高于 PRA 阳性组（P＜0.05）。
结论 研究发现 HLA-A2、B48、B52（05）、B55（22）可能为湖南地区原发肾病患者并发 ESRD 的易感基因，而 B60（40）可能为保护基因；PRA 的产生与 HLA 基因分布具有相关性，HLA-A2、B38（16）可能更易获得 PRA，而 HLA-B60（40）不易获得 PRA。

PU-0434

基于基因表达数据库对胰腺癌患者的生物信息学分析

陈佳益、伍均
上海市第一人民医院嘉定分院

目的 通过生物信息学工具筛选胰腺癌患者相关的差异表达基因，探寻胰腺癌肿瘤的发病机制。
方法 通过 GEO 数据库资料筛查，检索词：胰腺癌（Pancreatic tumor）；探针（array），共筛选 8 个与胰腺癌组织及正常胰腺组织共同相关数据集，GSE15471,GSE16515,GSE28735,GSE32676,GSE56560,GSE62165,GSE62452 和 GSE101448。网络下载相关 mRNA 数据集，使用 R 语言包 sva 合并相关数据集中信息。，其中胰腺癌组织标本 384 个，正常胰腺组织标本 207 个，并寻找差异表达基因。
结果 经过分析，共发现 249 条差异基因（|logFC|>1 且 adjusted p<0.05），其中 173 条上调基因（包含 OLR1），76 条下调基因。接下来进行 GSEA 分析，在脂肪生成(Adipogenesis)中 181 个条目出现了显著富集，在血管生成（Angiogenesis）中 33 个条目出现了富集，在磷酸化作用（Phosphorylation）中 176 个条目出现了富集，在过氧化物酶体(Peroxisome)中 181 个条目上出现了显著富集，表明胰腺癌与非癌组织具有显著差异的基因在这些功能条目上进行了富集，并通过这些功能条目促进胰腺癌的发生发展。我们在此基础上进一步进行通路富集分析，查询这些差异基因共同富集的信号通路（其中包含 PI3K/AKT、KRAS 信号通路）。分析：通过进一步分析 OLR1 在 GEO 数据库中胰腺癌组织和正常胰腺组织的表达水平，我们发现 OLR1 的表达水平在胰腺癌组

织中要显著高于正常胰腺组织（P<0.001）。再下载 TCGA 数据库，使用 survminer R 包做生存分析，采用 KM 分析(log-rank test)，结果显示 OLR1 的表达水平与胰腺癌预后明显相关（P=0.018）。**结论** 氧化低密度脂蛋白受体 1（OLR1），又称为凝集素样氧化低密度脂蛋白受体 1（LOX-1），是一种 II 型跨膜糖蛋白，作为氧化低密度脂蛋白的作用受体（ox-LDL）主要分布于内皮细胞、巨噬细胞及平滑肌细胞表面。OLR1 的表达已经被证实与多种晚期恶性肿瘤相关。我们推测，胰腺癌患者伴有的脂质代谢异常可能与 OLR1 的参与有关。ox-LDL 和炎症刺激反应可以诱导肿瘤表面 OLR1 水平的上调，OLR1 进一步激活信号通路与炎症因子之间形成三者之间的正向反馈，促进胰腺癌脂代谢异常，最终促进恶性肿瘤侵袭与转移的发生。

PU-0435

Identification of the ataxin-1 interaction network and its impact on spinocerebellar ataxia type 1

Jiu-Ming Chen、Shi-Kai Chen、Pei-Pei Jin、Shun-Chang Sun
Ruijin Hospital, Shanghai Jiao Tong University School of Medicine

Purpose To explore the ataxin-1 interaction network and its impact on spinocerebellar ataxia type 1.
Methods Protein-protein interactions were screened using tandem affinity purification (TAP) tagging, and were validated by immunoprecipitation. Direct transcriptional targets of ataxin-1 were identified using chromatin immunoprecipitation high-throughput sequencing (ChIP-seq) and RNA immunoprecipitation high-throughput sequencing (RIP-seq) techniques in HEK-293T cells.
Results We found that wild-type ataxin-1 interacted with MCM2, GNAS, and TMEM206, while mutant ataxin-1 lost its interaction with MCM2, GNAS, and TMEM206 in this study using HEK-293T cells. Two ataxin-1 binding targets containing the core GGAG or AAAT were identified in HEK-293T cells using ChIP-seq. Gene Ontology analysis of the top ataxin-1 binding genes identified SLC6A15, NTF3, KCNC3, and DNAJC6 as functional genes in neurons in vitro. Ataxin-1 also was identified as an RNA binding protein in HEK-293T cells using RIP-seq, but the polyglutamine expansion in the ataxin-1 had no direct effects on the RNA binding activity of ataxin-1.
Conclusions An expanded polyglutamine tract in ataxin-1 might interfere with protein-protein or protein-DNA interactions but had little effect on protein-RNA interactions. This study suggested that the dysfunction of protein-protein or protein-DNA interactions is involved in the pathogenesis of SCA1.

PU-0436

一种新型无酶等温核酸扩增方法

许伟、吴国球
东南大学附属中大医院

目的 建立一种基于核酸分子间自由能差区别驱动的无需酶促的核酸分子扩增体系
方法 该反应类似于酶促反应。待测靶标链 T 触发反应，使得链置换反应启动，通过链置换反应的循环，链 T 在循环末端释放并触发下一个循环。该反应中链 T 并不会被消耗，而是消耗预先加入的复合物 SBO 以及链 F，即该过程中链 T 催化底物复合物 SBO、链 F 生成产物复合物 SF、链 B 和链 O。作为一种类酶促反应，其在待测靶标链 T 存在的情况下可快速高效地将底物转化为产物，实现信号的无酶循环扩增。
反应过程：通过连续三次链置换反应，构建一个闭环的循环扩增方法，当待检测靶标触发第一次反应后即可启动扩增循环，对核酸信号进行扩增，具体原理见图 1。步骤①：链 T 以其功能区 1 与复

合物 SBO 中链 S 中 1’互补结合，且链 S 与链 B 之间结合的吉布斯自由能更低，从而引发链置换反应与复合物 SBO 竞争性结合，导致链 S 从复合物中解离并生成新的复合物 STO；步骤②：因复合物 STO 暴露出 S 链中 3’功能区，所以链 F 可以以其序列中 3 功能区特异性结合至复合物 STO 上，因此其可以通过链置换反应使得链 O 被解离；步骤③：链 F 继续竞争结合在链 S 上的链 T，最终导致链 T 的解离，最终生成复合物 SF。该扩增循环中，链 T 在此过程中充当着核酶的作用，即因为链 T 的存在从而促进了整个反应的进行，而反应前后链 T 并不会消耗。该反应消耗加入体系中的复合物 SBO、链 F，最终生成复合物 SF、链 B 以及链 O。该反应循环系统在不借助酶等物质的帮助下将待测靶标链 T 的核酸信号转化为复合物 SF、链 B 以及链 O 的核酸信号，同时还可以对该信号进行放大。

熵驱动无酶扩增循环示意图. 其中 S, F, T, O, B 分别代表反应体系中所使用核酸链链 S, 链 F, 链 T, 链 O, 链 B. 链 S 为从左至右按 5’-3’顺序, 其它核酸链为从右至左按 5’-3’顺序. 1, 2, 3, 4 代表其中其中的核酸功能区, 1’, 2’, 3’, 4’分别代表功能区 1, 2, 3, 4 的互补序列. 反应按箭头所示方向进行.

结论 核酸按照碱基互补配对规则以氢键相互连接，该反应过程中初始复合物 SBO 以及最终复合物 SF 间互补的碱基对数量相同，仅存在链 O、链 B 间的核酸缺口，可以认为反应的起点以及终点的化学能是相等的。通过以上推导，即可推断该反应过程中体系能量不变，即焓没有变化。

根据吉布斯自由能公式：可知化学反应通过反应熵变以及焓变共同推动，在该反应中焓变，所以我们推断整个过程中反应由反应过程中从初始复合物中释放的分子的熵增益以热力学方式驱动。因此，该方法是一种熵驱动的无酶扩增循环系统。

PU-0437

Age-related Increased Onset and Progression of Prostate Cancer is Revealed in Novel Pten-null Mouse Models

Bing Zhang[1]、Sen Liu[2]、Qiuyang Zhang[2]
1. Medical Laboratory of Shenzhen Luohu Hospital Group , Shenzhen, China
2. Tulane University School of Medicine, New Orleans, Louisiana, United States

Prostate cancer (PCa) is associated with advanced age. To better understand how age impacts PCa, it is critical to use PCa animal models generated at different ages (aged vs. nonaged). The PB-Cre4 driven phosphatase and tensin homolog (Pten) conditional knockout mouse model, which closely imitates human PCa initiation and progression. However, the Pten deletion is triggered in a 2-week-old prostate, when comparing the extent of PCa between aged and non-aged mice, it is difficult to distinguish the extent to which the onset and progression of PCa are due to the acceleration of the normal aging process or due to the manifestation of PCa pathologies over time. We present here a protocol to inject Cre-expressing adenovirus with luciferin tag intraductally into the prostate anterior lobes of Pten floxed mice, thus, the Pten-loss will be triggered at different ages post-Cre expression. The in vivo imaging of luciferin signals following viral infection was conducted to confirm the Cre expression andactivity. Immunohistochemical staining was performed to confirm the Cre expression, Pten loss, and p-Akt and p-S6activation. Prostate weight and histopathology were compared between aged and non-aged mice. The results showed that the virus infection was limited in the prostate glands and aged mice had significantly increased PCa onset and progression compared to young mice. Although technical skill is required to carry out this procedure and the success rate of viral infection is about 80%, this model of PCa is of great use to all investigators in the aging and cancer research field.

PU-0438

BCKDK promotes the proliferation of Tumor by regulating the metabolism of BCAA and Citrate in NSCLC

Li Ren
Tianjin Medical University Cancer Institute and Hospital

Objective Metabolic reprogramming is one of the major characteristics of tumors, Branched-chainα-ketoacid dehydrogenase kinase (BCKDK), the key enzyme of branched-chain amino acids (BCAAs) metabolism, has been reported to play an important role in diabetes, obesity and other diseases. However, much remains unknown regarding BCKDK in No small cell lung cancer (NSCLC). In the current study, we explored BCKDK's role in NSCLC.
Methods Metabolites in serum of NSCLC patients and NSCLC cell culture supernatant were deteted by Nuclear Magnetic Resonance（NMR）.Colony formation, cell proliferation and cell apoptosis were performed to examine BCKDK's role on NSCLC progression. Glucose uptake, lactate production, cellular oxygen consumption rate, extracellular acidification rate and ROS were measured to examine the effect of BCKDK on glucose metabolism. Gene expression was determined by RT-qPCR, Western blot and IHC assay.
Results BCKDK is upregulated in NSCLC tissues, it affects the metabolism of BCAA and citrate in NSCLC cells. Compared with healthy controls and postoperative NSCLC patients, serum BCAA increased and citrate decreased in preoperative NSCLC patients. Knockout of BCKDK decreased NSCLC cell proliferation and apoptosis ex vivo. Further studies demonstrated BCKDK elevated oxidative phosphorylation, ROS level and Inhibited glycolysis.
Conclusion Our results demonstrate that BCKDK may affect glycolysis and oxidative phosphorylation by regulating the degradation of BCAA and citrate, thereby affecting the progression of NSCLC.

丙型肝炎病毒基因分型在临床的应用

李文妮
西安金域医学检验所有限公司

目的 分析丙型肝炎病毒基因亚型的型别分类，以评估其辅助临床治疗丙肝相关疾病的临床价值。
方法 本实验室使用厦门泰普生物 HCV 分型检测试剂盒（PCR--荧光探针法），进行 HCV 基因分型，实时检测临床常见的 HCV 基因亚型，分别为 HCV 1b、2a、3a、3b、6a 5 个亚型。分析本实验室 1613 例 HCV 基因分型结果，对比各亚型的检出率，从而区分临床常见丙型肝炎的感染类型，指导临床用药。
结果 2a 亚型：该型别共检出 495 例，占总样本量的 30.7%。1b 亚型：该型别共检出 388 例，占总样本量的 24.1%。3a 亚型：该型别共检出 179 例，占总样本量的 11.1%。3b 亚型：该型别共检出 92 例，占总样本量的 5.7%。6a 亚型：该型别共检出 67 例，占总样本量的 4.2%。
病毒含量低于检测下限共有 366 例，占总样本量的 22.7%。剩余 26 例样本为极少见型别或无法检测样本，占样本总量 1.6%。通过分析本实验室 1613 例临床样本数据得出 HCV 2a 亚型感染，临床较为常见。
结论 不同亚型的 HCV 感染，其临床表现、肝病严重程度及慢性化病程进展均有差异，抗病毒治疗的效果也不同。临床检测 HCV 基因亚型，有助于区分其感染类型，并判断治疗的难易程度，也可根据病人情况制定个体化抗病毒治疗方案，从而达到治疗效果。

基于分子标记探针的多重 PCR 快速筛查临床高毒力沙门菌方法的建立

肖林林[1]、张李钟蕊[1]、朱雯雯[1]、朱玉[1]、王童[1]、魏取好[1]、董庆利[2]
1. 上海交通大学附属第六人民医院南院
2. 上海理工大学

目的 沙门氏菌是一种常见的食源性病原菌，对公众的生命健康和财产安全造成重大危害。基于此，我们建立并验证了一种基于多重 PCR 结合分子标记探针的检测方法用于快速筛查临床高毒力沙门氏菌，旨在指导临床快速甄别由高毒力沙门氏菌引起的感染，及时采取治疗措施，降低患者负担。
方法 该试验选择沙门氏菌中高保守的分子靶点 invA、常见毒力因子 pagC 基因及肠毒素编码基因 stn，利用已有的基因序列进行引物和探针设计，对设计的 3 套引物和探针进行筛选得到扩增效率最佳的 invAF2、invAR2、invAP3, pagC F3、pagCR3、pagCP2, stnF2、stnR2、stnP1。收集 40 株分离自临床患者标本的沙门氏菌进行灵敏度分析，选择沙门氏菌、大肠埃希菌、阴沟肠杆菌、铜绿假单胞菌、产期肠杆菌、无乳链球菌、金黄色葡萄球菌、肺炎克雷伯菌、变形杆菌、鲍曼不动杆菌、粘质沙雷菌、嗜麦芽窄食单胞菌共 12 种临床常见细菌用于特异性验证。采用磁珠法对所选菌株进行基因组 DNA 提取，将基因组 DNA 浓度稀释至 10-2μg/ml 用于特异性验证，对沙门氏菌基因组 DNA 进行倍比稀释，扩增后依据结果绘制标准曲线，进一步确定灵敏度。
结果 经过系列实验筛查，将 invA、pagC、stn 作为多重 PCR 的 3 个检测靶标具有良好的检测性能，其中以 invA 为沙门氏菌菌种鉴定靶标其检测限可达为 1×10-6μg/ml（目标 DNA 浓度）,特异性 100%，以 pagC、stn 为区分高毒力沙门氏菌鉴定靶标其检测限可达为 1×10-8μg/ml（目标 DNA 浓度）,特异性 100%。3 个检测靶标分别标记不同检测波长的激发荧光基团，相互间无明显干扰。
结论 本研究建立的检测方法具有较高灵敏度和特异性，能够准确鉴定并区分高毒力沙门氏菌菌株，可以用于临床高毒力沙门氏菌的筛查。该方法的建立可以为临床快速判断沙门氏菌毒力大小提供一种高效便捷的手段，为临床早期诊断和治疗提供新的支撑。

PU-0441

Prognostic value of piR-39980 in patients with colorectal cancer

Wei Gao 、Guoqiu Wu
Zhongda Hospital, Southeast University

Objective Colorectal cancer (CRC) accounts for a common gastrointestinal malignancy all over world. Piwi-interacting RNAs (piRNAs) show a substantial role in the oncogenesis of a variety of tumors. The objective of this work was to uncover the expression profile of piR-39980 and its prognostic value in CRC.
Methods The levels of piR-39980 expression in CRC tissues and paired normal tissues was determined by quantitative real-time polymerase chain reaction (qRT-PCR). Association of piR-39980 with CRC clinical feathers was assessed by Chi-square test. Overall survival curve was built via log-rank test by Kaplan–Meier analysis. The prognostic significance of piR-39980 in CRC was measured by Cox regression model.
Results piR-39980 was upregulated in CRC specimens than the paired normal specimens ($P < 0.001$). Importantly, upregulation of piR-39980 was related to tumor size and T stage (all $P < 0.05$). Survival evaluation suggested that CRC folks with high expression of piR-39980 went through poorer overall survival than folks with low piR-39980 expression (log rank test, $P = 0.0429$). piR-39980 could be an independent indicator for CRC patients' prognosis (HR = 3.308, 95% CI = 1.762-6.594, $P = 0.043$).

Conclusions piR-39980 plays oncogenic roles in CRC tumorigenesis and may be an independent indicator for CRC prognosis.

PU-0442

Silvestrol induces cell apoptosis through endoplasmic reticulum stress triggered JAK2/STAT3 pathway inhibition in gastric cancer

Wei Gao 、Guoqiu Wu
Zhongda Hospital, Southeast University

With the increasing of chemotherapeutic resistance in gastric cancer (GC), the discovery of new chemotherapy drugs become extremely urgent. Silvestrol has been found to possess anti-tumor effects recently, but its role and underlying mechanism in GC are still not clear. In the present study, we aimed to explore the effect of silvestrol in GC cells and the underlying molecular mechanism.

Cell viability was evaluated by CCK-8 assay to evaluate whether silvestrol possesses any potential for treatment of GC cells. Apoptotic effects of silvestrol on GC cells were adopted by flow cytometry and western blot. Real-time quantitative PCR was used to clarify whether the endoplasmic reticulum stress (ERS) is involved in silvestrol-induced GC cell apoptosis. To further elucidate the underlying molecular mechanism of silvestrol-induced cell apoptosis, western blotting analyses was also applied to examine the phosphorylation status of JAK2/STAT3 in GC cell treated with various concentrations of silvestrol.

In the research, we found that treatment with silvestrol resulted in a significant inhibitory effect and more apoptotic deaths in GC cells , compared with the control. Our work also revealed that silvestrol play a crucial role in inhibiting the cell proliferation and potently induced the apoptosis of GC cells in vitro in a time- and concentration-dependent manner. Moreover, the addition of silvestrol to GC cells increased the levels of GRP78, ATF4, and CHOP than the control. Furthermore, the phosphorylation of JAK2/STAT3 and the release of caspase-3 proteases in silvestrol-treated cells appeared to be inhibited in a concentration-dependent manner, compared to that in untreated control cells.

In summary, based on the presented data, our results showed that the apoptosis of GC cells induced by silvestrol was mediated by ERS and ERS-triggered JAK2/STAT3 signaling pathway. We provided the support for silvestrol as a potential therapeutic agent for GC, which may facilitate to further development of preclinical anti-tumor drugs.

PU-0443

Hsa_circ_0080145 induces cell proliferation and apoptosis of colorectal cancer via regulation of Akt/NF-kB signaling pathway

Wei Gao 、Guoqiu Wu
Zhongda Hospital, Southeast University

Circular RNAs have been reported to regulate tumorigenesis and served as a tumor target. The functional role and underlying molecular mechanism of circular RNA hsa_circ_0080145 in colorectal cancer (CRC) were still remain unclear. The purpose of this work was to consider the pattern of hsa_circ_0080145 expression, function and its biological significance in CRC.

Thirty cases of CRC tissues and four CRC cell lines of hsa_circ_0080145 mRNA expression were analyzed by RT-PCR. Small interfering RNA (siRNA) were transferred into CRC cells to

target hsa_circ_0080145. MTT assays and flow cytometer were used to analyze the effect of hsa_circ_0080145 on CRC cell growth and apoptosis in CRC cell lines. We also inspected the changes of Bcl-2 and Bax, which is responsible for cell proliferaion and apoptosis. The restraint of hsa_circ_0080145 knockdown on phosphorylation of Akt was verified by western blot.

The outcomes indicated that hsa_circ_0080145 was distinctly overexpressed in all four CRC cell lines. As hsa_circ_0080145 was upregulated in CRC cell lines, RT-PCR demonstrated that hsa_circ_0080145 expression in CRC tissues was overexpressed compared with normal cases. Clinical pathological detection confirmed that high hsa_circ_0080145 expression were highly associated with CRC volume, and the serum content of hsa_circ_0080145 was significantly elevated comparing with healthy control group ($P<0.05$). Hsa_circ_0080145 level also increased in distinguishing CRC compared with normal group ($P<0.01$). In addition, Kaplan–Meier analysis found that increased hsa_circ_0080145 resulted in poor survival ($P < 0.05$). Further experiments illuminated that loss of hsa_circ_0080145 expression repressed tumor proliferation and resulted in apoptosis in vitro. Importantly, we demonstrated that Akt signaling inactivation after loss of hsa_circ_0080145 in CRC.

Taken together, this study supported the first evidence that hsa_circ_0080145 was a promising biomarker and a novel target for treatment of CRC in humans. Hsa_circ_0080145 may be served as a potential target for cancer therapeutics via regulation of Akt signaling pathway.

PU-0444

A Novel Controlled PTEN-Knockout Mouse Model for Prostate Cancer Study

Bing Zhang[2]、Sen Liu[3]、Qiuyang Zhang[1]

1. Department of Structural and Cellular Biology, Tulane University School of Medicine, New Orleans, LA, United States

2. Medical Laboratory of Shenzhen Luohu Hospital Group , Shenzhen, China

3. Department of Structural and Cellular Biology, Tulane University School of Medicine, New Orleans, LA, United States

Prostate cancer (PCa) is associated with advanced age, but how age contributes to prostate carcinogenesis remains unknown. The prostate-specific Pten conditional knockout mouse model closely imitates human PCa initiation and progression. To better understand how age impacts PCa in an experimental model, we havegenerated a spatially and temporally controlled Pten-null PCa murine model at different ages (aged vs. non-aged) of adult mice. Here, we present a protocol to inject the Creexpressing adenovirus with luciferin tag, intraductally, into the prostate anterior lobes of Pten-floxed mice; Pten-loss will be triggered post-Cre expression at different ages. In vivo imaging of luciferin signal following viral infection confirmed successful delivery of the virus and Cre activity. Immunohistochemical staining confirmed prostate epithelial-specific expression of Cre recombinase and the loss of Pten and activation of P-Akt, P-S6, and P-4E-BP1. The Cre-expression, Pten ablation, and activated PI3K/AKT/mTOR pathways were limited to the prostate epithelium. All mice developed prostatic epithelial hyperplasia within 4 weeks after Pten ablation and prostatic intraepithelial neoplasia (PIN) within 8 weeks post-Pten ablation. Some PINs had progressed to invasive adenocarcinoma at 8–16 weeks post-Pten ablation. Aged mice exhibited significantly accelerated PI3K/AKT/mTOR signaling and increased PCa onset and progression compared to young mice. The viral infection success rate is ~80%. This model will be beneficial for investigations of cancer-related to aging.

PU-0445

Aloin affects the apoptosis of oxaliplatin-resistant gastric cancer cells by Akt/NF-kB signaling pathway

Wei Gao 、Guoqiu Wu
Zhongda Hospital, Southeast University

Background Gastric cancer (GC) is one of the most lethal malignancy types with the highest mortality rate and the steadily increasing incidence. Survival of patients with GC remains poor, which is largely attributed to active carcinogenesis. Therefore an enormous amount of research are under to exploit novel strategies for the treatment of gastric cancer. Aloin has recently been shown to have anti-tumor effects, but its functional role and underlying mechanism in GC are rather elusive. The present study is focused on investigating the effect of aloin in GC cell lines and the underlying important cellular signal transduction molecules such as Akt and NF-kB pathway, which play a vital role in cell apoptosis.
Methods To investigate whether aloin possesses inhibitory effect for treatment of gastric cancer, we examined its effect on proliferation of GC cell lines by CCK-8 assay. An annexin V-FITC flow cytometry assay and DNA fragmentation method were performed to analyze the effect on cell cycle assay and apoptosis. Western blot analysis was used to examine the expression of apoptosis related proteins.
Results Aloin treatment group significantly reduced cell viability in a dose-dependent manner compared with control groups. The flow cytometry result showed an increase in sub-G1 phase. Aloin inhibited the nuclear transportation of NF-kB, and downregulated Akt expression. Declined of Bcl-2, activation of caspase-3 and increased of PARP cleavage triggered apoptosis. Besides, DNA fragmentation analyse also displayed apoptotic induction.
Conclusion Taken together, our results suggested that aloin exerted cytotoxicity
against GC cells and could induce apoptosis of SGC-7901. The apoptosis of
GC cells induced by aloin was related to inhibition of Akt/NF-kB signaling pathway. It may become a potential chemotherapeutic therapy strategy for the oxaliplatin-resistantance gastric cancer.

PU-0446

CREB3L4 基因在云南宣威肺癌中的表达及作用机制研究

张艳亮 [1,2,3]、刘肖 [1,2,3]、段友斌 [4]、段勇 [1,2,3]
1. 昆明医科大学第一附属医院
2. 云南省检验医学重点实验室
3. 昆明医科大学第一附属医院临床检验诊断省创新团队
4. 云南昆明血液中心

目的 加强宣威地区肺癌发病的分子机制研究，寻找新的诊断和治疗靶点。
方法 应用 WB 和 RT-qPCR 方法检测 CREB3L4 在宣威肺癌细胞株 JT、普通非小细胞肺癌细胞株 A549 中的表达和其在正常人支气管上皮细胞株 16HBE、Beas-2b 中的表达差异。RT-qPCR、WB、IHC 检测 CREB3L4 在宣威肺癌组织和癌旁组织中的表达情况，并进行临床相关性分析。构建 CREB3L4 过表达、干扰、回复及相应对照稳定转染细胞株，应用 RNA-seq 和 ChIP-seq 对各组细胞进行检测，筛查出差异表达基因。并通过多种等生物信息学方法探讨 CREB3L4 的生物学功能。随后通过 CCK8 实验、Transwell 实验、流式细胞术检测细胞增殖、侵袭、迁移、周期与凋亡等情况，在体外观察 CREB3L4 异常表达对 JT 和 A549 细胞株生物学特性的影响。
结果 无论在转录水平还是翻译水平，JT 和 A549 中的 CREB3L4 的表达都显著高于 16HBE 和 Beas-2b 中的表达（$P<0.05$）。组织实验结果显示，CREB3L4 mRNA 和蛋白水平在宣威肺癌组织中都明显高于癌旁组织。在宣威肺癌组织中 CREB3L4 蛋白的阳性率与患者性别、年龄、吸烟情况

以及肿瘤的 TNM 分期等临床病理特征之间均无明显相关性（P>0.05），但在有淋巴结转移 N1~3 期的肺癌组织中 CREB3L4 蛋白的表达明显高于无淋巴结转移 N0 的肺癌组织（P＜0.05）。CHIP-seq 与 RNA-seq 结果显示在不同组的细胞中均存在一定数量的差异表达基因。GO 和 Pathway 分析结果显示 CREB3L4 涉及的多种与癌症有关的生物学过程和信号通路，提示其在 LCXW 发生发展中的重要作用。功能实验结果显示，CREB3L4 的上调、下调和回复对 JT 和 A549 细胞株的增殖、凋亡、侵袭和迁移都具有一定的调节作用。

结论 CREB3L4 的表达水平在宣威肺癌中发生上调，其表达改变会对宣威肺癌细胞的增殖、凋亡、侵袭和迁移产生影响，CREB3L4 涉及多种与癌症有关的生物学过程和信号通路，以上实验结果为 CREB3L4 在宣威肺癌发生发展中的作用机制研究奠定了一定的基础。

PU-0447

CREB3L4 在宣威肺癌中调控的靶基因筛选及调控方式的探讨

刘肖 [1,2,3]、段勇 [1,2,3]、段友斌 [4]、张艳亮 [1,2,3]
1. 昆明医科大学第一附属医院
2. 云南省检验医学重点实验室
3. 昆明医科大学第一附属医院临床检验诊断省创新团队
4. 云南昆明血液中心

目的 初步探索 CREB3L4 在宣威肺癌发生发展中可能作用的靶基因以及其作为宣威肺癌分子标志物的临床应用价值。

方法 构建 CREB3L4 敲减、过表达宣威肺癌（lung cancer in Xuanwei, LCXW）细胞株，同时应用 RNA-seq 和 ChIP-seq 对各组细胞进行检测，联合分析测序结果筛选出 CREB3L4 可能调控的候选靶基因并在细胞水平进行验证。随后，在新鲜配对 LCXW 组织中通过 RT-qPCR、WB 和 IHC 进一步验证 CREB3L4 与其候选调控靶基因的共表达关系。最后，采用双荧光素酶报告实验验证 CREB3L4 与候选靶基因的结合与调控相关性。同时进行 CREB3L4 及其靶基因的临床相关性分析，评价其作为宣威肺癌诊断标志物的临床应用价值。

结果 联合分析 ChIP-seq 与 RNA-seq，最终筛选出 RASEF 和 SLC38A2 两个候选靶基因进行后续实验。RT-qPCR 结果显示 RASEF、SLC38A2 在 CREB3L4 过表达后存在明显上调（P<0.05）。IHC 和 WB 结果显示，CREB3L4 的蛋白表达量要明显高于癌旁组织（P<0.01），以上结果进一步提示 CREB3L4 与 RASEF 和 SLC38A2 之间的正相关调节。双荧光素酶实验结果显示，抑制 CREB3L4 表达后，RASEF 和 SLC38A2 组的荧光均值比值相对于对照组明显降低（P<0.01），初步证实 CREB3L4 可与 RASEF 和 SLC38A2 直接结合并正向调控它们的表达。临床相关性分析发现，CREB3L4、RASEF 和 SLC38A2 与 LCXW 的淋巴结转移情况和肿瘤病理分期存在相关性（P<0.05）。因此，CREB3L4 及其靶基因 RASEF、SLC38A2 对于 LCXW 的预后评估和治疗可能具有一定意义。

结论 CREB3L4 可能通过调控 RASEF、SLC38A2 的表达而在 LCXW 的发生发展中发挥重要作用。

不同溶血标本对荧光定量 PCR 快速新型冠状病毒核酸检测的影响

杜红飞
成都医学院第一附属医院

目的 2019-nCoV 感染可引起发热、咳嗽、肌痛或疲劳等，重症患者可出现呼吸窘迫综合征等临床表现。2019-nCoV 检测的影响因素众多，其中溶血性状的标本为不可忽视的重要因素。同时，由

于 2019-nCoV 核酸标本采集过程中存在采样人员手法的差异、被采集者鼻腔粘膜破损出血等情况，致血液和标本粘附鼻拭子上，进而可能存在溶血标本的情况。本文就是为了研究分析不同浓度溶血标本对荧光定量 PCR 快速新型冠状病毒核酸检测结果的影响。

方法 利用新型冠状病毒核糖核酸液体室内质控品（中值）模拟阳性标本，实时荧光定量 PCR 方法分别检测非溶血标本与不同模拟溶血标本（依据溶血程度，分为高溶血组，中溶血组，低溶血组）的循环阈值（Ct）值，采用统计学方法进行差异分析。

结果 未溶血与低溶血组的开放读码框 1ab(ORF1ab) 、核衣壳蛋白(N)基因扩增 Ct 值差异均无统计学意义(P > 0.05) ；未溶血与中溶血组的 ORF1ab、N 基因扩增 Ct 值差异均无统计学意义(P > 0.05) ；未溶血与高溶血组比较，溶血组的 ORF1ab、N 基因扩增 Ct 值差异无统计学意义(P > 0.05)，且当血红蛋白浓度达到 142g/L 时，新型冠状病毒核酸标本的 Ct 值>30，被抑制。

结论 通过本文的研究，为指导实验室检验人员在处理患者标本时,能够正确的评价标本因素对 2019-nCoV 核酸检测结果的影响，进而在临床工作中尽量避免对此类标本结果的误判，致临床的漏诊。同时，优化和提高 2019-nCoV 核酸检测标本的质量，对标本的检测结果提供正确、客观分析和合理的解释,避免不必要的临床纠纷。血红蛋白浓度低于 142g/L 的溶血标本对荧光定量 PCR 快速新型冠状核酸检测结果无明显影响。

PU-0449

1351 例地中海贫血基因检测结果及血液学表型分析

周晓萍
成都医学院第一附属医院

目的 地中海贫血是一组不同类型的血红蛋白疾病，其原因是正常珠蛋白链的产生减少或缺失。部分中间型和重型地贫常需规律输血标准治疗方法，如不治疗，患者常表现为中、重度贫血，可伴有肝脾肿大，发育迟缓等，严重者在青少年期死亡。规律输血能够控制住大多数病理状况，但同时也会引发一系列继发性疾病。世界各地对地贫的计划主要是避免重型患儿的出生，许多携带者都是在婚前或早孕阶段进行产前筛查，而近几年本地区地贫筛查才开始普及，成都北部地区地贫流行病学相关报道甚少，本文的目的就是为了了解本地区人群中地中海贫血基因型分布特点，分析 β-地中海贫血杂合子血液学表型与年龄的关系。

方法 选取 2017 年 6 月至 2020 月 12 月于成都医学院第一附属医院检测地贫基因疑似病例 1351 例，采用 PCR-反向斑点杂交法检测常见 α、β 地中海贫血，收集确诊病例的 MCV、MCH、MCHC、Hb 数据。β-地中海贫血杂合子按照年龄分为儿童组、成人组、老人组，比较各组间血液学表型的差异。

结果 在 1351 例检测标本中，确诊 523 例地中海贫血（38.71%），其中 α-地贫 260 例（19.25%），共检出 13 种基因型；β-地贫 252 例（18.65%），共检出 12 种基因型；α 复合 β 地贫 11 例，共检出 9 种基因型。研究发现 MCV、MCH 在儿童组、成人组、老人组呈明显上升趋势，MCHC 呈下降趋势，Hb 在老人组最低，差异具有统计学意义（p<0.05）。

结论 本地区 α-地中海贫血以--SEA/αα 基因型为主，β 地中海贫血以 CD41-42/N、IVS-II-654/N 基因型为主，且在 β-地中海贫血中，年龄与血液学表型呈显著的相关性，可在地中海贫血血常规初筛中提供一定的参考价值。

PU-0450

不同类型地中海贫血对糖化血红蛋白检测干扰的初探

方艳平
南方医科大学珠江医院

目的 高效液相色谱法具有较高稳定性和准确度，为目前临床中公认检测糖化血红蛋白金标准。通过回顾性分析不同类型地中海贫血对 HPLC 检测系统的影响。
方法 收集南方医科大学珠江医院 2017 年 3 月 1 号至 2019 年 4 月 10 号地中海贫血基因检测异常同时又有检测糖化血红蛋白的病例共 284 例，本文中的干扰是指糖化血红蛋白检测不出。
结果 β 地贫基因对糖化血红蛋白的干扰率显著大于 α 地贫基因（P<0.05），不能认为不同类型 α 地贫基因对糖化血红蛋白的干扰有差异（P>0.05），不同类型 β 地贫基因对糖化血红蛋白干扰有明显差异，CD56、CD22、中国型缺失型、SEA-HPFH(东南亚型)和双重杂合突变的干扰率为 100%，但 MCV 和 MCH 的水平却不相同。分析 β 地贫基因检测异常的糖化血红蛋白干扰组和不干扰组的年龄分布，干扰组和不干扰组的年龄有显著差异（P<0.05），干扰组的年龄大于不干扰组。分析不同疾病对糖化血红蛋白的干扰情况，糖尿病肾病组占比最大（45.3%），其他组间占比差异不大。
结论 对于年龄较大的 CD56、CD22、中国型缺失型、SEA-HPFH(东南亚型)和双重杂合突变的检出者，不建议检测糖化血红蛋白反映测定前 120 d 的平均血糖水平。

三种核酸提取方法在六种呼吸道病毒诊断中的比较

谢婷彦、周予婧
中南大学湘雅医院

目的 检测湘雅医院发热儿童呼吸道合胞病毒、腺病毒、副流感病毒Ⅰ型、副流感病毒Ⅲ型、甲型流感病毒和乙型流感病毒的流行率。评估离心柱法、磁珠法(普通型)和磁珠法(快速型)对呼吸道样本的核酸提取效果。
方法 收集 2021 年 3 月 1 日至 4 月 1 日就诊于中南大学湘雅医院的发热儿童咽拭子样本，使用离心柱法提取核酸，用荧光定量 PCR 方法检测六种呼吸道病原体；筛选出阳性样本，分别使用磁珠法(普通型)及磁珠法（快速型）提取核酸，检测核酸浓度和纯度，评估提取方法对六种呼吸道病原体检出的影响。
结果 研究期间，共收集到 236 例发热儿童的咽拭子样本，检测出阳性病毒数 35 例，总检出率为 14.83％。其中呼吸道合胞病毒检出率最高为 14 例（5.93％），其次依次为腺病毒 12 例（5.08％）、副流感病毒Ⅲ型 6 例（2.54％）、副流感病毒Ⅰ型 2 例（2.54％）、甲型流感病毒 1 例（0.4％），未检出乙型流感病毒。三种核酸提取方法获得的核酸浓度（以四分位数表示，单位为 ng/μL）分别为柱提法：22.8（11.86，22.35）、磁珠法(普通型)：12.05（8.12，19.55）、磁珠法(快速型）：14.75（11.85，22.35）（P＜0.05）。三种核酸提取纯度分别为柱提法：1.96（1.91，2.05）、磁珠法（普通型）：1.70（1.62，1.76）、磁珠法（快速型）：2.00（1.87，2.41）（P＜0.05）。离心柱法、磁珠法（普通型）、磁珠法（快速型）提取核酸进行检测的平均 CT 值分别为 28.78、29.95、30.42（P＜0.05）。
结论 六种呼吸道病毒的流行率普遍较低。三种核酸提取方法中离心柱法核酸提取相对完全，浓度及纯度较高，检测灵敏度高。磁珠法（快速型）对胍酸盐的处理能力较弱，影响扩增结果，可造成弱阳性标本的漏检。

PU-0452

一种同时纯化、富集及检测人体血清游离 DNA 的改性水凝胶

张臣、吴国球
东南大学附属中大医院

目的 cfDNA(cell-free DNA)是人体组织排放到血液里的 DNA 片段，不管是正常人还是病人都会发生，现在已经被广泛应用于常见染色体非整倍体无创产前检测(NIPT)、癌症早筛，癌症治疗，治疗后的分子标记物检测等。然而 cfDNA 在血液中含量极低（低至 14-45 ng/mL）以及其已被分解等特性使得临床诊断对其应用进展缓慢，因此对于检测方法的灵敏度及低浓度下定量精确度有较高要求。目前，常规的 cfDNA 纯化和检测方法有磁珠分选法，放射性免疫分析法、实时荧光定量 PCR、测序法等，但这些方法有的检测成本较高，有的方法复杂且需要特殊仪器。因此建立一种简单易行并能够纯化和检测人血清中目标 cfDNA 的方法具很大临床运用前景。
方法 本研究中，研究人员使用一种 DNA 改性水凝胶以及对应的特殊装置实现了人血清样本中的 cfDNA 的同时捕获、纯化、富集以及检测。
结果 该套系统对长度 20-100 bp 的单双链核酸的检测均有良好的灵敏度、特异度，可以检测到低至 10 pg/μL 的 DNA，在多次循环后甚至可以得到极其纯净的核酸。

PU-0453

葡萄球菌核酸酶样结构蛋白 1 在应激刺激下参与加工小体的聚集

邵洁、赵猛、任丽
天津医科大学肿瘤医院

目的 探讨葡萄球菌核酸酶样结构蛋白 1（SND1）在应激刺激下如何参与加工小体（P-body）的聚集以及如何调节应激反应。
方法 利用免疫荧光实验和激光共聚焦显微镜观察 HeLa 细胞中的 SND1 蛋白与 Ago2 蛋白和 Dcp1 蛋白在应激刺激下是否形成共定位加工小体。利用 RNA 干扰技术敲除 HeLa 细胞中 SND1 蛋白表达并利用 Western Blotting 检测蛋白表达水平，从而观察 SND1 低表达是否对加工小体的聚集产生影响。
结果 SND1 蛋白在应激刺激下与 Ago2 蛋白和 Dcp1 蛋白结合共同参与加工小体聚集。SND1 低表达不会抑制 Ago2 聚集到加工小体，但会减少加工小体的数量。
结论 SND1 蛋白在应激刺激下与 Ago2 蛋白和 Dcp1 蛋白结合共同参与加工小体聚集，从而调节细胞应激反应。

PU-0454

叶酸代谢相关酶基因 MTHFR（C677T）多态性与脑梗死的相关性研究

林丽娟
南方医科大学珠江医院

目的 探讨叶酸代谢过程中亚甲基四氢叶酸还原酶（MTHFR）基因 C677T 位点多态性与脑梗死的相关性。
方法 回顾性分析 2017 年 10 月至 2019 年 10 月广州市珠江医院 81 例脑梗死患者的 MTHFR 基因 C667T 位点检测结果，另选择同期本院 81 例进行叶酸代谢相关酶基因检测的健康体检者为对照组，

按 MTHFR 基因多态性分为野生型(C/C 型)、杂合型(C/T 型)、突变型(T/T 型)，分析不同基因型与脑梗死发生的关系。
结果 纯合突变型（T/T）的 MTHFR 在脑梗死组中的频率（30.9%）显著高于对照组（3.7%），差异有统计学意义（P＜0.05）；脑梗死组的亚甲基四氢叶酸还原酶 C/T 型和 C/C 型者和对照组无统计学意义（P＞0.05）
结论 亚甲基四氢叶酸还原酶 C677T 的 T/T 基因型与脑梗死显著相关，T/T 基因型可能是导致脑梗死发生的一个潜在独立危险因素。

PU-0455

G6PD 缺乏症患者基因多态性及与地贫的研究

林丽娟
南方医科大学珠江医院

目的 通过对葡萄糖-6-磷酸脱氢酶（Glucose-6-phoshate-dehydrogenase, G6PD）活性低于 1800 IU/L 的样本进行 G6PD 基因突变分析，了解常见的使 G6PD 酶活性降低的基因突变类型，并探究地贫患者突变与 G6PD 酶活性之间的联系。
方法 收集 2017 年 7 月至 2019 年 1 月在南方医科大学珠江医院酶速率法检测 G6PD 酶活性水平的样本 323 例；从中筛出用 GAP－PCR 法检测 α 地贫基因和反向斑点杂交(RDB) 法检测 β 地贫基因的标本 190 例；并对收集的 323 例的标本一致采用 Taqman 探针荧光定量方法检测 16 种中国人群中常见的 G6PD 基因突变型。
结果 1.在 G6PD 缺乏患者（活性<1300 U/L）中，男女性别比为 103:35；而在 G6PD 酶活性偏低（1300-1800 U/L）人群中，男女性别比为 4:17；两组间的差异有统计学意义。2. 在 130 例单纯一种突变型中分析，其中前四位的基因突变类型分别是 c.1388G>A（67 例，45.6%)，c.1376G>T（46 例，31.2%)，c.95A>G（16 例，4.8%)，c.871G>A（10 例，6.8%)。3. 在 G6PD 缺乏合并地贫的基因检测中，2 例酶活性临界值的女性均检测突变基因型。
结论（1）最常见的两种基因突变为 c.1388G>A 和 c.1376G>T。（2）130 例 G6PD 单纯突变型与 G6PD 酶活性相关性分析，结果发现，不同的基因突变型具有不同水平的 G6PD 酶活性，但没有发现 G6PD 酶活性与突变类型有关联。（3）在收集的 323 例标本中，有 190 例既做了酶法检测 G6PD 酶活性又做了地贫基因筛查的标本，发现无论是 α－地贫、β－地贫或 α+β－地贫，其 G6PD 活性都较无地贫组显著升高(P ＜ 0. 05)，其结果具有显著性差别。

PU-0456

两台荧光定量 PCR 仪检测 HBV-DNA 结果的一致性分析

孙春萍
联勤保障部队第九〇〇医院

目的 对联勤保障部队第 900 医院检验科 PCR 实验室的两台不同型号的荧光定量 PCR 仪（ABI-7500 和 ABI-ViiA7）进行性能评估，在两台仪器精密度，灵敏度，准确度均达到要求的情况下，对两台仪器检测的乙肝病毒 DNA 的结果进行比对分析，评估 ABI-7500 和 ABI-ViiA7 在乙肝病毒 DNA 定量检测方面是否具有一致性的结果。
方法 以 PCR 实验室的 ABI-7500 荧光定量 PCR 仪作为的参比仪器，以该仪器检测的 HBV-DNA 的结果作为参比结果，以 ABI-ViiA7 作为实验仪器，以该仪器检测的 HBV-DNA 的结果作为实验结果。分别通过精密度、灵敏度、准确度等性能验证方法验证这两台定量 PCR 仪器均符合临床检测的要求。其次通过比较两种不同型号仪器所检测的 HBV-DNA 定量值。最后将 30 份无溶血、无黄疸和脂血的新鲜血清标本在这两台仪器上进行扩增，比较分析乙肝 DNA 定量的结果。

结果 ABI-ViiA7 和 ABI-7500 这两台仪器的精密度、灵敏度、准确度均满足临床要求，通过比较 30 份血清标本的结果表明两台仪器检测 HBV-DNA 具有良好的相关性（R2=0.9919），并且两台仪检测的结果偏倚均在<±7.5%的范围。
结论 ABI-ViiA7 检测 HBV-DNA 具有良好的仪器性能，且 ABI-ViiA7 和 ABI-7500 这两种不同型号的仪器检测的 HBV-DNA 具有良好的一致性，ABI-7500 和 ABI-ViiA7 两台荧光定量 PCR 仪 HBV 定量检测的结果能为临床诊断提供一致性和可靠性的保障。

PU-0457

Systematic Analyses of the Role of the Reader Protein of N6-Methyladenosine RNA Methylation, YTH Domain Family 2, in Liver Hepatocellular Carcinoma

Xiangyang Shao
Department of Laboratory Medicine, Nanfang Hospital, Southern Medical University

Background YTH domain family (YTHDF) 2 acts as a “reader” protein for RNA methylation, which is important in tumor regulation. However, the effect of YTHDF2 in liver hepatocellular carcinoma (LIHC) has yet to be elucidated.
Methods We explored the role of YTHDF2 in LIHC based on publicly available datasets [The Cancer Genome Atlas (TCGA), International Cancer Genome Consortium (ICGC), and Gene Expression Omnibus (GEO)]. A bioinformatics approach was employed to analyze YTHDF2. Logistic regression analyses were applied to analyze the correlation between YTHDF2 expression and clinical characteristics. To evaluate the effect of YTHDF2 on the prognosis of LIHC patients, we used Kaplan–Meier (K–M) curves. Gene set enrichment analysis (GSEA) was undertaken using TCGA dataset. Univariate and multivariate Cox analyses were used to ascertain the correlations between YTHDF2 expression and clinicopathologic characteristics with survival. Genes co-expressed with YTHDF2 were identified and detected using publicly available datasets [LinkedOmics, University of California, Santa Cruz (UCSC), Gene Expression Profiling Interactive Analysis (GEPIA), and GEO]. Correlations between YTHDF2 and infiltration of immune cells were investigated by Tumor Immune Estimation Resource (TIMER) and GEPIA.
Results mRNA and protein expression of YTHDF2 was significantly higher in LIHC tissues than in non-cancerous tissues. High YTHDF2 expression in LIHC was associated with poor prognostic clinical factors (high stage, grade, and T classification). K–M analyses indicated that high YTHDF2 expression was correlated with an unfavorable prognosis. Univariate and multivariate Cox analyses revealed that YTHDF2 was an independent factor for a poor prognosis in LIHC patients. GSEA revealed that the high-expression phenotype of YTHDF2 was consistent with the molecular pathways implicated in LIHC carcinogenesis. Analyses of receiver operating characteristic curves showed that YTHDF2 might have a diagnostic value in LIHC patients. YTHDF2 expression was associated positively with SF3A3 expression, which implied that they may cooperate in LIHC progression. YTHDF2 expression was associated with infiltration of immune cells and their marker genes. YTHDF2 had the potential to regulate polarization of tumor-associated macrophages, induce T-cell exhaustion, and activate T-regulatory cells.
Conclusion YTHDF2 may be a promising biomarker for the diagnosis and prognosis of LIHC and may provide new directions and strategies for LIHC treatment

PU-0458

Nasopharyngeal carcinoma diagnosis based on a single-cell Raman-based platform

Dan Xiong、Wei Wu、Dayang Chen、Xiaowen Dou、Xiang Ji、Xiuming Zhang
Medical Laboratory of The Third affiliated hospital of ShenZhen university, Shenzhen, 518001, China;

Nasopharyngeal carcinoma is a kind of head and neck cancer with a high degree of malignancy, which is easy to relapse and metastise. Traditional testing relying on immunofluorescence or fluorescent in situ hybridization were proved to be tedious and expensive. Accurate, quick, and intact diagnosis is important for improving the survival rate of those patients with nasopharyngeal carcinoma. A Raman-based cell assay is a promising tool for evaluating cancer progress. because it can provide abundant varied compound fingerprints of cancer cells in comparison with normal cells, Herein, we developed an efficient and accurate method on a label-free and noninvasive single-cell Raman microspectroscopy (SCRM) platform, to distinguish NPC cell lines 5-8F,6-10B, SUNE1, CNE1, CNE2, C666-1, HK1 from nasopharyngeal normal cell line NPEC1-BMI1. NPC cancer cells and non-cancer cells can be differentiated by analyzing their intrinsic phenotypic Raman spectra at a large scale (5337cm-1 Raman spectra in total). The Raman spectra of glycogen, nucleic acids, and tyrosine in NPC cancer cells were significantly higher than those in non-cancer cells. However, the Raman spectra of lipids in NPC cancer cells were significantly lower than those in non-cancer cells. Those results are consistent with the high expressions of glycogen, nucleic acids, and tyrosine and low expression of lipid in NPC cancer cells. Support Vector Machine (SVM) analysis distinctly differentiates NPC cancer cells from non-cancer cells with 97.85% accuracy. Nasopharyngeal tissues were also clearly distinguished from control tissues with 93.95% accuracy. Together, our study developed an efficient SCRM-based method to evaluate the cells canceration of nasal tissue in advance which shed light on established quick and accurate diagnose during surgery of Nasopharyngeal carcinoma. As a complementary tool, the platform was expected to view the real-time dynamic cancerization status and contributed to improving the diagnosis and operation effects.

实时荧光定量 PCR 检测乙型肝炎病毒 DNA 的方法学性能验证

张鸿娟
昆明医科大学第一附属医院

目的 建立实时荧光定量 PCR 的方法学性能验证方案，并验证实时荧光定量 PCR 检测乙肝病毒 DNA 的方法学性能。
方法 采用试剂厂家所提供的标准品和临床标本进行系列稀释，将所得到的循环阈值与浓度的对数进行直线回归，进行分析测量范围的性能验证；采用接近定量检测限的标本进行倍比稀释，每个浓度标本分为 16 份，分别进行 DNA 提取，以每份浓度样本的检出率和浓度的对数进行概率分析验证最低检出限；选择分析测量范围内高（105IU/mL）、低(103IU/mL)两水平样本，每天平行测定 4 次，连续测量 5 天进行精密度验证。
结果 实时荧光 PCR 检测乙型肝炎病毒 DNA 的分析测量范围为 1.2×103 IU/mL～1.2×107IU/mL；高、低浓度样本批内标准差（浓度取对数）分别为 0.156 和 0.235，总标准分别为 0.221，0.238；最低检出限为 5.2×102IU/mL。
结论 建立的实时荧光定量 PCR 方法学性能验证的方案科学、实用具有可操作性。

PU-0460

Development and internal validation of prognostic nomograms for I-III stage colon cancer patients with preoperative serum normal CEA range

Ming Lei
Yunan Tumor Hospital

Background Although a number of studies have been conducted to investigate factors affecting colon cancer patient overall survival (OS) after surgical treatment, no effective clinical prognostic risk models have been proposed for predicting CC patient with preoperative serum CEA in normal range. We aimed to identify factors affecting the survival of the patients and to construct a nomogram for predicting their survival.
Methods This was a retrospective study. This study used the Colorectal Cancer database of Official Follow-up System of Yunnan Cancer Center, which contains retrospectively collected data of all consecutive patients with stage I to III colorectal cancer who underwent surgical curative resection between 2013 and 2017. We used univariate Cox regression analysis to select the significant prognostic features, which were subjected to the least absolute shrinkage and selection operator (LASSO) regression algorithm for feature selection. Then, the nomogram was used to estimate 1-, 3- and 5-year OS based on the multivariable Cox regression model. Model were established using a training cohort (n=220) and internal testing cohort (n=220). Training cohort stratification was performed by X-tile and Evaluate Cutpoints to assess the predictive capacity of the nomogram. The predictive accuracy was measured by concordance indexes (c-indexes) and calibration values of the nomograms. Evaluation was measured by decision curve analysis (DCA).
Results The multivariate analyses showed that preoperative primary tumor site, differentiation, N stage, and serum CA125 were incorporated into the predictive nomogram. In the training cohort, the preoperative nomogram provided good discrimination, achieved a C-index of 0.811 (95%CI: 0.742-0.882) in predicting OS for training cohort and 0.811 (95%CI: 0.742-0.882) for testing cohort. The timedepended ROC curve was plotted for 1-year nomogram AUC was 0.743, 3-year nomogram AUC was 0.873, and for the 5-year nomogram AUC was 0.823 in the training cohort, while in the testing cohort was 0.863, 0.892, and 0.823. Calibration of the nomogram predicted the probabilities of 1-, 3- and 5-year survival, which corresponded closely with the actual survival rates. The survival curves stratified by the risk score calculated by the nomogram were almost identical for the training and testing cohorts preventing potential loss of information. There was no significant difference at TNM stage I, but there was significant difference at low-risk, intermediate-risk, and high-risk groups in TNM stage II and III.
Conclusion This novel prognostic model showed more accurate predictions of individualized survival in our cohort, but it it recommended to be used in conjunction with AJCC TNM system. In conclusion, this study developed a novel nomogram with good accuracy to aid physicians in estimating the risk of 1-, 3- and 5-year CC in patients starting surgical therapy stratify patients with CC into different risk groups.

PU-0461

叶酸配体靶向 PCR 法定量检测循环肿瘤细胞在非小细胞肺癌临床诊断中的初步研究

刘祥琴
四川省医学科学院·四川省人民医院

目的 循环肿瘤细胞（CTC）的定量检测对肿瘤患者的早期筛查和诊断至关重要。为了研究循环肿瘤细胞对非小细胞肺癌诊断的临床意义，我们采用叶酸配体靶向 PCR 定量检测法对循环肿瘤细胞进行初步研究。
方法 收集 174 例非小细胞肺癌患者和 117 例肺部良性病患者的外周血样本进行实验，以病理检查结果为金标准评估该液体活检方法用于肺癌临床诊断的准确性。通过免疫磁珠筛选去除白细胞使 CTC 得到富集，然后用肿瘤特异性配体——寡聚核苷酸复合物对 CTC 进行标记，洗涤去除多余的未结合复合物，并将与 CTC 结合的复合物洗脱下来进行实时定量 PCR 检测。
结果 按照试剂说明书规定以 8.7CU 作为区分阳性与阴性的阈值，该方法对 I/II 期、III 期和 IV 期患者的检出率分别为 48.3%（29/60）、82.6%（57/69）和 84.4%（38/45）。以肺部良性病患者作为对照组，则该方法对癌症患者的检测灵敏度和特异性分别为 71.3%和 29.6%。
结论 叶酸配体靶向 PCR 定量检测法能够较敏地对非小细胞肺癌患者 CTC 进行定量检测，对肺癌特别是早期患者的临床分期具有潜在应用价值。但特异性较差，需结合病理结果和影像学结果进行进一步确诊。

PU-0462

Prediction of ovarian reserve and clinical pregnancy rates by FSHR Asn680Ser and LHCGR Asn312Ser gene polymorphisms

Xiangqin Liu 、Chun Guo
Sichuan Provincial People's Hospital

Purpose The purpose of this study was to investigate whether the polymorphisms of FSHR (Asn680Ser) and LHCGR (Asn312Ser) can predict ovarian reserve and ovarian response, and the relativity between the polymorphisms and the POSEIDON groups.
Methord 210 infertile women, including 103 low prognosis women were enrolled in this prospective study. The gene polymorphisms were analyzed by Sanger method for direct sequencing. The clinical parameters were statistically analyzed based on genotypes.
Results The frequency of heterozygous and homozygous G allele FSHR Asn680Ser in the low prognosis group was significantly higher than that in normal and high response groups, and there was no significant association between LHCGR Asn312Ser and ovarian response. Moreover, the serum anti-Müllerian hormone (AMH) concentrations, antral follicle count (AFC), oocytes retrieved, MII oocytes, and 2PN oocytes in patients with FSHR Asn/Ser were significantly lower than those with FSHR Asn/Asn. The serum luteinizing hormone (LH) concentrations and clinical pregnancy rate of fresh embryo transfer in patients with LHCGR Ser/Ser were significantly higher than that of the Asn/Ser genotype. In the POSEIDON groups analysis, the low prognosis women with FSHR Asn/Asn were more likely to appear in subgroup 1.
Conclusion In conclusion, our study observed that there was a significant association between the polymorphism of FSHR Asn680Ser and ovarian response. FSHR Asn680Ser Ser/Ser can predict good ovarian reserve, and the LHCGR Asn312Ser gene polymorphisms can be a potential opportunity for all included infertile women to undergo clinical pregnancy for COH. In order to reduce the heterogeneity of POR population, our study adopted POSEIDON groups and

analyzed the correlation between POSEIDON groups and genetic biomarkers. Low-prognosis infertile women with FSHR Asn/Asn genotype were more likely to have better ovarian reserve and prognosis, While using LHCGR Asn312Ser, Asn/Ser is better than Ser/Ser in ovarian response. However, these results are limited owing to the sample size, grouping, ethnicity and region. Larger sample size, and multi-center and multi-ethnic studies are required in future studies.

PU-0463

提升 EB 病毒核酸检测灵敏度对辅助判断鼻咽癌患者疾病进展的意义探讨

杨伊、蔡贞
南方医科大学南方医院

目的 提高鼻咽癌患者血浆 EB 病毒核酸检测灵敏度，初步探究其对患者的疾病进展和治疗效果的临床意义。
方法 使用 EB 病毒核酸检测试剂测定临床确诊的鼻咽癌患者血浆中 EBV DNA 含量。收集 2020 年 9 月至 12 月使用试剂 A 检测结果为 EBV DNA 低于检测下限（500copies/ml）样本 366 例，使用检测下限为 100copies/ml 的试剂 B 进行 EBV DNA 测定，跟踪随访 4~7 个月,记录患者的病情发展及治疗情况并继续监测其血浆 EBV DNA 拷贝数，分析 EBV DNA>100copies/ml 与患者疾病复发或转移的相关性。使用试剂 B 检测 2021 年 3 月至 5 月确诊鼻咽癌患者血浆 EBV DNA，比较以 500copies/ml、100copies/ml 为临界值患者血浆 EBV DNA 阳性率，探讨提高检测灵敏度对临床的指导意义。本次研究采用了磁吸附法对血清中 EBV DNA 进行纯化，实时荧光定量 PCR（qPCR）法对病毒载量进行检测，运用统计学知识对数据进行分析。
结果 使用试剂 B 检测收集到的患者血浆，以 100copies/ml 为临界值，阳性率约为 8.81%（23/261）。通过病例资料随访显示，23 例阳性样本中预后不良者占 56.52%，阴性预后不良者占阴性样本的 4.20%，两组数据的差异具有统计学意义（P<0.01）；男性阳性样本患者比阴性样本患者预后更差；中晚期阳性患者比阴性患者预后更差。试剂 B 检测的 2021 年 3-5 月确诊鼻咽癌患者血浆，以 500copies/ml、100copies/ml 作为临界值，阳性率分别约为 7.81%（31/397）、16.12%(64/397)，提高检测灵敏度后，患者血浆阳性率是提高前的 2.06 倍。
结论 提升 EBV DNA 的检测灵敏度，能更灵敏地反映鼻咽癌患者体内 EB 病毒的变化，及时发现患者体内的病毒残留，有助于临床对鼻咽癌患者复发及转移实施更及时和有效的治疗。

共聚焦显微拉曼光谱鼻咽癌检测中的研究进展

王雪[2]、王萌萌[1]、张秀明[1]、熊丹[3]
1. 深圳市罗湖医院集团医学检验科
2. 深圳市罗湖医院集团医学检验科
3. 深圳市罗湖医学集团医学检验科

中国是鼻咽癌新发病例最高的国家，作为头颈部恶性肿瘤，鼻咽癌严重威胁居民健康。早期鼻咽癌对放化疗敏感，生存率可达 90%。但由于鼻咽癌发病隐匿，现有技术难以实现早期诊断，故灵敏准确的鼻咽癌早期无创检测技术对鼻咽癌的防治及预后评估意义重大。共聚焦显微拉曼光谱技术是将拉曼光谱技术与共聚焦显微分析技术结合起来的一种检测方法，可以提供细胞、组织或体液的化学指纹信息，具有灵敏度高、非侵入性、免标记、水干扰性小等优势。共聚焦显微拉曼光谱在肿瘤细胞间细微差异的检测及肿瘤生物标志物探索方面具有重要的应用价值。本文综述了当前共聚

焦显微拉曼光谱在鼻咽癌检测中的应用现状及研究进展，探讨其成为鼻咽癌临床诊断方法的价值及前景。

PU-0465

Serum exosome concentration as a differential diagnosis marker for pulmonary

Taixue An 、Dehua Sun、Lei Zheng
Nan Fang Hospital

Introduction The 5-year survival rate of Non-small cell lung cancer (NSCLC) patients was less than 16%. Pulmonary tuberculosis (pTB) is the disease most commonly misdiagnosed as lung cancer. A bulk of time and medical resources were consumed on distinguishing two diseases. Previous researches reported that EVs level will increase dramatically in tumorigenesis. However the EVs level in pTB patients has not been determined. We suppose that serum EVs level of pTB patients may be different from cancer patients for their low immunity and weak physical conditions. Serum EVs concentration may sever as a diagnostic marker to distinguish two diseases.
Method We recruited volunteers from the Nang Fang Hospital, including 3 groups: NSCLC (n = 90), pTB (n = 55) and healthy individuals (n = 22). NSCLC patients were diagnosed by pathological biopsy, and pTB patients were diagnosed based on acid-fast staining of sputum smears. Subjects without lung shadows in X-ray tests, a history of tuberculosis, or obvious symptoms of illness were enrolled into healthy group. Chemical reagent was utilized to precipitate EVs from serum. Isolated EVs were characterized by western bloting and electron microscope. The concentration and diameter were measured by the Nanoparticle Tracking Analysis (NTA). Our research was approved and supervised by the Medical Ethics Committee of hospital.
Result We compared levels of serum EVs concentration in pTB, NSCLC, and healthy group. Decreased EVs concentration in pTB patients and smaller EVs diameter in NSCLC patients with advanced stage were observed. With a cutoff of 7.7×1012/ml, the AUC of serum EVs concentration reached 0.83 for discriminating pTB and total NSCLC, which is significant higher than commonly used markers like CEA, CRP and WBC. It seems that serum EVs concentration is not correlated with individual age, sex, CEA, CRP and WBC.
Summary These findings suggest that the serum EVs concentration is significant different among pTB, NSCLC, and healthy individuals, and may serve as a potential marker for the differential diagnosis of two diseases thereby aiding clinicians and decreasing the incidence of misdiagnosis.

43 种白血病融合基因在儿童急性白血病患者中的表达及临床意义

梅 茜
滨州医学院烟台附属医院

目的 本研究通过统计 43 种常见白血病融合基因在儿童白血病患者中的表达情况，分析儿童急性白血病的分子遗传学与临床表现及预后的关系，为进一步加强白血病融合基因用于临床治疗白血病和预后评估提供相应支持。
方法 本研究收集与分析 2018.10.01 至 2019.10.31 一年间医院收治的儿童白血病患者共 52 例患儿的临床资料，主要通过 PCR 实时荧光探针检测方法检测融合基因，采用流式细胞仪检测免疫分型，

以及收集患者骨髓细胞学，血常规等检验结果，（该 52 例患儿均进行了 43 种白血病常见融合基因检测）。
结果 52 例患儿中诊断为 ALL28 例，AML9 例（其中 APL3 例），12 例阴性（另有 3 例无法分型），43 种白血病常见融合基因检测阳性 16 例，总阳性率为 30.7%，包括 TEL-AML1 融合基因 5 例，AML1-ETO 融合基因 3 例，PML-RARα 融合基因 3 例，MLL-AF9 融合基因 2 例，MLL-AF4 融合基因 1 例，E2A-PBX1 融合基因 1 例，NPM-ALK 融合基因 1 例。
结论 采用 PCR 实时荧光探针技术检测融合基因可作为白血病诊断,个体化用药指导，白血病分型、白血病预后评估、临床治疗方案选择，及靶向药物研发的重要依据，也可作为高灵敏度监测 MRD 的分子标志。

Genital human papillomavirus prevalence and genotyping among males in Putuo district of Shanghai, China 2015-2019

Xiaoxiao Li、Fenfen Xiang、 Zixi Chen、Tao Zhang、Zhaowei Zhu、Mengzhe Zhang、Rong Wu、Xiangdong Kang
Laboratory Medicine, Putuo Hospital, Shanghai University of Traditional Chinese Medicine

Background Reports of human papillomavirus (HPV) infection status and genotype-distribution in Chinese men are limited, and men in China have not been recommended for HPV vaccine yet.
Material and Methods We retrospectively reviewed the prevalence and genotyping of male genital HPV in Putuo district of Shanghai, 2015-2019. A total of 1227 male patients (aged 17 to 81 years) attending the dermatology and sexually transmitted disease (STD) clinics at Putuo District Center Hospital were included. Genital exfoliated specimens were obtained for detection and genotyping 27 HPV types by Luminex-based multiplex assay.
Results We found that the prevalence of any HPV was 65.5% (804/1227), and the rate of multiple infection was 25.8% (317/1227). Five main detected types were HPV-6 (32.0%), -11 (23.2%), -16 (5.6%), -43 (4.3%) and -59 (4.0%). In all detected HPV genotypes, 65.5% (875/1336) were nine-valent (9v) HPV genotypes. No significant differences were observed in the detection rate of HPV infection over the studied five years ($P > 0.05$). The ≤24 (70.7%) and ≥55 (72.9%) years old groups showed higher infection rates, and significant differences were detected in rates of low-risk HPV infection in different age-stratified groups ($P < 0.05$). The prevalence of HPV infection among patients with warts (74.4%) was significantly higher than those with other clinical characteristics (40.4%) and physical examination (63.6%).
Conclusions Our study suggested that more than half of Chinese male patients have detectable HPV infections, and penis-genital and anogenital warts were the most common clinical manifestation encountered in patients with HPV infections. Moreover, currently available 9v HPV vaccine covered the most frequently observed HPV types among men.

PU-0468

流行性感冒的季节分布特征分析

张小燕
滨州医学院烟台附属医院

目的 通过探讨本医院 2017 年～2019 年流行性感冒发病的季节分布特征，可进行流行病学的调查研究以及为预防流行性感冒的流行提供参考依据。

方法 收集 2017 年～2019 年医院采用 PCR 核酸检测技术对患者咽拭子进行流感病毒核酸检测的阳性患者共有 351 例，用圆形分布法分析流行性感冒发病的高峰日以及高峰期。
结果 （1）所在实习医院流行性感冒发病有很强的季节性，季节性分布特征为:主要为冬季高发，每年的 1、2、3 月份和 11、12 月份为发病高峰期，其它月份较少或者流感发病患者例数为 0，其中总的流感流行高峰期为 12 月 29 日至次年 4 月 13 日，总高峰日为 2 月 20 日。（2）2017 年和 2018 年所在医院流感发病水平较低，2019 年流感发病人数较多。
结论 2017 年-2019 年所在医院流行性感冒发病存在很强的季节分布特征，每年 12 月至次年 4 月为流行性感冒发病的流行高峰，这段时间正处于冬季，人们容易发病，尤其是学生正处在放寒假回家和返校期间，因此可根据流感发病的高峰期采取有效的预防措施。

PU-0469

烟台地区 PCR 检测 HPV 感染结果分析

邹子涵
滨州医学院烟台附属医院

目的 对烟台地区下生殖道感染女性患者人乳头瘤病毒（Human papilloma virus,HPV）感染的检测结果进行探讨，以了解烟台地区不同年龄的女性 HPV 的感染情况和基因型分布。
方法 选取本医院从 2016 年 1 月至 2019 年 12 月四年的 5599 例女性为研究对象，采集宫颈脱落细胞作为标本，通过多重荧光 PCR 技术对 23 种 HPV 基因型进行分型检测。
结果 HPV 基因检测总阳性率为 16.38%（917/5599），其中高危感染率为 12.95%，感染亚型 52 、16、58 为主分别占总感染人数的 15.28%、15.19%、9.51%。；低危感染率为 2.80%，感染亚型以 42，6，44 为主，分别占中感染人数的 6.59%、4.84%、4.51%。不同年龄组的分布显示 30-40 岁阳性率最高（33.70%）两边呈现下降走向。其中多重感染有 198 人，多集中于 20-30 岁（31.82%；63/198）。
结论 烟台地区女性 HPV 感染以单一感染为主，感染趋势有年轻化的倾向。

PU-0470

GINS2 促进子宫内膜癌增殖和凋亡作用的研究

罗建波
云南省肿瘤医院

目的 本研究旨在从基因和蛋白水平上研究 GINS2 在子宫内膜癌组织中的表达水平，阐明 GINS2 在子宫内膜癌肿瘤细胞增殖和凋亡中可能发挥的作用，为深入研究子宫内膜癌发生发展的分子机制奠定基础，同时为子宫内膜癌的基因诊断和治疗提供新的靶点。
方法实时荧光定量 PCR(RT-PCR）、免疫组织化学法（IHC）。
结论 1 GINS2mRNA、GINS2 蛋白在子宫内膜癌组织中均高表达提示 GINS2 对癌细胞的核酸复制有促进作用，可以调控子宫内膜癌细胞恶性转化，促进子宫内膜癌肿瘤细胞生成过程。
2 子宫内膜癌组织中 GINS2 的高表达与子宫内膜癌患者的年龄、病理类型、病理分级、临床分期、淋巴结转移、肌层侵犯深度和脉管浸润无明显相关性， GINS2 在子宫内膜癌中恒定的高表达，提示 GINS2 可作为子宫内膜癌基因诊断的靶点。
3 Bcl-2、Bax 、CHK2 蛋白在子宫内膜癌组织中的表达水平明显升高，GINS2 与 Bcl-2、CHK2 的表达水平存在正相关，且 GINS2 与 Bcl-2/ Bax 的比值呈正相关。提示 GINS2 通过调节 Bcl-2、CHK2 表达水平，使 Bcl-2、CHK2 表达上调，促进子宫内膜癌细胞增殖抑制其凋亡，发挥促癌作用。其具体的作用机制有待在细胞水平及体外实验进一步探究。

PU-0471

4 个循环 miRNAs 在甲状腺乳头状癌中的诊断意义及与临床病理特征的关系

梁良、李德璇、张晓珺、汪坚、沈乾
云南省第三人民医院

目的 研究 4 个循环 miRNAs 在乳头状甲状腺癌（PTC）中的鉴别诊断的临床意义及与临床病理特征的关系。
方法 选取 2019 年 6 月至 2020 年 6 月在云南省第三人民医院接受甲状腺手术的 PTC 患者 150 例，甲状腺良性病变患者 50 例，健康人 50 例，分别检测外周循环血中 miRNA-21，miRNA-222，miRNA-146b 以及 miRNA-7 的相对表达量。分析 4 个循环 miRNAs 在三组中的表达差异，并分析 4 个循环 miRNAs 与 PTC 临床病理特征的关系。
结果 miRNA-21，-222，-146b 以及 miRNA-7 在 PTC 病变组，甲状腺良性病变组及正常组三组内任意两组之间差异具有统计学意义（P<0.05）。血浆 miR-21、miR-146b 和 miR-7 用于鉴别诊断 PTC 和甲状腺良性病变的诊断价值一般（AUC=0.671、0.629、0.649）；而血浆 miR-222 的鉴别诊断价值良好（AUC=0.953，敏感度 84%，特异性 91.3%）。miR-21、miR-146b、 miR-222 和 miR-7 四者联合指标用于鉴别诊断 PTC 和甲状腺良性病变诊断价值高于 miR-222 单项指标（AUC=0.977，敏感度 90%，特异性 93.3%），特异性高，敏感度强，诊断性较强。miRNA-146b 表达水平与是否有淋巴结转移有相关性（P<0.05）；miRNA-222 与肿瘤分期有相关性（P<0.05）。
结论 miR-146b 与 miR-222 与 PTC 的发展进程相关。血浆 miR-222 可以帮助临床进行 PTC 和甲状腺良性病变的鉴别诊断，减轻病人的痛苦，miRNA-21，-222，-146b 以及 miRNA-7 四者联合指标的诊断效果更好。

PU-0472

MALDI TOF 质谱成像在临床肿瘤组织研究中的应用

卢兆莲
山东大学第二医院

肿瘤是一种高度复杂的组织，由许多不同类型的细胞形成，每种细胞都具有特定的目的，相互之间通过复杂的相互作用而连接，它包含了关于形态、基因组学、蛋白质组学和脂质组学等改变的所有信息。但基于传统的方法很难进行全面评估。基质辅助激光解吸/电离（Matrix-assisted laser desorption/ionization , MALDI）质谱成像（Imaging Mass Spectrometry, IMS）是原位生物分子空间分辨分析的强有力工具。MALDI IMS 能够可视化和测定组织、细胞和微生物区域特异性的、时间性变化的蛋白、多肽、脂质、药物分子和代谢物。这些为研究人员提供了一种新的发现人类疾病潜在生物标志物和解释代谢调节基础生物学的途径，从而使人类健康达到一个新水平。

内皮型一氧化氮合酶增强子 AVE3085 逆转同型半胱氨酸诱导的人乳内动脉内皮功能障碍

张茜、侯敏
天津市胸科医院检验科

同型半胱氨酸(Hcy)是心血管疾病内皮功能障碍的独立危险因素。我们提出假说，eNOS 转录增强子 AVE3085 可以保护人乳内动脉(IMA)中因 Hcy 受损的内皮功能。在肌电图仪中，在不存在/存在 Hcy(100 μmol/L)和/不存在 AVE3085(30 μmol/L)的情况下，使用 U46619(-8 log mol/L)预收缩的冠状动脉手术患者的 IMA 中建立乙酰胆碱（-10 至-4.5 log mol/L）或硝普钠的累积浓度-舒张曲线。RT-qPCR 和 ELISA 定量 eNOS 的 mRNA 和蛋白水平。采用比色法检测一氧化氮(NO)的生成。Hcy 可显著减弱人乳内动脉的最大舒张。与 AVE3085 共孵育可保护内皮免受 Hcy 的损害，并增加 NO 的生成。Hcy 作用 24h 下调 eNOS 蛋白表达($P < 0.05$)而在 mRNA 水平上调 eNOS 的表达($P < 0.05$)。除 Hcy 外 AVE3085 的存在显著增加 eNOS 蛋白($P < 0.05$)，轻微降低 mRNA 水平。该研究首次揭示，在人血管(IMA)中临床相关的高浓度 Hcy 通过下调 eNOS 蛋白生成直接引起内皮功能障碍，可能被 AVE3085 逆转。这些发现不仅为冠状动脉搭桥术中保护内皮，提高移植物的长期通畅率提供了新的方向，而且为 eNOS 增强子在各种病理状态下内皮功能障碍患者中的应用提供了证据。

PU-0474

清远地区生殖道沙眼衣原体和淋病奈瑟菌感染情况分析

周鹏、罗瑛、周美芳、刘艳枚、林金端、尹卫国
清远市人民医院

目的 探讨清远地区生殖道分泌物沙眼衣原体（CT）和淋病奈瑟菌（NG）感染于生殖道炎症及不孕不育之间的相关性分析。
方法 采用实时荧光定量 PCR 对 28762 例女性妇科炎症患者、不孕不育患者和健康体检者的生殖道分泌物和 12655 例男性尿道感染患者、不孕不育患者和健康体检者的尿道分泌物进行 CT、NG 的检测。
结果 女性 CT 总感染率为 8.00%、NG 总感染率为 1.12%，其中妇科炎症患者中 CT 感染率 10.37%和 NG 感染率 2.39%、不孕不育患者中 CT 感染率 6.34%和 NG 感染率 0.33%、健康体检者 CT 感染率 10.46%和 NG 感染率 1.06%；男性 CT 总感染率为 11.17%、NG 总感染率为 10.21%，其中尿道感染患者中 CT 感染率 30.33% 和 NG 感染率 42.39%、不孕不育患者中 CT 感染率 3.43%和 NG 感染率 0.28%、健康体检者 CT 感染率 9.94%和 NG 感染率 1.47%，三个组份中 CT 感染率和 NG 感染率的差异性具有统计学意义，且均是尿道感染患者组感染率最高；各年龄组 CT、NG 的感染率不论是女性还是男性，其差异性均具有统计学意义，且以 25 岁以下人群感染率较高，同时男性就诊者 CT 感染率和 NG 感染率各年龄段均高于女性。
结论 生殖道 CT、NG 感染是导致生殖道感染性疾病和不孕不育的重要因素，且男性的感染率高于女性，重视 CT、NG 的常规检验对治疗生殖道炎症和不孕不育具有重要意义。

PU-0475

Performance Verification of Five Commercial RT-PCR Diagnostic Kits for SARS-CoV-2

Mei Yang
Department of Laboratory Medicine, Shengjing Hospital of China Medical University

Background Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2), which has caused a global pandemic, can be detected by reverse-transcription quantitative polymerase chain reaction (RT-PCR). However, owing to the urgent need of these detection kits in large numbers, the duration for research and development with regard to the kits has been shortened during the epidemic, and the kits that are being used commercially have not undergone full and independent evaluation. To ensure the accuracy of the SARS-CoV-2 test results, performance verification of commercial RT-PCR kits is required.
Methods The performance of five commercial RT-PCR diagnostic kits for SARS-CoV-2 used in China, namely, reagents A, B, C, D, and E, was evaluated using a COVID-19 RNA liquid performance verification reference product—manufactured by Guangzhou Bondson (BDS) Biotechnology Co., Ltd—that uses the droplet digital PCR combined with the fluorescence quantitative PCR method. The performance verification criteria included the coincidence rate, limit of detection (LoD), specificity, precision, and anti-interference.
Results The coincidence rate for reagent C was 95%, while that for all the other reagents was 100%. The LoD for reagent A was 5.00E+02 copies/ml, 1.00E+03 copies/ml for reagent B, and 2.50E+02 copies/ml for both reagents D and E. Reagent C was not able to detect its advertised LoD of 500 copies/ml. The results for the cross-reactivity tests were all negative, which indicated specificity. Moreover, all kits had a coefficient of variation less than 5%; however, reagent B kits showed the best precision. Reagents A, B, and D showed higher sensitivity to N gene than they did to ORF1ab. The anti-interference results for all five kits were positive.
Conclusions Except for reagent C, all commercial RT-PCR diagnostic kits for SARS-CoV-2 passed the performance verification. This study can provide guidance for the selection or optimization of RT-PCR diagnostic test kits for SARS-CoV-2.

PU-0476

HCV 核心基因的深度基因组测序用于 HCV / HIV 共感染患者的 HCV 亚型分析

雷胡芯、廖璞
重庆市人民医院

目的 HCV 感染是引起肝炎的重要病原体。随着生活水平和习惯的变化，HCV 的感染率越来越高，甚至出现了更多的亚型，并且发现 HCV / HIV 共感染的患者体内的 HCV 亚型与当前的流行病不一致，合并有多种亚型，这对于诊断和治疗非常不利。通过研究 HCV / HIV 共感染患者的 HCV 亚型和亚型的比例，可以推断出 HCV 流行如何受到 HIV 感染的影响，以及如何为 HCV 引起的并发症提供临床诊断和治疗。
方法 通过收集 HCV / HIV 共感染患者的血清样本，用 RT-PCR 扩增 HCV 核心基因，并通过凝胶回收提高其浓度。首先通过琼脂糖凝胶电泳确定核心基因，然后将其送去纯化和深度测序。最后，用 MEGA 6.0 分析了 HCV 亚型系统发育树和亚分析类型比。
结果 我们发现样本 1、5、9、10、12、14 和 15 中同时存在两种或两种以上的亚型，与 HCV 感染的患者通常通常只感染一种亚型基因并不匹配。 HCV 的各种基因型显示出不同的治疗效果， GT 2 和 GT 3 的患者可以实现 70-80％的较高 SVR，而 GT 1 和 GT 4 的患者具有较低的 SVR（40-50％），这可能是由于不同的 GT 和宿主细胞因子对 HCV 的致病性和复制能力不同所致。

结论 在中国，目前慢性 HCV 感染患者的护理标准（SOC）是聚乙二醇干扰素 α 和利巴韦林的组合。但是，在现阶段，针对囚犯的 HCV 抗感染药物治疗仅是基本治疗。正是因为 HCV 感染后这些囚犯用药的基本性，不合规定性和不合规定性可能导致其亚型感染的多样性。

PU-0477

葛根素减轻顺铂引起的急性肾损伤及上调 MIR-31 相关信号研究

吴镇
山东大学第二医院

目的 顺铂(DDP)是一种常用的化疗药物，但其使用的副作用，特别是急性肾损伤(AKI)，限制了其临床应用。葛根素是从中药葛根中提取的天然黄酮类化合物，已被报道可减轻 DDP 引起的肾毒性。然而，葛根素调控 AKI 微 RNA(MIR)-31 介导的信号通路的机制尚不清楚。
方法 通过逆转录-定量 PCR 和 westernblot 分析，研究葛根素在 DDP 诱导的 AKI 大鼠模型中的作用。结果表明，DDP 在体外和体内均以浓度依赖性的方式上调了 MIR- 31 的水平，此外，DDP 显著提高了血尿素氮和丙二醛含 量、血清肌酐和组织病理学变化，同时显著降低了肾脏组织中超氧化物歧化酶、过氧化氢酶和谷胱甘肽 S-转移 酶的表达水平。 TUNEL 和 westernblot 分析表明，DDP 增加了凋亡蛋白的表达水平，影响了 MIR-31 下游的 Numb/Notch1 信号通路。在葛根素治疗后，DDP 所致的效应被抵消。
结果 本研究的结果表明，葛根素通过上调 MIR-31 的表达和抑制 Numb/Notch1 信号通路，对 DDP 诱导的 AKI 具有肾保护作用。

PU-0478

RAGE 基因启动子甲基化与糖尿病视网膜炎症的相关性研究

吴镇
山东大学第二医院

目的 评价 2 型糖尿病视网膜病变(DR)患者外周血单核细胞(PBMC)中晚期糖氨化终产物(RAGE)基因启动子受体的甲基化状态，以研究 RAGE 基因启动子甲基化与糖尿病视网膜炎症的相关性。
方法 2013 年 10 月至 2015 年 10 月期间，山东大学齐鲁医院收治并诊断为 2 型糖尿病患者。他们为观察组，40 名健康受试者被纳入对照组。使用密度梯度离心法收集患者的 PBMC，并使用甲基化特异性 PCP(MSP)检测 RAGE 基因启动子的甲基化状态。采用酶联免疫吸附法(ELISA)测定了血清中白细胞介素-1β(IL-1β)、IL-6 和肿瘤坏死因子-α(TNF-α)的水平。分离 RAGE 基因启动子甲基化阳性患者的 PBMC，并使用去甲基化剂 5'-aza-2'-脱氧胞苷(5-aza-dC)抑制 RAGE 基因启动子甲基化。通过 MSP 检测到 PBMCs 中 RAGE 基因启动子的甲基化状态。用 ELISA 对 PBMC 培养液上清液中的 IL-1β、IL-6 和 TNF-α 水平进行了评价。MSP 结果显示，在 DR 患者中，PBMCs 的 RAGE 基因启动子有 26 例（32.50%的甲基化）。RAGE 基因启动子在所有正常健康受试者中都被甲基化。阳性 RAGE 基因启动子甲基化组的血清中 IL-1β、IL-6 和 TNF-α 水平明显低于阴性 RAGE 基因启动子甲基化组（$p<0.01$）。5-Aza-dC 抑制了 RAGE 基因启动子甲基化阳性患者 RBMC 的 RAGE 基因启动子甲基化。抑制作用 RAGE 基因启动子的甲基化增加了培养液上清液中 IL-1β、IL-6 和 TNF-α 的水平。
结果 发现 RAGE 基因启动子低甲基化，表明 RAGE 基因启动子甲基化可抑制糖尿病视网膜炎症。

PU-0479

重组酶聚合酶检测破伤风方法的建立

郭铭静
中国人民解放军陆军军医大学第二附属医院

目的 利用重组酶聚合酶技术，建立快速、灵敏、特异、经济的破伤风梭菌的检测方法。
方法 在 Genebank 数据库中检索编码破伤风梭菌毒素的基因序列，采用序列比对软件筛选出保守区域，合成并构建质粒标准品，设计并筛选出引物对及探针，扩增目的片段，对其灵敏度、特异性和抗干扰能力进行评估。用标准菌株对建立的方法进行验证。
结果 RPA 95%检测限为 7copies/μl，与 PCR、LAMP 等方法灵敏度相当，对常见感染菌无交叉反应性。可在 20 分钟内读取结果，能够检测出 195bp 的特异性条带。
结论 重组酶聚合酶扩增技术在破伤风梭菌诊断中应用效果较佳，有理想的灵敏度、特异性以及准确度，有望成为替代传统 PCR 的有效检测方式，能在床旁及基层开展，值得临床推广应用。

PU-0480

数字化重组酶聚合酶技术快速检测 lncRNA HULC

郭铭静
中国人民解放军陆军军医大学第二附属医院

长链非编码 RNA（lncRNA）HULC 的发现与表征揭示了其在肿瘤中调控的多样性，在多种肿瘤的发生发展中起到关键作用。恒温数字化检测系统——重组酶聚合酶扩增联合微流控芯片对 lncRNA 标志物 HULC 恒温数字化检测，系统的解决了 HULC 常规检测技术不能满足临床和实验室应用的问题。37℃恒温扩增条件降低了对加热元件的需求，终点处荧光读数降低了实时监测荧光仪器的需求，数十万 RPA 微小反应单元无需绘制标准曲线即可对低拷贝的靶标进行绝对定量。本方案提供了新的高敏、特异、简便、快速的 HULC 检测新技术和新方法，可以对低丰度靶标 HULC 进行检测，该技术不仅能在大中型医院应用，而且能在更多的中小医院推广。

PU-0481

液相芯片技术检测消化道恶性肿瘤常用药物靶位基因多态性

许红丽、左学礼、段小华、彭云、李了兰、张文斌
武冈市人民医院

目的 基于液相芯片技术，建立一种可同时、快速检测消化道恶性肿瘤常用药物相关靶位基因多态性的方法。
方法 从 Genbank 中查找与二氢嘧啶脱氢酶（DPYD）和亚甲基四氢叶酸还原酶（MTHFR）等与 5-氟尿嘧啶（5-Fu）相关；X 射线修复缺陷基因 1（XRCC1）、着色性干皮病互补基因 D（XPD）、切除修复交叉互补组 1（ERCC1）、6-氧-甲基鸟嘌呤-DNA 甲基转移酶（MGMT）、谷胱甘肽 S 转移酶基因 1（GSTP1）等与铂类相关；多耐药基因 1（ABCB1）与紫杉类相关；二磷酸葡糖醛酸转移酶 lAl（UGT1A1）与伊利替康相关等消化道恶性肿瘤常用药物的 9 个基因中 10 个靶位点附近基因序列，设计特异性引物和探针；通过多重 PCR 扩增，等位基因特异性引物延伸（ASPE），MagPlex-Tag 微球杂交，经液相芯片系统 Luminex 200 检测荧光信号，确定基因型；优化反应体系并进行方法学评价。采用建立的方法检测 48 例消化道肿瘤患者 DNA 样本，与测序结果比较。
结果 本方法检测 48 例样本结果显示：纯合子荧光强度中位值（MFI）比率均>0.85 或<0.1，杂合

子 MFI 比率均在 0.25-0.65 之间；各基因型批内和批间变异系数分别低 8.5％和 11.3％；所需 DNA 最低检测限为 0.65ng；48 例样本的检测结果与测序结果完全一致。
结论 本研究采用液相芯片技术，成功建立了快速检测消化道恶性肿瘤常用药物相关靶位基因多态性的方法。该方法可靠，性能稳定，有潜在的临床应用价值。

PU-0482

南京地区体检人群中女性乳头瘤病毒的基因型与感染情况

张燕
江苏省人民医院（南京医科大学第一附属医院）

目的 旨在研究南京地区体检女性人群中人乳头瘤病毒的感染情况，为南京地区的 HPV 疫苗接种及科学防治提供指导作用。
方法 选取 2017 年 1 月～2019 年 7 月在江苏省人民医院健康体检中心进行健康体检的 8699 名女性，采用罗氏 cobas 荧光定量 PCR 进行 HPV 分型检测，并同时取脱落细胞进行液基薄层细胞检测（TCT），通过结果分析对南京地区健康体检人群的 HPV 感染情况做一定的调研。
结果 本研究表明南京地区高危型 HPV 的总阳性率为 12.29%（1069/8699），感染率较低，其中 HPV-16 型仍是需要重点关注的高危型。就年龄段来看，年龄>50 岁的人群 HPV 感染率高于其他年龄段（P<0.05）。通过对高危 HPV 分型和 TCT 的结果分析来看：HPV-16 型与宫颈细胞学病变存在一定的相关性。
结论 通过对南京地区健康体检人群的 HPV 的筛查，基于其感染特性、年度特性、年龄特性、宫颈细胞学特性等研究为疫苗科学接种与 HPV 防治提供指导作用。

PU-0483

Running affects Achilles tendon health in rats by changing the expression of lubricin

Shufen Li
Nanfang Hospital, Southern Medical University

Background The Achilles tendon transmits mechanical force from the calf muscle to the calcaneus through collagen fibers. Lubricin facilitates the movement of tendon fascicle gliding and recoil against the surrounding tissues. However, little is known about its response under various mechanical loading conditions. This study aimed to determine the effect of treadmill running with different exercise intensities on the alterations of lubricin content in rat Achilles tendon.
Methods In this study, 18 rats were randomly divided into the following groups: strenuous treadmill running (STR), moderate treadmill running (MTR), and control (CON). The rats in the two running groups were subjected to eight weeks' treadmill running protocol. Their Achilles tendons were then harvested for histological observation and biochemical analyses.
Results After eight weeks, the morphologies of the collagen fibers were relatively parallel, crimping, and elastic in the CON and MTR groups, but more ruptured in the STR group. The cell density in the Achilles tendon sections markedly increased in the MTR group compared with the CON group, whereas it markedly decreased in the STR group compared with the CON or MTR group. Additionally, the content of lubricin was dramatically increased in the MTR group compared with the CON group, but substantially decreased in the STR group compared with the CON or MTR group. Furthermore, the expressions of TGF-β1 and lubricin were significantly upregulated in the MTR group in contrast to the CON group, while they were significantly downregulated in the STR group in contrast to the CON or MTR group. Conversely, the expression of IL-1 was statistically downregulated in the MTR group in comparison to the CON

group, but was statistically upregulated in the STR group in comparison to the CON or MTR group.
Conclusions Moderate treadmill running might induce an increase of lubricin through the upregulation of TGF-β1 expression to improve lubrication and enhance the loading transmission efficiency. Meanwhile, strenuous treadmill running could result in a decrease of lubricin as a result of the dramatically increased expression of IL-1, consequently enhancing interfascicular tribology, and predisposing to tendinopathy or even tendon rupture.

PU-0484

LINC00973 在非小细胞肺癌的作用机制及临床价值研究

陈妍柯
江苏大学

目的 高通量测序筛选 NSCLC 中差异表达的长链非编码 RNA(long noncoding RNA, lncRNA)，检测 LINC00973 在非小细胞肺癌(non-small cell lung cancer, NSCLC)中的表达，初步探讨其分子作用机制，为 NSCLC 诊疗提供新的靶点。
方法 对 NSCLC 组织全转录组测序筛选，实时荧光定量 PCR 验证其在 NSCLC 细胞、组织中的表达，受试者工作特征曲线分析其临床价值。分别敲减和过表达 NSCLC 细胞中的 LINC00973，细胞生长曲线和平板克隆形成检测细胞的增殖能力， Transwell 迁移与侵袭检测细胞的转移能力，流式细胞术检测细胞周期变化和凋亡情况。转录组测序分析敲减 LINC00973 后影响的靶基因和信号通路。收集与 LINC00973 结合的蛋白质并通过液相色谱-质谱分析鉴定该结合蛋白，小干扰 RNA 敲减 NSCLC 细胞中的 DTX3L，细胞生长曲线和平板克隆形成实验检测细胞增殖能力，流式细胞术检测细胞凋亡。
结果 全转录组测序结果中 LINC00973 表达上调。LINC00973 在 NSCLC 细胞和组织中呈高表达。敲减 LINC00973 削弱细胞的增殖和转移能力，诱导细胞发生 G1 期阻滞并促进凋亡，LINC00973 基因沉默下调上皮间质转化(epithelial-mesenchymal transition, EMT)相关蛋白和增殖相关蛋白的表达，敲减 LINC00973 导致促肿瘤相关基因下调，Akt-mTOR 信号通路受到抑制。过表达结果相反。LINC00973 能与 DTX3L/PARP9 蛋白复合物结合，且正向调控 DTX3L 蛋白表达。敲减 DTX3L 具有抑制 NSCLC 细胞增殖并促进其凋亡的生物学功能。
结论 LINC00973 在 NSCLC 中表达上调，具有作为诊断标志物的潜力。LINC00973 可能通过与 DTX3L/PARP9 蛋白复合物结合发挥作用。

The role and mechanism of hsa_circ_0007991 in gastric cancer progression

Xueyan Zang
Jiangsu Key Laboratory of Medical Science and Laboratory Medicine, School of Medicine, Jiangsu University

Background Circular RNAs (circRNAs) have recently been proven to affect the initiation and progression of cancers. A particularly abundant circRNA, hsa_circ_0007991, was proposed to be involved in tumorigenesis. However, its molecular mechanism in gastric cancer (GC) remains unclear.
Methods Gene Expression Omnibus(GEO) datasets were used to investigate aberrantly expressed circRNAs in gastric cancer. Gene silencing and over-expression were performed to detect circRNA function. Cell proliferation and transwell assays were used to study cell proliferation and invasion. The expression of circRNAs, miRNA and mRNAs was detected by qRT-PCR. The location of circRNAs was detected using RNA in situ hybridization. Meanwhile, the

underlying mechanism of hsa_circ_0007991 was explored by bioinformatics analysis, mass spectrometry, RNA pulldown, RNA immunoprecipitation, luciferase assays and recue experiments. Lastly, mice xenograft was used to exam the clinical relevance of hsa_circ_0007991 in vivo.
Results In this study, we screened out that hsa_circ_0007991 was decreased in GC tissues and serum and was related to lymphatic metastasis and distant metastasis. Overexpression of hsa_circ_0007991 inhibited cell growth, migration and invasion in vitro and delayed tumor growth in vivo. In mechanism, hsa_circ_0007991 contained multiple miRNA binding sites, functioning as a sponge for miR-4449
Conclusion Take together, our findings revealed that hsa_circ_0007991 regulates miR-4449 contributes to GC progression. Hsa_circ_0007991 might serve as a novel tumor suppressive factor and act as a promising prognostic biomarker and therapeutic target for GC treatment.

PU-0486

A Novel Near-infrared Emissive and Biodegradable Polymer for Fluorescent Imaging of Cancers

yanxia Chen
Jiangsu University

Purpose Two nanoparticles were compared to derive an optimized coating strategy for a needed biological feature in cancer imaging.
Methods In this study a chemically synthetic polymer, benzo [1,2-b:4,5-b'] difuran(BDF)-based donor-acceptor copolymer PBDFDTBO, was individually coated by amphiphilic poly(ethylene oxide)-block-poly(ε-caprolactone) (PEO-b-PCL) and1,2-distearoyl-sn-glycero-3-phosphoethanolamine-N-methoxy(polyethylene glycol) (DSPE-PEG), to form stably fluorescent particles at nano dimension in the near-infrared (NIR) window. The physicochemical properties of synthesized nanoparticles were well characterized and compared, in term of their size, morphology and surface charge. In mouse cancer models, both of the circulation time, tumor accumulation and biodistribution were detected.
Results The physicochemical properties of synthesized nanoparticles were great. The sizes of the two nanoparticles are similar. Besides they possess uniform shape and size, and have good biocompatibility and optical stability. In mouse cancer models both polymeric nanoparticles exhibited prolonged circulation time, desired tumor accumulation and preferred biodistribution, showing great biodegradability and biocompatibility.

PU-0487

The role and mechanism of a novel circRNA, circDIDO1, in gastric cancer progression

Yu Zhang
Department of Laboratory Medicine, Nanjing Drum Tower Hospital, Nanjing University Medical School

Objective Circular RNAs (circRNAs), a subclass of noncoding RNA characterized by covalently closed continuous loops, play emerging roles in tumorigenesis and aggressiveness. Nevertheless, the biological roles and clinical significance of circRNAs in gastric cancer (GC) remain unclear. The purpose of this study is to reveal the mechanism of aberrantly expressed circRNAs in GC progression and provide new targets for the molecular diagnosis and therapy of GC.
Methods We conducted bioinformatic analysis to evaluate differentially expressed circRNAs in GC tissues compared to adjacent tissues. The data were downloaded from the Gene Expression Omnibus dataset. Fold change ≥ 2 and P value ≤ 0.05 were set as the threshold for significantly

differential expression. We detected the expression of circRNAs in tumor tissues of GC patients by qRT-PCR and analyzed its association with clinicopathological parameters. Cell counting, colony formation, transwell migration and matrigel invasion assays, and flow cytometry analyses were used to examine GC cell proliferation, migration, invasion and apoptosis. RNA sequencing, mass spectrometry, tagged RNA affinity purification, RNA immunoprecipitation and luciferase analyses were used to find key interacting proteins and miRNAs for the novel circRNA and identify key downstream target genes and signaling transduction pathways.
Results We identified a novel circRNA (termed circDIDO1) that was down-regulated in GC tissues and its low expression level was associated with tumor size, distal metastasis, and poor prognosis. CircDIDO1 overexpression inhibited GC cell proliferation, migration and invasion while promoted cell cycle arrest and apoptosis. Conversely, circDIDO1 knockdown in GC cells led to the opposite effects. Bioinformatics analysis revealed that there were miR-1307 binding sites in circDIDO1 sequence and the luciferase reporter gene assay showed that miR-1307 could bind to circDIDO1. In addition, circDIDO1 was co-immunoprecipitated with miR-1307 from the Ago2 complex. Furthermore, we found miR-1307 was up-regulated in GC tissues, and could down-regulate the expression of circDIDO1 in GC cells.
Conclusion CircDIDO1 could suppress the proliferation, migration and invasion as well as promote apoptosis in GC cells, indicating that it may serve as a new target for the diagnosis, prognosis and therapy of GC.

PU-0488

肿瘤活化中性粒细胞诱导 MSC 向 CAF 转化促胃癌进展

张家慧
江苏大学

目的 探讨肿瘤活化的中性粒细胞调控 MSC 向 CAF 转化以及在胃癌进展中的作用。
方法 从脐带组织中分离培养 huc-MSC 并鉴定。利用胃癌细胞上清刺激中性粒细胞，收集其培养上清。将培养上清与 MSC 共孵育，采用 qRT-PCR 和 Western Blot 检测 CAF 相关纤维化指标。及相关信号通路活化情况。用中性粒细胞上清处理 MSC 后，收集其培养上清，作用于胃癌细胞株，检测胃癌细胞迁移和增殖能力变化。Western Blot 和 qRT-PCR 检测胃癌细胞 N-cadherin、E-cadherin、PCNA、CyclinD1 等蛋白表达情况。裸鼠皮下荷瘤实验检测对肿瘤生长的影响。采用中和抗体与活化的中性粒细胞培养上清共同刺激 MSC 验证中性粒细胞发挥作用的效应分子。
结果 肿瘤活化的中性粒细胞刺激 MSC 后，CAF 相关纤维化指标 FAP 和 α-SMA 表达增高，明显促进胃癌细胞增殖和迁移。Western Blot 和 qRT-PCR 检测发现胃癌细胞增殖和迁移相关蛋白表达增加，裸鼠荷瘤实验结果表明胃癌细胞体成瘤能力增强。IL-17/IL-23/TNFα 中和抗体作用后，中性粒细胞诱导 MSC 向 CAF 转化和发挥上述作用的能力减弱。
结论 肿瘤活化的中性粒细胞能诱导 MSC 向 CAF 转化并促进胃癌进展。

PU-0489

EFNB1 促进淋巴瘤侵袭的作用机制及 EFNB1 对靶向药物的影响

张晨笑
江苏大学

目的 弥漫大 B 细胞淋巴瘤（diffuse large B-cell lymphoma，DLBCL）是最常见非霍奇金淋巴瘤。研究发现 Ephrin-B1（EFNB1）是导致淋巴瘤侵袭关键基因，但机制尚不明确，本研究旨在探讨 EFNB1 在淋巴瘤发生发展中作用，以及对肿瘤细胞应答靶向药物的影响。

方法 C57/BL6 小鼠尾静脉注射对照和过表达 EFNB1 的淋巴瘤细胞，体内重建淋巴瘤模型观察小鼠生长状态和成瘤情况，对淋巴瘤小鼠解剖检查。生物信息学方法分析 EFNB1 基因在 DLBCL 中表达模式及预后潜能。细胞过表达 EFNB1 流式细胞术检测细胞增殖能力。Western blot 检测 NF-κB 信号通路相关蛋白表达。分离并提取过表达 EFNB1 淋巴瘤细胞的上清外泌体，NanoSight 和 Western blot 检测外泌体大小和表面分子标志物。对 18 种靶向药物药物敏感性实验，分析 EFNB1 对靶向药物影响。

结果 体内实验显示过表达 EFNB1 促进小鼠淋巴瘤恶性化，高度侵犯肺和肾脏。生物信息学结果显示 EFNA3、EFNA4、EFNB1、EPHB4、EPHB6 是 DLBC 的主要表达基因，对 EFNB1 生存分析表明 EFNB1 高表达与预后差相关。过表达 EFNB1 后，IκBα、IKKα、IKKβ 和 p-IκBα-Ser32 的表达下调，NF-κB （p65）表达升高。外泌体上表达 EFNB1 蛋白。有 8 种有效的靶向药，其中 EFNB1 高表达细胞对 CAPE、Erlotinib 和 AZD4547 敏感，对 Axitinib 耐药。

结论 过表达 EFNB1 通过抑制 IκBα 来激活 NF-κB 信号通路在淋巴瘤中发挥作用，对 NF-κB 抑制剂 CAPE 敏感。外泌体表达 EFNB1 蛋白，EFNB1 有可能通过外泌体发挥功能。EFNB1 高表达细胞对 CAPE、Erlotinib 和 AZD4547 敏感，对 Axitinib 耐药，为 EFNB1 高表达患者的临床治疗提供新的方向。

PU-0490

L-PGDS 修饰间质干细胞外泌体抑制肿瘤的实验研究

尤本帅
江苏大学

目的 探究脂质运载蛋白型前列腺素 D 合成酶（lipocalin-type prostaglandin D synthase，L-PGDS）修饰的人脐带间质干细胞（hucMSCs）来源的 exosomes 体内外对胃癌的抑制作用。

方法 编码 L-PGDS（Ad-L-PGDS）和空载体（Ad-Vector）的腺病毒转染 hucMSCs，产生过表达 L-PGDS 的 exosomes（EX-L-PGDS）和空载体 exosomes（EX-Vector）。Western blot、透射电镜、Nanosight 可视型纳米颗粒分析仪对 exosomes 鉴定。共聚焦显微镜检测胃癌细胞对 exosomes 的摄取情况，RT-PCR 和 Western blot 检测胃癌细胞内 L-PGDS 的表达。迁移和侵袭实验、流式凋亡检测体外探寻 EX-L-PGDS 对胃癌细胞的抑制作用；构建 SGC-7901 皮下荷瘤小鼠模型，观察 EX-L-PGDS 体内对肿瘤生长的抑制效果。

结果 EX-L-PGDS 除表达特异性标记 CD9、CD63 和 CD81 外，L-PGDS 的表达量较 EX-Vector 明显增高。EX-L-PGDS 被内吞进入 SGC-7901，并增加细胞内 L-PGDS 的表达水平。EX-L-PGDS 能抑制 SGC-7901 细胞的迁移和侵袭能力。EX-L-PGDS 促进 SGC-7901 凋亡发生。同时，EX-L-PGDS 抑制 SGC-7901 细胞克隆形成能力。裸鼠皮下荷瘤实验显示，EX-L-PGDS 处理的 SGC-7901 肿瘤生长更加缓慢，形成的肿瘤更小。HE 切片显示 EX-L-PGDS 组肿瘤组织更加疏松，有更少的血管形成。EX-L-PGDS 组 PCNA 表达较低，TUNEL 检测可见更多的凋亡细胞。EX-L-PGDS 组肿瘤组织 L-PGDS 表达增高，Bax 表达上调。

结论 EX-L-PGDS 体内外能够有效抑制胃癌进展，这为以 exosomes 为载体的肿瘤治疗提供新思路。

PU-0491

人脐带间质干细胞外泌体转运 CAMKK1 促进脂质代谢抑制非酒精性脂肪肝

杨馥吉
江苏大学

目的 人脐带间充质干细胞来源的外泌体(human umbilical cord MSC derived exosome, hucMSC-Ex)能够减缓急性肝损伤及肝纤维化。hucMSC-Ex 是否能修复 NAFLD 尚不清楚。本研究旨在观察 hucMSC-Ex 抑制脂肪沉积缓解 NAFLD 作用，探讨 hucMSC-Ex 转运 CAMKK1 蛋白调控脂肪酸代谢的机制，为 hucMSC-Ex 在 NAFLD 中的应用提供依据。
方法 游离脂肪酸诱导人肝细胞 LO2 脂肪变性，加入 hucMSC-Ex 共培养，Nile red 染色观察脂质沉积，试剂盒检测脂肪酸氧化率，非靶向代谢组芯片检测 LO2 的脂肪酸代谢产物；构建高脂饮食(HFD)诱导的 NAFLD 小鼠模型，尾静脉注射 hucMSC-Ex，评估 hucMSC-Ex 的 NAFLD 修复效果；转录组芯片和质谱分别分析 hucMSC-Ex 调控的脂肪酸代谢通路和相关蛋白并验证。免疫荧光、Nile red 染色等观察过表达蛋白后脂代谢调控作用及其调控的信号通路。构建调控蛋白敲减 hucMSC-Ex，比较分析调控蛋白在 hucMSC-Ex 抑制脂肪酸代谢中的作用。
结果 hucMSC-Ex 表达外泌体标志蛋白 CD9、CD63、Alix 和 TSG101，具有外泌体典型特征。hucMSC-Ex 呈浓度依赖性减轻 LO2 细胞脂质沉积，增加脂肪酸氧化率，抑制脂肪酸代谢物的生成。hucMSC-Ex 能减轻高脂饮食诱导的 NAFLD 小鼠肝脏脂肪空泡变性和脂质沉积，减轻小鼠体重，改善肝功能。钙调蛋白激酶激酶 α(CAMKK1)通过调控 AMPK/PPARa 和 AMPK/SREBP-1C /FASn 通路，促进脂肪酸氧化，抑制脂肪酸生成。CAMKK1 敲减减弱 hucMSC-Ex 的脂代谢调控功能和脂肪沉积抑制作用。
结论 hucMSC-Ex 通过转运 CAMKK1，促进脂肪酸氧化，抑制脂肪酸合成，延缓 NAFLD 的进展，是 NAFLD 潜在治疗手段。

PU-0492

胃癌干细胞外泌体源 hsa_circ_0000670 在吸烟促进胃癌发展中的作用和机制研究

郭文浩
江苏大学

目的 探讨吸烟通过胃癌干细胞 exosomes 促进胃癌发展的作用及机制，阐明 hsa_circ_0000670 在这过程中的生物学作用的生物学作用。
方法 GEO 数据库筛选胃癌中高表达的 circRNAs; qRT-PCR 检测吸烟胃癌患者者胃癌组织中 hsa_circ_0000670 表达；构建胃癌干细胞培养模型，观察胃癌干细胞球形成；细胞活力实验筛选香烟悬液浓度；显微镜观察 0.5%香烟烟雾悬液处理 2d 后胃癌干细胞球大小以及数量变化，qRT-PCR 和 Western-blot 检测处理前后胃癌干细胞干性基因的表达变化；Western-blot、Transwell 迁移实验和 Matrigel 侵袭实验检测 0.5%香烟烟雾悬液以及两种胃癌干细胞 exosomes 处理后胃癌干细胞和胃癌细胞干性基因；qRT-PCR 检测 0.5%香烟烟雾悬液处理前后胃癌干细胞以及 exosomes 内 hsa_circ_0000670 的表达水平。
结果 吸烟者胃癌组织中 hsa_circ_0000670 的表达水平上调；香烟烟雾促进胃癌干细胞球的自我更新以及干性基因 mRNA 和蛋白表达水平；透射显微镜观察香烟烟雾处理前后胃癌干细胞分泌的 exosomes 均为圆形或椭圆形膜性囊泡，其粒径均在 110nm 左右。香烟烟雾处理后胃癌干细胞分泌的 exosomes 上调胃癌干细胞和胃癌细胞的干性基因和 EMT 进程相关指标的表达，促进胃癌细胞的迁移侵袭能力； hsa_circ_0000670 在香烟烟雾刺激的胃癌干细胞及其分泌的 exosomes 中表

达上调；胃癌干细胞自我更新能力提升，促进胃癌干细胞的干性基因的表达和 EMT 进程，香烟烟雾进一步促进了这个过程。
结论 香烟烟雾促进胃癌干细胞的干性基因干性，胃癌干细胞的 exosomes 以自分泌和旁分泌的方式促进胃癌干细胞和胃癌细胞的干性，、EMT 进程以及迁移侵袭能力。Hsa_circ_0000670 发挥重要作用。

PU-0493

miR-4465 修饰间质干细胞外泌体下调 LOXL2 抑制胶原沉积的作用及机制

王岩金
江苏大学

目的 探讨 miR-4465 修饰的人脐带间质干细胞外泌体(hucMSC-ex)对肝星状细胞（Lx2）活化、肝纤维化组织胶原沉积作用及机制。
方法 ExoQuick-TCTM 沉淀法提取 hucMSC-ex,并通过透射电镜、粒径分析以及表面标记检测进行鉴定。TGF-β 活化诱导，建立人肝星状细胞 Lx-2 细胞株活化模型，活化后细胞过表达 miR-4465，实时定量 PCR 检测 miR-4465 的表达情况，并通过 Western blot 和免疫荧光检测 LOXL2 以及胶原表达。将 25μg/mL 和 50μg/mL 的 miR-4465 mimics 分别经超声转入 hucMSC-ex，并提取外泌体内的 miRNA，通过定量 PCR 检测转入效率。分别加入 25、50μg/ul 浓度的 hucMSC-ex 和相同浓度的 hucMSC-ex-miR-4465 与活化后的细胞共培养，另设对照组(常规培养)，Western blot 和免疫荧光检测 LOXL2 表达以及胶原的表达情况。腹腔注射 CCl4 以构建小鼠纤维化模型，并分为损伤组，hucMSC-ex 组和 hucMSC-ex-miR-4465 组，免疫组化，Masson 染色观察比较纤维化修复效果。
结果 HucMSC-Ex 呈球形膜性囊状结构，直径 40~100nm 左右，表达 CD9、CD63 等表面标志物。转染后，细胞内 miR-4465 表达上调，同时 LOXL2 和相关胶原的表达均下调。定量检测表明 miR-4465 经超声后大量转入外泌体。HucMSC-ex 能明显下调 LOXL2 和相关胶原的表达，而 hucMSC-ex-miR-4465 其下调能力更加明显。在体内实验，hucMSC-ex-miR-4465 修复效果强于 hucMSC-ex，纤维化得到更大程度上的缓解，胶原沉积明显减少。
结论 hucMSC 来源外泌体能够转运 miR-4465，通过下调 LOXL2 抑制胶原沉积，从而抑制肝纤维化。

PU-0494

外泌体 hsa_circ_0000670 在胃癌诊断中的潜在价值及作用机制研究

王妍
江苏大学

目的 筛选胃癌中差异表达 circRNA，检测其在胃癌患者组织、血清及其外泌体中的表达并评价其作为诊断标志物潜在价值；揭示外泌体 circRNA 在胃癌进展中的作用机制，为胃癌治疗提供新靶点。
方法 GEO 数据库筛选出胃癌中高表达的分子 circ670。检测 circ670 在胃癌细胞、组织、血清及其外泌体中的表达，评价 circ670 的诊断价值。运用 ASO 和质粒载体对 circ670 进行敲减和过表达，同时将外泌体与胃癌细胞共培养，开展一系列功能学实验研究。采用生物信息学预测与 circ670 结合的 miRNA 和靶基因并验证。共转染实验、qRT-PCR 及 Western blot 用于验证 circ670、miRNA 与靶基因的相互作用。

结果 Circ670 在各胃癌细胞株、组织、患者血清及血清 exosomes 中均呈高表达，且 circ670 的表达与患者侵袭深度和 TNM 分期有关。血清外泌体中的 circ670 显示出更好的诊断效能。FISH 实验提示 circ670 在胃癌组织和各胃癌细胞株中主要存在于细胞质中。 ASO 敲减 circ670 后，胃癌细胞的增殖、迁移能力下降，细胞周期阻滞，而过表达后呈现相反的结果。富集 circ670 的外泌体与胃癌细胞共培养后，其增殖、迁移和干性能力均增加。荧光素酶实验证明 circ670 能与 miR-4659a/b-3p 结合。MiR-4659a/b-3p 能够逆转 circ670 促进胃癌生长和迁移的能力。肝素样表皮生长因子（HBEGF）是 miR-4659a/b-3p 的靶基因，通过 circ670/miR-4659a/b-3p/HBEGF 信号轴促进胃癌的进展。

结论 Circ670 在血清外泌体中其诊断效能更加具有优势。外泌体 circ670 作为胃癌细胞间通讯重要分子，从而促进胃癌的增殖、转移和干性能力，可能通过靶向 miR-4659a/b-3p/HBEGF 来发挥作用。

PU-0495

hucMSC 源外泌体调控 PGC-1α 延缓糖尿病视网膜病变

王小玲
江苏大学

目的 糖尿病视网膜病变（diabetic retinopathy, DR）是糖尿病最常见的微血管并发症，但尚缺乏理想防治方案。本研究旨在探讨人脐带间充质干细胞源外泌体（human umbilical cord mesenchymal stem cells derived exosomes, hucMSC-Ex）在 DR 治疗模型中的作用及机制，为管控和治疗 DR 提供新策略。

方法 构建 DR 大鼠模型。行玻璃体腔内注射 hucMSC-Ex 干预，检测视网膜细胞增殖、凋亡、氧化应激及 DNA 损伤，综合评估 hucMSC-Ex 对于 DR 的修复作用。人视网膜色素上皮细胞（ARPE-19）作为细胞模型，检测其增殖凋亡、细胞活力及活性氧（ROS）水平。hucMSC-Ex 和 HFL1-Ex 进行了 miRNAs 谱分析，筛选抑制氧化应激的 miRNAs。ARPE-19 细胞转染 miRNAs 的模拟物及抑制物明确其分子机制。电穿孔技术制备 miRNAs 工程化 hucMSC-Ex 应用于体内外模型，探索其增强治疗的效果。

结果 hucMSC-Ex 处理后视网膜组织总体厚度增加，结构清晰，抑制氧化应激及 DNA 损伤，且视网膜血管渗漏得到恢复。在体外 hucMSC-Ex 能逆转高糖引起的 ARPE-19 的增殖抑制及 ROS 的产生。hucMSC-Ex 能活化 PGC-1α 的表达，基于测序结果，筛选出了 hucMSC-Ex 中高表达的 1 种新的调控 PGC-1α 的 miRNA 分子，miR-10228。体内外实验结果表明 miR-10228 在延缓 DR 疾病进展中起关键作用。miR-10228 工程化 hucMSC-Ex 显示出更强的抗凋亡、抗氧化应激及 DNA 损伤、促增殖及保护血-视网膜屏障的作用，能更有效的延缓 DR 进程。

结论 hucMSC-Ex 携载 miR-10228 调控 PGC-1α 延缓 DR 进展，miR-10228 工程化 hucMSC-Ex 有望成为新型治疗方案。

PU-0496

昆明地区妇女 HPV 感染分型情况及其与宫颈病变的关系

洪颖、满宝华、常业飞、温瑾、姜水、田浩
云南省第三人民医院

目的 了解昆明地区女性生殖道人乳头瘤病毒（HPV）亚型感染分布情况及与宫颈病变之间的关系。

方法 收集 2019 年 1 月至 2020 年 12 月云南省第三人民医院共 10046 个标本进行 HPV 基因分型的女性作为研究对象，用 PCR 反向点杂交法进行 HPV 基因分型检测，分析昆明地区女性 HPV 亚型

感染情况。并将其中的 4327 例进行阴道脱落细胞液基细胞学检查，分析 HPV 亚型与宫颈病变的关系。
结果 10046 例检测标本中，检出阳性标本 1637 例，阳性率为 16.30%，其中高危型阳性占 88.72%、低危型 HPV 阳性占 11.28%。单一亚型 1292 例，所占比例最高，为 78.63%。其中 HPV 阳性率最高的 3 种 HPV 亚型依次为 HPV52（20.31%）、HPV39(16.24%)、HPV16（12.33%）。不同年龄段女性 HPV 阳性率进行比较，≥55 岁组的总感染率、单一基因及单纯高危亚型感染率均高于 21~55 岁年龄组，且差异有统计学意义（P<0.05）；癌变组 HPV 高危型感染率明显高于非典型鳞状细胞组及宫颈正常组（P<0.05）。
结论 昆明地区 HPV 感染以单一基因和高危感染为主，HPV52 型、HPV39 型、HPV16 型为前三大亚型，55 岁以上年龄段 HPV 感染率较高，随着宫颈病变程度的增加，高危型 HPV 的感染率也逐渐的升高。

PU-0497

Circ0613 在胃癌进展中的作用和机制研究

王君怡
江苏大学

目的 胃癌（gastric cancer, GC）是常见恶性肿瘤之一，发病率和死亡率高居不下，寻找新的诊断标志物迫在眉睫。我们检测了胃癌患者组织、血清及血清外泌体内 circ0613 的表达，阐明 circ0613 在胃癌发生发展中的作用机制，探索潜在的新型胃癌早期诊断和预后判断的生物标志物。
方法 qRT-PCR 检测胃癌患者组织、血清、血清外泌体中 circ0613 表达水平；绘制 ROC 曲线判断其诊断效能；分析 circ0613 与临床数据的相关性。分别构建 siRNA 和过表达慢病毒载体转染胃癌细胞株敲减和过表达 circ0613， CCK-8 和平板克隆形成实验检测胃癌细胞的增殖能力；Transwell 迁移和侵袭实验检测胃癌细胞的迁移和侵袭能力。qRT-PCR 和 western blot 检测 circ0613 母基因 USP1 的表达水平及两者的相关性；探索 USP1 在胃癌细胞中的生物学效应。此外，结合生物信息学与 RIP 实验筛选出 circ0613 的 RNA 结合蛋白(RNA binding protein, RBP)为 HuR；进一步探索 HuR 具体生物学作用。MG132 和 CHX 实验研究 circ0613 调控 USP1、HuR 蛋白水平的机制。皮下注射 circ0613 过表达胃癌细胞构建裸鼠荷瘤模型，取瘤称重和测量体积。
结果 circ0613 在胃癌患者血清中呈高表达，与胃癌的分化程度和淋巴结转移相关，ROC 曲线下面积为 0.726；但该分子在胃癌患者血清外泌中无显著性差异。敲减 circ0613 抑制胃癌细胞的增殖、迁移和侵袭能力；过表达则相反。circ0613 通过抑制蛋白降解而上调 USP1 和 HuR 蛋白的表达。
结论 Circ0613 在胃癌患者血清中呈高表达，有望成为胃癌诊断的潜在分子标志物。Circ0613 的母基因 USP1 及 circ0613 的结合蛋白 HuR 均能促进胃癌细胞的恶性进展。

PU-0498

脐带间质干细胞外泌体靶向抑制 HIF-1α 防治糖尿病视网膜病变的作用及机制

孙丰田
江苏大学

目的 糖尿病视网膜病变（DR）患病率高是成人致盲的主要原因之一，早期防治是降低 DR 致盲的关键。本研究主要探讨人脐带间质干细胞来源的外泌体（hucMSC-Ex）对 DR 的保护作用。
方法 以滴注或玻璃体腔内注射的方式对糖尿病大鼠进行 hucMSC-Ex 干预。通过 HE 染色、免疫组化、Western-blot 等技术分析视网膜结构变化、视网膜细胞增殖、凋亡、炎症及血管新生能力的改变、HIF-1α 表达、定位等情况，以评价 hucMSC-Ex 调控 HIF-1α 信号通路延缓糖尿病视网膜病变

的作用。用 hucMSC-Ex 处理高糖环境下培养的人视网膜微血管内皮细胞(hRMECs)。应用 CCK8 增殖实验观察细胞增殖能力，transwell 实验观察细胞迁移能力，小管形成实验检测血管形成能力以及 HIF-1α 的表达及核转位情况，以进一步评价 hucMSC-Ex 对高糖刺激下 hRMECs 的作用。
结果 hucMSC-Ex 干预后视网膜各层结构清晰，视网膜明显增厚，western blot 结果显示 BAX、Caspase-3 表达降低，Bcl-2 表达增加，同时 hucMSC-Ex 抑制 DR 动物模型和细胞模型炎症因子和促血管物质释放。体外研究表明，hRMECs 在 hucMSC-Ex 处理后增殖和迁移能力减弱，血管形成减少。在高糖刺激下，HIF-1α 蛋白表达整体水平和核内表达皆显著增加，hucMSC-Ex 干预后 HIF-1α 蛋白下调且入核明显减少；进一步研究证实 hucMSC-Ex 干预后降低 DR 动物模型和细胞模型中糖酵解限速酶 PFKFB3 的表达。
结论 hucMSC-Ex 可延缓糖尿病视网膜病变进程，其作用机制可能是通过抑制 HIF-1α 表达，减弱糖酵解，减少促炎因子与促血管生成物质释放，为临床糖尿病视网膜病变的防治提供新方法和思路。

PU-0499

环状 RNA circ1477 对胃癌进展的作用机制及其临床价值

李荣
江苏大学医学院

目的 阐明环状 RNA circ1477 在胃癌组织和血清及外泌体中的表达变化、生物学作用及分子机制，为胃癌诊断及预后判断提供新的分子标志物，为胃癌治疗寻找潜在的靶点。
方法 收集胃癌患者的胃癌组织及癌旁组织，胃癌患者及健康人血清及外泌体，采用 qRT-PCR 检测分析 circ1477 的表达水平。Fish 和核质分离定量 PCR 确定其亚细胞定位，RNase R 和 Actinomy D 处理检测其成环特性及半衰期。通过 siRNA 和过表达质粒转染在胃癌细胞中分别敲减和过表达 circ1477，检测细胞增殖、克隆形成、迁移、侵袭、等生物学功能变化。利用生物信息学技术预测与 circ1477 结合的 miRNA 及其调控靶基因，并通过荧光素酶报告基因检测和 RNA 免疫共沉淀进行验证。
结果 环状 RNA circ1477 在胃癌组织和胃癌细胞系中显著低表达，但在胃癌患者血清及血清外泌体显著高表达，且胃癌组织 circ1477 的表达水平与淋巴结转移相关，胃癌血清 circ1477 的表达水平与远端转移有关。组织 circ1477 低表达的胃癌患者生存时间显著短于高表达者。circ1477 主要表达于胞质中，能抵抗 RNase R 作用，其半衰期显著高于线性 RNA。敲减 circ1477 抑制细胞迁移和侵袭，过表达 circ1477 则相反，但敲减和过表达 circ1477 对细胞增殖影响不显著。生物信息学分析显示 circ1477 具有多种 miRNA 结合位点，且能与 Ago2 蛋白免疫共沉淀。双荧光素酶报告基因检测结果显示 miR-190a 和 miR-190b 能显著抑制 circ1477 载体 3'UTR 荧光素酶报告基因活性，且 miR-190b 在胃癌组织中显著低表达并与 circ1477 表达呈显著正相关。
结论 环状 RNA circ1477 可以作为胃癌诊断与预后判断的新分子标志物；circ1477 能体外抑制胃癌迁移和侵袭，可能是通过与 miR-190 家族结合发挥作用。

PU-0500

hucMSC-Ex 促进星形胶质细胞极化缓解脊髓损伤的作用及机制

金倩
江苏大学

目的 脊髓损伤（spinal cord injury，SCI）是一种严重的中枢神经系统的疾病，现有的临床治疗方案尚不能根治 SCI。本课题组前期研究发现人脐带间充质干细胞来源的外泌体（human umbilical cord mesenchymal stem cell derived exosomes, hucMSC-Ex）可缓解大鼠 SCI，但具体机制尚未明确。星形胶质细胞是中枢神经系统中一种数量最多的异质性神经胶质细胞，调控着神经微环境。

本研究旨在探讨 hucMSC-Ex 在星形胶质细胞表型极化中的作用及机制，为 SCI 临床治疗提供新思路。

方法 分离提取鉴定 hucMSC-Ex。构建 SD 大鼠撞击性脊髓损伤模型，hucMSC-Ex 进行治疗。术后 2w 根据 BBB 评分、HE 和荧光染色评价修复效果。检测星形胶质细胞表型变化。原代培养并鉴定星形胶质细胞，免疫荧光、western blot 和 qRT-PCR 检测 LPS 与 hucMSC-Ex 同时处理下的细胞表型标志物和炎症因子的表达。质谱分析筛选关键蛋白，利用 western blot、组化和荧光染色进行验证。

结果 hucMSC-Ex 具有外泌体的典型表征。hucMSC-Ex 可以缓解大鼠 SCI，减少脊髓组织结构紊乱，促进神经再生。 hucMSC-Ex 抑制静息型星形胶质细胞向炎症（A1）型极化，促进其向 A2 型极化。A2 型星形胶质细胞的条件培养基可以支持微环境细胞。hucMSC-Ex 富含 AP1B1 蛋白，干预后的组织和细胞高表达 AP1B1 和 S100a10。敲减了 AP1B1 的 hucMSC-Ex 抑制星形胶质细胞 AP1B1 和 S100a10 的表达。

结论 hucMSC-Ex 通过抑制 NF-κB 信号通路的磷酸化减少 A1 型星形胶质细胞极化，抑制炎症。hucMSC-Ex 通过携载 AP1B1 蛋白来促进 A2 型星形胶质细胞极化，支持神经系统微环境细胞并缓解 SCI，将成为治疗 SCI 新方案。

基于单细胞 RNA 测序分析脐带间充质干细胞外泌体抑制纤维化延缓糖尿病肾病的作用机制

纪成
江苏大学医学院

目的 糖尿病肾病是持续高血糖引起的糖尿病微血管并发症，进展性肾间质纤维化为特征。间充质干细胞外泌体在急慢性肾损伤中具有明显的修复效果。旨在基于 10xGenomics 单细胞测序探究间充质干细胞外泌体减轻肾组织纤维化延缓糖尿病肾病的分子机制。

方法 45%高脂饮食联合链脲佐菌素构建糖尿病肾病大鼠模型。尾静脉注射 hucMSC-Ex 观察干预 DKD 效果。评价肾功能组织损伤程度和纤维化沉积。10xGenomics 单细胞测序分析大鼠的肾脏细胞群落，分析巨噬细胞与肾小球系膜细胞间交互作用。蛋白质谱 LC-MS/MS 分析筛选 hucMSC-Ex 的激酶泛素系统。

结果 尾静脉注射的 hucMSC-Ex 能迁移至 DKD 大鼠受损肾组织改善肾功能抑制肾间质纤维化程度。10xGenomics 单细胞测序发现 DKD 中 TGF-β1+巨噬细胞活化 TGF-β1/Smad2/3/YAP 促进系膜细胞向肌成纤维化样改变。hucMSC-Ex 抑制系膜细胞 YAP，α-SMA 表达。免疫共沉淀显示 YAP 发生泛素化降解。质谱显示 hucMSC-Ex 富含 CK1δ/β-TRCP 激酶泛素系统促进 YAP 泛素化降解。

结论 hucMSC-Ex 可以靶向迁移至受损的肾组织部位改善肾功能，减轻胶原沉积抑制肾间质纤维化进展。10xGenomics 单细胞测序和转录组分析发现一群高表达 TGF-β1+巨噬细胞群落极化，通过活化 TGF-β1/Smad2/3/YAP 轴促进系膜细胞向肌成纤维化样改变加速肾间质纤维化进展，而 hucMSC-Ex 递送 CK1δ/β-TRCP 激酶泛素系统促进 YAP 蛋白泛素化降解抑制肾间质纤维化延缓糖尿病肾病进展。本研究为间充质干细胞外泌体防治糖尿病肾病提供了治疗新策略。

人脐带 MSC 外泌体转运 Beclin1 促进肝星状细胞铁死亡抑制肝纤维化

黄燕
江苏大学

目的 人脐带间充质干细胞来源外泌体（human umbilical cord mesenchymal stem cell derived exosomes，hucMSC-Ex）能够有效抑制肝纤维化，但详细机制不明。本研究旨在观察 hucMSC-Ex 促进 HSCs 铁死亡抑制肝纤维化的作用，探讨 hucMSC-Ex 转运 Beclin1 调控 HSCs 铁死亡的机制，为 hucMSC-Ex 修复肝纤维化提供新的依据。
方法 超速离心法分离纯化 hucMSC-Ex。将 hucMSC-Ex 与人 HSCs 细胞株 LX-2 共培养，观察 hucMSC-Ex 作用后 LX-2 的铁死亡。检测经 hucMSC-Ex 处理后的 LX-2 的 Beclin1 mRNA 和蛋白表达。观察经 hucMSC-Ex 处理后的 LX-2 和肝组织的 CD9 和 Beclin1 的表达水平。过表达/敲减 LX-2 的 Beclin1 检测铁死亡相关的 Beclin1/System Xc-/GPX4 信号通路，检测 ROS 水平和线粒体膜电位的变化，观察 LX-2 铁死亡。构建 CCl4 诱导的 ICR 小鼠肝纤维化模型，尾静脉注射 hucMSC-Ex、hucMSC-ExshBeclin1。评估肝组织胶原沉积检测 Beclin1/System Xc-/GPX4 信号通路，明确 hucMSC-Ex 的作用及机制。
结果 HucMSC-Ex 能够促进 LX-2 及肝纤维化小鼠肝星状细胞铁死亡。HucMSC-Ex 通过转运 Beclin1 调控 System Xc-转录促进 LX-2 铁死亡。HucMSC-Ex 可通过促进 HSCs 铁死亡，抑制 HSCs 活化，缓解肝纤维化。Beclin1 敲减 hucMSC-Ex 的肝纤维化抑制作用减弱。
结论 hucMSC-Ex 转运 Beclin1 调控 System Xc-/GPX4 信号通路促进肝星状细胞铁死亡，抑制其活化及胶原沉积，延缓肝纤维化。

Depressive-Like Behaviors Induced by Chronic Social Defeat Stress Are Associated With HDAC7 Reduction in the Nucleus Accumbens

xu jing
The Second Hospital of Shandong University

Persistent symptoms of depression indicate the adaptive involvement of stablemolecules in the brain that may be manifested at the level of chromatin remodeling, such as histone acetylation. Former studies have identified alterations in histone acetylation and deacetylation in several animal models about depression. However, the specific histone deacetylases related with depression are needed to be explored. Here, social avoidance behaviors, anxiety-, and depression-like behaviors were all found in mice suffered from chronic social defeat stress. Moreover, we also discovered that the amount of the class II histone deacetylase, HDAC7 rather than HDAC2, was significantly decreased in the nucleus accumbens of defeated mice, which suggested that HDAC7 might be a crucial histone deacetylase in a chronic social defeat stress model. Our data showed that the depressive-like behaviors induced by chronic social defeat stress were associated with HDAC7 reduction in nucleus accumbens. HDAC7 might be a promising therapeutic target for depression.

PU-0504

Gene deficiency or pharmacological inhibition of PDCD4-mediated FGR signaling protects against acute kidney injury

xu jing
The Second Hospital of Shandong University

Recent studies have shown that programmed cell death 4 (PDCD4) modulates distinct signal transduction pathways in different pathological conditions. Despite acute and chronic immune responses elicited by ischemia contributing to the functional deterioration of the kidney, the contributions and mechanisms of PDCD4 in acute kidney injury (AKI) have remained unclear. Using two murine AKI models including renal ischemia/reperfusion injury (IRI) and cisplatin-induced AKI, we found that PDCD4 deficiency markedly ameliorated renal dysfunction and inflammatory responses in AKI mice. Consistently, upregulation of PDCD4 was also confirmed in the kidneys from patients with biopsy confirmed acute tubular necrosis from a retrospective cohort study. Moreover, we found that overexpression of Fgr, a member of the tyrosine kinase family, dramatically aggravated renal injury and counteracted the protective effects of PDCD4 deficiency in AKI mice. We discovered that FGR upregulated NOTCH1 expression through activating STAT3. Most importantly, we further found that systemic administration of ponatinib, a tyrosine kinase inhibitor, significantly ameliorated AKI in mice. In summary, we identified that PDCD4 served as an important regulator, at least in part, of FGR/NOTCH1-mediated tubular apoptosis and inflammation in AKI mice. Furthermore, our findings suggest that ponatinib-mediated pharmacologic targeting of this pathway had therapeutic potential for mitigating AKI.

An ultrasensitive hybridization chain reaction-amplified CRISPR-Cas12a aptasensor for extracellular vesicle surface protein quantification

Shan Xing、Wanli Liu
Sun Yat Sen University Cancer Center

Introduction Tumor-derived extracellular vesicle (TEV) protein biomarkers facilitate cancer diagnosis and prognostic evaluations. However, the lack of reliable and convenient quantitative
Methods for evaluating TEV proteins prevents their clinical application.
Methods Here, based on dual amplification of hybridization chain reaction (HCR) and CRISPR-Cas12a, we
developed the apta-HCR-CRISPR assay for direct high-sensitivity detection of TEV proteins. The TEV protein-targeted aptamer was amplified by HCR to produce a long-repeated sequence comprising multiple CRISPR RNA (crRNA) targetable barcodes, and the signals were further amplified by CRISPR-Cas12a collateral cleavage activities, resulting in a fluorescence signal.
Results The established strategy was verified by detecting the TEV protein markers nucleolin and programmed death ligand 1 (PD-L1). Both achieved limit of detection (LOD) values as low as 100 particles/μL, which is at least 104-fold more sensitive than aptamer-ELISA and 102-fold more sensitive than apta-HCR-ELISA. We directly applied our assay to a clinical analysis of circulating TEVs from 50 μL of serum, revealing potential applications of nucleolin+ TEVs for nasopharyngeal carcinoma cancer (NPC) diagnosis and PD-L1+ TEVs for therapeutic monitoring.
Conclusion The platform was simple and easy to operate, and this approach should be useful for the highly sensitive and versatile quantification of TEV proteins in clinical samples.

结核分枝杆菌磷酸盐转运系统及其在结核病诊断中的应用

刘培
湖南省人民医院

结核病是危害社会健康的常见传染病，我国是结核病发病率较高的国家之一，每年因结核病死亡的人数居传染病死亡人数的首位。结核病的病原体为结核分枝杆菌，其基因组结构及其功能的研究对阐明结核分枝杆菌的致病机制和有效防治结核病具有重要的意义。磷酸盐转运系统是结核分枝杆菌中的运输系统，在其致病、检测、治疗、耐药中都起着一定的作用。本文概述结核分枝杆菌磷酸盐转运系统及其在结核病诊断中的应用。

PU-0507

Hypoxia and cancer related pathology

熊秋霞
昆明医科大学第一附属医院

Hypoxic environments occur normally at high altitude, or in underground burrows and in deep sea habitats. They also occur pathologically in human ischemia and in hypoxic solid tumors. This review will discuss how hypoxia can influence two aspects of tumorigenesis, namely the direct, cell-intrinsic oncogenic effects, as well as the indirect effects on tumor progression mediated by an altered tumor microenvironment. We will also discuss recent progress in identifying the functional roles of hypoxia-related factors (HIFs), along with their regulators and downstream target genes, in cancer stem cells and therapy. Importantly, we propose, using convergent evolution schemes to identify novel biomarkers for both hypoxia adaptation and hypoxic solid tumors as an important strategy in the future.

PU-0508

NCAPH is negatively associated with Mcl-1 in non-small cell lung cancer

Qiuxia Xiong
The First Affiliated Hospital of Kunming Medical University;Yunnan Key Laboratory of Laboratory Medicine; Yunnan Institute of Experimental Diagnosis

lung cancer has a high mortality rate worldwide. non-SMc condensin i complex subunit H (ncaPH) has been identified to be one of the regulatory subunits of the condensin i complex, which is essential for the correct packaging and segre- gation of chromosomes in eukaryotes. NCAPH is abnormally overexpressed in various types of cancer. a pro-survival member of the Bcl -2 family, myeloid cell leukemia sequence 1 (Mcl-1) is also frequently overexpressed in multiple cancers and is associ- ated with poorer clinical outcomes for patients. The association of NCAPH and Mcl-1 proteins with the clinical and pathological features of non-small cell lung cancer (NSCLC) remains to be elucidated. In the current study, the positive percentage of ncaPH in the non-cancerous lung tissues was revealed to be higher compared with that in nSclc. However, the positive percentage of Mcl-1 in the non-cancerous lung tissues was lower compared with nSclc. in addition, ncaPH high-expression patients had a higher overall survival rate compared with

patients exhibiting low expression, whereas the Mcl-1 high-expression group had a lower survival rate. Pairwise association in 260 cases
of NSCLC revealed that overexpression of the NCAPH protein was negatively associated with Mcl-1 expression and vice versa. The results of multivariate Cox proportional hazard regression analysis also indicated that ncaPH and Mcl-1 demonstrated potential as distinct prognostic factors that may be used in NSCLC. The expression of NCAPH and Mcl‑1 may be associated with, and act as distinct molecular marks for the prediction of apoor prognosis in patients with nSclc.

某三甲医院地贫基因突变及红细胞参数分型研究

刘飞、杜昱志
陆军军医大学第二附属医院检验科

目的 收集 地贫患者基因型与红细胞数据，分析缺陷种类、分布差异，为地贫和干预提供流行病学支持。
方法 收集我院 2019 年 5 月到 2020 年 5 月间 281 例地贫患者基因检测数据，关联患者 Hb、RBC、Hct、MCV、MCH、MCHC 红细胞参数。按照 α 地贫静止型、α 地贫标准型、α 地贫 HbH 病型、β 地贫、复合型地贫进行分组。选取各组基因频率较高的基因型与性别、地区等进行差异统计分析。
结果 α 地贫基因缺失型占比最多，其中--SEA 占比高达 55.28%；余下依次为-α3.7、-α4.2、复合型缺失、纯合缺失；点突变最为罕见。β 地贫中，CD41-42/N 单基因突变最多，占比为 32.93%；其余依次为 CD17/N、IVS-2-654/N、-28 缺失型等。α 地贫的 Hb、MCV、MCH 的平均水平随着类型从静止型、标准型到 HbH 依次减少，病情严重化趋势明显。β 地贫的基因型和临床分度没有显著相关。各类地贫的性别和地区基因频率分布没有显著性差异。
结论 除 α 地贫静止型外，所有病例均呈不同程度的小细胞低色素性贫血，在 α 地贫中，静止型、标准型、HbH 病的红细胞参数显示的小细胞低色素贫血程度逐渐加重，而在 β 地贫中则无法找到基因型与临床表现的关系。α 地贫基因缺失型占比最多，点突变最少；β 地贫 CD41-42/N 单基因突变最多，缺失型则较少；各地区和性别之间的的基因型分布频率基本相似，这在某种程度代表性反应了西南地区的基因分布特征。红细胞参数检测是筛检地贫的一个有效的方法。展望：地贫作为一种遗传性疾病，目前还没有彻底治愈的方法，控制地贫的有效方法始终是预防与完善产前筛查。基因诊断目前是地贫确诊“金标准”，但花费较高，报告周期长，需要的医疗条件较高，在贫困地区不易推行，而红细胞参数检验简单易行，在医疗水平不甚发达的地区，对简化筛查步骤具有意义，值得进一步验证并应用。

纳米粒子四氧化三铁纳米粒子表面定量吸附的实验研究

袁晨燕
东南大学附属中大医院

以四氧化三铁磁性纳米粒子为核心，在其表面修饰聚乙烯亚胺(PEI)以制备一种纳米基因载体．利用扫描电镜、红外光谱仪、zeta 电位仪对其形貌、表面包覆功能团、电位等进行表征。 电镜下修饰后粒子之间的聚集明显减轻、等电点由 pH 7．0 移至 pH 11．5．PEI 质量、介质的 pH 值以及离子强度均可影响 PEI 在 Fe3O4 上的吸附．不同的吸附量也影响了纳米粒子的 DNA 结合、释放与转染能力．本文通过对化学沉淀法制备 PEI-Fe3O4 磁性纳米粒中各种影响因素的优化，制定最优生产条件，获得稳定性优良的水溶性 PEI-Fe3O4 磁性纳米粒，兼具超顺磁性，提出多功能型磁性纳米粒的概念，使后续研究更具潜能。

AFP 启动子调控绿色荧光蛋白在肝癌细胞中特异性表达的研究

袁晨燕
东南大学附属中大医院

肝细胞癌（Hepatocellular carcinoma，HCC）是我国最常见的恶性肿瘤之一，随着现代分子生物学理论和技术的飞速发展利用基因工程的手段，对肝癌进行基因治疗，有可能成为肝癌治疗的突破点之一。基因治疗中利用细胞或组织特异性启动子能够使目的基因在特定的靶细胞中表达，从而最大程度的减少对正常组织的毒副作用。以绿色荧光蛋白为报告基因，研究 AFP 启动子调控的下游基因在肝癌细胞中的特异性表达，为肝细胞癌的靶向基因治疗奠定基础。

方法 构建重组真核表达载体：pcDNA3.1(+)-AFP-EGFP，载体经测序验证后分别用脂质体 Lipofectine 转染至肝癌细胞 HepG2，成纤维细胞 L929，于 37℃，5%二氧化碳，饱和湿度条件下培养 48 小时后，于荧光倒置显微镜下观察绿色荧光蛋白 EGFP 的表达情况。

结果和讨论 重组真核表达载体 pcDNA3.1(+)-AFP-EGFP 构建后，经酶切鉴定，载体大小、插入片段位置均正确（图 1），经测序鉴定 AFP 启动子与已报道序列完全匹配（数据未列出）。使用 AFP 启动子驱动下游基因的表达只能在肝癌细胞中进行[8]，因此我们将 pcDNA3.1(+)-AFP-EGFP 重组载体转染肝癌细胞 HepG2 和成纤维细胞 L929 后，仅能在肝癌细胞中观察到报告基因 EGFP 的表达（图 2）。

结论 AFP 启动子可以调控其下游基因仅在肝癌细胞内表达，而在正常细胞中没有转录活性。

PU-0512

CRISPR/Cas12a 结合 RCA 及 G-四链体/hemin 催化的 ABTS 系统比色检测 EGFR 基因突变

冯春凤
陆军军医大学第二附属医院（新桥医院）

表皮生长因子受体(epidermal growth factor receptor, EGFR)第 19 位外显子的突变状态对于预测酪氨酸激酶抑制剂(tyrosine kinase inhibitors, TKIs)治疗非小细胞肺癌(non-small-cell lung cancer, NSCLC)的敏感性具有非常重要的临床意义。因此，对于 NSCLC 患者，迫切需要一个简单、特异、灵敏的等温平台用于 EGFR 19del 检测。CRISPR/Cas12a 复合物在识别靶标后，对其周围的非特异性单链 DNA 表现出强大的反式裂解活性，在生物传感应用中具有潜在价值。在此，我们将 CRISPR/Cas12a 系统与滚动圆扩增(RCA)和 G-四链体/hemin DNAzymes 相结合，报道了一种新的用于 EGFR 19del 的视觉检测的免清洗和免标记的信号递减型比色传感器。根据溶液颜色的改变可用肉眼定性读取检测结果，当用分光光度计检测 420nm 波长吸光度时，可定量反应样本中的靶标含量。在最佳实验条件下，比色生物传感器表现出超高的灵敏度，检测限低至 20 fM。此外，该方法在识别单碱基不匹配和其他核酸时表现出强大的选择性和抗干扰能力。另外，通过加热人血清的方法灭活 RNase，获得了良好的回收率(93.00%~110.31%)。这种基于裸眼的比色生物传感器为癌症的早期无创诊断和指导临床用药提供了一种有前途的策略。

PU-0513

Large number hexagonal cavities microfluidic digital chip for gene mutation ultrasensitive analysis in lung cancer

Pan Feng
Department of Clinical Laboratory, the Second Affiliated Hospital, Army Medical University

Lung cancer has the highest incidence of malignant tumors in the world. Targeted therapy based on gene mutation detection, including epidermal growth factor receptor (EGFR) gene mutation detection, is one of the first-line treatments. In this work, taking the EGFR gene G719S mutation as a representative object, a large number hexagonal cavity microfluidic chip (LHMC) platform based on digital PCR (dPCR) for the absolute quantification of gene mutations in lung cancer was established. A 113,137-cavity chip was designed to increase the number of absolute quantities, which was 2~5 times higher than the traditional number. The hexagonal shape of the cavities elevates the filling rate and filling speed. A set of primers and probes for G719S with high sensitivity, high specificity and high reliability were designed and screened. Then, the PCR parameters were optimized. The results demonstrated that the chip platform shows good performance. The minimum detection concentration of the gene mutant was 3.01 copies/μL, and a good correlation (Y= 0.725X- 0.581, R2= 0.984) was noted between the measured value and the expected value. This chip sensitively detected positive mutations in G719S and indicated completely negative results when detecting other substances. The developed LHMC-dPCR chip is a rapid and accurate gene mutation analysis platform that has faster speed and lower price than classic detection methods, such as droplet dPCR and DNA sequencing **Methods** Moreover, LHMC-dPCR is not limited by the number of nucleic acids and droplets, and there is no need to estimate the nucleic acid concentration of the sample. This chip platform could also detect other gene mutations, for example, L858R and exon 19 deletions, in other tumors, including lung cancer.

PU-0514

HucMSC derived exosomes attenuate colitis by regulating macrophage pyroprosis via the miR-378a-5p/NLRP3 axis

xiu Cai
Jiangsu University

Background Human umbilical cord mesenchymal stem cells derived exosomes (hucMSC-exosomes) are recognized as novel cell-free therapeutic agents for inflammatory bowel disease (IBD), a condition caused by dysregulated intestinal mucosal immunity. The nucleotide-binding domain and leucine-rich repeat-containing family, pyrin domain-containing 3 (NLRP3) inflammasomes play an important role in regulating innate immune responses. Macrophage pyroptosis is a process of cell death releasing pro-inflammatory cytokines like interleukin (IL)-1β and IL-18, which is believed to partially account for inflammatory reactions. This study aimed at confirming the therapeutic effect and mechanism of hucMSC-exosomes on colitis repair.
Methods In vivo,We used BALB/c mice to establish a dextran sulfate sodium (DSS) induced colitis model and administasted hucMSC-exosomes intravenously to estimate its curative effect. Human myeloid leukemia mononuclear (THP-1) cells and mouse peritoneal macrophages (MPMs) were stimulated by LPS and nigericin to activate NLRP3 inflammasomes which simulated inflammation environment in vitro. The microRNA was used to verify the role of miR-378a-5p/ NLRP3 axis in colitis repair.
Results HucMSC-exosomes inhibited the activation of NLRP3 inflammasomes in the mice colon. The secretion of IL-18, IL-1β and Caspase-1 cleavage were suppressed followed by the reduced cell pyroptosis. The same outcome was observed in the in vitro cell experiments, where the co-

culture of THP-1 cells and MPMs with hucMSC-exosomes caused decreased expression of NLRP3 inflammasomes and increased cell survival. Furthermore, miR-378a-5p was highly expressed in hucMSC-exosomes and played a vital function in colitis repair.
Conclusions HucMSC-exosomes carrying miR-378a-5p inhibited NLRP3 inflammasomes and abrogate cell pyroptosis to protect against DSS-induced colitis.

PU-0515

过表达 LNCRNA 00593 通过 p53 通路调控非小细胞肺癌的顺铂耐药

李峥、任丽
天津医科大学肿瘤医院

目的 探讨 LNCRNA 00593 调控非小细胞肺癌顺铂耐药的机制研究。
方法 实时荧光定量 PCR（Quantitative Real-time PCR，RT-qPCR）检测 LNCRNA 00593 在癌旁正常组织、肺腺癌和肺鳞癌、HEB 细胞、A549 细胞、H1299 细胞、PC9 细胞、H460 细胞和 calu3 细胞中的表达量；CDPP 处理 H1299 细胞后 RT-qPCR 检测细胞中 LNCRNA 00593 的表达量。CCK-8 及流式细胞仪分析过表达及下调 LNCRNA 00593 对 H1299 细胞顺铂耐药的影响。RT-qPCR 及 Western blot 检测过表达及下调 LNCRNA 00593 后，H1299 细胞内 p53 的表达量，RNA-pull down 验证 LNCRNA 00593 和 p53 的结合。p53 通路抑制剂 PFT-α 作用细胞后，检测 LNCRNA 00593 对顺铂诱导的 H1299 细胞活力和凋亡的影响。
结果 LNCRNA 00593 在非小细胞肺癌组织的表达水平明显低于癌旁正常组织（P<0.05）。LNCRNA 00593 在非小细胞肺癌 A549、H1299、PC9、H460、calu3 细胞中的表达水平明显低于 HEB 细胞（P<0.01）。分别用 0μM、5μM、10μM CDPP 处理 H1299 细胞后，LNCRNA 00593 表达量随 CDPP 作用浓度依赖性升高（P<0.01）。用 10μM CDPP 处理 H1299 细胞 12 h、24 h、3 6h、48 h 后，LNCRNA 00593 表达量随 CDPP 作用时间不断增加（P<0.01）。CDPP 作用细胞后，下调 LNCRNA 00593 使 H1299 细胞活力明显上升，过表达 LNCRNA 00593 使 H1299 细胞活力下降。过表达 LNCRNA 00593 激活了 p53 通路。
结论 过表达 LNCRNA 00593 通过 p53 通路调控非小细胞肺癌细胞的顺铂耐药。

PU-0516

circHIPK2 在乳腺癌发展中的生物学功能及其临床诊断价值研究

吴军营、杨欢、王凌霞、吴茜茜
苏州大学附属第二医院

目的 研究 circRNA 分子在乳腺癌组织中的表达情况，验证差异表达的 circRNA 筛选出目标分子；建立 circHIPK2 检测方法，明确其与乳腺癌临床特征相关性，为乳腺癌的诊断、疗效及预后判断提供新的分子标志物；研究 circHIK2 对乳腺癌细胞增殖、迁移和侵袭的影响。
方法 1、采用 LPS 刺激乳腺癌细胞 MDA-MB-231，进行测序分析，筛选出差异表达的 circRNA 分子。对筛选出来的 circHIPK2 分子进行验证。并对其进行表征分析和临床病理资料相关性分析。
2、采用小干扰 RNA 进行 circHIPK2 敲减实验；采用细胞生长曲线及平板克隆实验检测 其对乳腺癌细胞增殖能力的影响；采用 transwell 迁移、侵袭实验检测 circHIPK2 对乳腺癌细胞迁移、侵袭能力的影响。
3、通过检测乳腺癌组、健康组及良性肿瘤组血清中 circHIPK2 表达水平，并进行差异分析，确定其在诊断、疗效及预后方面的价值。

结果 1、circHIPK2 在乳腺癌组织中显著高表达，circHIPK2 高表达与肿瘤大小、淋巴结转移和预后不良相关。设计 circHIPK2 特异性引物，PCR 产物仅能从 cDNA 模板中扩增出来，并且 circHIPK2 可以抵抗 RNase R 消化。
2、采用 siRNA 干扰可抑制乳腺癌细胞增殖、克隆形成、迁移和侵袭；敲减 circHIPK2 可以抑制乳腺癌细胞 EMT 及干性基因表达。
3、乳腺癌患者血清中 circHIPK2 表达水平明显高于健康对照组及良性肿瘤组，手术两周后 circHIPK2 表达水平明显降低。
结论 乳腺癌患者肿瘤组织中高表达的 circHIPK2 水平与乳腺癌大小、淋巴结转移相关，其高表达促进乳腺癌细胞增殖、克隆形成、迁移和侵袭，且该分子在乳腺癌、良性肿瘤及健康对照组血清中的表达水平存在显著差异，可作为乳腺癌诊断分子标志物。

PU-0517

Identification of differentially expressed long non-coding RNAs as potential plasma biomarkers for active tuberculosis

Chao Yuan
The Second Hospital of Shandong University

Background Tuberculosis, one of the deadliest infectious diseases worldwide, is difficult to diagnose. As long noncoding RNAs (lncRNAs) were demonstrated to be promising biomarkers, we aimed to identify lncRNAs in plasma as potential biomarkers for tuberculosis.
Methods We analyzed a GEO dataset (GSE94907) to identify the differential lncRNAs in serum exosomes between active tuberculosis (ATB) patients and healthy controls. To search for promising candidates that can be used for tuberculosis diagnosis, we excluded low-abundance lncRNAs using a cutoff value of FPKM >5. Four lncRNAs were selected for validation using real-time quantitative PCR in 69 ATB patients and 69 healthy individuals. A receiver operating characteristic (ROC) curve was constructed to evaluate the diagnostic value of these lncRNAs for ATB.
Results Integrated analysis of the GEO dataset and NONCODE database identified nine dysregulated lncRNAs in ATB patient serum exosomes. Compared with the heathy controls, NONHSAT101518.2, NONHSAT067134.2, NONHSAT148822.1 and NONHSAT078957.2 were significantly downregulated in ATB patient plasma. ROC curve analysis suggests that these four lncRNAs can discriminate ATB from healthy individuals with high specificity and sensitivity.
Conclusion We identified four differentially expressed lncRNAs in ATB patient plasma that can be used as potential diagnostic biomarkers of ATB.

PU-0518

肺结核病实验室不同检测方法诊断价值分析

吕星、杨欣宇
中南大学湘雅二医院

目的 探讨赛沛结核诊断系统（Xpert MTB/RIF）、液基夹层杯法、γ-干扰素释放定量检测(interferon-γ release assays, IGRAs)三种方法在结核病中的诊断价值，为临床选择肺结核病检测方法提供参考。
方法 选取 2020 年 1 月至 2020 年 11 月期间在中南大学湘雅二医院就诊的 200 例疑似结核病患者，根据《肺结核诊断标准(WS288-2017)》，分为临床确诊组（观察组）和临床未确诊组（对照组）。回顾性分析患者住院期间上述三种实验室检查的结果，并进行评价。

结果 观察组的三种检测方法的阳性率均高于对照组。三种方法单独检测的敏感度分别为 21.3%、36.2%、76.6%、85.1%。IGRAs 敏感度高于 Xpert MTB/RLF 和液基夹层杯法，但无统计学意义（P 均＞0.05）。Xpert MTB/RLF＋IGRAs 组合敏感度高于三种方法单独检测，但仅与 IGRAs 和 Xpert MTB/RLF 差异有统计学意义（P＜0.05）。三种方法单独检测的特异度分别为 96.7%、97.4%、68.6%、68.0%。Xpert MTB/RLF 和液基夹层杯法特异度高于 IGRAs，但无统计学意义（P 均＞0.05）。Xpert MTB/RLF＋IGRAs 组合特异度低于 Xpert MTB/RLF 和液基夹层杯法（P＜0.05），Xpert MTB/RLF＋IGRAs 组合特异度与 IGRAs 没有明显差异。
结论 三种方法各有各的优点，在辅助临床诊断结核病时应该优势互补，根据实际情况选用。组合项目检测可以提高检测的敏感度，但特异度会一定程度降低，可根据实际需要科学地选择组合项目，以满足临床需求。

PU-0519

P66shc 基因在 OSAHS 合并高血压患者中的表达水平

吕星、严镕璇
中南大学湘雅二医院

目的 观察阻塞性睡眠呼吸暂停综合征（OSAHS）合并高血压患者外周血 PBMCs 中 p66shc mRNA 表达和血浆 3-NT 浓度水平变化，探讨 p66shc 在 OSAHS 调节外周血氧化应激中的作用。
方法 选择 25 例单纯 OSAHS 和 13 例 OSAHS 合并高血压患者作为观察组，并选择同期 10 例确诊无 OSAHS 的健康人作为对照组。采用密度梯度离心法分离外周血中 PBMCs，RT-qPCR 检测其中 p66shc mRNA 表达水平变化。同时采用 ELISA 法检测血浆中氧化应激指标 3-硝基酪氨酸（3-NT）浓度。
结果 与正常对照组相比，单纯 OSAHS 组、OSAHS 合并高血压组 PBMCs 中 P66shc mRNA 表达和血浆中 3-NT 浓度明显升高，差异有统计学意义（P＜0.05），并且 P66shc mRNA 表达与血浆中 3-NT 浓度成正相关（r=0.517，P＜0.05）；而单纯 OSAHS 组与 OSAHS 合并高血压组之间 P66shc mRNA 表达和血浆中 3-NT 浓度无统计学差异（P＞0.05）。
结论 OSAHS 合并高血压患者外周血 PBMCs 中 P66shc mRNA 表达水平显著升高，并且血浆中氧化应激指标 3-NT 浓度成正相关，提示 OSAHS 可能通过 P66shc 基因调控循环系统氧化应激水平。

Evaluation of serum exosomal lncRNAs as diagnostic and prognostic biomarkers for esophageal squamous cell carcinoma

Suzhen Yan、Lutao Du、Chuanxin Wang
The Second Hospital of Shandong University

Background Exosomal long non-coding RNAs (lncRNAs) have been recognised as promising stable biomarkers in cancers. The aim of this study was to identify exosomal lncRNA panel for diagnosis and prognosis of esophageal squamous cell carcinoma (ESCC).
Methods Exosomes were isolated from serum by ExoQuick Solution. To validate the exosomes, immunoblotting for exosome markers and characterization of nanoparticle were performed. In training set, exosomal lncRNA profiles from 404 samples was conducted and established new models for ESCC detection. In validation set, the diagnostic performance of panel was further validated with an 222 additional individuals. The correlation between lncRNAs and survival rate of ESCC patients was assessed to explore prognostic potential.

Results A 4-lncRNA panel (UCA1, POU3F3, ESCCAL-1 and PEG10) in exosomes for ESCC diagnosis was developed by logistic regression model. The diagnostic accuracy of panel was evaluated with AUC value of 0.844 and 0.853 for training and validation stage, respectively. The corresponding AUCs for patients with TNM stage I-II and III were 0.820 and 0.935, significantly higher than squamous cell carcinoma antigen (P<0.001), which were 0.652 and 0.642, respectively. Kaplan–Meier analysis indicated that patients with higher level of UCA1 and POU3F3 had lower survival rate (P<0.001). Additionly, POU3F3 might be as an independent prognostic factor for ESCC patients (P=0.004).
Conclusions This findings suggested that serum exosomal 4-lncRNA panel has considerable value for ESCC diagnosis, and POU3F3 may serve as a novel prognostic predictor in clinical applications.

一个 F8 基因第 22 内含子剪接位点突变的血友病 A 家系遗传学分析

邱雪平、郑芳
武汉大学中南医院

目的 检测一个血友病 A 患者家系凝血因子Ⅷ基因（F8）的突变情况，明确 F8 基因的突变类型，以期为家系提供遗传咨询。
方法 联合应用长距离 PCR、二代测序技术（next generation sequencing, NGS）和 Sanger 测序技术对一个血友病 A 家系的先证者进行 F8 基因变异检测。
结果 长距离 PCR 结果显示先证者 F8 基因未检测到第 22 内含子和第 1 内含子倒位；NGS 结果发现先证者 F8 基因第 22 内含子区 c.6429+5 G>A 半合子突变，并经 Sanger 测序技术证实，对于该位点突变的致病性已有相关文献报道。
结论 通过 NGS 确定一例 F8 基因第 22 内含子半合子突变，该位点可能通过影响 mRNA 剪接而影响其蛋白功能，最终导致凝血因子Ⅷ活性降低甚至丧失。

B-raf V600E 基因检测试剂在肿瘤患者中检测的临床性能评价

刘玲、王玲玲
山东大学第二医院

目的 B-raf 基因是人类最重要的原癌基因之一，大约 8% 的人类肿瘤发生 B-raf 基因突变。90%左右的 B-RAF 基因突变发生在 15 外显子的第 1799 位核苷酸上 (V600E)，该突变导致下游 MEK-ERK 信号通路持续激活，对肿瘤的生长增殖和侵袭转移至关重要。该突变患者接受 EGFR-TKI 及 EGFR 单抗药物治疗不敏感。本研究拟对国产 B-raf V600E 基因检测试剂的检测性能进行评价。
方法 收集 2015 年 9 月至 2016 年 12 月山东大学第二医院 315 例的肺癌、结直肠癌、甲状腺癌等患者的病理组织样本。美国罗氏试剂为对比试剂，北京鑫诺美迪基因检测技术有限公司的 B-raf 基因突变检测试剂为考核试剂（鑫诺试剂），通过荧光 PCR-毛细管电泳测序法检测 B-raf 基因 V600E 突变。
结果 鑫诺试剂的 B-raf V600E 试剂突变检测率和罗氏试剂的分别为 43.68%、44.59%（P＞0.05），鑫诺试剂的 B-raf V600E 试剂无突变检测率和罗氏试剂的分别为 56.31%、55.41%（P＞0.05）。在统计学上，两者无差异具有较好的一致性。

结论 鑫诺的 B-raf V600E 试剂的灵敏度高、特异度好，具有较高的临床应用价值，可用于指导靶向药物的合理使用。检测 B-raf V600E 基因可及时发现耐药，辅助临床调整治疗方案，避免资源浪费。

胃腺癌中异常表达的 lncRNAs、miRNAs 和 mRNAs 在竞争性内源性 RNA 网络中的综合分析

朱丹丹、陈杰荣、张喜钦
广东省人民医院

蛋白质编码和非编码 RNA 正成为越来越多的研究热点，这些 RNA 参与了癌症的发展和发生。我们的研究旨在进一步探索胃腺癌中长非编码 RNAs(lncRNAs)、微 RNAs(miRNAs)和 mRNAs 之间的相互作用。为了确定差异表达的 RNAs（DERNAs），我们从 The Cancer Genome Atlas（TCGA）数据库中下载了数据。基于 lncRNAs、miRNAs 和 mRNAs 之间的相互作用，我们构建了一个竞争性内源性 RNA 网络来说明 lncRNAs、miRNAs 和 mRNAs 之间的关系。随后，进行了 GO 和 KEGG 功能富集分析和蛋白质-蛋白质相互作用（PPI）网络分析，以探索与 ceRNA 网络相关的 DEmRNAs 的功能和相互作用。生存分析用于筛选预后相关的 RNAs。通过差异表达分析，在胃腺癌中共发现了 327 个 DElncRNAs，242 个 DEmiRNAs，和 4343 个 DEmRNAs。经过预测、配对和网络分析，构建了一个由 29 个 DElncRNAs、31 个 DEmiRNAs 和 182 个 DEmRNAs 组成的 ceRNA 网络。这些 DEmRNAs 在与胃腺癌的发生和发展相关的途径中明显富集。39 个 mRNAs、4 个 miRNAs 和 3 个 lncRNAs 被鉴定出来，并与胃腺癌的总生存率显著相关（P <0.05）。我们的研究提供了关于 ceRNAs 在胃腺癌中的功能以及开发 STAD 治疗方法的生物标志物的见解。

PU-0524

Serum albumin in furry animals as a cross-reactive component may causes more severe allergic symptoms

Zhifeng Huang、Baoqing Sun
First Affiliated Hospital of Guangzhou Medical University

Background The prevalence of allergies has increased significantly in the past decade. And further research on allergic diseases caused by furry animals is of great importance for clinical prevention, diagnosis and treatment.
Objective To identify the sensitization profile and clinical association of various furry animal crude extracts and components based on CRD.
Methods 211 patients with allergic rhinitis (AR) sensitized to cat and or dog were recruited, and the Specific Immunoglobulin E (sIgE) of various furry animals (such as dog / cat extract and its components, pigeon, parrot, duck, chicken, sheep, rat, mouse, goose, cow and horse extract) were measured to analyze the sensitization profiles, cross reaction and clinical relevance.
Results 91.67% of cat sensitized patients were sensitive to Fel d 1, while only 16.03% of cat sensitized patients responded to Fel d 2. Can f 1 and Can f 5 as the major components of dog, the positive rates were 23.53% and 16.18%, respectively. 20% of patients were sensitized with other 10 furry animal allergens, and the positive rate was between 0-19.12%. There was a significant correlation between components (Can f 1-5 and Fel d 2) and 5 furry animals (mouse, sheep, horse, rat, cow), especially between serum albumin (Can f 3, Fel d 2) and furry animals. The sensitization rate of most of the animal crude extracts and components in patients with serum albumin positive was significantly higher than that of the patients with serum albumin negative. Especially for mouse, sheep, horse, rat and cow, which OR value were more than 10

times. The VAS of symptoms and life quality in the serum albumin sensitized patients was higher than that in unsensitized patients, and lipocalin sensitized patients' quality of life was also worse. **Conclusion** Serum albumin Fel d 2 and Can f 3, rather than lipocalin or prostatic kallikrein, as minor allergens in cats and dogs, significantly cross-reacted with 5 uncommon furry animals. Serum albumin sensitization significantly increases the risk of sensitization to other furry animals and makes allergic rhinitis symptoms worse.

PU-0525

黄河三角洲地区育龄妇女亚甲基四氢叶酸还原酶基因多态性分析

郝静静
滨州医学院烟台附属医院

目的 了解黄河三角洲地区育龄妇女体内亚甲基四氢叶酸还原酶(MTHFR)677 和 1298 两个位点基因多态性的分布情况。
方法 采用荧光 PCR 法检测 2019 年 1 月 1 日至 12 月 31 日全年滨州医学院附属医院的 6135 位育龄妇女的 MTHFR 中 C677T 以及 A1298C 的基因分型，统计分析基因多态性的频率分布特征，并与符合条件的其他地区育龄妇女 MTHFR 分布数据作比较。
结果 黄河三角洲地区育龄妇女的 MTHFR 中 C677T 位点 CC（野生型）基因型频率为 13%（798/6135）、CT（突变杂合）基因型频率为 44%（2699/6135）和 TT（突变纯合）基因型频率为 43%（2638/6135）。MTHFR A1298C 位点 AA（野生型）基因型频率为 76%（4662/6135）、AC（突变杂合）基因型频率为 22%（1350/6135）、CC（突变纯合）基因型概率为 2%（123/6135）。对于 C677T 基因突变统计，黄河三角洲地区 T 等位基因与海南、乌鲁木齐、云南、郑州的统计结果差异具有统计学意义(P＜0.05)，与淄博的统计结果差异无统计学意义(PAF＞0.05)。黄河三角洲地区 T 基因突变频率(65.00%)显著高于海南(26.18%)、乌鲁木齐(49.10%)、云南(37.50%)和郑州(62.35%)，表现出明显的地域差异性。同时黄河三角洲地区、郑州和淄博 CT 与 TT 表现型的基因频率相当，海南、乌鲁木齐、云南等地 CT 与 TT 表现型的基因频率差距较大，CT 基因频率高于 TT，即杂合突变率高于纯合突变。
结论 黄河三角洲地区育龄妇女 MTHFR 基因多态性分布具有地域特异性，MTHFR C677T 位点 T 突变率较高，通过检测 MTHFR 基因多态性来指导育龄妇女适量补充叶酸是进一步降低当地出生缺陷和妊娠期疾病的重要方法。

呼吸道病原菌核酸检测在儿童肺炎诊断中的临床应用

刘玲、赵燕、王玲玲
山东大学第二医院

目的 环介导等温扩增技术是 Notomi 发明的一种核酸扩增技术，基于 LAMP 的检测方法具有检测时间短、灵敏度高和检测结果易于判读等优点，能辅助进行病原早期诊断。本研究拟采用环介导等温扩增技术的呼吸道病原菌核酸检测试剂盒对临床痰液样本进行检测，评价该试剂盒的检测效果和临床适应性。
方法 山东大学第二医院 2019-2020 年收治的儿童肺炎患者 45 例，各病例的痰液样本分别使用细菌学方法和呼吸道病原菌核酸检测试剂盒进行，对两种检测方法的病原检出种类、数量和检测一致性进行对比。
结果 试剂盒检测结果和细菌学检测结果有较好的一致性，肺炎链球菌、肺炎克雷伯氏菌和流感嗜血杆菌检出率分别为 37.5%、 14.6%和 9.98%。以上结果与 2010 年的全国性调查结果接近。对于

临床上肺炎感染率最高的 3 种细菌，肺炎链球菌的检测总符合率为 85.4%，肺炎克雷伯氏菌的总符合率为 97.1%，流感嗜血杆菌的总符合率为 91.2%。

结论 呼吸道病原菌核酸检测试剂盒能一次检测肺炎相关的 8 种常见病原菌，操作简便，能快速获得检测结果，能大大缩短对未知病原的检测时间，在实际使用中更具有时效性，检测结果有临床价值，适用于临床的检测。

PU-0527

分支杆菌核酸检测在疑似结核患及非结核分支杆菌病鉴别诊断中的应用

刘玲、刘军莉
山东大学第二医院

目的 利用基于实时荧光 PCR 技术的分枝杆菌核酸检测区别 MTB 与 NTM，探讨其对疑似结核患及非结核分支杆菌病快速鉴别诊断的应用价值。

方法 收集本院呼吸科疑似结核病患者标本经 BACTECMGIT960 快速培养，培养阳性标本 48 例用 PNB 检测法做菌型鉴定获得结核分枝杆菌 41 株、非结核分枝杆菌 7 株，分别用荧光 PCR 检测并与 PNB 结果对比。

结果 重复检测 6 株菌株的核酸／非核酸分枝杆菌检测，符合率 100％，检测特异性高。41 例结核分枝杆菌使用荧光 PCR 方法检测阳性 39 例，结核分枝杆菌阳性符合率为 95.1％（39／41）；7 株非结核分枝杆菌使用荧光 PCR 方法检测，阳性 7 例，非结核分枝杆菌阳性符合率 100％（4／4）。

结论 本研究建立的实时荧光定量 PCR 的分支杆菌核酸检测检测方法，利用结核分枝杆菌和分枝杆菌特异性的核酸序列，利用双重实时荧光 PCR 技术实现对分枝杆菌和非结核分枝杆菌的快速检测。

PU-0528

HHT 可诱导 PSMD11 蛋白合成并调节胰腺癌干细胞特性

王乐乐
山东大学第二医院

胰腺导管腺癌（PDAC）是美国癌症相关死亡的第三大主要原因。PDAC 患者的 5 年死亡率仍低于 8.2%。胰腺癌发现难易转移等特点使得发现新的靶向治疗药物迫在眉睫。我们前期研究发现胰腺癌细胞发生急性凋亡与短寿命中心蛋白质组中 PSMD11 蛋白的迅速降解密切相关。PD98059 激活 MEK/ERK1/2 信号通路可以 抑制由 HHT 引发的 PSMD11 蛋白的合成。理解 HHT 对 PSMD11 蛋白起作用的机制对于 胰腺导管腺癌及其他癌症的靶向治疗可能会有很大的作用。研究发现高蛋白酶体活性的人胚胎干细胞与 PSMD11 蛋白增加有关。提示 PSMD11 蛋白也有可能通过调节胰腺癌干细胞来影响胰腺癌细胞的生长和增殖。因此深入理解胰腺导管腺癌的作用机制对胰腺癌的靶向治疗具有十分重要的意义。

PU-0529

SHOX2/PTGER4 基因甲基化在肺癌早筛的临床意义

赵敬杰、赵燕、王玲玲
山东大学第二医院

目的 DNA 的甲基化在肿瘤的发生发展中发挥了重要的作用，检测某些 DNA 位点的甲基化可作为肿瘤检测的标记物。最新研究表明 SHOX2/PTGER4 基因甲基化在肺癌肿瘤早期筛查方面具有高度的特异性和敏感性。本研究拟探讨 SHOX2/PTGER4 基因甲基化对早期肺癌患者筛查的意义。
方法 收集山东大学第二医院 2018 年 9 月至 2020 年 12 月已确诊为 I 期和 II 期肺癌患者 134 例，72 例非肺癌患者和 75 例正常人的血液标本。用鑫诺美迪 SHOX2/PTGER4 基因甲基化试剂，提取血液标本中肿瘤 ctDNA，进行 MSP 荧光定量 PCR 方法检测 SHOX2/PTGER4 基因甲基化程度。
结果 I 期和 II 期肺癌患者的检测 SHOX2/PTGER4 基因甲基化阳性率与非肺癌患者的分别为 69.12%， 9.01%（P＜0.05），与正常人的 3.49%（P＜0.05）相比，均具有显著性差异。
结论 采用鑫诺美迪的 SHOX2/PTGER4 基因甲基化试剂，能有效应用于肺癌患者的早期筛查，特异性好，灵敏度高，具有较高的临床应用价值。SHOX2/PTGER4 基因甲基化可以联合组织学和细胞学共同检测，提高确诊率，是确诊肺癌的有效工具。

PU-0530

循环肿瘤 DNA 在乳腺癌中的临床应用

王乐乐
山东大学第二医院

目前，液体活检的三驾马车为 ctDNA，CTC 和外泌体。其中 ctDNA 的发展相较于另外两个更有优势。ctDNA 主要来源于肿瘤中癌细胞凋亡和 / 或坏死。ctDNA 在个体总 cfcDNA 的比例主要取决于肿瘤负荷和增殖速率等因素。ctDNA 的取样和分析已经用于转移性非小细胞肺癌（NSCLC），检测 EGFR 突变。在乳腺癌患者中我们通过检测治疗前和治疗过程中患者 ctDNA 水平，来评估 ctDNA 对乳腺癌患者临床结局的预测价值。

PU-0531

免疫球蛋白基因重排分析在非何杰金淋巴瘤骨髓侵犯监测中的作用

马雨婷
滨州医学院烟台附属医院

目的 探讨免疫球蛋白基因重排分析在非何杰金淋巴瘤骨髓侵犯监测中的作用。
方法 收集 2017 年至 2019 年间本院收治的 192 例非何杰金淋巴瘤患者的骨髓穿刺液标本。采用多重体外扩增手段病人免疫球蛋白重链（IgH）和免疫球蛋白轻链（Igκ 和 Igλ）的核酸系列重组；使用多色流式细胞仪检测淋巴细胞上分化抗原的表达；采用瑞士-姬姆萨染色骨髓涂片并用光学显微镜分类计数骨髓细胞；采用传统细胞遗传学检测染色体易位；采纳应用 DNA 复制时期荧光原位杂交(FISH)手段检验 MYC、BCL-2 核酸系列空间构成改变。
结果 免疫球蛋白基因重排检测发现不同类型淋巴瘤骨髓侵犯的发生率不同，小淋巴细胞淋巴瘤和 Burkitt 淋巴瘤的骨髓侵犯率明显高于弥漫大 B 细胞淋巴瘤（P＜0.05）；与核酸序列重组的检验数据比较，小淋巴细胞淋巴瘤骨髓侵犯骨髓形态学检出率较低（P＜0.05），其它几种淋巴瘤亚型尽管没有统计学分别，但均低于核酸系列重组检验的检出率；对各种类型淋巴瘤，流式细胞仪与基因

重排检测骨髓侵犯结果间没有统计学差异（P＞0.05）；传统细胞遗传学和 FISH 技术可确证其它检测结果不符时的诊断结论。

结论 免疫球蛋白基因重排检测在非何杰金淋巴瘤骨髓侵犯监测中具有重要价值，联合应用流式细胞术、细胞形态学以及分子细胞遗传学技术有助于明确淋巴瘤骨髓侵犯的诊断。

PU-0532

葛根素提高肝癌细胞化学敏感性的影响

吴镇
山东大学第二医院

目的 本研究研究了葛根素(Pu)对 HepG2 人肝癌(HCC)细胞对化疗药物敏感性的影响，以确定可能的机制。

方法 用不同浓度的 Pu 和顺铂(CDDP)单独或联合治疗。用 MTT 法测定不同药物对 HepG2 细胞的抑制作用。通过倒置显微镜观察到细胞形态。用西斑点分析测定了 B 细胞淋巴瘤 2（Bcl-2）和 Bax 蛋白的表达。Pu 和 CDDP，单独或联合使用，可抑制 HepG2 细胞的增殖。CDDP 与 Pu 联合使用对 HepG2 细胞的抑制作用明显高于单一药物治疗方法(p<0.01)。此外，与单个药组相比，细胞形态显著改变，细胞凋亡率和 Bax 蛋白表达显著增加（p<0.01）。然而，在联合给药组中，Bcl-2 蛋白的表达显著降低(p<0.01)。

结果 Pu 可以提高 HCC 对化疗药物的敏感性，提高化疗药物对细胞增殖的抑制作用，协同诱导 HepG2 细胞凋亡。该机制可能与 Bax 蛋白的上调和 Bcl-2 蛋白的下调有关。

PU-0533

人肾癌组织和肾癌细胞株中 MICA 表达的临床意义

赵敬杰、鞠振宇
山东大学第二医院

目的 肾细胞癌是一种肾脏最常见的恶性肿瘤，其特点是高发局部侵袭和远端转移。MHC I 类相关基因 A(MICA)位于 MHC I 类基因区域，具有高度的多态，但当细胞受到感染、应激或恶性转化时可明显上调其表达量。本研究拟揭示人类肾癌细胞系和组织标本中膜结合型 MICA（mMICA）的表达，并确定可溶性 MICA（sMICA）在肾细胞癌患者的血清含量。

方法 应用流式细胞术（FCM）、免疫组化和 RT-PCR 法对肾癌组织中和肾癌细胞株的 mMICA 进行检测和分析；应用酶联免疫吸附试验（ELISA）检测对照组和肾癌患者体内血清中 sMICA 的含量。

结果 应用流式细胞术（FCM）、免疫组化和 RT-PCR 三种方法均显示：与健康成人和人胚胎肾 293（HEK293）细胞系相比较，人肾癌组织和肾癌细胞株（786-O 和 Ketr-3）中 mMICA 的表达百分比明显增加（P＜0.05）。ELISA 分析表明 sMICA 在健康成人中的表达为阴性，但在 76.7%（23/30）的肾癌患者中显著升高（P＜0.05）。

结论 MICA 在人肾癌中呈高表达状态，提示 MICA 可作为人肾细胞癌中潜在的肿瘤相关抗原（TAA）。sMICA 的释放则不仅降低肿瘤细胞表面 MICA 的表达，继而降低肿瘤的免疫原性，可能是肿瘤发生免疫逃逸的又一机制。

PU-0534

HSP90α 在肺癌患者中血浆表达的临床意义

赵敬杰、王玲玲、赵燕
山东大学第二医院

目的 热休克蛋白 90α（HSP90α）是一种细胞质蛋白质，是一类在遗传上高度保守的分子，能保护细胞并促进细胞对各种刺激所造成的损伤进行自身修复。HSP90α 作为肿瘤标志物，在肿瘤筛查、诊断、判断预后、评价疗效和高危人群随访等方面都具有重要的实用价值。本研究拟探讨肺癌患者血浆 HSP90α 的表达及其临床意义。
方法 应用酶联免疫法检测山东大学第二医院 72 例初治肺癌患者及 35 例健康体检者血浆 HSP90α 浓度，并分析患者临床资料。
结果 肺癌组血浆 HSP90α 浓度为（189.62±106.21）ng/mL，明显高于健康对照组（40.14± 20.15）ng/mL（t＝10.480，P＜0.001）；使用 58ng/ml 作为区分癌症和对照组的 cut off 值时，检测灵敏度为 71.24%（95% CI，0.695–0.749），特异度为 77. 89%（95% CI，0.761–0.813）。与 CEA、NSE、CYFRA21-1 相比，HSP90α 灵敏度更高，热休克蛋白 90α 与 CEA、NSE、CYFRA21-1 联合检测，灵敏度达到 96%。热休克蛋白 90α 含量的变化与患者病情有对应关系。
结论 HSP90α 具有辅助诊断肺癌的作用，通过数值的变化判断患者病情发展情况，其联合肺癌三项可显著提高肺癌的检出率。HSP90α 亦可提高其他肿瘤患者的病情监测和疗效评价水平，对实现肿瘤个体化治疗具有重要推动作用。

Circulating Serum Exosomal lncRNA POU3F3 as Potential Biomarker for Esophageal Squamous Cell Carcinoma

Suzhen Yan、Lutao Du、Chuanxin Wang
The Second Hospital of Shandong University

Purpose Esophageal squamous cell carcinoma (ESCC) is one of the most common malignant cancers worldwide especially in Eastern Asia and the prognosis of ESCC remain poor. Exosomes are bioactive vesicles secreted by cells into surrounding body fluids,and have major impact in cancer development. Recent studies have demonstrated that long non-coding RNAs (lncRNAs) were present in the circulating exosomes of cancer patients and have shown great potential as powerful and non-invasive tumor markers. The aim of our study was to identify serum exosomes lncRNA expression in patients with ESCC for diagnosis and prognosis prediction.
Methods Exosomes were isolated from serum of ESCC and healthy subjects by ExoQuick precipitation kit and confirmed by transmission electron microscopy, Western blot, flow cytometer and NanoSight analysis. Then, 24 lncRNAs which previously found to be differently expressed in esophageal cancer were selected as candidate targets to investigate in 34 ESCC and matched adjacent normal tissues via quantitative real-time PCR. Identified lncRNAs were further confirmed in serum exosomes on training and validation sets.
Results Consequently, lncRNA POU3F3 was finally identified by qRT-PCR for the diagnosis of ESCC. The results showed that the expression levels of lnc-POU3F3, was significantly higher in ESCC serum exosomes than in normal controls($p<0.001$), and no other lncRNAs showed significant differential expression between ESCC and normal control samples. Furthermore, the expression level of lncRNA POU3F3 was significantly higher in patients with advanced stage. The areas under the receiver operating characteristic curve (AUC) of the POU3F3 were 0.717 and 0.707 for the training and validation stages, respectively. In addition, Kaplan–Meier analysis showed that patients with high levels of POU3F3 had significantly lower survival rate ($p < 0.001$).

In multivariate Cox regression analysis, POU3F3 was independently associated with tumor prognosis of ESCC (p=0.004).
Conclusions Our study identified serum exosomes lncRNA POU3F3 as a biomarker for ESCC diagnosis and demonstrated POU3F3 as an independent prognostic factor for ESCC prognosis prediction.

PU-0536

全外显子组测序筛选限制性心肌病致病基因: 一例限制性心肌病病例报告

徐嘉欣
成都市第一人民医院

目的 限制性心肌病（RCM）是一种罕见且独特的心肌病，其特征是具有正常的心室腔尺寸和正常的心肌壁厚度，但心肌松弛能力减弱，限制了心脏的正常伸展和充盈，患者预后差，心脏移植是目前唯一的治疗方式。遗传因素是 RCM 发病的主要原因之一，但目前关于 RCM 致病基因的相关研究仍不完善。本文通过对 1 例散发 RCM 患者进行全外显子组测序对 RCM 潜在致病基因进行检测与探讨，以寻找新的 RCM 候选致病基因或致病突变，为进一步探索 RCM 潜在的致病机制提供遗传学依据和靶点。
方法 本研究以 1 例中国女性 RCM 患者为研究对象，收集其临床信息并提取其血液样本基因组 DNA 进行全外显子组测序，通过生物信息软件 SIFT、Polyohen-2 和 HOPE 等软件对变异导致的蛋白功能改变进行致病性预测。
结果 此例 RCM 患者的全外显子组测序结果显示 SMPD1 中存在缺失突变（exon1:c.108_113del:p.36_38del），为一新发缺失突变。通过对比不同物种 SMPD1 蛋白氨基酸序列，结果显示突变位点氨基酸具有高度的保守性，SMPD1 突变使蛋白序列发生改变，且 SIFT、Polyohen-2 和 HOPE 软件均预测此变异导致的蛋白功能改变具有有害性。
结论 本文章报道了 SMPD1 上的新的缺失突变位点，该研究结果丰富了中国人群 SMPD1 基因突变谱。同时，为探索其在限制性心肌病发生发展中的致病机制，进一步的细胞与动物实验十分必要。此外，本文章为全外显子组测序在 RCM 诊断上的应用提供了新思路。

基于双功能发光剂的电化学发光传感器用于无标记法检测 microRNA

宁振强[2]、沈艳飞[1,3,4]
1. 东南大学医学院
2. 东南大学医学院
3. 东南大学附属中大医院临床检验医学中心
4. 东南大学江苏省重症医学重点实验室

微小 RNA（microRNA）是一类长度约为 19 至 23 bp 的单链内源非编码 RNA 分子。相关研究表明，作为基因表达的转录后调节因子，microRNA 参与到人体的多种生理过程，如细胞的分化、增值，其表达水平与肿瘤的发生、发展存在重要联系，因此 microRNA 有望成为新型生物标志物应用于疾病的非侵入性的早期诊断。目前，microRNA 的检测方法主要包括 Northern 印迹法，Real-time PCR、基因芯片法等等，而这些方法存在灵敏度低，操作繁琐，耗时，成本高等缺点，因此无法满足当前疾病诊断的需求。因此，建立针对 microRNA 的简便快捷的超灵敏定量检测技术具有十分重要的临床实践意义。

电化学发光（electrochemiluminescence, ECL）是一种由电化学反应驱动的化学发光现象，通过智能整合电化学及化学发光技术，使其相较于其他光学检测方法其具有更加优越的性能。电化学发光不需要额外的光源，这不仅简化了实验的设备，同时也避免了杂志及散射光源的背景干扰，具有较高的灵敏度，因此被广泛地应用于食品和药品分析、环境监测等领域，是实现 microRNA 超灵敏检测的最有潜力的平台之一。

本文首先采用简便的一步合成法制备了同时负载发光剂 Ru(bpy)32+和共反应剂(二乙氨基甲基)三乙氧基硅烷 （DEAMTES）的二氧化硅纳米粒子，其提升了 ECL 反应过程的电子传输的有效性及速率，相比于传统发光剂具有更强的发光效率。其次，通过设计 Y 字型催化发卡自组装探针用于识别 microRNA 并发挥信号放大的作用，用于构建无标记的 ECL 传感系统。结果显示，该传感器能够实现 0.01-1000 pM 浓度范围的 microRNA-21 的定量检测，其最低检测限达到 8.19 fM，显示出其在未来临床检验诊断领域的强大潜力和应用前景。

Fusobacterium nucleatum is a risk factor for metastatic colorectal cancer

Xin Zhang
Qilu Hospital of Shandong University

Background Increasing evidence has indicated that there is a correlation between the abundance of Fusobacterium nucleatum (F. nucleatum) and poor prognosis of colorectal cancer (CRC). Moreover, tumor metastasis plays a decisive role in the prognosis of CRC patients. Therefore, we hypothesized that the abundance of F. nucleatum in CRC tissue affected tumor metastasis.
Materials and Methods F. nucleatum DNA from 141 resected CRC samples was quantified by qPCR to analyze whether there were differences in F. nucleatum abundance between the groups with and without CRC metastasis. Moreover, in vitro experiments (electron microscopy as well as migration and invasion trials) were performed with CRC cells infected with F. nucleatum to observe the influence of F. nucleatum. Additionally, a meta-analysis was carried out to comprehensively evaluate the correlation between the F. nucleatum abundance and CRC stage based on large cohorts.
Results CRC tissues enriched with F. nucleatum had a higher risk of lymph node metastasis and distant metastasis. The receiver operating characteristic (ROC) curve indicated that F. nucleatum in the CRC tissue could act as an indication marker for CRC metastasis to some extent. Moreover, F. nucleatum was a highly invasive bacterial strain and could significantly enhance the invasion and migration capacities of SW480 and SW620 cells. Besides, the meta-analysis indicated a slight correlation between the F. nucleatum abundance and advanced CRC stage (RR=1.17, 95% CI: 1.00–1.37, P=0.04, random effect).
Conclusions F. nucleatum abundance is associated with CRC metastasis, and it might serve as a metastasis biomarker for CRC patients.

Exosome-mediated Bmi1 promotes cholangiocarcinoma growth and metastasis through the differential regulation of miR-320b and miR-27b-3p

Xin Zhang
Qilu Hospital of Shandong University

Background B-cell specific moloney leukemin virus insertion site 1 (Bmi1) is up-regulated in many human malignancies. However, the role of Bmi1 in the progression of cholangiocarcinoma (CCA) remains largely undetermined. In the present study, we investigated the biological function and potential mechanisms of Bmi1 in the progression of CCA.
Methods The expression of Bmi1 was detected in 2 cohorts of human CCA tissues using immunohistochemistry. Function of Bmi1 or exosomal Bmi1 was investigated using CCK8, colony formation, transwell, vascular tube formation assays and tumor xenograft models. RNA-seq and miRNA-seq were used for identification of downstream targets and upstream regulation miRNAs.
Results Bmi1 was significantly up-regulated in CCA tissues, and associated with tumor size and lymph nodes metastasis, which is an independent prognostic marker for CCA. Overexpresson of Bmi1 promoted CCA cells proliferation, migration, and invasion. And, depletion of Bmi1 could inhibit growth and metastases of CCA cells in vitro and in vivo. QBC-939-derived exosomes transferred Bmi1 to RBE cells and human umbilical vein endothelial cells, thus promoting proliferation, metastasis, and angiogenesis of CCA. Bmi1 is involved in regulation of p53 pathway and EMT in CCA. Based on the next-generation sequencing, we identified and verified Bmi1 was downregulated by miR-320b while upregulated by miR-27b-3p in CCA.
Conclusion Bmi1, or exosomal Bmi1, played a critical role in tumorgenosis and metastasis of CCA by inhibiting p53 and promoting EMT, which could be used as a potential predictive biomarker for CAA prognosis.

ＨＰＶ感染和宫颈癌的病发率与防治

郭文静、王耀东、杨叶
呼和浩特金域检验所有限公司

在国内，宫颈癌的发病率飞速上升，是发病率增长速度最快的癌症之一。近十年，新发现的患者数量增加了 68.8%，宫颈癌患者的年龄以往以四十岁至五十岁为最多，二十岁以下的比较少见一些。世界卫生组织国际癌症探讨所的探讨结果表明人乳头病毒(HPV)感染是宫颈癌的主要病因，宫颈癌是近年来最常见的妇科恶性肿瘤之一，在女性恶性肿瘤疾病中位居第二位，随着最近几年宫颈细胞学筛查的普遍应用，明确了解了子宫颈癌的三级预防策略，通过减少 HPV 感染、早发现、早诊断、早治疗子宫颈癌前病变，以及对子宫颈浸润癌及时治疗降低宫颈癌的疾病负担。

乙型肝炎患者检验指标相关性分析

杨博
雅安市人民医院

目的 探讨乙型肝炎患者 HBV DNA 与乙肝标志物及肝功能的相关性。

方法 选取我院 2020 年 6 月至 2020 年 11 月收治的 82 例乙型肝炎患者，对患者实施 HBV DNA 定量检查、乙肝标志物检查及肝功能检查。根据 HBV DNA 定量结果将研究对象分为阴性组、阳性组，比较两组患者乙肝标志物、肝功能检
查结果。
结果 阴性组、阳性组各项乙肝标志物的阳性率比较，P 均 >0.05，无统计学意义。阳性组 ALT、AST 较阴性组高，组间比较，P 均 <0.05，差异有统计学意义。
结论 乙型肝炎患者 HBV DNA 与乙肝标志物无明显相关性，但能反映肝功能变化，定量越高时，肝功能越差。

PU-0542

云南地区遗传性耳聋相关 21 个基因位点的分子流行病学数据报道

孟博
昆明金域检验医学有限公司

目的 与遗传性耳聋相关的基因位点分布在四个基因（GJB2、SLC26A4、GJB3 和 12SrRNA）上，基于中国人群的耳聋基因位点流行病学分布的数据报道还比较有限，不同地区的分布数据更是缺乏。云南地区少数民族种类较多，通过基于该地区的耳聋基因检测大数据分析可以帮助对于云南地区的耳聋发病的分子特征的了解，进而为当地疾病预防和诊疗提供重要的参考价值。
方法 本研究分析了本医学检验所近 19 个月的耳聋基因检测数据（4 个基因的 21 个位点），采用的方法为基质辅助激光解吸电离飞行时间质谱技术（MassARRAY CPM96/Agena Bioscience），统计分析了各位点在检测人群中的突变频率和突变类型，并且进一步比较了与已有报道的异同。
结果 在 35820 例检测样本中， 一共有 1165 例发现有突变位点，占 3.25%。突变位于 GJB2 基因上的样本数为 613 例 （1.71%总样本数，51.43%阳性突变总数），突变于 SLC26A4 上有 427 例（1.19%总，35.82%阳），于 12SrRNA 上有 90 例 （0.25%总，7.55%阳），于 GJB3 上有 62 例（0.17%总，5.20%阳）。GJB2 基因中的热点突变位点为 c.235delc （1.396%总样本数），slc26a4 基因的热点突变为 c.919-2a>g(常用名 ivs7-2a>g) （ 0.793%）。在 1165 例阳性突变样本中，有 1140 例为单位点突变，占突变比例 97.85%。有 25 例为多位点突变，占突变比例 2.15%，其中 SLC26A4 和 GJB2 共突变的检出最多。
结论 我们的研究数据检测到的各个基因的突变频率排序和基于深度测序方法的报道一致，GJB2 和 SLC26A4 是云南地区耳聋基因检测人群中突变频率较高的基因，值得进一步关注。

PU-0543

子宫颈人乳头瘤病毒感染与阴道环境的关系分析

邬剑
雅安市人民医院

目的 探讨子宫颈人乳头瘤病毒(human papilloma virus,HPV)感染与阴道环境相关的因素。
方法 对 500 例参加两癌筛查的妇女的阴道分泌物进行霉菌、滴虫检测，阴道分泌物清洁度检查,对感染 HPV 人群、感染高危型 HPV 人群以及 HPV 阴性人群的检查结果进行比较分析。
结果 500 个受检已婚育龄妇女,HPV 阳性 32 例(6.4%),其中高危 HPV 感染患者 21 例，低危 HPV 感染患者 11 例，HPV 阴性 468 例(93.6%)。HPV 感染患者、高危 HPV 感染患者以及 HPV 阴性患者在假丝酵母菌感染、滴虫感染以及阴道清洁度方面均无明显差异，根据统计学方法分析计算(P>0.05),不具有统计学意义。

结论 子宫颈人乳头瘤病毒感染与阴道环境中假丝酵母菌感染、滴虫感染以及阴道清洁度这三方面无明显的相关性。

Characterization of eight novel full-length genomes of SARS-CoV-2 among imported COVID-19 cases from abroad in Yunnan, China

Mi Zhang 、cuixian Yang 、xingqi Dong
Yunnan Infectious Diseases Hospital

Recent correspondence in this Journal has highlighted the current threat posed by recently-emerging corona virus disease 2019 (COVID-19) in the world.1 The COVID-19 is infection caused by the severe acute respiratory syndrome coronavirus 2 (SARS-COV-2) and is characterized by fever, dry cough, weak, and so on. Eight COVID-19 patients imported from overseas were admitted to Yunnan Provincial Infectious Disease Hospital from March 15, 2020 to March 26, 2020. Phylogenetic analyses revealed that the six isolates, including one from France (YN_Im02), two from Spain (YN_Im01 and YN_Im03), and three from the United States (YN_Im06-08) were clustered as G clade with a high bootstrap value of 99%, one strain from Cambodia (YN_Im04) was grouped into S clade with a bootstrap value of 80%, and the remaining one from Sri Lanka was classified within other clade, a large unclassified sequences because lack the signature variants. To further characterize the characteristics of virus variation, The results revealed that 15, 12 and 10 nucleotide mutations to clades G, S, and other, respectively, were mapped across the SARS-CoV-2 full-length genome. Corresponding to these nucleotide substitutions, 8, 6, and 5 nonsynonymous amino acid substitutions were detected in clades G, S, and other, respectively.

In summary, we characterized the full-length genomes of SARSCoV-2 strains from eight COVID-19 cases imported from abroad in Yunnan, China. Our results showed that the predominant SARSCoV-2 clade was G (6 cases), followed by S clade (one case) and unclassified clade (one case). Further, comparative genomic analyses revealed that a novel signature amino acid substitution P4715L in nsp12 was found in the G clade strains. Moreover, three novel mutations, including D1962V in nsp3, L1375F in nsp3, and A829T in S protein were first identified in this study.

新冠核酸标本检测中的假阳性及假阴性

王娇
雅安市人民医院

目的 探讨新冠核酸检测过程中的假阳性及假阴性并分析原因
方法 从新冠核酸的各个环节着手，逐一分析其中有可能影响结果的因素，有助于提高结果的准确性和及时性，为临床提供更好更准确的检测结果。
结果 造成假阳性结果的原因主要在实验操作过程，假阴性的原因有标本、实验过程、疾病本身病程

PU-0546

HPV16 E7 upregulated the expression of ACP5 by mediating FoxM1 through activating CDK6 in lung cancer cells

Yunhui Li
General Hospital of the northern theater of the Chinese people's Liberation Army

According to the GLOBAL cancer statistics 2018, lung cancer is the most commonly diagnosed cancer (11.6% of the total cases) and the leading cause of cancer death (18.4% of the total cancer deaths)[1]. Besides a range of environmental and genetic factors, Syrjänen, et al. reported that human papilomavirus (HPV) infection was involved in the development of lung cancer firstly[2]. The persistent infection of high-risk HPV is related to the occurrence of cervical cancer, especially HPV16/18. E6/E7 as the mainly oncogenes have been extensive researched. Although the association between HPV infection and lung cancer has not been established in the Western population[3], a significant number of infection rates (37.22%) were found to be related to the incidence of lung cancer in China[4]. P16 as a cyclin dependent kinase(CDK) inhibitor, performs the function of tumor suppressor genes by down-regulating the activity CDK4 and CDK6 [5], which phosphorylate the retinoblastoma susceptible gene product, pRb. Hypophosphorylated form of pRb binds transcription factor E2F. Incompetent pRb-E2F complexes prevent the cell cycle G1-S transition, then play the role of tumor inhibition[6]. The p16/cyclin D1/cdk4/pRb cell cycle regulatory cascade is central to regulation of the G1-to-S phase transition. Once the cell is infected by HPV virus, oncoprotein E7 binds to pRb, the RB-E2F complex will be disrupted resulting in an increase in the level of free E2F, which will promote the cell cycle from G1 to S. In this way, the tumor cell proceeded, the sequestrated E2F will reflex upregulate p16 [7,8]. P16 is expressed high level in pulmonary small cell carcinoma (SCLC)[9] as well as cervical squamous intraepithelial lesion(HSIL) cases, and may help to distinguish HSIL and the triage of transient infection[10].

Forkhead box M1 (FOXM1) is a transcription factor of the Forkhead box (FOX) protein superfamily, plays a crucial part in the regulation of a diversity of cellular functions, including cell proliferation, cell survival, and immortalisation, which are essential for tumorigenesis, and is expressed only in proliferating cells [11,12]. In adult mammals, FoxM1 expression is detected mainly in the progenitor and regenerating tissues. The FoxM1 gene is a downstream target of E2F[13] and frequently overexpressed in lung cancer[14]. But the mechanism is not clearly claimed. Tartrate-resistant acid phosphatase 5(ACP5) plays a vital role in bone resorption and osteoclast differentiation, it promotes cell motility through the modulation of focal adhesion kinase phosphorylation[15]. Overexpression of ACP5 were detected in hepatocellular carcinoma and lung carcinoma, it was correlated with microvascular invasion, poor differentiation and higher tumor-node-metastasis stage, as well as lymph node status, tumor–node–metastasis (TNM) stage, and differentiation respectively[16]. It was reported that ACP5 is a direct transcriptional and functional target of FoxM1[15]. In our study, we speculated that FoxM1 upregulayed ACP5 is mediated by HPV16 E7-induced CDK6 activation mechanism by investigating the correlation among HPV16 E7, p16, CDK4/6, FoxM1 and ACP5. Further elucidate the molecular mechanism of lung cancer and provide a new target for the treatment.

PU-0547

发热伴血小板减少综合征血常规及凝血功能分析

刘文静[1]、魏红霞[2]、李雷[1]、夏永泉[1]、夏茂[1]、徐学静[1]、沈瀚[1]
1. 南京大学医学院附属鼓楼医院
2. 江苏省南京大学医学院附属鼓楼医院

目的 分析发热伴血小板减少综合征（severe fever with thrombocy-topenia syndrome，SFTS）患者与健康者血常规和凝血指标的差异，为临床诊断与治疗 SFTS 提供更多依据。
方法 收集本院 2020 年 4 月-2020 年 7 月 61 例 SFTS 患者和 61 例健康体检者的血常规和凝血五项结果，对其进行回顾性分析。
结果 SFTS 组血小板计数（PLT）65(43.5~81)×109/L 和白细胞计数（WBC）2.1(1.7~3.5)×109/L 显著低于对照组 192(167~223)×109/L、6.1(5.1~7.7)×109/L，P<0.05。SFTS 组的活化部分凝血活酶时间（APTT）、凝血酶时间（TT）、D 二聚体（DD）显著高于对照组。与治疗前相比，危重组治疗后的 PLT 减少，APTT、TT 延长（P<0.05），轻症组治疗后的 PLT、WBC 显著升高。
结论 PLT、WBC 减少以及 APTT、TT、DD 水平的升高提示可能有发热伴血小板减少综合征布尼亚病毒（SFTSV）感染，PLT 持续减少以及 APTT、TT 和 DD 持续升高提示患者预后不良，根据 PLT、APTT、TT、DD 指标的动态变化可以监控患者的病情进展。

长链非编码 RNA 在肺癌研究中的进展

张蕊
中国人民解放军北部战区总医院

肺癌是人类肿瘤发病率和死亡率最高的恶性肿瘤，筛选可用于早期诊断、疗效评估和预后判断的生物标记物成为了近年来的研究热点之一。随着分子生物学的长足发展，长链非编码 RNA 吸引了越来越多的关注。长链非编码 RNA 可以在转录水平、转录后水平以及表观遗传水平调控基因的表达，发挥促进肿瘤或抑制肿瘤的作用，参与了肺癌的发生、进展、转移和侵袭等生物学过程。本文总结了长链非编码 RNA 在肺癌中最新研究进展，旨在为肺癌的早期诊断、疗效评估和预后判断提供理论依据和新的策略方案。

呼吸道病原菌核酸检测技术在下呼吸道感染快速检测中的应用

刘婷婷
中国人民解放军北部战区总医院

目的 探讨呼吸道病原菌核酸检测技术在临床快速检测下呼吸道感染中的应用价值，为临床呼吸道感染的诊治提供参考依据。
方法 收集 2018 年 8 月～2019 年 10 月在北部战区总医院就诊的 900 例疑似下呼吸道感染者的合格痰标本, 采用恒温扩增芯片法对患者痰标本进行临床 13 种常见呼吸道病原菌的定性检测，并分析相关呼吸道病原菌感染的情况。
结果 在 900 例疑似下呼吸道感染的患者中, 核酸检测的阳性率为 49.3%，其中单一感染占 34%，混合感染占 15.3%。在单一病原菌感染中，流感嗜血杆菌与肺炎支原体的检出率最高，占所有患者的 6.1%和 5.4%。在混合病原菌感染中，主要是肺炎克雷伯菌合并其它感染，占所有患者的 6.6%。不同性别呼吸道病原菌总的核酸检出率之间比较，差异无统计学意义，但女性流感嗜血杆菌与铜绿

假单胞菌的核酸检出率明显高于男性，且差异具有统计学意义(χ^2=13.458，P <0.001）(χ^2=9.912，P =0.002）；而在混合病原菌感染中，男性核酸检出率明显高于女性(χ^2=6.817，P =0.009）。不同年龄组呼吸道病原菌总的核酸检出率之间的比较，差异无统计学意义；而肺炎支原体和流感嗜血杆菌在青年组检出率最高（χ^2=9.340，P =0.009）（χ^2=47.034，P <0.001）；嗜麦芽窄食单胞菌和铜绿假单胞菌在老年组检出率最高（χ^2=8.009，P =0.018）（χ^2=8.918，P =0.012）。

结论 采用恒温扩增芯片法对疑似下呼吸道感染者进行临床常见 13 种呼吸道病原菌核酸检测，具有较高检出率，且操作简便快速，有一定的临床应用价值。

变温和恒温核酸体外扩增技术在流感病毒检测中的应用及进展

王兰
中国人民解放军北部战区总医院

近年来，随着现代医疗技术的发展，一系列分子诊断技术以其灵敏度高、漏检率低、窗口检测时期较短的优点被不断被用于流感的检测，本文就 1991 年来至今出现的变温和恒温体外扩增技术的发展现状、应用场景、最新进展等方面的文献进行整理，探讨恒温体外扩增技术—RAA (Recombinase aided amplification）在流感诊断中的可行性及创新性为 RAA 技术在流感中的应用奠定基础。

PU-0551

MiR-186-5p can target ERK1/2 to reduce myocardial apoptosis in acute coronary syndrome

Wennan Nie
JINLING HOSPITAL

Coronary artery disease is the leading cause of morbidity and mortality in the world. Acute coronary syndrome (ACS), consisting of acute myocardial infarction and unstable angina, is the most dangerous and fatal form of coronary heart disease. MicroRNAs are a class of non-coding small RNA with a length of about 22 nucleotides encoded by endogenous genes, which are involved in the regulation of posttranscriptional gene expression. Growing evidences link microRNAs to the process of cardiovascular disease. Our research group previous study confirmed that miR-186-5p expression level in serum is up-regulated in ACS patients compared with those controls, and gradually decreased within 1 week after percutaneous coronary intervention (PCI). So that serum miR-186-5p may be a candidate for monitoring the clinical condition and assessing the prognosis of ACS patients. But little is known about its role in the process of ACS. So we aimed to investigate the underlying molecular mechanism of miR-186-5p participating in the pathological processes of myocardial ischemia. In this study, we first used three bioinformatic software to predict that ERK1/2 may be the target gene of miR-186-5p. Cell transfection, Western Blot and luciferase reporting assay were used to verify the relationship between miR-186-5p and ERK1/2. And then we established a rat model of AMI, and explored the possible source of miR-186-5p in serum by analyzing the changes and relationship of miR-186-5p content in myocardial tissue and peripheral blood serum of rats. At the same time, we established oxygen-glucose deprivation (OGD) model of cardiomyocyte (H9C2) to simulate myocardial ischemia and hypoxia in vitro. The source of miR-186-5p was further verified by analyzing the content of miR-186-5p in cells and cell medium. In addition, flow cytometry and cell proliferation experiments were used to analyze the specific mechanism of miR-186-5p in the process of glucose deprivation and hypoxia in cardiomyocyte.

PU-0552

lncRNA GAU1 induces GALNT8 overexpression and potentiates colorectal cancer progression

Xuemei Tang[1]、Haoyu Ruan[3]、Liu Dong[3]、Sihan Li[2]、Zhiyuan Wu[1]、Ming Guan[3]
1. Department of Laboratory Medicine, Huashan Hospital, Shanghai Medical College, Fudan University
2. Center for Pharmacogenetics, Department of Pharmaceutical Sciences, University of Pittsburgh
3. 复旦大学附属华山医院

Objective Colorectal cancer (CRC) ranked the third common type of cancer, adding up 10% of all cases. Genetic mutation in APC, TP53, and K-RAS have been intensively studied as major contributors to the tumorigenesis of CRC. However, the non-mutational alteration in CRC was less studied. Massive paralleled sequencing facilitated the genome-wide characterization of the human cancer transcriptome, and identified long non-coding RNA (lncRNA) expression as the most common transcriptional alteration in cancer. Our previous reports revealed that lncRNAs are extensively involved in the CRC development and drug resistance, indicating that more efforts should be encouraged to identify the CRC specific lncRNA expression, and to link the biological "operator" regulated these non-coding "regulators".
RNA-Seq technology empowered by sequence alignment and assembly provides a revolutionary approach for the prediction of full-length transcripts from both the intergenic "gene desert" and protein-coding loci. The MiTranscriptome database applied ab-initio assembly to 7,256 curated RNA-Seq libraries from tumor, normal tissue, and cell lines so as to provide an unbiased method for gene discovery. Here by incorporating this ab-initio assembly based human cancer transcriptome database and experimental validation, we identified a colorectal cancer-related lncRNA GAU1 from 12,382 cancer-associated lncRNA transcripts, and investigated the role of GAU1 in colorectal cancer.
Methods In the human cancer transcriptome library MiTranscriptome, through sample collection enrichment analysis, we identified lncRNAs related to colorectal cancer from 12,382 cancer-related lncRNA transcripts. With colorectal cancer samples collected from hospitals and pathological data/follow-up data of patients, lncRNA expression was analyzed in colorectal cancer and adjacent tissues by real-time fluorescence quantitative PCR. The expression level was measured and analyzed, and then correlation analysis was performed on lncRNA and pathological parameters and survival of patients. And the subcellular localization was used to identify cellular location of GAU1.Lentivirus overexpression method and small interfering RNA are used to regulate the expression of GAU1/GALNT8 in cell lines. PI staining was measured for cell cycle analysis.CCK-8 and colony formation test were used to study the proliferation of cell lines. TMA staining and Immunohistochemistry were used to analyze GALNT8 expression in CRC.
Results By incorporating this ab-initio assembly based human cancer transcriptome database and experimental validation, we identified a colorectal cancer-related lncRNA GAU1 from 12,382 cancer-associated lncRNA transcripts. In the human cancer transcriptome library MiTranscriptome, we identified GAU1 (percentile of overexpression = 99.75%) as one of the highest expressed lncRNAs in colorectal cancer by sample set enrichment analysis. Consistent with the database, GAU1 is highly expressed in cancerous tissues compared to normal tissues in clinical samples collected in hospitals. At the same time, high expression of GAU1 is associated with poor prognosis of patients. Experimental data show that GAU1 is highly correlated with GALNT8 expression in cancer tissue samples. In vitro, GAU1 can regulate GALNT8 expression at the RNA and protein levels.
In hospital samples and tissue microarrays, the expression of GALNT8 in cancer was much higher than that in normal tissues adjacent to the cancer, and the high expression of GALNT8 was related to the poor prognosis of colorectal cancer patients. In the samples collected in the hospital, the high expression of GALNT8 was associated with the large tumor volume. In vitro experiments showed that overexpression of GALNT8 significantly promoted the proliferation of cancer cell lines. Interfering with GALNT8 expression in GAU1 overexpressing cell lines can

inhibit tumor proliferation, which further proves that GAU1 can promote the proliferation of colorectal cancer by regulating GALNT8.
Conclusion We found a lncRNA GAU1 highly expressed in colorectal cancer, and its expression level can be used as a prognostic marker for colorectal cancer patients. In colorectal cancer, GAU1 can promote the proliferation of tumor cells by regulating the expression level of protein encoding gene GALNT8.

miR▪21 联合血清胱抑素 C 对肝硬化急性肾损伤的诊断价值

岳飞利[2]、赵敏[3]、王娇[2]、岳飞廷[1,4]
1. 雅安市人民医院超声科
2. 雅安市人民医院检验科
3. 雅安市人民医院肾内科
4. 雅安职业技术学 院附属医院超声科

目的 探讨血清 miR▪21 联合胱抑素 C（Cys C）检测在肝硬化急性肾损伤中的临床诊断价值。
方法 收集 2017 年 1 月-2018 年 1 月雅安市人民医院收治的 123 例肝硬化患者临床资料，将患者分为急性肾损伤组（n=61）和非急性肾损伤组（n=62），选取同时间段体检健康者（n=57）作为对照组。观察受试者血清 miR▪21、Cys C、血肌（SCr）、尿素氮（BUN）及肾小球滤过率（GFR）水平，采用受试者工作特征曲线（ROC）评价血清 miR▪21、Cys C 对肝硬化急性肾损伤诊断的预测价值。
结果 与对照组、非急性肾损伤组比较，急性肾损伤组患者血清 miR▪21、Cys C、BUN、SCr 水平显著升高，GFR 水平显著下降，差异均有统计学意义（P<0.05）；血清 miR▪21、Cys C、BUN、SCr 水平随病情加重而增高（P<0.05），GFR 随病情加重而下降（P<0.05）。Pearson 相关性分析结果显示，血清 miR▪21、Cys C、BUN、SCr 水平与 GFR 水平负相关（r=-0.710、-0.657、-0.545、-0.674，P<0.05）。ROC 曲线显示，血清 miR▪21、Cys C 水平及二者联合检测对肝硬化患者急性肾损伤诊断的曲线下面积分别为 0.824、0.867、0.947。
结论 血清 miR▪21、Cys C 联合检测对肝硬化急性肾损伤的诊断效能优于单独指标检测，对肝硬化继发急性肾损伤的早期诊断具有一定应用价值。

基于大数据挖掘肺鳞癌中血管生成拟态相关分子机制研究

王芃芃、董树昊
中国医科大学附属盛京医院

目的 肺鳞癌具有丰富的血管结构及肿瘤组织的血液供应，是其临床难以治愈的重要原因之一。本研究旨在深入分析并自检相关数据库锁定肺鳞癌生物学相关潜在基因；利用生物模式识别与数据挖掘等多种生物信息处理技术，构建肺鳞癌中 PECAM1/CDH5/ESAM 等促进血管生成和血管拟态相关基因转录网络，进而评价其作为肺鳞癌早期诊断分子靶标的临床价值，具有潜在的临床意义。
方法 于 TCGA 获得 LUSC 的基因组表达数据,鉴定具有显著性的协同一致的差异基因的表达模式，分析预测不同临床分期中的显著的差异基因协同表达模式。利用 cytoscape 软件筛选基因拓扑网络中重要的节点基因集。利用 GSEA，DAVID，ClueGo 等基因功能和通路富集分析预测节点基因集主要富集在 Notch 通路相关因子和癌症相关的血管生成基因（PECAM1, CDH5,ESAM 等），在显著的节点基因集中利用转录因子数据库识别血管生成基因（PECAM1, CDH5,ESAM 等）特定的区域之间结合构成基因调控网络。

结果 1.通过 TCGA 数据库 LUSC 数据集对肺鳞癌早期、晚期及全期进行 WGCNA 法分析获得相关的网络模块及差异基因。2.三组差异基因取交集后取前 300 degree 进行功能聚类分析，结果显示富集到血管生成通路上三个显著基因 PECAM1、CDH5、ESAM。
结论 基于大数据初步构建肺鳞癌中血管生成拟态分子调控网络，肺鳞癌中 PECAMI/CDH5/ESAM 差异表达能够影响血管生成拟态，参与肺鳞癌的发生过程，为肺鳞癌早期诊断提供了潜在的分子靶标。

hsa_circ_0001708 与 IKZF1 的比值对儿童 B-ALL 的诊断价值及其与 B-ALL 中 MICM 的相关性分析

付立芳[1]、何霞[1]、张航[2]、邹琳[2]
1. 雅安市人民医院检验科
2. 重庆医科大学附属儿童医院

目的 探讨 hsa_circ_0001708 与 IKZF1 的比值在儿童 B-ALL 骨髓细胞中的高低情况及临床意义。
方法 利用 T-A 克隆构建包含 hsa_circ_0001708 反向剪切位点的重组质粒，梯度稀释重组质粒作为标准品建立检测 hsa_circ_0001708 的绝对荧光定量 PCR 方法。收集 2016 年 1 月至 2019 年 1 月重庆医科大学附属儿童医院血液科住院的 159 例 B-ALL 患者骨髓标本为研究对象。对照组为同期住院的 19 例非恶性血液病患儿的骨髓标本。采用绝对荧光定量 PCR 方法检测 B-ALL 患儿和对照患儿骨髓细胞中 hsa_circ_0001708 和 IKZF1 的绝对拷贝数，按患者年龄，性别，外周血白细胞数，分子生物学、遗传学、免疫学特点，以及在随访期是否复发，随访期末是否生存等临床特点进行分组。回顾性分析 hsa_circ_0001708 和 IKZF1 的比值在各组中的表达情况以及与以上各因素的相关性。采用 t 检验、Pearson 相关性检验进行统计学分析。**结果** 建立了能精确定量 hsa_circ_0001708 拷贝数的绝对 RT-qPCR 方法。与非血液肿瘤对照患儿相比，hsa_circ_0001708 与 IKZF1 的比值在儿童 B-ALL 中升高（$p<0.0001$），ROC 曲线下面积为 0.7936。相关性分析结果提示，hsa_circ_0001708 与 IKZF1 的比值在外周血高白细胞数组，外周血高原始细胞数组，免疫分型 pre-B 组和细胞遗传学预后较差组中的比值升高，且差异具有统计学意义（$p<0.05$）。
结论 hsa_circ_0001708 与 IKZF1 的比值对儿童 B-ALL 有中等诊断价值且与 B-ALL 患儿的 MIC 分型密切相关。

PU-0556

Methodology and Application of PCR- Dipstick DNA Chromatography for eight Respiratory Bacterial Pathogens Multiple Detection

Wei Xiao、Liuyang Hu、Liangshan Hu、Yachao Yao、Donglin Cao
Guangdong Second Provincial General Hospital

Background Community-acquired pneumonia mainly caused by Acinetobacter baumanni,Klebsiella pneumoniae, Streptococcus pneumoniae, Haemophilus influenzae, Staphylococcusaureus, Pseudomonas aeruginosa, Mycoplasma pneumoniae and Chlamydia pneumoniae that leadto critical illness and death in developing countries. **Purpose** To establish a rapid, simple,sensitive, high-throughput and accurate point-of-care technique for respiratory bacterial pathogensdiagnose, especially co-infection of respiratory pathogens.

Methods Prospectively collected 182respiratory sputum specimens evaluated by PCR-dipstick DNA chromatography assay and werealso tested by quantitative reference culture.
Results The PCR-dipstick DNA chromatographyhybridization method can specifically identify and semiquantitative analysis the eight pathogenicbacteria within 40 minutes. The limit of detection ranged from 10 to 102 CFU/mL of singlebacterium by using PCR-dipstick DNA chromatography hybridization. Compared with the methodof bacterial culture which was regarded as the gold standard of clinical diagnosis, the positivepredictive value of PCR-dipstick DNA chromatography hybridization was 90.2% and the negativepredictive value was 100%.
Conclusion A PCR-dipstick DNA chromatography hybridizationassay was successfully established for the detection of eight respiratory tract bacterial pathogenssimultaneously and successful applied for clinical samples analysis, indicating that this disposabledevice has great potential in analysis of microbial composition associated with respiratoryinfections, as well as can be used for small laboratories and point-of-care diagnosis.

血浆 Septin9 基因甲基化检测与结直肠癌等消化道肿瘤相关性初探

董晓龙、白深林
中国医科大学附属第一医院

目的 在结直肠癌等消化道肿瘤细胞中，Septin9 基因异常甲基化时，其抑癌基因功能缺失导致肿瘤发生。肿瘤细胞释放游离核酸入血后，可在血浆中检测到 Septin9 基因。因此血浆 Septin9 基因甲基化检测能够成为结直肠癌等消化道肿瘤筛查的理想标志物。**目的** 探究血浆 Septin9 基因甲基化检测与结直肠癌等消化道肿瘤的相关性。
方法 收集门诊住院以及体检患者标本，金标准（镜检）做参比，进行 Septin9 甲基化检测，收集结果，通过计算灵敏度和特异性等来验证血浆 Septin9 基因甲基化检测与结直肠癌等消化道肿瘤筛查的相关性。
结果 在门诊住院患者的标本中，Septin9 检验灵敏度为 76.3%，特异性为 79.2%，诊断符合率：为 76.8%。Septin9 检测在体检人群中准确率为 84.5%。所有标本汇总结果灵敏度为 76.3%，特异性 82.9%，诊断符合率 78.9%。其中结直肠恶性肿瘤检测准确率 78.8%（89/113），符合预期结果；在肝细胞癌中检测准确率 75%（6/8）；在胆管恶性肿瘤中检测准确率 100%（2/2）；在胃恶性肿瘤中检测准确率 50%（2/4）。
结论 Septin9 甲基化作为一种新型无创肿瘤筛查手段，在结直肠癌中应用作用显著，此外，对于肝胆相关肿瘤可考虑应用。Septin9 甲基化检测拥有着优秀的特异性和敏感性，并且样本采集方便、患者依从性好、实验方法稳定从而更适合于临床应用。

PU-0558

山东省不同地区 HPV 感染情况调查及 HPV 新型重组疫苗建议

王青、董苹、彭德志、王佳佳、王丽云、张守都
济南金域医学检验中心有限公司

目的 统计山东省烟威地区与济南地区人乳头瘤病毒（HPV）感染和不同型别分布情况，为 HPV 疫苗接种选择提供参考，为重组不同型别疫苗提供建议。
方法 回顾 2018 年 1 月－2020 年 12 月烟威地区与济南地区送检我中心的 153974 例宫颈脱落细胞标本的 HPV 基因分型结果及分布情况，汇总不同价别疫苗型别 HPV 型别感染人群的比率，对结果间差异进行统计分析。

结果 纳入统计的烟威地区和济南地区的总标本量分别为 108305 例和 45669 例，其中烟威地区 HPV 阳性标本 25678 例（占 23.71%），济南地区 HPV 阳性标本 45669 例（占 20.70%），两地区阳性检出率间差异有统计学意义(χ^2 =165.0，P＜0.05)。不同分型结果如下：烟威和济南地区高危型、低危型、多重感染型分别检出 22066 和 8025、7346 和 2629、3734 和 1200 例，三种类型均存在差异(χ^2 值分别为 160.4、55.8 和 69.6，P 均＜0.05)。另外，两地区 23 种型别均被检出，烟威地区与济南地区 HPV 亚型分布前 5 位分别为 HPV16、HPV68、HPV18、HPV58、HPV59 和 HPV16、 HPV58、HPV52、HPV68、HPV18。现用二价、四价、九价疫苗涉及 HPV 型别的感染人群占比分别为 21.91%、30.64%和 71.95%。而重组九价型别，即 HPV16、HPV18、HPV59、HPV51、HPV45、HPV31、HPV68、HPV58、HPV52，感染人群占比为 83.36%，明显高于现用疫苗型别。

结论 烟威地区与济南地区人群 HPV 总感染率均较高且不同型别分布存在差异，因此早期筛查对 HPV 感染和预防宫颈病变有重要意义。另外，因接种疫苗可有效预防 HPV 感染，九价疫苗因型别覆盖广而广泛应用，疫苗生产厂家应定期对国内 HPV 感染亚型进行跟踪和分析，重组新型别的疫苗，更加有效的控制 HPV 感染。

耦合适配体酶和催化发夹自组装策略用于级联信号放大电化学发光生物传感

尹斐[1]、宁振强[1]、郑永军[1]、杨二利[1]、沈艳飞[1,2,3]
1. 东南大学医学院
2. 东南大学中大医院临床检验医学中心
3. 东南大学危重症医学江苏省重点实验室

三磷酸腺苷（ATP）作为生命有机体中必不可少的分子之一，在许多酶活性和生物过程中起着重要作用，其水平与某些疾病和食品卫生有密切的关系。开发可靠、灵敏的 ATP 检测方法对临床诊断和食品安全至关重要[1-3]。本研究以 Ru(bpy)32+掺杂的二氧化硅纳米颗粒（RuSiO2）为电化学发光探针，二茂铁功能化的发夹 DNA（hairpin-Fc）为猝灭剂，将基于适配体酶和催化发夹自组装（CHA）的信号放大与电化学发光（ECL）耦合，制备了一种超灵敏的 ATP 生物传感器。在 ATP 和 Mg2+共存的情况下，核酸酶被激活并催化裂解 DNA 底物，释放大量的触发 DNA。Au@Fe3O4 促进了触发 DNA 的分离纯化，有效降低了背景信号。同时诱导 CHA 反应，即二茂铁（Fc）的附着也会导致触发 DNA 的释放和再循环，从而产生二次信号放大。适配体酶触发的 DNA 底物断裂和 CHA 反应都触发 DNA 的循环释放，使双信号得到高达 940 倍的显著增强。结果表明，制备的 ECL 生物传感器对 ATP 的检出限比以往报道的要低得多，为 0.054 pm，对加标血清样品和金黄色葡萄球菌的 ATP 检测具有较高的可靠性。本研究为核酸信号放大技术在细菌分析和临床诊断中的应用提供了新的思路。

WO3-x 纳米点在循环肿瘤细胞检测中的应用研究

尹斐[1]、潘登[1]、房正邹[1]、杨二利[1]、沈艳飞[1,2,3]
1. 东南大学医学院
2. 东南大学中大医院临床检验医学中心
3. 东南大学危重症医学江苏省重点实验室

与 TPrA 相比，WO3-x 纳米点的毒性可忽略不计，同时在促进 ECL 反应方面保持了优异性能。因此，基于 WO3-x 纳米点作为 Ru(bpy)32+-ECL 体系共反应剂的优异性能和良好的生物相容性，

以循环肿瘤细胞 MCF-7 为模型靶点，以 WO3-x 纳米点为捕获探针构建了 ECL 细胞传感器。其中 Ru(bpy)32+被用作 ECL 发光剂，并且 Fe3O4@SiO2/Au/WO3-x 纳米点/适体作为捕获探针富集 MCF-7 靶细胞。由于 WO3-x 纳米点对 Ru(bpy)32+的 ECL 有明显的增强作用，因此电极上 Ru(bpy)32+的 ECL 增强可能与捕获 MCF-7 细胞的 Fe3O4@SiO2/Au/WO3-x 纳米点/适体有关。细胞传感器在 10 cells mL-1 到 5.0×105 cells mL-1 范围内 ECL 强度与 MCF-7 浓度对数之间呈现线性关系，检测限（LOD）为 3 cells mL-1，迄今为止性能最佳[1, 2]。细胞传感器的优良性能可归因于 WO3-x 纳米点对 Ru(bpy)32+的 ECL 信号增强。因此，以 WO3-x 纳米点为共反应剂制备的 ECL 细胞传感器在生物分析和临床诊断方面具有很大的应用潜力。

PU-0561

金属有机骨架-适配体分离检测肿瘤 EV 亚群新方法

冯俊杰
南方医科大学南方医院

目的 乳腺癌属于高发性肿瘤，对乳腺癌进行早期诊断、预后判断和疗效评估可改善患者预后和指导用药。而目前对于乳腺癌的早期诊断和疗效评估存在灵敏度低、有创、放射性等问题。因此，亟需寻求一种高效、无创或微创、便捷的早期诊断和疗效评估的方法。在这里，我们开发了一种金属有机骨架@适配体和基于胆固醇的 EV 荧光传感器（MOFs@Aptamer Cholesterol-based EV fluorosensor，MACHINE），以期快速分离和高敏检测肿瘤 EV 亚群。
方法 通过水热法合成 MOF 材料 UiO-66-NH2。在 UiO-66-NH2 表面修饰一段功能化的特异性核酸适配体（PO34--Spaser-PD-L1-Aptamer）PSPA,合成修饰的 MOF@PSPA 平台分离富集 1 表达 PD-L1 膜蛋白的特定 EV 亚群。接着，通过脂质探针识别和核酸等温快速检测法，对捕获的特定 EV 亚群进行荧光信号的放大检测。
结果 MACHEINE 检测的荧光强度和外泌体浓度呈拟合的非线性关系，范围在 2.50 × 105 - 1.00 ×1 08 （Particles/μL)，且相关系数为 0.998。检测限（LOD）为 9.40 × 104 Particles/μL；最后，验证了该平台具有良好的检测性能和临床诊断效能，可显著区分早期乳腺癌患者，健康查体和乳腺良性疾病患者的血浆标本。并且可对乳腺癌病人进行有效的分期诊断。
结论 EV 分离检测一体化平台 MACHEINE 可实现特异肿瘤 EV 的快速分离，同时基于脂质识别和 TaqMan 探针的荧光信号放大检测体系，可实现膜蛋白 PD-L1（+）EV 亚群的分离检测。通过临床实际样本 也验证了该平台的实际检测应用能力。我们相信，该方法可对肿瘤特异 EV 亚群进行高效分离和检测，对临床癌症患者提供有效的早期诊断和疗效评估的手段。

PU-0562

WO3-x 纳米点的合成及作为 ECL 共反应剂的性质研究

尹斐[1]、潘登[1]、房正邹[1]、杨二利[1]、沈艳飞[1,2,3]
1. 东南大学医学院
2. 东南大学中大医院临床检验医学中心
3. 东南大学危重症医学江苏省重点实验室

WO3-x 纳米点的特殊性质引起了人们的广泛兴趣[1, 2]，但关于 WO3-x 纳米点制备的报道很少，而且大多数报道依赖于使用 WCl6 作为典型前体的自下而上的合成方法。[3, 4]因此，如何在不使用不稳定反应物、昂贵设备和复杂合成工艺的情况下合成高质量的 WO3-x 纳米点仍然是一个重大的挑战。在此，我们报道了简单但直接剥离大量 WS2 并进行温和后续化学转化来合成高度分散且富含氧空位的无配体 WO3-x 纳米点。首先，使用 DMF 作为溶剂，在室温下超声处理 WS2 块 4 h，导致 WS2 块剥离成几微米的纳米片。在密闭系统中将空气饱和的 WS2 纳米片分散液在 140 ℃下

进一步加热 6 h，离心得到淡黄色悬浮液。制备的纳米粒子在紫外光下呈蓝色荧光，在水中具有良好的单分散性和分散性。WO3-x 纳米点作为 Ru(bpy)32+电化学发光（ECL）的共反应剂出现，其 ECL 效率与众所周知的 Ru(bpy)32+/三丙胺（TPrA）体系相当，且与 TPrA 相比，WO3-x 纳米点的毒性降低了约 300 倍。这项工作为合成性能优异的 WO3-x 纳米点开辟了一条新的途径。

PU-0563

The identification of a 5-hydroxymethylation signature and its associated pathways in circulating cell-free DNA for the noninvasive detection of colorectal cancer

Hongwei Liu[1]、tao tang[2]、huixian zhang[1]、weiren ding[1]、peng zhou[1]、ying luo[1]、华欣 qi[1]、yanm liu[1]、yongixn liu[1]、meifang zhou[1]、weiguo yin[1]、jinduan lin[1]

1. Department of Laboratory Medicine, The Sixth Affiliated Hospital of Guangzhou Medical University, Qingyuan People's Hospital

2. 中山大学肿瘤防治中心（中山大学附属肿瘤医院、中山大学肿瘤研究所）

Background As a crucial epigenetic modification, DNA 5-hydroxymethylcytosine (5-hmC) plays an important role during colorectal cancer (CRC) carcinogenesis. However, the levels of 5 hmC-related genes in the circulating DNA of CRC remain largely unknown.

Methods and Results In this study, the GSE81314 dataset, in which a sensitive chemical labeling-based low-input shotgun sequencing approach was used to detect 5-hmC in circulating cell-free DNA (cfDNA), was downloaded from Gene Expression Omnibus (GEO). It includes 8 plasma samples from healthy people and 4 plasma samples from CRC patients. These data were used for differentially expressed gene (DEG) analysis and weighted gene coexpression network analysis (WGCNA). DEG analysis identified 19 upregulated and 9 downregulated 5-hmC-related genes. WGCNA showed that the pink, purple and brown modules, which contain 531 genes total, were significantly correlated with CRC (0.66 (p=0.02), 0.61 (p=0.04) and -0.59 (p=0.04), respectively). Gene Ontology (GO) and pathway enrichment analyses were performed to determine the functions and related pathways of the genes that were identified from the DEGs and WGCNA. Genes with a significant log fold change and in the highly correlated modules were input into GeneMANIA, a Cytoscape plugin. We constructed a protein-protein interaction (PPI) network, and 4 nodes (LCN2, LRG1, SP100, TACSTD2) played key roles in the network. We analyzed LCN2, LRG1, SP100 and TACSTD2 expression in the GEPIA database. Consistent with the 5-hmC levels in CRC patient plasma, LCN2, LRG1, SP100 and TACSTD2 were highly expressed in CRC tissue compared with controls in the GEPIA database.

Conclusion Our study suggests that the abnormality of cell free DNA hydroxylation in plasma may be associated with an abnormal immune response to CRC. Current research shows that the 5-hmC levels of LCN2, LRG1, SP100 and TACSTD2 in circulating cfDNA may be used as potential noninvasive markers for CRC.

PU-0564

LINC01094 promote epithelial-mesenchymal transition and metastasis of breast cancer by regulating miR-577/Rab25 axis

Ji Wu
Guangdong Provincial People's Hospital, Guangdong Academy of Medical Sciences

Background LNCRNAs can act as both tumor suppressor genes and oncogenes and participate in cell proliferation, metastasis, and apoptosis. LINC01094, as an identified lncRNA, has been reported in several cancers but not in breast cancer. This study aims to explore the effect of LINC01094 on breast cancer tumor epithelial-mesenchymal transition and metastasis and its underlying mechanism.
Methods Bioinformatics analysis was used to analyze the expression of LINC01094 in breast cancer patient with the TCGA database. MCF-7 cells MDA-MB-231 cells with upregulated LINC01094 and MDA-MB-231 cells with downregulated LINC01094 were established. Transwell invasion assays were used to examine the invasiveness of cells. Epithelial-mesenchymal transition (EMT) markers were evaluated by immunofluorescence and Western blot. CCK8, colony formation and wound healing assays were used to detect the proliferation and migration of breast cancer cell. Xenograft models were used to examine the effect of LINC01094 on BC metastasis. Luciferase report assays were employed to analyzed the relationship of LINC01094 and miR-577.
Results LINC01094 expression was significantly upregulated in BC tissues. Moreover, knockdown of LINC01094 strongly inhibited the invasiveness and EMT of BC cells in vitro. Knockdown of LINC01094 significantly affected breast cancer cells proliferation and migration both in vitro and in vivo. Luciferase report showed that MiR-577 was a directly target of LINC01094. And LINC01094 also affect the Rab25 which is a target of miR-577 in BC. Inhibited of miR-577 in si-LINC01094 BC cells decreased the levels of E-cadherin and increased the levels of Vimentin. However, an increase in Rab25 counteracted the invasive effect of si-LINC01094 in BC.
Conclusion In summary, our data indicated that LINC01094 promote epithelial-mesenchymal transition and metastasis of breast cancer by regulating miR-577/Rab25 axis, and LINC01094 may be a therapeutic target for breast cancer treatment.

PU-0565

PAI-1 基因多态性与动脉血栓的关系研究

胡馨元、郝思嘉、姜艳芳
吉林大学第一医院

目的 血栓栓塞分为动脉血栓栓塞和静脉血栓栓塞，遗传和获得性因素可影响遗传性血栓形成的表型表达。在深静脉血栓形成(DVT)患者中，PAI-1 过量可导致纤溶降低，且 PAI-1 基因 4G/5G 多态性可调节抑制剂 PAI-1 的表达。而 PAI-1 基因多态性与动脉血栓的关系目前结果并不一致。本研究目的 PAI-1 基因多态性是否与动脉血栓相关。
方法 选取吉林大学第一医院 2020 年 10 月至 2021 年 6 月发生动脉血管栓塞患者 56 例，健康对照 97 例。采用原位杂交技术进行 PAI-1 基因多态性检测。
结果 发生动脉血管栓塞的患者中 PAI-1 4G4G 基因型为 18 例，4G/5G 基因型为 28 例，5G/5G 基因型为 10 例。健康对照患者中 4G/4G 基因型为 33 例，4G/5G 基因型为 41 例，5G/5G 基因型为 24 例。采用卡方进行分析，动脉血栓组 4G 纯合子频率与健康对照组 4G 纯合子频率无显著性差异

（P=0.548），动脉血栓组 4G/4G,4G/5G,5G/5G 多态性频率与健康对照组也无显著性差异（P=0.137）

结论 PAI-1 基因多态性与动脉血栓关联无统计学意义，可能与样本量较小相关，可能需要增加样本量研究

PU-0566

利用环介导等温扩增技术检测鸟分枝杆菌

蒋栋能
陆军军医大学第二附属医院（新桥医院）

目的 鸟分枝杆菌与结核分枝杆菌有许多相近的生物学特性，对其进行鉴别诊断很有必要。本文拟用环介导等温扩增技术（LAMP），设计一种快速检测鸟分枝杆菌的方法，以期能应用于鸟分枝杆菌临床检测。

方法 通过基因比对与引物设计，设计针对鸟分枝杆菌的 LAMP 引物和检测试剂；对临床标本进行 DNA 预提取、LAMP 扩增及检测；结合临床表现，对方法的主要性能进行初步评价。

结果 通过基因比对与引物设计，设计出一套针对鸟分枝杆菌的 LAMP 引物，含 F3、B3、FIP、BIP 引物、扩增及检测等一套试剂。对临床标本进行了 DNA 提取、LAMP 扩增和检测。与临床表现对照发现，该方法灵敏度高（检测下限约为 1x10^2CFU/ml）、特异性强、与临床表现完全符合，而且比常规的培养方法快捷、简便，非常适合鸟分枝杆菌的临床检测。

结论 本试验设计出的针对鸟分枝杆菌的 LAMP 检测方法，该检测方法具有良好的特异性和较高的灵敏度，操作流程快捷、简便，能够用于鸟分枝杆菌的临床鉴别诊断。

PU-0567

围产期妇女 B 族链球菌感染的易感因素探究

张宇
重庆市人民医院三院院区

目的 探讨围产期妇女 B 族链球菌易感因素,旨在辅助围产期妇女及新生儿 GBS 感染预防和控制工作。

方法 选择 600 例孕妇，于围产期产前检查时或早产孕妇在入院时取阴道下段 1/3 处分泌物进行实时荧光定量-聚合酶链反应（polymerase chain reaction，PCR）GBS DNA 检测，并对其年龄进行分组。同时对其中住院的 316 例分别按有无甲状腺疾病、糖尿病、细菌性阴道炎、高血压分别分为研究组 1、2、3、4（各研究组仅含对应的一种高危因素）无以上四种基础疾病的为对照组共 159 例。

结果 600 例的 4 个年龄组：＜25 岁（阳性率 0.026）、26-30 岁（阳性率 0.04）、31-35 岁（阳性率 0.058）＞35 岁（阳性率 0.06）研究组 1、2、3、4 的 GBS 阳性率分别是 0.33、0.14、0.15、0.14，对照组 2 阳性率是 0.03。采用两独立样本 χ2 检验进行统计学处理。探究围产期妇女 B 族链球菌易感因素（年龄，糖尿病，甲状腺，细菌性阴道炎，高血压）。

结论 甲状腺异常、妊娠期糖尿病、细菌性阴道炎、高血压阳性率均明显高于对照组，阳性率具有统计学差异 (P < 0. 01）。高血压、妊娠期糖尿病、妊娠期阴道炎和妊娠期高血压是 B 族链球菌感染的危险因素。

PU-0568

Deficiency of NARFL increases transcription of NADPH oxidases and ROS production impairing the function of endothelial cells

柳洪周
成都市第三人民医院

Background NARFL is involved in cytosolic iron-sulfur (Fe–S) protein biogenesis and cellular defense against oxidative stress.
Methods and Results It showed that NARFL deficiency resulted in upregulated expressions of Nox2, Nox4, and p47phox and increased ROSROSlevels in endothelial cells. Nox2 knockdown reduced the upregulated ROS levels and improved endothelial dysfunctions caused by NARFL deficiency. ChIP experiments revealed that NARFL knockdown increased the expressions of RNA polymerase II and Histone acetylase (H3K9ac) at the promoter sites of Nox2 and Nox4.
Conclusion NARFL knockdown induced the transcriptional activation of Nox2 and Nox4, which resulted in increased ROS levels and impaired endothelial function.

PU-0569

Circulating exosomal microRNAs as metastasis-related molecular predictors in non-small cell lung cancer

Zhijun Zhang[1]、Xianrang Song[2]
1. Taian city central Hospital
2. 山东省肿瘤医院

Background The high mortality rates of non-small cell lung cancer (NSCLC) are primarily due to metastases. The aim of this study was to investigate the clinical significance of serum exosomal miRNA-212-5p and miRNA-651-3p as metastasis-related molecular predictors in NSCLC.
Methods Serum exosomes of 226 healthy donors and 233 NSCLC patients (M0: n=173 and M1: n=60) were isolated by ultracentrifugation. Characterization of exosomes were conducted by qNano, TEM, and western immunoblotting. Partly differently expressed miRNAs were demonstrated by RT-PCR. Receiver operating characteristic (ROC) analysis were used to evaluate the diagnostic power.
Results Compared with healthy controls, the expression levels of ExmiR-212-5p and ExmiR-651-3p were decreased apparently in NSCLC patients ($p < 0.0001$ and $p < 0.0001$, respectively). The AUC were 0.699 and 0.745 according to ROC curves. Through the combined analysis of ExmiR-212-5p and ExmiR-651-3p, the AUC could be improved to 0.751. Furthermore, both of these two ExmiRs could distinguished metastatic NSCLC patients (n=60) with non-metastatic NSCLC patients (n=173) (both $p < 0.0001$). From ROC curves, the AUC were 0.682 and 0.674, respectively. The combined analysis could improve the AUC to 0.696. The diagnostic power of these two ExmiRs combined by traditional blood biomarkers CEA and CYFRA21-1 could be raised to 0.862.
Conclusion This study demonstrated that serum exosomal miRNAs are promising non-invasive molecular predictors for metastatic NSCLC.

PU-0570

In situ tumor-triggered subcellular precise delivery of multi-drugs for enhanced chemo-photothermal-starvation combination antitumor therapy

Xinglu Jiang[1]、Guoqiu Wu[2]
1. Medical School, Southeast University
2. 东南大学附属中大医院检验科

Rationale Drug combination therapy for cancer treatment exerts a more potent antitumor effect. The targeted delivery and release of multiple drugs in a patient's body thus presents a more effective treatment approach, warranting further research.
Methods Two antitumor drugs (ICG: indocyanine green and THP: pirarubicin) were successfully screened to sequentially trigger self-assembling peptides (P60) to produce bacteria-sized particles (500-1000 nm, P60-ICG-THP). First, after mixing equal amount of P60 and ICG, trace amount of water (the mass ratio between P60 and water: 100:1) was used to trigger their assembly into P60-ICG. Subsequently, the assembly of P60-ICG and THP was further triggered by ultrasound treatment to produce P60-ICG-THP.
Results P60-ICG-THP constituted a cluster of several nanoparticles (50-100 nm) and possessed a negative charge. Owing to its size and charge characteristics, P60-ICG-THP could remain outside the cell membrane, avoiding the phagocytic clearance of blood and normal tissue cells in vivo. However, after localizing in the tumor, the size and charge switches of P60-ICG-THP, rapidly triggered by the low pH of the tumor microenvironment, caused P60-ICG-THP to segregate into two parts: (i) positively charged nanoparticles with a size of approximately 50 nm, and (ii) negatively charged particles of an uneven size. The former, mainly carrying THP (chemotherapeutic agent), could immediately cross the cell membrane and deliver pirarubicin into the nucleus of tumor cells. The latter, carrying ICG (used for photothermal therapy), could also enter the cell via the endocytosis pathway or accumulate in tumor blood vessels to selectively block the supply of nutrients and oxygen (cancer starvation). Both these particles could avoid the rapid excretion of ICG in the liver and were conducive to accumulation in the tumor tissue for photothermal therapy.
Conclusion Our drug delivery system not only achieves the precise subcellular delivery of two anticancer drugs due to their size and charge switches in the tumor site, but also provides a new strategy to combine chemotherapy, photothermal therapy, and cancer starvation therapy for the development of a highly efficient antitumor therapeutic regimen.

PU-0571

Serum exosomal miRNAs as efficient diagnostic biomarkers for the early-stage non-small cell lung cancer

Zhijun Zhang[1]、Xianrang Song[2]
1. Taian city central Hospital
2. 山东省肿瘤医院

Dysregulated exosomal microRNAs (ExmiRNAs) are potential diagnostic and predicting prognosis biomarkers for human cancers. However, insufficient research has been conducted on early-stage non-small lung cancer (NSCLC). The aim of the present study was to evaluate two ExmiRNAs in the serum of NSCLC patients as a useful tool for the diagnosis of early-stage NSCLC. Ultracentrifugation was employed to isolate exosomes from the serum of healthy donors and NSCLC patients, followed by characterization with qNano, TEM, and western immunoblotting. Differentially expressed exosomal miRNAs were determined by microarrays. RT-qPCR was used

to verify the differentially expressed miRNAs using a large set of specimens (healthy donors, n = 282 and NSCLC patients, n=276, 0 and I stage: n=104). The diagnostic values were evaluated by receiver operating characteristic (ROC) analysis. Herein, we proved that the expression of ExmiR-20b-5p and ExmiR-3187-5p was significantly decreased in NSCLC patients compared with that of the healthy donors ($p < 0.0001$ and $p < 0.0001$, respectively). Based on the ROC curves, the Area under the ROC Curve (AUC) was determined to be 0.818 and 0.690 for ExmiR-20b-5p and ExmiR-3187-5p, respectively. When these two ExmiRs were combined, the AUC increased to 0.848. When CEA and Cysa21-1 were combined, the AUC was further improved to 0.905 and 0.894, respectively. Additionally, both ExmiR-20b-5p and ExmiR-3187-5p could be used to distinguish early stage NSCLC (0 and I stage) from healthy controls ($p < 0.0001$ and $p < 0.0001$, respectively). ROC curves showed that the AUCs were 0.810 and 0.673, respectively. Combination of ExmiR-20b-5p and ExmiR-3187-5p enhanced the AUC to 0.838. When continue to combine CEA and Cysa21-1, the AUC would improve to 0.930 and 0.928, respectively. In conclusion, serum exosomal miR-20b-5p and miR-3187-5p were effective, non-invasive biomarkers for the diagnosis of early-stage NSCLC, and the effects were further improved when the ExmiRNAs were combined.

PU-0572

To evaluate the value of varies molecular detection techniques in diagnosing mosaic polysome 9p

Sufen Zhang
Zhuhai Maternity and Child Healthcare Hospital

Polysomy 9p has been characterized by clinical features of intrauterine growth restriction (IUGR), developmental delay, ventriculomegaly, Dandye-Walker malformation, facial dysmorphism, congenital heart defects, the severity of phenotype associated withpolysomy 9p is influenced by the size of the chromosomeinvolved, the degree of mosaicism, and the presence of tissuemosaicism.Mosaicism for polysomy 9p is a challenging issue interms of prenatal diagnosis as the abnormality may not be detectable in amniotic fluid and fetal ultrasound assessment can be normal throughout the pregnancy. Identifyingthe mosaic level and the size of polysomy9pinvolvedaccurately is important for guiding genetic counseling in prenatal diagnosis. In this study, different molecular detection techniques were used to diagnose 2 cases of mosaic polysomy 9pand the advantages and limitations of varies techniques were compared to evaluate the application value in diagnosis process. According to the noninvasive prenatal testing (NIPT) results in the first trimester,chromosome 9 was duplicated to varying degrees in both two cases.The karyotype of the case 1 was 47,Xn,+der(9)del(9)(q21q34)dup(9)(p12p24)[10]/46,Xn[90], of which the chr9 was 2.2 copies in cultured amniocytes, the mosaic level were 2.43 and2.5 copies with chromosomal microarray analysis (CMA) and fluorescence in situ hybridisation (FISH) in uncultured amniocytes, respectively. The case 2 presented a complex mosaic containing 3 cell lines, the karyotype was 47,Xn,+9[82]/47,Xn,+del(9)(q13qter)[14]/46,Xn[4] with 2.96 copies of 9p and 2.82 copies of 9q in cultured amniocytes. The CMA results of case 2 prompted the status of mosaic of multiple cell lines in chromosomal 9 and the smoothsignal diagram showed 9p with 3copies and 9q with 2.5 copies in uncultured amniocytes. These two cases all provided evidence for the discrepancy in themosaic level of 9pbetween uncultured and cultured amniocytes or varies molecular detection techniques. Different detection technologies have their own advantages and limitations in the prenatal diagnosis of polysomy 9p.It is necessary to choose the detection **Methods** according to the needs and also combined use of molecular diagnostic techniques may be could complement each other and increase the detection rate and accuracyof chr9 mosaicism.

珠海市新生儿 G6PD 缺乏筛查结果分析

张素粉
珠海市妇幼保健院

目的 探讨珠海市新生儿葡萄糖 6-磷酸脱氢酶（glucose 6-phosphate dehydrogenase, G6PD）缺乏、新生儿高胆红素血症发病情况及该地区 G6PD 缺乏基因突变热点。
方法 收集 2015 年 1 月至 2020 年 7 月于珠海市妇幼保健院出生的 42480 例新生儿脐血行 G6PD 酶活性检测，同时回顾性分析同期内 8450 例因新生儿高胆红素血症入院新生儿 G6PD 酶活性及基因位点突变类型。
结果 42480 例新生儿 G6PD 缺乏阳性率 6.39%，女性阳性率高于男性，差异有统计学意义(c^2=54.91，P＜0.001)，8450 例新生儿发生高胆红素血症，发病率为 19.89%，男性发病率高于女性，差异有统计学意义(c^2=6.89，P=0.0086)，G6PD 缺乏所致新生儿高胆红素血症发病率 14.47%，男性明显高于女性，差异有统计学意义(c^2=18.93，P＜0.0001)。男性 G6PD 缺乏患儿残余酶活性以低于 10%为主，女性 G6PD 携带者则以 60%-100%残余酶活性为主，差异有统计学意义(c^2=840.1，P＜0.0001)，本地区热点突变基因型以 c.1388G>A、c.1376G>T、c. 95A>G、871G>A 为主，合并约占比 90.96%。
结论 珠海市新生儿 G6PD 缺乏发病率及 G6PD 缺乏所致新生儿高胆红素血症发病率高且均有性别差异，本地区热点突变基因型以 c.1388G>A、c.1376G>T、c. 95A>G、871G>A 为主。

姜黄素对多发性骨髓瘤 RPMI-8226 细胞 RASSF2A 表达及启动子区甲基化的影响

陈佳琦
丽水市人民医院

目的 探讨姜黄素(Curcumin，Cur) 联合甲基化抑制剂 5 氮杂 2′脱氧胞苷(5 AzaCdR)对多发性骨髓瘤(multiple myeloma，MM) 细胞抑癌基因 RASSF2A 的去甲基化作用。
方法 利用 RPMI-8226 细胞系建立 MM 细胞模型，分别加入一定浓度姜黄素组、5 AzaCdR 组以及姜黄素联合 5 AzaCdR 组(联合用药组)处理。观察各组 MM 细胞的生长情况，采用甲基化特异性 PCR 法(MSP)检测各组 MM 细胞 RASSF2A 的甲基化水平，采用荧光定量 PCR 法和蛋白质印迹法检测 RASSF2A mRNA 和蛋白的表达量。
结果 实验组 RASSF2A 甲基化程度为 35.95±2.59（%）均低于对照组 44.16±4.40（%），RASSF2A mRNA 及蛋白表达均显著高于对照组，其中联合用药组为 0.607±0.076 又显著强于 2 个单独用药组，姜黄素组 0.240±0.046、5 AzaCdR 组 0.433±0.038，差异均有统计学意义(P<0.05)。
结论 姜黄素联合 5 AzaCdR 用药可增强 5 AzaCdR 对 MM 细胞抑癌基因 RASSF2A 的去甲基化作用

PU-0575

肿瘤转移的分子机制及靶向干预研究新进展

贾如雪[1,2]、李卓林[1,2]、吴亚婷[1,2]、张胜行[1,2]、王水良[1,2]
1. 厦门大学附属东方医院福建省适配体技术重点实验室
2. 中国人民解放军联勤保障部队第九〇〇医院检验科

转移是肿瘤历经多阶段恶性进展直至终末期后极具特征性改变的病理过程，它涉及一系列序贯发生的细胞恶性生物学改变：通常始于肿瘤在原发部位的局部浸润和侵袭性生长；继而，部分肿瘤细胞经上皮-间质转化（EMT）后获得游离原发部位并侵入邻近的血管或淋巴管道的能力；侵入循环系统的肿瘤细胞可长期处于休眠状态，一旦条件成熟即可从脉管腔穿出并侵入远端靶器官实质组织形成微转移灶，微转移灶再进一步克隆性生长并最终发展成肉眼可见的转移瘤。肿瘤转移是导致病人综合治疗效果差和生存预后不佳的最主要原因；大量统计数据表明，约 90%以上肿瘤患者系死于远端靶器官转移。鉴于转移过程的每一阶段均有赖于肿瘤细胞表型的特征性改变，而这种表型改变又与肿瘤细胞本身遗传和表观遗传改变以及微环境中诸多因素的综合调控密切相关。本综述概要介绍了恶性肿瘤转移多步骤过程中所涉的分子调控新机制以及基于新分子机制而开发的肿瘤转移靶向干预新措施等方面的当前研究进展，主要包括：（1）肿瘤转移起始阶段 EMT 表型改变的转录水平、表观遗传修饰和转录后水平的调控；（2）肿瘤转移中间过程包括肿瘤细胞侵入循环系统及在其中存活等方面的调控；（3）肿瘤转移终末阶段即预转移微环境的构建及转移瘤的克隆性生长的调控；（4）基于新分子机制的肿瘤转移靶向干预新措施的开发。同时，就未来肿瘤转移研究相关的新技术和新方向作一简单的展望。

PU-0576

Tumor-Derived Exosomal miRNAs as Diagnostic Biomarkers in Non-Small Cell Lung Cancer

Zhijun Zhang[1,2]、shuping zhao[1]、Xianrang Song[2]
1. Taian city central Hospital
2. 山东省肿瘤医院

Background Delayed diagnosis is the main obstacle to improve prognosis of non-smallcell lung cancer (NSCLC). Novel biomarkers for the diagnosis of NSCLC are urgentlyneeded. This study aimed to identify the specific exosomal miRNAs with diagnostic andprognostic potential in NSCLC patients.
Materials and Methods Transmission electron microscopy (TEM), qNano and westernblots were used to characterize the exosomes isolated from the serum of NSCLC patients(n=330) and healthy donors (n=312) by ultracentrifugation. Exosomal miRNAs wereprofiled by miRNA microarrays and verified by quantitative PCR (qPCR). The diagnosticaccuracy was determined by receiver operating characteristic (ROC) analysis.
Results A total of differential 22 miRNAs were screened out based on $P < 0.05$ and folddifference>2.0 by miRNA microarrays, among which, exosomal miR-5684 and miR-125b-5p were significantly down-regulated in NSCLC patients compared to healthy donors,processing favorable diagnostic efficiency for (early) NSCLC. Importantly, the exosomalmiR-125b-5p were associated with metastasis ($P < 0.0001$), chemotherapeutic effect($P=0.007$) and survival ($P=0.008$).
Conclusion Exosomal miR-5684 and miR-125b-5p levels are significantly downregulated in NSCLC patients, and serve as the promising diagnostic and prognosticbiomarkers for NSCLC

Role of NRG-1 signaling in regulating tumor biology

Ruxue Jia[1,2]、Zhuolin Li[1,2]、Yating Wu[1,2]、Shenghang Zhang[1,2]、Shuiliang Wang[1,2]
1. 厦门大学附属东方医院福建省适配体技术重点实验室
2. 中国人民解放军联勤保障部队第九〇〇医院检验科

Over the past two decades, tumor has increasingly been recognized as organ that results from the co-evolution of malignant cells and their direct environment. The tumor microenvironment (TME) encompasses extracellular matrix (ECM) and various non-transformed cells including fibroblasts, immune infiltrates, and vascular vessels recruited from nearby local or distant tissues. Through providing matrices, cytokines, growth factors, as well as vascular networks for nutrient and waste exchange, the TME plays an essential role in tumor initiation, progression, invasion, metastasis, and resistance to therapy. Cumulative studies have demonstrated that the cross-talk between cancer cells and their TME involves reciprocal juxtacrine and paracrine signaling pathways. Among them, neuregulin (NRG) signaling has long been recognized as an important player in regulating tumor progression. Neuregulins are members of the largest subclass of growth factors of the epidermal growth factor family, mediate a myriad of cellular functions including survival, proliferation, and differentiation in normal tissues through binding to receptor tyrosine kinases of the ErbB family. However, aberrant neuregulin signaling in the tumor microenvironment is increasingly recognized as a key player in initiation and malignant progression of human cancers. In this review, we summarize the progress in the role of neuregulin signaling in the hallmarks of cancer, including cancer initiation and development, metastasis, as well as therapeutic resistance. Moreover, role of neuregulin signaling in the regulation of tumor microenvironment and targeting of neuregulin signaling in cancer from the therapeutic perspective are also briefly discussed.

一例 46,X,+mar[33]/45,X[67]羊水标本的 STRs 位点分析

龙若庭、陈淑霞、林萃、罗华玉、李恋湘、李淑娜
珠海市妇幼保健院

目的 通过对相关 STR 位点检测，判断 X 染色体上基因的拷贝数，对一例核型为 46,X,+mar[33]/45,X[67]的羊水标本进行遗传分析。
方法 采用达瑞生物、瑞典 Devyser 紧凑型 V3 非整倍体检测试剂盒和中德美联 AGCU19X-STRs 多重荧光扩增试剂盒扩增羊水细胞 DNA，检测 X 染色体上各 STR 相关位点，分析 X 染色体上基因的拷贝数，并用传统方法进行细胞核型分析。
结果 经检测，有 2 个 X 染色体 STR 位点扩增出两个不平衡峰，其余 X 染色体 STR 位点均为单峰。AGCU19X-STRs 检测的 19 个 X-STRs 中有 14 个位点为单峰，DXS10159、DXS10164、DXS10162、DXS10079、DXS10074 等 5 个 X-STRs 为双峰。细胞染色体核型分析结果为 46,X,+mar[33]/45,X[67]。
结论 羊水细胞丢失一条 X 染色体，此条染色体仅残留着丝粒至 q13 区域，形成 46,X,+mar 与 45,X 两种核型的嵌合，联合应用 STRs 分析可对嵌合型染色体数目异常提供诊断支持，为临床咨询提供线索。

造血干细胞移植术后 BK 病毒感染与免疫重塑之间的关联研究

刘胜男[1]、廖建枫[1]、冯舒欣[2]、郑有为[1]、黄革[1]、顾兵[1]
1. 广东省人民医院
2. 广州医科大学

目的 分析造血干细胞移植术（HSCT）后 BK 病毒感染与各淋巴细胞亚群免疫重塑之间的关联。
方法 回顾性分析 2014 年 1 月至 2020 年 8 月广东省人民医院血液科及骨髓移植科行造血干细胞移植术 214 例患者的临床资料，采用实时荧光定量 PCR 技术检测患者尿液或血液中的 BKV-DNA，采用流式细胞术检测患者行移植术后 1 年内（3、6、9、12 月）外周血中淋巴细胞亚群的动态变化。根据 BKV-DNA 定量结果分为 BKV 感染组（>2000copies/mL）和 BKV 未感染组（<2000copies/mL），比较分析 HSCT 后 BKV 感染与淋巴细胞亚群重塑之间的关联。
结果 214 例患者中，HSCT 后有 145 例患者出现 BKV 感染，首发感染多发生在 30d 内（66.3%）。术后 3 个月内 CD3+T 细胞、CD4+CD28+T 细胞、CD8+CD28+T 细胞、CD3+CD16+CD56+NK 细胞恢复迅速，中位重建时间接近 3 个月，CD19+B 细胞中位重建时间接近 6 个月，CD3+CD4+和 CD3+CD8+T 细胞恢复速度慢，12 个月内未恢复正常水平。未感染组的整体重塑时间（225d）略长于感染组（196d）。术后 3 月内 BKV 感染组 CD19+B、CD3+CD4+T 细胞低于未感染组，而 CD3+CD8+T 细胞水平高于未感染组（P＜0.05）；在术后第 6、9 个月 BKV 感染组 CD3+T 细胞和 CD3+CD8+T 细胞高于未感染组，而 CD3+CD8+T 细胞水平低于未感染组（P＜0.05）；移植后 12 月时 BKV 感染组 CD3+T 细胞水平高于未感染组，而 CD19+B 细胞水平低于未感染组（P＜0.05）。P＜0.05，差异具有统计学意义。HSCT 后 NK 细胞、CD19+CD5+和 CD19+CD5-B 细胞免疫重建快组的感染率显著高于慢组（P＜0.05）。
结论 BKV 感染患者存在免疫重建受损和延迟，免疫重建快慢对 BKV 感染情况有影响。

PU-0580

Increased expression of GINS2, Bcl-2, CHK2 and their correlation in endometrial carcinoma

Xi Zhang
Department of Clinical Laboratory, Caner Hospital of Yunnan Province, the Third Affiliated Hospital of Kunming Medical University

Endometrial cancer (EC)is a group of epithelial malignant tumors that occurs in the endometrium. Although a great deal of studies has shown that GINS2 is abnormally expressed in many solid tumors, and plays a key role in cell proliferation and apoptosis, there is no relevant report on its expression and correlation with Bcl-2 apoptosis regulator, and checkpoint kinase 2(CHK2) in endometrial cancer. The purpose is to study the expression level of GINS2 in EC from gene and protein level, and detect the expression and location of GINS2, CHK2 and Bcl-2 in EC tissues by immunohistochemistry, and analyse the correlation between GINS2 with CHK2 and Bcl-2. The results showed that the gene and protein levels of GINS2 in malignant group were significantly higher than those in benign group and normal control group. GINS2 protein was mainly located in the nucleus of EC tissues, CHK2 was mainly expressed in the nucleus, while Bcl-2 protein was mainly expressed in the cytoplasm. The positive rates of GINS2, CHK2, and Bcl-2 in malignant group were significantly higher than those in benign group and normal control group. In addition, the expression of GINS2 was positively correlated with the expression of CHK2 and Bcl-2 in EC tissues, suggesting that GINS2 could promote the development of EC by regulating the expression of CHK2 and Bcl-2.

PU-0581

Identification of a potential autophagy-related prognostic signature involved in colorectal cancer using bioinformatics analysis

Xi Zhang
Department of Clinical Laboratory, Caner Hospital of Yunnan Province, the Third Affiliated Hospital of Kunming Medical University

Background Autophagy is an extremely conservative degradation mode in eukaryotes, aberrant activation or deregulation of autophagy promotes tumorigenesis in various preclinical models of cancer. Although overall survival (OS) rates for colorectal cancer (CRC) has significantly improved in recent years, however, the exact predictive value of autophagy for the prognosis of CRC has not yet been recognized. The purpose of the present academic work was to identify an autophagy-related prognostic signature in CRC and their potential mechanisms.
Material/Methods The gene expression profiles (HTSeq-FPKM) of patients with CRC and normal controls were available from The Cancer Genome Atlas (TCGA) datasets. Differentially expressed autophagy-related genes (ARGs) were further screened out, and then gene ontology (GO) and Kyoto Encyclopedia of Gene and Genome (KEGG) analysis were performed to establish functions of the identified ARGs in CRC. At the same time, Search Tool for the Retrieval Interacting Genes (STRING) 11.0 was used to construct protein-protein interaction (PPI) network and screen relative hub genes. Besides, ARGs and clinic/pathological parameters involved in the OS of CRC were confirmed by Cox proportional hazards regression models. Based on the independent prognostic ARGs, a prognosis risk score of individual patients was calculated using the regression coefficients and responding expression value. Moreover, we also analyzed the correlation between clinic/pathological parameters with autophagy-related gene expression.
Results A total of 206 ARGs were significantly related with CRC, of which 36 ARGs were differentially expressed in CRC. Most of ARGs were mostly involved in biological process including autophagy, utilizing autophagic mechanism, and responding to oxygen levels. Univariate and multivariate Cox proportional hazards regression analyses revealed that 6 ARGs (PELP1, RAB7A, MAP1LC3C, ULK3, WIPI2, and DAPK1) had independent prognostic significance for the OS of CRC. Next, the survival rate of high-risk patients was significantly lower than that of low-risk patients. Besides, T stage and risk score have independent prognostic significance for CRC patients. What's more, PELP1, ULK3, MAP1LC3C, RAB7A, WIPI2 gene and risk score were significantly correlated with clinic/pathological parameters.
Conclusions Our research suggests that six genes autophagy-related signature could serve as an independent prognostic indicator, and may become a new target for the prevention and treatment of CRC.

PU-0582

一种新型的用于外泌体 microRNA-181 检测的分步聚合发卡催化装置

张如意、胡秀梅、郑磊
南方医科大学南方医院

目的 为了更好的检测体液中的外泌体 microRNA，我们设计了一种基于分步聚合的发卡催化组装生物传感器。
方法 外泌体 miR-181 作为激发剂，可以诱导分步聚合催化步骤（SP-CHA），从而生成众多 T 字型的产物，该产物长度不一，可聚集在电极表面。

结果 这种分步聚合的发卡催化传感器所产生的产物可以提高检测信噪比，且它的检测线性范围为 10fM 至 100nM 之间，最低检测限位 7.94fM。另外，这种方法可以鉴别区分冠脉患者及正常健康人的外泌体 miR-181 水平，且结果与 qRT-PCR 的结果相仿。其对冠心病的诊断效能高，曲线下面积可达 0.9867。
结论 SP-CHA 对外泌体 miR-181 检测具有较高的灵敏度及特异度，具有心血管疾病床旁检测试剂开发的前景。

乙型肝炎病毒 C 区基因突变试剂盒临床检测性能评价

刘军莉、刘玲、王玲玲、赵燕、李顺子
山东大学第二医院

目的 HBV 在机体的免疫力压力和药物治疗影响下可出现变异，其中 C 区基因突变在慢乙肝中较为常见。本研究拟对国产乙型肝炎病毒(HBV) C 区基因突变检测试剂盒的检测性能进行评价。
方法 以罗氏公司的乙型肝炎病毒突变检测试剂盒作为对比（以下简称罗氏试剂），以北京鑫诺美迪基因检测技术有限公司的 B 乙型肝炎病毒(HBV) C 区基因突变检测试剂盒为考核试剂（以下简称鑫诺试剂），收集 2018 年 2 月至 10 月山东大学第二医院 569 例临床血清标本，通过荧光 PCR-毛细管电泳测序法，对 HBV C 区的前 C/BCP 区进行突变检测。
结果 569 例临床样本的检测中，鑫诺试剂的灵敏度、特异度分别为 94.50%、96.67%；罗氏试剂的灵敏度、特异度分别为 95.50%、97.17%。Kappa 值为 0.95，U 值为 31.16，P<0.01，两者具有较好的一致性。鑫诺的灵敏度和特异度与罗氏试剂无显著性差异（P＞0.05）。
结论 鑫诺基因的乙型肝炎病毒(HBV) C 区基因突变检测试剂盒的灵敏度高、特异度好。通过检测 HBV C 区耐药基因突变点有助于帮助选择初治药物，判断治疗的效果，及时发现基因型耐药，从而采取预防措施，避免发生病毒反弹，利于临床及时调整用药方案，从而辅助临床诊断和指导临床用药，制定个体化抗病毒治疗方案。

HLA-Ⅰ类基因的多态性与肾小球膜增生性肾小球肾炎的相关性

刘军莉、刘玲、王玲玲、赵燕、程娜娜、赵敬杰
山东大学第二医院

目的 人类白细胞抗原（human leukocyte antigen, HLA）就是一组密切连锁的基因群。HLA 可以作为某些疾病的遗传标志，也可以将 HLA 抗原多态性用于群体关联分析和家系连锁分析，从而推断出人类患某种疾病的相对风险率。本研究旨在探讨 HLA-Ⅰ类基因多态性与肾小球系膜增殖性肾小球肾炎（MsPGN）的相关性，找到相关的基因。
方法 以山东大学第二医院十年间 2641 例 MsPGN 患者为病例组，中国造血干细胞捐献者 6542 例健康志愿捐献者为对照组，采用聚合酶链反应序列特异性引物方法（SSP-PCR）对两组的 HLA 基因多态性进行基因频率（GF）和 odds ratio（OR）分析比较，找出 MsPGN 的易感基因和保护性基因，并对携带易感基因的患者进行预后评价。
结果 HLA 等位基因 A * 23，A * 25，B * 15，B * 40 和 B * 53 的 GF 在 MsPGN 患者中比对照组高（P＜0.05），认为这些等位基为 MsPGN 的易感基因（SSG）。携带这些易感基因与没有携带的患者预后没有差异（P＞0.05）。MsPGN 患者 HLA-A * 32，A * 33，B * 50，B * 58，B * 60，B * 71 的 GF 比对照组低（P＜0.05）。另外，等位基因 A * 20，A * 22，A * 35，A * 36，A * 38，B * 21，B * 73 和 B * 78 在 MsPGN 患者中没有表达，这些基因可被认为是 MsPGN 的保护基因。

讨论 HLA - Ⅰ类基因多态性与 MsPGN 存在相关性，研究发现了 MsPGN 相关的易感基因和保护性基因，为 MsPGN 的临床治疗、预后及预防措施提供了理论依据。

PU-0585

在肾细胞癌中川穹嗪对 MICA-NKG2D 信号通路的影响

刘军莉、刘玲、赵燕、王玲玲、赵敬杰
山东大学第二医院

目的 肾细胞癌是起源于肾实质泌尿小管上皮系统的恶性肿瘤，MICA 与 NKG2D 配受体间信号途径可在肿瘤的免疫监视中具有重要作用，川穹嗪对肿瘤细胞有生长抑制作用。本研究拟揭示人透明细胞（ccRCC）中川穹嗪（TMP）通过 MICA 与 NKG2D 信号途径的抗癌效果及机制。
方法 采用 MTT、流式细胞术、划痕和肿瘤侵袭实验检测 TMP 对 ccRCC 细胞的活力、增殖、凋亡、侵袭和迁移功能的影响；并通过逆转录聚合酶链反应（RT-PCR）、蛋白质印迹和免疫荧光方法检测 TMP 作用后对 MICA-NKG2D 信号通路的影响。
结果 MTT 实验表明 TMP 显著抑制 ccRCC 细胞的活力（抑制率 75.63%，P＜0.05）；流式细胞检测 TMP 可抑制 ccRCC 细胞增殖，促进凋亡；划痕和肿瘤侵袭实验均表明 TMP 可显著抑制 ccRCC 细胞侵袭和迁移功能，并上调 NKG2D 配体（NKG2DLs）MHC Ⅰ类链相关分子 A 和 B（MICA / B）和 E-钙粘蛋白的表达，下调波形蛋白和纤连蛋白的表达。
结论 TMP 对 ccRCC 细胞的抑制可能是通过抑制 NKG2D 相关信号通路，从而进一步抑制上皮间质转化（EMT），抑制肾细胞癌的生长。 NKG2D 与其配体的结合可激活 NK 细胞，为临床有效防治 RCC 提供药物新靶点。

PU-0586

LncRNA AC105942.1 downregulates hnRNPA2/B1 to attenuate vascular smooth muscle cells proliferation

Ruyi Zhang 、Xiumei Hu、Lei Zheng
Southern Hospital, Southern Medical University

Objectives The abnormal proliferation of vascular smooth muscle cells (VSMCs) is crucial in the atherosclerosis. Although long noncoding RNAs (lncRNAs) are implicated in a variety of diseases, their roles in activation of VSMCs proliferation and vascular disorder diseases are not well understood. In addition, heterogeneous nuclear ribonucleoprotein A2/B1 (hnRNPA2/B1) was reported to participate in lncRNAs-mediated function. Herein, we propose to investigate the role of lncRNA AC105942.1 and hnRNPA2/B1 in pathological VSMCs proliferation and the possible mechanisms in vitro.
Methods qRT-PCR analysis and immunohistochemistry staining were used to measure the expression of lncRNA AC105942.1 and hnRNPA2/B1 in atherosclerotic plaques and normal artery tissues. CCK-8 assay and EdU staining were used to evaluate the proliferation ability of VSMCs. The expression of hnRNPA2/B1, CDK4 and p27 were measured by qRT-PCR and western blot.
Results We have identifified that lncRNA AC105942.1 was downregulated and hnRNPA2/B1 was upregulated in atherosclerotic plaques compared with normal artery tissues. Enhanced lncRNA AC105942.1 could noticeably inhibit Ang II-induced VSMCs proliferation. Further investigation suggested that lncRNA AC105942.1 could downregulate the expression of hnRNPA2/B1 and then regulate the level of CDK4 and p27.
ConclusionsTaken together, our study indicated that lncRNA AC105942.1 downregulated hnRNPA2B1 to protect against the atherosclerosis by suppressing VSMCs proliferation. LncRNA

AC105942.1 and hnRNPA2/B1 could represent potential therapeutic and diagnostic targets to atherosclerosis-related diseases.

基于催化发夹自组装偶联免疫荧光试纸条检测 HCV 核酸

苏菲娅
东南大学医学院

目的 HCV 的感染已成为全球公共卫生问题，我国为高危地区，将近 80％的感染者发展成慢性肝炎并引起肝硬化。由于 HCV 的疫苗尚未研发，因此丙型肝炎病毒的检测对 HCV 感染防治具有重要意义应用催化发夹自组装（CHA）偶联免疫荧光试纸条检测 HCV 核酸，为 CHA 技术应用于现场检测探究新技术,早日实现 HCV 现场即使检测（POCT）。
方法 根据 CHA 原理设计发夹探针 H1 和 H2，当目标链存在的情况下，通过吉布斯自由能的驱动，H1、H2 可形成双链杂交产物，随后将反应产物滴加于试纸条加样区后，核酸双链会和修饰有抗生物素的荧光纳米微球结合；当核酸产物进入试纸条检测区后，双链复合物被抗地高辛抗体捕获，从而在试纸条上形成一条荧光线，目的是通过对目标核酸的检测信号进行二次放大并检测其荧光值。通过聚丙烯凝胶电泳以验证 CHA 反应，根据设计系统优化实验条件，设计不匹配探针验证所设计探针的特异性，并通过检测稀释的模板以验证系统的灵敏度。
结果 荧光检测值与 PAGE 电泳相当，以证实反应可行性，优化的试验条件系统表明 CHA 反应在 37℃，30 分钟具有较强特异性，反应较稳定：HCV 核酸灵敏性最低可检测至 1fmol/L。
结论 发夹自组装偶联免疫荧光试纸条检测 HCV 核酸具有较好的特异性和灵敏度，操作简便，具有在现场或基层医院的应用前景。

Nitidine chloride suppresses epithelial-mesenchymal transition and stem cell-like properties in glioblastoma by regulating JAK2/STAT3 signaling

Mingbo Jia、Ying Wang、Yingxue Guo、Pengyue Yu、Ying Sun、Yanke Song、Liyan Zhao
Jilin University Second Hospital

Background Based on the poor prognosis of glioma, new drugs that suppress the rapid progression and aggressive growth of glioma are urgently needed. Nitidine chloride (NC), an active ingredient extracted from plants, has been shown to inhibit the proliferation of a variety of tumor cells and epithelial–mesenchymal transition (EMT). The present study investigated the inhibitory effects of NC on the EMT process in glioma cells and the formation of gliospheres.
Methods Transforming growth factor (TGF)-β1 was used to induce EMT in the U87 and LN18 glioma cell lines. Scratch and invasion assays were used to analyze the migration and invasion abilities of treated cells flow cytometry was used to detect the promotion of glioma cell apoptosis treatment with NC, the second generation of gliosphere formation test, Limiting dilution assay were used to test cancer stem cell self-renewal ability, Western blotting was used to explore the expression of markers related to epithelial mesenchymal transformation, apoptotic proteins, stem cell-related markers, and JAK2/STAT3 signaling pathway proteins.
Results U87 and LN18 glioma cells showed increased migration and invasion after induction of EMT, and these effects were inhibited by NC in a concentration-dependent manner. NC treatment also promoted glioma cell apoptosis, and altered expression of EMT markers after NC treatment indicated the suppression of EMT in glioma cells. Moreover, NC inhibited the EMT-induced enhanced self-renewal capacity of gliospheres as well as the EMT-induced expression of

stem cell markers. Western blotting results indicated that these effects of NC were achieved via the alteration of Janus kinase 2 (JAK2)/Signal Transducer and Activator of Transcription 3 (STAT3) signaling.
Conclusion NC can inhibit the EMT process and glioma stem cell characteristics of glioma cells via modulation of JAK2/STAT3 signaling, suggesting that NC may be a potential anti-glioma drug.

448 例无创产前基因检测(NIPT)高风险胎儿回顾性分析

陈艺升、王菲菲、陆娄恺奕、倪颖华、王强、应春妹
复旦大学附属妇产科医院

目的 探讨无创产前基因检测技术(NIPT) 在胎儿染色体异常筛查中的应用价值。
方法 收集复旦大学附属妇产科医院 2017 年 5 月-2021 年 1 月 NIPT 筛查高风险孕妇 448 例，采用胎儿染色体核型分析和染色体微阵列分析技术(CMA)进行产前诊断，回顾性分析结果，随访妊娠结局。
结果 448 例孕妇产前诊断结果显示 NIPT 筛查对 21、18、13 三体(T21、T18、T13)、性染色体非整倍体(SCAs)、染色体微缺失/微重复综合症的阳性预测值(PPV)分别为 86.0%（86/107）、79.5%（35/44）、54.5%（12/22）、39.5%（75/190）和 41.7%（30/72）。研究表明，NIPT 对高龄孕妇的预测性能优于年轻孕妇（$p<0.05$），而基于特定年龄段（间隔 5 年）的比较分析，T21、T18、T13 和 SCA 的阳性预测值没有明显的上升趋势，这表明无论产妇年龄大小，NIPT 高风险都应被重视。此外，45,X、47,XXY、47,XXX 和 47,XYY 的终止妊娠率分别为 100%（11/11）、91.7%（22/24）、20%（3/15）和 7.1%（1/14），这表明孕妇对胎儿不同 SCA 型别的妊娠决策有很大差异。
结论 NIPT 能有效筛查高危人群, 显著降低侵入性诊断比例，但对 NIPT 高风险的孕妇仍需要胎儿染色体核型分析进行诊断。

新生儿坏死性小肠结肠炎及自发性肠穿孔调控枢纽基因筛选

郭彬瀚、江咏梅
四川大学华西第二医院

目的 新生儿坏死性小肠结肠炎（Necrotizing enterocolitis, NEC）及新生儿自发性肠穿孔（Spontaneous intestinal perforation, SIP）是新生儿期常见胃肠道急症，在早产儿中具有较高发病率及死亡率，但由于该疾病发病原因多样化，因此其确切分子机制尚不明确。本研究通过生物信息学挖掘并分析了两种疾病的潜在分子机制。
方法 通过 NCBI-GEO 公共数据库下载 GSE46619 基因表达芯片数据，使用 R 语言软件对原始数据进行整理，清洗，过滤；应用加权基因共表达网络分析算法构建基因共表达网络，分别识别与 NEC 和 SIP 发病相关的基因模块，利用可视化分析工具筛选枢纽基因，并针对枢纽基因进行基因功能富集分析及互作网络构建。
结果 基于共表达网络分析发现，某些枢纽基因确实与 NEC 和 SIP 两种疾病的发生发展存在显著的关联。基因功能分析提示，与细胞黏附功能相关的一些信号通路诸如细胞黏附分子（Cell adhesion molecules, CAMs）、补体途径与凝血级联等与 NEC 发病具有较高相关性；同时互作网络的分析结果表明，JAK3、KNG1、MMRN1 等枢纽基因在该病的潜在发病分子机制中扮演重要的角色。此外，我们发现补体途径与凝血级联可能也参与了 SIP 的发病过程，但其中还涉及到了血小板激活相

关信号通路。基于此，基因与基因之间互作分析表明，FGA、FGB 以及 FGG 可能作为核心基因在 SIP 发病过程中起了决定性作用。
结论 该研究为严重威胁新生儿健康的消化道疾病 NEC 和 SIP 发病的潜在分子机制提供了新的研究方向及治疗思路。

PU-0591

MAZ 诱导 lncRNA AC005355.2 调控 Ezrin 促进 Luminal 乳腺癌进展的作用机制研究

孟玥
广东省人民医院

Luminal 乳腺癌是女性最常见的恶性肿瘤，其特异的 lncRNA 可能在该肿瘤进展中起到重要作用，但功能机制尚不清楚。我们前期发现 lncRNA AC005355.2 在 Luminal 乳腺癌中特异高表达；MYC 相关的锌指蛋白（MAZ）可结合其启动子区刺激其表达；CHIRP-MS 筛选确认 lncRNA AC005355.2 可与膜细胞骨架蛋白（Ezrin）结合，数据库预测三者表达呈正相关。故我们推测：MAZ 诱导 lncRNA AC005355.2 转录，并促使其在 Luminal 乳腺癌中特异高表达，而 lncRNA AC005355.2 可直接结合 Ezrin 蛋白调控活化下游信号通路从而促进 Luminal 乳腺癌进展。本项目拟从分子、细胞、组织水平全面阐明 lncRNA AC005355.2 在 Luminal 乳腺癌中的功能及上下游调控机制，为研发 Luminal 乳腺癌新型生物标志物及靶向药物提供新方向。

PU-0592

Bioinformatics-based Analysis Identifies Potential Key Genes in the Pathogenesis of Membranous Nephropathy

Yue Zhang、xiaosong Qin
Shengjing Hospital of China Medical

Background Membranous nephropathy (MN) is one of the most common causes of nephrotic syndrome in adults, however, the studies of the mechanisms of pathogenesis in membranous nephropathy are far from enough. Research on the pathogenesis of MN will help clinicians to better prevent the occurrence and delay disease progression.
Methods Data from GSE73953 were downloaded from Gene Expression Omnibus (GEO) datasets to identify differentially expressed genes (DEGs) between MN patients (MNs) and healthy controls (HCs),Then, enrichment analysis included Gene Set Enrichment Analysis (GSEA), FunRich analysis, Gene Ontology (GO) analysis, Kyoto Encyclopedia of Genes and Genomes (KEGG) pathways analysis, and Protein-Protein Interaction (PPI) network analyses were applied. Finally, circRNAs-miRNAs-mRNAs networks were constructed and the key genes related to MN were identified.
Results A total of 1096 mRNAs were differentially expressed between the MNs and NCs. Enrichment analysis showed multiple roles of the DEGs enriched in MN, such as signaling events mediated by HDAC Class III and p53 signaling pathway. Fourteen circRNAs seemed potentially involved in MN via regulation of HDAC3 and HIST1H2AJ expression.
Conclusions Our study found that several mRNAs-miRNAs-circRNAs interaction chains play a crucial part in the pathogenesis of MN, and several mRNA-related molecules including hsa-miR-362-5p, hsa-miR-760, and 14 circRNAs were identified that may be helpful to further understand the mechanisms of MN and provide novel ideas for the development of drug targets.

PU-0593

早期糖尿病肾病病变的生物信息学研究

张悦[1]、司徒成彪[2]
1. 中国医科大学附属盛京医院
2. 中国医科大学

目的 利用生物信息学手段筛选出与人类早期糖尿病肾病（Early Diabetic Nephropathy，EDN）病变差异表达基因,早期糖尿病肾病潜在调控机制,为早期糖尿病肾病的诊断和治疗提供帮助。
方法 在基因表达公共数据库 GEO 中筛选出与人类 EDN 相关的基因芯片数据集（GSE111154），使用 GEO 数据库页面在线提供的 GEO2R 工具筛选出实验组和对照组中符合条件的差异表达基因，使用 DAVID 数据库对已得到的差异基因进行 GO 功能富集分析和 KEGG 信号通路进行进一步的分析
结果 1、利用生物信息学手段筛选获得符合要求的人类 EDN 差异表达相关基因共 123 个，其中包含上调基因 103 个，下调基因 20 个。
2、利用 GO 富集分析，在分子功能的 GO 分析中差异基因主要表现为：结合蛋白、细胞外基质、丝氨酸型内肽酶活性、单加氧酶活性；在细胞组分的 GO 分析中，差异基因主要表现为：细胞外泌体、质膜、细胞外基质；在生物学过程的 GO 分析中差异基因主要表现为：细胞外基质、蛋白水解、免疫反应、补体激活、细胞黏附、血小板脱粒。
3、利用 KEGG 通路分析，差异基因主要表现在：补体和凝血通路、金黄色葡萄球菌感染、药物代谢-细胞色素 P450、酪氨酸代谢、在癌症中的蛋白聚糖、疟疾、细胞色素 P450 代谢异种生物、百日咳、系统性红斑狼疮、PI3K-Akt 信号通路。
结论 1、本次研究获得人类 EDN 差异表达相关基因共 123 个，其中包含上调基因 103 个，下调基因 20 个。
2、 本次研究探明多种信号通路与 EDN 有关，其中包括 PI3K-Akt 信号通路、补体和凝血通路、免疫反应、细胞外基质等等。讨论着重研究了 PI3K-Akt 经典信号通路与 EDN 的相关性。

探究他汀对结核合并Ⅱ型糖尿病患者预后的影响

程宇慧、王义莉、周妍冰、赖红历、吕梦媛、应斌武
四川大学华西医院

目的 探究他汀药物对于结核合并Ⅱ型糖尿病患者（TB-T2DM）预后的影响，并构建预后的预测模型，为临床治疗 TB-T2DM 患者提供可靠依据。
方法 收集 2013 年 12 月至 2019 年 9 月就诊于华西医院的患者的临床病例数据，以 2 月末痰菌阴转率（2SS）、复发、死亡为预后指标。对其进行单多因素分析，探究 TB-T2DM 的危险因素，使用 Logistic 回归、弹性网络、KNN、SVM、RVM 五种模型构建预后的预测模型，并计算相对危险度和相应的 95%置信区间。计算敏感性、特异度及曲线下面积以评估模型效能，$p \leq 0.05$ 时认为差异有统计学差异。
结果 共纳入 927 名患者，其中使用他汀 463 例，未使用他汀 464 例。分析发现是否使用他汀药物为 2SS 独立危险因素（OR=0.603，95%CI：0.463-0.784，P=0.000），吸烟、体重减轻、HbA1c、肺部结节/钙化灶、血糖、肌酐也是危险因素。基于上述结果，成功构建 TB-T2DM 患者预后的五种预后预测模型。训练集中，弹性网络模型 AUC 为 0.663（敏感度：68.4%，特异度：56.1%）；测试集中，弹性网络模型 AUC 为 0.672（敏感度：72.6%，特异度：53.3%）。
结论 他汀药物是 TB-T2DM 患者预后的独立保护因子，服用他汀有助于提高预后。在临床诊治中，可使用弹性网络构建的模型预测 TB-T2DM 患者预后，辅助指导临床医师用药。

河北石家庄地区 HBV 基因分型及耐药突变分析

杨莉、侯军良、冯爱东、刘腾飞、许怡、张海丛
河北省石家庄市第五医院

目的 探讨石家庄地区经各种核苷(酸)类似物治疗的 CHB 患者 HBV 基因型、基因耐药突变位点分布和基因耐药情况进行分析。
方法 选择 2014 年 10 月-2019 年 3 月在石家庄市第五医院就诊的 CHB 患者 1157 例，收集患者基本资料，并采用基因测序技术对患者基因分型和基因耐药突变位点进行检测，对检测结果进行统计分析。
结果 石家庄地区 CHB 患者的基因分型以 C 型为主，少量为 B 型，在不同的 HBV 基因型在不同性别间的分布差异无统计学意义
($\chi2=0.676$, $P>0.05$),不同年龄间的分布差异有统计学意义($\chi2=11.797$, $P<0.05$). 不同的 HBV 基因分型在 14 种不同耐药模式检出率、基因耐药位点突变率及 4 种核苷（酸）类似物的耐药情况分布差异无统计学意义(P>0. 05). C 型患者数随基因突变位点增多而占比不断增高，B 型患者数随基因突变位点增多而占比不断降低,；在对 LAM、ADV、ETV 及 LDT 四种核苷(酸)类似物耐药的 11 种模式中，对 LAM、LDT 及 ETV 均发生耐药的患者占比达到 54.8%；其次是对 ADV 耐药的患者，占比达 21.6%；位于第三位的是对四种药物均耐药的患者占比达 12%。
结论 石家庄地区 CHB 患者感染的基因分型以 C 型为主，男性多见，且发生的基因耐药突变以多重耐药为主。

血清外泌体 SIRT4 在结直肠癌中的表达及临床意义

李宁
山东大学第二医院

目的 SIRT4 作为疾病调控的关键分子备受关注。在这项研究中，我们拟确定 SIRT4 在结直肠癌（CRC）患者肿瘤组织及血清中的表达水平并明确其临床诊断价值。
方法 收集 80 对 CRC 患者的癌组织及癌旁正常组织，通过实时荧光定量 PCR 的方法，检测 SIRT4 在组织中的表达水平，分析其与患者临床病理信息的关系。收集 125 例 CRC 患者的血清，同时纳入 125 例健康对照血清，提取血清外泌体，并对外泌体中的 SIRT4 水平进行检测，通过受试者工作特征(ROC)曲线分析 SIRT4 的诊断价值。
结果 SIRT4 在 CRC 组织和血清外泌体中表达显著降低，此外血清外泌体 ROC 曲线分析发现，其 ROC 曲线下面积（AUC）为 0.841，灵敏度为 84.4％，特异性为 76％（95％ CI = 0.770-0.898），具有较高的临床诊断价值。
结论 SIRT4 有望成为 CRC 诊断和预后的生物标志物

PU-0597

Long Noncoding RNA ADAMTS9-AS1 Suppresses Colorectal Cancer by Inhibiting the Wnt/β-catenin Signaling Pathway, and is a Potential Diagnostic Biomarker

Ning Li
The second hostipal of Shandong university

Long noncoding RNAs (lncRNAs) have come out as critical molecular regulators of human tumorigenesis. In this study, we sought to identify and functionally characterize lncRNAs as potential mediators of colorectal cancer progression.We screened and identified a novel lncRNA, ADAMTS9-AS1, which was significantly decreased in colorectal cancer tissues and was correlated with clinical outcomes of patients according to The Cancer Genome Atlas (TCGA) database. In addition, ADAMTS9-AS1 regulated cell proliferation and migration both in vitro and in vivo. Bioinformatics analysis revealed that overexpression of lncRNA-ADAMTS9-AS1 preferentially affected genes that were linked to proliferation and migration. Mechanistically, we found that ADAMTS9-AS1 obviously suppressed β-catenin, suggesting that Wnt signaling pathway participates in ADAMTS9-AS1-mediated gene transcriptional regulation in the suppression of colorectal tumorigenesis. Finally, we found that exosomal ADAMTS9-AS1 could serve as a diagnostic biomarker for colorectal cancer with AUC = 0.835 and 95% confidence interval = 0.777-0.911. Our data demonstrated that ADAMTS9-AS1 might play important roles in colorectal cancer by suppressing oncogenesis. Targeting ADAMTS9-AS1 may have potential clinical applications in colorectal cancer prognosis and treatment as an ideal therapeutic target. Finally, exosomal lncRNA-ADAMTS9-AS1 is a promising, novel diagnostic biomarker for colorectal cancer.

鼠尾消化实验的传统“经典法”和新技术“快速法”的对比及探讨

刘寒、曾超、陈璐、王君安、王欣、凌昉钦
上海市第一人民医院嘉定分院

目的 以小鼠为模型的模式动物在现代科学研究中发挥着重要的作用。目前对于小鼠的遗传学改造是扩充小鼠品系的重要途径，这也要求对小鼠的基因鉴定应该朝着更快和更准确的方向发展。传统的鼠尾粗 DNA 提取依赖蛋白酶 K，消化时间在 5 个小时左右。本文提出了一种不依赖蛋白酶 K 的快速鼠尾粗 DNA 提取法，并探讨其实验过程及其准确性。
方法 经典鼠尾消化过程，需要在弱碱体系中，经过蛋白酶 K 的水解消化和乙醇洗涤获得粗 DNA 浸出液。我们提出了新的鼠尾粗 DNA 提取的方法，即在强碱、高温环境下，破坏组织裂解细胞，使其核酸片段释放出来，获得粗 DNA 浸出液。该方法不依赖蛋白酶 K 的生物消化过程，是组织和细胞在高温强碱反应下，自然将染色质成分释放出来；在经过酸性缓冲液中和之后，获得可以进行 PCR 反应的鼠尾粗 DNA 提取液。
结果 经过对比我们发现，“快速法”大大缩短了反应时间。“经典法”还是需要 5 个小时左右的时间，但是“快速法”仅仅需要 20 分钟的时间。“经典法”消化得更为彻底，在经过“快速法”消化后，EP 管底部仍有鼠尾组织。根据两者的实验原理分析，“经典法”获得的是双链粗 DNA，而“快速法”获得的是单链 DNA。由于 DNA 的本质是反向平行的双脱氧核糖核苷酸链，所以双链和单链有等效的遗传信息。对两者获得的粗 DNA 浸出液进行 PCR 反应的结果显示，两者都可对敲除式基因和敲入式基因进行基因鉴定，结果同样稳定可靠，表现为两者条带同样清晰，亮度相似。
结论 通过实践，发现使用“快速法”鼠尾消化可以缩短小鼠基因鉴定所需时间，同时可减少蛋白酶 K 的使用，并且进一步简化实验操作步骤，有一定的应用和推广前景。

Identification of two Novel HIV-1 Second-generation Recombinant Forms (CRF01_AE/CRF07_BC) in Hebei, China

Ying Xing、Erhei Dai
the Fifth Hospital of Shijiazhuang

Homosexual contact is one of the main transmission routes of HIV-1 epidemic in Hebei, China. Several subtypes of HIV are prevalent simultaneously in the population, which always leads to the emergency of unique recombinant forms (URFs). Here we reported two new URFs from two HIV-1 positive subjects (HB030009, HB030021) infected through homosexual contact route in Hebei, China. RNA was extracted from 200μL of plasma samples. Then, extracted RNA was reversely transcribed into cDNA . The NFLG was obtained in two halves by nested PCR amplification. The positive products were detected by 1% agarose gel electrophoresis, then purified and sequenced with a series of special primers. phylogenetic tree and subregion tree were constructed using the Neighbor-joining method based on Kimura two-parameter model with 1000 bootstrap replications by Mega6. Recombination breakpoints were identified by Recombination Identification Program and jpHMM. Phylogenetic and recombinant analyses based on the near full-Length genome (NFLG) of the two URFs both revealed the two URFs are the second generation of recombinant strains originated from CRF01_AE and CRF07_BC. The CRF01_AE segments of two URFs lacated in cluster 4 of CRF01_AE strains in the phylogenetic tree. The emergence of the novel CRF01_AE/CRF07_BC recombinant forms with complicated genomic structures indicated the importance of the continuous monitoring of the HIV-1 epidemic and new URFs among the MSM populations.

Individualized prediction of survival by a 10 long non-coding RNA based prognostic model for patients with breast cancer

Xuemei Yang、Juan Li、Yifan Wang、Peilong Li、Yinghui Zhao、Weili Duan、ABAKUNDANA NSENGA Ariston Gabriel、Yingjie Chen、Haiting Mao、Yunshan Wang、Lutao Du、Chuanxin Wang
The Second Hospital, Cheeloo College of Medicine, Shandong University

Deregulations of long non-coding RNAs (lncRNAs) have been implicated in the progression of breast cancer (BC). However, the prognostic values of those lncRNAs in BC remain elusive. This study aimed at constructing a lncRNA-based prognostic model to improve the clinical management of BC. Systematic investigation of lncRNA expression profiles and clinical data from The Cancer Genome Atlas (TCGA) database were utilized to establish a 10-lncRNA signature. The prognostic signature efficiently discriminated patients with significantly different prognosis regardless of intrinsic molecular subtypes and Tumor-Node-Metastasis (TNM) stage. A combined model was constructed by multivariate Cox proportional hazards regression (CPHR) analysis, which combined the lncRNA-based signature with certain clinical risk factors (TNM stage, age and human epidermal growth factor receptor 2 status). This model predicted a survival probability that closely corresponds to the actual survival probability. With respect to the entire set, the time-dependent receiver-operating characteristic curves revealed that the area under the curve of this model was the highest than any of the clinical risk factors. Moreover, functional enrichment analysis indicated that the molecular signature was mainly involved in DNA replication, which was firmly related to BC tumorigenesis. Consistent with the discovery, the knockdown of LHX1-DT, one of the 10 prognostic lncRNAs, attenuated the proliferation of BC cells in vitro and in vivo. Taken together, our study constructed a novel 10-lncRNA signature for prediction prognosis and the signature-based model could provide new insight into accurate management of BC patients.

6-lncRNAs 模型评估三阴性乳腺癌患者预后结局

杨雪梅
山东大学第二医院

目的 通过大数据挖掘，构建可预测三阴性乳腺癌患者预后情况的 lncRNA 预后模型。
方法 基于 R 语言软件包，获取 TCGA 数据库中三阴性乳腺癌和正常乳腺组织的 lncRNA 表达谱及临床病理信息。单因素 Cox 回归和 Kaplan-Meier 曲线，鉴定三阴性乳腺癌中差异表达并与预后相关的 lncRNAs。利用多因素 Cox 逐步回归模型在训练集中构建 lncRNA 预后模型，Kaplan-Meier 曲线评估此模型在训练集、验证集中的预测效能。
结果 116 例三阴性乳腺癌和 113 例正常乳腺组织的 RNA 表达谱差异分析得到 1548 个在三阴性乳腺癌中差异表达的 lncRNAs，单因素 Cox 回归分析联合 Kaplan-Meier 生存曲线发现其中 24 个 lncRNAs 与预后相关，经多因素 Cox 逐步回归模型构建了基于 6-lncRNAs 的预后预测模型：风险评分=0.33× 表达量 LINC02685 + 1. 69 × 表达量 LINC01614 + 0.92 × 表达量 AC112250.2 + 0.57× 表达量 AL355483.2 + 0.16 × 表达量 FAM83A-AS1 + 0.43 × 表达量 LINC00377。Kaplan-Meier 曲线结果表明该模型可有效区分三阴性乳腺癌人群中预后高风险组和低风险组，且高风险组生存率明显低于低风险组。同时，该模型的时间依赖性受试者工作特征曲线下面积高达 0.811。
结论 基于 LINC02685、LINC01614、AC112250.2、AL355483.2、FAM83A-AS1 和 LINC00377 的预后预测模型可有效预测三阴性乳腺癌患者的预后结局，为三阴性乳腺癌的临床决策提供参考依据。

5-lncRNAs 模型用于预测乳腺癌患者预后生存

杨雪梅
山东大学第二医院

目的 长链非编码 RNA 表达失调已被证明与癌症的发生和发展有关，其表现出更高的组织、疾病、发展阶段的特异性表达。 然而，lncRNAs 在乳腺癌中的预后价值仍不清楚。 这项研究通过联合大数据分析及功能实验验证，以寻找新颖的 lncRNA 模型来预测乳腺癌患者的临床结局。
方法 通过大数据分析基因表达谱，以鉴定来自 TCGA 数据库的乳腺癌样品和正常样品之间的差异表达 lncRNAs。然后使用单变量 Cox 比例风险回归筛选鉴定预后相关的 lncRNAs，并通过 Cox 回归模型（逐步回归）进行进一步评估。最后，我们通过多变量 Cox 比例风险回归基于这些与预后相关的 lncRNAs 建立了 lncRNA 模型，并通过 Kaplan-Meier 方法、时间依赖性受试者工作特征曲线（ROC 曲线）在两个不同的数据集中进一步对其进行了验证。我们开发了一种 5-lncRNAs 模型，以预测乳腺癌的 3 年和 5 年 OS。
结果 依据 TCGA 数据库中乳腺癌样品和正常样品的 lncRNA 表达谱，我们确定了 5 种差异表达的 lncRNAs，它们与患者的总体生存率明显相关。然后，我们根据训练数据集中的 5 个预后相关 lncRNAs 的表达值及系数构建风险评分公式，风险得分=（0.244×AC007128.1 表达量）+（0.498×AL445647.1 表达量）+（0.441 ×LINC01574 ）+（0.617×CARMN 表达量）+（0.541×MME-AS1 表达量）。在其他验证集进行了进一步验证，Kaplan-Meier 曲线及时间依赖性

受试者工作特征曲线结果表明高风险评分的乳腺癌患者的生存时间明显低于低风险评分的乳腺癌患者（p 值<0.05）。

DNAzymatic Molecular Beacon Probe for colorimetric Detection of Nucleic Acids

Ying Ping、Xuchu Wang、Zhihua Tao
The Second Affiliated Hospital of Zhejiang University School of Medicine, Hangzhou, China

Nucleic acids are promising biomarkers for disease diagnosis and therapeutic decision-making. Herein, we employ a label-free molecular beacon probe to achieve easy and sensitive detection of nucleic acids. Specifically, a peroxidase-mimicking DNAzyme sequence is linked to the 3' end of molecular beacon that greatly enhances hemin peroxidation with an initial state. Introduction of target nucleic acid opens the stem-loop conformation of molecular beacon exposing the complementary region for DNAzyme sequence binding. The DNAzyme sequence is then extended to displace the target into next cycle, resulting in an embedded conformation that shows less peroxidase activity. This proposed probe is capable of discriminating varieties of gene mutations with high resolution, and detecting target nucleic acid as low as 0.105 nM in an isothermal manner, showing capacity to further exploit a simple and portable biosensor for nucleic acid detection.

Near Full-Length Genomic Characterization of Two Novel HIV-1 Unique Recombinant Forms (CRF01_AE/CRF07_BC) among MSM in Shijiazhuang, Hebei, China

Leilei Han、Erhei Dai
the Fifth Hospital of Shijiazhuang

Multiple subtypes were found to be co-circulated among men who have sex with men (MSM) populations in Hebei province, China, which always result in the emergence of unique recombinant forms (URFs). In the current work, two novel unique recombinant forms (URFs) were identified from two near full-length genomes (NFLG) that were obtained from two HIV-positive subjects (HB010014, HB010063) in Shijiazhuang, Hebei province, China. Both patients signed informed consent before investigated, then, their plasma samples were collected. RNA from plasma was extracted and transcribed into cDNA. the NFLG was amplified in two halves with High Fidelity Taq (Invitrogen) as described previously. PCR positive products were purified and sequenced by SinoGenoMax (Beijing, China) with several specific primers. Phylogenic analyses showed that both two sequences formed a distinct monophyletic cluster. The genomic recombination analysis based on the NFLGs revealed that the genome of HB010014 and HB010063 was composed of CRF01_AE and CRF07_BC. Further subregion phylogenetic analysis indicated that CRF01_AE segments were traced back to cluster 4 of CRF01_AE strains which are mainly circulating among the men who have sex with men (MSM) population in China. The emergence of two novel second-generation recombinant strains indicates the increasing complexity of the HIV-1 epidemic among MSM in Hebei, China.

烟台地区 PCR 检测呼吸道病毒感染结果分析

安 彤
滨州医学院烟台附属医院

目的 研究烟台地区近段时间内呼吸道病毒的流行趋势，从而做到更好地预防感染呼吸道感染以及防控其广泛流行。
方法 利用烟台地区 2019 年以及 2020 年至今的流感样病例的样本，采用实时定量荧光 PCR 法对采集的标本进行扩增，最后对实验结果进行综合分析。
结果 本篇论文就甲、乙型流感病毒(FluA、FluB)和人腺病毒 B 型（AdV-B）的核酸检测结果来进行分析，总体来看，从 2019 年到 2020 年至今甲型流感病毒的阳性率最高，其次是乙型流感病毒和人腺病毒 B 型，其阳性率分别是 17.79%、13.39%和 5.68%。
结论 从现有标本检测结果可分析得知烟台地区呼吸道感染具有明显季节性，对儿童和青少年感染性较强，但根据计算结果显示，并没有证据表明三种病毒的感染与性别之间有统计学意义。

Sox2 inhibits Wnt-β-catenin signaling and metastatic potency of cisplatin-resistant lung adenocarcinoma cells

Kangjian Zhang
The Second Hospital of Shandong University

Lung cancer remains one of the most common cancerassociated mortalities worldwide, and platinumbased doublet chemotherapies are recommended as the firstline treatment for advanced nonsmall cell lung cancer (NSCLC). However, the frequent development of multidrug resistance, to cisplatin regimens in particular, is a major cause of chemotherapy failure in patients with aggressive NSCLC. Wnt/βcatenin signaling and sexdetermining region Y box 2 (Sox2) have been implicated in the development and progression and resistance to epidermal growth factor receptortargeting therapy in lung cancer. The present study aimed to explore the effects of Wnt/βcatenin and Sox2 signaling on the chemoresistance of cisplatinresistant lung cancer cells. This study explored the effects of Wnt/βcatenin and Sox2 signaling on the chemoresistance of cisplatinresistant lung cancer cells by assessing the effects of Sox2 on Wnt/βcatenin signaling activity, cell migration, invasion and clonogenicity, and susceptibility to cisplatin in lung adenocarcinoma A549 cells and cisplatinresistant A549/DDP cells. The results demonstrated that an enforced expression of Sox2 led to inhibition of Wnt/βcatenin signaling activity, potentially by upregulating glycogen synthase kinase 3 β in A549 and A549/DDP cells. An overexpression of Sox2 promoted cell migration and invasion, in addition to enhancing the clonogenic capacity in A549 cells. Notably, knockdown Sox2 using short hairpin RNA led to an enhanced susceptibility of A549 and A549/DDP cells to cisplatin, along with increased cell apoptosis. The present study thus suggests that Sox2 may be an important regulator in development of chemoresistance of lung cancer cells and may be a novel therapeutic target for treatment chemoresistant lung cancer.

PU-0609

适配子在检测 CD64 蛋白中的应用

李卫滨[1]、严烨炜[2]
1. 中国人民解放军联勤保障部队第 900 医院(原福州总医院)
2. 中国人民解放军联勤保障部队第九〇〇医院

目的 中性粒细胞上的人 FcγRI（CD64）是早期诊断脓毒血症的新标志物。目前临床检测技术为流式仪法，仅有部分医院开展项目，尚未有在大部分医院广泛开展的检测方法。适配子是从含有大量随机序列的 ssDNA 或者 RNA 文库中筛出能与蛋白质或其他小分子物质等靶标特异性结合的短链分子。ELAA 法是将适配子代替双抗夹心 ELISA 法中的酶标抗体适配子，用于检测 CD64 浓度，此法有价格低、无需昂贵仪器等优点，易广泛推广。本研究使用固相重组人 FcγRI-适配子结合，对比三条适配子和混合适配子与 CD64 蛋白的结合力，并探索最佳实验条件和抗体最佳包被量，以期为后续研究 ELAA 法测 CD64 蛋白奠定基础。
方法 （1）所购抗体、重组人 FcγRI 特异性分析。（2）在高吸附 96 微孔板上包被 600ng/孔的重组人 FcγRI，分别结合 LW7-1、LW7-9、LW7-27 三条适配子和 250nM、500nM、1000nM 的混合适配子，用酶标仪检测 OD 值，对比选取其中最优的一条适配子。（3）在高吸附 96 微孔板上包被 0nM、100nM、200nM、300nM、400nM、500nM、600nM、700nM 的 CD64 抗体，与辣根酶标山羊抗兔 IgG 抗体结合，用酶标仪检测 OD 值，得到抗体最佳包被量。
结果 （1）所购抗体、重组人 FcγRI 特异性较好。（2）三条适配子中 LW7-9 与重组人 FcγRI 结合力较好，OD 值为 1.052。LW7-1 孔 OD 值为 0.598，LW7-27 孔 OD 值为 0.203。（3）抗体最佳包被量为 200ng/孔。
结论 （1）三条适配子中 LW7-9 与 CD64 蛋白的结合力较好，LW7-1 次之，LW7-27 结合力较低。（2）后续做 ELAA 实验时，抗体最佳包被量为 200ng/孔。

PU-0610

LncRNA NEAT1 受 m6A 甲基化调控并通过 miR-766-5p/CDKN1A 轴介导慢性粒细胞白血病进展

姚芳苡、王小中、黄波、刘静
南昌大学第二附属医院

目的 本研究探讨 LncRNA NEAT1 在 CML 中的生物学功能，并初步探索 METTL3 通过 m6A 修饰调控 NEAT1 表达参与 CML 发生发展的作用机制。
方法 采用 RT-qPCR 检测 20 例健康对照者、20 例 CML 初发期患者及 20 例 CML 急变期患者外周血单个核细胞（PBMC）和 CML 细胞系（K562、KCL22）中 NEAT1 表达水平。采用 NEAT1 过表达载体及对照载体分别转染 K562 和 KCL22 细胞，采用 CCK8 法和流式细胞术检测细胞增殖和凋亡水平变化。生物信息学预测 NEAT1 的靶基因。使用双萤光素酶报告基因实验、RNA 免疫沉淀实验、RT-qPCR 和 Western blot 测定 NEAT1 对 miR-766-5p 和 miR-766-5p 对 CDKN1A 的靶向调控作用。采用 SRAMP 软件预测 NEAT1 基因 m6A 修饰位点，并用 MeRIP 实验进行验证。
结果 与健康对照者相比，CML 患者 PBMC 和 CML 细胞系中的 NEAT1 表达水平均显著下调，CML 急变期患者显著低于 CML 初发期患者。K562 和 KCL22 细胞中过表达 NEAT1 后，细胞增殖降低，凋亡增加。NEAT1 可通过海绵吸附的方式负调控 miR-766-5p 的表达；CDKN1A 是 miR-766-5p 的靶基因，受其负调控。沉默 CDKN1A 可部分逆转过表达 NEAT1 和沉默 miR-766-5p 对 K562 和 KCL22 细胞增殖和凋亡的影响。SRAMP 预测显示 NEAT1 上存在多个 m6A 修饰位点，MeRIP 证实 NEAT1 的表达水平同 M6A 修饰相关，RIP 实验发现 METTL3 可以富集 NEAT1 的表达，沉默 METTL3 可降低 NEAT1 在细胞中的半衰期。

结论 本研究阐明了 NEAT1 以依赖 m6A 修饰方式，通过 METTL3/NEAT1/miR-766-5p/CDKN1A 作用轴，影响 CML 发生发展的作用及其机制。

PU-0611

突变型 SMOC2 基因诱导多能干细胞系的构建

龙逢
山东大学第二医院

目的 构建突变型 *SMOC2* 基因诱导多能干细胞系并检测其增殖凋亡情况。
方法 从患者和正常对照者体内抽取静脉血后分离其单个核细胞（PBMCs）并进行培养。使用电转仪将相关质粒转入 PBMCs 进行重新编程，使其成为诱导多能干细胞（hiPSCs）。对 hiPSCs 传代培养并进行核型分析和 STR 连锁分析，确定该 hiPSCs 的来源。随后进行三胚层分化并提取 RNA 进行实时定量 PCR 检测和免疫荧光染色检测，检测其是否具有与胚胎干细胞相同的分化能力。确定成功构建突变型 SMOC2 基因 hiPSCs 细胞系后，使用 EdU 染色和脱氧核糖核苷酸末端转移酶介导的缺口末端标记法（TUNEL）检测其增殖和凋亡能力。
结果 本研究通过电转成功将 *OCT4*、*SOX2*，*c-Myc* 和 *KLF4* 基因导入 PBMCs 中，将其重新编程为 hiPSCs。核型分析和 STR 连锁分析显示其来源于原始样本。在该 hiPSCs 中，对表达于 ES 细胞的特异性蛋白标志物进行检测，发现 hiPSCs 中这些特异性转录因子在 mRNA 水平和蛋白质水平的表达量与 ES 细胞相似。对其进行三胚层分化后，可高表达内胚层、中胚层和外胚层的标志物。EdU 染色和 TUNEL 检测发现，突变型 *SMOC2* 基因 hiPSCs 的增殖能力没有改变，凋亡能力减弱。
结论 本研究成功构建了来源于患者和对照者的具有多能干性的 hiPSCs，并发现突变型 *SMOC2* 基因 hiPSCs 的增殖能力没有改变，凋亡能力减弱。

PU-0612

SPARC 相关模块钙结合蛋白基因功能的研究

龙逢
山东大学第二医院

目的 探究 *SMOC2* 基因变异导致骨骺发育不良的致病机制。
方法 构建野生型和突变型 *SMOC2* 基因病毒表达载体以及稳定过表达野生型和突变型 *SMOC2* 基因的细胞系，通过蛋白免疫印迹（Western blot，WB）检测 BMP 信号通路和 MAPK 信号通路相关分子的表达水平，利用免疫共沉淀（Co-Immunoprecipitation，Co-IP）、固相结合实验（Solid Phase Assay，SPBA）实验检测分子间相互作用。
结果 本研究成功构建稳定表达野生型和突变型 *SMOC2* 基因的 HEK293 细胞系。WB 检测发现过表达野生型和突变型 *SMOC2* 基因后，HEK293 细胞的磷酸化 SMAD1/5/9 表达量明显降低，使用 BMP 重组蛋白刺激后表达量没有恢复。在过表达野生型 *SMOC2* 基因的 HEK293 细胞系中，使用 WB 检测 MAPK 信号通路的相关分子发现其表达水平没有升高。随后使用活化的 BMP 受体进行拯救实验，发现 SMAD1/5/9 的磷酸化水平得到恢复。此后进行的 Co-IP 实验结果显示野生型和突变型 SMOC2 蛋白均能与 IB 型 BMP 受体（BMPRIB）进行结合。同时，Co-IP 和 SPBA 实验显示突变型 SMOC2 蛋白与 COL9A1 蛋白和 HSPG 结合能力下降，而与 COMP 蛋白和 MATN3 蛋白的结合能力不变。
结论 突变型 SMOC2 蛋白在软骨细胞外基质分子网络中的结合能力下降，使大量 SMOC2 蛋白释放出来，与 BMP 受体结合，阻碍 BMP 配体与受体的结合和 BMP 受体的活化，进而抑制 BMP 信号通路的传导。

突变型 Smoc2 基因敲入小鼠模型的构建及表型分析

龙逢
山东大学第二医院

目的 成功构建突变型 *Smoc2* 基因敲入小鼠并对其表型进行分析。
方法 通过胚胎干细胞（ES）打靶技术构建突变型 *Smoc2* 基因敲入小鼠，并使用 Sanger 测序进行验证。利用 X 光测量小鼠的身长，使用游标卡尺测量小鼠股骨和胫骨长度，应用 micro-CT 检测膝关节形态、骨密度和骨量，通过透射电子显微镜观察软骨细胞的超微结构。制备小鼠胫骨石蜡切片后，通过苏木素-伊红染色，番红固绿染色。免疫染色和脱氧核糖核苷酸末端转移酶介导的缺口末端标记法（TUNEL）检测骨骺生长板的形态和软骨细胞的增殖、分花费大、凋亡情况以及相关标志物的表达水平。
结果 本研究通过 ES 细胞打靶技术承购构建了突变型 *Smoc2* 基因敲入小鼠。突变型 *Smoc2* 基因敲入小鼠的身长、体重、股骨和胫骨的长度均小于野生型小鼠。对小鼠的胫骨生长板进行病理学分析，发现突变型 *Smoc2* 基因敲入小鼠的增殖区软骨细胞所占比例缩小，肥大区软骨细胞所占比例增大，而且软骨细胞排列松散、紊乱。对其软骨细胞的 PCNA、Collagen X 和 Runx2 检测发现突变型 *Smoc2* 基因敲入小鼠的 PCNA 表达量减少，Collagen X 和 Runx2 的表达量增加。
结论 突变型 *Smoc2* 基因敲入小鼠出现明显的骨骼发育不良表现，而且其软骨细胞增殖能力减弱，肥大分化能力增强，导致其骨骺生长板结构异常。

PU-0614

Construction of a circRNA-miRNA-mRNA network reveals the key pathways and central genes of osteosarcoma in vivo and immune cell infiltration characteristics in osteosarcoma

Haifang Zhang、Hong Du
Department of Clinical Laboratory, The Second Affiliated Hospital of Soochow University, Suzhou, Jiangsu, 215004, China.

The potential functions and detailed mechanisms of circular RNAs (circRNAs) in osteosarcoma (OS) have not been fully elucidated. In this study, the circRNA, micro RNA (miRNA), and messenger RNA (mRNA) expression profile of human OS was investigated based on the raw microarray data from Gene Expression Omnibus (GEO) datasets, and seven differentially-expressed circRNAs (DEcircRNAs), 166 differentially-expressed miRNAs (DEmiRNAs), and 175 differentially-expressed mRNAs (DEmRNAs) were identified in total. After bioinformatics analysis, we identified 185 statistically-significant transcription factors and revealed the pattern of tumor-infiltrating immune cells in OS. And we found that post-translational protein modification, collagen-containing extracellular matrix, and single-stranded DNA binding were the most significant pathways in GO annotation analysis, whereas complement and coagulation cascades, RNA transport and drug metabolism-other enzymes were the most significantly enriched pathways in KEGG pathway enrichment analysis. In addition, we constructed circRNA-miRNA-mRNA and protein-protein interaction (PPI) networks that may be associated with pathological processes of OS. Moreover, the expression of targets in competitive endogenous RNA (ceRNA) network constructed was confirmed by RT-qPCR. Finally, we further explored the potential value of the ceRNA networks, and found that COL1A1 and RAN were promising biomarkers which were significantly correlated with overall survival. More importantly, circ_0010220–miR-338-3p–COL1A1 and circ_0010220–miR-324-5p–RAN, the novel

regulatory axes in OS, were firstly highlighted in this study. To our knowledge, this study provides the first profile analysis of DEcircRNAs, DEmiRNAs, and DEmRNAs with OS in vivo and reveals a novel idea for understanding the pathogenesis of OS.

PU-0615

Long non-coding RNA SNHG14 enhances pancreatic-β-cell function by sponging microRNA-206 and thereby upregulating IGF1

Zheng Mao、Zhen Li、Zengkun Qian、Jingjing Zhou、Xiaoqin Li、Fan Cui
The First People's Hospital of Wuhu

OBJECTIVE Diabetes mellitus (DM) characterised by pancreatic β-cell dysfunction and insulin resistance is already prevalent worldwide, and the complications of DM increased the mortality of diabetic patients. More and more reports showed that long non-coding RNA (lncRNA) plays key roles in DM, and in this study we explored the effect of long non-coding RNA SNHG14 (SNHG14) in DM.
STUDY DESIGN Quantitative reverse transcription PCR (qRT-PCR) was used to analyze the expression of SNHG14 and microRNA (miR)-206 in peripheral blood from 60 pairs of healthy and DM samples. Then the effect of SNHG14 on the insulin secretion of pancreatic β-cells was investigated. Moreover, the effects of SNHG14 on the viability and apoptosis of pancreatic β-cells were determined by 3-(4,5)-dimethylthiahiazo (-z-y1)-3,5-di- phenytetrazoliumromide (MTT) assay and flow cytometry (FCM) respectively using INS-1 cells transfected with SNHG14-plasmid and/or miR-206 mimic. Bioinformatics and Daul luciferase reporter assay were used to confirm the direct target of miR-206.
RESULTS Our data showed that SNHG14 level was decreased but miR-206 was increased significantly in the peripheral blood of DM patients. Furthermore, over-expression of SNHG14 enhanced insulin secretion and cell viability but inhibited apoptosis of pancreatic β-cells, whereas, miR-206 over-expression reversed these effects. In addition, insulin-like growth factor-1 (IGF1) was proved to be regulated by miR-206 negatively and over-expression of SNHG14 increased the expression of IGF1 and IGF1R in pancreatic β-cells.
CONCLUSION In conclusion, we found that SNHG14 was significantly down-regulated in DM patients, and SNHG14/miR-206/IGF1 may serve as a potential candidate for the clinical target of DM.

PU-0616

肿瘤坏死因子 α 基因多态性与强直性脊柱炎的相关性研究

杨越、吉阳涛
中国医科大学附属第一医院

目的 探讨肿瘤坏死因子(tumor necrosis factor)-α 启动子区 857C/T 基因多态性与强直性脊柱炎之间的关系,为临床上科学的预防干预和治疗强直性脊柱炎提供新的思路和治疗方案。
方法 通过在计算机中检索 CBM、CNKI、 万方数据库、维普数据库，PubMed、Cochrane Library、OvidSP、Wiley Online Library、 EBSCO、Elsevier Science Direct、Springer Link、Goolge scholar 数据库，文献检索 时间都选择从建库开始到 2021 年 5 月。检索 TNFα857 位点的 SNPs 与 AS 易感性的病例-对照研究，采用 Review Manager 5.4 软件进行 Meta 分析，我们选择使用固定效应模型 或者随机效应模型进行 Meta 分析，然后再通过一定的运算合并 OR 值及其 95%CI，借此来判断 TNFα857 的 SNPs 与 AS 易感性的关联情况,分析强直性脊柱炎与 TNF-α 启动子区 857C/T 基因多态性。

结果 经过筛选，最终选定 6 篇文献，来进行 Meta 分析，其中涉及到 571 例患有 AS 的患者，615 例健康人群对照组病患，Meta 分析的结果最终显示，CC 基因型[OR=0.24, 95%CI (0.31, 0.17), P=0.13]，TT 基因型[OR=0..02, 95%CI (0.03, 0.07), P=0.40],C 基因型[OR=0.14, 95%CI (0.19, 0.08), P=0.04],T 基因型[OR=0.14, 95%CI(0.08, 0.19), P=0.40]。
结论 TNF-α 启动子区 857C/T 基因多态性与强直性脊柱炎发病率存在相关性；携带 C 等位基因人群可能 AS 的发病风险低，而携带 T 等位基因人群可能 AS 的发病风险高。

PU-0617

探讨新冠核酸检测的风险评估与生物防护

胡瑞国
山东第一医科大学第一附属医院

在医学快速发展的当下，医学实验室也在与时俱进，检验项目多元化，检验仪器多品牌化，相应的检验标本种类及数量也越来越多，生物防护就显得尤为重要。PCR 实验室为做好生物防护，加强生物安全管理监控工作，联合相关职能部门（医务处、护理部、感染管理科、总务处）及临床重点科室（新生儿科、产房、血液透析室、重症医学科、呼吸重症监护室、心外监护室、外科监护室、危急重症神经外科、颅脑肿瘤神经外科、脑血管病神经外科、消毒供应室、手术室、内镜诊疗科、发热门诊的科主任及护士长）对新型冠状病毒的生物防护进行风险评估并制定相应的防护措施，本文就 PCR 实验室检测新冠核酸时生物防护现状进行探讨，同时结合工作中的实际问题，提出改进措施进行有效防护。

一多发性骨骺发育不良家系致病基因的分离

龙逢
山东大学第二医院

目的 分离一多发性骨骺发育不良家系的致病基因。
方法 通过系谱分析确定该家系疾病的遗传方式，STR 连锁分析发现该家系的发病是否与已知致病基因相关，使用全外显子组测序技术发现该家系的候选致病基因，通过 Sanger 测序，保守性分析以及生物信息学软件确定该家系的致病基因。
结果 通过对该家系的系谱分析，我们发现该家系的遗传方式为常染色体显性遗传，STR 连锁分析发现该家系的发病与已知致病基因无关。通过对该家系三名患者的全外显子组测序，筛选出 *INSL5*，*MRPS5*，*ANXA5*，*KAT6B*，*MYO15A*，*LRRC48*，*DSCAM*，*PABPC3* 和 *SMOC2* 基因为候选致病基因。在 EXAC 数据库中的检索结果发现位于 *INSL5*，*MRPS5*，*ANXA5*，*KAT6B*，*MYO15A*，*LRRC48* 和 *DSCAM* 基因的变异在正常人群中是存在的。通过对该家系中患者和正常人的 Sanger 测序，我们未检测到 *INSL5*，*MRPS5*，*ANXA5*，*KAT6B*，*MYO15A*，*DSCAM* 和 *PABPC3* 基因的变异与家系中患者表型共分离。对 SMOC2 蛋白和 LRRC48 蛋白在进化中的保守性进行分析，发现 LRRC48 蛋白的突变位点氨基酸在进化中并不保守，而 SMOC2 蛋白的突变位点氨基酸在进化中是高度保守的。
结论 该常染色体显性遗传性多发性骨骺发育不良家系的致病基因为 *SMOC2* 基因。

PU-0619

新型冠状病毒核酸检测比对结果分析

朱艳
西安金域医学检验所有限公司

目的 通过对新型冠状病毒核糖核酸（2019-nCOV）检测的技术人员及检测仪器比对结果分析，确保本实验室新型冠状病毒核酸检测技术人员及检测仪器的稳定性，保证检测结果的准确性和可靠性。
方法 使用广州邦德盛 2019-nCOV 定值质控物 S2（批号 2021004，浓度均值为 1.93E+04 copies/ml）原液 E4、稀释 10 倍至 E3、E3 稀释 5 倍至 E2、及 2 例临床阴性样本，作为 5 例比对样本。人员比对：本实验室 15 名持 PCR 上岗证的技术人员分别提取扩增 5 例样本及阴阳性质控品，阴阳性质控品结果必须在控，之后检测结果与预期结果进行比对。仪器比对：本实验室目前有 4 台提取仪和 12 台扩增仪，由 1 名持 PCR 上岗证的技术人员分别在 4 台提取仪上提取 5 例比对样本及阴阳性质控品，之后分别在 12 台扩增仪上扩增，如提取仪 1 号分别对应扩增仪 1、2、3...12 号，提取仪 2 号再分别对应扩增仪 1、2、3...12 号，以此类推，阴阳性质控品结果必须在控，之后检测结果与预期结果进行比对。
结果 人员比对：15 名持 PCR 上岗证的技术人员检测结果均符合预期，比对通过。仪器比对：4 台提取仪分别对应 12 台扩增仪，共 48 份检测结果均符合预期，比对通过。
结论 本实验室新型冠状病毒核糖核酸（2019-nCOV）检测的技术人员及检测仪器比对结果分析均一致通过，表明本实验室人员及设备的检测质量均有所保障，从而保证检测结果的准确性和可靠性，在新冠疫情中发挥应有的社会价值。

第三方质控品在新型冠状病毒核酸检测中的应用

朱艳
西安金域医学检验所有限公司

目的 通过检测新型冠状病毒核糖核酸（2019-nCOV）第三方质控品，来进行本实验室新型冠状病毒核酸检测的室内质量控制，保证检测结果的准确性和可靠性。
方法 本室使用的广州邦德盛 2019-nCOV 液体质控品，是以新型冠状病毒假病毒培养液为原料，用阴性稀释液稀释，添加适量的稳定剂制备而成。该质控品有不同浓度，本实验室检测浓度为 2-3 次方，通过连续近 200 次的批间测试，计算出 ORF 基因 Ct 值均值为 32.59，SD 为 1.36，CV 为 4.19%，N 基因 Ct 值均值为 33.57，SD 为 1.34，CV 为 4.98%。
结果 ORF 基因、N 基因 Ct 值统计的 CV 结果，均符合试剂盒精密度的变异系数≤5%的要求，检测精密度较好。
结论 ORF 基因、N 基因为新型冠状病毒核糖核酸的主要检测目标，对于新型冠状病毒感染的临床诊断有非常重要的意义。本实验室通过对广州邦德盛 2019-nCOV 液体质控品的检测，提示本实验室的检测精密度较好，室内质量控制有所保障，从而保证检测结果的准确性和可靠性，在新冠疫情中发挥应有的社会价值。

HBV-DNA 定量不同检测系统比对结果分析

朱艳
西安金域医学检验所有限公司

目的 分析 HBV-DNA 定量不同检测系统比对结果的一致性，以辅助指导临床医生对于 HBV 患者的诊治。
方法 采用 HBV-DNA 定量检测系统 1｛设备：罗氏 COBAS® Ampliprep /COBAS® Taqman®全自动核酸纯化/分析仪，检测试剂：罗氏乙型肝炎病毒核酸检测试剂盒，检测**方法** Real-time PCR（内标法）}检测过的 20 例覆盖测量区间且不同浓度的 HBV-DNA 定量临床样本，使用 HBV-DNA 定量检测系统 2（设备：DP1000 半自动核酸提取仪、ABI7500 荧光定量扩增仪，检测试剂：上海科华乙型肝炎病毒核酸检测试剂盒，检测**方法** 磁珠/PCR-荧光探针法）进行检测，比对结果的一致性。
结果 根据 CNAS-CL02-A009：2018《医学实验室质量和能力认可准则在分子诊断领域的应用说明》要求，比对结果的通过标准为线性相关系数 R2≥0.980，总样本数 95%的检测结果偏倚<±7.5%。本室两套检测系统比对结果的线性相关系数 R2 =0.9923，总样本数（19/20) 95%的检测结果偏倚<±7.5%，比对通过。
结论 本室两套检测系统比对结果通过，可同时用于临床 HBV-DNA 定量项目的检测，从而辅助指导临床医生对于 HBV 患者的诊治。

PU-0622

核酸检测联合细菌培养在肾移植术后呼吸道感染早期诊断中的应用

吕星
中南大学湘雅二医院

目的 研究基因芯片检测联合细菌培养的对肾移植术后患者呼吸道感染诊断的临床价值。
方法 本研究选取 2018 年 5 月～2019 年 1 月在湘雅二医院就诊的肾移植术后患者呼吸道来源的标本（痰、肺泡灌洗液、咽拭子）共 132 例作为研究对象。回顾性分析其基因芯片及痰培养的数据，对比分析两种方法的检测结果。
结果 细菌培养共检出 15 例阳性，117 例阴性，阳性率为 11.36%，其中 15 例检出革兰阴性菌，0 例检出革兰阳性菌。基因芯片共检出 53 例阳性，79 例阴性，阳性率为 40.15%，其中革兰阴性菌 44 例，革兰阳性菌 7 例，抗酸杆菌 2 例，未检出嗜肺军团菌、支原体和衣原体。两者共 14 例标本检测结果一致。与细菌培养相比，基因芯片检测结果的灵敏度为 93.3%，特异性为 66.7%，总符合率为 70.7%，两者比较差异有统计学意义(P<0.05)，基因芯片的阳性率明显高于细菌培养。
结论 常规的细菌培养容易贻误治疗时机并可存在一定程度的漏检现象，细菌培养联合基因芯片检测可以有效提高病原菌的检出速度和检出率。

PU-0623

新型冠状病毒核酸快速检测系统性能验证方案建立的探讨

吕星、胡敏
中南大学湘雅二医院

目的 建立适用于新型冠状病毒核酸快速检测系统的性能验证方案,以确保检测系统性能满足临床检测需要。
方法 按照 ISO15189《医学实验室质量和能力认可准则（2012 年）》和《医疗机构新型冠状病毒核酸检测工作手册（试行第二版）》以及厂家声明，采用第三方阳性定值参考品、企业阳性定值参考品以及企业阴性参考品对国产某型新冠核酸快速检测系统的重复性、准确度、特异性、最低检测限、抗干扰能力等进行验证及评价，并与实验室使用的常规新冠核酸检测 RT-PCR 方法比较，了解两种检测方法性能差异。
结果 待评价新冠核酸快速检测系统重复性验证，符合厂家申明和相关国家要求；准确性验证，与常规 RT-PCR 检测系统相比较总符合率为 95%；待评价新冠核酸快速检测系统最低检出限为 7×102 copies/mL。10%（体积比例）的全血、10%（体积比例）鼻分泌液、100 μg/mL 浓度曲安奈德溶液、100 μg/mL 浓度莫匹罗星溶液对检测结果未产生干扰。与冠状病毒（OC43、NL63、229E、HKU1、MERS、SARS）、甲型流感病毒、乙型流感病毒、腺病毒、肺炎支原体不产生交叉反应。
结论 本研究选择的新冠核酸快速检测系统的检测性能基本能够满足厂家申明要求；最低检测限与厂家试剂盒说明书相比有差异，值得临床实验室关注。

PU-0624

胶体金法在诊断甲/乙型流感病毒中的临床应用

吕星、胡敏
中南大学湘雅二医院

目的 评估广州万孚甲/乙型流感病毒抗原检测试剂（胶体金法）对 A、B 型流感病毒的临床诊断价值。
方法 获取中南大学湘雅二医院 2019 年 1 月-2019 年 3 月期间符合流感样症状的 95 例门急诊患者及 226 例住院患者的咽拭子标本，使用甲/乙型流感病毒抗原检测试剂进行咽拭子 A、B 型流感病毒检测，同时取咽拭子经聚合酶链反应（RT-PCR）进行验证。
结果 胶体金免疫层析法的阳性检出率为 19.6%（63/321），与 PCR 方法比较，检测 A 型流感病毒的灵敏度和特异度分别为 31.5%（39/124）和 94.9%（187/197），阳性预测值及阴性预测值分别为 79.6%（39/49）和 68.8%（187/272）；检测 B 型流感病毒的灵敏度和特异度分别为 20.0%（1/5）和 95.9%（303/316），阳性预测值及阴性预测值分别为 7.1%（1/14）和 98.7%（303/307）。
结论 甲/乙型流感病毒抗原检测试剂诊断 A、B 型流感病毒灵敏度低，特异度高，容易出现误诊，故对于流感病毒抗原检测为阳性的患者建议行核酸聚合酶链反应（RT-PCR）进行确诊。

PU-0625

长沙市某医院 2018-2020 年流感流行病学分析及抗原检测方法评价

吕星、胡敏
中南大学湘雅二医院

目的 分析长沙市某医院 2018-2020 年流行性感冒病例的流行病学特征，评估流感病毒抗原检测试剂（胶体金法）对流感病毒的临床诊断价值，为长沙市流感防控措施提供依据。
方法 收集 2018 年 1 月至 2020 年 4 月在中南大学湘雅二医院就诊的 53510 份流感样病例信息，采用卡方检验比较不同流感型别，性别特征，年龄分布，时间分布和科室分布等流行特征。评价流感病毒抗原检测（胶体金法）与核酸检测（PCR 法）比较的一致性、灵敏度和特异度。
结果 43116 例流感抗原检测阳性结果为 3374 例（甲流 2680 例，乙流 694 例），总阳性率为 7.82%。10394 例流感核酸检测阳性结果为 652 例（甲流 504 例，乙流 148 例），总阳性率为 6.27%。流感好发于 15 岁以下的儿童和青少年。、因 2020 年 1 月出现新冠疫情，人们居家隔离以及佩戴口罩，与 2019 年同期比较，流感阳性率出现明显下降。（2）与 PCR 技术相比，胶体金检测甲型/乙型流感病毒一致性较差，Kappa 值分别为 0.283 和 0.275。甲流抗原检测灵敏度为 28.37%，特异度为 94.68%，差异有统计学意义（P=0.000）。乙型抗原检测灵敏度为 30.76%，特异度为 96.74%，差异有统计学意义（P=0.000）。
结论 长沙市地区 2018—2020 年流感发病率呈上升趋势，需加强防控措施。甲型和乙型毒株混合流行，但以甲型为主。科学佩戴口罩以及减少人员聚集可遏制流感病毒传播。抗原检测与核酸 PCR 检测结果一致性较差，甲、乙流感抗原检测（胶体金法）的敏感度较差，特异度较好，临床应根据检查目的合理选择检测方法。

PU-0626

p300 对结肠癌细胞增殖凋亡和迁移的影响及机制研究

唐金霞
中南大学湘雅三医院

目的 探讨 p300 蛋白对结肠癌细胞增殖、凋亡和迁移能力的影响，并对其分子机制进行研究。
方法（1）利用 DNA 测序技术，检测结肠癌患者和正常人外周血 p300 基因 rs20551 的基因型；（2）检测结肠癌细胞系 DLD-1、HT29、HCT116、SW480 和 SW620 与正常结肠细胞系 FHC 的 p300 蛋白表达水平及乙酰转移酶（HAT，histone acetyltransferase）活性；（3）p300 HAT 特异抑制剂 C646 作用结肠癌细胞 HT29、SW480 和 SW620 后，CCK8 实验和克隆形成实验检测结肠癌细胞的增殖能力，Hoechst 染色及流式细胞术检测结肠癌细胞的凋亡水平，划痕实验检测结肠癌细胞的迁移能力；（4）Western Blot 检测 C646 处理结肠癌细胞 HT29、SW480 和 SW620 后 53BP1、p53、乙酰 p53、MMP9、p21 和 Bax 蛋白表达水平变化。
结果（1）p300 rs20551 的基因型在结肠癌患者和正常人之间无明显差异；（2）HT29、SW480 和 SW620 细胞的 p300 蛋白表达以及 p300 蛋白 HAT 活性比 FHC 细胞高，且 C646 处理 HT29、SW480 和 SW620 细胞后，结肠癌细胞的增殖和迁移能力下降，凋亡水平增高；（3）C646 处理结肠癌细胞可下调 HT29、SW480 和 SW620 细胞的 53BP1、p53 和乙酰 p53 蛋白，下调 SW480 和 SW620 细胞的 MMP9 蛋白，上调 HT29 和 SW620 细胞的 Bax 蛋白，HT29 细胞 p21 蛋白上调，SW620 细胞 p21 蛋白下调。
结论 靶向抑制 p300 蛋白 HAT 活性可抑制结肠癌细胞的增殖、迁移，并促进凋亡，这可能与 p300 对 p53 通路的表观遗传学调控和乙酰化调节有关，以及对凋亡蛋白 Bax，迁移蛋白 MMP9 和增殖抑制蛋白 p21 的表达调控有关，这些结果均提示 p300 有望成为结肠癌治疗的潜在靶点。

PU-0627

人乳腺癌细胞系 MCF7 中 FOXM1 调控 SYK 转录

冯鹭
山东大学第二医院

目的 探讨人乳腺癌细胞系 MCF 7 中叉头框转录因子 M1(FOXM1)对脾酪氨酸激酶(SYK)表达的调控机制。
方法 从 MCF 7、T47D、SK BR3 和 MDA MB 231 中提取 RNA 和蛋白质，分别用 PCR 和 Westernbloting 检测 SYK 的表达水平，并检测 SYK 基因启动子区 CpG 岛甲基化。在 MCF 7 中过表达 FOXM1，采用 Westernblot ting 和实时荧光定量 PCR 检测 FOXM1 和 SYK 的表达。利用染色质免疫沉淀(ChIP)技术和荧光素酶报告基因检测转录因子 FOXM1 对 SYK 基因转录水平的调控作用。
结果 SYK 在 MCF 7 中呈阳性表达，而在 T47D、SKBR3 和 MDA MB 231 中呈阴性表达;MCF 7 细胞中 SYK 基因启动子区 CpG 岛甲基化水平低于对照细胞(P<0.05)。在 MCF 7 中过表达 FOXM1 能下调 SYK 表达，在 SK BR3 细胞系中沉默 FOXM1 基因能激活 SYK 表达。ChIP 结果显示 FOXM1 直接参与调控 SYK 的转录;基因沉默 FOXM1 激活 SYK 基因启动子活性，过表达 FOXM1 抑制 SYK 基因启动子的活性。
结论 在人乳腺癌细胞系 MCF 7 中，SYK 是 FOXM1 的靶基因，FOXM1 可能通过调节 SYK 的表达来调控乳腺癌的发生发展。

PU-0628

Ten years of prevalence and clinical laboratory features of HCMV infected children in a hospital of Jiangsu Province

Wenwen Shang、Lei Wu、Hong Zhao、Guodong Rong、Ting Xu、Yan Zhang
Jiangsu Province Hospital

Human cytomegalovirus (HCMV) is prevalent worldwide and causing lifelong infection. We conducted a retrospective study to determine the epidemiology and clinical laboratory characteristics of CMV infection. Urine CMV-DNA load test was intensively ordered in 2012 for infants under 1 month but the rate continuously dropped ever since. In fact, infants under 1 month had the lowest detection sensitivity and children aged between 3 to 24 months had the highest positive rate. Analysis of blood routine test showed that the absolute counts of leukocytes, monocytes, neutrophils and platelets were significantly decreased in CMV+ group. The percentages of neutrophils were decreased while the percentages of lymphocytes were increased. Moreover, NLR, MLR and SII were also decreased. The hospitalization of cases in CMV+ group was significantly longer. CMV survey has not drawn much attention and the combined application of urine CMV detection and blood routine test should be benefit when assessing CMV infections.

PU-0629

MiR-204-5p knockdown increases betaB2-crystallin expression in the lens by targeting Wnt2

Hanxiao Ren
the Second Hospital of Shandong University

Objective To investigate the role of miR-204-5p in regulating betaB2-crystallin during the occurrence and development of cataract, and provide new ways for the early intervention and treatment of cataract.
Methods Real-time PCR and bioinformatics analysis were performed to compare the expression of miRNAs between knockout (KO) mice and wild-type mice (WT). Luciferase reporter assay was used to confirm the target of miR-204-5p. A miR-204-5p mimic and an inhibitor were constructed and co-transfected into HLEC-B3. While the expression of Wnt2 and betaB2-crystallin were detected by quantitative RT-PCR and western blot.
Results Real-time PCR and bioinformatics analysis showed that miR-204-5p was significantly down-regulated after betaB2 had been knocked out. Wnt2 was confirmed to be a novel target of miR-204-5p through luciferase reporter assay. Overexpression of miR-204-5p in HLEC-B3 could reduce the expression level of Wnt2 and betaB2-crystallin, on the contrary, they were apparently up-regulated when the miR-204-5p inhibitor was transfected into HLEC-B3.
Conclusions This study confirms that miR-204-5p could inhibit the expression of betaB2-crystallin by targeting Wnt2. To down-regulate miR-204-5p temperately may alleviate even reverse the development of cataract to some extent, and provide new ways for the early intervention and treatment of cataract.

PU-0630

miR-326 调控晶状体浑浊的机制研究

任含笑
山东大学第二医院

目的 探讨 miR-326 调控 betaB2 晶体蛋白在白内障发生、发展中的作用机制，为老年性白内障的早期干预提供靶点和治疗新途径。
方法 采用基因芯片筛选可能调控 betaB2 的 miRNA 分子，并进行 betaB2 基因 KO 鼠和 WT 鼠之间以及老年性白内障患者与正常人血清之间的差异 miRNA 的筛查。明确 miR-326 的下游靶基因。通过体外荧光素酶报告基因系统验证 miR-326 调控 betaB2 表达的作用靶点。并验证靶点对 betaB2 的调控作用。通过细胞增殖、周期、凋亡等明确晶状体上皮细胞中 miR-326 对 betaB2 表达以及细胞生物学功能的调控作用。
结果 betaB2 基因敲除后 miR-326 的表达显著降低；荧光素酶报告基因实验证实 miR-326 的靶基因为 FGF1；miR-326 模拟物转染 HLEC-B3 细胞后 FGF1 和 betaB2 的表达量均降低，而转染 miR-326 抑制体后 FGF1 和 betaB2 晶体蛋白的表达同步升高。
结论 本研究证实 miR-326 通过与靶基因 FGF1 的 3′-UTR 结合而特异性抑制 FGF1 的表达，从而抑制 betaB2 晶体蛋白的表达。通过 miR-326 的抑制载体靶向上调 FGF1 的表达，进而促进 betaB2 晶体蛋白的表达，促进该蛋白在晶状体中发挥特殊结构蛋白及类伴侣蛋白作用，以利于稳定晶状体正常功能、延缓晶状体老化，为老年性白内障的“未病先防”提供理论及实验依据。

PU-0631

小胶质细胞极化在精神分裂症发病机制中的研究进展

李博慧[1]、刘春梅[2]
1. 大庆市第三医院
2. 江苏省苏北人民医院

目的 小胶质细胞的活化是精神分裂症发病的主要原因之一，其参与精神分裂症的生理病理过程。小胶质细胞可以活化为功能完全不同的两个极化表型。本文旨在分析精神分裂症时小胶质细胞的极化状态及其研究进展。
方法 使用中国知网、PubMed、Embase、Web of Science 网站进行检索，关键词设置为“精神分裂症”和“小胶质细胞”、“Schizophrenia”and“Microglia”
结果 共检索出中文文章 14 篇、英文文章 239 篇，去除重复文章后，最后文章 210 篇，根据文章题目及摘要筛选出与小胶质细胞极化相关的文章共 49 篇。
结论 在精神分裂症的发生发展过程中，存在小胶质细胞的极化过程。其中，M1 极化表型分泌诱导型一氧化氮合酶、肿瘤坏死因子 α、白介素 6 等促炎细胞因子和大量活性氧自由基、引起神经毒性、破坏神经元，使神经递质释放异常，导致精神和行为改变；而 M2 极化表型则分泌精氨酸酶 1、白介素 10 等抗炎因子，同时分泌胶质细胞源性神经营养因子、神经生长因子以及细胞生长因子，促进神经元的再生和修复，并清除中枢神经系统损坏的神经及感染性物质。因此，精神分裂症时，调节小胶质细胞从 M1 极化表型向 M2 极化表型转变，有助于改善疾病状态，为精神分裂症的治疗提供了新方向。

PU-0632

SDC2 基因甲基化检测技术在结直肠癌中的应用

朱艳
西安金域医学检验所有限公司

目的 验证 SDC2 基因甲基化试剂盒的分析性能，以评估其诊断结直肠癌的临床价值。
方法 在西安金域医学检验所分子诊断室，使用 SDC2 基因甲基化检测试剂盒检测 SDC2 基因甲基化阴阳性标本，进行性能验证。灵敏度：检测临床结直肠癌患者的粪便样本 10 例，采用肠镜检查或/和病理诊断结果结合的金标准方法为对照方法进行试验。特异性：检测临床非结直肠癌的粪便样本 9 例，采用肠镜检查或/和病理诊断结果结合的金标准方法为对照方法进行试验。
结果 灵敏度：10 例样本的 SDC2 基因甲基化检测结果均为阳性，与对照方法一致。特异性：9 例样本的 SDC2 基因甲基化检测结果均为阴性，与对照方法一致。总符合率：通过检测 19 例临床粪便样本，结果显示 SDC2 基因甲基化检测结果与对照方法完全一致。
结论 SDC2 基因甲基化检测试剂盒的灵敏度、特异性 2 项性能指标均合格，表明该试剂盒对结直肠癌有较高的辅助诊断价值，可用于临床结直肠癌的辅助诊断。

PU-0633

TCT 联合 HR-HPV DNA 在维吾尔族妇女宫颈癌前期筛查中的应用

佟晓洁、刘静、高婷、孙亚红、胥翠合
新疆金域医学检验所有限公司

目的 宫颈癌是女性两癌之一，是严重影响女性健康的肿瘤疾病。维吾尔族是新疆人数最多的少数民族，该民族的妇女宫颈癌患病率较高。单一的宫颈液基薄层细胞学（TCT）筛查或人乳头瘤病毒（HPV）的感染及基因亚型分析筛查，很难确保诊断的精确性，采取 TCT 联合 HR-HPV DNA 筛查，能够降低漏诊以及误诊的风险，为临床诊断提供更多依据。
方法 收集 2021 年 1-5 月送至新疆金域医学检验所有限公司的育龄维吾尔族妇女受检者 500 例，年龄 18-58 岁，平均年龄 (32.35±4.52) 岁，均进行 TCT 检测和 HR-HPV DNA 检测， 最终以病理活检结果为金标准，统计并比较不同检查方法的检出情况。分析 TCT 联合 HR-HPV DNA 检测在维吾尔族妇女宫颈癌癌前病变筛查中的应用价值。
结果 500 例受检者中，经病理活检确诊宫颈低级别鳞状上皮内病变 175 例，宫颈高级别鳞状上皮内病变 108 例，宫颈癌 13 例；TCT 联合 HR-HPV DNA 检测筛查宫颈癌及癌前病变的准确度为 92.18%， 灵敏度为 93.83%， 特异度为 87.65%。
结论 HPV 与 TCT 的联合使用，极大降低了宫颈癌筛查的漏诊率 ,能够有效、精准地筛查出维吾尔族妇女宫颈癌及癌前病变，为社区医疗服务提供精准治疗的参考依据。同时，结合实际实验中收集的维吾尔族妇女宫颈病变中 HPV 的亚型感染的特点，针对新疆地区维吾尔族妇女 HPV 疫苗的研制提供研发依据，进而为维吾尔族妇女宫颈癌的预防、诊断及治疗提供可靠的参考依据。

PU-0634

Remarkable inhibition effects of afatinib alone or in combination with paclitaxel in esophageal squamous cell carcinoma

Liyan Yang[1]、Zhijian Cheng[2]、Na Zhang[1]、Zhilu Fan[1]、Jiajie Hao[1]、Mingrong Wang[1]
1. National Cancer Center/National Clinical Research Center for Cancer/Cancer Hospital, Chinese Academy of Medical Sciences and Peking Union Medical College
2. 黄山市人民医院

Background and Aim Esophageal squamous cell carcinoma (ESCC) is a serious threat to the life and health of people. To date, chemotherapy drugs do not work well in ESCC, and none of the targeted drugs have been applied in the clinical therapy. Thus, it is urgent to develop targeted therapy for the treatment of ESCC. This study was performed to identify effective small-molecule inhibitors or combinations and to explore the suitable biomarkers associated with the inhibitor in esophageal squamous cell carcinoma.
Methods The effect of of 40 FDA approved small-molecule inhibitors were first tested in five ESCC cell lines. CCK8 assays and xenografts derived from ESCC cell lines were performed to evaluate the anti-ESCC effects of inhibitors or chemotherapeutic agents in vitro and in vivo, respectively. Immunohistochemistry was utilized to analyze the p-EGFR expression in tissues. Western blot combining with gray analysis was conducted to detect the expression of interest protein. Flow cytometry and immunofluorescence assay were used to analyze apoptosis, cell cycle, and mitotic changes after drug treatment.
Results Afatinib showed remarkable effects on inhibiting ESCC cells with higher expression of p-EGFR. Results from combinatorial screening in ESCC cells expressing lower phosphorylation level of EGFR showed that paclitaxel and afatinib presented a significant synergistic inhibitory

effect (P < 0.001). Molecular analysis revealed that paclitaxel sentisized afatinib by activating EGFR, and afatinib in combination with paclitaxel effectively blocked MAPK pathway, induced G2/M cell arrest and apoptosis which is an indicator of mitotic catastrophe.
Conclusions Our data demonstrate that afatinib is an effective drug for patients with ESCC expressing higher phosphorylation level of EGFR. And for patients with lower p-EGFR in tumors, paclitaxel in combination with afatinib might be a promising therapeutic strategy in ESCC.

PU-0635

河南地区肺癌 EGFR 基因突变分型临床特征分析

朱丽蒙、韩雪莹、马楠、任晓妮、王小乐、张暨
郑州金域临床检验中心有限公司

目的 研究河南地区肺癌患者表皮生长因子受体（epidermal growth factor receptor,EGFR）基因突变分型特征，探讨其临床意义。
方法 收集 895 例来自河南省各地市的肺癌患者的诊断资料，用 NGS 技术检测 EGFR 基因全外显子区域的突变状态，包括点突变、小片段插入和缺失、拷贝数扩增等突变类型。统计 EGFR 基因各突变分型阳性率，阐述 EGFR 突变分型特征。
结果 河南地区肺癌 EGFR 基因各突变分型的总阳性率为 53.97%，其中单突变占 83.4%，复合突变占 16.5%；常见突变分型 L858R、19DEL 、20INS、T790M、扩增，阳性率分别为：24.02%、22.12%、1.56%、2.46%、3.91%，突变阳性率之间，有统计学差异（P<0.05）。肺腺癌与肺鳞癌相比，EGFR 基因突变型总阳性率和 L858R、19DEL 阳性率，均有统计学差异（P<0.05）；而 20ins 和扩增的阳性率，无统计学差异（P>0.05）。转移性肺癌的 L858R、19DEL、扩增阳性率与肺癌总体水平相比，有统计学差异（P<0.05）。男性和女性肺癌患者之间，只有 EGFR 基因扩增阳性率无统计学差异（P>0.05），其他突变分型的阳性率有统计学差异（P<0.05）。组织 FFPE 样本和血浆样本之间，各突变分型阳性率和总阳性率无统计学差异（P>0.05）。
结论 河南地区肺癌样本中，EGFR 基因突变阳性率 53.97%；EGFR 基因突变分型在肺腺癌、肺鳞癌、转移性肺癌中分布特征不同；采用 NGS 检测肺癌 EGFR 基因，阳性率在性别之间和不同病理分型之间存在统计学差异，但组织 FFPE 和血浆样本之间无统计学差异，后者提示液体活检对没有足够组织检测的患者是一种有效的辅助诊断方法。

Serum microRNAs as biomarkers for the noninvasive early diagnosis of biliary tract cancer

Yueting Han、Li Ren
Tianjin Medical University Cancer Institute and Hospital

Background Biliary tract cancers (BTCs) are aggressive malignancies with difficult early diagnosis and poor prognosis. Studies have shown that microRNAs (miRNAs) are expected to be biomarkers of the disease, which indicates that we can diagnose cancers according to the miRNAs that have significant changes. The aim of this study was to explore miRNA biomarkers of BTCs.
Methods A total of 163 samples were collected and divided into the control group, the benign group and the malignant group. High-throughput low density chips were used to screen miRNAs with significant changes. Then, the preliminary screening test and the verification test were performed by quantitative real time PCR (qRT-PCR). Finally, the level of miRNAs in serum exosomes was measured.

Results MiR-10a, miR-21, miR-135b, miR-221, and miR-214 were upregulated in the BTCs group compared to the control group. The change in the miR-221 level was statistically significant when the malignant group was compared with the benign group (P<0.01). Meanwhile, miR-135b and miR-214 were enriched in serum exosomes.
Conclusion Five miRNAs in the serum were found to be significantly upregulated in patients with BTCs. Among them, miR-221 can serve as an early diagnostic marker for BTCs patients. MiR-10a, miR-21, miR- 135b and miR-214 can be used as biomarkers for the diagnosis of biliary diseases.

PU-0637

外泌体 miR-214 调控肝脏间质细胞 NKRF/NF-κB/IL-6 通路促进胆管癌肝转移的机制研究

韩月婷、任丽
天津医科大学肿瘤医院

目的 探索胆管癌细胞来源的外泌体 miR-214 通过调控肝脏巨噬细胞中的 NKRF/NF-κB/IL-6 通路产生炎症因子，形成肿瘤转移微环境，从而促进胆管癌肝转移的分子机制。
方法 本研究选取了胆管癌细胞系（HCCC-9810）和肝脏巨噬细胞系（THP-1 细胞诱导）。首先，用 miR-214 mimic/inhibitor 转染 HCCC-9810 细胞后，检测用 HCCC-9810 源性外泌体处理 THP-1 细胞中 miR-214 的水平。然后，在巨噬细胞系中分别上调和下调 miR-214 的表达，利用 western blot、ELISA 方法测 NF-κB 和 IL-6 的表达情况，将其与胆管癌细胞系非接触式共培养，采用 transwell、CCK-8 等方法检测肝脏间质细胞对胆管癌的迁移、增殖能力的影响。
结果 通过生物信息学预测 miR-214 和 NKRF 存在相互作用，并且胆管癌细胞源性外泌体 miR-214 可被 THP-1 细胞摄取。western blot 实验发现转染 miR-214 mimic 的 THP-1 细胞内 NF-κB 的表达量明显高于对照组，而转染 miR-214 inhibitor 的 THP-1 细胞内 NF-κB 的表达量明显低于对照组，P<0.05；ELISA 实验发现转染 miR-214 mimic 的 THP-1 细胞对 IL-6 的分泌量明显高于对照组，而转染 miR-214 inhibitor 的 THP-1 细胞对 IL-6 的分泌量明显低于对照组，P<0.05。此外，CCK8 和 transwell 实验显示胆管癌细胞与活化的 THP-1 细胞共培 48h 后，其增殖和迁移的数量差异均具有统计学意义。
结论 胆管癌细胞分泌的外泌体 miR-214 能够调控胆管癌细胞和肝脏间质细胞的相互作用，负调控 NKRF 的表达并激活 NF-κB/IL-6 通路使肝巨噬细胞活化，产生炎症因子形成肝脏转移前微环境，促进胆管癌的肝转移。

PU-0638

PAX1 基因甲基化检测在宫颈癌筛查中的应用

袁超、赵敬杰
山东大学第二医院

目的 检测配对盒家族基因 1（PAX1）基因启动子区域甲基化修饰，初步探讨 PAX1 基因甲基化在宫颈癌早期筛查中的临床应用价值。
方法 收集山东大学第二医院 2017 年 6 月至 2019 年 4 月已有宫颈病理结果的宫颈脱落细胞样本 606 例，其中 CINⅢ和宫颈癌样本共 224 例，CINⅡ、CINI 和健康女性共 382 例，提取 DNA，采用 PAX1 基因甲基化检测试剂盒进行样本甲基化水平检测。利用 ROC 曲线分析评估 PAX1 基因甲基化水平区分 CIN3、宫颈癌与 CIN2、CIN1、健康个体的能力。

结果 与 CIN2，CIN1 和健康个体相比，CIN3 和宫颈癌中 PAX1 基因甲基化水平显着增加。PAX1 基因甲基化检测侦测 CINⅢ+的灵敏度和特异度分别为 76.2% (95% CI: 69.4%-82.5%)和 90.6%（95%CI: 86.1%-93.3%)。

结论 PAX1 基因甲基化检测能有效检测宫颈癌前病变 CINⅢ及宫颈癌，具有较高的灵敏度和特异度，可联合细胞学检查提高确诊率；亦可作为 HR-HPV(+)后分流管理宫颈，降低阴道镜转诊率。

PU-0639

食管癌患者血清 LINC00189 表达及其临床意义

袁超、赵敬杰
山东大学第二医院

目的 检测食管癌患者血清中 LINC00189 表达水平，评估其表达水平与临床病理参数的关系，并探讨其临床诊断价值。

方法 利用 Kaplan-Meier Plotter 分析 LINC00189 表达水平与肺癌患者生存率关系，实时荧光定量 PCR（qRT-PCR）检测癌组织与相应癌旁组织中 LINC00189 的表达以及体检健康者及食管癌患者血清中 LINC00189 的表达水平，分析其与食管癌患者临床病理参数的相关性，并用 ROC 曲线分析其诊断效能。

结果 Kaplan-Meier Plotter 结果表明 LINC00189 表达水平与肺癌患者的生存率呈负相关。我们收集了 60 例新鲜的食管癌组织，qRT-PCR 的方法检测了癌组织与相应癌旁组织中 LINC00189 的表达，结果表明，癌组织中 LINC00189 的表达水平显著高于癌旁组织。LINC00189 在食管癌患者血清中的平均含量较体检健康者均明显升高(P＜0.01)，且与淋巴结转移、浸润深度和 TNM 分期相关(r 分别为 0.632、0.518 和 0.447，P 均＜0.01)；食管癌患者血清 LINC00189 的 ROC 曲线下面积为 0.873，95％可信区间(CI)为 0.806～0.939。

结论 LINC00189 在食管癌患者癌组织及血清中呈高表达，且与淋巴结转移、浸润深度和 TNM 分期相关，具有食管癌诊断潜在应用价值。

Snail/PRMT5/NuRD complex contributes to DNA hypermethylation in cervical cancer by TET1 inhibition

Jie Gao
The Second Hospital, Cheeloo College of Medicine, Shandong University
山东大学

The biological function of PRMT5 remains poorly understood in cervical cancer metastasis. Here, we report that PRMT5 physically associates with the transcription factor Snail and the NuRD(MTA1) complex to form a transcriptional-repressive complex that catalyzes the symmetrical histone dimethylation and deacetylation. This study shows that the Snail/PRMT5/NuRD(MTA1) complex targets genes, such as TET1 and E-cadherin, which are critical for epithelial-mesenchymal transition (EMT). This complex also affects the conversion of 5mC to 5hmC. This study demonstrates that the Snail/PRMT5/NuRD(MTA1) complex promotes the invasion and metastasis of cervical cancer in vitro and in vivo. This studyalso shows that PRMT5 expression is upregulated in cervical cancer and various human cancers, and the PRMT5 inhibitor EPZ015666 suppresses EMT and the invasion potential of cervical cancer cells by disinhibiting the expression of TET1 and increasing 5hmC, suggesting that PRMT5 is a potential target for cancer therapy.

Phosphorylation of islet-1 serine 269 by CDK1 increases its transcriptional activity and promotes cell proliferation in gastric cancer

Qiong Shi [1]、Xiaomei Ni[1]、Ming Lei[1]、Quansong Xia[1]、Yan Dong[1]、Qiao Zhang[2]、Weiping Wang[3]
1. Clinical Laboratory, School of Clinical Oncology, Kunming Medical University & Yunnan Cancer Center, Yunnan, Kunming, P. R. China.
2. 昆明医科大学
3. 北京大学

Background Despite recent advances in diagnostic and therapeutic approaches for gastric cancer (GC), the survival of patients with advanced GC remains very low. Islet-1 (ISL1) is a LIM-homeodomain transcription factor, which is upregulated and promotes cell proliferation in GC. The exact mechanism by which ISL1 influences GC development is unclear.
Methods Co-immunoprecipitation (co-IP) and glutathione S-transferase (GST)-pulldown assays were employed to evaluate the interaction of ISL1 with CDK1. Western blot and immunohistochemistry analyses were performed to evaluate the ability of CDK1 to phosphorylate ISL1 at Ser 269 in GC cell and tissue specimens. Chromatin immunoprecipitation (ChIP), ChIP re-IP, luciferase reporter, and CCK-8 assays were combined with flow cytometry cell cycle analysis to detect the transactivation potency of ISL1-S269-p and its ability to promote cell proliferation. The self-stability and interaction with CDK1 of ISL1-S269-p were also determined.
Results ISL1 is phosphorylated by CDK1 at serine 269 (S269) in vivo. Phosphorylation of ISL1 by CDK1 on serine 269 strengthened its binding on the cyclin B1 and cyclin B2 promoters and increased its transcriptional activity in GC. Furthermore, CDK1-dependent phosphorylation of ISL1 correlated positively with ISL1 protein self-stability in NIH3T3 cells.
Conclusion ISL1-S269-p increased ISL1 transcriptional activity and self-stability while binding to the cyclinB1 and cyclinB2 promoters promotes cell proliferation. ISL1-S269-p is therefore crucial for tumorigenesis and potentially a direct therapeutic target for GC.

纺锤体检查点蛋白 Cenp-E 过低表达是肝癌细胞染色体数目异常的重要原因

刘斌
南华大学附属第二医院

目的 在肝癌细胞系（HepG-2）和正常肝细胞系（LO2）中研究 Cenp-E（纺锤体检查点蛋白 E）基因在肝癌细胞中的定位和作用。为进一步阐明肝癌细胞染色体数目异常的机理奠定基础。
方法 利用 FQ-PCR 检测 Cenp-E 基因在用 Nocodazole（诺考达唑）同时处理 HepG-2 细胞和 LO2 细胞中 mRNA 的表达水平。同时用间接免疫荧光技术观察 Cenp-E 蛋白在其中的定位及表达。在 LO2 细胞中用 RNAi 技术干扰 Cenp-E 基因来进一步评价细胞功能情况。
结果 Nocodazole 处理前 cenp-E 基因和蛋白在 LO2 和 HepG-2 细胞中表达无显著差异，处理后 cenp-E 基因和蛋白在两种细胞表达都增高，但 LO2 细胞上调水平大于 HepG-2 细胞。间接免疫荧光结果显示 Cenp-E 在出现异常分裂的细胞核内 Cenp-E 蛋白的表达明显低于正常分裂的细胞核。在干扰 Cenp-E 的 LO2 细胞中出现核异常比例明显高于正常细胞。
结论 Cenp-E 过低表达可能是肝癌细胞染色体数目异常重要原因之一。

CircBCBM1 promotes breast cancer brain metastasis by modulating miR-125a/BRD4 axis: a novel diagnostic and therapeutic target

Bo Fu、Wei Liu、Li Pan、Anqi Zhang、Wenqiang Tang、Meng An
Liaocheng People's Hospital

Circular RNAs (circRNAs) play critical roles in tumorigenesis and the progression of various cancers. We previously identified a novel upregulated circRNA, circBCBM1, in the context of breast cancer brain metastasis. However, the potential biological function and molecular mechanism of circBCBM1 in breast cancer brain metastasis remain largely unknown. In this study, we confirmed that circBCBM1 was a stable and cytoplasmic circRNA. Functionally, circBCBM1 promoted the proliferation and migration of 231-BR cells in vitro and growth and brain metastasis in vivo. Mechanistically, circBCBM1 acted as an endogenous miR-125a sponge to inhibit miR-125a activity, resulting in the upregulation of BRD4 (bromodomain containing 4) and subsequent upregulation of MMP9 (matrix metallopeptidase 9) through Sonic hedgehog (SHH) signaling pathway. Importantly, circBCBM1 was markedly upregulated in the breast cancer brain metastasis cells and clinical tissue and plasma samples; besides, circBCBM1 overexpression in primary cancerous tissues was associated with shorter brain metastasis-free survival (BMFS) of breast cancer patients. These findings indicate that circBCBM1 is involved in breast cancer brain metastasis via circBCBM1/miR-125a/BRD4 axis. CircBCBM1 may serve as a novel diagnostic and prognostic biomarker and potential therapeutic target for breast cancer brain metastasis.

GFPT1 基因复合杂合突变引起的先天性肌无力综合征

刘思文、姜艳芳
吉林大学第一医院

目的 鉴定 1 例先天性肌无力综合征患者的致病基因并分析突变带来的疾病表型。
方法 对先证者及其父母进行家系全外显子组分析,并用用一代测序进行验证。
结果 发现两种杂合错义突变(c.331C>T;p。Arg111Cys c.1428G > C;p.Lys476Asn)。GFPT1 基因编码谷氨酰胺-果糖-6-磷酸转氨酶 1，在这例常染色体隐性遗传的 CMS 患者中， c.1428 g > C;p.Lys476Asn 是一个以前没有文献报道过的新的突变体，在 ClinVar 数据集和 gnomAD 全球人口数据集中也没有记录过。我们在此报告 1 例患有 CMS 的患者的遗传变异和临床随访。先证者表现为肢体无力，在肢体活动后症状加重。此外，在先证者中，重复性神经刺激可导致肌肉动作电位下降。因此，最初怀疑是重症肌无力，但他从未出现眼睑下垂和视力模糊。先证者的表型与既往关于 CMS 和 TAs 的报道一致。
结论 本研究为 CMS 患者提供了一个新的 GFPT1 基因突变。本研究为 CMS 患者的诊断和治疗提供了重要信息。

PARP1 rs1136410 Val762Ala contributes to an increased risk of overall cancer in the East Asian population: a meta-analysis

yi juan xin、liu yang、mingquan su、xiaoli cheng、lin zhu、jiayun liu
Air force medical uiversity xijing hospital

Objectives To investigate the association between poly(ADP-ribose) polymerase 1 (PARP1) rs1136410 Val762Ala and cancer risk in Asian populations, as published findings remain controversial.
Methods The PubMed and EMBASE databases were searched, and references of identified studies and reviews were screened, to find relevant studies. Meta-analyses were performed to evaluate the association between PARP1 rs1136410 Val762Ala and cancer risk, reported as odds ratio (OR) and 95% confidence interval (CI).
Results A total of 24 studies with 8 926 cases and 15 295 controls were included. Overall, a significant association was found between PARP1 rs1136410 Val762Ala and cancer risk in East Asians (homozygous: OR 1.19, 95% CI 1.06, 1.35; heterozygous: OR 1.10, 95% CI 1.04, 1.17; recessive: OR 1.13, 95% CI 1.02, 1.25; dominant: OR 1.13, 95% CI 1.06, 1.19; and allele comparison：OR 1.09, 95% CI 1.03, 1.15). Stratification analyses by race and cancer type revealed similar results for gastric cancer among the Chinese population.
Conclusion The findings suggest that PARP1 rs1136410 Val762Ala may be significantly associated with an increased cancer risk in Asians, particularly the Chinese population.

PU-0646

Clinical features and genetic variations in five neonates with severe hyperbilirubinemia: case report

Fen Lin [1]、liye yang[2]
1. Laboratory Medical Center, Chaozhou Central Hospital Affiliated to Southern Medical University, Chaozhou, China
2. 阳江市人民医院

Background Neonatal hyperbilirubinemia is a common problem faced by pediatricians. The role of genetic factors in neonatal jaundice has been gradually recognized. This study aimed to identify genetic variants which influence the bilirubin level in five representative cases by next-generation sequencing (NGS).
Case presentation We present five neonates with severe hyperbilirubinemia, they exhibited bilirubin encephalopathy, hypothyroidism, ABO hemolysis, glucose-6-phosphate dehydrogenase (G6PD) deficiency and premature, respectively. A customed 22 genes panel was designed and NGS was carried out in the neonates. Eight variations (G6PD c.G1388A, HBA2 c.C369G, SPTB c.A1729G, ABCC2 c.C3825G, UGT1A1 c.G211A, EB41c.G520A, c.1213-4T>G and c.A1474G) were identified in five patients, which involved in genetic mutations associated with hereditary elliptocytosis, thalassemia, Gilbert syndrome, G6PD deficiency and Dubin-Johnson Syndrome. One of the patients was found with variants combined EPB41 splice site c.1213-4T>G and c.G520A (p.E174K) mutation but no elliptocyte was seen on his blood smear.
Conclusions Pathological factors of severe neonatal hyperbilirubinemia were very complicated, genetic variants may play an important role for an increased risk of neonatal hyperbilirubinemia, and severe jaundice in neonates may be potentially related to the cumulative effect of genetic variants.

氯化两面针碱对胶质瘤细胞 LN18 上皮-间质转化的抑制作用

李峣、贾茗博、孙莹、宋燕珂、汪敏、赵丽艳
吉林大学第二医院

有研究表明，氯化两面针碱(nitidinechloride, NC)能抑制肿瘤细胞的 EMT(epithelial-mesenchymal transition, EMT)过程，从而抑制肿瘤生长。但 NC 在胶质瘤细胞中扮演的角色及有关机制尚未被揭示，本文对这一问题进行探讨。本文应用划痕愈合实验、Transwell 侵袭实验和 Western blotting 法分别检测细胞迁移、侵袭能力及蛋白表达水平。划痕愈合实验和 Transwell 侵袭实验结果显示，与对照组相比，经 TGF-β1 刺激后的 LN18 细胞划痕距离明显缩小，穿膜数量明显增多，说明诱导 EMT 使细胞迁移和侵袭能力增强(P<0.01）。加入 NC 后，与 EMT 组的 LN18 细胞相比，细胞划痕距离增大，穿膜数量减少，说明 NC 可以抑制 LN18 细胞 EMT 引起的细胞迁移和侵袭能力的增强(P<0.01），并且这种抑制能力与 NC 浓度相关。Western blotting 结果显示，与对照组相比，TGF-β1 处理后的 LN18 细胞上皮标志物表达降低，间质标志物表达升高，加入不同浓度 NC 后，与 EMT 组相比，LN18 细胞上皮标志物表达增加(P<0.05），间质标志物表达降低(P<0.01），说明 NC 对胶质瘤 LN18 细胞 EMT 有明显抑制作用，且与 NC 浓度有关。对 JAK2/STAT3 蛋白表达水平检测结果显示，加入不同浓度 NC 后，与 EMT 组相比，JAK2、p-JAK2、STAT3 和 p-STAT3 蛋白表达水平明显降低(P<0.01），说明 NC 可以抑制 LN18 细胞 JAK2/STAT3 信号通路。用 STAT3 抑制剂 WP1066 阻断 JAK2/STAT3 信号通路的效果与 NC 相同，说明 NC 可以通过阻断 JAK2/STAT3 信号通路抑制 LN18 细胞 EMT 过程。以上实验结果表明，NC 可以抑制胶质瘤 LN18 细胞的 EMT 过程，并且这种作用可能与 JAK2/STAT3 信号通路有关。

PU-0648

IL-35 通过调节乳腺肿瘤细胞来源外泌体的 mRNA 表达谱促进肿瘤血管生成

刘佳、董娜娜
山东大学第二医院

目的 研究表明，肿瘤细胞可通过分泌各种生物活性介质促进肿瘤血管的生成。外泌体（exosomes）是具有双层磷脂分子膜的细胞外囊泡，能够由大多数细胞分泌并被受体细跑吞噬。对乳腺 TME 的研究表明，肿瘤细胞来源的外泌体可以通过与周围的基质细胞交流向受体细胞传递特定信息，从而改善肿瘤细胞的生长环境，促进肿瘤的生长。研究表明，乳腺肿瘤细胞和肿瘤局部浸润淋巴细胞均可表达抑制性细胞因子 IL-35。因此我们着重探讨 IL-35 影响乳腺肿瘤细胞分泌的外泌体在 TME 中的血管生成作用。

方法 1、超速离心法分离乳腺肿瘤细胞外泌体；透射电子显微镜和纳米颗粒跟踪分析技术鉴定外泌体的形态和直径；Western-blot 检测外泌体表面标志蛋白 CD9 和 TSG101。激光共聚焦显微镜观察 HUVECs 对外泌体的摄取。

2、用乳腺肿瘤细胞来源的外泌体(con-Exos)和 IL-35 刺激后的肿瘤细胞分泌的外泌体(IL-35-Exos)分别诱导 HUVECs，CCK8 及流式细胞术检测 HUVECs 的增殖活性及细胞周期变化，成管试验及鸡胚绒毛尿囊膜血管试验分析 HUVECs 成管能力。

3、基因芯片技术分析 con-Exos 和 IL-35-Exos 内 mRNA 表达谱，筛选出显著差异的基因。

结果 与 con-Exos 相比，IL-35-Exos 显著促进 HUVECs 增殖且显著增强了 HUVECs 细胞的成管能力。分析 con-Exos 和 IL-35-Exos 内 mRNA 表达谱，GO 和 KEGG 结果显示，差异基因参与血管生成和细胞增殖，并在 RAS 和 PPAR 信号通路中发挥作用。

结论 本部分的研究表明，乳腺肿瘤细胞来源的外泌体可以被 HUVECs 内吞，并促进肿瘤微环境中的血管生成。IL-35 通过改变乳腺肿瘤细胞来源外泌体的 mRNA 增强其血管生成作用。

PU-0649

The clinical significance of UBE2C gene in progression of renal cell carcinoma

zhiping chen
First affiliated Hospital of Gannan Medical University

Purpose This study proves that UBE2C is an important gene in RCC and is essential to proliferation and migration of RCC.

Methods Bioinformatics analysis and TCGA mining In order to analyze the differential expression levels of UBE2C in RCC and normal renal tissues, TCGA database was extracted. The mRNA expression level of UBE2C from a total of 525 cases of RCC and 72 cases of normal renal tissues was downloaded from the TCGA database (https://cancergenome.nih.gov/). Then, RStudio (Version 1.1.442), a free and open-source data analysis software, was used to analyze the differential expression of UBE2C and to deduce the overall survival (OS) and disease-free survival (DFS) curves. Gene ontology (GO) and Kyoto Encyclopedia of Genes and Genomes (KEGG) were used in conjunction with DAVID 6.8 and Enrichment Map plug-in Cytoscape to visualize the significant pathways and differential expression genes (DEGs) in RCC.

RCC tissues and pathological information of patients A total of 90 RCC tissues and matched normal tissues were retrospectively collected to perform RT-qPCR analysis. All the patients had received radical operation in our hospital from July 2006 to December 2010.The last follow-up time was August 2017. The pathologic diagnosis of all cases was renal clear cell carcinoma after operation. This study was approved by the Ethics Committee of First affiliated Hospital of Gannan Medical University and written consent was collected from all patients.

RT-qPCR Total RNA of renal cancer tissues and matched normal tissues was extracted with TRIzol (Invitrogen, USA) and treated with RNase-free DNase (Promega, USA). SYBR Green quantitative real-time PCR was performed by Stepone Real-time PCR system (Applied Biosystems 7000, USA). Beta-actin was used as the internal control. Relative expression level of each gene was calculated by the 2-△△Ct method, in which △△Ct=Test group △Ct (CTinterested gene-CTBeta-actin) - Control group △Ct (CTinterested gene-CTBeta-actin)

Immunohistochemical analysis Human tumor tissues were fixed in 4% paraformaldehyde, embedded in paraffin and sectioned as 5 μm. Each sectioned tissues were incubated with antibody against UBE2C (1:500, ab252940, Abcam, NY, USA) diluted with 0.01 M PBST buffer (0.01 M PBS, 0.001×Triton X-100)for 12 h at 44°C followed by HRP-conjugated secondary antibody (1:100, Beyotime, Shanghai, China). Peroxidase conjugates were determined using 3,3′-diaminobenzidine solution.

RNA interference assay (RNAi) siRNA fragments targeting human UBE2C gene (siUBE2C: 5'-TCCTTTTTGTGATTTCTGTATAG-3') was designed and synthesized. Random sequence was designed as negative control (NC). Then RCC typical cells 786-O cells were cultured in a 6-well plate and transduced with siUBE2C or NC (General Biosystems, Anhui, China) by Lipo reagent (Yeasen, Shanghai, China) for 4-6 h according to the manufacture's instruction. The knockdown efficiency of siUBE2C was tested by RT-qPCR method.

Cell proliferation assay Treated cells were seeded into a 96-well plate at 5×103 cell/well and cultured consecutively for 96 h. At each designed time point, 10 μL of CCK-8 agent was added and cultured for another 1-2 h. Then OD value at 450 nm was detected on microplate reader (Molecular Devices, CA, USA). The proliferation rate of cells was calculated according to the negative control.

Cell invasion assay Transwell rooms with 8-μm-pore size membrane were pre-treated with 0.2 mL Matrigel 12 h before seeding tumor cells. Then a total of 2×104 cells/well was seeded into upper room and DMEM medium without FBS was added. DMEM medium containing15% FBS

was added in the lower room. After culture for 24 h, cells on the upper room were removed and cells in the lower surface of upper room were fixed by 4% paraformaldehyde for 30 min and dyed with 0.5% crystal violet for 10 min. Then stained cells were observed under a microscope and counted.
Statistical analysis SPSS 16.0software (SPSS, Inc., Chicago, IL, USA) was used to analyze the experimental data. All data was expressed as mean±SD. TCGA data were analyzed by the independent samples t-test to compare the differential levels of UBE2C mRNA between RCC and control. Chi-square test or Fisher's exact test was employed to analyze the relationship between UBE2C expression and clinicopathological factors of RCC patients. Kaplan-Meier analysis was used to produce the survival curve. Univariate and Cox multivariate survival analyses were performed to analyze the prognostic significance of UBE2C in RCC patients. The difference was considered statistically significant when the p-value was less than 0.05.
Results UBE2C was highly expressed in RCC. UBE2C was correlated to clinicopathological factors in RCC patients. UBE2C showed prognostic value in RCC. Identification of potential signaling pathways associated with UBE2C in RCC. UBE2C is important for cell proliferation in RCC. UBE2C contributes to cell migration in RCC.
Conclusion This study proves the clinical role of UBE2C and suggests it to be an important prognostic factor in RCC. UBE2C contributes to the proliferation and migration in RCC.

纳米孔测序技术在病原微生物感染检测中的应用评价

何沛
新疆生产建设兵团第六师医院

目的 利用纳米孔三代测序技术，对临床样本中的病原微生物进行靶向测序检测，探讨纳米孔三代测序在病原微生物感染检测中的应用价值，为临床早期诊断与治疗提供支持。
方法 1.采用收集临床样本对该技术进行临床评价：1）104 份收集临床阳性样本评价检测灵敏度，包含血流感染相关的 5 种病原微生物。2）用不同浓度的病原微生物灵敏度质控品评价最低检出限。3）模拟 30 例临床阴性样本评价检测特异性。采用纳米孔检测对样本和质控品进行测序检测，采用 qPCR 和三代测序方法做同步验证。纳米孔测序检测流程包括：①提取病原微生物核酸；②设计针对细菌和真菌高度保守序列的通用引物及特异性靶向引物，多重靶向扩增病原微生物特定序列；③对扩增产物进行靶向文库构建和纳米孔测序；④生信分析。 2. 用所建立的方法和传统的细菌培养方法，分别对 23 例下呼吸道感染患者的肺泡灌洗液标本进行病原体检测，并进行一代测序验证，比较检出率及病原种类。
结果 1）104 例阳性样本中检出大肠埃希氏菌 34 例、金黄色葡萄球菌 15 例、白色念珠菌 43 例、EB 病毒 6 例、巨细胞病毒 6 例，与 qPCR 和三代测序法检测结果一致性为 100%。2）最低检出限为：大肠埃希氏菌和金黄色葡萄球菌 100cps/mL，白色念珠菌 100cps/mL，EB 病毒和巨细胞病毒 500cps/mL。3）30 例模拟阴性样本中，检测特异性为 100%。从样本处理到出分析报告全流程于 8h 之内完成，单个样本数据量达 50M 左右，测序序列矫正检测准确度大于 99.2%。 2. 23 例患者的测序病原检出率高于细菌培养[73.9%，43.4%，P<0.05]。测序检出病原种类多于细菌培养。不同的 7 例样本使用一代测序验证，结果与纳米孔检测结果一致。
结论 同传统方法相比，纳米孔测序技术具有更短的检测周期、更高的检测灵敏度、同时检测多种病原体、检测特异性高等特点，为临床感染病原体的快速准确检测提供了新技术。

PU-0651

RNA M6A 修饰在肝癌治疗的研究现状与展望

周英杰、尹文君
南华大学附属第一医院

RNA 的甲基化 N6-甲基腺苷 m6A（N6-methyl-adenosine)修饰是指发生在 RNA 分子(包括 mRNA 和非编码)上不同位置的甲基化修饰现象、是真核生物信使 RNA(MRNAs)中丰度最高的内部修饰，作为一种可逆表观遗传修饰，m6A 不仅存在于信使 RNA 中，而且还存在于非编码 RNA 中，影响修饰 RNA 分子的命运，在几乎所有重要的生物过程中发挥重要作用，包括癌症的发生。其他 mRNA 修饰，包括 N1-甲基腺苷(M1A)、5-甲基胞嘧啶(M5C)和假尿苷，与 M6A 一起形成表位编码组，共同编码控制蛋白质合成的新信息层。M6A 修饰的 mRNA 的作用依赖于识别它们的不同蛋白(即阅读器)的功能，取决于不断扩大的 m6A 阅读器和 m6A 编写器复合体以及潜在的擦除器影响，这些潜在的擦除器目前与转录组中 m6A 的流行丰度尚不清楚。M6A 修饰由由 METTL3、METTL14 和 WTAP 组成的 M6A 甲基转移酶复合物(MTC；即 WRITER)沉积，也可能由 Virma 和 RBM15 组成，并且可以被诸如 FTO，ALKBH5 和 ALKBH3 的 M6A 去甲基酶(即擦除器)去除，并与 m6A 结合蛋白相互作用，如 YTHDF1/2/3, IGF2BP1/2/3, HNRNP, eIF3 (读取器)。RNA 甲基转移酶、去甲基化酶和 m6 结合蛋白在来自不同人类器官的癌症组织中经常上调，增加癌基因转录和癌蛋白的表达，促进癌细胞的增殖、存活、影响肿瘤的启动、进展和转移。近来多项研究结果也表明 m6A 修饰及其相关蛋白的失调通过调节肿瘤相关基因的表达参与肝癌的发生与转移。越来越多的小分子抑制剂已被确定为靶向 m6A 调节剂，并具有治疗各种肝病的潜力。本文将会对 m6A 修饰(编码和非编码 RNA)基因异常修饰的生物学功能、潜在分子机制及在肝癌中的发病机制，靶向 m6A RNA 修饰如何成为治疗肝病的有效新策略等方面的最新研究成果进行综述。

基于四种生物标志物建立急性髓系白血病预后风险评分体系

匡野、高辉、曹向红、王杨、董玉琳、李红燕、程云、孔凡斌
昆明市延安医院

目的 根据生物信息学筛选的生物标志物，建立急性髓系白血病（AML）预后评分系统。
方法 从 UCSC Xena 和 GTEx 下载 151 例 AML 患者和 337 例健康人的 RNA 表达数据和临床资料。我们利用 R3.6.2 中的 dprir 和 tidyr 包，从 RNA 表达数据中筛选出差异表达的 mRNAs（DEmRNAs）。在这些 DEmRNAs 中，使用 R3.6.2 中的 survival 和 glmnet 包，采用单变量和 Lasso 回归筛选预后相关的 mRNAs。采用多变量 Cox 回归分析对这四种核心 mRNAs 与 AML 预后效果综合进行预测评分。我们进一步用 R3.6.2 中的 ESTIMATE 包对核心基因表达水平与肿瘤纯度的关系进行了比较。应用 QRT-PCR 和 western blot 方法，验证了核心 mRNAs 在 AML 细胞模型和临床标本中的差异表达。
结果 筛选了 4 个与 AML 预后相关的核心 mRNAs（FAM124B、HPDL、MPO 和 P2RY1），并与之建立预后评分系统。进一步证实了 4 个核心 mRNAs 在 AML 细胞模型和临床标本中的差异高表达。同时发现具有高免疫性和间质评分的样本，其 HPDL 和 MPO 的表达较高。
结论 本研究发现了与 AML 患者预后密切相关的 4 种 mRNAs（FAM124B、HPDL、MPO 和 P2RY1）。并在此基础上，用 4 个预后 mRNAs 构建了 AML 预后评分系统，其研究结果有助于对于 AML 的预后评估。

CRP 在 EBV 感染儿童中的诊断意义

王新颖
泰安市中心医院

目的 探讨 CRP 对 EBV 感染儿童诊断的临床价值
方法 选取 2018 年 1 月到 12 月在泰安市中心医院确诊的 856 例 EBV 感染的儿童和 240 例健康体检儿童，两组均检测 CRP，EBV 感染儿童检测 EBV-DNA 载量。
结果 EBV 感染儿童组的 CRP 水平显著高于健康对照组，差异有统计学意义（$p<0.05$）,EBV 低载量组患儿与高载量组的 CRP 差异无统计学意义（$p<0.05$）。
结论 CRP 的检测可作为 EBV 感染的一个诊断指标。

PU-0654

长沙 1 092 例急性下呼吸道疾病患儿病毒感染的流行病学特征分析

周杰英
郴州市第一人民医院

目的 了解长沙地区急性下呼吸道感染患儿的呼吸道病毒谱和流行病学特征，为疾病的预防和临床诊疗提供科学依据。
方法 用实时荧光定量 PCR 方法筛查 1 092 份小儿呼吸道标本，对 12 种常见呼吸道病毒进行核酸检测。
结果 1 092 例样本中，呼吸道合胞病毒阳性 437 例（40%）、副流感病毒 3 型 337 例（30.9%）、博卡病毒阳性 263 例（24.1%）、腺病毒阳性 228 例（20.8%）。男性患儿总检出率为 82.26%,女性患儿总检出率为 83.42%。呼吸道合胞病毒在≤6 月组感染率较高、副流感病毒 3 型和博卡病毒在≤2 岁患儿中感染率较高、腺病毒在 6 月～5 岁这一年龄阶段感染率较高。春季、夏季、秋季和冬季病毒感染检出率分别为 90.48%、83.50%、62.26%和 82.80%，差异有统计学意义。
结论 长沙地区急性下呼吸道患儿病毒感染以呼吸道合胞病毒和副流感病毒 3 型为主,混合感染常见。男女童感染检出率差异无统计学意义。2 岁以下患儿更容易获得急性下呼吸道感染。病毒有季节流行趋势，多在春秋季流行。

禽呼肠孤病毒治疗肝癌的基因表达谱及相互作用途径

蔡瑞敏、李毅、冯强、王文洋
泰安市中心医院

Background Primary liver cancer(PLC) has unquestionably been a major public health challenge which is the second most common cause of cancer-associated death worldwide. The reovirus is being investigated as an anti-cancer therapy, and has proven oncolytic effects on many types of cancers.
Methods and Results We utilized the microarray data to analyze the GRCh38 gene expression profile in 6 specimens, Gene ontology (GO), Kyoto Encyclopedia of Genes and Genomes (KEGG) pathway enrichment analysis and the protein–protein interaction (PPI) network were conducted among the of DEGs, and six genes were validated using RT-qPCR analysis,and FOS, EGR2, IFIT2 and AGTR1 were identified as the hub nodes in the PPI network.

转录组学分析 1 型糖尿病潜在生物标志物的探讨

康建华、沈兴娅、杨立顺、冯绍华、李德来、袁海生
天津市北辰区中医医院

目的 转录组学是研究机体转录的技术，是所有 RNA 转录的总和，可以研究不同生物体的基因表达。本研究对 T1DM 患者进行转录组分析，以揭示其发病机制和进展。
方法 从基因表达（GEO）数据库中下载 GSE55098、GSE72492、GSE55099 和 GSE97123 表达谱。mRNA 表达谱 GSE55098 包括来自 12 例新 T1DM 患者和 10 例对照组的 22 个外周血单核细胞样本（PBMC）；GSE72492 包括 17 例 T1DM 患者和 7 例健康人群的胰腺组织标本。miRNA 表达谱 GSE55099 包含 12 个新 T1DM 患者和 10 个正常对照的 PBMC 样本；表达谱 GSE97123 中有 12 例 T1DM 患者和 12 例健康人血浆来源于外泌体样本，这些患者至少有 25 年的 T1DM 病史。通过不同检测平台筛选了差异表达基因（DEGs）、差异表达 miRNA，进行功能富集、通路、DEMs 靶点和 miRNA-基因对、DEGs 的蛋白-蛋白对分析和 PPI 网络构建。
结果 根据 mRNA 表达谱分别鉴定出 37 个和 110 个 DEGs，命名为短期 DEGs 和长期 DEGs。根据 miRNA 表达谱分别鉴定出 15 个和 6 个 DEMs，命名为短期 DEMs 和长期 DEMs。短期 DEGs 被富集在 6 个基因本体和 4 个通路中，长期 DEGs 被富集在了 40 个基因本体和 10 个通路中。短期 DEMs 中筛选出 17 对 miRNA-基因对，hsa-miR-181a 和 hsa-miR-181c 包含在最多对基因中。长期 DEMs 中获得了 20 对 miRNA-基因对，hsa-miR-338-3p 包含在所有的基因对中。KLRD1 参与了短 DEGs 的 PPI 网络中更多的配对。在长期 DEGs 的 PPI 网络中，ACTA2 和 USP9Y 的配对数较多。
结论 KLRD1、hsa-miR-181a 和 hsa-miR-181c 是 T1DM 致病性的生物标志物；ACTA2、USP9Y 和 hsa-miR-338-是 T1DM 进展的生物标志物。

Noninvasive detection of circulating fetal cells carrying the entire fetal genome is a promising way for prenatal testing of genetic diseases. However, ideal approaches for efficient separation of these valuable cells are not available. Here, a novel inertial microfluidic chip (CelutriateChip 1) is developed for ultra-fast, label-free enrichment of circulating trophoblasts (CTBs) from the whole blood samples of pregnant women. The unique structural design of the four-stage curved channel in CelutriateChip 1 enables CTBs with larger size to be efficiently separated from the blood samples under the effect of inertial and Dean drag forces. The transition of the target cells among the stages enables CelutriateChip 1 to achieveone or two orders of magnitude higher throughput compared to single channel inertial microfluidic chips. After optimization of conditions, CTBs can be recovered from 2 mL of whole blood within 5 min with an average recovery efficiency ranging from 52.3% to 65.8% and high white blood cell depletion (99.95%). CTBs collected from the chip can be isolated at the single-cell level and used for downstream immunofluorescence staining and genetic genotyping. Clinical tests are performed on 30 pregnant women and the results

demonstrate that CTBs are obtainable in 86.67% of pregnancy cases. A single-base variant in the HBB gene can be accurately detected by sequencing of rare CTBs. This simple, antibody-free and low-cost holds promise for obtaining rare CTBs for prenatal detection of various genetic diseases.

3. 北京贝瑞和康生物技术有限公司

Objective To compare the screening effect of the third generation sequencing technology and traditional genetic diagnostic technology on rare types of thalassemia genes, and analyze the molecular characteristics and phenotypes of rare thalassemia gene variants.
Methods Taking the 434 cases of Guangxi Zhuang Autonomous Region in China with positive hematology screening as the research object, using the third generation sequencing technology (research group) and traditional gene diagnosis technology (control group) for thalassemia gene screening.
Results Through third generation sequencing and traditional genetic diagnosis technology, a total of 361 cases of genetic testing were confirmed as positive (83.18%), of which 264 cases (60.83%) of α-thalassemia gene, 68 cases (15.67%)ofβ-thalassemia gene, and 29 cases (6.68%) of α and β compound thalassaemia gene. Among them, 318 cases (73.27%) were identified in the control group and 361 cases (83.18%) were detected in the research group. The results of testing 353 cases (81.34%) of conventional thalassaemia genes in the research group were essentially the same as those in the control group. However, the research group detected 76 more cases of 30 gene mutation types that were not detected in the control group, which are completely consistent with the verification results of Sanger sequencing or Gap-PCR. In addition, there are 5 rare cases (3 cases are diagnosed by MLPA technology. 2 cases are unclear mutations) are not in the detection range of third generation sequencing can be detected. The differences in hematological phenotypic parameters of 33 sporadic cases among 81 cases were analyzed.
Conclusion The third generation sequencing technology can increase the detection rate of thalassemia genes, with a comprehensive screening range and high efficiency, and can find rare thalassemia cases with multiple phenotypes, which is conducive to clinical thalassemia gene screening.

FBXW7/mTOR axis as novel biomarkers for diagnosis and metastasis prediction of colorectal cancer

Yuli Wang [1]、Yueyong Liu[1,2]、Jian Mao[2]、Guangwei Wei[3]
1. The Second Hospital of Shandong University
2. Life Sciences Division, Lawrence Berkeley National Laboratory
3. 山东大学

Purpose F-box and WD repeat domain containing 7 (FBXW7) encodes a substrate adaptor for an SCF E3 ubiquitin ligase complex and lies at the nexus of many pathways which control cell

growth, cell differentiation, and tumorigenesis by negatively regulating the abundance of different oncoproteins. Increased cell migration and invasion lead to cancer metastasis and are crucial to cancer prognosis. In this study, we explore whether FBXW7 plays any role in metastatic process.
Methods Wound healing assay, transwell assay and matrigel assay were used to detect the migration and invasion of colorectal cancer cells. Spheroid formation assay was used to detect the capability of self-renewal of colorectal cancer cells. Rapamycin was used to inhibit the mTOR signaling.
Results Depletion of FBXW7 induces epithelial-mesenchymal transition (EMT) in human colorectal cancer cells along with the increase in cell migration and invasion. Moreover, FBXW7 deficiency promotes the generation of colorectal cancer stem-like cells in tumor-sphere culture. mTOR inhibition by rapamycin suppresses FBXW7 loss-driven EMT, invasion and stemness, suggesting accumulation of mTOR in FBXW7-depleted cells play a role in induction of stem-like properties.
Conclusions EMT and stem cell-like properties are essential for tumor cells to disseminate from adjacent tissues and seed new tumors in distant sites. Our results demonstrated that FBXW7 regulated these two essential characteristics of metastatic disease through mTOR signaling pathway.

吉林地区非小细胞肺癌 RET 基因变异分析

何佳雪、胡欣彤、陈立国、姜艳芳
吉林大学第一医院

目的 探讨吉林地区非小细胞肺癌(NSCLC)患者 RET 基因变异情况及其基因变异特征。
方法 回顾性分析吉林地区 NSCLC 患者 RET 基因变异情况。应用高通量基因测序（NGS）技术检测 NSCLC 患者血浆、组织、FFPE、胸水样本中提取的 DNA，检测范围包括 122 个基因的点突变、插入/缺失，拷贝数变异和基因融合/重排。
结果 1060 例非小细胞肺癌患者中检出 RET 基因变异阳性 35 例，检出率为 3.3%，其中 RET 基因突变阳性 12 例，基因融合阳性 23 例，有临床意义的变异占比为 46%。最常见的 RET 融合伴侣是 KIF5B（52.1%），其中 KIF5B-RET（39.1%），RET-KIG5B（13%）。其他主要融合伴侣为 NCOA4（8.7%）、CCDC6（8.7%）、CCDC88C（4.3%）等。女性患者 RET 变异率高于男性（20 vs 15）。RET 突变阳性样本中，共检出突变 251 个，突变个数排名前 11 的突变总数为 107 个，占总数的 42.63%，最高的是 EGFR 共突变（7.7%）。RET 融合阳性样本中，共检出突变 26 个，最高的是 EGFR 共突变（23%），其次是 TP53 共突变（15%）。
结论 吉林地区 NSCLC 患者 RET 基因变异以融合突变为主，常见的 RET 融合伴侣是 KIF5B 和 NCOA4、CCDC6。

PU-0661

Assessing MicroRNA-375 Levels in Type 2 Diabetes Mellitus (T2DM) Patients and Their First-Degree Relatives with T2DM

Xu Wu
the Third Hospital of Yunnan Province, China.

Purpose The pancreatic islet specific microRNA-375 (miR-375) is over expressed in type 2 diabetes mellitus (T2DM) patients suppressing the glucose-induced insulin secretion. Thus, miR-375 may serve as a biomarker for the early prediction of T2DM among high-risk individuals. We

conducted this clinical study to assess the significance of miR-375 among type 2 diabetes mellitus (T2DM) patients and their first-degree relatives.
Patients and Methods We included 56 Han Chinese individuals (N: NGT = 21, T2DM =10, FD-NGT =13 and FD-T2DM = 12) who received medical health check-ups from January 2018 to September 2018 at The Third Hospital of Yunnan Province, China. They were categorized as normal glucose tolerance (NGT), T2DM, first-degree relatives with normal glucose tolerance (FD-NGT) and first-degree relatives with T2DM (FD-T2DM). OGTT, C-peptide and Insulin tests were performed to confirm the diagnosis. The miR-375 levels were determined by Quantitative real-time RT-PCR (qRT-PCR).
Results The OGTT test showed a significant difference in T2DM and FD-T2DM groups compared with NGT and FD-NGT ($p< 0.05$). Similar results were observed during C-peptide and insulin tests. Interestingly, the 2-hour insulin test showed FD-NGT group having a significantly higher mean ± standard error of (64.240 ± 12.775) compared to NGT (28.836 ± 10.875). Assessment of miR-375 expression levels in 4 groups showed a significant up-regulation in T2DM and FD-T2DM compared with NGT and FD-NGT groups. A slight increase in miRNA expression was observed in FD-NGT compared with NGT group but was not statistically significant.
Conclusion The OGTT, C-peptide and insulin tests revealed a statistically significant difference in T2DM and FD-T2DM compared with NGT and FD-NGT groups.
A significantly higher miR-375 expression was also observed in T2DM and FD-T2DM groups compared with NGT and FD-NGT and thus, miR-375 may serve as a stable biomarker for the early prediction of T2DM among high-risk individuals.

PU-0662

As a biomarker for gastric cancer, circPTPN22 regulates the progression of gastric cancer through the EMT pathway.

Shuo Ma、Shan Kong、Xinliang Gu、Yanhua Xu、Mei Tao、Lei Shen、Xianjuan Shen、Shaoqing Ju
Affiliated Hospital of Nantong University

Background Gastric cancer (GC) is one of the most common cancers in the world. Due to the lack of specific symptoms, more than 80% of patients are diagnosed as the advanced stage with a high mortality rate, so the early diagnosis of GC is incredibly essential. Circular RNAs (CircRNAs) are a kind of endogenous non-coding RNA with stable structure, the long half-life, and tumor specificity. It can be used as a diagnostic marker for tumors.
Method Using circRNA sequencing technology screened three pairs of GC and adjacent tissues, and circRNAs with significant expression differences were screened out. The circular structure and characteristics of circPTPN22 were determined by RT-qPCR, agarose gel electrophoresis, Sanger sequencing, RNase R, and actinomycin D assays. Cell Counting Kit-8, colony formation, Transwell, Wound healing, tumor formation in mice and western blotting assays were used to detect the effects of circPTPN22 on the proliferation, invasion, migration, tumor growth of GC cells in vitro and protein expression.
Result CircPTPN22 is up-regulated and positively correlated with metastasis in GC tissues, cells, and plasma. RTqPCR results showed that circPTPN22 had good diagnostic efficacy and could be used to predict the prognosis of GC patients. In vitro and vivo experiments showed that the downregulation of circPTPN22 could inhibit cell proliferation, migration, and invasion through the epithelial-mesenchymal transformation (EMT) pathway. CircPTPN22 may regulate GC progression through the competitive binding of miRNAs.
Conclusion CircPTPN22 can be used as a potential diagnostic and prognostic marker for GC and can inhibit cell proliferation and metastasis through the competitive binding of miRNA to inhibit the EMT pathway.

PU-0663

CircHAS2 通过调控 hsa-miR-944 介导的 PPM1E, 促进胃癌的增殖、迁移和侵袭

马硕、顾新亮、沈蕾、陈垠豪、钱晨、申娴娟、鞠少卿
南通大学附属医院

目的 胃癌被认为是世界上最常见的胃肠道恶性肿瘤之一，并且引发胃癌的原因众多。尽管近年来对胃癌的诊断和治疗都取得了较大进展，但胃癌患者的总体生存情况仍然不令人满意。CircRNAs 是一类新的内源性非编码 RNA，其被证明广泛分布在真核细胞中，可作为众多肿瘤的生物标志物和治疗靶点。但 circRNAs 在胃癌中的作用和潜在调控机制仍不清楚。
方法 利用 qRT-PCR 筛选目标 circRNAs 并检测 circHAS2，hsa-miR-944 以及 PPM1E 的表达水平。利用琼脂糖凝胶电泳、桑格测序、RNase R 和放线菌素 D 等方法检测了 circHAS2 的环状结构和性质。利用体外细胞实验检测了 circHAS2 对胃癌细胞增殖、迁移、侵袭和 EMT 关键蛋白表达的影响。利用 circAtlas，starbase，circBank 和 circinteractome 数据库预测 hsa-miR-944 与 circHAS2 的结合情况。利用 miRDB, miRWalk，miRPathDB 和 Targetscan 数据库预测 hsa-miR-944 和 PPM1E 的结合情况。利用双荧光素酶实验验证 hsa-miR-944 与的 circHAS2 和 PPM1E 的相关性。
结果 circHAS2 在胃癌组织和细胞中表达上调，与肿瘤转移呈正相关。体外实验证明，敲除 circHAS2 可抑制胃癌细胞的增殖、迁移和侵袭能力并可能影响 EMT 过程。此外，hsa-miR-944 与 PPM1E 相互作用，是 circHAS2 的靶基因。加入 hsa-miR-944 的模拟物可抑制胃癌细胞的增殖、迁移和侵袭能力。PPM1E 的上调逆转了敲除 circHAS2 后对胃癌细胞的影响。
结论 circHAS2/ hsa-miR-944/PPM1E 轴可参与胃癌的进展。提示 circHAS2 可充当胃癌的潜在生物标志物和治疗靶点。

PU-0664

伴骨髓异常 T 细胞增多的弥漫性大 B 细胞淋巴瘤一例

朱靖、李良梅、彭子秘、周宇、杨利群
四川金域医学检验中心有限公司

目的 探讨一例伴骨髓异常 T 细胞增多的弥漫性大 B 细胞淋巴瘤的实验室特征。
方法 回顾性分析一例伴骨髓异常 T 细胞增多的弥漫性大 B 细胞淋巴瘤患者的临床资料、骨髓细胞形态学、骨髓活检、流式细胞学、分子生物学检查及淋巴结活检的结果并文献复习。
结果 骨髓细胞形态学分析查见形态异常淋巴细胞，疑为淋巴瘤细胞骨髓侵犯；骨髓活检及免疫组化结果提示：CD3 散在极少数（+）、CD5 局灶（+）、CD79a 散在极少数（+）、CD20 散在极少数（+）、CD34 小血管（+），圆核细胞（-）、CD117 散在极少数（+）、E-cad 红细胞（+）、MPO 粒细胞系统（+）；淋巴结活检提示淋巴结结构完全破坏，弥漫中等偏大异型淋巴细胞浸润，核分裂易见，可见星空现象，累及周围脂肪组织，诊断为侵袭性 B 细胞淋巴瘤，符合弥漫性大 B 细胞淋巴瘤，非特指型（CD5+、CD30+），多系非生发中心来源（Non-GCB）；淋巴结活检标本 EBV 原位杂交显示肿瘤细胞部分阳性；骨髓流式检测到异常 T 淋巴细胞占有核细胞总数约 9.58%（占淋巴细胞总数约 53.82%），表达 cCD3、CD4、CD5、CD2、HLA-DR、CD38 部分，不表达 CD30、CD57、CD3、CD8、TCRab、TCRcd、CD7、CD56、CD19、CD20、CD10、CD34、CD117、CD33；淋巴结活检标本分子生物学检测到 RHOA 基因 p.G17V 突变、STAT3 基因 p.E616K 突变、TET2 基因 p.N275Ifs 和 p.I1349Lfs 突变，突变频率分别为 20.5%、21.2%、10% 和 43.3%；未检测到 BCL2/BCL6/MYC 基因重排；结合临床表现（全身多发淋巴结肿大）综合诊断为弥漫性大 B 细胞淋巴瘤伴骨髓异常 T 细胞增多。

结论 病理结果和流式结果不一致，伴骨髓异常 T 细胞增多的弥漫性大 B 细胞淋巴瘤患者罕见，诊断需结合临床表现和全面的检查，后期密切随访。

新型冠状病毒标本采集、运输、保存及提取对结果的影响

赵娅婷
昆明市中医医院

在新型冠状病毒检测过程中，标本的采集，运输，保存以及提取，在后续的实验过程中至关重要，它将直接影响实验结果的准确性，因此每一个步骤，我们必须严格按照实验室标准操作规程进行操作，严格控制标本采集的有效量，运输环节，样本保存及提取的有效性，确保实验结果准确性，避免操作不当对实验结果造成影响。

Serum hsa_tsr016141 as a kind of tRNA-derived fragments is a novel biomarker in gastric cancer

Xinliang Gu[1,2,3]、Shuo Ma[1,2,3]、Bo Liang[4]、Shaoqing Ju[1]
1. 南通大学附属医院检验科
2. 南通大学附属医院临床医学研究中心
3. 南通大学医学院
4. 南通大学附属医院超声科

Background Gastric cancer (GC) is one of the most common malignant tumors globally and the third leading cause of cancer-related death. GC can occur in any part of the stomach. The vast majority of GC is adenocarcinoma, originating from the most superficial glands or mucous membrane of the stomach. The early symptoms of GC are not obvious, and the symptoms of benign gastric diseases such as gastritis and gastric ulcers are easy to be ignored. Currently, the sensitivity and specificity of diagnostic markers for GC are low, patients often miss the best opportunity for treatment, so it is urgent to find new biomarkers with higher sensitivity and specificity. tRNA-derived small RNAs are a kind of small non-coding RNAs derived from tRNAs. Their stable structure and high abundance in body fluids show their potential to be used in liquid biopsy and become a new generation of tumor biomarkers. At present, most of the studies on tsRNAs have described the effects of tsRNAs on tumor cell proliferation, invasion, and migration, as well as their internal pathways and mechanisms. It is abundant in cancer cells and body fluids. However, there are still few studies on whether tsRNAs can be applied as biomarkers. Our goal is to find the differentially expressed tRNA-derived small RNAs in GC to explore their potential as a GC biomarker.
Methods Quantitative real-time PCR was used to detect the expression level of hsa_tsr016141. The molecular characteristics of hsa_tsr016141 were verified by agarose gel electrophoresis, Sanger sequencing, Actinomycin D Assay, and Nuclear and Cytoplasmic RNA Separation Assay. The diagnostic efficiency of hsa_tsr016141 was analyzed through receiver operating characteristic.
Results The expression level of hsa_tsr016141 in GC tissues and serum was significantly increased. The serum expression level showed a gradient change between GC patients, gastritis patients, and healthy donors and was positively correlated with the degree of lymph node metastasis and tumor grade, which has high diagnostic efficacy for GC. Besides, the elevated serum hsa_tsr016141 has good stability and specificity, which makes it have the potential to be used as a good biomarker for GC. Meanwhile, the elevated serum hsa_tsr016141 can effectively

track the postoperative situation of GC, dynamically monitor GC patients. Its detection method also has good clinical application value. The ROC curve of GC patients and healthy donors showed that the AUC of hsa_tsr016141 was 0.814 (95% confidence interval (CI): 0.760-0.867), which was higher than 0.705 (95% CI: 0.637-0.774) of CEA and 0.607 (95% CI: 0.535-0.678) of CA199. Meanwhile, the sensitivity (75%), specificity (78%), accuracy (76%), positive predictive value (80%), and negative predictive value (72%) of hsa_tsr016141 were also higher than those of CEA and CA199. Moreover, the AUC increased to 0.830 after the combination of hsa_tsr016141 and CEA, and 0.854 after combining hsa_tsr016141 and CA199. The AUC of the combination of the three was the highest, reaching 0.864. Compared with CA724, the AUC of hsa_tsr016141 was 0.820 (95% CI: 0.759-0.881), which was slightly higher than 0.780 of CA724 (95% CI: 0.712-0.848). The sensitivity (66%) and specificity (89%) of hsa_tsr016141 were also slightly higher than that of CA724. ROC analysis showed that the serum expression level of hsa_tsr016141 could significantly distinguish GC patients from healthy donors or gastritis patients. Besides, the expression level of hsa_tsr016141 in GC patients decreased significantly after the operation (P<0.0001).

Conclusions Serum hsa_tsr016141 has good stability and specificity and can be used for dynamic monitoring of GC patients, suggesting that serum hsa_tsr016141 can be a novel biomarker for GC diagnosis and postoperative monitoring.

PU-0667

Diagnostic Value of Detection of Pregenomic RNA in Sera of Hepatitis B Virus-Infected Patients with Different Clinical Outcomes

Ni Lin[2]、Qishui Ou[1]
1. 福建医科大学附属第一医院
2. 福建医科大学医学技术与工程学院

Pregenomic RNA (pgRNA) is a direct transcription product of hepatitis B virus (HBV) covalently closed circular DNA (cccDNA), and it plays important roles in viral genome amplification and replication. This study was designed to investigate whether serum pgRNA is a strong alternative marker for reflecting HBV cccDNA levels and to analyze the correlation between serum pgRNA, serum HBV DNA, and hepatitis B surface antigen (HBsAg). A total of 400 HBV-infected patients who received nucleos(t)ide analog (NA) therapy with different clinical outcomes were involved in this research. Case groups included asymptomatic hepatitis B virus carrier (ASC), chronic hepatitis B (CHB), liver cirrhosis (LC), and hepatocellular carcinoma (HCC) patients, with 100 patients in each group. The results showed that the levels of HBV pgRNA had significant differences between these 4 groups. Serum pgRNA levels correlated well with serum HBV DNA and HBsAg levels (HBV pgRNA levels versus HBV DNA levels, $r = 0.58$, $P < 0.001$; HBV pgRNA levels versus HBsAg levels, $r = 0.47$, $P < 0.001$). In addition, we focused on the 108 HBV-infected patients with HBV DNA levels of <500 IU/ml; it was surprising to find that in 17.57% (13/74) of cases, HBV pgRNA could be detected even when the HBV DNA level was below 20 IU/ml. In conclusion, HBV pgRNA levels in serum can be a surrogate marker for intrahepatic HBV cccDNA compared with serum HBV DNA and HBsAg. The detection of serum HBV pgRNA levels may provide a reference for clinical monitoring of cccDNA levels and the selection of appropriate timing for discontinuing antiviral therapy, especially when HBV DNA levels are below the detection limit.

长链非编码 RNA 调控糖尿病肾病的研究进展

李宇宸[1]、袁芸[1]、杨璐瑶[1]、胡琼英[2]
1. 成都中医药大学医技学院
2. 成都中医药大学附属医院（四川省中医医院）

糖尿病肾病是糖尿病病人最严重的并发症之一。糖尿病肾病在我国的发病率呈上升趋势，已成为终末期肾脏病的主要原因，仅次于肾小球肾炎。由于糖尿病肾病存在复杂的代谢紊乱，一旦发展为终末期肾脏病，往往比其他肾脏疾病的治疗更加棘手，因此早期诊断对糖尿病肾病的防治意义重大。深入了解糖尿病肾病的发病机制，以期早期筛选高危患者是糖尿病肾病治疗的关键。糖尿病肾病病理分期主要是基于肾组织活检，但活检是一项复杂的有创检查，难以早期开展推广，因此临床上希望能找到新的标志物早期诊断、鉴别诊断及指导糖尿病肾病用药。已有研究表明 lncRNA 与氧化应激、凋亡与自噬、炎症反应、细胞肥大与增值、肾纤维化和糖代谢异常等糖尿病肾病发病机制有关，lncRNA 通过这些分子机制来调节糖尿病肾病的发生发展，是糖尿病肾病检测的新型实验室指标。随着基因测序和分析技术的发展，将会有更多与 DN 相关的 lncRNA 被研究者发现，通过研究其生物学及在糖尿病肾病中的发生机制，可筛选出诊断 DN 效能更高的标志物及治疗靶点。然而，lncRNA 与 DN 的研究仍面临诸多挑战，大多数研究尚未建立适当的疾病对照组确认这些 lncRNA 对于 DN 是特异性标志物，因此寻找特异度强的 lncRNA 是有必要的。总之，lncRNA 的出现为临床 DN 的预防及治疗提供新的思路和方法，我们需要更多的研究进一步了解 lncRNA 在 DN 中的作用机制。

Mutational characterization of HBV reverse transcriptase gene and the genotype-phenotype correlation of antiviral resistance among Chinese chronic hepatitis B patients

Ya Fu、Qishui Ou
Fujian medical university

Background and Aims The drug resistance of hepatitis B virus (HBV) originates from mutations within HBV reverse transcriptase (RT) region during the prolonged antiviral therapy. So far, the characteristics of how these mutations distribute and evolve in the process of therapy have not been clarified yet. Thus we aimed to investigate these characteristics and discuss their contributing factors.
Methods HBV RT region was direct-sequenced in 285 treatment-naive and 214 post-treatment patients. Mutational frequency and Shannon entropy were calculated to identify the specific mutations differing between genotypes or treatment status. A typical putative resistance mutation rtL229V was further studied using in-vitro susceptibility assays and molecular modeling.
Results The classical resistance mutations were rarely detected among treatment-naive individuals, while the putative resistance mutations were observed at 8 AA sites. rtV191I and rtA181T/V were the only resistance mutations identified as genotype-specific mutation. Selective pressure of drug usage not only contributed to the classical resistance mutations, but also induced the changes at a putative resistance mutation site rt229. rtL229V was the major substitution at the site of rt229. It contributed to the most potent suppression of viral replication and reduced the in-vitro drug susceptibility to entecavir (ETV) when coexisting with rtM204V, consistent with the hypothesis based on the molecular modeling and clinical data analysis.
Conclusions The analysis of mutations in RT region under the different circumstances of genotypes and therapy status might pave the way for a better understanding of resistance evolution, thus providing the basis for a rational administration of antiviral therapy.

MTHFR C677T 基因多态性与原因不明复发性流产的相关性研究

张光辉、蔡少玲、刘卫民
深圳恒生医院

目的 探讨 MTHFR C677T 基因多态性与原因不明复发性流产（URSA）的相关性，为进行原因不明复发性流产的预防、诊断、治疗奠定基础。
方法 采用病例对照的研究方法，对来自深圳恒生医院 350 位孕周小于 12 周有复发性流产史的患者和 350 名孕周大于 28 周且无并发症的孕妇或者生育大于 1 个小孩的妇女进行 MTHFR C677T 位点基因分型检测，使用 SPSS 26.0 对病例组和对照组中的 MTHFR C677T 基因分型进行统计分析，分析 MTHFR C677T 基因多态性与 URSA 的相关性。
结果 MTHFR C677T 位点多态性与 RSA 明显相关，MTHFR C677T TT 基因型个体 RSA 风险是 CC 型个体的 3.7 倍（P＜0.0001，95％CI：2.5～5.4）；CT 基因型个体 RSA 风险是 CC 型个体的 2.6 倍（P＜0.0001，95％CI：1.7～3.8），携带 T 等位基因个体，RSA 风险增加 140％（P＜0.0001，95％CI：1.9～2.9）。
结论 MTHFR C677T 基因多态性与原因不明复发性流产具有高度相关性。

2021 年 4 月乌鲁木齐 943 批国内冷冻冷藏食品外包装 SARS-CoV-2 核酸检测结果分析

刘静、帕尔吾杂提·阿合苏木、 张雪庆、高婷、佟晓洁
新疆金域医学检验所有限公司

目的 新型冠状病毒 SARS-CoV-2 传染力强、传播途径多样化、不易被阻断、易感人群普遍，可通过气溶胶、接触、粪口等途径广泛快速传播且致死率较高。冷链物流食品是否会成为新型冠状病毒的传染源，其被污染的风险水平目前还缺乏足够的文献资料支撑。为了准确评估冷冻冷藏食品被 SARS-CoV-2 污染的风险大小，分析其可能存在的感染来源，食品表面的新冠病毒核酸检测是当下疫情风险防控的必要手段。
方法 采集 2021 年 4 月 1 日至 2021 年 4 月 30 日，新疆维吾尔自治区乌鲁木齐市不同经营场所、不同产地来源、不同品类的 943 批次冷冻冷藏食品外包装样本，对其采用实时荧光 PCR 法，以新型冠状病毒 2019-ncovdeORF1ab 和 N 基因设计特异性引物和 TaqMan 探针，通过荧光定量 PCR 仪进行 RT-PCR 扩增并检测荧光信号，自动绘制出实时扩增曲线，从而实现对新型冠状病毒 2019-nCOV 核酸的检测。
结果 本实验研究涉及到的 943 批冷冻冷藏食品外包装 SARS-CoV-2 核酸检测结果均显示阴性。
结论 本研究结果表明，乌鲁木齐市冷冻冷藏食品外包装被 SARS-CoV-2 污染的风险较低，其作为 SARS-CoV-2 传染源的可能性也相对较低。本研究实验样本数据充足，实验方法科学得当，检测数据准确可靠，样本来源广泛、食品种类丰富，结果可供参考；但由于本实验样本调查范围仅限于乌鲁木齐的销售环节，并不涉及其他运输、加工环节，未来应扩大研究食品全产业链范围，以便开展长期新型冠状病毒流行病学在食品之间污染概率的监测工作。

PU-0672

MiR-124 is a potential molecular marker in breast cancer

Yi Yang、Tongbao Feng
The Affiliated Changzhou No. 2 People's Hospital of Nanjing Medical University

Purpose MiR-124 acts as tumor-suppressive role in human cancer. However, the clinical significance of miR-124 in BRCA remains unclear. The aim of this study was to evaluate the role of miR-124 in breast cancer cells and investigate the association of hsa-mir-124 expression and the clinicopathological characteristics in breast cancer progression.
Methods MiR-124 expression in breast cancer tissue was measured by quantitative real-time PCR (RT-qPCR). CCK-8 assays were used to detect the role of miR-124 on the breast cancer cell proliferation. The expression profiles of hsa-mir-124 were obtained from the cancer genome atlas for BRCA. Then, we used Cox Regression test, Kruskal-Wallis test and Wilcox test to investigate the prognostic value of hsa-mir-124, the association of hsa-mir-124 and pathology TNM stages and pathologic stages in breast cancer.
Results We found that the expression of miR-124 was significantly downregulated in breast cancer tissues compared with matched adjacent non-neoplastic tissues and significantly inhibited breast cancer cell proliferation. In addition, we observed that miR-124 was associated with the clinicopathological characteristics of breast cancer. Moreover, the expression of miR-124 was also associated with the overall survival of breast cancer patients.
Conclusion Our findings demonstrated that miR-124 acted as tumor-suppressive gene in breast cancer and indicated that hsa-mir-124 expressions were associated with overall survival, TNM stages, pathologic characteristics and tumor molecular phenotype in breast cancer, providing a new biomarker and a potential therapeutic target for breast cancer patients.

PU-0673

Andrographis Enhances 5-Fluorouracil-Induced Anti-Tumor Effect in Colorectal Cancer through Inhibition of DKK1

Yinghui Zhao、Chuanxin Wang
The Second Hospital of Shandong University

Background Colorectal cancer (CRC) ranks as the third leading cause of cancer-related deaths in the US. In this malignancy, 5-fluorouracil (5FU)-based treatment remains the mainstay as first-line chemotherapy. Unfortunately, ~50-60% of patients treated with 5FU eventually develop resistance, leading to increased mortality. Hence, a better understanding of the molecular mechanisms underlying 5FU-resistance will lead to development of more effective therapeutic strategies. Our previous studies have shown that, andrographis, a botanical with diverse biological activities, synergistically enhanced 5FU-induced pro-apoptotic effects by mediating Wnt/β-catenin pathways. However, a more comprehensive knowledge of andrographis-mediated synergism with 5-FU remains largely unclear.
Methods We first established 5FU resistant isogenic cell lines of HCT116 and SW480 CRC cells (HCT116 5FUR and SW480 5FUR). To determine the synergistic anti-tumor effects of andrographis and 5FU, we performed cell viability, proliferation and colony formation assays by treating parental and 5FUR cells with andrographis, 5FU and their combination. To explore the molecular mechanisms responsible for the synergistic anti-tumor efficacy, we next performed gene expression microarrays to identify candidate pathways and genes that mediated anti-tumor efficacy of andrographis in 5FUR cells. We analyzed an expression profiling dataset from CRC patients (GSE52735) who either responded or did not respond to 5FU. We also studied the andrographis-mediated synergism with 5FU in a xenograft animal model, and in 3D patient-derived tumor organoids.

Results Combined treatment with andrographis and 5FU exhibited significantly superior effects on cell viability ($P<0.01$), proliferation ($P<0.001$) and colony formation capacity ($P<0.001$), compared to treatment with individual treatments. In line with our in vitro findings, the combined treatment also significantly reduced tumor growth in mice xenografts ($P<0.0001$) as well as patient-derived tumoroids ($P<0.001$). By analyzing gene expression profiling data from cell lines and CRC patients, we identified that overexpression of DKK1 gene was a critical event for 5FU resistance in CRC. Moreover, qRT-PCR and western blotting data revealed that andrographis resulted in downregulation of 5FU-induced DKK1 overexpression accompanied with the synergistic anti-tumor effects in animal xenografts ($P<0.001$) and patient-derived tumor organoids ($P<0.001$), which were reversed following siRNA-mediated silencing of DKK1 ($P<0.01$).
Conclusions Our data provide novel evidence for andrographis-mediated anti-tumor synergism with 5-FU through DKK1, highlighting that in addition to its preventive efficacy, andrographis may serve as a potential adjunctive treatment to conventional chemotherapeutic drugs in patients with CRC.

PU-0674

Identification of circulating miR-22-3p and let-7a-5p as novel diagnostic biomarkers for rheumatoid arthritis

Jifeng Tang、Jinpiao Lin
The First Affiliated Hospital of Fujian Medical University, Fuzhou, China

Objectives Early and correct diagnosis would be beneficial for outcomes of rheumatoid arthritis (RA), but there are some limitations in current diagnostic tools. In this study, we aimed to evaluate the diagnostic value of circulating miR-22-3p and let-7a-5p in RA.
Methods Seventy-six RA patients, 30 systemic lupus erythematosus patients, 32 Sjögren's syndrome patients and 36 healthy donors recruited at the First Affiliated Hospital of Fujian Medical University (China) were included in this study. Circulating miR-22-3p and let-7a-5p in plasma were measured using reverse transcriptase quantitative PCR (RT-qPCR) and serum cytokines were detected by cytometric bead array (CBA). The participants clinical materials were also collected. Receiver operating characteristic (ROC) curve analysis and correlation analysis were performed to assess the potential value of circulating miRNAs in RA.
Results Circulating miR-22-3p and let-7a-5p are significantly increased in RA patients and able to distinguish RA patients from other populations. Circulating let-7a-5p has been shown to improve the diagnostic ability of current laboratory indicators anti-cyclic citrullinated peptide antibodies (anti-CCP) and rheumatoid factor (RF). Moreover, the discriminatory capacity of both circulating miRNAs contribute to complement the diagnosis for seronegative RA. Meanwhile, correlation analysis reveals that circulating miR-22-3p positively correlates with hemoglobin, serum bilirubin, albumin and IL-17 but negatively correlates with mean platelet volume as well as let-7a-5p.
Conclusions The increased circulating miR-22-3p and let-7a-5p levels in RA patients, especially in seronegative RA patients, may provide a potential promising diagnostic biomarkers for RA in clinical practice.

PU-0675

Notoginsenoside R1-Induced Neuronal Repair in Models of Alzheimer Disease Is Associated With an Alteration in Neuronal Hyperexcitability, Which Is Regulated by Nav

Tao Hu
Department of Laboratory Medicine, The Third People's Hospital of Yunnan Province

Alzheimer's Diseaseis characterized by a progressive cognitive deficit and may be associated with anaberrant hyperexcitability of the neuronal network.Notoginsenoside R1 (R1), a major activity ingredient from Panax notoginseng (PNS), has demonstratedfavorable changes in neuronal plasticity and induced neuroprotective effectsin brain injuries resulting from various disorders; however, the underlying mechanisms are still not well understood. In the present study, we aimed to explore the possible neuroprotective effects induced by R1 in a mouse model of AD and the mechanisms underlying these effects. Treatment with R1 significantly improvedlearning and memory functions and redressed neuronal hyperexcitability in APP/PS1 mice by altering the numbers and/or distribution of the members of voltage-gated sodium channels (Nav). Moreover, we determined whether R1 contributed to the regulation of neuronal excitability in Aβ-42-injured cells. Results of our study demonstrated that treatment with R1 rescued Aβ1-42-induced injured neurons by increasing cell viability. R1-inducedalleviation in neuronal hyperexcitability might be associated with reduced Navβ2 cleavage, which partially reversed the abnormal distribution of Nav1.1a. These results suggested that R1 played a vital role in the recovery of Aβ1-42-induced neuronal injury and hyperexcitability, which is regulated by Nav proteins. Therefore, R1 may be a promising candidate in the treatment of AD.

PU-0676

The efficacy of addition of tenofovir disoproxil fumarate to Peg-IFNα-2b is superior to the addition of entecavir in HBeAg positive CHB patients with a poor response after 12 weeks of Peg-IFNα-2b treatment alone

Yongbin Zeng、Qishui Ou
The First Affiliated Hospital of Fujian Medical University

Background There are limited data regarding the efficacy of addition of entecavir (ETV) or tenofovir disoproxil fumarate (TDF) to Peg-IFNα-2b in HBeAg positive chronic hepatitis B (CHB) patients without early response to Peg-IFNα-2b. In this study, we aimed to evaluate the efficacy of ETV and TDF in HBeAg positive CHB patients who had a poor response to Peg-INFα-2b at the end of 12 weeks of monotherapy.
Methods A total of 40 HBeAg-positive CHB patients who were naive to antiviral therapy were recruited. The patients received a subcutaneous injection of Peg-IFNα-2b (180 μg) once a week for 12 weeks. However, the patients had a poor response to Peg-INFα-2b at the end of the 12-week-period monotherapy. The patients were then divided into two therapeutic protocol groups: (1) Group A: Patients received Peg-IFNα-2b (180 μg) subcutaneously weekly and ETV (0.5 mg) orally once daily for 48 weeks; (2) Group B: Patients received Peg-IFNα-2b (180 μg) subcutaneously weekly and TDF (300 mg) orally once daily for 48 weeks. The therapeutic efficacy was evaluated. Blood samples were collected at baseline and every 12 weeks. Routine biochemical tests including ALT, AST, etc. were measured by automated biochemical technique. HBV DNA was quantified using the TaqMan PCR assay. The

levels of HBsAg, HBsAb, HBeAg, HBeAb and HBcAb were measured using a commercial chemiluminescent microparticle immunoassay.
Results The HBsAg level declined rapidly in both two treatment groups during the first 12 weeks and declined gradually in the next 36 weeks. At week 48, the mean △HBsAg level in Peg-IFNα-2b+TDF group was significantly higher than that in Peg-IFNα-2b +ETV group (-1.799 ± 0.3063 vs. -1.078 ± 0.2028, P=0.0491). The HBeAg loss rate was significantly higher in TDF add-on group than that in ETV add-on group at week 48 (40% vs. 10%, P=0.028). At week 48, the proportions of patients with undetectable HBV DNA (<500 IU/mL) were 80% (16 out of 20) and 95% (19 out of 20) in Peg-IFNα-2b+ETV group and Peg-IFNα-2b+TDF group, respectively.
Conclusions This real world study demonstrated that the efficacy of addition of TDF to Peg-IFNα-2b is superior to the efficacy of addition of ETV to Peg-IFNα-2b in HBeAg positive CHB patients with a poor response after 12 weeks of Peg-IFNα-2b treatment alone. However, this present study also requires a larger sample size study to verify in the future.

PU-0677

3 例 CD5+的弥漫大 B 细胞淋巴瘤实验室检测和临床特征分析

汪玲[1]、杨利群[1]、林芝[2]、唐梅[1]、黄林林[1]
1. 四川金域医学检验中心有限公司
2. 宜宾市第二人民医院

目的 探讨 CD5+的弥漫大 B 细胞淋巴瘤（DLBCL）实验室检测和临床特征。
方法 收集到初诊为 CD5+的 DLBCL 患者 3 例，结合 HE 片及免疫组化对其进行 Hans 分型，检测 C-MYC、BCL2 蛋白表达情况，并应用 FISH 技术检测 MYC、BCL2 和 BCL6 基因结构异常，同时利用二代测序（NGS）对其进行淋巴造血相关基因突变分析。
结果 3 例 DLBCL 病例均表现为 CD5 阳性，主要的免疫组化抗体结果为 CD20（+）、CD10（-）、BCL-6（+）、MUM-1（+）、BCL-2（+）、C-MYC（+），Ki67（+）、CD5（+）等，根据 Hans 分型均为活化 B 细胞亚型（ABC 亚型）。第一例为 65 岁女性，病变部位为回肠，BCL-2（+，90%）、C-MYC（+，60%）、Ki67（+，90%），提示为 BCL-2、C-MYC 双表达；FISH 结果为阴性。第二例为 70 岁男性，病变部位为左颈部，Ki-67（+，70%），且 EBER（+）；但未进行 FISH 检测。第三例为 52 岁男性，病变部位为扁桃体，Ki67（+，90%）；FISH 结果为 BCL6 阳性，MYC 和 BCL2 为阴性。3 例病例 NGS 检测结果均为阳性，但检测到突变的基因各不相同，除了第三例病例检测到提示预后较差的 TP53 基因突变以外，其余基因突变的临床意义尚不明确，分子检测仍需进一步研究。
结论 在原发性 DLBCL 病例中 CD5 阳性的发生频率较低（约 5-10%），我们收集的 3 例病例均为 ABC 亚型，Ki67 指数均较高。CD5+DLBCL 通常很少继发于慢性淋巴细胞白血病/小淋巴细胞淋巴瘤,且与套细胞淋巴瘤的母细胞样或多形性变异型的区别在于缺乏细胞周期蛋白 CyclinD1 和/或 SOX11 表达。CD5+DLBCL 患者多为老年人，常具有高风险的临床特征，特别是在亚洲国家，并且 CD10 通常阴性，根据免疫组化 Hans 法则分型多为 ABC 亚型。

Xpert MTB/RIF 在结核性脑膜炎中的研究进展

徐婷、张燕、张祥、黄珮珺
江苏省人民医院（南京医科大学第一附属医院）

随着上世纪结核标准化用药的建立，结核病得到了有效控制，但目前全球仍有近百万的感染者，依然是一项世界性公共卫生问题。而结核性脑膜炎是肺外结核中最常见、最严重的类型，其病死率、致残率居高不下，如何进行早期快速诊断对结核性脑膜炎患者的治疗和预后具有十分重要的意义。

近年来越来越多的免疫学和分子生物学方法被运用在结核分枝杆菌检测上，其中，Xpert MTB/RIF 的出现为包括结核性脑膜炎在内的结核病提供了快速有效的诊断方法，是基于一体化的全自动实时 PCR 检测技术。本文就 Xpert MTB/RIF 检测的原理，在结核性脑膜炎中的临床应用和进展作一综述。

PU-0679

4206 例手足口病病毒核酸检测结果分析

唐笑、代冰、唐春燕、刘岱璿、李玲锦
长沙金域医学检验实验室有限公司

目的 分析 4206 例疑似手足口病患儿的肠道病毒核酸检测结果，为湖南地区手足口病原的预防控制提供病原学依据。
方法 选取 2019 年 1 月~2020 年 12 月送检长沙金域医学检验实验室的疑似手足口病患儿的标本作为研究对象，采用实时荧光 PCR 的方法进行肠道病毒通用型（EV）、柯萨奇病毒 A 组 16 型（CA16）和肠道病毒 71 型（EV71）核酸检测，统计分析检测结果，包括性别、年龄、月份的分布情况。
结果 4206 例疑似手足口病患儿检出肠道病毒通用型 1502 例、CA16 型阳性 166 例、EV71 型阳性 1 例，检测阴性 2537 例。其中，肠道病毒通用型阳性检出率明显高于其它两种肠道病毒，各类肠道病毒相比较，差异具有统计学意义（$\chi2=1193.678$，$P<0.01$）。2019 年肠道病毒检出总阳性率与 2020 年相比，差异有统计学意义（$\chi2=54.819$，$P<0.01$）。手足口病患儿男、女病例比例为 1.71:1，男性发病率高于女性。5 岁及以下年龄组手足口病病例占总阳性数的 90.29%。CA16 型手足口病患儿以 1~4 岁儿童为主，通用型感染主要发生在 0~3 岁儿童。湖南手足口病发病有明显的季节性，3~4 月和 9~11 月为湖南地区 2 个发病高峰。
结论 针对疑似手足口病患儿开展肠道病毒核酸检测具有较高的临床意义，可辅助临床诊断并为治疗提供依据。尽早发现并治疗病毒感染引起的手足口病，是疫情防控的关键环节，也是降低其导致的死亡率的有效手段。

The role of autophagy in hepatic fibrosis

Mei Sun
the Second Xiangya Hospital, Central South University

Hepatic fibrosis is a chronic liver injury process, and its continuous development can lead to cirrhosis, hepatic failure or hepatocellular carcinoma (HCC). Autophagy has attracted much attention because of its controversial role in the course of hepatic fibrosis. In this review, we separately introduce the mechanism related to noncoding RNAs and some of the signaling pathways that promoting or inhibiting fibrosis by affect autophagy. Finally, we list some targets related to autophagy that enable hepatic fibrosis therapy and forecast its prospect in hepatic fibrosis. This review will provide new ideas in diagnosing or curing hepatic fibrosis, which will be helpful to reduce the incidence of cirrhosis and its complications.

PU-0681

综合分析人类食管癌中家族性基因 E2Fs 的预后和免疫浸润价值

刘畅
四川省肿瘤医院

背景 E2Fs 是一组高等真核生物中编码转录因子家族的基因。通过调节 G1 / S 和 G2 / M 细胞周期的起始和过渡来调节基因表达。目前在哺乳动物中，已经鉴定出 E2F 家族的八个成员（E2F1-E2F8）。在某些人类恶性肿瘤中，E2F 家族基因表达异常。有研究表明 E2F 家族基因通过参与细胞分化，凋亡和 DNA 损伤反应和细胞死亡来影响肿瘤细胞的生长和侵袭。随着研究深入人们发现 E2F 家族基因可作为某些癌症（包括乳腺癌和胃癌）的诊断和预后生物标志物。然而，不同 E2F 家族基因在食管癌中的表达水平、遗传变异、分子机制、生物学功能以及与食管癌患者预后和免疫浸润的关系尚未完全阐明.
方法 采用 Oncomine、GEPIA、cBioPortal、GeneMANIA、STRING 和 Metascape 数据库，研究 E2Fs 在食管癌中的 mRNA 表达水平、临床相关性分析、预后价值、遗传变异、基因-基因相互作用网络以及功能富集分析。利用 TIMER 数据库研究 E2Fs 表达与食管肿瘤免疫侵袭及 PD-1、PD-L1、CTLA4 的关系。
结果 食管癌患者 E2F1 和 E2F7 的转录水平明显上调，E2F8 的高表达与食管肿瘤患者的肿瘤分期有关。E2F7 的异常表达与食管癌患者的临床预后有关。E2Fs 及其邻近基因的功能主要与 RNA 聚合酶 II 启动子的转录启动有关。E2Fs 及其邻近蛋白的功能主要与细胞周期等有关。我们还发现 E2Fs 的表达与免疫浸润（包括 B 细胞、cd8t 细胞、cd4t 细胞、中性粒细胞、巨噬细胞和树突状细胞）有相关性。与 PD-1 有一定的相关性
结论 本研究为食管癌患者免疫治疗靶点的选择和预后标志物的选择提供了新的思路。

PU-0682

Positive association between MIC gene polymorphism and tuberculosis in Chinese population

En Chen
The First Affiliated hospital of University of South China

The disease progression and morbidity of tuberculosis(TB) infections are determined by virulence of the micro-organism, host genetic factors and environmental factors. The highly polymorphic MHC class I chain-related gene (MIC) could serve as a potential host genetic candidate. To investigate the association of MIC polymorphism with TB infection, 124 patients and 191 ethnically matched controls from Hunan province, Southern China, were genotyped for the MIC polymorphism using polymerase chain reaction-sequence specific priming and sequencing-based typing. The results showed that allele frequencies of MIC-sequence and MICA-STR were different in TB patients in comparison to normal controls (both P<0.05). MICA-A4 and MICA*012:01 alleles were positive associated (OR=2.42, 95% CI: 1.69-3.87; OR=3.41, 95% CI: 2.19-5.33, respectively, both Pc<0.05) while MICA -A5 were inversely associated (OR=0.59, 95%CI: 0.41-0.94, Pc<0.05) with TB. Homozygote MICA*012:01/012:01 was observed to have significant risk effects on TB (OR =4.76，95% CI: 1.94-11.69, Pc<0.05). Additionally, MICB*008 allele conduct a significant risk effect for TB (OR=3.17, 95%CI: 1.80-5.61, Pc<0.05). All the data showed that MIC polymorphism was associated with the variable susceptibility to TB in Chinese population.

PU-0683

BK 病毒试剂盒性能验证

戎国栋、徐婷、张燕
江苏省人民医院（南京医科大学第一附属医院）

BK 病毒为直径约 45nm 的无包膜双链环状 DNA 病毒。其原发性感染多在 10 岁之前，成年人感染率高达 82%。病毒易潜伏在泌尿系统上皮细胞中。正常人因为免疫功能正常，因此绝大部分人群不会出现症状和体征。当人免疫能力下降（如肾移植后），BK 病毒被激活，进入肾小管上皮细胞并复制大量子代病毒，引起细胞坏死，破坏移植肾组织，导致移植肾的功能受损（BKV 肾病）。BK 病毒进入尿液或血液时，分别引起 BKV 尿症和 BKV 血症。国内外数据显示，BKV 肾病、BKV 尿症、BKV 血症的发生率分别为 5.6%、45.6%、22.2%，BK 病毒感染的早发现、早诊断，对于防止肾移植人群发生 BKV 肾病甚至病情恶化，具有重要意义。

我院肾移植人群具有相当数量，因此临床上对 BK 病毒检测的需求也比较大。检验学部分子室为满足临床需求，拟开展 BK 病毒 DNA 定量检测。根据医院试剂采购相关规定，以及检验学部 ISO 15189 质量体系要求，需要对试剂盒进行性能验证。然而目前，国内 BK 病毒 DNA 定量检测试剂盒无统一验证方案及评价标准。本实验室参照我国卫生行业标准 WS/T 492-2016、WS/T 408-2012 及 WS/T 420-2013 中推荐的定量项目精密度、正确度、线性、检出限、特异性验证方案，以乙肝病毒定量检测试剂盒验证的判断标准作为评价依据，验证并确立了 BK 病毒 DNA 核酸检测试剂盒性能验证方案及评价标准。

PU-0684

MICA 基因多态性与海南人群 HBV 易感关联性研究

陈恩
南华大学附属第一医院

目的 研究 MICA 等位基因多态性与海南人群 HBV 感染易感性之间的关联性。
方法 采用 PCR-SSP 和 PCR-SBT 方法对样本 MICA 等位基因的多态性进行检测。
结果 HBV 感染患者中共检出 10 种 MICA 等位基因和 5 种 MICA-STR等位基因，和对照组相比较，MICA* 010、MICA-A5 等位基因可能对 HBV 感染易感(MICA* 010: OR = 3. 88，95% CI: 2.19～6.85，P = 0.000; MICA-A5: OR=1.27，95% CI: 0.92～1.77，P = 0.0068) 。MICA* 008 /045 基因型可能对 HBV 感染不易感，MICA * 010 /010 纯合子基因型可能对 HBV 易感(MICA * 008 /045: OR = 0.09，95% CI: 0.01～1.74，P = 0.0071; MICA* 010 /010: OR = 4.41，95% CI: 1.26～15.46，P = 0. 0106) 。
结论 MICA 等位基因多态性与海南人群 HBV 感染的易感性间存在关联性。

PU-0685

PDZK1 acts as a tumorigenic gene in glioma via interacting with AKT1

Xing Ren
the First Affiliated Hospital of University of South China

Glioma is the most frequently diagnosed primary brain tumour and typically manifests poor prognosis because of malignant proliferation and invasion. It is urgent to detect the mechanisms driving glioma tumourigenesis and develop novel treatments to address this deadly disease. PDZK1 is a multidomain protein with four PDZ domains observed at the apical membrane of renal

proximal tubular cells. Here, we first revealed that PDZK1 is expressed at high levels in gliomas. Knockdown of PDZK1 inhibits glioma cell proliferation and invasion in vitro. Mechanistically, further investigations found that PDZK1 interact with AKT1 and loss of PDZK1 expression by siRNA inhibited the activation of the AKT/mTOR signalling pathway, leading to cell cycle arrest and apoptosis. Clinically, high expression of PDZK1 predicts a poorer prognosis for glioma patients than low expression of PDZK1. Altogether, our study revealed that PDZK1 acts as a novel and potentially selective target for glioma.

PU-0686

尿液外泌体长链非编码 RNA MALAT1 和 HIF1A-AS2 对膀胱癌诊断的价值

高娟、王青、王云杰、马梦影、王科勇、李卓
西安医学院第一附属医院

目的 探讨尿液外泌体中 lncRNA MALAT1 和 HIF1A-AS2 水平与膀胱癌发生和发展的关系及对膀胱癌诊断的价值。
方法 分别测定 40 例膀胱癌患者、膀胱良性疾病患者及健康人尿液外泌体中 MALAT1 和 HIF1A-AS2 的水平。比较 3 组尿液中 MALAT1 和 HIF1A-AS2 水平的差异，并分析膀胱癌患者 MALAT1 和 HIF1A-AS2 水平与肿瘤病理分级、分期及肿瘤大小的关系。应用 ROC 曲线分析 MALAT1 和 HIF1A-AS2 诊断膀胱癌的敏感度和特异度。
结果 膀胱癌组尿液外泌体中 MALAT1 和 HIF1A-AS2 水平显著高于膀胱良性疾病组和健康对照组，差异具有统计学意义 (P<0.01)；膀胱癌 G1 级组 MALAT1 和 HIF1A-AS2 水平与 G2-G3 级组比较，差异无统计学意义（P＞0.05）。膀胱癌不同分期的比较结果显示，Ta 期、T1-T2 期和 T3-T4 期 3 组之间 MALAT1 和 HIF1A-AS2 水平差异无统计学意义（P＞0.05）；而肿瘤直径≥3.0cm 组患者 MALAT1 和 HIF1A-AS2 水平明显高于直径＜3.0cm 组，且差异具有统计学意义（P＜0.05）。结果表明，MALAT1 的 ROC 曲线下面积(AUCROC) 为 0.777，当 cut-off 值为 398.64 时，其筛查膀胱癌的敏感性为 77.5%，特异性为 70.0%；HIF1A-AS2 的 ROC 曲线下面积(AUCROC) 为 0.797，当 cut-off 值为 350.21 时，其筛查膀胱癌的敏感性为 72.5%，特异性为 80.0%；MALAT1 和 HIF1A-AS2 联合检测的 AUCROC 为 0.862，敏感性为 80.0%，特异性为 92.5%，均高于两项指标的单独筛查价值。
结论 膀胱癌患者尿液外泌体 MALAT1 和 HIF1A-AS2 表达水平明显升高，MALAT1 和 HIF1A-AS2 有望成为膀胱癌诊断的潜在生物学标志物。

PU-0687

Targeting of VPS18 by the lysosomotropic agent RDN reverses TFE3-mediated drug resistance

Huanmin Niu
the Second Hospital of Shandong University

Transcription factor E3 (TFE3) is a critical stimulator to enhance the lysosomal biogenesis. Here, we demonstrated a novel role of TFE3 in mediating multidrug resistance (MDR). We found that chemotherapeutic agents such as docetaxel significantly activated TFE3, which resulted from the calcineurin-mediated TFE3 dephosphorylation in resistant cells. Activation of TFE3/lysosome facilitated multidrug resistance-associated protein-2 (MRP2) expression and lysosomal localization rather than promoting the migration of MRP2 to cellular membrane, which contributed to the development of MDR via the enhancement of drug sequestration in lysosomes. TFE3

deficiency reduced MRP2 lysosomal distribution and drug trapped in lysosomes, which significant restored the sensitivity of drug-resistant cells to chemotherapeutics. Importantly, the targeting of lysosomal vacuole protein sorting 18 (VPS18) by a lysosomotropic agent RDN, a novel derivative of bisbibenzyl riccardin D that directly interacted with the RING domain of VPS18, predominantly suppressed the resistant cell survival with no detectable toxicity. Further analysis revealed that the VPS18 was overexpressed in several cancer types and could be noticeably induced after chemotherapy. A high level of VPS18 exhibited drug resistance, associated with the poor survival, whereas VPS18 silencing dramatically inhibited tumor growth in animal study. In conclusion, TFE3-induced MRP2 translocation in lysosomes promotes the development of chemoresistance, and the VPS18 is emerging as a novel biomarker for predicting cancer prognosis and a potential target to overcome therapeutic resistance in cancer treatments.

基于催化发夹自组装和杂交链式反应的可视化传感器快速检测粪便中幽门螺杆菌的研究

邹海民、王东生
四川省肿瘤医院

目的 建立一种快速、灵敏检测粪便中幽门螺杆菌的可视化生物传感检测方法。
方法 采用 NUPACK 软件设计了 HP1、HP2、HP3 和 HP4 四条单链 DNA 发夹结构，其中 HP3 和 HP4 的 5’端用纳米金修饰。当幽门螺杆菌菌体与核酸适配体特异结合后将挤下与核酸适配体互补的催化链（C*），游离的催化链（C*）触发 HP1、HP2 的催化发夹自组装反应（catalytic hairpin assembly，CHA），形成含游离 Toehold 端的 HP1-HP2 复合物，游离 Toehold 端接着触发 HP3、HP4 的杂交链式反应（hybridization chain reaction，HCR）形成 HP2-HP1-[HP3-HP4]n 长链复合物。最后，根据纳米金团聚后溶液颜色变化及溶液吸收光谱波长的位移对幽门螺杆菌进行快速可视化半定量检测。研究对纳米金的制备条件进行了优化，同时对 CHA 反应条件（包括 HP1、HP2 序列，缓冲液种类等）和 HCR 反应条件（包括 HP3、HP4 序列，HP3、HP4 与纳米金的连接，缓冲液种类等）进行了优化。
结果 实验考察了方法的灵敏度、特异性、检出限等方法学参数，并采用构建的传感器对 15 例幽门螺杆菌感染者及 20 例对照人群（所有 35 人均进行 14C 尿素呼吸试验及快速尿素酶试验）粪便样本进行检测，结果显示建立的可视化传感器能够快速、准确从粪便样本中检测出幽门螺杆菌。
结论 研究建立的基于催化发夹自组装和杂交链式反应的可视化传感器具有可靠、特异、敏感的特点，适用于粪便中幽门螺杆菌的快速可视化检测。

PU-0689

新冠标本冷冻保存对病毒核酸检测结果的影响

顾春荣、刘京萍、穆原
江苏省人民医院（南京医科大学第一附属医院）

目的 分析 3 种类型新冠标本冷冻保存对病毒核酸检测结果的影响。
方法 收集 38 份-80℃保存的灭活新冠病人标本（18 份口咽拭子、4 份鼻咽拭子、16 份痰液），江苏科德新冠病毒核酸检测试剂盒和华大基因新冠病毒核酸检测试剂盒同时检测。
结果 18 份口咽拭子江苏科德和华大基因新冠病毒核酸检测试剂盒检测阳性率分别为 61.1%和 50%，4 份鼻咽拭子江苏科德和华大基因新冠病毒核酸检测试剂盒检测阳性率均为 100%，16 份痰液江苏科德和华大基因新冠病毒核酸检测试剂盒检测阳性率分别为 43.8%和 25%。

结论 -80℃保存的鼻咽拭子标本可用于病毒核酸检测，而口咽拭子和痰液标本却不能在-80℃保存后用于病毒核酸检测。

PU-0690

NGS 快速分析系统的临床应用

韩雪莹、朱丽蒙、张暨
郑州金域临床检验中心有限公司

目的 建立并探讨二代测序（NGS）快速分析系统在肿瘤测序数据分析中的临床实用效果。
方法 选取 500 例郑州金域 2020 年临床样本，以下机数据为研究对象，对分析人员和 NGS 快速分析系统筛选出致病位点的准确度、重复性和耗时进行比对并分析金域核心系统导出的报告单与 NGS 快速分析系统导出报告单内容的一致性。NGS 快速分析系统分为两个模块：模块一对生信分析的表格进行条件筛选，排除多态性突变及良性位点并生成格式正确、可被软件识别的有效样本 Excel 表以备后续进行串行或并行的数据检索和处理。模块二借助 cBioPortal，Cosmic，NCBI Pubmed 等多个数据库进行综合分析，通过机器人学习方法进一步提高分析的准确性及可信度。该模块主要识别该位点是否处于蛋白的功能区，有无功能研究，有无小型研究结果提示其有辅助诊断和（或）提示预后的意义，有无良性证据并根据检索结果进行临床分级并给出诊断建议。
结果 快速分析系统分析 500 例下机数据的结果与人工分析一致，准确定和重复性均达标，在耗时方面进行三因素三水平的正交试验分析，分析方法这一因素对分析时间的影响显著（$P<0.01$），选择系统分析为最优方案，其次限制分析的主要时间为标本量，影响因素最小的为检测项目类型。另 PRD 系统与 NGS 快速分析系统导出报告单的内容差异不明显。
结论 NGS 快速分析系统可一次性处理大批量实验数据并快速检出有临床意义的突变以实现结果快速报告，同时降低人员操作主观出错率，替代了人员的重复性工作，不失为一种新型的一体化数据分析解决模式。

LINC01559 promote colon cancer cell proliferation and promotes apoptosis by regulating β-catenin signaling pathway

Ji Wu[1]、Dehui Deng[2]、Wensheng Gong[2]
1. Guangdong Provincial People's Hospital, Guangdong Academy of Medical Sciences
2. 深圳市人民医院

Objective Long ncRNAs (lncRNAs) play an important role in carcinogenesis. LINC01559, as an identified lncRNA, has been reported in several cancers but not in colon cancer. This study aims to explore the effect of LINC01559 on colon cancer tumor growth and metastasis and its underlying mechanism.
Methods Bioinformatics analysis was used to analyze the expression and prognosis of LINC01559 in colon cancer patient with the TCGA database. RT-qPCR was performed to determine the expression of LINC01559 in colon cancer cells. CCK8, colony formation, wound healing, transwell and flow cytometry, assays were used to detect the proliferation, migration, invasion and apoptosis of colon cancer cell. Gain-and loss-function assays were applied to verify the effects of LINC01559 in Wnt/β-catenin signaling. Western blotting assay was used to detect the effects of LINC01559 on the key point protein in Wnt/β-catenin signaling.
Results LINC01559 was upregulated in colon cancer tissues and its high expression was associated with the poor prognosis. knockdown of LINC01559 significantly affected colon cancer

cells proliferation, migration, invasion and apoptosis. To investigate the underlying mechanisms of LINC01559 in colon cancer, we found that LINC01559 can activate the Wnt/β-catenin signaling. Rescue results revealed that the inhibition of the Wnt/β-catenin signaling pathway in LINC01559-overexpressing colon cancer cells suppressed cellular proliferation, migration and invasion.
Conclusion In summary, our data indicated that LINC01559 might serve as an oncogene by regulating β-catenin signaling pathway and may be a therapeutic target for colon cancer treatment.

PU-0692

高胆红素对丙肝病毒核酸定量检测结果的影响

闫静
宝鸡高新医院

目的 探讨不同浓度的胆红素对 HCV-RNA 定量检测结果的影响。
方法 将已知 HCV-RNA 定量检测结果为阴性的不同浓度的高胆红素血清标本加入丙肝病毒定量不同浓度梯度血清标本中，采用实时荧光定量 PCR 方法对其 HCV-RNA 进行定量检测，通过与原始结果比较分析，评价高胆红素对血液标本中 HCV-RNA 检测结果的影响。
结果 加入不同浓度高胆红素的血标本后，HCV-RNA 阴性无影响；HCV-RNA 三次方结果偏倚>7.5%；其余 HCV-RNA 载量大于 103 方结果偏倚<±7.5%。
结论 高含量胆红素对 HCV-RNA 定量检测临界阳性样本有一定的影响，病毒载量较低的高胆红素样本进行 HCV-RNA 定量检测会引起较大的正向偏倚。

PU-0693

TGF-β1 及其基因单核苷酸多态性（SNP）与心房颤动相关性研究进展

聂清美
贵阳市云岩区第二人民医院

房颤（atrial fibrillation，AF），是一种最为常见的快速性心律失常类型，房颤的发病机制极其复杂，是心律失常领域尚未攻克的顽固性疾病。转化生长因子 β1（transforming growth factor beta 1, TGF-β1）是房颤发生、发展和维持的结构基础之一，与房颤的发生发展息息相关。TGF-β1 基因型和 TGF-β1 血浆浓度存在相关性，其位点有 TGF-β1 -800G/A、TGF-β1 -509C/T，同时检测 TGF-β1 基因-800G/A 和-509C/T 位点的有着重要的临床意义，TGF-β1 基因-800G/A 和-509C/T 位点存在明显的连锁不平衡，其基因多态性和相关因子的研究将有利于我们进一步了解房颤发生发展的危险因素，为临床对房颤的诊断及治疗提供理论依据。

PU-0694

lncRNA-ANKRD36BP2 在肺腺癌中诊断预后研究

陈少婷、曹鹏驹、郭嘉晶、曾艳芬、陈发林
福建省立医院

肺癌是全球最常见的恶行肿瘤之一，更有效的诊疗手段目前仍然在不断探索，长链非编码 RNA(Long non-coding RNA, lncRNA)参与肺腺癌（lung adenocarcinoma，LUAD）的演变，而 lncRNA-ANKRD36BP2 对其的影响还不清楚，本文将探究 lncRNA-ANKRD36BP2 在 LUAD 中的

潜在价值。收集 TCGA 中 lncRNA-ANKRD36BP2 表达水平数据和患者临床数据；收集我院 LUAD 和癌旁样本，采用荧光定量 PCR 技术检查其相对表达水平。利用生存分析探究 lncRNA-ANKRD36BP2 表达水平与患者预后的关系；ROC 曲线（receiver operating characteristic curve）评价其诊断价值；COX 逻辑回归分析影响患者预后的独立危险因素。**结果** lncRNA-ANKRD36BP2 于肺腺癌组织中异常低表达（P = 0.008）。通过 TCGA 数据可知其表达水平和 M 分期(P = 0.254)、年龄（P = 0.765）及性别（P = 0.429）无关，和 T 分期（P = 0.009）、N 分期（P = 0.044）、TNM 分期（P = 0.001）及吸烟（P = 0.004）有关。而我们临床验证样本尚未发现其表达水平与临床参数显著相关。通过生存分析发现低表达 lncRNA-ANKRD36BP2 患者预后较高表达 lncRNA-ANKRD36BP2 患者更差。多因素 COX 逻辑回归显示 T 分期及 TNM 分期可作为肺腺癌患者预后的独立危险因素。诊断效能显示 lncRNA-ANKRD36BP2 曲线下面积为 0.6463。lncRNA-ANKRD36BP2 在肺腺癌组织中异常低表达，其表达水平对于肺腺癌的诊断具有一定价值，低表达 lncRNA-ANKRD36BP2 患者其预后越差，其具有成为肺腺癌治疗靶点的可能性，可为将来提高肺腺癌患者预后提高新思路。

PU-0695

常见肿瘤标志物在肺癌血清外泌体中的表达及临床意义

陈良远、周欢、杨国溜、康艳丽、陈发林
福建省立医院

目的 肺癌的主要实验室诊断指标包括神经元特异烯醇化酶（NSE），细胞角质蛋白 19 片段 21-1（CYFRA21-1），癌胚抗原（CEA），他们都有一定的局限性，本次研究探讨了常见肿瘤标志物 NSE 在肺癌患者和健康人血清外泌体中的差异表达，探究其临床意义。
方法 从 68 个肺癌患者和 35 个健康人的血清中提取外泌体，从外泌体中提取外泌体蛋白，采用 Roche Cobas 602 电化学发光分析仪检测外泌体 NSE 在肺癌患者和健康人血清样本中的表达水平。
结果 实验结果显示，健康人血清外泌体 NSE 高表达，肺癌患者血清外泌体 NSE 低表达，具有明显的差异性。
结论 肺癌患者和健康个体的血清外泌体中 NSE 的表达有较大差异，差异表达的外泌体 NSE 有可能作为潜在的肿瘤诊断标志物，值得进一步深入研究。

PU-0696

血清外泌体的 ENST00000422944 作为肺癌诊断标志物的筛选与验证

陈良远、康艳丽、杨国溜、尤剑彬、陈发林
福建省立医院

背景 肺癌是一种常见肿瘤，以其高发病率和高死亡率为特征。最近已有多项研究表明，许多外泌体中的长链非编码 RNA（lncRNA）在肺癌患者与健康人群中具有差异表达的现象。本研究旨在之前研究的基础上，验证 ENST00000422944 在肺癌诊断中的诊断价值。
方法 提取肺癌患者与健康人血清中外泌体中的 lncRNA，筛选出需要验证的 lncRNA 后，进一步通过实时荧光定量 pcr（qPCR）以及统计学分析来对其进行验证。
结果 经统计学分析，ENST00000422944 在肺癌患者以及健康人群中的血清表达水平有明显差异，且对于 TNM 分期也有一定的临床意义。通过 qPCR 验证后，更加进一步证明 ENST00000422944 对于肺癌早期筛查有着巨大潜力。
结论 ENST00000422944 在健康人群与肺癌患者的血清中有着差异表达，其有望作为新型的肺癌诊断与筛查的标志物。

PU-0697

肺癌患者血清外泌体中 hsa_circ_0001492 和 hsa_circ_0002490 诊断性能的初步分析

陈良远、康艳丽、杨国溜、尤剑彬、陈发林
福建省立医院

目的 探讨环状 RNA（circRNA）在肺腺癌患者和健康人血浆外泌体中的差异表达，通过分析特异性外泌体 circRNA 的表达谱为研究肺腺癌的发病机制建立一定的基础。
方法 从前期研究筛选出差异表达的 circRNA 中挑选其中两个 circRNA：hsa_circ_0001492 和 hsa_circ_0002490 进行进一步研究，通过扩大分析样本量并通过实时荧光定量 PCR（qPCR）进行验证。
结果 在早期肺腺癌患者和健康人血清外泌体中 hsa_circ_0001492 和 hsa_circ_0002490 差异表达，其中 hsa_circ_0001492ROC 曲线下面积（AUC）为 0.8167；hsa_circ_0002490ROC 曲线下面积（AUC）为 0.8588。
结论 肺腺癌患者和健康个体的血清外泌体中 hsa_circ_0001492 及 hsa_circ_0002490 的表达有较大差异并具有表达特异性，具备成为肺腺癌早期诊断标志物的潜力。

分子诊断技术虚拟仿真实验教学平台的构建与应用

杨柳、辛毅娟、程晓丽、李蕊、张翔、周磊、刘家云
空军军医大学西京医院

新冠疫情的暴发凸显了分子诊断技术的重要性。如何做好分子诊断技术规范化操作及实验室生物安全相关培训工作，提高操作培训的教学质量，是做好疫情防控工作的前提和保障。
目的 为提高分子诊断技术的实验培训效果，依托省级临床检验研究中心、省级 PCR 上岗培训基地的建设，在新冠核酸检测的操作技术培训中，采用虚拟仿真技术，使学生通过人机交互的方式对技术原理和实验操作流程进行“探究式、参与式”学习，并探讨平台的建设方法、效果及应用价值。
方法 1.情景化实验：我们开发的虚拟仿真实验平台实现全交互式场景教学。教学中根据实际工作的不同情景设计每项实验，学生可根据自己的学习进度自主学习，通过操控 3D 虚拟人完成实验操作流程。2.模块化教学：实验教学分为演练和考核两个模块。集“学、测、评”于一体，使学生即时了解对知识点的掌握情况并有重点地进行学习。3.线上线下结合的实训体系：虚拟仿真实验与实体单个训练相结合，提高学习效果。同时，学生在线学习遇到疑问时，教师在线解答，做到线上线下相结合的混合式教学。

PU-0699

Has_circ_0002490 可作为肺癌检测新的生物标志物

杨国溜、康艳丽、陈良远、尤剑彬、陈发林
福建省立医院

目的 探讨环状 RNA(circRNA)作为肺癌检测的新生物标志物，对肺癌的诊断价值。
方法 收集 2018 年 10 月至 2020 年 1 月福建省立医院收治的肺部肿瘤患者 5 例，通过高通量测序技术筛选出 5 个表达差异的 circRNA。扩大样本量，收集 79 对肺癌组织和邻近正常肺组织，分为肿瘤组和对照组。检测受试者组织中 circRNA2490、4891、74368、87357、0896 的相对表达水平。用受试者工作特征(ROC)线的相关参数分析。

结果 肿瘤组、对照组中 circRNA2490、4891、74368、87357、0896 的相对表达水平比较，差异均有统计学意义(P<0.05)。曲线下面积 AUC 分别为 0.832、0.679、0.809、0.743、0.683，circRNA2490、74368、0896 联合的曲线下面积 AUC 为 0.855。
结论 circRNA2490、4891、74368、87357、0896 的相对表达量检测对肺癌诊断均有诊断价值，其中 circRNA2490 预测价值最高，另外，circRNA2490、74368、0896 联合检测的诊断效能更佳，有望成为诊断肺癌新的诊断生物标志物。

PU-0700

重度子痫前期孕妇胎盘组织中 TMEM16A 表达的研究

王学翔
山东大学第二医院

目的 检测正常孕妇、重度子痫前期孕妇胎盘组织中 TMEM16A 的表达，分析 TMEM16A 在这二者之间的表达差异，探讨 TMEM16A 在重度子痫前期疾病发生发展中的作用。
方法 选取近 3 年在山东大学第二医院生产的孕妇，其中重度子痫前期孕妇 20 例，正常孕妇 20 例。利用实时荧光定量 PCR 技术（Real time PCR）和免疫印迹法(Western blot)分别检测两组孕妇胎盘中 TMEM16A 的 RNA 相对表达量和蛋白的表达水平，进行统计学分析。
结果 与正常孕妇胎盘组织中 TMEM16A 表达相比，重度子痫前期患者胎盘组织内 TMEM16A 的表达水平（RNA 和蛋白）显著增加。
结论 TMEM16A 在孕妇胎盘组织中有表达，与正常孕妇胎盘组织相比，重度子痫前期孕妇胎盘组织中 TMEM16A 的表达水平高。

PU-0701

Smoothened loss is a characteristic of neuroendocrine prostate cancer

Lili Wang
Shandong Provincial Qianfoshan Hospital

Purpose Hedgehog (Hh) signaling promotes castration-resistant prostate cancer (CRPC) by supporting androgen-independent prostate cancer cell development and growth; however, its role in neuroendocrine prostate cancer (NEPC) has not yet been explored. In this study, we assessed the expression of key genes involved in Hh signaling in prostate cancer and investigated the potential role of smoothened (SMO) in the pathogenesis of NEPC.
Methods Six public datasets, each containing cases of prostate adenocarcinoma (AdPC) and NEPC, were analyzed to compare the differential mRNA expression of 6 classic Hh signaling genes. The SMO, synaptophysin (SYP), chromogranin A (CHGA) and androgen receptor (AR) proteins were evaluated in human tissues from 5 cases of NEPC, 2 cases of AdPC mixed with NEPC, 2 cases of AdPC with neuroendocrine differentiation and 22 cases of high-grade AdPC as determined by an immunohistochemistry assay. Gene set enrichment analysis (GSEA) was performed to identify relevant genetic signatures associated with SMO expression based on the public datasets. Stable SMO-knockdown LNCaP and C4-2B cells were established with a lentiviral system, and the expression of SMO, Gli1, AR, PSA, and REST was assessed by real-time PCR and western blot. Secreted PSA in the conditioned medium was assessed by ELISA. Gli1 was ectopically expressed performed by the transfection of Gli1 cDNA into SMO-knockdown LNCaP cells, and western blot was used to assess of AR and PSA expression.
Results The mRNA level of SMO was dramatically downregulated in NEPC samples compared with AdPC samples in all 6 public datasets. SMO protein loss was observed in 100% of NEPC

samples but in only 9% (2 of 22) of high-grade AdPC samples. GSEA results showed that SMO loss was closely correlated with AR signaling activity. Stable SMO knockdown significantly attenuated AR signaling activity and suppressed AR expression, while Gli1 overexpression partially reversed the inhibitory effects of SMO knockdown on AR signaling activity and AR expression in LNCaP and C4-2B cells.
Conclusion These results demonstrate that SMO loss is a characteristic of NEPC and that detecting SMO by IHC could aid pathologists in NEPC diagnosis. SMO loss may promote NEPC pathogenesis by modulating AR signaling.

PU-0702

Clinical laboratory evaluation of COVID-19

Li Zhang
The First Affiliated Hospital of Shandong First Medical University & Shandong Provincial Qianfoshan Hospital

COVID-19, caused by SARS-CoV-2, is a highly infectious disease, and clinical laboratory detection has played important roles in its diagnosis and in evaluating progression of the disease. Nucleic acid amplification testing or gene sequencing can serve as pathogenic evidence of COVID-19 diagnosing for clinically suspected cases, and dynamic monitoring of specific antibodies (IgM, IgA, and IgG) is an effective complement for false-negative detection of SARS-CoV-2 nucleic acid. Antigen tests to identify SARS-CoV-2 are recommended in the first week of infection, which is associated with high viral loads. Additionally, many clinical laboratory indicators are abnormal as the disease evolves. For example, from moderate to severe and critical cases, leukocytes, neutrophils, and the neutrophil-lymphocyte ratio increase; conversely, lymphocytes decrease progressively but are over activated. LDH, AST, ALT, CK, high-sensitivity troponin I, and urea also increase progressively, and increased D-dimer is an indicator of severe disease and an independent risk factor for death. Severe infection leads to aggravation of inflammation. Inflammatory biomarkers and cytokines, such as CRP, SAA, ferritin, IL-6, and TNF-α, increased gradually. High-risk COVID-19 patients with severe disease, such as the elderly and those with underlying diseases (cardiovascular disease, diabetes, chronic respiratory disease, hypertension, obesity, and cancer), should be monitored dynamically, which will be helpful as an early warning of serious diseases.

G6PC 基因复杂杂合突变致糖原累积病 Ia 型合并先天性心脏病一例及诊断思路探讨

王晶、陈健康、高倩、周磊、刘家云
空军军医大学西京医院

糖原累积病（Glycogen storage Disease, GSD）是糖原和脂质在肝、肾内的异常累积导致肝脏和肾脏的肿大为特点的一种常染色体隐性遗传病。其中Ⅰ型又称 von Gierke 病，主要包括Ⅰa 和Ⅰb 两种亚型,Ⅰa 为葡萄糖-6-磷酸酶缺乏症，Ⅰb 为葡萄糖-6-磷酸转移酶缺陷[1]。2018 年 GSD Ⅰ型被国家卫生健康委员会等 5 部门联合制定的《第一批罕见病目录》纳入，以低血糖、高乳酸血症、高尿酸血症、高脂血症和肝腺瘤为特征。现报道临床检验工作中发现的糖原糖原贮积病 Ia 型合并先天性心脏病一例。

CRISPR/Cas9 系统构建 TSC1 基因敲除的 HEK293 稳定细胞株

王晶、刘家云
空军大学第一附属医院

目的 利用 CRISPR/Cas9 基因编辑系统在 HEK293 细胞系中对 TSC1 基因稳定敲除，并对其敲除效果进行鉴定。
方法 根据 TSC1 基因的序列设计 sgRNA，将 sgRNA 克隆到载体 lentilCRISPRv2 上，将连接产物转化至 Stbl3 感受态细胞，对菌液进行测序鉴定。将鉴定成功的 lentiCRISPRV2-sgTSC1 质粒转染至 HEK293 细胞，加入嘌呤霉素进行筛选，筛选后制备单细胞悬液铺板于 15cm 培养皿，挑选单细胞克隆进行 PCR 鉴定，选取条带单一的细胞株用蛋白免疫印迹法鉴定 TSC1 基因的表达。
结果 成功构建 lentiCRISPRV2-sgTSC1-1/2 重组质粒，并利用该质粒完成对 TCS1 基因的定点切割，蛋白免疫印迹法结果显示细胞中无 TSC1 表达。
结论 用 CRISPR/Cas9 系统成功构建 TSC1 基因敲除的稳定细胞株，为后续实验奠定了基础。

PU-0705

CREB-TFDP3 Promotes Prostate Carcinoma Cell Growth by inhibiting E2F1-Dependent Apoptosis

rui li、liu yang、juan wang、xiaoke hao、yueyun ma
Air force medical uiversity xijing hospital

Background The cAMP-responsive element-binding protein (CREB) is a transcription factor that controls cell differentiation and survival. CREB is overexpressed and constitutively phosphorylated in several human cancers, including prostate cancer (PCa). However, the regulation of CREB in PCa remains to be deciphered. We previously demonstrated that TFDP3 negatively regulates E2F1 transactivation, which is important in PCa carcinogenesis. And 5 CREB binding sites were found in the upstream of TFDP3 promoter.
Methods Luciferase and chromatin immunoprecipitation assays were used to determine the association between CREB and TFDP3. Immunohistochemical staining andimmuno-cytofluorescence assays were performed to determine the expression of CREB and TFDP3 in a prostate cancer tissue microarray and cell lines. Cell lines stably expressing the wild-type, overexpression or knockout of CREB and TFDP3 were established. The protein expression of CREB and TFDP3 were detected by western blot analysis. CCK-8, TUNEL staining and cell cycle analysis were used to analyze the proliferation and apoptosis of the stable cell lines in vitro. The tumor growths were evaluated using nude mice xenograft models.

PU-0706

实时荧光核酸恒温扩增技术在检测分泌物中 MRSA 的应用

张维清、杨滨
福建医科大学附属第一医院

目的 对实时荧光核酸恒温扩增技术（simultaneous amplification and testing method,SAT）检测创面分泌物中耐甲氧西林金黄色葡萄球菌（MRSA）核酸试剂盒（RNA 恒温扩增）应用进行评价。
方法 收集我院临床各科室于 2016 年 12 月至 2017 年 1 月送至检验科微生物室 347 份分泌物标本,分别用实时恒温扩增技术和 ChromID MRSA 产色平板筛选 MRSA。当 SAT 法和 MRSA 培养结果不相符时,进行冻存的备用标本 PCR 扩增、第三方测序,以 MRSA 培养结果加 PCR 测序结果作为本

次试验"扩大金标准",计算 SAT 的灵敏度、特异性、阳性预测值、阴性预测值,并进行相应的统计学分析。
结果 以 ChromID MRSA 产色平板筛选加 PCR 测序作为"扩大金标准",SAT 法检测 MRSA 的敏感度为 90.91%、特异度为 99.40%、阳性预测值为 83.33%、阴性预测值为 99.40%,对 MRSA 的最低检出下线为 102 拷贝/mL,Kappa 系数为 0.85。
结论 SAT 技术在检测分泌物中 MRSA 具有很高的灵敏度、特异性,而且准确、可靠,与传统的细菌培养相比耗时短,为 MRSA 的实验室诊断提供新的检测方法。

PU-0707

Long noncoding RNA LINC00511 promotes gastric cancer progression via regulation of p21 and activation of the AKT and STAT3 pathways

Shengkai Huang 、Hong Lin、Ruo-Xuan Ni、Mei Zhao、Dong-Dong Li、Yan Li、Ke-Xin Li、Qiao Zhang、Chang-Zhi Huang
National Cancer Center/Cancer Hospital, Chinese Academy of Medical Sciences and Peking Union Medical College, Beijing, 100021, China

Aims Multiple studies suggest that long intergenic noncoding RNA 00511 (LINC00511) plays an important role in all kinds of human cancers. However, the molecular role of LINC00511 in gastric cancer (GC) is still poorly understood and remains largely unexplored.
Methods The expression level of LINC00511 in human serum was determined by reverse transcription and quantitative polymerase chain reaction (qRT-PCR) experiments. CCK-8 assays were used to examine cell proliferation. Cell cycle progression was detected by flow cytometry. BALB/c nude mice were used for tumor transplantation experiments. Protein expression was detected by western blots.
Results In this study, we found that the expression of LINC00511 was upregulated in the serum of patients with gastric cancer and in cell lines derived from gastric cancer. Functional gain and loss experiments showed that overexpression of LINC00511 could promote the proliferation and invasion of gastric cancer cells in vitro, while depletion of LINC00511 inhibited cell growth and induced cell cycle arrest. Mechanistically, we found that LINC00511 downregulated p21 and activated the AKT and STAT3 pathways.
Conclusion Our findings show that LINC00511 accelerates gastric cancer progression by targeting p21 and activating the AKT and STAT3 pathways, and it could be a potential target for future treatments.

长春地区 1593 例人群解脲脲原体感染情况分析

刘明珠
吉林金域医学检验所有限公司

目的 了解本地区 2020 年内 1593 例人群泌尿生殖道解脲脲原体感染情况，为本地区解脲脲原体感染患者诊治提供参考依据。
方法 本实验所用试剂购于上海科华生物工程股份有限公司
1.核酸提取
1.1 吸取 100ul 样品处理液 A 于 0.5ml 离心管中，再加入 100ul 被测样本。
1.2 震荡混匀 13000rpm 离心 10min。
1.3 吸弃上清加入 50ul 样品处理液 B，震荡混匀 2000rpm 离心数秒，100℃干浴 10min。

1.4 3000rpm 离心 10min，取 2ul 上清为 PCR 反应模板。
2.PCR 试剂准备
根据待扩增样品数将 UU 反应液分装至 PCR 反应管中，每管分装 28ul。
3.加样
在 PCR 反应液管中分别加入处理好的样本及阴性、阳性对照各 2ul。
4.PCR 扩增
4.1UNG 酶反应：温度 50℃，时间 2 分钟，循环数 1。
4.2 预变性：温度 94℃，时间 2 分钟，循环数 1。
4.3 变性：温度 94℃，时间 10 秒，60℃时荧光检测，检测通道：FAM。
4.4 退火、延伸：温度 60℃，时间 30 秒,步骤 3 和 4 循环数 40 个。
结果 经检测 1593 例人群样本，其中检测到 UU-DNA673 例，未检测到 UU-DNA920 例，阳性率 42.24%。
结论 长春地区 1593 例样本中，感染解脲脲原体数量为 673 例，阳性率为 42.24%，因此通过实时荧光 PCR 的技术手段可以对解脲脲原体进行检测，可辅助临床进行早诊断、早治疗,并为性传播疾病的流行病学研究提供可靠依据。

PU-0709

福建省汉族乙型肝炎病毒感染者胆固醇 7α-羟化酶基因的多态性分析

吴文楠、欧启水
福建医科大学附属第一医院

目的 探讨胆固醇 7α-羟化酶（CYP7A1）基因多态性与福建汉族人 HBV 感染后不同临床结局之间的相关性,为了解 HBV 相关疾病的发生发展机制奠定基础。
方法 病例对照研究。收集 2015 年 5 月至 2016 年 6 月在福建医科大附属第一医院肝病中心未经抗病毒治疗的 HBV 持续感染者 586 例,乙型肝炎康复者 225 例（年龄在 35～55 岁之间）。未经抗病毒治疗的 HBV 持续感染组包括慢性乙型肝炎患者亚组（246 例）、乙型肝炎相关性肝硬化亚组（177 例）和乙肝相关性肝癌亚组（163 例）。采用改良的多重高温连接酶检测反应技术（iMLDR）对 CYP7A1 基因的 rs3824260、rs4738687 和 rs8192871 位点进行检测,在 HBV 持续感染组、乙型肝炎康复组以及慢性乙型肝炎亚组、肝硬化亚组和肝癌亚组之间进行两两比较,校正年龄性别因素运用二分类 Logistic 回归模型和卡方检验分析基因分型结果。
结果 rs3824260 位点各基因型在各组间的分布差异无统计学意义（X2=1.565,P=0.459）,相较于肝癌组,rs4738687 的突变型 GG 基因型频率在非肝癌组中显著增高（X2=4.403,P=0.041;X2=6.940,P=0.009）,性别分层结果显示男性分组的 rs4738687 的各基因型在 HBV 持续感染组间的分布差异有统计学意义（X2=10.697,P=0.030）。
结论 CYP7A1 基因多态性与福建汉族 HBV 感染者的不同临床结局有关。rs3824260 位点突变具有一定的性别倾向,在男性患者中突变等位基因检出比例更高,携带 rs3824260 C 等位基因的男性乙型肝炎患者更有机会转为乙肝康复;rs4738687 位点可能与福建汉族人肝癌的发生有关,尤其是在男性分组中,GG 基因型可能会延缓肝癌的发生发展;未发现 rs8192871 位点与 HBV 感染的不同临床结局存在相关性。

Long non-coding RNA LINC00662 promotes proliferation and migration of breast cancer cells via regulating the miR-497-5p/ EglN2 axis

Long Cheng、Zihe Xing、Peng Zhang、Wuqin Xu
The First Affiliated Hospital of Wanan Medical College

Previous reports indicated that ong intergenic non-protein coding RNA 662 (LINC00662) plays a crucial role in several human cancers. Here, we studied the expression pattern of LINC00662 and explored its function in human breast cancer. The expression level of LINC00662 was determined in human breast cancer cell lines and tissues by real-time quantitative polymerase chain reaction (RT-qPCR). Cytoplasmic and nuclear RNA from MDA-MB-157 cells were extracted to analyze the subcellular location of LINC00662. Moreover, the MTT assay, wound-healing assay, colony-forming assay and transwell assay were employed in MDA-MB-157 cells to detect the effect of LINC00662 on cell apoptosis, invasion, migration and proliferation, respectively. LINC00662-specific miRNA and miRNA-gene axis were examined in a dual-luciferase reporter assay and Western blot. We found that LINC00662 was overexpressed in both breast cancer cell lines and tissue compared to normal breast cell lines and healthy breast tissue. Analysis of subcellular localization revealed that LINC00662 was mainly found in the cytoplasm. Furthermore, LINC00662 silencing reduced cell viability and inhibited the proliferation, migration and invasion of MDA-MB-157 cells. Bioinformatics analysis predicted that LNC00662 binds to miR-497-5p. A series of studies confirmed that LINC00662 directly interacted with miR-497-5p and downregulated its expression in MDA-MB-157 cells. MiR-497-5p knockdown significantly reversed the inhibitory effect of shLINC00662. Moreover, egl-9 family hypoxia inducible factor 2 (EglN2) was verified as a target of miR-497-5p. Overall, our results demonstrated that overexpression of LINC00662 accelerated the malignant growth of breast cancer cells via sponging miR-497-5p and upregulating EglN2 expression, and indicate that targeting LINC00662 may represent a novel strategy for breast cancer therapy.

PU-0711

Urinary cell-free microRNA-106b as a novel biomarker for detection of bladder cancer

Xuanjun Zhou、Chuanxin Wang
The Second Hospital of Shandong University

Background Cell-free microRNAs (miRNAs) stably and abundantly exist in body fluids and emerging evidence suggests cell-free miRNAs as a novel class of non-invasive disease biomarkers. In this study, we hypothesized that the quantitative detection of the oncogenic miR-106b-25 cluster in urine could be a useful clinical biomarker for bladder cancer (BCa).
Methods Three members of the miR-106b-25 cluster (miR-106b, miR-93 and miR-25) were quantified by real-time RT-PCR in urine supernatant of 112 BCa patients and 78 age-matched controls.
Result In our study, the urinary levels of miR-106b were significantly higher in BCa patients than controls ($P<0.001$). No significant difference was observed in the urinary levels of miR-93 and miR-25 between two groups. Furthermore, the levels of urinary miR-106b were significantly reduced in postoperative samples compared with the levels in the preoperative samples ($P=0.007$). With respect of clinicopathological characteristics, the level of urinary miR-106b was associated with advanced tumor stage. Receiver operating characteristic (ROC) analysis revealed that urinary miR-106b had considerable diagnostic accuracy, yielding an AUC (the areas

under the ROC curve) of 0.802 with 76.8% sensitivity and 72.4% specificity in differentiating BCa from controls.
Conclusions Our data indicate that urinary cell-free miR-106b might provide new complementary tumor biomarkers for BCa.

PU-0712

石墨烯场效应晶体管生物传感器免扩增、快速检测 SARS-CoV-2 核酸

吴丁[1]、喻轶[2]、李听弦[2]、李坤[2]
1. 武汉大学中南医院
2. 湖北中医药大学

目的 现在主流的 SARS-CoV-2 RNA 检测方法为 RT-PCR，然而其检测具有检测周期长、灵敏度低等缺点。因而本研究旨在构建一种新型 SARS-CoV-2 RNA 生物传感器，以实现 SARS-CoV-2 RNA 的免扩增、直接快速检测。
方法 将与 SARS-CoV-2 RdRp 片段特异性互补的磷酰二胺吗啉寡核苷酸探针固定在该芯片表面，直接构建 SARS-CoV-2 RNA 生物传感器。随后，将其用于各种环境中 SARS-CoV-2 RdRp 基因的直接检测，以考察该传感器的灵敏度、特异性等性能。同时，选取 SARS-CoV RdRp 等干扰物考察该传感器的方法特异性。
结果 该传感器检测 PBS、咽拭子保存液、血清中 SARS-CoV-2 RdRp 的灵敏度分别为 0.37 fM(223 copies/μL)、2.29 fM、3.99 fM。在检测不同干扰物时，其信号分别为 6.7 mV（PBS）、18 mV（完全不互补 RNA）、23 mV（SARS-CoV RdRp）、37 mV（单碱基错配 RNA），与 133.4 mV（SARS-CoV-2 RdRp）之间均有显著性差异。在检测实际临床样品时，20 例阳性标本与 10 例阴性标本的检测信号之间的差异具有统计学意义（P<0.0001）。绘制受试者工作曲线后，其曲线下的面积可达 0.995。在该方法与金标准 RT-PCR 之间的一致性结果比较中，其 Kappa 指数可达 0.92；在实时检测中，该传感器可在 2 min 内产生特异性电流响应。
结论 本研究成功构建了一种用于免 PCR 扩增、直接检测 SARS-CoV-2 RNA 的高性能生物传感器。该生物传感器具有良好的方法特异性、出色的灵敏度（223 copies/μL）、抗干扰能力及准确性。该平台可在 2 min 内产生特异性信号响应，极大地缩短了检测周期，因而有望成为快速诊断 COVID-19 的全新检测平台。

PU-0713

血清外泌体 CircRNA 在桥本氏甲状腺炎中差异化的初步研究

吴亚彬、秦晓松
中国医科大学附属第二医院

目的 本研究重点探索桥本氏甲状腺炎（Hashimoto'sthyroiditis, HT）的病理机制，应用微阵列人 circRNA 基因杂交技术发现 HT 患者血清外泌体 circRNAs 的变化，为研究血清外泌体中的 circRNAs 在桥本氏甲状腺炎中的作用机制奠定基础。
方法 通过超高速离心法，提取 3 例 HT 患者及 3 例健康对照者血清中的外泌体。将外泌体中 circRNAs 利用微阵列人 circRNA 基因杂交技术进行分析，发现其差异表达 circRNAs。从上述差异的 circRNAs 中，选取 3 个上调和 1 个下调的 circRNAs，在 7 个 HT 和 8 个健康对照组中，使用逆转录定量聚合酶链反应（reverse transcriptase-quantitative polymerase chain reaction,RT-PCR）进行验证。预测并构建 circRNA/microRNA 之间的相互作用网络，并利用 GO 和 KEGG 途径分析并预测差异基因的潜在功能。

结果 与健康对照组血清中外泌体 circRNAs 相比，发现 HT 血清外泌体中有 162 个 circRNAs 表现出显著差异。所选定的 4 个差异的 circRNAs，经 RT-PCR 验证，统计学分析，hsa_circ_0038416 确实在 HT 患者血清外泌体中表现出上调。经 GO 和 KEGG 基因富集分析表明，这些显著差异表达的 circRNAs 与 29 种基因功能和 1 种信号通路相关。
结论 此项研究结果表明，可以对 HT 血清外泌体 circRNAs 进行基因调控机制研究，支持进一步研究外泌体 circRNAs 在 HT 中的作用。

PU-0714

女性宫颈上皮细胞端粒相对长度与高危型人乳头状瘤病毒感染的相关性

王丽娜
山东大学第二医院

目的 端粒在炎癌转换中发挥重要作用，高危型人乳头状瘤病毒（hrHPV）感染会引起女性宫颈炎、宫颈癌等。在 hrHPV 感染的宫颈癌上皮中端粒长度显著增加，但在 hrHPV 感染的宫颈炎上皮组织中端粒长度的变化研究不多。
方法 收集 2019 年 1 月至 2020 年 6 月在山东大学第二医院进行子宫颈癌筛查女性宫颈上皮组织，排除患有尖锐湿疣等生殖系统感染性疾病、宫颈上皮内瘤变、宫颈癌以及其他系统肿瘤等疾病。留取子宫颈脱落细胞标本，放入 SurePathTM 细胞保存液中，同时进行薄层液基细胞学检查、cobas 4800 HPV DNA 检测高危型 HPV 分型，并提取上皮细胞 DNA，qRT-PCR 检测上皮细胞相对端粒长度，分析相对端粒长度与 hrHPV 感染的关系。
结果 留取了 1434 份无其他生殖系统感染、无宫颈上皮内瘤变、宫颈癌以及其他系统肿瘤的女性宫颈上皮细胞标本，其中 608 例无 HPV 感染，826 例 hrHPV 感染阳性（其中 HPV16/18 感染阳性患者 306 例）；与 HPV 感染组相比，hrHPV 感染组端粒长度明显缩短（$p<0.05$），其中 HPV16/18 感染组与其他 hrHPV 感染组相比端粒长度更短,但无统计学意义。（$p>0.05$）
结论 感染 hrHPV 尤其是感染 HPV16/18 女性的宫颈上皮细胞相对端粒长度明显比未感染女性缩短，因此，宫颈上皮细胞相对端粒长度有望成为宫颈病变早期筛查标志物。

microRNA-206 通过靶向 IGF1 调节胰腺 β 细胞功能

李振、钱增堃、周敬敬、朱文娟、茆政、崔凡
芜湖市第一人民医院

糖尿病是一种常见的代谢性疾病，以慢性高血糖和胰腺 β 细胞功能障碍为特征。多种证据表明，microRNA-206 (miR-206)与糖尿病的发生密切相关，可在胰腺 β 细胞中调控。 然而，miR-206 是否影响 DM 的发展，其具体机制尚不清楚，我们设计本研究是为了阐明 miR-206 通过胰岛素样生长因子 1(IGF1R)/磷脂酰肌醇 3-激酶(PI3K)/蛋白激酶 B(AKT)信号通路在胰腺 β 细胞中的功能和相关的潜在机制，这可能为 DM 提供新的诊断或治疗。
方法 采用定量逆转录 PCR(qRT-PCR)检测 miR-206 和胰岛素样生长因子 1(IGF1)的水平。采用生物信息学和双荧光素酶报告分析方法，阐明了 miR-206 与 IGF1 的关系。 用刺激葡萄糖(16.7mM)或基础葡萄糖(3.3mM)刺激 INS-1 细胞 1h，用酶联免疫吸附试验(ELISA)检测胰岛素含量)。此外，还进行了 3-（4，5）-二甲基噻唑(-z-y1)-3，5-二苯甲酰肼(MTT)测定和流式细胞术(FCM)测定 INS1 细胞活力和凋亡，并分别用 Westernblot 法检测 IGF1R/PI3K/AKT 通路(IGF1R、p-AKT 和 AKT)中的相关蛋白。

结果 DM 患者血液样本中的 miR-206 水平高于健康献血者，表明 IGF1 为 miR-206 的直接靶标。此外，我们还发现 miR-206 负调控 IGF1 在 INS-1 细胞中的表达。证实了 miR-206 抑制剂导致胰岛素总含量增加，INS-1 细胞活力增加，细胞凋亡减少。因此，miR-206 抑制剂显著增强了 INS-1 细胞中 IGF1R 和 p-AKT 蛋白的表达。
结论 miR-206 可以通过靶向 IGF1 调节 IGF1R/PI3K/AKT 通路，从而调节胰腺 β 细胞的细胞活力和胰腺 β 细胞分泌胰岛素的能力。

PU-0716

Prevalence, Antibiotic Resistance and Molecular Characterization of Campylobacter Isolated from Children with Diarrhea in Guangzhou, China

Shouyi Chen、peng mei
Guangzhou Center for Disease Control and Prevention, Guangzhou 510440, China;

Diarrhea is a leading cause of morbidity and mortality in children around the word. Campylobacter, as a food-borne zoonotic pathogen, has been proved the most common pathogen that causes human gastroenteritis in developed countries, while there is a lack of information on the prevalence and antibiotic resistant profile in Guangzhou, China. In this study, stool samples from children with acute diarrhea were collected. The syringe filtration with enrichment method was used for the Campylobacter isolation. The isolates were characterized using molecular approaches and tested for antibiotic resistance. A total of 53 Campylobacter strains, including 42 C. jejuni and 11 C. coli, were isolated from 1197 samples. The most frequently observed resistance agents were ciprofloxacin, tetracycline and nalidixic acid. Overall, 43 different sequence types belonging to 13 clonal complexes and unassigned were identified, and 39.2% Campylobacter isolates representing 19 STs were reported for the first time in the MLST database. The dominant clonal complexes of C. jejuni and C. coli were CC-464 and CC-828, respectively. This study provides detailed information about the prevalence, molecular characterization and antibiotic susceptibility of Campylobacter infections in diarrheal children, which may facilitate the development of pathogen tracking and Campylobacter infection prevention in Guangzhou.

FBN1 基因 c.4336G>A 突变在马凡综合征家系中的致病性研究

李金洁
空军军医大学西京医院

目的 对 1 例马凡综合征患者及其家庭成员进行基因检测，并探究检出突变 FBN1（c.4336G>A）的致病性。
方法 采用多重 PCR 联合二代测序技术对先证者进行遗传性胸主动脉瘤/夹层相关的 15 个基因的组合检测，应用 Sanger 测序技术对检出位点进行验证并对其家庭成员进行同一位点的检测，通过反转录 PCR 及 Sanger 测序等体外实验研究突变对 pre-mRNA 剪接过程的影响，根据 ACMG 指南判读位点致病性。
结果 基因组合检测结果显示先证者携带有 FBN1 基因杂合变异 c.4336G>A，生物学软件预测该位点可能影响剪接；Sanger 测序对患者家庭成员检测发现该家系中存在 4 例携带者，其中 3 例已出现胸主动脉瘤/夹层表现；体外实验表明，该突变位点导致 FBN1 基因 35 号外显子缺失；根据 ACMG 指南该位点致病性判读为可能致病的突变。

结论 FBN1 基因 c.4336G>A 位点首次被证实影响剪接过程，导致 FBN1 基因 35 号外显子缺失，携带该突变将导致严重的胸主动脉瘤/夹层表现，建议对家系中突变携带者加强随访，尽早进行手术治疗或药物干预。

PU-0718

A de novo sSMC(22) characterized by High-Resolution chromosome microarray analysis in a Chinese boy with Cat-Eye Syndrome

Jinjie Li
Air force medical university xijing hospital

We report a 15-year-old boy with Cat-eye syndrome (CES) withoutshortstature or intellectual disorder. The boy was confirmed by cytogenetic and high-resolution chromosome microarray analysis(CMA). The G-banding karyotype confirmed the de novo of thepatient. And the CMA result showed 1.76Mb tetrasomy of proximal 22Q11.1→22Q11.21 consistent with CES {arr22q11.1q11.21(16,888,899-18,644,241)X4}, a typical small type I CES chromosome. The patient has many of the basic characteristics of CES, however, he is taller but not shorter than peers. It is rarely reported in the past since short stature is a common feature of this syndrome. Furthermore, the boy has no intellectual disorder and attends a normal school since he was six years old. What bothered him most were recurrent respiratory infections, retromicrognathia and heart defects.

PU-0719

Human umbilical cord mesenchymal stem cell-derived extracellular vesicles promote the proliferation of Schwann cells by regulating PI3K/AKT signaling pathway via transferring miR-21

Yongbin Ma 、Dan Zhou 、Huanyan Zhang、Jianhua Su
Jintan Affiliated Hospital of Jiangsu University

As an alternative mesenchymal stem cells (MSCs) based therapy, MSC-derived extracellular vesicle (EVs) have shown promise in the field of regenerative medicine. We previously found that human umbilical cord mesenchymal stem cell-derived EVs (hUCMSC-EVs) improved functional recovery and nerve regeneration in a rat model of sciatic nerve transection. However, the underlying mechanisms are poorly understood. Here, we demonstrated for the first time that Schwann cells were effector targets of hUCMSC-EVs, which promoted the proliferation of Schwann cells by activating PI3K/AKT signaling pathway. Furthermore, we showed that hUCMSC-EVs mediated Schwann cell proliferation via transfer of miR-21. Our findings highlight a novel mechanism of hUCMSC-EVs in treating peripheral nerve injury and suggest that hUCMSC-EVs may be an attractive option for clinical application in the treatment of peripheral nerve injury.

PU-0720

IGF2BP2 recognizes the m6A modification of YAP and activates the expression of ErbB2 to promote colorectal cancer progression

Anquan Shang
Tongji Hospital of Tongji University

Objective To explore the effect of insulin-like growth factor 2 mRNA-binding protein 2 (IGF2BP2) on colorectal cancer (CRC) by recognizing the m6A modification of YAP mRNA thus activating ErbB2 expression.
Methods The expressions of IGF2BP2, YAP, and ErbB2 in human CRC tissue, paracancerous tissue, normal human intestinal epithelial cells (HIECs), and three CRC cell lines were analyzed by RT-qPCR and Western blot analysis. Cell proliferation, migration, and invasiveness were detected by CCK-8 assay, scratch test and Transwell assay. The apoptosis was detected using flow cytometric analysis. YAP binding on the ErbB2 promoter was measured by dual-luciferase reporter assay. Enrichment of TEAD4 in the ErbB2 promoter region was measured by the ChIP assay. The level of YAP m6A modification in CRC cells was determined by Me-RIP. The xenograft tumor mice model was established and the tumor volume and weight were recorded.
Results High expressions of IGF2BP2, YAP, and ErbB2 promoted the proliferation, migration and invasion of CRC cells and reduced their apoptosis. IGF2BP2 recognized the m6A on YAP mRNA and promoted the translation of mRNA. YAP regulated ErbB2 expression by promoting TEAD4 enrichment in ErbB2 promoter region. Therefore, IGF2BP2 promoted the expression of ErbB2 to enhance the proliferation, invasion and migration of CRC cells, to repress cell apoptosis, and to promote solid tumor formation in nude mice.
Conclusion IGF2BP2 activates the expression of ErbB2 by recognizing the m6A of YAP, thus affecting the cell cycle of CRC, inhibiting cell apoptosis, and promoting proliferation.

PU-0721

LINC00936 regulate cell proliferation, migration and invasion and tumor angiogenesis in ovarian cancer by interacting with LAMA3 via binding to microRNA-221-3p

Anquan Shang
Tongji Hospital of Tongji University

Objective Ovarian cancer remains to be a leading cause of high mortality in women. Long non-coding RNA (lncRNA) are known to regulate the underlying biological processes and pathogenesis of numerous diseases including ovarian cancer. We aimed to explore whether LINC00936 influences ovarian cancer mediating laminin alpha 3 chain gene (LAMA3) throughmicroRNA-221-3p (miR-221-3p).
Methods Firstly, we identified the differentially expressed lncRNAs related to ovarian cancer in datasets. Subsequently, the expression of LINC00936, miR-221-3p and LAMA3 in ovarian cancer tissues and adjacent tissues was determined following RNA isolation. Next, ovarian cells were transfected with over-expressed LINC00936, miR-221-3p mimic, miR-221-3p inhibitor, and si-LAMA3 respectively, to elucidate their roles in cell proliferation, migration, invasion, angiogenesis, as well as tumorigenesis of ovarian cancer. To further investigate the underlying mechanism of LINC00936 in ovarian cancer, the relationships between LINC00936 and miR-221-3p, and between miR-221-3p and LAMA3 were identified using luciferase activity detection and RIP assays.

Results In cancer tissues, LINC00936 and LAMA3 were poorly expressed, while miR-221-3p was highly expressed. LINC00936 was found to bind to miR-221-3p. Over-expression of LINC00936 led to reduced miR-221-3p, while enhanced LAMA3 expression. Over-expression of LINC00936 significantly decreased ovarian cancer cell proliferation, migration, invasion, angiogenesis and tumorigenesis. Over-expression of LINC00936 reversedthe cancer progression caused byoverexpression of miR-221-3p or silencing ofLAMA3.
Conclusion In summary, over-expression of LINC00936 reduced the progression of ovarian cancer by competitively binding to miR-221-3p. Therefore, LINC00936 or miR-221-3p as therapeutic targets, could provide a novel sight for the treatment of ovarian cancer.

基于 CRISPR-Cas13a 快速高灵敏度检测甲型流感 H1N1

李锦潮[1]、肖斌[2]、李林海[2]
1. 中国人民解放军南部战区总医院
2. 广州医科大学附属第六医院，清远市人民医院检验医学部

目的 将成簇的规律间隔短回文重复序列及其相关蛋 13a （CRISPR-Cas13a）与等温扩增（Recombinase Polymerase Amplification，RPA）结合，即 SHERLOCK 技术，建立快速、高灵敏度以及高特异度的甲型流感 H1N1 检测方法。
方法 以甲型流感病毒 H1N1 特异性基因 H1 的保守序列设计 4 对 RPA 特异性引物，通过扩增和 H1 基因 dsDNA 片段，利用琼脂糖凝胶电泳筛选出扩增效率最高的一对引物，并设计相应扩增片段特异性的 crRNA（CRISPR RNA）；利用梯度稀释的甲型流感病毒 H1N1 核酸标准品评价该方法的检测极限；以 real-time PCR 法为金标准，通过检测临床样本，评价该方法的灵敏度与特异度。
结果 不同的 RPA 引物扩增效率差异明显，筛选出扩增效率最高的一对 RPA 引物，并设计相应的 crRNA，成功构建快速检测甲型流感病毒 H1N1 的 SHERLOCK 检测方法；该方法对甲型流感病毒 H1N1 标准品的检测极限为 10 拷贝，与其它流感病毒无交叉反应；以 real-time PCR 法为金标准，通过检测 30 份临床样本，该 SHERLOCK 检测法的灵敏度达 90%，特异度达 100%。
结论 建立的 SHERLOCK 检测法，具有快速简单、高灵敏以及高特异等优点,为甲型流感病毒 H1N1 的快速检测提供了新的工具。

Detection of EVs RNA Biomarkers by TCLN Chip for Early Diagnosis of Prostate Cancer

Yanjun Diao 、ani nan、weixiao fan、lijuan yu、zhou li、rui li、jinjie li、bingbing zhu、shan wang、lei zhou、liu yang、xiaoke hao、jiayun liu
Department of Clinical Laboratory Medicine, Xijing Hospital, Fourth Military Medical University, Xi'an, China

Extracellular vesicles (EVs) RNA are widely recognized as a good source of tumor biomarkers, because ithasbeenprovedselectivelysortedintoEVs and its detection technique hasrelatively loose requirements for EVs purity compared with protein biomarkers. Serological PSA test, as the only screening method for prostate cancer (PCa), has been abolished in Europe and America from 2012 because of its poor diagnostic specificity.Exploring new diagnostic biomarkers is the key to improve early diagnosis status of PCa. Currently, approximately 90% (17/19) EVs-RNA biomarker studies focus on early diagnosis of PCa, which means to select differentially expressed EVs RNA to distinguish PCa and benign prostate disease. Therefore, this experiment aims to explore and establish a new early diagnosis method for PCa, based on a new EVs detection technology "Tethered Cationic Lipoplex Nanoparticle"(TCLN) chip.

PU-0724

Tumor-Derived Extracellular Vesicles Nucleic Acids as Promising Diagnostic Biomarkers for Prostate Cancer

Yanjun Diao 、weixiao fan、ani nan、lijuan yu、rui li、jinjie li、bingbing zhu、lei zhou、liu yang、xiaoke hao、jiayun liu
Department of Clinical Laboratory Medicine, Xijing Hospital, Fourth Military Medical University, Xi'an, China

Liquid biopsy as a non-invasive method has a promising future in the field of cancer, and extracellular vesicles (EVs) as one of the new areas have drawn much attention. Tumor-derived EVs could mediate immune responses, antigen presentation and intracellular communication through serving as vehicles for intercellular proteins, nucleic acids and lipid transfer. An improved understanding of the role of EVs could lead to a powerful new strategy for diagnosing and preventing prostate cancer (PCa). Among all the components, nucleic acids seem to be the most promising biomarkers which show with potential for the detection and stratification of PCa. In this review, we summarize the current understanding of the topic. The literature points out two aspects of EVs in PCa: 1) biological function of EVs in PCa; 2) summarizing the recent research status of EVs RNA and DNA as PCa diagnosis biomarkers.

PU-0725

Limited diagnostic value of microRNAs for detecting colorectal cancer: A meta-analysis

Xuanjun Zhou、Chuanxin Wang
The Second Hospital of Shandong University

Background MicroRNAs have been demonstrated to play important roles in the development and progression of colorectal cancer. Several studies utilizing microRNAs as diagnostic biomarkers for colorectal cancer (CRC) have been reported. The aim of this meta-analysis was to comprehensively and quantitatively summarize the diagnostic value of microRNAs for detecting colorectal cancer.
Methods We searched PubMed, Embase and Cochrane Library for published studies that used microRNAs as biomarkers for the diagnosis of colorectal cancer. Summary estimates for sensitivity, specificity and other measures of accuracy of microRNAs in the diagnosis of colorectal cancer were calculated by using the bivariate random effects model. A summary receiver operating characteristic (SROC) curve was also generated to summarize the overall effectiveness of the test.
Result Thirteen studies from twelve published articles met the inclusion criteria and were included. The overall sensitivity, specificity, positive likelihood ratio, negative likelihood ratio and diagnostic odd ratio of microRNAs for the diagnosis of colorectal cancer were 0.81 (95%CI: 0.79-0.84), 0.78 (95%CI: 0.75-0.82), 4.14 (95%CI: 2.90-5.92), 0.24 (95%CI: 0.19-0.30), and 19.15 (95%CI: 11.65-31.48), respectively. The area under the SROC curve was 0.89.
Conclusions The current evidence suggested that the microRNAs test might not be used alone as a screening tool for CRC. Combining microRNAs test with other conventional tests such as FOBT may improve the diagnostic accuracy for detecting CRC.

PU-0726

结直肠癌特异性血清外泌体蛋白质标志物的筛选与应用

王恬恬、王传新
山东大学第二医院

目的 肿瘤细胞来源的外泌体蕴含丰富的核酸和蛋白等物质，能够实时反映原发肿瘤的动态变化，为肿瘤早期诊断提供了一条新途径。本研究旨在利用高通量蛋白质组技术检测分析结直肠癌特异性血清外泌体蛋白质表达变化，为结直肠癌早期诊断外泌体蛋白标志物的研究提供科学数据。
方法 随机选取 pTNM 分期 I-II 期结直肠癌患者及健康对照者血清样本各 8 例，超速离心法提取血清外泌体，采用 Label free 蛋白质谱分析技术鉴定差异表达蛋白，并利用生物信息学工具分析差异表达蛋白的功能。
结果 在健康人血清外泌体中鉴定出 4235 个蛋白分子，结直肠癌血清外泌体中鉴定出 4131 个蛋白分子，其中结直肠癌特有蛋白分子 181 个。基于 FC＞2.0 且 p＜0.05 的标准，共筛选出 367 个差异表达的蛋白分子，包括 136 个上调和 231 个下调蛋白分子。这些差异表达的蛋白质主要来自于胞外区、细胞质膜及细胞质，参与免疫反应、代谢、信号转导等生物学过程。
结论 利用血清蛋白质组学技术可以筛选出结直肠癌血清外泌体蛋白标志物,为结直肠癌的血清学诊断提供依据。

PU-0727

11 例惠普尔养障体阳性检出患者的临床特征分析

张玮佳、邓方芳、谭筱醴、冯敏
四川金域医学检验中心有限公司

目的 探讨宏基因二代测序技术检出惠普尔养障体阳性患者的临床特征。
方法 回顾性分析 2020 年 8 月至 2021 年 5 月通过宏基因二代测序技术检出的 11 例惠普尔养障体阳性患者的临床特征，包括性别、年龄、实验室检查、影像学表现、临床症状等，为惠普尔养障体的研究和临床诊疗提供依据。
结果 11 例阳性检出患者中男性共 5 例，占 45.4%，女性 6 例，占 54.6%；年龄范围为 27-90 岁，其中 60-90 岁占 36.4%。阳性检出患者普遍存在呼吸道症状，其中 3 例出现咳嗽，3 例出现呼吸困难，个别出现胸痛、下肢浮肿等症状。6 例阳性检出患者（54.5%）C 反应蛋白高于正常值范围（12.08-190.94mg/L），4 例阳性者（36.3%）降钙素原略微升高（0.43-0.65ng/mL），3 例（27.3%）表现为白细胞计数升高（>10×10^9 个/L），7 例（63.6%）中性粒细胞比率升高。影像学方面，共 9 例（81.8%）存在 CT 异常表现，包括间质病变、多发结节、异常密度影等。9 例（81.8%）合并检出其他病原体，如肺炎链球菌、金黄色葡萄球菌、结核分枝杆菌复合群、耶氏肺孢子菌等。
结论 惠普尔养障体阳性检出患者男女比例及年龄分布较为平均，反映人群普遍易感。临床表现为 C 反应蛋白正常或升高，降钙素原正常或略微升高，白细胞计数和中性粒细胞正常或升高。影像学多表现为肺部炎性改变，部分存在咳嗽、呼吸困难等症状。随着宏基因二代测序技术的普及，更多的惠普尔养障体检出阳性患者被发现，但由于惠普尔养障体感染导致的惠普尔病多为慢性病，且患者仍存在其他病原体合并感染情况，因此阳性检出是否代表致病有待进一步研究。

PU-0728

A Biomimetic Drug Delivery System by Integrating Surface-Engineered Exosomes and Doxorubicin-Loaded Nanoparticles for Glioma Dual-mode Therapy

yang zhang[1,2]、weiling fu[2]、lixiang wu[1]
1. Chongqing University cancer hospital
2. 陆军军医大学第一附属医院

Background Existing nanoparticle-mediated drug delivery systems for glioma systemic chemotherapy remain a great challenge due to poor delivery efficiency resulting from the blood brain barrier/blood-(brain tumor) barrier (BBB/BBTB) and insufficient tumor penetration. To address this issue, Exosomes, naturally derived nanovesicles secreted from various cell types, can serve as an outstanding drug platform for delivery for the reason that they have excellent biocompatibility, near nonimmunogenicity, and long blood circulation ability, all of which result from their endogenous origin. Moreover, exosomes also can traverse the blood-brain barrier, penetrate dense structural tissue. To date, various gold nanomaterials,
including gold nanoshells, gold nanorods (AuNRs), and gold nanocages, have been shown to absorb light in the NIR region (700–900 nm) and kill cancer cells locally without harming the healthy tissues via transforming optical energy into heat. These nanomaterials show promise for biomedical applications, especially tumor therapy.
Method and Results In this work, or the first time, We demonstrated a reproducible and bio-friendly strategy to combine Doxorubicin-Loaded Gold Nanorods (AuNRs) with engineered exosomes via a donor cell-assisted membrane modification strategy. We proposed using sulfhydrylated exosomes as a platform for efficiently conjugating natural exosomes with targeting biomolecules. RGD, which has a certain affinity for combining with integrins overexpressed on the tumor neovasculature and tumor cells. Furthermore, to improve the tumor cellular uptake efficiency, the surface of GD-Exos was functionalized with another tumor-specific targeting ligand (folic acid, FA) through covalent bonds. Because of the synergistic effect of the dual ligands, a high local exosome concentration could accumulate at the tumor site, generating better therapeutic outcomes. Moreover, to promote DOX release in the tumor acidic microenvironment, we prepared DOX-loaded AuNRs nanoparticles with pH-sensitive property (pH-sensitive DNs). Thus, The drug release behavior, which is IR-enhanced, could be rapidly, selectively, and locally activated by remote stimuli. Furthermore, because tumor cells have a lower heat tolerance than normal cells, localized hyperthermia would selectively eliminate the tumor cells without affecting surrounding normal tissues.
Conclusion The designer exosome effectively accumulates at target tumor sites via dual ligand-mediated endocytosis. followed by the near-infrared irradiation triggered drug release from exosomes, thus inhibiting tumor relapse in a programmable manner. The designer exosome can provide functional platforms by engineering with more multifarious functionalities from synthetic materials to achieve individualized precise cancer therapy in the future, especially Glioma.

PU-0729

高病毒载量 HBsAg 阳性孕妇 HBV 母婴传播多因素分析及控制策略

朱博[1]、吕小静[2]、田红霞[1]、赵玉婵[1]、戴二黑[1]
1. 石家庄市第五医院
2. 石家庄妇幼保健院

目的 探讨高病毒载量乙肝孕妇发生母婴传播的危险因素，为完善乙肝母婴阻断策略提供科学依据。
方法 回顾性收集石家庄市妇幼保健院和石家庄市第五医院高病毒载量（HBV DNA≥2×105IU/mL）乙型孕妇的资料，根据入排标准筛选并分为 TDF、TBV 和对照组，对可能影响 HBV 母婴传播的因素进行单因素分析及多因素 logistic 回归分析。
结果 共纳入 545 例孕妇，分娩 545 例婴儿。TDF 组、TBV 组和对照组 HBV 母婴传播率分别为 0.00%（0/174）、0.30%(1/331) 和 5.00%(2/40)，TDF 组与 TBV 组差异无统计学意义（P>0.999），但均低于对照组（P<0.05）。三组均无新生儿畸形等严重不良事件发生。单因素分析结果显示孕妇分娩时 HBV DNA 水平和孕期是否接受抗病毒治疗是发生母婴传播的影响因素（P<0.05），多因素 logistic 回归分析显示分娩时 HBV DNA 水平是发生母婴传播的危险因素（P=0.007）。多因素线性回归分析显示分娩时 HBV DNA 水平受基线 HBV DNA 水平、抗病毒治疗和抗病毒治疗时间影响。在 TDF 组中，孕妇孕中期服药分娩时 HBV DNA 水平显著低于孕晚期服药（P<0.001），但 TBV 组无此统计学差异（P>0.05）。
结论 高病毒载量乙肝孕妇分娩时 HBV DNA 高水平是导致免疫失败的主要原因，孕期接受抗病毒治疗可有效降低孕妇分娩时 HBV DNA 水平，提高母婴阻断成功率且安全性良好。孕中期服用 TDF 降低分娩时 HBV DNA 水平效果显著。因此，强烈推荐孕中期服用 TDF 进行抗病毒治疗以预防 HBV 母婴传播。

PU-0730

集成式微流控核酸检测系统用于生殖道感染病原现场快速检测

刘大渔
广州市第一人民医院

目的 发展一种便携式全集成多靶标核酸检测系统，用于生殖道感染病原现场快速检测。
方法 研究利用 3D 打印快速成型技术和消费电子器件极简地构建了一种低成本自动化“多重样品进快速结果出”核酸分析平台，以阵列芯片锚定液滴序列来构建试剂存储与反应单元，通过芯片相对磁、热、光等作用区域的宏观空间运动完成时间序列上的系列微观质量-能量输运过程，从而实现复杂微分析涉及的样品处理、信号放大及检测在芯片上串联集成和高度并行。研究通过将核酸分析涉及的裂解、富集、纯化、扩增检测试剂以油包水液滴形式预装载在多通道液滴阵列芯片上，将多通道核酸分析所需的系列操作转化为平行化的基本液滴操作组合，通过简单地耦合芯片一维线性运动与可变阵列磁场作用即可实现核酸分析操作的无缝集成与高效执行。该平台上还集成有基于无线视频摄像头的宽场荧光成像模块，结合荧光扩增曲线校正算法可提供基于空间多重分辨实时荧光定量检测且通道间的阈值时间 RSD<5%。
结果 研究优化了液滴平台上 RNA 提取的操作参数，可在 12 分钟内完成快速 RNA 提取，从而将实验室标准操作流程所需的时间相对缩短了近 2/3。进一步，以病原菌细胞内特异性且丰度高的 16S rRNA 为检测对象，通过等温 RNA 同时扩增检测（SAT）反应可以检出含量不低于 102 RNA copies/反应的样品。批量（n=41）临床尿液标本测试结果显示，该平台在 42 分钟完成疑似生殖道感染标本中 4 种病原体的快速定量检测，且结果与实验室标准方法的一致性良好。

结论 研究发展了一套集成式微流控核酸检测系统，并展示了其用于临床标本快速病原筛查的可行性。

PU-0731

基于核酸分子杂交的新型电化学传感器用于 circ RNA 定量检测

孟凡飞、张立群
陆军军医大学第二附属医院（新桥医院）

目的 构建基于核酸分子互补杂交电化学生物传感器，实现肝癌患者血清样本 circ RNA 的超敏快速精准检测。
方法 捕获探针通过氨基羧基作用被固定在磁珠表面，肝癌患者样本中被剪切的特异性片段与捕获探针结合，探针发卡结构被打开，信号探针可识别发卡结构序列并与其特异性结合，信号探针也被固定到磁珠表面。磁吸作用下使磁珠被有效清洗和富集。将磁珠加入电化学工作站区域，通过检测电化学物质分子的信号实现对 circ RNA 的定量分析，采用循环伏安、DPV 等不同检测方法对传感器表面的修饰过程进行电化学表征。
结果 该生物传感器对 circ RNA 有很好的电流响应，在最优的检测条件下，对传感器循环伏安法连续扫描 50 圈，峰电流值下降 3.9%，MB 的氧化峰电流值变化与 circ RNA 的浓度在 1 pmol/L 至 100μmol/L 时范围内呈良好的线性关系，检测限为 0.2 pmol/L。
结论 成功制备了基于核酸分子互补杂交的新型 circ RNA 电化学传感器，建立了 circ RNA 极微量精准检测新方法，该电化学传感器具有电流响应快，灵敏度高，稳定性好，特异性强和可再现性等优点，可应用于 circ RNA 的检测。该方法使用的设备简单方便，不需复杂的配套设施和条件，在微量物质的现场快速检测中具有很好的应用前景。

PU-0732

血液传染病筛查核酸检测与化学发光法比较评价

李广波
上海市东方医院（同济大学附属东方医院）

目的 评价血液传染病筛查三项（HBV、HCV、HIV）核酸检测在临床应用的可行性及与化学发光的比较。
方法 收集检测血液传染病筛查三项的血清标本 500 例，化学发光法检测乙肝五项、抗-HCV、HIV 抗原抗体，提取核酸定性检测 HBV DNA、HCV RNA、HIV RNA。比较三种病原体抗原、抗体筛查化学发光检测与核酸检测结果。结果不一致的标本用罗氏 CobasTaqMan 检测系统检测病毒载量确认最终结果。
结果 检测出 11 例 HBV 化学发光与核酸定性结果不一致标本，未检出 HCV 和 HIV 化学发光与核酸定性结果不一致标本。2 例 HBsAg 阳性 HBV DNA 定性阴性检测标本检测载量均小于 20IU/mL。9 例 HBsAg 阴性 HBV DNA 定性阳性样本中 2 例标本未检测到 HBV DNA 载量，6 例标本检测到 HBV DNA 载量小于 20IU/mL，1 例标本 HBV DNA 载量为 23.6IU/mL。7 例 HBsAg 阴性 HBV DNA 检测到载量标本中 1 例乙肝五项结果全阴，其余 6 例存在 HBsAb、HBeAb、HBcAb 中 1 至 3 项阳性。
结论 血液传染病三项使用核酸检测有利于检测出窗口期和免疫状态异常的感染者，有利于临床对手术病人及输血等患者的评估和管理，核酸检测与化学发光检测结合可为病人的感染确诊及管理追踪提供重要依据。

PU-0733

性病门诊就诊者 HPV 基因检测结果分析

李春花
四川省医学科学院·四川省人民医院

目的 了解统计分析成都地区性病门诊患者就诊者人乳头瘤病毒(Humanpapilomavirus, HPV)感染情况、及亚型分布及不同性别分布特征。
方法 采用导流杂交基因芯片技术对 2018 年 3303 例我院性病门诊就诊者进行 HPV 的 21 种分型检测，包括 15 种高危型和 6 种低危型。
结果 我院 3303 例性病门诊就诊者 HPV 感染率阳性率为 54.56%(1802/3303)，其中男性 1119 例，占 62.1%感染率为 53.16%(1119/2101)，女性 683 例，占 37.9%。感染率为 56.82%(683/1202)，两者比例差异有统计学意义($\chi2=3.912$, $P < 0.05$)。单一型别感染为主，占 58.44%以 58.44%（1053/1802）的单一型为主，其中 6 型(27.04%),11 型(19.06%),16 型(6.71%),52 型(6.35%),58 型(5.11%)最常见，而在多重感染中，以二重感染最为常见 434 例，占 57.94%（434/749）。不同年龄组的 HPV 感染率差异有统计学意义（$\chi2=12.937$, $P < 0.05$），其中，＞60 岁的感染率 63.57%（82/129）最高。
结论 本研究可反应出本地区人群 HPV 感染的基因型分布，不同年龄段和不同性别的 HPV 感染特征，对研制适合本地区特异性 HPV 疫苗，以及宫颈癌的筛查与防治具有参考价值。

PU-0734

Expression and Prognosis of Shelterin genes in Human Colorectal Cancer

Xiaowu Zhong[1]、Shuqi Wang[1]、Dongsheng Wang[2]、Xiaolan Guo[1]
1. Affiliated Hospital of North Sichuan Medical College
2. 四川省肿瘤医院

Background Mammalian chromosomes have a repetitive sequence at the end to prevent the loss of essential genetic information during end-replication. The shelterin genes are a protein complex that prevents recognition of telomere sequences as sites of DNA damage. Changes in telomeres can lead to a variety of human diseases, such as progeria and cancer. However, the distinct roles of each shelterin subunit involved in colorectal cancer (CRC) tumorigenesis remain unknown. In the current study, the mRNA expression and prognostic value of six shelterin subunits in CRC are elucidated.
Methods The transcriptional levels and clinic pathological of shelterin genes were analyzed via the ONCOMINE and UALCAN database. The sequence alteration data related to shelterin genes were obtained from c-BioPortal. The prognostic values of shelterin genes were performed in Kaplan-Meier Plotter. Database for Annotation, Visualization and Integrated Discovery (DAVID) were used to evaluate gene functional enrichment.
Results The result showed higher shelterin mRNA expression in CRC tissues than in normal tissues except TINF2. The higher expression of TERF1, TERF2, POT1, TINF2 and ACD showed in CRC patients with a more advanced cancer stage. The CRC patients with high mRNA levels of the POT1 and ACD were predicted to have poor prognosis. Moreover, the mutation rate of TERF1, TINF2, and POT1 was relatively high in CRC patients. Functional enrichment analyses confirmed that the expression levels of cell cycle genes were closely affected by shelterin genes alterations.
Conclusions This study implied that POT1and ACD could act as potential prognostic markers for the improvement of CRC, especially for high-risk subgroups of patients with CRC, as well as may be potential therapeutic targets for CRC.

PU-0735

METTL3 通过 mTOR 信号通路参与食管鳞状细胞癌细胞的糖酵解

钟晓武、邹江、周锡、郭晓兰
川北医学院附属医院

食管鳞状细胞癌(Esophageal squamous cell carcinoma, ESCC)是人类最致命的癌症之一，5年生存率较低。N6 -甲基腺苷(N6-methyladenosine，m6A)甲基化是一种重要的表观遗传修饰，已被报道与肿瘤的生理和病理过程有关。然而，它在 ESCC 中的作用仍不清楚。在本研究中，我们发现在 ESCC 癌组织和 ESCC 细胞中 m6A 水平升高。此外，我们发现 METTL3 mRNA 和蛋白在 ESCC 组织中显著上调。组织中 METTL3 mRNA 表达水平与 ESCC 分化程度和性别有关($p<0.05$)。组织 METTL3 mRNA 表达水平，诊断 ESCC 的敏感性为 75.00%，特异性为 72.06%，ROC 曲线下面积为 0.8030。METTL3 的缺失显著降低了人 ESCC 细胞系中 m6A 的水平，而 METTL3 过表达恢复了 m6A 水平的降低。这些结果表明 METTL3 是调控 m6A 甲基化的主要酶，是 ESCC 中一个关键的调控因子。此外，在细胞模型和动物模型中，METTL3 敲低显著抑制 ESCC 细胞增殖，而 METTL3 过表达显著促进 ESCC 细胞增殖。这些结果表明 METTL3 促进了 ESCC 的发展。同时也发现 METTL3 可通过 mTOR 信号通路参与 ESCC 细胞的糖酵解，进而促进 ESCC 的进展。我们的研究首次报道了 METTL3 介导的 m6A 甲基化在 ESCC 肿瘤发生中起着至关重要的作用，并强调了 METTL3 可能是 ESCC 患者潜在的生物标志物和治疗靶点。

PU-0736

NIPT 在筛查非目标染色体异常中的应用

叶松道、王晓欧
温州医科大学附属第二医院、育英儿童医院

目的 探讨无创产前筛查（non-invasive prenatal test，NIPT）在筛查常见非整倍体以外的其他染色体异常中的价值。
方法 选择 2018 年 1 月至 2020 年 12 月在温州医科大学附属第二医院产前诊断中心进行 NIPT 的孕妇 12726 例，对提示为 21、18 和 13 非整倍体之外的罕见常染色体数目异常及性染色体异常的孕妇，在知情同意前提下进行介入性产前诊断，获取胎儿染色体核型及染色体微阵列分析结果。回访所有孕妇的妊娠结局及胎儿出生 3 个月后的情况。统计 NIPT 检测胎儿非目标染色体异常的可靠性和准确性。
结果 NIPT 共筛查出胎儿罕见常染色体数目异常及性染色体异常 77 例，筛查阳性率 0.61%。其中 65 例孕妇通过介入性产前诊断，确诊胎性染色体异常 16 例（15 例数目异常、1 例复杂异常），罕见常染色体数目异常 2 例，阳性预测值（positive predictive value,PPV）分别为 43.24%、7.14%。在提示性染色体异常的孕妇中，性染色体增多（XXX、XXY 和 XYY）的 PPV 高达 81.25%，性染色体减少（XO）的 PPV 为 13.33%，性染色体复杂异常的 PPV 为 33.33%，一例复杂异常的核型为 45, X[30] / 46, XY, idic(Y)(q11.22)[23] / 46, XY[47]。
结论 NIPT 可用于筛查胎儿性染色体数目异常，对性染色体结构等复杂异常也有一定的提示作用；NIPT 对筛查罕见常染色体数目异常的阳性预测值不高，存在一定的局限性。

PU-0737

Prediction value of serum HBV large surface protein in different phases of HBV infection and virological response of chronic hepatitis B patients

Can Liu、Qishui Ou
The First Affiliated Hospital of Fujian Medical University

Background Serum HBV large surface protein (HBV-LP) is an envelope protein that has a close relationship with HBV DNA level. This study is to explore the prediction value of HBV-LP in different phase of HBV infection and during antiviral therapy in chronic hepatitis B (CHB) patients.
Methods A retrospective study was conducted in 2033 individuals, which included 1677 HBV infected patients in different phases and 356 healthy controls. HBV-LP, HBV serum markers and HBV DNA were detected by ELISA, CMIA and qRT-PCR, respectively. 85 CHB patients receiving PegIFNα or ETV were divided into virological response (VR) and partial virological response (PVR). The dynamic changes of HBV DNA and HBV-LP were observed.
Results The level of HBV-LP in 2033 individuals was shown as: HBeAg-positive hepatitis > HBeAg-positive infection > HBeAg-negative hepatitis > HBeAg-negative infection > healthy controls. HBV-LP was positive in all patients whose HBV DNA > 1.0E + 06 IU/ml. When HBsAg was <0.05 IU/ml or >1000 IU/ml, HBV DNAs were all negative if HBV-LP < 1.0 S/CO. When HBsAg was between 0.05 IU/ml and 1000 IU/ml, the consistency of HBV-LP with HBV DNA was 100% in case of HBV-LP > 4.0 S/CO in HBeAg-positive patients and HBV-LP > 2.0 S/CO in HBeAg-negative ones. During antiviral therapy, baseline HBV-LP was lower in VR patients than that in PVR patients. The optimal cut-off points to predict VR by baseline HBV-LP were 32.4 and 28.6 S/CO for HBeAg-positive and HBeAg-negative hepatitis patients, respectively.
Conclusions HBV-LP may be a useful marker for distinguishing the different phases of HBV infection. Moreover, baseline HBV-LP level can be used for predicting VR of CHB patients.

PU-0738

Polymorphisms of CYP27B1 are associated with IFN efficacy in HBeAg-positive patients

Yongbin Zeng 、Qishui Ou
The First Affiliated Hospital of Fujian Medical University

Background Host single nucleotide polymorphisms were associated with antiviral therapy in CHB patients. The CYP27B1 gene, encoding 25(OH)D3 -1α hydroxylase, might activate 25(OH)D3 to 1,25(OH)2 D3 in kidney resulted in influencing the efficacy of interferon (IFN). The aim of the study was to investigate the association between CYP27B1 polymorphisms and the response to IFN in HBeAg-positive patients.
Methods Eighty-seven HBeAg-positive CHB patients infected with HBV genotype B or C were included in the study. All patients were treated with IFN at least 1 year. According to the response to PEG-IFN therapy, they were divided into three groups: 16 complete responses (CR), 42 partial responses (PR), and 29 nonresponses (NR). Sanger-sequencing was utilized to genotype the CYP27B1 SNPs(rs4646536 and rs10877012).
Results In logistic regression analysis, the frequency of rs4646536 CC genotype was observed to be higher in the NR group. Besides, the GG genotype of rs10877012 differed significantly among the three groups. The GG genotype was prevalent in patients with CR, and patients with TT genotype result in NR at the end of IFN treatment. The most common haplotype TG was independently associated with CR, after adjustment, and haplotype CT appeared to be

associated with NR and PR, rather than CR. The data also showed that patients with baseline 1,25(OH)2 D3 > 39.39 pg/mL had higher CR rates at the end of IFN therapy.
Conclusion These results suggested CYP28B1 gene polymorphisms may be independently associated with the efficacy of IFN in HBeAg-positive patients.

PU-0739

Genetic variants in NTCP exon gene are associated with HBV infection status in a Chinese Han population.

Wennan Wu、Qishui Ou
The First Affiliated Hospital of Fujian Medical University, Fuzhou, China

Aim Sodium taurocholate co-transporting polypeptide (NTCP) plays an important role in the enterohepatic circulation of bile acids. Recently, NTCP was identified as a hepatitis B virus (HBV) receptor. The aim of this study is to investigate the association of NTCP polymorphisms with HBV clinical outcomes and investigate the relationship between NTCP polymorphisms and the serum bile acid level in a Chinese Han population.
Methods The single nucleotide polymorphisms rs2296651 and rs4646285 were genotyped in 1619 Chinese Han individuals. Improved multiple ligase detection reaction was utilized to genotype. The level of bile acids was measured by the enzymatic cycling method. Quantitative polymerase chain reaction analysis was carried out to analyze the potential function.
Results In logistic regression analysis, the frequency of rs2296651 (S267F) CT genotype was higher in HBV immune recovery and healthy control groups than in the chronic HBV infection group ($P = 0.001$ and $P < 0.001$, respectively). Patients who carried allele T showed a higher bile acid level than patients who did not carry allele T ($P = 0.009$). The rs4646285 AA genotype was more common in the immune recovery group than in the chronic HBV infection group ($P = 0.011$). No difference in serum bile acid was detected between the rs4646285 wild-type patients and mutant-type patients. Quantitative reverse transcription-polymerase chain reaction showed the NTCP mRNA levels were lower in rs4646285 variants than wild types.
Conclusion NTCP gene polymorphisms may be associated with the natural course of HBV infection in a Chinese Han population. The S267F variant may be a protective factor to resist chronic hepatitis B progression which showed a higher bile acid level in Chinese Han chronic HBV infection patients. The rs4646285 variants could influence the expression of NTCP at the level of transcription, and ultimately may be associated with HBV infection immune recovery.

PU-0740

Evaluation of the performance of four Methods for detection of hepatitis B surface antigen and their application for testing 116,455 specimens

Can Liu、Qishui Ou
The First Affiliated Hospital of Fujian Medical University

Hepatitis B surface antigen (HBsAg) is a crucial serum marker for the diagnosis of hepatitis B virus (HBV) infection. It is imperative to compare test results from different detection **Methods** based on different principles. Four methods, chemiluminescent microparticle immunoassay (CMIA), electrochemiluminescent immunoassay (ECLIA), enzyme-linked immunosorbent assay (ELISA) and golden immunochromato-graphic assay (GICA) were applied to test the HBsAg level in 250 specimens. According to the EP12-A2 and EP15-A2 documents from Clinical and Laboratory Standards Institute (CLSI), the concentration at which repeated results are 50% positive (C50) of HBsAg detected by CMIA, ECLIA, ELISA and GICA was 0.05, 0.08, 0.15 and

15.0IU/ml, respectively. When the detection concentration of HBsAg was 0.5IU/ml, the imprecision degree of CMIA, ECLIA and ELISA was 8.1%, 5.9% and 14.9% respectively. When detecting high HBsAg level (≥20.0IU/ml) and HBsAg negative specimens, the consistency of the four **Methods** was high, while for the low level (0.05-20.0IU/ml), the consistency was poor (except for the CMIA and ECLIA, P<0.05). When evaluation of the four **Methods** in qualitative diagnosis of HBsAg level in the 116,455 specimens, there was no significant discrepancy among CMIA, CMIA and ECLIA, however, GICA was significantly different from the other 3 **Methods** Compared with CMIA, the false negative rate of ECLIA, ELISA and GICA was 0.2%, 1.3% and 12.3% respectively. In conclusion, GICA was only suitable for the preliminary screening of HBsAg positive individuals and ELISA can be applied to the qualitative diagnosis of HBsAg. Both CMIA and ECLIA were suitable for the quantitative determination of HBsAg.

广东地区下呼吸道标本分枝杆菌菌种鉴定及结核分枝杆菌耐药基因检测结果回顾性分析

张磊、吴业鑫、党文强、王秀、黄亚梅、黄韵
广州金域医学检验中心有限公司

目的 了解广东地区下呼吸道标本分枝杆菌的检出率及菌种分布情况，以及结核分枝杆菌的耐药基因突变模式，为分枝杆菌感染的防治提供依据。

方法 采用 *PCR*-反向点杂交法对本中心 2020 年全年收集的 2131 份来自广东地区的下呼吸道标本进行分枝杆菌菌种鉴定（1138 份）和结核分枝杆菌耐药基因突变检测（993 份），分析其菌种分布特征及结核分枝杆菌的耐药基因突变模式。

结果 1138 份菌种鉴定标本中，分枝杆菌阳性 439 例（38.58%），其中结核分枝杆菌 285 例（占阳性标本的 64.92%），非结核分枝杆菌 154 例（占阳性标本的 35.08%）；混合感染 7 例。在 285 例结核分枝杆菌感染患者中，男性 220 例（占 77.2%），检出率显著高于女性，差异有统计学意义（χ^2=33.59，*P*=0.000）。非结核分枝杆菌菌种分布达 9 种，以胞内分枝杆菌和脓肿分枝杆菌脓肿亚种为主；其中胞内分枝杆菌 75 例（46.58%），男性 38 例，性别分布差异无统计学意义（χ^2=3.64，*P*=0.0564）；脓肿分枝杆菌脓肿亚种 53 例（32.92%），女性 41 例，检出率明显高于男性，差异有统计学意义（χ^2=13.49，*P*=0.0002）。485 份阳性标本结核分枝杆菌耐药基因突变检测结果显示，利福平耐药基因突变 80 例（16.49%），以 *rpoB* 531 位点为主（58.75%）；异烟肼耐药基因突变 89 例（18.35%），以 *katG* 315 位点为主（83.15%）；链霉素耐药基因突变 56 例（11.55%），以 *rpsL* 43 位点为主（75%）；乙胺丁醇耐药基因突变 35 例（7.21%），以 *embB* 306 位点为主（62.86%）。

结论 广东地区分枝杆菌感染以结核分枝杆菌为主，且耐药基因突变情况较严重，应重视药敏检测并关注利福平和异烟肼的耐药变化。非结核分枝杆菌感染率明显高于内陆地区，且种类多样，应普及分枝杆菌菌种鉴定。

Detection of hepatitis B virus genotypic resistance mutations by coamplification at lower denaturation temperature-PCR coupled with sanger sequencing

Can Liu、Qishui Ou
The First Affiliated Hospital of Fujian Medical University

Mutations in the reverse transcriptase (rt) region of the DNA polymerase gene are the primary cause of hepatitis B virus (HBV) drug resistance. In this study, we established a novel method that couples coamplification at lower denaturation temperature (COLD)-PCR and Sanger sequencing, and we applied it to the detection of known and unknown HBV mutations. Primers were designed based on the common mutations in the HBV rt sequence at positions 180 to 215. The critical denaturation temperature (Tc) was established as a denaturing temperature for both fast and full COLD-PCR procedures. For single mutations, when a melting temperature (Tm)-reducing mutation occurred (e.g., C-G → T-A), the sensitivities of fast and full COLD-PCR for mutant detection were 1% and 2%, respectively; when the mutation caused no change in Tm (e.g., C-G → G-C) or raised Tm (e.g., T-A → C-G), only full COLD-PCR improved the sensitivity for mutant detection (2%). For combination mutations, the sensitivities of both full and fast COLD-PCR were increased to 0.5%. The limits of detection for fast and full COLD-PCR were 50 IU/ml and 100 IU/ml, respectively. In 30 chronic hepatitis B (CHB) cases, no mutations were detected by conventional PCR, whereas 18 mutations were successfully detected by COLD-PCR, including low-prevalence mutations (<10%), as confirmed by ultradeep pyrosequencing. In conclusion, COLD-PCR provides a highly sensitive, simple, inexpensive, and practical tool for significantly improving amplification efficacy and detecting low-level mutations in clinical CHB cases.

一例与常染色体隐性脊髓小脑共济失调伴轴突神经病 2 型有关的 SETX 基因新突变

文霞、罗庆、刘靳波
西南医科大学附属医院

目的 本研究旨在确定一例共济失调患者的遗传学病因。
方法 对先证者进行详细的临床资料采集。通过动态突变及全外显子组测序寻找可能的致病变异，采用多种在线生物信息学软件对变异进行致病性分析及保守性评估。
结果 先证者主要表现为进行性加重的小脑性共济失调，头颅 MRI 提示小脑萎缩，电生理检查提示双下肢感觉神经受损。基因检测结果发现先证者存在 SETX 基因 c.3247T>C、c.5267T>C 复合杂合变异，父亲携带 c.3247T>C，母亲携带 c.5267T>C，且父母均无异常，符合常染色体隐性遗传模式。弟弟携带同样的复合杂合突变，但除了左眼有轻微水平眼球震颤外没有任何表现。多种生物信息学软件预测两个变异均具有致病性、且变异位点保守。
结论 常染色体隐性脊髓小脑共济失调伴轴突神经病 2 型具有极大的临床和遗传异质性，基因检测有助于该病的确诊。SETX 基因 c.3247T>C 与 c.5267T>C 变异可能为该患者的致病原因，其中 c.3247T>C 是未报道过的新变异，扩展了 SETX 基因的变异谱。

Clinical significance of periodic detection of hepatitis B virus YVDD mutation by ultrasensitive real-time amplification refractory mutation system quantitative PCR during lamivudine treatment in patients with chronic hepatitis B

Yongbin Zeng 、Qishui Ou
The First Affiliated Hospital of Fujian Medical University

Monitoring hepatitis B virus (HBV) mutants periodically during nucleoside analogue treatment is of great clinical significance, particularly in persistently HBV DNA-positive patients. However, few studies have investigated the dynamic changes of HBV YMDD (Tyr-Met-Asp-Asp) and YVDD (Tyr-Val-Asp-Asp) populations in chronic hepatitis B (CHB) patients whilst undergoing lamivudine (LMV) treatment. In this study, we sought to investigate the dynamic changes of HBV YMDD and YVDD variants by ultrasensitive real-time amplification refractory mutation system quantitative PCR (RT-ARMS-qPCR) and evaluate its significance for changes in the treatment of CHB patients. RT-ARMS-qPCR was established and evaluated with standard recombinant plasmids. Fifteen CHB patients receiving LMV (100 mg daily) were consecutively recruited and followed up for 60 weeks. Serum samples were obtained from each patient at baseline and every 12 weeks. The total HBV DNA, HBV YMDD DNA and YVDD DNA levels were measured using RT-ARMS-qPCR at all given time points after treatment. Routine liver biochemistry parameters, including aspartate aminotransferase and alanine aminotransferase, were also measured every 12 weeks. The linear range of the assay was between 1×10(12) and 1×10(5) copies ml(-1). The low detection limit was 1×10(4) copies ml(-1). After 60 weeks of LMV treatment, nine patients experienced virological breakthrough. The YVDD variant could be detected 12-48 weeks before virological breakthrough. The YVDD variant was detected as the predominant population (range 69.4-100 %) in patients by the time virological breakthrough appeared. We concluded that RT-ARMS-qPCR was sensitive for the detection and quantification of low levels of HBV mutation. Periodic detection of HBV YM(V)DD every 12 weeks during LMV treatment is helpful for therapeutic decision making.

Application strategies of serum HBV DNA detection in HBV infection patients: A retrospective study of 5611 specimens

Can Liu、Qishui Ou
The First Affiliated Hospital of Fujian Medical University

The detection of hepatitis B virus (HBV) DNA plays a critical role in determining the level of viral replication in HBV-infected patients. However, how to select appropriate HBV DNA detection method, low-sensitivity (ls) and hypersensitivity (hs) remains unclear. In this study, hepatitis B surface antigen (HBsAg), hepatitis B e-antigen (HBeAg), alanine transaminase (ALT), aspartate transaminase (AST), and hs HBV DNA titers in serum of 5611 cases with suspected HBV infection were reviewed. Besides, the dynamic changes of HBV DNA and HBsAg in 85 chronic hepatitis B (CHB) patients receiving peginterferon α (PegIFNα) or entecavir (ETV) were observed. The results showed the positive rate of HBV DNA was 32.8%, of which low viral load (20 to 500 IU/mL) accounted for 51.8%. In the 5611 cases, when the HBsAg was less than 1000 IU/mL, the proportion of low viral load was 76.3%. Moreover, in patients receiving antiviral treatment, when HBsAg was less than 2000 IU/mL (PegIFNα) or HBsAg was less than 3500 IU/mL (ETV), the

proportion of patients with low viral load was 79.5% or 78.0%, respectively. We developed a strategy of serum HBV DNA detection in HBV-infected patients. When HBsAg was negative, HBV DNA detection should be unnecessary. When HBsAg was 0.05 to 1000 IU/mL, hs HBV DNA should be detected in patients with abnormal level of ALT, AST, or HBeAg. While HBsAg was greater than or equal to 1000 IU/mL, ls HBV DNA was recommended. Moreover, the cutoff value of HBsAg increased during antiviral therapy of CHB patients. In conclusion, hs HBV DNA is of great value in HBV-infected patients with low viral load. HBV DNA detection **Methods** should be selected reasonably according to the levels of HBsAg, HBeAg, ALT, and AST.

PU-0746

A Circulating Long Noncoding RNA Panel Serves as a Diagnostic Marker for Hepatocellular Carcinoma.

Jinlan Huang、Qishui Ou
Department of Clinical Laboratory, First Affiliated Hospital of Fujian Medical University

Background Circulating long noncoding RNAs (lncRNAs) have been demonstrated to serve as diagnostic biomarkers for various cancers. We aimed to elucidate the diagnostic efficacy of eight serum lncRNAs HULC, MALAT1, Linc00152, PTENP1, PTTG3P, SPRY4-IT1, UBE2CP3, and UCA1 and their combinations for the diagnosis of hepatocellular carcinoma (HCC).
Methods A total of 129 patients with HCC, 49 patients with liver cirrhosis, 27 patients with chronic hepatitis B, and 93 healthy controls were enrolled in this study. The levels of serum lncRNAs were assessed by quantitative real-time polymerase chain reaction. The correlations between serum lncRNAs and clinicopathological characteristics were further analyzed. The receiver operating characteristic (ROC) curve and area under curve (AUC) were utilized to estimate the diagnostic capacity of serum lncRNAs and their combination with AFP for HCC. A logistic regression model was performed to establish a multiple-lncRNA panel.
Results The levels of serum HULC, MALAT1, Linc00152, PTTG3P, SPRY4-IT1, UBE2CP3, and UCA1 were significantly higher in HCC patients than in patients with benign liver diseases and healthy controls, whereas serum PTENP1 was significantly decreased in HCC patients compared with healthy participants. Positive correlations between serum Linc00152 and GGT, serum PTTG3P and GGT, and serum SPRY4-IT1 and ALT were noted in HCC patients. ROC analysis revealed that all these lncRNAs had a significantly predictive value for HCC except for PTENP1. The best performance of single lncRNA was obtained by Linc00152 with an AUC of 0.877. When combined with AFP, the combination of Linc00152 and AFP gained the highest accuracy, yielding an AUC of 0.906. Through logistic regression analysis, the panel consisting of serum linc00152, UCA1, and AFP provided the greatest predictive ability, obtaining an AUC of 0.912 with 82.9% sensitivity and 88.2% specificity.
Conclusion The panel of serum Linc00152, UCA1, and AFP demonstrates a novel and noninvasive biomarker with relatively high sensitivity and specificity for HCC diagnosis.

细胞因子与糖尿病视网膜病变的相关性研究

卢宇萌
徐州市第一人民医院

随着经济社会的迅速发展，生活方式的改变， DR 患者逐渐增多，正日益突显，但 DR 的确切病因和发病机制尚不明确。近年来有研究发现 DR 的发生发展过程与部分细胞因子存在一定程度的相关性，其中 VEGF 是目前已知的最强的内皮细胞有丝分裂原和诱导血管生成的细胞因子，也是目前认为与 DR 新生血管形成联系最紧密的一个细胞因子；IGF-1 作为一种多功能细胞增生调控因子，

与视网膜多种细胞生长繁殖密切相关。目前，已有研究表明，在 DR 患者中血清 SIL-2R、LECT-2 水平显著升高，而血清 IL-35、IL-6 水平显著降低。但这些细胞因子在 DR 中的具体作用尚不明确。迄今为止，国内外对 DR 与细胞因子相关性的研究众多，但大多数都是进行单一细胞因子的检测，很少有研究进行多种细胞因子的检测。因此，本研究拟以徐州市第一人民医院就诊的 PDR 患者和 NPDR 患者为研究对象，以健康体检者作为健康对照组，采用多重微球流式免疫荧光发光法检测血清中 12 项细胞因子（IL-1β、IL-2、IL-4、IL-5、IL-6、IL-8、IL-10、IL-12、IL-17、IFN-α、IFN-γ、TNF-α）的含量及其水平变化，运用统计学分析 12 项细胞因子与 DR 的相关性，评估 DR 患者的发病风险及患病程度，明确 DR 发生和发展过程中相关细胞因子的作用并探讨其临床意义。为我国 DR 的预防和诊治提供新的思路和方向。

本研究拟表明 DR 患者的血清中部分细胞因子表达水平存在差异，揭示炎症反应在 DR 发生和发展中起到重要作用。DR 的病变程度与部分细胞因子含量呈正相关，病变的严重程度逐渐加重，血清中的细胞因子含量呈递增趋势。因此，细胞因子有可能成为 DR 临床早期预警的标志物。

LncRNA-IMAT1 promotes invasion of meningiomas by suppressing KLF4/hsa-miR-22-3p/Snai1 pathway

Yu Ge、Tao Zhang
Huashan Hospital, Fudan University

Objective Meningiomas originate from the arachnoid cap cells and are the most common primary central nervous system (CNS) tumors. Although majority meningiomas are benign and can be completely resected by surgery, some others has high risk of recurrence and poor prognosis, especially WHO Ⅱ/Ⅲ grade tumors (high-grade meningioma). Compared to benign meningiomas, the prognosis of malignant meningioma is poor, and it seriously affects the survival and quality of life of the patients. Meningiomas with certain molecular characteristics, are prone to be aggressive, for example, NF2 mutation, loss of chromatin 22. Nevertheless, there is no effective molecular marker which has the appreciated value to predict the risk grade and prognosis of meningiomas invasiveness, especially in some benign tumors. Therefore, it is of urgent need to explore novel invasion-related molecule which can assist physicians to decide more precise therapy for patients. Recently lncRNAs are the hot topic in diseases researches，they regulate tumorigenesis and progression in a great many of tumors，which provide a new prospect of studying malignant meningiomas. Now this study is to illuminate the function of a new discovered lncRNA in high-grade meningiomas.

Methods The levels of IMAT1, KLF4, and Snai1 were detected by RT-qPCR and calculated according to the comparative Ct (2 -ΔCt) method using β-actin as an internal control, and hsa-miR-22-3p levels were normalized by U6 as reference. The protein level of KLF4, α-SMA, E-cadherin, MMP2, MMP9 and Snai1 were detected by Western blotting. β-actin was used as an endogenous reference for normalization. The expression of IMAT1 and hsa-miR-22-3p was also analyzed using FISH. The binding of KLF4 and has-miR-22-3p, as well as has-miR-22-3p and Snai1 were confirmed by Luciferase assay. Meningioma cell's viability was analyzed by CCK-8 assay, invasion ability was detected using Cell Invasion Assay and migration ability was assessed using wound healing assay.

Results Our studies indicated that the expression of IMAT1 in invasive meningiomas showed a significant increase compared with that in noninvasive meningiomas. In vitro studies showed that IMAT1 promoted meningioma cells invasion through inactivation of the tumor suppressor Krüppel-like factor 4 (KLF4) by acting as a sponge for hsa-miR-22-3p. IMAT1 knockdown effectively restored the tumor suppressive properties of KLF4 by preserving the KLF4/hsa-miR-22-3p/Snai1 pathway. In vivo experiments have confirmed that IMAT1 silencing could significantly inhibit the proliferation of subcutaneous tumors and prolong the survival period of malignant meningioma tumor-bearing mice.

Conclusion Our research shows that the high expression of IMAT1 is the inherent reason why KLF4 gene loses its tumor suppressor properties during meningioma progression. Based on its function model, we believe that IMAT1 may be a potential target for the treatment of meningioma and has the potential to become a new screening marker of diagnosis, grading, and prognosis for meningiomas.

西南地区 120 例男性不育症患者染色体原因分析

罗庆、李亚兰、刘靳波
西南医科大学附属医院

目的 探讨西南地区 120 例男性不育患者的临床特征与细胞及分子遗传学原因。
方法 收集西南四川地区 120 例男性不育症患者的临床资料并对其进行相应的实验室检测。精液检查按照世界卫生组织指南操作，外周血淋巴细胞按常规染色体培养 G 显带行核型分析，Y 染色体微缺失检测选取 EAA 和 EMQN 推荐的 6 个 Y 染色体特异标签序列位点采用多重 PCR 技术检测 Y 染色体 AZFa（sY84, sY86）、AZFb（sY127， sY134）和 AZFc（sY254, sY255）区的微缺失情况。
结果 120 例男性不育症患者中无精子症患者 62 例、严重少精子患者 21 例及精液质量正常的患者 37 例。采用核型分析与 Y 染色体微缺失检测发现异常 37 例，占总数 31.67%，其中 3 例患者结果均异常。检出染色体异常 30 例，占总数 25%，其中染色体数量异常 20 例，17 例为 47,XXY，2 例为 47,XXY,9qh+。染色体结构异常 11 例，包括了 5 例 46,X,Yqh-，2 例 46,X,inv(Y)(p11q11)，2 例 46,XY,inv(9)(p12q13)，1 例 46，XX, 1 例为 45,X[30]/46,X,Yqh-[20]，1 例 46,XY,15p+。检出 Y 染色体微缺失 10 例，均发生在无精子组及严重少精子组，占总数 8.3%，其中 AZF（a、b、c）缺失 1 例，AZF(b、c)区缺失 2 例，AZFc 区缺失 7 例。
结论 西南地区男性不育症患者中核型异常 47,XXY 与 Y 染色体 AZFc 位点缺失的发生率最高。对不育症患者进行核型分析与 Y 染色体微缺失检测等有助于病因的诊断及遗传咨询，必要时还应进行相关基因检测来进一步寻找遗传学病因。

Association between mitochondrial DNA content and baseline serum levels of HBsAg in chronic hepatitis B infection

Zhen Xun 、Qishui Ou
The First Affiliated Hospital of Fujian Medical University, Fuzhou, China

Recent studies have demonstrated a potential link between mitochondrial DNA (mtDNA) content and cirrhosis or hepatocellular carcinoma (HCC). However, there are few studies evaluating mtDNA content as a noninvasive marker of chronic hepatitis B infection (CHB). In this study, we conducted a case-control study to determine mtDNA content in peripheral blood leukocyte (PBL) samples from 76 CHB cases naïve to antivirus therapy and 96 healthy controls, and then evaluated the association between mtDNA content and baseline serum concentration of HBV markers. Consequently, CHB cases had significantly higher mtDNA content than healthy controls (1052.85 vs 618.98, $P < 0.001$). Pearson's correlation analysis revealed that mtDNA content was negatively correlated with the baseline levels of hepatitis B surface antigen (HBsAg) ($r=-0.291$, $P=0.011$) in CHB patients. In a trend analysis, a statistically significant association was detected between lower mtDNA content and increasing levels of HBsAg ($P=0.015$). In conclusion, our study provides the first epidemiological evidence that mtDNA content of CHB cases naïve to antivirus therapy is significantly higher than healthy controls and the levels of

mtDNA content is negatively associated with HBsAg. mtDNA content may serve as a potential noninvasive biomarker of CHB which may need more researches to validate.

非小细胞肺癌患者基因突变情况及与肺结节患者的比较

赵冉[1]、伍潇怡[1]、陈颖玮[1]、王雪亮[1]、何章勇[2]、黄维纲[1]
1. 上海市临床检验中心
2. 上海奕检医疗科技有限公司

目的 探讨 15 种肺癌相关基因在非小细胞肺癌（NSCLC）患者中的突变情况及与肺结节患者的差异。
方法 采用二代测序（next-generation sequencing，NGS）技术靶向检测 650 例 NSCLC 患者及同期 29 例肺结节患者石蜡包埋组织中肺癌相关 *BCL2L11*、*BRAF*、*EGFR*、*ERBB2*、*FGFR*、*KRAS*、*MAP2K1*、*MET*、*NRAS*、*NTRK*、*PIK3CA*、*RET*、*TP53*、*ROS1* 共 15 种基因的突变情况。
结果 在 NSCLC 组及肺结节组患者中，检测到基因突变的频率分别为 61.23%及 55.17%（P>0.05）；在所有检测到的基因突变位点中，位于表皮生长因子受体 *EGFR* 基因上的突变位点个数最多，占所有基因突变位点的比例分别为 67.65%和 59.09%（P>0.05）；两组患者中携带至少 1 个 *EGFR* 基因突变的患者分别为 313 例（48.15%）和 11 例（37.93%）（P>0.05）；中国 NSCLC 人群中 EGFR 基因变异频率远高于已报道的西方人群。在 *EGFR* 基因变异的 NSCLC 患者中，除外显子 19DEL、外显子 20INS、T790M 和 L858R 外，还发现了 24 种不同的非常见 *EGFR* 突变。在 NSCLC 患者中 *EGFR* 合并其他基因突变的情况较常见，且 *EGFR* 合并 2 个及 2 个以上其他基因突变的比例也较高，占所有 EGFR 合并突变的 16.13%（10/62）。此外，女性肺腺癌患者发生基因突变的频率更高。
结论 应用 NGS 技术揭示了中国 NSCLC 患者群体肺癌相关基因变异的更多独特特征，比其他分子检测方法更具可行性和必要性，可为后续 NSCLC 患者的药物开发和靶向治疗需要提供特殊策略。

Association study of hypertension susceptibility genes ITGA9, MOV10 , and CACNB2 with preeclampsia in Chinese Han population

Qian Xin
The second hospital of Shandong university

Objective Preeclampsia (PE) is a disorder that occurs during the pregnancy and could affect the maternal and perinatal mortality as well as morbidity. The aim of our study is to investigate the associations between the hypertension susceptibility genes ITGA9 , MOV10 and CACNB2 with PE in Chinese Han population.
Methods A case – control study including 178 PE patients and 202 healthy controls was conducted to assess the associations between three loci (ITGA9 rs155524, MOV10 rs2932538 and CACNB2 rs4373814) and PE. The TaqMan probe assay was applied for genotyping in our study. Quantitative real-time PCR was performed to detect the mRNA expression levels of ITGA9, MOV10 and CACNB2. ELISA was carried out to detect the concentration of serum sFlt-1 or PLGF.
Results Our study detected no significant differences in allelic frequencies of three SNPs between PE patients and healthy controls. In the genetic model, the results showed that the patients with ITGA9 rs155524 GA or AA genotypes had a higher risk of PE development compared to those with GG genotype in codominant model. And PE patients had a higher frequency of GA þ AA genotypes based on the dominant model. Subgroup analysis showed ITGA9

rs155524 was associated with early-onset PE but not with late-onset PE. No association was observed between MOV10 and CACNB2 with PE in any genetic model and subgroup analysis. Quantitative real-time PCR results showed that ITGA9 mRNA expression level was apparently increased in the placental tissues of PE patients. In addition, ITGA9 expression levels of GA þ AA subjects were apparently higher than that in the genotype GG of placental tissues. sFlt-1/PLGF ratio was higher in GA þ AA subjects than that in GG subjects. Regression analysis revealed that ratio of sFlt-1/PLGF was positively correlated with ITGA9 mRNA expression level.
Conclusion This study has identified ITGA9 is a promising candidate susceptibility gene for early-onset PE. Our findings demonstrated that the high expression of ITGA9 might be associated with an increased risk of PE.

PU-0753

Real-time PCR for quantitative detection of mitochondrial DNA from peripheral blood mononuclear cell in patients with HBV-related hepatocellular carcinoma

Zhen Xun 、Qishui Ou
The First Affiliated Hospital of Fujian Medical University, Fuzhou, China

The alteration of mitochondrial DNA (mtDNA) content could affect the expression of genes which causes many tumor diseases. However, the association between mtDNA content in peripheral blood mononuclear cell (PBMC) and hepatitis B virus (HBV)-related hepatocellular carcinoma (HCC) remains undetermined. First of all, establishing a reliable assay to detect mtDNA content is of great clinical significance. In this study, the method of real-time quantitative polymerase chain reaction (RT-qPCR) with SYBR Green I was established to evaluate mtDNA content in PBMC of healthy controls (n=23) and non-surgical HBV-related HCC cases (n=46). Receiver operating characteristic (ROC) curve analysis was carried out to assess the clinical significance of mtDNA content for diagnosing HCC. Consequently, linear range of the assay was between 1×1010 copies/μl and 1×103 copies/μl. Sensitivity was 800 copies/μl. Besides, HCC cases had a significantly lower mtDNA content than healthy controls (378.55[58.20–784.85] vs 715.48[292.00–1280.00]; P<0.001). When 489.90 copies/μl was set as the cut-off point, the sensitivity and specificity of mtDNA content to diagnose HCC were 82.6% and 71.7%, respectively. In conclusion, a simple, cost-effective, highly sensitive and specific method to detect mtDNA content is established. This method can be applied to clinical laboratory for detecting mtDNA content. Moreover, our study provides the first epidemiological evidence that mtDNA content in PBMC is significantly associated with HCC. MtDNA content in PBMC could serve as a novel clinical diagnostic indicator for HCC which may need more researches to validate.

医学检验技术在血液肿瘤诊治中的支持作用

胡玎玉
南华附属第一医院

血液检验技术极大地影响了不同形式的血液系统恶性肿瘤患者的诊断和临床管理。早期对血液肿瘤的检测主要根据光镜及电镜下观察细胞形态以及化学染色，此方法易于在基层单位推广，无论新技术如何发展，这一方法仍有不可替代的价值。随着免疫学、细胞遗传学及分子遗传学、分子生物学技术的飞速发展与临床应用，使多种检验方法被综合起来法对血液肿瘤进行诊断和分型。免疫学分析主要包括 IHC 和 FCM, 细胞遗传学主要采用染色体核型分析，分子遗传学分析主要采用荧光原位杂交技术。与 FISH 技术比较，染色体核型分析反映了全基因组的遗传学改变，可同时发现多

种染色体异常，与其他基因分析技术比较，对整条染色体或较大片段染色体的丢失或增加或易位的发现更直观、快速、便捷。血液肿瘤是由于造血干/祖或前体细胞染色体异常或基因突变，导致细胞增殖、分化或凋亡异常，恶性血液细胞大量增加的疾病。目前临床应用的基因检测技术主要有融合基因检测、基因测序和基因芯片技术。目前全基因组测序、全外显子测序、目标基因的测序等多种技术的也相继开展，也从技术层面上进一步推动了血液肿瘤分子检测在实验室的开展和临床的广泛应用。尽管有这些好处，但新突变的识别在临床环境中也面临挑战。在细胞减少不清楚和可能代表芯片的克隆性突变存在的情况下是需要谨慎的。在淋巴系统恶性肿瘤方面，正在尝试建立淋巴瘤的液体活检诊断方法，并最终在骨髓瘤中建立液体活检诊断方法，从而改善治疗监测。不仅如此，临床医生和分子生物学家都需要深入培训，以便对下一代测序结果进行合理的解释，他们的跨学科交流比以往任何时候都更加重要。这样的联合努力最终将有助于最大化发挥这些新的诊断方法的优势，并勾勒出未来的需求和战略，以造福于血液恶性肿瘤患者。

Evaluation of cell-free DNA variables including gene mutations as prognostic biomarkers in breast cancer

Juan Xu[1]、Hailin Peng[1]、Yongmei Meng[1,2]、Chenglin Zhou[1]
1. Department of Laboratory Medicine, Taizhou People's Hospital
2. School of Laboratory Medicine, Dalian Medical University

Objective Cell-free DNA (cfDNA) has recently been recognized as a biomarker of cancer progression. In this paper, we evaluated the prognostic potential of cfDNA variables in breast cancer.
Methods A total of 92 breast cancer (BC) patients were enrolled. The concentration of plasma cfDNA was represented by the qPCR result with LINE1-97 bp primers, and integrity index was calculated as the ratio of the LINE1-259 and LINE1-97. Next generation sequencing (NGS) was used to examine cfDNA to detect copy number variation (CNV) and single nucleotide variant (SNV).
Results The cfDNA concentration, cfDNA CNV index were higher and cfDNA integrity index were lower in metastatic patients than in no metastatic ones ($P < 0.05$). The concentration (OR = 3.877, 95% CI: 1.043-14.413, $P = 0.043$) was associated with metastatic status of BC patients. CNV index of cfDNA was associated with metastatic (OR = 2.895, 95% CI: 1.129-7.424, $P = 0.027$) and distant metastatic status (OR = 4.055, 95% CI: 1.225-13.424, $P = 0.022$) of BC patients. Cases with high cfDNA concentration showed worse progression-free survival (PFS) compared with cases with low cfDNA concentration ($P < 0.05$). Nineteen mutant genes were validated in enrolled breast cancer patients. Among these patients, 27 patients (29.3%) have TP53 mutations, 14 patients (15.2%) have PIK3CA mutations, and 9 patients (9.8%) have KRAS mutations. TP53 mutation was closely related to tumor stage and distant metastatic status of breast cancer ($P < 0.05$). In addition, patients with TP53 mutation showed shorter PFS than those without mutation ($P < 0.05$). In the multivariate analysis, TP53 mutation were significant associated with the poor PFS ($P = 0.035$, HR = 2.094, 95% CI: 1.052-4.167).
Conclusion Assessment of cfDNA concentration, cfDNA integrity index, CNV index and TP53 mutation could be useful in predicting prognosis for breast cancer. These cfDNA variables carry important clinical information for breast cancer monitoring.

PU-0756

GABRD 表达增强预测结肠腺癌患者预后不良

伍模鑫
九江学院附属医院

据报道，神经递质与肿瘤的发生和进展有关。本研究旨在阐明使用来自癌症基因组图谱 (TCGA) 数据库的数据，研究 γ-氨基丁酸 A 型受体 δ 亚基 (GABRD) 在结肠腺癌 (COAD) 中的预后价值。使用 Wilcoxon 秩和检验比较 COAD 和正常组织中的 GABRD mRNA 表达水平。通过 Wilcoxon 秩和检验或 Kruskal-Wallis 检验和逻辑回归分析临床病理特征与 GABRD 表达之间的相关性。使用 Kaplan-Meier 曲线和 Cox 回归分析确定 GABRD mRNA 表达在 COAD 患者中的预后价值。最后，通过基因集富集分析（GSEA）预测了 GABRD 在 COAD 中的分子机制。COAD 组织中 GABRD mRNA 表达水平高于正常组织。Logistic 回归分析显示 GABRD mRNA 表达与 TNM 分期、N 分期、M 分期和微卫星不稳定性（MSI）状态相关。 Kaplan-Meier 生存曲线和对数秩检验显示，表现出高 GABRD mRNA 表达的 COAD 患者与较差的总生存期 (OS) 相关。多变量分析表明，GABRD mRNA 表达的增加是一个独立的预后因素，并且与较差的 OS 相关。 GSEA 揭示 GABRD 参与信号通路，包括细胞粘附分子、间隙连接、黑色素生成和 mTOR 信号通路，以及与基底细胞癌或膀胱癌发展相关的信号通路。总之，增强的 GABRD mRNA 表达可能是 COAD 潜在的独立预后生物标志物。

Genetic polymorphisms in MAPK4 are associated with clinical response to methotrexate in patients with psoriasis

Zhijia Fan、kexiang yan、zhicheng wang
Department of Laboratory Medicine, Huashan Hospital, Fudan University, Shanghai

Background Although methotrexate (MTX) is widely applied to treat psoriasis, significant heterogeneity of efficacy exists among individuals.
Objectives We aimed to investigate the relationship of MAPK4 genetic variants with the efficacy of MTX in psoriasis patients.
Methods Patients treated with MTX were classified as responders or nonresponders if the Psoriasis Area and Severity Index (PASI) at week 12was reduced greater than 75% or lower than 50%, respectively. The genotypes of 14 MAPK4 single nucleotide polymorphisms (SNPs) in 310 patients with MTX treatment were analyzed. The associations of polymorphisms of MAPK4 gene with clinical response were analyzed using both allelic and genotypic models. The expression levels of relative proteins were detected by western blot.
Results Multiple SNPs significantly influenced the clinical response in the univariate analyses. Only rs751114 and rs9949644 polymorphisms were associated with the efficacy followed by adjusting for the confounding factors. Besides, the haplotype analysis of the SNPs revealed the strong differences of frequencies in some haplotypes between responders and nonresponders, as of H5-TA and H6-AGCT haplotypes were significantly higher, whereas the frequencies of H3-GG, H7-GATC, and H11-AT haplotypes were significantly lower in responders. The expression levels of MAPK4 were down-regulated in responders but up-regulated in nonresponders.
Conclusions By demonstrating the significant association of MAPK4 with the clinical efficacy of MTX, this study indicates that MAPK4 may be involved in drug metabolism as a predictor of therapeutic response.

18 个代谢相关基因的肺腺癌预后模型的建立及验证

张文婷[1,2]、刘亚峰[1,2]、胡春晓[1,2]、胡东[2]、邢应如[1,2]
1. 淮南东方医院集团肿瘤医院
2. 安徽理工大学医学院

目的 基于代谢基因的生物信息学分析构建肺腺癌预后模型及验证。
方法 获取 TCGA 和 GEO 数据库中肺腺癌相关临床数据，LASSO 回归构建 TCGA 多基因预后模型并形成风险评分公式以计算患者风险值（risk score,RS）。单因素 Cox 独立预后分析联合多因素 Cox 独立预后分析判断肺腺癌独立的预后因子。通过 ROC 曲线获取模型的 AUC 面积用以评价模型的准确性。根据 RS 的中位值将患者分为高风险、低风险组，在两组间进行 Kaplan-Meier 生存分析判断预后差异。为辅助临床评价患者的生存预后，利用肺腺癌患者的临床信息和 RS 构建诺莫列线图。通过 GSEA 对高低风险组间预后代谢基因进行功能富集分析，探索肺腺癌相关代谢基因的生物学功能和机制。通过 TIMER 数据库分析患者的 RS 与 6 种免疫细胞的浸润以及与 8 种免疫检查点分子表达的相关性。
结果 运用 TCGA 数据库基于 18 个代谢相关基因构建肺腺癌预后模型，GEO 验证集验证预后模型效应良好。RS 可以作为独立的预后因子(HR=4.242,95%CI=3.040-5.919，P＜0.001)。ROC 曲线下面积为 0.713。K-M 生存分析显示，与高风险组相比，低风险组总体生存率显著更高(P＜0.001),预后模型与免疫细胞的浸润以及与免疫检查点分子的表达具有相关性。
结论 基于 18 个代谢相关基因构建的肺腺癌预后模型对患者的预后有良好预测价值，预后模型的 RS 是独立的预后因子，预后模型可以对肺腺癌病人的个体化治疗和早期评估给予一定帮助，同时为指导免疫精准治疗提供了新方向。

PU-0759

血清外泌体 miR-218-5p 在结直肠癌中的表达水平及临床应用价值

常文婧[1]、李冬[2]
1. 上海市同济医院
2. 李冬

目的 探讨外泌体 miR-218-5p 在结直肠癌（CRC）患者血清中的表达水平及其与患者临床病理特征的相关性，评价其在 CRC 中的诊断效能。
方法 选择同济大学附属同济医院 2016 年 10 月至 2018 年 10 月确诊的结直肠癌病例组 78 例，术前采血并保存血清；选择同期健康体检者 40 例作为对照组。采用 ExoQuick 试剂盒提取血清外泌体，应用透射电镜、NTA、Western blot 对外泌体进行形态学和分子表型鉴定；利用 miRNeasy 试剂盒提取血清外泌体中总 RNA，实时荧光定量 PCR 法（RT-qPCR）检测各组血清外泌体 miR-218-5p 的表达水平。以 miR-218-5p 相对表达水平的中位数为截断值，将 CRC 患者分为高表达与低表达组，利用四格表卡方检验（χ2 检验）判断其与临床病理特征的关系；受试者工作特征曲线（ROC）判断其在结直肠癌中的诊断效能。
结果 试剂盒法成功提取到血清中的外泌体。结直肠癌患者血清外泌体 miR-218-5p 的表达水平较正常健康人明显降低（P＜0.001）；其低表达程度与肿瘤大小、TNM 分期、肿瘤淋巴结转移和浸润深度显著相关（P 均＜0.05）；ROC 分析表明血清外泌体 miR-218-5p 诊断结直肠癌的曲线下面积（AUC）为 0.827（95%CI=0.754～0.900），明显优于常规的肿瘤标志物癌胚抗原 CEA（AUC=0.718, 95%CI=0.626～0.811)和糖类抗原 CA199（AUC=0.661,95%CI=0.564～0.758）。
结论 结直肠癌患者血清外泌体中 miR-218-5p 的表达下调与多个不良临床病理学因素相关，具有成为结直肠癌诊断生物标志物的潜力。

PU-0760

无创 DNA 基因检测技术在产前筛查中的应用价值

陈敏
陆军特色医学中心（大坪医院）

目的 通过对比分析无创基因检测技术、血清学唐氏筛查技术和羊水细胞核型分析，探讨无创 DNA 基因检测技术应用于产前筛查中的临床价值和意义。
方法 回顾性分析在我院 2018 年 1 月至 2018 年 12 月 3175 例孕妇进行无创基因检测，包括预产期年龄≥35 岁，唐筛结果为高风险、临界风险或单指标异常、超声软指标等孕妇。在充分知情同意后选择无创 DNA 产前检测，对检测结果为高风险孕妇进一步进行染色体核型分析，对低风险孕妇进行电话追踪随访。
结果 3187 例孕妇外周血中，3175 例低风险，12 例高风险，其中 8 例提示 21 号染色体异常，3 例 18 号染色体异常，1 例 13 号染色体异常，另有 17 例提示性染色体或其他常染色体异常；无创 DNA 检测结果为异常的 29 例孕妇，25 例进行了羊水穿刺核型分析，7 例染色体核型为 47，XN，+21；0 例染色体核型为 47，XN，+18；0 例染色体核型为 47，XN，+13，4 例性染色体异常，3 例其他常染色体异常，11 例染色体无整倍体异常。并对无创 DNA 检测低风险的出生新生儿进行随访，未述明显异常。应用无创 DNA 检测技术诊断胎儿染色体疾病的敏感度为 100%（14/14），特异度为 99.62%（3175/3187），假阳性率为 0.35%（11/3187），假阴性率为 0（0/3187）。
结论 无创 DNA 检测技术在产前筛查中敏感性和特异性高，假阳性和假阴性低的优点，可提高产前筛查效率，减少染色体疾病患儿的出生，是快捷、安全、较介入性产前诊断易于接受、值得推广的安全可靠的产前筛查方法。

PU-0761

Long non-coding RNA IGF2-AS represses breast cancer tumorigenesis by epigenetically regulating IGF2

Yanan Zhang
Ben Xi central hospital

Long non-coding RNAs (lncRNAs) are a kind of endogenous ncRNAs with a length of more than 200 bp. Accumulating evidence suggests that lncRNAs function as pivotal regulators in tumorigenesis and progression. However, their biological roles in breast cancer remain largely unknown. Here, we found that IGF2 antisense RNA (IGF2-AS) was significantly decreased in breast cancer tissues, cell lines and plasma. Patients with low IGF2-AS were more likely to develop larger tumor size and later clinical stage. Overexpression of IGF2-AS evidently inhibited the proliferation and induced apoptosis of MCF-7 and T47D cells in vitro, as well as retarded tumor growth in vivo. Further investigation revealed that IGF2-AS inhibited the expression of its sense-cognate gene IGF2 in a epigenetic DNMT1-dependent manner, resulting in the inactivation of downstream oncogenic PI3K/AKT/mTOR signaling pathway. Enforced expression of IGF2 could significantly block the tumor inhibitory effect of IGF2-AS. Importantly, we found that IGF2-AS could be used as an effective biomarker for breast cancer diagnosis and prognosis. Taken together, our study indicates that IGF2-AS is a tumor suppressor in breast cancer, restoration of IGF2-AS may be a promising treatment for this fatal disease.

PU-0762

Retinoic acid-induced gene G (RIG-G) as a novel monitoring biomarker in leukemia and its clinical applications

quan wenqiang、Li Dong
ShanghaiTongji Hospital

INTRODUCTION Retinoic acid inducible gene G (RIG-G) is an inducible gene produced during the treatment of acute promyelocytic leukemia with all-trans retinoic acid (ATRA). The expression level of RIG-G gene in the peripheral blood of healthy subjects and patients with acute promyelocytic leukemia (APL or AML-M3) is unclear. A TaqMan-MGB fluorescent probe qPCR (real-time polymerase chain reaction) method was established to detect the expression of RIG-G (retinoic acid induced gene G) in APL.
METHODS we used this method to analyze the expression level of RIG-G in the peripheral blood of normal population and APL patients, and further explore its clinical value in APL. Twenty clinical patients with APL were selected and their RIG-G expression was quantified to evaluate the relevance between peripheral blood and bone marrow samples. U test was used to analyze the expression level of RIG-G in the peripheral blood of 40 normal specimens and 20 APL patients to observe the prognostic monitoring effect of RIG-G gene in the ATRA treatment process, and use ROC (receiver operating characteristic curve) Analyze and test the diagnostic efficiency of RIG-G gene for APL patients.
RESULTSThere is a strong positive correlation between the expression of RIG-G in peripheral blood and bone marrow of APL patients. The expression level of RIG-G in peripheral blood of APL patients is significantly lower than that in healthy controls ($p<0.001$). The changes inthe expression level of RIG-G in peripheral bloodchanged indicates the remission and recurrence of APL patients after ATRA treatment, and the ROC curve shows that it has a better diagnostic power for APL.
CONCLUSIONS The TaqMan-MGB real-time PCR method we established functioned successfully, deeming it suitable for the detection of RIG-G gene expression in peripheral blood. This method could provide necessary help for diagnosis, prognosis judgment and relapse monitoring of clinical APL patients.

PU-0763

结直肠癌患者血浆外泌体 miRNA-139-3p 的表达及其临床应用价值

杨滇宇、李冬
上海市同济医院(同济大学附属同济医院)

目的 探讨结直肠癌患者的血浆外泌体 miRNA-139-3p 水平的变化及其在结直肠癌辅助诊断中的临床应用价值。
方法 利用外泌体试剂盒提取 80 例结直肠癌患者和 23 例健康人血浆中的外泌体，分别使用透射电镜、Western Blot 和纳米颗粒示踪法进行鉴定。采用 RT-qPCR 法检测血浆外泌体中 miRNA-139-3p 的表达 水平，并分析其与患者临床病理学特征的关系。
结果 结直肠癌患者血浆外泌体 miRNA-139-3p 的表达水平较正常健康人明显降低（$P<0.001$），其低表达程度与肿瘤转移和浸润深度显著相关（$P<0.05$）；受试者工作特征曲线（ROC）分析表明，血浆外泌体 miRNA-139-3p 诊断结直肠癌的曲线下面积（AUC）为 0.726（95%CI=0.603～0.848），血浆外泌体 miRNA-139-3p 鉴别诊断结直肠癌是否有转移和是否浸润至粘膜下层的曲线下面积（AUC）分别为 0.766（95%CI=0.662～0.869）和 0.733（95%CI=0.602～0.863）。

结论 结直肠癌患者血浆外泌体中 miRNA-139-3p 的表达下调与多个不良临床病理学因素相关，具有成为诊断结直肠癌的生物标志物的潜力。

PU-0764

A nomogram from the SEER database for predicting the prognosis of patients with non-small cell lung cancer

Bingjie Zeng 、Zujun Sun
Shanghai Tongji Hospital

Objective The purpose of this study was to establish and validate a nomogram to predict the prognosis in patients with non-small cell lung cancer (NSCLC) from multiple perspectives.
Methods A total of 98,640 eligible patients were randomly divided into a training set (n = 69,048) and a validation set (n = 29,592). The base line characteristics of the two sets were similar. We used clinical data from patients in the training set for univariate and multivariate Cox regression analyses. Twelve independent risk factors were incorporated for constructed a prognostic nomogram.
Results And the nomogram with a concordance index of 0.777(95 % CI, 0.775 to 0.779) for overall survival. The calibration curve results showed that the actual survival rate was consistent with the predicted survival rate. The area under curve of the receiver operating characteristic curves demonstrated that the nomogram has a high prediction of the overall survival rate in patients with NSCLC.
Conclusion We have developed a nomogram with high prediction accuracy and discrimination ability, which can help cliniciansmaking personalized survival predictions for NSCLC patients.

PU-0765

p62 在肺腺癌中的表达及其临床诊断价值

曾冰洁、李冬
上海市同济医院(同济大学附属同济医院)

目的 探讨 p62 蛋白在肺腺癌(lung adenocarcinoma，LUAD)中的表达情况及其在肺腺癌中的临床诊断价值。
方法 收集 2011 年 12 月至 2013 年 5 月上海市同济医院收治的 60 例肺腺癌患者组织标本进行石蜡包埋和组织芯片制作，采用免疫组织化学技术(immunohistochemistry，IHC)检测肺腺癌患者癌组织和癌旁组织中 p62 的表达，综合分析 p62 表达与肺腺癌患者临床病理特征及生存预后的关系；收集 2018 年 4 月至 2019 年 10 月同济医院初诊的肺腺癌住院患者术前检查标本和健康体检者血浆标本，酶联免疫吸附法(enzyme linked immunosorbent assay，ELISA)分别检测肺腺癌患者和健康体检者血浆中 p62 的表达情况，应用 ROC 曲线评估血浆 p62 在肺腺癌中的诊断价值。
结果 IHC 结果显示癌组织中 p62 水平明显高于癌旁组织，具有统计学意义(P<0.05)；p62 表达与患者肿瘤大小、临床病理分期及有无淋巴结转移具有统计学相关（均 P<0.05）。p62 高表达的肺腺癌患者总生存期差于 p62 低表达患者(P<0.05)，提示 p62 高表达与肺腺癌患者不良预后有关。肺腺癌患者血浆中的 p62 蛋白水平显著高于健康对照组，差异具有统计学意义(P<0.001)，受试者工作特征曲线下面积为 0.835(P<0.05)，单项指标中 p62 的 AUC（0.835）、阴性预测值（82.02%）和准确度（76.67%）优于 CEA、CA125、CA153 等传统指标；四项指标联合检测敏感度（86.67%）、准确度（81.67%）和 AUC（0.920）则最高。
结论 p62 在癌组织和血浆中高表达，与肺腺癌患者总生存期及不良预后相关，与传统肿瘤标志物联合检测能明显提高对肺腺癌的诊断效能，具有一定的辅助诊断价值，有望成为评估肺腺癌患者生存预后的肿瘤标志物。

PU-0766

人类转导蛋白（β）-2（TBL2）在泛癌中的表达分析研究

刘阳阳
柳州市柳铁中心医院

肿瘤作为人类致死率最高的疾病之以其的发生与遗传、能量代谢、环境等多种因素相关，肿瘤标志物也一直是肿瘤学的研究重点之一。人类 TBL2 目前多认为是与威廉姆斯伯伦综合征、血脂调节和代谢综合征等疾病相关，但与肿瘤的发生及预后之间的关系尚缺乏相关研究。

目的 探究 TBL2 与泛癌的发生及预后间是否存在关联，探寻其作为肿瘤标志物及预后指标的可能。

方法 通过 TCGA、Oncomine、TIMER、GEPIA2、UALCAN 及 cBioportal 等在线数据库对 TBL2 在不同肿瘤中的表达水平和突变情况进行分析，并探究其表达水平对肿瘤患者生存情况的影响及遗传变异情况。

结果 1.TBL2 的 mRNA 表达水平在 BLCA、BRCA、CHOL、COAD、ESCA、GBM、HNSC、KICH、KIRC、KIRP、LIHC、LUAD、LUSC、PRAD、READ、STAD、LGG、DLBC、OV、SKCM 及 THYM 中均呈高表达,在 LAML 及 TGCT 中则呈低表达状态（P<0.01）。在蛋白水平上则在结肠癌、乳腺癌、透明细胞癌、RCC、UCEC 及 LUAD 中呈高表达（P<0.01）。同时在 IV 期的 CESC 中呈高表达状态（P<0.01）。2.在 LGG、LUAP、SARC、GBM 及 UVM 中均存在随 TBL2 表达升高患者整体生存率降低的情况（P<0.01），同时在 LGG、LIHC 及 UVM 中存在随 TBL2 表达升高患者无病存活率降低的情况（P<0.01）3.TBL2 在在 TCGA 数据库中各肿瘤中的遗传变异情况表现为：在 UVM 病例中均表现为突变，在 ESCA、DLBC、TGCT、PRAD、CSCC 及 KRCC 中则均表现为扩增。突变位点中则是以错义突变为主。在 SKCM、LGG 及 GBM 中 TBL2 的突变水平与患者整体生存率相关（P<0.05）。

结论 人类 TBL2 与多种肿瘤的发生及预后均具有一定的相关性，是作为新的肿瘤标志物的有力候选。

PU-0767

人体表征分子 SNP 位点在群体个体识别方面的初步研究

赖力
福建省立医院

目的 通过对 DNA 遗传信息和表型特征进行关联分析，在人体外貌特征（EVC）的特定表型与第三代遗传标记单核苷酸多态性(Single nucleotide polymorphisms，SNPs)位点之间建立对应关系，评价分子遗传标记在人体表征鉴定识方面应用价值。筛选与特定群体虹膜颜色、发色等人体表征具有高度相关性的 SNPs 位点，为构建针对群体的 EVC 鉴识体系提供依据。

方法 以 100 名福建地区汉族无血缘关系个体为研究对象，采集研究对象个人头面像及虹膜照片，由人工读取 2D 照片并对色素表型进行分类的方法来提取色素特征。同时采集研究对象血样并提取基因组 DNA，构建 EVC 中与虹膜及毛发颜色相关的 24 个 SNPs 复合检测体系，来源于 11 个不同的基因：MClR， HERC2，OCA2，SLC24A4，SLC45A2，IRF4，EXOC2， TRYPl，TYR，KITLG 和 PIGU / ASIP。通过 PCR 复合扩增、产物消化、电泳体系纯化、毛细管电泳和荧光检测基因分型等方法获得 24 个 SNPs 位点的基因分型。将 SNPs 分型结果上传色素表型在线推断模型（https://HIrisPlex.erasmusmc.nl/）进行表型分析，计算后可得到眼睛颜色（中间色、棕色）和头发颜色（棕色、黑色、深色）的推断概率。依据推断模型使用说明及相关文献对眼睛头发颜色进行判读。判读结果与人工图片判读结果进行比较。

结果 福建地区汉族人群的虹膜和毛发颜色为棕色瞳孔和深色头发，体系预测的平均准确度为深色头发 93.3%和棕色瞳孔 95.8%，基于 SNP 位点基因型的色素表型推断结果与人工判断结果基本一致。

结论 24 个虹膜与毛发颜色相关的 SNP 位点构建的色素表征推断体系具有较高的可靠性，具有一定的适用性，能够在群体个体识别尤其是眼睛和毛发颜色预测中有重要作用。

HPV genotypes distribution in cervical intraepithelial neoplasia and invasive cervical cancer: a population-based study in Beijing

Xiao Han、Jie Yi、Yaling Dou、Yong Gan、Lingjun Kong、Jie Wu
Peking Union Medical College Hospital, Chinese Academy of Medical Sciences

Background Human papillomavirus (HPV) has been proved to be a major risk in the occurrence of cervical cancer. Therefore, it is critical to understand the distribution of HPV genotypes in a specific region. This study aimed to investigate the distribution and prevalence of HPV genotypes among women with cervical intraepithelial neoplasia (CIN) and invasive cervical cancer (ICC) in Beijing.
Methods A total of 2133 women with HPV-positive infection and pathological abnormalities were enrolled in Beijing from January 2014 to November 2019. The obtained data were used to analyze the prevalence rates of HPV genotypes based on all grades of pathological diagnosis (CIN1, CIN2, CIN3, and ICC). Frequency tables were evaluated using the chi-squared test ($\chi 2$). The multivariate logistic regression method was used to analyze the association between the multiple HR-HPV types and cervical lesions of CIN3 and ICC.
Results The top five overall prevalence of HPV genotypes were HPV16 (28.22%), HPV58 (19.64%), HPV52 (19.32%), HPV66 (9.47%), and HPV56 (9.14%) among HPV-positive women with all grades of pathological abnormalities in Beijing. The overall prevalence of HPV was higher in the under 35 and 35-44 age groups than in other age groups ($P<0.001$). As a single type of HPV infection, HPV16 had a significantly higher percentage in CIN3/ICC than in the CIN1 group ($P<0.05$). Considering infection with the single HPV genotype as a reference, adjusted odds ratio (OR), (95% CI) was 0.94 (0.70-1.25) in CIN3 in the case of individuals with ≥2 HPV infection. The corresponding result in ICC was 0.81 (0.56-1.17).
Conclusion HPV detection and pathology diagnosis were important screening programs in patients under the age of 45, who should take cervical precancerous lesions seriously. Moreover, there was no significant association between the multiple HR-HPV types infection and the pathological diagnosis of CIN3/ICC (versus CIN2) in this study.

宁夏地区尖锐湿疣患者人乳头瘤病毒基因分型检测及分析

赵倩颖、师志云、乔霞
宁夏医科大学总医院

检测与分析宁夏地区人乳头瘤病毒（HPV）基因型的感染情况。利用 HPV 液态芯片流式荧光杂交法对已确 525 例尖锐湿疣（CA）患者进行 HPV-DNA 分型检测与分析。525 例患者中 HPV 阳性 245 例，检出率为 46.7%，27 种亚型全部检测出。排名前 6 的亚型检出分别为 HPV-6（19.4%，102/525），HPV-11（7.4%，40/525），HPV-39（4%，21/525），HPV-53（4%，21/525），HPV-16 （3%，16/525），HPV-18（2.9%，15/525），其中高危型检出率为 34.8%，低危型检出率为 37.3%。单一感染有统计学意义占 63.3%，多重感染占 36.7%。不同性别间，单一低危型和单一高危型感染差异（P ＜0. 05），但多重感染差异无统计学意义（P＞0. 05）。宁夏地区 CA

患者以低危型 HPV -6、HPV -11 和高危型 HPV -39、HPV -53 为主，高危型与低危型存在混合感染或交叉感染，为宁夏地区 CA 患者 HPV 感染预防提供参考依据。

PU-0770

Quantitative Proteomics Reveals Dormancy-related Proteins Mediated Attenuation Program in Mycobacterium Strain

hong wang、Er hei Dai
The Fifth Hospital of Shijiazhuang,

More evidences show that Mycobacterium tuberculosis complex (MTBC) exhibit >99.95% identity over genome sequence and closer genetic relationship, but different virulent, immune response, and transmissibility. To better understand the mechanisms of MTB virulence and search new potential targets, we systemically investigated the total cell protein among virulent H37Rv, attenuated H37Ra, and avirulent M. bovis BCG vaccine strain in log and stationary-phase by tandem mass tag (TMT) quantitative proteomics. Data analysis showed that we obtained deep-coverage protein identification (three quarters of annotated proteins) and higher quantification (>99% labeling efficiency). Among the quantified proteins in log-phase, total 611 protein groups were dysregulated including 227 groups from H37Rv and H37Ra, 381 from BCG and H37Rv, and 414 from BCG and H37Ra group. More differentially expressed proteins (DEPs) were found in stationary-phase, total 1365 protein groups showed statistically significant differences including 61 groups from H37Rv and H37Ra, 1177 from BCG and H37Rv, and 1124 from BCG and H37Ra, respectively. Similar protein abundance was observed between H37Ra and BCG in log-phase, while more similar protein expression was showed between H37Rv and H37Ra in stationary-phase. Bioinformatics analysis revealed that the upregulated DEPs from H37Rv or H37Ra in log-phase were virulence factors, which mainly enriched in VII secretion system, pathogenesis, sulfolipid biosynthesis, growth of symbiont in host cell, and active evasion of host immune response. Whether in log or stationary phase, the DEPs of BCG were enriched in fatty acid metabolism, lipid metabolism of cell wall, carbon flux, arginine synthesis, and stress response (hypoxia, NO, nutrient starvation, deficiency of metal ions, low pH, etc.), which are also the MTB response proteins under dormancy condition. This study described the proteomic portrait of H37Rv, H37Ra and BCG by precise quantitative proteomics, which may provide a better understanding of H37Rv pathogenesis, H37Ra attenuation and BCG inmmuno-protection.

PU-0771

Diagnostic value of dysregulated microribonucleic acids in the placenta and circulating exosomes in gestational diabetes mellitus

Lina Wang
Laboratory Medical Center, The Second Hospital of Shandong University, Jinan, Shandong Province, China

Aims/Introduction Differentially expressed microribonucleic acids (miRNAs) in the placenta and circulating exosomes are of diagnostic value for gestational diabetes mellitus (GDM). In a cross-sectional study, we identified miRNAs expressed both in the placenta and circulating exosomes of pregnant women with GDM, and estimated their diagnostic value.
Materials and Methods Next-generation sequencing was used to identify miRNAs in the placenta that were differentially expressed between GDM and normal glucose tolerance

pregnancies. Quantitative polymerase chain reaction was used to validate the identified targets. Western blot and transmission electron microscopy were used to validate exosomes. Univariate logistic regression analysis was used to establish diagnostic models based on miRNAs expression, and the diagnostic value was estimated using the receiver operator characteristic curve.
Results We identified 157 dysregulated miRNAs in the placental tissue obtained from GDM pregnancies. Of these, miRNA-125b was downregulated ($P < 0.001$), whereas miRNA-144 was upregulated ($P < 0.001$). The patterns of these two miRNAs remained the same in circulating exosomes from GDM pregnancies (all $P < 0.001$). miRNA-144 levels in the circulating exosomes negatively correlated with body mass index both before pregnancy ($P = 0.018$) and before delivery ($P = 0.039$), and positively correlated with blood glucose at 1 h, estimated using the oral glucose tolerance test ($P = 0.044$). The area under curve for the established diagnostic model was 0.898, which was higher than blood glucose levels at 0 h.
Conclusions These findings suggest that miRNA-125b and miRNA-144 are consistently dysregulated in circulating exosomes and the placenta from GDM pregnancies, and are of excellent diagnostic value for GDM.

PU-0772

Y 染色体 STR 基因座分型与 AZF 区基因微缺失的相关性研究

赖力
福建省立医院

目的 对个体识别和父源关系鉴定中的 Y 染色体 STR（Y-STR）基因座分型缺失现象进行分析，探讨其与 AZF 区基因微缺失的相关性。
方法 采用三种 Y-STR 基因座检测系统共检测样本的 43 个 Y-STR 基因座，分别为 AGCU Y24 检测系统、GFS 24Y 检测系统以及 Promega Y23 检测系统（美国 Promega 公司），对存在 Y-STR 基因座分型缺失的样本进一步采用 Y 染色体微缺失试剂（荧光 PCR-毛细管电泳法）（北京阅微基因技术公司）进行 AZF 区 STS 位点检测，对 AZF 区基因缺失情况进行判断。
结果 本研究共发现 3 例样本存在 Y-STR 基因座分型缺失现象，其中 1 例样本（编号 1）采用 GFS 24Y 检测系统发现 DYS459 和 DYS527ab 基因座分型缺失，用 AGCU Y24 检测系统发现 DYS527ab 基因座同样存在分型缺失（见图 1）。进行 Y 染色体微缺失 STS 位点检测，结果显示该样本丢失 sY255/sY1191/CDY1/sY254/DAZ 等位点，经过分析该样本为 AZFc 区缺失（b2/b4）（见图 2）。本研究还发现 2 例存在父子亲缘关系的样本（编号 2,3）的 Y-STR 基因座分型结果一致，均存在 DYS522、DYS570 和 DYS576 等三个基因座分型缺失，其余基因座分型为单倍型（见图 3）。对两份样本进行 Y 染色体微缺失分析，结果提示两份样本检测结果一致，AZF 区均未发现缺失以及 SRY 基因均正常（见图 4）。
结论 在个体识别和父源关系鉴定中发现 Y-STR 基因座缺失的个体有可能存在 Y 染色体 AZF 区基因微缺失，部分 Y-STR 基因座如 DYS459、DYS527ab 等与 Y 染色体 AZF 区 STS 位点存在对应关系,在对男性不育症基因检测方面具有一定应用价值，而在遗传关系鉴定方面应避免使用。

PU-0773

Understanding the functional effects of ZEB2 and RBM38 in determining the liver cancer stem cell proliferation

Xiaowan Yu、Wei Wang
Department of Laboratory Medicine, Second Affiliated Hospital of Fujian Medical University

Purpose Liver cancer stem cells are associated with tumor progression, metastasis and resistance development and therefore it is important to understand the key proteins that supports the tumor microenvironment. There are reports available that suppression of ZEB2 results with inactivation of Wnt/βcatenin pathway. As in case of RBM38, it suppresses tumor outgrowth and helps to improve the longevity of tumor patients. But still the direct role of ZEB2 and RBM38 in favoring tumor microenvironment is not studied.
Methods Initially, we develop an initial and advanced stage of liver cancer mice model using CD133+ cells injection, which mimics the natural form of liver cancer in all aspects. Histology, Immunohistochemistry and Western blotting analysis are carried out to understand the cancer progression.
Results Histologically, the developed initial liver cancer is observed with the microfoci structure formation; in an aggressive stage of liver cancer, it is observed with distinct morphological changes with enlarged nucleolus and clumping nature. Immunohistochemical and Western blotting analysis of CD133 and ZEB2 proteins shows the similar upregulated expression pattern as the tumor progress with initial and advanced stage of liver cancer. But the expression of RBM38 is enormously increased in initial liver cancer stage, but noted with a remarkably downregulated expression in advanced stage of liver cancer.
Conclusions In overall, from our result, we conclude that ZEB2 favors the tumor microenvironment which supports liver cancer stem cells proliferation. But RBM38 expression negatively regulates the tumor microenvironment that restrict the proliferation of liver cancer stem cell.

PU-0774

GPR183 在 T-ALL 中的表达及对 T-ALL 细胞系作用

张航
成都市第三人民医院

目的 研究 GPR183 在 T-ALL 患者细胞及细胞系中的表达，并探索过表达 GPR183 及应用其激动剂后对 T-ALL 细胞的影响。
方法 收集 T-ALL 患者骨髓分离肿瘤细胞，提取 mRNA 及蛋白质，qPCR 及 Wsetern blot 检测 GPR183 表达；GEO 数据库查询 T-ALL 患者全基因组测序结果，分析 GPR183 表达水平；过表达 GPR183 及使用激动剂后检测对 T-ALL 细胞增殖及凋亡的影响。
结果 GPR183 在 T-ALL 患者细胞中 mRNA 及蛋白质表达明显降低，GEO 数据库中亦证明 GPR183 在 T-ALL 中表达下降；使用 GPR183 激动剂 7α,25-OH 胆固醇及过表达 GPR183 后 T-ALL 细胞系增殖明显被抑制且凋亡明显增加。
结论 GPR183 在 T-ALL 中表达下降，过表达和激动 GPR183 后 T-ALL 细胞增殖被抑制凋亡增加，说明 GPR183 在 T-ALL 发生发展中可能起重要作用，并可能成为其治疗靶点。

lncRNA RMST Suppressed GBM Cell Mitophagy through Enhancing FUS

Changhong Liu
Central South University

Long non-coding RNAs (lncRNAs) play a significant role in post-translational modifications of proteins, yet the importance of lncRNAs for SUMOylation is unknown. rhabdomyosarcoma 2 associated transcript (RMST) expression in glioma tissues and normal brain tissues was measured by quantitative real-time PCR and in situ hybridization. The functional roles of RMST in astrocytomas were demonstrated by a series of in vitro experiments. The potential mechanisms of RMST for SUMOylation were investigated by RNA immunoprecipitation, RNA pull-down, western blotting, and coimmunoprecipitation assays. We first demonstrated the oncogenic activity of lncRNA RMST by inhibiting glioma cells mitophagy. We also first determined that RMST is an enhancer of FUS SUMOylation, especially boosting SUMO1 modification at K333. SUMOylation induced by RMST contributes to the interaction between FUS and heterogeneous nuclear ribonucleoprotein D (hnRNPD) and stabilized their expression and cells mitophagy. Importantly, lncRNA RMST could serve as a promising prognostic factor for glioma patients. Our results demonstrated a previously unknown function of lncRNAs worked as an enhancer in FUS SUMOylation, and RMST will be a significant guide for the development of medications targeting gliomas.

PU-0776

外泌体 miRNAs 作为代谢相关脂肪性肝病诊断标志物

陈豪、曾玉萍、何訸
四川大学华西医院

目的 代谢相关脂肪性肝病（metabolic associated fatty liver disease, MAFLD），全球患病率高达 25%，未来十年可能超过乙型肝炎成为终末期肝病和肝移植的主要原因，而早期诊断是控制 MAFLD 疾病进展的关键。肝活检、影像学和生物标志物评分在中国人群中存在较强异质性。大量证据显示血浆外泌体中的 miRNA 更能准确反映肝脏病变情况，因此，它有潜力成为 MAFLD 的新型无创性诊断分子标志物。
方法 收集 MAFLD 患者、疾病对照（非代谢相关肝纤维化，酒精性脂肪肝，病毒性肝炎）以及健康对照血浆，差速离心法提取血浆外泌体，采用高通量测序技术检测筛选队列中外泌体 miRNA 的差异表达谱，通过生物功能学分析筛选目标 miRNA，利用 qRT-PCR 方法在验证队列中进行验证。
结果 共纳入 143 例受试者，其中 MAFLD 患者 81 例，健康对照 51 例，疾病对照组 11 例。实验室指标提示 MAFLD 组出现不同程度的肝损伤以及脂糖代谢紊乱。测序检测在 MAFLD 患者和健康对照间共发现了 1125 个差异表达的 miRNAs，其中，697 个 miRNAs 的表达水平上调，428 个下调；最终选择 miR-122-5p、miR-148a-3p 和 miR-192-5p 进行下一步验证； qRT-PCR 方法在验证队列中检测 3 种候选 miRNAs 发现：与健康对照组相比，miR-148a-3p 仅在 MAFLD 组中高表达；miR-192-5p 在 MAFLD 组和疾病对照组中均上调；miR-122-5p 在 MAFLD 组和疾病对照组中都出现上调。
结论 本研究在中国汉族人群中发现 3 种血浆外泌体 miRNAs（miR-148a-3p、miR-192-5p 和 miR-122-5p）在 MAFLD 患者中较健康对照组明显上调，可能是 MAFLD 潜在的新型诊断标志物。

PU-0777

基于 MALDI-TOF MS 技术的乳腺癌蛋白质组学研究

许小雨
中国人民解放军联勤保障部队第九六〇医院

目的 应用基质辅助激光解吸电离飞行时间质谱（MALDI-TOF MS）发现乳腺癌血清中潜在的肿瘤标志物，为乳腺癌类型的筛查以及术后疗效的评估提供新的策略和方法。
方法（1）收集 2020 年 8 月至 2021 年 3 月中国人民解放军第九六〇医院经组织病理学活检确诊的 61 例乳腺癌女性患者及 44 例健康女性体检者血清。使用弱阳离子交换磁珠（WCX-MB）富集蛋白质/多肽，MALDI-TOF MS 上机检测，筛选出乳腺癌组与健康体检对照组之间的差异蛋白/多肽峰，使用 GA、SNN、QC 三种算法建立乳腺癌诊断预测模型并选择最佳效能模型。（2）收集接受了手术治疗的乳腺癌患者 12 例，并保存其术前血作为对照数据。使用统计学方法筛选术前术后蛋白质/多肽差异峰，分析乳腺癌患者与健康对照者之间存在的差异峰，寻找与乳腺癌相关的潜在血清生物标志物。（3）将乳腺癌组分为三阴性乳腺癌组（8 例）和非三阴性乳腺癌组（53 例），筛选两种不同类型乳腺癌之间的差异峰。
结果（1）将乳腺癌组与健康体检对照组的血清蛋白质谱进行对比，成功筛选出 26 个差异显著的蛋白/多肽峰（P<0.000001），三种算法中，GA 模型具有最优的诊断性能，其敏感性为 93.8%，特异性为 90.9%，准确性为 92.6%。（2）与健康组对照组相比，差异峰 m/z 4220.9、5920.36 在乳腺癌组中低表达，此外，术后组这两个峰的表达水平明显高于术前组；与非三阴性乳腺癌患者组相比，三阴性乳腺癌组峰 m/z 4220.9、5920.36 的表达水平升高。
结论 MALDI-TOF MS 联合 ClinProTools 能为区分乳腺癌患者和健康人、乳腺癌患者术前术后以及三阴性乳腺癌患者与非三阴性乳腺癌患者提供新的发展方向。

PU-0778

分子诊断在肝癌诊疗中的探究

王宏
烟台市烟台山医院

分子诊断是指利用 DNA 或 RNA 作为生物标记进行临床检测的诊断技术，包括多种扩增技术的精细探测方法。分子诊断依托其准确、便捷、灵敏、无创和自动化的优势，在疾病的诊断、预后评估及疗效监测中也发挥着极为重要的作用。临床上，分子诊断广泛应用于感染性疾病,肿瘤以及遗传性疾病的检测。

1. MK 与肝癌

肝癌标志物的研究中出现了一种中间因子(Midkine，MK)。MK 是一个肝素结合性生长因子, 其基因最初鉴定是在视黄酸诱导分化早期的胚胎瘤细胞中获得。成年后除肾脏外,其它正常组织几乎测不出 MK mRNA 表达[1,2] 。RT-PCR 研究表明，MK mRNA 在肝癌患者中成高表达，而在肝良性病变组织均未见其表达[3]。MK 的高表达可能可以作为肝癌诊断过程中的一个早期指标，并可能参与肝癌细胞局部浸润、转移，对术后制定进一步治疗方案有参考价值。

2. miRNA 与肝癌

微小 RNA（microRNA，miRNA） 是一类短的单链内源性非编码 RNA，可与靶 mRNA 的 3’非编码区部分序列不完全或完全互补配对， 引起靶向 mRNA 的翻译抑制或特异性降解， 调控基因表达，从而调节细胞增殖、分化、凋亡等生命过程。YANG 等人[4] 利用 miRNA 芯片以及 qRT-PCR 技术，对肝癌标本以及各细胞株 HepG2、Hep3B、 Huh7、 L-O2（正常肝细胞株）进行分析研究，并通过双荧光素酶和 Western-Blot 验证。得出结论， miRNA-590 的 2 个臂的 miRNA 在 HCC 恶变中发挥着至关重要的作用。在不久之后，Zhang 等人[5]对肝硬化发育不良结节、分化良好的肝细胞

癌组织、晚期肝癌以及对应的肝硬化组织进行实时荧光定量发现，miRNA-96-3p 表达水平是 HGDN 和 HCC 鉴别诊断的良好标志物。

PU-0779

XpertMTB/RIF 和 T-SPOT.TB 在诊断艾滋病合并肺结核中的临床应用分析

王晓敏
长春市传染病医院

目的 对 XpertMTB/RIF 和 T-SPOT.TB 在诊断艾滋病合并肺结核中的临床应用分析，以期两种方法能联合应用及时准确诊断出艾滋病患者患有潜伏结核分枝杆菌感染及利福平耐药情况。
方法 对 2017 年 12 月—2020 年 7 月期间内收治的，获得明确诊断的艾滋病患者，并疑似肺结核感染，共计 108 例研究对象进行回顾性分析。108 例均做 XpertMTB/RIF 诊断性试验（HIV 合并肺部感染组 44 例， HIV 合并肺结核感染组 64 例），其中有 91 例做 XpertMTB/RIF 和 T-SPOT.TB 两种方法的诊断性试验，有 17 例单独做 XpertMTB/RIF 诊断性试验。
结果 认为在艾滋病合并肺结核患者中女性平均年龄要比男性平均年龄高，本组年龄和性别间差异有统计学意义($p<0.05$，$p=0.013$)。91 例患者同时做 XpertMTB/RIF 和 T-SPOT.TB 两种方法的诊断性试验，T-SPOT.TB 检测方法敏感度 76.60%（36/47）优于 XpertMTB/RIF 检测方法敏感度 53.19%（25/47），差异有统计学意义（$p<0.05$,$p=0.017$）。XpertMTB/RIF 检测方法特异度 100%（44/44）优于 T-SPOT.TB 特异度 84.09%（37/44），差异有统计学意义（$p<0.05$,$p=0.012$）。64 例 HIV 合并肺结核组 XpertMTB/RIF 检测到 22 例阴性、22 例利福平耐药、20 例利福平敏感。

PU-0780

不良孕产患者宫颈分泌物解脲脲原体、沙眼衣原体和生殖道支原体核酸的检测及临床意义

杨佳佳、张彦懿、黄江渝
成都市第三人民医院

目的 分析不良孕产患者宫颈分泌物中解脲脲原体（UU）、沙眼衣原体（CT）和生殖道支原体感染情况及临床意义，比较实时荧光聚合酶链反应（FQ-PCR）和实时荧光核酸恒温扩增检测(SAT)技术检测 UU、CT 核酸的性能差异。
方法 应用 FQ-PCR 检测 98 例不良孕产患者（观察组）和 38 例健康妇女（对照组）宫颈分泌物中的 UU-DNA 和 CT-DNA，应用 SAT 检测观察组和对照组 UU-RNA、 CT-RNA 和 MG-RNA，并进行统计学分析处理。
结果 1：观察组 UU-DNA、CT-DNA 阳性检出率和总检出率均高于对照组（$P<0.05$）。2：在<35 岁年龄段，观察组 UU-DNA、CT-DNA 阳性检出率和总检出率均高于对照组（$P<0.05$）；在≥35 岁年龄段，观察组 UU-DNA 阳性检出率和 UU-DNA 及 CT-DNA 总检出率均高于对照组（$P<0.05$）。3：观察组 MG-RNA 阳性检出率高于对照组（$P<0.05$）。在<35 岁年龄段，观察组 MG-RNA 阳性检出率高于对照组（$P<0.05$）。4：在自发性流产、异位妊娠和不孕症患者中，UU-RNA、CT-RNA 和 MG-RNA 阳性检出率较一致，差异无统计学意义（$P>0.05$）。5：观察组中 UU-RNA 与 UU-DNA 检出率相当、CT-RNA 与 CT-DNA 检出率相当（$P>0.05$）；但在对照组中，UU-RNA 检出率明显高于 UU-DNA（$P<0.05$），CT-DNA 与 CT-RNA 检出率无明显差异（$P>0.05$）。

结论 不良孕产患者宫颈分泌物中 UU 检出率较高，并随年龄增加有增高趋势。FQ-PCR 和 SAT 检测均能为临床诊断 UU、CT 或 MG 感染提供依据。SAT 检测无症状感染人群中的病原微生物更具优势。

PU-0781

血浆 hsa_circ_0005397 检测作为肝癌潜在生物标志物的研究

王峰
南通大学附属医院

目的 环状 RNA（circRNA）在肝细胞癌（HCC）的发生发展中起着重要作用。然而，有关血浆 circRNA 在 HCC 中的表达模式及临床应用价值的报道较少。我们探讨了血浆 hsa_circ_0005397 在 HCC 诊断和预后中的作用。
方法 采用实时定量聚合酶链反应（qRT-PCR）检测血浆 hsa_circ_0005397 表达水平。通过受试者操作特征（ROC）曲线评价血浆 hsa_circ_0005397 以及联合血清 AFP、AFP-L3 对 HCC 的诊断价值，并通过动态监测和 Kaplan-Meier 曲线分析评价血浆 hsa_circ_0005397 对 HCC 的预后价值。
结果 HCC 患者血浆 hsa_circ_0005397 的表达高于良性肝病患者和健康对照组（均 P<0.05）。与 HCC 患者肿瘤大小（P=0.020）和 TNM 分期（P=0.006）密切相关。血浆 hsa_circ_0005397 诊断 HCC 的 ROC 曲线下面积为 0.737，95%可信区间为 0.671-0.795。血浆 hsa_circ_0005397、血清 AFP 和 AFP-L3 联合检测可提高 HCC 的诊断灵敏度。此外，动态监测血浆 hsa_circ_0005397 可能有助于预测 HCC 患者手术切除后的复发或转移；且血浆 hsa_circ_0005397 升高与 HCC 患者总生存期缩短密切相关（P=0.007）。
结论 血浆 has_circ_0005397 有望成为一个新的 HCC 生物标志物；其与血清 AFP、AFP-L3 联合检测可提高对 HCC 的诊断价值。

PU-0782

S100A6 和相关 lncRNAs 作为原发性胆汁性胆管炎诊断和分期生物标志物的分析

董西华
中国医科大学附属第一医院

目的 探讨血浆 S100A6 mRNA、LINC00312、LINC00472 和 LINC01257 对原发性胆汁性胆管炎（PBC）的诊断及分期价值。
方法 采用胆管结扎（BDL）小鼠模型模拟 PBC；免疫荧光双标记法验证 BDL 小鼠肝内胆管细胞中 S100A6 蛋白表达是否上调；纳入 145 例 PBC 患者和 110 例健康对照者(HCs)，其中 80 例 PBC 患者和 60 例 HCs 作为训练集，65 例 PBC 患者和 50 例 HCs 作为验证集；采用 qRT-PCR 方法分析血浆 S100A6 mRNA、LINC00312、LINC00472 和 LINC01257 的相对表达量；用甘氨酸鹅脱氧胆酸（GCDC）处理人肝内胆管上皮细胞（HiBECs）模拟 PBC 肝内胆管上皮细胞胆汁淤积环境。
结果 S100a6 蛋白在 BDL 小鼠肝内胆管上皮细胞中表达上调；PBC 患者血浆和 GCDC 处理的 HiBECs 中 S100A6 mRNA、LINC00472 和 LINC01257 的相对表达量均上调，LINC00312 的相对表达量下调；S100A6 mRNA 在 PBC 晚期（III 期和 IV 期）的相对表达高于 HCs 和早期；晚期 LINC00312 表达水平低于早期和 HCs，早期 LINC00312 相对表达低于 HCs；LINC00472 在晚期的相对表达高于早期和 HCs；与 HCs 相比，LINC01257 在早期和晚期相对表达均上调；S100A6、LINC00312、LINC00472 和 LINC01257 对 PBC 诊断的曲线下面积(AUC)分别为 0.759、0.7292、

0.6942、0.7158；对 PBC 分期的 AUC 分别为 0.666、0.661、0.839 和 0.5549；验证集数据的 AUC 与训练集接近。
结论 S100A6、LINC00312、LINC00472 和 LINC01257 可作为 PBC 诊断的潜在生物标记物；LINC00472 可作为 PBC 分期的潜在生物标志物。

PU-0783

血清外泌体 MT1-MMP 对胃癌的早期诊断价值研究

董召刚、张义
山东大学齐鲁医院

目的 检测血清外泌体 MT1-MMP 在胃癌、不典型增生、慢性萎缩性胃炎、健康对照中的表达。
方法 收集山东大学齐鲁医院胃癌（119 例）、不典型增生（33 例）、慢性萎缩性胃炎（31 例）患者及 31 例健康对照血清。试剂盒提取血清外泌体 RNA，RT-PCR 检测 MT1-MMP 表达。电化学发光法检测 CEA、CA19-9、CA72-4。
结果 成功分离并鉴定了血清外泌体，MT1-MMP 在胃癌中表达(4.819 (1.748–8.023))高于不典型增生(2.725 (1.566-4.878))、慢性萎缩性胃炎(1.886 (0.779–3.631))及健康对照(0.694 (0.066–2.464))（P 均<0.05），而不典型增生高于慢性萎缩性胃炎（P=0.022）及健康对照（P=0.001），慢性萎缩性胃炎高于健康对照（P=0.019）。胃癌 CEA (2.31ng/ml)高于不典型增生(1.77ng/ml)、慢性萎缩性胃炎健康对照(1.65ng/ml)，P<0.05），而健康对照、胃炎及不典型增生表达无差异（P 均>0.05）。CA19-9 和 CA72-4 在三组表达无显著差异（P >0.05）。胃癌患者血清外泌体 MT1-MMP 表达与肿瘤大小(P=0.002)、分化(P=0.013)、分型(P=0.012)、浸润深度(P<0.001)、转移(P<0.001)、TNM 分期(P<0.001)密切相关。ROC 曲线显示 MT1-MMP 与 CEA 诊断胃癌的 cut-off 值为 2.89 和 2.10 ng/ml，其曲线下面积、灵敏度、特异度、分别为 0.788 和 0.655、63.9%和 63.0%、87.1%和 87.1%。二者联合灵敏度、特异度、曲线下面积为 75.6%、83.9%、0.821。
结论 血清外泌体 MT1-MMP 在胃癌时表达升高，与分期转移密切相关，对胃癌早期诊断价值较高。

PU-0784

TNIP1 gene polymorphisms associated with susceptibility to rheumatoid arthritis in the Chinese population

Qian Xi
Department of Laboratory, Medicine, Sichuan Provincial People's Hospital

BACKGROUND The tumor necrosis factor alpha inducible protein 3 interacting protein 1 (TNIP1) is involved in inhibition of nuclear factor-κB (NF-κB) activation. Recently, TNIP1 is regarded to associate with systemic lupus erythematosus (SLE) susceptibility, while the role of TNIP1 in RA is obscure. Thus, we conducted this study, aiming to precisely estimate the correlation.
METHODS A case-control study was conducted on TNIP1 single nucleotide polymorphisms (SNP) rs3792783 in Chinese population including 151 RA patients and 209 healthy controls. The presence of disease-related autoantibodies in RA were assessed.
RESULTS TNIP1 rs3792783 was found to be associated with RA susceptibility (recessive model, OR=0.55, 95%CI: 0.32-0.93) and anti-CCP antibody positive RA (recessive model, OR=0.53, 95%CI: 0.30-0.94). In accordance, TNIP1 haplotype CTC* favored the risk of RA development (P=0.011).
CONCLUSION TNIP1 rs3792783 was strongly correlated with RA inChinese population.

PU-0785

在中国人群中 C 反应蛋白启动子（rs3091244）的功能性基因变异与癌症风险无关

苏海翔[1]、王铭宇[2]、周海红[1]、武一[2]
1. 甘肃省医学科学研究院，甘肃省肿瘤医院
2. 兰州大学生命科学院

目的 在欧洲人群中，循环 C 反应蛋白（CRP）基因水平升高与癌症风险的关系已被广泛研究，但结论有很多矛盾。三等位基因 rs3091244 是一种功能验证的基因变体，其等位基因频率在欧洲和亚洲人群中存在显著差异。本项目研究中国人群中 rs3091244 与癌症风险的关系。
方法 采用 Sanger 测序法对 4971 例癌症患者和 2485 例正常人进行 rs3091244 基因分型，同时，在亚组中使用 TaqMan 分析对 rs1205 和 rs2794521 基因变异进行分型。
结果 无论是否区分癌症类型，在中国人群中 CRP 基因型变异都与癌症风险之间没有相关性。
结论 在中国人群中，循环 CRP 与肿瘤发生没有因果关系。

PU-0786

RASSF1A 及 SHOX2 基因甲基化水平对肺癌和良性肺部疾病的鉴别诊断研究

任静
广元市中心医院

目的 评价肺泡灌洗液（BLAF）中 SHOX2、RASSF1A 甲基化水平对肺癌和良性肺部疾病的鉴别诊断的临床价值。
方法 选取广元市中心医院 2018 年 10 月—2020 年 2 月经病理初次确诊的 162 患者，其中肺癌 65 例，良性肺部疾病 76 例，非肺部的恶性肿瘤 21 例。将良性肺部疾病和非肺部的恶性肿瘤患者共 97 例，分别作为对照组。对全部 162 例患者的 BLAF 样本，进行修饰纯化脱氧核糖核酸 (DNA)后采用实时荧光 PCR（RT－PCR）检测 BALF 中 SHOX2 和 RASSF1A 两种基因甲基化情况，比较二者在肺癌和良性肺部疾病的鉴别诊断的临床价值。
结果 1）肺泡灌洗液中 SHOX2 和ＲASSF1A 基因甲基化联合检测在肺癌组的诊断灵敏度为 0.836，高于良性疾病组(0.189) (P＜0.05)；高于非肺部的恶性肿瘤（0.210）(P＜0.05)。2）肺癌组 BALF 中 SHOX2、RASSF1A 基因甲基化联合检测阳性率在小细胞肺癌和肺鳞癌中分别是 100%和 91.4%，高于肺腺癌(75.0%)。
结论 对肺泡灌洗液中 SHOX2、ＲASSF1A 基因甲基化的 PCR 检测在肺癌诊断中有良好的灵敏度及特异性，是肺癌病理学诊断的有效补充工具。

PU-0787

高危型 HPV 感染与阴道微生态及性病感染情况的相关性研究

任静
广元市中心医院

目的 探讨阴道微生态与高危型人乳头瘤病毒（HR-HPV）感染及性病感染情况的关系。
方法 选择 HR-HPV 阳性受试者 296 例、HR-HPV 阴性受试者 306 例作为研究对象，进行阴道微生态、性病三项核酸（CT、UU、NG）及 HPV 分型检测，分析这三者之间的关系。

结果 HR-HPV 阳性与 HR-HPV 阴性比较，HR-HPV 阳性菌群多样性明显高于 HR-HPV 阴性($\chi2=7.602$，$P<0.05$)，HR-HPV 阳性组较 HR-HPV 阴性组的过氧化氢、白细胞酯酶和唾液酸苷酶的阳性率均明显升高($\chi2$ 分别为 8.560，8.431，10.907，$P<0.05$)；两组 pH 值无明显统计学意义($\chi2=0.079$，$P>0.05$)。与 HR-HPV 阴性组相比，HR-HPV 阳性组沙眼衣原体检测，解脲支原体，淋球菌检出率均高于对照组，差异均有统计学差异($\chi2=6.357$，$P<0.05$)；

结论 阴道微生态失调与 HR-HPV 感染及宫颈病变密切相关，阴道微生态平衡被打破，可增加 HR-HPV 感染及宫颈病变风险。此外，部分病原体诸如沙眼衣原体检测，解脲支原体，淋球菌对于 HR-HPV 的感染具有协同作用。

PU-0788

Further delineation of bone marrow failure syndrome caused by novel compound heterozygous variants of MYSM1

Niu Li[1]、Yufei Xu[1]、Tingting Yu[1]、Ru-en Yao[1]、Jing Chen[1]、Chengjuan Luo[2]、Jian Wang[1]
1. Shanghai Children's Medical Center, Shanghai Jiaotong University School of Medicine
2. Shanghai Children's Medical Center

Myb-like SWIRM and MPN domains (MYSM1) is a chromatin-binding transcriptional regulator that mediates histone 2A deubiquitination, which plays a vital role in hematopoiesis and lymphocyte differentiation. Biallelic variants in MYSM1 cause a rare bone marrow failure syndrome (OMIM #618116). To date, only three pathogenic variants (E390*, R478*, and H656R) of MYSM1 have been reported in nine patients, and all variants are homozygous. Here, we describe a Chinese female patient who mainly presented with leukopenia, granulocytopenia, thrombocytopenia, severe anemia, and B-cell and natural killer cell deficiency in the peripheral blood, and was diagnosed with bone marrow failure. Trio whole-exome sequencing revealed a novel compound heterozygous variant in MYSM1 (c.399G>A, p.L133L, and c.1467C>G, p.Y489*). The c.399G>A synonymous variant is located at the 3′-end of exon 6, which is predicted to affect MYSM1 mRNA splicing. Analysis of the products obtained from the reverse transcription-polymerase chain reaction revealed that the c.399G>A variant leads to exon 6 skipping, resulting in a premature termination codon (c.321_399 del, p.V108Lfs*13). cDNA sequencing suggested that the c.1467C>G variant triggered nonsense-mediated mRNA degradation. Moreover, we identified a novel transcript of MYSM1 mRNA (missing exons 5 and 6) in human blood cells. Our results expand the mutation spectrum of MYSM1; additionally, this is the first report of a synonymous splicing variant that induces post-transcriptional skipping of exon 6 leading to a bone marrow failure syndrome phenotype.

Exosomal miR-222-3p contributes to AIPC transformation and confers resistance to AR inhibition via activating mTOR signaling

Weiwei Liu、Piaoping Kong、Zhihua Tao
The Second Affiliated Hospital of Zhejiang University School of Medicine

Background/Aims Prostate cancer (PCa) remains the most common urologic malignancy and the second leading cause of male cancer-related deaths in developed countries. As PCa growth is initially dependent on androgens for survival, androgen deprivation therapy (ADT) has been the mainstay of treatment for PCa. However, these tumors will eventually progress to an androgen-

independent phenotype and fail to respond to ADT treatment, becoming the major obstacle of clinical therapy. Understanding the molecular mechanisms that underlie the progression of androgen-independent PCa will shed considerable lights on possible treatment strategies for PCa. MicroRNAs (miRNAs) or exosomes have recently been shown to play vital regulatory or communication roles in cancer biology. However, the roles and mechanisms of exosomal (Exos) miRNAs in AIPC remain unclear. In the present study, we aimed to investigate the detailed roles and mechanisms of tumor-generated exosomal miRNAs in the progression of AIPC.

Methods High-throughput sequencing was used to characterize the whole transcriptome profiles in both the androgen dependent and independent PCa cell line. Exosomes were isolated using ultracentrifugation and characterized using transmission electron microscope (TEM). The effects of Exos-miR-222-3p on PCa cell viability, apoptosis, EMT, motility were evaluated by CCK8, flow cytometry, transwell and wound healing assays, immunofluorescence. The regulatory mechanisms of miR-222-3p were investigated by qRT-PCR, WB, dual-luciferase assays and immunofluorescence.

Results 1. In our previously established stable ADT treatment-resistant LNCaP cell lines, cell growth was stabilized and can grow well in androgen-depleted environment. Our CCK-8 and transwell migration/invasion results showed that LNCaP-AI cells exhibit stronger proliferation, metastasis and invasiveness activity than LNCaP cells.

2. High-throughput RNA sequencing results found that miRNA-222-3p was mostly elevated in LNCaP-AI compared to LNCaP. In addition, exosomes secreted by AIPC cell line LNCaP-AI were successfully ingested by LNCaP, which dramatically promoted the growth activity and enhanced the migration and invasion ability of LNCaP cells in androgen-free complete medium. Interestingly, we further found that miRNA-222-3p expression was significantly enhanced in LNCaP-AI exosomes than that of LNCaP exosomes. Moreover, overexpression of miRNA-222-3p can significantly promote the proliferation ability of LNCaP. These results strongly suggested that Exos-miR-222-3p plays a paramount role in facilitating AIPC transformation.

3. What's more, the underlying mechanisms by which Exos-miR-222-3p contributes to AIPC transformation were investigated. Firstly, based on the results of full transcriptome sequencing, GO pathway and KEGG analysis showed that mTOR signalling pathway was markedly activated in LNCaP-AI cells compared to LNCaP-AI. In line with the predictive results, p-mTOR was obviously increased after miR-222-3p overexpression both in LNCaP and LNCaP-AI cells. Secondly, the target mRNAs of miR-222-3p were investigated. miRWalk 3.0 online predictive results showed that MIDN, BMF, BCL2L11, TP53BP2, ZFYVE16, PHACTR4, TMCC1 are potential target mRNAs of miR-222-3p. Considering the fuctions (oncogenes or tumor supressors) of these 7 potential targets, MIDN, a tumor supressor, was highly suspected to be a novel target of miR-222-3p. Dual-luciferase assays further demonstrated that miR-222-3p significantly supressed MIDN expression by combining with the 3' untranslated region (3'UTR) of the target gene mRNA, in addition, this result was also verified by RT-qPCR. Taken together, our results suggested that Exos-miR-222-3p mediated AIPC transformation was, at least in part, by activating mTOR signalling pathway via targeting MIDN.

4. Exos-miR-222-3p confers resistance to androgen receptor (AR) inhibition. In addition to androgen deprivation therapy, AR blocking is also an effective therapeutic strategy for prostate cancer. We found that either MDV3100 or AR shRNA mediated AR inhibition significantly decreased the proliferation activity of LNCaP, however, this anti-tumor effect was dramaticlly impaired after treatment of LNCaP-AI exosomes. Moreover, dual inhibition of miR-222-3p and AR led to synergistic cytocidal effects both in LNCaP and LNCaP-AI.

5. Exos-miR-222-3p may be a potential biomarker for castration-resistant prostate cancer (CRPC) diagnosis. Circulating exosomes from androgen dependent PCa (ADPC) and CRPC patients were isolated using ultracentrifugation, qPCR results indicated that miR-222-3p was more abundant in ADPC-exosomes compared to CRPC-exosomes, suggesting it could be a promising non-invasive biomarker for identifying ADPC and CRPC.

Conclusion In summary, our findings show that Exos-miR-222-3p plays a paramount role in promoting AIPC transformation and confers resistance to AR inhibition, which is mediated, at least in part, by activating mTOR signalling pathway via targeting MIDN, suggesting it could be a promising non-invasive biomarker for facilitating CRPC treatments.

Malignant Assesment of Mutant KRAS Circulating Cell-Free DNA in Pancreatic Cancer

Zheying Wang[1]、Xiaorong Pan[2]、Jianhua Tong[2]
1. Qilu Hospital of Shandong University
2. 上海交通大学医学院附属瑞金医院

Objective The research on circulating tumor DNA (ctDNA) in pancreatic cancer (PC) has emerged recently. Although the detection rate of the c in ctDNA was relatively consistent with that in tumor tissue, whether the KRAS mutant allele fraction (MAF) differed was still not reported. In this study, we aim to explore the clinical application of mutant KRAS ctDNA detection in clinical staging and differential diagnosis of PC.
Methods Plasma samples were collected from 110 PC and 52 pancreatic benign (PB) disease patients. The detection of KRAS mutation in ctDNA was performed using droplet digital PCR and compared with that in matched tumor tissue. We assessed the utility of KRAS MAFs in ctDNA and tissue for pancreatic malignancy assessment.
Results We found that KRAS MAF in ctDNA of PC patients was higher than that of PB patients, and was obviously associated with tumor staging and distant metastasis. However, KRAS MAF in ctDNA was significantly different from that in matched tissue. KRAS MAF in tumor tissue had no significant correlation with the clinical status. In addition, a ROC curve analysis revealed that mutant KRAS ctDNA combined with CA19-9 could increase the sensitivity rate of early-stage PC prediction, compared with CA19-9 test alone.
Conclusion The MAF of KRAS in ctDNA was related to the clinical stage of PC. Mutant KRAS ctDNA could improve the sensitivity in early diagnosis of PC as a complement to CA19-9. Our study suggested that KRAS mutation in ctDNA could be a valuable circulating biomarker for the malignancy assessment in PC.

Performance comparison of commercial kits for isolating and detecting of circulating tumor DNA

MENGYAN WANG、XIA HUANG、XIN LI、QIAOMEI GUO、WANXING XU、MINGNA ZHAO、XUEQING WANG、LIN WANG、JIATAO LOU
SHANGHAI CHEST HOSPITAL

Circulating tumor DNA (ctDNA), a fraction of cell-free DNA (cfDNA) in the circulatory system, is released from tumor cells and thus carries tumor-specific genetic signatures. Using blood-derived ctDNA to detect somatic mutations has shown great value in guiding cancer targeted

therapy. Isolation and detection efficiencies are the key factors affecting the performance of ctDNA detection.

To optimize and standardize our clinical practice, in this study, we analyzed the isolation efficiency of four commercial cfDNA purification kits: QIAamp circulating nucleic acid kit, AmoyDxVR Circulating DNA kits, MicrodiagVR circulating DNA isolation kit, and MagMAX cell-free DNA isolation kit; and the detection efficiency of two mainstream domestic EGFR gene mutation detection kits: MicroDiag EGFR gene mutation detection kit and Fluorometric real-time PCR Detection Kit for the analysis of EGFR gene mutations. Reference materials and plasma samples collected from lung cancer patients and healthy volunteers were used for the analysis. Our results showed that QIAamp circulating nucleic acid kit and MicrodiagVR circulating DNA kit had the highest recovery rate (up to 21.25 ng/mL) for short DNA fragments of about 173 bp which is the peak length of ctDNA. For ctDNA detection, the MicroDiagVR EGFR gene mutation detection kit showed the highest detection rate and sensitivity for detecting EGFR mutations at a mutant frequency of 0.5%. This work provides a reliable choice of commercial kits for the clinical application of ctDNA.

PU-0793

Non-small cell lung cancer cell–derived exosomal miR-17-5p promotes osteoclast differentiation by targeting PTEN

MENGYAN WANG[2]、MINGNA ZHAO[1]、QIAOMEI GUO[1]、JIATAO LOU[1]、LIN WANG[1]
1. SHANGHAI CHEST HOSPITAL
2. 上海市胸科医院

Aberrant activity of bone resorbing osteoclasts plays a key role in the development of osteoporosis and cancer bone metastasis. The identification of novel and specific targets will be helpful for the development of new therapeutic strategies for bone metastasis in lung cancer. Herein, we examined microRNAs in tumor cell-derived exosomes to investigate the communication between the bone environment and tumor cells. TCGA database analysis showed that the level of miR-17-5p increased in non-small cell lung cancer tissues compared with non-tumor tissues. To investigate the function of exosomes in inducing osteoclastogenesis, osteoclast precursors were incubated with exosomes isolated from non-small cell lung cancer cell line, as well as receptor activator of NF-KB ligand and M-CSF to induce osteoclastogenesis. We found that exosomal miR-17-5p is upregulated in a non-small cell lung cancer cell line with bone metastasis compared with the original cell line. Overexpression of miR-17-5p enhanced the osteoclastogenesis of RAW264.7 cells. PTEN was identified as a direct target of miR-17-5p and showed negative effects on osteoclastogenesis. Importantly, treatment of LY294002 (an inhibitor of the PI3K/Akt pathway) attenuated miR-17-5p-mediated osteoclastogenesis effects. Taken together, our findings demonstrated that miR-17-5p promotes osteoclastogenesis through the PI3K/Akt pathway via targeting PTEN in lung cancer.

JAK/STAT3 信号通路特异性抑制剂 AG490 对膀胱癌细胞侵袭能力的影响

张彦懿
成都市第三人民医院

目的 探讨 JAK/STAT3 信号通路特异性抑制剂 AG490 对 MMP-2、MMP-9、VEGF 和 P-STAT3 蛋白表达以及膀胱癌细胞侵袭能力的抑制作用，以验证 PLCε 是否是通过 JAK/STAT3 通路来抑制膀胱癌细胞侵袭能力。
方法 分别用高、中、低三种药物浓度的 AG490 处理 BIU-87、T24 细胞株,transwell 侵袭试验检测 AG490 对细胞侵袭能力的影响，采用 Western blot 法分别检测 AG490 处理前后 STAT3 总蛋白、磷酸化形式蛋白和 MMP-2、MMP-9 和 VEGF 蛋白表达变化。
结果 AG490 对膀胱癌细胞侵袭力具有抑制作用，且抑制作用呈浓度依赖性，AG490 同样抑制 P-STAT3、MMP-2、MMP-9 和 VEGF 蛋白的表达(P<0.05)。
结论 AG490 可能通过抑制 JAK/STAT3 信号通路的激活，从而抑制下游 MMP-2、MMP-9 和 VEGF 的表达既而达到下调膀胱癌侵袭能力的作用。

2016-2020 年成都某医院门诊女性 HPV 感染情况及基因亚型分析

张彦懿
成都市第三人民医院

目的 了解四川省成都市某医院女性人乳头瘤病毒（human papilloma virus，HPV）阳性感染情况，为宫颈癌防治策略提供参考依据。
方法 收取 2016 年 1 月至 2020 年 12 月门诊就诊的 9635 例女性的宫颈脱落上皮细胞样本，采用宫颈刷取法，用 PCR 及导流杂交方法对 21 种 HPV 亚型进行分型检测，分析各型感染阳性率。同时，将受检者年龄分为 6 组（≤20 岁，21-30 岁，31-40 岁，41-50 岁，51-60 岁，≥61 岁），分析各年龄段感染情况。用卡方检验对结果进行统计分析。
结果 共检出 HPV 阳性 4322 例，阳性率 44.9%，其中单一型感染占 32.46%，多重感染占 12.44%；所有 21 种基因亚型均被检出，其中高危型占 73.82% ，低危型占 26.18%，检出率前三位的亚型依次为 52 型、16 型、53 型；各年龄段的检出率分别为：≤20 岁 32.67%，21-30 岁 28.49%，31-40 岁 10.26%，41-50 岁 5.81%，51-60 岁 1.19%，≥61 岁 21.58%，单一型别及多重感染率最高的组均为≤20 岁年龄组。
结论 2016-2020 年成都该医院女性 HPV 感染以单一型、高危型为主，以 HPV 基因亚型 52 型、16 型、53 型多见，预防接种时宜选用涵盖这 3 种亚型的疫苗。

Protective effect and mechanism of miR-216a silencing on carbon tetrachloride-induced liver fibrosis in rats

Shuaijun Lu 、fang wang、burong zhang、weihua wang
The AffiliatedHospitalof Medical School，Ningbo University

Objective To explore the effect and mechanism of microRNA (miRNA) 216a silencing on carbon tetrachloride-induced liver fibrosis in rats.
Methods Ten of the fifty rats were randomly selected as the normal group, and the remaining 40 rats were intraperitoneally injected with olive oil solution containing CCl4 to establish the liver fibrosis model rats. Thirty rats were randomly divided into model group, control group and silent group, with 10 rats in each group. Adenovirus containing empty plasmid was injected into the control group through tail vein, and adenovirus containing plasmid si-miR-216a was injected into the silent group through tail vein. The levels of hyaluronic acid (HA), laminin (LN), type Ⅲ

procollagen (PC Ⅲ) and type Ⅳ collagen (C Ⅳ) were detected by enzyme-linked immunosorbent assay. The expression levels of miR-216a, phosphatase and tensin homolog deleted on chromosome 10 (PTEN) mRNA and mothers against decapentaplegic homolog 7 (Samd7) mRNA were detected by real-time fluorescence quantitative PCR method. The expression levels of PTEN and Samd7 were detected by Western Blot.

Results Compared with the normal group, the levels of HA, LN, PC Ⅲ, C Ⅳ, and miR-216a in the model group increased, while the levels of PTEN mRNA, Samd7 mRNA, PTEN, and Samd7 decreased, the differences were statistically significant (P<0.05). Compared with the model group and control group, the levels of HA, LN, PC Ⅲ, C Ⅳ, and miR-216a in the silent group decreased, while the levels of PTEN mRNA, Samd7 mRNA, PTEN, and Samd7 increased, and the differences were statistically significant (P<0.05).

Conclusions miR-216a silencing can reduce the levels of HA, LN, PC Ⅲ and C Ⅳ in liver fibrosis rats, and improve the liver fibrosis injury induced by carbon tetrachloride. The mechanism may be related to the regulation of PTEN/Smad7.

基于多重 RT-PCR 检测法的儿童呼吸道病原体流行特征

刘文渊、张艺之、卢文波
宁波市妇女儿童医院

目的 了解区域儿童呼吸道感染病原体的流行特征，为临床防控和诊治提供参考依据。
方法 收集 2019 年 7 月～10 月间宁波市妇女儿童医院就诊急性呼吸道感染患儿的标本共 3 103 例，通过基于毛细电泳的多重 RT-PCR 法检测常见的 13 种呼吸道病原体，并对结果进行统计分析。
结果 3103 例患儿中 2 053 例呼吸道病原体检测阳性，总阳性率为 66.16%。检出率前 3 位分别为肺炎支原体（mycoplasma pneumoniae, MP）33.19%（1030/3 103）、鼻病毒（human rhinovirus, HRV）24.20%（751/3 103）和腺病毒（human adenovirus, HADV）8.77%（272/3 103）。病原体在男性患儿和女性患儿中的检出率分别为 65.70%（1 157/1 761）和 66.77%（896/1 342），差异无统计学意义；在年龄≤1 岁组、1～≤3 岁组、3～≤6 岁组和 6～≤16 岁组检出率分别为 58.02%（626/1 079）、74.37%（589/792）、73.78%（543/736）和 59.48%（295/496），组间差异具有统计学意义；7 月～10 月份检出率依次为 71.64%（341/476）、68.81%（536/779）、67.01%（648/967）和 59.93%（528/881），差异具有统计学意义；单一感染率为 52.30%（1 623/3 103），两种及以上病原体混合感染率为 13.86%（430/3 103），其中以 2 种病原体混合感染多见。
结论 本区域儿童呼吸道病原体检出以 MP 和 HRV 为主，病原体检出率在不同年龄阶段和不同月份间存在一定差异。

PU-0798

YTHDF1 promotes Cyclin B1 translation through m6A modulation and contributes to the poor prognosis of Lung adenocarcinoma with KRAS/TP53 co-mutation

Xiaoying Lou、Kexin Li、Danfei Xu、Yue Wu、Wei Cui
National Cancer Center/National Clinical Research Center for Cancer/Cancer Hospital

Background KRAS and TP53 mutations are the two most common driver mutations in patients with lung adenocarcinoma (LUAD), and appear to reduce latency and increase metastatic

proclivity when KRAS and TP53 co-mutation (KRAS/TP53-mut) occur. This raises the question of whether co-mutations impact the prognosis of LUAD. N6-methyladenosinde (m6A), the most abundant RNA modification in mammal mRNAs, plays a critical role in tumorigenesis. YTHDF1, as m6A reader protein, directly promotes the translation of methylated mRNAs. Recently studies have revealed that YTHDF1 depletion restrains LUAD progression. However, the molecular mechanism involved is unclear for LUAD patients with KRAS/TP53-mut.
Methods Transcriptome, somatic mutation, and clinical data for LUAD patients was extracted from public database to investigate the impact of KRAS and TP53 co-mutation in LUAD. Differential expression of the 15-m6A-related genes were analyzed in LUAD with different mutations. Moreover, bioinformatic analysis was applied to screen the potential targets of YTHDF1. The specific binding between YTHDF1 and presumed target was verified by m6A-RIP and YTHDF1-RIP assays. Furthermore, cell proliferation assays were performed to discover the functional role of YTHDF1 and its target in LUAD with KRAS/TP53-mut. Finally, 70 LUAD tissues were collected from patients with KRAS and/or TP53 mutation to confirm the association between YTHDF1 and Cyclin B1 expression.
Results We first found that only LUAD patients with KRAS/TP53-mut, but not individual mutation appeared to poor overall survival, when compared with patients without KRAS and TP53 mutation (Wild-type). Interestingly, YTHDF1 was the most upregulated in KRAS/TP53-mut patients and associated with their adverse prognosis. RNA level of YTHDF1 was positively correlated with the protein level and translation efficiency of Cyclin B1. Cyclin B1 is high expressed in LUAD patients with KRAS/TP53-mut, and its high expression is closely correlated with shorter overall survival. Experimental evidence indicated that protein levels of YTHDF1 and Cyclin B1 were significantly elevated in the KRAS/TP53-mut cell lines. Elevated YTHDF1 functionally promoted the translation of Cyclin B1 in an m6A-dependent manner, thereby facilitating the tumor proliferation and poor prognosis of LUAD with KRAS/TP53-mut. Furthermore, the correlation between YTHDF1 and Cyclin B1 expression was confirmed in patients with co-mutant KRAS/TP53, and upregulation of YTHDF1 was found to be associated with an unfavorable pathological stage and tumor size.
Conclusion In this study, we found that YTHDF1 promotes the translation of Cyclin B1 through m6A regulation and contributes to the poor prognosis of LUAD with KRAS/TP53 co-mutation by combining bioinformatics and experimental **Results** Thus, YTHDF1-targeted therapy might be a potential target for KRAS/TP53-mut lung cancer therapy.

PU-0799

Identification of Thearpeutic Targets and Prognostic Biomarkers Among CDKs in the Renal Cell Carcinoma Microenvironment

Chenggui Zhao
Zhongda Hospital,Southeast University

Background Renal cell carcinoma (RCC), which is one of the most common malignances, hasa continuous growing incidence and mortality.
Methods ONCOMINE, GEPIA, UALCAN, cBioPortal, GeneMANIA, DAVID 6.8,Metascape, TRRUST, LinkedOmics and TIMER were utilized in this study.
Results The mRNA levels of CDK1/2/4/5/8/13/16 in RCC tissues were significantly elevated while the mRNA levels of CDK3/9/17 were significantly reduced. The transcriptional levels of CDK1/2/3/4/5/7/9/10/13/17/18/19 in RCC tissues were significantly elevated while the transcriptional levels of CDK6/8/14/16 were significantly reduced. A significant correlation was found between the expression of CDK1/4/5/6/8/9/15/19/20 and the pathological stage of RCC patients. RCC patients with low transcriptional levels of CDK1/3, high transcriptional levels of CDK9/14/15/18/19/20 were significantly associated with a better prognosis. The functions of

differentially expressed CDKs are primarily related to the cell cycle, serin/threonine protein kinase complex, cyclin-dependent protein serin/threonine kinase activity. It's suggested that IRF1, MYC, TP53, NR3C1, AR and RREL were key transcription factors for CDKs. Significant correlations were found between the expression of CDKs and the infiltration of six types of immune cells (B cells, CD8+ T cells, CD4+T cells, macrophages, neutrophils, and dendritic cells). 19 drug-gene interaction pairs were obtained in DGIdb.
Conclusions This study provides novel insights for the selection of immunotherapeutic targets and prognostic biomarkers for renal cell carcinoma.

PU-0800

HOTTIP contributes to cisplatin resistance by sponging miR-216a-5p in gastric cancer

Rui Zhao
Qilu Hospital, Shandong University

Background Gastric cancer (GC) is a significant public health burden worldwide, and cisplatin resistance is the leading cause for the failure of chemotherapy in this disease. Previous studies have revealed that HOXA transcript at the distal tip (HOTTIP) is involved in the pathology of GC and is associated with poor overall survival. Recent studies have revealed that autophagy plays an important role in regulating response to chemotherapy. However, the functional role of HOTTIP in GC cisplatin resistance and whether HOTTIP can modulate cisplatin resistance in GC by regulating autophagy remains largely unknown. Our study aims at investigating the important roles of HOTTIP in GC cisplatin resistance.
Methods 1. Expression levels of HOTTIP in GC cells (GES-1, SGC7901 and SGC7901/DDP) were detected by RT-qPCR. 2. The HOTTIP coding sequence was amplified and cloned into pcDNA3.1 vector. The resulting construct, named pcDNA3.1-HOTTIP, was used to overexpress HOTTIP. Si-HOTTIP was used to silencing HOTTIP expression. Transfection was performed using Lipofectamine 2000. 3. A xenograft tumor model was established to evaluate the effect of HOTTIP on chemoresistance in vivo. 4. The effect of HOTTIP expression levels on cisplatin resistance in GC was detected by CCK-8 proliferation assay, apoptosis assay (TUNEL assay and flow cytometric analysis) and autophagy assay. 5. The interaction among HOTTIP, miR-216a-5p and Bcl-2 were predicted by StarBase v2.0 and confirmed by double luciferase reporter system and western blot.
Results 1. SGC7901/DDP expressed higher level of HOTTIP than SGC7901 ($p<0.001$), and these two GC cell lines showed 1.473- and 2.042-fold upregulation of HOTTIP compared to GES-1. 2. HOTTIP overexpression notably increased cisplatin resistance of SGC7901 cells compared to control cells ($p<0.001$) while silencing of HOTTIP significantly inhibited cisplatin resistance of SGC7901/DDP cells compared to cells transfected with the empty vector ($p<0.001$). 3. In vivo experiment, HOTTIP overexpression group displayed larger tumor size and weight than those in the NC group. 4. Overexpression of HOTTIP in SGC7901 cells significantly decreased cell apoptosis while silencing of HOTTIP in SGC7901/DDP cells significantly increased cell apoptosis. 5. Knockdown of HOTTIP inhibits chemoresistance of SGC7901/DDP by promoting autophagy. 6. HOTTIP could sponge miR-216a-5p to promote the expression of Bcl-2, then decrease the release of Beclin1 from Bcl-2/Beclin1 complex, and finally inhibit autophagy.
Conclusion HOTTIP could affecte the cisplatin resistance of GC cells by regulating miR-216a-5p/Bcl-2 /Beclin1 pathway, which provides a novel strategy to overcome resistance to chemotherapy in GC.

PU-0801

Exosomal long noncoding RNA HOTTIP as potential novel diagnostic and prognostic biomarker test for gastric cancer

Rui Zhao
Qilu Hospital, Shandong University

Aim Gastric cancer (GC) is a huge burden worldwide with high morbidity and high mortality, especially in Eastern Asia. Blood-based examination is an ideal examination for GC diagnosis, butcurrent serum tumor biomarkers, like CEA, CA 19-9 and CA 72-4, have a low positive rate. Long noncoding RNA HOTTIP (HOXA transcript at the distal tip) plays important roles in the generation and progression of human cancers and has gained growing attention among cancer-related lncRNAs. Exosomes participate in cellular communication by transmitting moleculars between cells and are regarded as suitable candidates for non-invasive diagnosis. However, the existence of HOTTIP in the circulating exosomes and the potential roles of exosomal HOTTIP in GC was poorly understood. This study aims at estimating the potential novel diagnostic and prognostic values of exosomal HOTTIP for GC.
Methods 1. Serum exosomal HOTTIP from 246 subjects (126 GC patients and 120 healthy people) were detected by reverse transcriptionreal-time quantitative polymerase chain reaction (RT-qPCR) and serum CEA, CA 19-9 and CA 72-4were measured by electrochemiluminescence method on Cobas E601. 2. Receiver operating characteristic curve (ROC) was built to estimate the diagnostic values of exosomal HOTTIP, CEA, CA 19-9 and CA 72-4. 3. The Kaplan–Meier analysis was used to analyse the relationship between exosomal HOTTIP, CEA, CA 19-9 and CA 72-4expression levels and overall survival (OS) of GC. 4. Cox proportional hazards models were performed to identify independent prognostic factors for GC.
Results 1. Exosomal HOTTIP was directly released by GC cells. And RT-qPCR results showed that the expression levels of exosomal HOTTIP in serum were typically higher in GC than in normal control ($P < 0.001$) and its expression levels were significantly correlated with tumor invasion depth ($P = 0.0298$) and TNM stage ($P < 0.001$). We also proved the stability ofexosomal HOTTIP by treated serum samples with prolonged exposure to room temperature or mutiple freeze-thaw cycles. 2. The area under the curve (AUC) for exosomal HOTTIP was 0.827 ($P < 0.001$), which was significantly higher than the AUCs for CEA, CA 19-9, CA 72-4 with 0.653, 0.685 and 0.639, respectively ($P < 0.001$), indicating that exosomal HOTTIP was superior to them in GC diagnosis. 3 The Kaplan–Meier analysis showed a correlation between increased exosomal HOTTIP levels and poor overall survival (OS) ($P < 0.001$) and there was no significant relationship between CEA, CA 19-9, CA 72-4 and OS ($P > 0.05$). The online (www.kmplot.com) survival analysis results, basing on the detection data from GC tissues, demonstrated that expression levels of HOTTIP were increased above the optimal cutoff point in 71.8% of patients with GC and these patients had a poor OS, with the pooled HR of 1.63 (95% CI 1.19-2.23, logrank $P = 0.0022$), which supported our
Conclusion 4 Univariate and multivariate COX analysis revealed exosomal HOTTIP overexpression was an independent prognostic factor in GC patients (HR = 2.037, 95% CI = 1.085-3.823, $P = 0.027$).
Dissucion Exosomal long noncoding RNA HOTTIP may be a potential biomarker for GC in diagnosis and prognosis.

应用加权基因共表达网络分析筛选结肠腺癌干性指数相关核心基因

丁志祥、史兵伟、葛贤
南京中医药大学附属常州市中医医院

目的 利用加权基因共表达网络分析挖掘结肠腺癌（colon adenocarinoma，COAD）转录组干性指数相关核心基因。
方法 从 TCGA 官网下载 COAD 相关转录组数据及临床资料，应用逻辑回归机械学习法则计算基于转录组表达数据的干性指数（mRNA expression-based stemness indices，mRNAsi）。应用加权基因共表达网络分析（weighted gene co-expression network analysis，WGCNA）获取与 mRNAsi 密切相关的模块及基因。对相关模块基因进行 GO 富集分析和 KEGG 通路分析。利用 STRING 在线数据库分析 mRNAsi 相关基因的蛋白质相互作用网络（PPI），并通过 Cytoscape 筛选核心基因（Hub gene）。分析各 Hub 基因之间的相关性及其在 COAD 组织和正常组织中的表达差异。
结果 COAD 组织中 mRNAsi 评分显著高于正常组织（t=14.145，P<0.001），mRNAsi 高评分组生存率高于低评分组（P=0.041）。应用 WGCNA 共筛选出 3 个 mRNAsi 相关模块及 178 个相关基因。通过 PPI 分析筛选出的 Hub 基因包括 COL1A2、COL1A1、COL3A1、POSTN、THBS2、COL5A1、COL5A2、DCN、BGN 及 LOX。经 TCGA 数据库验证 COL1A2、COL1A1、COL3A1、POSTN、THBS2、COL5A1、COL5A2、BGN 及 LOX 在 COAD 组织中表达显著高于正常结肠组织（P<0.01），而 DCN 在癌组织中表达显著低于正常组织中的表达（P<0.01）。
结论 通过 WGCNA 筛选到与结肠腺癌 mRNAsi 相关的 10 个潜在 Hub 基因，对结肠腺癌的分子机制研究提供了新靶点。

Comparative analysis of QS3D and droplet digital PCR for detection of plasma EGFR T790M mutation at disease progression

QIAOMEI GUO、XIA HUANG、LIHUA QIAO、MINGNA ZHAO、MENGYAN WANG、LIN WANG、JIATAO LOU
Department of Laboratory Medicine, Shanghai Chest Hospital

Objectives Numerous studies have demonstrated the ability of QuantStudioTM 3D (QS3D) and droplet digital PCR (dPCR) platforms in the successful detection of EGFR mutations from plasma. However, no prospective data on quantitative comparative analysis of the two **Methods** are available. Here we directly compared the performance of the two platforms in the detection of the EGFR T790M mutation in cell-free DNA (cfDNA) samples from lung cancer patients.
Methods cfDNA was isolated from plasma samples of 72 non-small cell lung cancer patients who initially received tyrosine kinase inhibitor treatment and acquired drug resistance. Identical cfDNA samples were subjected to T790M mutation analysis using QS3D and droplet dPCR in parallel.
Results The T790M mutation was detected in 15/72 (20.8%) cfDNA samples by QS3D dPCR and 21/72 (29.2%) cfDNA samples by droplet dPCR. The overall concordance between the two **Methods** was 91.7% (66/72). The median allele frequency of the T790M mutation detected by QS3D dPCR and droplet dPCR was 2.01% and 2.62%, respectively. The partition number of QS3D dPCR is much higher than that of droplet dPCR, while the mutation abundance detected by the two platforms is similar. Furthermore, a strong correlation was observed in allele frequencies and copy numbers between the two methods, with R2 of 0.98 and 0.97, respectively.

Conclusion Our study demonstrated a high level of concordance between the QS3D and droplet dPCR platforms for the detection and absolute quantification of the EGFR T790M mutation in cfDNA.

Exosomal miR-92b-3p Promotes Chemoresistance of Small Cell Lung Cancer Through the PTEN/AKT Pathway

李明
安徽省立医院（中国科学技术大学附属第一医院）

Resistance to fifirst-line chemotherapy drugs has become an obstacle to improving the clinical prognosis of patients with small cell lung cancer (SCLC). Exosomal microRNAs have been shown to play pro- and anti-chemoresistant roles in various cancers, but their role in SCLC chemoresistance has never been explored. In this study, we observed that the expression of exosomal miR-92b-3p was signifificantly increased in patients who developed chemoresistance. Luciferase reporter analysis confifirmed that PTEN was a target gene of miR-92b-3p. The PTEN/AKT regulatory network was related to miR-92b-3p-mediated cell migration and chemoresistance in vitro and in vivo in SCLC.

PU-0805

The subtype-specific molecular function of SPDEF in breast cancer and insights into prognostic significance

Ting Ye、Jinbo Liu
The Affiliated Hospital of Southwest Medical University

Background Breast cancer (BC) is a molecular diverse disease which becomes the most common malignancy among women worldwide. There are four BC subtypes (Luminal A, Luminal B, HER-2 enriched and Basal-like) robustly established following gene expression patterns based characterization, behave significant differences in terms of their incidence, risk factors, prognosis and therapeutic sensitivity. Thus, there is an urgent need to provide mechanism research, treatment strategies and/or prognosis evaluation based on the patient stratification of BC subtypes. The prostate-derived ETS factor SPDEF was first identified as an activator of prostate specific antigen and then the involvements in many aspects of BC has been proposed. However, the subtype-specific molecular function of SPDEF in BC and insights into prognostic significance have not been clearly elucidated.
Materials and Methods In the present study, we unveiled the global expression profiles of SPDEF, as well as the clinicopathologic and prognostic importance in different BC subtypes through public datasets and experimental evidences. Subsequently, Gene Ontology (GO), Kyoto Encyclopedia of Genes and Genomes (KEGG) and hallmark effect gene sets analysis were performed to explore the potential functions and molecular mechanisms of SPDEF in BC subtyping progression.
Results We conducted the prognostic risk model of SPDEF-related prognosis genes respectively in subtypes of BC, indicating a highly prognostic performance in survival surveillance.
Conclusions In summary, our findings would help to better understand the possibly mechanisms of various BC subtypes and to find possible candidate genes for prognostic and therapeutic usage.

自噬相关 LncRNA 在肝细胞肝癌中的预后价值研究

周亚萍
新疆军区总院
石河子大学

目的 LncRNA 可能通过体内多种自噬相关途径在肝细胞肝癌的发生、转移和生理生化反应中发挥至关重要的作用，本研究的主要目的是探讨肝细胞肝癌中多种自噬相关 LncRNA 的表达情况及其临床意义，并进一步研究其可能的分子机制。
材料与方法 肝细胞肝癌患者和自噬相关基因数据分别从癌症基因组图谱数据库和人类自噬数据库获得，基于比例风险回归模型分析和基因共表达构建预测模型。
结果 最终构建的预后模型中包含 7 个自噬相关的 lncRNA，分别是 PRRT3-AS1,RP11-479G22.8,RP11-73M18.8,LINC01138,CTD-2510F5.4,CTC-297N7.9,RP11-324122.4。对预测模型进行进一步风险评估，整体生存（OS）曲线显示，高风险患者的 OS 显著低于低风险患者（P = 2.292E-10），并且其风险评分预测精准度（AUC = 0.786）显著高于 ALBI 肿瘤分期（AUC =0.532），Child_Pugh 肿瘤分期（AUC =0.573），甲胎蛋白 AFP（AUC =0.5751）和美国癌症委员会肿瘤分期（AUC =0.631）。多因素 COX 分析和风险评分列线图显示，风险评分联合 Child_Pugh 肿瘤分期、患者年龄、TNM 分期和 GRADE 分级进行综合分析时，预测肝细胞肝癌患者 1 年和 3 年的 OS 的准确率明显升高（1 年生存率 AUC =0.87，3 年生存率 AUC =0.855）。此外，这 7 个自噬相关的 lncRNAs 可能参与调节体内剪接体构成、细胞周期、RNA 转运、DNA 复制、mRNA 监控途径等，并且与 RNA 剪接、mRNA 剪接的生物学过程有关。
结论 综上所述，这 7 种自噬相关的 LncRNAs 可能通过体内多种调节途径参与肝细胞肝癌的发生发展过程，也可能是监测肝细胞肝癌的治疗效果和预后情况的理想标志物。

PU-0807

GATA1/SP1 and miR-874 mediate enterovirus-71-induced apoptosis in a granzyme-B-dependent manner in Jurkat cells

Meijuan Zhang、jun zhou
the First Affiliated Hospital of Nanjing Medical University

Enterovirus 71 (EV71)-induced T lymphocyte apoptosis plays an important role in hand, foot, and mouth disease (HFMD), and granzyme B (GZMB) has been shown to be critical for this process. However, the mechanisms underlying GZMB- mediated apoptosis of T lymphocytes remain unknown. In this study, we investigated whether transcription factors and microRNAs (miRNAs) are involved in GZMB-mediated apoptosis of T lymphocytes in response to EV71 infection. Our ndings indicated that EV71 infection signi cantly induced apoptosis in Jurkat cells, a human T lymphocytes cell line, as revealed in ow cytometric analysis. Furthermore, EV71 increased the expression of pro-apoptosis Bcl-2-associated X (Bax) and cleaved caspase 3 but decreased the expression of anti-apoptosis B-cell lymphoma protein 2 (Bcl2). GZMB knockdown decreased cell apoptosis and prevented EV71-induced changes in the expression of Bax, cleaved caspase 3, and Bcl2 in Jurkat cells, highlighting the role of GZMB as a key factor in EV71-induced apoptosis. Our study also indicated that overexpression of the transcription factors GATA binding factor 1 (GATA1) and speci city protein 1 (SP1) signi cantly increased luciferase activity when this gene was inserted in the GZMB 3’ untranslated region (3’UTR). GATA1/SP1 overexpression induced cell apoptosis, increased the expression of Bax and cleaved caspase 3,

and decreased the expression of Bcl2. Finally, our results suggested that miR-874 plays an essential role in GZMB-mediated cell apoptosis, since an miR-874 mimic decreases the expression of GZMB by targeting its 3'UTR. Collectively, these data indicated that GATA1/SP1 and miR-874 mediate EV71-induced apoptosis in a granzyme B-dependent manner. This signaling pathway may provide a new pharmacological target for the prevention and treatment of HFMD.

高危型 HPV 基因分型在妇科保健人群中的分布特征分析

张美娟、周军
江苏省人民医院（南京医科大学第一附属医院）

目的 了解高危型人乳头瘤病毒(high risk HPV, hr HPV)感染的基因分型，为宫颈病变的早期筛查提供依据。
方法 选取 2020 年 4 月~2021 年 3 月江苏某三甲医院妇女保健门诊就诊的 1903 名女性，取宫颈脱落细胞标本进行高危型 HPV 分型检测，了解高危型 HPV 感染状况以及亚型分布规律。
结果 在所收集的 1903 份标本中，共检出高危型 HPV 阳性 396 例，阳性率为 20.8%。hr HPV 感染型别按检出阳性率从高到低依次是 HPV52(5.47%) 、HPV58(3.31%)、HPV16(3.05%)、HPV51(2.05%)、 HPV39(1.94%) 、HPV56(1.58%)、 HPV18(1.31%) 、HPV68(1.26%) 、HPV66(1.10%) 、HPV33(1.00%)、 HPV59(1.00%)、 HPV35(0.84%)、 HPV31(0.79%) 、HPV45(0.58%) 和 HPV82(0.53%)。hr HPV 阳性率从高到低的年龄组分别是: ≥65 岁组(35. 71%)、55~64 岁组(31.71%)、<25 岁组(24.64%)、45~54 岁组(24.14%)、35~44 岁组(20.00%)、25~34 岁组(18.84%)。在 396 例 HPV 阳性检测结果中，以单一感染为主，共 321 例(81.06%)，多重感染 75 例，多重感染率为 18.94％，其中二重感染 57 例，三重感染 13 例，四重感染 3 例，五重感染 2 例。
结论 在妇科保健人群的筛查中，感染率最高的出现在≥55 岁的人群。阳性人群中以单一感染为主，hr HPV 感染以 HPV52、HPV58 和 HPV16 亚型为主。Hr HPV 基因分型检测对于宫颈病变的早期防治有重要的指导意义。

结直肠癌组织高频突变基因与临床病理特征及 MMR 基因突变的相关性分析

吴爱华
宁波市第一医院

目的 利用高通量测序平台分析结直肠癌（colorectal cancer，CRC）热点基因及新发基因突变状况，探讨突变基因与临床病理特征之间的关系。
方法 回顾性分析 2019 年 1 月至 2020 年 12 月宁波市第一医院行二代测序检测的 128 例 CRC 患者的临床病理资料及基因检测结果。分析热点基因和新发基因突变的分布及致病性，分析高频突变基因与临床病理特征及 MMR 基因的关系。
结果 128 例 CRC 患者中，检测出 APC、TP53、KRAS、FBXW7、 PIK3CA 及 MMR 基因的突变率分别为 77.3%（99/128）、73.4%（94/128）、42.2%（54/128）、16.4%（21/128）、15.6%（20/128）和 7.8%（10/128）。共检测到结直肠癌相关的 17 个基因的 224 种突变，其中包括 191 种热点突变和 33 种新发突变。利用生物信息学软件分析基因新发突变的致病性，结果显示有 17 个位点对基因的功能产生重大影响。此外，TP53 基因在有脉管浸润（p=0.035）及发生远处转

移 (p=0.03) 的患者中突变率高。APC 基因突变在左半结肠癌（p=0.01）的患者中突变率较高。KRAS 基因在不同肿瘤原发部位（p=0.002）的突变率有统计学意义。PIK3CA 基因在女性（p=0.019）、肿瘤直径≥ 5 mm（p=0.005）及未发生脉管浸润（p=0.043）的患者中具有较高的突变率。FBXW7 基因在发生淋巴结转移（p=0.023）的患者中突变率较高。TP53、APC、KRAS、PIK3CA、FBXW7 基因突变率与 MMR 基因的突变率没有相关性。

结论 高通量测序平台可作为分析结直肠癌多基因检测的手段，高频突变基因 TP53、APC、KRAS、PIK3CA 和 FBXW7 基因与临床病理参数存在相关性，对临床诊疗提供一定帮助。

通过转录组测序探索生物节律参与 2 型糖尿病肾病的机制研究

孔晓牧、马亮、曹永彤
中日友好医院

目的 生物节律对于维持肾脏生理功能至关重要。已有研究提示生物节律紊乱可能参与糖尿病肾脏疾病的发生发展，机制尚不清楚。本研究旨在通过转录组测序方法探索生物节律参与 2 型糖尿病肾病病理过程的新机制。

方法 购入 36 只 8 周龄雄性 2 型糖尿病 db/db 小鼠及对照组 m/m 小鼠。在各基因型组内，根据基线随机血糖与体重水平将动物进一步分为 6 组（n=6）。采取 12h 光照-黑暗周期（光照从 7:00am~7:00pm）适应性饲养 1 周。其后，分别在环境钟（ZT）为 ZT0（7:00am）、ZT4（11:00am）、ZT8（3:00pm）、ZT12（7:00pm）、ZT16（11:00pm）、ZT20（3:00am）时处死小鼠并取材。肾脏组织进行二代转录组测序、差异表达基因富集分析。

结果 转录组测序初步结果显示，m/m 小鼠 ZT4、ZT8、ZT12、ZT16 和 ZT20 组肾脏相对 ZT0 组的差异基因数目分别为 133、284、278、155 和 46 个；db/db 小鼠各组肾脏相对 ZT0 组的差异基因数目分别为 11、90、161、115 和 18 个，可见其在各 ZT 时间点差异基因数目均显著少于 m/m 小鼠。差异基因富集分析显示，db/db 小鼠与 m/m 小鼠肾脏受到生物节律调控的基因通路存在共同点与差异性，m/m 小鼠肾脏受到生物节律调控的基因通路种类更为丰富。此外，各 ZT 时间点检测到 m/m 与 db/db 小鼠的肾脏间分别存在 347（ZT0）、408（ZT4）、514（ZT8）、453（ZT12）、526（ZT16）及 563 个（ZT20）差异表达基因。我们将对其中受到生物节律调控最为显著的基因及通路进行验证与分析。

结论 转录组测序数据显示 2 型糖尿病小鼠与对照组相比肾脏受到生物节律调控的基因数目与通路的丰富性均显著降低，提示肾脏生物节律调控基因及通路的异常参与了 2 型糖尿病肾脏疾病的病理过程，有可能成为未来防治糖尿病肾脏疾病的新靶点。

Advances in the application of artificial intelligence in solid tumor imaging

Ting Cui
the First Affiliated Hospital of Nanjing Medical University

Background Cancer is currently a worldwide health problem. Early diagnosis and timelytreatment are crucial in reducing cancer-related mortality. Medical imaging is acommon technique used to guide the clinical diagnosis of solid tumors. Accurateinterpretation of imaging data has become an important but difficult task inthe diagnosis process. Artificial intelligence (AI) has greatly relievedclinical workloads and changed the current medical workflows.

Methods Wesearched for recent studies, reports and reviews referring to AI and solidtumors; many reviews have summarized AI applications in the diagnosis andtreatment of a single tumor type.
Results We herein systematicallyreview the advances of AI application in multiple solid tumors includingesophagus, stomach, intestine, breast, thyroid, prostate, lung, liver, cervix,pancreas and kidney with a specific focus on the continual improvement on modelperformance in imaging practice.
Conclusion AI has clear characteristicsof high efficiency, specificity and sensitivity in the classification,identification and diagnosis of solid tumor. After its integration into imagingtechnology, AI optimizes clinical workflows, decreases the discrepancy between thereaders and reduces the misdiagnosis rate, which helps clinicians effectively chooseappropriate therapeutic strategies and accurately predict the prognosis.

Sample-to-Answer and Routine Real-Time RT-PCR：A Comparison of Different Platforms for SARS-CoV-2 Detection

Donghua Wen 、Simin Yang、Guangbo Li、Qiankun Xuan、Wenzheng Guo、Wenjuan Wu
Department of Laboratory Medicine, Shanghai East Hospital, Tongji University School of Medicine, Shanghai, China

Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) is spreading all over the world and has caused millions of deaths. Several Sample-to-Answer platforms, including Cepheid Xpert® Xpress SARS-CoV-2 (Xpert Xpress), have received emergency use authorization (EUA) for SARS-CoV-2 nucleic acid detection as a point of care test（POCT） in the US. But their application niche is unclear comparing with real-time reverse transcription PCR (rRT-PCR) assays cleared by the National Medical Products Administration (NMPA) in China. In this study, the clinical performance, sensitivity and workflow of Xpert Xpress and two rRT-PCR kits (BioGerm, Shanghai and Sansure, Hunan) were evaluated by the specimens from 86 symptomatic patients. The positive percent agreement (PPA) of Xpert Xpress was 100%, followed by BioGerm Kit (96.15%) and Sansure Kit (90%), respectively. The negative percent agreement (NPA) was 100% for three assays. The limit of detection (LoD) is 100 copies /mL for Xpert Xpress, 500 copies /mL for BioGerm Kit and Sansure Kit. By serially diluting five positive specimens assay, the Xpert Xpress displayed better detection capability. In the workflow and throughput analysis, the turnaround time was 51 min for Xpert Xpress, 150 min for BioGerm kit and 210 min for Sansure kit. This study provides some indication for diagnosis **Methods** selection.

3. Women and Children's Hospital, School of Medicine, Xiamen University
4. School of Public Health, Xiamen University
5. Women and Children's Hospital, School of Medicine, Xiamen University
6. Women and Children's Hospital, School of Medicine, Xiamen University

Congenital heart disease (CHD) is a common structural birth defect worldwide, and defects typically occur in the walls and valves of the heart or enlarged blood vessels. Chromosomal abnormalities and genetic mutations only account for a small portion of the pathogenic mechanisms of CHD, and the etiology of most cases remains unknown. The role of epigenetics in various diseases, including CHD, has attracted increased attention. The contributions of DNA methylation, one of the most important epigenetic modifications, to CHD have not been illuminated. Increasing evidence suggests that aberrant DNA methylation is related to CHD. Here, we briefly introduce DNA methylation and CHD and then review the DNA methylation profiles during cardiac development and in CHD, abnormalities in maternal genome-wide DNA methylation patterns are also described. Whole genome methylation profile and important differentially methylated genes identified in recent years are summarized and clustered according to the sample type and methodologies. Finally, we discuss the novel technology for and prospects of CHD-related DNA methylation.

PU-0814

Methylation of CYP1A1 and VKORC1 promoter associated with stable dosage of warfarin in Chinese patients

shiwei he[1,2]、yuan wu[3]、shuidi yan[4]、jumei liu[1]、li zhao[1,5]、huabin xie[3]、shengxiang ge[2]、huiming ye[1,2,5]
1. Women and Children’s Hospital, School of Medicine, Xiamen University
2. National Institute of Diagnostics and Vaccine Development in Infectious Diseases (Xiamen University), School of Public Health, Xiamen University
3. Xiamen Cardiovascular Hospital, School of Medicine, Xiamen University
4. Zhongshan Hospital, School of Medicine, Xiamen University
5. School of Medicine, Xiamen University

Objective To investigate the association between DNA methylation and the stable warfarin dose through genome-wide DNA methylation analysis and pyrosequencing assay.
Method This study included 161 patients and genome-wide DNA methylation analysis was used to screen potential warfarin dose-associated CpGs through Illumina Infinium HumanMethylation 450 K BeadChip; then, the pyrosequencing assay was used to further validate the association between the stable warfarin dose and alterations in the methylation of the screened CpGs. GenomeStudio Software and R were used to analyze the differentially methylated CpGs.
Results CpGs surrounding the xenobiotic response element (XRE) within CYP1A1 promoter methylation levels significantly differed between the different dose groups ($P < 0.05$), and these CpGs presented a positive correlation ($r > 0$, $P < 0.05$) with an increase in the stable dose of warfarin. At the VKORC1 promoter, two CpGs methylation level were significantly different statistically between the differential dose groups ($P < 0.05$), and one CpG(Chr16: 31106793) presented a significant negative correlation ($r < 0$, $P < 0.05$) among different dose (low, medium, and high) groups.

Conclusion This is a novel report of the methylation levels of six CpGs surrounding the XRE within the CYP1A1 promoter and one differential CpG at the VKORC1 promoter associated with stable warfarin dosage; these methylation levels might be applied as molecular signatures for warfarin.

PU-0815

Immunogenicity of recombinant protein CPSIT_p6 and its localization in cells infected with Chlamydia psittaci

Mingxing Liang 、 changshun yang
the First People's Hospital of Huaihua

We evaluated the immunogenicity and the localization of CPSIT_p6 in Chlamydia psittaci 6BC-infected cells. The recombinant plasmid pET-30a-CPSIT_p6 was transformed into Escherichia coli BL21 for expressing the His-tagged CPSIT_p6, which was purified using Ni-nitrilotriacetic acid (NTA) beads and was confirmed by western blot analysis. BALB/c mice were immunized with the purified His-fusion protein subcutaneously three times with 2-week intervals. Results displayed that the CPSIT_p6 protein induced not only a strong humoral immune responses to C. psittaci by generating significantly high titers of specific serum IgG antibodies, but also a strong T lymphocyte responses that were recalled by the immunogen CPSIT_p6 in an in vitro restimulation assay. Furthermore, the CPSIT_p6 protein substantially primed secretion of IFN-γ, revealing that induce a strong Th1 response. Finally, a mouse anti-CPSIT_p6 antibody was used to localize the protein in cells infected with C. psittaci using an indirect immunofluorescence assay (IFA), revealed that CPSIT_p6 was localized inside the inclusion of C. psittaci 6BC-infected cells. Although CPSIT_p6 protein is a non-secreted protein, it has good immunogenicity. Therefore, the CPSIT_p6 protein may be useful for developing vaccines against C.psittaci infection.

Association of MTHFR C677T gene polymorphism with neonatal defects: a meta-analysis of 81444 subjects

juan li[1]、danqin feng[2]、shiwei he[3]、hua yang[4]、zhiying su[5]、huiming ye[6]
1. Women and Children's Hospital, School of Medicine, Xiamen University
2. Women and Children's Hospital, School of Medicine, Xiamen University
3. Xiamen University
4. Women and Children's Hospital, School of Medicine, Xiamen University
5. Women and Children's Hospital, School of Medicine, Xiamen University
6. Women and Children's Hospital, School of Medicine, Xiamen University

Objectives Methylenetetrahydrofolate reductase (MTHFR) is one of the enzymes involved in folic acid/homocysteine metabolism. In this meta-analysis, we attempted to clarify controversial associations of the MTHFR C677T gene polymorphism in maternal and fetal tissue with neonatal defects.
Methods We searched the PubMed, Embase, Cochrane, and Wanfang Data electronic databases to identify all case-control studies in English or Chinese that reported the association of MTHFR C677T gene polymorphism with frequencies of neonatal defects including congenital heart disease (CHD), neural tube defects (NTD), nonsyndromic cleft lip and palate (NSCL/P), and Down syndrome (DS). Studies were divided by subject type (neonatal and maternal) . We used a random-effect model or fixed-effect model to estimate overall odds ratios, depending on data heterogeneity.

Results In total, 81444 subjects of 116 qualified studies were included in this meta-analysis, namely 8169 case and 55604 control subjects in the maternal group and 6970 case and 10701 control subjects in the neonatal group. Depending on the neonatal defect subtypes, MTHFR C677T gene polymorphism was associated with NTD, CHD (except for TC/CC and TT+TC/CC modes of inheritance; p = 0.167 and p = 0.054, respectively), DS, and NSCL/P (TC/CC mode of inheritance, p = 0.032) in the maternal group. However, in the neonatal group, the MTHFR C677T gene polymorphism was only associated with the frequency of NTD and CHD.
Conclusions Maternal and neonatal MTHFR C677T gene polymorphisms appear to be associated with neonatal defects, but differ by defect types. More studies are needed to validate the findings of this meta-analysis.

PU-0817

Upregulation of microRNA 181a 5p increases the sensitivity of HS578T breast cancer cells to cisplatin by inducing vitamin D receptor mediated cell autophagy

jianmin lin[3]、xuming chen[4]、mingliang sun[5]、xiaojiao qu[1]、ye wang[6]、chenxi li[7]、xiujuan li[8]、li zhao[2]、zhiying su[9]、huiming ye[10]

6. Women and Children's Hospital, School of Medicine, Xiamen University
7. Women and Children's Hospital, School of Medicine, Xiamen University
8. Women and Children's Hospital, School of Medicine, Xiamen University
9. Women and Children's Hospital, School of Medicine, Xiamen University
10. Women and Children's Hospital, School of Medicine, Xiamen University

Objective Breast cancer (BC) is the leading cause of death in females worldwide. Although cisplatin is a strong-effect and broad-spectrum chemotherapy drug, resistance to cisplatin remains a significant factor effecting clinical efficacy. The underlying mechanism of cancer cell resistance to cisplatin is not fully understood. MicroRNAs (miRs/miRNAs), as a regulator, are involved in regulating chemosensitivity to numerous chemotherapeutic drugs. The present study aimed to investigate the function of miR-181a-5p as a potential tumor suppressor in improving the efficiency of cisplatin in BC.
Method The IC50 of cisplatin and miR-181a-5p expression were determined in five BC cell lines, and HS578T was selected as an appropriate cell line for subsequent experiments. The sensitivity of HS578T cells to cisplatin was assessed using cell proliferation, migration and apoptosis assays. Western blotting was performed to detect the expression of vitamin D receptor (VDR) and autophagy in HS578T cells.
Result It was found that the increase in autophagy resulted in increased apoptosis and sensitivity to cisplatin in HS578T cells. miR-181a-5p transfection also inhibited the proliferation and migration ability of HS578T cells and induced apoptosis. Meanwhile, HS578T cells have increased sensitivity to cisplatin. VDR, as a target gene and autophagy regulator of miR-181a-5p, was negatively regulated by miR-181a-5p. Upon the decrease in VDR expression, the autophagy in HS578T cells was increased.
Conclusion These results indicate that the increase in autophagy enhanced the chemosensitivity of cisplatin by inducing apoptosis of HS578T cells and by inhibiting proliferation and migration. The present study showed that miR-181a-5p increased the chemical sensitivity of HS578T cells to cisplatin by inhibiting VDR to promote autophagy. The use of miR-181a-5p/autophagy/VDR-based treatment strategies may be a potential method to overcome cisplatin resistance in BC.

PU-0818

Development of a 6-gene model for COVID-19 diagnosis and treatment based on the blood leucocytes sequencing dataset of patients with SARS-CoV-2 infection

Xin Gao、Changshun Yang
怀化市第一人民医院检验科

Objective Coronavirus disease 2019 (COVID-19) is a global epidemic disease caused by a novel virus, severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2), causing serious adverse effects on human health. By analyzing transcriptome sequencing data from peripheral blood samples, we can identify differentially expressed genes (DEGs) associated with host immune and/or inflammatory responses. Studying the changes in gene expression in human immune cells after SARS-CoV-2 infection helps improve understanding of the mechanism of SARS-CoV-2 damage to the human body and helps improve the diagnosis and treatment of the disease. The objectives of this study were to explore aberrantly expressed genes related to SARS-CoV-2 infection in peripheral blood leucocytes and to develop a diagnostic model for COVID-19 using SARS-CoV-2 infection-related genes.

Methods and results In this study, we obtained the COVID-19-related dataset GSE157103 from the GEO database, which consists of human blood leucocytes sequencing data from 100 COVID-19 patients and 26 non-COVID-19 individuals. We identified 245 DEGs in the GSE157103 dataset based on the criteria log2|fold change (FC)| > 2 and false discovery rate (FDR) < 0.05, these DEGs including 226 upregulated DEGs and 19 downregulated DEGs. We further analyzed these DEGs by protein–protein interaction analysis and Gene Ontology enrichment analysis and identified 15 DEGs closely related to SARS-CoV-2 infection. Then, we constructed a 6-gene model (comprising IFIT3, OASL, USP18, XAF1, IFI27 and EPSTI1) by logistic regression analysis and calculated the area under the ROC curve (AUC) for the diagnosis of COVID-19. The risk score of SARS-CoV-2 infection was calculated by the following formula:
risk score = (−0.00318 × ExpressionIFIT3) + (0.01133 × ExpressionOASL) + (0.00015 × ExpressionUSP18) + (−0.02515 × ExpressionXAF1) + (0.00269 × ExpressionIFI27) + (0.05727 × ExpressionEPSTI1) − 0.66853. Therefore, for each patient, we obtained the expression level of these six genes and substituted these values into this formula to calculate the risk value. We then divided the patients into high- and low-risk groups according to the cutoff value 0.5. We found that patients in the high-risk group are more likely to have COVID-19 disease. The AUC values of the training group, testing group and entire group were 0.930, 0.914 and 0.921, respectively. The 6-gene model has a good predictive ability, and the predictive ability of the model was higher than that of individual genes. We also found the predictive ability was higher than some clinical indicators (CRP, ferritin, fibrinogen, D-dimer, lactate and procalcitonin) in the same dataset. The combined diagnostic model obtained by fitting the 6-gene model with ferritin and fibrinogen had a higher AUC value (0.976), indicating that the 6-gene model combined with ferritin and fibrinogen clinical indicators could better identify patients infected with SARS-CoV-2. In addition, the six genes were highly expressed in patients with COVID-19 and positively correlated with the expression of SARS-CoV-2 invasion-related genes (ACE2, TMPRSS2, CTSB and CTSL). The risk score calculated by this model was also positively correlated with the expression of TMPRSS2, CTSB and CTSL, indicating that the six genes were closely related to SARS-CoV-2 infection.

Conclusion We comprehensively analyzed the functions of DEGs in the blood leucocytes of patients with COVID-19 and constructed a 6-gene model that may contribute to the development of new diagnostic and therapeutic ideas for COVID-19. Moreover, these six genes may be therapeutic targets for COVID-19.

PU-0819

4 种方法对比研究 Xpert MTB/Rif 对结核分枝杆菌检测的临床应用价值

褶淑霞、尹卫国、周美芬、杨梦、刘艳枚、汤英贤
清远市人民医院

目的 综合评价 Xpert MTB/RIF 的检测性能及其临床应用价值，寻找结核分枝杆菌（mycobacterium tuberculosis，MTB）的联合检测方案，以更好指导临床结核病的诊断和治疗。
方法 收集清远市人民医院门诊、住院部或体检人群中，被临床诊断为结核病、疑似结核病、肺部感染、发热查因、不明感染、健康查体等患者的痰液、胸水、脑脊液等临床标本，采用抗酸染色、荧光定量 PCR（QPCR）、恒温芯片扩增法 及 Xpert MTB/RIF 4 种不同的检测方法，对同一标本进行检测，比较 4 种方法的阳性检出率。
结果 在 312 例待测标本中，抗酸染色的阳性检出率为 19.23%，QPCR 为 32.69%，恒温芯片法为 27.56%，Xpert MTB/RIF 为 38.14%，3 种分子检测技术与抗酸染色相比均有显著性差异（ P<0.001）。在抗酸染色阳性标本中，Xpert MTB/RIF 与 QPCR 的阳性检出率对比无统计学差异（P>0.05），与恒温芯片法对比有显著差异（P<0.001）。而在涂阴标本中，Xpert MTB/RIF 的阳性检出率为 24.6%，与 QPCR（18.25%）及恒温芯片法（13.49%）对比均有显著性差异（P<0.001）。
结论 Xpert MTB/RIF 对 MTB 的阳性检出率最高，QPCR 次之，恒温芯片法最低。XpertMTB/RIF 检测方法的操作简单，同时能检测利福平耐药，适用于对早期结核病的快速检测，也适用在基层医院推广应用。

Association of aldehyde dehydrogenase 2 gene polymorphism with myocardial infarction Running Title: Association of ALDH2 with MI

Lei Peng[1,2]、Liping Zhu[1]、Peng Zhou[1]、Shuxia Xuan[1]、Ying Luo[1]、Chen Chen[1]、Bin Chen[2]、Jinduan Lin[1]、Yanmei Liu[1]、Fengjun Tan[1]、Weiguo Yin[1]
1. The Sixth Affiliated Hospital of Guangzhou Medical University-Qingyuan People's hospital
2. 广州医科大学附属第六医院

Objective This study explored the correlation between myocardial infarction (MI) and the Glu504Lys polymorphism in the aldehyde dehydrogenase 2 (ALDH2) gene in the Qingyuan area.
Methods The Glu504Lys polymorphism of the ALDH2 gene was analyzed using the polymerase chain reaction and deoxyribonucleic acid microarray analysis for 468 patients diagnosed with MI for the first time and 132 healthy subjects.
Results There was a significant difference in the distribution of the ALDH2 genotype between the MI group and the control group (P = 0.0492), but there was no significant difference in allele frequency between the two groups (P = 0.1363). The clinical data showed that there were statistically significant differences (P < 0.05) in the two groups' gender and age distributions, rates of diabetes and hypertension, levels of alcohol and tobacco use, serological levels of heart markers, blood lipids and glucose. The subgroup analysis of ALDH2 genotypes found that alcohol consumption, high levels of myoglobin, and low levels of high-density lipoprotein cholesterol were significantly associated with a higher incidence of MI (P < 0.05). After adjusting for gender, hypertension, diabetes, and other related influencing factors, logistic regression analysis showed that the ALDH2 genotype GA/AA was an independent risk factor for MI (P < 0.05, OR = 1.479, 95% CI = 1.003–2.179).

Conclusion The presence of risk alleles with the genetic effect (ALDH2 genotype GA/AA) is an independent risk factor for MI.

新型冠状病毒肺炎痰标本 SARS-CoV-2 核酸阳性 3 例报道：对咽拭子检测假阴性问题的思考及建议

马良
长治医学院附属和平医院

由新型冠状病毒(SARS-CoV-2)引起的肺炎(COVID-19)目前疫情仍十分严峻。SARS-CoV-2 的核酸检测是 COVID-19 确诊的必要指标之一。临床对标本类型的选择影响 SARS-CoV-2 核酸检出率。本文报道 3 例 COVID-19 患者的确诊经过，分析采用咽拭子和痰标本检测 SARS-CoV-2 的效果，为临床诊断 COVID-19 时如何选择标本类型和如何提高核酸检出率提供参考。

MassARRAY 在非小细胞肺癌多基因位点检测中的应用

吴彭春、陈欣、李金莲、王淑华、刘敏
昆明金域医学检验所有限公司

目的 MassARRAY 系统是一款定制用于 DNA 分子精准检测的基质辅助激光解吸附电离-飞行时间(MALDI-TOF)质谱仪。本研究通过 MassARRAY 和 NGS（Next Generation Sequencing）在非小细胞肺癌 (non-small cell lung cancer ,NSCLC) 多基因位点检测的方法学比对，以评估 MassARRAY 是否可用于临床非小细胞肺癌多基因位点的检测。
方法 首先通过查阅肺癌相关文献以及中国肺癌人群的基因谱特征，选取 10 个与 NSCLC 发病机制、耐药及转移密切相关的靶向基因，即:BRAF、EGFR、KRAS、ERBB2、PIK3CA、ALK、RET、ROS1、NTRK1、MET，共 107 个突变位点。采用 Assay Design 设计引物 107 条，其中正向和反向扩增引物 107 对，延伸引物 107 条，建立检测方法。从昆明金域病理库中选取 2021 年 4 月至 12 月共 100 例确诊 NSCLC 患者送检的蜡块组织，通过使用 NGS 检测非小细胞肺癌相关基因进行比较和验证，并评估该方法的敏感性和特异性。
结果 基于 MassARRAY 技术的非小细胞肺癌相关 10 基因多重检测方法结果显示:100 例 NSCLC 中，总体突变阳性率为 58%，EGFR 突变阳性占比最多（41%），其次是 KRAS(9%),其余突变为 ALK（4%），ERBB2(2%)、MET(1%)和 BRAF(1%)，检测双基因和双位点共存突变有 EGFR/PIK3CA、EGFR/KRAS、KRAS/PIK3CA、ERFR18 外显子+19 外显子各 1 例。检测结果与 NGS 高度一致，该方法可以用于临床非小细胞肺癌多基因位点的检测。检测灵敏度和特异性分别为 100%和 96.8%。
结论 基于 MassARRAY 技术的多重检测方法较 NGS 实验操作简单，并节省了生信分析环节，可以应用于中国非小细胞肺癌患者多基因位点的检测。

DNA N6-Adenine methylation in Hepatocellular Carcinoma

Zhongling Zhuo[1]、Fei Xiao[2]
1. Beijing Hospital
2. The Key Laboratory of Geriatrics, Beijing Institute of Geriatrics, Beijing Hospital; National Center of Gerontology, National Health Commission

Objective DNA methylation on N6-adenine (6mA) has recently been found to be a potentially epigenetic mark in prokaryotes and several eukaryotes. However, its distribution patterns and potential functions in human tumorigenesis remain largely unknown. Here we reported global profiling of 6mA sites at single-nucleotide resolution in the genome of hepatocellular carcinoma using Nanopore sequencing.
Methods The DNA library was sequenced using the long-read sequencing on GridION. The mRNA was sequenced using next-generation sequencing on Illumina NextSeq. Tombo was used to identify 6mA positions in the human hepatocellular genome at single-base resolution. A variety of bioinformatics analysis **Methods** were used to analyze 6mA modification patterns.
Results 6mA was widely distributed throughout the human genome and was mainly distributed in introns and intergenic regions. The 6mA site was related to the pathway of porphyrin and chlorophyll metabolism in autosomes and was related to oxidative phosphorylation and ATP metabolism in mitochondria. The most prevalent motifs in tumors were mainly distributed in mitochondria, and AGG was the most significantly associated motif with 6mA modification. The density of 6mA was related to the activation of gene transcription.
Conclusion DNA 6mA modification was extensively present in the human hepatocellular genome, related to the activation of gene transcription, and could play a fundamental role as an epigenetic in hepatocellular carcinoma.

PU-0824

中国人群中 UGT1A1 基因型对伊立替康剂量限制性毒性反应的预测价值及疗效的关系

储楚
江苏省人民医院（南京医科大学第一附属医院）

目的 在精准医学分子学基础上探讨 UGT1A1* 6 和 UGT1A1* 28 基因多态性对伊立替康剂量限制性毒性反应的预测价值及疗效的关系，将遗传学信息、治疗两者结合，使疾病的诊治更具有针对性、安全性、靶向性和特异性。
方法 新鲜外周血中抽提 DNA，治疗前采用 PCR 毛细管电泳法分析 300 例中国肿瘤患者 UGT1A1* 6 和 UGT1A1* 28 的基因多态性，合理制定药物配伍及用药剂量。
结果 300 例中国肿瘤患者中, UGT1A1* 6 基因型为野生型(G/G)有 182 例(60.7%)，杂合突变型（G/A）与纯合子突变型（A/A）有 118 例(39.3%)；UGT1A1*28 基因启动子区 TA 序列呈 6 次重复的野生型（TA6/6）有 191 例(63.7%)，TA 序列杂合突变型(TA6/7) 与纯合子突变型（TA7/7）有 109 例(36.3%%)。剂量调整后完全缓解 1 例，部分缓解 53 例，疾病稳定 233 例，疾病进展 53 例；白细胞减少 87 例，中性粒细胞减少 57 例，腹痛腹泻 16 例。调整剂量后，腹痛腹泻及粒细胞减少等副反应发生率与传统治疗的差异具有统计学意义。
结论 在采用含伊立替康方案化疗恶性肿瘤患者中，伊立替康的剂量限制性毒性主要取决于患者个体的 UGT1A1 基因型，要提高伊立替康的临床疗效和安全性，降低其不良反应，重点在于治疗前对患者进行基因型检测，预测患者 UGT1A1 基因型，并合理制定药物配伍及用药剂量等，实现临床抗肿瘤药物的精准化治疗。

HPVE6/E7mRNA 检测对宫颈病变筛查的价值研究

孙佳莹
吉林金域医学检验所有限公司

目的 探讨 HPVE6/E7mRNA 对宫颈病变筛查的临床价值。
方法 选取 2020 年 1 月至 2020 年 10 月送检我公司的 TCT 结果异常的标本进行 HPVE6/E7 mRNA 检测，根据 TCT 检测结果将研究对象将标本分为未见上皮内细胞病变组（NILM）、非典型鳞状细胞组（ASC-US）、低度鳞状上皮内病变组（LSIL）、高度鳞状上皮内病变（HSIL）、鳞状细胞癌组（SCC）5 组。以 TCT 检测结果为金标准,并与组织病理学检测结果比较，计算 HPV E6/E7mRNA 检测方法的灵敏度、特异性及准确性并进行统计学分析，分析 HPVE6/E7 对宫颈病变患者的筛查价值。
结果 HPVE6/E7mRNA 检测提示 NILM 组阳性率为 25.40%,ASC-US 组提示阳性率是 57.89%,LSIL 组提示阳性率是 91.67%,HSIL 组提示阳性率是 100.00%,SCC 组提示阳性率是 100.00%,总阳性率是 42.78%;HPV E6/E7mRNA 的阳性率是 42.78%,灵敏度是 91.42%,特异性是 70.34%,准确性是 74.44%。
结论 HPVE6/E7 mRNA 检测在宫颈病变患者的筛查中，灵敏度、特异性、准确率都较高，对宫颈病变患者的筛查具有重大意义,可以通过 HPVE6/E7 阳性表达来判断宫颈病变严重程度,为临床提供参考依据进而采取相应治疗措施,制定相关预后方案。

宏基因组测序诊断非典型恙虫病 1 例

刘美芳、赵锐
南昌大学第一附属医院

目的 分析非典型恙虫病的临床特点，并探讨宏基因组测序对该病的诊断及应用价值。
方法 回顾性分析南昌大学第一附属医院收治的 1 例非典型恙虫病的临床表现、诊治过程。患者为 52 岁女性，出现连续发热伴寒战、头痛、肌肉酸痛等非特异性症状数十天，皮肤未见焦痂。多次予抗细菌、抗病毒药物治疗，效果不佳。入院后多次行常见病原微生物检测，均未找到致病菌。遂采集患者静脉血行宏基因组测序。
结果 宏基因组测序提示恙虫病东方体感染，检出 7 个序列数，覆盖率为 6%。予恙虫病特效药多西环素，辅以莫西沙星，每 12 小时 100 mg 剂量治疗。用药 24 小时后，患者体温恢复正常，全身症状改善。用药 3 天后患者出院。出院一周后回院复查，各项实验室指标均恢复正常，无并发症发生。
结论 恙虫病在我国南方地区的流行季节为 5～12 月，呈大单峰分布，以夏季型恙虫病为主。患者发病季节为三月，在我国南方地区十分罕见，又无典型焦痂，诊断极为困难，为非典型的恙虫病。而宏基因组测序是一种可用于帮助临床诊断疑难病例的准确快速的诊断方法，包括非典型恙虫病。

高分辨溶解曲线建立 SLCO1B1 和 ApoE 多态性检测的方法

陈欣、张宸源、李金莲
昆明金域医学检验所有限公司

目的 利用高分辨溶解曲线（HRM-PCR）建立一种较为简易灵敏的方法，对他汀类药物代谢相关基因位点 SLCO1B1 和 ApoE 进行检测，通过与实时荧光定量 PCR(RT-qPCR) 比较，以评估高分辨溶解曲线（HRM-PCR)是否可用于临床 SLCO1B1 和 ApoE 多态性检测。
方法 选取 2021 年 1 月至 4 月在诊断为高脂血症或动脉粥样硬化的患者送检昆明金域的 EDTA 抗凝全血共计 89 例，并提取标本基因组 DNA。分别采用 HRM-PCR 和 RT-qPCR 检测 SLCO1B 的 rs2306283(388A＞G) 和 rs4149056(521T＞C) 位点以及 ApoE 的 rs429358(388T＞C) 和 rs7412(526C＞T)位点，并利用 Kappa 系数比较结果的一致性。
结果 利用高分辨溶解曲线（HRM-PCR)可以直接判断 SLCO1B1 和 ApoE 上述基因位点，其检测结果与实时荧光定量 PCR(RT-qPCR) 结果完全一致。
结论 HRM-PCR 可应用于他汀类药物代谢相关基因 SLCO1B1 和 ApoE 多态性的检测，为临床他汀类药物个体化用药提供可靠评估。

PU-0828

白血病抑制因子通过调控支链氨基酸代谢促进胰腺癌增殖的机制研究

蒋文娜、任丽
天津医科大学肿瘤医院

目的 探讨胰腺癌星形细胞分泌的白血病抑制因子（LIF）对于胰腺癌细胞中支链氨基酸（BCAA）代谢的影响。
方法 回顾性收集天津医科大学肿瘤医院收治的 100 例胰腺癌组织标本对 LIF 进行免疫组化染色，分析 LIF 在胰腺癌组织中的表达水平与胰腺癌患者生存预后的相关性，收集血清标本，包括胰腺癌，健康对照组，利用 ELISA 实验验证 LIF 预测胰腺癌的价值，利用共培养技术，检测 PSC 通过分泌 LIF 对于胰腺癌生物学行为的影响，利用核磁及蛋白质谱技术，分析 LIF 对 BCAA 水平的影响及对于 BCAA 代谢酶的影响。
结果 胰腺癌患者均获得随访，胰腺癌组织中 LIF 的表达水平与胰腺癌的生存预后成负相关，血清中 LIF 表达含量在胰腺癌组明显高于正常对照组，并且可以作为预测胰腺癌的分子标记物，PSC 通过分泌 LIF 导致胰腺癌增殖，LIF 通过上调 BCKDK 导致 BCAA 代谢紊乱从而促进胰腺进展。
结论 LIF 是胰腺癌预后的独立风险因素，通过影响 BCKDK 的表达促进 BCAA 代谢紊乱.

PU-0829

LIF 在胰腺癌中作为预测淋巴结转移及远处转移的生物标志物的应用价值

蒋文娜[1]、任丽[2]
1. 天津医科大学肿瘤医院
2. 天津医科大学附属肿瘤医院

目的 本研究旨在探讨 LIF 分子在胰腺癌中与临床病理特征的关系及其表达水平对胰腺癌的诊断价值。
方法 采用免疫组化和 ELISA 法检测组织和血清中 LIF 水平。采用 Kaplan Meier 法分析总生存期(OS)和无复发生存期(RFS)，采用受试者工作特征曲线评价 LIF 的预测价值。
结果 胰腺癌组织中 LIF 水平与话患者的总生存期 OS 和无进展生存期 RFS 呈负相关。此外，LIF 蛋白是胰腺癌的独立预后因素。LIF 的组织或血清水平与淋巴结转移相关。根据受试者工作特征(ROC)曲线下面积(area under the receiver operating characteristic, ROC)，血清 LIF 在预测淋巴结转移和远处转移方面优于其他标记物(CA199 和 CEA)。
结论 LIF 的表达与胰腺癌的预后密切相关且为独立危险因素。该因子可用于诊断淋巴结和远处转移的胰腺癌患者。

PU-0830

新冠病毒检测方法学发展与比较

夏海丹
沈阳金域医学检验所有限公司

目的 评价新冠病毒检测方法的进展以及在感染诊断中的应用。
方法 回顾性评价现有用于新冠病毒的检测手段。
结果 1.荧光 PCR 法
PCR 法指的是聚合酶链式反应，能将微量的 DNA 大幅增加。用于检测新冠病毒时，由于新冠病毒是 RNA 病毒，需要先将病毒 RNA 逆转录为 DNA，再进行 PCR 检测。这是目前新冠病毒核酸检测最常用的方法。
2.联合探针锚定聚合测序法
这种检测主要是用专门的仪器检测测序载片上 DNA 纳米球携带的基因序列。这种检测的灵敏度高，不容易漏诊，但结果也容易受多种因素的影响而不准。
3.恒温扩增芯片法
和 PCR 相比，基因芯片准确率高，时间更短，但价格也更为昂贵、检测通量（单位时间内所能产生的数据量）相对更低。
4.病毒抗体检测
抗体检测试剂是检测血清中由病毒进入人体后刺激人体产生的 IgM 或 IgG 抗体，IgM 抗体出现较早，IgG 抗体出现较晚。目前已获批的 5 个新冠病毒抗体检测试剂，分别采用的是胶体金法和磁微粒化学发光法。
胶体金法是用胶体金试纸进行检测，也就是目前常说的快速检测试纸。这种检查一般在 10~15 分钟左右，就可以得出检测结果。这种检测方法很方便，出结果的速度也很快。但主要的不足在于，检测通量较低，有一定的误判率（主要是受抗体质量影响）。而且，胶体金法检测的新冠病毒抗体是 IgM 抗体。IgM 产生的时间要晚于病毒复制的时间，所以检测的时间窗口比核酸检测窄。

磁微粒化学发光法是在化学发光检测的基础上，加用了磁性纳米粒子，使检测具有了更高的灵敏度和更快的检测速度。不过，磁微粒化学发光法选择性差，会对一个系列的化合物做出反应，而非特定的某一化合物，因此，准确性上相对不够好。而且，环境对检测的影响比较大，容易导致误差。
结论 目前推荐用来确诊新冠感染的只有核酸检测，对于新冠病毒核酸检测阴性的疑似病例，可以采用抗体检测作为补充检测指标。

PU-0831

杭州地区乙肝患者核苷类似物耐药位点分析

许生样
杭州迪安医学检验中心有限公司

目的 检测杭州地区乙型肝炎患者体内 HBV 逆转录酶基因的耐药突变情况，为临床制定合理的治疗方案提供依据。
方法 通过聚合酶链反应（PCR）及 DNA 测序将 2020 年 1 月至 9 月送检杭州迪安医学检验中心的 746 例乙型肝炎患者进行 HBV 耐药突变位点和基因耐药情况检测，并对结果进行统计分析。
结果 在 746 例血清标本中有耐药突变位点产生的有 324 例，检出率是 43.43%（324/746），其中 M204I、L180M+M204V、L180M+S202G/C+M204V 和 L180M+T184L/A/F+M204V 检出率较高，分别占总数的 16.36%（53/324）、16.67%（54/324）、13.89%（45/324）和 11.11%（36/324）。患者对 L-dT、LMV、FTC、ETV、ADV、TDF 耐药比例分别是 95.37%（309/324）、87.04%（282/324）、87.04%（282/324）、38.27%（124/324）、31.17%（101/324）、0.31%（1/324）。单药耐药比例为 4.63%（15/324），多药耐药比例为 95.37%（309/324）。发生耐药突变与患者的性别无关（P＞0.05）。
结论 在杭州地区乙肝患者中，常见的突变模式为 M204I、L180M+M204V、L180M+S202G/C+M204V 和 L180M+T184L/A/F+M204V；耐药情况主要以多药耐药为主。

PU-0832

IMPA2 plays a novel role in AIFM2-mediated mitochondrial apoptosis pathway and enhances paclitaxel resistance in cervical cancer

Min Wang、bingqi wang、sheng yin、lei liu
The Second Xiangya Hospital, Central South University

Background Cervical cancer continues to be concerned and chemoresistance of tumors often lead to treatment failure, which underscores pivotal needs to find novel therapeutic targets. Previously, we firstly identified IMPA2 as a potential oncogene and verified its tumor-promoting role in vitro and in vivo. In this study, we aimed to elucidate the underlying mechanisms of IMPA2 in regulation of tumor apoptosis and to evaluate whether IMPA2 inhibition attenuates chemoresistance to chemotherapy drugs by regulating apoptosis.
Methods Cell apoptosis was assessed by apoptosis-related proteins detecting, flow cytometry, immunofluorescence and immunohistochemical staining. Morphological changes of mitochondria were observed through transmission electron microscopy (TEM) and function changes were evaluated by measurements of mitochondrial membrane potential, intracellular Ca2+ levels and release of Cyto c. Fluorescence microscope was used to analyze ROS generation. The expression of AIFM2 was determined by qRT-PCR, western blot and immunohistochemical staining analysis. Determination of IC50s were calculated according to cell viability detected by CCK-8.

Results Apoptosis of cervical cancer cells was markedly promoted when silencing IMPA2, and IMPA2 knockdown-induced apoptosis was proved to be mitochondria-dependent along with generation of reactive oxygen species (ROS). Also, antioxidant (NAC) treatment successfully rescued IMPA2 deficiency-induced apoptosis. After inhibiting IMPA2 expression, AIFM2 was significantly up-regulated both in mRNA and protein levels, and inhibition of AIFM2 could reserve IMPA2 knockdown-induced apoptosis in a mitochondrial dependent manner. Further mechanistic study revealed that IMPA2 silencing apparently activated p53 and treatment of p53 inhibitor (Pifithrin α) could rescue IMPA2 knockdown-induced cell apoptosis. More importantly, IMPA2 inhibition was shown to increase chemosensitivity to paclitaxel (PTX) by enhancing PTX-induced cell apoptosis.
Conclusion Our findings demonstrated a novel function of IMPA2 in regulating mitochondrial metabolism and apoptosis within cervical cancer cells and inhibitory of IMPA2 greatly improved chemosensitivity to PTX, potentially making it a novel therapeutic target for cervical cancer treatment.

PU-0833

Longitudinal assessment of the bkv-miR-B1-3p in blood and urine concentration for kidney transplant recipients with BK polyomavirus replication-a retrospective study.

Sheng Yin、wang min
The Second Xiangya Hospital of Central South University

Objective In kidney transplant recipients (KTRs), BK polyomavirus (BKV) replication may progress to polyomavirus-associated nephropathy (PVAN). BK polyomaviruses encoded microRNA can better reflect the replication of virus. Here, we studied whether microRNA in urine can become a promising diagnostic indicator.
Method In this retrospective study, we assessed the BKV DNA and bkv-miR-B1-3p in urine and blood samples consecutively acquired from 276 KTRs who displayed different stages of BKV replication and eventually developed PVAN. Besides, we analyzed renal function and blood drug concentration.
Results In all specimens tested for BKV DNA, 36.8% of them were positive for urine and 23.4% were positive for blood. BKV DNA positive mainly occurred in renal transplantat recipients who had taken immunosuppressive agents, and FK506 based therapeutic scheme was significantly increased the positive rate. Correlation analysis showed that the BKV DNA in the blood was related to it in the urine ($r=0.6065$, $P<0.0001$). Urine BKV DNA analysis had a higher sensitivity (92%), while blood BKV DNA method had a higher specificity (85.7%). The bkv-miR-B1-3p results have a good correlation with DNA loads, and might be a better detection performance for BKV infection.
Conclusions Immunosuppressant should be adjusted or replaced when BKV DNA was detected in the blood or urine. MicroRNA detection method showed a good diagnostic efficiency in laboratory detection of BKV replication.

PU-0834

新型冠状病毒患者检验指标的变化及其临床意义

陈升辉
沈阳金域医学检验所有限公司

目的 研究探讨新型冠状病毒感染者（COVID-19）外周血中各项检验指标对于临床的意义。

方法 通过收集 2019 新冠爆发至今的新冠相关检验指标变化相关文献，将搜索到的文献进行归纳整理，得出本文。
结果 新型冠状病毒具有爆发快，易传染，起病急等特点，严重危害人们的健康，COVID-19 根据临床表现可分为普通型、重型、危重型，普通型患者外周血白细胞计数、淋巴细胞百分比、C 反应蛋白（CRP）均升高，且有性别差异，女性患者较男性患者升高幅度高。重症，危重症患者可出现淋巴细胞百分比降低现象，危重症甚至出现大量减低，提示预后不良。对比流感引发的肺炎，新冠相关肺炎肝肾功能指标也均有不同程度的升高。血清中抗体表达水平与疾病转归密切相关，IgM 类抗体可出现于疾病窗口期（即核酸检测阴性但有相关症状），可将抗体检测与核酸检测联合作为疑似患者的筛查手段，有效降低漏诊。疾病早期抗体含量常常与疾病预后成正比，检测抗体含量联合影像学手段可有效判断疾病进程。疾病中晚期 IgG 类抗体水平升高，核酸复制量明显减低，应用 IgG 类抗体检测，可有效防止疾病后期核酸报告“假阴性”。有文章指出，新冠患者血液冻存样本较新鲜样本相比，抗体效力明显下降，因此疑似患者的样本应尽量避免冻存。
结论 本文分析了目前新型冠状病毒患者血中检验指标对于疾病的分期、进程、转归方面的意义，意在更好的服务临床，助力人类早日战胜病魔。

人乳头瘤病毒分型在临床上对女性宫颈癌筛查的诊断价值

李丽兵
沈阳金域医学检验所有限公司

目的 用于女性宫颈癌的筛查
方法 人乳头瘤病毒（Human Papillomavirus，HPV）是一种小的 DNA 双链病毒。目前已经发现的 100 多个基因型中近 40 种能入侵人生殖器官，其中 16、18、31、33、35 及 58 型等高危型的感染是女性宫颈癌的主要病因。而 6、11 等低危型是引起常见性病湿疣的主要病因。本试剂盒是应用 PCR 体外扩增和 DNA 反向点杂交相结合的 DNA 芯片技术，利用 HPV 基因特点设计特异引物，可以扩增出包含 23 种 HPV 基因型的目标片段，再将扩增产物与固定在膜条上的包括 17 种高危型和 6 种低危型的分型探针进行杂交，依据杂交信号的有无来判断是否有这些 HPV 基因型的存在。
结果 根据膜条上显色位点判读相应的 HPV 基因型。可检测 17 种高危型（HPV16，18，31，33，35，39，45，51，52，53，56，58，59，66，68，73，82）和 6 种低危型（6，11，42，43，81 和 83
结论 HPV 有多种基因型，不同基因型的 HPV 感染可导致不同临床病变，HPV 的分型检测可以将 HPV 病毒分为高危型和低危型，高危型 HPV 感染与宫颈癌、癌前病变相关，低危型主要与轻度鳞状上皮内病变和泌尿生殖系统庞、复发性呼吸道息肉相关。高危型 HPV 感染的检测，对于预防和早期发现子宫颈癌及癌前病变有非常重要的意义。

PU-0836

探讨人乳头瘤病毒检测对宫颈癌的诊断意义

刘璐
沈阳金域医学检验所有限公司

目的 探讨人乳头瘤病毒检测在宫颈癌筛查中的临床应用价值，能够让大家更加详细的了解人乳头瘤病毒，能更有效的预防和治疗宫颈癌。
方法 人乳头病毒（简称 HPV）是一种嗜上皮性病毒，有高度的特异性，HPV 病毒的感染可引起人类良性的肿瘤和疣，若该病毒生长在生殖器官附近皮肤和黏膜上会导致尖锐湿疣以及生长在黏膜上的乳头状瘤。HPV 病毒有 130 多种基因型，分高危型和低危型。其中，高危型如 16、18、30、31、

33、35、39、45、51、52、56、58、59、66、68 等与癌及癌前病变相关，低危型主要与轻度鳞状上皮损伤与泌尿生殖系统疣等相关。目前 HPV 病毒检测方法临床主要应用定性和定量两种。我们常用的是反向杂交法，16、18 型是感染 HPV 最危险型别。连续两次（间隔 6-12 个月）检 HPV 为阳性，即可视为持续感染；30 岁以上妇女 1 次 HPV 结果阳性，即可视为高危人群。
结果 若发现 HPV 病毒检测结果阳性不要害怕，大部分妇女感染 HPV 病毒后，在 9-16 个月会被自身免疫力清除，在病毒清除后 3-4 个月时间内转为正常。定期复查就好。从感染 HPV 到发展为宫颈癌需要 9-25 年时间，持续 HPV 感染是子宫颈癌发生的必备条件。
结论 通过对 HPV 病毒检测的了解，明确了 HPV 病毒检测对宫颈癌的筛查和诊断有重要意义。及早的发现病毒感染，做到早检测、早治疗；预防宫颈癌的发生。

PU-0837

阴道菌群与 HPV 感染的相关性

张静
沈阳金域医学检验所有限公司

目的 通过 HPV 分型检测和阴道微生态检查，探讨阴道菌群和 HPV 感染的相关性。
方法 收集患者宫颈分泌物标本和阴道拭子—500 份，采用 PCR—反向点杂交法进行 HPV 基因亚型检测，使用涂片镜检法对阴道菌群进行观察。
结果 通过检测得出，HPV 检测阴性 325 例（65%），主要阴道菌群为乳酸杆菌，偶见加德纳菌；HPV 检测阳性 175 例(35%)，阴道菌群中加德纳菌的检出率为 78%，且为优势菌种，并可见加氏乳酸杆菌等其他菌种。而且，HPV 阳性组的阴道加德纳菌和加氏乳酸杆菌检出率也高于 HPV 阴性组。
结论 由此可见，HPV 感染会造成阴道优势菌群改变，与 HPV 阴性组相比，HPV 阳性组菌群的多样性和组成更为复杂。阴道微生态失衡可能作为 HPV 感染的协同因素，对疾病确诊提供佐证。

PU-0838

对新型冠状病毒核酸检测结果影响因素的探讨

张鑫宇
沈阳金域医学检验所有限公司

目的 2019 年末快速爆发的由新型冠状病毒（SARS-Cov-2）引发的新型冠状病毒肺炎（COVID-19），简称“新冠肺炎”，蔓延至上百个地区，甚至国家。其诊断需要结合临床表现，肺炎影像学，血清学等多方面结果，其中核酸检测阳性或基因测序高度同源是确诊的金标准，核酸检测简便快捷，成本较低，是确诊最主要方法。但核酸检测结果受影响因素颇多，检测结果与临床诊断有差异等问题也引起重视，也是检验人员持续关注并需要解决的问题。本文主要探讨不同标本类型、不同检测试剂、不同提取方法等各方面因素，对新型冠状病毒核酸检测结果的影响。
方法 通过查询新冠肺炎相关文献，结合沈阳金域医学检验所有限公司基因实验室核酸检测的经验，从分析前、分析中、分析后多个方面详细探讨，在便于操作的环节，基于某一影响因素为变量，控制其他因素为定量的方法检测，进行实验后分析。
结果 新型冠状病毒核酸检测受多方面因素的影响：
1. 分析前：1.1 样本采集部位及方法
标本采集部位：鼻咽拭子阳性率最低，其中鼻拭子标本阳性率高于咽拭子，痰标本其次，鼻咽拭子联合痰标本检测阳性率最高；1.2 样本运输及保存；1.3 核酸检测相关设备及试剂；1.4 人员培训；
2.分析中：2.1 提取方法、相关试剂、操作
各厂家试剂盒检测结果差异明显，对比 ORF-lab 基因的 Ct 值及△Rn 可分析出差异明显；2.2 扩增

3.分析后：3.1 结果分析；3.2 环境、物表消杀
结论 在这场战“疫”中，检验人的高效与准确有着至关重要的作用，对于新冠病毒核酸检测的结果的控制，是要综合考量的，相对于其他因素，分析前尤为重要，随着检测的不断完善，检测结果的准确性、稳定性一定会有大幅度提升，进一步对症治疗，控制疫情。

PU-0839

探讨新型冠状病毒检测结果的影响因素

刘爽
沈阳金域医学检验所有限公司

目的 新型冠状病毒肺炎疫情已全球蔓延，在如此严峻的环境下如何对新型冠状病毒检测结果质量保证。
方法 本文详细介绍了不同试剂新型冠状病毒的检测方法，包括抗体检测、核酸检测、抗原检测等
结果 分析了新型冠状病毒核酸检测及特异性抗体检测产生假阳性和假阴性的原因，导致假阴性的原因主要为分析前标本采集、运输和保存，分析中试剂质量和病情进展、用药、内源性和外源性干扰物质等因素；导致假阳性的原因主要为分析中交叉污染、消毒不彻底，标本不合格，操作不规范和方法学缺陷等因素；
结论 新型冠状病毒肺炎传染性极强，人群普遍易感，严重危害了人民健康。本文结合卫健委相关规范性文件和本实验室防控程序，探讨采集人员及检验人员如何规范操作，制定有效的防护措施并通过对三者联合检测结果的分析，建立完备的质量保证方案，为患者的每一份期待的心得到可靠的质量保证。

PU-0840

探究乙肝病毒含量肝脏损伤之间的关系

孔祥峰
沈阳金域医学检验所有限公司

目的 比较 HBV-DNA 含量与该患者肝脏功能损伤程度是否存在某一数量关系，探究 HBV-DNA 含量与携带者传染能力是否具有某种比例关系。
方法 采用回顾性分析方法，在沈阳金域医学检验所有限公司 2019 年 12 月至 2020 年 12 月的乙肝定量样本中抽取 600 人进行数据记录统计分析。并制成二乘二列联表进行独立性检验探究关系。将 600 人按照个体属性分类，设 A 为乙肝相关个体，A1、A2 分别为阳性和阴性；设 B 为肝脏病变相关个体，B1、B2 分别为有明显病变与无明显病变。
结果 由联表得：147、143、155、155 皆大于 5，且 K^2=600（147*155-143*155）²/（147+155）（147+143）（143+155）（155+155）≈0.0212，K^2远远小于 0.45。
结论 经查表可得 0.0212＜0.14，即成立概率小于 1-0.50=0.50，故可认为乙肝病毒含量肝脏损伤之间并无数量关系。

PU-0841

HPV 分型实验杂交仪封盖膜材料探究

霍颖
沈阳金域医学检验所有限公司

目的 杂交决定实验成功与否，材料的不同，对实验有不同影响，合适的材料是至关重要的。

方法 从稳定性的角度出发，探究各种材料对实验的影响情况。

结果 主要从一下几个角度挑选材料①耐热能力、②密封能力、③介电性、④耐臭氧性。大多数固体材料热稳定性较强，然而质地较硬，气密性不好，无法贴合杂交盒形成想多隔离的空间，金属材料更是良导体，硅胶具耐热性、耐寒性、介电性、耐臭氧性等优点。因此硅胶材质最适合用于此实验。

结论 由于材料的种类复杂，也可能由于新材料的诞生而有所改变，随着科技的发展，对材料的研究，更多新型材料的研究，为实验室提供更好的实验条件。

PU-0842

探究人乳头瘤病毒 HPV 分型检测与液基细胞 TCT 检测结果结合分析的意义

尚鑫辉
沈阳金域医学检验所有限公司

目的 探讨 HPV 分型检测结果与液基细胞 TCT 检测结果相结合对宫颈癌及癌前病变早期筛查的临床应用价值。

方法 选取 100 例不同地区不同医院在本公司检测 HPV 分型和液基 TCT 的筛查者，将他们的检测结果结合。HPV 结果 16 型作为高危阳性参考,TCT 高度病变作为阳性参考。

结果 100 例筛查标本中有 76 例为阴性，15 例为低危阳性（不作为参考）1 例因细胞量不足结果不在记录范围内。2 例 TCT 结果高病变但 HPV 分型结果阴性。1 例 TCT 结果低度病变 HPV 分型结果 16 型。其余 5 例 TCT 结果高度病变且 HPV 结果均存在 16 型

结论 液基细胞 TCT 检测结果与 HPV 分型结果二者从一定程度上可以相互印证对方结果的准确性。因为采样时机和方法所以对于有些样本的结果存在影响导致实验结果不准确的可重新实验。二者的实验结果在一定程度上相吻合，所以对于临床上判断宫颈癌以及宫颈癌前病变的筛查提供了有力证明。

PU-0843

新型冠状病毒人源性和非人源性试剂适用性初步分析

周文婧
沈阳金域医学检验所有限公司

目的 本研究目的在于评估人源性和非人源性检测试剂，检测不同类型样本和的适用分析

方法 收集 10 例已知阴性结果样本，5 例物表样本包括（食品表面，环境表面），5 例送检筛查患者样本，样本正常提取后，10 例验证样本，3 份生理盐水阴性对照，1 份弱阳性质控品，共 14 人份分别用人源性试剂和非人源性试剂两种试剂同时扩增。

结果 人源性试剂 5 例送检筛查患者样本 VIC 内标曲线正常，5 例物表样本，3 份生理盐水阴性对照无扩增曲线，弱阳性质控品质控曲线正常；非人源性试剂 10 例样本，3 份生理盐水阴性对照 VIC 内标曲线正常，弱阳性质控品质控曲线正常。

结论 人源性和非人源性检测试剂对于验证样本检测符合性一致。非人源性试剂对物表样本及生理盐水阴性对照样本无法进行有效区分，在检测样本时非人源性试剂可能会出现样本漏检无法检测的情况，人源性试剂可以通过比对 VIC 内标曲线区分物表和送检筛查患者样本，适用临床不同筛查样本的区分。

PU-0844

脂血和溶血样本对 HBV-DNA 定量实验结果的影响

祝蕊
沈阳金域医学检验所有限公司

目的 分析在日常实验中脂血、溶血对于实时荧光定量 PCR 检测乙型肝炎病毒定量项目的结果影响
方法 分组实验观察脂血标本的制备：在分析脂血对 HBV-DNA 定量实验结果的影响时，将几份不同患者的脂血样本混合后，进行分别处理。分为未作任何处理和做高速离心处理，高速离心后样本分离脂质层和血清层后，弃去脂质层，吸取下层血清加入。观察对比同样本在脂血状态下和高速离心后吸取上清进行实验后实验结果的差异。溶血样本的制备：采集 10 份乙型肝炎病毒的血液标本，混合离心后吸取血清，作为无红细胞样本；同样的样本与部分红细胞混合后，适当混匀，作为溶血样本。观察对比样本在两种状态下进行实验后实验结果的差异。HBV-DNA 定量实验的实验操作、反应体系、扩增条件严格按照试剂盒所写进行。
结果 将扩增后的结果转为数值进行分析，可得出结论脂血样本与离心后样本结果无明显差异；溶血样本与空白对照样本结果相比偏低。

PU-0845

人乳头瘤病毒感染和液基薄层细胞检测的关系

张静
沈阳金域医学检验所有限公司

目的 旨在通过数据分析，以液基薄层细胞学（TCT）为参考，提高人乳头瘤病毒（HPV）分型结果的准确性。
方法 本研究选取 2400 例样本，通过 PCR-反向点杂交技术检测 HPV 亚型，同时进行 TCT 检查。
结果 2400 例样本，根据 TBS 分组，HSIL 共 56 例（2.33%），HPV 感染率为 89.3%；LSIL 组共 126 例（5.25%）HPV 感染率为 77.8%；ASC 组共 245 例（10.21%），HPV 感染率为 59.2%。
结论 TCT 阳性患者 HPV 检出率明显高于 TCT 阴性患者，联合 TCT 检测，能更好的提高 HPV 分型检测结果的准确性。

PU-0846

HPV 分型阳性结果亚型分布情况的统计

张佳蓉
沈阳金域医学检验所有限公司

目的 总结近一月内女性 HPV 检测阳性基因亚型分布情况，为本地区 HPV 防治提供参考数据。
方法 所有 HPV 检测通过全自动核酸提取仪采用磁珠法提取核酸，使用 PCR 方法进行扩增，再进行反向点杂交，采用基因芯片法进行基因分型检测；通过公司系统收集 2021 年 3 月-2021 年 4 月本公司检测人群 HPV 分型检测结果，运用 spss 和 Excle 软件进行统计学分析。
结果 2021 年 2 月-2021 年 3 月 HPV 试剂盒所提供的 23 个型均有检出，其中 HPV52、HPV16、HPV53、HPV81、HPV51 型阳性检出率在近一月中占据阳性型别的前五位，阳性率分别为 14.72%、11.99%、9.45%、7.26%、6.07%。、

结论 本统计结果显示近一月 HPV 阳性型别前五位的主要为 HPV52、HPV16、HPV53、HPV81、HPV51，其中 81 型为低危型，其余均为高危型别，说明本地区 HPV 防治应着重注意 HPV 高危型别。

PU-0847

低水平乙型肝炎病毒 DNA（HBV-DNA）载量的临床意义

董艳、周文婧、刘璐、刘爽
沈阳金域医学检验所有限公司

目的 乙型肝炎病毒（Hepatitis B virus ）是引起乙型肝炎（简称乙肝）的病原体，乙型肝炎病毒 DNA（HBV-DNA）载量是判断乙肝病毒感染最直接、特异性强和灵敏性高的指标，HBV-DNA 阳性，提示 HBV 复制和有传染性，HBV-DNA 越高表示病毒复制越多，传染性越强。乙肝病毒的持续复制是乙肝致病的根本原因，HBV 的治疗主要是进行抗病毒治疗，根本目的是抑制病毒复制，促使乙型肝炎病毒 DNA 的转阴。在乙肝诊断领域，国内外最新的乙型肝炎防治指南提到，推荐使用最低检测下限可以达到 20IU/mL 的高灵敏检测方法检测乙型肝炎病毒 DNA（HBV-DNA），以帮助找到更多低病毒血症的患者，指导临床用药，进一步减少肝癌的发生。
方法 采用回顾性分析方法，2020 年 9 月-2021 年 3 月，全自动核酸提取纯化仪（Abbott m2000 sp)/实时荧光定量 PCR 仪（Abbott m2000rt)共检测 3282 例临床标本，根据阴性，临界值，低值，中值和高值分别进行统计。
结果 阴性占 42.07%，临界值占 37.91%，低值占 9.96%，中值占 5.13%，高值占 4.93%。阴性和临界值占比相对较高，确诊 HBV 和评估 HBV 治疗效果时更多选择高灵敏检测方法。高值占比相对比较低，选择其他检测方法。
结论 使用高灵敏检测方法检测 HBV-DNA 对确诊 HBV 和评估 HBV 治疗效果具有十分重要的作用，可了解机体内病毒的数量、复制水平、传染性、药物治疗效果、制定治疗策略等并作为评估指标，也是唯一能帮助确诊隐匿性 HBV 感染和隐匿性慢性 HBV 的实验室检测指标。

PU-0848

基于无效循环反应实现 hNQO1 检测和药物筛选的电致化学发光传感

郑永军[4]、沈艳飞[1,2,3]
1. 东南大学医学院
2. 东南大学附属中大医院临床检验医学中心
3. 江苏省重症医学重点实验室，东南大学
4. 东南大学医学院

目的 hNQO1（醌氧化还原酶）是一种参与体内解毒和激活抗肿瘤药物的双电子还原酶，其作为一种潜在肿瘤标志物和药物靶点受到了广泛的关注。近年来，hNQO1 检测取得了极大进展，其检测机制都依赖于 hNQO1 还原激活通过酯键连接的醌修饰的探针底物。然而，大多数基于这种策略的 hNQO1 传感缺乏足够的稳定性，对于提高 hNQO1 检测体系的灵敏性仍然具有十分巨大的挑战。在此，我们首次构建了基于检测 hNQO1 代谢天然底物的产物的电致化学发光（ECL）传感，用于 hNQO1 的高灵敏检测以及相关药物活性的筛选。
方法 我们以三维泡沫镍负载鲁米诺（信号分子）作为工作电极，Ag/AgCl 作为参比，铂丝作为对电极构建了三电极体系。当 NQO1 与底物作用时，产生大量的活性氧分子，在电激活下活性氧可以引起鲁米诺的 ECL 信号变化。该变化可以直接反应酶活性变化。此外，不同底物与酶反应时，产

生的活性氧含量有显著差别，该差别可以直接反映底物的抗肿瘤活性，因此该体系也可以用于药物筛选。

结果和结论 归功于 hNQO1 代谢机制固有的循环放大效应和全新构建的鲁米诺修饰的多孔泡沫镍工作电极，该 ECL 传感器表现出创纪录的 hNQO1 的检测限（10 ng / mL）和信噪比（～460）。另外，利用同样的传感机制，该传感器成功地实现了 hNQO1 相关的抗肿瘤药物的快速筛选。这项全新的 hNQO1 传感策略将引导 ECL 作为一种极具潜力的兼具肿瘤诊断和药物筛选功能的高效肿瘤管理工具。

PU-0849

SORBS1 基因甲基化在 Hcy 诱导人脐静脉内皮细胞氧化应激中的作用

梁雅茹
清远市人民医院

目的 探讨 SORBS1 基因甲基化在同型半胱氨酸(Hcy)诱导人脐静脉内皮细胞(HUVEC)氧化应激中的作用.

方法 将培养冻存的人脐静脉内皮细胞(HUVEC)复苏培养至第三代,分成四组:(1)Hcy 组;(2)叶酸组;(3)叶酸+VitB12 组;(4)空白对照组.用基因芯片法筛选出具有差异的甲基化位点 SORBS1.siRNA 转染 HUVEC,检测转染后三组(SORBS1-siRNA 组,NC-siRNA 组和空白对照组)HUVEC 的 SORBS1、丙二醛(MDA)和超氧化物歧化酶 2(SOD2)的表达水平.

结果 与空白对照组相比,Hcy 组 SORBS1 甲基化水平升高(P<0.05);与 Hcy 组比较,叶酸组、叶酸+vitB12 组 SORBS1 甲基化水平均降低(P<0.05).与 NC-siRNA 组和空白对照组相比,SORBS1-siRNA 组 SORBS1 和 SOD2 表达水平均下降(P<0.05),MDA 含量升高(P<0.05).

结论 Hcy 可通过调节 SORBS1 基因的甲基化水平诱导人脐静脉内皮细胞的氧化应激,为 Hcy 导致 HUVEC 氧化应激的分子机制提供了新思路.

PU-0850

Circular RNA hsa_circ_0089172 Regulates T Helper 17 Cells Response in Patients with Rheumatoid Arthritis

Huiyong Peng、Yingzhao Liu、Shengjun Wang
The Affiliated People's Hospital of Jiangsu University

Circular RNAs (circRNAs) are important transcriptional regulators of gene expression that participate in the pathogenesis of human diseases. Mechanistically, circRNAs, as competitive endogenous RNAs (ceRNAs), can sponge microRNAs (miRNAs) with miRNA response elements (MREs). Previous study has identified hsa_circ_0089172 is abnormally expressed in Hashimoto's thyroiditis and may regulate miR-125a-3p expression. However, the role of hsa_circ_0089172 in Rheumatoid arthritis (RA) remains unclear. A total of 28 RA patients and 28 healthy controls were enrolled in this study. We found that hsa_circ_0089172 was an abundant and stable circRNA in the RA patients and could potentially differentiate the RA patients from the healthy subjects. Additionally, the elevated levels of IL-23R, one of the miR-125a-3p target genes, had positive correlation with hsa_circ_0089172 expression. Knockdown of hsa_circ_0089172 resulted in the reduction of IL-23R+ cells. The proportion of circulating Th17 cells and the transcript levels of IL-17A were increased in the RA patients, which were both positively correlated with IL-23R expression. Moreover, positively correlations between the transcript levels of hsa_circ_0089172 and the percentage of Th17 cells and the transcript levels of IL-17A were indicated in the RA

patients. Down-regulation of hsa_circ_0089172 decreased the proportion of Th17 cells and the transcript levels of IL-17A in human CD4+T cells. Furthermore, hsa_circ_0089172 functioned as a ceRNA for miR-125a-3p in the RA patients. Taken together, our results indicate that the elevated levels of hsa_circ_0089172 contribute to Th17 cells response in the RA patients.

PU-0851

Androgen Receptor is a prognostic biomarker and correlated with clinical pathologic features and immune infiltrates in gastric cancer

nan xia
The first hospital affiliated to China medical university

Backgroud Androgen Receptor (AR) is a critical gene in different human malignancies. However, the correlation of AR to prognosis and immune-infiltrating lymphocytes in different cancers remain unclear.
Methods AR expression was analyzed via the Oncomine database and Tumor Immune Estimate Resource (TIMER) site. We evalueted the influence of AR on clinical prognosis using Kaplan-Meier plotter, the PrognoScan database and Gene Expression Profiling Interactive Analysis(GEPIA). The correlations between AR expression and gene marker sets of immune infiltrates were analyzed by TIMER and GEPIA.
Results High AR expression was associated with poorer overall survival(OS), disease-specific survival(DSS), and disease-free survival(DFS). In addition, AR expression was positvely correlated with inflilltrating levels of CD4+ T and CD8+ Tcells, macrophages, neutrophils, and dendritic cells(DCs) in gastric cancer. AR expression showed strong correlations with diverse immune marker sets in GC.
Conclusion These findings suggest that AR is correlated with prognosis and immune infiltrating level in gastric cancer patients.

PU-0852

The CYP3A5 and ABCB1 gene polymorphisms in kidney transplant patients and establishment of initial daily tacrolimus dosing formula

Yuting He、YiXiao Ma、Qian Fu、Jianbo Liang、Xuegao Yu、Bin Huang
The First Affiliated Hospital, Sun Yat-sen University

Objective To detect the gene polymorphisms of CYP3A5 and ABCB1 of the patients after kidney transplantation at the First Affiliated Hospital of Sun Yat-sen University and establish the initial daily dose formula of tacrolimus based on the clinical information, genotypes of CYP3A5 and ABCB1, and laboratory test results of patients, providing tacrolimus personalized medication for kidney transplant patients.
Methods The patients who underwent a triple immunosuppressive regimen of tacrolimus, mycophenolate mofetil and prednisone after kidney transplantation at the First Affiliated Hospital of Sun Yat-sen University from May 2016 to May 2018 were selected as the research subjects. The enrolled patients were divided into two cohort according to the admission time. One cohort was used to establish the tacrolimus dosage formula, and the other was used to evaluate the feasibility of tacrolimus dosage formula formed previously. PCR-SSP and PCR-RFLP were used to detect the genotypes of CYP3A5 and ABCB1. Meanwhile, blood cell, PCT, CRP and tacrolimus blood concentration were also analyzed. The height, weight, age, gender, type of

transplantation, blood pressure and infection status of the patients were recorded. The effect of each index on tacrolimus dose were analyzed and multiple linear regression analysis were used to establish the initial dose formula of tacrolimus in kidney transplant patients. Then the formula was evaluated by comparing the estimated dose from the formula with the actual clinical dose.
Results 102 cases of kidney transplant patients were enrolled in cohort one to establish the initial daily dose formula of tacrolimus, including 34 female and 68 male patients. Their height, weight and hemoglobin value were 162 ± 14 cm, 55 ± 15 kg and 95 ± 16 g / L respectively and there were 42 cases of infection and 87 cases of hypertension. There were 10 cases of CYP3A5 *1/*1 (9.8%), 28 cases of CYP3A5 *1/*3 (27.5%) and 64 cases of CYP3A5 *3/*3 (62.7%). The mutation frequency of CYP3A5 was 76.5%. The distribution of ABCB1 C1236T genotype were CC 15 (14.7%), CT 45 (44.1%) and TT 42 (41.2%); The distribution of ABCB1 C3435T genotype were CC 36 (35.3%), CT 52 (51.0%) and TT 14 (13.7%); The distribution of ABCB1 G2677T/A genotype were GG 39 (38.2%), GT 40 (39.2%) and TT 23 (22.5%). The allele mutation frequency of ABCB1 C1236T, ABCB1 C3435T and G2677T/A were 63.3%, 39.2% and 42.1% respectively. The multiple linear regression analysis had indicated a linear relationship between body weight, hemoglobin concentration and CYP3A5 genotypes and the daily dose of tacrolimus. Then the initial daily dosage formula of tacrolimus in kidney transplant patients was formed, which was equal to 7.499+0.053×weight-0.029×hemoglobin concentration -1.045×CYP3A5 genotype. (CYP3A5 genotype: *1/*1 type inputs 0, *1/*3 type inputs 1, *3/*3 type inputs 2). 65 cases of kidney transplant patients were enrolled in cohort two to evaluate the initial daily dose formula of tacrolimus formed previously, including 5 cases of CYP3A5 *1/*1 (7.7%),26 cases of CYP3A5 *1/*3 (40.0%) and 34 cases of CYP3A5*3/*3 (52.3%). Their weight and hemoglobin concentration were 54±14 kg and 98±16 g/L respectively. Pearson correlation analysis showed that the predicted dose of tacrolimus formula had a positive correlation with the actual clinical dose. The correlation coefficient r=0.605 (P<0.001). The equation for the linear regression line was Y = 1.072*X - 0.688 and the R2 values for the linear goodness of fit was 0.366.
Conclusions The hemoglobin, weight, and CYP3A5 genotype should be considered comprehensively when using tacrolimus. The dose formula established in our study can make a good prediction for the initial daily dosage of tacrolimus and help the patient reach the reference range of the tacrolimus treatment window.

PU-0853

lncRNA 在冠状动脉粥样硬化性心脏病中的诊断和预测价值

陈则金、江华、郑登滋、魏建威
福建省第二人民医院

目的 探讨 lncRNA 在冠状动脉粥样硬化性心脏病中的诊断和预测价值。
方法 选取我院住院患者 2018 年 6 月~2020 年 6 月期间收治的 68 例冠心病患者和同期接受检查的 70 例健康体检者作为研究对象，分别作为观察组和对照组，所有受试者知晓本次研究的目的与意义，并自愿参与本次研究。采集两组受检者的空腹肘静脉血，提取 RNA（Trizol 法），测定 RNA 浓度，合成 cDNA，应用雅培 Abbott m2000rt 实时荧光定量 PCR 仪，进行 lncRNA UCA1、lncRNA TUG1 表达水平的检测（qRT-PCR 法），比较冠心病患者和健康体检者、不同病变支数冠心病患者以及不同预后患者的 lncRNA UCA1、lncRNA TUG1 表达水平。
结果 冠心病患者和健康体检者对比，观察组患者的 lncRNA UCA1 表达水平[（0.79±0.30）＜（1.02±0.22）]低于对照组（P＜0.05）、lncRNA TUG1 表达水平[（1.79±0.27）＞（1.12±0.32）]高于对照组（P＜0.05）。不同病变支数冠心病患者对比，单支病变患者的 lncRNA UCA1 表达水平最高，双支病变其次，多支病变最低。单支病变患者的 lncRNA TUG1 表达水平最低，双支病变其次，多支病变最高。不同预后患者对比，预后良好患者的[（0.95±0.22）＞（0.74±0.18）]高于对照组（P＜0.05）、lncRNA TUG1 表达水平[（1.19±0.27）＜（1.43±0.22）]低于对照组（P＜0.05）。

结论 在冠心病患者的诊疗过程中，lncRNA 有着重要的应用价值，根据 lncRNA 的表达水平，能够真实、准确的反映出疾病的发生、进展情况，能够为疾病的早期防治提供重要的参考依据。

Screening of novel biomarkers in maternal blood for prenatal screening of Down's syndrome and construction of detection Methods for biomarkers

Yuan Yao
Guigang District, No 923 Hospital, Joint Logistics Support Force of PLA
中国人民解放军陆军军医大学第一附属医院检验科

Chromosome analysis of fetus cast-off cells obtained by invasive procedures is the gold standard for prenatal diagnosis of Down's syndrome (DS), whereas the invasiveness warrants the discovery of novel noninvasive predictive biomarkers. In this study, the liquid chromatography-tandem mass spectrometry analysis and the gas chromatography-mass spectroscopy analysis were employed, and combined with the results of bioinformatics studies, to set up the analysis model of metabonomics in maternal serum from DS-unaffected pregnant women (UP) and DS-affected pregnant women (DP). The principal component analysis (PCA), cluster analysis, and random forest (RF) analysis were performed, and the Welch t-test was used to screened for the metabolic molecules whose levels differed significantly between UP and DP. Total RNA was extracted and purified, and RNA quality and quantity was measured. After that, the cluster analysis, and RF analysis were performed, and the unpaired t-test was used to screened for the microRNA molecules. The western blot test was performed to verify the four proteins including CFHR1, dGTPase, KNG1, and β2-GPI, and the TRFIA **Methods** were established to detect the concentrations of the proteins in maternal serum. Then, the methodological evaluation, including the linear detection ranges, the sensitivity exploration, the precision experiments, the specificity experiments, was conducted, and the concentration ranges of the proteins were preliminarily investigated in serum of UP and DP. The results of PCA for metabonomics in serum showed that the contribution ratios of comp 1, comp 2, and comp 3 were 34.86%, 10.46% and 5.99%, and the RF analysis provided a forecast accuracy of 97%. A total of 193 metabolic compounds expressed significantly differentially were screened out, including the increased levels of 16 molecules and decreased levels of 177 molecules. Results of the cluster analysis for microRNA in plasma showed that the levels of microRNA between samples within a group were homogeneous. A total of 135 microRNA molecules expressed significantly differentially were screened out, including the increased levels of 95 molecules and decreased levels of 40 molecules. Results of western blot tests revealed that levels of CFHR1, dGTPase, and KNG1 in DP were increased significantly, and β2-GPI was decreased remarkably, compared with UP. The TRFIA detection results of dGTPase, KNG1, β2-GPI, and showed that the equation of standard curve was "lg(y) = 0.867lg(x)+lg1789" (R2 = 0.992), "lg(y) = 0.982lg(x)+lg1579" (R2 = 0.994), and "lg(y) = 1.009lg(x)+lg1164" (R2 = 0.991), and the sensitivity was 3.06, 2.16, and 3.91 ng/ml, respectively. Besides, there were significant differences in the levels of dGTPase, KNG1, and β2-GPI between UP and DP, as well as between DS-unaffected high-risk pregnant women group and DP. A total of 193 metabolic compounds whose levels differed significantly between UP and DP were discovered, which might provide the foundation for the screening of potential metabolic markers for DS-affected pregnancies, and the exploration of the metabolic pathways might provide some clues for the exploration of the pathological mechanism of DS. Levels of 135 microRNA molecules differed significantly between UP and DP, which might provide the foundation for the screening of potential microRNA markers for DS-affected pregnancies, and the exploration of microRNA markers and the gene expression might provide some clues for the exploration of the pathogenesis of this disease. Results of western blot tests suggested that CFHR1, dGTPase, KNG1, and β2-GPI might be potential novel protein markers for DS, and establishment of the

TRFIA **Methods** for dGTPase, KNG1, and β2-GPI in maternal serum provided some foundations for the exploration of novel prenatal screening strategies for DS-affected pregnancies.

PU-0855

The Role of Dectin-1-Mediated M1 Macrophage Polarization in Cerebral Ischemia-Reperfusion Injury

Zongyun Chen
Department of Laboratory Medicine, Mindong Hospital Affiliated to Fujian Medical University

Introduction Te advances in cerebral ischemia treatment have resulted in a larger proportion of patients get the benefits of
rebuilding blood flow to the brain. Ten, ischemia-reperfusion injury has emerged as a new essential problem. Dectin-1 plays an
important role in cerebral ischemia-reperfusion injury by regulating the function of immune cells.
Methods C57BL/6 was blindly divided into four groups including the sham-operated group and the three different kinds of middle cerebral artery occlusion (MCAO)groups(after6hours,12hours,and24hoursafterplugremoval).Teproteinexpressionlevelsofdectin-1,proapoptosis
molecule, and antiapoptosis molecule were measured by using western blot analysis. Te brain tissue was analyzed by flow
cytometrytodetecttheM1macrophagelevels.
Results Tecorrelationanalysisofdectin-1andinfarctareasshowedthattherewas an obviously positive correlation in between them (R^{2}0.9603). Dectin-1, cleaved caspase-3, and Bax increased, while anti-apoptosis molecule, Bcl-2, decreased at three appropriate time points (after 6 hours, 12 hours, and 24 hours). Te level of M1 macrophages in the experimental group increased after ischemia-reperfusion injury compared to the control group.
Conclusions Te high expression level of dectin-1 may affect M1 macrophage polarization and brain cell apoptosis in cerebral ischemia-reperfusion injury.

Integrated Analysis of lncRNAs and mRNAs Identifies a Potential Driver lncRNA FENDRR in Lung Cancer in Xuanwei, China

Yanliang Zhang、Yong Duan、Yan Wang、Ying Zhao
First Affiliated Hospital of Kunming Medical University

This study was to screen out potential driver long non-coding RNAs (lncRNAs) in lung cancer in Xuanwei (LCXW) differently expressed mRNAs and lncRNAs were detected by gene expression microarrays in 23 paired lung adenocarcinoma and adjacent tissues. Combined bioinformatics analysis was performed to identify potential driver lncRNAs and their potential regulatory relationships. Transcriptome and clinical data in TCGA-LUAD were used as comparison and validation dataset. The comparison of LCXW and TCGA-LUAD revealed significant differences in expression of some genes, signaling pathways affected by differentially expressed genes, and the 5-year survival rate of patients. We identified 14 consistently deregulated mRNAs and 5 lncRNAs as candidate genes, which affected multiple cancerrelated pathways and influenced patients' overall survival. By combined bioinformatics analysis, we further identified a potential driver lncRNA fetal-lethal non-coding developmental regulatory RNA (FENDRR) and proposed its possible regulation mechanism. The low expression of FENDRR was positively correlated with Kruppel-like factor4 (KLF4), KLF4 down-regulation may loss the

activation function of cyclin-dependent kinase inhibitor 1A (CDKN1A) and cyclin-dependent kinase inhibitor 1C (CDKN1C) and the inhibition function of CyclinB1 (CCNB1), eventually cause excessive cell cycle activation and lead to lung cancer. This study revealed a potential FENDRR-KLF4-cell cycle regulation axis. These results lay an important foundation for further research on the pathogenesis of LCXW and identification of potential novel biomarkers or therapeutic targets.

PU-0857

BRCA1 基因表达和 CXCL16 在乳腺癌诊断中的应用

邓君、洪华、刘蔚、孙昌瑞
四川省医学科学院·四川省人民医院

目的 探讨乳腺癌易感基因 1（breast cancer susceptibility gene 1, BRCA1）和趋化因子 CXCL16 在乳腺癌诊断和治疗监测中的应用。
方法 采用 FQ-PCR 检测 50 例健康女性体检者、102 例良性乳腺肿瘤、157 例乳腺癌和 126 例其他肿瘤组外周血中 BRCA1 mRNA，ELISA 检测 CXCL16，分析与乳腺癌患者临床组织学分期的关系，以及手术前后的差异。
结果 乳腺癌组的 BRCA1mRNA 水平低于正常对照组和良性乳腺疾病组，而 CXCL16 高于正常对照组和良性乳腺疾病组，乳腺癌组的 BRCA1 低于其他肿瘤组，而 CXCL16 则无显著性差异；BRCA1 在手术后显著上升，而 CXCL16 显著下降；在乳腺癌组中,随着临床分期的升高，BRCA1 递减，而 CXCL16 递增；BRCA1 和 CXCL16 联合检测可提高乳腺癌诊断灵敏度。
结论 BRCA1 和 CXCL16 对乳腺癌预后有一定的预测作用，BRCA1 和 CXCL16 对术后随访有意义，联合检测有助于提高对乳腺癌早期诊断。

PU-0858

RMP 通过 ATM/NF-κB 信号途径促进肝癌细胞 DNA 双链损伤修复

周围
常州市第一人民医院

目的 放疗耐受是肝癌治疗中的一大难题，急需从分子水平解析肝癌细胞射线的耐受的原因。目前已有报道表明 RMP 能够维持基因组稳定性，因此 RMP 能否参与肝癌细胞 DNA 损伤修复调值得进一步探究。
方法 经 γ 射线诱导肝细胞和肝癌细胞 DNA 损伤，彗星电泳和免疫荧光染色明确各组细胞在射线照射 0~120 分钟后的 DNA 损伤程度；通过 qRT-PCR 和 Western blot 检测射线诱导后 RMP 的表达水平；评估 RMP 对对肝癌细胞 DNA 损伤后的修复速度的影响。通过 Western blot 分析 DNA 损伤后细胞核和胞浆中 RMP 的表达水平；检测 DNA 损伤断链点上 RMP 的募集； qRT-PCR 检测损伤修复和凋亡基因在射线照射后的表达；Western blot 分析 RMP 对 ATM 和 NF-κB 磷酸化的影响；免疫荧光和免疫共沉淀分析 RMP 与 ATM 在细胞损伤断链点的共定位；ATM 抑制剂和 NF-κB 抑制剂处理后，明确 ATM 和 NF-κB 磷酸化对 RMP 介导的肝癌细胞 DNA 损伤修复的影响。
结果 γ 射线照射后，肝癌细胞的 DNA 损伤修复速度高于肝细胞，且 RMP 表达显著上调；敲减 RMP 表达后，肝癌细胞 DNA 损伤修复明显减慢，DNA 损伤 120min 后细胞核内仍存在较多 DNA 损伤断链点；发生 DNA 损伤后，RMP 蛋白核转位增加，并募集于 DNA 损伤断链点处；同时 RMP 能促进 ATM 磷酸化，且 RMP 在损伤断链点的募集不依赖于 ATM 磷酸化，但 ATM 磷酸化能抑制 RMP，ATM 和 Mre11 损伤修复复合物的形成。RMP 能通过促进 ATM 磷酸化激活 NF-κB 通路，而

NF-κB 介导的损伤修复、细胞周期调控和抑凋亡分子等的表达参与了 RMP 介导的 DNA 损伤修复过程。
结论 肝癌细胞通过上调 RMP 的表达增强 DNA 损伤修复，该过程中，RMP 募集于损伤断链点，形成 RMP/ATM/Mre11 损伤修复复合物，激活下游 NF-κB，促进 DNA 损伤修复的同时，促进抑凋亡基因表达。

PU-0859

RMP 与 IGF1r 协同促进缺氧诱导的胃癌转移的机制研究

周围
常州市第一人民医院

目的 缺氧是肿瘤微环境的一大特征，而缺氧诱导的转移是胃癌治疗中迫切需要解决的难题，急需从分子水平解析缺氧诱导胃癌转移的原因。已有报道表明定位于 mTOR 通路上游和下游的 IGF1r 和 RMP 是肿瘤细胞应答微环境、调控细胞生长和转移的重要分子。因此探讨 RMP 和 IGF1r 调控缺氧微环境诱导的胃癌细胞转移的机制，对我们理解胃癌转移的分子基础具有重要意义。
方法 明确 RMP，IGF1r 和 RMP-Ser371 磷酸化与胃癌转移和患者生存期的相关性；建立体外和体内的胃癌缺氧模型，明确 RMP、IGF1r 和 RMP-Ser371 磷酸化与缺氧的关系；通过划痕、transwell 和小鼠肿瘤转移模型明确单独和共敲减 RMP 和 IGF1r 表达对胃癌细胞转移的影响；通过免疫印迹明确 RMP 和 IGF1r 对迁移相关蛋白表达的影响；建立 RMP 的 Ser371 突变体明确其与胃癌转移的关系；通过敲减 PKN3 表达明确 PKN3 应答缺氧微环境并磷酸化 RMP；通过小分子抑制剂分析 PI3K, mTOR, AMPK 通路对缺氧诱导的胃癌转移的影响；通过抑制剂和激动剂评估 AMPK 对 RMP-磷酸化和 RMP/IGF1r/PKN3 复合体的影响，最终明确缺氧诱导胃癌转移的分子基础。
结果 缺氧微环境能上调胃癌细胞中 RMP 和 IGF1r 的表达，促进 RMP 的 Ser371 磷酸化；RMP 的磷酸化促进胃癌细胞中迁移相关蛋白的表达；IGF1r 能与 RMP 结合并且维持 RMP 磷酸化；缺氧时 AMPK 下游分子 PKN3，能被 AMPK 活化，从而与 RMP/IGF1r 形成三元复合物，进而促 RMP 磷酸化；缺氧时 AMPK 和 PKN3 的活性对于 RMP 的磷酸化和胃癌细胞的转移必不可少，而 IGF1r 作为桥梁分子，促进 RMP 和 PKN3 的蛋白互作。
结论 缺氧通过上调胃癌细胞 AMPK 活性，促进 RMP/IGF1r/PKN3 三元复合物形成，帮助 PKN3 磷酸化 RMP 的 Ser-371 位点，最终诱导胃癌转移。

基于网络药理学的强心益脉汤调治射血分数保留的心力衰竭的分子机制研究

万科幸
自贡市第一人民医院

目的 基于网络药理学方法分析强心益脉汤调治射血分数保留的心力衰竭（HFpEF）的药理机制，为新药研发及经典方剂的临床拓展运用提供参考。
方法 通过 TCMSP 数据库获取太子参、黄芪、猪苓、泽泻、白术、茯苓、桂枝、红花、桃仁、川芎、赤芍的主要化学成分及其靶点，根据 ADME 筛选中药活性组分；通过 Gencards、OMIM、TTD、DRUGBANK 数据库获取射血分数保留的心力衰竭主要靶点，利用 String 平台进行蛋白质相互作用分析，构建 PPI 网络并挖掘网络中潜在的蛋白质功能模块。采用 Metascape 平台分析“药物-成分-靶点”及其参与的生物过程及通路，而后采用 Cytoscape3.7.1 软件构建“强心益脉汤成分-HFpEF 靶点-通路”网络，最后采用 MOE2010 中的分子对接模块进行分子对接验证。

结果 强心益脉汤调治射血分数保留的心力衰竭的核心活性成分为 β-胡萝卜素、豆甾醇、谷甾醇、β-谷甾醇、菜油甾醇、白杨甙、常春藤皂苷元、异黄酮、氢化松苓酸、齿孔菌酸等。强心益脉汤调治 HFpEF 的生物学通路主要作用于癌症相关信号通路，cAMP 信号通路、HIF-1 信号通路、钙信号通路以及 C21-甾体激素的生物合成等通路，其功能主要为调节血压，血液循环等生命活动。
结论 本研究初步揭示了强心益脉汤调治射血分数保留的心力衰竭的多成分、多靶点、多通路的作用机制，为强心益脉汤的临床开发利用提供基础。

Analysis of circular RNA expression profiles of lung cancer in Xuanwei, China

Yan Wang、Ling-Jiao Lu、Yong Duan、Xiao Liu、Yue Mao、Yu Chen、Yan-Liang Zhang
First Affiliated Hospital of Kunming Medical University

Background Mounting evidence indicates that circular RNAs (circRNAs) could play a pivotal role in cancers. However, due to the lack of sensitive biomarkers, most lung cancer in Xuanwei (LCXW) patients are still diagnosed at an advanced stage accom_x0002_pany with distant metastasis.
Methods According to the stage of LCXW patients and tissue sources, circRNAs microarray detection was carried out in six groups. Considering fold change, raw intensity, the length of circRNAs, and P-value, we selected eight circRNAs for fur_x0002_ther study. A total of 50 paired LCXW tissues were carried out real-time quantitative polymerase chain reaction (RT-qPCR) in order to extended sample size to verify the expression of these circRNAs.
Results We designed 13 617 human circRNA probes for the human circular RNA microarray, detected 10 819 circRNA in six groups of samples; 537 circRNAs were differentially expressed consistently in every stage. Through RT-qPCR, we selected 8 circRNAs, three of which were upregulated (hsa_circ_0005927, hsa_circ_0069397 and hsa_circ_0000937) and five were downregulated (hsa_circ_0001936, hsa_ circ_0005255, hsa_circRNA_406010, hsa_circ_0007064, hsa_circ_0000907) in tumor tissues, only hsa_circ_0001936 showed the opposite expression between microarray and RT-qPCR, others were consistent. Additionally, hsa_circ_0005927 and hsa_circ_0001936 were significantly correlated with tumor size, and hsa_circRNA_406010 was related to the prognosis of LCXW patients.
Conclusion Together, these results suggest that hsa_circ_0005927, hsa_ circ_0001936, and hsa_circRNA_406010 may serve as the novel potential biomarkers for LCXW. Moreover, these results may provide a new insight for the pathogenesis of LCXW.

PU-0862

PAPP-A 和 sFlt1/PlGF 对中国人群子痫前期诊断价值的比较

马岩团进[1,2]、张宇航[1,2]、钱源[1,2]
1. 昆明医科大学第一附属医院
2. 云南省检验医学重点实验室

目的 统评价妊娠期 PAPP-A 水平和 sFlt1/PlGF 比值与子痫前期发病的相关性，间接比较 PAPP-A 和 sFlt1/PlGF 在中国人群子痫前期诊断的临床价值。
方法 检索中国知网、万方、维普、中国生物医学文献数据库，收集有关妊娠期 PAPP-A、sFlt1/PlGF 检测子痫前期诊断性实验的相关文献。按纳入与排除标准筛选文献、评价文献质量、提取数据。采用 Meta-Disc1.4 和 Stata15 软件对纳入的文献进行 meta 分析。
结果 总共有 35 项研究纳入。分析结果显示，子痫前期组血清 PAPP-A 水平低于对照组[SMD=-1.688, 95%CI (-2.878～-0.497)]，而子痫前期组的 sFlt1/PlGF 比值明显高于对照组[SMD=1.44,

95%CI (0.876～2.003)]，差异均有统计学意义（P<0.05）；PAPP-A 诊断子痫前期发病的 SEN 合并为 0.69（95%CI 0.66～0.72）,SPE 合并为 0.81（95%CI 0.80～0.82）,DOR 为 10.54（95%CI 6.37～17.43）,SROC 曲线下面积为 0.8017; sFlt1/PlGF 诊断子痫前期发病的 SEN 合并为 0.80（95%CI 0.77～0.84）,SPE 合并为 0.89（95%CI 0.87～0.9）,DOR 为 34.41（95%CI 16.36～72.38）,SROC 曲线下面积为 0.8903。间接比较显示 PAPP-A 与 sFlt1/PlGF 检测的 AUC 有统计学差异（Z=2.16 P<0.05）。

结论 妊娠期 PAPP-A 水平的降低或者 sFlt1/PlGF 比值的提高与子痫前期发病相关，PAPP-A 和 sFlt1/PlGF 检测在诊断子痫前期发病中均具有较好的准确性，但 sFlt1/PlGF 较 PAPP-A 的诊断准确性更高，可作为预测子痫前期发病的方法之一。

PU-0863

Association of Apolipoprotein E gene polymorphisms with type 2 diabetes mellitus and coronary artery disease

Lei Wu
The First Affiliated Hospital of Nanjing Medical University

Apolipoprotein E (APOE) gene mediates lipoprotein clearance in the body and is one of the most studied candidate genes for Type 2 diabetes mellitus (T2DM) and coronary artery disease (CAD). This study was performed to determine the association between APOE polymorphisms and T2DM with and without CAD, as well as its effect on plasma lipid level. A total of 1414 subjects were recruited into four distinct groups, 264 in T2DM group, 401 in CAD group, 204 in T2DM+CAD group, and 545 in normal control group. APOE genotyping was carried out using chip platform. Logistic regression analysis was used to obtain odds ratio (OR) and 95% confidence interval (CI) in predicting the risk probability of APOE. APOE ε3/ε3 genotype was the most prevalent genotype in our studied groups. Genotype frequency ratio of genotype ε3/4 and allele ε4 among the CAD patients with or without T2DM was obviously increased. Compared with ε3/3 genotype, the ε3/4 genotype had a significant increased risk of CAD (adjusted OR = 1.90, 95% CI = 1.30-2.77) and T2DM+CAD (adjusted OR = 1.95, 95% CI = 1.24-3.08). The plasma HDL-C levels of CAD patients with ε4-bearing genotypes were lower than those with ε3/3 genotype. These results indicate that ε4 allele may increase the risk of both CAD with and without T2DM, and has influence on lipid profiles. The detected associations deserve to be definitively validated in larger multi-center studies.

PU-0864

Near a half of PICU patients with unexplained death received genetic diagnosis by exome sequencing and the genotypes and phenotypes of 19 rare diseases were expanded

Yu Zheng、Juan Liu、Jiaotian Huang、Desheng Zhu、Ping Zang、Yongjia Yang、Zhenqing Luo、Zhenghui Xiao、Yimin Zhu、Xiulan Lu
Hunan Children's Hospital

Background Phenotypes of some rare genetic diseases are atypical. A considerable proportion of PICU puzzling cases are still need to be clarified. It is a challenge for pediatric intensive care units (PICUs) to diagnose and manage shortly in emergency.
Methods 58 PICU patients in critical ill status or died shortly without a clear etiology in Hunan Children's hospital from 9/20/2014 to 12/30/2018 were selected. Whole exome sequencing was

performed for 103 samples in 58 families (39 deceased and 19 surviving patients). Disease-causing single nucleotide variants (SNVs) and copy number variants (CNVs) were analyzed using customized bioinformatics pipeline.
Results In total, 27 (46.6%, 27/58) patients received a genetic diagnosis, and six (10.3%, 6/58) patients had uncertain pathogenicity variants (VUS). We identified 34 pathogenic or likely pathogenic SNVs from 26 genes, which relating to at least 19 rare diseases. Each genetic rare disorder involved in an isolated patient, excepting two patients shared underlying disorders from the same gene ACAT1. In addition to two novel CNVs, the genotypic spectrum of genetic disorders was expanded by 23 novel SNVs from gene MARS, PRRT2, TBCK, TOR1A, ECE1, ARX, ZEB2, ACAT1, CPS1, VWF, NBAS, COG4, and INVS etc. Among the 27 patients with genetic diagnosis, 20 patients (74.1%, 20/27) accompanied severe infection, 19 patients (70.1%, 19/27) died. Phenotypes associated with respiratory (n=12), MCA (n=10), neuromuscular (n=8), or metabolic disorders (n=9) were the most common. In addition to the phenotypes associated with the identified genetic diseases, eight patients had clinical features to be clarified.
Conclusion The diagnosed genetic disorders are sporadic in the regional PICU, which resulted in high mortality. Our findings expanded the genotypes and phenotypes of 19 rare diseases from PICU with complex characteristics.

PU-0865

同源重组缺陷检测在肿瘤临床诊疗中的进展与展望

郁俐[1]、沈敏娜[1]、姜惠琴[1]、王蓓丽[1,2]、郭玮[1,2]
1. 复旦大学附属中山医院
2. 复旦大学附属中山医院厦门医 院检验科

目的 总结同源重组缺陷（homologous recombination deficiency, HRD）检测方法，探讨 HRD 检测在肿瘤临床诊疗中的作用。
方法 围绕 HRD 的基本概念，检测方法及临床价值作一综述。
结果 同源重组（Homologous recombination，HR）是修复 DNA 双链断裂、单链 DNA 间隙和停滞或折叠复制叉的主要途径，有助于端粒维持，确保减数分裂过程中染色体的正确分离。同源重组修复（Homologous recombination repair, HRR）通路是 DNA 损伤修复通路之一，在肿瘤中有较高的突变频率。除了 BRCA1/2 基因突变之外，同源重组缺陷（homologous recombination deficiency, HRD）也可以由其他机制引起，例如 HRR 相关基因的胚系突变、体细胞突变、基因组稳定性及 HRR 途径中涉及基因的表观遗传修饰等。最新临床研究数据发现，通过 HRR 基因突变检测和基因瘢痕检测来反应同源重组缺陷状态可有效预测肿瘤患者使用多聚腺苷二磷酸核糖聚合酶（Poly ADP-ribose polymerase, PARP）抑制剂的疗效，帮助患者精准用药及预后判断。
结论 本文回顾了 HRD 的不同检测方法，探讨 HRD 检测在临床运用中的价值，为肿瘤的精准治疗奠定临床基础。

PU-0866

血清 Flt3L 和 Gas6 对非霍奇金淋巴瘤患者化疗后感染的诊断价值

晏黎[1]、黄伟[2]、饶亚华[2]、熊银[2]、姜锐[2]、崔天盆[2]
1. 湖北中医药大学
2. 武汉市第一医院

目的 探讨 Flt3 配体（Flt3L）和生长停滞特异性蛋白 6（Gas6）对非霍奇金淋巴瘤（NHL）患者化疗后感染的诊断价值。

方法 收集 2019 年 7 月至 2020 年 10 月在武汉市第一医院就诊的 NHL 化疗患者 94 例。根据化疗后是否感染，分为感染组 40 例，未感染组 54 例。另选择同期健康者 50 例为对照组，比较三组间血清 Flt3L、Gas6 和一般炎症指标的表达水平及相关性。ROC 曲线分析血清 Flt3L 和 Gas6 对 NHL 患者化疗后感染的预测价值。采用 Kaplan-Meier 曲线分析血清 Flt3L 和 Gas6 水平对 NHL 化疗患者发生医院感染的影响。
结果 NHL 患者化疗后感染组血清 Flt3L［807.80（215.10～1232.00）pg/ml］和 Gas6［20.04（13.14～27.52）ng/ml］水平均高于未感染组和对照组，差异均有统计学意义（P 均<0.05）；NHL 患者化疗后重度感染组血清 Flt3L［887.30（321.60~1367.00）pg/ml］和 Gas6［25.24（17.61~42.86）ng/ml］水平均高于轻度感染组，差异均有统计学意义（P 均<0.05）。血清 Flt3L 浓度与 WBC 呈负相关，与 IL-6 呈正相关；血清 Gas6 浓度与 WBC 呈负相关。ROC 曲线分析表示血清 Flt3L 和 Gas6 预测诊断感染的曲线下面积及 95%CI 分别为 0.811（0.719～0.902），0.643（0.526～0.759）。血清 Flt3L 与 hsCRP、PCT 和 IL-6 联合应用后诊断效能明显提高，曲线下面积分别为 0.956、0.923 和 0.865。Kaplan-Meier 曲线分析表示 NHL 化疗患者血清 Flt3L≥649.8pg/ml 及血清 Gas6≥21.50ng/ml 时，医院感染率显著升高（P 均<0.05）。
结论 早期检测血清 Flt3L 浓度有助于预测 NHL 患者化疗后感染及病情判断。

PU-0867

中药靶向 miRNA、lncRNA 治疗乳腺癌的机制的研究策略及乳腺癌与化学修饰

卢晴晴
湖南中医药大学

乳腺癌是全球发病率第一的癌症，根据免疫组化的结果可将乳腺癌分为四型，不同型别的乳腺癌在肿瘤直径、组织学分级、生存率等上存在差异。miRNA 是一类小的非编码 RNA，lncRNA 是一类长的非编码 RNA，它们对乳腺癌的增殖、迁移、侵袭、凋亡等可能有促进或抑制的作用。根据乳腺癌型别及研究目的的不同常采用不同的研究策略，不论采用何种实验，都必须同时研究过表达和敲减待研 miRNA 对乳腺癌细胞和正常乳腺细胞的影响，以保证实验思路严谨、结果可靠。除了 miRNA 和 lncRNA 以外，乳腺癌的发生发展还与 mRNA 甲基化和蛋白质泛素化等化学修饰有关。

PU-0868

Circulating LncRNA UCA1 and LncRNA PGM5–AS1 act as potential diagnostic biomarkers for early-stage colorectal cancer

Xiaodong Feng、Minghui Wang
The Affiliated Hospital of Qingdao University

Background Colorectal cancer (CRC) is the most common malignant tumor worldwide and is difficult to diagnose. Growing evidence has indicated that long non-coding RNAs (lncRNAs) play a significant role in the occurrence and progression of many cancers. In this study, we aimed to identify lncRNAs in plasma as potential diagnostic biomarkers for CRC.
Methods The common differential lncRNAs between cancer tissues and adjacent tissues were identified by analyzing Gene Expression Omnibus (GEO) datasets GSE102340, GSE126092, GSE109454 and GSE115856. Then the two most differentially expressed lncRNAs were verified by using quantitative real time–PCR (qRT–PCR) in 200 healthy controls and 188 CRC patients.

Receiver operating characteristic (ROC) curve was constructed to evaluate their diagnostic value for CRC.
Results Integrated analysis of the GEO datasets identified three significantly up–regulated and eleven down–regulated lncRNAs in CRC tissues. Compared with healthy control, lncRNA UCA1 was significantly up–regulated in CRC patient plasma and lncRNA PGM5–AS1 were significantly down–regulated. The area under the ROC curve (AUC) was determined to be 0.766, 0.754 and 0.798 for UCA1, PGM5–AS1 and the two lncRNAs were combined. Moreover, these two lncRNAs could be used to distinguish early stages CRC from the healthy controls. The combination of UCA1 and PGM5–AS1 enhanced the AUC to 0.832. When the lncRNAs were administered with either carcinoembryonic antigen (CEA) the AUC was further improved to 0.874.
Conclusion This research identified two differentially expressed lncRNAs in CRC patient plasma. Our data suggest that these two lncRNAs can be used as potential diagnostic biomarkers of CRC.

低密度脂蛋白受体 rs688 位点、AvaⅡ、NcoⅠ基因多态性与缺血性脑卒中的相关性研究

陈雅斌、张志珊
福建医科大学附属泉州第一医院

目的 分析低密度脂蛋白受体 rs688 位点、AvaⅡ、NcoⅠ等基因之间是否存在连锁不平衡，以及连锁不平衡的基因与缺血性脑卒中是否存在相关性。
方法 选取缺血性脑卒中、健康对照、其他脑血管病组各 50 例，进行低密度脂蛋白受体 rs688 位点、AvaⅡ、NcoⅠ等基因多态性的检测。应用卡方分析对组间各基因型频率、等位基因频率进行比较。连锁不平衡和病例/对照研究分析 3 基因之间是否存在连锁不平衡，并分析缺血性脑卒中关联的等位基因。Logistic 线性回归分析连锁不平衡的基因与缺血性脑卒中的相关性。
结果 缺血性脑卒中组中 LDLR rs688 位点基因型频率、等位基因频率存在明显差异；AvaⅡ基因等位基因频率比较亦均有统计学差异；NcoⅠ基因比较差异无统计学意义。连锁不平衡分析显示 rs688 位点基因和 AvaⅡ基因存在高度连锁不平衡（D'=0.940，R2=0.533）。与缺血性脑卒中存在相关等位基因分别为：rs688 位点：T（X2=16.071，P=0.000）、AvaⅡ：C（X2=8.224，P=0.004）。logistic 线性回归分析得出，和野生型 rs688 位点和 AvaⅡ基因（CC/TT）组合相比，双重杂合子突变（CT/TC），增加了缺血性脑卒中疾病发生的概率（OR= 1.361，P=0.000）。
结论 缺血性脑卒中 LDLR rs688 位点、AvaⅡ基因多态性的频率分布明显区别于对照。rs688 位点和 AvaⅡ基因存在高度的连锁不平衡现象。双重杂合子（rs688/ AvaⅡ:CT/TC）提高了缺血性脑卒中发生的风险概率。或可作为缺血性脑卒中的一个遗传标志，用以临床筛查高危人群预防缺血性脑卒中的发生。

4 例新型冠状病毒感染病例鼻拭子、咽拭子病毒核酸检测和血浆抗体检测结果分析

陈荣华、柳丽娟、李勤光
福建医科大学孟超肝胆医院

目前，新型冠状病毒（SARS-CoV-2）核酸检测和血浆抗体检测是确诊新型冠状病毒肺炎（COVID-19）的重要依据。为比较分析 SARS-CoV-2 感染病例鼻拭子与咽拭子的病毒核酸检测及其血浆病毒抗体检测结果，本研究采用实时荧光定量 PCR 方法，分别检测 4 例 COVID-19 确诊病例鼻拭子与咽拭子标本的 SARS-CoV-2 ORF 1ab 基因和 N 基因，并采用胶体金法检测血浆标本中的 SARS-CoV-2 IgM 和 IgG 抗体。结果显示，在 4 例 COVID-19 确诊病例中，鼻拭子中病毒 ORF 1ab 基因及 N 基因的核酸扩增信号均强于咽拭子，Ct 值均低于咽拭子；血浆病毒抗体检测仅发现 1 例标本 SARS-CoV-2 IgG 单阳性。本研究结果提示，鼻拭子标本的病毒含量明显高于咽拭子标本，血浆病毒 IgM 和 IgG 抗体检测是 COVID-19 辅助临床诊断的有效工具。

Elevated Soluble Programmed Death-ligand 1 levels indicate immunosuppression and poor prognosis in hepatocellular carcinoma patients undergoing transcatheter arterial chemoembolization

Wenjing Yang、Xiao-Lu Ma、Xu-Dong Qu、Bei-Li Wang、BAI-SHEN PAN、JIAN ZHOU、JIA FAN、Xin-Rong Yang、WEI GUO
Department of Laboratory Medicine, Zhongshan Hospital, Fudan University

AIMS Soluble Programmed Death-ligand 1 (sPD-L1) is associated with hepatocellular carcinoma (HCC) prognosis after resection; however, this association has not yet been characterized in patients with unresectable HCC. The present study aimed to determine the prognostic significance of sPD-L1 in HCC patients undergoing transcatheter arterial chemoembolization (TACE).
METHODS We treated 114 HCC patients with TACE from 2012 to 2013 and determined their sPD-L1 levels by enzyme-linked immunosorbent assay. We evaluated prognoses according to mRESIST criteria and analyzed prognostic values by Cox regression and Kaplan-Meier analysis. We further evaluated correlations between sPD-L1 and systemic inflammation index (SII), soluble interleukin-2 receptor (sIL-2R), IL-10, hepatitis B virus (HBV)-DNA loads, and C-reactive protein.
RESULTS sPD-L1 levels were significantly increased in patients who developed HCC progression (P=0.002) and death (P<0.001). Patients with higher pre-treatment sPD-L1 levels had a significantly shorter time to progression (10.50 vs. 18.25 months, P=0.001) and decreased overall survival (16.50 vs. 28.50 months, P=0.003). In low-recurrence-risk subgroups, sPD-L1 levels retained prognostic value (P<0.050). Importantly, multivariate regression confirmed that pre-treatment sPD-L1 level was an independent predictor for both progression [hazard ratio (HR) 1.82; P=0.032] and survival (HR 1.84; P=0.009). Moreover, sPD-L1 levels positively correlated with SII (r=0.284, P=0.002), sIL-2R (r=0.239, P=0.010), IL-10 (r=0.283, P=0.002), HBV-DNA loads (r=0.229, P=0.014), and CRP (r=0.237, P=0.011).
CONCLUSIONS sPD-L1 level is a prognostic indicator of poor outcomes after TACE. High sPD-L1 might reflect increased immune activation in an immunosuppressive environment that hindered anti-tumor response activity. Lowering sPD-L1 levels may provide a novel avenue for preventing HCC progression post-TACE.

BCL11B suppresses tumor progression and stem cell traits in hepatocellular carcinoma by restoring p53 signaling activity

Wenjing Yang[1]、YUN-FAN SUN[1]、AN-LI JIN[1]、BEI-LI WANG[1]、TE LIU[2]、BAI-SHEN PAN[1]、JIAN ZHOU[1]、JIA FAN[1]、XIN-RONG YANG[1]、WEI GUO[1]
1. Department of Laboratory Medicine, Zhongshan Hospital, Fudan University
2. 上海中医药大学；上海老年医学研究所

Background Cancer stem cells (CSCs) are a rare subclass of highly tumorigenic cells with self-renewal capacity and differentiation potential. Previous studies identified B cell leukemia/lymphoma-11b (BCL11B) as a novel tumor suppressor with the potential to restrain CSC traits. The implications of BCL11B in hepatocellular carcinoma (HCC) remain unclear.
Methods The prognostic value of BCL11B in patients with HCC was evaluated by immunohistochemistry staining. The effects of BCL11B silencing and overexpression in HCC cell lines were measured. HCC cell self-renewal and proliferation were assessed in vitro and in vivo. CCK-8 and colony-formation assays were conducted to assess proliferation potential. Cell cycle progression and apoptosis were evaluated by flow cytometry. Transwell and wound-healing assays were performed to determine migration capacities. A Cignal Finder Center 10-Pathway Reporter Array was used to identify key downstream pathways.
Results Low BCL11B expression was an independent indicator for shorter overall survival (OS) and time to recurrence (TTR). In vitro and in vivo experiments confirmed BCL11B as a tumor suppressor in HCC with inhibitory effects on proliferation, cell cycle progression, apoptosis, and mobility. BCL11B suppressed CSC traits, as evidenced by dramatically decreased liver spheroid formation and enhanced drug sensitivity. Mechanistically, BCL11B activated P53 signaling by triggering P73 transcription. BCL11B exerted its inhibitory functions on HCC cells regardless of P53 mutation status.
Conclusions BCL11B is a strong suppressor of CSC traits in HCC. Ectopic expression of BCL11B should be investigated as a strategy for anti-HCC treatment with the potential to cure HBV-related HCC regardless of P53 mutation status.

长链非编码 RNA 作为新的诊断标志物在自身免疫病中的进展研究

孙萌、李忠信、王文强
郑州安图生物工程股份有限公司

长链非编码 RNA (Long non-coding RNA, LncRNA)是多种生物学和病理过程中的重要调控分子。已有的研究显示 LncRNA 和 microRNA（miRNAs）作为竞争性内源性 RNA（ceRNA）在控制基因表达及多种疾病发生发展中发挥重要作用。自身免疫性疾病是指机体对自身抗原发生免疫反应而导致自身组织损害所引起的疾病。目前，自身免疫性疾病患病率逐年增加。此外，自身免疫病及其发病机制的研究一直是体外诊断研究的热点和难点。通过 LncRNA 表达水平与自身免疫性疾病的相关研究，可以进一步加深我们对疾病发展及发病机制的了解。因此，考察 LncRNA 作为一种诊断标志物在自身免疫病中的研究进展，可为临床工作者以及体外诊断研究者提供重要的参考资料。

BMP4 过表达诱导阿尔茨海默病 APP/Tau 蛋白的上调和记忆缺陷研究

汪晶、马丽、徐旺旺、程阳
蚌埠医学院

目的 探讨 BMP4 在阿尔茨海默症中所扮演的角色及作用机制
方法 利用神经烯醇化酶（NSE）启动的 BMP4 过表达的转基因小鼠并结合阿尔茨海默症常用的模型细胞株小鼠神经瘤细胞（N2A）、海马神经细胞（HT22）、人神经母细胞瘤（SH-SY5Y）。1.将 BMP4 转基因鼠和野生鼠分为 1 月、3 月、6 月、9 月四个年龄段，用 WB 和 RT-PCR 技术检测不同年龄段海马组织中 AD 诊断标志物及凋亡的变化。2.6 月龄的实验鼠用 Morris 水迷宫实验。3.TUNEL 荧光实验和 HE 染色检测 9 月龄老年实验鼠海马组织凋亡和神经元丢失的情况。4.细胞株通过 RT-PCR 技术检测 3 种细胞株 BMP4 基因的 RNA 水平的表达量，通过 WB、RT-PCR、MTT 细胞增殖实验等方法探究 BMP4 水平的高低是否影响阿尔茨海默病的进展。
结果 1.Morris 水迷宫实验证明 6 月龄的 NSE-BMP4 转基因小鼠记忆出现缺失；2.实验鼠海马组织蛋白和 mRNA 结果证明 NSE-BMP4 转基因鼠 β 淀粉样蛋白和异常磷酸化 TAU 蛋白升高且神经元凋亡增加；3.细胞株实验证明 BMP4 基因升高后 AD 标志物表达升高，BMP4 敲低后则这些标志物表达降低。4.细胞株 MTT 实验证明 BMP4 升高后细胞增殖能力减弱，敲低则增强；流式细胞仪细胞凋亡结果显示 BMP4 过表达后细胞凋亡率增加，敲低则减少；5.9 月龄实验鼠海马组织 TUNEL 实验发现，与野生鼠相比 NSE-BMP4 转基因鼠海马组织 CA1、CA3 区和齿状回 DG 区凋亡率增加。6.9 月龄鼠 BMP4 转基因小鼠海马组织 CA1 和 CA3 区的椎体细胞排列紊乱，出现一定的神经细胞丢失现象。
结论 1.Morris 水迷宫实验证明中年期 NSE-BMP4 转基因小鼠有存在空间记忆障碍；2.BMP4 可对通过 β 淀粉样蛋白沉积机制，PSEN 突变机制和 TAU 蛋白异常磷酸化机制调控阿尔茨海默病；3.BMP4 促进神经细胞的凋亡和抑制神经细胞的增殖。

中枢神经系统淋巴瘤脑脊液中弥漫性大 B 细胞的单细胞转录组分析

阮浩宇
江苏省人民医院（南京医科大学第一附属医院）

弥漫性大 B 细胞淋巴瘤（DLBCL）是中枢神经系统淋巴瘤（CNSL）的主要类型，包括原发性 CNSL 和继发性 CNSL。脑脊液中弥漫性大 B 细胞（CSF-DLBCs）为 CNSL 脑膜转移的诊断和治疗提供了广阔前景。为了探索 CSF-DLBCs 的特征，我们使用 Smart-seq2 单细胞 RNA 测序（scRNA-seq）分析了六名 CNSL-DLBCL 患者 1000 多个 CSF-DLBCs 的转录组。通过分析发现 CSF-DLBCs 高表达 B 细胞标记物，增殖和代谢活跃。CSF-DLBCs 表现出免疫球蛋白轻链限制性（LCR），但值得注意的是，某些 CSF-DLBC 具有 lambda 和 kappa 两种轻链可变区。CSF-DLBCs 异质性较高，病人间异质性高于病人内异质性，且细胞间异质性 CSF-DLBCs 主要表现在细胞周期状态，癌-睾丸抗原的表达以及基于单细胞生发中心（sc-GC）B 细胞特征的细胞分类。另外，与各种正常 B 细胞相比，CSF-DLBC 中基因 CCDC167, EML6, EZH2, HAUS1, LAS1L, METTL26, NCAPH2, NT5DC2, NUSAP1, PHF19, PKMYT1, PTTG1, RRM2, SH3TC1, SMC4, TIMM50 显著上调，这 16 个基因在 CNS-DLBCL 发生发展中具有潜在的重要价值。该研究是首次系统全面地分析 CSF-DLBCs 转录组特征，为 CNSL-DLBCL 的机制研究和诊断提供新的方向。

Circulating tumor cell characterization of lung cancer brain metastases in the cerebrospinal fluid through single-cell transcriptome analysis

Haoyu Ruan
Jiangsu Province Hospital

Background Brain metastases explain the majority of mortality associated with lung cancer, which is the leading cause of cancer death. Cytology analysis of the cerebrospinal fluid (CSF) remains the diagnostic gold standard, however, the circulating tumor cells (CTCs) in CSF (CSF-CTCs) are not well defined at the molecular and transcriptome levels.
Methods We established an effective CSF-CTCs collection procedure and isolated individual CSF cells from five lung adenocarcinoma leptomeningeal metastases (LUAD-LM) patients and three controls. Three thousand seven hundred ninety-two single-cell transcriptomes were sequenced, and single-cell RNA sequencing (scRNA-seq) gene expression analysis was used to perform a comprehensive characterization of CSF cells.
Results Through clustering and expression analysis, we defined CSF-CTCs at the transcriptome level based on epithelial markers, proliferation markers, and genes with lung origin. The metastatic-CTC signature genes are enriched for metabolic pathway and cell adhesion molecule categories, which are crucial for the survival and metastases of tumor cells. We discovered substantial heterogeneity in patient CSF-CTCs. We quantified the degree of heterogeneity and found significantly greater among-patient heterogeneity compared to among-cell heterogeneity within a patient. This observation could be explained by spatial heterogeneity of metastatic sites, cell-cycle gene, and cancer-testis antigen (CTA) expression profiles as well as the proportion of CTCs displaying mesenchymal and cancer stem cell properties. In addition, our CSF-CTCs transcriptome profiling allowed us to determine the biomarkers during the progression of an LM patient with cancer of unknown primary site (CUP).
Conclusions Our results will provide candidate genes for an RNA-based digital detection of CSF-CTCs from LUAD-LM and CUP-LM cases, and shed light on the therapy and mechanism of LUAD-LM.

Role of circulating free DNA in evaluating clinical tumor burden and predicting survival in Chinese metastatic colorectal cancer patients

XIAO-JING XU、YI-YI YU、MIN-NA SHEN、Mengling Liu、SHENG-CHAO WU、Li Liang、FEI HUANG、Chenlu Zhang、WEI GUO、TIAN-SHU LIU
Department of Oncology, Zhongshan Hospital, Fudan University, Shanghai, China;

Background The aim of this study was to explore the utility of circulating free DNA (cfDNA) in the evaluation of clinical tumor burden and survival in Chinese patients with metastatic colorectal cancer (mCRC) and to preliminarily summarize some metastatic characteristics associated with mutational status.
Methods A panel covering a total of 197 hotspot mutations of KRAS, NRAS, BRAF and PIK3CA was used to evaluate the mutational status in plasma by next-generation sequencing (NGS) technology in 126 patients with mCRC. An amplification-refractory mutation system (ARMS) was used to analyze genomic DNA from matched tissue samples.
Clinical markers including carcinoembryonic antigen (CEA), carbohydrate antigen 199 (CA199), carbohydrate antigen 125 (CA125), neuron-specific enolase (NSE) and lactate dehydrogenase

(LDH) in serum and the sum of all tumor diameters on CT or PET/CT were collected to indicate clinical tumor burden. The correlations between cfDNA and clinical tumor burden were analyzed using Pearson correlation and linear regression models. The median progression- free survival (PFS) and 1-year overall survival (OS) rates were calculated by Kaplan-Meier (K-M) survival analysis.

Results Of the 126 enrolled patients, patients who were tested positive for mutations in plasma accounted for 45.2% (57/126). Mutations in KRAS, NRAS, BRAF and PIK3CA were detected in 37.3% (47/126), 1.6% (2/126), 3.2% (4/126) and 13.5% (17/126) of patients, respectively. The overall concordance rate of mutational status between plasma and matched tissues was 78.6% (99/126). Sixteen patients had mutations in plasma that were not detected in tissue, including some rare hotspot mutations. The cfDNA concentration was significantly correlated with the levels of clinical markers, especially CEA ($P < 0.0001$, Pearson $r = 0.81$), LDH ($P < 0.0001$, Pearson $r = 0.84$) and the sum of tumor diameters ($P < 0.0001$, Pearson $r = 0.80$). Patients with a high cfDNA concentration (> 17.91 ng/ml) had shorter median progression-free survival (6.6 versus 11.7 months, $P < 0.0001$) and lower 1-year overall survival rate (56% versus 94%, $P < 0.0001$) than those with a low cfDNA concentration (≤17.91 ng/ml). The most common metastatic site was the liver (77.8%), followed by the lymph nodes (62.7%), lung (40.5%), peritoneum (14.3%) and bone (10.3%), in all patients. There was no significant difference in metastasis between different mutational statuses.

Conclusion Analyzing mutations in plasma could provide a more comprehensive overview of the mutational landscape than analyzing mutations in tissue. The cfDNA concentration could be a quantitative biomarker of tumor burden and could predict survival in Chinese patients with mCRC.

HCV6 型 NS3 基因区域耐药检测方法学的建立

曾征宇、郭晓磊、代艳峰、温俊雄
广州金域医学检验中心有限公司

目的 通过检测已知为 HCV 6 型（6a,6n）的丙肝患者血浆样本 NS3 基因突变位点，建立并评价 HCV 直接抗病毒药物的耐药检测方法，为临床直接抗病毒治疗提供相关依据。

方法 设计针对 HCV 6 型（6a,6n）NS3 区域的扩增及测序引物，收集广州金域医学检验中心有限公司分型为 HCV 6 型（6a,6n）的丙肝患者的血浆样本；从血浆样本中提取 HCV RNA 模板，一步法反转录 PCR 法扩增 HCV NS3 片段，琼脂糖凝胶电泳鉴定扩增片段的正确性及产物大致浓度；满足测序要求时利用 ABI3730xl 测序仪进行测序；未满足测序要求的样本以第一轮扩增产物为模板进行巢式 PCR 扩增并测序。然后使用序列分析软件 Sequencher 将得到的序列与 HCV 6 型参考序列进行比对，进而确定分析位点的氨基酸变异情况。最后对检测数据进行统计分析，评价有效性、重复性和最低检出限三个方法学参数的分析性能。

结果 使用 40 例样本进行有效性验证，经过两轮 PCR，扩增及测序成功率为 100%（40/40）；使用 20 例样本由不同操作人员、在不同时间和不同仪器上进行重复性验证，结果显示该检测方案的重复性为 96.25%（77/80）；使用进行分别梯度稀释后的 5 例 HCV 阳性样本进行最低检出限验证，初步认为，该检测方案的最低检出限为在 1.00E+03IU/mL。

结论 该检测方案在用于 HCV 6 型 NS3 基因区域的耐药检测过程中，方法学性能良好，有望应用于临床相关检测。

Circular RNA hsa-circ_0003945 promotes progression of hepatocellular carcinoma by mediating miR-34c-5p/LGR4/GSK-3β axis

Lihua Lv、CHUN-YAN ZHANG、XIN-RONG YANG、WEI GUO
Department of Laboratory Medicine, Zhongshan Hospital, Fudan University

Aim Accumulating evidence proposed that circular RNAs (circRNAs) play essential roles in regulating cancer progression, but many circRNAs in hepatocellular carcinoma (HCC) remain unknown. In this study, we evaluated the dys-regulated circRNAs in HCC patients and explored the role of hsa_circ_0003945 (circ_0003945) and its underlying mechanism in HCC.
Methods Dysregulated circRNAs in HCC were identified through the bioinformatics analysis of Gene Expression Omnibus data sets. The qRT-PCR, Sanger sequencing, RNase R treatment, and actinomycin D treatment were conducted to confirm the characterization of circRNAs. The CCK-8, wound healing, transwell assay were performed to assess the functional role of hsa_circ_0003945 (circ_0003945) in HCC cells. The subcellular fraction assay and fluorescence in situ hybridization (FISH) assay were performed to locate the circ_0003945 in HCC cells. Dual-luciferase reporter assay was executed to verify the binding of circ_0003945 with miRNAs or the miRNAs with their target genes.
Results In this study, we found that circ_0003945 was upregulated in tissues, and higher circ_0003945 expression was positively correlated with tumor size and CNLC stages. The functional experiments revealed that overexpression or knockdown of circ_0003945 promoted or attenuated tumor growth and invasion, respectively. Mechanically, circ_0003945 might function as miR-34c-5p sponge to upregulate the expression of LGR4, which inactive GSK-3β/phospholating β-catenin pathway and finally facilitated the malignant progression of HCC cells. Additionally, GSK-3β activator or Wnt/β-catenin inhibitor could also reverse the consequence caused by intervening the expression level of circ_0003945.
Conclusion The circ_0003945 exerts a tumor-promoting role in HCC progression by regulating miR-34c-5p/LGR4/GSK-3β axis, which may be a potential target for HCC therapy.

PU-0880

The diagnostic value of plasma exosomal hsa_circ_0070396 for hepatocellular carcinoma

Lihua Lv[1]、WEN-JING YANG[1]、HAO WANG[1]、JIE ZHU[1]、AN-LI JIN[1]、TE LIU[2]、BEI-LI WANG[1]、JIAN ZHOU[1]、JIA FAN[1]、XIN-RONG YANG[1]、WEI GUO[1]
1. Department of Laboratory Medicine, Zhongshan Hospital, Fudan University
2. 上海中医药大学 上海老年医学研究所

Aim We aimed to identify novel exosomal circRNAs for HCC diagnosis.
Methods Exosomes was extracted and characterized. The expression level of exosomal circRNAs were verified via quantitative real-time PCR. The diagnostic value of candidate circRNAs was evaluated according to the receiver operating characteristic curve (ROC) analysis.
Results The exosomal circ_0070396 significantly elevated in HCC patients than other control groups and it performed better in distinguishing HCC patients from healthy donors than that of AFP. Combination of two above markers exerted greater diagnostic performance. Exosomal circ_0070396 could discriminate HCC individuals from patients with chronic hepatitis B and liver cirrhosis. Intriguingly, exosomal circ_0070396 was positively correlated with HCC progression.
Conclusion Exosomal circ_0070396 maybe a potential biomarker for HCC detection and management.

PU-0881

磷酸化酶激酶 β 亚基(PHKB)与肿瘤的研究进展

金安莉、杨文静、郭玮
复旦大学附属中山医院

目的 综述磷酸化酶激酶 β 亚基(PHKB)与肿瘤发生、发展之间的关系。
方法 以磷酸化酶激酶 β 亚基、糖原代谢和肿瘤为关键词进行文献检索，建立网络分析图，进行综述分析。
结果 糖原代谢被认为是癌症代谢重编程的关键途径，肿瘤细胞内糖原代谢重编程的特征表现为调控其合成与分解代谢的关键酶的表达或功能异常。糖原分解是机体内糖原代谢的主要方式之一，为肿瘤细胞的增殖提供能量，促进肿瘤的发生发展。磷酸化酶激酶是参与糖原分解过程的关键酶，其活性受到磷酸化酶激酶 β 亚基的调控。近年研究发现，磷酸化酶激酶 β 亚基在多种类型的肿瘤中异常表达，参与肿瘤细胞的增殖和凋亡，并与肿瘤的预后相关，有望成为一种预示肿瘤发生的新型生物分子标志物。
结论 磷酸化酶激酶 β 亚基有望成为一种预示肿瘤发生的新型生物分子标志物。

HBV RNA 检测试剂盒性能验证及临床应用

马艳婷、黄斐、王蓓丽、潘柏申、郭玮
复旦大学附属中山医院

目的 对 HBV RNA 检测试剂盒进行性能验证评估；比较不同乙肝两对半模式患者血清 HBV RNA 水平以及其与 HBV DNA 之间的相关性；探究血清 HBV RNA 水平与抗病毒药物治疗的联系。
方法 对 HBV RNA 检测试剂盒进行性能验证评估（包括精密度、灵敏度以及线性范围）；收集 81 例 HBsAg 阳性患者的血清，并进行分组。通过对比分析 HBV RNA 与其他血清学标志物以及治疗用药情况的联系来探讨其潜在临床意义及应用价值。
结果 HBV RNA 试剂盒的低值和高值的批内精密度 CV 为 2.16%、0.63%，批间精密度 CV 为 5.98%、3.11%；灵敏度达 100%；线性回归方程为 y = 0.9769x + 0.1299，R2=0.9995，线性范围为 102~107 copies/ml，性能验证符合要求；HBeAg 阳性组血清 HBV RNA 水平高于 HBeAg 阴性组（P<0.01），在不同两对半模式患者中，HBeAg 阳性且 HBeAb 阴性组 HBV RNA 水平最高（P<0.01）；未经治疗患者血清 HBV RNA 水平高于治疗组患者（P<0.05）；HBV RNA 与 HBV DNA 及 HBeAg 均有相关性（r=0.348，P<0.05；r=0.544，P<0.05）。
结论 HBV RNA 试剂盒性能验证结果满足临床需求，血清 HBV RNA 是一种潜在的乙肝病毒活性及治疗疗效监测的新型标志物。

PU-0883

多平台检测 cfDNA 肿瘤突变在 NSCLC 患者中的应用评估

高姚怡、黄斐、王蓓丽、潘柏申、郭玮
复旦大学附属中山医院

目的 对 NGS 平台检测 NSCLC 患者 cfDNA 肿瘤突变进行性能验证，并进行血浆 cfDNA 突变检测的 NGS、ddPCR、super ARMS 平台比对。
方法 对标准品、初诊未治疗 NSCLC 患者血浆 cfDNA 及自制混合标本进行 NGS 平台的检测，以验证 NGS 平台的空白限、分析灵敏度、精密度、准确性及分析特异性；使用 ddPCR、NGS 平台对

复旦大学附属中山医院的 75 例 NSCLC 患者血浆 cfDNA 突变检测，比较两平台对血浆 cfDNA 突变的检测性能，随机抽取 12 例进行 super ARMS EGFR 突变检测，比较 3 平台对 NSCLC 患者血浆 cfDNA 突变检测的检测性能。

结果 本研究 NGS 平台对血浆 cfDNA 突变检测的空白限统一设置为 0.00%；分析灵敏度为 0.2%；批内精密度、批间精密度均为 100%；检测结果不受血浆内源性血红蛋白、胆红素和甘油三酯或外源性 DNA 干扰影响，分析特异性好。75 例 NSCLC 患者血浆 cfDNA ddPCR 平台、NGS 平台检测突变阳性率分别为 61.33%、60%，完全一致率为 89.33%。

结论 NGS 平台可用于 NSCLC 患者的 cfDNA 突变检测；ddPCR、NGS、super ARMS 对 NSCLC 患者血浆 cfDNA 的突变检测各有优点，可根据临床需要选择。

PU-0884

Chemotherapy-associated clonal hematopoiesis mutations should be taken seriously in plasma cell-free DNA RAS/BRAF genotyping for metastatic colorectal cancer

Fei Huang、YI-HUI YANG、BAI-SHEN PAN、BEI-LI WANG、WEI GUO
Department of Laboratory Medicine, Zhongshan Hospital, Fudan University

Background Genotyping of plasma cell-free DNA (cfDNA) is an increasingly important method to assess the tumor mutation status in colorectal cancer (CRC) patients. Clonal hematopoiesis (CH) releases non-tumor somatic mutations into blood, causing false positive results in cfDNA-based tumor genotyping. Till now, it is still not clear if CH should be examined in all the CRC patients undergoing cfDNA analysis.
Methods We analyzed cfDNA KRAS/NRAS/BRAF genotypes in 236 metastatic CRC patients, who had matched tissue genotyping results, by next-generation sequencing using plasma cfDNA. The cfDNA-only mutations with allele frequencies (AFs) <5% were defined as candidate CH-derived mutations. CH-derived mutations were finally determined by droplet digital PCR (ddPCR) using paired peripheral blood cells (PBCs). A patient with a CH-derived mutation was followed up and the subpopulation of blood cells, in which CH was present, was investigated.
Results Three CH-derived mutations, KRAS Q61H, KRAS G12D and KRAS G12V, were identified in the patient cohort. All the three patients harboring corresponding CH-derived mutations had a prior chemotherapy history. The CH-derived KRAS G12V mutation in a patient was found only present in lymphocytes and persisting under treatment. For all the cfDNA mutations, the CH-derived ones were clustered in the patients with <5% mutation AF and prior chemotherapy.
Conclusion It is recommended for patients with <5% mutation AF and prior chemotherapy to take genotyping analysis of their PBCs following plasma cfDNA genotyping.

PU-0885

Cross-platform comparison of NGS and MALDI-TOF mass spectrometry for detecting RAS/RAF/PIK3CA mutations in cfDNA from metastatic colorectal cancer patients

Fei Huang、MIN-LU CAO、BEI-LI WANG、WEI GUO
Department of Laboratory Medicine, Zhongshan Hospital, Fudan University

Background Examining the tumor RAS/RAF/PIK3CA status in metastatic colorectal cancer (mCRC) is essential for treatment selection and prognosis evaluation. Cell-free DNA (cfDNA) in the circulatory system is a feasible source for tumor gene analysis.

Methods In this study, we recruited mCRC patients and analyzed their KRAS/BRAS/BRAF/PIK3CA status in cfDNA using two platforms, next-generation sequencing (NGS) and matrix-assisted laser desorption/ionization time-of-flight mass spectrometry (MALDI-TOF MS). The performance between the two platforms and the concordance between cfDNA and tissue were analyzed. The relationship between cfDNA-related variables and clinical variables were also assessed. For the patients that carried tumor mutations and received continuous treatments, their cfDNA was monitored in the follow-ups.
Results NGS reported 1 false negative result of 840 reportable ones, whereas MALDI-TOF reported 6 false positive ones and 5 false negative ones. The overall concordance rate of NGS and MALDI-TOF was 98.6%. For the reportable types of mutations in both cfDNA and tissue, the concordance rate was 96.1%. Among 28 tissue-positive patients, the allele frequencies of tumor mutations in cfDNA was significantly higher in patients with primary tumor burden. Both CEA and CA 19-9 were positively correlated with cfDNA concentration. The allele frequencies of tumor mutations changed with disease progression.
Conclusions Compared to MALDI-TOF, NGS showed slightly better performance in detecting cfDNA mutations. cfDNA was a valuable source for tumor mutation detection, with a high concordance rate with tissue. As well as serum biomarkers, cfDNA-related variables reflected the tumor status, showing a promising potential in monitoring disease progression.

PU-0886

卡氏肺孢子虫肺炎患者肺泡灌洗液的免提取 PCR 检测方法的建立及临床应用评估

杨轶慧、王蓓丽、郭玮
复旦大学附属中山医院

参考中国医师协会检验医师分会分子诊断专家委员会《实验室自建分子诊断项目基本要求专家共识》相关要求，验证本实验室自建的卡氏肺孢子虫肺炎患者肺泡灌洗液的免提取 PCR 检测方法各项性能参数。
方法 2016 年 1 月-2019 年 12 月复旦大学附属中山医院已确诊的 10 例肺炎患者的肺泡灌洗液样本及自配标准品质粒。根据卡氏肺孢子虫基因保守序列设计引物和探针，建立一种免提取核酸的荧光 PCR 检测方法。在准确性、精密度、检出限、分析特异性、临床符合率等各方面对检测方法的性能进行评估。
结果 基于肺泡灌洗液样本的免提取 PCR 检测方法的准确性一致性为 100%；精确性符合率为 100%；最低检出限为 500 拷贝/ml；特异性符合率为 100%；临床符合率为 100%。
结论 基于免提取荧光 PCR 反应方法检测卡氏肺孢子虫可用于卡氏肺孢子虫肺炎患者的快速筛查和辅助诊断。

高通量测序生信数据分析提示结直肠癌患者 ERBB2 扩增

沈敏娜、郁俐、陈馨宁、王蓓丽、郭玮
复旦大学附属中山医院

目的 回顾性分析非涵盖 ERBB2 扩增检测的高通量测序检测方法生信数据对 ERBB2 扩增的潜在提示价值。
方法 回顾性分析经病理活检确诊为结直肠癌，并接受外周血 cfDNA 高通量测序检测样本的生物信息学数据 252 例。根据经免疫组织化学（immunohistochemistry, IHC）和荧光原位杂交(fluorescence in situ hybridization, FISH)判断为 ERBB2 非扩增样本的生物信息学数据，初步确定

其提示 ERBB2 扩增的临界值。根据临界值筛选可疑阳性样本，使用数字 PCR、IHC 和 FISH 进行验证。
结果 89 例经 IHC 和 FISH 判定为 ERBB2 非扩增样本的 17 号染色体占检测区域 Reads 数比例范围为 0.188~0.299。以 0.299 作为提示 ERBB2 扩增的临界值分析 163 例样本数据，其中 7 例疑似阳性，比例范围 0.302~0.853。其中 5 例经 IHC 和 FISH 判定为阳性，其中 6 例经数字 PCR 验证为阳性，ERBB2/EIF2C1 比值与 17 号染色体占检测区域 Reads 数比例成正相关，相关性好，r2=0.9498。
结论 高通量测序生信数据对结直肠癌患者 ERBB2 扩增有一定提示价值。

PU-0888

基于 GeneXpert 系统的结核分枝杆菌检测及利福平耐药的研究

郭晓磊、曾征宇、唐耀祖
广州金域医学检验中心

目的 通过回顾性研究广州金域医学检验公司 2015 年 4 月~2018 年 3 月不同标本类型、不同地区、不同性别及不同年龄段人群的结核分枝杆菌(MTB)阳性率及利福平(RIF)耐药率的情况，对临床采样提供指导意义同时对发病率高的人群指导采取干预措施，从而指导疾病防控。
方法 采用 GeneXpert MTB/RIF 方法对 11918 例疑似结核患者的标本进行检测，统计 MTB 阳性及 RIF 耐药的数据，分析其意义。
结果 11918 例患者 MTB 阳性率为 28.51%，RIF 耐药率为 15.27%。其中，痰液的 MTB 阳性率最高，为 34.06%；关节液的 RIF 耐药率最高，为 28.57%；各标本类型的 MTB 阳性率及 RIF 耐药率差异具有统计学意义(χ^2=480.86，P<0.05；χ^2=457.38，P<0.05)；东北地区 MTB 阳性率及 RIF 耐药率均最高，各地区 MTB 阳性率及 RIF 耐药率差异具有统计学意义(χ^2=196.49，P<0.05；χ^2=46.89，P<0.05)；男性 MTB 阳性率显著高于女性，差异具有统计学意义(χ^2=92.05，P<0.05)，RIF 耐药率差异无统计学意义(χ^2=0.73，P>0.05)；20~29 岁年龄段患者 MTB 阳性率最高，40~49 岁年龄段患者 RIF 耐药率最高，各年龄段 MTB 阳性率及 RIF 耐药率差异具有统计学意义(χ^2=143.86，P<0.05；χ^2=52.57，P<0.05)；各年份 MTB 阳性率差异具有统计学意义(χ^2=21.92，P<0.05)，各年份 RIF 耐药率差异无统计学意义(χ^2=7.59，P>0.05)。
结论 各标本类型中，以痰液标本 MTB 阳性率最高，为首选标本类型；在全国七个地区中，以东北地区 MTB 阳性率最高，患者男性多于女性，MTB 阳性主要集中在青年年龄段(21~29 岁)，RIF 耐药主要集中在中年年龄段(40-49 岁)，对于结核的防控，应针对重点人群。

PU-0889

Correlation between steroid levels in follicular fluid and hormone synthesis related substances in its exosomes and embryo quality in patients with polycystic ovary syndrome

LI YU、BEI-LI WANG、WEI GUO
Department of Laboratory Medicine, Zhongshan Hospital, Fudan University, Shanghai

Purpose Polycystic ovary syndrome (PCOS) is a major endocrine and metabolic disorder with heterogeneous manifestations and complex etiology. Follicular fluid (FF) serves as the complex microenvironment for follicular development. However, the correlation between the concentration of steroid in FF and the pathogenesis of PCOS is still unclear.
Methods 20 steroid levels in FF from ten patients with PCOS and ten women with male-factor infertility

undergoing in vitro fertilization were tested by liquid chromatography-tandem mass spectrometry (LC-MS/MS) in order to explore their possibly correlation with PCOS. Meanwhile, the mRNA expression levels of core enzymes in steroid synthesis pathway from exosomes of FF were also detected by qPCR.
Results The estriol ($p < 0.01$), estradiol ($p < 0.05$) and prenenolone ($p < 0.01$) levels in FF of PCOS group were significantly increased, compared to the normal group, and the progesterone levels ($p < 0.05$) were decreased in PCOS group. Increased mRNA levels of CYP11A, CYP19A and HSD17B2 of exosomes were accompanied by the changes in hormonal levels in FF. Correlation analysis showed that mRNA levels of CYP11A and HSD17B2 were negatively and significantly correlated with percent of good-quality embryos and rate of embryos develop to blastocyst.
Conclusion Our results suggest that increased levels of estrogen and pregnenolone in follicular fluid may affect follicle development in PCOS patients, and the mechanism is partially related to HSD17B1, CYP19A1 and CYP11A1 expression change in FF exosomes.

PU-0890

Role of blood mSEPT9 in evaluating tumor burden and disease monitoring in colorectal cancer patients

HUI-QIN JIANG、BEI-LI WANG、WEI GUO
Department of Laboratory Medicine, Zhongshan Hospital, Fudan University.

Purpose This study aimed to investigate the correlation between mSEPT9 and tumor burden and explore the role of mSEPT9 in disease monitoring in CRC patients.
Methods A total of 309 patients were recruited and received mSEPT9 detection in this retrospective study. Clinicopathologic characteristics were collected, including age, gender, differentiation, gene mutation, stage, tumor marker, and so on. The correlations between mSEPT9 and clinical tumor burden were analyzed. A relative mSEPT9 value was determined using the △△Ct method.
Results The overall positivity rate of mSEPT9 was 39.8% in CRC patients. mSEPT9 status was significantly associated with disease status and tumor marker (CEA and CA19-9). The mSEPT9 positivity rate was 15.6%, 50.0%, 64.4%, and 70.0% for P0M0, P1M0, P0M1, and P1M1, respectively ($P<0.001$). Among 137 CRC patients who received mSEPT9 assay before surgery, the pre-operation mSEPT9 positivity rate increased significantly from UICC stage I to stage IV CRC patients (Stage I vs. II vs. III vs. IV 25% vs. 59.1% vs. 57.1% vs. 70.0%, respectively). Consecutive blood samples were available from 26 patients on therapy. The patients with increased mSEPT9 levels after treatment showed a higher progression rate.
Conclusion mSEPT9 was a biomarker reflecting tumor burden, and serial detecting of mSEPT9 could be a promising strategy for disease monitoring in CRC patients.

PU-0891

一种快速、灵敏的 SARS-CoV-2 感染环介导等温扩增试验的研制及临床应用

邓倩昀、胡雪姣、侯铁英
广东省人民医院

目的 开发和验证一种新的反转录环介导的等温扩增（RT-LAMP）方法来检测严重急性呼吸综合征冠状病毒 2 型（SARS-CoV-2）。SARS-CoV-2 的爆发迫切需要敏感、便捷的诊断方法，以遏制疫情和及时治疗患者。

方法 从 2020 年 1 月 26 日至 4 月 8 日，在两家医院招募疑似 COVID-19 患者和密切接触者。采集呼吸道标本，采用 RT-LAMP 检测，并与逆转录定量 PCR （RT-qPCR）检测结果进行比较。两种方法结果不一致的样品进行二代测序确认。RT-LAMP 还应用于无症状 COVID-19 携带者和其他呼吸道病毒感染患者。

结果 共收集 129 例患者（329 例鼻咽拭子）和 76 例患者（152 例鼻咽拭子和痰样本）的样本。RT-LAMP 方法被证实准确度高（总灵敏度和特异度分别为 88.89%和 99.00%）和诊断效能高（阳性和阴性似然比分别为 88.89 和 0.11）。与 RT-qPCR 相比，RT-LAMP 检测 SARS-CoV-2 的灵敏度更高（88.89% vs 81.48%）、一致性更高（kappa, 0.92），且只需要恒温加热和目视判读结果。RT-LAMP 从样品制备到结果所需时间均在 1 h 以内。此外，RT-LAMP 可用于无症状患者，且不与其他呼吸道病原体发生交叉反应。

结论 我们开发的 RT-LAMP 一种提供了快速、敏感和直接的 SARS-CoV-2 感染检测方法，可能有助于在公共领域和医院扩大 COVID-19 检测范围。

基于 COVID-19 确诊患者临床多种生物样本监测 2019-nCoV RNA 比对研究

张驰[1]、王钒[1]、何雯雯[1]、宋玉霞[1]、许珺[1]、舒占钧[1]、张蕊[1]、李远达[1]、王子璠[1]、段丽[1]、屈晓娟[1]、赵豆豆[1]、木尼热·库尔班[1]、何雪[1]、林国跃#[1]、蔺志强[1]、易嘉敏[2]、王珂[3]

1. 新疆医科大学第八附属医院（新疆新冠肺炎医疗救治定点医院）

2. 广州中医药大学第一临床医学院中西医临床，广州市 510006；

3. 广东省广州市天河区黄埔大道石牌村广东省结核控制中心，广州市 510000

目的 探讨冠状病毒病 (corona virus disease 2019，COVID-19) 患者不同部位核酸检测阳性率及其影响因素。

方法 应用 2019-nCoV ORF1ab/N 基因双重实时荧光 PCR 技术对新疆维吾尔自治区第六人民医院 2020 年 1 月 31 日-2 月 19 日定点收治住院的 46 例 COVID-19 患者不同部位样本进行 2019-nCoV 核酸检测，分析比较咽拭子、痰液、粪便的病毒核酸检测阳性率。

结果 46 例 COVID-19 患者共检测咽拭子 246 人次，痰液 18 人次，粪便 15 人次，其核酸检测阳性率咽拭子 43.90% (108/246)、痰液 33.33%(5/15)、粪便 38.89%(7/18),咽拭子检出阳性率高于痰液及粪便，但三者阳性率差异无统计学意义（P ＞ 0.05）；对疑难危重型患者有针对性的重点同时采集 2 种不同生物样本进行 2019-nCoV 核酸检测，发现 10 例咽拭子/粪便样本检测阳性率 80.00%(8/10) /70.00 %(7/10)，比 4 例咽拭子/痰液样本 75.00%(3/4)/ 50.00%(2/4)和 2 例粪便/痰液样本 0.0%(0/2）/50.00%(1/2)同时检测效果明显的高，经 Fisher 精确检验组内比较无统计学意义（P＞ 0.05）。

结论 重点监测 COVID-19 患者选择咽拭子或痰液样本就可以及时明确临床诊断、预估病情进展及预后，对已确诊的 COVID-19 患者同时采集不同部位样本反复监测 2019-nCoV RNA 其临床诊断意义不大。

PU-0893

成骨不全患者临床分型及表型分析

白雪[1]、常小丽[1]、官士诊[1]、任秀智[2]、王毅[1]
1. 天津市天津医院
2. 天津市武清区人民医院

目的 研究 COL1A1/COL1A2 基因突变的成骨不全（osteogenesis imperfecta, OI）患者临床分型及临床表型。
方法 收集天津市天津医院及天津市武清区人民医院就诊的 OI 患者，经基因检测已确诊为 COL1A1/COL1A2 基因突变患者 28 例，其中 COL1A1 基因突变患者 17 例、COL1A2 基因突变患者 11 例，分析这些 OI 患者的临床分型及表型。
结果 28 例 COL1A1/COL1A2 基因突变的 OI 患者中，临床分型为 IV 型的 OI 患者占 57.14%、Ⅰ型 OI 患者占 32.14%、Ⅲ型 OI 患者占 10.71%。Ⅰ型患者与Ⅲ型患者例数比较无显著性差异（χ^2 =3.84，P>0.05），Ⅰ型患者与 IV 型患者例数比较无显著性差异（χ^2 =3.54，P>0.05）。IV 型 OI 患者例数大于Ⅲ型 OI 患者例数（χ^2 =13.46，P<0.01）。在 OI 患者的临床表型中，蓝巩膜占 100%，四肢畸形占 82.14%，牙质形成不全占 67.86%，脊柱及胸部畸形各占 35.71%，影响活动能力，不能自行行走的患者占 42.86%。初次骨折的年龄从出生到 13 岁均有发生，初次骨折的平均年龄为 2 岁。患者骨折次数从 2 次到 80 次均有发生，平均骨折的次数为 18 次。OI 患者身材矮小，但Ⅰ型 OI 患者身高可接近正常水平。
结论 COL1A1/COL1A2 基因突变的 OI 患者临床表型变化多样，临床表型前三位依次为，蓝巩膜、四肢畸形、牙质形成不全。初次骨折时间越早、骨折次数越多，病情越严重。临床表型较严重的患者临床分型以Ⅲ型、IV 型居多。临床分型和临床表型分析有助于 OI 患者的诊断和发病机制研究。

PU-0894

恒温扩增芯片技术在下呼吸道感染性疾病诊断中的应用价值评估

吕阳花
攀枝花市中心医院

目的 评价恒温扩增芯片技术在医院下呼吸道感染性疾病诊断中的应用价值。
方法 纳入于 2020 年 11 月~2021 年 5 月攀枝花市中心医院呼吸科和重症医学科疑似下呼吸道感染住院患者 506 例，在抗生素使用前采集痰液或肺泡灌洗液标本，通过恒温扩增芯片技术（芯片法）检测 13 种呼吸道常见病原菌，同时进行痰培养，比较芯片法和痰培养方法的检出率。
结果 芯片法共检出 167 例样本阳性，阳性率 33.00%（167/506），高于培养法的 17.39%（88/506），差异具有统计学意义；芯片法检出阳性样本中，单一感染 120 例，占比 71.86%（120/167），混合感染 47 例，占比 28.14%（47/167），混合感染以 2 重感染为主，占混合感染的 70.21%（33/47），另外在 4 例样本中分别检出 4 种病原菌混合感染；芯片法检出率排名前五位的病原菌分别为肺炎克雷伯菌（21.65%）、流感嗜血杆菌（16.45%）、结核分枝杆菌（13.85%）、铜绿假单胞菌（10.82%）和肺炎链球菌（7.79%）；同时，芯片法检出 1 例嗜肺军团菌和 3 例肺炎支原体。
结论 恒温扩增芯片技术检测呼吸道病原菌操作简便、快速、灵敏度高，可同时检出 13 种呼吸道常见病原菌，病原体的检出率明显高于培养法，并且在结核分枝杆菌、嗜肺军团菌、肺炎支原体等难培养病原菌感染的诊断方面优于培养法。

PU-0895

血浆 Septin9 甲基化检测在结直肠癌诊断中的临床意义

刘冬雪
吉林金域检验医学检验所有限公司

目的 通过研究血浆中游离 DNA Septin9 甲基化检测灵敏度与结直肠癌诊断及分期的关系，探讨血浆 Septin9 甲基化检测在结直肠癌诊断中的临床意义。
方法 收集 2014 年至 2017 年间权威研究机构收取的大样本 1330 例进行临床研究试验，受试者年龄全部在 30 岁到 80 岁之间，其中有结直肠癌阳性患者 586 例，结直肠癌前病变及早期其它肠道系统疾病患者 744 例。对这 1330 例大样本进行 Septin9 甲基化检测，评价其在结直肠癌诊断中的价值。
结果 通过对 1330 例样本结果进行逐一分析，其中结直肠癌阳性符合率为 76.45%，结直肠癌阴性符合率为 90.32%,总体符合率为 84.21%。在探讨 Septin9 甲基化检测与结直肠癌分期的研究中，1 期结直肠癌阳性符合率为 63.89%，2 期结直肠癌阳性符合率为 75.92%，3 期结直肠癌阳性符合率为 82.82%，4 期结直肠癌阳性符合率为 90.41%。
结论 Septin9 甲基化检测结果与患者的年龄、性别无相关性，检测灵敏度与结直肠癌分期呈正相关。Septin9 甲基化检测在结直肠癌诊断中有比较高的灵敏度与特异度，优势为无创伤、采样方便快捷、样本利用度高、方法稳定等，临床推荐适用于不能或不愿意接受肠镜检查结直肠癌高风险人群，可以与肠镜检测优势互补，提高肠镜的一次阳性检出率，因此可以作为在临床检测中诊断结直肠癌的辅助手段。

PU-0896

Screening and functional prediction of key candidate genes in hepatitis B virus-associated hepatocellular carcinoma

Ling Liao、Shaoli Deng
中国人民解放军陆军特色医学中心

Background The molecular mechanism by which hepatitis B virus (HBV) induces hepatocellular carcinoma (HCC) is still unknown. The genomic expression profile and bioinformatics **Methods** were used to investigate the potential pathogenesis and therapeutic targets for HBV associated HCC (HBV-HCC).
Methods Microarray dataset GSE55092 was downloaded from the Gene Expression Omnibus (GEO) database. The data was analyzed by bioinformatics software to find differentially expressed genes (DEGs). Gene ontology (GO) enrichment analysis, kyoto Encyclopedia of Genes and Genomes (KEGG) pathway analysis, ingenuity pathway analysis (IPA) and protein-protein interactions (PPIs) network analysis were then performed on DEGs. The hub genes were identified using Centiscape2.2 and Molecular Complex Detection (MCODE) in Cytoscape software (Cytoscape_v3.7.2). The survival data of these hub genes was downloaded from the OncoLnc.
Results A total of 2264 messenger RNA transcripts were differentially expressed, including 764 up-regulated and 1500 down-regulated in tumor tissues when compared to those in the paired normal tissues. GO analysis revealed that these DEGs were related to small molecule metabolic process, xenobiotic metabolic process and cellular nitrogen compound metabolic process. KEGG pathway analysis revealed that metabolic pathways, complement and coagulation cascades and chemical carcinogenesis were involved. IPA analysis showed that canonical pathways, such as LXR/RXR activation, FXR/RXR activation and LPS/IL-1 mediated inhibition of RXR function were involved in regulating the occurrence and development of HBV-HCC. Diseases and bio functions showed that DEGs were mainly associated with the following diseases or biological function

abnormalities: cancer, organismal injury and abnormalities, gastrointestinal disease, and hepatic system disease. The top 10 upstream regulators were predicted to be activated or inhibited by Z-score and identified 25 networks. The 10 genes with the highest degree of connectivity were defined as the hub genes. Cox regression revealed that all the 10 genes (CDC20, BUB1B, KIF11, TTK, EZH2, ZWINT, NDC80, TPX2, MELK and KIF20A) were related to the overall survival.
Conclusion Our study provided a registry of genes that play important roles in regulating the development of HBV-HCC, assisting us in understanding the molecular mechanisms that underlie the carcinogenesis and progression of HCC.

PU-0897

基于 CRISPR/Cas9 全基因文库技术筛选肝癌乐伐替尼耐药基因靶点

孙一帆[1,2]、卢永刚[2]、黄文杰[2]、沈永奇[2]
1. 柳州市柳铁中心医院
2. 广西医科大学附属柳铁中心医院

目的 乐伐替尼（Lenvatinib）是新的中晚期肝癌患者一线靶向药物，但其耐药机制尚未阐述。
材料和方法 使用 GeCKO V2 文库建立 HuH7 Lenvatinib 耐药细胞模型，经高通量测序获得表达差异的 sgRNA。利用 CCK8 和克隆形成实验筛选出影响细胞增殖的耐药关键基因。采用 HuH7 和 PLC/PRF/5 细胞系，通过敲除或敲低耐药基因，通过克隆形成和细胞杀伤实验检测基因缺失后对 Lenvatinib 耐药性的影响。进一步过表达耐药基因回复基因功能后验证对 Lenvatinib 耐药性的影响。Western blot 检测 HuH7 和 PLC/PRF/5 细胞系经敲除或敲低、过表达耐药基因后 AKT、ERK 和 FOXO3 磷酸化水平。选择相关通路抑制剂作为杀伤药物，验证 IC50，获得基因缺失后仍然对癌细胞敏感的药物，并在 HuH7、PLC/PRF/5 细胞系和肝癌小鼠模型中，验证药物对肝癌细胞增殖、肿瘤大小和重量的影响。
结果 经测序和初步验证结果表明 NF1 和 DUSP9 是潜在的耐药基因。敲除或敲低 NF1 和 DUSP9 后，肝癌细胞对 Lenvatinib 耐药性上升；过表达 NF1 和 DUSP9 后，可恢复了肝癌细胞对 Lenvatinib 的敏感性。NF1 缺失导致 AKT、ERK 和 FOXO3 磷酸化；Dusp9 缺失导致 ERK 和 FOXO3 磷酸化，过表达 NF1 和 DUSP9 后，上述磷酸化重新被抑制。NF1 或 Dusp9 缺失后，Trametinib 仍能抑制 AKT、ERK 的磷酸化。动物实验表明 NF1 缺失后，肝癌细胞对 Trametinib 仍然敏感。
结论 NF1 和 DUSP9 缺失后通过磷酸化 AKT、ERK 和 FOXO3，导致 PI3K/AKT/mTOR 和 RAS/Raf/MAPK/ERK 信号通路重新激活，使 Lenvatinib 失去了对肝癌细胞的抑制作用。Trametinib 仍能抑制 NF1 缺失后导致的 AKT、ERK 磷酸化。

LINC02323 参与肺腺癌转移的相关分子机制研究

张晓时[1]、杜鲁涛[2]、韩竟懿[1]、李晓丽[1]、王洪春[1]、王传新[2]
1. 山东大学齐鲁医院
2. 山东大学第二医院

In the present study, we aimed to investigate the underlying roles of LINC02323 in the migration, invasion and TGF-β-induced epithelial-mesenchymal transition (EMT) of lung adenocarcinoma (LUAD) cells.LINC02323 was distributed in the cytoplasm and nucleus. TGF-β-induced EMT process was significantly affected by both RNA interference (RNAi) and over-expression of LINC02323. The predicted results showed that there were binding sites between LINC02323 and miR-1343-3p. The double luciferase reporting system, RT-qPCR and Western

blotting experiments confirmed that LINC02323 could bind to miR-1343-3p, which bound to TGF-β receptor 1 (TGFBR1). Inhibition of miR-1343-3p reversed LINC02323 silencing-mediated suppression of migration, invasion and EMT.

PU-0899

LncRNA SNHG16 通过靶向 miR-106a，上调 KLF9，加重糖尿病肾病中高糖诱导的足细胞损伤

何昕
暨南大学附属第一医院

糖尿病肾病(DN)是糖尿病的主要并发症之一，足细胞损伤在 DN 发病机制中起重要作用。MicroRNA(miR)-106a 被预测为长链非编码 RNA (lncRNA)SNHG16 的靶标，并已被确定为糖尿病肾病的治疗生物标志物。然而，SNHG16/miR-106a 轴在 DN 中的作用尚未得到阐明。本研究旨在探讨 SNHG16 是否可通过 miR-106a 调控 DN 足细胞损伤，并揭示其潜在机制。
方法 MPC5 足细胞经对照或高糖(HG)培养基处理后，检测其 miR-106a 水平。暴露于汞的 MPC5 细胞中，miR-106a 过表达或不过表达，然后 KLF9 或 SNHG16 过表达或不表达。检测细胞活力、凋亡、活性氧种类及 synaptopodin、podocin 蛋白表达。
结果 MiR-106a 在 DN 患者和 hg 诱导的 MPC5 足细胞中均下调。过表达 miR-106a 抑制了高糖诱导的细胞活力、Bcl-2、synaptopodin 和 podocin 表达的降低，ROS、凋亡细胞、Bax 和 cleavedcaspase3 表达的增加。MiR-106a 可与 KLF9 和 lncRNA SNHG16 结合，在 DN 患者和 hg 诱导的 MPC5 足细胞血清中均上调。SNHG16 过表达降低了 miR-106a 水平，而 miR-106a 过表达降低了 KLF9 的表达。此外，过表达 KLF9 或 SNHG16 削弱了 miR-106a 对汞诱导的 MPC5 损伤的保护作用。
讨论 LncRNA SNHG16 可以通过靶向 miR-106a 来增强 KLF9 的表达，从而促进汞刺激的足细胞损伤。SNHG16/miR-106a/KLF9 干预可能是一种治疗 DN 的方法。

Clinical evaluation of Interferon-γ Release Assay, Nucleic Acid Amplification Tests and Culture in the diagnosis of active tuberculosis

Ting Xu[1]、Yan Zhang[2]、Guodong Rong[1]、Hong Zhao[1]、Lei Wu[1]、Peijun Huang[1]
1. the First Affiliated Hospital of Nanjing Medical University
2. Nanjing medical university

Background Interferon-γ release assay (IGRA), nucleic acid amplification tests (NAAT) and culture are recommended as the evidence of diagnosed TB, but still have considerable limitations. This study intended to evaluate the performance of these **Methods** to speed up the TB diagnosis process through the effectively use of routine tests.
Methods A retrospective study was conducted from January 2018 to June 2019 at the first affiliated hospital of Nanjing Medical University. A total of 288 hospitalized patients who were suspected of active tuberculosis were enrolled in this study. Each subject underwent IGRA, NAAT and TB culture tests. The diagnostic performance of these tests was compared.
Results IGRA produced the highest overall sensitivity (87.80%) as compared to NAAT and culture (both 46.34%). NAAT produced an overall sensitivity and PPV of 100%. The comparatively higher overall NPV occurred in IGRA (97.28%), followed by NAAT (91.82%) and culture (91.79%). In extrapulmonary TB, IGRA had a sensitivity of 100%, which outperformed

both NAAT (25%) and culture (8.33%). A substantial agreement between NAAT and culture was revealed with Kappa coefficient of 0.64 (95% CI 0.46-0.82, P<0.001). A trend was also found IGRA simultaneously increased with the positive rates of NAAT and culture (P<0.001). Then a two-step procedure of NAAT-IGRA was suggested benefited 69.44% patients (200/288) who got the test results in about 28 hours with the accuracy of 99% (198/200).
Conclusions IGRA and NAAT displayed complementary advantages in tuberculosis diagnosis, and the two-step principle of NAAT-IGRA can shorten the diagnostic cycle with high accuracy.

PU-0901

血清长链非编码 RNA Linc00511 在胃癌中的表达及临床意义

孙晓杰、李林
齐齐哈尔医学院

目的 探讨长链非编码 RNA Linc00511 在胃癌病人血清中的表达，分析其表达水平与胃癌临床特征的相关性，评估其单项及与糖类抗原 CA72-4 联合检测对胃癌临床诊断的应用价值。
方法 收集 100 例胃癌病人和 76 例健康对照者血清样本，通过实时荧光定量 PCR 技术检测 Linc00511 的相对表达量；Mann-Whitney U 检验方法分析 Linc00511 表达水平与胃癌临床特征的相关性；采用受试者工作特征（ROC）曲线和危险分数分析法评价 linc00511 对胃癌的诊断价值；通过 ROC 曲线下面积（AUC）、灵敏度、特异度、阳性预测值（PPV）及阴性预测值（NPV）评估单项及联合检测的临床诊断效能。
结果 胃癌组和健康对照组血清 Linc00511 的相对表达量分别为 1.871±1.082 和 1.389±1.078，两组比较差异有统计学意义（Z=﹣3.605，p<0.01）。Linc00511 的表达水平与患者的年龄、性别以及肿瘤远处转移等均无关（p>0.05），但其在临床Ⅰ~Ⅱ期胃癌病人血清中的表达水平显著高于临床Ⅲ~Ⅳ期的病人，两组比较差异有统计学意义（Z=-2.203，p<0.05）；此外，Linc00511 在无淋巴结转移病人血清中的表达水平显著高于有淋巴结转移者（Z=-2.138，p<0.05）。Linc00511 诊断胃癌的 AUC 值为 0.659，诊断的灵敏度和特异度分别为 74%和 60.5%，PPV 和 NPV 分别为 71.8%和 64.4%。CA72-4 诊断胃癌的 AUC 值为 0.764，灵敏度和特异度分别为 30%和 81.6%，PPV 和 NPV 分别为 68.2%和 47%。CA72-4 与 Linc00511 联合检测可将灵敏度和 NPV 分别提高至 83%和 69.6%。
结论 血清 Linc00511 的表达水平与胃癌临床分期和淋巴结转移相关，与 CA72-4 联合检测可作为胃癌诊断的潜在血清学标志物。

PU-0902

血管内皮生长因子 VEGF 在肺癌患者血清中的表达及诊断价值的研究

王琳[1]、任丽[2]
1. 天津医科大学肿瘤医院
2. 天津医科大学肿瘤医院

目的 本论文旨在研究血管内皮生长因子（VEGF）在肺癌患者血清中的表达及功能。
方法 收集天津医科大学附属肿瘤医院 2015 年 5 月至 6 月确诊为肺癌的患者病历资料和血清标本 100 例,其中小细胞肺癌患者至少 70 例,非小细胞肺癌患者 20 例，正常对照 10 例。采用酶联免疫吸附法（ELISA）定量检测患者血清中血管内皮生长因子水平,比较肺癌患者血清中血管内皮生长因子水平的表达,明确血管内皮生长因子与肺癌的相关性,根据病理分期、转移情况对 100 例患者进行分组,明确血管内皮生长因子与肺癌病程进展、转移情况的相关性。

结果 (1)比较正常组与肺癌患者血清中的血管内皮生长因子水平,差异有统计学意义（P<0.05）,比较非小细胞肺癌患者与小细胞肺癌患者,差异无统计学意义(P>0.05)。（2）在肺癌患者的不同分期中比较局限期和广泛期的血管内皮生长因子水平,差异有统计学意义（P<0.05）。（3）比较肺癌患者有转移组和无转移组的血管内皮生长因子水平,差异有统计学意义（P<0.05）。（4）血管内皮生长因子与小细胞肺癌、肺癌病程进展、转移情况有显著相关性（P<0.05）。
结论 血管内皮生长因子在肺癌患者血清中的异常表达,对肺癌患者的病程发展及转移情况的判断具有一定的临床价值。

PU-0903

The Roles of GSTT1 in Taxol/Carbo-Resistant Serous Ovarian Cancer Cells

Jing Zhang、Suhong Xie、Lei Zhou、Xiaoyu Tang
Fudan University Shanghai Cancer Center

Objectives To construct a paclitaxel/carboplatin combined drug-resistant cell lines for ovarian cancer (HO8910-TAX/CBP and SKOV3-TAX/CBP), and study the role of GSTT1 in chemotherapy resistant cell lines, which plays an essential role in.
Methods Taxol/carboplatin drug-resistant cell clones (HO8910-TAX/CBP and SKOV3-TAX/CBP) were constructed using the increasing concentration gradient method. The final concentration of each drug was 20 folds than the initial concentration. Examination of drug-resistance related genes expression were used by qRT-PCR and western-blot. The application of immunefluorescence and co-immunoprecipitation confirmed the localization of GSTT1 and Topo I in cells, and figured out the interaction between GSTT1 and Topo I. The expression of GSTT1 in chemotherapy resistant cell lines was down regulated by shRNA.
Results The expression of resistance-related molecules MDR1, Bcl-2, ERCC1, GSTT1 and Topo I was increased in the chemotherapy-resistant cell clones, both at the mRNA and protein level. Cell arrest was observed in the drug-resistant cells at the G0/G1-phase. Then, down-regulation of GSTT1 in the drug-resistant cells significantly depressed cell proliferation and increased cell sensitivity to taxol and carboplatin. In addition, inhibition of GSTT1 induced cell cycle arrest at the G2/M phase and increased cell apoptosis. Finally, down-regulation of GSTT1 resulted in a reduction in DNA damage repair molecules Topo I, and down-regulation of the expression levels of cell cycle-relevant molecules Cyclin B1 and Cyclin E1. Also GSTT1 and Topo I were co-localized in the cell nucleus and GSTT1 co-existed with Topo I.
Conclusion We successed in developing cell clones resistant to taxol/carbo. The expression of GSTT1 is associated with paclitaxel / carboplatin resistance in ovarian cancer. Down-regulation of GSTT1 can increase the sensitivity of ovarian cancer cells to taxol / carboplatin. This study indicates a potential role of GSTT1 as an indicator of drug resistance in serous ovarian cancer.

PU-0904

母体内胎儿游离 DNA 检测在预防新生儿染色体疾病达中的应用研究

徐天天、骆衡
贵州金域检验中心有限公司

无创产前诊断是通过高通量测序技术对母体内胎儿游离 DNA 进行检测以判断其是否存在异常突变，从而对新生儿某些基因疾病起到预防作用。与传统的唐筛相比，孕妇所承受的伤害较小，且检测覆盖范围广泛，是目前前景较好的预防新生儿基因疾病的一种策略。本研究拟通过检测母体内

胎儿游离 DNA 以对新生儿部分染色体疾病达到早预防的作用，减少新生儿的出生缺陷率。对孕妇外周血进行离心得到一定量的血浆，通过磁珠法对血浆中游离的胎儿 DNA 进行提取、筛选以及纯化后，得到胎儿小片段 DNA，进行 PCR 扩增，构建相应的文库，采用高通量测序技术对文库进行测序。结果表明利用高通量测序技术对母体内胎儿游离 DNA 进行检测可发现较多病种，包括临床常见的 13 号、18 号、21 号三个染色体异常的 3 种胎儿染色体非整倍体疾病，及 Turner 综合征、超雌综合征、超雄综合征、克氏综合征 4 种性染色体非整倍体疾病， 21 种胎儿其他常染色体非整倍体疾病，103 种大于 3Mb 的胎儿染色体缺失/重复疾病。正常结果的检测范围 Z 值在负 3 和正 3 之间，超出范围属于异常结果。上述结果表明通过对母体内胎儿游离 DNA 检测可有效预防新生儿部分基因疾病，可满足临床需要，为降低新生儿出生缺陷率，具有一定的临床使用价值。

PU-0905

LncRNA-FA2H-2 attenuates LPS-induced endothelial cells proptosis and inflammation via regulation of the NF-κB/NLRP3 pathway

Fengxia Guo
Henan Provincial People's Hospital

Pyroptosis is a novel form of pro-inflammatory programmed cell death linked to atherosclerosis (AS), but its exact mechanisms are unknown. Long noncoding RNAs (lncRNAs) are important in the etiology of a variety of diseases, such as AS. The relationship between lncRNAs and pyroptosis in AS, on the other hand, is largely unknown. Our previous research showed that LncRNA-FA2H-2 was expressed at low levels in AS plaques and was closely related to the inflammatory response. In this study, we confirmed that the Nod-like receptor protein 3 (NLRP3)-mediated pyroptosis and inflammation was induced by lipopolysaccharide (LPS) and overexpression of LncRNA-FA2H-2 could reduce this effect. Interestingly, the results of our study also indicated that LncRNA-FA2H-2 could inhibit the function of nuclear factor κB(NF-κB) p50 (an NF-κB subunit) and that p50 could interact with NLRP3 in endothelial cells (ECs). In conclusion, these results suggested that LncRNA-FA2H-2 participated in pyroptosis and inflammation in ECs under conditions of LPS stress by activation of the NF-κB/NLRP3 signaling pathway, which could shed light on how LncRNA-FA2H-2 is regulated during the progression of AS.

PU-0906

新疆地区 6-丙酮酰四氢蝶呤合成酶缺乏致四氢生物蝶呤缺乏症的诊断及基因突变分析

何江、杨曦、史清海
新疆军区总医院检验科

目的 探讨新疆地区 6-丙酮酰四氢蝶呤合成酶缺乏症（PTPSD）的临床诊断和基因突变特点，为开展四氢生物蝶呤缺乏症（BH4D）患者的基因诊断和基因携带者筛查提供重要依据。
方法 6 例 HPA 患者经血 Phe、BH4 负荷或 Phe+BH4 联合负荷试验、尿蝶呤谱、DHPR 活性测定，采用基因芯片捕获、二代高通量测序等进行 PTS 基因突变检测，分析基因型与临床表型的关系。
结果 病例 1、3、6 均为经新筛召回复查确诊 HPA，初期症状为皮肤稍白、四肢肌张力正常或稍有降低，偶有惊厥，病例 2、4、5 未接受新筛，呈智力障碍、运动落后、肌张力异常、惊厥等症状，尿新蝶呤（N）明显增加（病例 2、4、5）或者正常（病例 1、3、6），生物蝶呤（B）全部明显降低，B/(B+N)%都<5%甚至<1%，DHPR 酶活性测定基本正常，服用 BH4 或 Phe+BH42h 后，

Phe 浓度逐渐下降至 56.89%~68.75%，4h 后下降至 83.29%-90.26%，4~6h 血 Phe 浓度基本将至正常水平，在 6 例 BH4D 患者 12 个等位基因中都发现 PTS 基因致病突变，最终全部诊断为 PTPSD。5 例患者接受 BH4、左旋多巴、5-羟色氨酸等治疗后逐渐好转，1 例死亡。在 6 例 PTPSD 家系中发现错义突变 5 种：N52S、P87S、K91R、D96N、P98Q，剪切位点突变 1 种（IVS1-129A>G），突变检出率为 83.3%，以错义突变为主（91.7%），突变主要集中在外显子 5（66.7%）、外显子 2（25.0%）和内含子 1（8.3%）中。发现 IVS1-129A>G 为一种国际上尚未报道的新突变。

结论 PTS 基因突变是导致 BH4D 的主要原因，N52S、P87S、K91R 和 D96N 为新疆地区 PTS 基因的热点突变，联合采用基因芯片捕获和二代高通量测序技术可优化 BH4D 诊断策略，提高基因诊断时效。

中国西北地区汉族苯丙酮尿症患者苯丙氨酸羟化酶基因突变分析

何江[6]、强荣[1]、毛新梅[2]、王慧珍[3]、闫有圣[4]、邹红云[6]、史清海[5]

1. 陕西省妇幼保健院医学遗传中心
2. 宁夏回族自治区妇幼保健院新生儿疾病筛查中心
3. 青海省妇幼保健院新生儿疾病筛查中心
4. 甘肃省妇幼保健院医学遗传中心
5. 新疆军区总医院检验科
6. 新疆军区总医院检验科

目的 分析中国西北地区汉族苯丙酮尿症患者苯丙氨酸羟化酶（PAH）基因的突变特征。

方法 应用 PCR 产物直接测序法、基因芯片捕获和二代高通量测序对西北地区 223 例汉族 PKU 患儿及其父母的 PAH 基因启动子、第 1~13 外显子及其旁侧内含子区域进行基因突变分析。

结果 在西北地区 223 例汉族 PKU 患者 446 条 PAH 等位基因中检测出 75 种致病突变，总检出率为 88.6%（395/446），突变以错义突变（66.7%）、剪切位点突变 12 种（16.0%）和无义突变（9.3%）为主；大部分突变主要分布在外显子 7（29.0%）、外显子 6（10.5%）、外显子 3（10.3%）、外显子 11（9.6%）、外显子 12（8.5%）和第 4 内含子（6.7%）中；突变频率较高的 PAH 基因致病突变是 R243Q（22.1%）、IVS4-1G>A（6.7%）、EX6-96A>G（6.5%）、R111X（5.4%）、R53H（4.3%）、Y356X（4.0%）、R413P（3.8%）和 V399V（3.1%）；西北汉族最常见 PAH 基因突变（R243Q）与中国北方基本一致，但显著区别于日本（R413P）、巴西（V388M、德国（R408W）、立陶宛（R408W）和美国（R408W）。发现 7 种国际上未见报道的新突变：N93fsX5、G171E、P225S、Q304K、H107R、F392I 和 N223I。

结论 西北汉族 PKU 患者 PAH 基因致病突变构成与中国北方类似，但显著区别于部分亚洲和欧美国家，西北汉族的 PAH 基因突变谱具有其独特保守的地域特征，推测 R243Q 突变的高处在中国北方地区，而 R408W 突变的高处在欧洲地区。

PU-0908

1 例晚期婴儿型神经元蜡样质脂褐素沉积症的临床诊断及新突变发现

何江
新疆军区总医院
全军临床检验诊断中心
全军计划生育优生优育技术指导中心

目的 探讨新疆地区 1 例晚期婴儿型神经元蜡样质脂褐素沉积症（LINCL）的临床诊断和基因改变，为神经元蜡样质脂褐素沉积症（NCL）患者诊断策略优化和基因携带者筛查提供重要依据。
方法 对 1 例初发症状"癫痫伴进行性小脑萎缩"患者进行头颅 MRI、听觉和视觉诱发电位、运动及体感诱发电位、脑电图、数字视频脑电、SCA 基因动态突变、TPP1 活性和多重连接探针扩增分析（MLPA）、基因芯片捕获、二代高通量测序等辅助检查，分析基因型与临床表型的关系。
结果 本病例发病年龄 4~5 岁，癫痫、小脑共济失调伴萎缩是首发临床症状，后续出现小脑萎缩、共济失调、运动认知功能倒退、语言障碍等，PPT1、TPP1、CLN3、CLN6 和 CLN8 基因未发现存在大片段变异， 全血 TPP1 酶活性测定值（7.2 nmol/day/spot）远低于正常参考范围，患者 CLN2 基因发现 V216M（c.646G>A，p.Val216Met）和 IVS7-17A>G（c.887-17A>G）复合杂合核苷酸变异，其变异分别遗传自生物学父母，患者最终被确诊为两个 CLN2 基因突变所导致的晚期婴儿型神经元蜡样质脂褐素沉积症。IVS7-17A>G 突变经检索相关文献及数据库，是国际上尚未见报道的新突变。
结论 根据患者发病年龄、临床表现、电生理学、组织病理学、影像学进行 NCL 诊断难度较高，尽早进行酶学检查和 NCL 相关基因（CLN1~10 基因）突变测序分析，可显著提高 LINCL 诊断时效，以延缓病程进展或者减轻患者症状。我国 CLN2 基因的突变类型存在与其他国家或地区不同的新基因，为本家系的携带者筛查和产前诊断奠定了坚实基础。

PU-0909

中国西北地区回族苯丙酮尿症患者苯丙氨酸羟化酶基因突变分析

何江 [1]、毛新梅 [2]、王慧珍 [3]
1. 新疆军区总医院
2. 宁夏回族自治区妇幼保健院新生儿疾病筛查中心
3. 青海省妇幼保健院新生儿疾病筛查中心

目的 分析中国西北地区回族苯丙酮尿症患者苯丙氨酸羟化酶（PAH）基因的突变特征。
方法 应用 PCR 产物直接测序法、基因芯片捕获和二代高通量测序对西北地区 67 例回族 PKU 患儿及其父母的 PAH 基因启动子、第 1~13 外显子及其旁侧内含子区域进行基因突变分析。
结果 在西北地区 67 例汉族 PKU 患者 134 条 PAH 等位基因中检测出 40 种致病突变，总检出率为 82.1%（110/134），突变以错义突变（65.0%）、剪切位点突变（15.0%）和无义突变（10.0%）为主；大部分突变主要分布在外显子 7（24.6%）、外显子 6（15.7%）、外显子 3（7.5%）、外显子 11（6.7）中；突变频率较高的 PAH 基因致病突变是 R243Q（13.4%）、R241C（7.5%）、R413P（5.2%）、Q232X（4.5%）、Y356X（3.7%）、EX6-96A>G（3.7%）和 L430P（3.0%）；西北回族最常见 PAH 基因突变是 R243Q，区别于日本（R413P）、巴西（V388M）以及德国、立陶宛、拉脱维亚和美国等欧美国家（R408W）。西北回族 R243Q 突变检出率显著低于中国北方（P<0.05），R413P 突变检出率显著低于日本（P<0.05），EX6-96A>G 在中国北方和韩国的突变检出率显著高于中国西北（P<0.05）。发现 5 种国际上未见报道的新突变：M1I、L430P、D222G、S16fsX10 和 IVS11+1G>A。Y414X、P281L 和 S303fsX38 这三种突变是中国回族中首次报道的突变。

结论 西北回族 PKU 患者 PAH 基因致病突变构成与中国北方类似，但显著区别于部分亚洲和欧美国家，具有自身独特保守的特性。

PU-0910

广西桂北地区人群脂联素及其基因多态性与冠心病的关联研究

向晓华[1]、韦传东[1]、冷俊[2]、李宁[2]
1. 桂林医学院第二附属医院
2. 桂林医学院

目的 探讨桂北地区人群脂联素（APN）水平及脂联素基因两个单核苷酸多态性（SNPs）与冠心病（CHD）的关系。
方法 采用酶联免疫吸附法测定 498 例研究对象(冠心病组 263 例、健康对照组 235 例)血清 APN 浓度，比较两组间 APN 表达差异；采用聚合酶链反应-限制性片段长度多态性结合 DNA 直接测序技术，分析 498 例受试者的 rs1501299 G/T 和 rs266729 C/G 的基因型，比较两组间的分布差异及其与 APN 浓度的相关性。
结果 冠心病组血清 APN 浓度明显低于对照组（$P < 0.001$）。两组间 rs266729 基因分型差异有统计学意义(P<0.001)，但等位基因分布频率差异无统计学意义(P>0.05)。在未对性别及年龄参数做出调整时，突变纯合子 GG 基因型与野生纯合子 CC 基因型之间差异无统计学意义（$P > 0.05$），调整后，GG 基因型较 CC 基因型增加 CHD 的患病风险（OR=2.740,95%CI 1.109-6.768,P=0.029）。rs266729 基因型的显性和隐性模型与冠心病的关系表现为 GG 基因型较 C 等位基因（CG 型+CC 型）增加患 CHD 的风险（OR=2.156,95%CI 1.004-4.631,P=0.049），且在调整性别和年龄参数后仍然存在（OR=2.695,95%CI 1.110-6.540,P=0.028），GG 基因型携带者可能是 CHD 的独立危险因素之一。rs1501299 在两组间无统计学意义（$P > 0.05$）。rs1501299 和 rs266729 对血清脂联素的水平无显著性影响（$P > 0.05$）。
结论 桂北地区 CHD 患者血清 APN 水平低于健康人群，提示低脂联素血症是 CHD 的危险因素之一；rs266729 基因的 GG 基因型增加患 CHD 的风险可作为冠心病的独立危险因素之一；rs1501299 和 rs266729 与 APN 水平无明显相关性，不能作为 APN 水平的预测指标。

PU-0911

缺血性脑卒中患者外周血中 miR-488 表达水平与 NIHSS 评分的相关性探讨

张钦政[1]、马思琦[2]、任晓庆[2]、樊金宇[2]、李晨[2]、李春燕[2]、闫海润[1]
1. 牡丹江医学院红旗医院
2. 牡丹江医学院

目的 缺血性脑卒中发生后，脑组织和外周血中的 miRNA 表达谱出现变化，此前研究表明 miR-488 在脑卒中患者外周血中相对表达水平大概是健康对照组的 2 倍。本文旨在研究 miR-488 在缺血性脑卒中患者外周血血清中的表达水平以及其与美国国立卫生研究院卒中量表（NIHSS）评分之间的相关性，探究 miR-488 能否作为评估缺血性脑卒中患者病情严重程度的指标。
方法 随机选择 2020 年 8 月至 2021 年 2 月于牡丹江医学院附属红旗医院就诊的缺血性脑卒中患者 30 例作为病例组，收集同期来我院体检的健康体检者 30 例作为对照组，收集患者确诊时和健康体检者的血清，采用实时荧光定量聚合酶链反应（qRT-PCR）测定两组外周血血清中 miR-488 相对表达量；记录病例组和对照组的年龄、性别、吸烟史、血糖、血压、血脂等指标，进行统计学分析。收集病例组患者确诊时的 NIHSS 评分，采用 pearson 的相关性分析，分析病例组患者外周血血清中 miR-488 的相对表达量与 NIHSS 评分之间的关系。

结果 病例组和健康对照组之间在年龄、性别、糖尿病、吸烟、血压、血脂等方面的差异无统计学意义（P>0.05）。病例组血清中 miR-488 的相对表达量显著高于对照组（P<0.01）；pearson 的相关分析表明，缺血性脑卒中患者外周血血清中 miR-488 的相对表达量与患者 NIHSS 得分呈正比。
结论 与健康人相比，缺血性脑卒中患者外周血血清中 miR-488 表达量明显增高，并随发病时间呈上升趋势，与 NIHSS 评分呈正相关。检测脑卒中患者外周血中 miR-488 表达水平有助于评估病情严重程度及神经功能受损情况。

PU-0912

结直肠癌中长链非编码 RNA-AL135905.1 的表达及作用的初步研究

李铭杰、伍严安
厦门大学附属翔安医院

目的 研究长链非编码 RNA（lncRNA）AL135905.1 在结直肠癌组织中的表达模式，探讨其对结直肠癌细功能的影响及潜在机制。
方法 本研究通过高通量测序（RNA-seq）的方法，筛选出结直肠癌组织中差异表达的 lncRNAs。扩大样本对结直肠癌组织和细胞系 lncRNAs 表达水平的验证。构建过表达 AL135905.1 的重组质粒，转染低表达该 lncRNA 的结直肠癌细胞 Caco2 和 SW480。应用 CCK8 实验、克隆形成实验检测细胞增殖，Transwell 小室实验检测细胞迁移、侵袭。流式细胞术检测细胞周期、凋亡。通过 TCGA 数据库分析不同 AL135905.1 表达水平的患者总生存时间（OS）和无疾病复发生存时间（RFS）。最后对 AL135905.1 潜在的靶基因及作用机制进行生物信息学分析。
结果 AL135905.1 在结直肠癌肿瘤组织和细胞中显著下调（P < 0.001）。AL135905.1 低表达同患者淋巴结转移、TNM 分期、脉管侵犯、神经侵犯相关（均 P < 0.05），而与患者年龄、性别、肿瘤大小、分化状态、远处转移、浆膜侵犯、KRAS 突变、BRAF-V600E 突变无明显相关（P > 0.05）。体外实验表明过表达 AL135905.1 的细胞株，细胞增殖、克隆形成、迁移和侵袭明显受到抑制，而细胞凋亡显著被促进（P < 0.05）。生存分析提示同时高表达 AL135905.1 和 PHLPP2 的结直肠癌患者 OS 和 RFS 显著高于二者同时低表达患者及单一基因低表达患者。生物信息学分析预测 AL135905.1 可能通过 miR-6838-5p/PHLPP2/ PI3K/ AKT 轴在结直肠癌中起抑癌基因样的作用。
结论 AL135905.1 在结直肠癌肿瘤组织和细胞系中表达下调，AL135905.1 可能通过 miR-6838-5p/PHLPP2/PI3K/AKT 轴在结直肠癌中起抑癌基因样的作用。

PU-0913

TIM-3 与非小细胞肺癌预后的相关性研究

景丽萍、庄学伟
山东省立第三医院

目的 检测非小细胞肺癌组织 TIM-3 和肿瘤浸润淋巴细胞（TILs）表达情况，探讨免疫分子在非小细胞肺癌微环境分布及其预后价值。
方法 HE 染色法检测 TILs，免疫组化法检测 TIM-3 在非小细胞肺癌组织表达，分析 5 年存活组和 5 年内死亡组表达差异。
结果 TIM-3 和 TILs 在非小细胞肺癌组织都有表达；与 5 年存活组相比, 5 年内死亡组 TIM-3 表达高，差异有显著意义(P<0.05)，TILs 细胞表达低，但表达两组差异无显著意义（P>0.05）。
结论 TIM-3 在肿瘤细胞和免疫细胞皆有表达，5 年生存组低于 5 年死亡组，TIM-3 高表达预后差，是独立预后因子。

PU-0914

合胞素在急性髓系白血病患者表达及化疗对其表达的影响

景丽萍、庄学伟
山东省立第三医院

目的 研究合胞素在急性髓系白血病患者表达及化疗对其表达的影响
方法 初诊急性髓系白血病患者 20 例，其中男 17 例，女 25 例，年龄 25～62 岁; 其中包括 M1 2 例，M2 4 例，M3 3 例，M4 5 例，M5 例。首次及第二次化疗前分别收取其外周血标本。健康对照 20 例。实时定量 PCR 法检所有病例及对照单个核细胞合胞素表达。
结果 1、与健康对照组相比，化疗前急性髓系白血病患者外周血单个核细胞合胞素表达明显升高（$P < 0.05$）；2、首次化疗后，急性髓系白血病患者外周血单个核细胞合胞素表达较化疗前表达显著下调（$P < 0.05$），但仍高于健康对照水平（$P < 0.05$）；3、进一步分析发现，未获完全缓解患者（$n =6$）合胞素表达水平显著高于缓解患者（$P < 0.05$）。
结论 急性髓系白血病患者外周血单个核细胞合胞素表达水平明显升高，化疗后随着肿瘤负荷下降，其表达水平下调，且未缓解患者水平高于缓解患者，提示合胞素在急性髓系白血病中发挥重要作用，有望成为白血病诊断治疗中的新型标志物。

PU-0915

Syncytin-1 表达与非小细胞肺癌预后的关系

景丽萍、庄学伟
山东省立第三医院

目的 检测非小细胞肺癌组织 syncytin-1,CD4+,CD8+T 细胞表达情况，探讨免疫分子在非小细胞肺癌微环境分布及其预后价值。
方法 免疫组化法检测 syncytin-1，CD4+和 CD8+T 细胞在非小细胞肺癌组织表达，分析 5 年存活组和 5 年内死亡组表达差异。
结果 Syncytin-1,CD4+T,CD8+T 细胞在非小细胞肺癌组织都有表达；与 5 年存活组相比, 5 年内死亡组 syncytin-1 表达高, 而 CD8+T 细胞阳性率表达低，差异有显著意义($P<0.05$)，CD4+ T 细胞表达两组差异无显著意义（$P>0.05$）。
结论 Syncytin-1，CD8+T 细胞在非小细胞肺癌组织表达，可作为判断预后的指标，CD8+ T 细胞表达高预后好，而 syncytin-1 表达高则预后不良。

PU-0916

H2O2 对 BeWo 细胞 syncytin-1 表达的影响

景丽萍、庄学伟
山东省立第三医院

目的 采用过氧化氢（hydrogen peroxide，H2O2）作为外源性自由基生成系统，观察其对 BeWo 细胞 syncytin-1 基因表达的影响，从细胞及分子水平探讨氧化应激在子痫前期发病中作用及其可能的机制。
方法 实时定量 PCR 法检测不同浓度（50μmol/L、100μmol/L 和 200μmol/L）外源性 H2O2 对培养的 BeWo 细胞 syncytin-1 表达的影响。

结果 50μmol/L、100μmol/L 和 200μmol/L H2O2 三组中 100μmol/L 的 H2O2 对 syncytin-1 基因表达影响最大，外源性 100μmol/L H2O2 组与对照组相比，syncytin-1 表达 24h 升高，48 小时达峰值，72 小时降低。
结论 H2O2 可影响 syncytin-1 基因的表达，可能是子痫前期发病机制之一。

PU-0917

莆田市 HPV 感染的 27 种基因亚型和年龄分布的特征分析

陈展飞[1]、张文娟[2]、涂海健[1]、俞柳敏[1]
1. 莆田学院附属医院
2. 莆田学院药学与医学技术学院医学检验系

目的 研究探讨 2020 年 12 月至 2021 年 4 月期间福建省莆田市女性人乳头瘤病毒（HPV）的感染状况、基因亚型及年龄分布特征，同时也为宫颈癌的早期筛查和临床诊断与治疗提供可靠依据。
方法 选取 2020 年 12 月至 2021 年 4 月期间于莆田学院附属医院（以下用“我院”代替）就诊的女性，共计 3245 例，收集宫颈脱落细胞标本，采用流式荧光杂交法检测女性 HPV27 种基因亚型的感染情况，分析不同年龄阶段女性 HPV 的感染状况和基因亚型、感染的高危型和低危型情况以及单一感染、双重感染和多重感染的情况。
结果 在接受检查的 3245 例患者中，剔除不符合本次统计的标本之后，有效数据共 2950 例，检测结果显示共有 609 人感染 HPV，检出率达到 20.64%：其中处于 20 岁以下有 18 人，感染人数为 6 人，占比为 33.33%，位居第一；处于 61-70 岁有 89 人，感染人数为 27 人，占比为 30.34%；处于 21-30 岁有 521 人，感染人数有 120 人，占比为 23.03%，位居第三；随后依次为 41-50 岁、51-60 岁和 31-40 岁，感染人数分别为：175、82 和 199，占比分别为：20.49%、20.30%以及 18.70%，不同年龄阶段之间 HPV 检出率比较差异有统计学意义（$\chi 2=11.18$，$P<0.05$）。感染 HPV 的 609 人中，单一感染共有 454 例，比例为 74.55%，双重感染共有 110 例，比例为 18.06%，三重感染共 32 例，比例为 5.25%，四重感染共 11 例，比例为 1.81%，五重感染共 2 例，比例为 0.33%。此外，609 例感染人数中检测出 HPV 感染基因共 824 次，其中高危型感染基因检出频数为 503 次，占总感染人数的 82.59%。
结论（1）HPV 感染的基因亚型与年龄分布具有一定的相关性。（2）HPV 感染的基因亚型具有地域性，而 HPV 混合感染与地域差异无明确关联。

PU-0918

Evaluation of low coverage whole genome sequencing as a new method for detecting malignant ovarian mass

Pengqiang Zhong[1]、Ming Chen[1]、Mengzhi Hong[1]、Jingfeng Tan[1]、Xuegao Yu[1]、Hao Huang[1]、Juan Ouyang[1]、Xiaoping Lin[2]、Peisong Chen[1]
1. First Affiliated Hospital of Sun yat-sen university
2. 中山大学肿瘤防治中心

Objective To evaluate whether low coverage whole genome sequencing is suitable for the detection of malignant pelvic mass and compare its diagnostic value with traditional tumor markers.
Methods We enrolled 63 patients with a pelvic mass suspicious for ovarian malignancy. Each patient underwent low coverage whole genome sequencing (LCWGS) and traditional tumor markers test. The pelvic masses were finally confirmed via pathological examination. The copy number variants (CNVs) of whole genome were detected and the Stouffers Z-scores for each CNV was extracted. The risk of malignancy (RM) of each suspicious sample was calculated

based on the CNV counts and Z-scores, which was subsequently compared with ovarian cancer markers CA125 and HE4, and the risk of ovarian malignancy algorithm (ROMA).
Results Receiver Operating Characteristic Curve (ROC) were used to access the diagnostic value of variables. As confirmed by pathological diagnosis, 44 (70%) patients with malignancy and 19 patients with benign mass were identified. Our results showed that CA125 and HE4, the CNV, the mean of Z-scores (Zmean), the max of Z-scores (Zmax), the RM and the ROMA were significantly different between patients with malignant and benign masses. The area under curve (AUC) of CA125, HE4, CNV, Zmax, and Zmean was 0.775, 0.866, 0.786, 0.685 and 0.725 respectively. ROMA and RM showed similar AUC (0.876 and 0.837), but differed in sensitivity and specificity.
Conclusion After all, we develop a LCWGS based method for the identification of pelvic mass of suspicious ovarian cancer. LCWGS shows accurate result and could be complementary with the existing diagnostic **Methods**

PU-0919

BS69 在先兆子痫患者胎盘中的表达

庄学伟、景丽萍
山东省立第三医院

目的 探讨 BS69 基因在先兆子痫患者胎盘与正常胎盘之间的差异表达。
方法 通过收集 8 例先兆子痫孕妇胎盘和 12 例正常胎盘，提取 RNA 后进行实时荧光定量 PCR，观察先兆子痫胎盘与正常胎盘的表达差异。
结果 BS69 作为一种转录抑制因子，先兆子痫患者胎盘中的表达显著下调。
结论 BS69 基因表达下调与先兆子痫密切相关，可作为先兆子痫疾病诊断的潜在生物标志物。

PU-0920

siRNA 干扰下调 DJ-1 的表达对人支气管上皮细胞 HBE 生物学行为的影响

魏旺丽
郴州市第一人民医院

目的 探讨 DJ-1 表达下调对正常人支气管上皮细胞系 HBE 细胞生物学行为的影响。
方法 构建 DJ-1 基因 siRNA 慢病毒载体,感染 HBE 细胞（DJ-1 siRNA 组），并设立慢病毒载体对照组（Control siRNA 组）及空白对照（BC）组，分别进行流式细胞术检测、MTT 实验和克隆形成实验、Transwell 小室实验。
结果 与 Control siRNA 组及空白对照组比较，DJ-1 siRNA 组的 G1 期细胞数量显著增多而 S / G2 期细胞数减少表明细胞周期受阻；细胞增殖能力明显减弱(P<0.01)；细胞体外迁移和侵袭能力显著减弱(P<0.01)。
结论 下调 DJ-1 的表达具有抑制人支气管上皮细胞系 HBE 细胞增殖和体外迁移侵袭的作用。

PU-0921

新冠感染者外周血 lncRNA 和 circRNA 差异性表达研究

吴英萍
浙江大学医学院附属第四医院

为应对新冠肺炎疫情在全球范围内的爆发，围绕新冠肺炎感染、传播和治疗开展了大量研究。然而，circRNA 和 lncRNA 参与调节免疫耐受、免疫逃逸等多种生命活动，可能为 COVID-19 新发感染和复发提供宝贵信息，目前研究较少。此外，外泌体已被报道在 COVID-19 复发中发挥重要作用，因此可能与 circRNA 和 lncRNA 的表达相互作用。在这项工作中，我们对复发性 COVID-19 患者和健康人群的 circRNA、lncRNA 和 mRNA 进行了测序，并比较了两者的差异。GO 和 KEGG 富集分析表明，差异表达的 circRNA 和 lncRNA 主要参与调控宿主细胞周期、凋亡、免疫炎症、信号通路等过程。与外泌体相关数据库的比较显示，有 114 个差异表达的 circRNA, 10 个差异表达的 lncRNA 与外泌体相关。这些研究为探索 circRNA 和 lncRNA 研究 COVID-19 感染机制、诊断和治疗价值以及将其作为生物标志物的可能性提供了参考。

PU-0922

非小细胞肺癌患者呼出气冷凝液中 miRNA34a 和 miRNA21 检测的临床意义

陶国华、万洋洋、宋卫华、陈金亮
南通市第一民医院

目的 探讨非小细胞肺癌（non-small cell lung cancer, NSCLC）患者呼出气冷凝液（exhaled breath condensates, EBC）中 miRNA34a 和 miRNA21 的表达水平及其临床意义。
方法 应用实时定量聚合酶链反应技术检测 50 例病理证实 NSCLC 患者的血清、EBC，及其中 30 例手术患者癌组织、癌旁组织和 50 例健康人群的血清及 EBC 标本中 miRNA34a 和 miRNA21 的相对表达水平。
结果 NSCLC 患者癌组织、血清及 EBC 中 miRNA21 的相对表达量均高于对照组，而 miRA34a 的相对表达量低于对照组（P 均<0.05）。晚期（Ⅲ-Ⅳ期）NSCLC 患者癌组织、血清和 EBC 中 miRNA21 的表达量均高于早期（Ⅰ-Ⅱ期）患者（P <0.05），而 miRNA34a 的表达量均低于早期患者（P <0.05）。.腺癌患者癌组织、血清和 EBC 中 miRNA21 的表达量高于鳞癌患者（P 均<0.05）。
结论 miRNA34a 和 miRNA21 在 NSCLC 患者癌组织、血清和 EBC 中的相对表达水平与非小细胞肺癌患者的 TNM 分期和病理类型相关，可用于临床 NSCLC 患者的诊断和病情严重程度的评估。

PU-0923

乳腺癌 miR-185-5p、c-MYC、NK1R-Tr 的相互表达调控研究

周云丽
天津医科大学肿瘤医院

目的 探讨乳腺癌 miR-185-5p、c-MYC、NK1R-Tr 之间的相互表达调控关系。
方法 选取 2020 年天津医科大学肿瘤医院 100 例乳腺癌患者癌及癌旁组织，分析 NK1R-Tr、c-MYC、miR-185-5p 在癌及癌旁组织和不同乳腺癌细胞系中的表达，并与不同病理特征进行统计分析。采用 CHIP 验证 c-MYC 对 NK1R-Tr 启动子区的结合；采用荧光素酶报告基因验证 c-MYC 对

NK1R-Tr 的调控作用，检测干扰和过表达 c-MYC 后 NK1R-Tr 蛋白/mRNA 水平的改变。在 MDA-MB-231 中利用荧光素酶报告基因验证 miR-185-5p 对 NK1R-Tr 的 3'-UTR 区调控作用；瞬时转染 miR-185-5p，检测 NK1R-Tr 的蛋白及基因表达、miR-185-5p 水平的改变；检测干扰 c-MYC 后，miR-185-5p 表达水平改变；验证抑制 miR-185-5p 是否通过 c-MYC 影响 NK1R-Tr 蛋白及基因表达。
结果 NK1R-Tr、c-MYC 在癌组织中表达明显高于、miR-185-5p 明显低于癌旁组织；转移组 NK1R-Tr 和 c-MYC 的 mRNA 表达高于、miR-185-5p 低于未转移组；TNM 分期Ⅰ-Ⅱ期 NK1R-Tr 和 c-MYC 的表达明显低于、miR-185-5p 明显高于Ⅲ-Ⅳ期组。MDA-MB-231 细胞中 miR-185-5p 表达较低，NK1R-Tr、c-MYC 表达较高。c-MYC 结合于 NK1R-Tr 启动子区并对 NK1R-Tr 起正性调节的作用；干扰 c-MYC 后，NK1R-Tr 的表达降低；过表达则相反。miR-185-5p 靶向作用于 NK1R-Tr 的 3'UTR 区抑制其转录活性。c-MYC 可抑制 miR-185-5p 的表达，并通过 miR-185-5p 间接作用 NK1R-Tr 调控其表达。
结论 c-MYC 可通过调控 miR-185-5p 靶向影响乳腺癌细胞 NK1R-Tr 的表达。

PU-0924

Hepatitis B virus X protein modulates chemokine CCL15 upregulation in hepatocellular carcinoma

Yueguo Li
Tianjin medical university cancer hospital and institute

Background Hepatitis B virus X protein (HBx) is an indispensable progression factor in hepatocellular carcinoma (HCC). CCL15 could be a peculiar proteomic biomarker of HCC with tumorigenesis and tumor invasion.
Objective The aim of study was to explore the relationship between HBx and CCL15 expression in HCC.
Methods HBV–positive HCC pathological tissue samples and corresponding adjacent non-tumor liver tissues were clearly collected. The expression of HBx and CCL15 was analyzed by immunohistochemistry, real-time polymerase chain reaction (PCR) and western blot analysis in tissues or in vitro.
Results The levels of CCL15 mRNA and protein expression in HCC samples were observably higher than the ones of adjacent non-tumor liver tissues. The CCL15 was significantly associated with the expression of HBx in HBV-positive HCC samples. The up-regulation of HBx induced CCL15 expression in vitro. The high expression score of CCL15 was significant associated with the poor prognosis of HCC patients.
Conclusions The CCL15 expression was observably associated with HBx in HCC patients. The CCL15 may be considered as a indicator in clinical managment of HBV-associated HCC.

PU-0925

Rapid and visual detection of Burkholderia pseudomallei using a a lateral flow dipstick recombinase polymerase amplification assay

Jin Li
Department of Clinical Laboratory Medicine, Institute of Surgery Research, Daping Hospital, Army Medical University

Burkholderia pseudomallei is an important infectious disease pathogen, which mainly causes melioidosis. The melioidosis is mainly prevalent in Thailand, northern Australia and southern China, which has become a global public health problem. Early detection of

B. pseudomallei infection is vital for prognosis of a melioidosis patient. In this study, we evaluated the utility of a lateral flow dipstick recombinase polymerase amplification (LFD-RPA) assay for detecting B. pseudomallei and other non-B. pseudomallei bacteria species. A set of primer-probe targeting orf2 gene within the putative type III secretion system (T3SS) cluster genes was generated, and then the parameters for the LFD-RPA assay were optimized. At the same time, we validated the LFD-RPA assay for detecting B. pseudomallei with 120 clinical B. pseudomallei isolates identified by 16S rRNA gene sequencing. The results showed that the detection sensitivity and specificity are 100%. These results present the developed LFD-RPA assay as a new simple, specific, sensitive, rapid and convenient method for the detection of B. pseudomallei infection in hospital, and it has great application potential for detecting B. pseudomallei and other non-B. pseudomallei bacteria species.

PU-0926

陕西地区他汀类药物代谢相关基因多态性研究

文少佳、张维、李永霞、梁建萍、张强、朱亚荣
西安金域医学检验所有限公司

目的 通过对陕西地区多名检测者的他汀类药物代谢相关基因 SL-CO1B1 和 APOE 的基因多态性进行研究，从而对不同个体进行精准用药指导，提高用药的有效性和安全性；
方法 利用实时荧光定量 PCR 技术检测陕西省 2018 年 4 月至 2021 年 4 月在本单位进行检测的共 289 例患者的外周血中基因组的 SL-CO1B1 基因的 rs2306283(388A＞G) ，rs4149056 (T＞C)位点和 APOE 基因的 rs429358(388T＞C)，rs7412(526c＞T)位点的基因多态性分布特点，并与已报道的中国其他地区检测者的数据进行比较，分析不同地区间的基因型分布差异；
结果 检测到陕西地区检测者中 SL-CO1B1 基因型共有 6 种，分别为*1a/*1b 型（27.3%），*1b/*1b 型（50%），*15/*15 型（9%），*1b/*15 型（4.5%），*1a/15 型（4.5%），*1a/*1a 型（4.5%）；APOE 基因共有 5 种表型，分别为 E2/E3 型（13.6%），E2/E4 型（4.5%），E3/E3 型（59.1%），E3/E4 型（18.1%），E4/E4 型（4.5%）。本研究人群中携带 SL-CO1B1 正常肌病风险型的比例最高，约占 75％ ；SL-CO1B1 中度肌病风险型和高度肌病风险型的人群比例较低，分别为 16.7％ 和 8.3％。APOE 大众类基因型比例最高，约占 63.6％ ；APOE 保护类基因型及风险类基因型的人群比例分别为 13.6％ 和 22.6％。
结论 陕西地区 289 例检测者 SL-CO1B1 和 APOE 基因型分别以他汀药物剂量耐受性较高的正常肌病风险型和对他汀药物敏感的大众类基因型为主；且两种基因的多态性分布均不受性别的影响。因此，检测 SL-CO1B1 和 APOE 基因多态性对于临床评估效益/风险比有重要的指导意义，可实现“个性化用药”的目标。

PU-0927

FISH 检测 IGH/CCND1 联合免疫表型 CyclinD1 在诊断一例伴有浆细胞分化的套细胞淋巴瘤中的应用及文献复习

黄林林、高菲、谭鸿文、敬敏、陈虹、左梅琳、徐之裕、杨友谊、唐梅
四川金域医学检验中心

目的 探讨联合荧光原位杂交（FISH）检测 IGH/CCND1 及免疫表型 CyclinD1 在伴有浆细胞分化的套细胞淋巴瘤的诊断及鉴别诊断中的应用。
方法 回顾研究本中心一例 79 岁男性患者，左锁骨淋巴结肿大，大小约 1.2cm，切除肿大淋巴结送实验室检查，通过病理组织形态、免疫表型及 FISH 多平台检测综合诊断及鉴别诊断并复习文献。
结果 淋巴结结构基本破坏，深染和浅染区交替分布，深染区为中等偏小淋巴细胞浸润，核分裂可

见，浅染区为浆样细胞，深染区细胞免疫表型 CD20、CD5、CyclinD1 阳性,浅染区浆样细胞 CD20 部分阳性，CD138 阳性，cyclinD1 阴性，CD3、CD5、lambda 阴性，kappa 阳性，显示为克隆性浆细胞，轻链限制性表达，Ki-67 约 20%阳性，FISH 检测：IGH/CCND1 融合基因深染区细胞和浅染区浆样细胞均阳性。结合病理组织形态、免疫表型及 FISH 检测，综合诊断为：伴有浆细胞分化的套细胞淋巴瘤。

结论 套细胞淋巴瘤是相对少见的 B 细胞淋巴瘤，预后较差，检索文献，发现伴有浆细胞分化的形态学特征非常罕见，容易误诊为其它伴有浆样细胞分化的小 B 细胞淋巴瘤。细胞周期素蛋白 D1（CyclinD1）尽管是套细胞淋巴瘤相对特异的诊断指标，但是在浆细胞瘤、毛细胞白血病、弥漫性大 B 细胞淋巴瘤、恶性黑色素瘤等肿瘤中也可有部分细胞弱-中等强度阳性，这在鉴别诊断中要特别注意，本例 FISH 检测浆样分化细胞 IGH/CCND1 阳性，提示克隆性浆细胞分化也可见于套细胞淋巴瘤，而联合 IGH/CCND1 的 FISH 检测和 CyclinD1 的免疫表达并结合组织形态，基本上可以准确诊断套细胞淋巴瘤，即使罕见的伴有浆细胞分化，也能避免误诊，从而为临床精准治疗提供了保障。

PU-0928

陕西地区 9765 例女性叶酸代谢相关基因多态性分布研究

文少佳、朱亚荣、张强、梁建萍、张维、李永霞
西安金域医学检验所有限公司

目的 通过对陕西地区多名女性亚甲基四氢叶酸还原酶（MTHFR）和甲硫氨酸合成酶还原酶（MTRR）基因多态性分布情况进行研究，旨在为临床医师指导育龄妇女个体化的叶酸补服方案提供科学依据。

方法 以陕西省 9 765 例育龄期妇女为研究对象，利用单碱基延伸方法检测 MTHFR C677T、A1298C 位点和 MTRR A66G 位点的基因型，统计分析基因多态性的分布特征，根据基因型结果评估叶酸代谢能力强弱，从而得出陕西省育龄女性是否有叶酸补充风险及风险级别。

结果 统计全部样本中的 MTHFR C677T 位点，其中野生型（CC）、杂合突变型（CT）及纯合突变型（TT）基因型频率分别占 24.4%、46.9%和 28.7%；MTHFR A1298C 位点野生型（AA）、杂合突变型（AC）及纯合突变型（CC）基因型频率分别为 71.7%、25%和 3.3%；MTRR A66G 位点野生型（AA）、杂合突变型（AG）及纯合突变型（GG）基因型频率分别为 48.6%、44.6%和 6.8%。MTHFR C677T、A1298C 和 MTRR A66G 位点基因型分布与中国人群差异均具有统计学意义（$P<0.05$）。育龄女性存在叶酸代谢障碍者高达 60%以上。

结论 陕西省育龄女性 MTHFR C677T、A1298C 和 MTRR A66G 基因多态性的分布具有地域特异性，超过 60.00%的育龄女性携带高风险基因，需根据叶酸代谢基因检测结果，给予补充相应剂量的叶酸，以降低出生缺陷。

PU-0929

Comprehensive Analysis of regulatory factors and immune-associated patterns to decipher common and BRCA1/2-mutation type-specific critical regulation in breast cancer

Yue Li
The Second Affiliated Hospital of Xi'an Jiaotong University

Background BRCA1/2 mutations are currently proven to be closely related to high lifetime risks of breast cancer. The objective of this study is to identify the genes and associated regulators and

immune-associated patterns underlying disease pathology in BRCA mutations and its association with clinical traits.
Results Consensus network analysis identified 13 modules, including 8 upregulated modules and 3 downregulated modules, in the BRCA1-mutant compared with wild-type cohorts; and 13 modules including 9 upregulated modules and 2 downregulated modules in the BRCA2-mutant breast cancer. Among them, some modules showed significantly positive correlations with tumor stage, number of positive lymph nodes and margin status, without any significance in wild-type patients. Function enrichment suggested the potential mechanisms by which BRCA1/2 carriers could regulate cell cycle, immune response, cellular metabolic processes and cell migration, and thus influence the metastasis and prognosis of BRCA1/2-mutant breast cancer, via enriched pathways including p53, JAK-STAT signaling and so on associated with its multi-genes from these modules. Therefore, consensus network helped identify the specificity and commonality of carcinogenic mechanism of BRCA mutations, relative to wild-type breast cancer. Intermodular network of transcription factors showed some transcription factors and miRNAs enriched, notably, significantly enriched E2F transcription factor family associated cell cycle regulation, and IRF family associated with immune response regulation. The validation of multi-gene using other TCGA and GEO databases, could screen the hub genes including ISG15, MX1, IF1T1, ITGAX and so on, and indicate the close relationships between BRCA1/2 mutations and TNBC at molecular levels. Furthermore, on this basis, we could identify BRCA1/2-mutation type-specific immune-associated patterns and imply that BRCA1 mutation could regulate multi-gene and multi-pathway and thus influence the tumor immune microenvironment (TIME), manifested as the recruitment of T cells, neutrophils, dendritic cells, T-regulatory cells (Tregs) infiltration and T cell exhaustion.
Conclusions In our study, we identify a BRCA1/2-mutation type-specific co-expressed gene network with associated transcription factors, and its immune-associated patterns, accordingly, to reflect the common and specific regulation patterns of tumor metastasis and TIME, which provides novel insights into the pathological process of this disease and corresponding BRCA mutations.

PU-0930

茎环引物辅助的新型等温扩增技术实现高特异性和高灵敏性核酸检测

罗光成
川北医学院附属医院

目的 建立特异性高、灵敏度好的新型等温扩增技术和可视化核酸检测方案。
方法 本研究采用全新的引物设计原则，开发了一种名为茎环引物辅助的新型等温扩增技术 (Stem-loop-primer assisted isothermal amplification, SPA)。SPA 的引物设计非常简单，只需针对模板的 2 区域，设计 1 对普通引物（正向引物 FP 和反向引物 BP)。然后再基于普通引物构建 1 对茎环引物（正向茎环引物 SFP 和反向茎环引物 SBP)。SFP 和 SBP 是在 FP 和 BP 的 5’端增加一段茎环序列。通过将普通引物和茎环引物按一定比例混合就构成了 SPA 的扩增引物，并能在 Bst DNA 聚合酶的催化下对待测核酸进行恒温扩增。
结果 SPA 的确可以快速。灵敏、特异地扩增靶核酸。本研究以扩增 ALDH2 基因为模型，充分验证了 SPA 的扩增机理和检测性能。SPA 的特异性好且灵敏度高，其非特异性扩增比目前广泛使用的 LAMP 等温扩增技术更低，且灵敏度与之相当。另外，本研究通过对临床样本中 16、18、52 和 58 型 HPV DNA 的检测，充分验证了 SPA 的临床实用性。最后，本研究建立了基于 pH 指示剂的可视化 SPA 检测方案（即通过反应前后扩增液的颜色变化来判断扩增结果的阴阳性），并将其成功地应用于 16 型 HPV 的检测之中。

结论 本研究建立了一种名为茎环引物辅助的新型等温扩增技术（SPA），并基于 SPA 技术进一步建立可视化核酸检测方案。可视化 SPA 展现出了良好的临床实用性，为实现便携式核酸检测提供了思路和方案。

两例 FGB 基因 c.1115 T>A 杂合突变导致的遗传性异常纤维蛋白原血症家系的表型及遗传学分析

王晓欧、姚雅婷、林素珍 、王锦乐、舒旷怡、艾心怡、江明华（通讯作者）
温州医科大学附属第二医院、育英儿童医院

目的 对 2 例遗传性异常纤维蛋白原血症家系进行临床表型和基因型分析，初步探讨其发病机制。
方法 用 STA-R 全自动血凝仪检测先证者及其家系成员血浆凝血酶原时间（PT）、部分活化凝血活酶（APTT）、凝血酶时间（TT）、纤维蛋（原）降解产物（FDPs）、D 二聚体（D-D）及 TT 的硫酸鱼精蛋白纠正实验；分别用 Clauss 法和免疫散射比浊法分别检测血浆纤维蛋白原活性（Fg:A）和纤维蛋白原抗原（Fg:Ag）；用 PCR 扩增纤维蛋白原 FGA、FGB 和 FGG 基因的所有外显子及其侧翼序列，扩增产物纯化后直接测序分析，寻找基因突变位点并排除基因多态性；用 4 个生物信息学预测软件（PolyPhen-2、SIFT、PROVEAN 和 Mutation Taster）对突变进行功能预测；采用 PyMol 软件对突变蛋白进行结构分析；用 Clustal X 软件分析突变氨基酸的保守性。
结果 2 例先证者 PT、APTT、FDPs、D-D 正常，而 TT 延长且不能被硫酸鱼精蛋白校正，Fg 活性明显降低，分别为（1.25 和 1.17g/L），但 Fg 抗原含量正常，分别为（3.50g/L 和 3.81g/L）。基因分析显示 2 例先证者均为 FGB 第 7 号外显子 c.1115 T>A（p.Val372Glu）杂合错义突变，突变均来源于父亲。四个生物信息学软件预测结果均表示此突变可影响蛋白质功能，且为有害突变。Clustal X 软件保守性分析结果表明 Val372 在同源物种间高度保守；PyMol 显示 p.Val372Glu 突变使 Fg 蛋白二级结构和三维结构改变，导致活性降低。
结论 2 例先证者是 FGB c.1115 T>A 所致的遗传性异常纤维蛋白原血症，该位点为尚未见报道的新变异。

新型冠状病毒的检测方法概述

王丽娟、许宏涛
北京医院

新型冠状病毒(SARS-CoV-2)最先在武汉爆发，随后蔓延至全国各地。这种新型冠状病毒感染成为国际关注的突发性公共卫生事件，其主要传播途径为呼吸道飞沫及密切接触，具有高传染性、高致病性。快速、准确检测病毒感染对防控疫情非常重要，SARS-CoV-2 的检测方法主要包括核酸检测、高通量测序、血清学检测等。核酸检测和抗原检测是诊断新型冠状病毒肺炎（Corona Virus Disease, COVID-19）的直接证据，IgM 和 IgG 抗体检测可以辅助诊断 COVID-19 和评价疫苗接种是否有效。核酸检测联合抗体检测有助于提高临床诊断 COVID-19 的特异性和敏感性。本文主要对 SARS-CoV-2 的检测方法进行概述。

Prognostic value of the baseline circulating T cell receptor β chain diversity in advanced lung cancer

Yujie Zhu[2]、Jiaqi Wang[1]
1. National Cancer Center/National Clinical Research Center for Cancer/Cancer Hospital, Chinese Academy of Medical Sciences and Peking Union Medical College
2. Xuanwu Hospital, Capital Medical University

Purpose An indicator for systemic evaluation of the adaptive immune status is lacking. Peripheral blood is important in antitumour immunity, and the T-cell receptor (TCR) repertoire diversity is key for effective immunity. This study aimed to investigate changes in the circulating T cell receptor β chain (TCRB) diversity during the first few (1~4) treatment cycles and its clinical value in patients with advanced lung cancer.
Experimental Design TCRB-enriched sequencing data combined with transcriptomic RNA sequencing data of peripheral blood leukocytes was obtained from 72 patients with advanced lung cancer before and after targeted therapy or chemotherapy. Changes in the circulating TCRB diversity during treatment and relationship of the baseline circulating TCRB diversity with prognosis and therapeutic effect were evaluated.
Results We found that targeted therapy or chemotherapy did not significantly affect the T lymphocyte composition or circulating TCRB diversity (3.83 vs 3.74, T-test, p=0.16) in patients with advanced lung adenocarcinoma (LUAD) during the first few treatment cycles. The circulating TCRB diversity links to improved therapeutic effects (T-test, p=0.00083) in LUAD patients receiving targeted therapy. Higher baseline circulating TCRB diversity was associated with better prognosis. In addition, a five-factor prognostic risk score model was built for more accurate prognosis prediction for LUAD patients.
Conclusions The chemotherapeutic agents for advanced lung cancer does not significantly affect adaptive immune function over the first few treatment cycles. The circulating TCRB diversity reflects the adaptive immunological repertoire and it might be a convenient indicator for evaluating the adaptive immune status and prognosis.

PU-0934

HMBOX1 与非小细胞肺癌预后及免疫浸润的相关性分析

于运亮[1]、李婷[2]、封建凯[1]
1. 滨州医学院烟台附属医院
2. 烟台市烟台山医院

目的 探索 HMBOX1（Homeobox Containing 1）基因在非小细胞肺癌中的表达及与患者预后及肿瘤免疫细胞浸润的相关关系，为非小细胞肺癌免疫治疗提供新的靶点。
方法 利用 qRT-PCR 技术和免疫组化技术检测 HMBOX1 在非小细胞肺癌与正常肺组织中的表达差异；利用 Kaplan-Meier Plotter 数据库分析 HMBOX1 与非小细胞肺癌患者预后相关关系；使用 FunRich 软件、MetaScape 等生物在线数据库进行 GO 和 KEGG 富集分析；利用 TIMER、TSIDB 等数据库综合分析 HMBOX1 与肿瘤微环境中免疫细胞浸润程度、肿瘤突变负荷（TMB）、肿瘤微卫星不稳定性（MSI）、新抗原等相关关系。
结果 肺鳞癌和肺腺癌组织中 HMBOX1 的表达水平明显低于正常肺组织。肺癌患者尤其是肺腺癌患者 HMBOX1 高表达的其总生存时间较长（P=0.0014）。肺癌分期 1 期患者中 HMBOX1 高表达的患者其总生存期较长（P=0.0084）；男性肺癌中 HMBOX1 高表达的患者其总生存期较长（P=0.00083）；未经过化疗的肺癌患者 HMBOX1 高表达的其总生存期较长（P=0.033）。HMBOX1 与 DSCC1（DNA replication and sister chromatid cohesion 1）高度相关，两者可能在调控肿瘤细胞 DNA 复制过程中发挥相互拮抗作用。HMBOX1 与多种肿瘤微环境中 T 细胞的活化有

关，且与肺腺癌患者 TMB 和 MSI 呈负相关关系。HMBOX1 很可能通过激活 JAK2/STAT3 信号通路调控机体免疫细胞。
结论 HMBOX1 基因在非小细胞肺癌患者中低表达，且 HMBOX1 的表达水平与非小细胞肺癌尤其是肺腺癌患者的预后及免疫细胞浸润有关。

PU-0935

SENP1 在 HIV 抗 I 型干扰素固有免疫通路中的作用研究

宋艳辉
苏州大学附属第一医院

目的 确定 HIV 感染过程中去 SUMO（Small ubiquitin-like modifier）化酶 SENP1（Sentrin-specific protease 1）对底物 PTP1B 的 SUMO 化及功能影响，以及 PTP1B 对 STAT1 磷酸化的调控，探讨 SENP1 在 HIV 抗 I 型干扰素固有免疫通路中的作用。
方法 我们在细胞中感染 HIV 并检测 SENP1 的表达变化；同时我们在细胞中用 siRNA 下调 SENP1，检测 HIV 的复制。在 293T 细胞中过表达 SENP1 的质粒，然后用 phos-tag 沉淀细胞内磷酸化的蛋白，检测其 STAT1 和 STAT2 的磷酸化水平。用 Co-IP，MS 的方法在 293T 过表达 Flag-SENP1, 然后用 HIV-luc 病毒感染细胞，质谱鉴定与蛋白磷酸化相关的重要蛋白。
结果 下调 SENP1，可以显著地增加 I 型干扰素信号通路中 ISRE 控制下的 luciferase 的表达。在 HIV 感染过程中，SENP1 表达水平增加；通过 siRNA 下调 SENP1，HIV-1 病毒的复制减少。过表达 SENP1 可以明显降低胞内 STAT1 的磷酸化水平。质谱鉴定与蛋白磷酸化检测结果表明 PTP1B 和 SENP1 有相互的直接作用。
结论 在 HIV 感染过程中，SENP1 表达得到上调，进而可能通过 PTP1B 磷酸化酶，减少 STAT1 磷酸化水平，抑制 I 型 IFN 干扰素信号通路中抗病毒基因的表达，帮助病毒复制。

PU-0936

长链非编码 RNA 在脓毒症相关器官损伤中致病机制的研究进展

胡元慧
武汉大学人民医院

脓毒症是一种由感染、创伤等多因素引起机体炎症反应紊乱的综合症，常并发肾损伤、心肌损伤、肺损伤和肝损伤等相关器官损伤，临床致死率极高预后不理想。现有的实验室生物标志物如降钙素原、C 反应蛋白等，对脓毒症早期诊断、治疗效果评估和预后判断提供了一定的帮助，但仍存在特异性和敏感性差的不足。近期长链非编码 RNA（long non-coding RNA，lncRNA）功能的研究被重视，在炎症反应、器官功能障碍等过程中，lncRNA 主要通过参与各种信号通路发挥重要作用。本文就目前 lncRNA 在脓毒症引起的常见器官功能损伤中可能的作用机制进行综述。

PU-0937

淋巴细胞 Pole2 增龄性表达变化及在老年病患者中初步观察

张弛、侯玉丽、王培昌
首都医科大学宣武医院

目的 探讨北京市健康人群外周血淋巴细胞 Pole2 表达水平的增龄性变化，分析部分老年病患者外周血淋巴细胞 Pole2 表达水平的变化。

方法 以 RT-PCR、 Western blot 方法检测不同年龄组健康人群外周血淋巴细胞 Pole2 的 mRNA 及蛋白表达水平，绘制增龄相关曲线；检测糖尿病（DM）、冠心病（CHD）、阿尔茨海默病（AD）、脑动脉粥样硬化（CVD）外周血淋巴细胞 Pole2 的 mRNA 及蛋白表达水平，分析其与同龄健康人群的差异。
结果 北京健康人群 Pole2 的 mRNA 及蛋白表达水平在 20～50y 年龄区间随龄上升，60y 以后随龄下降（P<0.001）；CHD、AD、DM、CVD 患者外周血淋巴细胞 Pole2 的 mRNA 及蛋白表达水平明显高于同年龄健康人群，其中 AD 患者组 Pole2 蛋白表达水平明显高于其他疾病组（P<0.001）。
结论 外周血淋巴细胞 Pole2 表达水平随龄及在老年病中变化显著，其具有成为衰老及上述老年病标志物的较大潜能。

PU-0938

HBsAg 和 HBV DNA 定量水平在慢性 HBV 感染自然史中的关系

薛占成、庞伟
武警特色医学中心

目的 探讨慢性乙型肝炎（chronic hepatitis B, CHB）患者 HBsAg 和 HBV DNA 定量的变化及两者的相关性。
方法 纳入慢性 HBV 感染患者 144 例，其中根据自然史分为免疫耐受期（immune tolerance phase，IT）（n=46）、免疫清除期（ immune clearance phase，IC）（n=28）、低复制期（ low-replication phase，LR）（n=24）、再活动期（reactivation phase），RA）（n=46）。采用化学发光定量法和实时荧光 PCR 定量法检测患者血清 HBsAg 和 HBV DNA。
结果 CHB 患者不同时期 HBsAg 和 HBV DNA 定量水平差异均具有统计学意义（P<0.05），HBsAg 和 HBV DNA 在 IT 期显著高于其他 3 期，LR 期最低（P<0.05）。HBsAg 和 HBV DNA 定量在 IC 期（r=0.3873,P<0.05）和 RA 期（r=0.7401,P<0.05）具有相关性。ROC 曲线分析显示: HBsAg>3.455 log10 IU/ml 的截断值（2852 IU/mL），用于预测 IC 期敏感度为 78.60%，特异度为 79.10%；HBsAg>3.505 log10 IU/ml 的截断值（3200 IU/mL），用于预测 RA 期敏感度为 74.31%，特异度为 80.21%。
结论 CHB 自然史不同阶段 HBsAg 和 HBV DNA 水平有明显差异,但仅在 IC 期和 RA 期 HBsAg 与 HBV DNA 相关。这些发现表明 HBsAg（3200 IU/mL）作为预测 HBV 再激活有重要价值。

PU-0939

亚甲基四氢叶酸还原酶基因 677 位多态性与 H 型高血压相关性研究

迟忠雨
光谷大街 1977 号金域检验

目的 叶酸（folate acid）也称为蝶酰谷氨酸或者维生素 B9，是由蝶啶、对氨基苯甲酸和 L-谷氨酸组成。在 DNA 和 RNA 合成中起重要作用，为核苷酸的合成提供一碳单位。在氨基酸的甲基化循环中参与甲基转运，在同型半胱氨酸（Hcy）的转化中起重要作用，而 H 型高血压患者血液中的同型半胱氨酸（Hcy）水平高于正常。H 型高血压患者更易发生脑卒中风险。本实验的目的是探讨亚甲基四氢叶酸还原酶基因 677 位多态性与高同型半胱氨酸血症及 H 型高血压之间的关系。判断叶酸对 H 型高血压治疗是否有效，为临床应用提供参考。
方法 收集高血压患者 300 例,根据测得的同型半胱氨酸水平被分为 H 型高血压组（H 组）（n=159）、原发性高血压组（HT 组）（n=141）,收集其一般临床资料，并利用 PCR 方法检测其亚甲基四氢叶酸还原酶基因（MTHFR）多态性 677 位点的三种基因型,应用统计学软件分析结果。

结果 H 组与 HT 组同型半胱氨酸（Hcy）水平比较（18.89±9.43 vs 8.09±1.53,P<0.01）;H 组与 HT 组 TT 型基因频率比较（41.73% vs 17.86%,P<0.01）。亚甲基四氢叶酸还原酶基因（MTHFR）C-T 的突变与 H 型高血压密切相关,300 例研究对象中携带 TT 基因型的高血压患者同型半胱氨酸（Hcy）水平比 CC 和 CT 基因型显著增高。
结论 亚甲基四氢叶酸还原酶基因（MTHFR）TT 型与高同型半胱氨酸血症及 H 型高血压有关；叶酸可用于治疗高同型半胱氨酸血症且有助于改善 H 型高血压。

PU-0940

The kynurenine derivative 3-HAA sensitizes hepatocellular carcinoma to sorafenib by upregulating phosphatases

Guifang Gan[1]、Zhaopeng Shi[2]、Fuxiang Chen[1]、Jun Mi[2]
1. Ninth People's Hospital, Shanghai Jiao Tong University School of Medicine
2. 上海交通大学医学院

Objectives Sorafenib is the FDA-approved first-line target drug for HCC patients. However, sorafenib merely confers 3-5 months of survival benefit with less than 30% of HCC patients sensitive to sorafenib therapy. Thus, it's necessary to develop a sensitizer for hepatocellular carcinoma (HCC) to sorafenib.
Methods The principal component analysis, gene ontology, and KEGG analysis are utilized following RNA-sequencing. The mass spectrometry analysis following immunoprecipitation is performed to discover the phosphatase targets. Most importantly, both the cell line-derived xenograft (CDX) and the patient-derived xenograft (PDX) mouse model are used to determine the effect of 3-HAA on sorafenib-resistant HCC in vivo.
Results In nude mice carrying HCC xenograft, tumor growth is inhibited by sorafenib or 3-HAA alone. When used in combination, the treatment particularly prevents the xenograft from growing. Combined treatment also suppresses the growth of sorafenib-resistant (≥30mg/kg) PDXs. In a set of mechanistic experiments, we find enhanced AKT activation and decreased apoptotic cells in de novo and acquired sorafenib-resistant HCC cells and tissues. 3-HAA decreases AKT phosphorylation and increases the apoptosis of HCC in both cultured cells and mouse xenografts by upregulation of phosphatases PPP1R15A/DUSP6. PPP1R15A/PPP1α directly reduces Akt phosphorylation while DUSP6 decreases Akt activity through inhibiting PDK1. The AKT activator abolishes 3-HAA inhibition of HCC growth in vitro and in mice.
Conclusion This study demonstrates that 3-HAA sensitizes HCC cells to sorafenib by upregulation of phosphatases, suggesting it as a promising molecule for HCC therapy.

TREM2 水平升高与神经退行性疾病患者和阿尔茨海默病模型小鼠的认知水平相关

张晓敏、刘静、曹敏、王培昌
首都医科大学宣武医院

背景 髓样细胞表达的触发受体 2（Triggering receptor expressed on myeloid cells 2， TREM2）主要表达于小胶质细胞，在神经退行性疾病特别是阿尔茨海默病（Alzheimer's disease, AD）中起重要作用。本研究旨在阐明 TREM2 作为阿尔茨海默病诊断生物标志物的潜在价值。
方法 采用 ELISA 法检测人和小鼠血清 TREM2 水平，采用实时荧光定量 PCR（RT-qPCR）和 Western Blot 方法检测小鼠淋巴细胞和脑组织中 TREM2 的 mRNA 和蛋白表达情况。采用 MMSE/MoCA 评分法测定患者的认知能力。采用 Morris 水迷宫（MWM）实验评价小鼠的认知能力。

结果 研究结果发现神经退行性变疾病患者与 AD 模型小鼠的血清 TREM2 浓度和淋巴细胞的蛋白表达水平均升高，且 TREM2 的表达水平与 AD 患者、APP/PS1 小鼠的认知能力有相关性。
结论 TREM2 作为一种新的 AD 诊断标志物具有潜在的临床价值。

PU-0942

APP/PS1 转基因小鼠基因型与蛋白水平鉴定及认知水平分析

张晓敏、曹敏、刘静、王培昌
首都医科大学宣武医院

目的 对 APP/PS1 转基因小鼠与野生型（WT）小鼠进行基因型鉴定，并比较二者的认知行为能力和脑内 APP 蛋白的表达量。
方法 利用聚合酶链式反应（PCR）与琼脂糖凝胶电泳技术鉴定不同年龄组 APP/PS1 双转基因小鼠与 WT 小鼠基因型；行水迷宫实验检测 2 月，5 月，10 月龄小鼠的认知水平；取不同组小鼠的海马组织进行匀浆，利用 Western blot 检测海马组织 APP 蛋白含量。
结果 正确鉴定了 APP/PS1 转基因小鼠与 WT 小鼠；10 月龄 APP/PS1 转基因小鼠的学习记忆能力比同月龄对照组 WT 小鼠明显下降，而 2 月龄、5 月龄的两组小鼠之间学习记忆能力差异不显著；同月龄的 APP/PS1 转基因小鼠海马组织 APP 蛋白表达量显著高于 WT 小鼠。
结论 正确鉴定了 APP/PS1 转基因小鼠，10 月龄的 APP/PS1 转基因小鼠比 WT 小鼠认知水平明显降低，该转基因小鼠可作为研究阿尔茨海默病等衰老疾病的动物模型。

PU-0943

血清 PLCG2 作为生物标志物对阿尔茨海默病早期诊断的价值

曹敏、刘静、张晓敏、王培昌
首都医科大学宣武医院

根据全基因组关联分析发现 PLCG2 基因突变是迟发性 AD 的危险因素，本研究的目的是探索 PLCG2 基因在 APP/PS1 小鼠中的作用，并验证血清中 PLCG2 能否作为 AD 的潜在生物标志物。
方法 取 2 月龄、5 月龄及 9 月龄 APP/PS1 小鼠及 WT 小鼠海马及皮层组织，WB，RT-PCR 检测组织中 PLCG2 的表达水平，同时收集轻度认知障碍患者（25 例），阿尔茨海默病痴呆患者（71 例），帕金森病患者（48 例），血管性痴呆患者（39 例）及健康对照患者（60 例）血清样本，通过 ELISA 方法检测血清中 PLCG2 在不同疾病中含量有无差异，并验证血清中 PLCG2 含量与认知功能 MMSE 评分、MOCA 评分的相关性，同时制作受试者工作曲线，计算曲线下面积，判断血清 PLCG2 对 AD 的诊断价值。
结果 与同龄 WT 小鼠相比，在 9 月龄 APP/PS1 小鼠皮层组织中，PLCG2 蛋白表达水平增高，而在 RNA 水平上，与同龄 WT 小鼠相比，在 9 月龄 APP/PS1 小鼠海马组织中 PLCG2 表达水平增高。与健康对照组相比，AD 患者血清中 PLCG2 含量明显下降（$P<0.01$），且在 AD 轻度认知障碍期，血清 PLCG2 含量低于重度痴呆期（$P<0.01$），我们发现血清 PLCG2 含量帕金森病患者低于重度痴呆期（$P<0.05$）,而血管性痴呆患者血清 PLCG2 含量低于帕金森患者（$P<0.005$），同时我们发现血清中 PLCG2 含量与 MMSE、MOCA 评分有显著的相关性。通过受试者工作曲线计算曲线下面积，发现血清 PLCG2 在鉴别 AD 与 PD 时，曲线下面积为 0.812。鉴别 AD 与 VaD 时，曲线下面积为 0.815，表明血清中 PLCG2 含量能够鉴定 AD 型痴呆与非 AD 型痴呆。
结论 我们的结果表明 PLCG2 基因在 AD 模型鼠中的作用，同时验证了血清 PLCG2 能够早期诊断 AD，为 AD 提供了一个潜在血液生物标志物

PU-0944

衰老细胞染色质开放变化的初步分析

宋乔、王亚琦、侯玉丽、刘静、张晓敏、曹敏、王培昌
首都医科大学宣武医院

为研究复制性衰老中表观遗传学的变化，以年轻代龄(PD26)和年老代龄(PD55)的人胚肺二倍体成纤维细胞(2BS)为材料，进行 ATAC-seq 测序，并使用 Bowtie2、FastQC、MACS、deepTools、phastCons、R 语言、HOMER 以及基因本体论(Gene Ontology，GO)对测序结果进行深入分析和挖掘。结果显示，2BS 细胞染色质开放区域的保守性较强，其主要集中于启动子(promoter)区至转录起始位点(transcription start site，TSS)，且年轻细胞与年老细胞的启动子区至转录起始位点的开放程度不同，细胞随着衰老在启动子区至转录起始位点的开放程度逐渐下降。进一步对年轻和年老细胞之间存在显著差异的靶基因进行 GO 分析发现，这些差异基因主要与细胞进程、代谢、生物性调节、结合功能、催化功能相关。本次研究发现衰老过程中染色质开放区减少、转录调控水平下降，提示复制性衰老与转录调控关系密切。

PU-0945

MicroRNA-135a in ABCA1 Labeled Exosome is a Candidate Biomarker for Alzheimer's Disease in Serum

Chengeng Liu、Yao Lu、Yue Zhao、Peichang Wang
Xuanwu Hospital,Capital Medical University

In the present study, ABCA1 protein was used as a specific exosome label to capture specific exosomes, and evaluate the value of ABCA1 labeled exosomal microRNA-135a (miR-135a) in the diagnosis of AD, especially in the early diagnosis of AD.

Methods This study conducted preliminary research on the levels of ABCA1 in white blood cell (WBC), red blood cell (RBC), HT-22 cells, and neuronal cells. The diagnostic value of ABCA1 labeled exosomal miR-135a in cerebrospinal fluid (CSF) and serum in APP/PS1 double transgenic mice and 152 SCD, 131 MCI, 198 DAT and 30 control subjects.

Results The ABCA1 levels of exosome harvested from HT-22 cells and neurons medium was significantly higher than that of RBC and WBC ($P < 0.05$). The ABCA1 labeled exosomal miR-135a were increased in the CSF of MCI and DAT patients compared with control group ($P < 0.05$). The ABCA1 labeled exosomal miR-135a were slightly increased ($P > 0.05$) in the serum of SCD and significantly increased in MCI and DAT patients compared with control group ($P < 0.05$).

Conclusion In summary, this study provides a method to capture specific exosomes and detect them using immunological methods, which is more efficient for early diagnosis of AD.

PU-0946

Severely High Lactic Acid in Severe Pneumonia Patient: a Case Report

Chengeng Liu、Yiming Chu、Yao Lu、Peichang Wang
Xuanwu Hospital,Capital Medical University

Background Severe pneumonia (SP) is a clinically critical acute disease which has a higher mortality rate in infectious diseases. In this report, a rare case of severe pneumonia with severely high lactic acid (up to 24 mmol/L) and relatively normal pH was analyzed.

Methods The case was discussed from different angles including acid-base balance disorder, the using of extracorporeal membrane oxygenation (ECMO), dialysis treatment, circulatory disturbance, and inspection methodology.
Results Hypoxia and dissolution of muscles caused by circulatory disorders may be the cause of the abnormal increase of lactate in this case; while the relatively normal pH may be caused by the dialysis treatment.
Conclusions Such a high blood gas lactic acid value is extremely rare, and this increase is not due to the limitations of the test method; high lactic acid may not result in the significant decrease of pH when the patient receives continuous systemic treatment.

PU-0947

ABCA1 Labeled Exosome Contain Higher MicroRNA-193b in the Serum of Alzheimer's Disease

Chengeng Liu、Yao Lu、Yue Zhao、Peichang Wang
Xuanwu Hospital,Capital Medical University

This study used immunocapture to isolate serum exosomes labeled with ABCA1 for diagnosis of Alzheimer's disease dementia and differential diagnosis of vascular dementia.
Methods This study conducted preliminary research on the levels of ABCA1 labeled exosomal miR-193b in white blood cell (WBC), red blood cell (RBC), HT-22 cells, and neuronal cells. The ABCA1 labeled exosomal miR-193b in cerebrospinal fluid (CSF) and serum of APP/PS1 double transgenic mice and 89 subjective cognitive decline (SCD), 92 stage and mild cognitive impairment SCD (MCI), 92 dementia of the Alzheimer type (DAT), 60 vascular dementia (VaD) and 60 control subjects.
Results The ABCA1 levels of exosome harvested from HT-22 cells and neurons medium was significantly higher than that of RBC and WBC ($P < 0.05$). The ABCA1 labeled exosomal miR-193b were increased in the CSF of MCI and DAT patients compared with control group ($P < 0.05$). The ABCA1 labeled exosomal miR-193b were slightly increased ($P > 0.05$) in the serum of SCD and significantly increased in MCI and DAT patients compared with control group ($P < 0.05$).
Conclusion In summary, this study provides a method to capture specific exosomes and detect them using immunological methods, which is more efficient for early diagnosis of AD.

脊髓小脑共济失调及强直性肌营养不良症易感基因突变位点的研究进展

兰贺、刘辰庚、王培昌
首都医科大学宣武医院

脊髓小脑共济失调(spinocerebellar ataxia, SCA)以及强直性肌营养不良症（myotonic dystrophy，DM）均为临床上较常见的常染色体显性遗传病，其主要基因突变类型为动态突变。SCA 常见突变亚型为 SCA1、SCA2 和 SCA3，其动态突变类型均为核苷酸（CAG）序列拷贝数异常。强直性肌营养不良症 I 型（DM1）突变位点多位于 19q13.3，主要为蛋白激酶 K（dystrophia myotonic protein kinase，DMPK）基因 3′端非翻译区核苷酸（CTG）拷贝数异常；强直性肌营养不良症 II 型（DM2）主要突变类型为 3 号染色体长臂（3q21.3）锌指蛋白 ZNF-9（zinc finger protein 9）第一内含子中重复序列（CCTG）拷贝数异常，(CCTG)n 的重复序列在健康人群中是间断的，而在基因突变人群中 CCTG 是连续出现的。Sanger 测序以及多重 DNA 聚合酶链反应是目前 SCA、DM 动态突变基因检测的重要方法。

转录因子 CTCF 在衰老过程中对 POLD1 转录调控机制的研究

侯玉丽、宋乔、高世超、张晓敏、王亚琦、刘静、付静轩、曹敏、王培昌
首都医科大学宣武医院

衰老是细胞、组织、器官等结构及功能随龄渐进性退行性变，最终走向不可逆的死亡过程。是多种老年病的发病基础，因此研究衰老的机制对于老年病的预防和治疗具有重要意义。POLD1 是 DNA 聚合酶 δ 的催化亚基，在 DNA 合成和 DNA 修复过程中起关键作用。已有研究表明 POLD1 表达的增龄性下调通过降低 DNA 合成率以及 DNA 损伤修复能力加速细胞衰老。但是对于 POLD1 增龄性下调的具体机制尚未清晰，本文从转录调控的水平研究 POLD1 的增龄性下调机制。本研究首先发现 CTCF 与 POLD1 启动子区的两个位点进行结合，并对 POLD1 启动子活性起激活作用。此外，在衰老细胞系、SAMP8 小鼠组织和人外周血淋巴细胞中发现 CTCF 和 POLD1 表达均随龄下降并具有正相关性，并且这种表达趋势与 CTCF 和 POLD1 启动子的结合水平相关，表明 CTCF 有可能是通过影响与 POLD1 启动子的结合而调控 POLD1 的表达。更深入的机制研究表明，在衰老细胞中进行 CTCF 敲除后 POLD1 表达下降，细胞增殖能力下降、DNA 合成率下降、DNA 损伤修复能力下降及细胞衰老染色加深，而当 CTCF 过表达后具有相反的结果。当在 CTCF 敲除后进行 POLD1 过表达后发现 POLD1 表达增高，并且 CTCF 对细胞衰老的作用被回复。在 CTCF 过表达后进行 POLD1 敲除也出现同样的回复作用，表明 CTCF 是通过靶向调控 POLD1 的表达而调控衰老的进展。总之，以上结果表明衰老过程中转录因子 CTCF 的增龄性下调导致了 CTCF 与 POLD1 启动子结合水平的下降而调控细胞衰老。该研究为衰老的分子机制提供了新的思路，进而可能为延缓衰老提供了新的靶点。

阿尔茨海默病中 β 淀粉样蛋白的生成及清除的调节

崔雨婷、王亚琦、王培昌
首都医科大学宣武医院

阿尔茨海默病（Alzheimer's disease， AD）是一种慢性退行性神经系统疾病，临床主要表现为进行性认知能力下降、记忆力衰退、人格改变等。AD 的标志性病理特征包括脑细胞外 β 淀粉样蛋白（β-amyloid protein，Aβ）沉积形成老年斑、细胞内神经纤维缠结（neurofibrillary tangles，NFT）、神经炎症增加以及神经元凋亡。β 淀粉样蛋白主要在神经元产生，是淀粉样前体蛋白经过一系列酶解反应生成的由 39～42 个氨基酸组成的多肽，调节 Aβ 的生成和清除能够有效延缓甚至逆转阿尔茨海默病的进程，因而具有重大的研究价值。β-分泌酶（β-site APP cleaving enzyme 1，BACE1）为 Aβ 产生过程中的关键酶，其含量及活性的改变均能影响 Aβ 产生，在阿尔茨海默病的发生发展中发挥至关重要的作用；老年斑周围炎性细胞的聚集提示，AD 与神经炎症高度相关，神经炎症相关细胞能够参与 Aβ 的清除，多种炎性因子也能调节 Aβ 的生成；非编码 RNA 虽很少直接参与 Aβ 的产生、沉积和清除，但其可以通过多种途径调节 Aβ 的产生。本文从 β 淀粉样蛋白生成及清除的机制着手，重点阐述了 BACE1、神经炎症、非编码 RNA 对 Aβ 调控的重要作用，以期为 AD 发病机制的进一步研究提供思路，并对阿尔茨海默病早期干预及治疗提供理论参考。

A Case Report on Delayed Diagnosis of COVID-19 Infection: On the Critical Role of Specimen Type and Quality, Limit of Detection of Test Kits, and IgM and IgG Antibodies Test

Dequan Tian、jing Liu、Jingrong Cao、Diandian Chen、Yidan Wang、Wenshuo Yang、Leiming Wang、Ying Li、Chengeng Liu、Peichang Wang
Department of Clinical Laboratory Xuanwu Hospital, Capital Medical University

Background The outbreak of COVID-19 caused by SARS-CoV-2 has spread globally and has become a public health emergency of international concern. Molecular diagnostic reverse-transcription RT-PCR assay is regarded as the gold standard for the etiological diagnosis of COVID-19. However, the sensitivity and specificity of RT-PCR were questioned because of the presence of negative results in some patients who were highly suspected of the disease based on clinical manifestations.
Methods In the case of negative nucleic acid result of SARS-CoV-2 in throat swabs, we chose a more sensitive SARS-CoV-2 Molecular Diagnostic Assays and sputum samples with higher viral load. In addition, the detection of IgG and Ig M against SARS-CoV-2 played an indicative role in this process.
Results The detection of IgG against SARS-CoV-2 and the nucleic acid of sputum samples were positive, eventually, the patient were diagnosed novel coronavirus pneumonia.
Conclusion Sputum specimens are most suitable for the detection of SARS-CoV-2 in middle-late-stage patients with the lower LOD of molecular diagnostic assays. Antibody detection may play an important role in the diagnosis of COVID-19 as a complementary approach for viral nucleic acid assays.

Homer1 基因重组质粒的构建与其在 HT22 细胞中的表达

曹敏、张晓敏、王培昌、刘静
首都医科大学宣武医院

目的 构建鼠 Homer1 基因真核表达重组质粒并在 HT22 细胞中表达。
方法 提取小鼠海马组织的 RNA，经逆转录获得 cDNA，以 cDNA 为模板，扩增得到长为 1064bp 的 Homer1 基因编码序列，经双酶切、连接、转化得到重组质粒 p3XFLAG-CMV-10-Homer1，双酶切反应鉴定后送公司测序。将构建成功的重组质粒转染到 HT22 细胞中，利用蛋白免疫印迹（Western Blot）检测 Homer1 基因的表达情况。
结果 测序结果显示重组序列与目的基因完全一致，质粒构建成功。Western Blot 结果显示 Homer1 在 HT22 细胞中成功表达。
结论 成功构建了 p3XFLAG-CMV-10-Homer1 真核表达载体并在 HT22 细胞中得到表达，为研究 Homer1 对 Ca2+调控及抑郁症、创伤性脑损伤等神经系统疾病奠定基础。

The Predictive Model of key Molecules in Liquid Biopsy for Prognosis of Bladder Cancer

xin dong、Baojun Wei、Wei Cui
Department of Laboratory, National Cancer Center/Cancer Hospital, Chinese Academy of Medical Sciences and Peking Union Medical College

Purpose The aim of present study was to explore the expressive status of overexpressed in lung cancer-1 (OLC1) gene in bladder urothelial carcinoma, and analyzed the correlation between the aberrant expression of OLC1 and the clinicopathological features. On the basis of clarifying the expression of OLC1 gene in the tumor tissue of bladder cancer patients, explore the relationship between OLC1 expression and the prognosis of bladder cancer patients. Determine the expression of OLC1 in blood and urine before operation, and evaluate the possibility of OLC1 as a biopsy marker for predicting the prognosis of bladder cancer.
Methods The mRNA expression of OLC1 was examined in 70 bladder cancer tissues and 38 corresponding normal urothelial samples by reverse real-time quantitative polymerase chain reaction (qRT-PCR); and OLC1 protein expression was examined in 114 bladder cancer specimens by immunohistochemical staining，OLC1 protein expression was examined in 52 bladder cancer patient serum by ELISA. Kaplan-Meier analyses were performed to determine the association between OLC1 expression and progression-free survival (PFS) and overall survival (OS) of the patients.
Results The mRNA and protein expression of OLC1 was markedly up-regulated in the tumor tissues($p<0.05$) and serum($p<0.05$) of the bladder cancer patients, especially in those with the muscle invasive bladder cancer (stage T2-T4, $p<0.001$), and of the smoker patients ($p<0.05$). The 5-year OS rate for the patients with high level OLC1 in the tumor was considerably lower than those with low level OLC1 ($p=0.04$). Additionally the 5-year OS rate for the smoking patients with high level OLC1 protein was significantly lower than those of non-smoking patients with low level OLC1 ($p=0.01$).
Conclusions OLC1 was overexpressed in bladder urothelial carcinoma which correlated with the tumor invasion, overall survival, and smoking history of the patients, suggesting that OLC1 is a potential biopsy prognosis biomarker for bladder cancer.

高通量分子测序在男性新生儿 G6PD 缺乏症筛查中的应用研究

杨金玲、陈大宇、黄丽华、韦江艳、蔡稔
柳州市妇幼保健院

目的 探讨高通量分子测序（NGS）在男性新生儿葡萄糖-6-磷酸脱氢酶（G6PD）缺乏症筛查中的应用，研究本地男性新生儿 G6PD 基因多态性及 G6PD 酶活性筛查截断值。
方法 随机收集男性新生儿足跟干滤纸血片 1092 例，采用 G6PD 酶活性分析和 NGS 技术进行筛查，多色探针荧光 PCR 熔解曲线法进行验证。
结果 共检测 1092 例男性新生儿，121 例检出 G6PD 基因突变，本地区男性新生儿 G6PD 活性缺乏发生率为 11.08%；G6PD 酶缺乏的男性新生儿酶活性为 1.2±0.72U/gHb，正常男性新生儿 G6PD 酶活性为 6.66±0.91U/gHb。酶活性分析检出 G6PD 酶活性缺乏 114 例，假阴性 7 例；NGS 检出 G6PD 基因变异 115 例，假阴性 6 例。高通量测序的灵敏度、特异性、阳性预测值和阴性预测值分别为 95.04%、100%、100%和 99.39%。酶活性分析灵敏度、特异性、阳性预测值和阴性预测值分别为 94.21%、100%、100%和 99.28%，两种检测无差异（P＞0.05）。共检测到 7 种 G6PD 突变，c.1376G>T、c.95A>G、c.1388G>A、c.1024C>T 突变为本地区男性新生儿 G6PD

基因常见突变类型，酶活性依次升高；常见突变类型分属于Ⅱ、Ⅲ类，以Ⅱ类为主。4 种变异位点酶活性比较差异有统计学意义（F=16.2，P<0.05）。本地男性新生儿 G6PD 活性以 II 型为主和 III 型为主，II 型占其中 85.12%（103/121）。男性新生儿 G6PD 酶活性检测截断值＜4.24U/gHb，敏感度为 99.28%，特异度为 100%，AUC 面积为 0.999。
结论 NGS 是男性新生儿 G6PD 缺乏症筛查的可靠方法，设置合理 G6PD 酶活性检测截断值，两种检测可以互为补充，为遗传咨询及临床指导用药提供参考依据。

PU-0955

Efficacy of Circulating miR-130b and Blood Routine Parameters in Early Diagnosing Gastric Cancer

Jianlin Chen、Yifan Sun
Affiliated Liutie Central Hospital of Guangxi Medical University

Background Gastric cancer (GC) is a common malignant cancer worldwide, with its poor prognosis. which is mainly due to lack of early diagnosis. Circulating biomarkers with diagnostic and prognostic value remain to be found. This study aimed to evaluate whether circulating miR-130b and blood routine parameters are useful markers to diagnostic GC, early-stage GC(EGC) and precancerous lesions (Pres), and to find more effective diagnostic models by combining circulating blood markers.
Methods 90 GCs, 90 Pres and 45 normal controls (NCs) were enrolled in this study. Plasma miRNA-130b was measured using quantitative real-time polymerase chain reaction (qRT-PCR) and retrospective analysis of selected blood parameters were performed. Receiver operating characteristic (ROC) curves were performed to evaluate the diagnostic value of markers for GCs, EGCs and Pres.
Results Circulating levels of M#, M%, RDW-CV, MPV, PDW, MLR and NLR were significantly higher and Hb, L% were significantly lower in patients with GC and Pre than that in NCs (all P<0.05). The levels of N#, N% and PLR in patients with GC were significantly higher and Hct was significantly lower than that in NCs (all P <0.05). Values of MPV/PC were significantly higher in Pre cohort versus healthy controls. The area under the ROC curve (AUC) of potential biomarkers in the diagnosis of GC was 0.634-0.887 individually, and increased to 0.978 in the combination of miR-130b-PDW-MLR-Hb. Moreover, the expression of RDW-CV, PLR, NLR, N#, N% were positively correlated and MPV, L#, L%, Hb, Hct were negatively correlated with cancer stage; Furthermore, the circulating levels of miRNA-130b, NLR, RDW-CV, PDW, M%, Red blood cell count (R#), Hct, Hb and MLR differed significantly between the EGCs and NCs. The AUCs of these biomarkers was 0.6491-0.911 individually in the diagnosis of EGC, and increased to 0.960 in combination; In addition, the AUC values of miR-130b, RDW-CV, MPV/PC ratio, MLR, NLR, PDW, L %, M%, M# and Hb in the diagnosis of Pre was 0.638-0.811 individually. The dual-model of miR-130b-PDW manifested a significantly largest AUC 0.896 in the diagnosis of Pre, and the sensitivity and accuracy increased when miR-130b and PDW were combined.
Conclusions Circulating miR-130b and blood routine parameters maybe novel biomarkers in early diagnosing gastric cancer, and combined biomarkers assay could improve diagnostic accuracy up to a point.

PU-0956

Remarkable inhibition effects of afatinib alone or combining with paclitaxel in esophageal squamous cell carcinoma

Liyan Yang[1]、Zhijian Cheng[2]、Jiajie Hao[3]、Mingrong Wang[3]、Yu Zhang[3]
1. National Cancer Center/National Clinical Research Center for Cancer/Cancer Hospital, Chinese Academy of Medical Sciences and Peking Union Medical College
2. The People's Hospital of Huangshan
3. National Cancer Center/National Clinical Research Center for Cancer/Cancer Hospital, Chinese Academy of Medical Sciences and Peking Union Medical College

Background and Aim Chemotherapy drugs do not work well in esophageal squamous cell carcinoma (ESCC), and none of the targeted drugs have been applied in clinic. This study aims to identify effective targeted drugs and related biomarkers for the treatment of ESCC.
Methods The effect of of 40 FDA approved small-molecule inhibitors were first tested in five ESCC cell lines. CCK8 assays and xenografts derived from ESCC cell lines were performed to evaluate the anti-ESCC effects of inhibitors or chemotherapeutic agents in vitro and in vivo, respectively. Immunohistochemistry was utilized to analyze the p-EGFR expression in tissues. Western blot combining with gray analysis was conducted to detect the expression of interest protein. Flow cytometry and immunofluorescence assay were used to analyze apoptosis, cell cycle, and mitotic changes after drug treatment.
Results Afatinib showed remarkable effects on inhibiting ESCC cells with higher expression of p-EGFR. Results from combinatorial screening in ESCC cells expressing lower phosphorylation level of EGFR showed that paclitaxel and afatinib presented a significant synergistic inhibitory effect ($P < 0.001$). Molecular analysis revealed that paclitaxel sentisized afatinib by activating EGFR, and afatinib in combination with paclitaxel effectively blocked MAPK pathway, induced G2/M cell arrest and apoptosis which is an indicator of mitotic catastrophe.
Conclusions Our data demonstrate that afatinib is an effective drug for patients with ESCC expressing higher phosphorylation level of EGFR. And for patients with lower p-EGFR in tumors, paclitaxel in combination with afatinib might be a promising therapeutic strategy in ESCC.

PU-0957

Expression levels of miR-192-5p in colon cancer serum and their relationships with clinicopathological features

Xu Chen、Jun Qiu
First Affiliated Hospital of Soochow University

Background Colon cancer has a poor prognosis due to a lack of biomarkers for early diagnosis and prognosis. The present study analyzed serum miR-192-5p expression levels in colon cancer patients and their correlations with clinicopathological features.
Methods Relative mRNA expression was assessed by real-time fluorescence-based quantitative PCR in the serum of 164 colon cancer patients and 60 healthy controls. Patients were enrolled in the high or low miR-192-5p group according to the cutoff value determined by ROC curve analysis. The Kaplan-Meier method and univariate and multivariate Cox regression models were applied to analyze the risk factors influencing the postoperative survival of colon cancer patients.
Results miR-192-5p mRNA expression in the colon cancer group was significantly reduced compared with the control group ($P<0.01$). Low miR-192-5p expression was significantly associated with a poor differentiation degree, lymphatic metastasis, vascular invasion and high TNM stage ($P=0.027$, 0.001, 0.010, and <0.001, respectively). Colon cancer patients in the low miR-192-5p group exhibited a low survival rate ($P<0.001$). The independent risk factors for

postoperative survival included lymphatic metastasis, a high TNM stage and miR-192-5p<1.16 (P=0.017, 0.025, and 0.008, respectively).
Conclusions miR-192-5p may represent a promising biomarker for early diagnosis and prognosis prediction in colon cancer patients.

PU-0958

miR-612 对前列腺癌能量代谢及增殖凋亡的影响

张强、卢凯
东南大学附属中大医院

目的 探讨 miR-612 在调控前列腺癌能量代谢转变、增殖及凋亡中的作用。
方法 用 miRNA 芯片筛选前列腺能量代谢转变相关 microRNA，定量 PCR 方法进行验证，通过测定葡萄糖摄取率、乳酸产生水平、MTT、Western blotting 及 FACS 来研究 miR-612 对于前列腺癌细胞能量代谢及增殖、凋亡的影响。
结果 增加 miR-612 在前列腺癌中的表达，可抑制细胞糖酵解及增殖，并增加其凋亡。
结论 miR-612 参与前列腺癌糖酵解，并行使癌基因作用，与前列腺癌的增殖及凋亡相关。

MS-HRM 定量检测乳房外 Paget 病 MSH2 启动子甲基化的研究

董柳、关明
复旦大学附属华山医院

研究背景及目的 乳房外 Paget 病（EMPD）是一种罕见的皮肤肿瘤，DNA 错配修复（MMR）基因 MSH2 基因启动子甲基化在 EMPD 具有较高的检出率，由 MSH2 甲基化引起的蛋白表达下降可能在 EMPD 发病中发挥重要作用。本研究拟建立基于甲基化敏感性高分辨率熔解曲线（MS_x0002_-HRM）检测 MSH2 启动子甲基化的分析策略。
材料和方法 1. 材料：收集华山医院收治的 EMPD 患者，共计 57 例组织样本
2. 样本 DNA 的提取和重亚硫酸盐修饰
3. 甲基化标准品制备
4. 构建 MS-HRM 检测 MSH2 启动子甲基化水平的分析方法
5. 甲基化阳性的 EMPD 样本 DNA，采用焦磷酸测序对阳性样本进行验证
结果 1. 构建基于 MS-HRM 的 MSH2 基因启动子甲基化的水平检测方法
按甲基化阳性对照 DNA 比例为 100%，50%，30%，10%，5%，1%，0%的系列浓度梯度，构建标准曲线。利用该 MS-HRM 检测方法，将亚硫氢酸盐修饰后的 EMPD 样本与标准曲线同时扩增，以浓度梯度的标准曲线确定 EMPD 样本中的 MSH2 甲基化水平，96.5%（55/57）的样本存在不同程度的甲基化。此后对 19 例阳性样本进行焦磷酸测序验证，均检测出一定甲基化阳性，与 MS-HRM 检测结果吻合。
讨论 MS-HRM 是一种快速的甲基化水平分析方法，本研究建立基于 MS-HRM 的 MSH2 启动子甲基化水平分析策略，以期证实 MSH2 甲基化作为 EMPD 分子标志物的可行性。此外，若将 MMR 蛋白表达状态与其基因启动子甲基化水平检测结合起来，并探索 2 者之间及其与 EMPD 的关联，可能有利于揭示 EMPD 发病的分子机制，对 EMPD 的诊断和对疾病分级的分子病理标志物具有积极意义。

A Bioorthogonal Time-Resolved Luminogenic Probe for Metabolic Labelling and Imaging of Glycans

judun zheng[1,4]、Qiuqiang Zhan[2]、Lijun Jiang[3]、Da Xing[4]、Tao Zhang[4]、Ka-Leung Wong[3]
1. Dermatology Hospital, Southern Medical University, Guangzhou 510091, P. R. China.
2. Centre for Optical and Electromagnetic Research, South China Academy of Advanced Optoelectronics, South China Normal University, Guangzhou, 510006, P.R. China
3. Department of Chemistry, Hong Kong Baptist University, Kowloon Tong, Hong Kong SAR, P.R. China
4. College of Biophotonics, South China Normal University, Guangzhou 510631, P. R. China

Bioorthogonal fluorogenic probes are superior to the labelling and imaging of biomolecules in live cells and organisms, while how to overcome the limitation of the autofluorescence is still a challenge for current probes to achieve high illumination resolution of the target of interest. We herein demonstrate a functionalized terbium complex Tb-1 that is stable and biocompatible to enable bioorthogonal ligation with engineered cell-surface glycans for providing responsive luminescence. A luminescence resonance energy transfer (LRET) quencher with bioorthogonal properties is strategically incorporated in a tripodal terbium complex with low toxicity, which can undergo a click-cycloaddition reaction with a cyclooctene to completely change the electronic structure of the quencher, resulting in much less efficient LRET but a 5-fold enhancement in the long-lived terbium emission intensity. This work therefore establishes a time-resolved platform that enables labeling and imaging of biomolecules of interest.

Establishment of a Scalable Nanoliter Digital LAMP Platform for Rapid, Accurate and Quantitative Detection of Multiple Myeloproliferative Neoplasm Molecular Markers

Guojun Cao[1]、Jinze li[2]、Lianqun Zhou[2]、Ming Guan[3]
1. Huashan Hospital North, Shanghai Medical College, Fudan University
2. 中科院苏州医工所
3. 复旦大学附属华山医院

Objective Philadelphia chromosome-negative myeloproliferative neoplasms (MPNs) are a series of unique blood disorders characterized by the continuous clonal proliferation of relatively mature bone marrow hematopoietic stem cells in one or more lines, including essential thrombocytosis (ET), polycythemia vera (PV), and primary myelofibrosis (PMF) lines. Compared with myeloid neoplasms, MPNs were characterized by benign myeloproliferation with a natural history and supportive care alone, measured in decades rather than years in most cases. However, MPNs was associated with a risk of bone marrow failure or acute leukemia transformation, the frequencies of which varied between disorders. In addition, each type of MPNs had phenotypic mimicry and was capable of evolving into another type, which makes clinical diagnosis, risk assessment, and treatment prescription tricky. Host genetic variation plays an important role in the mutational landscape of MPNs, including in the presence of a shared disease allele. The quantitative detection of molecular markers is one of the important criteria for MPNs diagnosis. So it is necessary to detect the molecular markers early, fast and multi index. Therefore, a nanodigital LAMP platform (nano-dLAMP) was established in this study.
Methods Chips with four physical partitions were fabricated for the simultaneous detection of CALR-1, CALR-2 and JAK2 V617F mutations and internal reference genes. PCR additives and nanoparticles were used to make traditional LAMP suitable for amplification of nanoliter samples. The performance of this dLAMP system was verified with simulated samples. A total of 281

clinical samples were examined synchronously by nano-dLAMP and the commercial Quantstudio 3D system to preliminarily evaluate the new platform.
Results Nanoparticles improved the amplification performance of the nanoliter LAMP. Quantitative detection of the main MPNs molecular markers could be performed simultaneously in one four-partition chip within 1 hour. The detection sensitivity of CALR-1 was 0.5% mutation burden, that of CALR-2 was 0.1%, and that of JAK2 V617F was 0.5%. The agreement between the self-built platform and Quantstudio 3D was as high as 99.64% (280/281).
Conclusions A nano-dLAMP platform with good sensitivity and specificity and fast detection was established for the detection of MPNs markers. As a general platform, it could also be used for the detection of other nucleic acid markers, and the chip throughput could be adjusted flexibly according to each experiment.

2019 新型冠状病毒（2019-nCoV）核酸检测体系性能验证

吴剑、龚纯全、傅后榜、龚虹、张恒超、支林俊、徐媛、刘宇
邵武市立医院

目的 评估 2019 新型冠状病毒（2019-nCoV）核酸检测体系在质量上是否能满足临床需求。
方法 对本实验室采用的新冠核酸采样管、提取试剂、两种扩增试剂及相应仪器在配套使用时的阴阳性符合率、批内精密度、批间精密度及最低检测限、交叉反应等项目进行性能验证。
结果 本实验室的新冠核酸检测体系阴阳性符合率 100 %；ORF1ab、N 与 E 各基因批内精密度、批间精密度 CV 均≤5 %；新冠标准物质稀释至厂家声明的最低检测限浓度 500 copies/ml 时，ORF1ab、N 与 E 每个基因重复提取扩增 10 次，每次均出现了扩增曲线，Ct 值均<37，检出率 100 %，利用本核酸检测体系对人类冠状病毒（HKU1，OC43，NL63 和 229E）、MERS 冠状病毒、甲型流感病毒、乙型流感病毒、人副流感病毒 I 型、腺病毒 I 型、EB 病毒，人巨细胞病毒，肺炎支原体及人基因组 DNA 进行提取扩增，结果为阴性。
结论 本实验室的新冠核酸检测体系阴阳性符合率一致，重复性好，最低检测限与厂家声明一致，与能引起相同或相似临床症状的其它病原体及人基因组 DNA 不产生交叉反应，特异性好，能够在质量上保证临床新冠核酸检测的需要,可为其他实验室选择配套检测体系提供参考依据。

Background Balanced complex chromosome rearrangement (CCR) carriers are phenotypically normal but at high risk of reproductive failure, recurrent miscarriages, and affected offspring, so that cytogenetic characterizations of CCR carriers are crucial.
Methods We report a case of CCR: 46,XX, t(6;15;10;9)(q13;q15;p11.2;q34.3) ins(9;8)(q22.33;q21.1q21.3). The peripheral blood was collected for karyotyping, single nucleotide polymorphism array (SNP-array) analysis, and whole genome mate-pair sequencing.
Results The patient's karyotype is detected and identified as 46,XX, t(6;15;10;9)(q13;q15;p11.2;q34.3) ins(9;8) (q22.33;q21.1q21.3), with no significant duplication

and deletion found by SNP-array analysis. There are 16 break-points among chromosomes 6, 8, 9, 10, and 15 identified by whole genome sequencing.
Conclusions With a variety of detection techniques, we can deeply study the genetic characteristics of CCRs, thus providing a basis for genetic counseling and choice of fertility.

人 MTHFR C677T 基因多态性检测试剂盒的性能验证评价

张强、文少佳
西安金域医学检验所有限公司

目的 对苏州旷远和西安金磁两个厂家的人 MTHFR C677T 基因多态性检测试剂盒的性能进行分析评价，并探讨其临床应用价值。
方法 选取 50 例临床样本进行验证，分别使用苏州旷远和西安金磁的人 MTHFR C677T 基因多态性检测试剂盒进行检测，比较两种试剂盒检测结果的准确度、重复性、检测限等性能指标。
结果 使用两种试剂盒对 50 例临床样本 MTHFR C677T 基因多态性的检测结果完全符合，3 次重复试验的结果均保持一致，稀释到检测限以下均可以准确分型。
结论 苏州旷远采用 PCR-荧光探针法，检测快速用时较短；西安金磁采用 PCR-胶体金法，结果判读简单方便。上述两种试剂盒的准确度高、重复性好、灵敏度高，能满足临床检测的要求。并且其操作快速方便、结果可靠，特别适用于叶酸代谢的风险评估，可以进一步推广使用。

2016～2019 年长治市手足口病病原学研究

王亚飞
长治医学院附属和平医院

目的 了解长治市 2016～2019 年手足口病病原学分布情况及流行特征，为预防控制手足口病提供科学依据。
方法 采集手足口病患儿咽拭子标本，通过荧光定量 PCR 方法进行肠道病毒核酸检测，采用 SPSS21.0 软件对资料进行统计分析。
结果 2016～2019 年共检测手足口病样本 1424 例，肠道病毒核酸阳性 1122 例，阳性率为 78.79%（1122/1424），其中有 246 例检出两种病毒，共检出 1368 株病毒，肠道病毒 71 型（EV-A71）、柯萨奇病毒 A16 型（CV-A16）、通用型肠道病毒构成比分别为 7.09%（97/1368）、15.79%(216/1368)、77.12%(1055/1368)。男女阳性比例为 1.43:1，1～4 岁龄阳性构成比为 86.03%(965/1122)，5 年中 6、7、8 月阳性标本构成比分别为 16.13%(181/1122)、36.15%(405/1122)、24.51%(275/1122)。
结论 长治市 2016～2019 年手足口病以 1～4 岁幼儿为主，发病风险与性别无关，7～8 月为发病高峰期，病原以通用型肠道病毒为主，CV-A16 次之，EV-A71 最低。

11 个基因突变、PD-L1 表达及临床病理特征在非小细胞肺癌病人中的分析

刘艳清、吴爱华、王姗姗、房树玉、莫翼军
宁波市第一医院

目的 探讨程序性细胞死亡配体 1 (PD-L1)、11 个突变基因的表达与 273 例非小细胞肺癌(NSCLC)临床病理特征的关系。
方法 采用 SP263 抗体检测的免疫组化方法，回顾性检测 247 例手术切除的原发性和 26 例晚期 NSCLC 患者的肿瘤 PD-L1 表达。NGS 序列检测 EGFR、TP53、KRAS、PIK3CA、ERBB2、MET、RET、ALK、BRAF、ROS1、APC 基因突变情况。数据分析采用 SPSS 22.0 进行。通过单因素和多因素分析评估 PD-L1 表达、11 个突变基因和临床病理特征之间的关系。
结果 273 例患者中，PD-L1 表达阳性 68 例(24.9%)。数据显示，EGFR 基因的突变率最高，为 63.0%(172/273)，其次为 TP53(11.7%， 32/273)和 KRAS(5.5%， 15/273)。女性、非吸烟者和腺癌患者更可能有 EGFR 突变。多因素 logistic 回归显示 PD-L1 表达与非腺癌、淋巴浸润、EGFR 野生型和 TP53 突变显著相关(p 分别为 0.041、< 0.001、0.004 和 0.014)。此外，PD-L1 在腺癌中的表达与淋巴浸润、TP53 和 KRAS 基因突变有关(p 分别为 0.012、< 0.025 和 0.041)。
结论 临床应常规检测 EGFR、KRAS 和 TP53 的突变，以更好地指导 NSCLC 患者的免疫治疗。未来的研究需要阐明驱动基因突变和 PD-L1 表达在指导 NSCLC 患者免疫治疗中的潜在机制。

PU-0967

The Effect of Methotrexate on Serum Levels of Trace/Mineral Elements in Patients with Psoriatic Arthritis

Yue Gao、Zheng Liu
Guilin Medical University

Psoriatic arthritis is a type of inflammatory arthritis that occurs in some patients with psoriasis. Clinically, low-dose methotrexatewas used to treat psoriatic arthritis as a first-line agent. However, the pathogenesis of psoriatic arthritis and the mechanism ofmethotrexate treating psoriatic arthritis remained unclear. In recent years, a variety of side effects associated with methotrexatehave been reported. In order to illuminate the role of trace/mineral elements in the pathogenesis of psoriatic arthritis and the sideeffect of low-dose methotrexate on blood cells and trace/mineral elements in patients with psoriatic arthritis, 37 psoriatic arthritispatients and healthy 50 people with similar age and gender were enrolled in this study. The blood cells, serum trace/mineralelements, liver function, and kidney function were determined. The results revealed that the level of serum zinc was significantlylower and copper was significantly higher in psoriatic arthritis patients in comparison with healthy control. After giving patientsmethotrexate intravenously (15 mg weekly), their serum zinc was significantly increased, and copper was significantly decreasedwith symptoms relieved. Our study provided the evidence that low zinc and high copper might be associated with the patho_x0002_genesis of psoriatic arthritis, and the possible mechanism of methotrexate treating psoriatic arthritis was through elevating zincand reducing copper in serum. Moreover, we demonstrated that low-dose methotrexate could induce liver damage to psoriaticarthritis patients.

PU-0968

浙江地区 120245 例检测新型冠状病毒血清抗体阳性率分析

王欢[1]、刘军权[1]、张幸[2]、陈信[3]
1. 杭州金域医检验所有限公司
2. 台州市第二人民医院
3. 天台县人民医院检验科

目的 了解浙江地区新型冠状病毒血清抗体阳性率概况，以期找到后续抗体监测重点。
方法 回顾性分析我中心实验室检测的 120245 例新型冠状病毒血清抗体结果，依照样本来源、年龄、性别分组探究浙江地区人群 IgG 血清抗体单阳性率、IgM 血清抗体单阳性率和 IgG 与 IgM 血清抗体双阳性率。
结果 在 120245 例研究对象中，发热门诊、新住院及陪护人员占比最多，年龄以 30-50 岁为主，IgG 抗体单阳性率为 0.11%，IgM 抗体单阳性率为 0.15%，IgG、IgM 抗体双阳性率为 0.13%。依照样本来源分组，发热门诊新住院及陪护人员 IgG、IgM 血清抗体单阳性率最高，隔离点人员 IgG 和 IgM 血清抗体双阳性率最高(0.16%)；依照年龄性别分组，男性组 IgG 单阳性率与 IgG、IgM 双阳率高于女性组，且差异有统计学意义；与>50 岁组相比，其他各组 IgG 单阳性率、IgM 单阳性率、IgG 和 IgM 双阳性率均更低，且差异有统计学意义。
结论 浙江地区新型冠状病毒血清抗体阳性率较低，应继续做好对隔离点人员和发热门诊新住院及陪护人员的检测工作，尤其是年龄在 50 岁以上的人群。

PU-0969

多评价指标分析浙江天台地区新型冠状病毒肺炎确诊病例

陈信[3]、刘军权 Liu[1,2,3]、张幸[3]
1. 杭州金域医检验所有限公司
2. 台州市第二人民医院，
3. 天台县人民医院检验科

目的 采用临床症状、疾病转归、理化检查、病原学检测等多种评价指标来分析浙江省天台地区新型冠状病毒肺炎确诊病例，以了解天台地区疫情的防治概况，为后续临床工作和新型传染病的防治提供理论指导。
方法 选取我院于 2020 年 1 月 17 日以来初诊收治的 8 例新型冠状病毒肺炎确诊住院患者和 20 例疑似病人为研究对象，并追踪到密切接触者 38 人（其中医务人员 14 人）。运用发热、咳嗽等呼吸系统临床症状，住院时间、痊愈等疾病转归，实验室检测指标、影像学检查等理化检查，病毒核酸检测、病毒抗体检测等病原学检测的多种评价指标对其进行分析。
结果 确诊患者共 8 例，男 5 例，女 3 例，年龄 37～55 岁，平均年龄(48.0±7.27)岁；7 例从武汉归来，2 例为与确诊患者有接触史，属家庭聚集性发病；1 例有高血压基础疾病；1 例为甲流患者；7 例有武汉接触史(91.37%)，1 例家族聚集性发病。主要症状为发热和干咳，8 例中仅有一例乏力且胸闷，一例头晕头痛，均无呼吸困难、畏寒、鼻塞流涕、腹痛腹泻、恶心呕吐、结膜充血等症状。8 例确诊患者现已全部治愈出院，住院治疗时间 15～29d，平均住院时间 21.88d，行肺部 CT 检查渗出均已吸收。送检疾控中心标本中除 8 例确诊患者阳性外，其余均为新型冠状病毒核酸检测阴性。出院 2-4 周后，确诊患者新型冠状病毒抗体 IgM 转阴，而 IgG 阳性。
结论 采用临床症状、疾病转归、理化检查、病原学检测等的多种评价指标来分析新型冠状病毒肺炎确诊病例可提升我们对疾病的认识，更好的指导临床诊疗。

PU-0970

Pathogenesis of COVID-19 and the quality control of nucleic acid detection

Kangsheng Liu
Department of Clinical Laboratory, Women's Hospital of Nanjing Medical University，Nanjing Maternity and Child Health Care Hospital, Nanjing, Jiangsu 210029, China.

The new coronavirus pneumonia (COVID-19) epidemic spread rapidly throughout the world. Considering the strong infectivity and clustering of COVID-19, early detection of infectious cases is of great significance to control the epidemic. Nucleic acid testing (NAT) plays an important role in rapid laboratory diagnosis, treatment assessment, epidemic prevention and control of COVID-19. However, since COVID-19 is caused by a new emerging virus and NAT for COVID-19 has not been clinically applied before, false negative results inconsistent with clinical diagnosis have appeared in clinical practice. Therefore, it is urgent to improve the sensitivity of NAT for COVID-19. This study aimed to summarize the current situation and prospect of NAT based on the latest findings on COVID-19 infection. Also, the quality control of sample collection was discussed. Hopefully, this study could help to improve the effectiveness of NAT for COVID-19.

IL-17B/IL-17RB signaling cascade contributes to self-renewal and tumorigenesis of cancer stem cells by regulating Beclin-1 ubiquitination

Qingli Bie、Haixin Dong、Bin Zhang
Department of Laboratory Medicine, Affiliated Hospital of Jining Medical University, Jining, Shandong, P. R. China

Cancer stem cells (CSCs) are characterized by robust self-renewal and tumorigenesis and are responsible for metastasis, drugresistance, and angiogenesis. However, the molecular mechanisms for the regulation of CSC homeostasis are incompletelyunderstood. This study demonstrated that the interleukin-17 (IL-17)B/IL-17RB signaling cascade promotes the self-renewaland tumorigenesis of CSCs by inducing Beclin-1 ubiquitination. We found that IL-17RB expression was significantlyupregulated in spheroid cells and Lgr5-positive cells from the same tumor tissues of patients with gastric cancer (GC), whichwas closely correlated with the degree of cancer cell differentiation. Recombinant IL-17B (rIL-17B) promoted the sphere_x0002_formation ability of CSCs in vitro and enhanced tumor growth and metastasis in vivo. Interestingly, IL-17B inducedautophagosome formation and cleavage-mediated transformation of LC3 in CSCs and 293T cells. Furthermore, inhibition ofautophagy activation by ATG7 knockdown reversed rIL-17B-induced self-renewal of GC cells. In addition, we showed thatIL-17B also promoted K63-mediated ubiquitination of Beclin-1 by mediating the binding of tumor necrosis factor receptor- associated factor 6 to Beclin-1. Silencing IL-17RB expression abrogated the effects of IL-17B on Beclin-1 ubiquitinationand autophagy activation in GC cells. Finally, we showed that IL-17B level in the serum of GC patients was positivelycorrelated with IL-17RB expression in GC tissues, and IL-17B could induce IL-17RB expression in GC cells. Overall, theresults elucidate the novel functions of IL-17B for CSCs and suggest that the intervention of the IL-17B/IL-17RBsignalingpathway may provide new therapeutic targets for the treatment of cancer.

Delivery of mRNA for cancer immunotherapy

Lang Yi
Xiangya hospital central south university

mRNA vaccines have enormous potential to fight against cancer due to superiorities in safety, efficacy and industrial production. Promising preclinical works have begun using mRNA vaccines for cancer immunotherapy. However, safe and effective delivery of mRNA in vivo is still a critical challenge for their clinical applications. In this review, we summarized the delivery of mRNA vaccines systems by physical methods, viral vectors and non-viral vectors for cancer immunotherapy, and discuss their relative merits. In addition, the prospects for the development of different ways for delivery of mRNA are reviewed, and promising advances in cancer treatment using mRNA vaccines are discussed.

PU-0973

Expression, clinical significance and function of long non-coding RNA CTC-425O23.2 in gastric adenocarcinoma

KAI WANG[2]、XIAOJUAN OUYANG[3]、YUAN DANG[1]、ZHIHUA WANG[4]、MIAO ZHENG[5]、QIAOJIA HUANG[1]
1. Fuzhou General Hospital of Nanjing Military Command
2. Affiliated Hospital of Shaanxi University of traditional Chinese Medicine
3. Fuzhou General Hospital of Nanjing Military Command
4. No.92 Hospital of Chinese people's Liberation Army
5. Fujian Provincial Maternity and Children's Hospital

Objectives Long-noncoding RNAs (LncRNAs) play important roles in gastric cancer (GC). However, the expression and effect of many LncRNAs remain largely unknown. Long non-coding RNA CTC-425O23.2 (lncRNA CTC-425O23.2) related to gastric adenocarcinoma (GA) is unreported yet. The present study was aimed to assess the significance and potential function of lncRNA CTC-425O23.2 levels in GA.
Methods According to our previous lncRNA expression chips data, LncRNA CTC-425O23.2 levels in the 131 tissues collected from surgically resected primary GA and in BGC-823, SGC-7901 and MGC-803 GA cell lines were further analyzed by the real-time quantitative reverse transcription–PCR (qRT-PCR), and the associations between its levels and clinical significance were then analyzed. The potential function and mechanisms of LncRNA CTC-425O23.2 were explored by the MTT, scratch damage, Transwell, Flow cytometry and bioinformatics analysis.
Results The expression of CTC-425O23.2 in GA tissues was significantly higher than that in the adjacent tissues in 79 out of 131 cases (over-expressed rate: 60.3% and over-expressed folds: 10.58 times, $p<0.05$), and its levels in BGC-823, SGC-7901 and MGC-803 GA cells was also significantly higher than that in normal gastric cell GES-1 ($p<0.05$, respectively). CTC-425O23.2 expression was associated with tumor size ($p=0.0280$), T staging ($p=0.0185$), venous invasion ($p= 0.0467$), and peripheral nerve invasion ($p=0.0115$) as well as with the expression levels of ribonucleotide reductase subunit M1 (RRM1) ($p=0.0275$) and Ki67 antigen (Ki67) ($p=0.0283$) in GA tissues. CTC-425O23.2 expression level was higher in patients with tumor size ＜5cm, not venous invasion or not perineural invasion than those patients with tumor size≥5cm, appearing venous invasion or appearing perineural invasion. Silencing of CTC-425O23.2 by transfecting siRNA decreased SGC-7901 and BGC-823 cell's proliferation ($P < 0.001$), inhibited SGC-7901 migration ($P < 0.0001$) and reduced SGC-7901 invasion ($P < 0.0001$). But compared with untreated control group, knockdown of CTC-425O23.2 in SGC-7901 exhibited no significantly affecting on the apoptosis of GA cells. The qRT-PCR results revealed that the CTC-425O23.2's expression levels were positively correlated with AKT2's (the parent gene of CTC-425O23.2) mRNA expression levels($R =0.5873$, $P < 0.0001$),

and had a certain interaction between them. The expression levels of lncRNAGK-IT1, lncRNATRAF4-AS1 and lncRNA CTC-425O23.2 exhibited no statistical correlation between each other.

Conclusion The results of this investigation indicated that the aberrant expression of lncRNA CTC was associated with GA. Detection the expression levels of lncRNA CTC in GA tissues may predict disease progression and prognosis in patients with GA. LncRNA CTC could be used as one of molecular markers of GA.The independent expression of different LncRNAs may suggest that the expression of different LncRNA may have biological independence.

PU-0974

Natch CS2 - ABI 7500 全自动核酸提取与定量检测系统 HCV-RNA 性能验证及评价

王凯、冯飞雪、肇玉博、周嘉迪、梁伟伟、宫伟、马艳侠*
陕西中医药大学附属医院

目的 对基于 Natch CS2 全自动核酸提取仪和 ABI 7500 实时荧光定量 PCR 的丙型肝炎病毒核糖核酸（HCV RNA）定量检测系统进行性能验证。

方法 依据中国合格评定国家认可委员会（CNAS）-GL039《分子诊断检验程序性能验证指南》的方案，使用临床样本及标准物质，对检测系统的精密度、正确度、线性范围、检出限、抗干扰能力进行验证，并与制造商声明比较。

结果 精密度验证结果显示，高、低浓度水平样本的重复性精密度变异系数（CV）值分别为 2.09%、2.54%，中间精密度 CV 值分别为 2.14%、4.72%，均小于厂家声明的 5%。正确度：与本实验室参考方法进行样本比对，20 个样本，Bias 均小于 7.5%。线性范围：经拟合分析，证实在 50～1.51E+07IU/mL 呈良好线性（R2=0.997>0.97）。抗干扰能力验证：含 28 mg/dL 的胆红素（TBIL），3.0g/dL 的甘油三酯（TG），2g/dL 的血红蛋白（Hb）的干扰物质对样本检测结果无影响。检出限 25 IU/mL，与制造商声明一致。

结论 HCV-RNA 定量检测系统精密度、正确度、线性范围、抗干扰能力、检出限各项性能指标与制造商声明一致，满足 CNAS 以及 ISO15189 要求，可用于临床检测。

PU-0975

NUCB-2/Nesfatin-1 Promotes the Proliferation of Nasopharyngeal Carcinoma Cells

Yunlai Liang、yating ma、kangkang huang、kun wang、manlin xiang、bin yi
Xiangya Hospital of Central South University

Recent studies indicate that a high level of nucleobindin-2 (NUCB-2)/nesfatin-1 promotes cell migration in breast, prostate and colon cancers and is a risk factor for poor outcome of the disease. However, the role of NUCB-2 remains poorly understood in nasopharyngeal carcinoma (NPC). In this study, NUCB-2 level in NPC tissue was higher than that in rhinitis tissue. Suppression of NUCB-2 in the NPC cell line CNE2 inhibited proliferation and clone formation of the cells; on the contrary, improvement of NUCB-2 in the NPC cell line CNE1 promoted cell propagation and clone development. An elevated serum level of NUCB-2 in NPC patients was detected, compared to that in patients with other head and neck tumors, rhinitis or healthy donors. Determination of nesfatin-1 combined with EA-IgA, VCA-IgA and Rta-IgG in serum samples for NPC diagnosis reached a sensitivity of 93.6% and a specificity of 94.5%, while the positive and negative predictive value of this diagnostic model was 89.8% and 96.6%, and the accuracy yielded 94.2%. In summary, our results proved that NUCB-2 could enhance proliferation of NPC

cells and NUCB-2/nesfatin has the potential to be a serological marker to aid early diagnosis of nasopharyngeal carcinoma.

Therapeutic effect of imidazole group-substituted arylaminopyrimidines (IAAPs) as potent BTK inhibitors against B-cell lymphoma and AML cells

Si Li[1]、Hong Yuan[2]
1. The First Affiliated Hospital of Dalian Medical University
2. 大连医科大学附属中心医院

Objective We aimed to identify the inhibitory effect of new imidazolyl-substituted arylaminopyrimidines (IAAPs) on Bruton's tyrosine kinase（BTK) and its effect on B-cell lymphoma and acute myeloid leukemia (AML), preliminarily explore the anti-tumor mechanism of the compounds in B-cell lymphoma and AML cell lines, and provide new targets and new ideas for the treatment of B-cell lymphoma and AML.
Methods The inhibitory activity of IAAPs against BTK was evaluated using the ADP-Glo™ Kinase Assay. The CCK8 assay was used to detect the proliferation inhibitory ability of the compounds and clinical reference drugs on the lymphoma cells Ramos NAMALWA, Raji and acute myeloid leukemia (AML) cells HL60, U937. AO/EB staining was used to observe the changes in cell number and apoptotic morphology after treatment with compounds, and to evaluate the toxicity of the drug to human normal peripheral blood PBMC. Annexin V-FITC/PI staining and flow cytometry was used to detect the early and late apoptosis of B-cell lymphoma and AML cells after the compound treatment. The effects of compounds on the cell-cycle progression of AML and B-cell lymphoma cells were detected by PI staining and flow cytometry. Western Blot was used to detect the activation of BTK in cells and the changes of Akt and ERK protein levels in downstream pathways after compound treatment.
Results Here, a series of IAAPs were synthesized and characterized as potent BTK inhibitors. Among them, most of the target compounds displayed inhibitory activity against BTK with an IC50 lower than 42.40 nM. In particular, 11a markedly inhibited the proliferation of HL60 and U937 cells with an IC50 value of 108.57 and 38.02 nM, respectively. Besides, 11b exhibited strong antiproliferative activity against Raji, Namalwa and Ramos cells with an IC50 value of 4.37, 4.95 and 9.25 μM, respectively. The results of AO/EB staining showed that the number of cells decreased after drug treatment and there was obvious nuclear pyknosis, that is, early apoptosis. Moreover, normal PBMCs were not sensitive to 11a and 11b, indicating their low toxicity towards normal cells. The results of Annexin V-FITC/PI showed that 11a and 11b significantly induced apoptosis of B-cell lymphoma and AML cells. Compared with the control group, with the increase of the drug concentration, the proportion of early and late apoptosis of HL-60 had both increased.11a and 11b can also block cells in G2/M phase and affect cell cycle progression. Furthermore, the analysis of the mechanism of action of these compounds revealed that 11a and 11b induce the activation of BTK and its downstream pathways in these cells.
Conclusion IAAPs compounds can be used as new BTK targeted drugs, which have a strong inhibitory effect on AML and B-cell lymphoma cells. The representative compounds significantly induce cell apoptosis and cause cycle arrest in AML and B-cell lymphoma cells and have low cell cytotoxicity. 11a and 11b can inhibit BTK phosphorylation and inhibit the activation of downstream ERK and Akt pathways. 11a and 11b may act as a potential new therapeutic drug against B-cell lymphoma and AML and provide a new perspective to conduct further research on the development of BTK inhibitors for the treatment of B-cell lymphoma and AML.

PU-0977

PCR-荧光探针法检测对 G6PD 酶活性临界女性临床诊断价值的探讨

熊君
南方医科大学珠江医院

目的 分析酶速率法对 G6PD 缺乏合并地贫患者的检测率，并分析 PCR-荧光探针法检测该类型患者的基因突变型,初步探讨 PCR-荧光探针法检测对 G6PD 酶活性临界女性的临床诊断价值。
方法 收集酶速率法检测 G6PD 酶活性水平的样本 323 例；从中筛出用 GAP－PCR 法检测 α 地贫基因和反向斑点杂交(RDB) 法检测 β 地贫基因的标本 190 例；并对收集的 323 例的标本一致采用 Taqman 探针荧光定量 PCR 检测 16 种中国人群中常见的 G6PD 基因突变型（c.1376G>T, c.1388G>A, c.95A>G, c.392G>T, c.871G>A, c.1024C>T, c.487G>A, c.1004C>A, c.202G>A, c.383T>C, c.473G>A, c.493A>G, c.1339G>A, c.1360G>A, c.1381C>T, c.1387C>T）。
结果 1.在 G6PD 缺乏患者（活性<1300 U/L）中,男女性别比为 103:35；而在 G6PD 酶活性偏低（1300-1800 U/L）人群中，男女性别比为 4:17；两组间的差异有统计学意义。2. 在 130 例单纯一种突变型中分析，其中前四位的基因突变类型分别是 c.1388G>A（60 例，46.15%)，c.1376G>T（40 例，30.77%)，c.95A>G（12 例，9.23%)，c.871G>A（10 例，7.69%)。3.在 G6PD 缺乏合并地贫的基因检测中，2 例酶活性临界值的女性均检测突变基因型。

PU-0978

Regulatory Role and clinical significance of circular RNAs in Spinocerebellar ataxia type 3

Minjin Wang
West China Hospital

Backgrounds Spinocerebellar ataxia type 3/Machado-Joseph disease (SCA3/MJD) is the most common autosomal dominant spinocerebellar ataxia and one of many inherited polyglutamine (polyQ) neurodegenerative diseases. Nevertheless, the exact mechanism of the disease still remains ambiguous. At present, circular RNAs (circRNAs) have been attracting extensive research interest in different human diseases, which emerged as new key regulators via different biological functions in genetic and epigenetic processes, but it remains largely unknown if they are correlated with SCA3/MJD pathogenesis. Therefore, the objuective of this work was to investigate the significance and potential role of circRNAs in SCA3/MJD.
Methods Here, we adopted next-generation sequencing（NGS）to examine the expression profile of circRNAs and mRNAs in cerebrospinal fluid（CSF）samples and peripheral blood samples from 11 SCA3/MJD patients and 10 healthy controls. Next, quantitative real-time reverse transcription polymerase chain reaction(qRT-PCR) was performed to validate NGS data. ROC analysis was also used to evaluate the predictive power of candidate circRNAs. In order to elucidate potential functions and signaling pathways involved in the pathogenesis of SCA3/MJD, we applied Gene ontology(GO) and Kyoto Encyclopedia of Genes and Genomes(KEGG) pathway analysis of the differentially expressed mRNAs and parental genes of circRNAs. Furthermore， after the knockdown or overexpression of candidate circRNA, MTT assay along with flow cytometric assays were used to assess changes in cell viability as well as apoptosis , and Western blot was performed to analyze the disease protein—polyQ-ataxin3 expression in SY-SH5Y/SCA3 cell models.
Results Our results showed that circRNAs and mRNAs profiles presented a total of 262 circRNAs and 1001 mRNAs commonly expressed in both CSF samples and peripheral blood samples of SCA/MJD patients. Among them, 14 circRNAs as well as 429 mRNAs were

upregulated and 42 circRNAs as well as 549 mRNAs were downregulated in SCA3/MJD group. The expression level changes of 5 differentially expressed circRNAs estimated by qRT-PCR were in accord with NGS data. Moreover, hsa_circ_0019149 (AUC:0.953; 95% CI: 0.911–1.005) were the most upregulated and significantly associated with SCA3/MJD, which could be identified as novel candidate diagnostic biomarker for the disease. Significantly enriched signaling pathways were involved in apoptosis, protein degradation, etc. The viability of cells increased markedly and polyQ-ataxin3 expression decreased following the knockdown of hsa_circ_0019149, whereas over expression of hsa_circ_0019149 had the opposite effects on cells.

Discussions These findings were the first report of differentially expressed circRNAs in SCA3/MJD, indicating a possible role for circRNAs as potential dynamic monitoring progress biomarkers and possibly original diagnostic or therapeutic targets of the disease. Also, our results provide novel insights into the mechanisms of the pathological process as well as important cues for further functional studies of the disease.

PU-0979

Development and validation of a LASSO prediction model for better identifying ischemic stroke: A case- control study in China

Minjin Wang
West China Hospital

Objective The diagnosis of ischemic stroke in the acute phase is a key clinical problem. We are committed to developing a Diagnosis Aid APP based on commonly used laboratory findings and electronic health records to provide more effective information for the early diagnosis.

Methods We retrospectively enrolled 931 subjects with proven ischemic stroke and other cerebrovascular diseases from March, 2017 to December, 2018 in the derivation cohort to establish identification model. The Least Absolute Shrinkage and Selection Operator algorithm was used for feature selection and construct laboratory panel. Combined with Electronic Health Record information, multivariate logistic regression was used for a identification model and was encapsulated as a visual and operable APP. It was internally evaluated by AUC calibration plot and DCA curve and was verified by an independent validation cohort containing 64 patients enrolled prospectively from January to March, 2019.

Results The Stroke Diagnosis Aid APP consisted of 14 laboratory-associated features and four Electronic Health Record factors (smoking, hypertension, diabetes, and hyperlipidemia) were established. User can get the recognition result by inputting index values in the graphical user interface (GUI) of the APP. It showed good discrimination (AUC=0.916, cutoff=0.577), calibration, and clinical availability, which were reconfirmed in independent verification cohort (positive predictive value=90.32%, negative predictive value=87.88%, sensitivity=87.50% specificity=90.62%).

Conclusion The Stroke Diagnosis Aid APP could facilitate the early identification of ischemic stroke, which is friendly, convenient, accurate and easy to use.

高通量测序揭示中国西南地区肺癌循环肿瘤 DNA 靶向药物相关基因突变特征

白玲、周娟、翟建昭、宋佳佳、应斌武
四川大学华西医院

目的 肺癌靶向药物的广泛应用使得分子基因检测逐步成为临床精准治疗的常规检测，本研究旨在分析中国西南地区肺癌病人血浆中循环肿瘤 DNA（Circulating tumor DNA, ctDNA）变异情况。
方法 项目纳入 2017 年至 2019 年间到我院就诊的肺癌病人共 672 例，对其外周血血浆 ctDNA 靶向测序结果及临床特征进行了回顾性分析。
结果 (1) 73.36%的患者 ctDNA 中至少检测到一个分子异常，主要类型为基因突变；(2) 突变频率前 10 位基因依次为 EGFR (42.41%)、ROS1 (8.04%)、HER2 (7.59%)、ALK (6.99%)、FGFR1 (5.51%)、RET (5.51%)、PIK3CA (4.46%)、TSC1 (4.46%)、KRAS (3.87%)、SMO (3.72 %)，无吸烟史患者的 EGFR、HER2 基因突变频率显著高于吸烟患者；(3) EGFR 基因突变类型主要是 19DEL（28%），其次是 T790M 和 L858R，T790M 几乎都是伴随 19DEL 或 L858R 出现的；(4) 与未服用过靶向药物的患者相比，接受过靶向治疗的患者 EGFR 基因与其他基因（HER2、ROS1、PIK3CA）的共突变更加常见，但其 PTEN 基因突变频率更低（1%）；(5) 晚期肺癌在肝、骨、脑、肾上腺等不同转移部位阳性检出率不同，尤其是脑转移阳性率只有 52%，而肾上腺转移阳性率为 100%；另外肾上腺转移患者 HER2 突变频率较高，脑转移患者无 AKT1 基因变异检出，骨转移患者与多部位转移患者的 ctDNA 突变图谱类似。
结论 ctDNA 高通量测序在无创性鉴定肺癌靶向药物相关分子标志中发挥重要作用，几乎一半的受检者能够从中获益，ctDNA 突变谱在检测前是否接受过靶向药物治疗的患者中明显不同，同时也受到肺癌晚期转移部位的影响。

Cancer Genomic Alterations: Potential Biomarkers for Early Recurrence Prediction after Surgery of Hepatocellular Carcinoma

Juan Zhou、Zhaodan Xin、Liting You、Yi Zhou、Xingbo Song、Xiaojun Lu、Binwu Ying
West China Hospital, Sichuan University

Objective In this study, we aimed to detect the genomic variations of HCC and evaluated the potential value of mutant genes in predicting Early Recurrence of HCC patients after hepatectomy.
Methods 52 patients with initially suspected HCC who were undergoing hepatectomy at West China Hospital of Sichuan University in 2019 were prospectively recruited. Preoperatively peripheral blood samples and fresh surgical tumor tissues were obtained. Those who relapse within one year (≤12 months) after operation are regarded as early recurrence. High-throughput targeted sequencing using a 1021-gene panel was performed for tumor tissues and circulating tumor DNA (ctDNA).
Results 50 individuals were detected mutations in tissue samples (50/52, 96.2%) and 26 plasma samples were detected mutations (26/33, 78.8%). The gene mutation rate of TP53 (84.62% vs 40.54%), KEAP1 (23.08% vs 0%) and CTNNB1 (46.15% vs 13.51%) was significantly higher in the recurrence group than the non-recurrence group in tumor tissue analysis ($P<0.05$); the gene mutation rate of both ATM and TSC2 (27.27% vs 0%) was significantly higher than the non-recurrence group in ctDNA analysis ($P<0.05$). CtDNA variant allele frequency (VAF) were further

compared between recurrence and non-recurrence groups, both the median and maximal VAF of ctDNA were higher in the recurrence group though did not reach the statistically significant difference (P＞0.05).
Conclusion We demonstrated that those genes with higher mutation rate in the recurrence group might be potential biomarkers for prognosis of HCC. The application of specific genomic mutations for predicting early recurrence of HCC can assist timely intervention and treatment after operation, and ultimately achieve better clinical outcomes.

机器学习方法构建抗结核药物导致结核病人肝损伤的治疗风险预测模型研究

周易、周娟、宋兴勃、应斌武
四川大学华西医院

目的 抗结核药物在结核病患者中引起的药物不良反应以肝损伤（Anti-tuberculosis drugs-induced liver injury，AT-DILI）最为常见，大量研究证明药物导致肝损伤与个体的多因素异质性有关，危险因素包括年龄、性别、相关病症、生活方式及遗传变异等。综合考虑识别遗传位点并结合人口学特征等的风险因素，构建抗结核药物患者肝损伤的风险模型，可能更有效的用于临床抗结核药物个体化风险预测。
方法 纳入四川大学华西医院一线抗结核药物治疗患者 280 例，其中共 59 例发生 AT-DILI，221 例耐受，收集电子病历（EHRs）和前期课题组 GWAS 筛选出的差异 SNPs。（1）EHRs：主要包括了患者的人口统计学指标和实验室检查数据。实验室指标来源于患者未使用抗结核药物前的基线指标数据；（2）SNPs：经由第一部分 GWAS 研究筛选出耐受或发生 AT-DILI 患者的差异 SNPs 位点(P<1×10-4)。用特征变量筛选算法，通过机器学习算法构建联合 SNPs 及电子病历的 AT-DILI 预测模型，评估模型的预测效能和临床适用性。
结果 联合差异 SNPs 与 EHR 用机器学习方法建模：“EHR+SNPs”模型的效果优于“SNPs”模型与“EHR”模型。“EHR+SNPs”模型的三种不同建模方法中，敏感性方面 SVM 模型较低（0.44），逻辑回归和随机森林模型能够达到中等性能（分别为 0.72 和 0.74）。而在特异性方面，逻辑回归、SVM 和随机森林三种模型具有极好的性能（分别为 0.95、0.97 和 1.00）。
结论 研究结果进一步提示采用机器学习算法整合 SNPs 和电子病历信息构建预测模型是优化 AT-DILI 治疗风险预测的可行方法。但是本研究结果需要在更大的群体中进行扩大验证。

PU-0983

A preliminary study of circRNA encoded by EBV as a serum molecular marker of malignant tumors

Yali Song、Juan Liao、Tingting Zeng*
Department of Laboratory Medicine, West China Hospital, Sichuan University

Objective With the rapid development of life science, more and more studies have confirmed that non-coding RNA plays an important role in the development of malignant tumors. It has been reported that the Epstein-Barr virus has 3 genes that can encode 6 kinds of circular RNA molecules, among which the BART gene transcription product can be spliced and processed into four circular forms of circBART1.1, circBART1.2, circBART2.1 and circBART2.2, given circRNA’s key role in malignant tumors, we are looking for effective from circRNA tumor molecular markers, hoping to find a malignant tumor related gene targets.The potential molecular markers of malignant tumor in blood have high clinical value, so we take the molecular markers of malignant

tumor serum as the breakthrough point to explore the highly specific molecular markers of malignant tumor serum.
METHODS The expression of these four circBARTs was detected by qRT-PCR in gastric cancer tissues and cell lines. qRT-PCR was used to detect circBARTs encoded by EBV in 6 cases of EBV-positive gastric cancer clinical tissue samples and EBV-infected gastric cancer cell line AGS-EBV. The EBV protein encoding genes LMP1 and Beta-actin were used as internal controls. We evaluated the expression levels of 4 circBARTs in malignant tumors.
RESULTS Among the four circRNAs, we found that the possibility of exon II participating in loop formation was first detected by primers across the splicing site, and circBART1.1 and circBART1.2 were found to be looped by exons II, IIIa, IIIb and IV. It is not detected in the serum of patients with gastric cancer. Through the expansion of the full-length primers, it was found that circBART2.1 and circBART2.2 were significantly up-regulated in the serum of gastric cancer patients. Therefore, circBART2.1 and circBART2.2 may be used as serum molecular markers of gastric cancer.
CONCLUSIONS The expressions of circBART2.1 and circBART2.2 are significantly up-regulated in serum of gastric cancer patients, which may be used as serum molecular markers of gastric cancer.

寨卡病毒的研究进展

曹震
南方医科大学珠江医院

近年来，寨卡病毒在全球多地爆发大规模疫情，因其可致新生儿小头畸形和成年人吉兰巴雷综合症等严重并发症，引起全球广泛关注，寨卡病毒感染的诊断和防治尤为重要。本文简要介绍寨卡病毒的结构、流行历史，并主要对当前病毒检测方法和疫苗研究进展进行综述与应用展望。

Development and validation of a predictive model for severe COVID-19: A case-control study in China

Minjin Wang
West China Hospital

Background Comprehensively understanding and early predicting the risk of progression to severe COVID-19 can facilitate personalized diagnosis and treatment options, optimizing utilization of medical resource.
Methods In this prospective study, 206 COVID-19 patients were enrolled from regional medical institutions between 20th December 2019 and 10th April 2020. Demographics, clinical characteristics, laboratory findings and cytokine levels were adequately described and analyzed for deriving and validating a predictive model. Variation analysis, lasso and boruta algorithm were used for modeling. Performances of models were evaluated by specificity, sensitivity, AUC, AIC, calibration plot, Decision Curve Analysis e and Hosmer-Lemeshow test.
Results Predictive model including ALT, IL6, Expectoration, Fatigue, LYMR, AST and CREA established by using LASSO algorithm and logistic regression can predict the progression risk of severe COVID-19 accurately. It yielded satisfactory predictive performance with an AUC of 0.9104 and 0.8792 in derivation and validation cohort, respectively. This model finally was visualized in the form of a nomogram plot and packaged into an open-source and free predictive calculator for clinical use easily and is available online at https://severeconid 19predction.shinyapps.io/SHINY/.

Conclusion The model combining demographics, clinical characteristics, laboratory findings and cytokine levels can effectively predict the progression to severe COVID 19, promoting early personalized management and the allocation of appropriate medical resources.

在肝细胞癌中联合检测 TERT 及 TP53 基因突变的临床意义研究

李晋、周娟
四川大学华西医院

目的 端粒酶逆转录酶（Telomerase reverse transcriptase, TERT）是一种能够维持端粒长度及稳定性的逆转录酶，于正常体细胞中处于沉默或失活状态。TERT 基因突变主要涉及启动子 C228T 和 C250T 两种类型，已在肝细胞癌（hepatocellular carcinoma, HCC）中广泛报道，被认为是 HCC 癌变的早期标志。细胞肿瘤抗原 p53（Cellular tumor antigen p53, TP53）是一种抑癌基因，在细胞周期阻滞、细胞衰老和凋亡等过程中发挥重要调节作用。TP53 是肝癌、肺癌等肿瘤中最常见的突变基因。虽然 TERT 和 TP53 在肝癌中均有较高的突变率，但二者在 HCC 发生、发展及预后等过程中的联合应用价值尚不清楚。本研究旨在探索二者联合检测在 HCC 中的临床意义。
方法 利用高通量测序技术检测 50 例 HCC 患者肿瘤组织中基因信息，进一步分析基因突变与患者临床特征之间的相关性。
结果 50 例样本中分别有 24 例（48%）和 16 例（32%）检测到 TP53 突变和 TERT 突变，其中 TERT 均为启动子 C228T 突变。分析结果表明，男性（P = 0.002）或肝炎症程度较高（P = 0.044）的 HCC 患者中更易发生 TPMs；有 TP53 突变的患者术后更易复发（P = 0.039），而 TERT 启动子突变和 TP53 突变同时存在时，患者的复发率显著升高（P = 0.009）。
结论 TERT 启动子突变和 TP53 基因突变在 HCC 中高频发生，提示二者在肝癌发生发展过程中可能发挥着重要作用。此外，TERT 启动子突变和 TP53 基因突变作为联合检测指标，有望成为临床评估 HCC 患者术后复发风险的重要依据。

CYP2C8 基因多态性与中国西部结核病患者抗结核药物性肝损伤的相关性研究

陈小娟[1,2]、赵珍珍[2]、周易[2]、杨阳[1]、应斌武[2]
1. 乐山市人民医院
2. 四川大学华西医院

目的 探讨细胞色素 P450 2C8(CYP2C8)基因多态性与中国西部结核病患者应用一线抗结核药物致肝损伤（anti-tuberculosis drug-induced liver injury，ATDILI）的相关性。
方法 本研究共纳入结核病患者 746 例，收集临床资料及相关实验室指标，根据肝功能指标将其分为 ATDILI 组和非 ATDILI 组，采用 QIAamp® DNA Blood Mini Kit 提取 DNA，利用高通量基因分型技术对 CYP2C8 基因 4 个单核苷酸多态性（single nucleotide polymorphism，SNP）分型。利用 Plink 软件分析不同遗传模型下两组间等位基因及基因型分布的差异。
结果 ATDILI 组 118 例，非 ATDILI 组 628 例。CYP2C8 基因 rs1058932、rs1113129、rs11572126、rs2275622 位点的等位基因、基因型及遗传模型（加性模型、显性模型与隐性模型）分布在 ATDILI 组与非 ATDILI 组中差异均无统计学意义（P＞0.05）。rs1113129、rs11572126、rs2275622 存在连锁不平衡，构成的 4 种单倍型模型在 ATDILI 组与非 ATDILI 组间分布差异无统计学意义（P＞0.05）。

结论 CYP2C8 基因 rs1058932、rs1113129、rs11572126、rs2275622 位点 SNP 可能与中国西部结核病患者应用一线抗结核药物致肝损伤无关，需进一步扩大样本量进行验证。

PU-0988

跨膜蛋白 40 在膀胱癌中作用的初步研究

张振飞
南方医科大学珠江医院

目的 跨膜蛋白 40（TMEM40）是一个大小为 34 kDa，由 233 个氨基酸构成且含有两个结构域的跨膜蛋白。在我们前期的研究中发现，TMEM40 在膀胱肿瘤中表达上调，预测它可能是一个潜在的促癌基因。
方法 在当前的研究中我们通过 qRT-PCR 及 WB 检测了膀胱癌细胞及组织中 TMEM40 在 mRNA 及蛋白水平的表达，结果表明 TMEM40 在膀胱癌细胞与组织中表达均上调；其次，通过组织芯片的免疫组化实验，探究 TMEM40 表达水平高低与膀胱癌患者临床病理参数间的关系。
结果 在 115 例膀胱癌患者中，TMEM40 的表达与患者的临床分期、pT 分期、组织病理学分级具有明显的相关性，而与患者的年龄、性别等无显著相关。接下来，我们选取两株人膀胱癌细胞系（5637、EJ），采用不同浓度梯度的 G418 筛选 TMEM40 过表达及敲减的膀胱癌细胞，扩大培养来得到稳定表达的细胞株。最后，通过 CCK-8、EdU、Transwell、细胞周期、凋亡及裸鼠皮下成瘤等一系列功能实验，来进一步验证 TMEM40 对膀胱癌恶性表型的影响。细胞增殖实验结果表明，TMEM40 表达上调促进细胞的增殖，而 TMEM40 下调则在一定程度上抑制了细胞的增殖；Transwell 实验表明，TMEM40 表达上调促进细胞迁移、侵袭，而 TMEM40 敲减则抑制细胞迁移、侵袭；流式细胞仪检测结果表明，过表达 TMEM40 对细胞的凋亡具有一定的抑制作用，而敲减 TMEM40 则促进了细胞的凋亡；过表达 TMEM40 加快 G1/S 期变，而敲减 TMEM40 则细胞周期阻滞在 G1 期。因此，TMEM40 在膀胱癌的发生发展过程中发挥着重要的作用，有可能成为膀胱癌患者临床治疗的基因靶点及分子标志物。

PU-0989

A case-control study on the correlation between the single nucleotide polymorphism of CLEC4E and the susceptibility to tuberculosis among Han people in Western China

Wenjing Zhou、Wu Lijuan、Jiajia Song、Lin Jiao、Zhou Zhou、Juan Zhou、Binwu Ying
West China Hospital

Background Tuberculosis (TB) is one of the leading causes of morbidity and mortality in West China. Preclinical studies have suggested the protective effect of the C-type lectin receptor of family 4 member E (CLEC4E) from TB. Herein, we investigated the association between CLEC4E gene variants and TB susceptibility in a western Chinese Han population.
Methods We genotyped four single-nucleotide polymorphisms (SNPs) rs10841856, rs10770847, rs10770855 and rs4480590 in the CLEC4E gene using the improved multiplex ligation detection reaction (iMLDR) assay in 900 TB cases and 1534 healthy controls.
Results After stratifying the whole data by sex, it was found that males exhibited mutant allele G of rs10841856 that was more strongly associated with increased TB risk after Bonferroni correction (OR = 1.334, 95% CI: 1.142–1.560; P<0.001 after adjusting for age; p=0.001 after Bonferroni correction). The genetic model analysis found that rs10184856 was associated with the increased risk of TB among males under the dominant model (OR = 1.557, 95% CI = 1.228-1.984, P<0.001 after adjusting for age, P<0.001 after Bonferroni correction). Bioinformatics

analysis suggested that rs10841856 might fall in putative functional regions and might be the expression quantitative trait loci (eQTL) for CLEC4E and long noncoding RNA RP11-561P12.5.
Conclusions Our study revealed that rs10841856 in the CLEC4E gene might be related to increased TB risk, especially the dominant genetic model among male Han individuals from Western China.

不同类型 miRNA 在类风湿关节炎中的病理生理学意义

周韶松
南方医科大学珠江医院

小 RNA（miRNA）是小分子非编码 RNA，负调控基因表达后的转录水平。目前，有 939 成熟的人类小 RNA 序列 Sanger 小 RNA 的注册表更新。预计人类基因组可能有大约 1500 的小 RNA 在控制我们三分之一基因的表达。在细胞中通过控制合成目标蛋白的，这些调控 RNA 分子，参与多种生理网络和主要职能，他们的管制已经牵连严重的人类疾病的发病机制，如癌症和感染。这暗示了最近出现基于小 RNA 的治疗方法在这些小 RNA 在免疫介导的疾病，如类风湿关节炎（RA）中的潜力。在这里，我们提供了在类风湿关节炎中一个小 RNA 的状态，集中讨论全身和局部病理特征。

PU-0991

Multiplex detection of Meningitis and Encephalitis pathogens: A study from Laboratory to the Clinical

Shuo Guo、yanbing zhou、minjin wang、zirui meng、tingna wu、binwu ying
West China Hospital, Sichuan University

Background Infectious Meningitis and Encephalitis(ME) as potentially life-threatening conditions are caused by various pathogens of which less sensitive and specific conventional laboratory testing projects cannot meet the demand for early diagnosis. Multiplex PCR is newly applied to the assistance in rapid and early diagnosis. Therefore, a retrospective study using the Multiplex PCR detection for Meningitis and Encephalitis panel of 18 pathogens (MME-18) was conducted to investigate the epidemiology characteristics of ME patients among the Chinese population in southwestern China while to help physicians achieve rapid and accurate diagnosis in ME.
Methods The hospitalized patients with suspected intracranial infection were analyzed retrospectively between May and July in 2019 in West China Hospital of Sichuan University. MME-18 was designed to detect 18 pathogens in cerebrospinal fluid (CSF) of enrolled patients. Conventional experiments including cryptococcal capsular antigen detection, GeneXpert, real-time PCR, and clinical feedback were used to verify the result of MME-18.
Results 146 eligible individuals were enrolled in the study in a total of 581 tested patients. Among 139 final diagnosis of infectious meningitis or encephalitis, M.tuberculosis, was the most common causative agents in mono-infection, viruses and C.neoformans were also frequently detected. There are 10 patients infected by more than one pathogen. Of 139 infected patients, 12 cases were diagnosed by MME-18 only, 57 patients by conventional testing only, 70 cases by both comparator tests and MME-18.
Conclusion MME-18 was designed with its rapid detection and wider range of pathogenic spectrum and may help clinicians with early identification of pathogens with comprehensive evaluation combined with conventional testing and clinical suspicion.

PU-0992

The association of polymorphisms in MAPK signaling pathway with antituberculosis drug-induced hepatotoxicity （ATDH）

Tangyuheng Liu
Department of Laboratory Medicine, West China Hospital, Sichuan University, Sichuan Province, P. R. China

Introduction Tuberculosis (Tuberculosis,TB) is an infectious disease seriously harmful to human health caused by Mycobacterium tuberculosis (Mycobacterium tuberculosis,MTB) infection. But at the same time, it is also accompanied by a very serious adverse drug reaction-drug-induced liver injury, which is the main reason for the interruption of anti-tuberculosis treatment. Oxidative stress is one of the important mechanisms of anti-tuberculosis drug-induced hepatotoxicity (Antituberculosis drug-inducedhepatotoxicity,ATDH), and its role in ATDH has been paid more and more attention in recent years, in which mitogen-activated protein kinase ((mitogen activated protein kinase,MAPK) signal pathway participates in the occurrence and development of ATDH by regulating the process of oxidative stress. In order to prevent and reduce the occurrence and development of clinical ATDH, there is an urgent need to further understand the relevant risk factors of ATDH and its mechanism, and to screen out effective markers for predicting the risk of ATDH, which can be used to predict the risk of ATDH and guide clinical medication.
Methods In this study, 746 tuberculosis patients in western China were randomly enrolled. Peripheral blood samples were collected and DNA was extracted. Combined with literature reports and bioinformatics database system, key genes and SNPs in MAPK signaling pathway were screened. A total of 18 SNPs were genotyped by imLDRTM multiplex SNP typing. SPSS22.0, Plink 1.90, Haploview and GMDR software were used to analyze the unit point, haplotype and gene interaction of target SNPs to explore the relationship between SNPs and the risk of ATDH and clinical characteristics. The Boruta algorithm is used to select the forecasting factors, and the R software is used to establish the line chart model.
Results There were significant differences in rs7160912 and rs11626707 loci of MAP3K9 gene, allele frequency and genotype frequency of rs882348 and rs57813199 loci of PPARGC1A gene, and allele frequency of rs4792246 of MAP2K4 gene between ATDH group and non-ATDH group. The An allele of rs7160912, rs11626707 and rs882348, and the C allele of rs57813199 may reduce the risk of ATDH. The values of OR and 95%CI are 0.68,0.66, 0.59 and 0.61, respectively. On the other hand, the G allele carriers of rs4792246 have an increased risk of ATDH (OR = 1.31Magazine 95% CIRC 1.00-1.72Power0.046). The sensitivity and specificity of the model are 0.14 and 0.67 respectively, suggesting that there is a moderate coincidence in predicting the risk value of ATDH, but the predictive ability of SNPs as a predictor of tuberculosis risk remains to be verified.
Conclusions It was found that six SNPs sites in MAPK signal pathway: MAP3K9 (rs7160912, rs11626707), MAP2K4 (rs4792246), PPARGC1A (rs882348, rs57813199, rs17885261) were associated with ATDH susceptibility, suggesting that the above SNPs may be a potential marker to predict the risk of ATDH. The haplotypes composed of rs7160912 and rs11626707 loci of MAP3K9 gene are associated with ATDH susceptibility, and the risk of ATDH of [AA] haplotype is reduced. The genetic variation of PPARGC1A gene (rs882348, rs57813199) may affect the changes of blood system (white blood cell count, low percentage of neutrophils, percentage of lymphocytes), and it is also related to (ALT), an index related to liver injury.

PU-0993

CMV DNA 和 CMV 抗体在器官移植病人巨细胞病毒

谭伟清
南方医科大学珠江医院

目的 探讨巨细胞病毒（Cytomegalovirus， CMV） DNA 和 CMV-IgM 抗体在诊断器官移植病人巨细胞病毒感染中的作用。
方法 以实时荧光定量聚合酶链反应（PCR）检测 52 例器官移植患者共 56 份尿和外周血单个核细胞 （PBMC） CMV-DNA，同时以酶联免疫吸附分析（ELISA）方法检测血清 CMV-IgM 抗体。
结果 56 份血清标本中 CMV-IgM 抗体阳性 8 例 （14.3%），而尿和 PBMC 的荧光定量 PCR 检测 CMV-DNA 阳性例数分别为 17 例（30.4%）和 21 例（37.5%）。
结论 对于器官移植患者，CMV-IgM 抗体作为 CMV 现症感染的血清学标志物阳性率偏低，检测尿中 CMV-DNA 可以提高阳性率，但依然存在部分漏检的情况，而 PBMC 的 CMV-DNA 则具有较高的阳性率，应该作为器官移植术后患者 CMV 现症感染的首选指标。

PU-0994

Distribution characteristics of CYP2D6 and ADRB1 genetic polymorphisms in Han Chinese hypertensive patients

李颖、陈克平
东南大学附属中大医院

Objective To investigate the allele and genotype frequencies of CYP2D6 and ADRB1 genetic polymorphisms and explore the potential role of these polymorphisms in guiding the selection of antihypertensive beta-receptor blockers for Han Chinese hypertensive patients.
Methods Totally 2419 Han Chinese hypertensive patients and 126 normotensive controls were recruited into the study in Zhongda Hospital. Venous blood samples were collected for each patient. The genetic polymorphisms of CYP2D6 and ADRB1 were determined using a gene chip platform. The allele and genotype frequency for each gene, as well as the combined genotypes among the subjects were analyzed respectively.
Results The gene chip analysis identified an allelic frequency of 39.29% for *1 and 60.71% for *10 allele of CYP2D6 in the cohort of Han hypertensive patients. Statistical analysis showed that the frequency of *1/*1 wild-type homozygous for CYP2D6 was 9.71%, while the frequency of *1/*10 heterozygous or *10/*10 mutant homozygous was 59.16% or 31.13%. In the meantime, we detected allelic frequencies of 32.78%, 67.22% for the G and C allele frequency of ADRB1. While the genotype frequency of GG wild-type homozygous was 10.29%, the frequency of GC heterozygous, or CC mutant homozygous was 44.98%, or 44.73%, respectively. Notably, the results showed *1/*10 + CC (25.88%) and *1/*10 + CG (27.78%) were the two combined genotypes with highest frequencies. Importantly, no significant differences in CYP2D6 and ADRB1 polymorphism distributions were revealed between normotensive control and hypertensive patients, or among all three grades of hypertensive patients.
Conclusion These data showed the CYP2D6 and ADRB1 polymorphisms characteristics in Han Chinese hypertensive patients. The present results would provide valuable information for antihypertensive effect of beta-receptor blockers in Han Chinese hypertensive patients in prospective clinical studies in the future.

PU-0995

Utilizing Machine Learning for Prediction of the Diagnostic Model of Microvascular Invasion Risk in Hepatocellular Carcinoma

Weiwei Liu[1]、Juan Zhou[2]、Binwu Ying[1]
1. West China Hospital of Sichuan University
2. 四川大学华西医

Background and objectives Microvascular invasion (MVI) has been proved to be an important independent risk factor for poor outcome in hepatocellular carcinoma (HCC), however, MVI can only be diagnosed by postoperative pathology and its pre-operative assessment remains largely challenge. The studies aimed to develop a machine learning model with valid prediction performance and clinical interpretability for MVI before surgical therapies.
Methods A total of 2375 patients with HCC were included, including 215 patients with macrovascular invasion, and 2160 patients without macrovascular invasion. Of the patients without macrovascular invasion, 575 patients suffered microvascular invasion (MVI), and 1585 patients didn't (non-MVI). In the model construction stage, the ratio of training set to test set was 8: 2. Three models were constructed using several machine learning algorithms: the "full indicators" model (model 1), the "preoperative prediction" model (model 2), and the "objective indicators only" model (model 3).
Results Three models were constructed using several machine learning algorithms: the "full indicators" model (model 1), the "preoperative prediction" model (model 2), and the "objective indicators only" model (model 3). Model 1 had the highest performance, with a sensitivity of 72.90%, a specificity of 67.06%, and an AUC of 0.74 in the test set, followed by model 2 with a sensitivity of 66.67%, a specificity of 65.11%, an AUC of 0.717, and model 3 with a sensitivity of 69.16%, a specificity of 62.91% and an AUC of 0.703, which were better than using only AFP or PIVKA-II. The most important features for MVI prediction were determined during modeling, including satellite lesions, tumor diameter, PIVKA-II, AFP, degree of differentiation, AST / ALT, PLT, etc. Although taking full advantage of EHR information to build a clinical MVI prediction model based on machine learning algorithms could improve prediction performance compared to a single indicator, the final AUC of the three models could only reach 0.7-0.8, considering the applicability of the models.
Conclusion Through a retrospective study of 2375 HCC electronic health records (EHR) in the past 5 years, based on a variety of machine learning algorithms, three MVI prediction models were constructed and optimized: "full index" model (model 1), "preoperative prediction" model (model 2), and "objective index only" model (model 3), the models performance were better than single index prediction, which reflects the advantages of the prediction model based on machine learning and provides new ideas for MVI prediction.

PU-0996

基于血清游离 microRNAs 的肌层浸润性膀胱癌预测 panel 的建立

蒋秀梅
山东大学齐鲁医院

目的 检测肌层浸润性膀胱癌血清游离 miRNAs 表达谱，建立肌层浸润性膀胱血清游离 miRNA 预测 panel。

方法 选取 6 例肌层浸润性膀胱癌患者、6 例非肌层浸润性膀胱癌患者和 6 例对照者血清，通过 miSeq 测序技术分别进行血清游离 miRNAs 表达谱检测，采用 RT-qPCR 在 111 例肌层浸润性膀胱癌患者、111 例非肌层浸润性膀胱癌患者和 187 例对照者血清中验证候选 miRNAs，确立肌层浸润性膀胱癌差异表达的 miRNAs，采用多元 logistic 回归分析建立预测肌层浸润性膀胱癌的血清 4-miRNA panel。在 90 例肌层浸润性膀胱癌患者和 168 例非肌层浸润性膀胱癌患者血清中对 4-miRNA panel 的肌层浸润预测效能进行验证。
结果 miSeq 高通量测序分析筛选出可作为肌层浸润性膀胱癌差异表达的 23 个候选 miRNAs 同时纳入课题组前期研究中发现的可用于膀胱癌诊断的 6 个 miRNAs。RT-qPCR 验证显示，miR-422a-3p，miR-486-3p，miR-103a-3p 和 miR-27a-3p 在三组间呈现差异表达（p 均<0.05）。构建血清 4-miRNA panel。血清 4-miRNA panel 预测肌层浸润性膀胱癌的 AUC 为 0.894。在另一人群中分析 4-miRNA panel 对肌层浸润性膀胱的预测价值。结果显示，4-miRNA panel 正确预测 121 例非肌层浸润性膀胱癌患者，特异度达 70.06%（95%CI，79.1~90.1）；正确预测 79 例肌层浸润性膀胱癌患者，灵敏度达 90.00%（95%CI, 81.9~95.3）。4-miRNA panel 预测肌层浸润性膀胱癌的 AUC 为 0.880。
结论 研究构建的血清 4-miRNA panel 对膀胱癌分期预测具有较高的临床价值。

PU-0997

MiR-27a-3p 在膀胱癌组织中的表达及功能研究

蒋秀梅
山东大学齐鲁医院

目的 通过 miR-27a-3p 在膀胱癌细胞系中的表达水平进行细胞功能试验。
方法 1. 选取在肌层浸润性膀胱癌血清中差异表达的 miRNAs，RT-qPCR 检测其在膀胱癌组织中的表达。
2. 检测差异表达 miR-27a-3p 在 40 对肌层浸润性膀胱癌及癌旁对照组织中的表达。
3. 采用 RT-qPCR 检测 miR-27a-3p 在膀胱癌细胞（T24）及永生化正常上皮细胞（SV-HUC-1）中的表达。
4. 通过 CCK8 细胞增殖实验、划痕实验及 Transwell 迁移和侵袭实验等分析 miR-27a-3p 对 T24 细胞的增殖、迁移及侵袭活性变化影响。
结果 1．miR-27a-3p 在肌层浸润性膀胱癌组织中的表达显著低于非肌层浸润性膀胱癌，且在 70%的肌层浸润性膀胱癌患者组织中较癌旁对照组织显著降低。
2．RT-qPCR 检测显示，miR-27a-3p 在 T24 细胞中的表达量显著低于 SV-HUC-1 细胞。
3.划痕实验中，miR-27a-3p mimic 转染组膀胱癌细胞伤口愈合率明显低于 miR-NC 组和 mock 组。miR-27a-3p inhibitor 转染组膀胱癌细胞伤口愈合率明显高于 miR-NC 组和 mock 组。
4. Transwell 迁移实验中，T24 膀胱癌细胞 miR-27a-3p mimic 组在转染 24h 后穿膜细胞数显著低于 miR-NC 组和 mock 组。T24 膀胱癌细胞 miR-27a-3p inhibitor 组在转染 24h 后穿膜细胞数显著高于 miR-NC 组和 mock 组。
5. Transwell 侵袭实验中，T24 膀胱癌细胞 miR-27a-3p mimic 组在转染 24h 后穿膜细胞数显著低于 miR-NC 组和 mock 组。T24 膀胱癌细胞 miR-27a-3p inhibitor 组在转染 24h 后穿膜细胞数显著高于 miR-NC 组和 mock 组。
结论 低表达的 miR-27a-3p 可显著增强膀胱癌细胞的增殖、迁移和侵袭能力。

PU-0998

CD47 在非小细胞肺癌中促进肿瘤侵袭和转移

刘元斌
山东大学齐鲁医院

CD47 在许多人类癌症中过表达，其水平与肿瘤的侵袭和转移呈正相关。然而，在非小细胞肺癌(NSCLC)中，CD47 过表达是否驱动转移以及 CD47 如何导致肿瘤转移仍是一个很大程度上未知的问题。在本研究中，我们分析了 NSCLC 标本和细胞株，发现 CD47 的表达水平高于无瘤对照标本。此外，CD47 表达增加与临床分期、淋巴结转移相关。为了理解其分子机制，我们在细胞系中将其功能增加和功能丧失观察其现象和结果。siRNA 介导的 CD47 下调抑制了体外细胞的侵袭和转移，而质粒转染 CD47 过表达则产生相反的作用。在体内，CD47 特异性 shRNA 显著降低了肿瘤的生长和转移。在分子水平上，无论是细胞系还是 NSCLC 标本中，CD47 的表达都与 Cdc42 的表达相关。抑制 Cdc42 可减轻 CD47 过表达细胞的侵袭和转移。这些结果表明 Cdc42 是 cd47 促进转移的下游介质。我们的发现首次证明 CD47 是疾病进展和转移的不良预后因素，也是 NSCLC 有希望的治疗靶点。

PU-0999

快检病理组织 EGFR 基因突变的方法

刘元斌
山东大学齐鲁医院

目的 寻找一种新的，高效快速检测 EGFR 基因突变的方法。
方法 这项研究描述了利用多种分子诊断学技术相结合的方式快速检测 EGFR 基因突变的新方法。相比 DNA 测序的检测方法，该方法是基于等位基因特异性扩增（ASA），重组酶聚合酶扩增（RPA），肽核酸（PNA），和 SYBR Green I，我们称之为 AS-RPA-PNA-SYBR （ARPS）系统。
结果 使用这种方法，在细胞系水平 5 分钟内即检测出了 EGFR 19Del（2）突变，同样在 10 分钟内检测出了 EGFR L858R 点突变；利用优化的 ARPS 系统检测临床标本，15 分钟即可很好的得到检测结果，并与临床信息和测序结果相一致。
结论 在这项研究中，使用 ARPS 系统检测 EGFR 基因突变的结果数据与由聚合酶链式反应（PCR）和 DNA 测序方法相一致，并且更快速，过程简单，方便使用。因此，利用该 ARPS 系统新方法检测基因突变，用以评估临床样品中 EGFR 基因突变有着可靠和实用的优势，并可在桥式 PCR 技术基础上更进一步检测循环肿瘤 DNA（ctDNA），在未来的床旁检测（POCT）和体液检测研究和应用中有很大的前景。

宫颈液基细胞学技术联合高危型人乳头瘤病毒 mRNA 检测技术在宫颈癌前病变中的应用价值

苗微微
吉林大学第一医院

目的 探讨宫颈液基薄层细胞学（TCT）联合高危型人乳头状瘤病毒 mRNA 检测在早期宫颈病变诊断中的价值。
方法 对 2019 年 10 月～2020 年 12 月在吉林大学第一附属医院妇产科就诊的 2456 例宫颈病变的患者行 TCT 检查联合 HPV mRNA 检测，并对一项或两项异常者行阴道镜下取活检，以病理组织学

结果为金标准。比较宫颈液基细胞学、HPVmRNA 检测以及两者联合检查与组织学结果的符合率。
结果 TCT 检测阳性者 180 例,敏感度为 83.9% ，HPV mRNA 检测阳性 161 例,敏感度 84.4% ,与 TCT 检测的敏感度相比差异无统计学意义(P＞ 0.05)，两种方法联合应用敏感度达到 92.4%，与单独应用 TCT 技术或 HC2 技术差异有统计学意义（P＜0.05）。
结论 可将 TCT 与 HPV mRNA 检测联合应用，可提高宫颈癌前病变筛查及早期诊断的检出率，有效降低假阴性率，弥补各自的不足。

The dominant model analysis of Sirt3 genetic variants is associated with susceptibility to tuberculosis in a Chinese Han population

Tao Wu[1,2]、Lin Jiao[1]、Hao Bai[1]、Xuejiao Hu[1,3]、Minjin Wang[1]、Zhenzhen Zhao[1]、Hui Xue[1]、Binwu Ying[1]
1. West China Hospital, Sichuan University
2. 宁夏回族自治区人民医院
3. 广东省人民医院

Background Tuberculosis (TB) is a complex infectious disease caused by the pathogen Mycobacterium tuberculosis (Mtb) which has coexisted with humanity since the Neolithic. Recent research indicated that SIRT3 plays a pivotal role in promoting the antimycobacterial response of mitochondria and autophagy during Mtb infection.
Materials/Methods A case-control study comprised 900 TB patients and 1534 heathy controls were retrospectively enrolled to assess the association between Sirt3 gene polymorphisms and TB susceptibility. In total of five single-nucleotide polymorphisms (SNPs) (rs511744, rs3782118, rs7104764, rs536715, and rs28365927) which were selected through database 1000 Genomes Project and offline software Haploview V4.2, and genotyped by a customized 2×48-Plex SNPscanTM Kit.
Results Our results suggested that the minor allele genotypes (A carriers) of rs3782118 confers the decreased risk of TB susceptibility (p Bonferroni = 0.032), and a similar but more significant effect was observed under the dominant model analysis (OR = 0.787, 95% CI = 0.666-0.931, p Bonferroni = 0.026). Haplotypes analysis showed that haplotype AGAAG (rs511744 / rs3782118 / rs7104764 / rs536715 / rs28365927) was associated with an increased risk of TB (p = 0.023, OR = 1.159, 95% CI = 1.019-1.317). In stratification analysis, we found that rs3782118 was associated with decreased risk of TB in female subgroup under the dominant model analysis (p Bonferroni = 0.016, OR = 0.678, 95% CI = 0.523-0.878). Moreover, functional annotations for three loci (rs7930823, rs3782116, and rs3782115) which are strongly linked to rs3782118 indicated that they may be responsible for the changes in some motifs.
Conclusions Our study suggested that the SNP rs3782118 was associated with a lower susceptibility to TB, especially under the dominant model analysis, and that the haplotype AGAAG (contains the major allele G of rs3782118) was associated with an increased risk of TB. Further independent cohort studies are necessary to validate the protective effect of Sirt3 genetic variants on the risk of TB.

结核分枝杆菌微滴式数字 PCR 检测方法的建立及临床应用评价

赵珍珍、应斌武
四川大学华西医院

目的 结核病（Tuberculosis，TB）是由结核分枝杆菌（Mycobacterium tuberculosis, MTB）感染引起的重大全球性疾病。传统的 MTB 检测方法对低菌含量样本检出率低，导致漏诊或延迟诊断。微滴式数字 PCR（droplet digital PCR，ddPCR）能准确定量痕量核酸靶标，基于 ddPCR，建立快速灵敏的 MTB 检测方法。
方法 以 MTB 插入序列（insert sequence, IS）6110 为靶标，构建 IS6110-ddPCR 检测方法。应用 IS6110-ddPCR 检测多类型临床样本，ROC 曲线分析评价 IS6110-ddPCR 对结核病的诊断价值，统计分析 IS6110-ddPCR 与常规结核检测试验效能，评估其对结核病的临床诊断效能。
结果 本研究建立的 IS6110-ddPCR 检测 MTB 的方法具有高特异性，与常见的非结核分枝杆菌和呼吸道感染细菌均无交叉反应。对 1012 例临床疑似结核病患者的各类型标本的检测，以临床最终诊断为结局指标（结核患者 432 例，非结核患者 580 例），IS6110-ddPCR ROC 曲线下面积（AUC）为 0.82（95%CI，0.79-0.85）。IS6110-ddPCR 诊断结核病的灵敏度、特异性、阳性预测值分别为 54.63%（95%CI，49.91-59.26%）、95.69%（95%CI，93.71-97.06%）、90.42%（95%CI，86.24-93.43%）。与传统 MTB 相关检测试验比较，IS6110-ddPCR 诊断结核病的灵敏度最佳[qPCR：29.86%，Xpert MTB/RIF ：36.43%，抗酸染色：13.95% ，分枝杆菌培养：30.66%]。
结论 IS6110-ddPCR 灵敏度优于常规结核检测试验，有助于低菌负荷的结核患者的早期诊断，对结核病疫情防控具有重要意义。

Identification of an exosomal long non-coding RNAs panel for predicting recurrence risk in patients with colorectal cancer

Xin Zhang
Qilu Hospital of Shandong University

Background Recurrence is a major cause of cancer-related deaths in colorectal cancer (CRC) patients, but the current strategies are limited to predict this clinical behavior. Our aim is to develop a recurrence prediction model based on long non-coding RNAs (lncRNAs) in exosomes of serum to improve the prediction accuracy.
Methods High-throughput lncRNAs microarray and reverse transcription quantitative real-time PCR were used to identify the recurrence-associated lncRNAs in 30 matched CRC tissues and sera. The recurrence prediction model was built with multivariable Cox analysis in 150-patient training set, and evaluated in an independent 203-patient test set using ROC, Kaplan–Meier, and COX analysis.
Results In discovery phase, 11 lncRNAs were found to be associated with CRC recurrence in tissues, and 9 of them were correlated with their expression levels of serum exosomes. In training phase, a model based on 5-exosomal lncRNAs (exolncRNAs) panel was constructed, and showed high distinguish capability for recurrent CRC patients. ROC showed the panel was superior to serum CEA and CA19-9 in prediction of CRC recurrence. In both training and test sets, high-risk patients defined by the 5-exolncRNAs panel had poor recurrence free and overall survival. And, COX model showed it was an independent factor for CRC prognosis.
Conclusions The 5-exolncRNAs panel robustly stratifies CRC patients' risk of recurrence, enabling more accurate prediction of prognosis.

ctDNA 突变丰度和分布与酪氨酸激酶抑制剂对非小细胞肺癌治疗效果相关性的研究

宋佳佳、周娟、白玲、应斌武
四川大学华西医院

背景 循环肿瘤 DNA（circular tumor DNA，ctDNA）检测对于组织量不足的患者或无法进行活检的患者十分重要。ctDNA 的突变丰度和分布可以反映患者整体肿瘤负担程度和肿瘤的已执行，目前关于突变的丰度和突变的分布与酪氨酸激酶抑制剂治疗效果的关系尚无最终结论。
方法 本研究回顾性纳入了 2017 年 12 月 18 日至 2019 年 12 月 31 日在华西医院收治的 100 例携带 EGFR 酪氨酸激酶抑制剂敏感突变（外显子 19 缺失，L858R 和 T790M 突变）的非小细胞肺癌患者。本研究通过二代测序技术和数字 PCR 技术检测患者外周血中 ctDNA 的突变及其丰度。
结果 EGFR 敏感突变丰度低于 3%的患者比 EGFR 敏感突变丰度更高的患者具有更长的无进展生存时间（progression free survival，PFS）（15 个月 vs. 10 个月，P = 0.028）。在 T790M 亚组分析中，T790M 突变丰度/最大突变丰度（T790M / MSAF）低于 30%的患者的 PFS 延长（7 个月）对比 15 个月，P = 0.013）。
结论 本研究结果表明，EGFR 敏感突变丰度较低或 T790M / MSAF 较高的患者预后更好。ctCNA 中 EGFR 敏感突变丰度和分布可能是酪氨酸激酶抑制剂治疗效果的重要预测因素。

SELEX 技术及核酸适体在感染性病原体检测中的研究进展及挑战

徐一心、王旻晋、应斌武
四川大学华西医院

Infectious diseases are considered as a pressing challenge to global public health. Accurate and rapid diagnostics tools for early recognition of the pathogen are essential for controlling the spread of infectious diseases. Aptamers, which screened by systematic evolution of ligands by exponential enrichment (SELEX), can bind to targets with high affinity and specificity so that have exciting potential in diagnosis of infectious diseases. In this review, we provide a comprehensive overview of the latest development of SELEX technology and focus on the applications of aptamer-based biosensor strategies for detecting of various infectious pathogens. The challenges and the future development in this field of clinical application will also be discussed.

ddPCR 检测 PML-RARa 融合基因的建立及其在中枢侵润诊断中的评价

叶远馨、周汶静、王念、周燕虹、陆小军、应斌武
四川大学华西医院

目的 PML-RARα 融合基因相互易位是诊断 APL 的分子基础。尽管实时定量 PCR (qPCR)已广泛应用 PML-RARa 的检测，但随着对微小残留（MRD）检测要求的提高，特别是中枢神经系统侵润时脑脊液检测的增多，已无法满足要求。微滴式数字 PCR (ddPCR)可以提供直接定量，具有更高敏

感度，受到广泛关注。本课题旨在设计 PML-RARa 的 ddPCR 检测体系，并探讨其在脑脊液 PML-RARa 检测中的应用价值，以提高早幼粒细胞白血病的 MRD 检测水平。
方法 本研究采用两步法 ddPCR 建立了 PML-RARa 的 ddPCR 检测体系，进行了灵敏度及特异性评价，采用 110 临床样本（96 例骨髓或外周血，14 例脑脊液）比较了 ddPCR 和 qPCR 在 PML-RARα 定量方面的差异，以评估 ddPCR 的诊断潜力，并验证 ddPCR 在脑脊液 PML-RARa 检测中的应用价值。
结果 建立了 PML-RARα 的 ddPCR 检测体系，敏感性实验提示 PML-RARα 的 ddPCR 检测 LOD 达到 0.002%。ddPCR 与 qPCR 检测结果的总符合率为 93.4%，在 68 例较高拷贝数（qPCR 检测>100copies/ml）PML-RARα 样本中，ddPCR 检测结果与 qPCR 检测定性结果完全符合，且两种方法定量结果具有良好的相关性（R2>0.97）。在另 42 例 qPCR 阴性样本中（含 14 例脑脊液样本），7 例 ddPCR 结果提示阳性（其中 2 例为脑脊液样本），但定量结果均<5copis/20ul。所有结果表明，ddPCR 与 qPCR 在临床样本 PML-RARα 的检测方面具有显著的一致性，但在精度、检测限(LOD)等基本性能参数上均优于 qPCR。
结论 ddPCR 被认为有可能成为一种可靠的 PML-RARα 定量替代技术，它将为 PML-RARα 水平在 qPCR LOD 上下波动的患者提供准确的结果，这可能与 ddPCR 比 qPCR 对抑制的耐受性更强有关。

PU-1007

Nacl 对大鼠肠道菌群构成改变的影响

董召刚
山东大学齐鲁医院

目的 高盐饮食被认为参与某些慢性疾病的发生发展，最近研究显示慢性疾病与肠道菌群密切相关，然而，对于高盐饮食对肠道菌群构成的影响尚不清楚。本研究的目的是探讨 Wistar 大鼠摄取高盐后肠道菌群构成的改变。
方法 4 周龄雄性 Wistar 大鼠按标准流程喂养后分为高盐组和对照组。高盐组大鼠通过灌胃方式给予 1 ml 10％NaCl 溶液，每周 3 次，共 4 周。收集粪便，提取 DNA 后，利用靶向 V4 区的 16S rRNA 基因测序技术分析粪便菌群表达谱。利用贝叶斯分类器对 OTUs 进行了分类分析，观察菌群多样性。LEfSe 分析比较微生物种群的相对丰度，并利用 PCA 和 LDA 分析来寻找两个或多个组之间差异表达菌群。使用微生物群落的系统发育研究，通过 PICRUSt 生物信息学软件预测微生物基因组的功能。
结果 结果表明高盐组和对照组粪便微生物 α 多样性无显着差异，而主成分分析（PCA）表明两组之间的菌群结构不同。在门水平，高盐组含量最丰富的是 Bacteroidetes（58.4％），而对照组为 Firmicutes（48.0％）。根据 LDA≥4 的标准使用 LEfSe 进一步分析显示，高盐摄入后 wistar 大鼠粪便中 Lactobacillus 和 Prevotella NK3B31 显着降低，而 Alloprevotella 和 Prevotella 9 在高盐组大鼠中增加。但是两组间的体重、肠道形态变化和血压、生化指标等参数均无明显差异。
结论 作为一项探索研究，高盐摄入与肠道微生物菌群构成变化有关，本研究为提高微生物菌群在高盐相关疾病发病机制中作用的认识提供了理论基础。

PU-1008

LncRNA-HOXA11-AS 结合 miR-124-3p 调控整合素 β3 表达在胃癌侵袭转移中的机制研究

宋兴勃、吴茜、钟慧钰、温阳、应斌武
四川大学华西医院

目的 通过细胞功能实验验证目标 lncRNA 及 miR-124-3p 和 ITGB3 的关系，以及三者的表达对胃癌细胞的增殖、侵袭迁移是否有影响。
方法 构建 pcDNA3.1-HOXA11-AS 重组质粒及 HOXA11-AS 干扰序列，通过 qPCR 检测了不同细胞中过表达或者敲降 HOXA11-AS 后 miR-124-3p，ITGB3 的表达。Western blot 检测 HOXA11-AS 对整合素 β3 表达水平的影响。采用划痕试验和 Transwell 迁移实验检测细胞的迁移能力，Transwell 侵袭实验检测细胞侵袭能力，CCK8 增殖实验检测细胞增殖能力。
结果 MKN45 细胞系中过表达 HOXA11-AS 后 miR-124-3p 的水平明显降低，ITGB3 表达明显升高，整合素 β3 表达明显上调；MGC-803 细胞中敲降 HOXA11-AS 后 miR-124-3p 的水平明显升高，ITGB3 表达明显下降，整合素 β3 表达明显下调。细胞功能试验显示，胃癌细胞过表达 HOXA11-AS 组的增殖，侵袭和迁移能力较对照组均有明显增强，而在 HOXA11-AS 敲降后，敲降组细胞的增殖，侵袭，迁移能力较对照组明显减弱。挽救实验显示，敲降 HOXA11-AS 的基础上沉默 miR-124-3p 可挽救由敲降 HOXA11-AS 导致的 miR-124-3p mRNA 水平的升高，ITGB3 表达的降低，整合素 β3 表达的降低。过表达 HOXA11-AS 的基础上过表达 miR-124-3p 可挽救由过表达 HOXA11-AS 导致的 miR-124-3p mRNA 水平的降低，ITGB3 表达的升高，整合素 β3 表达的升高。
结论 HOXA11-AS/miR-124-3p/ITGB3 参与了胃癌的增殖、侵袭和转移。HOXA11-AS 充当 miR-124-3p 的分子海绵，与 miR-124-3p 竞争性结合，上调了 ITGB3 蛋白整合素 β3 的表达，进而参与胃癌的发生发展。

PU-1009

Prognostic and predictive value of a hypoxia-related microRNA signature in patients with colorectal cancer

Ailin Qu
Qilu Hospital, Shandong University

Purpose Hypoxic is considered a critical microenvironment feature determining tumor behavior. Therefore, we sought to develop a hypoxia-related microRNA signature that could identify high-risk colorectal cancer patients.
Methods HT-29 cells cultured in hypoxia and normoxia were subjected to miRNA sequencing to identify differentially expressed miRNAs. These hypoxia-induced miRNAs were further used to construct microRNA-based signature for the prediction of overall survival of CRC patients using cox regression model, which was subsequently determined for its prognostic value in testing and independent validation cohorts.
Results We identified 52 hypoxia-induced miRNAs by analyzing sequencing data from HT-29 cells under normoxia and hypoxia conditions. Then using univariable and step multivariable cox regression model, we trained a four-microRNA signature in the training cohort (n=381) which could distinguish patients in high-risk group from those in low-risk group (AUC at 3 year: 0.711, 95%CI: 0.630-0.791; AUC at 5 year: 0.737, 95%CI: 0.627-0.845). Patients in high-risk group had poor overall survivals compared to those in low-risk group (log-rank test, $P < 0.001$ in training cohort). This microRNA signature was further confirmed in the testing cohort ($P=0.042$) and an independent validation cohort ($P < 0.001$). Multivariate Cox regression and stratified survival analysis revealed that the prognostic value of this signature was independent of

clinicopathological risk factors. ROC analysis indicated that the AUC of this signature was significantly larger than that of any other clinical risk factors or single miRNA alone (all $P < 0.05$). A nomogram was constructed for clinical use, which incorporated both miRNA signature and clinical risk factors (CEA, age and clinical stage) and did well in the calibration plots.
Conclusions This novel hypoxia-related miRNA signature was an independent prognostic factor of, and possessed stronger predictive power than, currently used clinicopathological features for identifying high-risk CRC patients. It may be a useful tool for patient counselling and personalize management for patients with CRC.

PU-1010

Development of a preoperative prediction nomogram for lymph node metastasis in colorectal cancer based on a novel serum miRNA signature and CT scans

Ailin Qu
Qilu Hospital, Shandong University

Purpose Preoperative prediction of lymph node (LN) status is of crucial importance for appropriate treatment planning in patients with colorectal cancer (CRC). In this study, we sought to develop and validate a non-invasive nomogram model to preoperatively predict LN metastasis in CRC.
Methods Development of the nomogram entailed 3 subsequent stages with specific patient sets. In the discovery set (n=20), LN-status-related miRNAs were screened from high-throughput sequencing data of human CRC serum samples. In the training set (n=218), a miRNA panel-clinicopathologic nomogram was developed by logistic regression analysis for preoperative prediction of LN metastasis. In the validation set (n=198), we validated the above nomogram with respect to its discrimination, calibration and clinical application.
Results Four differently expressed miRNAs (miR-122-5p, miR-146b-5p, miR-186-5p and miR-193a-5p) were identified in the serum samples from CRC patients with and without LN metastasis, which also had regulatory effects on CRC cell migration. The combined miRNA panel could provide higher LN prediction capability compared with computed tomography (CT) scans ($P<0.0001$ in both the training and validation sets). Furthermore, a nomogram integrating the miRNA-based panel and CT-reported LN status was constructed in the training set, which performed well in both the training and validation sets (AUC: 0.913 and 0.883, respectively). Decision curve analysis demonstrated the clinical usefulness of the nomogram.
Conclusion Our nomogram is a reliable prediction model that can be conveniently and efficiently used to improve the accuracy of preoperative prediction of LN metastasis in patients with CRC.

PU-1011

A serum piRNA signature as promising non-invasive diagnostic and prognostic biomarkers for colorectal cancer

Ailin Qu
Qilu Hospital, Shandong University

Purpose Piwi-interacting RNAs (piRNAs) are a novel class of small non-coding RNAs, which are not easily degraded but detectable in human body fluids. Recent studies have shown that aberrant piRNA expression is a signature feature across multiple tumor types. However, the expressions of piRNAs in serum of tumor patients and their potential clinical values remain largely unclear.

Methods High-throughput sequencing was performed to investigate the serum piRNA profiles, followed by evaluations in serum samples of 220 colorectal cancer (CRC) patients and 220 healthy controls using reverse transcription quantitative real-time PCR (RT-qPCR). Biomarker panels including piRNA-based Panel I and carcinoembryonic antigen (CEA)-based Panel II, were developed by logistic regression model, and their diagnostic potentials were compared. Fagan's nomogram was plotted to promote clinical application.
Results We identified five differently expressed serum piRNAs (piR-001311, piR-004153, piR-017723, piR-017724 and piR-020365), which, when combined in the piRNA-based Panel I, outperformed the CEA-based Panel II ($P < 0.001$) and could detect CRC with an area under the receiver operating characteristic curve of 0.867. In addition, Kaplan-Meier analysis showed that patients with low serum piR-017724 level had worse overall survival (OS) and progression-free survival (PFS). In multivariate Cox regression analysis, serum piR-017724 was an independent prognostic factor for OS and PFS ($P < 0.05$).
Conclusion Our findings suggest serum piRNA expression signatures have potential for use as biomarkers for CRC detection and to predict prognosis at the time of diagnosis.

PU-1012

RNA interference reveals tumor-promoting roles of Integrin alpha 6 (ITGA6) in Hepatocellular Carcinoma

Guixi Zheng
Qilu Hospital of Shandong University

Hepatocellular carcinoma (HCC) is the sixth most common malignancy worldwide and the third leading cause of cancer related mortality. The incidence and mortality rates of HCC are two times higher in Latinos than in the general population in the US and are the highest in Latinos from the South Texas region. The genetic and epigenetic events associated with the increased incidence of HCC in this population are still unclear. Increasing evidence suggests that integrins are one of the most important receptors for cell metastasisincluding integrin α6β1 and α6β4. However, few studies have focused on the function of integrin alpha 6 (ITGA6)in the tumorigenesis and progression of HCC.We aim to investigate the expression and potential roles ofITGA6 in HCC.
Materials and Methods Paired HCC tissues and adjacent non-tumor tissues were collected for RNA sequencing. ITGA6 RNA and protein expression levels were evaluated by RNA sequencing, RT-qPCR, Western blot and immunohistochemistry.HCC cell lines (SNU398 and Huh7) were transiently transfected with two ITGA6siRNAs and stably transfected with an ITGA6 shRNA lentivector. These cell lines were used for assays testing the effects of ITGA6 knockdown on HCC cellproliferation, migration and anchorage independent growth.
Results Analysis of RNA sequencing data indicatedthat the expression of ITGA6 increased 4-fold in HCC tumor tissues compared to adjacent non-tumor tissues, which was validated by RT-qPCR. Western blotting also confirmed increased expression of ITGA6 in the tumor tissues. The knockdown of ITGA6 by siRNAs and shRNAwasconfirmedwith Western blot and qRT-PCR. ITGA6 knockdownsignificantly decreased proliferation, migration and anchorage independent growth of HCC cell lines.
Conclusions ITGA6 is upregulated in HCC tumors in Latinos patients. ITGA6 may play a malignant-promoting role in HCC cells. Our studies provided new insights into the molecular mechanisms that drive HCC progression and potential therapeutic targets for treating patients with HCC including South Texas Latino patients.

PU-1013

DNA methylation analysis reveals the potential cancer-related lncRNAs in colon cancer

Guixi Zheng
Qilu Hospital of Shandong University

Purpose In the present study, we aimed to systemically characterize the profile of DNA methylation in colon cancer (CC), especially the methylation of aberrant lncRNAs genes, and identify the potential cancer-related long non-coding RNAs (lncRNAs) in CC.
Methods The genome-wide DNA methylation profile of CC was constructed using MethylRAD technology. The differentially methylated sites (DMSs) and differentially methylated genes (DMGs) were identified by EdgeR. LncRNA DMGs were identified after annotation by GENCODE v25. The RNA sequencing data were downloaded and analyzed from The Cancer Genome Atlas (TCGA) database. The aberrant lncRNA DMGs and dysregulated lncRNAs were co-analyzed by Venny 2.1. The lncRNAs, which were hypermethylated and down-regulated or hypomethylated and up-regulated, were identified as CC-related lncRNAs and screened to perform further functional analysis.
Results A total of 132,999 CCGG/8,487 CCWGG sites were identified as DMSs, which were mainly located on the introns and intergenic elements. Moreover, 1,359 CCGG DMGs and 1,052 CCWGG DMGs were screened respectively. Our results demonstrated that lncRNAs occurred frequently in DMGs, including 510 lncRNA genes (37.5%) in CCGG DMGs and 466 lncRNA genes (44.3%) in CCWGG DMGs. As a result, we totally obtained 963 lncRNA DMGs, including 387 hypermethylated and 576 hypomethylated genes. In addition, 1,328 differentially expressed lncRNAs, including 1,311 up-regulated and 16 down-regulated lncRNAs, were identified from TCGA data. Finally, we identified that 15 lncRNAs might be CC-related lncRNAs. ZNF667-AS1 and MAFA-AS1 were down-regulated in CC, which might be silenced by hypermethylation. Besides, 13 lncRNAs (A008781.2, HULC, AC100839.1, CRAT37, LINC01198, LINC01482, SMAD1-AS2, TH2CLCRR, DISC1-IT1, ABCC5-AS1, NFIA-AS1, AC007431.1 and AC012494.1) were hypomethylated and up-regulated in CC.
Conclusions We performed a genome-wide DNA methylation analysis by MethylRAD to acquire both CCGG and CCWGG DMSs and DMGs in CC. This study provided lncRNA DMSs and DMGs as potential biomarkers, novel therapy targets and valuable insights into molecular mechanism in tumorigenesis and development of CC.

PU-1014

Islet1 在女性肿瘤中有差异表达

耿燕、郑刚、郑刚、曹建林、曹建林、师伟、师伟、杨志宁、杨志宁
山西省人民医院

目的 胰岛素基因增强子结合蛋白-1 (isl1)是 LIM/homeodomain 家族的转录因子。ISL1 的异常表达已被证实与癌症的发展和进展密切相关。我们评估了 ISL1 在女性肿瘤中的表达及其与临床病理参数的关系。
方法 对 20 例宫颈癌、20 例卵巢癌、20 例子宫内膜癌和 30 例乳腺癌患者进行观察研究，免疫组织化学染色检测 ISL1 表达。
结果 ISL1 在不同女性肿瘤组织中的表达差异有统计学意义:宫颈癌、卵巢癌、子宫内膜癌均呈低表达($p < 0.05$）与癌旁组织中相比。同时，ISL1 在乳腺癌(组织分类为腔内 A、B，甚至三阴性乳腺癌(TNBC))中均未出现差异表达。此外，在乳腺的良性疾乳腺增生和乳腺纤维腺瘤中，ISL1 与正常乳腺组织表达无差异。

结论 与以往研究的其他肿瘤中 ISL 促肿瘤作用，ISL1 在女性肿瘤中一反常态的异常低表达。我们推测 ISL1 在抑制或促进癌症进展方面具有双重功能。其机制可能与 ISL1 甲基化或与雌激素相互作用有关。虽然 isl1 是否可以作为女性肿瘤的生物标志物或治疗靶点还需要进一步的研究。

PU-1015

RNF14 介导的 ORF45 单泛素化调控卡波氏肉瘤相关病毒（KSHV）定位于自噬体进行组装

王鑫、张义
山东大学齐鲁医院

目的 卡波氏肉瘤相关疱疹病毒（KSHV）是人类七种致瘤病毒之一，可致淋巴和皮肤粘膜等系统肿瘤。阻断 KSHV 组装将有效的抑制子代病毒的产生，抑制 KSHV 的持续感染。前期研究发现 KSHV 结构蛋白在宿主细胞内组装释放的过程中需要泛素化修饰指导病毒蛋白的组装，本研究试图揭示泛素化修饰调控 KSHV 组装释放的机制。
方法 免疫沉淀加蛋白质谱技术筛选与 KSHV 的被膜蛋白 ORF45 相互作用的蛋白质，并通过免疫共沉淀验证二者的相互作用。应用免疫印迹和激光共聚焦等技术检测泛素连接酶 RNF14 对 ORF45 蛋白的影响，包括 ORF45 蛋白的稳定性，泛素化修饰，细胞定位。最后运用免疫荧光和 qPCR 技术比较 RNF14 介导的泛素化修饰在 KSHV 组装和释放过程中的作用。
结果 通过筛选和鉴定我们发现一个与 ORF45 相互作用的 E3 泛素连接酶——RNF14。用 siRNA knockdown RNF14 后，用 anti-ORF45 沉淀 ORF45，再用泛素抗体 anti-Ub 检测 ORF45 的泛素化，发现 RNF14 knockdown 后，有一条泛素化的 ORF45 条带明显消失，提示 RNF14 介导了 ORF45 的泛素化，并且是 ORF45 的单泛素化。由于泛素化修饰常见的作用是介导蛋白质经蛋白酶体途径降解。因此，我们进一步检测 RNF14 对 ORF45 的稳定性的影响。敲除 RNF14 后，ORF45 的蛋白水平明显降低，由此，我们推测 RNF14 介导的泛素化非但没有降解 ORF45，反而稳定 ORF45。由于我们前期研究发现 ORF45 可以定位于自噬体，我们就进一步检测了 RNF14 对 ORF45 定位的影响。在病毒基因组 BAC16 稳定转染的细胞系中，用 siRNF14 敲低 RNF14 的表达后，ORF45 和 ORF65 不能与 LC3 共定位，并且 KSHV 病毒颗粒的产量明显低于对照组。表明 RNF14 介导了 ORF45 定位于自噬体，并且指导病毒在自噬体内组装。
结论 ① E3 泛素连接酶 RNF14 介导了 KSHV 被膜蛋白 ORF45 的单泛素化，以及；② RNF14 介导了 ORF45 定位于自噬体，并且将自噬体作为病毒组装释放的平台。

Analysis of protocols for SARS-CoV-2 nucleic acid extraction from pharyngeal swab samples

Lijuan Wu、Nian Wang、Wenjing Zhou、Juan Zhou、Huiyu Zhong、Jiajia Song、Tangyuheng Liu、Xingbo Song、Yuanxin Ye、Xiaojun Lu、Yi Zhou、Binwu Ying
West China Hospital of Sichuan University

We aimed to provide data toward optimizing detection **Methods** for COVID-19 in order to improve diagnostic protocols, focusing on swab type, viral inactivation protocol, RNA extraction methods, and extraction reagents. We found that the quality of viral materials was very important, with nylon flocked swabs performing better than dry cotton swabs in obtaining pharyngeal samples. Q-PCR results indicated that the virus at not inactivated, 56 °C for 30 min, and 65 °C for 30 min all yielded similar Ct values, suggesting that RNA was not significant degradation after inactivated virus was more suitable from the perspective of biosafety. There was no difference in

RNA extraction efficiency between NucliSENS easyMAG and Concert Bio C1016 magnetic-based protocols, and the magnetic-based protocols and a centrifugation-based protocol (QIAamp Viral RNA Mini Kit) for RNA extraction was no significant difference too. We suggested that SARS-CoV-2 RNA extraction in different laboratories should proceed based on a comparison of differences extraction methods, and use protocols that are most suitable according to the facilities of each laboratory.

The influence of HLA polymorphism and haplotype frequency on susceptibility to uremia in southwest China

Lijuan Wu[1]、juan zhou[1]、turun song[1]、jing li[2]、jie zhuang[1]、xiaojun lu[1]、tao lin[1]、binwu ying[1]
1. West China Hospital of Sichuan University
2. 攀枝花市中心医院

Kidney transplantation is the most effective and appropriate treatment for uremia, and HLA matching is an important factor affecting the success of organ transplantation and long-term survival. At present, many genome-wide association studies reveal a possible association between HLA and uremia, so this paper begins with the frequency distribution of HLA and analyzes the impact of HLA polymorphism on susceptibility to uremia in the population in southwest China. In this study, PCR-SSO (polymerase chain reaction and sequence specificoligonucleotide probe hybridization) typing technology was used to detect the genotypes of the HLA-A, -B, -DRB1 and -DQB1 loci in 8252 patients with uremia and 6193 donors in southwest China. To compare the frequency distribution of these HLA alleles and the influence of HLA polymorphisms on susceptibility between patients and donors. We detected 17 HLA-A, 44 HLA-B, 13 HLA-DRB1 and 7 HLA-DQB1 alleles. The major alleles of the HLA-A、-B、-DRB1 and -DQB1 loci of the patients were similar to those in the donors group. The five most common alleles in the HLA-A、-B、-DRB1 and -DQB1 loci accounted for 89.9%, 48.0%, 66.2% and 85.8% of the patients, while the five most common alleles in the donors group accounted for 89.4%, 49.4%, 64.2% and 86.0%, respectively. Four of the HLA-DQB1 alleles had significantly different distribution of patients and controls, while three of the -DRB1 alleles, two of the HLA-B alleles, and the HLA-A locus was zero. These HLA-B、-DRB1、-DQB1 alleles may be closely related to uremia. The haplotypes (combinations of HLA-A, -B, -DRB1 and-DQB1) with significantly different frequency between patients and controls, which mostly account for more than 1% have 27 haplotypes, of which 18 are risk factors for uremia and 9 are protective. This study sheds new light on HLA composition and differences, uremia patients and healthy people in southwest China of HLA genotype and can be used as a guide and renal transplantation HLA match HLA classification research resources. At the same time, the discovery of susceptibility genes and protective genes provides a theoretical basis for the clinical treatment, prognosis and preventive measures of uremia.

PU-1018

Hsa-miR-4484 调控整合素 α6 表达影响 VEGF 信号通路在胃癌侵袭转移中的机制研究

钟慧钰、周娟、由丽婷、温阳、周汶静、王军、宋兴勃
四川大学华西医院

目的 本研究筛选出位于整合素 α6 基因（ITGA6）3'UTR 内的位点 rs17664，进一步预测与之结合的 miRNA，通过组织实验及细胞实验揭示在胃癌侵袭与转移过程中 miRNA 调控整合素 α6 表达、影响 VEGF 信号通路的可能作用机制。
方法 利用生物信息学方法对可与 ITGA6 的 3'UTR 区相结合的 miRNA 进行预测，并采用双荧光素酶报告基因检测验证靶点。在 30 对配对胃癌组织和远端正常组织中采用荧光定量 PCR (RT-PCR) 及荧光探针原位杂交（FISH）检测 miRNA 和 ITGA6 的组织定位及表达水平，并采用免疫荧光组织化学（IFHC）和蛋白免疫印迹（WB）方法检测胃组织中整合素 α6 及 VEGF 信号通路相关蛋白的表达水平。进一步在胃癌细胞系中采用 RT-PCR 及 WB 检测相应目标分子的表达水平，并采用 CCK-8 增殖实验、Transwell 侵袭与迁移实验、小管形成实验观察胃癌细胞的增殖、迁移、侵袭及血管形成能力。统计学分析采用 GraphPad Prism 6.0 和 SPSS 22.0 软件。
结果 生物信息学预测结果显示 ITGA6 的 3'UTR 区内存在 hsa-miR-4484 的结合位点，双荧光素酶报告基因实验显示 ITGA6 是 hsa-miR-4484 的直接靶基因，hsa-miR-4484 可与 ITGA6 的 3'UTR 区结合并下调后者的表达。ITGA6 和整合素 α6 在胃癌组织表达水平显著高于配对的远端组织（P=0.015；P<0.001），hsa-miR-4484 表达水平则低于配对的远端组织（P=0.029）。分层分析显示 ITGA6 及 hsa-miR-4484 的表达水平与胃癌患者的临床病理特征具有相关性。在胃癌细胞系中分别对 ITGA6 进行过表达及干扰后，VEGF 信号通路相关蛋白表达水平以及胃癌细胞增殖、迁移侵袭、血管形成能力分别显著升高及降低；对 hsa-miR-4484 进行过表达及封闭后，ITGA6、整合素 α6、VEGF 信号通路相关蛋白的表达水平以及胃癌细胞增殖、迁移侵袭、血管形成能力分别显著降低及升高。
结论 本研究结果提示整合素 α6 基因（ITGA6）是 hsa-miR-4484 的直接靶基因，后者可结合并下调 ITGA6 及整合素 α6 的表达。miR-4484 在胃癌的发展过程中通过调控 ITGA6 和整合素 α6 的表达发挥抑制 VEGF 信号通路及胃癌侵袭转移、血管形成的功能。

PU-1019

基薄层细胞学技术联合 HPV DNA 检测在诊断高级别宫颈病变中的临床价值

魏爱婷
河南省漯河医学高等专科学校第三附属医院

目的 探讨液基薄层细胞学、HPV DNA 检测在诊断高级别宫颈病变中的临床价值。
方法 收集 439 例样本进行常规细胞学、HPV DNA 及组织学检测的患者为研究对象，分别采用液基薄层细胞学技术及 2001 版 Bethesda 分类系统对病人进行细胞学诊断，采用第二代杂交捕获法（hybrid captureⅡ，HC2）检测 HPV DNA。其中正常/慢性炎症组 194 例，CIN1 组 97 例，CIN2 组 56 例，CIN3 组 73 例，SCC 组 19 例。
结果 正常/慢性炎症组、CIN1、CIN2、CIN3 和 SCC 组细胞学阳性率和 HPV DNA 阳性率分别为 39.2%、70.1%、87.5%、87.7%、100%和 57.7%、73.2%、94.6%、90.4%、100%。HPV DNA 检测和细胞学诊断级别间、细胞学检测和组织学检测、HPV DNA 检测和组织学检测的关联系数 r 分别为 0.348、0.625 和 0.333（P 均<0.001）。以组织学为金标准，检测 CIN2+，细胞学检测、

HPV DNA 检测和两者联合检测间相比，仅细胞学和 HPV DNA 检测的特异性间，及联合检测与细胞学检测的敏感性、特异性间差异具有统计学意义（P 均<0.05）。
结论 液基细胞学和高危 HPV DNA 检测方法可互为补充，两者联合检测可以提高女性宫颈癌筛查筛查准确性。

PU-1020

柳州地区新生儿高胆红素血症 G6PD 基因结果分析

陈大宇、谭建强、杨金玲、黄丽华
柳州市妇幼保健院

目的 通过回顾性分析本地区不同程度新生儿高胆红素血症患儿葡萄糖-6-磷酸脱氢酶活性及基因突变位点，分析其不同突变蛋白功能改变情况，了解不同 G6PD 基因突变类型在高胆红素血症患儿诊疗价值，为新生儿高胆红素血症患儿的临床诊断及治疗提供科学依据。
方法 回顾性选取 2018 年 6 月-2020 年 6 月本院新生儿科确诊为高胆红素血症患儿 353 例为研究对象，运用生化分析仪分析总胆红素（BILIT）、G6PD 酶活性，利用多色探针熔解曲线分析法（Multicolor melting curve analysis， MMCA）检测 G6PD 基因 16 个热点突变位点。通过综合评估，分析不同类型 G6PD 突变位点及活性变化在高胆红素诊疗中的价值。
结果 在 353 例检测结果中，共有 114 例 127 频次的基因突变，发生率为 32.29%，其中男性半合子患者 70 例，女性纯合患者 4 例，女性复合杂合患者 9 例，女性杂合患者 31 例。高发突变位点为 c.1388G>A（33.07%），其次为 c.1376G>T（24.41%），c.95A>G（19.68%）。采用 PROVEAN 分析软件对这几种氨基酸改变导致的蛋白功能改变情况进行预测，结果显示高发的这三种突变的 PROVEAN 得分均低于阈值，被判定为有害影响。同时不同程度的高胆红素血症患儿的总胆红素与酶活性水平变化呈现负相关，具统计学意义（P<0.05）。
结论 通过研究本地区新生儿高胆红素血症患儿 G6PD 基因突变与酶活性变化的关系，根据基因突变引起的表达差异，从蛋白功能改变上分析导致酶活性降低的可能原因。同时本地区新生儿高胆红素血症患儿 G6PD 缺乏症发生率较高，高发突变位点有一定的地域性，在诊疗疾病的过程中，临床应同时综合分析胆红素水平、G6PD 活性水平变化及基因突变类型。在新生儿高胆红素血症 G6PD 功能影响的研究上，部分已知的突变位点的蛋白结构仍然未被解析，还有待未来研究人员进一步探索。高胆红素患儿的 G6PD 酶活性降低程度是否与不同突变位点存在关联，是否存在少数民族地域性，也还有待一步研论证。

PU-1021

Epoxide hydrolase gene(EPHX2)Arg287Gln is a promising hypertension-susceptibility locus in Han Chinese

Liang Ma、yongwei jiang、Yi Liu、Meimei Zhao、Xiaomu Kong、Peng Gao、Yongtong Cao
China-Japan Friendship Hospital

Backgrounds and Objectives Experimental studies indicate that the gene EPHX2 coding for epoxide hydrolase (sEH) is a potential candidate in the pathogenesis of hypertension. We genotyped a missense mutation at exon 8, R287Q (rs751141), in EPHX2 gene, aiming to assess its association with protein activity of soluble epoxide hydrolase and the risk of primary hypertension in Han Chinese and we also study the sEH activity of R287Qvariantby plasmid construction and transduction in vitro .
Methods This is a hospital-based case-control association study involving 1240 participants, including 782 patients with primary hypertension and 458 healthy controls. Genotyping was done using TaqMan technique and confirmed using direct sequencing. WT and R287Qvariant plasmids

were constructed using pcDNA3.1/V5-His A vector, and activity of sEH fusion proteins was evaluated by the conversion of 11,12-EET to corresponding 11,12-DHET using ELISA kit.
Results The genotypes of R287Q variant in EPHX2 gene were in the Hardy-Weinberg equilibrium. Only marginal significance was noticed for the genotype and allele distributions of this variant between patients and controls (P=0.032 and 0.023, respectively). After taking carriers of GG genotype of R287Q variant as a reference group, those with GA genotype had a significantly reduced risk of hypertension (adjusted odds ratio: 0.72, 95% confidence interval: 0.56 to 0.93, P=0.013). Five significant risk factors were identified using Forward logistic regression analysis, including age, body mass index, total cholesterol, homocysteine and R287Q variant. These five risk factors for hypertension were represented in a nomogram graph, with a descent prediction accuracy (C-index: 0.833, P<0.001). The enzyme activity of soluble epoxide hydrolase was significantly lower in the R287Q group than in the wild type group
Conclusions We provide genetic evidence that the mutation of R287Q variant in EPHX2 gene was associated with low enzyme activity of soluble epoxide hydrolase and reduced risk of having primary hypertension.

PU-1022

Neoadjuvant Chemotherapy Modulates the Tumor Microenvironment in High-Grade Serous Ovarian Cancer

Zhongling Zhuo、Fei Xiao
Beijing Hospital

Background While surgical reduction with adjuvant chemotherapy is the traditional treatment for high-grade serous ovarian cancer (HGSOC), neoadjuvant chemotherapy (NACT) has increasingly been applied. This work aims to investigate the expression profiles before and after NACT, explore changes in the tumor microenvironment, expand current treatments, and design a combination of treatment options for patients.
Methods We downloaded 326 pre-NACT RNA sequencing data and 37 matched pre- and post-NACT samples from The Cancer Genome Atlas (TCGA) and Gene Expression Omnibus (GEO) databases. Differentially expressed genes (DEGs) were determined with EdgeR, and Gene Ontology analysis was performed to identify the clusters responsible for the biological processes and pathways of HGSOC. Immune infiltration was analyzed using Single-sample Gene Set Enrichment Analysis (ssGSEA) and CIBERSORT. Kaplan-Meier (KM) survival analysis was performed to assess prognosis, and the potential correlations between modules and phenotypes were explored using weighted gene co-expression network analysis (WGCNA).
Results After NACT, a total of 352 genes showed significant changes in RNA expression, among which 180 genes were up-regulated and 172 down-regulated. The most influential pathway was the positive regulation of mitogen-activated protein kinase (MAPK) cascade. Correlation analysis and KM survival analysis showed that overexpression of MAPK cascade genes correlated with shorter survival time in HGSOC patients. ssGSEA results showed that the expressions of anti-tumor cells (central memory CD4+ T cell and central memory CD8+ T cell) and pro-tumor cells (neutrophil and dendritic cells) were significantly increased after NACT. CIBERSORT showed that the abundances of memory B cells, NK cells, and monocytes were increased and the abundance of plasma cells was decreased after NACT. WGCNA and KM survival analysis showed that a lower abundance of Regulatory T cells (Tregs) was correlated with a better prognosis.
Conclusions Gene expression of the MAPK pathway is up-regulated and the abundance of CD4+ T regulation cell decreases after NACT. Thus, the MAPK pathway may promote the differentiation of CD4+ T cells into Th17 cells while inhibiting Tregs development. The inhibited Tregs' development can lead to a better prognosis. Therefore, it is speculated that Tregs inhibitors combined with platinum-based NACT are potential treatment options for HGSOC.

PU-1023

Long non-coding RNA ZFAS1 promotes the invasion and proliferation of gastric cancer cells by regulating LIN28 and CAPRIN1 and has the potential value of tumor marker

Zhongling Zhuo[1]、Xiaotao Zhao[2]
1. Beijing Hospital
2. 北京大学人民医院（北京大学第二临床医学院）

Object LncRNA ZNFX1-AS1 (ZFAS1) is a newly discovered long non-coding RNA (LncRNA), but its value in the diagnosis of gastric cancer is unclear. The aim of this study was to investigate the potential role of ZFAS1 in gastric cancer and to evaluate the clinical significance of ZFAS1 as a biomarker for gastric cancer screening.
Methods Quantitative real-time polymerase chain reaction (qRT-PCR) was used to screen for gastric cancer-associated LncRNAs in gastric cancer patients, gastric stromal tumor patients, gastritis or gastric ulcer patients, and healthy controls. The correlation between ZFAS1 expression and clinicopathological features was analyzed. The biological effects of ZFAS1 on proliferation, migration and invasion of gastric cancer cells were studied by MTT assay, colony formation assay and transwell migration assay. The potential mechanism of ZFAS1 was demonstrated using ELISA and qRT-PCR. The relationship between ZFAS1 and tumorigenesis was demonstrated using in vivo tumor formation assays.
Results The expression of LncRNA ZFAS1 in plasma of preoperative patients with gastric cancer was significantly higher than that of the other 4 groups. Increased expression of ZFAS1 was significantly associated with lymph node metastasis, TNM staging, and poor prognosis. ZFAS1 knockdown inhibited the proliferation, migration and invasion of gastric cancer cells. In contrast, ZFAS1 overexpression promoted proliferation, migration and invasion of gastric cancer cells. LIN28 and CAPRIN1 are key downstream mediators of ZFAS1 in gastric cancer cells. ZFAS1 overexpression promoted the growth of gastric cancer cells in vivo. Meanwhile, ZFAS1 knockdown expression inhibited the growth of gastric cancer cells in vivo.
Conclusion LncRNA ZFAS1 promoted invasion and proliferation of gastric cancer cells by modulating LIN28 and CAPRIN1, suggesting that ZFAS1 can be used as a potential biomarker for the diagnosis and prognosis of gastric cancer.

PU-1024

Four novel BRCA variants found in Chinese hereditary breast cancer patients by next-generation sequencing

Zhongling Zhuo[1]、Pengfei Liu[2]、Xiaotao Zhao[2]
1. Beijing Hospital
2. 北京大学人民医院（北京大学第二临床医学院）

Object Breast cancer is the most frequent cancer among women worldwide. Patients carrying mutations in breast cancer susceptibility genes like BRCA1 and BRCA2 (BRCA1/2) account for 5%-10% of all breast cancer patients. Therefore, screening for breast cancer susceptibility genes may reduce the incidence of breast cancer and improve prognosis.
Methods To provide evidence for mutation interpretation and targeted drug use in breast cancer patients, gene mutations were screened in 78 women diagnosed with sporadic breast cancer using a next-generation sequencing (NGS) panel, confirmed by Sanger sequencing. Then the pathogenicity of the identified novel mutations was explored using in vitro experiments including western blotting, co-immunoprecipitation and cell-migration assays.

Results Four novel mutations (BRCA2 L1390T, BRCA2 G432F, BRCA1 P659L, and BRCA1 C835F) were identified. BRCA2 G432F decreased the expression of BRCA2 protein, enhanced cell migration and invasion ability, and prevented the protein from interacting with RAD51, resulting in a defect in the homologous recombination pathway.
Conclusions The identification of these four novel BRCA mutations and the confirmation of their pathogenicity have enriched the genetic database of breast cancer, especially in the Chinese population. Moreover, the mutations are the genetic risk factors for hereditary breast cancer. Therefore, BRCA mutation detection and genetic counseling for breast cancer patients are meaningful and important.

PU-1025

Transfer of microRNA-216a-5p from exosomes secreted by human urine-derived stem cells reduces renal ischemia reperfusion injury

Shuo Yang、Yinmei Zhang、Boxin Yang、Rui Qiao、Liyan Cui
Peking University Third Hospital

Objective Human urine-derived stem cells (USCs) protect rats against kidney ischemia/reperfusion (I/R) injury. Here we investigated the role of USCs exosomes in protecting tubular endothelial cells and miRNA transfer in the kidney.
Methods Urine samples were collected from 7 healthy adult male donors ranging in age from 22 to 28 years. USCs were collected, cultured and identified. The total RNA of USCs, USCs-Exos and MPs was used to prepare the template library. Two independent small RNA libraries were generated from USCs-Exos and MPs compared with the USCs library.HK-2 cells were treated with hypoxia for 1 h and reoxygenation for 24 h in vitro to establish H/R model. A CCK8 assay was used for the cell proliferation assay.PTEN, Akt, pAkt and β-actin were measured by Western blot.A dual-luciferase reported gene assay was employed to further assess whether PTEN was indeed a direct target gene of miR-216a-5p. Caspase-3 activity was measured using the Caspase 3 Activity Assay Kit.Rat renal I/R model was performed on adult male SD rats,and the renal Tissue specimens were embedded in paraffin and sliced into 4μm-thick sections, stained with hematoxylin and eosin (H&E).Immunohistochemical staining for PTEN in the renal cortex was detected using commercial assay kits,while apoptosis was assessed by the TUNEL assay.Serum creatinine and urea nitrogen levels were measured by AU5800 Analyzer.
Results Human USCs and exosomes from urine-derived stem cells (USCs-Exos) were isolated and verified by morphology and specific biomarkers. USC-Exos played a protective role in HK-2 cells exposed to H/R. USCs-Exos were rich in miR-216a-5p, which targeted phosphatase and tensin homolog (PTEN) and regulated cell apoptosis through the Akt pathway. In HK-2 cells exposed to H/R, incubation with USC-Exos increased miR-216-5p, decreased PTEN levels and stimulated Akt phosphorylation. Exposure of hypoxic HK-2 cells to exosomes of USCs pretreated with anti-miR-216a-5p can prevent the increase of miR-216-5p and Akt phosphorylation levels, restore PTEN expression and promote apoptosis. The dual-luciferase reported gene assay in HK-2 cells confirmed that miR-216a-5p targeted PTEN. In rats with I/R injury, intravenous infusion of USCs exosomes can effectively induce apoptosis suppression and functional protection, which is associated with decreased PTEN. Infusion of exosomes from anti-miR-216a-5p transfected USCs weaken the protective effect in the I/R model.
Conclusion Therefore, USCs exosomes can reduce renal I/R injury by transferring miR-216a-5p targeting PTEN. Potentially, USCs exosomes rich in miR-216a-5p can serve as a promising therapeutic for AKI.

COX-2 基因多态性与大肠癌易感性的关系

邢培祥、阚士锋、杨发林
山东大学齐鲁医院

目的 探讨环氧合酶-2（COX-2）基因多态性（SNP）与大肠癌发生发展的关系。
方法 采用聚合酶链反应限制性片段长度多态性（PCR-RFLP）检测 COX-2-3618A/G 及 COX-2-765 G/C SNP，免疫组化检测 COX-2 表达，通过病例-对照研究分析大肠癌与 COX-2-(3618,765)SNP 的关系；以 χ2 检验行相关指标的比较，以比值比(OR)及 95％可信区间(95％CI)估计相对风险。
结果 （1）大肠癌组 COX-2-3618AG 频率显著高于对照组（χ2 =7.41，P<0.05），-3618 AA 及其 A 频率均显著低于对照组（χ2 =6.98，P<0.05 及 χ2 =5.49，P<0.05）；COX-2-765 SNP 频率与对照组比较无统计学意义（P 值均>0.05）。（2）在结、直肠癌、管状腺癌、高、中分化管状腺癌亚组中 COX-2-3618AG 频率显著高于对照组，而相应 AA 频率显著低于对照组（P <0.05）。（3）低分化管状腺癌亚组中 COX-2-765C 频率显著高于对照组（χ2=10.7，P<0.05，OR=1.7，95%CI=1.24～2.34）。（5）大肠癌组、-3618G 及 AA， -765C 及 G 携带者大肠癌中 COX -2 表达阳性率均显著高于对照组（P < 0.01）。
结论 COX -2-3618 及-765 SNP 可能与大肠癌易感性相关。

Polymorphic Variation of NFKB1 and Risk of Tuberculosis for Tibetan Population in China

Wu Peng
Department of Laboratory Medicine, West China Hospital, Sichuan University

Objective Polymorphic Variation of NFKB1 has been conformed associated with numerous immune-related diseases. This study aims to find out the association between three SNPs--rs2836491, rs72696119, and rs1585215--in NFKB1 gene and TB risk in Chinese Tibetan population.
Methods The SNPs were genotyped using MassARRAY mass spectrometry in 305 Chinese Tibetan TB patients and 333 health controls. A comprehensive analysis of single loci (including the genotype and allele distributions, the genetic models of target SNPs) and haplotype between case and control groups were conducted by SPSS17.0, Plink, and Editplus software.
Results There were no significant differences between TB patients and healthy controls with regard to gender or age (p>0.05). Genotype distributions of three SNPs in cases and controls were all in agreement with Hardy-Weinberg equilibrium (p>0.05). For rs2836491, rs72696119, and rs1585215, we found a p value greater than 0.05 of genotype or allele comparison between cases and controls. Further considering of the inheritance models (recessive model or dominant model) also found non significantly different between two groups. Linkage analysis of the three tested SNPs showed strong linkage disequilibrium, but these haplotypes were not associated with TB in Chinese Tibetan population.
Conclusions We first evaluated the association between rs2836491, rs72696119, and rs1585215 in NFKB1 and TB in Chinese Tibetan population. Although there were numerous evidence indicated that NFKB1 gene was a key target for TB risk, we found no significant association between tested SNPs and TB in our study, further studies are still needed.

一例 47，XN，+der（13）t（7；13）（q35；q12）胎儿染色体的微阵列鉴定及遗传学研究

王玉萍、武其文、付夏、李琴、洪云、江峰
皖南医学院弋矶山医院

目的 明确一胎儿罕见异常染色体的来源、断裂点、临床意义，探讨微阵列芯片分析的临床诊断价值。

方法 常规抽取孕妇羊水行细胞培养染色体核型分析，进一步 cy750K 微阵列（chromosome microarray analysis，CMA）鉴定；对胎儿行 B 超检查；对夫妻双方及其表型正常孩子行外周血染色体核型分析。

结果 羊水染色体核型分析发现多一染色体片段，结果拟报告为 47，XN，+mar，该片段经 CMA 鉴定为 arr[hg19]7q35q36.3（144，913，870-159，119，707）×3 重复 14.2Mb；arr[hg19]13q11q12.13（19，436，286-27，584，302）×3 重复 8.1Mb；孕妇外周血染色体结果为 46，XX，t（7；13）（q35；q12），孕妇丈夫及其表型正常孩子外周血染色体正常；B 超显示胎儿室间隔缺损，三尖瓣后瓣回声增强，三尖瓣轻度反流，心轴略偏移。

结论 胎儿染色体核型为 47，XN，+der（13）t（7；13）（q35；q12）mat，此染色体片段来源于孕妇，是由孕妇平衡易位染色体重组后形成的衍生染色体。对于罕见的异常染色体片段，一定要进一步明确诊断，为临床后续产前诊断提供有效的诊断依据。微阵列分析用于衍生染色体片段、微重复检测具明显的优势，可以作为细胞遗传技术的有效补充手段。

Genetic Polymorphisms of Delta-Like 1 Homolog Influence the Susceptibility to Antituberculosis Drug-Induced Hepatotoxicity

Tangyuheng Liu、Yang Fu
Department of Laboratory Medicine, West China Hospital, Sichuan University, Sichuan Province, P. R. China

This study was designed to investigate the relationship between Delta-like 1 homolog (DLK1) polymorphisms and the occurrence of antituberculosis drug-induced hepatotoxicity (ATDH) in the

Western Chinese Han population. A total of 746 tuberculosis patients including 118 ATDH cases and 628 non-ATDH cases were enrolled from West China Hospital of Sichuan University during 2016–2018. Ten single nucleotide polymorphisms (rs11160604, rs7149242, rs7141210, rs7155375, rs876374, rs57098752, rs2400940, rs12431758, rs4900472, and rs6575802) within DLK1 were studied by the improved multiplex ligation detection reaction method genotyping technology assay. It was found that G allele of rs11160604 was associated with an increased risk for ATDH (p = 0.001) and G allele of rs4900472 showed a protective effect for ATDH (p = 0.030). Recessive model and dominant model of rs11160604 were observed as a risk factor for ATDH predisposition, whereas the recessive model of rs4900472 was a protective one. Moreover, the interaction genetic model composed of rs11160604, rs57098752, and rs12431758 showed a combined effect for the occurrence of ATDH. Our finding was a novel one indicating that the G allele of DLK1 rs11160604 might serve as a hazard for the development of ATDH in the Western Chinese Han population.

血浆 SEPT9 基因甲基化联合血清 CEA 和 CA724 检测在结直肠癌诊断中的临床应用

高海锋
陕西省宝鸡市中心医院

目的 探讨血浆 SEPT9 基因甲基化联合血清 CEA 和 CA724 检测在结直肠癌诊断中的临床应用，为结直肠癌的诊断提供实验室依据。
方法 选取 2018 年 5 月至 2020 年 10 月云南省新昆华医院收治的 219 例结直肠病变患者为研究对象，后经病理确诊为结直肠癌患者 149 例，结直肠息肉患者 70 例，同时选择同期体检健康者 100 例作为对照组。采用实时荧光 PCR 测定 SEPT9 基因甲基化的情况，电化学发光法测定 CEA 和 CA724 的水平，并对结果进行统计学分析。
结果 CRC 组 SEPT9 基因甲基化阳性率显著高于结直肠息肉组和对照组（P＜0.05），结直肠息肉组 SEPT9 阳性率亦高于对照组（P＜0.05）；SEPT9 基因甲基化诊断 CRC 的敏感度为 90.3%，阳性预测值为 84.68%，ROC 曲线下面积为 0.823，均显著高于血清 CEA 和 CA724，但 CEA 诊断 CRC 的特异度和阴性预测值最高；三项指标联合检测的敏感度、阳性预测值和 ROC 曲线下面积较单项指标高（P＜0.05）。
结论 SEPT9 基因甲基化、CEA 和 CA724 检测 CRC 具有快速、准确、敏感度高、患者依存性好及适于普查等优点，三项联合检测可以做到优势互补，提高诊断效率，对于 CRC 的诊断具有高的临床诊断价值，并对结直肠良恶性疾病的鉴别具有一定的辅助诊断价值，值得在临床上推广。

PU-1032

P16 蛋白和 HPV 分型联合检测在宫颈上皮内瘤变诊断中的临床研究

高海锋
陕西省宝鸡市中心医院

目的 了解宝鸡地区女性 HPV 感染现状，探讨 P16 蛋白和 HPV 分型联合检测在宫颈上皮内瘤变（CIN）检测中的应用价值。
方法 选择 2019 年 2 月至 2020 年 2 月来宝鸡市中心医院妇科门诊就诊的患者共计 8346 例为研究对象，后经阴道镜活组织病理检查确诊存在 CIN 患者共计 5282 例。按照年龄段分组，对本地区各

年龄段 HPV 感染现状进行调查分析，再以活组织病理检查为金标准，按照病理分级结果，分别研究 P16、HPV 分型的检出率及其单项及联合检测对 CIN 的诊断效能，对结果进行统计学分析。

结果 以年龄为分组依据，对 P16 和 HPV 结果的人群进行分类，结果表明阳性率最高的年龄组为 31~40 岁，其次为 41~50 岁年龄组，各年龄组间感染阳性率比较差异具有统计学意义（P<0.05）。以 P16 检查为依据，筛查出阳性病例 2584 例，其中炎症 22 例、CINⅠ 1105 例、CINⅡ 761 例、CINⅢ 548 例和 SCC 147 例。以 HPV 为依据，筛查出阳性病例共计 2169 例，其中炎症 35 例、CINⅠ 904 例、CINⅡ 651 例、CINⅢ 447 例和 SCC 122 例。随着 CIN 的持续进展，逐渐以 HPV16/18 型感染为主，P16 检出率也逐渐增高。HPV 单项检测 CIN 的敏感度为 75.26%，特异度为 81.13%，阳性预测值为 67.78%，阴性预测值为 86.14%；P16 单项检测 CIN 的敏感度为 89.66%，特异度为 84.52%，阳性预测值为 75.34%，阴性预测值为 83.94%，显著高于 HPV 检测，差异均具有统计学意义（P<0.05）；二者联合检测的敏感度为 94.10%，特异度为 91.33%，阳性预测值为 85.12%，阴性预测值为 96.71%，显著高于 HPV 检测，差异均具有统计学意义（P<0.05）。

结论 宝鸡地区 HPV 感染以 31~40 岁年龄段为主，41~50 岁次之，且有年轻化感染的趋势。P16 阳性率及 HPV 型别与 CIN 严重程度相关。二者联合检测可提高检测的敏感度和特异度，减少漏诊率，对 CIN 的早期诊断和治疗有重要的临床价值。

PU-1033

Association Between Levels of Serum Vitamin D Components and the Risk of CKD in RA Patients: a Case-Control Study

Jie Tang[1,2]、Yuwei Yang[1]、Jiafu Feng[1]、Bei Xu[1]、Lin Yu[1]、Wenqiang Jiang[1]、Binwu Ying[2]
1. Mianyang Central Hospital, School of Medicine,University of Electronic Science and Technology of China
2. 四川大学华西医院

Objective Determination of 25-hydroxyvitamin D[25(OH)D] based on liquid chromatography-tandem mass spectrometry (LC-MS/MS) can accurately evaluate the vitamin D reserve in human body and simultaneously detect its components 25(OH)D2, 25(OH)D3 which helping guide the clinical selection of vitamin D supplements. The aim of this research is to explore the relation of 25(OH)D and its components [25(OH)D2, 25(OH)D3, and Free 25(OH)D] levels to the risk of concurrent chronic kidney disease (CKD) in patients with rheumatoid arthritis (RA).

Methods A total of 883 RA patients were enrolled based on inclusion and exclusion standard, and were classified into low risk , medium risk and high risk CKD group according to the CKD risk classification criteria recommended by the "Kidney Disease: Improving Global Outcome (KDIGO) 2012" guideline, which classing the CKD risk on the basis of glomerular filtration rate and albuminuria. The differences and change trends of vitamin D components measured by LC-MS/MS were compared and analyzed among different CKD risk groups. Then analyze the association between vitamin D components levels and the risk of CKD in RA patients after adjusting gender, age, inflammatory factors (hsCRP), and specific antibody (RF) titers.

Results 25(OH)D, 25(OH)D3, and Free 25(OH)D[F-25(OH)D] in the medium-risk group and high-risk group were lower than the low-risk group (Median=21.57 and 18.77 vs. 24.40 ng/ml), (Median=16.63 and 12.97 vs. 19.09 ng/ml) and (Median=5.96 and 4.89 vs. 6.30 pg/ml) (all P<0.05) respectively, while 25(OH)D2 levels showed no statistically significant in three groups (P=0.328). When the risk of CKD increased from low to medium, the degree of reduction in 25(OH)D, 25(OH)D3, and F-25(OH)D had statistically significant difference (all Padj. <0.05); but from medium to high risk, only the degree of reduction in 25(OH)D3 had statistically significant difference (Padj.=0.014). Multiple logistic regression analysis showed that 25(OH)D3 and F-25(OH)D were significant risk factors for CKD in RA patients (all P<0.01).

Conclusion Serum 25(OH)D3 and F-25(OH)D levels of RA patients should be routinely monitored to understand the risk of CKD progression and perform timely intervention.

检验科带教学生特点及教育管理方法

王裔雄、肖传宇、陶锋、谢强、邱枫
枣阳市第一人民医院

医院检验科作为各级、各类医学检验类学生毕业前实践演练及理论联系实际的培养基地，已成为检验相关医学院校培养合格检验人才的最重要一环。现如今，医院检验科每年都会安排各级各类高校检验专业学生进行毕业前的带教实习，针对其自身特点及毕业后的发展方向，科室应形成不同培养机制，让带教学生在自主理论学习和基础实践操作上都能有所收获，对学生因材施教，促进各类学生共同成长。

PU-1035

革兰阳性菌的耐药性

朱时帅
哈尔滨医科大学第一附属医院

目的 了解哈尔滨医科大学附属第一医院医院 2020 年常见革兰阳性菌的耐药情况及耐药迁徙率分析。
方法 收集哈尔滨医科大学附属第一医院消化科革兰氏阳性细菌 100 菌种鉴定的体外药物敏感性试验。
结果 100 株革兰氏阳性细菌中，金黄色葡萄球菌 134 株（30%），屎肠球菌 84 株（19%），表皮葡萄球菌 61 株（14%），粪肠球菌 45 株（10%），这四种主要细菌占所检出的革兰阳性菌的 73%。在细菌的科室分布中，医学重症科内科（15%）和泌尿科（13.5%）是检出革兰氏阳性细菌最多的科室，而标本来源可知尿液（31.2%）和痰液（18.5%）检出率最高的标本。检出的最主要的四种细菌中，金黄色葡萄球菌、表皮葡萄球菌、粪肠球菌和屎肠球菌对抗生素的耐药种类及相应的耐药率表现出不同的特点。检测的四种主要细菌中，有三种对青霉素有高度耐药性，分别是屎肠球菌（95.2%）、金黄色葡萄球菌（92.5%）和表皮葡萄球菌（90.2%），并且细菌对红霉素耐药性也较高，但耐药率不如青霉素，分别是金黄色葡萄球菌（64.9%）、表皮葡萄球菌（73.8%）粪肠球菌（71.1%）和屎肠球菌（85.7%）。粪肠球菌、金黄色葡萄球菌和表皮葡萄球菌对万古霉素，替考拉宁百分之百敏感。值得注意的是，屎肠球菌对万古霉素（94%）和替考拉宁（94%）敏感率较以前有所下降，疑似出现耐药菌株，需引起关注。金黄色葡萄球菌和表皮葡萄球菌对达福普汀百分之百敏感，屎肠球菌和粪肠球菌对替加环素百分之百敏感。
结论 四种细菌对青霉素类和大环内酯类抗生素的耐药性强，对多肽类抗生素敏感。应进行长期动态耐药性检测，为临床用药的合理化和个体化提供参考依据，避免药物滥用的等现象的出现。

校企合一创新“六融合”育人机制---以医学检验技术专业建设改革为例

叶耘峰
江苏护理职业学院

江苏护理职业学院积极构建职业教育创新体系，坚持战略导向，将办学体制机制改革与健康中国建设、卫生职业教育服务社会、行业发展有机融合，自 1990 年起，与企业共同组建集“卫生行业、医学检验产业、医学检验企事业、医学检验技术专业、学生就业、创业”六融合的产教集群---“医学检验职业教育与产业发展联盟”。以产业集群理论、共生理论为指导，构建具有理论创新和实践解释力的协同、合作、共生的“职业教育+产业+科技创新”的组织结构和理事会管理体制，科学合理确定校企合一发展战略的逻辑起点，坚持产业与专业无缝对接、协同发展、双向反哺，使医学检验技术专业厚植企业承担职业教育责任的社会环境，凸显专业根植于产业的先天优势，实现了课程内容与职业标准的有效对接、教学过程与生产过程的相互衔接、教学资源与企业实境的紧密链接、操作习得与职业特质养成的至深嵌接、人才规格与岗位执业要求的精确铆接，提高了卫生职业教育服务社会的贡献度、人才培养目标达成度、人才供给侧与产业人才需求侧吻合度、办学条件支撑度、教学质量保障有效度、用人单位满意度，提升了办学质效。

“六融合”使医学检验技术专业建设由学科导向转向产业导向、专业分割转向产业专业的交叉融合、人才供给的单一支撑服务转向办学体制改革的创新引领，丰富了专业生态，避免了专业设置同质化倾向，延展了卫生职业教育开放、跨界、无区域性优势，提升了职业教育对经济社会发展的贡献度、开放度和职业教育市场辨识度。

健康中国战略背景下医学检验技术专业人才培养

石玉荣、 李玉云、梅传忠、耿建、武文娟、周继红、黄桦
蚌埠医学院

目的 探讨 “健康中国”战略背景下，医学检验技术人才培养面临新的路径，提升医学检验技术人才培养质量。

方法 调研我校医学检验技术专业学生的专业认知和职业认同情况调研影响我校医学检验技术专业学生专业认知和职业认同的影响因素；着力贯彻本科生全程导师制；健全医学检验技术专业认知及认同教育；对医学检验技术专业学生进行人文素养教育，着力研究医学检验技术专业岗位胜任力培养路径。

结果 在对我校医学检验技术专业学生的问卷调查的结果显示，我校医学检验技术专业学生对所学专业有比较认同的仅占，就业前景、社会因素和个人兴趣是影响学生专业认知的前三位因素。全程导师制的实施注重对学生的全程培养，有助于提升学生职业认知和专业认同，牢固树立社会主义核心价值观，做好学业设计和人生规划，有利于学生专业学习和综合素质的提高。提升医学检验技术专业的社会影响力，有助于学生专业认同。 医学检验技术专业人才人文素养的提升可利于医学各界以及医学与其他专业之间的交流、联系与合作，对健康促进、理顺医患关系具有促进作用。培养学生的岗位胜任力，是提升人才培养质量的关键。批判性思维能力培养、学生专业素质专业技能培养和学生的职业精神的塑造有助于提升学生的人才培养质量。

结论 多渠道、多方位培养有助于提升医学检验技术专业人才培养质量。

PU-1038

坚持四个回归，实现三全育人，强化内涵建设，做好高水平医学检验本科教育

李玉云[1]、耿建[1]、张英杰[1]、曹蕴[1]、王珏[2]
1. 蚌埠医学院
2. 蚌埠医学院第一附属医院检验科

2018 年 6 月 21 日，教育部在四川成都召开新时代全国高等学校本科教育工作会议。会议强调，要坚持“以本为本”，推进“四个回归”，加快建设高水平本科教育、全面提高人才培养能力，造就堪当民族复兴大任的时代新人。 2018 年 10 月 8 日教高〔2018〕2 号“教育部关于加快建设高水平本科教育全面提高人才培养能力的意见”。

一是回归常识。要围绕学生刻苦读书来办教育，引导学生求真学问、练真本领。对大学生要合理“增负”，真正把内涵建设、质量提升体现在每一个学生的学习成果上。二是回归本分。要引导教师热爱教学、倾心教学、研究教学，潜心教书育人。三是回归初心。要坚持正确政治方向，促进专业知识教育与思想政治教育相结合，用知识体系教、价值体系育、创新体系做，倾心培养建设者和接班人。四是回归梦想。要推动办学理念创新、组织创新、管理创新和制度创新，倾力实现教育报国、教育强国梦。医学检验教育怎么做，我们从以下几个方面进行全员育人、全程育人、全方位育人，全面培养学生的技能、知识、价值观、自我定位、驱动力、人格特征、岗位胜任力，培养德智体美劳全面发展的社会主义建设者和接班人。

PU-1039

The relationship between atherosclerosis and bone mineral density in patients with type 2 diabetes depends on vascular calcifications and sex

Ni Zhong[2]、Ran Cui[1]、Hui Sheng[1]
1. 同济大学附属上海市第十人民医院内分泌科
2. 同济大学附属上海市东方医院检验科

It is unknown whether a relationship exists between bone mineral density (BMD) and atherosclerosis with or without vascular calcification. In our study, a negative correlation between carotid atherosclerosis and BMD was found in female T2DM patients with vascular calcification, but not in those without calcification and males.

Introduction: Atherosclerosis is considered associated with low bone mineral density (BMD). However, most previous studies focus on patients with arterial atherosclerosis with vascular calcification. It is still unknown whether a relationship exists between atherosclerosis and BMD in patients without calcification. It is also unknown if sex plays a role in this relationship.

Methods We performed a retrospective cross-sectional study, which included 1459 type 2 diabetes mellitus (T2DM) patients (648 males ≥ 50 years old, and 811 postmenopausal females). They were assigned to three groups: group 1 (patients without carotid plaques and without carotid calcification), group 2 (patients with carotid plaques but without carotid calcification), and group 3 (patients with carotid plaques and with carotid calcification). Clinical characteristics and BMD were compared. The relationship between atherosclerosis and BMD was determined by binary logistic regression analysis. Statistical analysis was performed using SPSS 25.0.

Results Significant differences were only observed in women. The percentage of osteoporosis was higher in group 3 (43.64%) than in groups 1 (34.82%) and 2 (32.14%) ($P = 0.016$). Low BMD was found in the lumbar ($P = 0.032$), hip ($P < 0.001$), and femoral neck ($P < 0.001$). The odds ratio for osteoporosis increased significantly in a score-dependent manner in postmenopausal

female patients with calcified atherosclerosis, but not in uncalcified patients. In men, no differences or relationships were identified.
Conclusion A negative correlation between carotid atherosclerosis and BMD was found in female T2DM patients with vascular calcification, but not in those without calcification. A similar relationship was not observed in male patients with or without calcification. Thus, the relationship between atherosclerosis and bone mineral density in patients with type 2 diabetes depends on vascular calcifications and sex.

PU-1040

医学检验专业实习生教学思考

徐会涛、周颖
连云港市第一人民医院

临床实习是学生走上工作岗位的过渡阶段，是培养专业人才的关键期。因此，实习教育显得尤为重要。如何实现学生专业能力的有效提升，达到优质的实习效果，需要多管齐下。其一，专责的实习管理者是不可或缺的。无规矩不成方圆，好的管理是见成效的重要保障。其二，优良且有责任心的师资是必不可少的，让更多高学历的青年教师积极地参与实习教学，能够对实习同学做出更加科学合理的引导，从而提高实习同学的专业能力和综合素养，教学相长。实习实践性特别强，因此我们要舍得放手，给学生更多的动手机会，要给他们更多的容错机会。多些鼓励，少些批评与斥责。其三，调动实习主体的积极性、主动性，发挥其主观能动性。了解更多的相关知识，并将理论知识付诸于实际操作中，在运用的过程中不断发现问题、解决问题，周而复始，不断地更新知识，提高自己。其四，制定详实的实习计划和规章制度，狠抓落实，做到理论和实践的统一。如何评价计划落实的好与坏，我们需要引入严格的评判机制，适当的奖惩制度。不仅考核学生，同时也对实习带教老师进行考核。其五，以人为本，安全教育，多元化的教育，不仅学习专业知识，也要学习人文、哲学等其他学科知识。促进学生身心健康，全面发展。总而言之，实习是一个系统化的工程，每个环节都需要配合好，落实好。学习是终身教育，需要不断的学习。

PU-1041

2 型糖尿病肾病和 ANA 阳性的 2 型糖尿病肾病与肝肾功能和补体关系的研究

丁世锐
襄阳市第一人民医院

目的 对 2 型糖尿病肾病和 ANA 阳性的 2 型糖尿病肾病患者的肝肾功能、血糖和补体 C3 和 C4 指标进行检查分析，为临床动态监测和预防糖尿病肾病的恶化提供有价值的参考。
方法 选择襄阳市第一人民医院肾病内科住院和门诊糖尿病患者 29 例，平均（49±10）岁；糖尿病肾病患者 142 例，平均（51±12）岁；健康人群 29 名，平均（46±15）岁。肝肾功能和补体由全自动生化分析仪 ARCHITCET C16000 检测。
结果 肝功能指标 ALT 和 AST 在健康组、2 型糖尿病组和 2 型糖尿病肾病组间的比较，差异无统计学意义（FALT = 1.61；FAST = 1.76，$p > 0.05$）；肾功能指标和血糖在健康组、2 型糖尿病组和 2 型糖尿病肾病组间比较，差异有统计学意义（FUrea = 26.44；FCr = 59.40；Fβ2-M = 51.20；FUA = 3.43，F 血糖 = 5.62，$p < 0.05$）；补体 C3 和 C4 在健康组、2 型糖尿病组和 2 型糖尿病肾病组间比较，差异具有统计学意义（F 补体 C3 = 3.14；F 补体 C4 = 3.20，$p < 0.05$）；肾功能指标 β2-M 在 ANA--T2DN-CKD4 期和 ANA+- T2DN-CKD4 期组间比较，差异有统计学意义（tβ2-M = 2.52，$p < 0.05$）；肾功能指标 Cr 和补体指标在 ANA--T2DN-CKD5 期和 ANA+-T2DN-CKD5

组间比较，差异有统计学意义（tCr = 2.74，t 补体 C3 =2.87；t 补体 C4 =3.63，p < 0.05）；肾功能指标和补体指标在 ANA+-T2DN-CKD3 组，ANA+-T2DN-CKD4 组和 ANA+-T2DN-CKD5 组间比较，差异有统计学意义（FUrea = 8.07，FCr = 25.78，Fβ2-M = 18.49，F 补体 C3 =8.06；F 补体 C4 =4.41，p < 0.05）。

结论 肾功能和补体水平和 DN 分期和抗核抗体具有一定关系，可作为 DN 患者，尤其 ANA 阳性的 DN 患者疾病进展的动态检测指标，可为临床治疗和预防疾病提供有价值理论依据。

PU-1042

异常早幼粒细胞与正常早幼粒细胞的鉴别诊断及一例报道

杨发林
山东大学齐鲁医院

前言：1 例女性脑胶质瘤患者术后服用替莫唑胺后继发了急性早幼粒细胞白血病。同第一代烷化剂相比，替莫唑胺的致白血病副作用明显较低，经国内外文献检索，本例治疗相关性急性早幼粒细胞白血病系首次报道。

病历描述：33 岁中国妇女经手术证实为左额叶脑胶质瘤，术后行同步放化疗，在完成替莫唑胺首次周期化疗时，外周血发现异常早幼粒细胞轻度增多，其特点是细胞形态不规则，核不规则，呈双叶核或蝴蝶核，染色质颗粒密集粗大，棒状小体多见，可与细胞集落刺激因子等因素导致的外周血正常形态早幼粒细胞轻度增多进行鉴别。本例化疗时间短，总剂量小，且病人异常血象发生在刚使用了细胞集落刺激因子之后，这在临床极为少见。

结论 近二十年来，通常认为替莫唑胺是治疗脑胶质瘤的安全而高效的化疗药物，但其致恶性血液病变的风险仍值得密切监测和预防，明确的鉴别诊断和危急值管理程序有助于及时与临床肿瘤医师沟通，病人可得到及时的救治，意义重大。

PU-1043

带有二维码信息的样本载玻片示教片在教学中的应用

张玲
阿克苏地区第一人民医院

背景 在临床或医学教学时，载玻片是医学实验中重要的材料。通常将包含细菌、真菌、细胞或组织切片等的样本放在载玻片上，然后将其放置在显微镜下对样本的病理、形态学进行观察与分析。而用于临床检验、病理病例资料及教学的示教载玻片保存时需要对其进行标记。由于载玻片的尺寸小，那么可用于标记的内容也就极其有限。目前载玻片上标记的信息一般包括样本编号或类别及名称，具体的病理及形态学还需要根据标签上的编号或类别、名称通过电脑或其他的途径另作查询。这给实验人员尤其医学教学人员造成了极大的不便。基于上述原因，对现有载玻片标记方式进行改进。提供一种带有样本信息二维码贴在载玻片上，只需通过扫描二维码即可调取储存在载玻片上的与样本有关的各种形式（文档、图谱、PPT 甚至视频）的信息。方便了病历资料整理及保存，也为教学人员的教学提供了便利。

方法 根据载玻片上样本包含的内容制作需要展示的文档、图谱、PPT 甚至视频；信息化解码；生成二维码；扫码提取信息。选取 2020 年我院检验科学员及新进员工 16 人随机分组，A 组 8 人采用传统培训模式，集中授课、现场演示练习等；B 组 8 人，在传统培训模式的基础上，加用二维码示教片进行自主学习。两组干预周期均为两个月，干预后比较两组人员学习的效果，指标包括形态学理论知识与实践操作考核、培训的满意度。

结果 传统培训的基础上，加用二维码示教片进行自主学习后理论考试(91.8±6.50 vs.83.2±5.1，P=0.003)、操作考试(90.3±5.80 vs.82.90±5.2，P=0.007)均高于 A 单纯的传统培训模式；并且培训的满意度也比单纯的传统培训模式高 (98.2±2.30 vs.93.40±5.3，P=0.02)，且差异具有统计学意义。
结论 带有二维码信息的教学载玻片示教片是将现代信息技术与临床技能教学结合，有效激发了学员、新进员工及工作人员的学习兴趣，可提高对形态学教学的培训效果。让现代化信息技术为临床技能教学添彩加翼。

PU-1044

红细胞冷凝集现象与肺炎支原体感染相关性的研究

李晓娟
新疆生产建设兵团第五师医院

目的 探究出现红细胞冷凝集现象后肺炎支原体感染阳性率。
方法 采用前瞻性研究，统计 2020 年 10 月 1 日至 2021 年 3 月 31 日在第五师医院就诊，使用帝迈 DH76 五分类血液细胞分析仪及血细胞涂片镜检确诊为红细胞冷凝集阳性的患者 30 例。患者平均年龄为（15±6.58）岁。与患者主管医生联系后，用无抗凝剂的真空采血管采集静脉血 4ml，用胶体金法检测患者肺炎支原体抗体。
结果 红细胞冷凝集阳性的患者 30 例中发现肺炎支原体抗体阳性者 21 例，阳性率为 70%。
结论 在红细胞冷凝集现象青年患者中出现肺炎支原体感染阳性率较高，为临床提供了一定的诊断意义。

虚拟仿真实验平台在细胞培养实验教学培养无菌观念中的尝试和探讨

张梦莹
江苏省人民医院（南京医科大学第一附属医院）

细胞培养技术现已广泛应用于生物学、医学各个领域，是细胞与组织研究的重要技术之一，防止污染是细胞培养成败的关键条件，但是传统的教学方式在该教学过程中体现出了一系列的弊端。虚拟仿真技术依托网络科技，通过虚拟的视听触觉和三维空间环境等方式提供形象生动的场景和良好的人机互动，更好地调动学生自主探索的学习热情和学习兴趣，并弥补了传统线下教学的不足。本文对于如何依托虚拟仿真技术在有限的实验教学课时内培养学生严格的无菌意识，使学生掌握无菌操作和细胞培养实验技能，启发学生科研思维进行了初步尝试和探索。

医学检验技术专业主干课程《临床检验仪器与技术》教学组织模式现状及展望

谢而付、王芳、黄蕾
江苏省人民医院（南京医科大学第一附属医院）

《临床检验仪器与技术》是医学检验技术专业的主干课程之一，该学科是基础医学、工程学与仪器学之间的一门交叉学科，也是检验医学其它主干课程的基础课程，在本科生专业能力的培养中

发挥重要作用。规划教材在授课的过程中起到重要作用，为了适应专业培养目标的变化，该课程的规划教材也经历了多次改版。因本学科实践性强，每个学校该专业的组织形式不同，教学组织模式也存在差异。本文列举了现有常见教学组织模式以及本校使用的教学组织模式，以供同行之间交流借鉴并调研，为提高该课程的教学效果提供理论依据。

临床分离大肠埃希菌与肺炎克雷伯菌的对比性分析

郑港森
厦门大学附属第一医院

目的 对比性分析临床分离大肠埃希菌和肺炎克雷伯菌之间差异性，包括敏感性、标本类型分离和科室分布情况等，及时充分了解当前这两种主要病原菌耐药情况。
方法 回顾性分析 2020 年临床分离大肠埃希菌和肺炎克雷伯菌，采用法国 BioMerieux VITEK2 Compact 全自动细菌鉴定及药敏分析系统对菌株进行细菌鉴定和药物敏感性检测，并用 Excel 软件进行数据分析。
结果 2020 年临床分离的大肠埃希菌 1614 株，肺炎克雷伯菌 579 株；两者尿液分离菌株最多，大肠埃希菌尿液分离占一半以上（947 株/1614 株)，而肺炎克雷伯菌不同标本分离相差不大；另外，呼吸道标本分离数量肺炎克雷伯菌远多于大肠埃希菌(108 株/37 株）；ICU 中两者分离菌株差不多，而其它科室分离相差较大；两者产 ESBLs 菌株，检出率有显著性差异（$P<0.05$)，ESBLs（-）菌株没有差异性（$P>0.1$)，非 ESBLs（无法确定 ESBLs（+）和 ESBLs（-））检出率有显著性差异（$P<0.05$)；大肠埃希菌对亚胺培南敏感率在 98.9%，而肺炎克雷伯菌只有 82.4%，尤其在 ICU 其敏感率更低至 59.5%，痰液分离肺炎克雷伯菌敏感率也只有 64.8%；大肠埃希菌对头孢噻肟和头孢他啶敏感率分别是 56.4%和 79.2%，而肺炎克雷伯菌对两者敏感率相差不明显（52.0%和 62.9%），

在 ICU 中，对两者敏感率耕地且基本一致（37.4%和 38.2%）；两者对三种酶抑制剂组合敏感性，哌拉西林/他唑巴坦最好（92.3%和 67.7%）；对左氧氟沙星的敏感性，肺炎克雷伯菌反而比大肠埃希菌好（64.9%/46.3%)，在门急诊分离菌株中，其敏感率达 80.7%；两者对阿米卡星敏感性是 96.5%和 83.2%，对氨曲南敏感率分别是 72.8%和 61.3%；另外，102 株耐亚胺培南肺炎克雷伯菌只有 4 株对氨曲南敏感，而 17 株耐亚胺培南大肠埃希菌对氨曲南敏感有 10 株。
结论 大肠埃希菌和肺炎克雷伯菌均出现对碳青霉烯类抗菌药物耐药菌株，尤其是肺炎克雷伯菌上升明显，而且两者产碳青霉烯酶的类型有所区别。肺炎克雷伯菌对大多数抗菌药物敏感性比大肠埃希菌较差，除了左氧氟沙星相对比较好；另外，ICU 耐药问题尤其严重，全血分离菌株敏感性较好，而痰液最差尤其是肺炎克雷伯菌更差。

PU-1050

一例伴有 MYC 和 BCL2 重排的高级别 B 淋巴瘤的诊疗经过经验分享

周宇[1]、曾彦[2]、王方[2]
1. 四川金域医学检验中心有限公司
2. 成都市第二人民医院

目的 探讨一例伴有 MYC 和 BCL2 重排的高级别 B 淋巴瘤的实验室检查及治疗。
方法 对一例伴有 MYC 和 BCL2 重排的高级别 B 淋巴瘤的临床资料、MICM 检查结果分析诊断，对应治疗和疗效评估。
结果 骨髓细胞形态学分析提示淋巴细胞异常增生，原始及幼稚淋巴细胞占 67.5%，疑为淋巴瘤细胞白血病。骨髓流式检测到 90.63%单克隆 B 淋巴细胞，符合 CD5 阴性 CD10 阳性成熟 B 细胞淋巴瘤/白血病免疫表型。细胞遗传学检测到 BCL2 和 MYC 基因分离重排，未检到 BCL6 基因分离重排。分子生物学检测到具有临床意义的 3 个基因突变：EZH2 基因、KMT2D 基因和 MYC 基因。结合临床表现及 MICM 相关检查结果，综合诊断为伴有 MYC 和 BCL2 重排的高级别 B 淋巴瘤（IV期，高中危）。给予患者 R+Hyper-CVAD 方案、REDCH 方案、R-DHAP 方案化疗后评估治疗有效，疾病缓解。继而行自体周血干细胞移植和 CAR-T 治疗，患者获得较好疗效。
结论 临床表现、形态学、免疫表型、细胞遗传学、分子生物学及相关实验室检查有助于高级别 B 淋巴瘤的诊断。经过几期对症化疗方案调整，获得缓解，进而行自体周血干细胞移植和 CAR-T 治疗，患者获得较好疗效。

PU-1051

超敏 C 反应蛋白和纤维蛋白原对缺血性脑卒中的临床应用价值

叶涛、李琴
重庆市人民医院

目的 探讨缺血性脑卒中患者血超敏 C 反应蛋白（hs-CRP）和纤维蛋白原（Fib）的临床应用价值。
方法 选择 2020 年 6 月-2021 年 5 月我院 27 例缺血性脑卒中患者作为研究组，及同期于我院进行体检的健康人群 54 例作为对照组， 检测和比较两组静脉血中 hs-CRP 和 Fib 水平的差异，并进行统计分析。
结果 缺血性脑卒中患者的超敏 hs-CRP 和 Fib 与健康对照组比较，差异有统计学意义。
结论 缺血性脑卒中患者静脉血中超敏 C-反应蛋白和纤维蛋白原会明显上升，具有一定的临床价值。

高质量检验医学高等教育体系的思考与实践

李博
南方医科大学南方医院

构建高质量检验医学高等教育体系，培养高质量的检验医学人才，是新时代医药卫生事业发展的迫切需求。南方医科大学医学检验技术专业在建设国家一流专业过程中秉持高质量高等教育理念，通过构建全程式德育体系、多模态培养模式、国际化师资队伍、智能化教学技术的教学改革实践，提高检验医学人才培养水平。本文对高质量检验医学高等教育体系的内涵进行深入分析，并对建设经验进行总结，以期在增加院校间交流与沟通的同时，为 2035 年建成教育强国的国家战略目标做出本专业应有的贡献。

PU-1053

医学检验教育的现状及未来发展

庄明慧
武城县人民医院

目的 为了培养更多更优秀的动手能力强的医学检验技术型人才，许多高等医学院对本科医学检验教育进行了改革。
方法 为了更好的适应现代检验医学快速发展的要求及对新型实用型医学检验人才的需求。自 2018 年起，由原来的五年制医学检验改为四年制医学检验技术。授予理学学位。
结果 改变了原来基础与临床明显分离加之知识结构偏重检验而缺乏足够的临床医学知识等问题，集中力量加强对学生技术，操作和动手能力的培养，以更好的适应社会对技术型人才的需求。弊端是 2018 年以前入学的五年制医学检验是可以考执业医师的，但四年制不可以，这就意味着四年制本科毕业生不能考执业医师，也就不能考检验医师。五年制医学检验授予医学学位，而四年制医学检验技术则只授予理学学位。
结论 大胆改革创新，小心探索求证。
自医学检验专业“五改四”以来，尝试了一系列改革措施，事实证明，取得了较为理想的效果。四年制检验技师培养内容的重点之一是将理论与实践有机结合。这不仅使学生对所学的知识通过见习有更深入的理解，而且有利于他们更快的熟悉实验室的工作性质和岗位要求。
中国检验医学的未来将会是实验室自动信息化系统和实验室信息化系统的进一步完善，绝大部分常规操作都将会被机器取代。人员分工也将向细分化方向发展，独立实验室也将成为重要的发展方向。社会也将需要更多的技术型人才。

PU-1054

PDCA 循环法在提高血培养标本质量中的应用

何天娇
西安医学院第一附属医院

目的 血培养是采集患者血液标本并接种到培养瓶中,用以发现、识别引起菌血症或真菌血症。血培养是诊断血流感染的重要手段之一。资料显示,血流感染是临床上严重危及患者生命的感染性疾病,病情进展迅速,病死率高如何在提高血培养的阳性率时同时规范些培养的送检,血培养标本采集的质量控制至关重。为进一步改善患者血培养标本的送检质量,为临床提供快速准确的检测结果,我科再用 PDCA 循环管理法探讨 PDCA 循环管理法对提高住院患者血培养标本送检质量的应用效果。

方法 在发现问题阶段调查 2019 年 1—12 月(PDCA 实施前)住院患者血培养标本送检情况,统计血培养的送检结构，阳性率及分析不合格原因。于是成立了 CQI 小组（持续质量改进理论），运用头脑风暴，运用鱼骨图和柏拉图针对问题和原因，运用甘特图对 2020 年 1—12 月(PDCA 实施后)进行任务分解，在实施阶段运用更换仪器和血培养瓶，加强临床培训以及实验室内部整改的实施，运用 PDCA 循环法进行管理,比较 PDCA 循环实施前后血培养送检套数、阳性率以及不规范标本送检情况等各项评价指标。

结果 在检查阶段，实施 PDCA 循环后,血培养标本双套送检率从 31.7%上升至 68.4%,单套送检率从 68.3 下降至 31.6%,血培养标本阳性率从 8.62 上升至至 10.24%,血培养标本不规范情况在实施前和实施后发生明显改变，差异均有统计学意义(P<0.05)在处理阶段对取得的成绩形成常态化的严格监管，对出现的问题提出进一步的整改方案。

结论 应用 PDCA 循环管理法对血培养标本送检进行质量控制,可以有效提高血培养标本送检质量,为临床提供准确可靠的检验结果。

PU-1055

一例 Rh 血型结果与历史不符的病例分析

周祺淇
南方医科大学珠江医院

患者女性，年龄 21 岁，为血液内科病区病人，临床诊断为急性淋巴细胞白血病。于 10 月某天早晨送来一份血型标本做检测，经过常规操作流程离心上机检测，第一次检测结果为：正定型 Anti-A 柱 4+，Anti-B 柱阴性；Anti-D 柱报 MF 警；Ctrl 阴性；反定型 A1-Cells 柱阴性，B-Cells 柱 4+。点开仪器的标本血型卡快照，显示 Anti-D 柱中有两群细胞，离心后沉下去的细胞数量较少。查看病人送检血型的结果历史，发现病人最近一次检测为同年 3 月份，Rh 血型结果为阴性。此时出现了 Rh 血型结果与历史不符的情况，在等待与联系临床医生的时间里，与同事几番讨论，提出输血、移植等几种可能性。后经与医生沟通了解到，该病人早前往当地血站送过血型鉴定，结果为 Rh 阳性（DEL 阳性），谜底逐渐揭开。

PU-1056

检验技术创新应用型人才培养思路的探讨

宋志纯
丽水市人民医院

为响应国务院实施健康中国的战略新任务，提升检验专业本科教育阶段及初入职人员医学检验技术水平，使之能更好的适应未来的检验工作，本文初步提出了各类医学院校医学检验专业创新应用型人才培养的方向及思考，初步提出了大学附属医院在开展临床、科研，实践教学等方面培养高层次创新应用型人才的几点建议。

PU-1057

浅谈临床医学检验技术的提升

周美玲
东南大学医学院

目的 随着科技的飞速发展，医学技术水平的不断提升，医学检验作为临床医生诊疗的重要信息来源，检验技术逐步要求自动化、智能化。同时，检验科室对检验人员的要求也越来越严苛。本文旨在探讨在我国现有医疗水平下，该如何提升临床检验医学技术。
方法 本文从临床检验技术的现状及发展方向入手，查阅专业期刊文献，考察了我国近年来高等医学院校对临床检验医学生的教育理念的改革、授课模式的创新，临床医学检验科室的管理改革及医疗检验仪器设备研发与生产状况，并对其进行归纳总结。
结果 通过查阅文献，发现临床检验医学技术的提升的根本在于高校对优秀人才的培养。医学院校应改变对临床检验医学生的教育理念，从传统“灌输式”授课方式教学转变为多元化授课方式，重视实践教学；师生相互考核评价，相互学习进步；另外，医院应加强实验室日常管理及检验人员安全知识意识、质控意识，重视对检验人员的考核。此外，政府应战略性成立区域检验中心，为乡镇、社区级别小医院提供医学检验服务，弥补因资金、设备、人员不足所致的医疗限制，应激励医疗检验仪器设备厂商研发生产先进仪器，不断提高仪器检验结果的高效与准确性，为临床医师提供可靠的诊疗依据。
讨论 与世界先进国家相比，我国的医疗卫生事业还有很大不足，医学检验作为其中独立的一门学科，还具有相当大的发展空间。而检验技术发展的根本，是要从检验人员的基本素质抓起。我国医学院校正在积极借鉴世界优秀的教育、管理理念，总结、创新、发展一套适合我国国情的临床检验技术教育及管理系统，培养出基本理论扎实、实际操作能力强、具有创新思维、人文意识强的优秀医学检验人才，使他们能够参与临床治疗讨论，助力临床医师的诊疗工作，成为我国医学事业的新鲜血液。

抗 CD38 干扰相容性检测

侯希亮
东南大学附属中大医院

抗 CD38（达雷妥尤）是近年来治疗多发性骨髓瘤的一个靶向药，2015 年获 FDA 批准，2019 年才在中国上市，我们医院血液科现在也在使用。抗 CD38 可结合高表达 CD38 抗原的骨髓瘤细胞，然后通过多种机制杀死瘤细胞。但红细胞上也少量表达 CD38 抗原，所以使用抗 CD38 会对我们输血相容性检测带来一些干扰。

PU-1059

COVID-19 疫情期间相关国际组织对血制品供应安全的建议

侯希亮
东南大学附属中大医院

新型冠状病毒疫情给全球的血液采集和血制品管理等工作带来的严峻挑战。对此，近期世界卫生组织（WHO）等相关机构陆续发布或更新了关于新冠疫情期间血液采集和血制品输注的建议，以帮助采供血机构采取有效措施落实血制品安全、充足供应保障工作。

PU-1060

医学检验学生生物安全防护知识调查及教育效果研究

苏云福、李文静
和田地区人民医院

目的 分析医学检验学生生物安全防护知识调查及教育效果。
方法 研究共抽取 161 名学生，来源时间 2020 年，上学期末针对 161 名实习生全部开展生物安全防护教育，下学期开展生物安全防护教育，对上下学期末 161 名实习生生物安全防护情况以及生物安全防护知识认知状况通过问卷调查方式进行分析。
结果 干预后 161 名实习生生物安全防护认知情况高于干预前，干预后 161 名实习生物安全防护情况高于干预前（P＜0.05）。
结论 将生物安全防护教育应用在医学检验科实习生中至关重要，能够显著增强学生生物安全防护及相关知识认知程度，值得临床广泛推行。

PU-1061

“翻转课堂”教学模式在 MBBS《实验诊断学》教学中的实践分析

黄松苓、赵滢
昆明医科大学第一附属医院

目的 探讨“翻转课堂”教学模式在 MBBS《实验诊断学》教学中的应用效果。
方法 选取昆明医科大学 2015 级临床专业 MBBS 留学生为实验研究对象,分为实验组和对照组。在进行《实验诊断学》教学时,对照组采用课堂讲授法教学,实验组授课时充分使用 MBBS 教学模式,以期末考试成绩和教学满意度,比较两种教学模式的教学效果。
结果 完成《实验诊断学》教学工作后,实验组学生期末考试成绩明显高于对照组,差异有统计学意义(P<0.05)。实验组学生对教学方法与教学效果的评价明显高于对照组,差异有统计学意义(P<0.05)。
结论 “翻转课堂”教学方法应用于 MBBS《实验诊断学》课程教学，可调动学生的学习积极性并且显著提升学生学习效果,值得在 MBBS《实验诊断学》教学中加以推广。

PU-1062

浅谈检验医师教育

王新慧
山东大学第二医院

检验工作不只是简单地接收标本发出报告这么简单，随着检测技术的不断提高，检测项目不断出现，现代医学检验实验室不再是单纯的化验室，而是与临床科室一样，是集教学培训、医疗服务和科学研究于一体的综合科室。长期以来，大多数医院都是由检验技师承担实验室检测和临床沟通，但是在相关疾病的诊断、鉴别诊断等方面缺乏临床医学知识。因此，推行检验医师规范化培训势在必行。检验医师不仅要具备检验基础知识还需要扎实的临床知识，同时具备执业医师和检验技师双重资格，才能够胜任标本检测、质控分析、临床沟通和解释等工作，2003 年中国医师协会检验医师分会在北京成立，但是经过十几年的发展，检验医师仍然是个“新鲜名词”，认知度和接受度都非常低，这与检验医师制度不成熟密不可分。政府主管部门也出台了相关的制度和办法。一、通过招收临床医学专业-医学检验方向学位连读生培养检验医师，在欧美发达国家, 检验医师并不是一个新的职 业名称。在英国、美国称其为“laboratory physician”,在完成临床医学 5 年教育之后，进行检验学相关知识学习，并进入到生化科、免疫科、血液科进行轮转后，撰写毕业论文通过答辩后方可毕

业。这样的方式是可行的，但是由于有些学校对此专业的重要性和特点宣传得不够，很多学生对“检验医师”这一职业不够了解，导致这方面报考的考生比较少。二、建议完善的专科医师培训与培养制度。作为专业培养，应采取完整性、连贯性的教育模式，分别指定技师、主管技师及研究学者不同层次的老师分别负责不同层次的教学，同时定期举办小范围的学术交流会，提高学习的兴趣。

检验教育中生物安全防护教育的探究

白兰
成都市双流区第一人民医院

目的 当代生物安全教育极为重要，尤其是在时时刻刻接触具有潜在生物危险标本的检验专业，生物安全教育的作用就更加突出。加强检验教育中的生物安全防护教育有利于完善检验学教育，更好地促进公共生物安全管理，同时有效防范生物危害，促进社会安全的稳定，在一定程度上能防止实验意外发生，有效降低医者在职业生涯中暴露的风险。
方法 对某大学医学检验专业大四学生进行调研，随机选取该校大四医学检验专业学生 100 人，随机分为两组，一组称为实验组，一组称为对照组，每组 50 人。对两组进行同一问卷调查，根据其对生物安全知识的了解程度从高到低分为 A、B、C、D 四等。初步了解之后，再对实验组 50 名大学生进行为期 5 天的生物安全知识的培训及实验训练，其后对两组同时进行相同的生物安全知识的考核，根据其对生物安全知识的了解程度同样分为 A、B、C、D 四等，记录结果。
结果 结果显示在进行系统的培训和实践教育之前，实验组 A 等学生有 14 人，B 等 16 人，C 等 15 人，D 等 5 人；对照组 A 等 12 人，B 等 14 人，C 等 17 人，D 等 7 人；在进行生物安全教育培训和实践教育之后，实验组 A 等级 32 人，B 等 16 人，C 等 2 人，D 等 0 人；对照组 A 等 12 人，B 等 16 人，C 等 17 人，D 等 5 人。

结论 根据实践结果，可见生物安全防护教育的重要性与有效性。首先应加强检验医学背景下的生物安全理论体系建设，只有对于生物安全理论研究的完善和进步，才能更好地指导现代化的、甚至是超前时代的生物安全防护，才能指导更系统、更完善、更有效的在检验实践中的生物安全防护教育。其次，加强检验学教育中的生物安全防护教育必须有坚实的医学理论、检验学理论和生物安全理论知识，故加强基础知识的教育也是生物安全防护教育不可或缺的一部分。加强检验的实践培训和生物安全的岗前培训同样能够加强生物安全防护教育，丰富的理论知识只有运用到实践中才能收到成效，故模拟生物安全的实验课程开设和进入工作前的生物安全防护教育实践也就显得尤为必要。最后，从宏观上看，需要加强对于生物安全防护的管理，制定行之有效的政策、规范，从政策的层面发展检验教育中的生物安全防护教育。

PU-1066

对于检验教育中生物安全防护教育的探究

白兰
成都市双流区第一人民医院

目的 当代生物安全教育极为重要，尤其是在时时刻刻接触具有潜在生物危险标本的检验专业，生物安全教育的作用就更加突出。加强检验教育中的生物安全防护教育有利于完善检验学教育，更好地促进公共生物安全管理，同时有效防范生物危害，促进社会安全的稳定，在一定程度上不仅能防止实验意外发生，有效降低医者在职业生涯中暴露的风险。

浅谈网络教育在医学检验继续教育中的优势作用

赵雪粉、杨勇、张宏磊
甘肃金域医学检验所有限公司

随着经济的发展，当今的医学也在快速发展，传统的继续教育模式已不满足知识和科技日新月异，网络教育在医学检验继续教育的中发挥至关重要的作用，随着信息技术的逐渐发展，以网络为

渠道的医学教育模式可以比传统的教育模式获得更多的信息，时间及地点等具有更大的灵活性、内容更具有开放性，从而促进检验人员继续教育的公平性及可及性。网络教育在医学检验继续教育中发挥着种种优势：良好的资源共享、节约成本、扩展学习平台，增强临床知识学习、打破空间交流上的界限、学习行为自主化。网络教育的形式能够弥补传统继续教育模式中的不足之处，通过快速检索信息资源，掌握最新的检验技术及临床知识; 丰富继续教育形式，真正实现个性化教育教学以及拓展交流互动平台; 共享与传播临床工作经验等方式，构建灵活、开放以及互动的继续教育模式，创设一个良好的继续教育平台。

PU-1068

骨髓细胞形态学临床实践教学经验分享

张凤
福建医科大学附属协和医院

目的及方法 血液细胞形态是本科检验及检验实习的重点学科，是优秀检验医师成长的必经之路，也是许多检验工作者进修的常选科室之一。骨髓细胞形态室工作性质要求工作者无论是技师还是医师均需具备检验医师的临床思维，优秀的骨髓细胞形态室从业人员应具备较高的人文修养,善于处理检验科室与临床科室关系;能了解血液科、风湿科、感染科疾病的相关基础知识熟练掌握骨髓涂片、染色的基本操作,能够准确出具血液科常见病及多发病的骨髓象报告;具有良好的逻辑思维与发散思维,将理论知识与临床实践相结合。故本文以临床医师从事骨髓细胞形态检验工作带教的经历对骨髓血液细胞形态室实习生、规培医师及进修医师的重要性、人文修养、阅片能力、临床思维的培养和考核等方面进行总结反思。
结论 骨髓细胞形态学教学是检验医学实习、进修、住院医师规范化培训带教中的重点及难点，在教学中注重动手操作，利用多媒体资源及现代通讯网络学习平台，提升学生阅片能力和临床思维，注重人文修养，培养出符合当前教学及医疗环境要求的骨髓细胞形态室检验员。

基于病例对照研究的血脂与乳腺癌关系的 Meta 分析

何建伟[1]、曹薇薇[2]、于子恒[1]
1. 石河子大学医学院第一附属医院
2. 石河子大学医学院

目的 乳腺癌已经成为我国女性发病的首位恶性肿瘤。国内外的研究均表明：女性的血脂水平与乳腺癌的发生和进展以及预后显著相关。但是国内外学者对血脂与乳腺癌的关系持有不同的，甚至是相悖的观点。该研究通过用 Meta 分析对近些年来乳腺癌血脂相关因素研究文献进行综合定量分析，探讨总胆固醇、甘油三酯、高密度脂蛋白、低密度脂蛋白与乳腺癌发病之间的关系
方法 计算机检索整理大量乳腺癌与血脂研究的相关文献，文献检索范围为 2020 年 10 月前发表的相关文献。根据文献纳入与排除标准并采用参照纽卡斯尔渥太华量表（newcastle-ottawascale, NOS）设立质量评价体系，采用 Stata 15.0 软件进行 Meta 分析。
结果 该研究共纳入 9 篇文献，不同研究中研究对象最少 114 人，最多 1261 人。最终 8 个研究汇总 TC 的 SMD 为 0.223，95%置信区间为 0.153-0.293，且具有统计学意义，Z=2.37,P<0.05；6 个研究汇总 TG 的 SMD 为 0.078，95%置信区间为 0.014-0.143，且具有统计学意义，Z=6.25,P=0.018<0.05；7 个研究汇总 LDL-C 的 SMD 为 0.271，95%置信区间为 0.199-0.344，且具有统计学意义，Z=7.32,P=0.00<0.05；5 个研究汇总 HDL-C 的 SMD 为-0.018，95%置信区间为-0.086-0.051，无统计学意义，Z=0.51,P=0.609>0.05。 **结论** 高总胆固醇（TC）、甘油三脂（TG）、低密度脂蛋白胆固醇（LDL-C）是乳腺癌发生的危险因素，而高密度脂蛋白胆固醇

（HDL-C）不是乳腺癌发生的危险因素。然而，因为受纳入研究数量及研究质量的限制，上述结论仍需更高质量及更大样本的试验研究进一步验证。

中西医结合与检验医学

卢晴晴、谢小兵
湖南中医药大学第一附属医院

中医是我国人民不断实践与积累的产物，是中国传统文化的重要组成部分，然而近代以来受到西方思想的冲击，中医不被大众信任，直到新中国成立后才重新登上医学舞台。中西医结合是中医现代化的必经之路，结合不是简单的相加或配合，而检验医学则是两者之间沟通与结合的重要桥梁，帮助从西医的角度解释中医所认为的外邪和七情致病。中医药利用现代细胞生物学、分子生物学等现代技术，在许多中医领域都取得了重大突破，然而中西医结合医院还存在认识不清、人才缺乏、比例不协调等问题，中西医结合检验专业的同学中医理论知识匮乏、临床工作经验缺乏、西医理论知识也不够扎实，因此需要不断学习，并对未来努力的方向进行规划。

PU-1071

自然辩证法维度下的医学实践思考

卢晴晴、谢小兵
湖南中医药大学第一附属医院

自然辩证法思想是唯物辩证法理论的重要组成部分，它有着深厚的理论基础与渊源，系统地阐述了自然科学的产生、发展、壮大，这一理论实现了唯物辩证的自然观的突破，对当代社会的发展具有重要借鉴意义，对于指导具体科学的进步也有具有重要意义。自然辩证法维度下，作为医学生应该用联系的观点和综合思维看问题、具体问题具体分析，用自然辩证法指导医学实践过程。本文从自然观演变的轨迹及其当代价值与意义出发，探讨自然辩证法在世界观与方法论方面为医学的发展提供的指导，以期促进医学的良性运行与协调发展。

临床分子生物学检验教学模式反思与探索

林艳凤、林东红、林梨平、吴娟、薛龑、林旎
福建医科大学

当前，临床医学已经进入了以分子诊断为代表之一的精准医学时代，提高医学生临床分子生物学检验及其相关技术的理论功底、实践技能，积极提升教学质量，将有助于医学创新型高层次人才培养。本文基于目前的课程教学模式和培养现状，针对性地提出了优化课程体系、多渠道强化实践能力、增设多元化考核指标等解决方法和举措，以期为该课程教学模式改革提供借鉴。

PU-1074

临床检验教学实习中 PBL 教学模式初步探讨

杨亚平
陆军军医大学第一附属医院（西南医院）

目的 为了解决国内医学检验专业本科的专业实习教学安时间短、学生的临床知识比较有限，对现代临床检验和疾病的关系掌握不扎实等问题，特对近三届来我院实习带教的本科生进行了问题导向学习法(problem-based learning PBL 教学法)的应用探讨，以期培养学生主动学习和思考能力。
方法 在临床检验教学实习中，以临床检验学为实验模块，进行 PBL 教学法和传统教学法对比研究，考核评价教学效果，通过调查问卷评价学生的学习态度和满意度。
结果 PBL 教学组的专业测试平均成绩明显高于传统教学组($P<0.05$)，三年学生教学满意度为 91.8%，较之前有显著提高。
结论 PBL 教学法能较为显著地提高临床检验实习教学效果，从教学体验的实际参与中促进教学质量提高。

PU-1075

心跳骤停外周血骨髓小粒 1 例报道

金晓娟
联勤保障部队第九〇三医院

目的 心跳骤停外周血骨髓小粒 1 例报道。
方法 对患者血液标本进行临床血液检查。
结果 外周血出现骨髓小粒和巨核细胞。
结论 当机体无生命体征后，各屏障功能随之紊乱，各类造血细胞逐步移向髓窦，基膜退变，穿过内皮细胞，进入外周血循环中，故该患者外周血中可见原始幼稚细胞、巨核细胞、骨髓小粒、有核红细胞。

PU-1076

香兰素抗氧化作用机制研究进展

孔蓓蓓
联勤保障部队第九〇三医院

目的 氧化应激和 ROS 的生成经证明与肿瘤进展有关。香兰素作为一种重要的香料和芳香成分，常用于加工食品。其具有抗氧化性和抗肿瘤潜力。现对香兰素在氧化还原状态中的作用及抗癌作用进行探讨。
结论 本文揭示了香兰素的抗氧化活性，抗癌作用以及在肿瘤治疗和预防中的潜力。因此食用富含香兰素的蔬菜水果可能会抑制促进肿瘤发展的自由基。本综述所展示数据也符合“通过健康食品以及天然生物活性产品的有益作用可以提高生活质量、延长寿命”这一理念。

PU-1077

医学模拟教学联合 PBL 教学方法在医学检验实习生带教中的应用

刘丽莎、李松涛、高岭
南京市儿童医院（南京医科大学附属儿童医院）

目的 研究医学模拟教学（simulation based medical education, SBME）联合问题为基础的教学法（problem-based learning，PBL）在医学检验实习生带教中的应用效果，以期寻求新的实习生带教模式。
方法 以在本院检验科实习的学生群体为分析对象，随机抽取 40 名同学分别设为对照组和实验组，对照组同学采用传统实习带教方式，实验组同学采用 SBME+PBL 的带教方式，分别对两组同学进行理论知识、技能操作和应变能力考核并收集两组同学教学满意度调查表。
结果 实验组同学各项考核指标均高于对照组同学，且实验组同学对教学质量认同度高于对照组同学（$P<0.05$）。
结论 采取 SBME 联合 PBL 的教学方法可以提高医学检验专业实习生的学习效率和学习质量，是一项优于传统带教模式的教学方法。

PU-1078

科研成果融入临床检验实习教学的探索与实践

廖林、向立群、林发全
广西医科大学第一附属医院

临床实习是医学检验教育的重要环节，激发学生学习热情和科研兴趣、培养学生临床思维与科研能力是临床检验实习教学的基本任务。本文阐明了将科研成果融入临床检验实习教学的必要性，通过血细胞分析的科研成果融入实习教学实践，取得了较好的教学效果。

PU-1079

异基因造血干细胞移植研究现状

吕长坤、马菲菲、万雪莲、张卫斌、杨颖、周健
商丘医学高等专科学校

目的 造血干细胞移植可重建患者的造血系统和免疫功能，从而达到治疗某些重大的疾病的功能，详解异基因造血干细胞移植研究现状。
方法 本文总结异基因骨髓造血干细胞捐献的发展历程，分析了造血干细胞移植的现状，移植流程，临床应用，以及未来前景。
结果 我们认为异基因造血干细胞捐献需要更细致和精准的标准化操作流程，熟练的操作技术人员，优化检索和便捷供受者干细胞程序。
结论 希望通过异基因造血干细胞捐献知识的普及，让更多加入成为中华骨髓库志愿者，进一步推进造血干细胞捐献事业的发展，拯救或延长更多适应症相符的患者的生命。

PU-1080

以专业组为主导的多医疗区医学检验实习生带教模式构建和实践

滕文友、刘蓉
郴州市第一人民医院

目的 通过构建以专业组为主导的多医疗区实习生带教模式，提高医学检验实习生的培训质量。
方法 将实习生随机分为两组，对照组按医疗区轮转模式带教，实验组按以专业组为主导的模式带教，实习结束，比较两组实习生理论、操作和综合成绩。
结果 实验组实习生理论、操作和综合成绩分别为 83.25、91.13 和 87.19，均高于按医疗区轮转的对照组（80.17、86.96 和 83.56），且差异有统计学意义(P<0.05)。
结论 以专业组为主导的模式比按医疗区轮转模式更适合多医疗区大型三甲综合医院的检验专业实习生带教。

PU-1081

自身抗体与先兆早产的相关性研究及预测价值分析

方伟[1]、冯安妮[2]
1. 广东省人民医院（广东省医学科学院）
2. 广东医科大学

目的 探讨患者血清中 APS、LA、ds-DNA、ANA 的水平与先兆早产的相关性，同时结合年龄、孕周、生产史、流产史等对先兆早产进行预测分析。
方法 回顾性收集 2018 年 6 月至 2020 年 12 月在广东省人民医院就诊的诊断为先兆早产的孕妇资料，共收集 43 例，纳入病例组；对照组为同一时期孕龄相近的健康孕妇，共 47 例。采用酶联免疫吸附法（ELISA）、间接免疫荧光法检测两组孕妇血清中 APS、LA、ds-DNA、ANA 水平，结合年龄、孕周、生产史、流产史，寻找先兆早产相关独立影响因素，采用受试者工作特征曲线（ROC 曲线）对先兆早产进行预测价值分析。
结果 在本研究中，病例组 APS 中的 β2-GPⅠ-IgM 水平明显高于对照组，差异有统计学意义（P<0.05），且 β2-GPⅠ-IgM 是先兆早产的独立影响因素；LA、ds-DNA、ANA 与先兆早产无相关性；年龄、孕周、生产史、流产史均不能作为先兆早产的独立影响因素。

结论 β2-GPⅠ-IgM 可作为先兆早产的预测指标。

PU-1082

肿瘤标志物的电化学发光分析研究进展

李宏柱
呼和浩特金域检验所有限公司

目的 随着医学技术的发展，许多疾病正慢慢被人们所熟知，在这些疾病中最令老百姓们害怕的莫过于肿瘤。肿瘤（Tumor）是机体在各种致癌因素作用下，局部组织的某一个细胞在基因水平上失去对其生长的正常调控，导致其克隆性异常增生而形成的新生物。近年来，肿瘤的发病率一直居高不下，并且大多发现自己得了肿瘤的患者病程已经到达了晚期，彻底治愈的概率极低。因此，早发现早治疗是治疗肿瘤的关键。但早期的肿瘤患者无特异性临床表现，再加上检查的流程非常的繁琐，这导致许多患者面对检查也就不了了之，延误了治疗。因此，亟需开发更加准确、高效的诊断方法。电化学发光(ECL)由于其灵敏度高、准确度高等优点，在肿瘤标志物检测的领域有着迅速的发展。本文对电化学发光分析在检测 CEA 、AFP 、CA199、CA125、等肿瘤标志物的诊断价值及其研究进展进行了评述，并展望了电化学发光法在未来的发展趋势。
方法 本文采用了文献研究法对这些年来 ECL 在肿瘤标志物检验的领悟对其研究的发展进行了评述。
结果 ECL 分析在肿瘤标志物中的研究主要体现在构建多功能传感界面、制备新型纳米复合物和反应装置设计等方面，其目的是为了使 ECL 的检出限更低，灵敏度和分析速度进一步提升。
结论 所以可以预测到，随着新型肿瘤标志物的不断发现，新型分子识别材料、功能纳米材料和高通量微型装置的持续发展，将为高灵敏度诊断肿瘤提供更方便快捷的方法。所以，通量微型检测装置的设计和多功能生物传感界面的构建将是未来研究的重点方向之一。

PU-1083

医学检验专业本科生学习压力情况的调查与分析

黄奔、王洁、张祥、徐艳、赵鸿
南京医科大学第一附属医院（江苏省人民医院）

目的 为了解新形势下医学检验专业本科生学习压力的情况，使用问卷调查法进行调查分析。
方法 采用分层整群的抽样方法，调查江苏省某医学院校医学检验学专业三个年级的在校本科生，发放问卷 336 份，回收有效问卷 269 份，有效率为 80.59%。采用 Epidata3.1 软件建立数据库，双人双录入的方式来确保数据输入的准确性。采用 IBM SPSS Statistics 25.0 统计软件进行一般性统计学分析。
结果 此次调查分析中，共有男生 78 名，女生 191 名；大一学生 93 名，大二学生 95 名，大三学生 81 名。在感受学习压力很大、压力较大、压力较小和无压力的分析中，仅有 5（1.85%）名学生认为学习压力很大，135（50.19%）学生认为学习压力加大，129（47.96%）学生认为学习压力较小；0 人认为无学习压力。在性别方面，男女生在学习压力感受上无明显差异（P<0.05）。在不同年级上，学生在学习压力感受上存在着显著性差异（P<0.01），其中感受学习压力很大和学习压力较大以大三学生人数最多 155 人（57.62%），其次是大二学生 88 人（32.71%），大一年级人数最少 26 人（9.67%）。
结论 此次调研显示，约半数（52.04%）的在校学生存在着程度不一的学习压力，学习压力随着年级而增长。表明医学检验本科生学习压力情况较为严重，亟待重视。

PU-1084

探讨 PBL 教学方法在临床免疫检验中的应用效果

于建英
山东第一医科大学第一附属医院

目的 探究 PBL 教学方法在临床免疫检验中的应用效果。
方法 选取 2019 年 7 月～2020 年 1 月在院实习的 36 名临床免疫专业实习生为研究对象，将其随机分为观察组和对照组，各 18 人。观察组在教学中采用 PBL 教学，对照组采用传统带教法。
结果 观察组的实习成绩以及对本组教学模式的效果评价均优于对照组（P<0.05）。
结论 采用 PBL 教学模式在临床免疫带教中的效果显著，有利于教学效率的提高，有利于提高学生临床免疫理论和操作水平。

PU-1085

风湿性关节炎患者的外周血 C 反应蛋白 、血小板/淋巴细胞比率和红细胞体积分布宽度对疾病诊断价值的探讨

战伟
大连大学门诊部

选 105 例门诊健康体检者和 105 例风湿性关节炎患者，用对照法将上述人员分为健康对照组和患者组。根据风湿关节炎的的病情轻重 DAS28 评分法，将患者组又分为重度炎症组和轻度炎症组。分别对患者组（重度炎症组和轻度炎症组）与健康对照组的 C 反应蛋白（CRP） 、血小板/淋巴细胞比率（PLR）和红细胞体积分布宽度（RDW）的水平进行测定，用 t 检验比较两组间的测定水平，通过各受检者的工作特征（ROC）曲线，探讨患者体内 CRP、PLR 和 RDW 的特异性和灵敏度。患者组外周血 CRP 水平高于健康对照组，重度炎症组外周血 CRP 水平明显高于轻度炎症组，前后两组有明显相关性（P＜0.05）。患者组与健康对照组、重度炎症组与轻度炎症组的外周血 RDW 水平对比，无相关性（P＞0.05）。CRP、PLR、RDW 对风湿关节炎患者的特异性和灵敏度依次为 96.21% 和 26.47%，19.65%和 89.25%，83.40%和 29.31%，有明显相关性（P＜0.05）。CRP、PLR 和 RDW 与风湿性关节炎的严重程度有相关性，对该病良好的特异性和灵敏度，对风湿性关节炎有一定的诊断价值。

PU-1086

医学检验技术专业临床输血学教学与实践应用研究

王世波
云南商务职业学院

目的 针对医学检验技术专业临床输血学教学与实践应用效果进行探讨。
方法 观察期：2019 年 1 月-2020 年 1 月，纳入医学检验技术专业 40 名学生作为观察对象，按照教学方案的不同分为两组，观察组（n=20）与对照组（n=20），前组予以成果导向式教学，后组予以常规模式教学，比较不同方案的教学效果。
结果 观察组学生平均护理理论知识考核得分与实践操作考核得分均明显高于对照组学生，（P＜0.05）。
结论 在医学检验技术专业临床输血学教学中，应用成果导向式教学模式，可有效提升学生对临床输血的理论知识掌握程度，实践操作能力熟练程度，为其今后更好地胜任临床工作奠定基础，方案值得推荐。

PU-1087

急诊患者人性化护理应用效果分析

张燕
昆明市中医医院

为观察人性化护理在急诊患者护理工作中的应用效果，选择昆明市中医医院 2019 年 1－6 月入院接受急诊治疗的患者 60 例，平均分为两组。常规组以常规护理模式进行临床护理工作，实验组采用人性化护理模式。人性化组患者干预后，SAS 及 SDS 评分较对照组患者降低显著，本次对比分析结果有效。说明人性化护理工作在急诊患者临床护理工作中有着良好的应用优势，能够充分提高患者对医院各项工作的满意度，值得临床推广应用。

PU-1088

成果为导向教育模式下临床微生物检验技术教学改革探索

宋为娟
江苏省人民医院（南京医科大学第一附属医院）

“OBE”理念教学模式以成果为导向，通过课程改革有利于提升医学生临床实际操作能力。临床微生物学检验技术是医学检验专业重要的基础课程之一，本文以成果导向教育理念为指导，通过分析目前教学现状，对教学内容和方法改革提出改进措施，以期达到更好的教学效果。实践表明，成果为导向教育模式下临床微生物检验技术教学改革提高了学生的专业认可度、课堂参与度和解决实际问题的能力，符合检验医学的行业需求，为微生物检验技术教学改革提供了新思路。

PU-1089

临床检验技术教学中应用“岗位融入式”教学模式的作用

王琴、王世波
云南商务职业学院

目的 分析临床检验技术教学中应用"岗位融入式"教学模式的作用。
方法 2020 年 2 月至 2021 年 2 月于我院实习的 52 例医学检验技术专业学生为研究对象，抽签分组法分组，对照组实施常规教学模式，实验组实施岗位融入式教学模式，分析作用。
结果 教学实施前，两组学生成绩对比无统计学意义（P＞0.05）。教学后，实验组学生考核成绩较对照组高，P＜0.05。实验组学生对教学模式满意度较对照组高，P＜0.05。
结论 临床检验技术教学中应用"岗位融入式"教学模式可提高学生考核成绩，提高学生满意度。

PU-1090

疫情下的医学检验网络教学

朱琼
江苏省人民医院（南京医科大学第一附属医院）

新冠肺炎疫情背景下,各学校都选择进行线上网络教学与考核，医学检验是一门集理论与实践相结合的学科，充分利用网络进行教学，以及互联网微信、企业微信、云班课等 app 进行考核与互动，开展多元化的线上教学活动，激发学生的积极性与互动性，督促学习进展，与注重学习成果考核，提高医学检验网络教育质量。

PU-1091

临床生物化学检验的课程思政教学实践

黄桦[2]、梅传忠[1]、武文娟[1]、耿建[1]、周继红[1]、石玉荣[1]
1. 蚌埠医学院检验医学院
2. 蚌埠医学院检验医学院

在医学类专业课程的教学过程中要注重加强医风医德、医者仁心教育，在培养精湛医术的同时，提升综合素养和人文修养。临床生物化学检验是医学检验技术专业的专业课之一，在学习专业知识培养科学精神的同时，也要将价值引导有机融入，贯穿到课程教学的全过程中，于潜移默化之中达到综合育人的效果。

PU-1092

实验诊断学

张翔
空军军医大学第一附属医院

实验诊断学是临床医学专业的一门必修专业课程。是运用医学基本理论和基本知识对疾病进行诊断的一门学科，是诊断学中重要的一部分，也是重要的医学“桥梁”课程。教学对象是五年、八年制临床、航医、心理、预防、口腔专业。

通过“实验诊断学”课程的学习，学生能够掌握和应用实验诊断学的基本理论、知识和技能；学会充分利用、科学分析临床检验所提供的信息和数据，结合其它辅助手段，对疾病进行初步和鉴别诊断、观察疗效、判断预后；重要的是通过理论、线上和实验课教学以及教员与学生的双边互动，培养自主学习的意识，掌握独立思考、分析概括和创新能力，为继续学习其他课程和长远发展打下坚实的基础。

PU-1093

高浓度非结核胆红素对血红蛋白测定的影响初探

贾文祥[1]、曲菲[2]
1. 山东省千佛山医院
2. 山东省耳鼻喉医院（山东省立医院西院）

目的本人自工作以来，发觉高胆红素血症的病患，其血常规结果几乎都有所异常，经过文献查询发现业界有对高胆红素血症影响血常规内测定白细胞、红细胞、血小板的较深入研究，但对研究其影响血红蛋白测定较浅，故尝试从试验方面对高胆红素血症常出现的人群—新生儿入手，探究高胆红素血症对血常规测定血红蛋白的影响，且新生儿高胆红素血症以非结合胆红素升高为主，故特研究非结合胆红素对血红蛋白测定的影响。

PU-1094

对临检细胞形态学进修自学互教模式的探讨与实践

巩中华
山东省千佛山医院

目的 在临检细胞形态学学习过程中，对进修学生自学互教模式的一些探讨和实践。
方法 带教老师在日常工作中对临床细胞学要不断学习，不断更新自己的知识，和学生参与实验教学的"导学导思-自学自练-合作探究-展示共享-评价总结"互教模式,培养学生综合运用理论知识和细胞鉴别识别能力的同时,注重学生在合作交流 、自我学习及探索新知识 、新技能等方面能力的提升,制定相关的学习制度，对现有的学习资料进行有效地优化，
结果 在学生进修结束时，对其考核，考核结果与前几届相比，结果显示现有的自学互教模式更加有利于进修学生的学习，更加有效的提高进修学生对细胞形态鉴别识别能力。
结论 细胞形态学在临检专业占的位置是相当重要，地位是毋庸置疑的，所以从而培养符合当今社会需求的 、专业知识全面的 、具有一定创新精神和科研能力 、善于交流和合作的高素质医学检验专业人才。

PU-1095

《临床血液学检验技术》实习带教体会

李英
川北医学院附属医院

《临床血液学检验技术》是一门与临床血液学疾病的诊断及预后判断相关的学科，在临床主要应用于骨髓涂片细胞形态学检查，由于其专业的特殊性无法实现自动化与智能化，且与临床结合非常紧密，故实习要求与实习特点有别于其他专业。本人多年从事本专业的理论及实践教学与实习生带教工作，现就带教多年的体会作一小结，希望加强实习同学对本专业的正确深入认识、提早做好实习规划及规避在实习中一些意识上的误区，更好利用短暂的实习时间达到最优的学习效果，培养形态检验接班人。带教体会主要包括以下五个方面：一、合理安排实习时间及做好实习规划。二、看懂血常规报告、明确骨髓检验目的。三、培养学生自主学习与思考问题的能力。四、培养学生独立处理报告的能力。五、实习过程中的思政教育。

PU-1096

结合疫情时事提升《分子诊断学》教学效果的探索

刘湘
湖北中医药大学

2020 年上半年突如其来的新型冠状肺炎疫情给高校医学专业课程教学带来了挑战，也带来了新的关注点和教学契机。《分子诊断学》是一门理论性和应用性很强的医学检验技术专业核心课程，本文通过具体教学实践，从制定教学方案、优化教学内容、开展课程思政、引导学生科研思维四个方面，探索在疫情期间紧密结合热点时事开展课程教学的方法，同时对教学效果进行了评价和思考，为后续教学实施中提升《分子诊断学》的教学效果提供了思路和参考。

PU-1097

系统性红斑狼疮（SLE）患者血浆细胞因子水平分析及其临床意义

曾聪[1]、王启广[1]、程振波[2]
1. 湖南省人民医院
2. 湖南师范大学

目的 对六项细胞因子[白细胞介素 IL-4、IL-6、IL-10、IL-17、干扰素-γ(IFN-γ)、肿瘤坏死因子-α(TNF-α)]在系统性红斑狼疮患者血浆中的水平变化进行统计学研究并探讨其临床意义，以期辅助临床检测治疗，帮助药物研发。

方法 湖南省人民医院 2020 年 1 月至 2021 年 4 月收治的系统性红斑狼疮患者中选择 30 例初次发病或患病后初次进行治疗病人作为观察组，选择同时间段内 30 例（排除肿瘤免疫系统等疾病的外科患者）检测者作为对照组。比较两组血浆细胞因子水平，进行统计学独立 t 检验分析；并将观察组与检测试剂盒厂家提供的医学正常值范围进行比较讨论。对观察组中进行了复查的 3 例患者的六项细胞因子检测结果分为治疗前与治疗后两配对组进行配对 t 检验分析，分析治疗前后 IL-4、IL-6、IL-10、IL-17、IFN-γ、TNF-α 水平有无显著性差异。

结果 观察组患者血浆 IL-6、IFN-γ 水平均高于对照组（P<0.05），IL-4、IL-10、IL-17、TNF-α 变化无显著差异（P>0.05）。观察组 SLE 患者仅 IL-6 血浆浓度升高占 SLE 患者总数 46.66%；IL-6 和干扰素 IFN-γ 升高占 16.66%；仅干扰素 IFN-γ 升高占 10.00%；仅 IL-10 升高占 3.34%；六项细胞因子结果均正常占 23.34%。同一患者血浆中 IL-4、IL-6、IL-10、IL-17、IFN-γ、TNF-α 水平结果在治疗前与治疗后均无显著性差异（P>0.05），治疗后三位复查患者异常血浆 IL-6 水平均回归正常参考值范围。

结论 系统性红斑狼疮患者血浆中细胞因子存在活性水平紊乱，重点体现为 IL-6、INF-γ 在 SLE 患者外周血血浆中表达增加，在 SLE 的发生中产生关键作用，为 SLE 疾病的预防以及诊疗建立理论基础，可以作为病情监测以及判断疗效指标，帮助疾病早期发现。

PU-1098

冷球蛋白导致的血小板假性增高病例分析

朱颖珊、陈卓曦
广东省人民医院

目的 血小板假性增高的原因很多，这里着重讨论冷球蛋白引起的血细胞分析仪阻抗法通道测定血小板假性增多。

方法 一次审核结果时偶然发现的血小板计数与历史结果不符，触发复检规则，用 PLT-F 通道复查，血小板减少，推片染色观察血小板计数与 PLT-F 通道符合，同时发现细胞间存在片状淡蓝色不定形物质存在，怀疑是该物质是冷球蛋白。通知病房重新采血立即送检，用该标本于室温放置 0、30、60、90、120 min 后分别同时用电阻法通道和 PLT-F 通道检测，记录各项指标结果，对比血小板直方图曲线，同时手工涂片评估各阶段标本血小板计数，并观察血涂片细胞形态。联系病房做冷球蛋白血症相关检测。

结果 该标本电阻法通道血小板计数随着放置时间越长结果越高，PLT-F 通道则无差别，直方图曲线无异常，未触发血球仪报警信息，血片未见小红细胞及红细胞碎片等可能引起血小板计数假性增高的常见因素。血常规标本室温放置 60 min 后推片，可见不定形物及不规则形红细胞；标本 37 ℃温浴 30 min 后涂片，不定形物消失，不规则形红细胞明显减少。

结论 该患者血小板计数历史结果正常，这次检测血小板计数减少，是因之前采血后样本放置时间过长才检测，冷球蛋白形成引起阻抗法测定血小板计数假性增高。目前全自动血球分析仪阻抗法仍

是最常用的检测血小板的方法，因为直方图正常、结果正常、无报警信息导致冷球蛋白患者的血小板计数很假性增高不容易被发现，值得警惕。建议多和临床沟通，冷球蛋白血症患者血常规应做相应标识，同时日常工作时看到冷球蛋白血症诊断时，注意手工推片复检，用 PLT-F 通道检测血小板。

PU-1099

“需求引领、能力驱动”中高职一体化人才培养模式的探索与实践

李珍珠[1]、钟楠楠[2]
1. 陕西能源职业技术学院
2. 西安市卫生学校

《国家职业教育改革实施方案》和教育部《国家中长期教育改革和发展规划纲要（2010—2020 年）》都明确提出了中高职教育衔接，构建人才培养“立交桥”的重要性，良好有效的中高职衔接是现代职教体系建设中的重要步骤。

自 2015 年陕西省实行高职分类考试招生以来，西安市卫生学校成为陕西能源职业技术学院优质生源基地，医学检验技术专业每年有 80%以上的毕业生进入陕西能源职业技术学院学习。自 2016 年西安市卫生学校专门成立“能源基地班”，两校联合开始实施“需求引领、能力驱动”中高职一体化人才培养，在中高职人才培养有效衔接方面做了有益尝试，通过 5 年多的探索与实践，为近 400 名中职学生架设中高职一体化立交桥，铺就人才技能提升之路。本文以这两所中、高职院校医学检验技术专业五年来的实践为依据，通过分析中、高职不同阶段学生及岗位需求变化，厘清中高职人才培养目标和任务，对中高职一体化人才培养过程中，在人才培养模式构建、课程体系建设、教学资源开发、课证融合、校企合作、学生管理、技能竞赛等方面对“需求引领、能力驱动”中高职一体化人才培养模式进行的探索和实践进行了阐述。简要介绍了方案实施以来，两校在专业建设内涵、教育教学、学生培养等方面取得的成绩。

PU-1100

网络教学平台在检验科继续教育中的应用与研究

周琰、张春燕、王蓓丽、潘柏申、郭玮
复旦大学附属中山医院

目的 随着网络平台的普及和线上教学软件的推广，探讨其在检验科员工继续教育工作中的应用情况。
方法 应用网络教学平台在专业理论和技能培训、对分课堂教学方案应用、三基培训考核和生物安全等质量体系培训，以及人员管理中均取得了较好的效果，有效增强了“教”与“学”的双方沟通，提高了教学的时效性，提高了参与者的学习兴趣和主观能动性。
结果 基于检验科继续教育模式的现状，网络教学平台在教学工作安排、人才规划和培养、实验操作教学、科教成果评定和在其他培训考核中的应用发挥积极作用。
结论 基于网络通讯平台的教学模式可以作为现有检验医学继续教学方式的有效扩充。

PU-1101

CD85K、CD85J 在流式细胞术中评价单核细胞及急性单核细胞白血病中的应用

楚玉兰
天津金域医学检验实验室有限公司

目的 未成熟单核细胞缺乏特异性和敏感性的早期谱系标记，流式诊断急性单核细胞白血病受到限制。探讨 CD85K、CD85J 在鉴别单核细胞及其在临床诊断中的价值。CD85K、CD85J 是免疫球蛋白样转录本（ILT）的成员，是一种免疫抑制受体，CD85K 又称 ILT3，CD85J，又称 ILT2，两者均在单核细胞中表达。
方法 采用多色流式细胞术（FMC），分析了 49 例 AML 患者中，主要检测未成熟单核细胞（尤其对无单核细胞系成熟相关抗原，如 CD14，CD11b，CD15，CD64）CD85K、CD85J 表达情况。
结果 我们发现 CD85K、CD85J 在检测未成熟单核细胞分化方面优于 CD36、CD64 及 CD14。白血病母细胞或幼稚单核细胞 CD85k、CD85J 表达一般比正常单核细胞表达强度会减弱，同时 CD85K 表达敏感性优于 CD85J。CD85K、CD85J 在所有显示单核细胞分化的 AML 病例中均有表达(FAB M4/M5;n=29)；而在 M1、M2 和 M3 无表达 (n= 20;P <0.0001)
结论 CD85K、CD85J 两着联合是区分具有单核细胞分化的 AML 与其他类型 AML 的高敏感性和特异性标志物。CD85K、CD85J 表达检测可以纳入 AML 患者的初始诊断和监测。

PU-1102

医学检验专业妇幼检验科临检组实习教学改进的探讨

丁红梅
江苏省人民医院（南京医科大学第一附属医院）

对医学检验技术专业学生在妇幼检验科的实习带教中存在的理论知识欠缺、重视程度不够等问题进行分析，应用“导师制”教学法，设立阶段式“一对一”带教老师，利用现代化多媒体教学等措施，开展针对妇幼特色的带教。通过实习考核成绩比较和学生问卷调查两种形式，反馈带教效果，发现此些改进措施后可获得更好的带教效果。使学生能够了解妇幼检验工作的重要性，为其以后步入工作岗位打好基础。

PU-1103

杭州地区乙肝患者 HBV 核苷类似物耐药位点分析

许生样
杭州迪安医学检验中心有限公司

目的 检测杭州地区乙型肝炎患者体内 HBV 逆转录酶基因的耐药突变情况，为临床制定合理的治疗方案提供依据。
方法 通过聚合酶链反应（PCR）及 DNA 测序将 2020 年 1 月至 9 月送检杭州迪安医学检验中心的 746 例乙型肝炎患者进行 HBV 耐药突变位点和基因耐药情况检测，并对结果进行统计分析。
结果 在 746 例血清标本中有耐药突变位点产生的有 324 例，检出率是 43.43%（324/746），其中 M204I、L180M+M204V、L180M+S202G/C+M204V 和 L180M+T184L/A/F+M204V 检出率较高。患者对替比夫定（L-dT）、拉米夫定（LMV）、恩曲他滨（FTC）、恩替卡韦(ETV)、阿德福伟（ADV）、替诺福韦(TDF)耐药比例分别是 95.37%（309/324）、87.04%（282/324）、87.04%（282/324）、38.27%（124/324）、31.17%（101/324）、0.31%（1/324）。单药耐药比例为

4.63%（15/324），多药耐药比例为 95.37%（309/324）。27 例患者对 L-dT 和 ADV 耐药，比例为 8.33%（27/324）。129 例患者对 LAM、FTC 和 L-dT 耐药，比例为 39.81%（129/324）。47 例患者 LAM、FTC、L-dT 和 ADV 耐药，比例为 14.51%（47/324）。93 例患者对 LAM、FTC、L-dT 和 ETV 耐药，比例为 28.70%（93/324）。13 例患者对 LAM、FTC、L-dT、ETV 和 ADV 耐药，比例为 4.01%（13/324）。发生耐药突变与患者的性别无关（P＞0.05）。

结 论 在杭州地区乙肝患者中，常见的突变模式为 M204I 、L180M+M204V 、L180M+S202G/C+M204V 和 L180M+T184L/A/F+M204V；耐药情况主要以多药耐药为主。

PU-1104

肺癌晚期患者 CD8+T 细胞细胞毒活性

朱时帅
哈尔滨医科大学第一附属医院

探索服用扶正抗癌方后非小细胞肺癌（NSCLC）晚期患者 CD8+T 细胞细胞毒活性的变化。

方法 NSCLC 晚期患者共 31 例，根据不同的临床因素进行分组（服用扶正抗癌方前后、病理类型、TNM 分期和性别），流式细胞术检测外周血 CD4+T、CD8+T 细胞绝对值以及 CD8+T 细胞表达 CD107a、颗粒酶 B 和 IFN-γ 百分比的变化。

结果 Ⅲ期患者 CD8+T 细胞表达 CD107a、颗粒酶 B 和 IFN-γ 百分比都显著高于Ⅳ期。服用扶正抗癌方后 IFN-γ+CD8+T 细胞的百分比较治疗前显著升高，大部分患者的生存质量稳中有升。CD8+T 细胞表达 CD107a、颗粒酶 B 和 IFN-γ 的百分比在鳞癌和腺癌无差异，也无男、女性差别。

结论 服用扶正抗癌方后 NSCLC 晚期患者分泌 IFN-γ 的 CD8+T 细胞的百分比明显提升，有助于改善患者的生存质量和预后。

PU-1105

地贫的产前诊断概述

韦骁元[1]、胡销[2]
1. 柳州市妇幼保健院
2. 柳州书妇幼保健院

地中海贫血(thalassemia,简称地贫)是一组全球最常见的、对人类健康影响极大的单基因遗传病,在我国广东、广西、云南、四川等省份发病率高，广西 α 地贫 携带率为 17.55%，β 地地贫携带率为 6,43% ，重型 α 地中海贫血是致死性遗传病,患病胎儿高度水肿、畸形,在出生前窒息死亡或出生后不久死亡。重型 β 地中海贫血患儿则需每月输血和去铁治疗来维持生命,骨髓或脐血移植是惟一的根治方法,但目前成功率不高,而且合适的配型也较难找到。患者严重贫血时,只能依赖长期输血维持生命。

因此,控制该病最有效的办法是通过产前筛查和对高风险夫妇采取产前基因诊断来防止重型患儿的出生。

目的 探讨目前可开展的地贫诊断方法的优劣。

方法 查阅最新文献。

结果 目前检测地贫的手段多样，能满足各级实验室的要求。

结论 血液学检测和家系分析可以为血红蛋白病的 DNA 诊断提供必要的线索, 是开展基因诊断的基础;基于 DNA 检测的方法是用于 a- 和 β-地贫临床基因分型和产前诊断确诊的重要手段; 为保证质量,一个好的 DNA 诊断实验室应具备至少二种检测各种 a- 和 β-地贫突变的可选择的技术。就技术而言，高通量、高敏感性、高准确性、自动化和标准化是方法学研究的目标与方向，二代测序技术以其独特的技术优势将成为主流技术平台。

消失的球蛋白

卢洁仪
南方医科大学珠江医院

遇到一例 IgG、IgM 等球蛋白明显减少的病例，尝试从分析前（样本留取、样本状态等）、分析中（试剂状态、仪器状态、当天质控、方法学比对等）、分析后（患者临床资料、其他辅助检测等）等分析其中原因。后来分析发现该病人 CD19 淋巴细胞明显减少，未排除免疫缺陷症的可能，及时提醒临床完善基因检测，确定病因。

PU-1107

病例分析：双虫混合感染（粪类圆线虫+肝吸虫）

兰萌
南方医科大学珠江医院

佛山市南海区的李阿伯（化名）因全身浮肿一个月，发热 10 天在当地医院治疗无缓解后被家人送往我院就医。初进院时李阿伯情况危急，精神差，食欲差，睡眠差，小便少，全身浮肿加重，面色苍白，重度贫血貌，并出现发热，不喜言语，还有现感染性休克。初进院的第 1 天，李阿伯的抽血检测项目肿瘤指标高，呼吸科邓教授查房指示不排除胃肠道及肺部肿瘤的可能，并于床边在局麻下行右锁骨下深静脉穿刺置管术，手术顺利。第 2 天李阿伯全身水肿减轻，但仍有发热，精神很差，睡眠差。第 3 天李阿伯留取粪便送检，粪便涂片于显微镜观察发现有活动的虫体，虫体细长，大小约为 0.6-0.7mm，咽管呈柱状，尾端尖而分叉。于当天粪检结果报查见粪类圆线虫，又查见了肝吸虫卵。这一检查结果让呼吸科的医务人员振奋人心，夏教授查房听取病史汇报后，认为这是一例较少见的两种寄生虫同时感染。 增加抗寄生虫药物，继续肠虫清治疗，余治疗继续营养支持，纠正贫血处理。一直到了第 13 天，李阿伯无水肿，无发热，意识清楚，小便正常，感染休克已纠正。抽血检测结果大部分正常。面色较前红润，中度贫血貌。且粪便检查结果均未查见圆线虫和肝吸虫卵。李阿伯经历了两周的住院治疗症状好转后，家属满意签字出院。

面向未来的检验医学教育

何穗芬
南方医科大学珠江医院

一直以来，检验医学的教学重在把检验学子培养成“懂规矩”的检验人，因而，大多数学生都缺乏主动学习、独立思考的意识。现实的检验工作中，检验工作者普遍进化为与仪器紧密相连的半机器人，每天都在遵照检验相关的法律法规、行业准则、科室流程和 SOP 完成一套套规定性动作，日复一日，锁定在大大小小的检验流水线上，成为相同或相似功能的“工具人”。然而，面对异常复杂的临床工作，未来的“专业”检验人，除了必须“懂规矩”，还需要在临床疑难病例诊疗方面及实施科学合理的质量管理方面都能适应检验医学与时俱进的专业要求。目前，国内外有部分顶尖的检验实验室会主动挑战检验领域的高难度技术问题和/或创造能应对特殊临床检测任务的临床实验室运作新模式。他们的发展预示着未来的检验必将更重视协助临床鉴别诊断疑难病例和给出更具指导意义的报告解读、开发更具鉴别意义的实验技术和新项目，以及建立能高效应对临床特殊要求的组织形式。随着检验学科的快速发展，检验医学的未来注定充满各种不确定性。对于检验医学方向的学生们依靠记忆力、动手能力和执行力已不足以帮助他们适应未来检验高速发展的专业要求，因此，

他们迫切需要医学院校和教学医院的老师们能全方位地激发他们主动学习、自主思考及创造性劳动的主观能动性，进而强化他们观察能力、分析能力、决策能力及应变能力。

PU-1109

医学检验专业教育中通识教育满意度情况调查

王霞、何訸、张玫
四川大学华西医院

目的 调查在医学检验专业教育中学生对通识教育的满意度了解情况，以促进本专业通识教育的持续性改进。
方法 结合文献及学生访谈对问卷进行设计，采用“问卷星”进行线上匿名问卷调查。李克特五点量表分析学生对通识教育的满意度和了解情况，卡方检验进行不同专业组间的比较，SPSSAU.(Version 20.0)对数据进行统计分析及可视化。
结果 本次调查共回收有效问卷 209 份，研究数据信度质量高且具有效度。90%的学生表示喜欢通识类课程，检验专业学生喜欢的通识类课程为“科学探索与生命教育”与非检验专业学生喜欢的通识类课程有差异。学生对通识类课程的接受度较高，喜欢通识类课程的学习。但对通识教育的不了解仍然是影响满意度的主要原因，同时，由于医学类专业本身课业的繁重，对专业知识无帮助成为影响学生不喜欢通识类课程的主要原因。
结论 现阶段，我校所开设通识类课程已获得学生的普遍认可。增强学生对通识教育的了解程度，增设融合专业课程体系的通识类课程可提高通识教育的满意度。

一种新型快速全血心梗三项免疫检测方法的性能评估

于金星、崔凯、蔺亚晖、周洲
中国医学科学院阜外医院

目的 心梗三项检测在急性冠脉综合征的诊断中具有重要价值。大型检验化学发光设备结果准确，但通常只能使用血清或血浆样本，报告时间长。全血检测速度快，但通常检测准确性不足。本研究旨在评估一种基于探针的新型心梗三项检测应用于全血、血浆和血清三种样本类型的分析性能。
方法 根据 EP 文件，用全血、血浆和血清三种类型的样本评价 Pylon 平台循环增强免疫荧光发光法（CEFA）心梗三项（肌红蛋白 MYO、肌酸激酶同工酶 CK-MB、高敏肌钙蛋白 I hs-cTnI）检测的分析性能，包括精密度、线性范围、可报告范围、正常参考区间、方法学比对和样本类型比对。
结果 基于 Pylon CEFA 的心梗三项检测重复性和实验室内总不精密度均小于 10%，其中包括 hs-cTnI 第 99 百分位上限附近及以下的中低浓度水平。三项的线性范围和正常参考区间验证均满足要求。可报告范围实验表明，Pylon CEFA 方法 MYO、CK-MB 和 hs-cTnI 的可报告范围分别可达 10-40000 ng/mL、1-3000 ng/mL 以及 0.5-30000 ng/L。方法学比对显示，血清（n=100）和血浆样本（n=100）的 Pylon CEFA 法与 Architect i2000 化学发光法结果相关性好（相关性系数 R^2>0.95）。样本类型比对中，全血和血浆样本（n=100）的 Pylon CEFA 心梗三项检测结果相关性系数（R^2）均超过 0.95，且 Passing-Bablok 线性拟合斜率在 0.94-1.01 之间，表明两种样本类型可相互替代。Pylon CEFA 检测采用全血标本原管上机，心梗三项报告时间仅 15 分钟。
结论 Pylon CEFA 心梗三项检测的分析性能与大型化学发光设备相似，检测结果与化学发光相关性好。同时，其通过探针表面的特殊化学处理和分析系统的自动实时血细胞校正功能，实现准确的全血检测，简化实验室操作流程，减少周转时间和人力。

PU-1111

降钙素原及 C 反应蛋白联合检测在新生儿败血症诊断中的价值分析

黄瑶楠
空军军医大学西京医院

目的 探究降钙素原（PCT）及 C 反应蛋白（CRP）联合检测在新生儿败血症中的诊断价值。
方法 选择我院 2019 年 2 月-2020 年 10 月我院收治 80 例新生儿败血症患儿纳入败血症组，另选取同期于我院产科分娩的健康新生儿 78 例作为对照组。比较两组 PCT 及 CRP 水平；以血培养结果作为诊断“金标准”，分析 PCT、CRP 单独及联合检测的诊断价值，另分析 PCT、CRP 单独及联合检测与血培养结果的一致性。
结果 败血症组 PCT 及 CRP 水平均高于对照组，有统计学差异（P＜0.05）；PCT 及 CRP 联合检测在新生儿败血症中灵敏度、特异度及准确度均高于单项检测，有统计学差异（P＜0.05）。kappa 检验显示：PCT 与血培养结果的一致性尚可（kappa 值=0.708，P＜0.001）；CRP 与血培养结果的一致性尚可（kappa 值=0.557，P＜0.001）；联合检测与血培养结果的一致性良好（kappa 值=0.899，P＜0.001）。
结论 PCT 及 CRP 联合检测在新生儿败血症诊断中具有较高的应用价值，为临床鉴别诊断提供参考依据，大大降低误诊率及漏诊率，值得推广应用。

PU-1112

脑出血患者血清 SBDP145 与格拉斯哥昏迷、mRS 评分的相关性分析

王虹霏、史清海
新疆军区总医院

目的 探讨 SBDP145 作为诊断高血压性脑出血疾病及评估患者病情和预后的价值。
方法 对 55 例经头颅 CT 确诊的高血压性脑出血患者进行临床资料收集，在脑出血发病后 12 小时内和入院后 10 天内及出院时连续采集静脉血作为待检测样本，采用酶联免疫吸附法进行分析血清中 SBDP145 的浓度。用格拉斯哥昏迷评分对患者临床状况进行评估，用 mRS 评分（改良 Rankin 评分量表）评估存活患者出院后两个月的恢复情况。
结果 SBDP145 诊断脑出血的最佳截止值是 1.54ng/ml[ROC 分析曲线下面积 0.98(95% CI,(0.826 - 1),p＜0.001],入院时精神表现正常患者（格拉斯哥昏迷评分 15 分）与健康体检者相比,血清中 SBDP145 升高,平均血清 SBDP145 水平为 0.45ng/ml，健康体检者平均血清 SBDP145 水平为 0.23ng/ml。与格拉斯哥昏迷评分相比，患者发病 12h 内血清中 SBDP145 的水平与其成显著相关性（相关系数 0.78，p＜0.001），患者出院前血清中 SBDP145 的水平与 mRS 评分也有相关性（相关系数 0.568，p＜0.05）。
结论 SBDP145 可作为诊断脑出血疾病的特异性的生物标志物，并可作为初始评估患者病情的客观指标协助临床医生评估入院患者的病情。

PU-1113

甲亢性肝病患者血清检验指标改变的临床价值及检出率分析

周毅君
资阳市乐至县人民医院

目的 探讨甲亢性肝病患者血清检验指标改变的临床价值及检出率。
方法 抽取 50 例甲亢性肝病患者，作为观察组，均在 2019 年 10 月至 2020 年 10 月期间到我院接受治疗。并选择同期 50 例甲亢患者作为对照组，均进行血清指标检测。将两组患者的检查结果和并发症情况进行比较分析。
结果 在观察期间，观察组的并发症发生情况与对照组相比，呈现出更高的趋势（P<0.05）；在血清指标的比较中，观察组患者的 TT3、TT4、FT3、FT4、TSH 的数值较对照组，均有着明显的差异（P<0.05）。
结论 在甲亢性肝炎患者的检查中，血清指标的变化较明显，可通过此种方式对病情进行早期的诊断，更好对疾病进行控制，防止病情的进一步恶化，可在临床进行应用推广。

PU-1114

STAT5b 及其磷酸化与胃癌的相关性研究

孙涛
山东第一医科大学第一附属医院（山东省千佛山医院）

目的 信号转导和转录激活蛋白 5(signal transduction and transcriptional activation protein 5，STAT5)，被认为在多种肿瘤的发生发展中起重要作用，本研究旨在检测胃癌组织 STAT5b、pSTAT5b 的表达，并分析二者与胃癌临床参数及胃癌预后的关系。
方法 选取 92 例初诊的原发性胃癌患者作为研究对象, 免疫组化法检测患者胃癌组织中 STAT5b、pSTAT5b 的表达，并分析二者与胃癌患者临床病理参数的相关性。
结果 STAT5b 及 pSTAT5b 表达与胃癌 TMN 分期、T 值、N 值、临床分期和淋巴结是否转移均有相关性。
结论 STAT5b 可能通过其活性形式 pSTAT5b，影响胃癌的发生发展。

PU-1115

血清抗 p53 与抗 PTEN 自身抗体联合检测在原发性肝癌诊断中的研究

孙晓彤
大连市中心医院

目的 探讨 p53 及 PTEN 两种肿瘤相关抗原是否可作为 HCC 诊断的生物标志物，以及二者联合 AFP 检测在 HCC 中的诊断价值。
方法 采用原核表达技术获取 PTEN 蛋白，用镍柱层析法纯化 PTEN 蛋白；通过 SDS-PAGE（sodium dodecyl sulfate-polyacrylamide gel electrophoresis，十二烷基硫酸钠聚丙烯酰胺）凝胶电泳鉴定 p53 蛋白和 PTEN 蛋白；采用间接酶联免疫吸附实验（enzyme linked immunosorbent assay，ELISA）检测实验组和对照组血清标本中抗 p53 及抗 PTEN 自身抗体；采用电化学发光免疫测定（electrochemiluminescence immunoassay，ECLIA）检测各组血清标本中 AFP 浓度；通过 ROC 曲线计算 和对照组特征曲线下的面积（AUC），运用灵敏度和特异度来评估单个抗 TAA 自身抗体、抗 p53 和抗 PTEN 自身抗体及 AFP 联合检测对 HCC 的诊断价值。

结果 抗 p53 和抗 PTEN 自身抗体单独检测，阳性率很低；抗 p53 和抗 PTEN 自身抗体联合检测，阳性率由抗 p53 自身抗体 14.8%、抗 PTEN 自身抗体 21.3%升高至抗 p53 联合抗 PTEN 自身抗体 24.6%，灵敏度升高至 24.6%。特异度由 97.9%降低至 96.9%；二者与 AFP 三者联合检测时，阳性率由 24.6%升高至 69.3%，灵敏度由 24.6%升高至 69.3%，特异度由 96.9%降低至 62.5%。
结论 单个抗 TAA 自身抗体检测在 HCC 中的阳性率较低，p53 联合 PTEN 两种肿瘤相 关抗原的自身抗体检测能够提高 HCC 检测的阳性率；二者再联合 AFP 检测 HCC，HCC 检测的阳性率较高，对 HCC 具有一定的免疫学诊断价值。

PU-1116

血清 KL-6，PIVKA-Ⅱ表达水平在胰腺癌诊断中的应用价值研究

邢瑞青、彭道荣、刘杨
空军军医大学西京医院

目的 探讨血清异常凝血酶原（PIVKA-Ⅱ）,涎液化糖链抗原（KL-6）对胰腺癌的诊断价值。
方法 纳入 2020 年 1 月---2020 年 5 月来空军军医大学第一附属医院就诊的胰腺癌患者 49 例，胰腺炎患者 44 例，健康对照者 42 例。分别比较三组血清 CA199，PIVKA-Ⅱ，KL-6 表达水平。绘制 ROC 曲线评价 CA199，PIVKA-Ⅱ，KL-6 对胰腺癌的诊断价值。计算分析单一指标与联合检测对于胰腺癌的诊断价值。
结果 胰腺癌组血清 CA199，PIVKA-Ⅱ，KL-6 水平均显著高于健康对照组、胰腺炎组，差异具有统计学意义（U=263.000，Z=-6.098，P=0.000; U=1006.500，Z=-5.010，，P=0.004; U=299.500，Z=-5.808，，P=0.000; U=482.000，Z=-4.587，P=0.000；U=1972.000，Z=-2.540, P=0.003；U=667.500，Z=-3.159，P=0.002）。胰腺炎组与健康对照组之间无统计学差异(U=693.000，Z=-1.996，P=0.460；U=576.000，Z=-3.090，P=0.650; U=482.500，Z=-3.815，P=0.320)。

PU-1117

抑郁症患者免疫功能紊乱的相关研究

席倩
四川省医学科学院·四川省人民医院

目的 探讨血清免疫球蛋白（IgA、IgM、IgG）、补体（C3、C4）以及外周血 T 淋巴细胞亚群（CD3+、CD4+、CD8+、CD4/CD8）水平与抑郁症的相关关系。
方法 测定血清免疫球蛋白、C3、C4 以及外周血 T 淋巴细胞亚群的水平，分析并比较病例组与健康对照组以及不同性别、临床症状抑郁症患者之间免疫相关成分的水平。
结果 ①与健康对照组相比，抑郁症患者的血清 IgM 水平及外周血 CD4+细胞数和 CD4/CD8 比值明显升高，而血清 C3 水平降低；②男性抑郁症患者与正常男性相比，其血清 IgM 和外周血 CD4+细胞数升高，血清 IgG、C3 降低；女性抑郁症患者与正常女性相比，其血清 IgM 和外周血 CD4+细胞数升高；不同临床症状的抑郁症患者间无明显差异；③Logistic 多因素分析显示血清 C3、外周血 CD4+细胞数的改变与抑郁症关系密切，血清 IgM 水平改变可能与抑郁症相关。
结论 血清 C3 和外周血 CD4+细胞数是抑郁症的独立影响因素，他们可能作为抑郁症的监测指标。抑郁症患者血清免疫球蛋白 IgM、IgG、C3 和外周血 T 淋巴细胞亚群 CD4+水平的改变，提示抑郁症患者存在体液免疫异常和细胞免疫激活，同时抑郁症患者可能存在慢性免疫炎性损伤，进一步证实了抑郁症与免疫功能紊乱密切相关。

PU-1118

肝素结合蛋白对急性胆囊炎的诊断价值研究

郭斌[1]、何仁栋[2]
1. 川北医学院附属医院
2. 川北医学院

目的 评估肝素结合蛋白（HBP）在局部炎症疾病急性胆囊炎中的诊断价值。
方法 选取 58 例局部炎症疾病急性胆囊炎患者作为实验组，并以同期 29 例健康体检者为对照组。采用免疫荧光干式定量法测定 HBP 水平，并通过全自动化学发光免疫分析仪和全自动血细胞分析仪分别测定 PCT 和中性粒细胞水平。正态分布的定量资料采用 T 检验，非正态分布定量资料采用 Mann-Whitney U 检验，定性资料采用 χ2 检验，两变量间相关性采用 Spearman 相关分析，建立受试者工作特征(ROC) 曲线评估各指标诊断效能。
结果 局部炎症疾病急性胆囊炎患者和健康体检者 HBP 水平分别为(16.28±20.74)ng/ml、(6.48±1.39) ng/ml，PCT 水平分别为(0.11±0.28) ng/ml、(0.05±0.01) ng/ml，中性粒细胞绝对值分别为(4.62±2.83) ×109/L、(3.83±0.98) ×109/L。局部炎症急性胆囊炎 HBP 升高率明显高于 PCT 升高率（χ2=16.06，p=0.000）。同时急性胆囊炎患者 HBP 与中性粒细胞水平呈正相关（p=0.042，r=0.267），与 PCT 无明显相关性。HBP 用于急性胆囊炎诊断时 AUC 为 0.750。
结论 HBP 可用于辅助诊断急性胆囊炎，在一定程度上弥补传统指标的不足。

PU-1119

济南地区中老年人群 HP 抗体分型分析

耿丽丽
山东第一医科大学附属省立医院

目的 了解山东地区中老年人群 HP 抗体分型的感染情况。
方法 收集 2019 年 1 月至 2020 年 2 月在山东大学附属省立医院门诊就诊和查体患者 632 例。用免疫印印记方法进行血清细胞毒（CagA-116KD）、空泡毒(VacA-91KD)、空泡毒(VacA-95KD)、尿素酶（UreB-66KD）、尿素酶（UreB-30KD）五项指标检测。用 SPSS21.0 软件分析中老年人群 HP 抗体分型感染情况。
结果 632 例血清标本中，CagA-116KD 阳性率为 43.64%，VacA-91KD 阳性率为 27.18%，VacA-95KD 阳性率为 29.18%，UreB-66KD 阳性率为 69.76%，UreB-30KD 阳性率为：30.24%。男性 CagA-116KD、VacA-91KD、VacA-95KD、UreB-66KD、UreB-30KD 阳性率分别为 26.56%、16.41%、16.41%、50.78%、21.09%，均明显低于女性的 28.46%、17.82%、19.95%、51.33%、22.87%（P 均<0.05）。CagA-116KD、VacA-91KD、VacA-95KD、UreB-66KD、UreB-30KD 阳性率以 90 以上为最低：0、0、0、40%、0；40~49 岁开始升高阳性率为：24.63%、16.04%、17.16%、48.88%、18.66%；50~59 岁持续升高阳性率为：29.53%、19.29%、20.47%、53.15%、26.38%；60~69 岁阳性率最高为：33.33%、19.05%、19.05%、53.97%、25.4%。70~79 岁开始逐渐降低阳性率为：32%、8%、12%、56%、12%没；80~89 岁人群略微降低阳性率为：29.41%、17.65%、23.53%、41.2%、17.65%。（P 均<0.05）。CagA-116KD、VacA-91KD、VacA-95KD、UreB-66KD、UreB-30KD 阳性率 I 型和 II 型阳性率分别为 63.45%和 73.26%，II 型明显高于 I 型（P 均<0.05）。
结论 山东济南地区中老年人群 HP 抗体分型检测阳性率存在性别、年龄差异，HP 抗体分型以 II 型阳性为主。血清分型抗体检测对 HP 感染的判断具有重要的价值。

PU-1120

七种肿瘤相关抗原自身抗体在非小细胞肺癌诊断中的应用

刘京萍
江苏省人民医院

目的 探讨七种肿瘤相关抗原自身抗体在非小细胞肺癌（ NSCLC）辅助诊断中的临床价值。
方法 收集 2019 年 7 月至 2019 年 12 月在南京医科大学第一附属医院就诊的 155 例 NSCLC 初诊患者作为疾病组，同时选择 79 例肺部良性疾病患者（BLD）及 95 例健康体检者（HC）作为对照。采用 ELISA 法检测各组血清中七种肿瘤相关抗原自身抗体的水平，同时 ELICA 法检测癌胚抗原（CEA）、细胞角蛋白片段 19（CYFRA21-1）和神经元特异性烯醇化酶（NSE）水平，绘制 ROC 曲线分析并比较不同标志物对 NSCLC 的诊断效能。
结果 肺癌组 7 种自身抗体中有 6 项（p53、SOX2、GAGE7、GBU4-5 和 CAGE）的血清水平在 NSCLC 组均分别高于 BLD 组（p53：P=0.000；SOX2：P=0.000；GAGE7：P=0.000；GBU4-5：P=0.000；CAGE：P=0.000）和 HC 组（p53：P=0.000；SOX2：P=0.000；GAGE7：P=0.018；GBU4-5：P=0.000；CAGE：P=0.000），差异有统计学意义，MAGE A1 项在 NSCLC 组与 BLD 组间的差异有统计学意义（P=0.000）、与 HC 组无差异（P=0.102）。七种肿瘤相关抗原自身抗体联合检测诊断初诊 NSCLC 患者敏感性为 71.61%，特异性为 87.36%，AUC 为 0.795，其敏感性和 AUC 均高于传统肿瘤标志物。七种自身抗体联合检测在 NSCLC 组的阳性率明显高于 BLD 组($\chi2 = 7.293$，P=0.007) 和 HC 组($\chi2 = 8.411$，P=0.004)。
结论 七种肿瘤相关抗原自身抗体联合检测可作为 NSCLC 患者辅助诊断的指标，并且联合 CEA、NSE 和 CYFRA21-1 可以提高 NSCLC 患者的诊断敏感度。

PU-1121

血浆外泌体糖蛋白作为结直肠癌诊断标志物的应用价值

孙祖俊、李冬
上海市同济医院(同济大学附属同济医院)

目的 通过糖蛋白组学研究初步筛查正常对照组和结直肠癌患者血浆外泌体中差异表达的糖蛋白，并探讨其在结直肠癌诊断中的临床应用价值。
方法 提取并鉴定 3 例正常对照和 3 例肠癌患者组织中外泌体，用 O18 标记 N-糖基化位点 PNG F，用 LTQ-Orbitrap Elite mass spectrometer 对蛋白 N-糖基化位点进行筛选，然后进行生信分析并鉴定出表达差异显著的糖蛋白，最后用酶联免疫吸附实验（ELISA）进行验证。
结果 我们发现结直肠癌患者组织外泌体中包含更多的糖蛋白和脂质，初步鉴定纤维蛋白原 β 链（Fibrinogen beta chain，FGB）和 β2 糖蛋白 1（Beta-2-glycoprotein 1，β2-GP1）在结直肠癌患者的表达水平显著高于正常对照组；ELISA 验证结果发现，30 例结直肠癌患者血浆外泌体中 FG-β 和 β2-GP1 表达也显著高于正常对照组；FGB 和 β2-GP1 对结直肠癌具有较高的诊断效能，且优于血清学标志物癌胚抗原 CEA 或糖类抗原 CA19-9。
结论 血浆外泌体 FGB 和 β2-GP1 可能成为结直肠癌患者早期诊断、治疗监测及预后判断的潜在生物标志物，具有重要的临床应用价值。

PU-1122

外周血细胞因子检测与高血压脑出血疾病的相关性研究

邓中华[1]、孟雨婷[1]、张冉[2]、黎村艳[1]、谭超超[1]、曹友德[1]
1. 湖南省人民医院（湖南师范大学附属第一医院）
2. 湖南师范大学医学院

目的 分析外周血细胞因子含量与高血压脑出血疾病的相关性，为高血压脑出血疾病的发生发展机制研究及临床诊治提供研究基础和依据。
方法 收集 2020 年 1 月-2021 年期间湖南省人民医院由高血压引起的急性脑出血患者 91 例为高血压脑出血组，患有高血压疾病但无脑出血的患者 50 例为对照组。所有患者空腹采集外周血分离血浆，采用直接夹心法原理，以荧光发光微球作为固相偶联的细胞因子抗体与生物素标记的细胞因子配对抗体和样本中的细胞因子结合形成三明治复合物，再与加入藻红蛋白标记的链霉亲和素（SA-PE），利用免疫学分析方法与流式细胞荧光强度分析相结合，测定外周血中的 IL-6、IL-10、IL-4、IL-17、IFN-γ 和 TNF-α 六项细胞因子含量。比较高血压脑出血组和单纯高血压组患者之间各细胞因子含量的差异；对高血压脑出血组患者进一步按照 GCS 昏迷评分分为三组，比较各不同 GCS 评分组之间各细胞因子含量的差异。
结果 高血压脑出血患者外周血中 IL-6、IL-10、IL-4、IL-17、IFN-γ 和 TNF-α 的浓度高于对照组浓度，P＜0.05 差异有统计学意义。不同 GCS 昏迷评分组之间细胞因子 IL-6、IL-10、IL-4、IL-17、IFN-γ 和 TNF-α 的差异不具有统计学意义，P>0.05。
结论 高血压性脑出血患者血清中的细胞因子 IL-6、IL-10、IL-4、IL-17、IFN-γ 和 TNF-α 浓度发生显著变化，细胞因子可以辅助高血压疾病的进展诊断。血清中的细胞因子 IL-6、IL-10、IL-4、IL-17、IFN-γ 和 TNF-α 浓度与住院 GCS 评分，病人年龄没有相关性。

PU-1123

Prediction model based on the combination of cytokines and lymphocyte subsets for prognosis of SARS-CoV-2 infection

Ying Luo、Feng Wang、Ziyong Sun
Department of Laboratory Medicine, Tongji Hospital, Tongji Medical College, Huazhong University of Science and Technology, Wuhan, China

Background There are currently rare satisfactory markers for predicting the death of patients with coronavirus disease 2019 (COVID-19). The aim of this study is to establish a model based on the combination of serum cytokines and lymphocyte subsets for predicting the prognosis of the disease.
Methods A total of 739 participants with COVID-19 were enrolled at Tongji hospital from February to April 2020 and classified into the fatal (n=51) and survived (n=688) group according to the patient's outcome. Cytokine profile and lymphocyte subset analysis was performed simultaneously.
Results The fatal patients exhibited a significant lower number of lymphocytes including B cells, CD4+ T cells, CD8+ T cells and NK cells and remarkably higher concentrations of cytokines including interleukin-2 receptor, interleukin-6, interleukin-8 and tumor necrosis factor-α on admission compared to the survived subjects. A model based on the combination of interleukin-8 and the numbers of CD4+ T cells and NK cells showed good performance in predicting the death of patients with COVID-19. When the threshold of 0.075 was used, the sensitivity and specificity of the prediction model were 90.20% and 90.26%, respectively. Meanwhile, interleukin-8 was found to have potential value in predicting the length of hospital stay until death.

Conclusions Significant increase of cytokines and decrease of lymphocyte subsets are found positively correlated with in-hospital death. A model based on combination of three markers provides an attractive approach to predict the prognosis of COVID-19.

PU-1124

壳多糖酶 3 样蛋白 1 在乙肝相关肝脏疾病的鉴别诊断价值

黎村艳[1]、夏婷婷[2]
1. 湖南省人民医院
2. 湖南师范大学医学院

目的 探讨 CHI3L1 蛋白在乙肝相关疾病中表达浓度差异及其辅助乙肝相关肝脏疾病鉴别诊断价值。
方法 本研究纳入 2020 年 11 月——2021 年 3 月在湖南师范大学附属第一医院就诊的慢性乙型肝炎患者 42 例、乙肝相关肝硬化患者 59 例、乙肝相关肝癌患者 72 例及同期入院体检的健康人 52 例作为健康对照组，用 ELISA 检测血清 CHI3L1 蛋白浓度。正态分布数据多组间比较采用方差分析，两两比较采用独立样本 t 检验。
结果 CHI3L1 蛋白浓度随着乙肝相关肝脏疾病进展而升高，与健康对照组相比，慢性乙型肝炎组、乙肝相关肝硬化组和乙肝相关肝癌组的血清 CHI3L1 蛋白浓度升高（P 值均＜0.01）。与慢性乙型肝炎组相比，乙肝相关肝硬化组和乙肝相关肝癌组的血清 CHI3L1 蛋白浓度升高（P 值均＜0.01）。与乙肝相关肝硬化组相比，乙肝相关肝癌组的血清 CHI3L1 蛋白浓度升高(Z=-4.023；P 值均＜0.01）。将乙肝相关肝癌组按是否伴肝硬化分为乙肝相关肝癌伴肝硬化组（45 例）及乙肝相关肝癌不伴肝硬化组（27 例），前者血清 CHI3L1 蛋白浓度为 278.74（119.14，429.90）（ng/mL），后者血清 CHI3L1 蛋白浓度为 268.22（132.81，567.16）（ng/mL）。乙肝相关肝癌伴肝硬化组的血清 CHI3L1 蛋白浓度高于乙肝相关肝硬化组（Z=-3.461；P＜0.01）。CHI3L1 蛋白鉴别诊断乙肝相关肝癌与乙肝相关非肝癌肝脏疾病的 cut off 值为 208.67ng/mL，AUC 为 0.829，95%置信区间为[0.768，0.890]，P＜0.01，敏感度为 0.639，特异性为 0.895。
结论 CHI3L1 蛋白浓度随着乙肝肝脏疾病进展而升高，提示 CHI3L1 蛋白可以作为乙肝相关肝脏疾病患者病情监测、进展、预后生物标志物。CHI3L1 蛋白可作为乙肝相关肝癌潜在鉴别诊断生物标志物。

PU-1125

循环肿瘤细胞(CTCs)检测在肺癌诊断中的研究进展

冯宇欣
沈阳金域医学检验所有限公司

目的 目前临床常用于肺癌检查的方法存在创伤性大、影响诊断价值因素多、不利于反复活检等弊端。因此, 对肺癌患者采用无创、快捷、便宜、有效的检测手段进行检查是非常重要的。
方法 收集沈阳某医院 48 例肺癌患者、31 例肺部良性疾病患者和 19 例健康对照者作为研究对象，利用改良之后的流式细胞检测技术检测外周血循环肿瘤细胞水平，通过荧光标记单抗流式细胞术建立饱和曲线法，确定最适荧光抗体使用浓度；受试者工作特征曲线确定其诊断临界值。电化学发光法同步检测血清癌胚抗原和角质蛋白 19 片段水平，并比较这些肿瘤标志物的阳性率。并比较这些肿瘤标志物的阳性率。受试者工作特征曲线初步分析外周血循环肿瘤细胞的检测在肺癌早期诊断、治疗指导、疗效评估及预后的应用价值。
结果 饱和曲线法确定了荧光抗体最适使用浓度为 79 ng/μL。受试者工作特征曲线分析显示，外周血循环肿瘤细胞最佳诊断临界值为 209 个/mL，对应的敏感度为 52.60%，特异度为 79.88%。肺癌患者外周血循环肿瘤细胞阳性率为 59.40%，显著高于血清癌胚抗原和角质蛋白 19 片段（37.46%和 54.21%）；外周血循环肿瘤细胞水平在肺癌早期即较肺部良性疾病患者和健康体检者明显升高

（P<0.04），且在特异度保持优势的情况下，灵敏度较癌胚抗原和角质蛋白 19 片段单个指标高 56%左右；48 例肺癌患者血清癌胚抗原和角质蛋白 19 片段水平为双阴性，但外周血循环肿瘤细胞检测灵敏度和特异度仍分别达 75.32%和 87.33%。
结论 循环肿瘤细胞检测对肺癌诊断具有较高的灵敏度和准确度，存在重要的临床应用价值，理论上可以使用基于肿瘤细胞大小的分离法 (isolation by size of epithelial tumor cells, ISET) 对循环肿瘤细胞进行富集，这将使未来对高危患者早期筛查协助诊治成为可能。

PU-1126

糖尿病视网膜病变患者 HCY 与炎性因子水平的分析

刘辉
中日友好医院

目的 探讨 2 型糖尿病（Type 2 Diabetes Mellitus，T2DM）患者血清同型半胱氨酸 (Homocysteine，HCY)及炎性因子水平与糖尿病视网膜病变(Diabetic Retinopathy，DR)的发生发展的相关性。
方法 选取 2019 年 2 月至 2020 年 4 月中日友好医院内分泌科和眼科 2 型 DM（T2DM）住院患者 272 例，其中单纯 T2DM 组 146 例，DR 组 126 例 。采用化学发光法检测血清炎性因子：肿瘤坏死因子 α（Tumor Necrosis Factor -α,TNF-α）、白介素 6（Interleukin 6,IL-6）水平，两组间比较使用 Mann- Whitney U 检验。采用循环酶法检测 HCY 水平，两组间比较使用独立样本 t 检验。采用 Logistic 回归分析探讨 DR 患者发病的风险因素 。
结果 DR 组 HCY、TNF-α、IL-6 水平明显高于 T2DM 组（P<0.05）。HCY 是发生 DR 的独立危险因素。
结论 DR 患者血清 HCY、TNF-α、IL-6 水平与 DR 的发生存在相关性，提示 HCY、TNF-α、IL-6 对于评估 DR 的发病风险具有重要意义。

PU-1127

基质金属蛋白酶（MMPs）与动脉粥样硬化的新进展

俞晓晨[1]、孙妍[2]
1. 哈尔滨医科大学附属第一医院
2. 黑龙江省哈尔滨市医科大学附属第一医院

目的 了解基质金属蛋白酶的性能，为其在临床上的应用提供可能。
方法 基质金属蛋白酶（Matrix metalloproteinases, MMPs）是一组具有相似结构和功能的蛋白水解酶。MMPs 通常以无活性的酶原形式分泌，在激活因子的作用下被激活。MMPs 的活性由总蛋白酶抑制剂，组织抑制因子（TIMPs）加以调节。
结果 不同 MMPs 对动脉粥样硬化的作用不同。
结论 使用 MMP 特异的抑制剂来抑制 MMP 的有害作用，这也是将来治疗动脉粥样硬化的一个新靶点。

凝血四项指标及肿瘤标志物诊断乙型肝炎相关肝癌的检验分析

兰隆琴
资阳市雁江区中医医院

目的 探讨凝血四项结合肿瘤标志物指标检测对乙型肝炎相关肝癌的诊断价值。
方法 纳入本院 2018 年 6 月至 2019 年 6 月收治 50 例乙型肝炎相关肝癌患者建立研究组，同期纳入 50 例良性肝病患者建立对照组。两组患者均进行凝血四项结合肿瘤标志物指标检测，对比分析检测结果。
结果 研究组患者 APTT、PT 以及 TT 指标水平相比对照组明显更高（P<0.05）；研究组 Fib 水平相比对照组明显更低（P<0.05）；研究组患者 VEGF、AFP 以及 AFU 指标相比对照组明显更高（P<0.05）。
结论 临床当中检测凝血四项以及肿瘤标志物对于乙型肝炎相关性肝癌的诊断具有积极意义。

PU-1130

Peritoneal resident macrophages in mice with MLL-AF9-induced acute myeloid leukemia show an M2-like phenotype

Chong Chen
Tianjin Medical University Cancer Institute and Hospital

Background Acute myeloid leukemia (AML) is a devastating disease with a poor prognosis. Innate and adaptive immunity is closely related to the progression of leukemia. Macrophages within the leukemic microenvironment have a tendency toward a leukemia-permissive phenotype. However, the characteristics of macrophages in leukemia, including their kinetics, gene expression, and functional roles have not been fully illuminated.
Methods In the current study, the characteristics of peritoneal resident macrophages, whichwere large peritoneal macrophages (LPM), from mice with mixed lineage leukemia (MLL)-AF9-induced AML were investigated. AML-associated large macrophages (AML-LPM) were gated as F4/80high MHC-II- by flow cytometry. To further investigate the relationship between the leukemic microenvironment and macrophage characteristics, RNA sequencing was performed. Meanwhile, apoptosis, killing ability, and phagocytic function of peritoneal resident macrophages in MLL-AF9-induced AML were assessed..

Result The results suggested that AML microenvironment was found to affect the kinetics and morphology of peritoneal resident macrophages. The results of RNA sequencing suggested that the gene expression of AML-LPMs differed significantly from that of normal LPMs. The AML microenvironment also had effects on the apoptosis, killing ability, and phagocytic function of peritoneal resident macrophages.
Conclusions These data suggest that peritoneal resident macrophages in mice with AML induced by MLL-AF9 show an M2-like phenotype. The reversal of macrophage polarization in the leukemic microenvironment may potentially enhance the immunotherapeutic effect in AML.

PU-1131

肺泡灌洗液肝素结合蛋白在细菌性肺炎诊断与鉴别诊断中的临床价值

毕惠娟[1]、沈继录[2]、方文浩[2]、吴珊[3]、尹丽娜[2]、徐倩[2]、薛莹[2]
1. 安徽医科大学第四附属医院检验科
2. 安徽医科大学第四附属医院检验科
3. 安徽医科大学第四附属医院肿瘤科

目的 探讨支气管肺泡灌洗液（Bronchoalveolar lavage fluid, BALF）中肝素结合蛋白（Heparin binding protein, HBP）在细菌性肺炎诊断与鉴别诊断中的临床价值。
方法 选取 2019 年 1 月至 2021 年 1 月安徽医科大学第四附属医院呼吸科收治的 88 例肺炎患者，其中细菌性肺炎 48 例，非细菌性肺炎 40 例，另选取同期 40 例非感染性肺部疾病患者为对照组，检测并比较 3 组患者 BALF 中 HBP、降钙素原和 IL-6 水平，采用受试者工作特征（ROC）曲线分析上述各指标对细菌性肺炎的诊断和鉴别诊断效能。
结果 细菌性肺炎患者 BALFHBP、IL-6 水平均较非细菌性肺炎及对照组明显升高，差异有统计学意义（P<0.05）。ROC 曲线结果显示 HBP 及 IL-6 在细菌性肺炎早期诊断中 AUC 分别为 0.930、0.893，灵敏度分别为 88.5%、82.7%，特异度分别为 92.5%、92.5%，二者联合检测 AUC 为 0.942，灵敏度为 94.2%，特异度为 95.0%。ROC 曲线结果显示 HBP、IL-6 在鉴别细菌性肺炎与非细菌性肺炎时 AUC 分别为 0.890、0.777，灵敏度分别为 80.8%、71.2%，特异度分别为 91.7%、75.0%，二者联合检测 AUC 为 0.902，灵敏度为 96.2%，特异度为 79.2%。
结论 肺泡灌洗液 HBP 及 IL-6 在细菌性肺炎的早期诊断及鉴别诊断中，具有很好的临床价值，二者联合检测价值更优。

PU-1132

血清 CCL1 在肺癌患者外周血的表达及意义

程娟、陈礼文、唐伟、姚杰、周强
安徽医科大学第二附属医院

目的 探讨血清趋化因子 1（Chemokine C-C motif ligand 1，CCL1）在肺癌早期诊断的临床应用价值。
方法 采用酶联免疫吸附法（ELISA）检测 60 例肺癌初诊患者和 36 例健康体检人群血清中 CCL1 的表达水平并分析两组的差异，并采用电化学发光法检测两组肺癌肿瘤标志物（CEA、NSE、SCC、CYFRA211、Pro-GRP）水平。收集肺癌组所有患者的临床资料，包括年龄、病理类型、分期、转移情况。流式细胞术检测肺癌组和对照组 PBMC 中 CCR8+FoxP3+T 细胞占 CD4+T 细胞的比例。
结果 CCL1 和 CEA、NSE、SCC、CYFRA211、Pro-GRP 在肺癌患者的表达水平明显高于健康对照组（P<0.05）；受试者工作曲线显示 CCL1 表达水平检测肺癌的曲线下面积是 0.63，灵敏度是

0.59，特异度是 0.61；CCL1 的表达与肺癌患者的年龄、病理类型等无明显关系（P＞0.05）,但与 TNM 分期、有无转移有关（P<0.05）；肺癌组 PBMC 中 CCR8+FoxP3+T 细胞占 CD4+T 细胞的比例明显高于对照组（P<0.05）。

结论 CCL1 在肺癌患者血清中显著高表达，CCL1 的检测对肺癌的诊断及转移有潜在的临床价值。肺癌患者 CCL1 表达升高，可能与 CCL1 促进 T 细胞向抑制性 T 细胞的转化，免疫监视下降从而导致肺癌的发生和转移有关。

内蒙某三甲医院 2015-2020 年 HIV 检测情况分析

薄晋魏
内蒙古科技大学包头医学院第一附属医院

目的 根据 2015-2020 年艾滋病病毒（ＨＩＶ）检测结果，分析 ＨＩＶ 检测结果的判断和艾滋病的流行趋势。

方法 用化学发光法对临床样本血清进行 ＨＩＶ 抗原抗体联合测定，按检测规范对有反应的样本进行复检和患者基本信息采集，由疾病预防控制中心（ＣＤＣ）进行ＨＩＶ抗体确证试验。

结果 2015-2020 年该院累计进行 ＨＩＶ 检测２４５２２６例，初筛有反应性６６３例（初筛有反应性率２．７０‰），确证阳性４４９例（确证阳性率１．８３‰），确证阴性１３６例（初筛假阳性率０．５５‰），确证不确定报告７８例（可疑阳性率０．３２‰）。五年内确证阳性病例主要为来源于皮肤（１８４例）、急诊（５８例）、呼吸（５３例）及消化内科（２６例），年龄在２０～４０岁的男男性行为者（ＭＳＭ）２０９例。

结论 ２０～４０岁的 ＭＳＭ 是本地区艾滋病防控干预的主要人群；假阳性病例主要来源于消化内科，提示消化道类疾病可能对此检测造成干扰。

PU-1134

神经梅毒对糖尿病和高血压及高血脂的相关性

张惠林
厦门大学附属中山医院

目的 探讨神经梅毒对糖尿病、高血压及高血脂之间的相关性。

方法 采用快速血浆反应素试验和梅毒螺旋体明胶颗粒凝集试验进行梅毒血清学检测。测定脑脊液白细胞计数并检测患者脑脊液蛋白质、血液糖化血红蛋白、空腹血糖、甘油三酯、总胆固醇、脂蛋白(a)、高密度脂蛋白、低密度脂蛋白、载脂蛋白 A1 及载脂蛋白 B 等生化指标。比较神经梅毒患者和非感染性中枢神经系统疾病患者的糖尿病、高血压及高血脂相关指标。

结果 神经梅毒的糖尿病患病率、空腹血糖及糖化血红蛋白水平与非感染性中枢神经系统疾病差异无统计学意义;神经梅毒的高血压患病率、收缩压及 3 级高血压患者比例分别为 45.00%(36/80) 138(117,150)mmHg 和 17.50%(14/ 80),均高于非感染性中枢神经系统疾病(P<0.05);神经梅毒高脂血症患病率、总胆固醇、低密度脂蛋白和载脂蛋白 B 分别为 20.00%(16/80)、4.32(3.77,5.26)mmol/L、3.03(2.48,3.81)mmol/L 和 0.87(0.75,1.08)mmol/L,均高于非感染性中枢神经系统疾病患者(P<0.05)。

结论 神经梅毒可能导致代谢紊乱,对于神经梅毒患者,应及时关注未来可能发生的代谢紊乱,进行及早干预,以免延误治疗。

PU-1135

梅毒螺旋体特异性 IgM 抗体在梅毒患者血清治愈判断中的应用

童曼莉
厦门大学附属中山医院

目的 探讨梅毒螺旋体特异性 IgM（Tp-IgM）抗体在患者血清治愈判断中的应用价值。
方法 厦门大学附属中山医院诊治的 1035 例梅毒确诊患者，经治疗后每 3 个月复查甲苯胺红不加热血清反应素试验（TRUST），首次 TRUST 转阴时，采用荧光密螺旋体抗体吸收试验（FTA-ABS）检测血清治愈患者 Tp-IgM 抗体，阳性者采用胶体金法 和梅毒螺旋体颗粒凝集试验（TPPA）验证，并结合其临床资料进行分析。
结果 在 2 年的血清学随访过程中，共入组 126 例梅毒血清治愈患者，其中 4 例 FTA-ABS-IgM 抗体阳性，经胶体金法和 TPPA 验证后有 3 例 Tp-IgM 阳性。
结论 部分临床血清治愈的梅毒患者可能有传染性，在临床血清治愈判断中除了快速血浆反应素试验外，有必要加入 Tp-IgM 指标。

PU-1136

Treponema pallidum Dysregulates Monocytes and Promotes the Expression of IL-1b and Migration in Monocytes Through the mTOR Signaling Pathway

Lili Liu
Zhongshan Hospital, School of Medicine, Xiamen University

Objective This study aims to analyze the distribution of monocyte subsets in syphilis patients and the effect of Tp on monocyte functions to explore the pathogenesis of syphilis.
Methods Flow cytometry was employed to detect monocyte subsets.
Results Tp infection led to an increase in the proportion of CD14++CD16+ monocytes and a decrease in the proportion of CD14++CD16- monocytes. In addition, Tp promoted monocyte (THP-1) CD14 and CD16 expression in vitro, induced the expression of IL-1b and TNF-a in a dose-dependent manner and promoted the migration and autophagy of monocytes.
Conclusion Tp abnormally regulates monocyte subsets and promotes migration, autophagy, and the expression of IL-1b and TNF-a in THP-1 cells. Meanwhile, the mTOR affected the expression of IL-1b and migration in Tp-exposed THP-1 cells. This study is important as it sheds light on the mechanism by which monocytes interact with Tp during infection.

PU-1137

Immunization with nontreponemal antigen alters the course of experimental syphilis in the rabbit model

kun gao、kun gao
厦门大学附属中山医院

Objective The role of nontreponemal antibodies in the Treponema pallidum infection course is unclear.
Methods We investigated the effect of immunization with nontreponemal antigen on T. pallidum-challenged rabbits.

Results Nontreponemal antigen was injected intravenously into rabbits in the nontreponemal group (n = 12) to elicit antibodies (≥1:64), and normal saline-injected rabbits were used as control (n = 12).
Then, rabbits were challenged with 106 T. pallidum per site along their back. Lesion development was observed, and the injection sites were biopsied for mRNA analysis every week. Six rabbits from both groups were euthanized at 14 d and 28 d.
IL-2 and IFN-γ mRNA expression in the nontreponemal group was significantly higher than that in the control group at 7 d and 14 d post-challenge.
ConclusionImmunization with nontreponemal antigen altered the syphilis course in rabbits, resulting in delayed maximal lesion diameter and ulcer development, but it could not inhibit the spread of T. pallidum from primary lesion sites to viscera.

PU-1138

应用 ROC 曲线分析降钙素原在急性下呼吸道感染中的诊断价值

贾蔚、尹利民
昆明市第一人民医院

目的 探讨降钙素原在急性下呼吸道感染中的诊断价值。
方法 分别测定 126 例急性下呼吸道感染患者和 135 例健康志愿者的降钙素原水平，应用 ROC 曲线分析降钙素原诊断急性下呼吸道感染的最佳阈值、灵敏度、特异度。
结果 急性下呼吸道感染组降钙素原水平明显高于对照组，差异有统计学意义(Mann-Whitney U =1590.00，P=0.000)。ROC 曲线分析降钙素原诊断急性下呼吸道感染的曲线下面积为 0.907，灵敏度 86.5%，特异度 81.5%。**结论** 降钙素原在急性下呼吸道感染的诊断中具有较高的灵敏度和特异度，是可以有效指导临床治疗的细菌感染生物标志物。

PU-1139

探讨 ANA 与抗 ENA 抗体联合检测对诊断自身免疫病的应用价值

徐细兰
景德镇市第一人民医院

目的 探讨抗核抗体（ANA）与抗可提取性核抗原抗体（抗 ENA 抗体）联合检测对诊断自身免疫病的应用价值。
方法 选取 2018 年 1 月至 2020 年 9 月本院接收的 63 例自身免疫病患者和 60 例健康体检者为研究对象，自身免疫病设为研究组，健康体检者设为对照组，对两组实施 ANA、抗 ENA 抗体检测，对比分析其检测结果。
结果 经测定，研究组的 ANA 阳性率显著高于对照组，比较差异存在统计学意义（P<0.05）；在 ANA、抗 ENA 抗体检测中，研究组患者均出现了不同程度的阳性率，且 ANA、抗 ENA 抗体检测对 SLE 的敏感性最高；对照组的检测结果均为阴性。
结论 从 ANA 与抗 ENA 抗体联合检测来看，在本次研究中，ANA 在 SLE、SS 和 RA 方面有着较高的阳性率，且大部分患者的 ANA 在 SLE、SS 和 RA 方面有着较高的阳性率，ANA 滴度都在 1:320 以上。抗 ENA 抗体方面，抗 Sm 抗体为 SLE 的标志性抗体，抗 SS-A 抗体为 SS 的标志性抗体，Scl-70 则为 PSS 的标志性抗体。通过分析这方面的标志性抗体，能在 ANA 筛查的基础上进一步明确患者的自身免疫病类型。这对指导临床制定针对性治疗方案具有重要意义。此外，在自身免疫病患者的诊治过程中，ANA 与抗 ENA 抗体联合检测也能作为监测其诊治效果的方法，以实时掌握患者的病情变化情况，使其在临床中能获得最佳的治疗。虽然本次研究在结果方面获得了良好的应用

效果，但由于样本量少、研究周期短等因素，导致研究依旧存在一定的不足，对此，后续仍需进行进一步深入研究，以进一步明确 ANA 与抗 ENA 抗体联合检测的具有作用机制、诊断效果，从而为临床提供更为准确的数据。同时，建议出现自身免疫病特异症状的患者，应及时就诊，使临床进行早期诊断，并及时采用有效的治疗控制措施。在治疗过程中，自身免疫病患者应养成良好的饮食习惯，避免食用引起自身免疫反应的食物，以避免病情加重。综上所述，在自身免疫病的临床诊断中，ANA 与抗 ENA 抗体联合检测能发挥互补作用，使不同类型的自身免疫病阳性检出率提升，从而为临床制定治疗方案提供准确的指导依据，以快速控制患者的病情，减轻自身免疫病对其身心健康的影响。

PU-1140

病毒性肝炎诊断时行血常规和生化检验项目的临床价值分析

毕婧
丹东市第一医院

目的 分析病毒性肝炎诊断时行血常规和生化检验项目的临床价值。
方法 本实验开展时间确定在 2018 年 1 月到 2019 年 12 月之间，抽取该阶段临床确诊病毒性肝炎患者 80 例设为观察组，以肝活检作为金标准，选择同时期期间检查为健康的人员 80 人作为对照组，两组均开展血常规和生化检验项目，分析检测准确率、血常规检查结果以及生化检验结果。
结果 观察组检验准确率为 97.50%，对照组检验准确率为 100.00%，观察组与对照组检验准确率均较高，数据对比无统计学意义（P>0.05）。观察组淋巴细胞（39.21±6.22）%、中性粒细胞（67.89±12.34）%、白细胞计数（7.86±1.76）*109、血小板计数（103.23±60.23）*109，对照组淋巴细胞（30.87±4.56）%、中性粒细胞（53.76±10.77）%、白细胞计数（5.11±1.53）*109、血小板计数（176.34±72.34）*109，观察组淋巴细胞、中性粒细胞、白细胞计数高于对照组，血小板计数低于对照组，数据对比具有统计学意义（P<0.05）。观察组白蛋白（40.76±2.13）g/L、谷丙氨酸转氨酶（30.21±17.33）U/L、总胆红素（25.68±8.25）μmol/L、血清白蛋白/球蛋白（1.06±0.12）%，对照组白蛋白（46.77±4.32）g/L、谷丙氨酸转氨酶（112.33±54.33）U/L、总胆红素（14.11±6.12）μmol/L、血清白蛋白/球蛋白（1.69±0.23）%，观察组白蛋白、谷丙氨酸转氨酶、血清白蛋白/球蛋白低于对照组，总胆红素高于对照组，数据对比具有统计学意义（P<0.05）。
结论 病毒性肝炎诊断时行血常规和生化检验项目准确率较高，可以及时发现感染的情况，对疾病进行有效干预，可以作为疾病诊断的重要检查方式，为临床疾病诊断提供依据，并且检查操作简单便捷，在临床具有较高的普及价值。

PU-1141

健康体检中联合检测肿瘤标志物的临床价值分析

王海雪
德州市陵城区人民医院检验科

目的 探讨血清癌胚抗原（CEA）、甲胎蛋白（AFP）、总前列腺特异性抗原（t-PSA）单检和联检在肿瘤筛查中的诊断价值。
方法 采用胶乳免疫比浊法检测 358 例男性血清的 AFP、CEA、t-PSA 的含量，441 例女性血清的 AFP、CEA 的含量，分析三种肿瘤标志物在健康体检中阳性指标分布情况以及在不同性别中血清水平的差异性。
结果 799 例健康体检人群中，阳性指标 8 例（阳性率 1.00%），男性 3 例（阳性率 0.84%），女性 5 例（阳性率 1.13%）。两个指标组合阳性 2 例，其中男性 1 例经病理确诊为前列腺炎，女性 1

例经病理确诊为早期肝癌，肿瘤检出率为 0.13%（1/799）。单一肿瘤标志物来说，男性组 CEA 水平明显高于女性，组间比较有显著统计学差异（P<0.001），AFP 水平组间比较无统计学差异。
结论 对健康体检者进行多项肿瘤标志物联合检测，可弥补单项肿瘤标志物检测的不足，为肿瘤的早期诊断和治疗提供了重要的科学依据，临床应用价值高，值得广泛推广。

PU-1142

血清 PSA、CEA 和 ALP 联合检测诊断前列腺癌骨转移的临床价值

冯琳
德州市陵城区人民医院检验科

目的 分析血清总前列腺特异性抗原（PSA）、血清癌胚抗原（CEA）和血清碱性磷酸酶（ALP）水平对列腺癌骨转移的诊断价值。
方法 选取我院 215 例 2018 年 11 月至 2019 年 5 月确诊为前列腺癌患者，进行骨显像和血清 PSA、CEA 和 ALP 水平检测。
结果 前列腺癌骨转移患者血清 PSA、CEA 和 ALP 水平显著高于非前列腺癌骨转移组（P＜0.05）。血清 PSA、CEA 和 ALP 联合检测的敏感度和诊断符合度分别为 89.6%和 94.1%，高于单独检测和二联检测。
结论 血清 PSA、CEA 和 ALP 联合检测，可以提高前列腺癌骨转移的敏感度和检测准确度，对前列腺癌骨转移诊断有重要参考价值。

PU-1143

昆明地区 3472 例九项呼吸道病原体 IgM 检测结果分析

邹映东、张兴宗、李亚波、林云
云南省中医医院（云南中医药大学第一附属医院）

目的 了解九项呼吸道病原体在昆明地区的感染状况以及与年龄、季节的相关性。
方法 回顾性统计分析本院 2014 年 12 月至 2016 年 11 月期间 3472 例呼吸道感染者九项病原体血清 IgM 检测结果。
结果 九项呼吸道病原体血清 IgM 检测，总阳性率为 41.24％，其中，肺炎支原体阳性率最高为 28.40%，嗜肺军团菌和乙型流感病毒次之占 5.50%和 4.35%；不同年龄分组的检测，嗜肺军团菌、肺炎支原体、甲型流感病毒、乙型流感病毒存在统计学差异， Q 热立克次体、肺炎衣原体 、腺病毒、 呼吸道合胞病毒、副流感病毒 1、2 和 3 型差异无统计学意义；不同季节分组的检测，嗜肺军团菌、肺炎支原体、呼吸道合胞病毒、腺病毒、甲型流感病毒、乙型流感病毒、副流感病毒 1、2 和 3 型差异有统计学意义，Q 热立克次体、肺炎衣原体差异无统计学意义。
结论 昆明地区的呼吸道感染，病原体以肺炎支原体为主，嗜肺军团菌和乙型流感病毒次之，感染人群以儿童和青少年为主；在发病季节上，集中于春季和冬季。

PU-1144

抗 Ro60 和抗 Ro52 抗体在自身免疫性疾病中的应用价值探讨

周晖[1]、江楚文[2]、招晓彤[3]、陆子焕[1]
1. 广东省人民医院检验科
2. 广东省人民医院省临床检验控制中心
3. 中山大学南方学院

目的 探讨抗 Ro60 和抗 Ro52 抗体在自身免疫性疾病（AID）中的应用价值。
方法 回顾分析 2017 年 12 月～2018 年 12 月在广东省人民医院同时检测了抗核抗体（ANA）、抗核抗体谱（ANAs）14 项、抗双链 DNA（ds-DNA）抗体的 4561 例住院患者的临床资料、实验室结果，研究抗 Ro52 抗体和抗 Ro60 抗体与 AID 的相关性。
结果 4561 例患者中 1125 例诊断为 AID。女性患者的抗 Ro60 抗体和/或抗 Ro52 抗体阳性率均显著高于男性患者（P<0.05）。332 例 $Ro52^{+}Ro60^{+}$、353 例 $Ro52^{+}Ro60^{-}$、3753 例 $Ro52^{-}Ro60^{-}$患者中 AID、非 AID 所占百分比的差异均有统计学意义（P<0.05），123 例 Ro52-Ro60+患者 AID、非 AID 所占百分比的差异无统计学意义（P>0.05）。在 $Ro52^{+}Ro60^{-}$、$Ro52^{-}Ro60^{+}$、$Ro52^{+}Ro60^{+}$组中，ANA 阳性的 AID 患者均多于 ANA 阴性组（均 P<0.05）。抗 Ro52 抗体和/或抗 Ro60 抗体阳性合并其他 13 种特异性自身抗体阳性时，AID 所占百分比也增加。SS、SLE、DM/PM 是在抗 Ro52 抗体和/或抗 Ro60 抗体阳性组中占比较高的 3 种 AID。256 例 SLE 患者中各组所占百分比由低到高依次为：$Ro52^{+}Ro60^{+}$（43.36%）> $Ro52^{-}Ro60^{-}$(37.50%)> $Ro52^{-}Ro60^{+}$（9.77%）> $Ro52^{+}Ro60^{-}$(9.38%)。114 例 SS 患者依次为：$Ro52^{+}Ro60^{+}$（56.14%）> $Ro52^{+}Ro60^{-}$（21.93%）> $Ro52^{-}Ro60^{-}$（13.16%）> $Ro52^{-}Ro60^{+}$(8.77%)。48 例 DM/PM 患者依次为：$Ro52^{+}Ro60^{-}$（45.83%）> $Ro52^{-}Ro60^{-}$（43.75%）> $Ro52^{-}Ro60^{+}$（6.25%）> $Ro52^{+}Ro60^{+}$（4.17%）。29 例抗 Jo-1 抗体阳性的 AID 患者中，10 例 $Ro52^{+}Ro60^{-}$。$Ro52^{+}Ro60^{-}$的 22 例 DM/PM 患者中，18 例抗 Jo-1 抗体阴性，其中 61.11%（11/18）ANA 阳性。胞浆型是 $Ro52^{+}Ro60^{-}$组中占比最高的 ANA 荧光模型（30.26%）。
结论 抗 Ro60 抗体和抗 Ro52 抗体出现在多种 AID 中，结合 ANA、其他特异性自身抗体可提高诊断的敏感性。相比抗 Ro60 抗体，抗 Ro52 抗体更多出现在 PM/DM、SS 中，当结合 ANA 时对 PM/DM 具有较大的诊断价值。抗 Ro60 抗体和抗 Ro52 抗体分开检测对 AID 的诊断具有一定的临床应用价值。

PU-1145

白细胞介素-6 在原发性肝细胞癌组织中的表达及其对肝癌细胞增殖、侵袭作用

李慧洋
湖南省第二人民医院

目的 探讨白细胞介素-6（IL-6）在原发性肝细胞癌组织中表达的变化,并通过体外实验探讨其对原发性肝细胞癌细胞增殖、侵袭的作用。
方法 收集 2020 年 1 月—2021 年 5 月在湖南省第二人民医院手术切除的原发性肝细胞癌组织及对应的癌旁组织,检测其 IL-6 的表达量;培养肝癌 hepG2 细胞,随机分为对照组、空白质粒组、转染表达 IL-6 的重组质粒组,MTS 检测 3 组肝癌 hepG2 细胞的增殖能力,Transwell 实验检测细胞的侵袭能力,qRT-PCR 检测细胞周期蛋白 D1（CyclinD1）、B 淋巴细胞瘤-2（Bcl-2）、基质金属蛋白酶 2（MMP-2）、基质金属蛋白酶 9（MMP-9）mRNA 相对表达量,Western blotting 法检测 IL-6、蛋白相对表达量。
结果 肝癌组织中 IL-6 的蛋白相对表达量高于癌旁组织（P <0.05）;3 组细胞增殖及侵袭能力,CyclinD1、Bcl-2、MMP-2、MMP-9 mRNA 相对表达量,p-STAT3、p-Akt 的蛋白相对表达量比

较,差异有统计学意义（P <0.05）,IL-6 质粒组的细胞增殖及侵袭能力,CyclinD1、Bcl-2、MMP-2、MMP-9 mRNA 相对表达量,p-STAT3、p-AKT 的蛋白相对表达量均高于对照组、空白质粒组。
结论 IL-6 在原发性肝细胞癌组织中表达增加,下调 IL-6 的表达能够抑制肝癌细胞的增殖、侵袭。

PU-1146

自身免疫性疾病的研究进展

王芳
大理大学第一附属医院检验科
无

自身免疫性疾病被列为继心血管疾病、癌症后危害人类健康的第三大杀手疾病。不同病种危害程度不同，如系统性红斑狼疮可致肾衰竭而引起死亡，类风湿性关节炎可导致关节强直畸形，miRNAs 参与了这两种自身免疫性疾病的发生和发展，因此可通过对 miRNAs 的检测，再结合相应的临床症状和体征，来对这两种疾病进行诊断。另外，肠道菌群失衡，也会引起此类疾病的发生。其治疗方法包括物理治疗法、免疫抑制剂治疗法和中药治疗法等。其中，物理疗法是一种辅助手段，中药具有良好免疫调节效果，且不良反应少。

PU-1147

广州地区健康成人淋巴细胞亚群参考区间初探

蓝名伟、周茂华、李文敏、冼璐桦
广东省人民医院检验科

目的 检测广州地区健康成人外周血淋巴细胞亚群，初步建立其参考区间。
方法 收集广东省人民医院体检中心 176 例健康成人（18-59 岁）的外周血标本，其中男性 87 例，女性 89 例。采用 BD Multitest™ 6-Color TBNK 六色试剂盒进行标记，使用 BD FACSCantoplus 流式细胞仪检测淋巴细胞亚群绝对计数。根据 CLSI C28-A3 文件建立淋巴细胞亚群参考区间。
结果 176 例健康成人外周血淋巴细胞绝对值计数(个/μL）为 2029（998,3736），CD3+T 细胞绝对值(个/μL）和百分比（%）分别为 1430（821,2656）、67.53±8.52，其中 CD3+CD4+细胞绝对值(个/μL）和百分比（%）分别为 774（454,1393）、36.44±7.21，CD3+CD8+细胞绝对值(个/μL）和百分比（%）分别为 551（292,1164）、25.26±6.31，CD4+/CD8+比值为 1.4（0.64,2.80），NK 细胞（CD3-CD16+56+）绝对值(个/μL）和百分比（%）分别为 412（144,1062）、19.39±7.55，B 细胞（CD3-CD19+）绝对值(个/μL）和百分比（%）分别为 230（113,528）、11.52±3.49。
结论 初步建立广州地区健康成人外周血的淋巴细胞亚群参考区间，为今后广州地区人群的疾病诊断、治疗和疗效的评价提供有效依据。

PU-1148

N 末端 B 型利钠肽原与心力衰竭相关性研究进展

刘瑞清
中国人民解放军陆军特色医学中心

N 末端 B 型利钠肽原（NT-proBNP）为心衰诊疗中应用广泛的生物标志物，有助于急慢性心衰的诊断和鉴别诊断、疗效监测及预后评估等。当患者发生心力衰竭时，心肌细胞受到压力和牵拉刺激，可分泌 B 型利钠肽原前体（pre-proBNP），经蛋白酶剪切后成为 B 型利钠肽原（proBNP），

随后裂解为 NT-proBNP 与 B 型利钠肽（BNP），并释放入血。与 BNP 相比，NT-proBNP 半衰期长达 120min，可在常温下稳定 72h，目前常用的检测方法为快速荧光法，操作简便，报告及时，故其作为心力衰竭标志物有其特有的优势，且可作为 POCT 检测项目。早期心力衰竭患者临床症状多不明显，NT-proBNP 的及时检测有助于发现早期心衰患者、筛查心衰高危人群，在治疗心衰期间，可与超声心动图联合评价心功能变化，调整心衰治疗，改善心衰预后。此外，NT-proBNP 还具有辅助诊断急性冠状动脉综合征（ACS）危险分层与心功能分级的潜力。本文对近年来 NT-proBNP 与心力衰竭的相关性研究进展进行综述，分析其在心力衰竭发生中的变化情况与检测节点，以及对心脏相关疾病的诊断与鉴别诊断，进一步体现其临床价值，为实现临床推广归纳提供系统性证据与支持。

PU-1149

乙肝病毒性肝炎患者两对半结果分析

杨彩婷
大理大学第一附属医院检验科

目的 研究乙肝病毒性肝炎患者两对半检验结果和运用效果。
方法 选取 2020 年 7 月至 2021 年 3 月在云南省第四人民医院治疗的 500 例乙肝病毒性肝炎患者为研究对象，对患者进行乙肝两对半的检查，同时对检验结果进行研讨。
结果 大三阳患者 96 例，占总人数的 19.2%,小三阳患者 327 例，占总人数的 65.4%，其他类型患者 77 例，占总人数的 15.4%。对这些数据进行分析和统计，数据差异比较显著，符合统计学意义（p〈0.05）。
结论 在乙肝病毒性肝炎患者的临床检验中，对患者进行乙肝两对半检验，可准确对患者病症进行预判，此外，按时进行两对半的检验，能有效预防乙肝病毒性肝炎的发生，在临床上可以广泛推广。

PU-1150

慢性乙型肝炎患者基因型和核苷酸类似物治疗及耐药突变的临床研究

张仁宁、李娅
昆明医科大学第一附属医院

目的 探究云南地区慢性乙型肝炎患者 HBV 基因型分布特征和核苷酸类似物耐药位点突变情况，分析其临床意义和药物治疗策略，为临床治疗提供指导。
方法 收集昆明医科大学第一附属医院 2018 年 5 月到 2018 年 9 月收治的慢性乙型肝炎患者血清 90 例进行高通量测序检测其基因型和核苷酸类似物耐药突变位点，结合基因型和突变位点、治疗时间分析其各类血清学指标差异变化。
结果 B 基因型患者 54 人，突变率 8.33%，以 M204I 突变为主。C 基因型患者 36 人，突变率 12.96%，以 M/V207I 突变为主，LAM、LdT 耐药患者多于 ADV、ETV，差异具有统计学意义（P<0.05）。治疗后 HBcAb、TBIL、DBIL、ALT、AST、FIB、GGT、GLU 明显上升，而 AST、ALT、TBIL、DBIL、GGT、FIB 随治疗时间延长又出现明显下降；而 PT、APTT 治疗后下降，差异有统计学意义（P<0.05）。B 基因型患者治疗后 BUN 下降，而 ALT、AFP 明显升高；差异有统计学意义（P<0.05）。未经治疗的 C 基因型 HBcAb 值高于 B 基因型，治疗后 C 基因型 TBIL、DBIL、PT、FIB 大于 B 基因型，而 FIB 小于 B 基因型，差异有统计学意义（P<0.05）；随着治疗时间延长，C 基因型 DBIL、ALT、TBIL 高于 B 基因型，同时突变患者 C 基因型 ALB、PT、CREA 值高于 B 基因型，差异有统计学意义（P<0.05）。

结论 云南地区 HBV 基因型以 B 型和 C 型为主，C 型占优势；产生的耐药突变均以 LAM、LdT 突变为主。C 基因型患者肝脏损伤程度较 B 基因型严重，且治疗后血清学改善的比例更低。B 基因型突变患者发生肾功能损伤的比例更大，但 C 基因型突变患者病情更严重。持续较长时间的 NAs 类治疗可以使患者肝功能血清学指标趋于改善，病情缓解；其中凝血功能改善最为显著；故需对患者耐药突变和血清学指标进行及时检测和监测，以指导患者后续治疗。

PU-1151

自身抗体在肺癌早期诊断中的研究进展

王甲甲、铁丹丹、谭太昌
四川省医学科学院·四川省人民医院

肺癌是全世界最常见的恶性肿瘤之一。肺癌高发病率、高死亡率是全球共同面临的问题。肺癌患者早期多无明显症状，多数患者一经发现即处于肺癌晚期，肺癌晚期患者 5 年生存率很低，所以肺癌的早期筛查尤为重要。肺癌自身抗体(Autoantibodies, AABs)，包括 P53、黑色素瘤抗原 (MAGE)-A1、G 抗原 (GAGE)7、肿瘤相关基因(CAGE)、ATP 结合 RNA 解旋酶 (GBU4-5)、性别决定基因家族 2 (SOX2)和蛋白基因产物 9.5 (PGP9.5)的检测在早期肺癌检测中越来越受到重视。P53 基因作为肿瘤抑制基因，在多种恶性肿瘤患者体内发生突变，针对 P53 基因的自身抗体可于肺癌早期出现。MAGE-A1、GAGE7、 CAGE、GBU4-5 均属于肿瘤-睾丸抗原，在多种恶性肿瘤中表 达，可在肺癌患者体内出现，而不表达于人体正常组织。SOX2 自身抗体主要 存在于小细胞肺癌(Small cell lung carcinoma, SCLC)患者血清中，而 PGP9.5 在 非小细胞肺癌(Non-small cell lung carcinoma, NSCLC)患者中表达增加。本文主要对自身抗体在早期肺癌临床诊断中的研究进展进行综述。

PU-1152

IL-6 及 RDW 相关多个参数在慢性阻塞性肺病老年患者急性加重中的风险预测分析

程玉洁、侯彦强
上海市松江区中心医院

目的 慢性阻塞性肺病（COPD）是老年人最常见的呼吸道慢性病之一，感染是引发慢性阻塞性肺病急性加重（AECOPD）最常见的危险因素之一。本研究意在能否通过血免疫和血常规检测来预警 COPD 老年患者的急性加重，探讨相关常规指标和联合因子应用与 AECOPD 发生风险的预测性分析。

方法 本研究分析了 2019 年 10 月至 2021 年 2 月间在上海市松江区中心医院呼吸内科与急诊接受治疗的 COPD 患者。经过 GOLD 标准的筛选，共有 135 名老年患者纳入分析。收集所有样本血清通过化学发光法、免疫比浊法和 WPC 全血细胞计数分别检测 PCT,IL-6，CRP 和全血细胞分析结果 PLT,EOS,NEU,LYM,RDW,MPV，并对这些结果进行二元 logistics 分析，同时对显著影响急性加重的风险因素进行 ROC 模型建立，应用 ROC 曲线获得总体病人的临界值以及各危险因素分组病人的临界值，通过比较灵敏度、特异度、阳性预测值及阴性预测值，判断分组临界值是否更有助于 AECOPD 的诊断或排除。

结果 共有 50 名患者发生 AECOPD，COPD 急性加重发生率 37%，logistic 回归分析显示，CRP，PCT,RDW,IL-6 对 COPD 急性加重变化有显著性影响（P<0.05），其中 CRP（OR,1.045；95% CI,1.023-1.067 ）， RDW （ OR, 1.459 ； 95% CI,1.028-2.068 ）， PCT （ OR, 2.994 ； 95% CI,1.257-7.132），IL-6（OR, 1.005； 95% CI,1.000-1.010）。联合因子 ROC 下面积 93.00%，CRP，PCT,IL-6 和 RDW 的联合使用对 COPD 急性加重有较好的预测价值。

结论 CRP，PCT,IL-6 和 RDW 的联合使用对预测 AECOPD 的发生具有明显价值。对于老年人 COPD 的急性加重风险具有预测作用。对于炎症反应不明显的患者具有一定的诊断意义。同时对于低于临界值的患者可应用于排除诊断。

PU-1153

TNFα、IL-10 基因多态性与肝细胞癌易感性的相关研究

王甲甲、王智斌、谭太昌
四川省医学科学院·四川省人民医院

目的 分析 TNFα、IL-10 基因多态性与肝细胞癌（HCC）易感性之间的相关性。
方法 选取于 2014 年 9 月至 2016 年 8 月就诊于四川省人民医院的 277 例 HCC 患者及 306 例健康对照者作为研究对象，所有研究对象均为汉族人。抽提全血基因组 DNA，PCR 扩增后直接测序法检测 TNFα（-238G/A，-308G/ A）、IL-10（-592 C/A， -819 C/T）基因多态性的分布；ELISA 法检测血清、细胞培养上清中 TNFα、IL-10、IL-2、IL-4、TGF-β 的水平；体外淋巴细胞增殖实验和细胞毒实验检测携带不同基因型的外周血单个核细胞（PBMCs）的增殖能力及细胞毒活性。
结果 TNFα -238AA、-238A 与 HCC 的风险降低明显相关，IL-10 -592CA、 -819CT/TT 和-819T 与 HCC 的风险增加有关（$p<0.05$）。携带 TNFα AA 基因型的 PBMCs 仅与 IL-2、IL-4 水平降低有关。相反，携带 IL-10 -819 CC 基因型的 PBMCs 增殖能力明显降低，分泌 TGF-β、IL-10 水平明显减少，细胞毒活性显著增加（$p<0.05$）；同时，IL-10 -819T/C 与 HCC 的分级有明显的相关性。
结论 IL-10 -819 CT/TT 能够促进 HCC 的发生、发展，这可能与下调 Th1/Th2 型细胞因子，上调 Th3 型细胞因子有关。

炎症指标的研究

常谦
郑州大学第一附属医院

SII、PLR、NLR、LMR、MLR 等炎症指标的研究正逐渐丰富，这些指标被越来越多研究证实与多种类型的疾病进展及预后相关。由于其具有简便易获取且成本低廉的特点，应用前景广泛。尽管如此，仍有一些问题亟待解决。首先，针对健康人群的研究有限，大多数研究都只分析疾病治疗前后（手术或用药等）的 SII、PLR、NLR、LMR、MLR 水平，尤其缺少这些指标在健康人群的参考区间，缺少统一的定量标准，这使得连续监测的意义大打折扣。此外，缺少这些指标在不同疾病中的横向比较，使其临床应用受到限制。再者，缺少连续动态变化的数据，此类研究多以某个疾病状态下患者的检测指标为准，更进一步的研究中需要连续动态监测的数据，以更好的判断疾病进展趋势。最后，SII、PLR、NLR、LMR、MLR 等炎症指标均是基于血液学指标计算得出，血液学指标本身受多种因素影响，其采集和保存过程中也许多不定因素

PU-1155

2018-2019 年快速流感病毒抗原检测筛查结果分析

周庆丰、刘军
上海市松江区中心医院

目的 分析流感病毒抗原检测试剂盒（胶体金法）检测的有效性，评价流感病毒抗原检测试剂盒在临床中的应用。

方法 选择 2018 年—2019 年（1 月、2 月）同期在上海市松江区中心医院就诊的体温＞38℃，且具有流感样症状的患者，采集鼻拭子标本，用甲型/乙型流感病毒抗原检测试剂盒检测筛查，并对结果进行统计分析。
结果 5877 例流感样病例中，共检出 1915 例流感病例，阳性率为 32.5%；其中甲型流感病毒感染 1505 例，阳性率为 78.6%；乙型流感病毒感染 358 例，阳性率为 18.7%；甲、乙型流感病毒混合感染 52 例，阳性率为 2.7%；其中，2018 年与 2019 年同期的甲型流感病毒阳性率差异较大（P<0.05），2019 年 1 月乙型流感病毒阳性率与 2018 年同期相比差异较大（P<0.05）；而甲、乙型流感病毒混合感染阳性率无显著差异（P>0.05）。2018-2019 年（1 月、2 月）流感病毒主要分布于 0-12 岁的婴幼儿及儿童患者，以甲型流感病毒为主，阳性率在 78.0%左右，乙型流感病毒次之，约为 20.0%，甲、乙型流感病毒混合感染较为稳定，为 3.0%左右。
结论 在流感爆发时期，由于流感样本量大，流感病毒快速抗原检测方法可以在数十分钟时间内显示结果，而且具有操作简便，快速、易判读，故可用于流感早期筛查。

PU-1156

成都地区过敏原特异性 IgE 抗体检测结果分析

王甲甲、周佳祥
四川省医学科学院·四川省人民医院

目的 本研究旨在分析成都地区过敏性疾病患者血清特异性过敏原的分布特点及规律，为过敏性疾病的防治提供流行病学资料和诊断依据。
方法 选择 2018 年 9 月至 2021 年 4 月期间在四川省人民医院就诊并进行过敏原特异性 IgE（Immunoglobulin E,IgE）抗体筛查检测的 19744 名患者，采用酶联免疫法（Enzyme Linked Immunosorbent Assay，ELISA）快速试纸条技术检测血清中的总 IgE 和过敏原特异性 IgE 抗体，按照不同年龄段、不同性别、不同季节、不同疾病分组统计过敏原检测结果阳性率，分析过敏原分布特点与规律。
结果 19744 例过敏性疾病患者中，共 8406 例过敏原特异性 IgE 检测结果为阳性，阳性率为 42.57%；吸入性过敏原检测结果阳性率前三名为屋尘螨（15.17 %）、屋尘（10.86 %）、猫毛皮屑（4.04 %）；食入性过敏原检测结果阳性率前三名为牛奶（2.26 %）、牛肉（1.68 %）、蛋清（0.86 %）。通过分组统计分析显示，吸入性过敏原阳性率高于食入性过敏原阳性率；男性阳性率高于女性；0~10 岁、10~18 岁、18~60 岁、＞60 岁患者最主要的过敏原分别为屋尘螨和屋尘；秋季阳性率最高，其次为春季、冬季，夏季最低；以疾病的类型进行分类，阳性率从高到低依次为：过敏性鼻炎、哮喘、皮炎湿疹、过敏性紫癜、荨麻疹。
结论 上述结果在一定程度上反映了成都地区过敏原分布特点及规律，为本地区过敏性疾病的防治提供参考依据。

PU-1157

丽水地区新生儿与婴幼儿 TORCH 感染情况结果分析

张强
丽水市人民医院

目的 了解丽水地区新生儿与婴幼儿 TORCH 的感染情况。
方法 采用 ELISA 法检测 2059 例新生儿与婴幼儿血清中的 TORCH 特异性抗体，并进行结果分析。
结果 2059 例 TORCH 检测结果， TORCH-IgM 总感染率是 2.03%，CMV-IgM、Rv-IgM、TOX-IgM、HSV-IgM 的阳性率分别是 1.89%、0.05%、0.05%、0.05%，CMV-IgM 阳性率最高； CMV-IgG、Rv-IgG、TOX-IgG 的阳性率分别是 98.39%、85.23%、1.02%。不同年龄组 IgM 与 IgG 抗体

检测结果中 CMV-IgM、Rv-IgM、CMV-IgG、Rv-IgG 比较，差异有统计学意义（P<0.05）。不同性别的 IgM 与 IgG 抗体检测结果比较，差异无统计学意义（P>0.05）。
结论 丽水地区的新生儿与婴幼儿的 TORCH 的感染最高是 CMV。

PU-1158

血清胃蛋白酶原联合胃泌素-17 检测对萎缩性胃炎诊断价值的评估

张航烽
四川省医学科学院·四川省人民医院

目的 探讨血清Ⅰ型胃蛋白酶原(PGⅠ)、Ⅱ型胃蛋白酶原(PGⅡ)、PGR(PGⅠ/PGⅡ)和胃泌素-17(G-17)与萎缩性胃炎(AG)发生的关系及其诊断价值。
方法 采用酶联免疫吸附试验(ELISA) 法检测 195 例 AG 患者及 170 例健康对照者的血清 PGI、PGⅡ、PGR 和 G-17 表达水平，采用受试者工作特征(ROC)曲线评估各指标在萎缩性胃炎诊断中的效能。
结果 萎缩性胃炎组血清 PGⅠ、PGⅡ和 G-17 水平低于健康对照组，差异有统计学意义（P<0.05），根据 ROC 曲线，PGⅠ、PGⅡ及 G-17 诊断萎缩性胃炎的最佳临界值分别是 70.1μg/ml（敏感度 96%、特异性 82%、曲线下面积 0.887±0.040）、4.94μg/ml（敏感度 78%、特异性 64%、曲线下面积 0.725±0.051）和 1.65pmol/ml（敏感度 88%、特异性 76%、曲线下面积 0.848±0.04）。
结论 联合检测血清 PGⅠ、G-17 在萎缩性胃炎中有一定的诊断价值，可作为一种无创的筛查萎缩性胃炎的方法。

PU-1159

丽水地区流式细胞术检测白细胞抗原 B27 阳性率分析

张强
丽水市人民医院

目的 了解丽水地区不同年龄段白细胞抗原 B27（HLA-B27）分布情况。
方法 选择 2017 年 1 月-2019 年 1 月在丽水市人民医院风湿免疫门诊就诊的 1795 名患者作为研究对象，通过流式细胞术检测外周血 T 淋巴细胞 HLA-B27 抗原表达，并对结果进行统计分析。
结果 1795 名患者中 HLA-B27 阳性病例数是 251，阳性率为 13.98 %，其中男性、女性阳性表达率分别是 17.21 %、10.90 %。按年龄组分成≤20 岁、21 岁～30 岁、31 岁～40 岁、41 岁～50 岁、51 岁～60 岁、>60 岁，阳性率分别为 11.76 %、26.21 %、 20.25 % 、14.55 %、 9.96 % 和 8.74 %，阳性患者中主要是 21 岁～30 岁最高。
结论 HLA-B27 阳性表达率男性高于女性，主要集中于 21 岁～30 岁，流式细胞术检测 HLA-B27 为强直性脊柱炎的诊断提供重要依据。

PU-1160

间接法建立亚高原地区成年人血清甲状腺激素生物参考区间

鲁彦[2]、梁勤[1]、邢福军[1]
1. 甘肃省中医院检验科
2. 甘肃省中医院检验科

目的 通过“间接法”建立西门子 CP 化学发光仪亚高原地区成年人血清甲状腺激素水平生物参考区间。
方法 收集该院 2014 年 1 月 4 日至 2017 年 6 月 30 日实验室信息系统（LIS）内体检中心体检人员甲状腺资料 15 293 例。采用偏度-峰度值（Skewness-Kurtosis）对数据进行正态性检验。依据设备检测限度、四分位间距法剔除异常数据，采用 Hoffman 法获取参考区间，并与说明书和指南生物参考区间进行比较。
结果 “间接法”建立的生物参考区间为三碘甲状原氨酸（T3）：0.67～1.7 ng/mL；游离三碘甲腺原氨酸（FT3）：2.3～3.6 pg/mL；甲状腺素（T4）：5.5～10.9 μg/mL；游离甲状腺素（FT4）：0.89～1.75 ng/dL。T3、FT3、T4、FT4 与指南生物参考区间相对偏差分别为（﹣9.57%，﹣14.10%）、（2.56%，69.12%）、（﹣8.86%，11.34%）、（﹣9.33%，27.14%）；与说明书相对偏差分别为：（﹣5.85%，8.97%）、（﹣17.09%，0.00%）、（0.00%，20.24%）、（﹣0.52%，0.00%）。
结论 “间接法”建立的亚高原地区成人健康人群生物参考区间与指南和说明书提供的生物参考区间有较大的偏差，应根据不同人群建立实验室参考区间。

PU-1161

胃蛋白酶原影响因素分析以及德阳地区参考区间的建立

曹维维
德阳市人民医院

目的 分析探讨性别、年龄以及幽门螺旋杆菌（Hp）对胃蛋白酶原水平的影响,以及分层建立德阳地区体检人群酶联免疫吸附法血清 PGI、PGII 和 PGR 的参考区间。
方法 收集 2019 年 1 月到 2019 年 8 月来德阳市人民医院进行健康体检者的基本信息，用 ELASA 方法定量检测血清样本中 PGI、PGII 并计算 PGR 值，同时对各体检者进行碳 13 呼气试验。并用统计学方法参考年龄、性别、HP 感染等影响因素进行分层分析，建立血清胃蛋白酶原水平的参考区间。
结果 调查 1403 人的血清 PGⅠ，PGⅡ及 PGR 的值，得出 PGⅠ，PGⅡ和 PGR 呈偏态分布。PG 与年龄有相关性，其中 PGⅠ（r=0.107）、PGⅡ（r=0.249）与年龄正相关，年龄越大，值也相对增大。PGR（r=-0.201）与年龄负相关。男性ＰＧⅠ、ＰＧⅡ及 PGR 水平显著高于女性，差异有统计学意义（P<0.05）。HP 阳性组的 PGⅠ，PG2 水平显著高于 HP 阴性组 差异有有统计学意义(P<0.05)。HP 阳性组的 PGR 显著低于 HP 阴性组，差异具有统计学意义。男性的 HP 感染率为 62.8 高于女性为 37.2，差异具有统计学意义（P<0.05）。
结论 血清 PGⅠ、PGⅡ水平与性别、年龄、HP 感染均相关，将 HP 与血清 PGⅠ PGⅡ水联合检测对胃部疾病的早期筛查有重要意义

PU-1162

骨代谢标志物各项之间及与 IGF-1 的相关性研究

邱洪
电子科技大学附属医院•四川省人民医院临床医学检验中心

目的 对骨代谢相关标志物 β-胶原特殊序列(β-CrossLaps)、总 I 型前胶原氨基端延长肽(total procollagen type 1 amino-terminal propeptide, tP1NP)、人 N 端中段骨钙素(N-MID Osteocalcin, N-MID OC)、25 羟维生素 D(25-(OH)D)各项之间及各项与胰岛素样生长因子（Insulin-like growth factor，IGF-1）之间的相关性进行研究。
方法 将于我院进行常规男、女体检者 22 岁至 60 岁共计 194 名作为研究对象，对骨代谢标志物生物各项之间及各项与 IGF-1 之间的相关性进行研究。
结果 性别因素对骨代谢标志物有显著影响，男性组均大于女性组（P<0.05）。tP1NP 及 N-MID OC 水平随年龄的升高而降低，呈现负相关，推测与性激素的减少有直接关系。25-(OH)D 与各骨代谢标志物均无相关性（P>0.05）。IGF-1 水平与 β-CrossLaps、N-MID OC 呈正相关关系，再次证实了 IGF-1 参与调节骨形成、骨吸收的过程。
结论 性别、年龄为骨代谢标志物的独立影响因素，故应设立相应的参考区间。VD 缺乏广泛存在，但与骨代谢标志物无相关性。IGF-1 通过正向调节 β-CrossLaps、N-MID OC 参与机体的骨形成与骨吸收过程。

PU-1163

不同免疫学方法检测自身免疫性肝病患者血清 AMA-M2 的对比研究

王春玲
东南大学附属中大医院

目的 比较不同免疫学检测方法对抗线粒体 2 型抗体（AMA-M2）的检测性能。
方法 收集 2020 年 8 月至 2021 年 4 月间就诊本院的 21 例自身免疫性肝病患者、13 例乙型病毒性肝炎和 20 例健康体检人群对照血清样本，应用多重流式免疫分析法和线性免疫印迹法平行检测 AMA-M2。不同方法之间检测结果的一致性采用 Kappa 检验。
结果 多重流式免疫分析法与线性免疫印迹法检测 AMA-M2 时，阳性符合率为 61.5%，阴性符合率为 100%，总体符合率为 92.5%（Kappa=0.708；P<0.01)。
结论 应用多重流式免疫分析法和线性免疫印迹法检测 AMA-M2 时，两种方法具有良好的符合率和一致性。

PU-1164

Evaluation of the clinic value of serum Anti-rings and rods antibodies detection

Chengjie Xu
Sichuan Provincial People's Hospital, University of Electronic Science and Technology of China

it was reported that Anti-rings and rods (Anti-RR) antibodies are most commonly detected in HCV patients,especially who have undergone treatment with ribavirin or interferon alpha (IFN-α),and which have been associated to a poorer prognosis. Despite the recent availability of more effective and less toxic therapeutic options for the HCV patients,Anti-RR antibodies are still

frequently detected in serum samples from patients with multiple diseases. The aim of this context was to investigate the appearance of Anti-RR antibodies in different patients.Anti-RR antibodies were detected by indirect immunofluorescence (IIF) on HEp-2 cells. this study retrospectively examined the samples received from 2017 to 2019 for antinuclear antibody (ANA) testing. 106 out of 52964 patient samples exhibited the anti-RR antibodies, Among the 106 Anti-RR positive cases,there are 20 diseases involved,51 patients(48.11%) had renal dysfunction ,48 patients(45.28%) had high blood pressure while only 8 patients (7.55%) were infected with HCV, the rest of disease account for a small proportion,but none of the Anti-RR positive patients received ribavirin or IFN-α treatment and there is no evidence to link the use of certain drugs with the emergence of anti-RR antibodies ; further studies showed that RR pattern could not be directly related to disease prognosis,Whether in renal dysfunction or hepatitis C positive patients.in conclusion, these observations led to the hypothesis that the anti-RR antibodies are not significantly for HCV patients with ribavirin or IFN-α treatment and the value of anti-RR antibodies in the disease diagnosis and prognosis need to be futher studied.

PU-1165

TB-IGRA 检测在肾脏疾病患者中关于潜伏性结核的辅助诊断和预防性治疗后效果评价的应用

任亚文、张甲龙
铜川市人民医院

目的 肾脏疾病患者是潜伏性结核感染（Latent tuberculosis infection，LTBI）的重要人群之一。对此类人群进行结核病的筛查是进行预防性治疗的前提。
方法 通过对肾脏疾病患者中潜伏性结核感染者预防性治疗前后 γ 干扰素释放试验结果的比较,判断预防性治疗的效果。
结果 γ 干扰素释放试验在肾脏疾病患者中辅助诊断潜伏性结核和预防性治疗后效果评价具有方便、快速、易于统计等优点。
结论 对筛查试验阳性的 LTBI 者进行预防性治疗可以降低发生活动性结核病地风险。

PU-1166

HIV-1 广谱中和抗体的亲和力成熟、特征及运用

万鑫蕊[2]、李娅[1]
1. 昆明医科大学第一附属医院医学检验科
2. 昆明医科大学第一附属医院医学检验科

人类免疫缺陷病毒（human immunodeficiency virus，HIV-1）感染的长期不进展者（long-term nonprogression, LTNP）中，分离到的广谱中和抗体（broadly neutralizing antibodies，bNAbs）已被证明可以预防 HIV-1 感染并降低感染者体内的病毒载量。成为了指导 HIV-1 疫苗设计和被动免疫治疗的突破口。中和抗体的功能除了与表位有关，其亲和力也极大的影响了抗体的活性。HIV-1 bNAbs 通过体内的多轮亲和力成熟(affinity maturation)获得了较高亲和力，从而实现了广谱度和中和活性的增加。高亲和力 HIV-1 bNAbs 在治疗过程中能更好的辅助机体免疫系统清除病原体，并且使用剂量更少，毒副作用较低。在亲和力成熟的同时，HIV-1 bNAbs 表现出了高水平的体细胞超突变（somatic hypermutation，SHM）、插入缺失、较长的重链第三互补决定区等不寻常的特征。HIV-1 bNAbs 仅在少数长期不进展者中产生以及其异常特征表明，bNAbs 亲和力成熟受到多种复杂因素的调控，这些特征导致通过有效疫苗诱导 HIV-1 bNAbs 的难度增加。因此了解抗体亲和力成熟的过程有助于我们理解中和抗体的活性与特征的关系，并为设计潜在有效的 HIV-1 免

疫原提供参考。目前 HIV-1 疫苗的设计策略更趋向于抗体胚系特异性抗原的设计，即使用能与 bNAbs 前体 B 细胞结合的 HIV-1 免疫原，并采用共进化过程中关键位点突变的免疫原多次免疫以实现亲和力和广谱度的成熟，从而诱导广谱活性抗体产生，基于对 HIV-1 bNAbs 发育过程中亲和力成熟的理解，基于抗体与病毒共进化的研究，将极大的促进我们设计新型 HIV-1 疫苗诱导理想的 bNAbs，为突破 HIV-1 的有效预防提供新的突破口。对 HIV-1 bNAbs 发育过程中亲和力成熟的研究，有利于我们理解疫苗诱导 bNAbs 的机制及突破口。

PU-1167

clinic value of serum Anti-rings and rods antibodies detection

许程洁
电子科技大学附属医院•四川省人民医院

The aim of this context was to investigate the appearance of Anti-RR antibodies in different patients.Anti-RR antibodies were detected by indirect immunofluorescence (IIF) on HEp-2 cells. this study retrospectively examined the samples received from 2017 to 2019 for antinuclear antibody (ANA) testing. 106 out of 52964 patient samples exhibited the anti-RR antibodies, Among the 106 Anti-RR positive cases,there are 20 diseases involved,51 patients(48.11%) had renal dysfunction ,48 patients(45.28%) had high blood pressure while only 8 patients (7.55%) were infected with HCV, the rest of disease account for a small proportion,but none of the Anti-RR positive patients received ribavirin or IFN-α treatment and there is no evidence to link the use of certain drugs with the emergence of anti-RR antibodies ; in conclusion, these observations led to the hypothesis that the anti-RR antibodies are not significantly for HCV patients with ribavirin or IFN-α treatment and the value of anti-RR antibodies in the disease diagnosis and prognosis need to be futher studied.

迈瑞 CL-2000i 化学发光分析系统检测 PCT 的性能评价

王萍
亳州市人民医院

目的 探讨迈瑞 CL-2000i 化学发光分析系统检测 PCT（降钙素原）的临床适应性。
方法 根据美国临床实验室标准化协会（CLSI）的 EP9-A2 文件的规定，以罗氏 cobas® 6000 电化学发光分析系统作为参比系统，以迈瑞 CL-2000i 化学发光分析系统作为实验系统，通过对 PCT 进行检测，并对 2020 年 12 月 7 日～17 日 98 例我院就诊的患者 PCT 测定结果进行比对分析和偏倚评估，评价迈瑞 CL-2000i 化学发光分析系统检测 PCT 的临床适应性。
结果 两套检测系统对 PCT 检测结果的相关系数 r＞0.95，具有良好的相关性。高、中、低等 3 个水平的检测结果均具有较好的一致性。
结论 迈瑞 CL-2000i 全自动化学发光免疫分析系统检测 PCT 能够满足临床，可以应用于临床。

N 末端脑钠肽前体(NT-proBNP)对心力衰竭的诊断研究

朱薇、何玲鸽 、李耀妮
宝鸡市中心医院

目的 探讨 N-末端脑钠肽前体(NT-pro BNP) 在心力衰竭（HF）患者病变程度及心功能评估中的应用价值。

方法 选择心力衰竭患者 60 例作为试验组，按照美国纽约心脏病学会（NYHA） 分级分为Ⅱ～Ⅳ级，选择健康体检者 60 例作为对照组，采用电化学发光法（夹心法）测定血清 NT-proBNP 浓度。进行统计分析。

结果 与对照组相比，心力衰竭病人血清 NT-proBNP 检测值升高，且随心力衰竭的程度加重而增加，差异具有统计学意义(P＜0．05)。心力衰竭（NYHA 分级）
各组间血清 NT-proBNP 浓度的测定结果存在显著性差异(P<0.01)，具有统计学意义。

结论 在心力衰竭的早期筛查中，不仅可以通过检测血清 NT-proBNP 浓度水平作出初步诊断，而且随着心力衰竭程度的加重，心功能的进一步恶化，血清 NT-proBNP 水平逐渐升高，能有效提示疾病的发展进程和预后情况。

PU-1171

HIV-1-型长期不进展者 B 细胞谱系相关研究进展

李明玉、李娅
昆明医科大学第一附属医院

HIV-1 感染是危害全世界人类健康的公共卫生问题，虽然抗反转录病毒治疗在治疗 HIV-1 感染上取得了显著成效，但目前艾滋病仍然无法治愈，研发出能够诱导中和多种 HIV-1 毒株能力的广谱中和抗体 （Broadly neutralizing antibodies, bNAbs）的 HIV-1 疫苗，成为防治 HIV-1 感染的重要目标。HIV-1 长期不进展者（Long-term nonprogression, LTNP）是 bNAbs 的主要提供者，大量学者对 LTNP 展开了研究，阐释 HIV-1 长期不进展者 B 细胞谱系的特征，将为广谱中和抗体成熟的相关研究奠定重要基础。得益于单个 B 细胞分选、抗体克隆技术的成熟，以及高通量测序在抗体库中的应用，HIV-1 长期不进展者 B 细胞谱系的相关研究取得了一定成效，这些研究为 HIV-1 疫苗研发提供了新思路和新的实践指导。由于靶向 HIV-1 包膜不同位点的 bNAbs 在 HIV-1 长期不进展者中存在特定的 B 细胞谱系，本文就 HIV-1 长期不进展者的特定 B 细胞谱系相关研究进展进行综述。

PU-1172

四川地区不孕患者血清抗缪勒管激素水平的影响因素分析

许程洁
电子科技大学附属医院•四川省人民医院临床医学检验中心

目的 通过分析四川地区不同年龄组不孕患者血清中抗缪勒氏管激素(AMH)水平变化及其病因，探讨影响女性不孕患者血清中 AMH 水平变化的影响因素,为评估本地不孕女性卵巢功能水平和寻找不孕病因提供参考。
方法 选择来四川省人民医院就诊的 2350 例 20-50 岁不孕女性作为研究对象，按照年龄分成 5 组，＜25 岁组，26-30 岁组，31-35 岁组，36-40 岁组，＞40 岁组，ELISA 法检测血清 AHM 水平。
结果 血清 AMH 水平与年龄呈现负相关，以 20-25 岁年龄段最高。其中，多囊卵巢综合症和输卵管不通的患者的血清 AMH 水平显著高于平均水平。
结论 年龄、病因是不孕症女性 AMH 水平的主要影响因素。

PU-1173

联合检测血清 CA125、SA 和 SOD 在卵巢癌诊断中的价值

曹修娥、栾芳
山东第一医科大学附属省立医院

目的 探讨血清糖类抗原 125（CA125）、唾液酸（SA）及超氧化物歧化酶（SOD）在卵巢癌诊断中的临床应用价值。
方法 回顾性研究。选择山东大学附属省立医院妇科住院的 180 例卵巢癌患者作为卵巢癌组（所有病例均经病理组织学检查确诊）、105 例卵巢良性疾病患者及 115 名健康对照者（正常对照组），血清 SA 和 SOD 的含量采用酶法在 Beckman 全自动生化流水线上检测，电化学发光法在罗氏 Cobas 8000 全自动化学发光分析仪上检测 CA125 的含量。采用统计软件 SPSS 20.0 对数据进行统计分析，多组比较采用秩和检验，组间比较采用卡方检验。
结果 卵巢癌组血清 SA、SOD、CA125 水平分别为（710.81±182.82）mg/L、（149.22±39.09）U/ml、（766.53±1115.86）U/ml，卵巢良性疾病组血清水平分别为（556.49±70.83）mg/L、（187.22±25.41）U/ml、（15.89±8.49）U/ml，正常对照组血清水平分别为（556.85±57.55）mg/L、（173.68±14.50）U/ml、（11.56±5.50）U/ml，不同组间的血清 SA、SOD、CA125 水平比较，差异均有统计学意义，进一步经 Mann-Whitney 秩和检验两两比较可知，血清 SA 和 CA125 在卵巢癌组中明显高于卵巢良性疾病组和正常对照组（Z 值分别为-8.11、、-11.829、-8.305、-13.145，P<0.001），卵巢癌组中的血清 SOD 含量显著低于卵巢良性疾病组及正常对照组（Z 值分别为-10.265、-8.731，P<0.001）。在单项检测中 CA125 的灵敏度（86.67%）高于 SA、SOD（分别为 63.89%、65.56%）。CA125 与 SOD 联合检测诊断卵巢癌的特异度、准确度最高，分别为 91.3%、91.19%；CA125、SA、SOD 联合检测诊断卵巢癌的灵敏度最高为 92.22% 。
结论 CA125 仍是目前诊断卵巢癌的重要指标。血清 SA、SOD、CA125 联合应用能弥补单项血清标志物检测的不足，对提高卵巢癌的诊断具有重要的临床价值。

PU-1174

外周血淋巴细胞亚群与肺癌患者的预后关系

张璐璐
山东第一医科大学附属省立医院

目的 探讨外周血细胞亚群与肺癌预后的关系。
方法 选取 2013 年 1 月到 12 月来山东省立医院首诊的病例资料完整肺癌患者共 233 例，其中非小细胞癌 203 例，小细胞癌 30 例。另选取 60 例年龄和性别匹配的健康体检患者作为正常对照，同时检测其外周血 T 淋巴细胞亚群、NK cells、CD19+ B cells，结合临床病理特征回顾性分析 NSCLC 患者外周血淋巴细胞亚群与其预后的关系。
结果 肺癌患者外周血 CD3+T cells、CD4+ T cells、CD4/CD8 ratio、CD19+ B cells 明显低于正常对照组（P<0.05），而 CD8+ T cells、明显高于正常对照组（P<0.05），差异均有统计学意义。单因素和多因素变量 Logistic 回归分析结果显示，CD8+T cells 水平降低时与肺癌预后的风险比分别是（HR=3.84、p<0.0001, HR =1.78、P=0.0048）,是影响肺癌预后的因素。
结论 外周血 CD8+T cells 的增高的患者可获得较长时间的生存期。

PU-1175

肥大细胞活化分子及其抗体在鼻息肉中的表达及机制探讨

丁爽
徐州医科大学附属医院

目的 通过分析肥大细胞（Mast Cell, MC）活化分子及其抗体水平在鼻息肉患者血清、组织中的表达，探讨 MC 与鼻息肉发生的关系及其发病机制。
方法 选取 2020 年 1 月至 2020 年 12 月就诊于我院患者作为研究对象，且所有患者均经过术前鼻内窥镜及鼻窦 CT 检查。实验分为两组：30 例鼻息肉（NP 组）作为实验组；30 例行单纯下鼻甲部分切除术的鼻中隔矫正术者作为对照组（N 组）。收集患者的临床资料和外周血及鼻粘膜组织。全自动血细胞分析仪检测外周血中嗜酸性粒细胞百分比，速率散射比浊法检测血清 IgE 水平，酶联免疫吸附试验检测血清中抗 IgE 抗体、FcεRIα 和抗 FcεRIα 抗体水平。鼻息肉组，随机收取自手术中双侧鼻息肉组织，且术后送病理确诊为息肉；对照组，取下鼻甲黏膜组织。HE 观察两组组织病理改变，免疫组织化学方法分析类胰蛋白酶和 FcεRIα 在实验组和对照组的表达。
结果 鼻息肉组中嗜酸性粒细胞百分比、FcεRIα、抗 FcεRIα 抗体水平均明显高于对照组（P < 0.05），IgE 和抗 IgE 抗体与对照组相比，差异不显著（P > 0.05）；HE 染色和免疫组织化学结果提示，鼻息肉组中，嗜酸性粒细胞浸润；鼻黏膜下层和黏膜间质中发现棕色的类胰蛋白酶阳性、膜表面 FcεRIα 阳性的 MC。
结论 鼻息肉患者血清中高表达 FcεRIα 及其抗体，提示此抗体系统参与了鼻息肉的发生发展，MC 影响着鼻息肉形成的可能作用及具体机制值得进一步探讨。

PU-1176

1 例妊娠患者合并干燥综合征及腹中胎儿系统性红斑狼疮确诊的病例报道

李颖
东南大学附属中大医院

目的 报道东南大学附属中大医院产科 1 例妊娠患者合并干燥综合征及腹中胎儿系统性红斑狼疮确诊病例。结合患者该病的既往史、临床表现、实验室检查等，明确该病是一种经胎盘传导的获得性自身免疫性疾病，该自身抗体可存在于母亲羊水和胎儿脐带血中。
方法（1）诊断依据：1.（2021-04-17）患者李某，女，35 岁，因“停经 23 周 1 天，发现胎心偏慢 3 周，加重 1 天”入院。产检：宫高：22cm,腹围：79cm,内检未行。2.常规（2021-04-13,中大医院）胎位 ROP,双顶径 5.66cm,头围 20.88 cm,腹围 18.58 cm,股骨 3.79cm,颅骨可见，四腔心可见，腹壁脐带插入处未见异常膨出，胃泡可见，膀胱可见，双肾可见，颈部未见明显压迹。胎盘位于子宫宫底及前后壁，成熟度 0 度，厚度 1.96cm,位置正常。3.实验室检查（2021-04-13,中大医院）血细胞分析（五分类仪器检测法）：血红蛋白量：81g/L↓;急诊纤溶功能检查：D-二聚体：520μg/L↑;红细胞沉降率测定（ESR)(仪器法）：86mm/h↑,体液免疫特定蛋白检测：免疫球蛋白 G:22.9g/L↑KAP 轻链：5.9g/L↑ LAM 轻链：2.53g/L↑抗 β2-糖蛋白 1 抗体测定：抗 β2 糖蛋白 1 抗体：71.872RU/mL↑;ACA^ANCA:抗核抗体主要核型：细胞核一斑点型；抗核抗体主要核型滴度：1:320 阳性；抗 SSA 抗体 Ro60:阳性；抗 SSA 抗体 Ro52:阳性；抗 SSB 抗体：阳性（＋）。（2）目前诊断：1.妊娠合并干燥综合征；2.胎儿系统性红斑狼疮；3.产科抗磷脂综合征；4.胎儿心包积液；5.胎儿心律失常等；（3）采集患者外周血、羊水及胎儿脐带血进行抗核抗体系列检测,分别对该三种类型的样本进行 1:320 及 1:100 稀释,得出的结果为:患者外周血抗核抗体 1:320 核斑点型阳性；抗 SSA 抗体 Ro60 阳性；抗 SSA 抗体 Ro52 阳性；抗 SSB 抗体阳性。羊水和脐带血抗核抗体 1:100 核斑点型阳性；抗 SSA 抗体 Ro60 阳性；抗 SSA 抗体 Ro52 阳性；抗 SSB 抗体阳性。
结论 (1)临床上对于患有自身免疫性疾病的孕妇进行产前的相关筛查是十分有必要的。(2)该病例直接反应出高滴度自身抗体可通过胎盘进入羊水和胎儿脐带血,造成胎儿系统性红斑狼疮，应引起广泛重视。

结核性脑膜炎的诊断研究进展

黄鑫
襄阳市第一人民医院

结核性脑膜炎是指由于致病菌结核分支杆菌感染颅内脑膜或脑实质的一类非化脓性炎症，其为中枢神经系统常见的一种感染性疾病。该病的诊断主要依赖于对致病菌的检测，近年来关于结核性脑膜炎结核分枝杆菌检测方法的研究越来越多，治疗手段也有了大量的变化。因此，本研究对相关研究资料进行整理分析，对相关诊断结果和治疗方案进行综述，以期为结核性脑膜炎的诊断及治疗做出科学指导，提升诊断准确性，提高治疗的针对性，改善患者的预后。

PU-1178

LncRNA039932 对 RAW264.7 细胞因子分泌谱影响的研究

邵琦
徐州医科大学附属医院

目的 探讨 LncRNA039932 对 RAW264.7 细胞因子分泌谱的影响。
方法 (1)首先采用基因芯片技术筛选出不同极化状态 RAW264.7 中差异表达的 LncRNAs。并运用 qRT-PCR 技术验证了其中的 LncRNA039932。(2)利用小干扰 SiRNA 下调 RAW264.7 中 LncRNA039932,运用 ELISA 技术检测转染组与对照组上清中 IL-1β、TNF-α、IL-10 的含量，同时以流式细胞术检测转染后 RAW264.7 细胞表面抗原递呈分子 CD80、CD86 的表达。
结果 (1)M2 型极化状态下，LncRNA039932 高表达。(2)与对照组相比，SiRNA 组 IL-1β、TNF-α 表达增高；IL-10 含量显著下降.且差异有统计学意义。而转染前后 CD80、CD86 的表达均无明显变化。
结论 LncRNA039932 参与调控 RAW264.7 细胞因子分泌谱。同时我们猜想应该还存在其他差异表达 LncRNA 参与调控巨噬细胞表型及抗原递呈功能。

PU-1179

唐氏综合征实验筛查进展及问题

王丽娜、曹永彤
中日友好医院

目的 如何选择高效价比的筛查方案，更好地对高龄孕妇进行产前筛查和诊断，既可以检出染色体异常的胎儿，又尽量减少有创检查，提高产前筛查和诊断效率
方法 临床常见的多采用孕中期三联联合筛查。
结果 目前北京地区对 35 岁以上的初次怀孕的孕妇直接进行产前诊断，而生育过健康胎儿的 35 岁以上孕妇则在征求孕妇同意的原则下可以先行无创 DNA 筛查，而后根据筛查结果再决定是否进行产前诊断。对 35 岁以下未有不良孕史的孕妇先进行常规血生化筛查，筛查灰区孕妇，再根据后续无创 DNA 筛查结果来决定是否进行产前诊断。而筛查高危的孕妇则直接进行产前诊断。北京地区的产前筛查和产前诊断已经考虑到不同年龄及孕妇的实际情况，也算是在孕妇个体化产前筛查和诊断策略上一个极大的进步。
结论 孕妇血清学标志物筛查已被证实可在孕期有效检出 DS 患儿，便于大规模筛查，又为高危孕妇进一步做羊膜腔穿刺进行细胞染色体检查提供了必要依据，从而减少了盲目性，又降低了漏检率，是预防 DS 患儿出生的重要途径。因此为减少出生缺陷有必要推广产前筛查，使之成为每一个孕妇产前常规检查项目。在此基础上，再结合具体情况，选择最佳筛查方案，以提高检出率，降低假阳性率，减少有创检查，则是今后着重研究的方向。

PU-1180

四川某三甲医院体检人群甲状腺抗过氧化物酶抗体和甲状腺球蛋白抗体与甲状腺功能相关性分析

段笑生[2]、廖凤慧[1]
1. 电子科技大学附属医院 四川省人民医院临床医学检验中心
2. 电子科技大学附属医院 四川省人民医院临床医学检验中心

目的 分析体检人群甲状腺抗过氧化物酶抗体和甲状腺球蛋白抗体的检出率，并分析其与甲状腺功能的相关性。
方法 收集 2020 年 1 月 1 日至 2020 年 12 月 31 日于四川省人民医院体检中心均进行甲状腺抗过氧化物酶抗体（TPOAb）、甲状腺球蛋白抗体（TGAb）、游离三碘甲状腺原氨酸（FT3）、游离四碘甲状腺原氨酸（FT4）、促甲状腺素（TSH）检测的体检者共 14366 名的资料，其中女 6568 名，男 7798 名，平均年龄为 42.96 岁。
结果 14366 名体检者中，TPOAb 的总阳性率为 10.85%，女性阳性率明显高于男性（16.08%比 7.49%, P<0.01），女性阳性率高峰出现在 30~<40 岁人群，为 17.88%，男性阳性率高峰出现在≥70 岁人群，为 9.53%。 TGAb 的总阳性率为 9.72%，女性阳性率明显高于男性（14.37%比 5.28%，P<0.01），女性阳性率高峰出现在 50~＜60 岁人群，为 15.31%，男性阳性率高峰出现在≥70 岁人群，为 6.24%。 临床甲亢、亚临床甲亢、临床甲减、亚临床甲减人群中，TPOAb、TGAb 均阳性者分别占 30.11%、10.56%、53.36%、20.67%，显著高于非甲状腺功能异常人群的 5.36%；TPOAb 阳性者分别占 46.32%、21.79%、54.98%、33.55%，显著高于非甲状腺功能异常人群的 10.55%；TGAb 分别占 39.87%、18.42%、66.77%、24.33%，显著高于非甲状腺功能异常人群的 7.74%。
结论 体检筛查中，甲状腺抗过氧化物酶抗体和甲状腺球蛋白抗体具有重要意义，对于女性体检者，更应及早进行甲状腺抗过氧化物酶抗体和甲状腺球蛋白抗体的筛查，应重视、加强甲状腺自身抗体阳性者的随访，尤其是双抗体阳性者，以利于甲状腺功能异常疾病的预防和临床早诊治期。

PU-1181

三种新型冠状病毒总抗体检测试验的临床应用价值比较

罗风、李晓非
昆明市第三人民医院

目的 比较三种新型冠状病毒（2019-nCoV）总抗体检测方法（胶体金法、酶联免疫法和化学发光法）的临床应用价值。
方法 纳入 2020 年 2 月至 2020 年 3 月我院门诊及住院新冠肺炎（NCP）患者 39 例为病例组，195 例非 NCP 患者为对照组。收集所有入组对象不同发病时间的空腹静脉血，分别采用三种方法检测样本，并对试验数据进行统计分析。
结果 胶体金法、酶联免疫法和化学发光法的灵敏度分别为 85.71％、86.81％、81.32％，特异度分别为 99.21％、95.24％、97.22％，受试者工作特征曲线（ROC curve）下面积（AUC）分别为 0.925、0.938、0.965。此三种方法在机体发病不同时间对 2019-nCoV 抗体检出率差异没有统计学意义；随着发病时间延长，三种方法对 2019-nCoV 抗体的检出率呈先升高后下降的趋势（检出率在第 15~21 天达峰）。
结论 化学发光法诊断 NCP 的准确性最高，此三种方法的诊断性能均能满足临床需求。

PU-1182

人乳头瘤病毒与血清肿瘤标志物 CEA、CA125、CA199 联合检测在宫颈癌诊断中的价值

渠滕
山东第一医科大学附属省立医院临床医学检验部

目的 探讨人乳头瘤病毒（HPV）与血清肿瘤标志物癌胚抗原(CEA), 糖类抗原 125 (CA125), 糖类抗原 199(CA199)检测在宫颈癌诊断中的价值。
方法 选取 2019 年 1 月到 2020 年 12 月来本院就诊的 100 例经病理确诊为宫颈癌患者作为宫颈癌组，同时选取同期宫颈良性肿瘤 100 例为良性肿瘤组，另选取同期健康体检者 100 例作为健康组，所有患者均用上海之江配套试剂检测其 HPV,罗氏 Cobas 8000 全自动化化学发光免疫分析仪及配套试剂检测血清肿瘤标志物 CEA、CA125、CA199，探讨三组间 HPV 阳性检出率、血清 CEA、CA125、CA199 的表达水平，比较 HPV 及 CEA、CA125、CA199 单独检测与联合检测在宫颈癌诊断中的价值。
结果 研究数据显示, 宫颈癌组血清 CEA、CA125、CA199 水平明显高于良性肿瘤组和对照组，差异有统计学意义（P<0.05）；宫颈癌组 HPV16、HPV18 单独检测与联合检测阳性率均高于良性肿瘤组和对照组，差异有统计学意义（P<0.05）； HPV 与血清 CEA、CA125、CA199 联合检测的灵敏度、准确度均高于任一指标单独检测，组间比较差异有统计学意义（P<0.05）。
结论 宫颈癌患者 HPV 与血清 CA125、CA153、CA199 联合检测可明显提高宫颈癌诊断的准确度和灵敏度,值得临床推广应用。

PU-1183

尿 sCD163 在肾小球炎症疾病中的研究进展

宋佳、孙淑艳
吉林大学第一医院

目的 肾小球肾炎（glomerulonephritis，GN）约占慢性肾脏病的 20%，常见于青年，是青年终末期肾病的最常见原因。肾小球肾炎诊断的金标准是肾活检，是一种有创性检查，必须在满足适应症且排除禁忌症的情况下才能开展。因此，非侵入性的生物标志物检测对肾小球肾炎的早期诊断及病情监测则显得尤为有意义。sCD163 是一种与多种疾病相关的炎性标志物，尿液中 sCD163 水平被证实与肾脏炎症水平直接相关，可作为活动性肾小球肾炎的早期识别和监测的生物标志物，尤其在 ANCA 相关血管炎(AAV)合并肾脏病变的患者和活动期狼疮性肾炎患者的尿液中 sCD163 浓度会明显升高。
方法 通过计算机在 PubMed、Google Scholar 等数据库中进行文献检索，输入相应关键词，年限在 2000 年至 2020 年之间，对纳入文献进行人工审查，识别参考文献进行综述。
结果 尿液中 sCD163 作为一种独立的、理想的前瞻性验证指标，可用于鉴别活动性肾血管炎。相比缓解期的 AAV 患者、急性肾衰竭或脓毒症患者以及无肾受累的 AAV 患者，87%伴有肾受累的活跃 AAV 患者的尿液中 sCD163 水平显著升高；而在狼疮性肾炎（LN）发生发展过程中，sCD163 在尿液中的浓度能够反映 LN 的病理损伤，可作为 LN 新的生物标志物；尿 sCD163 被证实还可应用于其他形式的新月体肾小球肾炎的诊断及辅助识别复发，在一些肾脏疾病如 IgA 肾病、糖尿病肾病、膜性肾病和急性肾损伤中也具有巨大的潜力。
结论 尿液中 sCD163 水平的测定有助于在肾脏发生不可逆损害之前尽早发现累及肾脏的 AAV 复发；与经典的肾脏参数相比，尿 sCD163 的敏感性和特异性更好。sCD163 可作为一种非侵入性的生物标志物，直接反映巨噬细胞介导的肾小球炎症；尿 sCD163 可辅助复发性蛋白尿的 LN 的病理分型。

尿可溶性 CD163 作为非侵入性检测新指标，可参与评估多种肾脏疾病活动性、辅助病理分型及判断肾脏疾病复发预后，通过临床对该指标的不断研究，尿 sCD163 可为肾脏疾病患者带来新的希望。

PU-1184

探讨免疫球蛋白测定和免疫电泳在多发性骨髓瘤的诊断中的临床应用

杨奇[1]、刘旻[2]、张丽翠[1]
1. 石河子大学医学院第一附属医院检验科
2. 石河子大学医学院第一附属医院生殖医学科

目的 探讨免疫球蛋白定量检测、免疫蛋白电泳和免疫固定电泳在多发性骨髓瘤（MM）诊断中的应用与价值。
方法 收集在 2020 年 6 月-2021 年 6 月间就诊于我院确诊为 MM 患者 58 例血清，检测血清免疫球蛋白定量(IgG，IgA，IgM，κ 轻链(kappa light chain)和 λ 轻链(lambda light chain))，并进行血清蛋白电泳及免疫固定电泳，评价上述检测指标在 MM 诊断中的应用价值。
结果 58 例 MM 患者中 51 人经蛋白电泳检测发现存在 M 蛋白，检出阳性率为 87.9%，其中 IgG、IgM 型单克隆条带多出现在 γ 区域，IgA 型多出现在 β 区域；经免疫固定电泳检测后；54 例检测阳性，阳性率 93.1%，其中 IgG 型 32 例（55.2%）、IgA 型 8 例（13.8%）、IgM 型 3 例（5.1%）、轻链型 8 例（13.8%），7 例经蛋白电泳检测未发现 M 蛋白条带，后经固定电泳分析后：3 例均为微量双克隆蛋白分泌型，余 4 例为不分泌型。同时相应类型的免疫球蛋白和轻链增高并伴其它组分免疫球蛋白及轻链降低。
结论 免疫球蛋白及轻链检测、免疫蛋白电泳是临床初筛多发性骨髓瘤的重要方法，而基于毛细管电泳技术的免疫固定电泳则是 MM 快速诊断及分型的重要途径，可为临床提供重要的实验室依据。

PU-1185

拉曼光谱分析推动流式细胞术新发展

华木星[1,2]、段勇[1]
1. 昆明医科大学第一附属医院
2. 云南省阜外心血管病医院

流式细胞术目前在临床和科研领域都有着广泛的应用，通过制备细胞或实体颗粒的悬液从而测量细胞大小、细胞颗粒度以及细胞表面和细胞内分子的表达，能对生物过程进行系统性观察。甚至还能通过特定参数的设置对细胞进行分选，以及辅助实现分选样本的后续附加分析，例如 DNA/RNA 测序、克隆和定向分化。但是，传统的流式细胞术主要依靠荧光进行标记间接反应目的细胞的理化性质，这会对细胞的活性有一定的影响，同时受可用荧光种类限制和荧光间相互干扰的影响，无法同时对细胞内所有复杂成分进行分析。为了克服这些困难，一种基于拉曼光谱直接测量细胞特性的流式细胞术应运而生，简称“拉曼流式细胞术”。“拉曼散射”是指一定频率的激光照射到物质时，物质中的分子与光子发生能量转移，振动态发生不同方式和程度的改变，然后散射出不同频率的光。不同种类的原子团振动的方式是独一的，因此可以产生与入射光频率有特定差值的散射光，其光谱就称为“指纹光谱”。通过对指纹光谱的鉴定分析细胞内外的各个组分并不会对目的细胞产生损伤和破坏。因不需要对细胞进行标签，甚至有望在体内进行流式细胞检测。但是，拉曼散射的光分子相互作用很弱，信号采集缓慢，近年来随着信号转换及放大系统的进一步研究，激光科学、光子学、微流体学、计算机科学、分子工程和生物医学的合作愈加紧密，基于不同类型的受激拉曼散射(SRS)和相干反斯托克斯拉曼散射(CARS)的原理，如 CARS、多路 CARS、傅立叶变换 CARS、SRS、SRS 成像流式细胞术和 RIACS 发展迅速，实现了高灵敏度和高通量并存，并与液

滴微流体集成，利用机器学习技术，实现活体流式细胞术检测，尤其在微生物筛选、细胞分化跟踪、肿瘤检测和细胞治疗等领域的应用将迎来新机遇、新挑战和新发展。

PU-1186

Cyfra21-1、CEA 和 CA15-3 与乳腺癌早期诊断及病理特征的相关性研究

熊文祺、李清祥、仇丽娟、张小艳
南昌市第三医院

目的 基于血液的生物标记物对乳腺癌的早期检测都不够敏感，本研究通过对乳腺癌患者血清细胞角蛋白 19 片段抗原 21-1(Cyfra21-1)、糖类抗原 153(CA15-3)、癌胚抗原(CEA)水平变化检测，以探究这三个生物指标对乳腺癌的单独和联合诊断价值，旨在提高乳腺癌诊断率。
方法 选取 2020 年 1 月至 2021 年 12 月南昌市第三医院乳腺癌患者 84 例，乳腺良性肿瘤患者 60 例以及健康体检者 60 例。电化学发光法测定血清 Cyfra21-1 水平，化学发光法测定血清 CEA、CA15-3 以及实验室常规肿瘤标志物 AFP、CA242、CA50 和 CA125 水平。分析比较各组患者肿瘤指标水平，进一步分析肿瘤分期、淋巴结转移以及 ER、PR、HER-2 和 Ki-67 指数与研究指标的关系；绘制受试者工作曲线(ROC)，通过曲线下面积(AUC)评价 Cyfra21-1、CEA 和 CA15-3 对乳腺癌的诊断价值。
结果 乳腺癌组 Cyfra21-1、CEA 和 CA15-3 水平显著高于良性肿瘤组和健康对照组($P<0.05$)；Cyfra21-1、CEA 与肿瘤分期有关，CEA 与淋巴结转移有关；Cyfra21-1、CEA 和 CA15-3 诊断乳腺癌的 AUC 分别 0.753、0.690 和 0.683，三个指标联合诊断 AUC 最大，为 0.829，Cyfra21-1 诊断特异度最高，为 88.89%；CA15-3 灵敏度最高，为 96.43%。
结论 Cyfra21-1、CEA 和 CA15-3 与乳腺癌病理特征相关且对乳腺癌具有较高的诊断价值，联合诊断价值更高。

PU-1187

357 例抗磷脂抗体谱阳性病例的分析

潘晶晶
郑州大学第一附属医院

目的 探讨抗磷脂抗体谱检测结果中抗心磷脂抗体（aCL）和抗 β2 糖蛋白 I 抗体（aβ2GPI）的阳性率及分布特征。
方法 选取 2018 年 1 月至 2021 年 1 月在我院就诊并通过化学发光法进行 aCL 和/或 aβ2GPI 检测的 6977 例患者作为研究队象。
结果 至少一项 aCL 或 aβ2GPI 阳性的患者 357 例，占 5.12%，年龄范围为 9-85 岁（中位数 37 岁），其中女性 223 例，男性 134 例，男女比例为 1:1.66。仅 aCL 阳性（aβ2GPI 阴性）127 例，占 35.58%，仅 aβ2GPI 阳性（aCL 阴性）113 例，占 31.65%，aCL 和 aβ2GPI 同时阳性的 117 例，占 32.77%。aCL 亚型的阳性率分别为：aCL-IgA 为 20.31%，aCL-IgG 为 44.62%，aCL-IgM 为 28.21%,阳性率 aCL-IgG>aCL-IgM>aCL-IgA。aβ2GPI 亚型阳性率分别为：aβ2GPI-IgA 为 19.79%，aβ2GPI-IgG 为 58.18%，aβ2GPI-IgM 为 15.34%，阳性率 aβ2GPI-IgG>aβ2GPI-IgM> aβ2GPI-IgA。阳性病例中系统性红斑狼疮患者数量最多，共 48 例，占 13.45%，其次为抗磷脂综合征患者 36 例，占 10.08%，血栓形成、脑梗塞和血液系统疾病分别是 23 例、22 例和 22 例，占 6.4%、5.6%和 5.6%。
结论 对系统性红斑狼疮和抗磷脂综合征病患者定期检测抗磷脂抗体谱，协助临床疗效监测和判断预后。

PU-1188

肿瘤标志物 SP70 在宣威肺癌中的临床应用研究

洪源、段勇
昆明医科大学第一附属医院

目的 肺癌是目前世界上最常见的恶性肿瘤之一,在中国,云南省宣威地区人群以肺癌高发、恶性程度高、预后极差等特点引起了广泛的关注和研究。在对于宣威肺癌的研究中,一直缺乏特异性高、与病情变化相关性高、检测方法简便快速的肿瘤标志物。肿瘤特异性蛋白 70（tumor specific protein 70,SP70）是单克隆抗体 NJ001 识别的特异性抗原,在非小细胞肺癌组织上的表达率为 80%～90%,在肿瘤细胞的恶性增殖和侵袭转移中发挥着极其重要的作用。探索肿瘤标志物 SP70 与宣威肺癌相关性,有助于此类癌症的早期诊断、动态监测以辅助判断病情进展或治疗效果。因此本文就肿瘤标志物 SP70 在宣威肺癌诊断中的应用现状,对其特点进行分析,从宣威肺癌的疾病背景、肿瘤标志物 SP70 与宣威肺癌的相关性及检测方法等方面出发,探究肿瘤标志物 SP70 在宣威肺癌诊断和治疗中的应用,以期为宣威肺癌的早期诊断和预后判断提供新的思路。

PU-1189

了解恶性肿瘤患者血清自身抗体的临床意义

司文
山东省立医院

目的 了解恶性肿瘤患者血清自身抗体的临床意义。
方法 对 48 例原发性肝癌、46 例原发性肺癌,36 例胃瘤,28 例结直肠癌,67 例慢性肝炎、38 例肝硬化、36 例 自身免疫疾病和 50 例健康人血清，应用间接免疫荧光法检测自身抗体，蛋白印迹法检测 ENA 抗体谱，间接 ELISA 法检测,dsDNA 抗体,以及检测 ANA 抗体谱。
结果 原发性肝癌，原发性肺癌、胃癌、结直肠癌、慢性肝炎及肝硬化患者血清自身抗体检出率高于健康人(P< 0. 05)，低于自身免疫疾病患者(P < 0.05),原发性肝癌、原发性肺癌、胃癌、结直肠癌、慢性肝炎、肝硬化和自身免疫疾病患者均具有多种自身抗体荧光模式及较宽的自身抗体谱，健康人荧光模式少且自身抗体谱很窄，与其他疾病比较，癌症患者的自身抗体不具有特征性分布。大部分间接免疫荧光法自身抗体阳性的癌症患者，蛋白印迹法未检出 ENA 抗体。
结论 自身抗体有助于鉴别诊断健康人与癌症患者，但无独立诊断价值。癌症患者体内尚有许多自身靶抗原有待于进一步鉴定。

PU-1190

化学发光法检测新型冠状病毒总抗体假阳性结果的临床特征分析

黄宇、洪国斧
厦门大学附属第一医院

目的 探讨化学发光法检测新冠总抗体的假阳性结果与性别、年龄、疾病、炎症性指标以及肿瘤标志物的关系。
方法 对我院 2020 年 5 月至 2021 年 1 月门诊及住院患者的新冠总抗体检测结果进行统计分析。采用电化学发光法检测 PCT、免疫比浊法检测 CRP、流式细胞法检测 IL-6、化学发光法检测 CEA、AFP、CA125 等。对性别、年龄、疾病种类等进行描述性分析，组间采用卡方分析相关性。
结果（1）149 例假阳性样本中，女性浓度中位数为 2.655S/CO 高于男性，男女 2019-nCoVAb 假阳性率差异无统计学意义（P=0.120）；（2）149 例假阳性样本中，21~40 这组的浓度中位数最

高，为 2.250；（3）149 例假阳性样本结果≤5 S/CO 占比 85.91%，主要集中在低浓度水平；（4）149 例假阳性样本中，自身存在恶性肿瘤或炎症的占比较高，分别是 27.52%和 20.13%；（5）炎症性指标的阳性率较高，PCT、CRP、IL-6、WBC 的阳性率分别是 57.14%、18.06%、75%、15.56%。

结论 化学发光法检测新冠总抗体存在一定假阳性，与肿瘤、炎症疾病存在一定相关性，本研究为疫情防控与临床决策提供依据。

PU-1191

IL-6 在托珠单抗和恢复期血浆治疗 COVID-19 中的应用

武剑、夏欣一
中国人民解放军东部战区总医院

目的 重症 COVID-19 患者的体内有细胞因子风暴综合征 (CSS)，研究白细胞介素 6（IL-6）水平的动态变化对监测和治疗重症患者的指导意义，本文旨在评价 IL-6 在托珠单抗和恢复期血浆 2 种新疗法治疗 COVID-19 中的应用。

方法 纳入 1472 例经临床诊断和实验室确诊为 COVID-19 感染的住院患者(2020 年 2 月 4 日至 2020 年 3 月 30 日在火神山医院收治)，统计相关临床特征和实验室检测指标，分析 IL-6 水平与患者的基础疾病、治疗方式以及预后之间的相关性。

结果 1.IL-6 水平随年龄增长而升高，男性高于女性，体温高于 37.3°C 的患者 IL-6 水平更高，IL-6 水平与 SpO2 的水平呈负相关；2.患有糖尿病和高血压等基础疾病的患者，IL-6 水平高，疾病进展较快；3.用与 IL-6 正相关系数最高的 IL-10，绘制 ROC 曲线，两种细胞因子的曲线下面积 (AUC) 为：IL-6，0.686、IL-10，0.701，基于此，IL-6 可以作为生物标志物来直观反映机体炎症水平；4.新冠 IgG 抗体水平随着疾病严重程度的增加而增加，重症和危重症 COVID-19 患者体内的 IgG 水平随着 IL-6 水平的升高而降低，这可能是由于中和抗体耗尽所致；5.基于六类量表评分（SCSS）评估托珠单抗治疗患者的状况，发现托珠单抗治疗可以改善患者的炎症状况，但对于疾病的转归未发现改善，尤其是死亡病例数；6.接受 CPT 治疗的患者疾病持续时间缩短，炎症程度降低。

结论 IL-6 可作为一个稳定的检测指标，其水平的动态变化可以监测病毒感染期间的机体炎症状况。IL-6 水平高于正常水平 30 倍的患者，与 IL-6 水平较低的患者相比，预后较差。使用托珠单抗和恢复期血浆疗法 (CPT)，可降低 IL-6 水平，缓解患者全身炎症状况。（本文部分内容已发表于 Front Immunol, IF=5.085）

PU-1192

双阴性 T 细胞在耐药性肺结核中的表达及意义研究

梁骑、郭晓兰、刘文、杨尚瑜
四川省南充市川北医学院附属医院

目的 探究 CD3＋CD4-CD8-(double negative T，DNT)细胞在耐药性肺结核中的表达及意义。

方法 选取 2017 年 6 月-2018 年 1 月期间我院收治的 50 例耐药性肺结核患者为耐药肺结核组，并选取同期 50 例肺结核患者为结核组，同期来我院进行健康检查的 30 例健康志愿者为对照组。分析并比较三组对象的 DNT 细胞水平及白细胞介素 10(IL-10)和干扰素 γ（IFN-γ）水平，检测并比较三组对象的外周血 T 淋巴细胞亚群水平及 DNT 细胞、IL-10 和 IFN-γ 细胞的凋亡情况，并分析 DNT 细胞凋亡与 IL-10 和 IFN-γ 水平的相关性。

结果 耐药肺结核组与肺结核组患者的各项外周血 T 淋巴细胞水平均低于对照组，且耐药肺结核组低于肺结核组；耐药肺结核组与肺结核组患者的 DNT 细胞、IFN-γ 水平均低于对照组，且耐药肺结核组低于肺结核组，IL-10 水平均高于对照组，且耐药肺结核组高于肺结核组；耐药肺结核组与肺

结核组患者的 DNT 细胞、IFN-γ 细胞凋亡率均高于对照组，且耐药肺结核组高于肺结核组，IL-10 细胞凋亡率低于对照组，且耐药肺结核组低于肺结核组，差异有意义（p＜0.05）。DNT 细胞凋亡与 IL-10 水平呈现相关（r=0.644，p=0.010），DNT 细胞凋亡与 IFN-γ 水平呈现负相关（r=-0.230，p=0.016）。

结论 耐药性肺结核的出现可能与细胞免疫功能紊乱相关，耐药性肺结核患者 DNT 细胞凋亡率显著增加导致 DNT 细胞数减少，DNT 细胞凋亡与 IL-10 水平呈现相关，与 IFN-γ 水平呈现负相关。

PU-1193

ALCAM 在 HIV-1 感染者中的表达及意义

李明玉、李娅
昆明医科大学第一附属医院

目的 探讨 HIV-1 感染长期不进展者血清中活化白细胞黏附分子（activated leukocyte cell adhesion molecule，ALCAM）的水平及长期不进展者的产生机制。

方法 选取确诊的 HIV-1 感染者中的 10 例 HIV-1 长期不进展者为病例组 A，10 例 HIV-1 典型进展者作为病例组 B，10 例未感染 HIV-1 同时未患有其他疾病的健康志愿者作为对照组，采用双抗体夹心酶联免疫吸附实验（ELISA）法检测血清中 ALCAM 水平，使用 SNK（q）法进行组间两两比较。

结果 HIV-1 典型进展者血清 ALCAM 水平要高于 HIV-1 长期不进展者组和对照组，但是 P<0.05 差异具有统计学意义。而 HIV-1 长期不进展者血清 ALCAM 水平与对照组相比，P>0.05 差异不具有统计学意义。

结论 ALCAM 在 HIV-1 感染长期不进展者血清中水平与健康人无差异，在 HIV-1 感染典型进展者血清中升高，ALCAM 与 HIV-1 感染的疾病进展有关，有望成为 AIDS 治疗的潜在靶点。

Serum C1q concentration positively correlates with erythrocyte sedimentation rate in polymyositis/dermatomyositis

Liubing Li[1]、Li Yongzhe[2]
1. Peking Union Medical College Hospital, Chinese Academy of Medical Sciences
2. 北京市东城区北京协和医院东院检验科

C1q is an important component of the classical complement pathway. This study aimed to investigate C1q concentrations in the sera of PM/DM patients.

C1q concentrations were measured in the sera of 87 PM/DM patients and 100 healthy subjects. In addition, the association between C1q concentration and laboratory indexes such as CK, AST, ALT, LDH, hsCRP, and ESR were also evaluated.

Our data indicated no significant difference in the serum C1q concentration between PM/DM patients and healthy subjects. However, serum C1q concentrations were observed to be significantly higher in PM/DM patients in patients group with elevated ESR than in those with normal ESR (207.55 ± 37.54 mg/L and 180.69 ± 38.90 mg/L, respectively; P=0.008). Furthermore, there was a positive correlation between serum C1q concentration and ESR (P=0.002), but no association was observed with CK, AST, ALT, LDH, and hsCRP levels.

This study demonstrated C1q levels were elevated in PM/DM patients with higher ESR, and revealed significant positive correlation. However, the exact role of the classical complement pathway in PM/DM needs further elucidation.

Analysis of myositis auto-antibodies in Chinese patients with cancer-associated myositis

Liubing Li[1]、Li Yongzhe[2]
1. Peking Union Medical College Hospital, Chinese Academy of Medical Sciences
2. 北京市东城区北京协和医院东院检验科

Background Cancer-associated myositis (CAM) has poor prognosis and causes higher mortality. In general, myositis-specific auto-antibodies (MSAs) and myositis-associated auto-antibodies (MAAs) have been shown to be useful biomarkers for its diagnosis.
Methods In the present study, focus was given in assessing the presence, prevalence and diagnostic values of myositis auto-antibodies in Chinese patients diagnosed with CAM. The sera collected from 49 CAM patients, 108 dermatomyositis/polymyositis (DM/PM) patients without cancer, 105 disease controls and 60 healthy controls were detected for the presence of 16 auto-antigens (Jo-1, OJ, EJ, PL-7, PL-12, MDA5, TIF1γ, Mi-2α, Mi-2β, SAE1, NXP2, SRP, Ku, PM-Scl75, PM-Scl100, Ro-52) using a commercial Euroline assay.
Results The frequency of anti-TIF1γ was significantly higher in CAM patients than in DM/PM patients without cancer (46.9% vs. 14.8%, P<0.001). Importantly, the sensitivity and specificity for this MSA was 46.9% and 85.2%, respectively. These helped to differentiate CAM patients from DM/PM patients without cancer. However, there was no difference in other MSAs and MAAs between CAM and DM/PM patients without cancer.
Conclusion The present study indicates that anti-TIF1γ levels can serve as important biomarkers for CAM diagnosis, and help in distinguishing between CAM and DM/PM patients without cancer.

PU-1196

生长刺激表达基因 2 蛋白和肝素结合蛋白在川崎病中的应用价值

胡文霞
连云港市第一人民医院

目的 探讨生长刺激表达基因 2 蛋白(growth stimulation expressed gene 2，ST2)和肝素结合蛋白(Heparin-Binding Protein，HBP)在川崎病中的临床应用价值。
方法 选取 60 例川崎病患儿为研究对象，根据有无并发冠状动脉损伤（coronary artery lesion，CAL） 将入选患儿分为 CAL 组（21 例）和 NCAL 组（39 例），选取该院同期伴有发热并排除心肌损害的呼吸道感染患儿 30 例纳入对照组。检测所有患儿 ST2 和 HBP 水平，结果川崎病患儿 ST2 和 HBP 水平均显著高于对照组（均 P ＜ 0.05）； CAL 组患儿 ST2 和 HBP 水平显著高于 NCAL 组（均 P ＜ 0.05）。
结论 ST2 和 HBP 与川崎病患儿冠状动脉损伤密切相关，则作为预测是否发生冠状动脉损伤的指标。

PU-1197

Myositis-specific autoantibodies in dermatomyositis/polymyositis with interstitial lung disease

Liubing Li[1]、Li Yongzhe[2]
1. Peking Union Medical College Hospital, Chinese Academy of Medical Sciences
2. 北京市东城区北京协和医院东院检验科

Aim The prevalence and diagnostic values of myositis-specific autoantibodies (MSAs) and myositis-associated autoantibodies (MAAs) in dermatomyositis/polymyositis (DM/PM) were studied.
Method A commercial immunoblot assay with 16 autoantigens was used to detect MSAs and MAAs in serum samples from 130 DM/PM patients, 100 disease controls, and 50 healthy subjects.
Results The prevalence of anti-Jo-1, anti-MDA5, anti-TIF1γ, anti-Mi-2α, and anti-Mi-2β was significantly higher in DM/PM than in other connective-tissue diseases (CTDs). Moreover, anti-MDA5 and anti-Ro-52 were significantly higher in DM/PM with interstitial lung disease (ILD) than in DM/PM without ILD, while that of anti-TIF1γ and anti-NXP2 were significantly lower in DM/PM with ILD than in DM/PM without ILD. For distinguishing DM/PM from other CTDs, the sensitivity, specificity, and positive predictive value (PPV) for anti-MDA5 were 28.46, 99.00, and 97.37%, respectively, with a positive likelihood ratio (LR+) of 28.46; they were 46.15, 58.00, and 58.82%, respectively, for anti-Ro-52 with an LR+ of 1.10. For distinguishing DM/PM with ILD from DM/PM without ILD, the sensitivity, specificity, and PPV for anti-MDA5 were 45.57, 100.00, and 100.00%, respectively, and for anti-Ro-52 were 60.76, 73.91, and 80.00%, respectively.
Conclusion MSAs and MAAs serve as biomarkers for differentiating DM/PM from other CTDs as well as distinguishing DM/PM with ILD from DM/PM without ILD.

PU-1198

Associations between anti-NXP2 antibody and demographics, clinical characteristics and laboratory results of patients with dermatomyositis: A systematic meta-analysis

Liubing Li[1]、Li Yongzhe[2]
1. Peking Union Medical College Hospital, Chinese Academy of Medical Sciences
2. 北京市东城区北京协和医院东院检验科

Objective Anti-nuclear matrix protein 2 (NXP2) is a specific biomarker in patients with dermatomyositis (DM). Results from several studies that examined the relationship between anti-NXP2 antibody and the demographics, clinical characteristics, and laboratory results of DM patients have been conflicting. The purpose of this study was to identify the relationship, if any, of anti-NXP2 antibody with demographics, clinical characteristics, and laboratory results of DM patients.
Methods PubMed, Web of Science, Embase, and the Cochrane Library databases were searched for studies without language restrictions conducted before January 31, 2019. Stata 12.0 software was used to calculate pooled odds ratios (ORs) or weighted mean differences (WMDs) and corresponding 95% confidence intervals (CIs) to determine the relationship between anti-NXP2 antibody and patient characteristics.
Results Eleven studies comprising 2,047 cases were included in this meta-analysis. Anti-NXP2 antibody was associated with the following characteristics of patients: edema (OR = 3.90, 95% CI = 2.01–7.55, P < 0.001), muscle weakness (OR = 10.69, 95% CI = 4.67–24.47, P < 0.001), myalgia/myodynia (OR = 2.97, 95% CI = 1.97–4.46, P < 0.001), ILD (OR = 0.25, 95% CI = 0.15–

0.40, P < 0.001), dysphagia (OR = 4.00, 95% CI = 2.71–5.90, P < 0.001), calcinosis (OR = 3.74, 95% CI = 1.91–7.30, P < 0.001).
Conclusions Our meta-analysis indicated anti-NXP2 antibody is related to edema, muscle weakness, myalgia/myodynia, ILD, calcinosis in patients with DM.

PU-1199

Whole Exome Sequencing Identifies Rare Protein-Coding Variants in Dermatomyositis

Liubing Li[1]、Li Yongzhe[2]
1. Peking Union Medical College Hospital, Chinese Academy of Medical Sciences
2. 北京市东城区北京协和医院东院检验科

Objective Dermatomyositis (DM) is an idiopathic inflammatory myopathy characterized by chronic skeletal muscle and skin inflammation. Despite the identification of multiple common genetic variants associated with DM, rare genetic variants have been less explored. This study aimed to investigate the rare variants in juvenile DM (JDM) and adult DM (ADM) of Han Chinese using whole exome sequencing (WES).
Methods WES was conducted in a discovery set comprising 20 patients with JDM, 20 patients with ADM and 20 healthy controls of Han Chinese. WES data were generated for the cases and controls. Variants were annotated and filtered by quality, minor allele frequency, and deleteriousness on gene function. Candidate variants were identified in patients compared to healthy controls as well as controls from China National GeneBank. For validation, Multiplex polymerase chain reaction (PCR) was performed in an additional independent set of 34 JDM, 262 ADM and 241 healthy controls of Han Chinese.
Results In discovery stage, nine rare variants with predicted protein-damaging effects in DM were identified in cases but not in controls, harboured in FCRL1, DMBT1, COL1A1, KIAA1033, DDX58, DYSF, IL31RA, JAK2 and WDFY4. These variants were subsequently subject to multiplex PCR. A novel variant in WDFY4 (chr10: 50154140 C>T) was validated to be associated with JDM. Another novel variant in DDX58 (chr 9: 32487565 T>C) was validated to be associated with ADM.
Conclusion Our findings are helpful for providing new ideas for understanding the pathogenesis of DM by detecting and analyzing gene mutations at the whole-exome level. Rare putative protein-damaging genetic variants in WDFY4 and in DDX58 may be new susceptibility loci for DM, but their roles in the pathogenesis of DM are worthy of further study.

Heat inactivation of serum interferes with the immunoanalysis of antibodies to SARS-CoV-2

Xiumei Hu
Nanfang Hospital, Southern Medical University

Background The detection of serum antibodies to the severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) is emerging as a new tool for the coronavi_x0002_rus disease 2019 (COVID-19) diagnosis. Since many coronaviruses are sensitive to heat, heating inactivation of samples at 56°C prior to testing is considered a possible method to reduce the risk of transmission, but the effect of heating on the measurement of SARS-CoV-2 antibodies is still unclear.
Methods By comparing the levels of SARS-CoV-2 antibodies before and after heat inactivation of serum at 56°C for 30 minutes using a quantitative fluorescence immunochromatographic assay

Results We showed that heat inactivation significantly interferes with the levels of antibodies to SARS-CoV-2. The IgM levels of all the 34 serum samples (100%) from COVID-19 patients decreased by an average level of 53.56%. The IgG levels were decreased in 22 of 34 samples (64.71%) by an average level of 49.54%. Similar changes can also be observed in the non–COVID-19 disease group (n = 9). Of note, 44.12% of the detected IgM levels were dropped below the cutoff value after heating, suggesting heat inactivation can lead to false-negative results of these samples.
Conclusion Our results indicate that heat inactivation of serum at 56°C for 30 minutes interferes with the immunoanalysis of antibodies to SARS-CoV-2. Heat inactivation prior to immunoanalysis is not recommended, and the possibility of false-negative results should be considered if the sample was pre-inactivated by heating.

PU-1201

Genome-wide Association Study Identifies rs7770370 and rs35953215 within HLA-DPB1 loci as Major Genetic Factors for Polymyositis/Dermatomyositis

Liubing Li
Peking Union Medical College Hospital, Chinese Academy of Medical Sciences

Objective The polymyositis/dermatomyositis (PM/DM) are a spectrum of heterogeneous autoimmune diseases, characterized by skeletal muscle weakness and muscle inflammation. PM/DM are thought to be complex genetic diseases, arising from an interaction between environmental and genetic factors. This study aimed to identify genetic risk factors in patients with PM/DM of Han Chinese.
Methods We conducted a genome-wide association study (GWAS) of 576 PM/DM, which included 232 polymyositis (PM), 344 dermatomyositis (DM), 266 PM/DM-interstitial lung disease (PM/DM-ILD) and 97 PM/DM with anti-Jo-1 autoantibodies, and compared them with 1455 healthy controls. A total of 642832 single nucleotide polymorphisms (SNPs) were genotyped using the Affymetrix Axiom Genome-Wide CHB 1 Array Plate.
Results We found two SNPs, rs7770370 and rs35953215 within HLA-DPB1 loci, which were significantly associated with PM/DM. Rs7770370 was identified as a novel genetic risk factor for PM/DM [P = 1.69×10-8, odds ratio (OR) = 1.52], and rs35953215 was defined as a novel genetic protective factor for PM/DM (P = 1.17×10-8, OR = 0.63).
Conclusion Two novel susceptibility loci in HLA-DPB1 were identified to be associated with PM/DM of Han Chinese. Additional studies will be needed to determine the role of these findings in the genetic etiopathogenesis of PM/DM.

综合性医院首诊 HIV 患者中 HBV HCV 和梅毒混合感染状况及临床特征

王万海、孟宪春、明亮
郑州大学第一附属医院

目的 了解综合性医院首诊人类免疫缺陷病毒(HIV)患者中合并乙型肝炎病毒(HBV)、丙型肝炎病毒(HCV)和梅毒螺旋体(TP)的混合感染情况及临床特点，为艾滋病(AIDS)的防控和治疗提供科学依据。
方法 2013 年 1 月至 2017 年 12 月，以非艾滋病首诊于某综合性医院而确证为 HIV 患者，收集其人

口学资料和临床资料，并进行乙型肝炎病毒表面抗原(HBsAg)、丙型肝炎病毒抗体(HCV-Ab)和梅毒特异性抗体(TP-Ab)检测。
结果 359 例 HIV 患者年龄中位数为 45 岁(2~86 岁)，男性 251 人(69.92%)，女 108 人(30.08%)。4.18%的 HIV 患者通过母婴途径感染，33.98%通过性途径感染和 61.84%通过血液途径 (单采血浆)感染。混合感染 HBV 为 9.75%，HCV 为 17.55%和 TP 为 15.88%。HIV 感染的不同途径中，HBV、HCV 和 TP 的混合感染率存在差异。HIV 患者首诊科室共涉及 26 个，其中内科相关科室达到 58.22%，外科为 13.65%，其它科室占到 28.13%。涉及疾病谱 18 类，主见呼吸系统疾病、感染性疾病、神经系统疾病、消化系统疾病、血液系统疾病。
结论 首诊综合性医院的 HIV 患者中合并 HBV、HCV 和 TP 感染率相对较高，涉及就诊科室多，疾病谱广。

PU-1203

人免疫缺陷病毒检测的质量控制

周蓉
电子科技大学附属医院•四川省人民医院临床医学检验中心

目的 探所讨论人免疫缺陷病毒初筛检测的质量控制影响因素，提高人免疫缺陷病毒化学发光微粒法检测水平，快速为临床提供参考结果。
方法 用化学发光微粒法对人免疫缺陷病毒抗原抗体进行检测，初步检测阳性反应者用人免疫缺陷病毒 HIV(1+2)抗体胶体金法进行复检。
结果 影响人免疫缺陷病毒初筛检测质量的因素包括：标本采集是否正确，运输是否合理，试剂、试管的使用、人员操作过程、环境温湿度、仪器维护、质控设置等很多方面的原因。
结论 在日常工作检测中，除开客观不可抗力因素影响外，需要检测人员拥有高度的责任心，从标本采集到标本上机整个过程都要用心，保证标本的质量。在从仪器维护、试剂准备到质控完成，都要细心做到正确。对各种影响检测结果的因素，积极采取全面有效的质量控制措施，减少或想办法消除误差，才能有效预防假阴性或者假阳性结果的出现，从而避免或者预防医院感染及交叉感染，降低职业暴露的危险，加强医护人员的自我保护，为临床提供可靠准确的检测结果。

PU-1204

血清热灭活对胶体金法检测 2019-nCoV 抗体的影响

胡秀梅
南方医科大学南方医院

目的 评估热灭活对胶体金法检测新型冠状病毒（2019 novel Coronavirus, 2019-nCoV）特异性抗体 IgM 和 IgG 的影响。
方法 收集新型冠状病毒肺炎确诊住院患者血清 106 份及健康医护人员血清标本 52 份，采用商品化 2019-nCoV 抗体检测试剂盒（胶体金法）分别对 56℃ 30 min 热灭活前后的血清标本特异性 IgM 和 IgG 抗体进行检测，分析灭活前后抗体检出率的差异及一致性。根据患者发病时间分析热灭活对不同发病阶段抗体检出率的影响。
结果 健康对照组标本灭活前后测试均为阴性。56℃ 30min 灭活后降低 2019-nCoV 特异性抗体 IgM 和 IgG 的检出率，106 例确诊患者 IgM 抗体总检出率由 66.04%（70/106）降至 43.40%（46/106），差异有统计学意义（$\chi2=22.042$，$P=0.000$）；IgG 抗体阳性率由 81.13%（86/106）降至 76.42%（81/106），差异无统计学意义（$\chi2=0.800$，$P=0.063$）。在发病第 3 周、第 5 周和第 6 周热灭活可显著降低 IgM 抗体检出率。不同发病时段，血清热灭活前后 IgG 抗体检出率差异无统计学意义。

结论 56℃ 30 min 热灭活降低胶体金法 2019-nCoV 特异性 IgM 抗体检出率，易导致假阴性结果。

PU-1205

550 例儿童食入物过敏原 IgG 检测结果分析

郭争艳
山东第一医科大学第一附属医院（山东省千佛山医院）

目的 通过分析特异性过敏 IgG 的检测结果，对儿童食入物过敏性疾病预防和治疗提供理论支持。
方法 采用酶联免疫吸附法对我科 2020 年 1 月～2020 年 12 月 550 例儿童保健门诊、儿科门诊和住院患儿食入物过敏原特异性 IgG，进行统计分析。
结果 在 550 例患儿中检出总阳性率 87.3%蛋清/蛋黄阳性率最高 50.5%，牛奶次之 41.6%，一份血清标本可出现多种食入物过敏原存在。
结论 食物过敏原中蛋清/蛋黄和牛奶是最主要食入性过敏原，采取有效的预防措施，可以有效降低食入物导致过敏疾病的发生。

PU-1206

健康体检人群抗核抗体与抗核抗体谱检测结果相关分析

刘芳、司元全
山东省立医院东院

目的 通过对本实验室健康人群抗核抗体与抗核抗体谱定量检测结果的分析，揭示健康人群 ANA 分布情况及规律，进一步探讨人群筛查的意义，为临床疾病的诊断提供有用的价值。
方法 采用间接免疫荧光法(IIF)检测血清 ANA,流式荧光发光法检测 15 项 ANAS 特异性抗体。
结果 在 18240 例体检人群中，ANA 滴度阴性为 15482 例，ANAS 特异性抗体阳性率为 2.6%，流式荧光发光法检测 15 项 ANAS 特异性抗体按顺序阳性率排前三的为抗补体 C1q 抗体、SSA-52、抗双链 DNA 抗体（dsDNA）；ANA 滴度>1:100 阳性为 2758 例，阳性率为 15.12%，男性阳性率为 9.27%，女性阳性率为 21.23%，ANA 滴度>1:320 阳性率为 10.12%，男性阳性率为 6.60%，女性阳性率为 13.80%，不同性别阳性率差异有统计学意义。其中 ANA 滴度>1:320 时，男性阳性率随年龄增长出现平缓上升趋势，女性在青春期及更年期出现两个高峰；ANA 滴度>1:320 阳性人群中 15 项特异性抗体阳性率为 69.99%，按顺序阳性率排前三的为抗 SSA-52：14.84%、M2：13.00%、SSA60：9.97%。
结论 体检人群中 ANA 滴度阴性者中也存在一定的 ANAS 特异性抗体阳性者；ANA 滴度>1:100 各年龄段均存在阳性者，且其 ANA 滴度>1:320 分布随性别、年龄不同存在明显差异；对于健康人群尤其是处于青春期及更年期的女性筛查 ANA 是极其必要的，对于筛查中 ANAS 特异性抗体阳性人群进行定期的 ANA 及 ANAS 联合检测，可以有效防止漏诊和误诊，ANA 滴度阳性人群应做好自身免疫性疾病防御知识的宣传及追踪随访工作，为疾病诊断治疗及预后提供重要的临床价值。

PU-1207

白塞病患者外周血 T/B/NK 淋巴细胞亚群分析

王斐
中国医学科学院北京协和医院

目的 研究白塞病（Behcet’s disease，BD）患者外周血 T/B/NK 淋巴细胞亚群分布情况。

方法 回顾性分析就诊于北京协和医院的白塞病患者（114 例）的外周血淋巴细胞亚群分布情况，所有患者均根据国际白塞病研究组于 1989 年制定的诊断标准进行诊断和分类，并选用 75 例表观正常、无系统性炎性疾病和其他疾病的健康人群作为对照。统计分析采用 Graphpad Prism5 软件进行处理，P<0.05 差异有统计学意义。Kolomogorov-Simirnov 检验用于评价数据的正态性，其中正态分布资料采用（±S ）表示，两组间比较采用非配对 t 检验，非正态分布资料采用中位数[M(P25~P75)]表示，组间比较采用 Kruskal-Wallis 检验。
结果 白塞病患者外周血中淋巴细胞绝对计数（1.74±0.83）与健康对照组（2.21±0.47）相比明显降低（p<0.0001）；其中 CD3+T 细胞所占比例（77.08%±10.00%）与健康对照组（73.25%±5.23%）相比明显升高（p=0.0026）；CD3+CD4+T 细胞所占比例（35.33%±11.85%）与健康对照组（39.57%±4.66%）相比明显降低（p=0.0036）；CD3+CD8+T 细胞所占比例（32.85%±12.71%）与健康对照组（28.01%±4.69%）相比明显升高（p=0.0026）；CD3+CD4-CD8-双阴性 T 细胞所占比例（8.90%±10.60%）与健康对照组（5.63%±2.79%）相比明显升高（p=0.0097）；NK 细胞所占比例（12.69%±8.60%）与健康对照组（14.43%±4.69%）相比没有明显差异（p=0.1125）；B 细胞所占比例（9.66%±5.53%）与健康对照组（11.69%±2.70%）相比明显降低（p=0.0037）。
结论 在白塞病发病过程中，除 NK 细胞外，外周血淋巴细胞亚群各群占比发生了明显变化，值得注意的是白塞病患者 CD3+CD4-CD8-双阴性 T 细胞明显升高，但该群细胞在白塞病中的发病机制还需要进一步研究来证实。

PU-1208

肿瘤专科医院患者梅毒抗体检测分析

竺明晨
江苏省肿瘤医院

目的 分析肿瘤患者梅毒感染情况，为肿瘤患者的梅毒防治工作提供科学依据。
方法 收集我院 2011 年-2020 年共 119875 例肿瘤住院患者，梅毒螺旋体明胶颗粒凝集试验(TPPA)检测结果，统计分析阳性患者性别、年龄和肿瘤类型等分布情况。
结果 经 TPPA 检测结果梅毒抗体呈阳性的患者共 3128 例，阳性率 2.61%，其中男性 1714 例，女性 1414 例，阳性患者年龄 15 岁-95 岁，中位年龄 60 岁。男性患者阳性率 2.92%，女性患者阳性率 2.31%，男性阳性率高于女性患者。统计分析各年龄段梅毒抗体阳性情况，发现随着年龄增加阳性率也逐渐增加。从小于 20 岁的 0.24%阳性逐渐增加到大于 91 岁患者的 7.14%阳性。按年度统计分析梅毒螺旋体抗体检测阳性情况，抗体阳性率介于 2.57%~2.82%之间，各年度之间阳性率无显著差异。选择 119875 例肿瘤患者中 103299 例常见肿瘤，分别统计分析梅毒螺旋体抗体阳性率，结果发现梅毒抗体阳性率在 1.43%-10.00%之间，其中排名前五的肿瘤类型分别是阴囊肿瘤(10.00%)、宫颈肿瘤(4.77%)、阴道恶性肿瘤(3.59%)、膀胱恶性肿瘤(3.38%)和头颈肿瘤(3.12%)。
结论 部分肿瘤患者的梅毒阳性率较高，需要引起足够的关注 。

PU-1209

血清 CYFRA21-1、NSE、ProGRP 检测在非小细胞肺癌筛查中的应用

何成禄、段勇
昆明医科大学第一附属医院

目的 探讨细胞角蛋白 19 片段（CYFRA21-1）,神经元特异性烯醇化（NSE）,胃泌素释（ProGRP）在非小细胞肺癌（NSCLC）中诊断的临床诊断价值。

方法 选取经病理确证的 NSCLC 的病例组 720 例 ，肺部良性疾病组 240 例和同期健康体检者 550 名 (健康对照组) 作为研究对象, 运用微粒子化学发光法检测静脉血血清中 CYFRA21-1、NSE 和 ProGRP 浓度，计算各指标的敏感度、特异性、阳性预测值和阴性预测值，运用卡方检验及 ROC 曲线，单独比较各指标在 NSCLC 中的阳性率，并与两两或多重指标的并联做模式比较，构建 NSCLC 筛查的最佳组合模式。
结果 三组不同受检者的 CYFRA21-1,NSE 和 ProGRP 阳性率分别为（50%，29.2%，31%）、（16.7%，8.3%，8.3%）和（1.8%，0.2%，1.8%），组间比较结果显示 NSCLC 组大于良肺部良性疾病组和健康对照组,差异有统计学意义（P<0.05），不同肿瘤标志物间阳性率比较， 结果显示 NSCLC 组中的 CYFRA21-1 显著高于 NSE 和 ProGRP，而对照组 CYFRA21-1 和 ProGRP 均高于 NSE，差异均有统计学意义（P<0.05）；联合检测结果显示，两两联合的和三项联合的四项检测指标均高于单项检测，其中 CYFRA21-1+NSE、CYFRA21-1+ProGRP、NSE+ProGRP 两两联合比较差异无统计学意义（P>0.05），CYFRA21-1+NSE+ProGRP 联合检测比单项检测和两两联合检测的四项诊断指标均明显提高，差异有统计学意义(P<0.05)；单项检测指标 CYFRA21-1 的 ROC 曲线下面积最大为 0.721。
结论 对于单一指标的筛查，应首选 CYFRA21-1。三种肿瘤标志物联合检测的血清诊断学诊断有利于非小细胞肺癌的有效筛查，在临床具有很大应用价值。

PU-1210

溶血对新生儿静脉血丙肝抗原（HCV-Ag）检测的影响

李晓菲
山东第一医科大学第一附属医院（山东省千佛山医院）

目的 探讨溶血对新生儿静脉采血标本丙肝抗原（HCV-Ag）检测结果的影响，避免因溶血原因导致的 HCV 检测窗口期的错误判断。
方法 收集 2018.1-2018.12 在山东省千佛山医院检验科进行丙肝抗原(HCV-Ag)检测的新生儿静脉血标本 160 例，应用双抗体夹心法化学免疫分析原理在 CLIA500 板式化学发光免疫分析仪进行 HCV-Ag 检测。按照标本是否溶血进行分组检测，共分为两组，非溶血标本组(80 例)和溶血标本组(80 例)。对所有纳入研究的标本均进行离心分离血清，然后进行 HCV-Ag 即时检测和静止 24 小时后重新离心再检测。以 HCV-Ag 检测结果 S/CO>1 作为结果阳性的标准，计算 HCV-Ag 检测阳性率，观察溶血是否影响 HCV-Ag 检测阳性率，以及静置 24h 小时后能否降低阳性率。
结果 对非溶血标本，HCV-Ag 即时检测阳性率为 1.25 % (1/80)，静止 24 小时后重新离心再检测阳性率为 0% (0/80)。而对溶血标本，HCV-Ag 检测阳性率为 30% (24/80),静止 24 小时后离心重新检测阳性率 2.5 %(2/80),显著低于即时检测阳性率。
结论 溶血增加了新生儿静脉血标本 HCV-Ag 检测的假阳性率，静止 24 小时后离心重新检测假阳性率能够显著降低。

PU-1211

山东济南地区中年人 25-羟维生素 D 水平分析

张平
山东第一医科大学第一附属医院（山东省千佛山医院）

目的 了解山东济南地区中年人 25-羟维生素 D［25-(OH)D］的水平。
方法 选取 2020 年 1 月至 2020 年 12 月，在山东省千佛山医院内科门诊，中年人 850 例，年龄 45-59 岁，平均（51±4.50）岁。采用高效液相色谱串联质谱法检测 25-(OH)D 水平。

结果 850 例中年人 25-(OH)D 的平均水平（56.33±8.26）ng/ml。其中缺乏状态（＜25ng/ml）356 例，占 41.9%；不足状态（25～75ng/ml）170 例，占 20%；正常状态（75～250ng/ml）324 例，占 38.1%。按照年龄分组中，>55 岁水平最低（22.50±8.17）ng/ml，45-50 岁水平最高（88.92±8.25）ng/ml。按照月份分组，3 月份水平最低（19.73±6.34）ng/ml，9 月份水平最高（96.09±8.60）ng/ml，差异无统计学意义（P＞0.05）。各月 25-(OH)D 水平与平均气温具有相关性（r=0.846，P＜0.05）；与日照时数不具有相关性（r=0.231，P＞0.05）。
结论 山东济南地区中年人 25-(OH)D 总体水平偏低，存在缺乏和不足的占 61.9%；年龄分组中 >55 岁的水平最低；各月分组中 3 月份水平最低。临床应引起高度重视，采取预防措施；同时加强健康宣教，提高中年人对维生素 D 不足现状的认识。

Performance Characteristics of Light Initiated Chemiluminescence Assay for the Quantitative Determination of High Sensitivity Cardiac Troponin I

Jing Wang[3]、Yanv Ren[1]、Haifang Kong[1]、Luyun Peng[2]
1. Tianjin Medical University General Hospital
2. West China Second Hospital of Sichuan University
3. Tianjin Medical University

Objectives High sensitivity cardiac troponin I (hs-cTnI) assays have been used clinically throughout the world. How to select healthy reference subjects in deriving 99th percentiles for cardiac troponin I assays still needs to be clarified. In order to help the early diagnosis of myocardial infarction (MI) in chest pain patients, we evaluate the analytical performance of the newly developed hs-cTnI on light initiated chemiluminescence assay (LiCA) system.
Methods Evaluation of the sensitivity, imprecision, linearity, method comparison and 99th percentile sex-specific upper reference limit (URL) of hs-cTnI on the LiCA system. Comparison studies were performed vs Abbott ARCHITECT hs-cTnI assay. The 99th percentile sex-specific URL studies were established in 320 healthy males and 307 healthy females respectively.
Results The limit of blank, limit of detection and limit of quantitation at 20% coefficient of variation (CV) were 1.23pg/mL, 1.79pg/mL and 1.84pg/mL respectively. The intermediate imprecision ranged from 2.16% to 5.07%. Linearity was observed up to 5000pg/mL. The method comparison between LiCA and Abbott demonstrated a correlation coefficient of 0.975 with a slope of 1.09. The 99th percentile URL of healthy males and females were 13.23pg/mL and 10.59pg/mL respectively.
Conclusion The LiCA hs-cTnI immunoassay demonstrates excellent analytical performance with good sensitivity and precision, which can be an aid in the early diagnosis of acute myocardial infarction.

PU-1213

从中性粒细胞胞外捕获网角度探讨系统性红斑狼疮患者易于感染细菌的原因

穆丹妮、刘昱东
北京大学人民医院检验科

目的 包括中性粒细胞胞外捕获网(neutrophil extracellular traps, NETs)在内的人体先天免疫系统是机体对抗入侵病原体的重要防御屏障。针对系统性红斑狼疮(systemic lupus erythematosus, SLE)

患者 NETs 水平升高但更易于感染细菌这个现象，我们从 NETs 的角度探讨了 SLE 患者易于细菌感染的影响因素。

方法 收集 SLE 确诊病例 50 例（疾病活动期 23 例，稳定期 27 例），健康对照 27 例。分离受试者中性粒细胞，体外刺激 NETs 形成，与肺炎克雷伯菌(Klebsiella pneumoniae, KPN) 菌株 ATCC 43816 和一株分离自临床的 KPN 18219 分别共孵育 90 分钟，计算 NETs 介导的杀菌百分率。分析患者各项临床指标，包括疾病活动度、补体水平、血红蛋白浓度和病程等与 NETs 杀菌能力的关系。

结果 （1）狼疮活动组 NETs 对 KPN 43816 的杀菌率显著低于稳定组和健康对照（p=0.0162，p=0.0238），而稳定组和健康对照的杀菌百分率无显著性差异（p>0.05）。各组 NETs 对 KPN 18219 的杀菌率也呈现类似的现象。（2）SLE 患者的 NETs 对 KPN 43816 和 KPN 18219 的杀菌百分率与 SLEDAI 评分呈负相关关系（r=-0.3108，p=0.04；r=-0.2686，p=0.0679），而与患者病程、补体水平和用药情况无关。（3）用 ROC 曲线确定 NETs 杀菌率降低的临界值，NETs 杀菌率受损的 SLE 患者与杀菌率正常的 SLE 患者相比，SLEDAI 评分显著升高（p=0.0022），补体 C3、C4 水平显著降低（p=0.0244；p=0.0034），而病程、血红蛋白浓度、血小板和中性粒细胞/淋巴细胞比值都无显著性差异（p>0.05）。

结论 NETs 杀菌能力的降低可能与 SLE 易于细菌感染有关，活动期狼疮患者 NETs 介导的杀菌能力相比于稳定期和健康对照显著降低，与疾病活动度有关，而与病程和药物的使用无关。

PU-1214

流式细胞术测 12 项细胞因子性能验证及评价

陈学飞、李汉华、吴亚洲、翁文浩
上海市杨浦区中心医院（同济大学附属杨浦医院）

目的 对流式细胞术同时测 12 项细胞因子[白细胞介素 1β（IL-1β）、白细胞介素 2（IL-2）、白细胞介素 4（IL -4）、白细胞介素 5（IL -5）、白细胞介素 6（IL-6）、白细胞介素 8（IL-8）、白细胞介素 10（IL-10）、白细胞介素 12P70（IL-12P70）、白细胞介素 17（IL-17）、干扰素 α（IFN-α）、干扰素 γ（IFN-γ）、肿瘤坏死因子 α（TNF-））]的性能进行验证及评价。

方法 参照 WS/T492-2016《临床检验定量测定项目精度和正确度性能验证》、WS/T 402—2012《临床实验室检验项目参考区间的制定》，使用 BD FACS Canto II 流式细胞仪对青岛瑞斯凯尔生物科技有限公司 12 项细胞因子检测试剂盒进行线性及范围、精密度、准确性、参考区间进行验证。

结果 IL-1β、IL-2、IL-4、IL-5、IL-6、IL-8、IL-10、IL-12P70、IL-17、IFN-α、IFN-γ、TNF-α 在 BD Canto Ⅱ流式细胞仪上检测结果在 2.44 pg/mL—10000pg/ml 范围内呈线性。最低检测限浓度 2.44pg/ml 下能良好检出，变异系数符合要求；批内精密度和批间精密度变异系数均≤15%；准确性验证相对偏差均在±15%以内，参考区间可直接使用。

结论 12 细胞因子检测试剂盒（多重微球流式免疫荧光发光法）在 BD CantoⅡ流式细胞仪的线性及范围、最低检测限、精密度、准确性及参考范围通过验证，可以满足临床检测需求。

PU-1215

结直肠癌患者粪便钙卫蛋白和外周血可溶性 IL-2 受体、IL-6 水平变化与患者生活质量和临床预后之间的关系

邢继成
解放军第八一医院

目的 探讨结直肠癌患者粪便钙卫蛋白和外周血可溶性白细胞介素-2 受体(sIL-2R)、白细胞介素-6(IL-6)水平变化与患者生活质量和临床预后的关系。
方法 选择结直肠癌患者 186 例为观察组，另选择同期健康体检者 55 例为对照组，采用胶体金免疫层析法测定粪便钙卫蛋白，酶联免疫吸附法测定 sIL-2R 和 IL-6 水平，分析粪便钙卫蛋白、sIL-2R 和 IL-6 水平与结直肠癌患者临床资料、术后生活质量及临床预后的关系。
结果 观察组粪便钙卫蛋白、外周血 sIL-2R 和 IL-6 水平显著高于对照组 (P<0.05)；有淋巴结转移者 sIL-2R 和 IL-6 水平显著高于无淋巴结转移者(P<0.05)，粪便钙卫蛋白无显著意义(P>0.05)；TNF 分期Ⅲ一Ⅳ期者粪便钙卫蛋白和 sIL-2R、IL-6 水平显著高于 I～Ⅱ期者 (P<0.05)；粪便钙卫蛋白和 sIL-2R、IL-6 高水平组健康状况调查问卷(SF-36) 评分、终点事件发生率与粪便钙卫蛋白和 sIL-2R、IL-6 低水平组比较有显著性差异(P<0.05)。
结论 粪便钙卫蛋白和 sIL-2R、IL-6 在结直肠癌患者中呈高水平表达，其表达水平与淋巴结转移情况和临床分期有关，高水平粪便钙卫蛋白和 sIL-2R、IL-6 者术后生活质量较低，临床预后较差。

PU-1216

南京市秦淮区杨公井 34 标 34 号

杨帆
南京八一医院

目的分析评价雅培 Alinity i 全自动化学发光免疫分析仪检测乙肝表面抗原（HBsAg）及乙肝表面抗体（HBsAb）的性能。
方法 收集 HBsAg、HBsAb 的阳性及阴性血清各 25 例，健康体检标本 20 例，极高浓度 HBsAg 及 HBsAb 血清各一例，用 Alinity i 全自动化学发光免疫分析仪分别检测 HBsAg 及 HBsAb，分析其精密度、线性检测范围、检出限、携带污染率及正常生物参考区间，以雅培 Architect i2000 全自动化学分析仪的结果为对照，评价 Alinity i 与 Architect i2000 结果的相关性，通过检测 2021 年度卫生部临检中心室间质评样本来判定与其他实验室结果的一致性。
结果 Alinity i 全自动化学发光免疫分析仪 HBsAg 低高浓度的批内精密度为 3.76%和 1.16%，批间精密度为 6.72%和 3.89%；HBsAb 低高浓度的批内精密度为 3.81%和 3.28%，批间精密度为 6.42%和 3.78%。HBsAg 及 HBsAb 检测范围内的线性方程相关系数 r2 分别为 0.9958 和 0.995，回归方程斜率 a 分别为 0.9881 及 1.0244。HBsAg 及 HBsAb 的定值质控品稀释到定量限浓度后检测的均值分别为 0.053 及 2.0755，CV 分别为 8.87%和 7.89%。HBsAg 与 HBsAb 的携带污染率皆为 0.0%，健康人群 HBsAg 及 HBsAb 的结果均落在正常参考范围内。Alinity i 与 Architect i2000 比对检测 HBsAg 及 HBsAb 的线性相关方程相关系数 r2 分别为 0.9982 及 0.9939，回归方程斜率 a 分别为 0.9568 及 1.0355，Alinity i 检测卫生部室间质评结果与预期结果一致。
结论 雅培 Alinity i 全自动化学发光免疫分析仪检测 HBsAg 及 HBsAb 的稳定性、重复性和精确性完全符合临床应用要求。

PU-1217

乙型肝炎病人的血清免疫球蛋白检验价值探讨

常蕊
黄河水利委员会黄河中心医院

目的 探究乙型肝炎病人的血清免疫球蛋白检验价值探讨。
方法 将乙型肝炎患者 105 例作为此次研究观察组，105 例根据病情严重程度分为轻度组、重度组，再选取 105 例健康体检者作为对照组，收取时间为 2019 年 12 月 2021 年 1 月,对所有受检者均进行血清免疫球蛋白检验，并分析检验结果。
结果 重度组患者 IgG（17.12±2.15)g/L、IgM（2.45±0.16)g/L、IgA 水平（2.65±0.12)g/L 均高于轻度组 IgG（14.35±3.15)g/L、IgM（2.15±0.26)g/L、IgA 水平（2.26±0.65)g/L 和对照组 IgG（11.52±2.01)g/L、IgM（1.40±0.25)g/L、IgA 水平（1.50±0.35)g/L；而轻度组患者 IgG（14.35±3.15)g/L、IgM（2.15±0.26)g/L、IgA 水平（2.26±0.65)g/L 均高于对照组健康体检者，三组受检者各项指标具有显著差异（P＜0.05）。
结论 通过对乙型肝炎患者实施血清免疫球蛋白检验，取得显著的检验价值，不仅能够对患者病情程度进行判断，还能根据诊断结果制定针对性的治疗方案，从而提高治疗效果，并且改善患者疾病预后，促进疾病的转归。

PU-1218

涎液化糖链抗原-6 在类风湿性关节炎相关间质性肺疾病诊疗中的应用价值

王恩运[1,2]、豆小文[1]、胡纪文[1,2]
1. 深圳市罗湖医院集团医学检验实验室
2. 深圳市罗湖区中医院

目的 结缔组织病相关间质性肺疾病（CTD-ILD）多继发于类风湿关节炎（RA），国内外分别报道 22.5%和 47% RA 患者合并 ILD，RA-ILD 患者的中位生存期为 3 年，5 年生存率为 38.8%。研究已证实，涎液化糖链抗原-6（Krebs von den Lungen-6，KL-6）是 ILD 病变的敏感指标，可早期识别 CTD-ILD 改善预后。本研究拟探讨 RA 患者的血清 KL-6 水平升高是否有助于将 CTD-ILD 诊断窗口前移，预警其在 RA 继发 ILD 的诊疗价值。
方法 以临床诊断为金标准，纳入来我院就诊的类风湿性关节炎患者 29 例作为疾病组（32~64 岁，平均年龄 49 岁）；体检人员 27 例作为对照组（33~78 岁，平均年龄 53 岁）。收集血清，采用 AXCEED260 化学发光试剂，双抗体夹心法分别检测疾病组和对照组患者血清中 KL-6 水平。采用 MedCalc 19.0.4 统计学分析对照组与疾病组 KL-6 水平差异。
结果 KL-6 试剂 cutoff＞500U/mL（99%置信区间），可辅助诊断为间质性肺炎可知，对照组无阳性，疾病组检测出阳性 1 例（546 U/mL），经临床诊断 RA-ILD；KL-6 试剂可定量血清中 KL-6 含量，对照组和疾病组血清 KL-6 含量中位数分别为 170 U/mL（95%CI 111~189 U/mL）和 205 U/mL（95%CI 150~283 U/mL），疾病组相比对照组 KL-6 水平升高，经 Mann-Whitney U 检验两组水平无显著性差异（P＞0.05）。
结论 KL-6 试剂相比有创穿刺，该血清指标仅需简单采血可进行辅助诊断间质性肺炎；CTD-ILD 疾病早期 RA 疾病相比健康人群 KL-6 水平升高不显著，可能还需联合其他指标辅助鉴别 RA 继发的 ILD，实现 CTD-ILD 诊断窗口前移。

PU-1219

郑州市某大型医院近三年 HIV 抗体确证试验结果分析

张磊
郑州大学第一附属医院

目的 分析我院近三年经 HIV 抗体初筛阳性患者的 HIV 抗体确证结果。
方法 收集我院 2019 年-2021 年 HIV 抗体初筛（电化学发光法）阳性的标本，采用电化学发光法及胶体金法复检，复检结果双阳性或一阳一阴的标本，进一步用免疫印迹法进行确证，分析确证阳性患者的带型特点。
结果 704 例复检呈阳性（含一阴一阳及双阳结果）的患者，因知情同意受限 8 例未进行 WB 确证，696 例经免疫印迹试验证实，HIV-1 型抗体阳性患者 476 例，确证阳性率 68.39%，不确定 113 例，阴性 107 例。476 例确证试验阳性标本经流行病学调查 95．8％(456／476)是性行为（同性/异性性行为）传播。113 例 WB 不确定样本中要集中在孕产妇占 89．4％(101／113)，经随访及结合其它检查综合判断，89 例最终排除 HIV 感染。在 WB 结果为阴性的 107 例样本中，采用电化学发光法复检，其 COI 值介于 0.9～33.85 之间。
结论 性接触传播尤其是男男性接触者(MSM)是我实验室报告 HIV／AIDS 的主要传播途径；不确定样品主要集中在孕产妇人群，多是非特异性免疫反应，在低流行人群尤其孕产妇 HIV 抗体不确定样本最终以阴性转归为主。

PU-1220

20 例阿尔茨海默病患者自身抗体结果追踪分析

吴晓琪、陈婧、何亭亭、肖琼、董瀚淳、苏义恒
杭州迪安医学检验中心有限公司

目的 探讨自身抗体与阿尔茨海默病的关系。
方法 回顾性分析 20 例阿尔茨海默病患者 2017-2020 年自身抗体持续多次检测情况。
结果 20 例中有 7 例抗核抗体（ANA）持续检测均为阴性，ANA 检测有阳性的 13 例，10 例持续结果≤1：320，有 3 例检出中有 1：1000 高滴度，共检测 514 次 ANA，阴性检出率为 59.7%，阳性检出率为 40.3%，波形蛋白、纺锤体、肌动蛋白、Jo-1、SCL-70、Sm、U1nRNP、抗核糖体、AMA、抗着丝点均检测为阴性。SS-A，SS-B、ACA、抗组蛋白、c-ANCA、ds-DNA、p-ANCA 阳性检出率分别为 12.3%，8.4%、7.2%、6.6%、3.5%、1.4%和 0.4%。
结论 自身免疫疾病或许和阿尔茨海默病风险增加直接相关。

PU-1221

肾功能对肿瘤标志物 CA125 和 HE4 血清水平的影响初探

刘玲[2]、苗强[1]、张君龙[1]、蔡蓓[1]、牛倩[1]
1. 四川大学华西医院
2. 四川大学华西临床医学院

目的 探讨肾功能对糖类抗原 125（Carbohydrate antigen，CA125 ）和 人附睾蛋白 4（human epididymis protein4，HE4）血清水平的影响，并尝试建立适用于慢性肾脏病人群的 CA125 和 HE4 血清参考范围。

方法 纳入 CKD 患者 729 例，同时纳入性别匹配的健康体检者 94 例，采用罗氏电化学发光免疫分析仪检测血清 CA125 和 HE4 的水平，采用罗氏全自动生化分析仪检测血清尿素、肌酐和胱抑素 C 的水平。
结果 与健康对照组相比，CKD 组患者的尿素、肌酐、胱抑素 C、CA125、HE4 水平均明显升高，在校正年龄因素后差异仍具有统计学意义（P<0.001）。CKD 2-5 期患者的 CA125、HE4 表达水平均不一致，CKD4 期患者 CA125 表达水平最高，CKD2-5 期患者的 HE4 表达逐渐升高。Spearman 分析结果显示，CA125 与年龄、尿素、肌酐、胱抑素 C、eGFR 相关性较弱， HE4 水平与 eGFR 呈很强的负相关，与尿素、肌酐、胱抑素 C 呈很强正相关（P<0.001）。建立 CKD 女性人群特定的 CA125 和 HE4 参考范围，女性 CKD 人群 CA125 的参考范围为<213.9 pmol/L；HE4 的参考范围：CKD3 期人群为<564.5 pmol/L，CKD4 期人群为<1713.5 pmol/L，CKD5 期人群为<5022.6 pmol/L。
结论 肾功能下降可导致血清 CA125 和 HE4 水平明显升高；建立 CKD 女性人群特定的血清 CA125 水平参考范围为：<213.9 pmol/L；血清 HE4 水平参考范围为：CKD3 期： <564.5 pmol/L, CKD4 期 <1713.5 pmol/L, CKD5 期 <5022.6 pmol/L。

PU-1222

PI3K/Akt 信号通路在 SLE 患者中性粒细胞胞外诱捕网形成中的作用

蒋瑶[1,2,3]、祝静[1,2,3]、邢艳[1,2,3]
1. 川北医学院附属医院
2. 川北医学院医学检验系
3. 川北医学院转化医学研究中心

目的 系统性红斑狼疮（systemic lupus erythematosus，SLE）是一种经典的全身性自身免疫性疾病，近年来新发现的中性粒细胞死亡形式-中性粒细胞胞外诱捕网（neutrophil extracellular traps，NETs），因其形成过程释放大量自身抗原而参与 SLE 发病，但参与其形成的分子机制仍不明确。本文旨在探究 PI3K/Akt 信号通路在 SLE 患者 NETs 形成中的作用，从而为 SLE 的治疗提供新思路。
方法 密度梯度离心法分离 6 例健康体检者外周血中性粒细胞（PMN）后，瑞士染色及台盼蓝拒染实验检测 PMN 的纯度及活性；在加入或不加入 PI3K/Akt 特异性抑制剂 LY294002 或 MK2206 的情况下，荧光光度法检测经佛波酯（PMA）及 SLE 患者混合血清分别处理 PMN 90min 和 120min 后 NETs 形成水平，并分析 NETs 形成量的差异。
结果 分离得到的 PMN 纯度及活性均>95%，满足体外细胞实验要求；在 PMA 及 SLE 混合血清刺激 PMN 形成 NETs 过程中，加入 PI3K 抑制剂 LY294002 后，NETs 生成水平明显降低[（310±182.77）VS（840.20±334.54），P=0.005]、[（419.33±196.83）VS（703±266.71），P=0.004]；同样地，在加入 Akt 抑制剂 MK2206 后,NETs 生成明显减少[（593±224.93）VS（842.60±307.04），P=0.007]、[（500.67±271.53）VS（784.50±348.28），P=0.009]，组间均有统计学差异，表明 LY294002、MK2206 能通过抑制 PI3K/Akt 活化而减少 PMA 及 SLE 血清刺激 NETs 形成。在 PMN 自发形成 NETs 的过程中，Akt 抑制剂 MK2206 能抑制 NETs 形成[（138.67±52.11）VS（210.33±80.66），P=0.03]，但 PI3K 抑制剂 LY294002 无此作用[（168±78.08）VS（220.60±87.03），P=0.15]，表明在 PMN 自发形成 NETs 的过程中，有 Akt 的参与，但其上游调控蛋白可能不是 PI3K。
结论 PMA 及 SLE 混合血清可能通过 PI3K/Akt 信号通路启动了 NETs 的形成，提示对 PI3K/Akt 信号分子的调控可能抑制 NETs 的产生，继而控制 SLE 的病理进程。

PU-1223

上海市杨浦区人群 3 年间主要过敏原的分布和变迁

陈燚琼、赵迪、任方、钱朵朵、李智、翁文浩
同济大学附属杨浦医院

目的 分析上海市杨浦区人群的主要过敏原在 2016～2018 年的分布及变迁情况，为该地区过敏性疾病的预防和管理提供依据。
方法 对 2016 年 1 月～2018 年 12 月在本院就诊的疑似过敏性疾病的患者，应用 Immuno CAP100 过敏原检测系统检测过敏原特异性 IgE（sIgE），统计每种 sIgE 的检测量、阳性检出量和阳性率，并对阳性检出率进行排序分析。
结果 三年间 1010 例患者中，主要的食物性过敏原为虾和蟹，致敏阳性率分别为 9.51%和 7.33%；主要吸入性过敏原为粉尘螨和户尘螨，致敏阳性率分别为 24.17%和 21.94%；6 种混合性过敏原中阳性率最高的是户尘/户尘螨/粉尘螨/德国小蠊（hx2），阳性率为 25.27%。不同性别阳性率比较，男女虾 sIgE 阳性率分别为 12.09%和 6.05%，男女蟹 sIgE 阳性率分别为 9.69%和 4.18%，男女蟑螂 sIgE 阳性率分别为 13.49%和 5.95%，差异均有统计学意义（P<0.01）。鸡蛋白、粉尘螨和户尘螨阳性率在 0～18 岁组最高，并随年龄增大逐渐降低，3 个年龄组间差异有统计学意义（P<0.01）。
结论 上海市杨浦区过敏患者食物性过敏原以虾和蟹为主，吸入性过敏原以粉尘螨和户尘螨为主；且不同性别和年龄过敏原结构存在差异。3 年间粉尘螨和户尘螨阳性率出现年间波动，其他过敏原变化相对稳定。

PU-1224

抗核抗体、抗双链 DNA 抗体和抗中性粒细胞胞浆抗体检测的性能验证

邹麟
重庆医科大学附属第一医院

目的 对实验室间接免疫荧光法检测抗核抗体（ANA）、抗双链 DNA 抗体（dsDNA）、抗中性粒细胞胞浆抗体（ANCA）以及免疫印迹法检测可提取性核抗原抗体（ENA）进行性能评价，确保检测方法性能满足实验室及临床诊疗的质量要求。
方法 参考 WS/T 505-2017《定性测定性能评价指南》及 CNAS-GL038：2019《免疫定性检验程序性能验证指南》，对精密度、方法学符合率、检出限、携带污染率、人员比对五个方面进行验证。
结果 ANA 两个不同水平的批内精密度和批间精密度均为 100%；ANA、抗 dsDNA、ANCA 以及 ENA 室间质评阴阳性符合率均为 100%；ANA、抗 dsDNA 以及 ANCA 的检出限阳性率分别为 100%、100%和 95%；ANA 及 ANCA 携带污染率验证中样本 L1、L2、L3 结果均为阴性；ANA、抗 dsDNA 及 ANCA 人员比对结果一致率均为 100%。
结论 ANA、抗 dsDNA、ANCA 以及 ENA 的精密度、方法学符合率、检出限、携带污染率、人员比对验证均全部通过。本室 ANA、抗 dsDNA、ANCA 和 ENA 的检测方法性能验证结果能够满足 ISO 15189 对临床免疫学定性检验的性能评价要求，可为临床实验室检测方法评价提供参考。

PU-1225

CA199、NSE、CA153、CEA 联合检测用于脑胶质瘤的诊断

巨桓宇
江苏省人民医院

目的 本次实验简要的探讨在脑胶质瘤的诊断中，糖类抗原（CA）199、神经元特异性烯醇化酶（NSE）、CA153、癌胚抗原（CEA）价值。
方法 收集 2018 年 6 月—2019 年 6 月医院患者的数据，按照随机性的原则，选取 68 例脑胶质瘤患者和 67 例脑外伤颅内压手术患者。使用传统的分组实验对比的方法，将患者分为两组，68 例脑胶质瘤患者为实验组，67 例脑外伤颅内压手术患者作为对照组。检测两组患者的 CA199、NSE、CA153、CEA 水平，使用酶联免疫吸附试验法进行检测；使用曲线表示的形式进行评估，采用受试者工作特征曲线，评估两组患者的 CA199、NSE、ＣＡ153、CEA 对脑胶质瘤的诊断价值，对比 4 项指标联合检测与单项检测的诊断效能。
结果 实验结束后，可以看出各组患者的各项数据都是不相同的，脑胶质瘤组患者血清 CA199、NSE、CA153、CEA 水平较高，明显高于对照组；差异有统计学意义（Ｐ＜ 0.05）；低级别脑胶质瘤患者与高级别脑胶质瘤患者又有着明显使的差异，尤其是血清的数值，高级别脑胶质瘤患者的血清 CA199、NSE、ＣＡ153、CEA 水平较高差异有统计学意义（Ｐ＜0.05）。CA199、NSE、ＣＡ153、CEA 联合检测诊断脑胶质瘤具有较好的灵敏度，灵敏度为 88.46％，因此诊断的效果较好，准确度为 86.34％，即使诊断的灵敏度很高，但是仍然不会影响诊断的准确性，诊断的准确性较高，高于单项检测，差异有统计学意义（Ｐ＜0.05）。
讨论 根据实验的结果显示，CA199、NSE、ＣＡ153、CEA 对脑胶质瘤的诊断效果较好，联合诊断的效果优于一次性诊断。

PU-1226

降钙素原在辅助诊断血流感染中的价值研究

黄瑜
苏州市独墅湖医院（苏州大学附属独墅湖医院）

目的 近年来，随着临床创伤性治疗手段的应用以及广谱抗生素的使用，血流感染的发病率有逐年增高的趋势。血流感染早期诊断甚至疗效评估显得尤为重要。本文将系统论述降钙素原在辅助诊断血流感染中的价值。
方法 查阅近 10 年的文献，归纳和总结降钙素原在辅助诊断血流感染中的价值。
结果 降钙素原（PCT）是一种无激素活性的降钙素前肽物质。正常代谢状态下，PCT 在健康个体血浆中的浓度极低(< 0.1ng /ml)，一旦出现严重的细菌、真菌、寄生虫感染，降钙素原在内毒素等细胞因子诱导下其血浆水平会升高。降钙素原血清浓度在提示临床病原体感染方面有较高的诊断价值，且能够根据 PCT 血浆水平的不同早期判断病原菌的类型：有脓毒血症的患者血浆 PCT 水平明显高于非脓毒症患者，细菌性脓毒症患者的 PCT 水平显著高于非细菌性脓毒症，与 IL-2，IL-6，IL-8，CRP 和 TNF-α 相比，PCT 对脓毒症患者的全身炎症反应综合征（SIRS）患者的敏感性最高（85％）和特异性（91％）最高，因此可以作为诊断脓毒症和鉴别严重细菌感染的生物标志物，而目前来讲，菌血症的患者体内 PCT 的浓度一般大于 0.5ng/ml，其血浆浓度随着患者感染的严重程度浮动变化，若血浆浓度达到 10ng/ml，一般提示存在严重革兰阴性细菌的感染，可在微生物血培养结果尚未出来之前，建议临床进行早期治疗。
结论 血流感染发病迅猛，后果严重，因此能够早期对血流感染进行筛检极为重要。临床医生能够通过降钙素原的血浆浓度，在患者出现血流感染症状后，经验治疗（PCT<0.51μg/L,但存在血流感染症状时，使用抗生素无效，反之 PCT 水平短时间内升高，可能提示存在细菌感染，建议使用抗生素治疗）以挽救患者生命。

PU-1227

Comprehensive review the roles of autoantibodies in diseases

Gongjun Tan
zhuhai center for maternal and children healthcare

Antibodies are an essential immune component mediating both clearance and control of infections. autoantibodies, which recognize the host's own molecules and tissues, play a crucial role in the pathology of autoimmune disorders. Autoantibodies are most commonly associated with autoimmune diseases, but a large body of evidence indicates that they are also present in numerous other diseases. Surprisingly, with the increase of autoantibody research **Methods** and the change of research technology, the incidence and prevalence of autoantibodies in the disease is large and underestimated. Increasing number of autoantibodies being reported suggests that currently "idiopathic" diseases may someday be explained by neutralizing or agonizing autoantibodies. In this review, we comprehensive overview of autoantibodies in human diseases, the production mechanism of autoantibodies, the method of identification of autoantibodies as well as the application potential of autoantibodies.

PU-1228

急性胆囊炎严重程度与血清肌钙蛋白升高的临床研究

巨桓宇
江苏省人民医院

目的 探究分析血清肌钙蛋白 I(Tn I)水平与急性胆囊炎严重程度之间的关系，分析其对保守治疗无效的预测价值研究。
方法 收集 2018 年 6 月—2019 年 6 月医院患者的数据，选取 68 例急性胆囊炎患者作为研究对象，按照患者病情的严重程度，将患者分为三组，即重度组、中度组、轻度组。每一组患者接受不同的治疗措施，比较各组一般资料及血清 C-反应蛋白(CRP)、降钙素原(PCT)及 Tn I 水平，分析血清 Tn I 水平对保守治疗无效的预测效能，探究治疗的实际效果。
结果 实验结束后，可以看出三组患者的各项数据都是不相同的，重度组、中度组和轻度组患者的血清水平有着明显的差异，血清 Tn I 水平上差异具有统计学意义(P＜0.05)；血清 CRP、PCT 和 Tn I 水平会发生变化，在患者病情严重的时候，血清 CRP、PCT 和 Tn I 水平会升高。在 68 例急性胆囊炎患者中，保守治疗并非对每一位患者都有效，其中无效的共有 24 例。使用 Logistic 回归分析，患者保守治疗无效的原因有很多，胆囊长径、血清 Tn I、PCT 等都是独立预测因素。
结论 急性胆囊炎是临床上较为常见的一种疾病，但是患者对其了解的程度并不高，急性胆囊炎越严重，对患者造成的身体危害越大。本次实验简要的探究血清肌钙蛋白 I(Tn I)水平与急性胆囊炎严重程度之间的关系。根据实验的结果显示，血清 Tn I 水平与急性胆囊炎严重程度有关系，二者呈正相关，在患者病情严重的时候，血清 CRP、PCT 和 Tn I 水平会升高。这为患者早期分类诊治提供了重要的依据。

PU-1229

HBP 和 IL-6 在脓毒症中的临床应用

王然
第一人民医院

目的 观察 HBP 和 IL-6 检测在脓毒症中的临床价值。
方法 比较不同组别脓毒症患者的血浆 HBP 和血清 IL-6 水平，并进行相关性分析。 方法选取 120 例脓毒症病人,免疫荧光法测血浆 HBP、流式细胞仪测血清 IL-6 的水平,按照危重评分（ PCIS）将其分成非危重组（ PCIS 评分＞ 80 分， n = 46 例）、危重组（ PCIS 评分为 71 ～ 80 分， n = 40 例）以及极危重组（ PCIS 评分≤ 70 分， n =34 例）。并按照患者的临床结局分成死亡组（ n = 30 例）以及存活组（ n = 90 例）。
结果 非危重组、危重组以及极危重组的 HBP 和 IL-6 具有明显的差异（ P ＜ 0.05)，两两相比均具有明显的差异（ P ＜ 0.05），其中非危重组最低，危重组次之，极危重组最高。脓毒症患者的 PCIS 评分与 HBP，IL-6 水平均呈负相关（ P ＜ 0.01）
结论 HBP 和 IL-6 与脓毒症患者的病情危重程度紧密相关，可作为评估病情和预后情况的指标。

ELISA 技术与 Luminex 多因子检测技术在免疫学指标检测中的应用及比较

张娟、徐守久、刘迪、石春雨、程宇、刘建勇、梁超、陈忠
北京海思特医学检验实验室有限公司

研究目的 本文分析了 ELISA 试剂盒验证中易出现的问题和解决方案，并将 ELISA 技术与 Luminex 多因子检测技术相比较，为应用 Luminex 多因子检测技术开展免疫学检测提供参考。
研究**方法** ELISA 技术和 Luminex 多因子检测技术。
研究结果 酶联免疫吸附技术（enzyme-linked immunosorbent assay, ELISA）是临床免疫学检测中常用方法。以往研究发现应用新试剂盒前必须对试剂盒严格验证，本文对验证实验中常遇到的问题和解决方案进行讨论，同时与 Luminex 多因子检测技术进行比较。
ELISA 验证实验：（1）制定定标合格标准。定标时不仅要考察标曲的 R^2 值，同时关注斜率（K 值）。避免出现 R^2 值合格（R^2>0.95），但斜率差异较大（K 值偏离 1±10%）而造成结果不准确的情况。（2）准确度验证。优先选用可溯源的标准物质进行准确度验证，如果没有商用标准物质，则需要选用低、中、高值标准品进行回收实验验证。（3）精密度验证。可以将多样本混合成低、中、高 3 个浓度后，每个浓度每天重复检测 3 次，重复 5 天进行批内和批间精密度验证。临床样本可以通过复孔检测和留样待测来确定孔间和批次间的稳定性。（4）确定定量下限。实验室要根据试剂盒说明书的检测范围建立定量下限，一般会将高值标准品稀释到原浓度的 20-25%，重复测定 20 次，如果 CV 值在 20%以内为合格，否则需要重新调整稀释比例。（5）样本保存期限。常规样本 2-8 度保存，一周内完成检测。长期保存样本，建议在冻融≤3 次，超低温（-80 度）情况下保存不超过 1 年。
ELISA 技术具有数据结果准确、操作简便、仪器造价低等优点。但进行多指标检测时费时、费力。为了应对这种情况，我们尝试了 Luminex 多因子检测技术。此技术是基于 Luminex 仪器系统的高通量蛋白定量技术。
此技术优势：（1）单一样本同时进行多指标检测，减少由于操作不同 ELISA 试剂盒，各因子检测条件无法平行而造成的系统误差。（2）节省样本量和操作时间。每孔最低标本量 50μl，单孔最多可同时检测 100 种指标。即使检测指标增多，标本量和实验用时也不需要显著增加。（3）panel 灵活。可以根据检测需要自由组合检测指标。

此技术不足：（1）检测项目不全。由于是新兴技术，目前开发出的检测指标只局限于临床需求量较大的指标。（2）要求使用 luminex200 或 FLEXMAP3D 等仪器，仪器造价高。（3）仪器的使用、校准、验证、维护和保养复杂，需要专门培训。
因而，严格把控 ELISA 验证流程，做好实验质控，积极尝试新技术，才能使检测结果更具有临床指导意义。

补体系统在先兆子痫中的研究进展

唐娜、周玉球
珠海市妇幼保健院

先兆子痫（Preeclampsia, PE）是一种常见的威胁孕妇生命的妊娠高血压疾病。补体活化在维持健康的怀孕起着至关重要的作用，但补体系统的过度激活或不适当监管可能会导致 PE 的发生。本文就补体系统在 PE 发病中的活化和作用进行简要概述，为补体成分作为 PE 临床诊断的生物标志物和预防靶点提供参考依据。

PU-1232

2019 年湖北省 4966 例九项呼吸道感染病原体检测结果分析

周梅英、胡庆、冯园、徐能、申建维
武汉千麦医学检验实验室有限公司

目的 对 2019 年 1 月至 2019 年 12 月湖北地区共 4966 例呼吸道感染患者血清九项病原体 IgM 抗体检测结果进行回顾分析，为呼吸道疾病的临床诊断和预防提供辅助依据。
方法 采用间接免疫荧光法（呼吸道九联检试剂）检测 4966 例呼吸道感染患者血清标本中的九项常见病原体的 IgM 抗体，包括嗜肺军团菌(LP1)、肺炎支原体(MP)、Q 热立克次体(COX)、肺炎衣原体(CP)、腺病毒(ADV)、呼吸道合胞病毒(RSV)、甲型流感病毒(INFA)、乙型流感病毒(INFB)及副流感病毒(PIV)1、2、3 型。
结果 在 4966 例呼吸道感染患者中共检测出 IgM 抗体阳性 1653 例（33.29％），其中 MP 感染率最高（15.85%），其次 LP1（13.95%），最低为 RSV（0.12%）。不同季度感染率也不相同，其中第四季度感染率最高（53.07%）。
结论 MP、LP1 是湖北地区 2019 年呼吸道感染主要病原体，其中冬季为呼吸道病毒感染的高发期，在季节更替时需要加强对呼吸道感染疾病的预防和控制。

PU-1233

CNPY2 与肿瘤发生发展关系的研究进展

段文冰
山东第一医科大学附属省立医院临床医学检验部

CNPY2（Canopy FGF Signaling Regulator 2，CNPY2）作为一种新型的分泌蛋白，在心脏、肝脏、胰腺等机体各器官和组织上都广泛表达，CNPY2 是未折叠蛋白质反应（UPR）相关疾病（如代谢紊乱、炎症、癌症）潜在的新型治疗靶点，多个研究证明其与多种肿瘤的发生与发展密切相关。近年来，癌症的发病率迅速增长，已经严重威胁人类的身体健康和生活质量，CNPY2 可能通过促血管生成作用参与肿瘤的发生发展，且可通过激活 NF-κB 增强抗凋亡信号通路提高化疗敏

感性，因而深入研究 CNPY2 在癌症中的作用机制及临床应用价值，对癌症的发生、发展、治疗及预后都有着深远的意义。

PU-1234

壳多糖酶 3 样蛋白 1 在丙肝性肝硬化中的检测及临床意义

谢婉莹、黄霞
湖南省人民医院

目的 探讨血清壳多糖酶 3 样蛋白 1（CHI3L1）对丙型肝炎性肝硬化的诊断价值。
方法 选取 2018 年 10 月至 2021 年 1 月由湖南省人民医院诊治的 35 例慢性丙型肝炎患者、65 例丙型肝炎合并肝硬化患者作为研究对象，选取同期在该院体检的 100 例健康体检者作为对照组。采用酶联免疫双抗体夹心法测定血清 CHI3L1 水平，Pearson 线性相关分析血清 CHI3L1 水平与肝功能指标白蛋白（ALB）、谷丙转氨酶（ALT）、谷草转氨酶（AST）、γ-谷氨酰转移酶（γ-GGT）及碱性磷酸酶（ALP）之间的相关性。
结果 丙型肝炎合并肝硬化组 CHI3L1 水平明显高于慢性丙型肝炎组（P<0.05）和健康体检组（P<0.001），有统计学意义。CHI3L1 鉴别诊断丙型肝炎有肝纤维化和无肝纤维化的 ROC 曲线下面积为 0.806，最佳临界值为 119.4ng/ml，敏感度为 93.8%，特异度为 56.0%。CHI3L1 与 ALB 呈显著负相关（r＝-0.526，P<0.01），CHI3L1 与 AST、γ-GGT 均呈显著正相关（AST：r=0.507，P<0.01；γ-GGT：r=0.474，P<0.01），CHI3L1 与 ALT、ALP 无显著相关性（P>0.05）。
结论 血清 CHI3L1 对丙型肝炎合并肝硬化的诊断具有一定应用价值，有望成为判断肝硬化严重程度的指标。

PU-1235

肾移植排斥非侵入性生物标志物的研究进展

毛静秋
昆明市第一人民医院

肾移植已成为治疗终末期肾病的有效方法，但移植后的排斥反应仍是目前影响患者生存质量的关键因素。目前肾病患病率逐年上升，但较为成熟的肾移植技术给患者带来生存的希望，研究显示目前移植物的短期存活率可达 95%，我们现在面临的难题是如何提高患者移植后的生存质量及长期生存率。移植后发生的排斥反应是影响移植物的关键因素，选择合适的生物标志物检测有利于移植前排斥反应的预测并对其进行干预以及对移植后排斥的监测，以此改善患者的生存预期。目前，临床上移植物活检是诊断排斥反应的金标准。活检属于侵入性操作，对病人有一定伤害。非侵入性生物标记物可以减少移植物活检对患者和临床医生的负担。理想的非侵入性生物标志物可以区分排斥与其他肾脏疾病或短暂的变化，预测患者和移植物的预后，为患者提供个体化的治疗。本文描述了现在临床上常用及新提出的生物标志物，如 HLA 抗体已成为预测抗体介导的排斥反应的重要生物标志物。抗体介导的排斥反应是肾移植后移植物丢失的主要原因，部分移植患者由于输血，妊娠等情况致使机体处于致敏状态或自身存在针对供体的抗体，移植后 HLA 抗体针对移植物发生免疫应答，导致组织损伤。文中还描述了补体、免疫细胞、外泌体等。本综述总结的生物标志物对监测移植患者排斥方面都具有一定的有效性和局限性，选择合适的单个标志物及组合有利于对患者状态有更好的了解，随着各种技术的发展，相信更多更好的生物标记物被开用于临床，更好的为提高患者生存质量服务。

PU-1236

Diagnostic Value of PCT, IL-6 and CRP in the solid tumor patients with infections

Jia Gao
National Cancer Center/Hospital, Chinese Academy of Medical Sciences and Peking Union Medical College, Beijing

Fever is a common symptom in the course of cancer patients. It is very important to identify bacterial infection in time to guide the use of antibiotics. In this study, we evaluated the diagnostic value of procalcitonin (PCT), interleukin-6 (IL-6) and C-reactive protein (CRP) for bacterial infections in tumor patients. Firstly, we recruited 100 non-fever tumor patients, and determined the reference of PCT and IL-6 in tumor patients. After that, 334 patients were retrospectively categorized into the bloodstream infection (n=100), localized bacterial infection (n=100), tumor-relate fever (n=34) and the non-fever cancer (n=100) groups. Serum PCT, IL-6 and CRP were detected to assess their diagnostic value for fever. The results are summarized as follows: Firstly, the normal reference range of serum PCT and IL-6 in tumor patients is 0~0.14ng/ml and 0~29.42pg/ml, respectively, slightly higher than that of the healthy controls. In the bloodstream infection group, PCT yields a remarkably higher median concentration (Median=0.46, IQR=0.99) comparing with that of the localized bacterial infection group (Median=0.19; IQR=0.48, P=0.02) and tumor-relate fever group (Median=0.13; IQR=0.17, P<0.001). When using 0.195ng/ml as the cutoff value, PCT yielded the best diagnostic valve (sensitivity:72%; specificity:59%). No differences were observed for IL-6 and CRP among the three groups (P=0.118). In conclusion, PCT is feasible as an infection marker in diagnosing bloodstream infection in cancer patients.

肝素结合蛋白在感染早期中的作用

华春兰
郑州大学第一附属医院

Aim Infectious diseases remain a major health problem for patients, they lead to organ dysfunction and finally cause morbidity and mortality. Heparin-binding protein (HBP) has several biological functions. In this study, we found that HBP levels on admission are associated with the development of infection, so it can be regard as an early indicator of infection, which may be a potential biological marker and a new target for infection treatment.
Methods A total of 262 patients with a suspected infection from the ICU were included and HBP concentration on plasma samples from admission to the ICU was analyzed. Statistical analysis was performed by Student's t-test, the data shown were expressed as the mean ± SD.
Results The levels of plasma HBP, PCT, WBC, NEU were elevated in patients in ICU, however, HBP displayed a high level than other three biomarkers in 24 hours.
Conclusion Altogether, we proved that HBP may be a promising infection related biomarker with a potential for predicting serious infection. It is suggested that further studies either on plasma HBP are warranted.

PU-1238

乙肝两对半检测方法学及其临床应用差异对比

侯家旭
大理大学第一附属医院（云南省第四人民医院）

目的 研究不同检测法在检测乙肝两对半的各方面及其临床应用。现今临床常用的乙肝两对半的血清学检测方法主要有化学发光免疫分析法、酶联免疫法、免疫胶体金法。但在真正临床应用中各种方法有各自具有其不同的优缺点，可能受不同因素的影响其各自的敏感性和特异性不同。所以就乙肝两对半的不同检测方法及其临床应用的差异对比进行进一步研究。
方法 免疫胶体金法、酶联免疫吸附法、电化学发光法、统计学处理采用 SPSS22.0 进行统计分析，计数资料 n(%)表示，行 X^2检验比较，差异具有统计学意义（P＜0.05）
结果 灵敏度差异为电化学发光法的灵敏度最高；酶联免疫吸附法的灵敏度次之；免疫胶体金法最低
特异性的差异为为电化学发光法的灵敏度最高；酶联免疫吸附法的灵敏度次之；免疫胶体金法最低
结论 对于乙肝血清学标志物的检测方法在临床上的应用各有各的优点各有各的好处，但同时也各自存在一定的局限性和缺点。总的对比来说，电化学发光法在乙肝两对半的检测中较免疫胶体金法和酶联免疫吸附法灵敏度更好，特异性更好。其结果对于临床诊断的准确性以及对乙肝患者的整个感染、恢复过程的监测都具有重要意义。但是该方法成本高，还未能大量投入使用。而免疫胶体金法则因其灵敏度以及特异性的局限性，且只可做定性检测，但因其价格廉价，检测速度快，操作简单，所以大多只用于乙肝大面积筛查。酶联免疫吸附法则是现在应用比较广泛的方法，其成本价格低，技术较为成熟,所以现在大部分医院都在开展。但是其影响因素较多，其在今后的发展过程中也将会逐步被新的技术方法所替代。在如今这个科技快速发展的时代，对于乙肝的诊断治疗技术方法也将会逐步发展，所以我相信，将来一定会有对于乙肝诊断治疗更精确方便慧民的方法出现，人们将再也无惧乙肝病毒所给人们带来的健康困扰。

PU-1239

血清磷脂酶 A2 受体抗体检测在特发性膜性肾病中应用及患者临床特点分析

万青
东南大学附属中大医院

目的 探讨磷脂酶 A2 受体（PLA2R）抗体在成人特发性膜性肾病（IMN）中的诊断作用和病情活动监测价值，及特发性膜性肾病 PLA2R 阳性患者与阴性患者的临床指标差异及特点。
方法 对 2016 年 3 月至 2018 年 4 月期间东南大学附属中大医院 PLA2R 检测 602 例标本进行回顾性分析，其中肾脏活检明确诊断的 IMN 患者 60 例，肾脏活检确诊为其他类型的肾脏病患者 135 例为对照组，包括有 45 例糖尿病肾病、24 例高血压肾病、27 例 IgA 肾炎、24 例系膜增生性肾炎、15 例狼疮性肾炎的患者为阴性对照。分析 ELISA 法检测血清 PLA2R 的敏感性及特异性。此外将 IMN 患者 PLA2R 抗体浓度与 24 小时尿蛋白量、血清 IgG、IgA、IgM、补体 C3、补体 C4、IgG4、血清肌酐、血清白蛋白等临床指标进行相关性分析，探讨血清 PLA2R 检测的临床价值。根据 PLA2R 结果，将患者分组为 PLA2R 阳性组和 PLA2R 阴性组，对两组患者上述临床指标进行比较，分析特发性膜性肾病 PLA2R 阳性与阴性患者的临床相关指标特点。
结果（1）60 个确诊的 IMN 患者中有 39 个血清 PLA2R 阳性，阳性率为 65%，135 个对照组阳性患者只有 2 个阳性，其余 PLA2R 均为阴性，特异性达到 98.52%。（2）血清 PLA2R 与 24 小时尿蛋白量成正相关，P = 0.001，相关系数 rp = 0.523，两者相关性密切。（3）与膜性肾病 PLA2R

阴性组比较，PLA2R 阳性组患者 24 小时尿蛋白量显著增加（P=0.003），血清 IgG4 水平显著降低（P = 0.038），但其他指标没有统计学意义。
结论 血清 PLA2R 检测特异性高，可作为 IMN 的诊断指标。动态监测血清 PLA2R 与 24 小时尿蛋白量可以反应病情变化及评估临床疗效。

PU-1240

肺癌七项自身抗体在肺部结节中的诊断价值

万青
东南大学附属中大医院

目的 分析七项血清自身抗体在肺部结节患者中的诊断价值和临床意义。
方法 选择本院从 2020 年 1 月到 2021 年 4 月期间 298 例标本，其中分为 17 例确诊肺癌患者、221 例肺部良性结节患者和 57 例体检者三组，选用 ELISA 法检测血清中抑癌基因 53(p53)、蛋白基因产物 9.5(PGP9.5)、干细胞转录因子(SOX2)、G 抗原 7(GAGE7)、肿瘤抗原 4-5(GBU4-5)、黑色素瘤抗原 A1(MAGEA1)、人癌抗原(CAGE)共七项自身抗体的表达水平，进行统计学分析。
结果 p53、SOX2、GBU4 -5 和 MAGEA1 在肺癌组中的表达水平显著增高，表达水平均明显高于肺良性结节组和体检组，差异均有统计学意义（P<0.05）。使用 ROC 曲线进行统计分析结果显示：p53 (AUC =0.675，P<0.05)对肺癌组和其他组的鉴别诊断有意义；GBU4-5(AUC =0.632，P<0.05)及七项联合检测(AUC =0.624，P<0.05)对鉴别良性肺结节和肿瘤组具有一定的诊断价值。
结论 七项自身抗体及其联合检测对肺癌和良性肺结节的鉴别诊断均具有一定的价值，为肺部结节诊断提供了一种新的方法。

PU-1241

补体 C3 在成人 still 病和脓毒症中的鉴别诊断价值

李洁
江苏省人民医院（南京医科大学第一附属医院）

目的 评价血清补体 C3 在成人 still 病（AOSD）和脓毒症中的鉴别诊断价值。
方法 收集江苏省人民医院 2016 年至 2019 年 AOSD 患者 58 例、脓毒症患者 50 例，并选取 50 名江苏省人民医院体检中心健康体检者作为健康对照。检测三组血清中补体 C3 水平，并比较 AOSD 患者和脓毒症患者的其他实验室指标有无差异性，运用单因素和多因素分析各变量与 AOSD 鉴别诊断的关系，并采用 ROC 曲线探讨补体 C3 与血清铁蛋白水平对 AOSD 和脓毒症的诊断效能。
结果 AOSD 组补体 C3 水平（1.49±0.24）显著高于脓毒症组 C3（1.00±0.37），两组数据中高密度脂蛋白、铁蛋白、补体 C3 差异具有统计学意义。多因素分析显示铁蛋白≥472.20ng/ml（OR 56.968，95%CI 2.218~1463.439，P＜0.05），补体 C3 ≥1.20g/L（OR 27.801，95%CI 3.217~240.277,P ＜ 0.01 ），高密度脂蛋白 ≥0.82mmol/L （ OR 13.335 ，95%CI 1.009~176.293,P＜0.05）与 AOSD 发生的可能性独立相关。血清 C3 鉴别诊断 AOSD 和脓毒症患者的曲线下面积（AUC）为 0.81（95%CI 0.63~1.00），当 C3 临界值为 1.21 时，诊断灵敏度为 0.90，特异度为 0.73，此时可达最大的诊断效能，然而当 C3 联合铁蛋白鉴别诊断时，AUC 则为 0.86（95%CI 0.75~0.96）。
结论 血清 C3 可作为 AOSD 和脓毒症的鉴别诊断指标，对 AOSD 的诊断具有临床价值。

PU-1242

高敏肌钙蛋白 T 分析性能的评价及参考范围的建立

朱琳
中国人民解放军总医院第一医学中心检验科

目的 评价电化学发光法检测高敏肌钙蛋白 T（hs-cTNT）的分析性能，并建立本实验室的参考范围。
方法 按 2019 年发布的《临床化学定量检验程序性能验证指南》的具体操作方法评价 hs-cTNT 检测的正确度、精密度、线性范围、可报告范围，并收集 493 名表面健康人群的血清，检测其 hs-cTNT 浓度，建立本实验室参考范围。
结果 卫生部室间质评质控样本的检测结果均值与靶值之间的偏倚绝对值均小于 12.5%，全部通过；两个水平的批内标准差（低值 0.001ng/ml，高值 0.03ng/ml）和实验室内标准差（低值 0.001ng/ml，高值 0.027ng/ml）均小于厂家声称的重复精密度（低值 0.004ng/ml，高值 0.188ng/ml）和期间精密度（低值 0.005ng/ml，高值 0.339ng/ml）；线性分析 R2=0.9991；可报告范围为 0.017-100ng/ml；Spearman 相关分析评估 hs-cTNT 浓度与年龄的相关系数为 0.325，p<0.01；与性别的相关系数为 0.330，p<0.01；本实验室 hs-cTNT 的表面健康人群第 99 百分位值为：男性≤60 岁为 0.028ng/ml，>60 岁为 0.078ng/ml；女性≤60 岁为 0.026ng/ml，>60 岁为 0.024ng/ml。
结论 电化学发光法检测 hs-cTNT 的检测性能良好，符合实验室要求；本实验室建立的表面健康人群的 hs-cTNT 水平明显高于厂商声明的第 99 百分位值，建立一个适合于本实验室表面健康人群的参考范围有重要的临床意义。

PU-1243

通过尿素解离减少自身免疫性疾病患者新型冠状病毒抗体的假阳性及其临床评价

李小凤
重庆市公共卫生医疗救治中心

目的 探讨新型冠状病毒(SARS-CoV-2）IgM/IgG 胶体金免疫层析法在自身免疫性疾病中的假阳性情况及解决方法，同时探讨解决方法是否影响新型冠状病毒肺炎（COVID-19）患者 SARS-CoV-2 IgM/IgG 的检测。
方法 应用胶体金免疫法检测 396 份血清标本中 SARS-CoV-2 IgM/IgG，其中系统性红斑狼疮（SLE）、干燥综合征（SS）、混合性结缔组织病（MCTD）、自身免疫性肝炎（HIA）患者各 50 例、健康体检人员 50 例和确诊 COVID-19 患者 146 例，采用尿素解离试验以最佳解离浓度对 SARS-CoV-2 IgM/IgG 阳性血清进行解离。
结果 200 例自身免疫性疾病患者 SARS-CoV-2 IgM 抗体均为阴性，6 例 SARS-CoV-2 IgG 为阳性，其中 3 例 SLE 患者 IgG 阳性，SS、MCTD 和 AIH 患者各 1 例 IgG 阳性。6mol/L 尿素处理自身免疫性疾病患者 SARS-CoV-2 IgG 阳性标本后，5 例转为阴性。100 例（早、中、后期）COVID-19 患者 IgG 抗体阳性率 77%（77/100）；IgM 抗体的阳性率为 56%，IgM/IgG 总阳性率为 85%。用尿素(6mol/L)解离后，中期 1 例 IgG 阳性转为阴性；38 例弱阳性 SARS-CoV-2 IgM 中 1 例转为阴性；36 例弱阳性 SARS-CoV-2 IgG 中 1 例转为阴性。在 50 名健康体检人员中 SARS-CoV-2 IgM/IgG 抗体均阴性,经尿素解离后仍为阴性。
结论 尿素解离试验有助于减少自身免疫性疾病患者 SARS-CoV-2 IgG 假阳性，尿素解离使 COVID-19 患者 SARS-CoV-2 IgM/IgG 抗体转为阴性可能与抗体的亲和力有关，但需进一步研究。

PU-1244

血清多指标联合检测对肺癌的诊断价值

李丹、陈燕
福建省肿瘤医院

目的 探讨血清中癌胚抗原（CEA）、特异性烯醇化酶(NSE)、胃泌素释放肽前体(Pro-GRP)、细胞角蛋白 19 片段(CYFRA21-1)、鳞状细胞癌抗原（SCC）和胱抑素 C(Cys C)联合检测对肺癌诊断的价值。
方法 将研究对象分为健康对照组（医院体检者）和肺癌患者组（初次确诊肺癌患者），分别收集他们的 CEA、NSE、CYFRA21-1、Pro-GRP、SCC 及 Cys C 数据，进行比较；进而分析 CEA、NSE、CYFRA21-1、Pro-GRP、SCC 及 Cys C 单独检测和联合检测的检验效能，从不同类型的患者和疾病的不同阶段分析它们在肺癌中的诊断价值，结合 ROC 曲线，从而选出最优的肿瘤标志物组合，提高临床对肺癌的检出率。
结果 CEA、NSE、CYFRA21-1、Pro-GRP、SCC 及 Cys C 在年龄、性别表达上无显著差异。通过单因素方差分析，得出 CEA、CYFRA21-1、NSE、Pro-GRP 在 T1 期到 T4 期间，表达水平依次递增；CYFRA21-1 与 NSE 在 TNM 期中Ⅰ期到Ⅳ期，表达水平递增；CYFRA21-1 在鳞癌中，表达水平高于另外两种癌症；Pro-GRP 在小细胞癌的表达水平最高；SCC 随着肿瘤增大和淋巴转移其表达水平上升；Cys C 随着肿瘤增大表达水平上升，随着肿瘤多处转移减小。通过对数据进行相应 t 检验和卡方检验，得出正常组和健康对照组的差异是有统计学意义的。通过绘制 ROC 曲线，得出联合检测是可以提高诊断率的。其中两两联合检测中 Pro-GRP+SCC 高达 0.905，CEA+NSE 高达 0.976，明显比单独检测敏感度高。通过相关性分析，得出 CEA 与 CYFRA21-1、NSE 之间有相关性，Pro-GRP 与 NSE 之间有相关性，其余各项之间是可以起互补的作用。
结论 CEA、NSE、CYFRA21-1、Pro-GRP、SCC 及 Cys C 在肿瘤不同分期、癌症种类、肿瘤大小和肿瘤转移中表达水平存在差异；并且这些指标的联合检测是可以提高肺癌早期的辅助诊断率；肺癌表达 Cys C 水平和正常人表达的水平具有一定差异。

PU-1245

血清 ANCA 检测阳性患者的结果分析

侯彬、刘阳、杨平、王芳、袁丹、方堃
四川省科学城医院

目的 分析中性粒细胞胞浆抗体（ANCA)在临床应用。
方法 选取本院 2018 年 4 月至 2020 年 12 月期间进行了 ANCA 项目检测的患者的临床资料。
结果 共 922 患者检测 ANCA，其中阳性 39 例，占 4.2%。P-ANCA33 例，其中 11 例靶抗原 MPO 阳性。C-ANCA33 例，其中 1 例靶抗原 PR3 阳性。其中 6 例诊断为未分化结缔组织病，3 例诊断为系统性红斑狼疮，7 例 ANCA 相关性血管炎诊断明确，1 例诊断为类风湿关节炎，3 例无任何表现，考虑为假阳性，其余病例需进一步检查。
结论 1.在存在自身免疫性疾病时，应加查 ANCA 检测，以免漏检。2.ANCA 阳性不一定为血管炎，需根据临床症状对每个病例分析，防止误诊。3.ANCA 相关性血管炎早期临床表现复杂多样，故实验室开展 ANCA 检测，及实验室检测结果的准确性对临床在该病的诊断上具有重要意义。

PU-1246

抗髓过氧化物酶抗体及抗蛋白酶 3 抗体双阳性的 ANCA 相关性血管炎 1 例

宁明哲、臧福宇、朱文波、陶月
南京大学医学院附属鼓楼医院

目的 抗髓过氧化物酶（myeloperoxidase, MPO）抗体和抗蛋白酶 3（proteinase 3，PR3）抗体双阳性的病例，临床和实验室工作中罕见，我院检出 1 例抗 MPO 抗体、抗 PR3 抗体双阳性的患者标本，为临床实验室人员提供学习资料。
方法 2019 年 7 月，患者男，54 岁，因“反复发热 20 余天，伴有咳嗽、咯痰”入院，拟诊“肺部感染”；抗生素治疗效果欠佳，在完善相关实验室检查后发现抗 MPO 抗体、抗 PR3 抗体双阳性， pANCA 阳性, cANCA 阳性，肾功能受损，修改诊断为“ANCA 相关性血管炎”，转入风湿科，予以激素治疗，患者症状好转，出院随诊。后因患者擅自停药，造成症状反复，继续服药后症状好转。MPO、PR3 检测结果恢复至参考范围内。
结果 患者因 pANCA 阳性，MPO 阳性，出现肾脏相关症状；因 cANCA 阳性，PR3 阳性，亦出现上呼吸道相关症状。
结论 近年来，临床对 ANCA 和 AAV 的认识普遍提高，国际公认 ANCA 是 AAV 敏感性、特异性均较高的血清学指标，并将其作为诊断和分类 AAV 的重要参考 ，因此需要临床实验室提高 ANCA 检测报告的准确性，为临床诊治提供可靠依据。

PU-1247

肌钙蛋白 T 和 N 端 B 型脑利钠肽前体对乳腺癌患者蒽环类药物序贯曲妥珠单抗治疗致心脏毒性的预测价

陈岩松、陈燕
福建肿瘤医院

目的 探讨 cTnT 与 NT-ProBNPHER2 阳性乳腺癌患者接受蒽环类药物序贯曲妥珠单抗治疗所致的心脏毒性的预测价值。
方法 选取 2018 年 1 月-2021 年 3 月福建省肿瘤医院治疗的 70 例乳腺癌患者，按照发生心脏毒性和未发生心脏毒性分为两组，比较两组在基线期临床病理参数的差异；比较两组 cTnT 与 NT-proBNP 水平在基线和终点的动态变化，ROC 曲线分析 cTnT 与 NT-proBNP 对心脏毒性的诊断价值；将 cTnT 与 NT-proBNP 纳入 COX 回归分析，评估两生物标志物对心脏毒性的预测价值。
结果 两组在基线时期高血压、高血脂发生率、ER、PR 阳性率无明显统计学差异（P>0.05）,心脏毒性组基线高尿酸血症发生率高于非心脏毒性组，差异有统计学意义（P<0.05）；在基线时两组 cTnT 与 NT-proBNP 差异均无统计学意义（P>0.05）。然而在终点时间时，发生心脏毒性组 cTnT 与 NT-proBNP 水平明显高于未发生心脏毒性组，差异具有显著统计学差异（P<0.01）；ROX 曲线分析 cTnT 与 NT-ProBNP 诊断心脏毒性的曲线下面积分别为 0.883 和 0.892，最佳诊断阈值分别为 8.66 和 194.30； COX 回归分析提示患者 cTnT 与 NT-proBNP 对心脏毒性具有一定的预测价值，cTnT 与 NT-proBNP 任一指标高于阈值者发生心脏毒性的风险是两指标均正常者的其发生心脏毒性的可能性是 cTnT 和（或）NT-ProBNP 没有超过阈值者的 17.94 倍（HR=17.94）。
结论 cTnT 与 NT-proBNP 可以做为 HER2 阳性乳腺癌患者接受蒽环类药物序贯曲妥珠单抗治疗致心脏毒性的预测指标。

PU-1248

白细胞介素 6 在结直肠癌患者中的表达及与肿瘤疗效关系

陈岩松、陈燕
福建肿瘤医院

目的 探讨人白细胞介素 6（Interleukin-6，IL-6）在结直肠癌患者中的表达及意义。
方法 收集 132 例首诊结直肠癌患者（CRC）、34 例肠道良性疾病患者(CBD)及 84 例表观健康体检者(HC)血清,采用电化学发光双抗体夹心免疫分析法（ECLIA）检测血清中白细胞介素 6（IL-6）及癌胚抗原（CEA）含量，分析 IL-6 水平与结直肠癌患者临床病理特征的相关性；应用受试者工作特性曲线（ROC）和二元 Logistic 法回归分析 IL-6 和 CEA 两指标对结直肠癌的诊断价值；对随访资料完整的 120 例结直肠癌患者动态观察治疗前后血清 IL-6 和 CEA 水平，分析两指标与肿瘤疗效的关系。
结果 结直肠癌患者血清 IL-6 水平显著高于肠道良性疾病组(P<0.01)和健康对照组(P<0.01)，结直肠癌患者血清 CEA 水平显著高于肠道良性疾病组(P<0.05)和健康对照组(P<0.01),差异均有统计学意义。CRC 患者血清 IL-6 水平与肿瘤直径、分化程度、组织类型、淋巴结转移、远处转移、TNM 分期均显著相关(P<0.05)，而与年龄、性别及肿瘤发生部位无明显相关。IL-6 诊断结直肠癌的灵敏度（72.7%）和准确性（78.6%）均高于 CEA(分别为 68.2%和 77.9%，特异性（85.2%）低于 CEA（88.9%），两指标联合检测能够提高灵敏度（97.2%）和准确性（85.6%）。结直肠癌肿瘤控制组(CR+PR+SD)治疗后两指标均较治疗前有显著下降(P<0.05)，差异有统计学意义，而肿瘤进展组(PD)治疗后两指标均未显著下降(P>0.05)。
结论 IL-6 和 CEA 两指标联合检测有助于结直肠癌的诊断和疗效观察。

PU-1249

PIVKA-II 对肝癌患者疗效评价和预后评估的价值

叶倩、陈燕
福建肿瘤医院

目的 探讨异常凝血酶原（PIVKA-II）在肝癌患者疗效评价和预后评估中的应用价值。
方法 采集治疗前 163 例肝癌患者的血清，检测患者异常凝血酶原（PIVKA-II）和甲胎蛋白（AFP）浓度, 探讨其对肝癌患者疗效评估的价值，采用卡方检验分析患者临床病理特征与 PIVKA-II 浓度的关系，采用 Kaplan-Meier 法计算总生存率及无进展生存率，单因素分析采用 Log-rank 法，多因素分析采用 Cox 回归模型。
结果 肝癌进展组 PIVKA-Ⅱ、AFP 浓度显著高于缓解组，差异具有统计学意义（P<0.05）。PIVKA-II 高表达与 AFP、AST、ALT 有统计学意义（c2=13.664，P＜0.001；c2=4.013，P=0.045；c2=5.504，P=0.019）。随访 1-55 个月，163 例肝癌患者的 1 年总生存率为 57.67%，平均 OS 为 33.66 个月（95% CI：28.55~38.77）。3 年总生存率为 34.36%，平均 OS 为 23.76 个月（95% CI：19.24~28.28），中位 OS 为 16 个月（95% CI：9.39~22.61）。1 年无进展生存率为 38.04%，平均 PFS 为 26.61 个月（95%CI：21.93~31.3），中位 PFS 为 25 个月（95%CI：16.01~33.99）。单因素生存分析显示：肿瘤转移、血管侵犯、门脉癌栓、PIVKA-II、AFP、AST、ALT、ALB、TBIL、PT 对患者预后具有统计学意义（P 均<0.01）。Cox 回归模型多因素分析结果显示：PIVKA-II（P=0.003；HR =1.975，95%CI:1.269~3.073）、AFP（P=0.028；HR=1.663，95%CI:1.057~2.616）、TBIL（P=0.042；HR=1.530，95%CI:1.016~2.304）、血管侵犯（P=0.002；HR=2.523，95%CI:1.387~4.588）、肿瘤转移（P=0.022；HR=2.008，95%CI:1.107~3.642）、门脉癌栓（P=0.003；HR=1.970，95%CI: 1.256~3.092）、PT（P=0.030；HR=1.636，95%CI: 1.050~2.551）对患者预后具有统计学意义。

结论 PIVKA-Ⅱ、AFP 在肝癌中的表达水平，可成为预测肝癌患者发生发展及预后的分子标记物，对肝癌患者疗效评价和预后评估具有一定价值。

PU-1250

HSP90α、EBVCA-IgA、EBV DNA 在鼻咽癌诊断及预后相关性研究

叶倩、陈燕
福建肿瘤医院

目的 探讨热休克蛋白 90α（HSP90α）、EB 病毒衣壳抗原 IgA 抗体（EBVCA-IgA）、EBV DNA 对鼻咽癌(NPC)诊断及预后的价值。
方法 选取福建医科大学附属肿瘤医院 113 例鼻咽癌患者和 40 例健康体检者,采用 ELISA 法检测 HSP90α 和 EBVCA-IgA、采用实时定量 PCR 法检测 EBV DNA, 分析 HSP90α、EBVCA-IgA、EBV DNA 水平并进行统计分析和临床评价。
结 果 NPC 组 HSP90α 、EBVCA-IgA 、EBV DNA 水平均显著高于健康对照组(t/Z=15.317,11.459,24.261, P <0．05)，在 NPC 不同分期的患者中，III 和 IV 期患者的 HSP90α、EBVCA-IgA、EBV DNA 的表达水平均高于 I 和 II 期，IV 期 HSP90α、EBVCA-IgA、EBV DNA 表达水平均明显高于 III 期，差异有统计学意义(Z=5.347,4.768,6.418,P<0.05)。采用 ROC 曲线分析 HSP90α、EBVCA-IgA、EBV DNA 水平对 NPC 的预测价值,曲线下面积分别为 0.884 (95% CI 0.832～0.935)、0.841(95% CI0.781～0.901)、0.934(95% CI 0.897～0.970),最佳截断值分别为 121.70 ng/ml, 1.84 S/CO, 2.7×103 copies/ml,联合检测 ROC 曲线下面积最大为 0.954，灵敏度为 92.5%，特异性为 86.0%。预后不良组患者 HSP90α、EBVCA-IgA、EBV DNA 水平均显著高于预后良好组(P<0.05), Pearson 相关分析显示,NPC 患者 HSP90α 与 EBVCA-IgA、EBV DNA，呈正相关(r =0.768,0.873,P<0.05),随访 3 年患者总体生存率,经绘制生存曲线,低 HSP90α、EBV DNA 组患者 3 年总体生存率高于高 HSP90α、EBV DNA 组,差异有统计学意义(χ2 =9.715,12.805,P<0. 001)。
结论 HSP90α、EBV DNA 对 NPC 具有较高的诊断价值和预后预测价值, EBV DNA 诊断价值优于 HSP90α、EBVCA-IgA，联合检测诊断价值最高, HSP90α 可作为临床治疗监测指标之一,具有较好临床应用价值。

PU-1251

Transient positive Hepatitis B Surface Antigen due to recent vaccination in neonate.

Qiaodi Zhang、erfu xie
the First Affiliated Hospital of Nanjing Medical University

Background Recently, transient positive HBsAg was observed in the serum of neonates. The aim of this study was to investigate whether the transient positive HBsAg was due to a recent hepatitis B vaccination.
Methods Neonates with hepatitis B vaccination who were treated at our hospital between March 2013 to December 2017 were recruited. Newborns whose mothers were HBsAg-positive or chronic hepatitis B were excluded. HBsAg in the serum of the neonate was measured. In some neonates who were HBsAg-positive, HBsAg was redetected at 1–14 days of follow-up. The vaccine was diluted to various degrees and directly measured for HBsAg. Moreover, rabbit serum HBsAg was measured before vaccination and at days 3 and 7 after vaccination.

Results In the present study, 124 neonates among all 2223 newborns after vaccination were HBsAg positive, a 5.5% (124/2223) percentage. The range of neonate age was from 1 to 7 days. The children aged three days reached a peak of 8.09% percentage. The part of positive neonates was retested for HBsAg at 1–14 days of follow-up, showing their negative conversion ratio was 79.5% (35/44). Moreover, the hepatitis B vaccine was HBsAg positive without dilution and was positive even at a 1:32000 dilution. Animal tests showed that HBsAg could increase by day 3 and decrease by 7 days after vaccination.
Conclusion We have revealed that serum transient HBsAg, which has been observed in neonates, is due to hepatitis B vaccination. Subsequently, HBsAg gradually turns negative. Moreover, animal experiments have also confirmed that HBsAg increased after vaccination.

PU-1252

“冰火两重灸”对 HIV/AIDS 患者 IL23 及 IL10 影响的研究

唐亚娟
昆明市中医医院

目的 连续监测“冰火两重灸”疗法在不同淋巴细胞计数值的 AIDS 免疫重建不良患者的 IL23 及 IL10 影响差异研究。
方法 选取云南中医学院第三附属医院的 AIDS 免疫重建不良患者 30 例，按淋巴细胞计数值分为两组，运用冰火两重灸联合 HAART 治疗，观察 0，3，6,9,12 月的 IL23 及 IL10 的数值变化。
结果 两组实验组，其不同测定时间的 IL-10 及 IL-23（对数值）均数的差异均有统计学意义（P＜0.05），且都有随时间推移而下降的趋势（P＜0.05）。
结论 在不同免疫重建不良的 AIDS 患者中，因淋巴细胞数值的不同，在同一联合治疗方案下，均呈现有效治疗趋势，中医治疗联合国家推荐的一线方案治疗值得长期观察。

PU-1253

治疗前异常凝血酶原血清水平与原发性肝癌预后相关性研究

林莺莺、陈燕
福建省肿瘤医院

目的 探讨治疗前异常凝血酶原（PIVKA-Ⅱ）血清水平在原发性肝癌预后中的临床应用价值。
方法 收集 2013 年 12 月至 2014 年 3 月福建省肿瘤医院连续收治的 100 例未经治疗的肝细胞癌患者入院时血清样本，用化学发光免疫技术检测 PIVKA-Ⅱ血清水平。收集患者临床资料，同时对患者每隔三个月至半年进行随访，对随访结果结合临床资料，运用 X-tile 软件确立 PIVKA-Ⅱ对总生存期的最佳截断值，并用 SPSS16.0 软件包进行生存分析。
结果 截止 2017 年 3 月，100 例患者中位生存时间为 4.1 个月，3 年生存率为 20%。X-tile 软件确立 PIVKA-Ⅱ对总生存期的最佳截断值为 55859mAU/ml，PIVKA-Ⅱ>55859 mAU/ml 的患者 17 例（占总人数的 17%），中位生存期为 2.0 个月，与 PIVKA-Ⅱ≤55859 mAU/ml 组相比（中位生存期为 5.6 个月），差异有统计学意义（P=0.000）。PIVKA-Ⅱ的表达与总胆红素、腹水、肿瘤直径和门脉癌栓成正相关。单因素分析显示治疗前 PIVKA-Ⅱ表达、发现肿瘤途径、肝功能生化指标、腹水、CH 分级、侵犯肝被膜、肿瘤大小、肿瘤数量、临床分期、门脉癌栓、下腔静脉癌栓、远处转移以及治疗方式是患者总体生存率的影响因素。多因素分析显示治疗前 PIVKA-Ⅱ高表达（OR=5.405；95%CI： 0.219-0.879， P=0.020），下腔静脉癌栓和远处转移是患者预后较差的独立预测因素。

结论 治疗前血清 PIVKA-II 水平可作为肝癌预后标志物，治疗前 PIVKA-II 高表达提示不良预后。

PU-1254

成都市某综合医院 2020 年 HIV 抗体检测结果的分析

罗才会、王智斌、许程洁、唐义斌
电子科技大学附属医院·四川省人民医院

目的 了解综合医院就诊患者人类免疫缺陷病毒（HIV）的感染状况，为艾滋病的防治工作提供科学的依据。
方法 对 2020 年 1-12 月我院各科室送检检验科的血浆样本进行 HIV 抗体的初筛试验（酶联免疫吸附试验、化学发光试验和胶体金快速试验），初筛试验有反应的血浆样本进行确证试验（线性免疫印迹试验），对 2020 年我院 HIV 抗体初筛和确证试验的结果进行分析。
结果 共有 151284 例血浆样本进行初筛试验，初筛试验有反应的共 480 例，其中 HIV 抗体确证阳性 414 例，阴性 52 例，不确定 14 例。414 例 HIV 抗体确证阳性中男性 317 例（76.57%），女性 97 例（23.43%），男:女为 3.27:1；年龄最小 17 岁，最大 89 岁，17-19 岁 4 例（0.97%），20-29 岁 71 例（17.15%），30-39 岁 88 例（21.25%），40-49 岁 72 例（17.39%），50-59 岁 89 例（21.50%），60 岁以上 90 例（21.74%）。HIV 抗体确证阳性中门诊患者 238 例（57.49%），住院患者 171 列（41.30%），体检 5 例（1.21%），其中科室分布在内科（43.96%），皮肤科（22.71%），外科（12.08%），感染科（11.59%），急诊科（6.52%），五官及口腔科（1.93%），体检中心（1.21%）。
结论 本次研究中检出的 HIV 抗体阳性以男性为主，主要分布在 30-39 岁和 50 岁以上年龄段，可见青年和中老年人群为该地区 HIV 感染的主要高危人群，应重点关注这两个年龄段人群。但是也要加强对其他年龄段人群的监测及检测，特别是青少年，他们有着对社会极大的好奇心，但又缺乏性教育知识，从而导致青少年感染 HIV 的人数越来越多，年龄越来越小，因此应该引起社会的重视。

PU-1255

梅毒血清学试验生物学假阳性与自身免疫疾病相关性分析

陈斌[1]、吕敏红[2]、陈林强[1]
1. 广州市第一人民医院
2. 广东医科大学检验系

目的 分析可能造成梅毒非密螺旋体抗体检测生物学假阳性（biological false-positive，BFP）反应的相关因素，旨在分析其与自身免疫疾病的相关性，降低临床误诊率。
方法 回顾 2016 年 1 月至 2020 年 12 月在广州市第一人民医院进行梅毒筛查的 31846 名住院、门诊患者和体检人群，根据假阳性患者标准纳入 BFP 患者，分析 BFP 患者年龄、性别、基础疾病等特点。将 1570 例进行自身抗体系列检测和梅毒筛查的患者根据梅毒筛查结果分为假阳性组、阴性组和梅毒组，分析组间自身抗体系列检测结果差异。
结果 201 例发生梅毒非密螺旋体抗体检测 BFP 反应，假阳性率为 0.63%;在不同年龄分组的比较中，BFP 反应的差异存在统计学意义（P<0.05）;假阳性组与阴性组间自身抗体系列中抗双链 DNA 抗体（ds-DNA）、抗核糖体抗体（rRNP）、可溶性物质 A （SSA）、抗 Sm 抗体（Sm）、抗核糖核酸蛋白抗体（nRNP）、抗核抗体（ANA）、抗核小体抗体（AauA）、着丝点抗体（CENP B）、组蛋白阳性率存在统计学差异（P<0.05）。
结论 多种疾病可能引起梅毒非密螺旋体抗体检测 BFP 反应，其中自身免疫疾病患者体内 ds-DNA、rRNP、SSA、Sm、nRNP、ANA、AauA、CENP B、组蛋白阳性可能与 BFP 反应相关。

PU-1256

血清 sFlt-1、PLGF 及 sFlt-1/PLGF 与子痫前期发病的相关性研究

钟志敏[1]、霍心燕[2]、陈斌[1]
1. 广州市第一人民医院
2. 广州医科大学金域检验学院

目的 研究血清可溶性血管内皮生长因子 1（sFlt-1）、胎盘生长因子（PLGF）水平及其比值与子痫前期的相关性及预测价值。
方法 选择在广州市第一人民医院总院区妇科和产科就诊的住院孕产妇为研究对象，其中选取正常对照组 38 例，高血压对照组 38 例，病例组 15 例。应用全自动电化学发光免疫分析仪检测病例组和对照组中血清标本中 sFlt-1 和 PLGF 水平并计算 sFlt-1/PLGF 的比值，最后应用 SPSS16.0 软件统计分析，分别对病例组、高血压组和正常对照组的 sFlt-1、PLGF 和 sFlt-1/PLGF 的比值进行两两比较，从而得出 sFlt-1、PLGF 和 sFlt-1/PLGF 的比值与子痫前期的相关性及预测价值。
结果 1.病例组和高血压组 PLGF 测定值的 P 值为 0.039（P<0.05），存在差异性；病例组和正常组 PLGF 的 P 值为 0.750（P>0.05），不存在差异性；高血压组和正常组 PLGF 的 P 值为 0.02（P<0.05），存在差异性；病例组和高血压组 sFlt-1 测定值的 P 值为 0.019（P<0.05），存在差异性；病例组和正常组 sFlt-1 的 P 值为 0.000（P<0.001），存在显著差异性；高血压组和正常组 sFlt-1 值为 0.038（P<0.05），存在差异性；病例组和高血压组 sFlt-1/PLGF 值的 P 值为 0.000（P<0.001），存在显著差异性；病例组和正常组 sFlt-1/PLGF 的 P 值为 0.000（P<0.001），存在显著差异性；高血压组和正常组 sFlt-1/PLGF 值为 0.817（P>0.05），不存在差异性。2.当选取 PLGF 的 Cutoff 值为 18.9150pg/ml 时，对应的灵敏度和特异度分别为 93.3%和 21.05%，曲线下面积（AUC）=0.447;当选取的 sFlt-1 的 Cut off 值为 2890.00pg/ml 时，对应的灵敏度和特异度分别为 73.3%和 65.79%，AUC=0.673;当选取的 sFlt-1/PLGF 的 Cutoff 值为 53.5244pg/ml 时，对应的灵敏度和特异度分别为 60.0%和 90.79%，AUC=0.783。
结论 PE 孕妇血清中 sFlt-1、sFlt-1/PLGF 比正常妊娠孕妇高，PLGF 水平比正常妊娠孕妇低；而且 sFlt-1/PLGF 比值可用于预测和评估子痫前期,而且 sFlt-1/PLGF 的比值比 sFlt-1 和 PLGF 单因子更具检测价值。

PU-1257

Comparative analysis of serum CA125 and SCCA expression between pulmonary tuberculosis and lung cancer patients

Xingtian Liu
Taian City Centrol Hospital

Objective To investigate the changes of serum CA125 and SCCA expression in pulmonary tuberculosis and lung cancer patients，and to provide theoretical basis for clinical differential diagnosis of pulmonary tuberculosis and lung cancer.
Methods From June 2019 to December 2019， 87 cases of tuberculosis patients diagnosed in the department of infectious diseases of our hospital and 79 cases of lung cancer patients diagnosed in the cancer research center were selected， and 50 cases of healthy patients were collected. The contents of CA125 and SCCA in serum of three groups were determined by electrochemical luminescence.

Results The serum CA125 content of the pulmonary tuberculosis group (75.54±26.23) U/ml was significantly higher than that of the lung cancer group (46.08±13.76) U/ml，and that of the lung cancer group (11.25±5.92) U/ml was significantly higher than that of the control group (P<0.05)。The SCCA content of lung cancer group (2.68±1.30) ng/ml was significantly higher than that of pulmonary tuberculosis group (1.07±0.68) ng/ml and control group (1.03±0.45) ng/ml，the difference was statistically significant (P<0.05)。There was no significant difference in serum SCCA content between pulmonary tuberculosis group and control group (P>0.05)。The Ⅳ period lung cancer of serum CA125 levels (50.96±14.52) U/ml、SCCA levels (3.18±1.18) ng/ml are significantly higher than Ⅲ stage of CA125 (40.54±10.54) U/ml、SCCA (2.11±1.20) ng/ml，the differences were statistically significant (P < 0.05)；The serum CA125 content (50.00±14.58) U/ml in adenocarcinoma was significantly higher than that in squamous cell carcinoma (42.79±12.27) U/ml，and the serum SCCA content in squamous cell carcinoma (3.08±1.18) ng/ml was significantly higher than that in adenocarcinoma (2.20±1.30) ng/ml，the differences were statistically significant differences (P<0.05).

Conclusion The combined detection of serum CA125 and SCCA has certain clinical diagnostic value for the auxiliary differential diagnosis of pulmonary tuberculosis and lung cancer， and has certain reference value for the staging and classification of lung cancer.

PU-1258

乙肝表明抗原通过上调 IDO 抑制 T 细胞增殖

王森
南京大学医学院附属鼓楼医院

T 细胞的增殖分化失衡是乙肝病毒建立和维持免疫耐受的重要机制之一，乙肝病毒表面抗原（HBsAg）在逃逸机体的天然免疫和适应性免疫中发挥重要的作用。本课题研究发现 HBsAg 可显著抑制 CD4+T 细胞及 CD8+T 细胞的增殖，并以剂量依赖性的方式抑制 T 细胞的 IFN-γ 及 TNF-α 的产生能力。为了对 HBsAg 抑制 T 细胞的机制进行进一步的研究，我们使用基因芯片的方法筛选 HBsAg 诱导上调的基因，发现 HBsAg 可以显著上调 T 细胞抑制分子吲哚胺 2,3 双加氧酶(IDO)的表达，流式细胞仪检测 IDO 的表达证实 HBsAg 可上调 PBMC 及单核细胞中 IDO 的蛋白表达水平。IDO 的特异性抑制剂 1-MT 可以逆转 HBsAg 对 CD4+及 CD8+ T 细胞增殖的抑制作用，IDO 的代谢产物犬尿氨酸可发挥 HBsAg 的类似作用。表明 HBsAg 通过 IDO 抑制了 CD4 及 CD8 T 细胞的增殖。另外，我们在慢性乙肝患者外周血中也发现了 IDO 表达水平的上升。本项目有助于加深对 HBsAg 免疫调节功能及 HBV 感染慢性化机制的认识，同时为开发逆转 HBV 免疫耐受的策略提供理论基础。

PU-1259

吉林地区 2020 年幽门螺旋杆菌结果分析

谭宇鹏
吉林金域医学检验所有限公司

目的 幽门螺旋杆菌 (Helicobacter Pylori HP)作为人类最常见的慢性感染源之一，日渐被人们所关注。许多研究表明，HP 是消化性溃疡、慢性胃炎的重要病因，并与胃癌密切相关，时刻威胁人类健康。本文就 2020 年长春地区幽门螺旋杆菌检测结果进行分析，了解感染幽门螺旋杆菌在人群中比例，为临床提供参考依据。

方法 选取 2020 年 1 月至 2020 年 2 月送我公司检测幽门螺旋杆菌的 2000 例标本。采用免疫印迹法，（0.1ml 样本稀释液+10ul 血清）摇半小时，清洗液洗 3 次，每次一分钟；（0.05ml 样本稀释液+10ul 酶）摇半小时，清洗液洗 3 次，每次一分钟；（500ul 底物）摇 6 分钟，然后清洗。
结果 2000 例检测幽门螺旋杆菌的标本中，阳性的有 700 例，阳性率为 35%。
结论 实验表明，幽门螺旋杆菌的阳性率高达 35%，世界卫生组织癌症研究会已将 HP 定为Ⅰ级或明确的人类致癌因子。而幽门螺旋杆菌的传播途径广泛，可通过口-口传播、粪-口传染还有医源性传播，既通过接吻、就餐都可以传染，通过大便排出水的污染也可以传播，再就是患者进行胃镜检查时，幽门螺旋杆菌会寄附在胃镜检查仪器上，倘若仪器清理不彻底，医生手套没有及时更换，都可能造成感染。因此，健康人群感染 HP 的风险也很大，健康人群进行 HP 感染检测，可减少慢性胃炎、消化性溃疡的发生，降低胃癌等重大疾病的发生风险。所以，提高卫生意识，关注健康人群的幽门螺旋杆菌检测，做到早发现，早诊断，早治疗，提高人们的生活质量。

PU-1260

Increased CD4+CD8+ double positive T cell in patients with Primary Sjögren's Syndrome correlated with disease activity

Sen Wang
Nanjing Drum Tower Hospital

Primary Sjogren’s syndrome (pSS) is an autoimmune disease that invades lacrimal glands, salivary glands and other exocrine glands, but its pathogenic mechanism is still unclear. CD4+CD8+ double positive T (DPT) cells have been discovered in recent years to play an important role in autoimmune diseases and viral infections, but the frequency and significance of DPT in primary Sjogren’s syndrome are still unclear. This study detected the frequency of DPT in the peripheral blood of patients with pSS, and detected the clinical indicators and cytokines in patients. We then analyzed the correlation between DPT and clinical indicators, cytokines, and disease activity scores. The results showed that the peripheral DPT frequency of pSS patients was significantly higher than that of healthy controls. The peripheral DPT frequency was negatively correlated with ESR, IgA and IgG, and peripheral DPT frequency was positively correlated with anti-inflammatory cytokine IL-10. Analysis of DPT and pSS disease activity scores found that DPT frequency had a negative correlation with ESSDAI and SSDAI. This study suggests that peripheral DPT may play a protective role in pSS. The frequency of peripheral DPT cells can be used as an indicator for disease activity. Regulating the expression of peripheral DPT cells is expected to become a new strategy for treatment of pSS.

PU-1261

狼疮抗凝物（LA）检测的临床诊断分析

梁津
吉林大学第一医院

目的 探讨狼疮抗凝物检测对临床症状及诊断的实际意义。
方法 回顾性分析狼疮抗凝物阳性患者 43 例的具体病例和临床病症，均为自身免疫性疾病患者。以 LA 标准化比值 1.2 为标准，大于则判定为阳性。选 50 例低于标准化值的狼疮抗凝物阴性患者，并选择 30 例健康者作为对照，比较分析。

结果 阳性患者的标准化比值高于阴性组，远高于对照组。阴、阳性组中具有血栓及有关临床病症的患者标准化值远高于其他病症；同一组别中性别间比值几乎无差异；阴、阳组中女性在妊娠丢失表现明显。同一组内具有复合病症患者的标准化比值明显高于单一病症。
结论 狼疮抗凝物检测在临床病症判定时，与性别无显著学意义；与血栓相关病症具有极显著意义；与妊娠丢失具有显著学意义；对于狼疮抗凝物的检测不能仅作为单一病症的确诊分析，要结合临床判定复合病症的发生。

PU-1262

促甲状腺激素受体刺激性抗体检测的临床应用

王春玲
东南大学附属中大医院

目的 研究促甲状腺激素受体刺激性抗体（TSI）对甲亢诊断的临床作用。
方法 利用重组的人促甲状腺激素受体蛋白采用化学发光法对确诊为临床甲亢的 46 例患者的血清样本进行促甲状腺激素受体抗体（TRAb）中的 TSI 的检测，同时检测同一样本中 TRAb 的含量，比较 TSI 和 TRAb 在甲亢辅助诊断中的敏感性差异。
结果 在 46 例样本中，TSI 阳性 42 例（cutoff 值 0.55 IU/L），阴性 4 例，阳性率 91.3%；TRAb 阳性为 38 例（cutoff 值 1.75IU/L），阴性为 8 例，阳性率 82.6%；比较两组间阳性率无显著统计学差异（P=0.33）。
结论 血清 TSI 检测对甲状腺功能亢进诊断具有和 TRAb 相似的敏感性，可用于临床甲亢的辅助诊断。

PU-1263

Clinical Significance of the detection of HBV-DNA by the Real-time Fluorescence PCR

Yongsheng Shi、yingyu jin
The first affiliated hospital of Harbin medical university

Objective To analyze the correlation of hepatitis B virus (HBV) DNA with hepatitis M, and to uinvestigate their clinical significance in HBV diagnosis and prognosis.
Methods 200 cases of Clinical specimens were detected by enzyme linked immunosorbent assay (ELISA）and fluorescent quantitative PCR assay detected HBV- DNA of blood samples and the results were divided groups.
Results There were 48 positive in group that the HBsAg(+), HBeAg(+) and HBcAb(+) were positive and positive rate was 92%(48/52). There were 30 positive in group that the HBsAg(+), HBeAb(+) and HBcAb(+) were positive and positive rate was 43%(30/70). There was 1 positive in group that the HBsAb(+), HBeAb(+) and HBcAb(+) were positive and positive rate was 33%(1/3). There were 6 positive in group that the HBsAg(+), HBcAb(+) were positive and positive rate was 27%(6/22). There were 8 positive in group that the HBeAg(+), HBcAb(+) were positive and positive rate was 44%(8/18). 3 were negative in group of HBsAb(+). 12 were negative in group of HBsAb(+) and HBcAb(+). There was 1 positive in group that the HBsAb(+) were positive and positive rate was 30%(1/3). 2 were negative in group of HBeAb(+).There was a positive HBV-DNA in 3 total negative samples, and the positive rate was 33%.
Conclusion HBV DNA levels and HBV e antigen significant correlation, HBV DNA quantification and HBV M detection for clinical hepatitis B virus infection, replication and clinical diagnosis and treatment is important.

PU-1264

不同检测方法对肺结核早期诊断的应用

史永胜、金英玉
哈尔滨医科大学附属第一医院

目的 分析建立一种对结核分枝杆菌检出简便、快速、特异的方法。
方法 对 68 例研究对象根据医院肺结核诊断标准包括典型症状，典型体征，或痰菌阳性，PPD 皮试阳性或抗结核治疗的结果进行分析分为 2 组：结核病组 50 例，非结核病组 18 例；对这 68 例研究对象进行痰涂片结核分枝杆菌检查，痰液聚合酶链反应（Polyerase Chain Reaction PCR），结核菌素纯蛋白衍生物(purified protein derivative PPD)检测，并对其检出率进行比较。
结果 结核病组的痰涂片检测阳性 11 例，阳性率为 22%，非结核病组均为阴性。痰标本 PCR 检测结核病组阳性率 54％，非结核组阳性率 5.6%。PPD 皮试结果阳性 18 例，阳性率为 36％，非结核组为 3 例，阳性率 16.7％。痰标本经 PCR 的检出阳性率明显高出其余两种检测方法。
结论 PCR 技术对于痰液结核分枝杆菌的检出阳性率较其他两种方法而言具有更高的检出率，该技术发挥了重要的作用，检测结果具有方便、快速的特点，对临床上结核病的确诊有很大的意义。

PU-1265

血清 CK18、OPN 水平与原发性喉癌患者临床分期的相关性

屈慧
空军军医大学第一附属医院西京医院

目的 分析血清细胞角蛋白 18（CK18）、骨桥蛋白（OPN）水平与原发性喉癌患者临床分期的关系。
方法 前瞻选择 2019 年 1 月-2019 年 12 月医院 93 例原发性喉癌患者作为研究对象，入院时检测患者的 CK18、细胞角蛋白 19（CK19）、OPN、肿瘤标志物水平[糖类抗原 50（CA50）、糖类抗原 199（CAl99）、癌胚抗原（CEA）、糖脂类抗原 72-4（CA72-4）]，均接受纤维喉镜和病理活检，并根据检查结果分为晚期[国际抗癌联盟制定的肿瘤（TNM）分期Ⅲ期、Ⅳ期]和早中期（TNM 分期Ⅰ期、Ⅱ期），比较不同临床分期患者的 CK18、CK19、OPN、肿瘤标志物水平，重点分析入院时血清 CK18、OPN 水平与原发性喉癌患者临床分期的关系。
结果 晚期组 CK18、CK19、OPN、CA50、CA199、CEA、CA72-4 高于早中期组，差异有统计学意义（P＜0.05）；经 Logistic 回归分析检验结果显示，入院时血清 CK18、CK19、OPN、CA50、CA199、CEA、CA72-4 水平与原发性喉癌患者临床分期有关，CK18、CK19、OPN、CA50、CA199、CEA、CA72-4 高表达可能是原发性喉癌患者进展至晚期的风险因子（OR＞1，P＜0.05）；绘制 ROC 曲线图，结果显示，入院时血清 CK18、OPN 单独及联合评估原发性喉癌患者预后不良的 AUC 分别为 0.886、0.832、0.899，均有一定评估价值；经 Spearman 相关性分析检验，原发性喉癌患者血清 CK18、OPN 呈正相关（r＞0，P＜0.05）。
结论 血清 CK18、OPN 水平与原发性喉癌患者临床分期相关。可用于原发性喉癌患者临床分期的评估。

PU-1266

实时荧光定量 PCR 检测 乙肝病毒 DNA 的分析与临床意义

史永胜、金英玉
哈尔滨医科大学附属第一医院

目的 探讨乙型肝炎病毒 DNA 含量与血清标志物的关系及其临床意义。
方法 用酶联免疫吸附实验（ELISA）和实时荧光定量聚合酶链法（RTFQ-PCR）两种方法分别对 200 例疑似乙肝患者进行乙肝病毒血清学检测和 HBV-DNA 含量检测。然后分组进行分析。
结果 52 份 HBsAg(+)、HBeAg(+)、HBcAb(+)标本中有 48 份 HBV-DNA 为阳性，阳性率为 92%；70 份 HBsAg(+)、HBeAb(+)、HBcAb(+)标本中有 30 份 HBV-DNA 为阳性，阳性率为 43%；3 份 HBsAb(+)、HBeAb(+)、HBcAb(+)标本中有 1 份 HBV-DNA 为阳性，阳性率为 33%；22 份 HBsAg(+)、HBcAb(+)标本中有 6 份 HBV-DNA 为阳性，阳性率为 27%；18 份 HBeAg(+)、HBcAb(+)标本中有 8 份 HBV-DNA 为阳性，阳性率为 44%；3 份 HBsAg(+)、HBcAb(+)标本中 HBV-DNA 均为阴性；12 份 HBsAb(+)、HBcAb(+)标本中 HBV-DNA 均为阴性； HBsAb(+)的三份标本中 HBV-DNA 为阳性的有一份，其阳性率为 30%；2 份 HBeAb(+)标本中 HBV-DNA 均为阴性；全阴性的三份标本中 HBV-DNA 为阳性的有一例，阳性率为 33%。
结论 乙肝病毒 DNA 含量与 HBeAg 有明显的关联，乙型肝炎病毒 DNA 定量和乙型肝炎病毒血清学标志物检测对于临床乙型肝炎病毒感染、复制及临床诊断与治疗都有其重要的意义。

PU-1267

免疫功能检测在儿童肺炎支原体感染中的应用价值探讨

史永胜、金英玉
哈尔滨医科大学附属第一医院

目的 探讨免疫功能检测在儿童肺炎支原体感染中的应用价值。
方法 选取同期肺炎支原体感染患儿和体检健康的小儿来进行观察，检测两组儿童的血清免疫球蛋白 （IgA、 IgM、IgG）和补体 C3、C4，外周血的 T 淋巴细胞亚群水平。
结果 患儿急性期各项指标均低于对照组，且恢复期仍有差异。
结论 小儿受到肺炎支原体感染后免疫功能低下，若着手于儿童免疫功能的治疗，对于疾病的改善和治疗有很好的作用。

PU-1268

纳米金棒应用于血吸虫病敏感性检测的基础研究

杨毅梅[1]、马顺高[2]、李倩[1]、李家萌[1]、钟国梁[2]
1. 大理大学
2. 大理州医院

目的 本研究对纳米金棒的制备条件进行了优化，成功聚合最具有所需光学性质的纳米金棒，并将其功能化，制备了实验室条件下可针对日本血吸虫病检测的高敏感性纳米金生物探针。
方法 通过种子介导生长法合成纳米金棒，通过系统的研究纳米金棒最佳的合成条件，最大程度提高单个纳米颗粒的生物功能，聚合具有所需的形貌和波长可控的纳米金棒。制备日本血吸虫尾蚴和成虫可溶性抗原，通过抗原与纳米金棒结合，构建功能化 NanoSPR 生物探针，检测不同浓度梯度的感染日本血吸虫阳性血清抗体，并与 ELISA 检测结果做对照分析研究，探索日本血吸虫 NanoSPR 生物芯片的高敏感性。

结果 通过对 GNRs 在制备过程中还原剂、活性剂、温度等条件的优化，系统的研究了 GNRs 的最佳实验制备条件，成功制备 NanoSPR-SCA 生物探针，通过纳米金标记对抗原抗体反应产生的放大作用，使 NanoSPR-AWA 生物探针对血清中血吸虫抗体的检测更具有灵敏性，最低检测限可达到稀释倍数的 80 倍。相比于传统的 ELISA 检测法，NanoSPR 生物探针针对日本血吸虫感染早期的血清体现出了更强的识别能力。
结论 成功聚合了功能化纳米金棒。制备了纳米金标记的免疫传感器 NanoSPR 生物探针，研究证实纳米金标记的传感器是一种可以针对日本血吸虫病具有更灵敏的检测方法，为提高日本血吸虫感染敏感检测方法提供了新的技术，为纳米金生物技术应用于临床寄生虫检测提供了实验基础及科学依据。

PU-1269

血清 CEA、CA199、CA724 肿瘤标志物联合检验在胃癌诊断中的应用研究

渠滕
山东第一医科大学附属省立医院临床医学检验部

目的 分析血清癌胚抗原(CEA)及糖类相关抗原(CA199、CA724)的联合检测在胃癌诊断中的价值。
方法 选取 2019 年 1 月到 2020 年 12 月来本院治疗的 168 例胃癌患者作为胃癌组，同时选取同期良性胃病患者 159 为良性胃病组，另选取同期健康体检者 160 例作为健康组，用罗
氏 Cobas 8000 全自动化化学发光免疫分析仪及配套试剂进行检测，比较三组间 CEA、CA199、CA724 的表达水平以及单项、联合肿瘤标志物的阳性检出率，分析 CEA、CA199、CA724 的单一诊断和联合诊断在胃癌诊断中的价值。
结果 胃癌组血清 CEA、CA199、CA724 表达水平明显高于良性胃病组和健康组，差异均有统计学意义（P<0.05）；胃癌组血清 CEA、CA199、CA724 单独检测与联合检测阳性率均高于良性胃病组和健康组，差异均有统计学意义（P<0.05）；血清 CEA、CA199、CA724 三项联合检测的灵敏度均高于单独检测和任意两项检测，差异具有统计学意义（P<0.05）。
结论 胃癌患者血清 CEA、CA199、CA724 水平高于正常人，应用血清 CEA、CA199、CA724 联合检测能够有效提高胃癌的阳性检出率，有利于辅助早期胃癌的诊断，减少漏诊与误诊的发生。

PU-1270

ER、PR、CerbB-2 在甲状腺乳头状癌中的表达和临床意义

史永胜、金英玉
哈尔滨医科大学附属第一医院

目的 研究 ER、PR 和 CerbB-2 在甲状腺乳头状癌中的所起作用及其与甲状腺乳头状癌生理性行为存在的联系。
方法 以免疫组化法检测法为主电子显微镜检测为辅，随机抽取 89 例典型甲状腺乳头状癌标本、13 例典型结节性甲状腺肿标本中 ER、PR 和 CerbB-2 在癌变中所起的作用。
结果 ER、PR 和 CerbB-2 在甲状腺乳头状癌中的表达率分别为 50.48%、44.36%、17.98%，在结节性甲状腺肿中的表达率分别为 15.38%、7.69%、0%，俩组实验数据对比（P<0.01）。所以在甲状腺乳头状癌的表达中，ER 基因的影响与病人的年龄存在反比例关系；PR 基因的作用在无淋巴结转移的患者中表达更强。
结论 ER、PR、CerbB-2 基因在甲状腺乳头状癌癌变过程中的所起的作用明显增高，所以通过对 ER、PR、CerbB-2 检测可以起到对甲状腺乳头状癌的预防和治愈。

PU-1271

ELISA 检测梅毒螺旋体抗体的最佳临界值和可疑区间的建立

黄涛涛
联勤保障部队第九〇〇医院

目的 探讨酶联免疫法（enzyme-linked immunosorbentassay,ELISA）检测梅毒螺旋体抗体（TP-Ab）诊断阳性的最佳临界值（Cut-off 值）和可疑区间，降低本实验室的假阳性率和假阴性率。
方法 选取在联勤保障部队第九〇〇医院就诊共 26 例经 ELISA 初筛 TP-Ab 结果为阳性和试剂盒规定的 Cut-off 值（0.15）附近（阴性）的患者血清标本（OD＝0.1～0.6），分为 3 组，[0.1－0.3）共 12 例，[0.3－0.45）共 2 例，[0.45－0.6）共 12 例；并采用梅毒螺旋体特异性抗体明胶凝集试验（Treponema Pallidum Particle Agglunation Test,TPPA）检测确定其阴、阳性。通过软件 SPSS22.0 绘制受试者工作特征(receiver operating characteristic，ROC)曲线，取约登(Youden)指数最大时（0.737）的吸光度值为最佳 Cut-off 值，并进一步确定可疑区间。
结果 ELISA 检测 TP-Ab 诊断阳性的最佳 Cut-off 值为 0.3055，确定最佳 Cut-off 值后 ELISA 与 TPPA 一致性 kappa 值为 0.75，可疑区间为[0.168,0.351]。
结论 确定适合本实验室 ELISA 检测 TP-Ab 最佳 Cut-off 值和可疑区间能够有效降低假阳性率和假阴性率，减少临床的漏诊率和误诊率，为临床诊断工作提供有力依据。

服用螺旋藻致 CA72-4 异常升高一案例分析

肖雅[1]、渠文涛[2]、史小芹[1]
1. 郑州安图生物工程股份有限公司
2. 郑州安图生物工程股份有限公司

目的 笔者发现，患者在服用含有螺旋藻的保健品后，血清中 CA72-4 检测结果异常升高，停服一段时间后，CA72-4 检测结果又降低到原来的正常水平，现报道如下。
方法 患者在健康体检时发现，CA72-4 单项结果异常高，＞300.0 U/ml，而前一年的体检结果还是正常的。随后笔者查看了其胃镜、CT 等检查结果，均显示正常，且未发现肿瘤迹象。曾有文献报道服用灵芝孢子粉、虫草等后会导致 CA72-4 异常升高的案例，经仔细询问患者体检前的饮食史和病史发现，患者近半年来一直在规律服用螺旋藻片。于是，建议患者停服该保健品一段时间后再来复查 CA72-4。
结果 患者停服螺旋藻片 7 天后，CA72-4 由原来的＞300U/ml 降到了 80.96 U/ml；停服螺旋藻片 15 天后，CA72-4 已经降低到 5.17 U/ml。考虑到螺旋藻片中可能含有 CA72-4 的交叉物，笔者将螺旋藻片溶解到纯化水中，CA72-4 检测结果仅仅 0.15U/ml，可以排除检查干扰的可能。
结论 CA72-4 是一种消化道相关的肿瘤标志物。本例中的患者在服用螺旋藻后 CA72-4 检测结果异常升高，停服之后，CA72-4 检测结果逐渐降低，两周后已降到原来的正常水平。排除螺旋藻片本身可能含有 CA72-4 检测干扰物的影响，笔者推测，摄入螺旋藻之后，其在人体内的某种代谢产物可能与 CA72-4 抗原结构类似，或者螺旋藻或其代谢产物与体内细胞相互作用后可能会促进细胞过多表达 CA72-4 抗原。因此，临床上发现 CA72-4 异常升高时，应仔细询问患者饮食或用药史，确认是否是因为服用药物或保健品引起 CA72-4 异常升高的情况。

PU-1273

Ultrasensitive immunochromatographic assay based on graphene oxide-fluorescent nanoprobe for rapid and multiplexed detection of respiratory bacteria

Xiaodan Cheng、Chongwen Wang、Shengqi Wang
Beijing Institute of Radiation Medicine, Beijing 100850, PR China

Background Respiratory pathogens including a variety of bacteria and viruses are highly infectious to human, cause similar clinical symptoms, and pose serious threats to public health globally. Early and accurate identification of respiratory bacteria from other pathogens is crucial for guiding the rational use of antibiotics and controlling the epidemic spread.
Methods Here, we developed a multiplexed fluorescent immunochromatographic assay (ICA) for ultrasensitive qualification of respiratory bacteria in biological samples with high accuracy. A novel two-dimensional graphene oxide (GO)-based quantum dot (QD) nanoflake was designed as film-like immunoprobe to efficiently and closely stick onto the bacteria surface, which not only provide superior fluorescence signal but also ensure the liquidity of the captured bacteria for ICA detection. GO-QD nanoflakes were fabricated via the PEI-mediated electrostatic adsorption of numerous CdSe@ZnS-MPA QDs onto both sides of GO nanosheet. The conjugation of GO-QD and anti-bacteria antibodies was conducted via the carbodiimide chemistry, the antibody-conjugated GO-QD nanoflakes were directly mixed with the bacteria sample and dropped onto the sample pad of ICA. The formed GO-QD/bacteria complex migrated along the strip toward the absorbent pad by capillary forces and then captured by pre-coated monoclonal antibodies on the T lines. Sensitive and quantitative detection of two target bacteria was easily realized by reading the fluorescence intensity values of the two T lines.
Results By optimization of the assay conditions, our proposed method enables simultaneous and sensitive detection of two common respiratory bacteria, namely Streptococcus pneumoniae (S. pneumoniae) and Staphylococcus aureus (S. aureus) in one test within 20 min. The detection limit of the proposed method reached 13 and 20 cells/mL for S. pneumoniae and S. aureus, respectively, and was approximately 500 times more sensitive than traditional colloidal gold-based ICA. The GO-QD-ICA also exhibited the advantages of good stability, reproducibility (RSD < 4.1%), and specificity in sputum, suggesting its great potential for detection of real respiratory tract samples.
Conclusions Our results have demonstrated the incorporation of immuno-GO-QD into ICA system could improve the detection sensitivity and increase the testing throughput, leading to rapid, simple, accurate, and ultrasensitive POCT detection of respiratory pathogens.

PU-1274

2 型糖尿病患者中颈动脉斑块风险模型的建立及验证

姜繁明
中国医科大学附属第一医院

目的 使用列线图建立并验证 2 型糖尿病患者中颈动脉斑块的风险模型。
方法 选取在中国医科大学附属第一医院进行过劲动脉超声检查的 2 型糖尿病患者共 236 例，根据颈动脉超声结果，将任意一侧颈动脉有斑块的患者纳入颈动脉斑块组，将 2 侧颈动脉均无斑块的患者纳入无颈动脉斑块组，并收集 26 项临床常规检测项目。在 236 例患者中随机选取 168 例（70%）作为建模人群，用来构建列线图，其余 68 例患者（30%）用来验证建立的模型。以是否有颈动脉斑块作为因变量，以 26 项临床常规检测项目作为自变量，通过 lasso 回归以及多因素 logistics 回归选取与颈动脉斑块独立相关的自变量并绘制列线图。计算 C-index，绘制校准曲线，并通过验证队列进行校准分析。统计分析采用 R 3.6.1，P 小于 0.05 认为有统计学差异。

结果 建模人群及验证人群在性别、年龄及其他常规检测上均无显著性差异（P>0.05）。通过 lasso 回归进行变量筛选后，原来的 26 个变量缩减为 4 个，将这 4 个变量纳入多因素 logistics 回归分析后发现，年龄（OR=3.45, P<0.001）、红细胞平均血红蛋白浓度（OR=0.95, P=0.021）、血小板分布宽度（OR=1.60 P=0.003）以及高密度脂蛋白胆固醇（OR=0.11，P=0.007）这 4 个变量均为颈动脉斑块的独立风险因素，将上述 4 个变量绘制列线图。回归方程的 C-index 为 0.837（95%可信区间：0.773-0.902）。通过验证队列发现模型预测的结果与验证队列中的结果较为一致，验证队列的 C-index 为 0.774（95%可信区间：0.656-0.893），校准曲线拟合良好。
结论 我们建立并验证了 2 型糖尿病患者中颈动脉斑块的风险模型。

PU-1275

BRD7 通过 PI3K/AKT 信号通路抑制鼻咽癌细胞 PD-L1 的表达

李晓旭[1,2]、李梦娜[3]、陈镁琳[1]、周清[1]、刘影[1]、李夏雨[3]、周鸣[3]、李桂源[3]、张文玲[1]
1. 中南大学湘雅三医院湘雅医学院医学检验系
2. 芜湖市第二人民医院
3. 中南大学肿瘤研究所

Objective To investigate whether BRD7 gene could regulate the expression of PD-L1 in nasopharyngeal carcinoma (NPC) cells through PI3K/Akt pathway and provide more sufficient evidence for BRD7 as a candidate tumor suppressor gene and a promising target for NPC immunotherapy.
Materials and Methods Please refer to the appendix of the abstract.
Results The expression of PI3K-P85α protein in the nucleus in the PI3K/AKT pathway increased and the expression of p-mTOR, p-AKT, PI3K-P85, PI3K-P110α, PI3K-P110β and PD-L1 decreased after overexpression of BRD7, while the result was opposite after BRD7 was interfered. More interestingly, the expression of PI3K-P85α protein remained unchanged after interference with BRD7, but the PI3K-P85α protein increased in cytoplasmic and decreased in the nucleus. The expression of key molecules in PI3K/Akt pathway and PD-L1 were decreased after adding the pathway inhibitor LY294002 into NPC cells.
Conclusion BRD7 inhibited the expression of PD-L1 of NPC cells by inhibiting the activation of the PI3K/AKT signaling pathway.

PU-1276

血清 TK1、CA199 和 CA242 联合检测在结直肠癌中的诊断价值

黄献中、巫仕霞
广州金域医学检验中心有限公司

目的 探讨血清胸苷激酶 1(TK1)、糖类抗原 199(CA199)、糖类抗原 242(CA242) 联合检测对结直肠癌诊断的临床应用价值。
方法 采用化学发光法对 93 例结直肠癌患者、95 例结直肠良性病变患者和 100 例健康体检者（对照组）的血清 CA199、CA242 含量进行检测, 采用酶免疫点印迹化学发光法对各组血清 TK1 含量进行检测。
结果 结直肠癌组的 TK1、CA199 和 CA242 水平显著高于结直肠良性病变组患者和正常对照组,差异有统计学意义(P ＜ 0.05) ，单独检测 TK1 对结直肠癌诊断的敏感度、特异度和准确度分别为 62.4%、75.8%、69.1%, CA199 为 56.0%、82.1%、69.1%, CA242 为 64.5%、80.0%、72.3% ；联合检测 TK1、CA199 和 CA242 为 78.5%、68.4%、73.4%。
结论 血清 TK1、CA199 和 CA242 联合检测可以提高结直肠癌的检出率，对于结直肠癌的早期诊断、疗效监测、判断预后等方面具有重要的临床价值。

PU-1277

重组人型肿瘤坏死因子受体-抗体融合蛋白治疗强直性脊柱患者淋巴细胞亚群和单核细胞 CD36 表达的分析

王倩、王昌敏、李智伟
新疆维吾尔自治区人民医院

目的 观察重组人型肿瘤坏死因子受体-抗体融合蛋白(RhTNFR-Fc）治疗强直性脊柱炎(AS)患者外周血 T 淋巴细胞亚群的变化及 CD36 的表达，探讨 RhTNFR-Fc 治疗对活动性 As 患者淋巴细胞亚群和单核细胞 CD36 的影响。
方法 选取 2017 年 1 月～2019 年 12 月于新疆维吾尔自治区人民医院风湿科首次进行生物制剂治疗的活动性 AS 患者 78 例，随机分为观察组和对照组各 39 例，其中对照组进行非甾体类药物口服治疗，观察组在常规治疗基础上应用 RhTNFR-Fc 治疗，应用流式细胞学检测活动性 AS 患者治疗前后 T 淋巴细胞亚群、CD36 的表达情况。
结果 在活动性 AS 患者中，观察组患者治疗后临床 BASDAI 评分、BASFI 评分、CRP、ESR、Th1 细胞水平、Th17 细胞水平、CD36 荧光强度表达与对照组相比明显降低，存在统计学差异（P<0.05）。两组患者的 BASDAI 评分、BASFI 评分、Th1 细胞水平在治疗前后组间比较有统计学差异（P<0.05）。BASDAI 评分、BASFI 评分、Th17 细胞水平和 CD36 荧光表达强度在组别和时间之间存在交互效应，随时间的延长，观察组和对照组 BASDAI 评分、BASFI 评分、Th17 细胞降低的幅度和 CD36 荧光表达强度升高幅度存在明显差异（P<0.05）。在活动性 AS 患者外周血中 Th1、Th17 细胞水平与骶髂关节 CT 分级、BASDAI 评分和 BASFI 评分呈正相关性（P<0.05，r=0.3~0.5），CD36 荧光强度与 Th1 细胞、Th17 细胞、骶髂关节 CT 分级、BASDAI 评分和 BASFI 评分呈负相关性（P<0.05，r=-0.392、r=-0.368，r=-0.374,r= -0.413,r=-0.427），与 Th2 细胞、Treg 细胞水平成正相关（P<0.05,r=0.330,r=0.306）。
结论 检测外周血 T 淋巴细胞亚群和单个核细胞 CD36 的表达是对活动性 AS 病情变化和治疗监测的较好手段。此外，重组人型肿瘤坏死因子受体-抗体融合蛋白联合非甾体类药物共同治疗 AS 起效快、可有效缓解 AS 临床症状，达到协同用药效果。

PU-1278

非小细胞肺癌患者血清中 14 种可溶性免疫检查点蛋白的检测

彭蓑[1]、陈雨欣[2]、芮志莲[1]、童欣[2]
1. 溧阳市人民医院
2. 南京市鼓楼医院

目的 免疫治疗特别是免疫检查点抑制剂作为一种全新的抗肿瘤疗法，已在包括肺癌在内的多个肿瘤治疗领域取得了突破性的进展。免疫检查点相关的预测性生物标志物对于患者的诊断及预后有重要的价值。然而，免疫检查点蛋白能否作为 NSCLC 血清学标志物的研究仍然较少。本研究探讨了 NSCLC 患者血清中 14 种可溶性免疫检查点蛋白的表达水平，并评估其对非小细胞肺癌的潜在诊断价值。
方法 收集南京鼓楼医院经病理证实的 86 例 NSCLC 患者及 57 例健康体检者的血清。通过 Luminex 液相芯片技术对血清中 14 种免疫检查点蛋白进行定量检测，同时以电化学发光法检测常见肺癌肿瘤标志物 CEA、NSE 和 CYFRA211。组间比较采用 Mann-Whitney U 检验，临床病理参数与蛋白表达之间的相关性采用 Spearman 法。受试者工作特征曲线（ROC）用于评价免疫检查点蛋白在 NSCLC 中的诊断价值。
结果 14 种可溶性免疫检查点蛋白中 9 种在 NSCLC 血清中高表达，分别是 sTIM3、sCD137、sCD27、sLAG3、sIDO、sPDL2、sCD152、sCD80 和 sPD1。其中，sCD27 在肺鳞癌组的表达

（108.48 pg/mL）显著高于肺腺癌组（59.91 pg/mL），P = 0.003。sTIM3、sCD137 和 sCD27 在晚期组的表达（1.28、0.30 和 84.69 pg/mL）显著高于早期组（0.58、0.10 和 61.84 pg/mL），且与 TNM 分期之间呈正相关；而在早期组中 sLAG3 的表达（2.75 pg/mL）显著高于健康组（0.94 pg/mL），P < 0.001。ROC 曲线分析显示 sTIM3 有最高的诊断准确度（75.53%），AUC = 0.761，对应的诊断灵敏度和特异性分别是 60.47%和 98.25%。其次，sLAG3 的准确性为 73.43%，其 AUC 达 0.774。此外，sTIM3 和 sLAG3 的 AUC 与 CEA 接近（AUC=0.794），略高于 NSE（AUC = 0.741）。

结论 sTIM3、sCD137、sCD27、sLAG3、sIDO、sPDL2、sCD152、sCD80 和 sPD1 在 NSCLC 患者血清中高表达。其中，sCD27 在肺鳞癌中高表达将有助于病理类型的判别；sLAG3 在早期组中的高表达，有望在 NSCLC 的早期诊断中发挥作用。sTIM3、sCD137 和 sCD27 与肿瘤的分期正相关，提示其可能与 NSCLC 的发生发展密切相关。sTIM3 和 sLAG3 的 AUC 与肺癌常见肿瘤标志物 CEA 接近，且高于 NSE，提示这两个指标在 NSCLC 中存在较高的诊断价值。

PU-1279

结核分枝杆菌特异性细胞因子(IFN-γ、IL-2)联合检测对活动性结核诊断的真实世界研究

吴迪
广州市胸科医院（广州市结核病防治所、广州市结核病治疗中心）

目的 分析结核分枝杆菌特异性细胞因子(IFN-γ、IL-2)联合检测在真实世界中对活动性结核诊断的价值。

方法 回顾性队列分析法，连续收集广州胸科医院 2020 年 11 月 1 日-2021 年 1 月 25 日入院的患者共 790 例，纳入符合研究入组标准的患者 700 例，其中 542 例结核病、158 例非结核，统计分析两组患者检测结核分枝杆菌特异性细胞因子(IFN-γ、IL-2)的结果。

结果 结核分枝杆菌特异性细胞因子(IFN-γ、IL-2)联合检测的灵敏度为 80.1%（95%CI 76.5%~83.4%），特异性为 82.9%（95%CI 76.1%~88.4%），阳性预测值 94.1%（95%CI 91.6%~96.1%），阴性预测值 54.8%（95%CI 48.3%~61.2%），总符合率 80.7%（95%CI 77.6%~83.6%）。单独分析 IFN-γ 的灵敏度为 79.9%（95%CI 76.2%~83.1%），特异性为 82.9%（95%CI 75.9%~88.2%），阳性预测值为 94.1%（95%CI 91.5%~96.0%），阴性预测值为 54.6%（95%CI 48.1%~61.0%），总符合率 80.6%（95%CI 78.5%~81.4%）。单独分析 IL-2 的灵敏度为 48.2%（95%CI 43.9%~52.5%），特异性为 93.0%（95%CI 87.6%~96.3%），阳性预测值为 96.0%（95%CI 92.7%~97.9%），阴性预测值为 34.3%（95%CI 29.9%~39.0%），总符合率 58.3%（95%CI 56.4%~62.7%）。双因子阳性的灵敏度为 48.0%（95%CI 43.7%~52.3%），特异性为 93.0%（95%CI 87.6%~96.3%），阳性预测值为 95.9%（95%CI 92.6%~97.9%），阴性预测值为 34.27%（95%CI 29.8%~39.0%），总符合率为 58.1%（95%CI 75.2%~79.5%）。

结论 结核分枝杆菌特异性细胞因子联合检测方法在检测 IFN-γ 的基础上增加了 IL-2 的检测，在结核感染检测灵敏度不变的情况下提高了检测的特异性。

PU-1280

2014-2020 年四川省综合医院 HIV 感染者流行病学分析

麦涛
电子科技大学附属医院•四川省人民医院临床医学检验中心

目的 探讨综合性医院 HIV 感染者的流行病特征，为医院制定 HIV 的防控措施提供参考依据。

方法 回顾性分析 2014-2020 年四川省人民医院确诊的 5102 例 HIV 感染者人群的流行病学资料。

结果 HIV 感染人群数量呈现上升趋势。男女比例约为 5:1, 以 18-50 岁处于性活跃期的青壮年为主，占比约为 63.88%；而≥51 岁老年 HIV 群体数量逐年增加，从 26.15%升至 30.58%。已婚有配偶者居多(62.91%);异性传播为主要感染途径(78.48%) ,其他途径较少。HIV 感染者就诊临床科室众多，以皮肤科、神内科、呼吸内科、血液内科、简易门诊等为主，合占 34.30%。
讨论 2014-2020 年间我院 HIV 感染者在性别、年龄以及感染途径等方面同其他学者的研究一致。值得关注的是，老年 HIV 患者逐年增加, 调查发现该群体多缺乏 HIV 感染相关防护意识和检测行为。其 HIV 感染多经由入院时期常规感染性疾病筛查发现，表现出隐匿性强的流行病学特点，危害极大。应针对老年人群开展相关宣传工作,积极倡导自愿咨询检测。再者，皮肤科、神内科、呼吸内科、血液内科等是发现 HIV 感染者的重点科室，应加强在重点科室和高危人群中的筛查。

PU-1281

87 例维持性血液透析患者自身免疫性抗体分析

宋颖博、李晓苗、董清清、蒋菲、张艳、张新
新疆生产建设兵团总医院

目的 对 87 例维持性血液透析(maintenance hemodialysis, MHD)患者自身免疫性抗体分布情况进行分析，为 MHD 患者的综合治疗提供参考依据。
方法 选取我院血液净化中心透析龄在 3 个月以上的 87 例 MHD 患者（男性 49 例，女性 38 例），其中原发病为糖尿病肾病 50 例、高血压肾病 10 例、其他类型（多囊肾、慢性肾小球疾病等）27 例。采用间接免疫荧光法（IIF）检测血清抗核抗体（ANA）以及采用线性免疫印迹法（LIA）检测血清抗核抗体谱（ANAs）中抗 U1- nRNP、抗 Sm、抗 SSA、抗 Ro-52 、抗 SSB、抗 Scl-70、抗 PM-Scl、抗 Jo -1、抗 CENP -B、抗 PCNA、抗 dsDNA、抗核小体、抗组蛋白、抗核糖体 P 蛋白、抗 AMA -M2 等 15 种抗体。
结果 87 例 MHD 患者血清 IIF-ANA 阳性 16 例（占 18.4%），其中男性占 37.5%（6/16），女性占 62.5%（10/16），性别间 IIF-ANA 阳性率差异有统计学意义（P<0.05）。糖尿病肾病 MHD 患者 IIF-ANA 阳性率高于高血压肾病和其他类型的 MHD 患者阳性率（均 P<0.05）。87 例 MHD 患者血清 LIA-ANAs 阳性 20 例（占 23.0%），其中男性占 40%（8/20），女性占 60%（12/20），性别间 LIA-ANAs 阳性率差异有统计学意义（P<0.05）。LIA-ANAs 阳性的女性患者抗体谱分布广，主要为抗 Ro-52、抗 SSA、抗 SSB、抗 dsDNA 和抗组蛋白等 10 种抗体，而 LIA-ANAs 阳性的男性患者抗体谱主要以抗 AMA-M2、抗 Jo-1 抗体为主。糖尿病肾病 MHD 患者 LIA-ANAs 阳性率高于高血压肾病和其他类的 MHD 患者的阳性率（均 P<0.05）。
结论 女性 MHD 患者 IIF-ANA 和 LIA-ANAs 阳性率高于男性，且女性 MHD 患者 LIA-ANAs 分布较广；糖尿病肾病 MHD 患者的 IIF-ANA 阳性率和 LIA-ANAs 阳性率较高。因此，临床在 MHD 患者治疗过程中应关注女性 MHD 患者和糖尿病肾病 MHD 患者免疫功能状态。

Clinical utility of CD64 index in diagnosis with pediatric sepsis

Xian Chen 、Ruijing Lu、Xiyou Zhou、Feng Wang
深圳市宝安区妇幼保健院

Backgrounds The early detection and effective treatment of sepsis in the children is difficult due to the lack of representative signs and promising laboratory diagnostic biomarkers in clinical practice. This study aimed to explore the character and clinical application of CD64 index in early diagnosis of pediatric sepsis in comparison with common infection indicators including routine blood tests.

Methods We recruited 37 cases of sepsis, 34 cases of non-sepsis (common infections free of sepsis), and 20 cases of health children as control. We collected laboratory data such as absolute white blood cell (WBC) numbers, ratios of neutrophils and lymphocytes (NLR), neutrophil percentages, and C-reactive protein (CRP), procalcitonin (PCT) and CD64 index from all 91 participants.
Results We found that sepsis cohort had higher CRP and PCT, along with WBC numbers, NLR, neutrophil proportions compared to healthy control cohort, but these parameters could not distinguish non-sepsis cohort and sepsis cohort. However, CD64 index showed statistical significance in sepsis cohort, compared with non-sepsis cohort and control cohort, and could be used for sepsis diagnosis in the clinic.
Conclusion In summary, CD64 index combined with conventional blood parameters might shed light on early diagnosis of sepsis in pediatrics.

基于系列肿瘤标志物对肿瘤进展过程的认证和分子变化的解析

赵鹏飞
丹东市第一医院

目的 目前癌症仍然是威胁人类健康及生命的最主要的疾病，虽然目前有很多的诊断方法，但往往就诊时患者大多已经处于晚期或转移状态，不利于后期治疗和预后。肿瘤标志物检测的优点是对患者没有创伤、操作方法简单、检测时间短，并对于癌症的早期筛查很有效，但如果用某单一的肿瘤标志物进行诊断检测，其结果的灵敏性、特异性都不高，不利于肿瘤的筛查和早期诊断。因此，开发高效的肿瘤标志物联合检测技术对各系统肿瘤的早期诊断和治疗具有重要意义。文章旨在探讨肿瘤标志物在不同肿瘤分化程度中，其浓度的相关性分析以及联合检测肿瘤标志物对肿瘤分期及肿瘤分化程度的辅助诊断意义。
方法 收集 2016 年 2 月至 2019 年 6 月，在丹东市第一医院住院的肿瘤患者共 162 例，同期来院健康查体的正常对照组 55 例，分别记录性别、年龄、肿瘤良恶程度；用化学发光酶免疫分析技术测量静脉血清中 CEA、AFP、CA19-9、CA72-4、NSE、CYF21-1、FER 及 CRP 的浓度，整理入库。用 IBM SPSS 24.0 统计软件，对以上数据进行统计学分析。
结果 1、162 例肿瘤患者血清中 CEA、AFP、CA19-9、CA72-4、NSE、CYF21-1、FER 及 CRP 浓度均高于 55 例正常对照组，差异有统计学意义（$P<0.05$）。其中低分化高恶性和高分化低恶性肿瘤患者 8 种肿瘤标志物浓度均高于良性肿瘤息肉囊肿组和正常对照组。
2、单独检测 8 种肿瘤标志物的 ROC 曲线分析，CRP 曲线下面积最大，AFP 最小，FER 灵敏度最高，CA72-4 最低。
3、8 种肿瘤标志物联合检测的 ROC 曲线下面积、灵敏度及特异性均优于单独一种标志物的检测。
4、随着肿瘤分化程度降低，呈现各类肿瘤标志物阳性，有可能成为判断肿瘤分化程度的分子标志物。
5、在恶性肿瘤的不同分型中，与单项检测相比，8 种肿瘤标志物联合检测的阳性检出率均高于单独一种肿瘤标志物的检测。
结论 1、肿瘤患者的血清肿瘤标志物浓度高于正常体检者，恶性肿瘤患者肿瘤标志物高于良性肿瘤患者；
2、随着肿瘤分化程度降低，呈现各类肿瘤标志物阳性，有可能成为判断肿瘤分化程度的分子标志；
3、肿瘤标志物联合检测可能是肿瘤发展过程中的分子变化标志，并可以作为量化肿瘤分化程度的指标。

粪便潜血定量检测在体检人群中的应用价值分析

程守军
南京大学医学院附属鼓楼医院

目的 通过对体检人群粪便潜血定量检测，统计分析检测结果阳性人群的患大肠癌及相关肠道疾病的风险及其应用价值。
方法 统计分析 2019 年 1 月至 2019 年 12 月在本院体检中心接受体检人员的粪便潜血定量检测的检测结果，并分析其中阳性结果人员的肠镜检查及相关病理检查结果，统计分析粪便潜血定量检测的检测结果阳性结果占比，并且分析阳性结果体检人员与患大肠癌及肠道疾病相关性，得出应用价值相关分析。
结果 体检人群中共 17845 人次做了粪便潜血定量检测，结果为阳性(大于 100ng/ml) 是 787 例，其中 158 例做了肠镜检查及病理检查，检测出大肠癌、低级别上皮肉瘤变、息肉或腺瘤等肿瘤相关病变 82 例，肠炎及其他病患 52 例，无异常发现的 23 例。
结论 粪便潜血定量检测在体检人群中可以无创性提前筛选出无症状大肠癌及其他肠道相关性疾病，说明粪便潜血定量检测在体检人群中可以达到早发现，早治疗，减少疾病进展而引起的治疗延误，很好地诠释了健康体检的作用。

PU-1285

不同方法检测 1 型糖尿病患者胰岛自身抗体结果分析

陈菲
南京大学医学院附属鼓楼医院

目的 探讨三种方法在胰岛自身抗体检测中的应用价值。
方法 收集 94 例 2019 年 6 月-12 月南京鼓楼医院内分泌科的 T1DM 确诊住院患者血清，20 例健康人群血清（正常对照组），酶联免疫吸附法(ELISA)和化学发光法(CLIA)检测谷氨酸脱羧酶抗体（GADA）、酪氨酸磷酸酶抗体(IA2A)结果，免疫荧光法(IFA)和化学发光法(CLIA)检测胰岛细胞抗体(ICA)结果。
结果 ELISA 法、CLIA 法检测 GADA 的阳性率分别为 76.6％、62.8％，检测 IA2A 的阳 28.7%、9.6%，IFA 法、CLIA 法检测 ICA 的阳性率分别为 17％、 48.9％，三种抗体检测均两者有统计学差异（P<0.05）。
结论 三种方法学各有利弊，需联合检测，才能提高胰岛自身抗体检测的准确性。

PU-1286

热灭活后 COVID-19 IgG/IgM 抗体检测的潜在假阳性和假阴性结果分析

戴薇、夏欣一
中国人民解放军东部战区总医院

目的 随着由严重急性呼吸系统综合症冠状病毒 2 （SARS-CoV-2）引起的冠状病毒病 19（COVID-19）)在世界范围内的快速传播，已经开发出多种抗体检测试剂盒用以检测 SARS-CoV-2 IgG、IgM 和总抗体。然而，在各种热灭活条件下使用不同的免疫学检测方法可能会影响 COVID-19 的抗体检测结果。因此，本研究主要分析不同热灭活条件下，使用不同免疫学检测方法对 COVID-19 IgG/IgM 抗体检测的潜在假阳性和假阴性现象。

方法 中国武汉火神山医院共计使用了四家厂商生产的七种不同 SARS-CoV-2 抗体检测试剂盒，用于检测 SARS-CoV-2 IgG、IgM 和总抗体。抗体试剂盒主要采用双抗原夹心法、捕获法和间接免疫法。针对不同的检测方法，本研究分析了多种热灭活条件对 SARS-CoV-2 特异性 IgG、IgM 和总抗体检测结果的影响。
结果 采用间接免疫法，SARS-CoV-2 IgG 抗体值随着热灭活温度的升高或热灭活时间的延长而显著升高，而 IgM 抗体值显著降低。当使用捕获法和双抗原夹心法时，SARS-CoV-2 IgM 和总抗体的值没有明显变化。使用间接免疫法时，IgG 和 IgM 抗体值的变化表明热灭活可以影响 COVID-19 的检测结果。其中，18 个（22.2%）SARS-CoV-2 IgM 阳性样本经 65℃热灭活 30 分钟后检测为阴性结果，1 个（25%）IgG 阴性样本经 56℃热灭活 60 分钟或 60℃热灭活 30 分钟后检测为阳性结果。
结论 样本经热灭活后 SARS-CoV-2 IgG 抗体值升高，IgM 抗体值下降，导致使用间接免疫法检测 COVID-19 抗体时可能出现假阳性或假阴性检测结果。因此，在进行 COVID-19 抗体检测之前，应根据相关要求对检测平台进行评估，以确保准确可靠的 COVID-19 抗体检测结果。

PU-1287

T cell cytotoxicity toward Gastric Cancer via immunotherapy targeting

Xinlin Li
Affiliated Hospital of Xuzhou Medical University

T cells are important effectors in anti-tumor immunity, and aberrant expression of B7 family members may contribute to tumor evasion. In this study, we analyzed expression of costimulatory molecules on human gastric cancer cells and explored whether B7-H3, a member of the B7 superfamily, is an effective target for T cell mediated cytotoxicity toward gastric cancer. We investigated the bispecific antibody anti-CD3 × anti-B7-H3 (B7-H3Bi-Ab) for its ability to redirect T cells to target B7-H3 positive gastric cancer, including mgc, hgc, sgc, mkn cells and a primary culture. The capacity of T cells armed with B7-H3Bi-Ab to kill hematologic tumors was evaluated by lactate dehydrogenase assay, flow cytometry, ELISA, and luciferase quantitative assay at an effector/target ratio of 10:1. Compared with unarmed T cells, B7-H3Bi-Ab-armed T cells exhibited significant cytotoxicity toward gastric cancer cells. Moreover, B7-H3Bi-Ab-armed T cells secreted more IFN-γ, TNF-α, IL-2, and Granzyme B and expressed higher levels of activating marker CD69 compared to unarmed T cells. In conclusion, B7-H3Bi-Ab enhances the ability of T cells to kill gastric cancer cells, and B7-H3 may serve as a novel target for immunotherapy against gastric cancer.

PU-1288

肺癌诊断中血清肿瘤标志物五项联合检测的临床意义

刘瑛
禹城市中医院

目的 肺癌诊断过程中血清肿瘤标志物联合检测的临床价值分析及体会。
方法 分析我院 2017 年 1 月至 2019 年 2 月收治的 127 例患者的临床资料，其中 61 例为肺癌患者，将其分为肺癌组，余者 66 例为肺部良性病变分为良性病变组，另选择同期来我院进行体检的健康人员 51 例为对照组，比较三组研究对象血清中的肿瘤标志物检测五项结果，肿瘤标志物五项血清癌胚抗原(CEA)、细胞角蛋白 19 片段(CYFRA21-1)、神经元特异性烯醇化酶(NSE)、胃泌素释放肽前体（ProGRP)鳞癌相关抗原(SCC-Ag)。

结果 比较三组研究对象的血清肿瘤标志物检测结果可知，肺癌组血清中血清癌胚抗原(CEA)、细胞角蛋白 19 片段(CYFRA21-1)、神经元特异性烯醇化酶(NSE)、糖类抗原 125(CA125)胃泌素释放肽前体（ProGRP)五项指标的水平均显著高于肺部良性病变组及对照组，差异具有统计学意义(P<0.05)；肺部良性病变组与对照组比较差异不显著(P>0.05)。肺癌诊断中联合检测肿瘤标志物五项，以 CEA+ +CA125+CYFRA21-1+NSE+ProGRP 阳性率最高，显著优于 CEA+NSE +CYFRA21，差异具有统计学意义(P<0.05)；五项联合检测的特异性差异无统计学意义(P>0.05)。
结论 在肺癌诊断过程中联合检测血清肿瘤标志物五项可获得较高的阳性率，具有重要的临床应用价值。

PU-1289

T-SPOT 和 NLR 检测在肺结核诊断中的临床应用分析

贵志芳、张腊红、潘峰
杭州师范大学附属医院

目的 探讨和分析肺结核患者外周血结核感染 T 细胞斑点试验（T-SPOT）和中性粒细胞与淋巴细胞比值(neutrophil-lymphocyte rate，NLR)检测在肺结核诊断中的临床应用价值。
方法 回顾性纳入 2019 年 8 月至 2020 年 7 月在我院收治的 115 例肺结核患者（肺结核组），86 例非肺结核者即肺部其他疾病（非肺结核组）和 30 例健康体检者（健康对照组）作为研究对象，均行 T-SPOT 试验与 NLR 检测。采用受试者工作特征曲线（Receiver Operating Characteristic, ROC）分析 T-SPOT 和 NLR 对肺结核的诊断价值，用 Spearman 相关分析 T-SPOT 和 NLR 之间的关系。
结果 肺结核组中 T-SPOT 和 NLR 的水平分别为 120.86（27.45，525.36）pg/ml，3.52（2.18，5.64）均高于非肺结核组中 T-SPOT 和 NLR 的水平 18.06（5.28，132.26）pg/ml，2.58（1.62，4.03）和健康对照组 T-SPOT 和 NLR 的水平 6.08（3.56，11.11）pg/ml，1.62（1.24，2.02），差异有统计学意义（P<0.01）；T-SPOT 和 NLR 的 ROC 曲线下面积（Area Under Curve, AUC）分别为 0.67 和 0.63，T-SPOT+NLR 的 ROC 曲线下面积为 0.71；T-SPOT 和 NLR 的敏感性分别为 72.3%和 58.9%; 特异性分别为 65.8%和 67.1%。Spearman 相关性分析表明，肺结核患者 T-SPOT 和 NLR 之间存在一定的负相关关系(r=-0.269, P<0.01)。
结论 肺结核患者 T-SPOT 和 NLR 水平均升高，对肺结核的早期诊断有较大的应用价值，且 T-SPOT 和 NLR 的联合检测优于每项的单独检测。

PU-1290

血清 AFP、DCP 在乙肝相关原发性肝癌中的应用

邹珍珍
苏州市独墅湖医院（苏州大学附属独墅湖医院）

目的 探讨血清异常凝血酶原（DCP）、甲胎蛋白（AFP）在乙型肝炎病毒（HBV）感染相关的原发性肝癌（PHC）患者中的临床应用。
方法 收集 83 例乙肝相关原发性肝癌患者、76 例非乙肝相关原发性肝癌患者、54 例乙肝相关肝硬化患者、72 例慢性乙型肝炎患者以及 66 例健康体检者作为对照组，应用化学发光法检测患者的血清 DCP 水平、血清 AFP 水平、乙肝病毒 S 抗原（HBsAg）、乙肝病毒 S 抗体（HBsAb）乙肝病毒 E 抗原（HBeAg）、乙肝病毒 E 抗体（HBeAb）、乙肝病毒 C 抗体（HBcAb）。
结果 乙肝相关 PHC 组患者血清 DCP、AFP 水平高于非乙肝相关 PHC 组、乙肝相关肝硬化组、慢性肝炎组、健康对照组，差异具有统计学意义（P<0.05）。非乙肝相关 PHC 组血清 DCP 水平高于乙肝相关肝硬化组，乙肝相关肝硬化组血清 DCP 水平高于慢性肝炎组，慢性肝炎组血清 DCP 水

平高于健康对照组，差异具有统计学意义（P<0.05）。在乙肝相关 PHC 患者中，大三阳患者（HBsAg、HBeAg、HBcAb 三项同时阳性）组血清 DCP、AFP 水平高于小三阳患者（HBsAg、HBeAb、HBcAb 三项同时阳性），差异均具有统计学意义（P<0.05），两组患者中的血清 DCP 的阳性率高于血清 AFP 阳性率，但未见明显的统计学差异。经受试者工作曲线（ROC）分析，在乙肝相关的 PHC 患者中，血清 DCP、AFP 的曲线下面积为 0.896、0.672，血清 DCP 的敏感度和特异性分别为 70.22%、96.45%，血清 AFP 的敏感度和特异性分别为 60.47%、89.21%。
结论 血清 DCP、AFP 在乙肝相关性 PHC 患者中有较高的诊断价值，其中血清 DCP 诊断价值优于血清 AFP，临床可结合血清 PIVKA-Ⅱ与 HBV 感染模式对乙肝相关原发性肝癌进行早期筛查与疾病评估。

卵白蛋白多克隆抗体制备及其效价检测

林子沛
南方医科大学珠江医院

目的 制备卵白蛋白多克隆抗体及测定小鼠血浆中抗体效价。
方法 利用动物免疫的方法,分别用含弗式完全佐剂、含弗式不完全佐剂以及不含佐剂的卵白蛋白作为抗原，对小鼠进行皮下和三次腹腔注射，每次接种间隔 7 天或 14 天。以眼球采血法采取小鼠全血后离心分离出血浆，用 ELISA 方法测定血浆中的抗体效价。
结果 制得抗体血浆良好，测得抗体血浆中抗体效价为 1:8000。
结论 卵白蛋白抗体制备及其效价测定实验基本成功。

PU-1292

吖啶脂化学发光法检测抗髓过氧化物酶抗体和抗蛋白酶 3 抗体 的性能评价

胡静、高雪丹、杨滨
四川大学华西医院

目的 验证吖啶脂化学发光法检测抗髓过氧化物 酶 (myeloperoxidase，MPO) 抗体和抗蛋白酶 3 (proteinase 3，PR3) 抗体的检测性能，并研究该方法在检测抗 MPO，抗 PR3 的临床应用价值。
方法 参照相关标准结合科室实际情况，对吖啶脂化学发光法检测抗 MPO，抗 PR3 的日内重复性、日间重复性、线性范围、携带污染、参考区间及可报告范围进行验证和评价，并对 1026 例常规申请检测抗中性粒细胞胞浆抗体（antineutrophil cytoplasmic antibodies，ANCA）的样本同时采用间接免疫荧光法（IIF）、吖啶脂化学发光法和 ELISA 法进行检测，分析其结果。
结果 吖啶脂化学发光法检测 MPO 高低值的日内重复性和日间重复性的变异系数均在可接受范围内；MPO，PR3 线性范围回归方程和判定系数分别为 y=1.0067x+3.7417,R2=0.9953,y=0.995x+6.4,R2=0.9985，MPO 和 PR3 的线性范围为分别为 2.5-300 AU/ml，10-300 AU/ml；携带污染在可接受范围内；20 例健康体检者检测结果均在厂家提供的参考区间内；吖啶脂化学发光法和 ELISA 法在检测 MPO 和 PR3 时具有良好的准确性、阳性符合率、阴性符合率、总符合率（P＜0.01）；吖啶脂化学发光法及 ELISA 与 IIF 筛查检测结果亦具有良好的阳性符合率、阴性符合率、总符合率（P＜0.01）。
结论 吖啶脂化学发光法检测 MPO，PR3 的验证指标均达到规定要求，与 ELISA 相比，吖啶脂化学发光法在检测 MPO 和 PR3 时具有良好的准确性和符合率，可用于临床检测。

PU-1293

ERp44 参与动脉粥样硬化的机制研究

胡明晰
复旦大学附属中山医院青浦分院

目的 ERp44（Endoplasmic Reticulum Protein 44，ERp44）是蛋白质二硫键异构酶家族（protein disulfide isomerase，PDI）中的一员, 含有硫氧还蛋白结构域, 在内质网应激时表达上调，常被用作内质网应激的标志蛋白。探讨动脉粥样硬化（AS）的发病机制，内质网应激（endoplasmic reticulum stress，ERS）和 ERp44 在 AS 发生发展过程中的机制进行研究，为寻找动脉粥样硬化的生物标志物和可能的治疗靶点提供依据。
方法 构建动脉粥样硬化小鼠模型，选取动脉粥样斑块形成不同时间点，做免疫组化和免疫细胞荧光染色研究 ERp44 的细胞定位，做 RNA 抽提和 qRT-PCR，蛋白抽提和 Westernblot 研究 ERp44 的表达，取外周血分离血清利用 ELISA 检测 ERp44 水平。
结果 通过 ERp44 在 2 型糖尿病动物模型中的表达以及在 ERp44-/-小鼠中的表达，发现 ERp44 在高血糖、高血脂的条件下，表达降低；ERp44 敲除小鼠除了脂质代谢异常外，作为内分泌器官的脂肪组织也出现异常。
结论 ERp44 的缺失会导致血糖和血脂合成障碍，这些结果表明 ERp44 与糖脂代谢密切相关，而糖代谢和脂代谢又与 AS 的发生密切相关，所以 ERp44 在 AS 中可能起到了重要的作用，它为心血管疾病治疗提供新的理论依据，我们仍需要继续研究 ERp44 参与动脉粥样硬化的机制。

PU-1294

急性心肌梗死中心型脂肪酸结合蛋白与肌钙蛋白、肌红蛋白的诊断性对比

王一多、金英玉
哈尔滨医科大学附属第一医院

心型脂肪酸结合蛋白是一种心肌损伤的早期标志物，其具有分子量低（15KD），水溶性好，在心肌损伤时出现早等特点。在正常的人体中其含量很低，但是当心肌出现损伤时心型脂肪酸结合蛋白能在短时间内出现明显的升高。这一特点就为临床的诊断提供了更加快捷有利的辅助手段，所以研究心型脂肪酸结合蛋白对于指导临床诊断急性心肌梗死方面拥有重要意义。

PU-1295

尿转铁蛋白与冠心病及冠状动脉狭窄程度关系的分析

杨威、关庆柏
哈尔滨医科大学附属第一医院

目的 探讨尿转铁蛋白与冠心病及冠状动脉狭窄程度之间的关系。
方法 选取因冠心病住院的患者 138 例（冠心病组）和健康体检者 108 例（对照组）。调查入选对象存在的心血管疾病危险因素，包括: 性别、年龄、高血压病史、糖尿病病史及吸烟史; 检测受试者血清高密度脂蛋白（HDL）、低密度脂蛋白（LDL）、C 反应蛋白(CRP) 、肌酸激酶同工酶（CK-MB）、心肌肌钙蛋白 I（TnI）及尿转铁蛋白（TRF）。对冠心病的多重危险因素采用非条件 logistic 回归模型进行分析。
结果 冠心病组的血清中 LDL、CRP、CK-MB、TnI 及 TRF 水平明显高于对照组，差异具有统计学意义。冠心病组血清 HDL 水平低于组，差异有统计学意义；Logistic 回归分析显示 TRF 为冠心病

的独立危险因素，回归系数（β）为 0.729，相对危险度(OR) 为 1.36；尿转铁蛋白与冠状动脉狭窄程度之间存在着正相关关系，二者相关系数 r=0.886，P<0.01。
讨论 尿转铁蛋白是冠心病的独立危险因素，尿转铁蛋白水平有助于对冠状动脉狭窄病变程度进行判断。

PU-1296

EB 病毒与细胞因子在鼻咽癌患者中的作用

姜湘湖
武汉大学中南医院

目的 免疫细胞(CD3+ T 细胞、CD3+CD4+ T 细胞、CD3+CD8+ T 细胞、CD19+ B 细胞、CD16+CD56+自然杀伤(NK)细胞)、十二项细胞因子（IL-1β, IL-2, IL-4, IL-5, IL-6, IL-8, IL-10, IL-12, IL-17, IFN-γ, TNF-α, IFN-α）和血常规生化指标与鼻咽癌患者中 EB 病毒的关系。
方法 收集患者血液，从血浆和 PBMC 中分别提取 DNA，进行 EBV 实时定量聚合酶链反应(qPCR)，检测 EBV 载量。采用 BD FACSCalibur 流式细胞术按说明书检测血清细胞因子 IL-1β、IL-2、IL-4、IL-5、IL-6、IL-8、IL-10、IL-12、IL-17、IFN-γ、TNF-α 和 IFN-α。通过流式细胞术(BD)，按照制造商的说明，获得 CD3+ T 细胞、CD3+CD4+ T 细胞、CD3+CD8+ T 细胞、CD19+ B 细胞和 CD16+CD56+自然杀伤(NK)细胞的外周绝对细胞计数和淋巴细胞百分比.
结果 EBV-与 EBV+患者中，A/G, GLB, LYMPH%, MONO%, ALT, IL-10, RBC CD19+Abs, RBC 有明显差异。一些细胞因子与 EBV 载量有很好的相关性。如 EBV 载量与 IFN-α、IL-12 显著相关。在 EBV-组中，细胞因子之间存在令人满意的相关性，然而，这些细胞因子在 EBV +组中并没有很强的相关性。免疫细胞、细胞因子和血常规生化指标中，EBV-组 IL-6 与 AST、IL-8 与 WBC、IL-8 与 NEUT#、TNF-α 与 CD3+CD4-CD8-Abs 的相关系数分别为 0.793、0.749、0.741、0.031。而在 EBV+组，IL-6 与 AST、IL-8 与 WBC、IL-8 与 NEUT#、TNF-α 与 CD3+CD4-CD8-Abs 的相关系数分别为-0.021、0.261、0.314、0.552。TNM 分期 EBV 载量比较，N0-1 期与 N2-3 期肿瘤患者 EBV 载量差异有统计学意义。多变量 logistic 回归分析，T 期的独立危险因素为 ALT、IL-6、CD3+CD4+Abs 和 CD19+%Lym。N 期的独立危险因素包括 CD3+CD8+Abs、IL-8、CD16+CD56+%Lym 和 EO#。N 期的独立危险因素为 CD3+CD4+抗体、CD19+%Lym 和 LYMPH#。
结论 免疫细胞，十二项细胞因子和血常规生化指标中存在鼻咽癌患者 EBV+的预测因子。联合它们能更好的筛选出 EBV+的鼻咽癌患者。

PU-1297

酶联免疫反应加速仪在麻疹病毒 IgM 抗体检测中的应用

杨威、董莉芹
哈尔滨医科大学附属第一医院

目的 探讨酶联免疫反应加速仪在麻疹病毒 IgM 抗体检测中的应用价值。
方法 选取已知麻疹病毒 IgM 抗体阳性血清和临床疑似麻疹病毒感染者的血清分别用常规酶联免疫吸附试验（常规法）和酶联免疫反应加速仪法（加速法）进行麻疹病毒 IgM 抗体的检测，比较两种方法在检测麻疹病毒 IgM 抗体的重复性、精密度及特异性是否符合试剂盒标准。
结果 加速法的变异系数为 2.86%～9.52 %，灵敏度为 97.4%，特异度为 100%，均符合试剂盒标准。相关性分析加速法和传统法定量结果呈显著正相关关系。
结论 酶联免疫反应加速仪在麻疹病毒 IgM 抗体检测中，各项指标均符合试剂盒要求，可应用于临床检测。

PU-1298

Graves 病患者血清 TRAb 水平与甲功五项的相关性研究

闫洪宇
吉林大学第一医院

目的 研究 Graves 病患者血清 TRAb 水平与甲功五项之间相关性关系。
方法 收集本院 2020 年至今的 Graves 病患者共计 300 例，其中 TRAb 采用罗氏电化学发光免疫分析仪，以 1.75IU/L 作为 TRAb 的参考界限。甲功五项分别为 TSH、FT3、FT4、T3、T4，甲功五项采用雅培化学发光免疫分析仪检测。将患者分为 TRAb 阴性组（n=45）和 TRAb 阳性组（n=255）。分析两组患者间甲功五项的差异，采用相关性分析研究血清 TRAb 水平与甲功五项的关系。
结果 TRAb 阴性组 TSH 水平远高于阳性组（p<0.05），FT3、FT4、T3、T4 水平低于阳性组（p<0.05），相关性分析表明 Graves 病患者血清 TRAb 水平与 TSH 呈负相关（p<0.05），而与 FT3、FT4、T3、T4 呈正相关（p<0.05）。
结论 Graves 病患者血清 TRAb 水平与甲功五项有关，具有统计学意义，而与患者年龄和性别等无关。

PU-1299

56℃加热 30min 灭活的血液标对半乳甘露聚糖检测产生影响

黄晓晖[1]、兰圣雨[2]
1. 联勤保障部队第九 00 医院
2. 福建医科大学

目的 探究 56℃加热 30min 灭活的血液标本是否会对半乳甘露聚糖检测产生影响,旨在不影响检测结果的同时保护检验者,降低医源性感染的风险。
方法 收集中国人民解放军联勤保障部队第 900 医院 2021 年 02 月至 2021 年 04 月半乳甘露聚糖检测血清标本共 50 例,对血清标本采取热灭活的标本前处理方法后开展 GM 试验。1.检测 20 例 GM 阴性血清标本灭活后的 GM 抗原水平,将灭活后测得的 OD 值与原始 OD 值比较,分析灭活前后结果是否有统计学差异。2 检测 30 例 GM 阳性血清标本灭活后的 GM 抗原水平,比较灭活前后 OD 值,分析灭活前后结果是否有统计学差异。3.分析 50 例血清标本灭活前后的 GM 定性结果是否有统计学差异。
结果 1.GM 阴性血清标本灭活前 OD 值与灭活后 OD 值存在差异,曼-惠特尼 U 检验 sig 值<0.05,整体 OD 值较灭活前偏低。2.GMB 性血清标本灭活后阳性符合率仅为 0.321,在临界值范围内由阳转阴率为 0.333,灭活前后 OD 值之间具有显著差异性(sig 值<0.05) 。3 灭活前后 GM 检测标本卡方检验的 sig 值为 0.000,灭活前后 GM 检测标本定性结果存在显著差异。
结论 半乳甘露聚糖检测血液标本灭活前后 OD 值存在显著差异,表明了 GM 定性结果是受到热灭活处理影响的,此时 GM 检测结果不具有临床可接受性。因此建议临床实验室工作中开展半乳甘露聚糖检测暂勿使用 56℃加热 30minh 热灭活的标本前处理方法。

网膜素对动脉粥样硬化及相关疾病影响的研究进展

刘月娥、关秀茹
哈尔滨医科大学附属第一医院

网膜素主要是由内脏脂肪组织分泌的一种细胞因子，它具有参与代谢，调控炎症，增强胰岛素敏感性等的生物学活性。网膜素通过 eNOS、AMPK、Akt 等多种信号通路影响血管内皮细胞，巨噬细胞及血管平滑肌细胞的分泌、增殖、转化活动、血脂和血糖的代谢及血管钙化过程，从而参与动脉粥样硬化的形成、冠心病和脑梗死的发生和发展。已有研究表明体内网膜素水平的增加在动脉粥样硬化，冠心病及脑梗死的进展中起到保护作用。

PU-1301

冠心病患者血清 hs-CRP、TnI、CK-MB 测定的临床意义

姜玉玲、蒋丽鑫
哈尔滨医科大学附属第一医院

目的 探讨冠心病患者血清 hs-CRP、TnI、CK-MB 测定的临床意义。
方法 利用乳胶增强免疫比浊法和电化学发光法，对 112 例健康人群和 52 例急性心肌梗死（AMI），64 例不稳定性心绞痛（UA），32 例稳定性心绞痛（SA）患者检测超敏 C 反应蛋白（hs-CRP）、肌钙蛋白 I(TnI)和肌酸激酶（CK-MB）水平。
结果 SA 组、UA 组和 AMI 组 hs-CRP、TnI、CK-MB 水平明显高于健康组（P<0.05）。
结论 hs-CRP 是心血管疾病的独立危险因素，与 TnI、CK-MB 联合检测对冠心病的诊断、治疗及预后判断有重要意义。

PU-1302

An epitope vaccine based on Hepatitis B virus core protein triggers protection against Neisseria meningitidis serogroup B in BALB/c mice

Hui Cao[1]、Sihai Hu[2]、Jun He[1]
1. Institution of affiliated Nanhua Hospital, University of South China
2. 南华大学

Objective The primary objective of present study was to develop an effective epitope vaccine HBc-N144-epitope (1+2) ,which was constructed by fusing the selected peptides of Neisserial surface protein A (NspA) into the HBc-N144 virus like particles , as a promising candidate to prevent the infection of Neisseria meningitidis serogroup B (MenB).
MethodsWe screened the conserved dominant epitopes of N. meningitidis surface protein A (NspA) by bioinformatics analysis, establishing a recombinant prokaryotic expression plasmid, which was termed as pET28a-HBc-N144-epitope (1+2). The steps were recommended as follows: we obtained the NspA gene sequence of MC58 strain in GenBank of NCBI. DNASTAR and IEDB software were used to screen the dominant peptides of NspA, and two selected fragments were inserted into the major immunodominant region (MIR) between 78-79 of HBc-N144 DNA sequences to create recombinant plasmid pET28a-HBc-N144-epitope (1+2). Next, Escherichia coli BL21 DE3 containing the fused plasmid pET-28a-HBc-N144-epitope (1+2) was cultured to induce the expression of target protein. And then the purified protein was identified by Western Blot.The formation of virus-like particles from chimeric protein was observed by negative staining

transmission electron microscopy (TEM).After that, BALB/c mice were vaccinated intramuscularly (i.m.) or intranasally (i.n.), we analyzed the immune response and protective effect.The specific antibody levels of IgG and its subclass in serum were determined by ELISA, IFN-γ, the IL-4 and IL-17A cytokines in the supernatant of splenocytes were detected by ELISA. Meanwhile, flow cytometry (FCM) was used to identify antigen-specific T-Cell responses elicited by splenocytes. Two weeks after the final immunization, we prepared a lethal dose of MC58 bacteria ,and MenB challenge test was performed. Then, the survival was recorded twice-daily until day 14. Finally, SBA(serum bactericidal activity) assay was used to measure the functional antibody titers in immune sera against N. meningitidis, The reciprocal of the maximum serum dilution resulting in more than 50% decrease of the bacteria was defined as positive.
Results Mice immunized with HBc-N144-epitope(i.m. or i.n.) can produce high levels of specific antibodies, and the ratio of IgG1/IgG2a is greater than 1, which means a Th2 biased immune response. The flow cytometry (FCM) result confirmed that the HBc-N144-epitope(1+2) immunization could lead to a Th2 tendentious immunity. The HBc-N144-epitope(1+2) vaccine also induced increased IL-4, IFN-γ and IL-17A cytokines in splenocyte supernatants. Following intraperitoneal infection with N. meningitidis MC58, we found that this epitope vaccine based on HBc can confer an obvious protective efficacy. Furthermore, serum bactericidal activity（SBA） correlated with the i.m. vaccination was up to 1:32 after giving a booster injection. We used pathology analysis to investigate the effects of vlp vaccination on inflammatory response at injection sites. Muscle tissues at the inoculation site of intramuscularly immunized mice and lung tissues from the intranasally immunized mice were collected for pathological sections to assess the inflammatory cell infiltration. The result shows that the muscles collected from mice i.m. immunized with HBc-N144-epitope(1+2) vlp revealed no obvious inflammatory response, while the lung pathological analysis of mice to i.n. vaccination with HBc-N144-epitope(1+2) vlp exhibited a mild scattered inflammatory infiltration compared with the mice i.m. vaccination with HBc-N144-epitope(1+2) vlp.
Conclusion The study proved that i.m. or i.n. immunization with HBc-N144-epitope(1+2) may provide a novel and efficient tactic for the exploration of a vaccine against the MenB infection.

PU-1303

血清抗缪勒氏管激素在多囊卵巢综合征诊断中的临床价值

项国谦
杭州市第一人民医院

目的 探讨多囊卵巢综合征患者（polycystic ovary syndrome, PCOS）血清抗缪勒氏管激素（anti-mullerian hormone, AMH）水平变化及临床诊断价值。
方法 检测实验组 110 例 PCOS 患者、对照组年龄匹配的 70 例健康女性血清 AMH、睾酮（T）、卵泡刺激素（FSH）、黄体生成素（LH）、催乳素（PRL）、雌二醇（E2）、孕酮（P）、性激素结合球蛋白（SHBG）、脱氢表雄酮（DHEAS）、甘油三酯（TG）、总胆固醇（TC）、高密度脂蛋白胆固醇（HDL-C）、低密度脂蛋白胆固醇（LDL-C）、葡萄糖（GLU）和空腹胰岛素（INS）水平；同时通过构建受试者工作特征 (receiver operating characteristic, ROC) 曲线以及分析曲线下的面积 (area under ROC curve, AUC) 来分别评价 AMH 单独及联合其它血清学指标对 PCOS 的诊断效能。
结果 PCOS 患者 AMH 水平与对照组比较，差异有统计学意义（P＜0.05），且 PCOS 组血清 AMH 与 T、LH 呈正相关（P＜0.05）；AMH 的临界值（cutoff）为 3.94ng/mL，诊断 POCS 的 ROC-AUC 为 0.858，灵敏度为 0.861，特异性为 0.776；AMH 联合检测 T、LH 的 ROC-AUC 为 0.873，灵敏度为 0.903，特异性为 0.761。
结论 PCOS 患者 AMH 水平显著升高，且联合 T、LH 检测指标能提高对 PCOS 的诊断效能。

PU-1304

骨髓增生异常综合症患者中的 NOTCH1 基因变异

毕莉、董丽梅
哈尔滨医科大学附属第一医院

背景 Notch1 基因变异出现在半数以上的 T-ALL 患者中，对 T-ALL 的发生发展有着重要的意义。我们希望通过本试验在骨髓增殖异常综合症（MDS）患者中寻找 Notch1 基因变异。对象：20 例骨髓增殖异常综合症（MDS）患者的骨髓细胞。
方法 应用 nested-PCR 法，银染色-SSCP，direct sequencing 法分析。
结果 在患者 1 的白血病细胞中发现，在地 27 号外显子的第 5097 个对偶基因的 G 变异为 A。然而这个变异是在基因库中可查找的 SNP。
结论 在 MDS 患者中没有发现 Notch1 基因的变异。

PU-1305

TCS 通过 RAGE/NF-κB 信号通路调节 MDSCs 从而改善 STZ 诱导的小鼠糖尿病

殳洁、盛慧明
上海交通大学医学院附属同仁医院

Including various immature antigen-presenting cells (APCs), myeloid-derived suppressor cells (MDSCs) are implicated in immune regulation. Trichosanthin (TCS) was shown to induce APC-mediated immune regulation. Here, we investigated that MDSCs were involved in molecular mechanism of the therapeutic effect of TCS on streptozotocin (STZ) induced type 1 diabetes mellitus (T1DM). TCS treatment significantly decreased fasting blood glucose, glycosylated hemoglobin and significantly alleviated islet inflammation with reduced inflammatory factors IL-6 in the peripheral blood. In addition, the proportion of bone marrow MDSCs, and IL-6+ MDSCs decreased, while the proportion of IL-10+ MDSCs increased. Moreover, we found that the mRNA expression of arginase 1 (Arg1), inducible nitric oxide synthase (iNOS), advanced glycation end product receptor (RAGE) and NF-κB in MDSCs was significantly downregulated. These findings demonstrated that TCS treatment alleviated diabetic symptoms in STZ-induced T1DM mice through downregulation of RAGE/NF-κB signaling pathway in MDSCs.

PU-1306

S100B 蛋白的临床意义及研究进展

凌芸、薛丽、杨淑娴、陈蓉
江苏省人民医院（南京医科大学第一附属医院）

目的 S100 蛋白是一类酸性低分子量 Ca2+ 结合蛋白，由 α、β 两种亚基组成。在哺乳动物的中枢神经系统中，S100 蛋白主要由神经胶质细胞合成和分泌，其中 S100B 钙结合蛋白就是最为重要的一种。它在各种体液中的含量被认为是多种疾病的生物标志。因此，检测 S100B 蛋白水平，可协助了解中枢神经系统疾病，特别是累及神经胶质细胞的损伤。
方法 本文根据近几年相关文献对 S100B 蛋白的检查方法、临床意义及研究进展做一个综述。
结果 随着临床和医学界对 S100B 蛋白的重视，S100B 蛋白的检测方法和临床应用也在飞速地发展。
结论 S100B 蛋白的检测将会成为一种有效的工具。而随着不断地研究，未来可能会发现 S100B 蛋

白对更多疾病的意义与作用。这样将有助于临床医师对更多疾病进行早期诊断、病情进展评估及预后判断。

PU-1307

急性肾损伤早期标志物的研究进展

唐凯宏、金英玉
哈尔滨医科大学附属第一医院

急性肾损伤(acute kidney injury,AKI)是重者患者的常见并发症，其延长重症患者住院时间、影响患者预后，增加了重症患者的病死率。早期识别急性肾损伤并进行早期干预至关重要。目前急性肾损伤的诊断标准仍是以血清肌酐和尿量的变化为主。但由于血清肌酐的滞后性及受多种因素影响，使其并非为理想的急性肾损伤早期诊断标志物。目前，已有多种急性肾损伤早期标志物受到广泛研究，包括血清胱抑素 C（CysC）、视黄醇结合蛋白(RBP)、中性粒细胞明胶酶相关脂质运载蛋白(NGAL)、肾损伤因子 1(KIM-1)、可溶性髓样细胞触发受体-1（sTREM-1）、基质金属蛋白酶组织抑制因子-2（TIMP-2）、胰岛素样生长因子结合蛋白 7(IGFBP-7)、微小 RNA(miroRNA)、N-乙酰基 β-氨基葡萄糖苷酶(NAG)、白介素-18（IL-18）、白介素-6（IL-6）IL-6、白介素-5（IL-5）等。这些急性肾损伤的早期标志物有些已经应用于临床，应用于临床的指标中，对患者急性肾损伤的早期诊断仍存在不足，导致目前诊断急性肾损伤主要还是依靠血清肌酐的变化。有些指标尚处于临床前的研究阶段。目前对于急性肾损伤的早期识别和诊断非常急迫，而目前国内外报道多种急性肾损伤指标都只在研究阶段。对于这些指标的继续探索和应用方法需要进一步研究。本文综述目前对急性肾损伤有意义的多种指标。探讨每种指标在诊断急性肾损伤的优势，讨论其联合使用是否有更大意义。

PU-1308

血清抗 CHrom 抗体的检测分析与临床价值探讨

何增品
昆明医科大学第一附属医院

目的 探讨临床应用流式点阵免疫发光法测定的血清抗 chrom 抗体联合其他血清抗体在临床诊断中的意义，为疾病的诊断提供依据。
方法 选择 2019 年 1 月至 2021 年 4 月昆明医科大学第一附属医院就诊的 312 例血清抗 CHrom 抗体阴性（<0.2）的患者作为阴性组，169 例血清抗 CHrom 抗体阳性（≥0.2）的患者作为阳性组。对所有两组患者的一般资料、临床诊断、抗双链 DNA 抗体（ds-DNA）、抗核糖体 p 蛋白抗体（RIB）、抗 SM 抗体、抗 RNP 抗体进行对比分析，总结其临床诊断的意义。
结果 抗 CHrom 抗体阴性组患者男性 120 例，女 192 例，男女比例为 1:1.60；抗 CHrom 抗体阳性组患者男性 65 例，女 104 例，男女比例同样为 1:1.60，两组患者的性别比无显著性差异（P>0.05）。抗 CHrom 抗体阴性组患者年龄范围 28-79 岁，平均为 49±1.19 岁；抗 CHrom 抗体阳性组患者年龄范围 27-68 岁，平均为 48±2.01 岁。两组患者年龄无显著性差异（P>0.05）。与抗 CHrom 抗体阴性患者相比，抗 CHrom 抗体阳性患者的抗 ds-DNA 比例最高，其次是抗 RIB 比例，分别为 49.70%和 33.14%，均与阴性组患者相比具有显著性差异，P 值均为 0.002。而抗 SM 抗体以及抗 RNP 抗体，两组患者间无显著性差异（P>0.05）。与抗 CHrom 抗体阴性患者相比，抗 CHrom 抗体阳性患者的中诊断确诊病例最多的为类风湿关节炎和结缔组织病，均为 36 例，占 21.30%；第二的为系统性红班狼疮，病例 32 例，占 18.93%，两组具有显著性差差异（P<0.05）。

结论 抗 CHrom 阳性患者以中老年女性为主，临床相关诊断主要为类风湿关节炎、结缔组织病以及系统性红斑狼疮，抗 CHrom 抗体阳性患者的抗 ds-DNA 比例最高，其次是抗 RIB。使用流式点阵免疫发光法检测的抗 CHrom 抗体联合抗 ds-DNA 以及抗 RIB 对疾病的诊断与鉴别诊断有重要意义。

PU-1309

Autophagy induced by micheliolide alleviates acute irradiation-induced intestinal injury via inhibition of the NLRP3 inflammasome

jin li
The First Affiliated Hospital of Chengdu Medical College

Purpose Radiation-induced enteropathy (RIE) is one of the most common and fatal complications of abdominal radiotherapy, with no effective interventions available. Pyroptosis, a form of proinflammatory regulated cell death, was recently found to play a vital role in radiation-induced inflammation, and may represent a novel therapeutic target for RIE. Micheliolide (MCL) has shown promising anti-inflammatory, immunomodulatory, and therapeutic efficacy against multiple forms of cancer. Therefore, we postulated that MCL may play a promising role in the treatment of RIE, and investigated the therapeutic effects of MCL in RIE and evaluated the possible mechanisms by which it may be therapeutic.
Materials and Methods We screened a high-throughput pyroptosis drug library with 441 compounds and found that MCL exerted anti-radiation effects and blocked pyroptosis in vitro. Furthermore, we developed a mouse model of RIE by exposing C57BL/6J mice to abdominal irradiation.
Results MCL treatment significantly ameliorated radiation-induced intestinal tissue damage, inflammatory cell infiltration, and pro-inflammatory cytokine release. Moreover, MCL markedly inhibited radiation-induced activation of the nucleotide binding domain leucine-rich repeat-containing receptor - pyrin domain containing 3 (NLRP3) and suppressed pyroptosis in vivo. Furthermore, we observed that MCL treatment induced autophagy, which inhibited activation of the NLRP3 inflammasome and prevented caspase-1-dependent interleukin (IL)-1β and IL-18 secretion. In agreement with these observations, the beneficial effects of MCL treatment in RIE were abolished in Becn1+/- mice. Furthermore, super-resolution microscopy revealed a close association between NLRP3 and lysosome-associated membrane protein/ light chain 3-positive vesicles following MCL treatment, suggesting that MCL facilitates phagocytosis of the NLRP3 inflammasome.
Conclusion MCL-mediated induction of autophagy can ameliorate RIE by NLRP3 degradation, and identify MCL as a novel therapy for RIE.

PU-1310

丙型肝炎病毒亚型的 E1、E2 变异性分析

周海舟、张萱
哈尔滨医科大学附属第一医院

目的 了解丙肝病毒几种亚型（1a、1b、2a、2b、3a、4a、5a 和 6a）包膜基因变异性。
方法 我们用相应的软件分析了丙肝病毒包膜蛋白（E1、E2）的核苷酸和氨基酸序列，计算了这些包膜基因的非同义突变与同义突变的比值(dN/dS)，并预测 E1 和 E2 的糖基化位点。
结果 我们发现在丙肝病毒 1b 亚型内，E1 与 E2 相比变异性更大、dN/dS 值更大、糖基化位点更多。
结论 E1 蛋白可能在 HCV 免疫机制中起到重要作用，尤其是在 1b 亚型内，E1 内基因更大的变异

性、更高的 dN/dS 值和更多的糖基化位点数足以证实这点；因此 E1 区域应该在未来有关 HCV 药物抵抗性和免疫机制的研究中纳为一个重要因素。

PU-1311

TNFAIP3 Gene Polymorphisms Associatied with differential Susceptibility to Juvenile Idiopathic Arthritis, Childhood-Onset Systemic Lupus Erythematosus in the Chinese population

刘新乐、张梦兰、柳晓琴、段义飞、颜灵逸、李文胜、江咏梅
四川大学华西第二医院

We investigated the relationship between polymorphisms in the TNF-a-induced protein 3(TNFAIP3) gene and genetic susceptibility to JIA and cSLE in the west China.The present case-control study included 165 patients with JIA, 151 patients with cSLE and 302 healthy controls. Genotyping for TNFAIP3 gene polymorphisms rs2230926, rs3757173 and rs5029939 in TNFAIP3 gene polymorphisms was performed. Significantly different frequencies of minor alleles in three TNFAIP3 polymorphisms were found in patients with cSLE compared with healthy controls (P= 0.02). Moreover, patients with cSLE showed different frequencies of haplotypes and lower level of TNFAIP3 in the serum compared with healthy controls (P=0.01). However, no association was found between JIA susceptibility and TNFAIP3 polymorphisms (P= 0.54). The results suggest that TNFAIP3 gene polymorphisms are associated with differential susceptibility to cSLE and JIA in the Chinese population.

PU-1312

血清心肌标志物检测的临床意义

杜柏岩、姜玉玲
哈尔滨医科大学附属第一医院

目的 探讨冠心病患者血清 hs-CRP、TnI、CK-MB 测定的临床意义。
方法 利用乳胶增强免疫比浊法和电化学发光法，对 112 例健康人群和 52 例急性心肌梗死（AMI），64 例不稳定性心绞痛（UA），32 例稳定性心绞痛（SA）患者检测超敏 C 反应蛋白（hs-CRP）、肌钙蛋白 I(TnI)和肌酸激酶（CK-MB）水平。
结果 SA 组、UA 组和 AMI 组 hs-CRP、TnI、CK-MB 水平明显高于健康组（P<0.05）。
结论 hs-CRP 是心血管疾病的独立危险因素，与 TnI、CK-MB 联合检测对冠心病的诊断、治疗及预后判断有重要意义。

PU-1313

血浆 BNP 水平检测对于心衰患者的诊断意义

杜柏岩、郭欣
哈尔滨医科大学附属第一医院

目的 探讨血浆 BNP 水平检测对于心衰患者的诊断意义。
方法 对 107 例心衰患者和 50 例健康体检者采用化学发光微粒子法测定血浆脑钠肽（BNP）水平。心衰患者根据美国 NYHA 心功能分级分成 I、II、III、IV 级四组。

结果 正常对照组与心衰组 BNP 水平及阳性率差异极显著，P<0．001。NYHA 心功能分级各级之间均差异显著，有统计学意义（P<0．01）；并且随着分级的增高，BNP 水平也明显升高，除 I 级中有一例阴性外，其他阳性率均为 100%。
结论 血浆 BNP 水平对于心衰的诊断、预后判断及指导治疗等方面具有重要意义。在筛选 LVD 方面具有明显的优越性，是评估心功能的一项重要指标。

PU-1314

异常凝血酶原检测在肝脏疾病中的诊断价值研究

张运丽[1]、黄逸[2]、赵声远[1]
1. 中南大学湘雅医院
2. 中南大学湘雅医学院医学检验系

目的 探讨血清异常凝血酶原（PIVKA-Ⅱ）对肝炎病毒相关性肝脏疾病的临床诊断价值。
方法 选择中南大学湘雅医院于 2020 年 6 月-2021 年 3 月收治的慢性肝炎患者 51 例（慢性肝炎组）、肝炎肝硬化患者 57 例（肝硬化组）、原发性肝细胞癌患者 70 例（原发性肝细胞癌组）以及健康体检人群 105 例（健康对照组）。比较四组人群 PIVKA-Ⅱ、AFP、ALP、γ-GT 水平，分析其在肝炎、肝硬化和原发性肝细胞肝癌等肝脏疾病中 PIVKA-Ⅱ和 AFP 水平的相关性，分析 AFP、PIVKA 单项检测与二者联合检测对于原发性肝细胞癌诊断价值。
结果 原发性肝癌组血清 PIVKA-Ⅱ和 AFP 水平高于肝硬化组，差异具有统计学意义（P < 0.05）。良恶性肝脏疾病中 PIVKA-Ⅱ和 AFP 水平呈现正相关，r=0.56。PIVKA-Ⅱ诊断 HCC 的 AUC 为 0.858，灵敏度为 97.1%，特异度为 61.5%；AFP 诊断 HCC 的 AUC 为 0.717，灵敏度为 71.4%，特异度为 67.3%。
结论 在病毒相关性肝脏良恶性疾病中，对于原发性肝细胞癌的诊断，血清异常凝血酶原具有重要价值，诊断效能优于 AFP，对临床诊断有重要参考作用。

PU-1315

补体 C3、C4 和 LDH 在多发性骨髓瘤中的临床应用

朱萍
资阳市第一人民医院

目的 探讨补体 C3、C4 和 LDH 在多发性骨髓瘤中的应用价值。
方法 选取资阳市第一人民医院 2016 年 8 月至 2021 年 1 月收治的多发性骨髓瘤 80 例，其中Ⅰ期 38 例，Ⅱ期 23 例，Ⅲ期 19 例。同时收集同期健康体检者 50 例作为对照组。检测全部受检者的补体 C3、C4、LDH 含量。
结果 病例组补体 C3、C4 含量均有不同程度的降低，均低于对照组，差异有统计学意义（P<0.05）；Ⅰ期补体 C3、C4 含量低于对照组，差异有统计学意义（P<0.05）；Ⅱ期补体 C3、C4 含量低于Ⅰ期，差异有统计学意义（P<0.05）；Ⅲ期补体 C3、C4 含量低于Ⅱ期，差异有统计学意义（P<0.05）；Ⅰ期、Ⅱ期 LDH 含量与对照组相比无统计学意义，Ⅲ期 LDH 含量明显高于Ⅰ期、Ⅱ期，差异有统计学意义（P<0.05）；骨髓瘤细胞比例、单克隆免疫球蛋白含量与补体 C3、C4 和 LDH 含量具有相关性（P<0.01）。
结论 补体 C3、C4 含量在多发型骨髓瘤中均有不同程度降低，LDH 含量有不同程度升高，可以预测疾病发展，在诊断和疾病分期中发挥重要作用。

PU-1316

高敏肌钙蛋白 T 诊断心肌损伤临界值设定的探讨

凌芸、丁红梅、王敏、张小莉
江苏省人民医院（南京医科大学第一附属医院）

目的 血清高敏肌钙蛋白 T（high sensitivity-cardiac troponin T，hs-cTnT）诊断心肌损伤时是否有必要建立年龄和性别的特异性临界值。建立临界值时如何选择参考人群以及如何正确选用临界值等方面存在着较大的争议。实际工作中临界值的使用参差不齐，不合理的临界值会误导临床决策而产生严重的后果。
方法 本文通过综述相关文献，对以上问题进行了探讨。
结果 我们认为使用年龄特异性临界值不如采用持续监测 hs-cTnT 的变化。hs-cTnT 在诊断新生儿心肌损伤的使用尚待深入研究。临床针对 hs-cTnT 可纳入性别特异性临界值，但需要可靠的方法证明其诊断心肌损伤的改善作用并且建立临界值。建立临界值选择参考人群时每组健康群体至少 300 人，男女均分，同时选择年轻和年长，分布在 20-70 岁之间，筛选时应纳入病史、用药史，排除心肾功能障碍和糖尿病等疾病。
结论 选用临界值时，绝对值可作为预后评估的指标，变化值可鉴别诊断急性心肌损伤，动力学监测和绝对值临界值应当结合使用，并注意要结合其他诊断手段做出全面可靠的评估。

PU-1317

PCT 及超敏 CRP 在新生儿败血症诊断中的应用探讨

罗小庆
资阳市第一人民医院

目的 探讨 PCT、hs-CRP、红细胞沉降率、白细胞计数及中性粒细胞杆状核/分叶核(I/T)比值的测定在新生儿败血症早期诊断中的价值.
方法 选取患有败血症的新生儿(84 例)和同时期在同病区收治的非感染性疾病患儿(84 例,对照组),采集败血症患儿静脉血测定其治疗前的 PCT、hs-CRP、红细胞沉降率、白细胞计数及 I/T 比值,并与对照组进行比较.
结果 败血症组 PCT、hs-CRP 与对照组比较差异有统计学意义(P＜0.05),红细胞沉降率、白细胞计数及 I/T 比值与对照组相比差异无统计学意义(P＞0.05).PCT 诊断新生儿败血症时的临界值为 0.5 ng/ml,此时敏感度为 73.8％,特异度为 80.9％.hs-CRP 诊断新生儿败血症的临界值为 3 mg/dl,此时敏感度为 54.8％,特异度为 76.2％.PCT 联合 hs-CRP 在诊断新生儿败血症时敏感度为 85.7％,特异度为 88.1％.
结论 PCT 及联合检测 PCT、hs-CRP 对新生儿败血症的早期诊断具有一定价值,PCT 是诊断新生儿败血症价值较高的指标.

PU-1318

基于纳米抗体对黄曲霉素 B1 的直接免疫法检测

陈梦园[1]、孙倩[1]、沈艳飞[1,2,3]
1. 东南大学医学院
2. 东南大学中大医院，临床检验医学中心
3. 东南大学江苏省重症重点实验室

食品安全作为全球最重要的问题之一，受到人们的极大关注。而黄曲霉毒素 B_1（AFB_1）是一种毒性最强的真菌毒素，广泛存在于各种食品和农产品中，严重威胁到人类的生命健康，亟待开发

出准确灵敏检测 AFB_1 的简单方法。而 AFB_1 作为小分子因其尺寸小，使得大分子的单抗隆抗体难以对其产生有效的特异性识别，致使传统的传感策略难以产生可检测的信号。为解决上述问题，我们课题组使用分子量更小的纳米抗体（常规抗体的 1/10）与纳米材料结合。具体来说，利用普鲁士蓝作为电化学信号探针，氧化石墨烯/芘四甲酸二酐衍生物（GO/$PTCNH_2$）修饰在玻碳电极上用于信号放大，纳米抗体偶联在 GO 表面，通过目标物与纳米抗体的特异性识别，使得电化学信号与目标物浓度呈线性关系，从而达到对小分子 AFB_1 的准确定量检测。该免疫传感器具有 0.01-100 ng mL^{-1} 的检测范围，同时检测限低至 3.3pg mL^{-1} (S/N=3). 与传统间接免疫分析中使用的单克隆抗体制备的免疫传感器相比，该免疫传感器的线性范围宽了两个数量级，且灵敏度提高了 10 倍。另外，该方法被成功运用到实际样品中 AFB1 的检测。此法为 AFB1 的直接免疫检测提供了一种简单、高灵敏度和高选择性的方法。此传感体系在食品安全领域，将新开发的纳米抗体作为识别单元，为小分子的直接非竞争性免疫分析开辟了一条新的途径。

肿瘤标志物 CA724 在原发性胃癌及胃炎患者中的诊断鉴别价值

丁洁颖、吴紫娴、张晗
上海交通大学医学院附属第九人民医院

目的 探讨肿瘤标志物 CA724 在原发性胃癌及胃炎患者中的诊断鉴别价值及效能 ROC 曲线。
方法 选择 2018 年 1 月-2020 年 12 月原发性胃癌患者 146 例设为观察组；选择同期治疗的胃炎患者 89 例为对照 1 组；选择同期健康体检者 91 例为对照 2 组。采用电化学发光免疫分析法测定各组糖类抗原 CA724 水平；查阅观察组患者病理资料，分析不同病理状态下肿瘤标志物 CA724 表达水平；绘制 ROC 曲线，分析 CA724 在胃癌、胃炎中的诊断鉴别价值。
结果 对照 1 组和对照 2 组肿瘤标志物 CA724 水平无统计意义（P>0.05）；观察组肿瘤标志物 CA724 水平均高于对照 1 组和对照 2 组（P<0.05）；原发性胃癌患者肿瘤标志物 CA724 水平与肿瘤直径、肿瘤分期、分化类型、淋巴结转移具有统计学意义（P<0.05）；以肿瘤标志物 CA724 截断值为 7.94U/mL，绘制 ROC 曲线，结果表明：肿瘤标志物 CA724 用于原发性胃癌患者中 AUC 值为 0.815，诊断灵敏度为 84.68%，特异度为 71.95%。
结论 肿瘤标志物 CA724 在原发性胃癌患者中呈高表达，能实现胃癌及胃炎的诊断鉴别，可获得较高的诊断效能，为临床诊疗提供参考依据。

PU-1320

ELISA 联合荧光定量 PCR 检测丙型肝炎病毒的临床效果

丁燕
武城县人民医院

目的 分析丙型肝炎病毒检测中联合应用酶联免疫吸附法（ELISA）与荧光定量 PCR 法的价值。
方法 选取 2019 年 1 月～2020 年 12 月期间在我院接受检查的疑似丙型肝炎病毒感染患者 92 例，采集血液标本，分别采用 ELISA 法和荧光定量 PCR 进行检测，比较不同方法检测效果。具体为：（1）ELISA 检测，在酶标孔中加入样品稀释液 100μL，在相应孔中加入待测样本 10μL。并另外设置 2 个阳性对照孔和 3 个阴性对照孔，在各对照孔中加入 100μL 的阳性或阴性对照，操作完成后，实施封板，并将样品置于 37℃环境下，温育 1 小时。对其进行 5 次洗涤处理后，在各孔中分别加入酶标记物 100μL，在同样的温度条件下实施半小时的温育，再次洗涤 5 次后，在各孔中加入底物缓冲液和底物液各 50μL。将其充分混匀后，置于 37℃条件下温育半小时后，在各孔中加入终止液 50μL，然后使用酶标仪对其结果进行测定，严格按照说明书进行操作。（2）荧光定量 PCR 检测，使用核酸提取试剂盒，在反应孔中加入样品 200μL，然后加入 10μL 的 Protein-asek 和 4μL 的 Acryl

carrier，上机自动处理，操作完成后，取 20μL 上清液加入到分装好的反应扩增管中，对其进行 PCR 定量扩增检测，所有操作均严格按照使用要求完成。
结果 92 例疑似患者经病理等检查确诊为阳性 42 例，阴性 50 例，将其作为判断标准，ELISA 与 PCR 联合检测的准确度 94.56%，特异度 96.00%，阳性预测值 95.12^%，与单独 ELISA 或单独 PCR 检测结果比较均显著较高，差异有统计学意义（P＜0.05）。
结论 ELISA 与荧光定量 PCR 联合应用，能够显著提升临床对丙型肝炎病毒的阳性检出率及准确率，减少漏诊等情况出现，可推广应用。

PU-1321

抗核抗体谱检测结果应用

李军、许桂荣、程绍民、王倩、李新
禹城市人民医院

目的 分析自身免疫性抗体的分布，探索抗核抗体谱对自身免疫性疾病的诊断价值；
方法 收集 2018 年 6 月—2020 年 12 月我院确诊及待诊的自身免疫性疾病患者共 703 例，均采用欧蒙印迹法进行抗核抗体谱检测；
结果 抗核抗体谱检测阳性为 312 例，阳性率为 44.38%，男性检出率（28.00%）低于女性检出率（53.19%）；50 岁以下患者（32.12%）阳性率低于 50 岁以上患者（53.62%）；在系统性红斑狼疮 SLE、混合型结缔组织病 MCTD、干燥综合征 SS、类风湿性关节炎 RA 中有较高的检出率；
结论 针对特定人群检测抗核抗体谱对自身免疫性疾病的筛查及早期治疗和预防有重要的作用。

PU-1322

尿液结合珠蛋白联合微量白蛋白肌酐检测在筛查糖尿病早期肾损伤中的临床应用

王春玲、时彦、芦慧霞
东南大学附属中大医院检验科

目的 研究尿液中结合珠蛋白联合尿微量白蛋白/肌酐检测在评估糖尿病肾损伤中的临床应用价值。
方法 收集临床明确诊断为 2 型糖尿病（无明显肾损害依据）患者的尿液样本 35 例，分别采用双抗体夹心免疫层析法、散射免疫比浊法、苦味酸法同时进性尿液结合珠蛋白、微量白蛋白、肌酐的定量检测。
结果 35 例样本中，尿微量白蛋白/肌酐比值检测阳性 15 例（95%CI 3.46-12.85,cutoff:3.39mg/mmol)，阳性率 42.9%；尿液结合珠蛋白/肌酐比值检测阳性 15 例（95%CI 8.33-21.03,cutoff:7.0μg/mmol)，阳性率 42.9%。尿液结合珠蛋白联合尿微量白蛋白及肌酐检测阳性 20 例，阳性率 57.1%，较单检尿微量白蛋白/肌酐阳性率提高 14.2%。
结论 尿液结合珠蛋白与微量白蛋白、肌酐联合检测能够提高糖尿病早期肾损伤的阳性检出率，可作为糖尿病早期肾损伤筛查和预测指标。

一种无金属全碳纳米复合物用于甲胎蛋白的超灵敏光电化学检测

陈梦园[1]、杨二利[1]、沈艳飞[1,2,3]
1. 东南大学医学院
2. 东南大学中大医院，临床检验医学中心
3. 东南大学江苏省重症重点实验室

光电化学（PEC）生物传感因同时具备光化学方法和电化学技术的优势，受到研究者的广泛关注。为降低生物环境毒性，提高材料的生物兼容性，寻找新型光活性材料一直是研究热点。C_{60} 作为富勒烯的一种，能够可逆接受 6 个电子且在整个紫外-可见光区拥有良好的吸收性能，为其作为光活性探针提供优势。而其因导电性差、与生物分子的界面连接活性低致使在 PEC 生物传感领域少有报道。为此，我们通过简单的机械研磨将将高电导率的石墨片(Gr)、具有足够含氧官能团的氧化石墨烯(GO)和烷基化的 C_{60}(AC_{60})组装成无金属全碳纳米杂化物(AC_{60}-Gr-GO)。所制备的 AC_{60}-Gr-GO，一方面与原始 AC60 相比，光电流强度提高 35 倍；另一方面为生物分子偶联提供了丰富的活性位点。以甲胎蛋白（AFP）作为目标物，将其作为光活性探针与抗 AFP 连接，使得检测体系中的目标物含量与 PEC 信号的提高成正比，制备出了一种“signal on”型 PEC 传感器。该传感器具有较宽的线性检测范围（1pg·mL^{-1}-100 ng·mL^{-1}）以及检测限达到 0.54pg·mL^{-1}。这项工作展现出了基于富勒烯的纳米杂化物作为高灵敏的 PEC 探针在早期疾病诊断的生物传感方面的巨大潜力。

PU-1324

双抗原夹心 ELISA 检测丙肝抗体与 RIBA 确证阳性的相关性研究

刘义庆[1,2]、张庆[1,2]、邱旸[1,2]、刘春梅[1,2]、鞠瑛[1,2]、卢志明[1,2]
1. 山东第一医科大学附属省立医院
2. 山东省立医院

目的 探讨双抗原夹心 ELISA 检测抗-HCV 与重组免疫印迹试验（RIBA）确证结果的关系。
方法 对 10120 例在山东大学附属省立医院就诊的患者标本采用双抗原夹心 ELISA 法进行抗-HCV 检测，对检测阳性的标本做 RIBA 确证。
结果 双抗原夹心 ELISA 检测抗-HCV 抗体阳性的标本共计 51 份，采用 RIBA 对 51 份阳性标本进行检测，确认阳性 38 份、不确定 13 份，阴性 0 份，确认阳性比例为 74.51%，且确认阳性标本比例与 S/CO 比值相关。
结论 双抗原夹心 ELISA 法特异性高，可根据双抗原夹心 ELISA 法 S/CO 比值预测 RIBA 确证结果。

PU-1325

系统性红斑狼疮血清 tsRNA 标志物研究

张孝山、李智洋
南京市鼓楼医院

系统性红斑狼疮（Systemic lupus erythematosus，SLE）是一种损伤全身器官的自身免疫性疾病，狼疮性肾炎（Lupus nephritis，LN）是其最常见的一种并发症。tsRNA 是 tRNA 在外界压力或酶的作用下断裂形成，前人研究表明 tsRNA 在生物体各个生理和病理时期的丰度变化差异显著。本研究旨在从 SLE 病人血清中筛选 tsRNA 标志物，以期为该病的早期诊断、及时治疗提供科学依据。研究以临床诊断为 SLE 和健康体检病人的血清为材料，通过 RNA 提取、sRNA 高通量测序、

生物信息学分析、实时荧光定量聚合酶链式反应（Real Time Quantitative PCR，RT-qPCR）验证等方法筛选候选 tsRNA。试验表明，SLE 血清中 tsRNA 的表达特征与健康组差异显著，其中 tRF-1:28-His-GTG-1 在 SLE 组中显著高表达（P<0.001），受试者工作曲线（ROC）下面积为 0.6650（P=0.0012）。研究表明，SLE 血清中的 tsRNA 的表达谱相比健康对照组差异显著，提示 tsRNA 可能在 SLE 的发生发展中发挥重大作用；tRF-1:28-His-GTG-1 的表达水平显著上调，可以区分健康人、SLE 患者，具有成为 SLE 早期诊断和疗效检测标志物的潜力。

PU-1326

毛兰素对头颈鳞癌细胞的生长抑制作用及其机理研究

罗清琼、陈福祥
上海交通大学医学院附属第九人民医院

目的 探讨毛兰素对人头颈鳞癌（HNSCC）细胞的生长抑制作用及其机理。
方法 通过 MTT 和克隆形成实验探讨毛兰素对 HNSCC 细胞体外生长的影响；通过流式细胞术分析毛兰素对 HNSCC 细胞周期、凋亡和细胞内活性氧（ROS）生成的影响；分别通过酶联免疫吸附法和终点比色法检测细胞培养上清中白介素 1b（IL-1b）和乳酸脱氢酶（LDH）的量；采用免疫印迹实验探究毛兰素影响 HNSCC 细胞生长的作用机制。
结果 毛兰素能够明显抑制 HNSCC 细胞的活力和克隆形成能力。毛兰素能够下调 CDC25c 和 p-CDC2 的表达而上调 cyclin B1 水平，将 HNSCC 细胞的周期阻滞于 G2/M 期；可以上调促凋亡蛋白 Bax 和 cyto C 的表达，下调抗凋亡蛋白 Bcl-2A1 的表达水平，从而促进细胞内 caspase-9 和 caspase-3 的剪切活化，继而使 PARP 的剪切增加,导致 HNSCC 细胞发生凋亡；能够增加 HNSCC 细胞中的 ROS 水平,可能通过影响线粒体膜的稳定性而促进凋亡的发生；此外,还可引起 GSDME 介导的细胞焦亡。
结论 毛兰素可以抑制 HNSCC 细胞的体外生长，在 HNSCC 的治疗中具有潜在的应用前景。

PU-1327

乙肝患者血清 Pres1-Ag 和 HBsAg 及 HBeAg 相关性分析

刘义庆[1,2]、张庆[1,2]、邱旸[1,2]、刘春梅[1,2]、鞠瑛[1,2]、卢志明[1,2]
1. 山东第一医科大学附属省立医院
2. 山东省立医院

目的 分析乙肝患者血清 Pres1-Ag、HBsAg 和 HBeAg 三者之间的关系。
方法 采用电化学发光免疫分析法对 2015～2019 年 281628 例住院及门诊患者进行乙肝五项定量检测，酶促化学发光法检测 Pres1-Ag，并对结果进行统计学分析。
结果 共检出 HBsAg 阳性 12546 例，HBsAg 阳性率为 4.45％，2015-2019 年 HBsAg 阳性检出率分别为 4.56%、4.56%、4.49%、4.36%、4.34%，呈逐年下降趋势。乙肝患者中 HBeAg 阳性检出率为 24.85%，HBeAg 阳性患者 Pres1-Ag 阳性率为 93.52%，明显高于 HBeAg 阴性者的 75.40%（93.52% vs 75.40%，P<0.05）。乙肝患者 Pres1-Ag 阳性率为 79.91%，且阳性率随着患者 HBsAg S/CO 值增高呈升高趋势。
结论 乙肝患者 Pres1-Ag 与 HBsAg、HBeAg 具有良好的相关性，将 Pres1-Ag 可作为 HBsAg 和 HBeAg 检测的补充，预测乙肝病毒感染和复制。

PU-1328

探讨四代化学发光 HIV 筛查试剂在 AIDS 诊断中的应用

刘文清
资阳市第一人民医院

目的 将第四代人类免疫缺陷病毒（HIV）化学发光免疫分析（CLIA）试剂筛查阳性结果与免疫印迹试验（WB）结果进行比较,评估 CLIA 法 HIV 筛查在艾滋病诊断中的临床价值。
方法 CLIA 法对 2019 年 10 月-2020 年 12 月本院 64987 例患者进行 HIV 抗体初筛检测,复核阳性标本用 WB 法确证,确证阴性或者不确定样本进行核酸检测，记录结果并进行对比分析。
结果 CLIA 法初筛阳性送疾控中心 131 例,WB 确证阳性 120 例。其中不确定 2 例,经继续核酸检测均为高值，CLIA 初筛方法确证阳性率为 93.13%。核酸 9 例未检出，其中包含肿瘤和自身免疫性疾病患者各 1 例，且>50 岁的患者有 4 例，占假阳性的比率为 44.44%，老年患者的假阳性率占比较高，值得引起我们的重视。比较 1<COI≤10、10<COI 两组,WB 法获得的阳性率的差异有统计学意义（P<0.05）。
结论 CLIA 法筛查 HIV 在 COI 值>10 的样本中灵敏度和特异性均较高,但在 COI 值≤10 的样本中存在较高的假阳性率。方法学的更新确实加快了检测的自动化、报告的及时性以及阳性检出率，但如何减少假阳性，避免给患者带来较大的心理负担则是我们现在应该关注的重要内容。

PU-1329

血清 sST2、NT-proBNP 水平与血液透析患者发生心力衰竭的相关性分析

林胜
资阳市第一人民医院

目的 观察血清可溶性 st2（sST2）、N 末端脑钠肽前体（NT-proBNP）表达水平与血液透析患者发生心力衰竭的相关性。
方法 选取在我院血液透析中心行维持性血液透析（MHD）治疗的 100 例慢性肾功能不全尿毒症患者，依据是否发生心力衰竭，分为并发心衰组与未并发心衰组，比较 2 组一般资料、透析前后血清心肌酶[肌酸激酶同工酶-MB（CK-MB）、肌钙蛋白 I（cTn I）]、血肌酐（Scr）、sST2、NT-proBNP、心功能指标[心排出量（CO）、心脏指数（CI）与左室射血分数（LVEF）]，比较并发心衰组不同心功能分级患者血清 sST2、NT-proBNP 水平，分析血清 sST2、NT-proBNP 对心力衰竭的预测价值。
结果 并发心衰组透析后 CO、CI、LVEF 明显低于未并发心衰组（P＜0.05），且 CK-MB、cTn I、sST2 及 NT-proBNP 水平明显高于未并发心衰组（P＜0.05）；心力衰竭患者 sST2、NT-proBNP 水平为：II 级＜III 级＜IV 级，比较差异显著（P＜0.05）；sST2 预测心力衰竭敏感度 77.9%，特异度 68.1%；NT-proBNP 预测敏感度 91.8%，特异度 92.0%。
结论 血液透析并发心衰患者血清 sST2、NT-proBNP 表达水平呈异常升高趋势，心功能越差，升高程度越大，对心力衰竭具有较高预测价值。

PU-1330

山东地区 25-羟维生素 D 水平状况调查

陈瑞丹、刘义庆
山东第一医科大学附属省立医院临床医学检验部

目的 探讨山东省 5 181 例人群血清 25-（OH）维生素 D 水平与年龄、性别、季节之间的关系。
方法 采用整体抽样的方法收集 2014.3-2017.6 期间来我院就诊的血清标本，用电化学发光法检测血清 25-（OH）维生素 D 水平。根据性别、年龄和季节分组。年龄分成 9 组：0-9 岁，10-19 岁，20-29 岁，30-39 岁，40-49 岁，50-59 岁，60-69 岁，70-79 岁和≥80 岁。采用 SPSS17.0 软件对不同年龄、性别和季节的维生素 D 结果进行统计分析。
结果 1.不同性别之间比较：男性维生素 D 水平（17.11±11.75）ng/ml，女性为（15.08±11.73）ng/ml，稍高于女性，且数据具有统计学差异(P＜0.01)。2.不同年龄之间比较：0-9 岁和≥80 岁与其余各组相比具有统计学差异(P＜0.01)，其他各组之间无统计学差异（P＞0.05），0-9 岁维生素 D 水平为（26.99±17.28）ng/ml，明显高于其他各组。3.不同季节之间比较：春和夏，秋和冬之间数据具有统计学意义(P＜0.01)，且夏季维生素 D 水平最高（19.73±11.57）ng/ml，冬季最低（12.78±12.90）ng/ml。
结论 山东省人群维生素 D 营养状况存在性别、年龄和季节的差异，且普遍缺乏维生素 D。

PU-1331

灭活新型冠状病毒疫苗诱导的特异性抗体分析

陶月
南京大学医学院附属鼓楼医院

目的 动态监测灭活新型冠状病毒疫苗诱导的抗体水平。
方法 采用前瞻性队列研究。2021 年 1 月到 2021 年 2 月期间，招募本院 98 位健康受试者，接种新冠疫苗，采集接种前、第一次接种后第 14 天，第二次接种后第 14 天血清，检测血清中新冠病毒特异性 IgM、IgG 和阻断抗体。
结果 受试者接种新冠疫苗后，产生的新冠抗体 IgG 和阻断抗体转阳率均为 99%，新冠 IgG 和阻断抗体水平分别为 89.67（55.59,153.00）IU/mL 和 47.87（25.58, 99.99）IU/mL。另外，年龄和免疫间隔时间对人群新冠疫苗免疫应答有一定影响；而性别对新冠疫苗诱导的抗体免疫反应没有差异。
结论 灭活新冠疫苗诱导的抗体应答较好，年龄和免疫间隔时间对新冠疫苗免疫应答有一定影响。监测新冠疫苗诱导的抗体水平，将为新冠疫苗的免疫原性评价和免疫接种程序的优化提供最新重要参考依据。

PU-1332

成年人 EB 病毒感染者抗体特征分析

刘义庆[1,2]、张庆[1]、邱旸[1,2]、刘春梅[1,2]、鞠瑛[1,2]、卢志明[1,2]
1. 山东省立医院
2. 山东第一医科大学附属省立医院

目的 了解济南地区成年人 EB 病毒（EBV）感染者的抗体特征。
方法 检测 1472 例疑似 EBV 感染的成人血清样本中的 EB 病毒抗体，分析人群 EB 病毒感染情况。
结果 1472 例血清标本中，VCA IgG 阳性率为 95.58%，VCA IgM 阳性率为 5.30%，EA-D IgG 阳性率为 10.39%，EBNA IgG 阳性率为 93.95%。不同性别 EBV 感染者的 VCA IgM、EA-D IgG、

EBNA IgG 阳性率比较，差异无统计学意义（均 P >0.05）；男性 VCA IgG 阳性率为 94.54%，低于女性的阳性率 96.79%（P<0.05）。VCA IgG 阳性率以 18~29 岁最低，70~79 岁年龄组最高；VCA IgM 阳性率以 18~29 岁组最高（11.22%），60~69 岁年龄组最低（0.71%）；EA-D IgG 阳性率以 18~29 岁年龄组最低（6.92%），70~79 岁年龄组最高（16.92%）；EBNA IgG 阳性率以 50~59 岁组最高（97.61%），80 岁以上年龄组最低（90.48%）。VCA IgM 阳性率秋季和冬季分别为 6.40%和 6.35%，略高于春季的 4.62%和夏季的 4.37%（P 均>0.05），但无统计学差异。共检出 12 种 EB 病毒项目组合模式，以 VCA IgG、EBNA IgG 双阳性模式最多见，占 78.67%；EA-D IgG 和 EBNA IgG 双阳性模式最少见，占 0.07%。

结论 济南地区成年人群 EB 病毒抗体阳性率存在性别、年龄差异，季节间差异不明显。EB 病毒抗体组合感染模式以 VCA IgG 和 EBNA IgG 双阳性的既往感染模式为主，其它多种感染模式并存。多项抗体联合检测对 EBV 感染的判断具有重要的价值。济南地区成人中 EB 病毒感染以 18~29 岁年龄组人群感染率最高。

PU-1333

人 β 冠状病毒抗原的捕获抗体制备

武强
潍坊市人民医院

目的 冠状病毒抗原检测较核酸检测具有方便快速和对实验室要求低优势，较抗体检测具有检测无窗口期优势，冠状病毒抗原检测的常用方法为免疫层析法，用于捕获冠状病毒抗原的抗体是配制免疫层析试剂的关键原料，本文将制备同时识别五种人 β 冠状病毒（SARS-CoV-2, SARS-CoV，MERS-CoV，HCoV-HKU1 和 HCoV-OC43）N 蛋白的抗体，以获得一种冠状病毒抗体能够同时适用于所有人 β 冠状病毒抗原检测试剂的配制。

方法 采用 Clustal Omega 和 PyMOL 分析工具比对五种 β 冠状病毒 N 蛋白的氨基酸序列，获得同源序列 PRWYFYY 肽段，并进行不同方式修饰设计，如进行肽段-COOH 端半胱氨酸(C)修饰：PRWYFYY XXC，其中 C 为半胱氨酸提供游离-SH 与载体蛋白偶联，XX 作为肽段与载体蛋白之间的空间臂，X 为 F, G, W, Y, K 中的一种氨基酸，以合成肽段为半抗原再与载体蛋白（如牛血清白蛋白 BSA）偶联即可作为免疫抗原进行新西兰大白兔免疫，经过三次加强免疫后，取兔抗血清并进行纯化获得冠状病毒抗体。

结果 采用酶联免疫法（ELISA）检测免疫兔抗血清的抗体滴度可达 1：32000 以上，采用 Protein A 柱纯化抗体纯度大于 90%，纯化抗体与五种人 β 冠状病毒 N 蛋白均具有良好反应性。

结论 本文制备的冠状病毒抗体能够同时识别五种人 β 冠状病毒 N 蛋白，可用于不同冠状病毒抗原检测试剂（免疫层析法）的配制，大大降低不同种类冠状病毒抗体的研发成本，为冠状病毒疫情防控提供快速、可靠的检测原料；另外，本文列出的同源序列肽段经分析发现具有高度保守性， 说明该肽段是人 β 冠状病毒 N 蛋白的专有肽段序列，因此本文制备的冠状病毒抗体不仅可用于目前发现的人 β 冠状病毒抗原捕获，还极有可能适用于未来新发现人 β 冠状病毒种类的抗原检测，具有很好的技术储备意义。

PU-1334

降钙素原在新生儿非感染性疾病中的临床价值分析

何亮
资阳市第一人民医院

目的 研究在新生儿非感染性疾病中降钙素原的临床意义和影响因素。

方法 在对 300 列非感染性新生儿疾病患者中，在出生后的第一天、第三天、第七天挑选出 PCT 正常和 PCT 异常的部分进行分组，分别对其进行数据分析，其中包括性别、胎龄、体重、早产、剖腹产、抗生素的使用、呼吸机的使用等多种影响因素，通过使用统计学来分析影响 PCT 水平更重要的因素。
结果 有 8.4%第一天升高，31.2%第三天升高，4.3%第七天升高。
结论 在没有细菌感染的新生儿中，PCT 升高与出生时的胎龄、出生后时间、产后抗生素的使用、极低出生体重以及呼吸机的使用显著相关，所以在利用 PCT 对新生儿感染的疾病诊断中，还应多考虑这些非感染性因素。

PU-1335

系统性红斑狼疮中非编码 RNA 的生物学功能及应用

张孝山、李智洋
南京市鼓楼医院

系统性红斑狼疮（Systemic lupus erythematosus，SLE）是一种慢性的、多系统的自身免疫性疾病，它的特征之一是产生自身抗体并在女性人群中高发。非编码 RNA（ncRNA）在人类转录组中丰度较高，根据其来源和功能可分为 microRNA、lncRNA、circRNA、piRNA 和 tsRNA 等。研究表明 SLE 的发病机制复杂，临床治疗方法也具有多样性。NcRNA 如何在 SLE 中发挥作用，其能否作为 SLE 诊断或治疗的生物标志物是当前亟待解决的问题之一。本文综述了 ncRNA 调控人类 SLE 进程相关的研究，从 ncRNA 的分类、生物发生、功能以及其应用潜力等方面进行了总结。研究发现 lncRNA 在 SLE 病人血清、尿液等生物样本中差异表达，并通过外泌体等方式运输到肾脏组织中发挥作用。MiRNA 可以激活 T 细胞大量释放细胞因子（IL-4、IL-10 等）诱导多器官损伤，加重 SLE 的进程。NcRNA 几乎能在所有的生物样本中检测到，但是考虑到个体差异和组织的特异性，不同来源的 ncRNA 在 SLE 中的生物功能可能存在差异。因此，特异性 ncRNA 靶向的策略可能是为 SLE 患者寻找新型诊断性生物分子标志物，或是精确治疗的可靠手段。在这里，我们回顾了 ncRNA 在 SLE 进展中的相关研究，探讨了它们作为新型生物标志物和治疗剂的潜在临床应用价值，以期为 SLE 患者的诊断和治疗提供新的研究方向。

PU-1336

温阳补心汤加减联合常规疗法对慢性心衰患者心功能及血清 H-FABP、cTnI、Ang-2 水平的影响

陈春杰
宁津县人民医院

目的 探析温阳补心汤加减联合常规疗法对慢性心衰患者心功能及血清 H-FABP、cTnI、Ang-2 水平的影响。
方法 抽选本院 2019 年 1 月-2020 年 1 月收治的 120 例慢性心衰患者为研究对象，采用数字随机分组法将其等分为 A 组（n=60）与 B 组（n=60），B 组予以常规治疗（利尿、消肿等），A 组在此基础上加减使用温阳补心汤，每日煎服 150 ml，在治疗两个月后分析比较两组患者的心功能指标、血清 H-FABP、cTnI、Ang-2 水平、血液流变学指标、中医证候积分、中国心血管病人生活质量评定问卷（CQQC）评分。
结果 A 组治疗后的心功能指标、血清 H-FABP、cTnI、Ang-2 水平、中医证候积分和 CQQC 评分显著优于 B 组（P<0.001）；A 组治疗后的血液流变学指标显著优于 B 组（P<0.05）。
结论 温阳补心汤加减联合常规疗法能够改善慢性心衰患者的血清生物标志物水平，增强其心功能，使患者的临床症状得到缓解，生活质量得到提升，该种治疗方式应在实践中使用。

PU-1337

类风湿关节炎患者血清炎症因子 IL-6 和 TNF-α 的水平测定及临床意义

吴琼、易斌
中南大学湘雅医院

目的 检测类风湿性关节炎(RA)患者血清中 IL-6 和 TNF-α 的水平，探讨 RA 患者血清 IL-6 和 TNF-α 的水平变化及临床意义。
方法 采用化学发光法对 195 例 RA 患者和 47 例健康体检者血清中的 IL-6 和 TNF-α 水平进行检测，分析其与抗环瓜氨酸肽(CCP)抗体、血沉(ESR)、类风湿因子(RF)及 C 反应蛋白(CRP)表达的相关性，并对 RA 患者治疗前后血清 IL-6 和 TNF-α 水平进行比较。
结果 RA 患者组血清 IL-6[(29.87±62.41)pg/ml]和 TNF-α[(21.34±29.35)pg/ml]的水平均显著高于正常对照组 IL-6[(2.40±0.77)pg/ml]和 TNF-α[(5.87±1.23)pg/ml]，差异具有统计学意义(P 均＜0.01)。RA 患者血清 IL-6 与 ESR 及 CRP 水平均呈正相关(P 均＜0.01)，与抗 CCP 抗体及 RF 水平无相关性(P 均＞0.05)；TNF-α 与 ESR、CRP 及 RF 水平均呈正相关(P 均＜0.01)，与抗 CCP 抗体无相关性(P＞0.05)。RA 患者治疗后血清 IL-6 水平明显低于治疗前，差异具有统计学意义(P＜0.05),而治疗后血清 TNF-α 水平与治疗前相比，差异无统计学意义(P＞0.05)。通过比较 ROC 曲线下面积大小，血清 IL-6 对 RA 的诊断效能和 TNF-α 接近，敏感性分别为 77.4%、81. 5%，特异性分别为 97.9%、93.6%。
结论 RA 患者血清中的 IL-6 和 TNF-α 水平明显升高，检测 RA 患者血清 IL-6 和 TNF-α 水平，对类风湿关节炎的诊断及病情活动性判断具有重要的临床价值。

PU-1338

SCF 泛素连接酶 E3 指环亚基 RBX1/2 的研究进展

张楠楠
郑州大学第一附属医院

RBX1/2-SCF 泛素连接酶 E3 功能紊乱可导致包括肿瘤在内的一系列疾病。因此检测 RBX1/2 在癌症中的表达情况，并进一步研究了 RBX1/2 作用于肿瘤发生的机制具有重要意义。RBX1/2 也是肿瘤细胞的存活蛋白，提示 RBX1/2 可成为潜在的抗肿瘤靶目标。

泛素-蛋白酶体系统（ubiquitin-proteasome system，UPS）是细胞内降解蛋白质的重要途径，UPS 降解了胞内约 80%以上的底物，本身具有高度的特异性。蛋白降解过程涉及泛素激活酶 E1、泛素结合酶 E2 和泛素连接酶 E3。多聚泛素的底物一般被 26S 的蛋白酶体降解。

SCF 泛素连接酶 E3 是泛素连接酶中最大的家族，在 UPS 中识别底物，500-1000 种泛素连接酶 E3 满足多样性与特异性。泛素连接酶 E3 有 U 盒型、RING 指型、PHD 指型和 HECT-型。SCF-泛素连接酶 E3 是指环型。泛素连接酶 E3 包含: RBX1/ RBX2、Skp1（S 期激酶相关蛋白 1）、Cullins/CDC53、F 盒蛋白。RBX（环盒子蛋白）是最后被发现的泛素连接酶 E3 的亚基。支架蛋白在底物与环盒子蛋白之间起支撑作用。SCF 泛素连接酶 E3 复合体的晶体结构显示支架蛋白一端连接环盒子蛋白，另一端连接 S 期激酶相关蛋白 1-F 盒蛋白复合物。

虽然环盒子蛋白 1/2 的功能对细胞的生长非常重要，但是环盒子蛋白 1/2 以及 SCF-泛素连接酶 E3 组分在肿瘤中表达异常。显示环盒子蛋白 1/2 的过表达对肿瘤细胞生存是必需的。环盒子蛋白 1/2 的过表达对胃癌、肝癌肿瘤细胞的增殖和凋亡起调控作用。敲除环盒子蛋白 1/2 会导致肿瘤细胞的增殖抑制，并造成细胞的衰老与凋亡，可能由于 SCF-泛素连接酶 E3 泛素连接酶降解的底物积累。检测 RBX1/2 在癌症中的表达情况，并进一步研究 RBX1/2 作用于肿瘤发生的机制是具有

十分重要的意义的，而且 RBX1/2 也是肿瘤细胞的存活蛋白，提示 RBX1/2 可成为潜在的抗肿瘤靶目标。

PU-1339

2010-2017 年山东省立医院皮肤科门诊 HIV 抗体检测和感染状况分析

王泽筠
山东第一医科大学附属省立医院

目的 对山东省立医院皮肤科门诊 6335 例艾滋病抗体检测的相关资料进行回顾性分析，旨在有效预防艾滋病病毒的传播。
方法 对 2010 年 1 月~2017 年 12 月于皮肤科门诊进行 HIV 抗体检测人群给予临床回顾性分析，6335 例检测人群均进行艾滋病病毒抗体检测，并对回顾内容给予统计学分析，得出结论。
结果 6335 例在皮肤科门诊进行艾滋病抗体检测人群中，送检数量逐年上升，年龄 21~30 岁和 31~40 岁年龄段人群居多，分别占总数的 52.45%和 28.45%。经艾滋病病毒抗体检测可知结果为阳性人群为 120 例，占检测总人数的 1.89%。男性阳性率明显高于女性（χ^2=6.963，P=0.0083<0.01）。
结论 皮肤科门诊开展艾滋病病毒抗体检测工作的主要目的在于对艾滋病病毒抗体检测阳性患者做到早发现、早治疗，并指导患者采取正确的生活工作方式，从而尽量减少艾滋病对患者自身、家庭以及社会带来的负面影响有效预防艾滋病病毒的传播。

microRNA-149-5p 对宫颈癌细胞生物学功能的影响

刘璐[1]、吕学峰[1]、秦东春[1,2]
1. 郑州大学第一附属医院
2. 河南省医学重点实验室

目的 本研究通过检测 30 例宫颈癌组织及癌旁组织中 miRNA-149-5p 的表达水平，分析 miRNA-149-5p 分子表达水平与患者临床病理特征是否相关。通过构建 miR-149-5p 细胞转染模型，检测 miRNA-149-5p 对宫颈癌细胞（HeLa 和 SiHa）增殖、侵袭、迁移和凋亡的影响，并通过生信探讨 miRNA-149-5p 在 CC 中的作用机制，为 CC 的机制研究提供理论基础。检测 miR-149-5p 在宫颈癌组织中的表达，分析 miR-149-5p 与患者临床病理特征的相关性，进行 miR-149-5p 在宫颈癌（HeLa 和 SiHa）细胞中的功能及潜在作用机制探究。
方法 收集 30 对确诊为 CC 患者的癌组织与癌旁组织，使用 qRT-PCR 检测 miR-149-5p 的表达情况，分析 miR-149-5p 与患者临床信息相关性。通过细胞转染实验，在 CC（HeLa 和 SiHa）细胞中过表达和敲低 miR-149-5p。通过细胞功能实验（CCK-8、Transwell、细胞周期实验、细胞凋亡检测）验证 miR-149-5p 对 CC 细胞的影响。利用生信预测 miR-149-5p 的靶标 FASL，qRT-PCR 和 WB 检测在 SiHa 细胞中敲低 miR-149-5p 表达后 FASL 基因表达的变化。
5.使用 GEPIA2 和 GEO 数据库对 miR-149-5p 的靶基因 PDE1B 进行下游通路分析。
结果 miR-149-5p 在 CC 癌组织中低表达，且与患者淋巴结转移情况呈负相关。.与 mimic NC 组相比，miR-149-5p 在 HeLa 和 SiHa 细胞 miR-149-5p mimic 转染组中表达显著上调，与 inhibitor NC 组相比，miR-149-5p 在 SiHa 细胞 miR-149-5p inhibitor 组中表达显著降低。过表达 miR-149-5p 可抑制细胞增殖、迁移、侵袭和细胞周期，促进 CC 细胞凋亡，敲减 miR-149-5p 可促进细胞增殖、迁移、侵袭和细胞周期，抑制 CC 细胞凋亡。与 inhibitor NC 组相比，FASL 在 miR-149-5p

inhibitor 组中表达显著增高。5.miR-149-5p 靶基因 PDE1B 在 CC 组织中具有表达差异，且 PDE1B 参与调控多个信号转导过程，提示 miR-149-5p 异常表达可能在 CC 进展中发挥重要作用。**结论** miR-149-5p 在宫颈癌中发挥抑癌作用，可能通过靶向 FASL 抑制宫颈癌细胞的增殖、迁移、侵袭和细胞周期，促进细胞凋亡。

PU-1341

miR-100 通过靶向 CXCR7 抑制肝癌细胞的增殖、侵袭和迁移

葛一漫、张朝明、张灵玲、雍江堰
成都中医药大学附属医院

本研究旨在阐明 miR-100 在肝细胞癌进展中的作用，并探讨其机制。采用实时定量 PCR (quantitative real-time PCR, qRT-PCR)检测正常肝癌组织中 miR-100 的表达水平。使用 Transwell、CCK-8 和集落形成法测定转染 mimic-NC 或 mimic-miR-100 的肝癌细胞系的侵袭性和增殖能力。CXCR7 和 miR-100 之间的结合位点使用荧光素酶报告基因测定。通过共转染实验进一步证实 CXCR7 和 miR-100 在肝细胞癌进展中的相关性。我们的结果显示，miR-100 在肝细胞癌组织中表达显著降低，并与 CXCR7 表达呈负相关。细胞功能检测结果发现，miR-100 的上调抑制了肝细胞癌细胞的增殖、侵袭和迁移能力。荧光素酶报告基因检测显示 CXCR7 mRNA 与 miR-100 相互结合。增加 CXCR7 表达逆转了上调 miR-100 在肝细胞癌细胞中的抑制作用。进一步研究表明，miR-100/CXCR7 通过调节金属蛋白酶-2 (MMP2)和血管内皮生长因子(VEGF)在肝癌的进展中发挥作用。总之，miR-100 对肝细胞癌具有抗肿瘤作用。miR-100 的过表达通过靶向 CXCR7 减弱肝细胞癌细胞的侵袭和增殖能力。

PU-1342

PCT.BNP.cTnI 在脓毒症患儿早期诊断中的价值

陈来英
资阳市第一人民医院

目的 探讨血清降钙素原(PCT)、N 端脑钠肽前体(NT–proBNP)、肌钙蛋白 I(cTnI)测定在脓毒症患儿早期诊断中的价值。
方法 选择近两年来我院就诊的脓毒症患儿 88 例,按照患儿病情分为严重脓毒症组 56 例、脓毒症休克组 32 例,并选择没有达到脓毒症诊断标准的相应年龄、性别的普通住院患儿 88 例作为对照组。检测三组患儿血清 PCT、NT–proBNP、cTnI 的水平,并分析三项指标单独检测与联合检测的灵敏度、特异度以及阳性预测值。
结果 与对照组患儿相比较,严重脓毒症组以及脓毒症休克组患儿血清 PCT、NT–proBNP、cTnI 水平均较高,脓毒症休克组患儿均显著高于严重脓毒症组,差异均具有统计学意义(P<0.05)。三项指标联合检测的灵敏度、特异度以及阳性预测值均高于各项指标单独检测,差异均具有统计学意义(P<0.05)。
结论 脓毒症患儿血清 PCT、NT–proBNP、cTnI 水平会显著升高,且与患儿病情密切相关,三项指标联合检测诊断脓毒症的准确度较高。

PU-1343

IL-33 与多囊卵巢综合疾病进展关系的研究

易楠
郑州大学第一附属医院

目的 通过检测 PCOS 患者血清中 IL-33 水平,探讨两者之间的相关性。
方法 选取 2017 年 3 月—2019 年 2 月间 30 例多 PCOS 患者,30 例健康对照者作为研究对象,应用 ELISA 方法检测所有研究对象 PCOS 组和健康对照组血清中 IL-33 水平,并进行统计学分析。
POCS 患者 IL-33 水平与健康对照组相比显著升高,具有统计学差异,且 IL-33 水平与 POCS 疾病的发展呈正相关。
结论 IL-33 水平升高可能通过调节细胞免疫的变化而

PU-1344

重组 HMGB1-A box 蛋白对系统性红斑狼疮肾炎的缓解作用及其机制研究

孙文萍
山东第一医科大学附属省立医院

目的 系统性红斑狼疮是一种慢性自身免疫病，病程长且容易复发，严重威胁人类健康。狼疮肾炎是其中一种典型的并发症，对其治疗方法目前有很多研究。HMGB1-A box 是致炎因子 HMGB1 的特异性拮抗剂，本研究检测重组 HMGB1-A box 蛋白对系统性红斑狼疮肾炎的作用及其可能的机制。
方法 实验室重组 HMGB1-A box 蛋白，鉴定其生物学活性，并且检测其浓度。将造模成功的系统性红斑狼疮 BALB-C 小鼠按照年龄性别分为两组，每组 20 只，实验组注射实验室重组的 HMGB1-A box 蛋白，对照组注射等量的生理盐水。小鼠处死后，对小鼠肾脏进行病理学免疫组化染色，分别检测实验组和对照组肾脏炎症细胞的浸润情况。实验室内重组 HMGB1-A box 蛋白对狼疮肾炎的作用用单核细胞跨血管内皮细胞迁移 Transwell 的方法检测。把微血管内皮细胞株接种在具有通透性的 Transwell 小室的滤膜上，形成一单血管内皮细胞层，将该层血管内皮细胞分为实验组和对照组，实验组用重组 HMGB1-A box 蛋白干预 24 小时，对照组则用等量生理盐水干预相同时间，然后将单核细胞加入到上室中进行跨血管内皮细胞迁移，20 小时后，将迁移至下室的单核细胞收集起来用细胞计数仪计数，并且比较实验组和对照组之间单核细胞跨内皮细胞迁移的差异。
结果 肾脏病理结果显示：与对照组相比，实验组狼疮小鼠肾脏炎症细胞浸润明显减轻；Transwell 结果显示，与对照组相比，实验组单核细胞跨内皮细胞迁移至下室的细胞较对照组明显减少 ($P < 0.05$) 。
结论 重组 HMGB1-A box 蛋白对系统性红斑狼疮小鼠肾炎具有明显的缓解作用，其中一种可能的机制是减少了肾脏炎症细胞的浸润。

PU-1345

近 5 年住院精神病人免疫球蛋白、补体检测结果分析

张明华
资阳市精神病院

目的 在于了解长期住院精神病患者体液免疫状态，以便加强相应的提高免疫机能的治疗及手段，减少精神病人罹患机会感染的机率，相对提高精神病人生活质量，减少精神科工作人员护理难度。
方法 从我院近期(2016 年 5 月-2021 年 05 月)收治的精神症状的患者中,筛选符合入组条件的患者总

计 200 例进行对照研究，对研究结果与正常参考组进行比对分析。采 SPSS17.0 统计软件进行资料整理，用卡方检验及 t 检验进行统计分析，P＜0.05 为有显著性差异，有统计学意义。
结果 长期住院服药精神病人，其免疫球蛋白及补体检测结果明显低于正常对照组。
结论 长期住院精神病人的免疫功能监测，更能反应其免疫状态，有助于精神科医生和护士对病人的治疗，具有较大的社会经济学价值。

多发性骨髓瘤差异基因的生物信息学分析

秦东春[1,2]、吕学峰[1]、刘璐[1]
1. 郑州大学第一附属医院
2. 河南省医学重点实验室

目的 本研通过整合生物信息学分析来探究多发性骨髓瘤（MM）中的关键候选基因和信号通路。
方法 在 GEO 数据库中选择 GSE39754 数据集，通过 GEO2R 平台筛选多发性骨髓瘤（MM）患者相对于健康人的差异基因（DEGs）。然后利用 DAVID 网站对 DEGs 进行 GO 分析，用 REACTOME 网站进行信号通路富集分析，借助 STRING 网站构建 PPI 网络，并用 Cytoscape 软件对网络进行可视化筛选 Hub 基因，利用 PrognoScan 数据库分析 Hub 基因与 MM 患者的生存相关性。
结果 通过 GEO2R 平台共筛选出 302 个 DEGs。其中上调基因 217 个，下调基因 85 个。GO 分析的结果为：DEGs 富集到的 Top5 生物学过程：SRP 依赖的协同翻译蛋白靶向膜、翻译起始、病毒复制、核转录的 mRNA 分解代谢过程，无意义介导的衰变、核糖体 RNA 的加工；富集到的 Top5 生物学组件：细胞外泌体、核糖体、细胞膜、内质网膜、细胞外基质；富集到的 Top5 分子功能：核糖体的结构组成、poly(A)RNA 的结合、碳水化合物结合、蛋白质结合、受体活性。通过 REACTOME 网站分析显示：上调基因富集到的信号通路有 srp 依赖的协同翻译蛋白靶向膜、无义介导衰变(NMD)独立于外显子连接复合体(EJC)、形成一个自由的 40S 亚基池、GTP hydrolysis and joining of the 60S ribosomal subunit、病毒信使核糖核酸的翻译；下调基因富集到的信号通路有中性粒细胞脱颗粒、先天免疫系统、抗菌肽、 免疫系统、白细胞介素-4 和白细胞介素-13 信号。构建 PPI 网络，筛选出 Top10Hub 基因：SEC61A1、UBA52、HSPA5、RPLP0、EPRS、RPL11、RPS23、RPS3、RPL30、RPL18，利用 PrognoScan 数据库分析 Hub 基因与 MM 患者的生存相关性发现 HSPA5、EPRS、RPL30 与 MM 患者的生存情况明显相关。
结论 总共筛选出 302 个多发性骨髓瘤 DEGs，包括 217 个上调基因和 85 个下调基因，从中筛选出 Top10Hub 基因：SEC61A1、UBA52、HSPA5、RPLP0、EPRS、RPL11、RPS23、RPS3、RPL30、RPL18，其中 HSPA5、EPRS、RPL30 与 MM 患者的生存关系最为显著。

PU-1347

血清肿瘤标志物对胃癌诊断和准确率观察

熊杨
资阳市乐至县人民医院

目的 探讨血清肿瘤标志物 CA199、CA125、CA242、CA724 对胃癌诊断和准确率观察。
方法 选取早期胃癌患者 51 例，我院内科 2018 年 1 月至 2019 年 6 月收治，为本次研究的观察组 A。同时选取同期我院收治的良性病变患者 51 例，为本次研究的观察组 B。选取同期于我院进行健康体检者 51 例，为本次研究的对照组。三组均接受多种血清肿瘤标志物的联合检测诊断。对血清肿瘤标志物对胃癌诊断和准确率进行观察研究。

结果 观察组 A 的 CA199、CA125、CA242、CA724 均显著高于观察组 B 和对照组的血清肿瘤标志物水平，差异具有统计学意义（P<0.05）。观察组 B 和对照组的血清肿瘤标志物水平相较，经检测无差异（P>0.05）。观察组 A 组的胃癌患者的胃癌血清肿瘤标志物联合检出率为 74.50%，显著高于各单项的血清肿瘤标志物检出率，差异具有统计学意义（P<0.05）。
结论 血清肿瘤标志物在胃癌患者诊断效果效果显著，而血清肿瘤标志物联合检测效果更加，显著提高患者疾病诊断准确率。

双抗原夹心 ELISA 法检测登革病毒患者血清中的 EDⅢ抗体

丁细霞
南方医科大学珠江医院

目的 建立一种检测登革病毒（dengue virus,DENV）特异性抗体的双抗原夹心 ELISA 方法。
方法 利用毕赤酵母系统表达 4 个血清型登革病毒包膜蛋白Ⅲ区（envelope protein domain Ⅲ,EDⅢ），并采用改良过碘酸钠法对 EDⅢ蛋白标记 HRP，建立一种可同时检测四个血清型登革病毒 EDⅢ蛋白特异性抗体的双抗原夹心 ELISA 法。并对 2014 年广州珠江医院门诊和住院确诊的登革热患者血清标本进行检测，并与澳洲 Panbio MAC ELISA 检测的敏感性进行比较。
结果 本研究成功建立了一种检测登革病毒 EDⅢ蛋白特异性抗体的双抗原夹心 ELISA 法，该方法能同时检测到四个血清型登革病毒 EDⅢ蛋白免疫的小鼠血清和 I 型登革病毒 EDⅢ蛋白免疫的兔血清，而与烟曲霉 AF-MP 蛋白免疫的小鼠血清和兔血清均无交叉反应。对 184 份健康人血清标本检测全为阴性，而对 168 份确诊的登革热患者血清标本检测结果表明，两种诊断方法检测结果无统计学差异，P<0.0001（56.0% vs 58.3%）,联合 NS1 抗原检测方法，其敏感性提高到 95.2%。
结论 双抗原夹心 ELISA 法检测登革病毒 EDIII 特异性抗体具有高度的特异性，但如果能同时联合抗原检测可明显提高登革热的早期诊断率。

PU-1349

抗核抗体系列检测对狼疮性肾炎进行鉴别诊断的临床意义

张娜、郭欣
哈尔滨医科大学附属第一医院

目的 探讨抗核抗体（ANA）系列指标在狼疮性肾炎（LN）患者中的表达情况及临床意义。
方法 对 406 例系统性红斑狼疮（SLE）患者（其中 LN 122 例）和 74 例其他自身免疫病患者及 120 例健康体检者采用间接免疫荧光法测定抗核抗体(ANA)，应用欧蒙印迹法测定抗核抗体系列。
结果 SLE 患者 ANA 阳性率为 94.49％，与其他自身免疫病组间差异显著，(p<0.05)；与对照组比较 P<0.01，差异极显著。LN 组 ANA 系列中，8 个检测项目阳性率均高于不伴肾炎 SLE 组，差异有统计学意义（p<0.05）。抗双链 DNA 抗体+抗 Sm 抗体+抗 nRNP 抗体同时阳性时，LN 组阳性表达显著高于不伴肾炎 SLE 组（p<0.05）。当抗双链 DNA 抗体阳性时，LN 组抗组蛋白抗体、抗核小体抗体和抗核糖体 p 蛋白抗体同时阳性的表达也显著高于不伴肾 SLE 组（p<0.05）。
结论 抗核抗体及抗核抗体系列的联合检测可以相互补充，对提高狼疮性肾炎的诊断率及判断预后、指导治疗等方面具有重要意义。

PU-1350

7 种肿瘤标志物检测对胸腔积液的诊断价值

丁兴龙
徐州矿务集团总医院检验科

目的 探讨胸腔积液 CEA、CA125、 NSE 、CYFRA21-1 、CA50 、SCC、 TSGF 等 7 种肿瘤标志物检测对胸腔积液良恶性的诊断价值。
方法 回顾性分析我院 2019 年 2 月至 2020 年 2 月 195 例胸腔积液住院患者的临床资料，按照胸腔积液性质分良性胸腔积液 109 例为对照组，恶性胸腔积液 96 例为观察组。其中观察组按照脱落细胞类型分为小细胞癌组 10 例，鳞癌组 18 例，腺癌组 68 例。比较 2 组患者及不同病例类型肺癌胸腔积液中 7 种肿瘤标志物的水平差异，同时比较 7 种肿瘤标志物在恶性胸腔积液中的诊断效果。
结果 观察组中 CEA、 NSE、 CYFRA21-1、 CA50 、TSGF 水平明显高于对照组，差异具有统计学意义（P<0.05）。不同病例类型肺癌胸腔积液中小细胞癌 NSE 明显高于其他两组（P<0.05），小细胞癌及腺癌组 CA50 明显高于鳞癌组（P<0.05），鳞癌组 SCC 明显高于腺癌组。CEA 、NSE、CYFRA21-1、 CA50、 SCC、 TSGF 的 ROC 曲线下面积（AUC）分别为 0.992、 0.663、 0.735、0.801、 0.525、 0.680 。所有指标诊断准确度好，CEA 诊断准确度最好，灵敏度和特异性均高于其他指标。诊断率分别 93.54%、39.64%、48.74%、60.38%、25.93%、38.89%。
结论 肿瘤标志物检测对鉴别胸腔积液良恶性及疾病的诊断具有重要价值。

PU-1351

抗心磷脂抗体检测对狼疮性肾炎患者的诊断意义

郭欣、张娜
哈尔滨医科大学附属第一医院

目的 探讨抗心磷脂抗体（ACA）、抗核小体抗体、补体 C3 检测对狼疮性肾炎（LN）患者的诊断意义。
方法 对 406 例系统性红斑狼疮（SLE）患者（其中 LN 122 例）和 120 例健康体检者采用 ELISA 方法测定抗心磷脂抗体，应用欧蒙印迹法测定抗核小体抗体，应用散射比浊法测定补体 C3 水平。
结果 ACA 阳性率在 LN 组和非 LN 组间差异无统计学意义（p>0.05）；与对照组比较 P<0.01，差异显著。抗核小体抗体阳性率和补体 C3 水平在 LN 组和非 LN 组间，差异有统计学意义（p<0.05）；与对照组比较差异显著（P<0.01）。
结论 抗心磷脂抗体、抗核小体抗体、补体 C3 的联合检测可以相互补充，对狼疮性肾炎的诊断及鉴别诊断、预后判断等方面具有重要意义。

PU-1352

急诊胸痛病人超敏 C -反应蛋白检测的诊断价值

姜玉玲、徐兆珍
哈尔滨医科大学附属第一医院

目的 检验超敏 C -反应蛋白（hs-CRP）对急诊室胸痛病人的诊断价值
方法 从 2014 年 1 月至 2014 年 12 月，对急诊接诊主诉为胸痛的病人进行超敏 C 反应蛋白测定，以及心电图检查
结果 各组心血管性疾病患者(112 例)血清 hs - CRP 浓度显著高于对照组(52 例，1.07±0.93mg/L) ，而非心血管性疾病组与对照组相比无显著差别

结论 hs - CRP 的测定可辅助急诊胸痛病人预测心源性疾病的发生，有助于急诊室心源性疾病的诊断。

PU-1353

尿视黄醇结合蛋白及尿微量白蛋白在糖尿病肾病中的早期诊断价值

张娜、徐兆珍
哈尔滨医科大学附属第一医院

目的 探讨 2 型糖尿病(DM)患者尿视黄醇结合蛋白(RBP) 、尿微量白蛋白(ALB) 在糖尿病肾病的早期诊断意义。
方法 选取受检者 24h 尿, 离心去上清液, 运用 ELISA 法测定 RBP、ALB 表现。
结果 2 型 DM 患者尿 RBP、ALB 的阳性率高于尿常规蛋白的阳性率, 尿常规蛋白阳性的尿 RBP、ALB 比尿常规蛋白阴性的阳性率高,不同病程的 DM 患者随着病程的延长尿 RBP、ALB 的阳性率就越高。
结论 检测 DM 患者尿 RBP、ALB 有助于早期诊断糖尿病肾病。

PU-1354

乙肝表面抗原和乙肝表面抗体同时存在的模式分析

姜玉玲、徐兆珍
哈尔滨医科大学附属第一医院

目的 分析乙型肝炎病毒（HBV）感染者乙肝表面抗原（HBsAg）与乙肝表面抗体（HBsAb）同时阳性的模式，与 HBV DNA 的关系，以及其产生的原因及临床意义。
方法 采用化学发光微粒子免疫分析法（CMIA）检测样本的 HBV 血清标志物，从中选出 HBsAg 和 HBsAb 同时阳性的样本，采用荧光定量聚合酶链反应(FQ-PCR)检测其 HBV DNA 定量值。
结果 在选取的 HBsAg 和 HBsAb 同时阳性的 37 例样本中，有 21 例血清 HBV-DNA 检测阳性，阳性率为 57％。
结论 乙型肝炎患者出现 HBsAg 和 HBsAb 同时阳性，原因复杂，不同 HBsAg 亚型双重感染可能是主要原因。HBsAg 和 HBsAb 同时阳性并不代表疾病真正好转，相反其预后较差，应当引起重视。

PU-1355

乙肝血清学标志物检验临床价值研究

凌燕
资阳市乐至县人民医院

目的 探究乙肝血清学标志物两对半检测的临床价值。
方法 选取本院 2018 年 1 月到 2020 年 11 月期间收治的 3186 例在检验科对血标本进行两对半化验的患者进行研究，检测两对半使用 ELISA 法试剂盒，对其结果进行分析，发现其中有 1978 例呈现阳性模式。
结果 两对半检测 3186 例结果中，血清标志物 5 项全部（-）1208 例，出现比率为 37.91%；至少一项成（+）1978 例，出现比率为 62.08%，以 15 组阳性模式出现，其中检测出有 628 例具有保护性的 HBsAb 呈现阳性，出现比率 19.71%。

结论 为了有效的对乙肝病毒进一步的预防和控制，需要对乙肝相关疾病的知识加大宣传的力度，需要接种乙肝疫苗工作更好的开展，需要对广大人民参与检测乙肝两对半的行为进行积极的鼓励。

PU-1356

2007～2012 年哈医大一院艾滋病感染者情况分析

张萱、周海舟
哈尔滨医科大学附属第一医院

目的 中国大多数医院都有可以进行 HIV 检测。然而，这还不是一个面向所有患者的常规试验，许多患者就诊时仍不知道他们感染了艾滋病病毒。目的了解我院艾滋病病毒的感染率和影响感染的因素。
方法 我们收集了从 2007 年到 2012 年这 6 年来就诊于哈尔滨医科大学附属第一医院的 348151 位患者的血液样本，用 ELISA 法进行初筛。阳性结果的标本用不同厂家的试剂盒进行复查，若有一个结果为阳性，就送往疾病预防和控制中心进行确诊实验。
结果 从 2007 年到 2012 年我院 HIV 检测的阳性率有逐渐上升的趋势。并且 HIV 感染与患者的性别、年龄、职业、婚姻状况、教育水平和感染途径相关。艾滋病在男性中更加普遍。超过 80%的 HIV 阳性患者没有接受过高等教育（>12 年）。传播方式主要由为性传播感染，其中由于同性接触而引起的 HIV 感染近年急剧增加，感染率在 36.4%到 65.1%之间。
结论 近年来在医院被诊断为艾滋病毒阳性的患者数量显著增加。提供院内 HIV 常规检测具有可行性并且对艾滋病感染者和患者家属的自身健康有着重要的作用。

PU-1357

降钙素原、C 反应蛋白用于乙肝肝衰竭患者合并感染的诊断意义

宋晓君
乐至县人民医院

目的 探讨降钙素原和 C 反应蛋白用于乙肝肝衰竭患者合并感染的诊断意义。
方法 从我院收治乙肝肝衰竭合并感染患者抽取 50 例作为感染组，另选取乙肝肝衰竭非感染患者 50 例作为非感染组，选取时间在 2019 年 10 月—2020 年 10 月，监测患者的降钙素原和 C 反应蛋白指标，对比两组患者指标变化。
结果 感染组患者相较于非感染组，PCT 和 CRP 指标均较高，P＜0.05。
结论 乙肝肝衰竭患者合并感染患者相较于非感染患者的 PCT 和 CRP 指标均较高，可应用在临床诊断的重要指标。

PU-1358

孕妇产前传染病指标检测结果分析

李文清
山东省千佛山医院

目的 通过对本院孕产妇产前传染病检测项目分析，了解传染病感染状况，为诊断治疗及产科防护提供依据。
方法 对 1653 例孕产妇产前采用化学发光法检测其血清乙型肝炎病毒表面抗原（HBsAg）、梅毒螺旋抗体（TP-Ab）、丙型肝炎抗体（HCV-Ab）、人免疫缺陷病毒抗体（HIVAg-Ab）。

结果 检出 HBsAg 阳性 42 例（2.54%），TP-Ab 阳性 6 例（0.363%），HCV-Ab 0 列，HIVAg-Ab 0 列。
结论 对本院 1653 例孕产妇产前传染病 4 项检测结果表明，HBsAg 阳性率最高，其次是 TP-Ab。在产前检查中应用传染病检测可及时发现孕产妇感染情况，可以减少或阻断母婴传播途径。也对医护人员针对性加强自我防护，减少或防止职业感染具有重要意义。

PU-1359

针对肿瘤标志物碱性磷酸酶（ALP）的 OFF-ON 型近红外荧光探针的设计、合成及临床应用

齐亚军
德州市人民医院

恶性肿瘤已成为威胁人类生命健康的主要疾病之一，在我国这种情况更为严重，能否尽早发现肿瘤和介入治疗对患者生存期的延长起到了重要作用。早期恶性肿瘤可以通过外科手术进行切除，这也是早期患癌病人的最有效和首选的治疗方案。然而，实体肿瘤的切除往往需要富有经验的临床医生负责完成，其往往需要肿瘤的体积达到一定大或出现明显转移灶才能确诊。因此，现代医学急需一种能够帮助临床医生快速诊断肿瘤存在和明确肿瘤大小及边界的检测手段，这也是广大科研工作者急需突破的诊断技术瓶颈。

在动物、植物、微生物中，碱性磷酸酶担任着蛋白质去磷酸化的作用，是调控细胞代谢，参与细胞分裂分化等信号通路上不可或缺的酶，与多种恶性肿瘤的发生发展相关。荧光成像方法是通过聚焦在蛋白质组和活细胞水平上，对 ALP 活性的检测进行了改善。在这其中，小分子荧光探针因具有良好的化学改性、生物兼容性和低成本等优点备受青睐。荧光探针检测法为非入侵性、传感机制简单，操作方法简便，但受到荧光染料的影响，导致其特异性差、不能准确识别，毒性以及存在背景干扰等。传统的荧光染料存在灵敏度低、特异性差、复杂的传感机制以及短的发射和激发波长等弊端，相比传统的荧光染料，近红外荧光染料有更长的激发和发射波长、极好的时空分辨率、更深的组织穿透力以及较低的自发荧光的背景干扰，可以更加完善的检测体内碱性磷酸酶的活性。因此，开发一种灵敏、可靠、简便的生物学和化学方法来检测碱性磷酸酶的表达水平是十分必要的。可以利用磷酸基团为 ALP 的反应位点，DCM 类染料为荧光发色团，合成能特异性检测 ALP 的 OFF-ON 型荧光诊断试剂探针。荧光诊断试剂采用 OFF-ON 型策略设计，基本原理为分子内电荷转移。诊断试剂在 OFF 状态，此时荧光基团处于缺电子状态，整个体系为不发荧光状态。当该体系在体内弱碱性环境下通过碱性磷酸酶的酶促去磷酸化后，磷酸酶去除荧光基团上的磷酸部分，导致分子内电荷转移效应的恢复和荧光的“开启”成为 ON 的状态，此时荧光基团处于给电子状态，该试剂可以发射激发光，并可以被荧光光谱仪检测到。

PU-1360

呼吸系统感染治疗中血清降钙素原检验的作用及准确性分析

易婷
资阳市乐至县人民医院

目的 探索呼吸系统感染治疗中血清降钙素原检验的作用及准确性。
方法 在 2018 年 4 月 21 日至 2019 年 6 月 29 日期间选取对照组 69 例健康体检者、观察组 69 例疑似呼吸系统感染患者为试验对象，均进行血清降钙素原，随后对比两组受检者血清降钙素原，分析降钙素原在疾病判断中准确性。
结果 观察组血清降钙素原（10.53±1.49）ng/mL 高于对照组（P＜0.05）。而血清降钙素原对细菌感染性肺炎准确性为 87.50%，对支气管炎准确性为 94.12%，对细菌感染性哮喘准确性为 96.67%，

且对呼吸系统感染的特异度为 92.86%，敏感度为 94.55%，误诊率为 7.14%，漏诊率为 5.45%。
结论 血清降钙素原在判断呼吸系统感染疾病时，具有较高特异性和敏感性，可鉴别机体感染程度。

PU-1361

化学发光法和 ELISA 法测定乙肝标志物的结果对比分析

李牧
复旦大学附属中山医院青浦分院

目的 研究化学发光法与酶联免疫吸附测定法在乙肝两对半检测中的应用。
方法 选取我院收治的乙肝患者 130 例作为研究对象，分别化学发光法和 ELISA 法检测乙肝 5 项血清标志物，并对乙肝少见模式的病例结果进行数据分析。
结果 ELISA 法和化学发光法检测 HBsAg、HBsAb、HBeAg、HBcAb 的一致性较好，化学发光法测定的检出率高，更灵敏。在少见模式中，ELISA 法测单独 HBeAb 阳性的 22 例标本中用化学发光法测得 22 例 HBeAb 全部阳性，但其中 4 例 HBsAg 弱阳性，2 例 HBsAb 强阳性，2 例 HBsAb 弱阳性，12 例 HBcAb 阳性，说明化学发光法检出率高。用 ELISA 法测得单独 HBeAg 阳性且 DNA 扩增<500 拷贝的 8 例标本用化学发光法测得全部阴性。
结论 化学发光法优于 ELISA 法，但化学发光法 HBeAg 阴性的乙肝感染者还应注意病毒低复制。化学发光法相比 ELISA 能有效防止发生漏诊、误诊。

PU-1362

粪便隐血与肿瘤标志物联合诊断结直肠癌的效果分析

唐昌伟
资阳市乐至县人民医院

目的 讨论粪便隐血与肿瘤标志物联合诊断结直肠痛的效果。
方法 将 50 例于 2018 年 6 月-2020 年 3 月期间本院收治的疑似结直肠癌患者作为研究对象,所入选患者均实施粪便隐血与肿瘤标志物检测,本次研究诊断金标准为病理诊断结果,评判标准:类便隐血与肿瘤标志物联合诊断结直肠癌的准确率。
结果 50 例疑似结直肠癌患者经病理诊断后有 45 例确诊,剩余 3 例为局限性结肠炎、2 例为肠结核。典便隐血联合肿瘤标志物检测下的诊断准确性、敏感性及特异性水平均明显高于单一检测,P<0.05。
结论 与单独性实施粪便隐血检测与肿瘤标志物检测相比,这两种检测方式联合实施下结直肠癌瘸症的诊断准确性、敏感性及特异性更高,值得推广。

PU-1363

ELISA 法在诊断梅毒螺旋体感染中的临床应用对提高检验准确性的价值

陈阳
资阳市乐至县人民医院

目的 分析研究 ELISA 法在诊断梅毒螺旋体感染中的临床应用对提高检验准确性的价值。
方法 纳入 2018 年 04 月至 2019 年 04 月接收的 90 例梅毒螺旋体感染患者，随机平均分为 2 组，对照组 45 例采纳 TRUST 检验，观察组 45 例采纳 ELISA 法，对比特异性、敏感性及准确性。
结果 观察组特异性、敏感性及准确性明显较对照组更高，数据对比差异显著，P＜0.05。

结论 实施 ELISA 法，可提高梅毒螺旋体感染患者诊断率的效果，在临床中值得应用和推广。

PU-1364

超敏 TNI 结果异常增高的原因分析

王连明、鲁平
哈尔滨医科大学附属第一医院

目的 患者症状与超敏 TNI 测定结果不相符，证多个检测系统对同一份样本的测定结果之间差异显著，寻找产生差异的可能原因。
方法 通过动态观察同一患者的超敏 TNI 的测定结果，与同期的临床症状及其他检查、检验结果进行综合分析；在多个品牌、型号的检测系统进行相同样本的检测，观察其差异，并分析原因。
结果 经仔细询问患者,近期未服用生物素制品,核对所服用药物的成分也未发现含有生物素,排除了生物素的干扰; 通过动态观察同一患者的超敏 TNI 的测定结果，与同期的临床症状及其他检查、检验结果进行综合分析发现其临床症状与超敏 TNI 的动态变化不同步。同时在罗氏、强生、西门子、雅培的仪器上测定同一份病人样本得到的结果，其超敏 TNT 或超敏 TNI 升高的倍数差别较大，进一步证实样本中存在干扰测定的物质，且对不同品牌的试剂干扰程度不同。后检测到病人的类风湿因子异常增高，经分析判定病人样本中的类风湿因子是引起超敏 TNI 升高的主要原因。
结论 对于无明显器官/组织功能异常的临床及生物化学指征出现的高超敏 TNI 情况，应怀疑样本中存在影响测定的物质存在，如本病人的类风湿因子异常增高，以保证测定结果对临床的诊断意义。

PU-1365

两种化学发光检测系统对血清降钙素原测定结果的可比性研究

唐万富
安岳县中医医院

目的 探讨迈克 i3000 化学发光仪和罗氏 Cobase e601 电化学发光仪针对人血清中降钙素原(PCT)的检测能力是否等效以及检测结果的可比性。
方法 分别以迈克 i3000 化学发光仪和罗氏 Cobase e601 电化学发光仪为目标系统和待测系统。收集均匀分布于试剂说明书所标注的线性区间(0.02~24ng/mL)内的 120 例血清标本,且排除脂血、溶血及黄疸标本,分别在两个检测系统内检测 PCT 数值。依据 NCCLS EP9-A2 文件并运用 SPSS 20.0 或 EXCEL 软件进行离群点检查,绘制绝对偏倚图和相对偏倚图,计算相关系数和回归方程,统计符合率和 Kappa 值,并进行偏倚分析,综合评估 2 个检测系统检测 PCT 的检验效能和可比性。
结果 纳入的 120 例标本中无离群值;两种设备检测的 PCT 结果高度相关(r=0.987,P〈0.01);回归方程:Y=1.069X-0.021,F 检验显示回归方程差异有统计学意义(P〈0.05);对回归方程的两个系数进行 t 检验显示,截距(b)则反之差异无统计学意义(P=0.768〉0.05),而斜率(a)比较差异有统计学意义(P〈0.05).PCT 在定值 0.23 ng/ml 和 0.50 ng/ml 时的系统误差(SE%)分别为 5.40%和 2.60%.
结论 迈克 i3000 化学发光仪和罗氏 Cobase e601 电化学发光仪检测 PCT 的相关性和线性良好;一致性和符合率均一致,即两者的检验效能一致,均能满足临床检测需求,但两个检测系统检测 PCT 的具体结果数值不具有可比性。

PU-1366

肺部感染患者甲状腺激素的变化及其临床诊断价值

龚代黔
资阳市安岳县中医医院

目的 研究肺部感染患者、正常体检人员的 FT3、FT4 和 TSH 结果，以及肺部感染患者的甲状腺激素与其他可提示感染的指标 HsCPR、PCT 的结果比较。
方法 将 2019 年 1 月-2020 年 5 月我院肺部感染患者 116 例，体检组 116 例，甲状腺激素采用全自动化学发光免疫分析仪 I3000，游离三碘甲状腺原氨酸测定试剂盒、游离甲状腺素测定试剂盒、促甲状腺激素测定试剂盒，检测 FT3、FT4 和 TSH，降钙素原测定试剂盒检测 PCT，超敏 C-反应蛋白测定试剂盒检测 HsCPR。
结果 肺部感染患者与体检组 FT3 和 TSH 的 P<0.05，说明肺部感染患者与体检组的差异具有统计学意义；FT4 的 P>0.05，差异没有统计学意义，且 FT3 对肺部感染的发生的前中期具有一定的指导意义，但没有 PCT、HsCRP 的特异性高，但在对疾病的预后具有高于 PCT、HsCRP 的指导意义。
结论 肺部感染患者的血清 FT3、TSH 浓度低于正常组水平，FT3 可作为肺部感染预后的检测指标。

PU-1367

N 端 B 型脑利钠肽前体与超敏 CRP 联合检测在诊断慢性心力衰竭中的临床意义

唐旭
资阳市安岳县中医医院

目的 慢性心力衰竭（CHF）是各种心血管疾病导致心脏收缩与舒张障碍的一种综合征，主要表现为体液潴留，乏力，呼吸困难等，是心血管疾病的终末阶段。随着人口老龄化加重，CHF 的发病率，病死率也在逐年增加，因此对 CHF 患者进行早诊断，早治疗，促进患者心功能恢复从而延缓病情发展具有重要的临床意义。目前研究表明，心室负荷增加时导致 N 端 B 型脑利钠肽前体(NT-proBNP)释放，超敏 CRP（hsCRP）是在急性炎症期肝脏合成的细胞因子，是心血管疾病的危险因子。此研究旨在联合检测血清 NT-proBNP 和 hsCRP 对诊断 CHF 患者的临床价值。
方法 选取本院收治的慢性心力衰竭患者 88 例作为研究组，根据 NYHA 标准进行分级（Ⅰ级 5 例，Ⅱ级 13 例，Ⅲ级 32 例，Ⅳ级 38 例），同期选择本院健康体检者 30 例作为对照组,通过电化学发光法和透射免疫比浊法对两组研究对象血清 NT-proBNP 和 hsCRP 进行测定并对结果进行比较。
结果 研究组 NT-proBNP 和 hsCRP 水平均明显高于对照组且差异具有统计学意义（P<0.05），研究组中不同心功能分级患者随着心功能下降 NT-proBNP 和 hsCRP 结果逐渐上升，组间两两比较差异有统计学意义（P<0.05）。
结论 CHF 患者血清中 NT-proBNP 和 hs CRP 水平明显升高，且随疾病严重程度呈现一定变化，对 CHF 诊断及病情评估具有重要的临床价值。

PU-1368

心型脂肪酸结合蛋白在急性心肌梗死中的应用

王一多、金英玉
哈尔滨医科大学附属第一医院

心肌梗塞（myocardial infarction）是冠状动脉闭塞，血流中断，使部分心肌因严重的持久性缺血而发生局部坏死。临床上有剧烈而较持久的胸骨后疼痛，发热、白细胞增多、红细胞沉降率加快，血清心肌酶活力增高及进行性心电图变化，可发生心律失常、休克或心力衰竭。患者多发生在冠状动脉粥样硬化狭窄基础上，由于某些诱因致使冠状动脉粥样斑块破裂，血中的血小板在破裂的斑块表面聚集，形成血块(血栓)，突然阻塞冠状动脉管腔，导致心肌缺血坏死，另外，心肌耗氧量剧烈增加或冠状动脉痉挛也可诱发急性心肌梗死。近年来，AMI 的发病率呈逐年上升趋势，是一种常见的心身疾病，每年由急诊科收治诊断的 AMI 患者也日益增多。近几年国内外在 AMI 的诊断中所使用的分子诊断标志物主要以 TnI/T 和 Mb 为主，但其作为主要的诊断依据却缺乏敏感性和特异性。这就导致对该疾病诊断、早期发现和预后评估加大了难度，进而可能延误患者的救治导致死亡。近年的研究发现心型脂肪酸结合蛋白（heart fatty acid-binding protein, HFABP）是心脏中富含的一种新型小胞质蛋白，它具有高度心脏特异性，但在心脏以外的组织中也有低浓度表达。心肌缺血性损伤出现后，hFABP 可以早在胸痛发作后 1-3 小时在血液中被发现，6-8 小时达到峰值而且血浆水平在 24-30 小时内恢复正常。国内外学者及生物制剂公司已经研制出以双抗体夹心法测定 HFABP 的试剂盒。

心型脂肪酸结合蛋白作为心肌细胞中特异性较高的一种蛋白质，其对于急性心肌梗死或者心肌损伤的诊断的意义非常重要，尤其是在心肌梗死的早期对于 AMI 的诊断较传统指标具有更高的灵敏性和特异性，所以研究心型脂肪酸结合蛋白对于指导临床诊断急性心肌梗死方面拥有重要意义。

PU-1369

乙肝病毒性肝炎患者两对半临床医学检验分析

邹航
安岳县人民医院

目的 乙型病毒性肝炎是乙肝病毒感染所致，该疾病的危害性不仅仅在于肝脏本身，乙型病毒性肝炎还会引起其他疾病，例如胆道感染、肾功能衰竭、糖尿病等等，对患者健康存在较大威胁。通过规范性的治疗能够稳定病情，减少传染性，降低肝硬化和肝癌的发生率。本次研究是对乙肝病毒性肝炎患者两对半临床医学检验结果。

方法 对我院 2018 年 11 月至 2019 年 11 月的 184 例乙肝病毒性肝炎患者进行研究。对其进行两对半临床医学检验，观察检查结果。

结果 经检查大三阳检出率 28.26%，小三阳检出率 19.56%，其他类型肝炎检出率 52.17%，组间结果比较差异具有统计学意义，差异明显（P＜0.05）。

结论 乙型病毒性肝炎分为急性、慢性，不同类型的疾病治疗方法不同，为此在乙型病毒性肝炎治疗中需要通过临床诊断鉴别疾病，实施针对性的治疗。两对半临床医学检验在乙肝病毒性肝炎诊断中检出率较高，具有一定临床价值。

PU-1370

小儿肺炎支原体感染临床检验的诊断价值研究

李虹桥
安岳县人民医院

目的 小儿 MP 感染在小儿肺炎中约占 20%以上，学龄期儿童是 MP 感染好发人群。该疾病经呼吸道飞沫、接触等方式传播，幼儿体质较弱，抵抗力不足更容易感染 MP.研究小儿肺炎支原体感染临床检验的诊断价值。
方法 对我院 2019 年 4 月至 2020 年 4 月的 74 例 MP 感染患儿进行研究。患儿均予以实验室痰培养和血清 IgM 抗体检测两种检查方法。比较两种方式的诊断结果。
结果 经诊断实验室培养共检出 31 例阳性，血清 IgM 抗体检测出 61 例阳性，两种诊断方法比较血清 IgM 抗体检测阳性检出率更高，差异明显（P＜0.05）。
结论 MP 感染检查中血清 IgM 抗体检测具有一定临床价值，有利于诊断疾病，具有临床价值可大力推广。

PU-1371

戊型肝炎抗体与血清 ALT 的关系探讨

贺洪军
安岳县人民医院

目的 戊型肝炎病毒（HEV）感染与血清丙氨酸氨基转移酶（ALT）升高的关系进行初步探讨，为了提高对戊型肝炎的认识，以免造成对戊型肝炎的误诊或漏诊。
方法 选择 ALT 异常升高（40-2000U/L）并除外甲、乙、丙、丁肝炎感染者的血清标本 300 例（0-40U/L 参考范围），其中门诊病人 155 例，住院病人 145 例进行抗 HEV-IgG、IgM 检测。
结果 HEV 的感染阳性率有显著性差异（P<0.01）,而 41-100U/L、101-150U/L、151-200U/L 这三组间无显著性差异(P>0.05)。若将此三组合并与≥200U/L 组比较，存在显著性差异（P<0.01）。
结论 HEV 吸引免疫活性细胞的能力可能不强，导致了其感染肝细胞后机体内的免疫活性细胞的损害并不严重。

PU-1372

系统性免疫失调与早期非小细胞肺癌患者临床特征的相关性研究

金胜航、郝志行、杜峰、武当、俞群、伍品
浙江大学医学院附属第二医院

背景 系统性免疫失调与肿瘤进展有关，然而系统性免疫失调在早期非小细胞肺癌中的临床意义并不清楚。
方法 利用 9 个标志物定义的 12 个外周血免疫参数，我们在发现组中探索了早期非小细胞肺癌病人的系统性免疫失调及其特征。然后我们检测了手术治疗对病人系统性免疫状态的影响。最后，我们在验证组中揭示了系统性免疫失调与早期非小细胞肺癌患者临床特征的相关性。
结果 我们发现早期非小细胞肺癌患者外周血出现一种显著的以总淋巴细胞、活化淋巴细胞、T 细胞、静息 T 细胞、CD8+T 细胞、CD4+T 细胞和 NKT 细胞减少及活化 T 细胞、活化 CD8+T 细胞、NK 细胞和 B 细胞增多为特征的系统性免疫失调。进一步研究我们发现，手术治疗可以部分性逆转非小细胞肺癌患者外周血系统性免疫失衡。此外，我们发现系统性免疫失调与肺癌患者多种临床特征，如性别、年龄、吸烟史、体重、病理类型、肿瘤分期、手术方式、肿瘤分化程度及 EGFR 突变等

有关。最后，我们发现系统性免疫失调与早期非小细胞肺癌患者合并症及围术期全身炎症反应综合征发生率相关。
结论 我们的研究发现非小细胞肺癌患者存在显著的系统性免疫失调，并证明了该系统性免疫失调与患者临床特征的相关性。这些研究结果提示系统性免疫失衡参与了肿瘤发展并有可能成为潜在的早期非小细胞肺癌预后预测及干预靶标。

PU-1373

流式细胞术动态监测食管癌患者手术及化疗前后 T 淋巴细胞亚群及 NK 细胞水平变化的意义

龚容
昆明医科大学第一附属医院

目的 探讨利用流式细胞术多时间点监测食管癌患者手术及化疗前后外周血 T 淋巴细胞亚群及 NK 细胞水平变化的价值及临床意义。
方法 采用流式细胞技术检测 39 例食管癌患者在手术及化疗前后外周血 T 淋巴细胞亚群和 NK 细胞的百分率，并与健康对照组比较并进行统计学分析。
结果 食管癌患者 T 淋巴细胞不同的亚群及 NK 细胞水平与正常人群相比均存在明显差异（$P<0.05$）；手术后 T 淋巴细胞各亚群及 NK 细胞水平均较术前明显下降（$P<0.05$），且在术后第 3 天为最低值，随后逐渐升高，但 $CD4^+/CD8^+$未见明显变化；患者化疗后 $CD3^+$、$CD4^+$比例及 $CD4^+/CD8^+$有所升高，而 CD8+比例下降，差异有统计学意义（$P<0.05$），在化疗后 3 周各 T 淋巴细胞亚群比例与化疗前相似，化疗前后 NK 细胞水平虽表现出与 $CD3^+$、$CD4^+$类似的变化趋势，但是并不显著。
结论 利用流式细胞术多时间点监测可发现食管癌患者手术及化疗前后免疫功能的状态及变化。患者的免疫功能处于受抑制的状态，手术后患者免疫功能更是出现一过性降低，化疗能够一定程度上改善这种状态，但长期来看，化疗对 T 淋巴细胞亚群及 NK 细胞水平的影响可能很小，这可能给予化疗与 T 细胞依赖性免疫治疗在同步或序贯方案中有效结合的想法一定的支持。

PU-1374

血清胃蛋白酶原、胃泌素-17 与幽门螺杆菌抗体分型检测临床分析 1

张培莉
山东第一医科大学附属省立医院

目的 检测体检人群幽门螺杆菌（Helicobacter Pylori，HP）感染情况，以及血清中胃蛋白酶原 I(PGI)、胃蛋白酶原 II（PGII）和胃泌素-17(G-17)的含量，探讨其与 HP 感染发生的相关性。
方法 选择 2017 年 2 月至 4 月到本院体检中心体检的 781 例人群，分别用幽门螺杆菌抗体分型试剂盒和酶联免疫吸附试验检测此人群的血清 HP 抗体分型、PGI、PGII、G-17 水平。运用用 SPSS22.0 分析系统，对该人群 HP 感染率，HP 感染者与非感染者间及不同分型感染者间 PGI、PGII、PGI/PGII（PGR）、G-17 水平差异进行分析，并对不同年龄不同性别体检者感染率及各水平差异进行分析。
结果 HP 阳性感染者占 49.81%，不同年龄组间有显著性差异（P<0.05）。HP 阳性与阴性者比较，血清中 PGI、PGII、PGR、G-17 水平有显著性差异（P<0.05）。将感染者按 HPI 型和 HPII 型分组比较，PGII、PGR 水平有显著性差异（P<0.05）。不同性别不同年龄组血清中 PGI、PGII 水平

均有显著性差异（P<0.05），PGI、PGII 水平男性较女性偏高；随年龄升高，PGI、PGII、G-17 有升高趋势，而 PGR 呈下降趋势。
结论 该地区体检人群中，血清 PG 水平与性别、年龄、HP 是否感染有关，且与 HP 感染分型密切相关。将 HP 抗体分型及血清 PG、G-17 水平联合作为胃功能常规检测，对早期胃部疾病的评估和筛查重要的意义。

PU-1375

Logistic 回归和 ROC 曲线评价 EB 病毒抗 VCA-IgM，AST，ALT 对 EB 病毒现症感染的诊断价值

张培莉
山东第一医科大学附属省立医院

目的 应用 Logistic 回归和受试者工作特征 ROC 曲线探讨 EB 病毒衣壳抗原 IgM（EB 抗 VCA-IgM）、AST、ALT 单向检测及联合检测对 EB 病毒现症感染的诊断价值。
方法 回顾性研究。收集 2016 年 1 月至 10 月化学发光法测定 EB 病毒抗 VCA-IgM 阳性的样本，RT-PCR 法检测 EB-DNA，酶速率法检测 AST、ALT,将标本分成 EB-DNA 阳性组和 EB-DNA 阴性组，运用 SPSS22.0 对各指标进行非参数检验，通过 Logistic 回归和 ROC 曲线对各指标进行分析。
结果 EBV DNA 阳性组抗 VCA-IgM、AST、ALT 水平均高于 EBV DNA 阴性组水平，差异有统计学意义（P < 0.05）。抗 VCA-IgM、AST、ALT 三者均与 EBV DNA 呈相关性（P < 0.05）。抗 VCA-IgM、AST、ALT 三者单项检测曲线下面积（AUC）分别为 0.803[95%CI(0.735～0.872)],0.788[95%CI(0.708～0.868)]，0.752[95%CI(0.671～0.832)]，三者联合检测的 AUC 为 0.830[95%CI(0.765～0.896)]，高于各指标单项检测 AUC。
结论 EB 病毒现症感染指标中，抗 VCA-IgM 意义最大，优于 AST、ALT，三者联合检测优于单项检测意义,有助于 EB 病毒感染及其他合并感染的诊断和防治。

PU-1376

解脲支原体感染、细菌性阴道病与女性不孕的相关性分析

岑宜静
四川省人民医院城东院区

目的 研究分析细菌性阴道病（BV）和解脲支原体(UU)感染与女性不孕的相关性。
方法 收集 2018 年 12 月~2020 年 12 月来我院辅助生殖中心就诊的 762 例患者做为此次研究的观察组，选取同期来我院体检的 200 例健康女性作为对照组，检测两组研究对象的细菌性阴道病（BV）和解脲支原体感染情况。将不孕症患者分为原发不孕（N=329）和继发不孕（N=433），对比不同不孕症类型患者的解脲支原感染（UU）和细菌性阴道病(BV)检测结果
结果 观察组患者的解脲支原体（UU）感染和细菌性阴道病(BV)的检出率均显著高于对照组，差异有统计学意义（P<0.05）。继发性不孕症患者的解脲支原体检出率显著高于原发性不孕症患者，差异有统计学意义（P<0.05）。
结论 女性不孕症与解脲支原体感染和 BV 有极为密切的联系，尤其是继发性不孕症患者的解脲支原体感染检出率更高。

PU-1377

三种抗双链 DNA 抗体检测方法在系统性红斑狼疮诊断中的效能评价

毕胜、朱红艳、孙鹭、沈燕迪
云南省第一人民医院

目的 评价间接免疫荧光法(IIFA)、免疫印迹法(LIA)和酶联免疫吸附法（enzyme-linked immunosorbent assay, ELISA）检测抗双链 DNA(dsDNA)抗体的性能。
方法 选取在本院就诊的 93 例系统性红斑狼疮（SLE）患者、84 例其他自身免疫性疾病患者和 50 例健康人作为对照组，采用上述 3 种方法检测血清中的抗 dsDNA 抗体。
结果 在 SLE 患者组中，抗 dsDNA 抗体检测阳性率最高的是 ELISA 法（60.2%），其次为 LIA 法（46.2%），最低的为 IIFA 法（38.7%），均显著高于对照组，差异有统计学意义（P<0.05）。特异度与阳性预测值最高的是 IIFA 法（99.3%、97.3%），灵敏度与阴性预测值最高的是 ELISA 法（60.2%、77.7%），ROC 曲线下面积最大是 ELISA（0.782），其次是 LIA 法（0.724），IIFA 法（0.690）。IIFA 法和 LIA 法(Kappa=0.881，P<0.001)、LIA 方法和 ELISA(Kappa=0.804，P<0.001)诊断结果一致性较好；IIFA 方法和 ELISA 方法诊断结果一致性一般(Kappa=0.693，P<0.001) 。
结论 推荐 ELISA 法联合 IIFA 法检测抗 dsDNA 抗体，对 SLE 诊断和病情活动监测有重要意义。

PU-1378

肾脏病患者血清过敏原检测结果分析研究

朱红艳、毕胜、孙鹭、沈燕迪、余亚玲
云南省第一人民医院

目的 探讨肾脏病患者食入性及吸入性过敏原分布情况。
方法 采用免疫印迹方法对 296 例肾脏病患者和 156 例正常对照的血清进行食入性及吸入性过敏原检测。
结果 肾病患者中食入性与吸入性过敏原阳性者占 70.3%（208/296）；对照组中过敏原阳性者占 31.4%（49/156），两组间差异有统计学意义（p<0.05）；过敏原阳性肾病患者中以肾病综合征（nephrotic syndrome, NS）患者最多，占 27.9%（58/208），其次是慢性肾衰竭（chronic renal failure, CRF）患者和 IgA 肾病患者，分别占 26.4%（55/208）和 11.1%。过敏原阴性肾病患者中 CRF 患者最多，占 40.9%（36/88），其次是 NS 患者，占 14.8%（13/88）,两组病人间差异有统计学意义(p<0.05)。同一种疾病过敏原阳性与阴性病人数量比值最高的是 IgA 肾病和 NS 患者（4.6 VS 4.5）；肾脏病人血清过敏原阳性患者中，最常见的过敏原是户尘螨占 76.4%（159/208）、其次是蟑螂占 58.7%（122/208）及腰果占 38.5%(80/208)。
结论 肾病患者尤其是 IgA 肾病和肾病综合征患者中过敏原阳性情况比较常见，户尘螨和蟑螂是该地区肾病患者中最常见的过敏原。因此，对于肾病患者应常规进行血清过敏原检测筛查。

PU-1379

浙江地区 0-14 岁儿童维生素 D 水平现状分析

柳强
杭州迪安医学检验中心有限公司

目的 了解浙江地区 0-14 岁儿童血清 25-羟维生素 D 水平和现状，为本地区儿童合理补充维生素 D 提供参考依据。
方法 血清 25-羟维生素 D 采用直接化学发光法检测。回顾分析本中心 2019 年 6 月 1 日至 2020 年 5 月 31 日浙江地区 20227 例 0-14 岁儿童健康体检血清 25-羟维生素 D 检测结果，计算 25-羟维生素 D 水平；分析其与年龄、性别以及季节变化之间的关系。
结果 浙江地区 20227 例 0-14 岁儿童血清 25-羟维生素 D 平均水平为（26.45±18.98）ng/ml，其中 25-羟维生素 D 充足(≥20.00ng/ml)占比 73.95%(14958/20227)，25-羟维生素 D 不足（12.00～20ng/ml）占比 23.02%(4657/20227)，25-羟维生素 D 缺乏（＜12.00ng/ml）占比 3.03%(612/20227)；不同性别儿童血清 25-羟维生素 D 水平比较，0-1 岁组和 3-6 岁组男、女童比较差异均无统计学意义[（33.96±19.41）ng/ml 比（33.50±19.47）ng/ml，（25.26±15.48）ng/ml 比（24.93±15.53）ng/ml，均 P＞0.05]，1-3 岁组和 6-14 岁组男童较女童高，比较差异均有统计学意义 [（29.17±19.15）ng/ml 比（28.48±18.21）ng/ml]较女童高[（19.50±13.13）ng/ml 比（18.63±12.69）ng/ml，均 P＜0.05] ；不同季节儿童 25-羟维生素 D 水平不同，秋季儿童血清 25-羟维生素 D 水平[（27.10±18.81）ng/ml]高于其他三季，[春（26.06±19.36）ng/ml、夏（26.57±18.76）ng/ml、冬（25.57±19.11）ng/ml]，其中冬季最低，差异均有统计学意义（均 P＜0.05）；随着年龄增大，儿童血清 25-羟维生素 D 的水平逐渐减低[0-1 岁组、1-3 岁组、3-6 岁组和 6-14 岁组分别为（33.76±19.44）ng/ml、（28.85±18.73）ng/ml、（25.11±15.50）ng/ml、（19.16±12.99）ng/ml]，不同年龄段儿童血清 25-羟维生素 D 的水平差异均有统计学意义（均 P＜0.05）。
结论 浙江地区 0-14 岁儿童维生素 D 营养状况总体良好，仅有小部分维生素 D 含量不足或缺乏。维生素 D 作为儿童生长发育的必要营养元素，其补充应该贯彻儿童发育的不同时期，且还应该根据当地季节变化补充 25-羟维生素 D。

PU-1380

新型冠状病毒防控措施对呼吸道感染谱影响的初步分析

曾家伟、彭梦
绵阳市中心医院

目的 分析新型冠状病毒（Severe acute respiratory syndrome coronavirus 2, SARS-CoV-2）流行后所采取的各种防控措施对甲型流感病毒（Influenza A virus, FluA）、乙型流感病毒（Influenza B virus, FluB）、副流感病毒（Parainfluenza virus, PIV）、腺病毒（Adenovirus, ADV）、嗜肺军团菌（Legionella pneumophila, LP）、肺炎支原体（Mycoplasma pneumoniae, MP）、肺炎衣原体（Chlamydia pneumoniae, CP）和呼吸道合胞病毒（Respiratory syncytial virus, RSV）在呼吸道中感染率的影响。
方法 收集 2019 年 3 月至 2021 年 2 月在绵阳市中心医院门诊和住院进行呼吸道病原体检测的原始数据结果，分析防控前（2019 年 3 月至 2020 年 2 月）和防控后（2020 年 3 月至 2021 年 2 月）8 项呼吸道病原体检出率的变化。
结果 在采取防控措施前 RSV、PIV、MP、LP、FluB、FluA、ADV 和 CP 的阳性率分别为 3.36%、4.62%、21.29%、5.99%、34.78%、36.64%、3.54%和 3.29%，总阳性率为 14.19%；在采取防控措施后，RSV、PIV、MP、LP、FluB、FluA、ADV 和 CP 阳性率分别为 3.21%、7.53%、20.25%、9.74%、27.06%、34.66%、2.57%和 2.29%，总阳性率为 13.41%。前后相比 MP、PIV、

LP、FluB、FluA、ADV 和 CP 阳性率的降低有统计学差异，RSV 阳性率的降低无统计学差异。检出抗体阳性的病例数除 PIV 和 LP 有小幅上升，分别增加了 18.49%和 18.34%外；其余均呈下降趋势，如 RSV（-30.39%）、MP（-30.82%）、FluB（-43.42%）、FluA（-31.21%）、ADV（-47.29%）和 CP（-49.47%），检出阳性的病例数平均下降 24.47%。

结论 针对 SARS-CoV-2 流行所采取的防控措施对降低呼吸道病原体的感染具有重要作用，特别在呼吸道感染性疾病高发季节，做好个人防护，采取有效的措施，能够大大降低感染风险。

PU-1381

核酸适配体在炎症性疾病诊疗中的应用

牛会敏
联勤保障部队第九〇〇医院

炎症是机体组织对损伤和感染的一种保护性生物反应，在病理状态时，促炎与抗炎细胞因子异常释放，选择性诱导受体细胞的特定信号，实现基因调控以影响宿主应答。基于适配体对目标分子高亲和力和特异性，且合成简单、易于修饰、成本低的优势，有望代替抗体用于临床诊断和治疗。本文综述了现有人工筛选的 12 种细胞因子的特异性适配体，包括 IL-1α、IL-6、IL-11、TNF-α、TGF- β、IFN-γ、IL-8、IL-17、IL-32、IL-23、MCP-1 和 IP-10；总结了基于适配体联合纳米材料及信号放大技术的电化学和光学传感器；列举了多种稳定性适配体在有效抑制炎症、减慢肿瘤进程中的免疫治疗应用。随着对疾病标志物的深入研究，需要继续筛选更多特异性适配体。在疾病诊断方面，适配体传感器需要从单一化向组合化发展，从复杂化向简便化发展。在治疗方面，多数适配体在动物测试中有效但还没有被批准用药，需要进一步结构修饰提高稳定性。目前，细胞因子适配体筛选、适配体作用机制分析、适配体相关的即时诊断技术研发及适配体药物的临床试验等方面仍需付出更多努力。

PU-1382

血清抗 Scl-70 抗体的检测分析与临床价值探讨

何增品
昆明医科大学第一附属医院

目的 研究流式点阵免疫发光法测定的抗 Scl-70 抗体联合抗核抗体（ANA）以及实验室检测指标在临床诊断中的意义，为疾病的诊断提供依据。

方法 选取 2019 年-2020 年来院就诊的 115 例抗 Scl-70 抗体阳性（>8.0）ANA（+）患者作为抗 Scl-70 抗体（+）组，以 406 例抗 Scl-70 抗体阴性（<0.2）ANA（+）患者作为抗 Scl-70 抗体（-）组，就两组患者的一般资料、临床诊断、ANA 核型和滴度、ANA 抗体谱及其他实验室指标进行研究，并对结果进行统计学分析。

结果 抗 Scl-70 抗体阳性患者男女比例 1:1.80，且以中老年居多，平均 54（43，67）岁，高于抗 Scl-70（-）组，差异有统计学意义（P<0.05）。抗核抗体 ANA 荧光核型以核仁型为主，其次为核颗粒型、核均质型。ANA 谱中抗 Scl-70 抗体>8.0 合并出现抗 SSA 抗体阳性比例最高，达 41.74%，差异有统计学意义（P<0.05）。临床诊断为系统性硬化症,占 30.43%，其次为结缔组织病，占 13.04%，干燥综合征，占 11.30%，系统性红斑狼疮，占 11.30%。抗 Scl-70 阳性患者血清免疫球蛋白均明显升高，差异有统计学意义（P<0.05）。抗 Scl-70 阳性患者补体 C3、C4 均明显降低，差异有统计学意义（P<0.05）。

结论 抗 Scl-70 阳性患者以中老年女性为主，ANA 荧光核型以核仁型为主，临床相关诊断主要为系统性硬化症，结缔组织病，干燥综合征，系统性红斑狼疮。使用流式点阵免疫发光法检测的抗 Scl-70 抗体联合间接免疫荧光发检测抗核抗体（ANA）对疾病的诊断与鉴别诊断有重要意义。

PU-1383

我院 2019 年-2020 年新生儿乙肝两对半结果分析

罗彩心
资阳市妇幼保健院

目的 为了解我区新生儿乙肝两对半的模式情况，为后期检验结果出具，合理性提供可参考依据。
方法 用化学发光方法检测乙肝五项。
结果 共统计 564 名年龄在 5 天以内的新生儿，四种模式最常见： HBV 五项全阴为 156 人，比率 22.3%；单独抗-HBS 阳性为 117 人，比率 20.74%；HBsAb、HBeAb、HBcAb 阳性为 128 人，比率为 22.69%；HBsAb、HBcAb 阳性人数 146 人，比率为 25.89%。相对少见得模式有三种：HBcAb 阳性人数为 19 人，比率 3.37%；HBeAb、HBcAb 阳性人数为 14 人，比率 2.48%；HBsAb、HBeAg、HBcAb 阳性人数为 9 人，比率为 1.59%。及少见模式四种：HBeAg、HBcAb 阳性人数为 2 人；HBsAg、HBsAb、HBcAb 阳性人数为 1 人；。HBsAg、HBcAb 阳性人数为 1 人；HBsAg、HBsAb、HBeAb、HBcAb 阳性人数为 1 人。
结论 5 天以内的新生儿，五项全阴，表抗体阳性，表抗体、e 抗体、c 抗体阳性，表抗体、c 抗体阳性这四种模式最为常见。

PU-1384

乙型肝炎患者血清免疫球蛋白的临床检验准确性及价值分析

杨利侠
资阳市中医医院

目的 分析乙型肝炎患者血清免疫球蛋白的临床检验准确性及价值。
方法 选取我院 2019 年 1 月至 12 月间收治的乙型肝炎患者 180 例作为此次研究的实验组，再将其按照疾病类型的不同分成各有 90 例的肝硬化组与非肝硬化组，其中肝硬化组再分为各有 45 例的代偿期组以及非代偿期组，此外，在选取同期在我院接受健康体检的人员 90 例作为参照组，对本次研究的所有患者均实施血清免疫球蛋白检测，并对检测结果进行对比分析。
结果 肝硬化组以及非肝硬化组患者的 IgA、IgM 以及 IgG 水平均高于对照组，且肝硬化组高于非肝硬化组，对比均具有统计学差异性（$p<0.05$）；而非代偿期组的 IgA 水平明显高于代偿期组，对比（$p<0.05$），具有统计学意义，但两组的 IgM 以及 IgG 水平对比则无统计学意义（$p>0.05$）。
结论 对乙型肝炎患者实施血清免疫球蛋白检测的价值较高，值得推广。

PU-1385

孕产妇产前检测免疫学检验的临床应用对降低不良分娩发生率的价值分析

兰隆琴
资阳市雁江区中医医院

目的 分析孕产妇产前检测免疫学检验的临床应用及对降低不良分娩发生率的价值。
方法 抽取 2019 年 1 月至 2020 年 8 月间我院收治的孕产妇 168 例作为此次的观察对象，并将其按照抽签法分成各有 84 例常规检验组以及常规检验+免疫学检验组，并对两组的疾病检出率、不良事件发生率、不良分娩发生率进行分析。
结果 从产妇疾病检出率上看，常规检验+免疫学检验组明显较高，与常规检验组相比显著（$p<0.05$），具有统计学意义；从不良事件发生率上看，常规检验+免疫学检验组明显较低，对比

结果（p<0.05），具有统计学差异性；从不良分娩发生率上对比，常规检验+免疫学检验组较低，与常规检验组相比具有统计学差异性（p<0.05）。
结论 孕产妇在产前检测中采取免疫性检验的临床价值较高，值得推广。

PU-1386

TPHA 法与 ELISA 法用于梅毒不同时期患者临床检验的价值分析

杨利侠
资阳市雁江区中医医院

目的 探讨梅毒螺旋体血球凝集试验法（TPHA）与酶联免疫吸附试验法（ELISA）对梅毒不同时期患者临床检验的效果。
方法 选取本院 2018 年 8 月至 2019 年 8 月收治 100 例梅毒患者建立研究组，包括一期梅毒 38 例、二期梅毒 62 例，同期纳入健康体检者 100 例建立对照组。受检者均进行 ELISA 法检测、TPHA 法检测。对比分析两种方法检验情况。
结果 ELISA 法对一期梅毒、二期梅毒阳性检出率相比 TPHA 法明显更高（P<0.05），两种方法检测对照组阳性检出率对比无明显差异（P>0.05）；ELISA 法检测敏感度与准确率相比 TPHA 法检测较高。
结论 临床针对不同时期梅毒疾病患者采用 ELISA 法检验相比采用 TPHA 法检验的敏感度与准确度更高，该方法操便捷，具有临床推广与应用价值。

PU-1387

2020 年吉林地区过敏原检测结果季节性分析

郭亚明
吉林金域医学检验所有限公司

目的 我国过敏性疾病人群发生率很高，是临床常见多发病。本文通过检测和分析吉林地区过敏原检测结果，为临床患者对过敏的预防及治疗提供参考依据。
方法 选取 2020 年 1 月至 2020 年 12 月吉林地区送检我公司的过敏原项目 500 例阳性患者为研究对象。特异性过敏原被吸附于硝酸纤维素膜表面，加入患者血清后孵育，标本中的特异性 IgE 与过敏原发生反应，结合到硝酸纤维素膜上。加入碱性磷酸酶标记的链酶亲和素，与生物素结合。加入 BCIP/NBT 酶作用底物孵育后，发生特定底酶显色反应，试剂条上出现沉底。颜色的深浅与血清中的 sIgE 抗体含量成正比，待试剂条干燥后，用过敏原检测仪器检测，读取定量检测结果。
结果 主要对过敏原阳性高发率当中的其中 2 项进行了统计，豚草在春季的阳性标本 53 例，占比 10.60%，夏季阳性标本 43 例，占比 8.60%，秋季阳性标本 4 例，占比 0.85%，冬季阳性标本 2 例，占比 0.05%。猫毛在春季阳性标本 59 例，占比 11.80%，夏季阳性标本 27 例，占比 5.50%，秋季阳性标本 60 例，占比 12.10%，冬季阳性标本 30 例，占比 6.12%。
结论 实验证明，豚草的发病季节在春季阳性率占比最高。猫毛在春季和秋季阳性率占比较高。目前过敏原最常用的筛查方法是免疫印记法。该方法是检测患者血清特异性 IgE 抗体。过敏原检测对过敏性疾病的诊断，治疗及预后判定均具有重要意义，检测发现过敏原并采取有效措施避免与之接触，是过敏疾病防治的基本原则。因此针对吉林地区，对豚草过敏的人群应远离豚草，远离过敏原就可以避免过敏的发生。对猫毛过敏的人群就不适宜养猫，避免接触猫毛，远离过敏原就可以避免过敏的发生。过敏并不可怕，只要适当远离过敏原就可以减少过敏疾病的发生。

PU-1388

胃癌应用 CA724、CEA、CA242、CA199 肿瘤标志物联合检验的分析

陶贵华、贺爱丽
德州市第二人民医院

目的 分析胃癌应用 CA724、CEA、CA242、CA199 肿瘤标志物联合检验的临床价值。
方法 选择 2018 年 1 月—2019 年 1 月于我院就诊的 30 例胃癌患者为观察组，另选同期 30 例胃良性病变患者为对照组，关于血清 CA724、CEA、CA242、CA199 的检测均给予电化学发光法、放射免疫法与酶联免疫吸附试验，对比分析两组患者的具体情况。
结果 观察组血清肿瘤标志物水平明显高于对照组，且多项检测敏感度随之提高（P＜0.05）。
结论 针对胃癌患者，CA724、CEA、CA242、CA199 肿瘤标志物能够极大的提升临床诊断敏感性，便于早期诊断，在临床上具有很高的应用价值。胃癌是一种恶性肿瘤，在临床上比较常见，关于诊断多采用影像学、胃镜与病理学检查等，会耗费大量的资源，即人力、财力等，并且需要专业人员。近年来，随着我国生活习惯的改变，胃部恶性肿瘤发生率逐年增加，且多出现在胃窦部，病理分型较多，主要是腺癌与鳞状细胞癌，对于胃癌患者而言，早期无典型症状，就诊时多发展到晚期，为此及早诊断能够有效的诊治疾病，取得良好预后效果。随着临床基础医学的逐渐发展，在早期诊断中血清肿瘤标志物的检测成本最低且最为快捷方便，通过特异性指标能够靶向诊断肿瘤，但是肿瘤具有多个形态，一种肿瘤所具有的肿瘤标记物有很多种。关于肿瘤的存在，可经肿瘤标志物及时反映出来，在正常机体中含量较少，在出现癌变时，会提高其浓度，伴随着不断提高的医疗水平，在临床中肿瘤标志物能够更加广泛的诊断恶性肿瘤，且能够将癌症发展进程在一定程度上反映出来，在病变组织与血液中能够检出，待其水平达到一定程度后，便可以提示恶性肿瘤的存在，如 CA724、CEA、CA242、CA199 等已经逐渐成为当下研究的重点。

PU-1389

梅毒抗体三种不同检测方法的检测应用及比较

张敏
合肥金域医学检验实验室有限公司

目的 探讨应用 3 种不同的血清学方法测定梅毒抗体并评价检测结果，建立适合自己实验室的梅毒检测流程。
方法 将 160 例已确诊为梅毒阳性血清标本分别采用酶联免疫吸附测定法（ELISA）、甲苯胺红不加热血清试验（TRUST ）、梅毒螺旋体明胶颗粒凝集试验（TPPA）检测血清梅毒抗体，观察三者的敏感度及特异性。
结果 酶联免疫吸附测定法（ELISA）检测阳性 158 例，阳性率为 98.75%；梅毒螺旋体明胶颗粒凝集试验（TPPA）法检测 154 例，阳性率为 96.25%；TRUST 法检测阳性 105 例，阳性率为 65.62%。而在 120 例非梅毒对照组中，经 TP-ELISA 检测 115 例为阴性，特异性为 95%，TPPA 阴性 118 例，特异性为 98%，TRUST 阴性 108，特异性为 90%。
结论 TP-ELISA 法检测梅毒螺旋体特异性抗体具有操作简便，结果易于保存，敏感度优于 TPPA 及 RPR 法等特点，但也存在一定的假阴性和假阳性为了提高梅毒检出率，对于 TP-ELISA 阳性标本，要做 TRUST 复检和 TPPA 确认实验。

PU-1390

合肥市高新区成人接种新冠疫苗后抗体水平检测结果分析

梅圣学
合肥金域医学检验实验室有限公司

目的 分析研究新冠疫苗接种后新冠抗体的检测结果。
方法 选取 2020 年 10 月份到 2021 年 3 月份送检我中心 103 例接种新冠疫苗 1 月左右的成人抗体水平，对这些人群采用磁微粒化学发光法进行新冠 IgM、IgG 和 IgA 抗体进行检测，并对其检测结果进行总结与分析。
结果 由于个体及新冠 IgM、IgG 和 IgA 抗体在人体中存在时间长短的原因，在我中心送检的 103 例新冠疫苗接种者，其中新冠 IgG 阳性率 90%，新冠 IgM 阳性率 72%，新冠 IgA 阳性率 8%.
结论 随着新冠疫苗接种率的不断提高，抗体检测会逐渐的开展起来，IgG 阳性率对疫苗接种效果监测有一定的辅助指导意义。

PU-1391

强直性脊柱炎发病机制研究进展

彭若玉
郑州大学第一附属医院

强直性脊柱炎（AS）是一种以脊柱及骶髂关节慢性炎症为主的全身性结缔组织疾病，目前 AS 病因和发病机制尚未明确，且疾病也无理想的早期诊断及治疗方法。前期研究发现，AS 的发生与遗传因素相关，且在 AS 发生过程中 miRNA 的改变已经被证实，据此我们可以推测，在此过程中相关的 circRNA 也发生改变，circRNA 与 AS 的生物学行为和临床表现有关，可以作为潜在的分子标志物和治疗靶点。本课题拟通过对 AS 发生相关 circRNA 及其调控 miRNA 的作用进行探讨，以增加我们对 AS 发病机制的了解，并进一步寻找有效的分子诊断标志物和药物治疗的作用靶点，为 AS 发生的早期诊断、有效治疗并改善预后等奠定基础。

PU-1392

异嗜性抗体对血清甲状腺功能免疫检测的干扰及分析处理

钱丹、刘畅、田野
陆军军医大学第二附属医院（新桥医院）

目的 分析和处理异嗜性抗体对血清甲状腺功能免疫检测的干扰。
方法 分别采用倍比稀释法，大分子蛋白干扰排除法，聚乙二醇（PEG）沉淀法及异嗜性抗体阻断剂对血清样本进行异嗜性抗体干扰的分析及处理检测。在排除大分子蛋白干扰的情况下，比较分析倍比稀释，PEG 沉淀，异嗜性抗体阻断剂处理前后的甲状腺功能免疫学血清检测的结果。
结果 使用贝克曼 IMMANGE800 测定干扰血清的免疫球蛋白及类风湿因子，结果均在正常参考范围以内可排除大分子蛋白对检测结果的干扰。使用 ARCHITECT i2000SR 系统检测干扰血清及对照组血清原倍、2 倍、4 倍、8 倍的甲状腺功能检测值，结果提示无干扰对照组倍比稀释检测值成线性，干扰血清倍比稀释检测值不成线性及相关性分析 R 值均小于 90。PEG 沉淀后血清高灵敏血清促甲状腺激素(TSH)，甲状腺球蛋白抗体(TGAB)，甲状腺过氧化物酶抗体(TPOAB)回收率均<40%。使用 ARCHITECT i2000SR 系统检测异嗜性抗体阻断剂处理前后甲状腺功能血清检测结果均在参考范围以内。

讨论 检测血清受到异嗜性抗体的干扰，利用倍比稀释，PEG 沉淀，异嗜性抗体阻断剂可以有效解决此类干扰作用。

PU-1393

感染新冠肺炎病毒康复者体内抗体水平分析

梅圣学
合肥金域医学检验实验室有限公司

目的 分析研究感染新冠病毒康复患者体内抗体的检测结果。
方法 选取 2020 年临床确认感染新型冠状病毒患者送检我中心的 116 例血清新型冠病毒抗体水平，我中心使用化学发光法对这些患者人群进行新冠 IgM、IgG 抗体定量检测，并对其检测结果进行总结与分析。
结果 在送检我中心的 116 例新冠康复者，其中新冠 IgG 阳性率 95%，新冠 IgM 阳性率 24%.
结论 随着新冠疫情的逐渐控制，新冠抗体检测逐渐的开展起来，由于 IgM 人体内存在的时间较短，而 IgG 抗体在人体内存在的时间较长，新冠 IgG、IgM 阳性率对临床监测有一定的辅助意义。

PU-1394

骨折患者纤维蛋白原浓度与骨不连的关系

耿丽丽
山东第一医科大学附属省立医院

背景 骨不连患者的诊断具有挑战性，因此，需要更多地诊断指标加以辅助。已有研究证明纤维蛋白原浓度是骨不连诊断有潜力的诊断指标。本研究的目的就是揭示纤维蛋白原浓度与骨不连的关系。
材料和方法 我们回顾性的研究了 2010 年 1 月-2019 年 5 月山东省立医院就诊的所有锁骨骨折和股骨骨折的患者共 438 例，在这些病例中，确定入排标准后，最终纳入完全愈合的患者 315 例，骨不连患者 23 例，通过曲线拟合、单因素分析、多因素分析的方法探讨血浆纤维蛋白原浓度与骨不连的关系。
结果 在这些所有患者中，骨不连患者大约有 5%。经曲线拟合显示纤维蛋白原浓度增加，骨不连风险越高。多因素分析的结果显示纤维蛋白原在没有调整变量时，纤维蛋白原每增加一个单位，骨不连的风险增加 55%；纤维蛋白原在调整了年龄和性别两个变量时，纤维蛋白原每增加一个单位，骨不连的风险增加 64%；纤维蛋白原在调整了年龄、性别、损伤机制和 ASA 变量时，纤维蛋白原每增加一个单位，骨不连的风险增加 48%。
结论 骨不连与血浆纤维蛋白原呈现独立相关关系。纤维蛋白原浓度增加，骨不连风险越高。

PU-1395

山东地区人群百日咳抗体阳性特征分析

赵万辉
山东第一医科大学附属省立医院

目的 分析山东地区人群中百日咳抗体的阳性特征情况。
方法 收集 2014 年 1 月至 2016 年 12 月在山东省立医院门诊就诊和住院的患者 5 836 例。用酶联免疫分析方法进行血清百日咳 IgG 抗体、百日咳 IgM 抗体两项指标检测。用 SPSS21.0 软件分析人群中百日咳抗体的阳性特征情况。

结果 5 836 例血清标本中，百日咳 IgG 抗体阳性率为 40.42%，百日咳 IgM 抗体阳性率为 35.52%，男性百日咳 IgG 抗体阳性率 37.56%，明显低于女性的 44.36%（P<0.05）；男性百日咳 IgM 抗体阳性率为 29.83%，明显低于女性的阳性率 43.34%（P<0.05）。百日咳 IgG 抗体阳性率以 6 个月~＜12 个月（24.70%）最低，以后逐渐升高，30 岁以上组最高（67.34%）；百日咳 IgM 抗体阳性率以小于 6 个月组最低（2.54%），7 岁~＜15 岁组最高（63.98%）。百日咳 IgM 抗体阳性率秋季最高为 45.79%，明显高于夏季的 34.92%，明显高于春季的 25.23%，冬季最低为 18.82%，四个季节之间阳性率差异均有统计学意义（P 均<0.05）。共检出 4 种百日咳抗体项目组合模式，以百日咳 IgG 抗体、百日咳 IgM 抗体双阴性模式最多见，占 49.43%，其次为百日咳 IgG 抗体、百日咳 IgM 抗体双阳性模式占 25.36%，百日咳 IgG 抗体阴性、百日咳 IgM 抗体阳性模式最少见，占 10.14%。
结论 山东地区人群百日咳抗体的阳性率存在性别、年龄和季节差异，应加强对学龄期儿童百日咳的防控。

PU-1396

抗 CCP 抗体、抗 AKA 抗体、抗 APF 抗体等多种检测对类风湿关节炎的诊断价值

赵万辉
山东第一医科大学附属省立医院

目的 探讨检测抗环瓜氨酸多肽抗体（CCP）、抗角蛋白抗体（AKA）、抗核周因子抗体（APF）、抗 RA33 抗体、抗葡萄糖 6 磷酸异构酶抗体（GPI）、抗突变型瓜氨酸波形蛋白抗体（MCV）、补体 C1q、类风湿因子（RF）、血沉（ESR）在类风湿性关节炎（RA）的临床诊断价值。
方法 选取经临床确诊的类风湿性关节炎患者 120 例，体检健康者 80 例，分别检测其 CCP、AKA、APF、抗 RA33 抗体、抗 GPI 抗体、抗 MCV 抗体、补体 C1q、RF 及 ESR，并对结果进行统计分析。
结果 CCP、AKA、APF、抗 RA33 抗体、抗 GPI 抗体、抗 MCV 抗体、补体 C1q、RF 及 ESR 在 RA 中的灵敏度分别为 86.4%、82%、80%、12%、69.2%、78%、10%、87.3%、82.3%，特异性分别为 94.0%、92.5%、90.3%、97.0%、87.6%、90.8%、90.2%、82.5%、72.20%。
结论 抗 CCP 抗体、抗 AKA 抗体、抗 APF 抗体、与其他抗 RA33 抗体、抗 GPI 抗体、抗 MCV 抗体、补体 C1q、RF 及 ESR 综合检测对 RA 具有一定的诊断价值，有助于 RA 的早期临床诊断。

PU-1397

间接免疫荧光法检测血小板相关抗体新判读标准的建立和评价

杨细媚
江西省儿童医院

目的 通过建立新的判读标准来提高间接免疫荧光法（IIF）检测血小板相关抗体（PAIg）的诊断效能。
方法 收集 2020 年 1 月-12 月的 261 例免疫性血小板减少症（ITP）和 50 例红斑狼疮（SLE）患儿作为实验组，50 例再生障碍性贫血（AA）作为病例对照组，50 例健康体检儿童作为正常对照组进行 PAIg 检测。分析新旧两个判读标准的结果，并与流式细胞仪（FCM）法进行比对，分析两种方法的相关性和符合率。
结果 IIF 法使用新的判读标准后，ITP 组患儿阳性率从 19.54%上升到 62.07%，诊断效率从 45.01%上升为 67.64%。SLE 组患儿阳性率从 16%上升到 38%。IIF 法与 FCM 法在诊断 ITP 和 SLE 中结果具有一致性，kappa 值分别为 0.680 和 0.653。

结论 新的 IIF 法判读标准提高了对临床疾病的诊断效能，与 FCM 法比较更适合儿童 ITP 患儿 PAIg 的筛查实验。

PU-1398

乌鲁木齐某中医三甲医院 2020 年 4 种传染性疾病的感染情况分析

王雪婷[1]、宁萍[1]、李奋荣[1]、赵淑珍[1]、赖长青[2]、王瑾[1]、伏志勇[3]、陈媛[1]、云发超[1]
1. 乌鲁木齐市中医医院
2. 军区总医院北京路医疗区
3. 中国人民解放军 93986 部队医院

目的 了解乌鲁木齐地区患者的乙型肝炎病毒（HBV）、丙型肝炎病毒（HCV）、梅毒螺旋体（TP）和人类免疫缺陷病毒（HIV）的感染情况，分析流行因素，为防止院内感染和我市相关部门制定传染病预防策略提供参考资料。
方法 2020 年共有 8440 名患者在我院进行了以上 4 种疾病的筛查，采用化学发光法定量检测各传染病的血清标志物，对比分析患者的感染情况，用 SPSS 17.0 进行统计学数据处理。
结果 8840 名患者中 HBV、HCV、TP、HIV 的检测者各有 8396 例、7504 例、7554 例、7452 例，感染率为 5.55%（466 例）、1.999%（90 例）、0.40%（30 例）、0.09%（7 例）；比较各传染病上下半年的检测结果，感染率差异均无统计学意义（P>0.05）；HBV、TP 的感染率在男女间无明显差异（P > 0.05），HCV、HIV 的感染率在男性人群中高于女性（P < 0.05）;HBV 感染率在>40 岁年龄组要高于≤40 岁年龄组（P < 0.05），其他 3 种无明显的年龄上的差异。
结论 2020 年本地区 HBV、HCV 感染率较于我国一般人群低，TP、HIV 感染率较高；HCV、HIV 感染在男性中多发，高龄 HBV 感染者较多。需要加强传染病的筛查力度，完善相关预防措施，做好传染病知识宣教工作。

PU-1399

血清 Lp-PLA2 联合 S100β 检测在脑梗死患者的临床应用价值

万青
东南大学附属中大医院

目的 探讨血清脂蛋白相关磷脂酶 A2(Lp-PLA2)和血清 S100 钙结合蛋白 β(S100β)测定在急性脑梗死(Acute cerebral infarct, ACI)患者观察病情严重程度的临床应用价值。
方法 选取 2021 年 2 月-2021 年 5 月在我院收治的 157 例 ACI 患者为观察组，同时选取在我院接受体检的健康人员 70 例作为对照组，将两组血清 Lp-PLA2 和 S100β 水平进行检测分析对比。
结果 患者组血浆 Lp-PLA2 和 S100β 水平均高于对照组，差异具有统计学意义(P< 0.05)；患者神经功能损伤程度越高，血清 Lp-PLA2 和 S100β 水平越高，差异具有统计学意义(P< 0.05)。
结论 ACI 患者的血清 Lp-PLA2 和 S100β 水平与神经功能损伤程度有关，对 ACI 患者进行 Lp-PLA2 和 S100β 水平的相关检测有利于临床病情的观察。

PU-1400

脑特异性蛋白产物 9.5 检测试剂对外源性颅脑损伤患者的检测性能评估

申逸志、姜习新、王锴佳、梁紫薇
岳阳市人民医院

目的 对国产脑特异性蛋白产物 9.5 检测试剂进行检测性能评估。
方法 应用 319 例颅脑损伤患者血清样本（其中具有 CT 诊断结果或格拉斯哥评分的新鲜样本 79 例），分别采用考核试剂盒和对比试剂盒对同一入选患者的血清标本进行检测及结果判定，比较考核试剂的判断结果与临床诊断结论的一致性，以及考核试剂与对比试剂检测结果的相关性和一致性。
结果 本研究共收集 319 例血清样本，用于统计分析，分析结果表明，319 例样本中，考核试剂和对比试剂检测结果之间的阳性符合率为 96.34%，95%可信区间为（92.28%，100%），阴性符合率为 99.16%，95%可信区间为（97.99%，100%），总符合率为 98.43%，95%可信区间为（97.07%，99.80%），Kappa 值=0.9588，考核试剂与对比试剂具有良好的相关性；79 例新鲜样本的考核试剂检测结果与临床诊断结果的阳性符合率为 96.15%，95%置信区间为（90.93%，100%），阴性符合率为 96.30%，95%置信区间为（89.17%，100%）；总符合率为 96.20%，95%置信区间为（91.99%，100%），Kappa 值=0.9163，考核试剂检测结果与临床诊断具有良好的相关性。
结论 考核试剂和对比试剂测定结果之间具有较高的符合程度和较好的一致性，对于临床应用，两者之间具有等效性；此外，考核试剂的检测结果与临床诊断结果同样具有较高的符合程度和较好的一致性，该脑特异性蛋白产物 9.5 检测试剂可用于外源性脑损伤的辅助诊断。

PU-1401

HIV/HCV 共感染和 HCV 感染使用检验指标评估肝纤维化在临床应用的研究

翟秀伟、陈艳芝、李巧清、张思荣、郭霞、杨珅、何丽萍
保山市人民医院

目的 探讨 HIV/HCV 共感染与 HCV 单纯感染对肝纤维进程中的影响进行临床探讨。
方法 选取 299 例研究背景相对一致的患者作为研究对象，且 HCV-RNA 检测均结果>500IU/mL 其中男性 158 例（52.9%），女性 141 例（47.1%），年龄 22～65，平均年龄为（39±11.2）岁，共分为 HIV(CD4+>400 个/ul)与 HCV 共感染、HIV(CD4+<400 个/ul)与 HCV 共感染、HCV 单纯感染三组，通过检测三组研究对象的天门冬氨酸氨基转移酶(AST) 和血小板(PLT)结果计算出 APRI，APRI 值指数是天门冬氨酸氨基转移酶(AST) 与血小板(PLT) 比值，APRI 评分是一种被较多研究者接受的无创诊断模型评价肝病患者肝纤维化程度的方法，本研究使用 APRI 评分作为肝纤维程度指标，并对 HIV/HCV 共感染与 HCV 单纯感染不同患者的肝纤维程度进行比较研究。
结果 ①三组患者的 AST 进行比较（q 0.08，p 0.93）P>0.05,三组差异没有统计学意义②三组患者的 PLT 进行比较（q 0.03，p 0.97）P>0.05,三组差异没有统计学意义③使用 AST 和 PLT 结果计算出 APRI，对三组研究对象的肝纤维程度 APRI 评分比较为（q 0.64，p 0.53）P>0.05。
结论 HIV/HCV 合并感染患者与 HCV 单纯感染者在肝脏纤维化进程的影响没有显著性差异。

PU-1402

实验室自建 B 细胞亚群流式检测方案和商品化试剂盒方案结果的比对

吴伟民
中南大学湘雅二医院检验科

背景/目标 随着流式细胞分析方法和淋巴细胞亚群检测项目的推广，临床医师对流式技术运用于临床检测的需求也高。现有的商品化的 BD 公司的淋巴细胞亚群检测试剂盒包含了 B 细胞、T 细胞和 NK 细胞的比例，而 T 细胞又可以进一步细分为 Th 细胞和 Ts 细胞。但是，一方面高昂的临床收费阻碍了这个项目的广泛开展，另一方面特定的临床专科仅对这一项目的某一个指标感兴趣而不需要其他的结果。所以，针对肾内科的患者进行临床检测，我们实验室自建了一套 B 细胞亚群流式检测方案，并讲其与商品化试剂盒方案结果的比对。
方法 我们实验室自建了一套 B 细胞亚群流式检测试剂由两个部分组成，分别为 BD 公司 3/4/8 检测试剂盒和 CD19-APC 抗体。在自建方法中，全血染色后裂解红细胞，并且使用 PBS 洗涤两次，其中淋巴细胞使用 FSC/SSC 圈门。商品化试剂盒也来自 BD 公司（Multitest CD3/CD8/CD45/CD4 和 CD3/CD16+CD56/CD45/CD19）。商品化试剂盒只裂解红细胞，并不洗涤，其中淋巴细胞使用 SSC/CD45 圈门。选取了 10 个临床标本，分别使用两种方法进行检测，并分析两种方法的结果的差异。
结果和结论 实验室自建方法淋巴细胞圈门清晰，对于外周血比例较高的细胞，如 T、Th 和 Ts，两种方法测得细胞比例的偏倚均小于 15%。B 细胞在外周血中的比例较低，虽然两种方法测得细胞比例的偏倚较大，但是实际比例的差异并不大。因此，对于有特定需求的临床科室，我们实验室自建的实验室自建 B 细胞亚群流式检测方案可以满足要求。

PU-1403

血清 CD146 与血液透析患者腹主动脉钙化的相关性研究

于洋、韩俊岭、徐娟、赵岩、曹婧媛、周成林
泰州市人民医院

目的 血管钙化与血液透析（HD）患者的心血管事件密切相关，是透析患者预后的重要影响因素。本研究旨在评估血清 CD146 水平与 HD 患者腹主动脉钙化（AAC）发生的相关性，为 HD 患者血管钙化风险分层及改善预后提供依据。
方法 选取 2020 年 1 月 1 日至 2020 年 12 月 31 日在南京医科大学泰州临床医学院血液净化中心透析的 HD 患者及同期于我院行健康体检的正常人为研究对象，收集临床、实验室相关资料。采用酶联免疫吸附实验（ELISA）测定血清 CD146 水平。收集 HD 患者腹部 CT 资料，评估有无 AAC 及严重程度。将所有 HD 患者按照是否发生 AAC 分为 AAC 组和非 AAC 组；将 AAC 组按照钙化严重程度分为重度 AAC 组和非重度 AAC 组。数据采用 SPSS 22.0 软件进行统计分析。连续型变量以平均值±标准差或中位数（四分位数）表示，两组间比较采用独立样本 t 检验或秩和检验；分类变量以例数（比例）表示，组间比较采用卡方检验；采用多因素 Logistic 回归分析腹主动脉钙化发生的独立危险因素，使用向前 LR 法来构建最终的模型；构建 ROC 曲线评估不同危险因素预测钙化发生的准确性。
结果 纳入符合标准的 HD 患者 256 例，其中发生 AAC 者 159 例，AAC 发生率为 62.1%。发生 AAC 的 HD 患者中，重度 AAC 者 68 例（42.8%），非重度 AAC 者 91 例（57.2%）。合并 AAC 的 HD 患者血清 CD146 水平明显高于非 AAC 者（123.8-215.3 ng/ml vs 189.2-293.5 ng/ml，$p < 0.001$）；重度 AAC 患者血清 CD146 高于非重度 AAC 组（213.2-301.7 ng/ml vs 142.1-272.3

ng/ml，$p < 0.05$）。多因素 logistic 回归分析显示，PD 患者年龄增长、腹透龄延长、CD146 升高、血磷升高、白蛋白降低时发生 AAC 的风险增加。
结论 发生 AAC 的 HD 患者血清 CD146 水平明显高于非 AAC 患者。PD 患者年龄增长、腹透龄延长、CD146 升高、血磷升高、白蛋白降低与 AAC 的发生风险增加相关。血清 CD146 水平可作为早期预警 HD 患者发生 AAC 的指标。

PU-1404

嗜异性抗体对 CA153 和 HIV 检验结果影响的分析

滕凤猛、顾万建
江苏省中医院

目的 分析干扰物质对 CA153 和 HIV 检测结果的影响，为临川诊断提供有价值的实验数据。
方法 采用倍比稀释法对样本进行稀释，然后进行检测；将检测结果与理论结果进行相关性分析。更换新的检测平台或检测方法对检测结果进行检测。加入嗜异性抗体阻断剂（HBR-1、ALPPool、Poly MAK 和 Mouse IgG）分别进行阻断后检测。
结果 HIV 检测结果原倍为 385.16，2 倍稀释检测结果为 184.35，4 倍稀释检测结果为 41.06，8 倍稀释检测结果为 3.8,16 倍稀释检测结果为<1。糖类抗原 153 检测结果原倍为>800，2 倍稀释检测结果为 367.1，4 倍稀释检测结果为 108.2，8 倍稀释检测结果为 29.1，16 倍稀释检测结果为 8.5。将 HIV 和 CA153 检测结果与理论结果进行相关性分析，发现两者无相关性。利用酶联免疫和金标法对 HIV 进行检测两者结果均阴性，更换新的检测平台发现 CA153 检测结果在正常范围内。嗜异性抗体阻断剂（HBR-1、ALPPool、Poly MAK 和 Mouse IgG）阻断之后 CA153 检测结果 HBR-1 下降-99%、ALPPool 下降 11%、Poly MAK 下降-99%和 Mouse IgG 下降-83%。HIV 检测结果 HBR-1 下降-100%、ALPPool 下降 60%、Poly MAK 下降-100%和 Mouse IgG 下降-91%。
结论 嗜异性抗体 HBR-1 和鼠源性嗜异性抗体 Mouse IgG 以及 ALPPool 均对 HIV 和 CA153 检测结果有干扰。嗜异性抗体干扰，导致临床出现 HIV 和 CA153 假性增高；临床可以利用倍比稀释法或更换新的检测平台以及加入阻断剂的方法消除嗜异性抗体的干扰。

PU-1405

基于双酶扩增信号放大适配体传感器对 IFN-γ 的定量分析

刘畅、蒋栋能、刘琳琳
中国人民解放军陆军军医大学第二附属医院

目的 建立一种用于结核菌感染诊断相关细胞因子 IFN-γ 的电化学适配体传感器。
方法 以石墨烯-纳米金复合材料修饰电极，利用适配体的高特异性，结合核酸外切酶（RecJf）辅助的目标物循环和末端脱氧核苷酸转移酶（TDT）辅助的 DNA 扩增技术建立 IFN-γ 定量检测的电化学传感器新技术，并对该方法进行线性、灵敏度、特异性等性能指标的评估。
结果 以此策略构建的电化学适配体传感器对 IFN-γ 检测的线性范围为 0.01 ng·ml-1～50 ng·ml-1，电流强度的峰值与 IFNγ 浓度的对数值（logC）呈良好的线性关系(r= 0.9915)，其线性方程为：I= 5.38 logC+22.25，传感器显示出良好特异性、稳定性。
结论 本研究建立了基于纳米材料、双酶扩增的无标记、多重信号放大的电化学适配体传感器，该传感器具有操作简单、速度快、抗干扰能力强等优点，可用于细胞因子的定量检测。

PU-1406

诊断 IgG4 相关胆管病的新方法 胆汁中 IgG4 的测定

任雪娇
吉林大学第二医院

目的 IgG4 相关疾病(IgG4-RD)是一种累及多个器官的慢性炎性疾病。常见的表现包括主要唾液和泪腺增大，眼眶疾病，胆道疾病，自身免疫性胰腺炎，肾小管间质肾炎等。血清 IgG4 浓度升高，大量表达 IgG4 的浆细胞浸润是该病的关键特征。IgG4 相关的胆道疾病如今备受关注，但在影像学上，IgG4 相关性胆管炎(IAC)在胆道造影上不能与胆管癌或原发性硬化性胆管炎(PSC)鉴别，诊断困难。血清 IgG4 水平的敏感性虽然较高，但是在区别 PSC 等相关疾病的患者时特异性较低，影响鉴别诊断。由于 IAC 发生在胆管上皮，我们推测胆汁中 IgG4 的测定可能比血清具有更高的敏感性和特异性。
方法 收集 67 例胆道造影患者的胆汁和血清标本，其中 PSC 42 例，胆管癌 35 例，胆总管结石 34 例，IAC 8 例。胆汁和血清中均检测到 IgG4。
结果 IAC 患者胆汁 IgG4 水平明显高于其他胆道疾病患者。血清 IgG4 水平在 PSC 和 IAC 患者中均升高，而胆汁 IgG4 水平仅在 IAC 患者中升高。
结论 本研究表明胆汁 IgG4 测定是可行的，敏感性和特异性高于血清中 IgG4 水平，可能有助于 IAC 与其他疾病的鉴别。

PU-1407

IIF 检测中的影响因素

吴晓玲
西安金域医学检验所

目的 简单总结影响 IIF 的各种影响因素
方法 IIF 法的影响因素较多主要有以下几个方面：
（1）显微镜
（2）试剂盒
（3）标本
（4）实验原理或操作
（5）环境因素
这些因素都会对结果判读产生影响，造成漏检或误检，造成临床诊断的误差。
结果 免疫荧光技术是标记免疫技术中发展最早的一种，它是在免疫学、生物化学和显微镜技术的基础上建立起来的一项技术。具有特异性强、敏感性高、速度快等特点，广泛用于自身抗体筛查等项目。但 IIF 法的影响因素较多，主要有以下几个方面
（1）显微镜：
①光源偏强，导致观察到的细胞荧光强度人为增强选择和调整最合适光源
②光源偏弱，导致观察到的细胞荧光强度人为减弱
③弥散状荧光：荧光显微镜不干净，镜头上可能有划痕
④背景荧光：检查显微镜滤光片/镜头
⑤不均匀荧光：显微镜调节错误，需调节汞灯
⑥荧光偏少或没有：显微镜调节问题
（2）试剂盒：
荧光偏少或没有：①荧光二抗污染失活或载片包被物丢失。②清洗缓冲液的 pH 值发生变化

（3）标本：

①背景荧光：脂血、溶血。

②细胞密度过低：基质被蛋白水解酶水解，需进行灭活血清。

（4）实验原理或操作：

①细胞密度过低：长时间接触去离子水导致细胞裂解或清洗缓冲液直接冲洗反应基质，需严格按照说明书清洗程序进行。

②不均匀荧光：血清没有完全覆盖检测反应区造成或载片用蜡笔标记产生虚影

③背景荧光：实验过程中载片干燥。

（5）环境因素：

①不均匀荧光-反应区中血清干燥，周边荧光更强，需在潮湿环境下进行孵育

这些因素都会对结果判读产生影响，造成漏检或误检，造成临床诊断的误差。

结论 在日常工作中，我们需要总结了解 IIF 法中各种影响因素并加以预防和控制，保证检测结果的准确性，为临床诊断提供可靠依据。

PU-1408

血清可溶性 ST2 水平在原发性脑出血危险分级及预后评估的临床应用价值

曹爽
中国医科大学附属盛京医院

目的 探讨血清可溶性 ST2（sST2）及 D-二聚体在原发性脑出血危险分级及短期预后评估中的临床意义。

方法 选取已确诊为脑出血的患者共 85 例，根据入院时患者状态进行 APACHE-Ⅱ评分将患者分为重症组 45 例，轻症组 40 例，同期检测患者入院时血清 sST2 和 D-二聚体水平。根据出血部位不同分为基底节出血组 65 例，小脑出血组 4 例，脑室出血组 6 例，脑叶出血组 10 例。根据出院报告中病人状态记录依据格拉斯预后评分将患者分为预后较好组 36 例，和预后较差组 49 例。采用 SPSS26.0 软件进行统计学分析，比较不同组间 sST2 和 D-二聚体水平的差异。

结果 重症组 sST2 和 D-二聚体水平显著高于轻症组（P<0.05）；预后较差组 sST2 和 D-二聚体水平显著高于预后较好组（P<0.05）；按照出血部位分组中，不同组间 D-二聚体水平无统计学差异(P>0.05)，而 sST2 水平有统计学差异(P<0.05)，小脑出血组 sST2 水平明显高于其他组；Spearman 分析显示 sST2 与 D-二聚体具有相关性（P<0.05）。

结论 血清 sST2 和 D-二聚体水平对原发性脑出血患者的病情判断和短期预后评估中有重要的临床价值。

PU-1409

血清 NSE、CA-19-9、CEA 检测在肺癌诊断与分期中的临床研究

黄莎莎
山东第一医科大学附属省立医院

目的 研究血清 NSE、CA-19-9、CEA 检测在肺癌诊断与临床分期中的临床意义。

方法 抽取我院 2019 年 1～12 月确诊的肺癌患者 80 例设为观察组,再取同期确诊的肺良性疾病的患者 64 例设为对照组,抽取同期体检健康人员 100 例设为健康组,采用 SPSS17.0 统计学软件,对三组人员的血清 NSE、CA-19-9、CEA 结果进行统计分析,证实检验结果对肺癌诊断及分期的临床价值。
结果 观察组检测神经特异性烯醇化酶(NSE)、糖类抗原 19-9(CA19-9)、癌胚抗原(CEA)的水平均高于健康组,比较差异具有统计学意义(P<0.05);观察组神经特异性烯醇化酶、糖类抗原 19-9、癌胚抗原水平均高于对照组,比较差异具有统计学意义(P<0.05);癌症不同分期测得 NSE、CA19-9、CEA 浓度有着明显差异,(P<0.05)。
结论 通过肿瘤标志物检测对肺癌的诊断与分期具有重要辅助意义,可以作为肺癌临床诊断及评估患者病情严重程度的依据,建议临床推广应用。

PU-1410

系统性红斑狼疮达标治疗与实验室指标关系研究

翟建昭、蔡蓓、武永康
四川大学华西医院

目的 近年来“达标治疗”的概念被引入系统性红斑狼疮（SLE），达标治疗即以病情缓解或尽可能降低疾病活动度作为治疗目标，采取各种积极有效的治疗控制 SLE。本研究旨在寻找可以作为达标治疗的治疗目标的实验室指标，通过关键指标长期规律的监测，控制疾病活动度，减少药物毒性和疾病并发症，最大限度的提高患者的生存时间和生活质量。
方法 纳入 SLE 患者 994 例，通过系统性红斑狼疮疾病活动度评分（SLEDAI-2k）将 SLE 患者分为“达标”（SLEDAI≤4，n=156）和“未达标（SLEDAI>4，n=838）”，对两组患者的实验室数据，包括 PCT，CRP，IL-6，尿素，肌酐，胱抑素 C，eGFR，血小板，白细胞数量、红细胞数量，血红蛋白含量以及尿蛋白进行分析，寻找在两组中有显著差异的指标。
结果 胱抑素 C 在未达标患者中显著升高（1.16 mg/L vs.1.4 mg/L，P<0.001）,蛋白尿也更加常见（阳性率 20.5% vs.42.4%，P<0.001）。红细胞数量在未达标患者中更低（3.81×10^12/L vs.3.59×10^12/L,P=0.009）,血红蛋白含量也更低（109g/L vs.102g/L,P<0.001）。除此之外炎性指标 PCT 也在未达标组中更高(0.06 ng/mL vs.0.08 ng/mL),而 IL-6（10.06 ng/mL vs.7.79 ng/mL）和 CRP（7.51 mg/L vs.5.26 mg/L）则在达标组中更高，但无统计学意义（P>0.05）。
结论 红细胞数量、血红蛋白含量和尿蛋白均可以作为达标治疗效果预测指标，预示疾病的活动程度。未达标的患者肾功能更差，贫血症状也更显著。但实验室指标和临床症状之间不一定完全符合，炎性指标升高的患者不一定具有更活跃的疾病状态。同时，这些物质在体内的代谢过程使得它们不一定能及时准确的反映疾病变化，临床工作中需要结合多个指标并进行长期监测，同时未来需要更多准确、可重复的指标来准确的判断患者的疾病状态。

PU-1411

血清 AFP、CEA、AFU、GGT 联合检测对原发性肝癌的临床诊断

黄莎莎
山东第一医科大学附属省立医院

目的 探讨血清甲胎蛋白、癌胚抗原、α-L-岩藻糖苷酶、γ-谷氨酰转肽酶联合检测在原发性肝癌诊断中的应用价值。
方法 选取 2017 年 1 月至 2021 年 1 月山东省立医院收治的 100 例原发性肝癌患者及 100 例健康体检者作为研究对象，比较各组受检者血清中的甲胎蛋白、癌胚抗原、α-L-岩藻糖苷酶、血清 γ-谷氨酰转肽酶水平, 血清肿瘤标志物检测阳性率,以及单个检测与联合检测的敏感度和特异度。

结果 原发性肝癌组血清甲胎蛋白、癌胚抗原、α-L-岩藻糖苷酶含量与健康对照组比较,差异均有高度统计学意义(均 P ＜ 0.01);血清甲胎蛋白、癌胚抗原、α-L-岩藻糖苷酶、γ-谷氨酰转肽酶各自单项检测的阳性率分别为 65.00%、29.00%、86.00%、75.00%,其中癌胚抗原及 α-L-岩藻糖苷酶及 γ-谷氨酰转肽酶的阳性率均明显升高,与健康对照组比较,差异均有统计学意义(均 P ＜ 0.05);此外血清甲胎蛋白联合癌胚抗原或甲胎蛋白联合 α-L-岩藻糖苷酶或甲胎蛋白联合 γ-谷氨酰转肽酶检测的阳性率分别为 73.00%、84.00%、88.00%,甲胎蛋白、α-L-岩藻糖苷酶联合检测及甲胎蛋白、γ-谷氨酰转肽酶联合检测与甲胎蛋白单项检测相比差异均有统计学意义(均 P ＜ 0.05);此外血清甲胎蛋白同时联合癌胚抗原、α-L-岩藻糖苷酶、γ-谷氨酰转肽酶 4 项检测原发性肝癌的检出阳性率为 95.00%,明显高于甲胎蛋白单项检测的检出阳性率,两者相比差异有高度统计学意义(P ＜ 0.01)。
结论 使用血清甲胎蛋白、癌胚抗原、α-L-岩藻糖苷酶、γ-谷氨酰转肽酶联合检测有助于原发性肝癌的早期诊断,值得在临床工作中推广应用。

PU-1412

罗氏 e801 电化学发光法在 HIV 筛查试验中的假阳性分析

刘丽
临沂市人民医院

目的 分析罗氏 e801 电化学发光法在 HIV 筛查试验中的假阳性的原因。
方法 对本院 2020 年 5 月至 2021 年 5 月期间应用此方法的所有 HIV 筛查样本通过 e801 电化学发光法进行 HIV 筛查试验检测。临沂市疾病控制中心通过免疫印迹法(WB)对初筛 HIV Ab 阳性进行确认，初筛 HIV Ag 阳性患者进行随访。
结果 87795 例病人血清标本中，共筛检出阳性血清 82 例，其中 HIV Ag 阳性 6 例。经临沂市疾病控制中心确认，15 例为阳性，1 例为不确定，66 例为阴性。HIV Ag 初筛阳性样本确认结果均为阴性。
结论 罗氏 e801 电化学发光法 HIV 抗原抗体联合检测假阳性率 0.08％，仍应结合临床资料及确认试验结果综合判断。

PU-1413

r-干扰素释放试验在活动性肺结核诊断中的应用价值

王昌敏、赵进、马晶、李帅
新疆维吾尔自治区人民医院检验科

目的 探讨 γ-干扰素释放试验（SPOTest）在活动性肺结核诊断中的应用价值。
方法 在 2020 年 12 月 1 日-2020 年 12 月 31 日于新疆维吾尔自治区人民医院呼吸内科治疗的 267 例肺结核疑似患者中选择其中 118 例接受过 SPOTest、结核分枝杆菌/利福平耐药实时荧光定量核酸扩增检测技术（Xpert Mtb/RIF）检测及涂片检测的患者，6 例为陈旧性结核患者未纳入研究，112 例肺结核疑似患者中经临床诊断为阴性 80 例，阳性 32 例。以临床诊断为判断依据，计算 SPOTest、Xpert Mtb/RIF 检测、涂片检测诊断 APTB 的敏感度、特异性、准确率，以及与临床诊断结果的一致性。
结果 SPOTest 诊断 APTB 阳性 39 例，阴性 73 例，SPOTest 诊断 APTB 结果与临床诊断结果一致性较高（Kappa 值=0.733）；Xpert Mtb/RIF 检测 APTB 阳性 16 例，阴性 96 例，Xpert Mtb/RIF 检测诊断 APTB 结果与临床诊断结果一致性较高（Kappa 值=0.588）；涂片检测诊断 APTB 阳性 3 例，阴性 109 例，涂片检测诊断 APTB 结果与临床诊断结果一致性差（Kappa 值=0.129）。SPOTest 诊断 APTB 的敏感度 90.63%，高于 Xpert Mtb/RIF 敏感度 50.00%与涂片检测敏感度 9.38%，差异有统计学意义（P＜0.05）；SPOTest 诊断 APTB 的准确率 88.39%高于 Xpert

Mtb/RIF 准确率 85.71%以及涂片检测准确率 74.11%，差异有统计学意义（P＜0.05）；SPOTest 诊断 APTB 的特异性 87.50%，低于 Xpert Mtb/RIF 的特异性 100.00%以及涂片检测的特异性 100.00%，差异有统计学意义（P＜0.05）。
结论 SPOTest 诊断 APTB 敏感度及准确率较高，且 SPOTest 诊断结果与临床诊断结果一致性较高，有助于鉴别诊断 APTB，并指导临床治疗。

PU-1414

调节性 T 细胞、白介素-17、干扰素-γ 在小儿过敏性哮喘的诊断价值探讨

赵莹莹
临沂市人民医院

目的 评估外周血调节性 T 细胞（Treg）、白介素-17（IL-17）、干扰素 γ（IFN-γ）在小儿过敏性哮喘中的诊断价值。
方法 选取 2018 年 3 月至 2021 年 2 月临沂市人民医院收治的过敏性哮喘患儿（符合中华医学会修订的小儿支气管哮喘诊断标准，且经支气管激发试验或运动试验确诊）120 例为观察组，其中男 68 例，女 52 例；年龄 3～13 岁，平均（8.95±1.42）岁，选取同期 75 名健康儿童为对照组，其中男 43 名，女 32 名；年龄 3～14 岁，平均（9.07±1.37）岁。两组儿童基础资料差异无统计学意义（P>0.05）。对比两组外周血调节性 T 细胞（Treg）、白介素-17（IL-17）、干扰素 γ（IFN-γ）水平差异，进行受试者工作特征曲线(ROC 曲线)、曲线下面积(AUC) 分析，得出 3 种指标各诊断小儿过敏性哮喘的灵敏度、特异性，进一步计算 3 种指标联合诊断小儿过敏性哮喘的灵敏度及特异性。
结果 1、观察组的 IL-17 水平高于对照组，Treg、IFN-γ 水平明显低于对照组（P<0.05）。
2、Treg 单独诊断小儿过敏性哮喘的临界值 2.13%，AUC 为 0.894，灵敏度为 79.6%，特异性为 91.2%；IL-17 单独诊断小儿过敏性哮喘临界值 24.13ng/L，AUC 为 0.861，灵敏度为 81.8% ，特异性为 72.9%；IFN-γ 单独诊断小儿过敏性哮喘的临界值为 305.42ng/L，AUC 为 0.836，灵敏度为 82.5%，特异性为 76.6%。
3、Treg、IL-17 及 IFN-γ 三者联合诊断小儿过敏性哮喘的灵敏度及特异性分别为 84.1%，89.3%。
结论 小儿过敏性哮喘诊断灵敏度比较：IFN-γ>IL-17>Treg，诊断特异性比较：
Treg> IFN-γ>IL-17；Treg、IL-17 及 IFN-γ 对小儿过敏性哮喘均有诊断价值，联合检测 Treg、IL-17 及 IFN-γ 可有效提高小儿过敏性哮喘的诊断效能。

PU-1415

雅培 i2000SR 检测梅毒螺旋体特异性抗体效果评价

马梦影
西安医学院第一附属医院

目的 探讨雅培 i2000SR 化学发光微粒子免疫分析法（CMIA）检测梅毒螺旋体特异性抗体的筛查策略。
方法 对本院 2018 年 1 月-2019 年 12 月期间共 46868 例血清样本运用化学发光微粒子免疫分析法（CMIA）检测梅毒螺旋体特异性抗体，并对筛查出的阳性血清样本运用梅毒螺旋体颗粒凝集试验（TPPA）进行确证。
结果 46868 例血清样本中 CMIA 筛查出阳性样本 663 例，运用梅毒螺旋体颗粒凝集试验（TPPA）对阳性样本进行确证，结果显示，真阳性样本 468 例，假阳性样本 195 例。同时，将 CMIA 检测的 S/CO 值分为 1.0～3.0、3.0～6.0、6.0～9.0、>9.0 四组，结果显示，梅毒螺旋体特异性抗体的

真阳性率会随着 S/CO 值的升高而逐渐上升；并且，当 S/CO>9.0 时，真阳性率可达 100%。年龄>60 岁的患者假阳性率为 38.3%，较其他组差异有统计学意义（P<0.05）。
结论 CMIA 检测梅毒螺旋体特异性抗体敏感性较高，可作为筛查实验。但对 S/CO 值在 1.0～9.0 之间的样本需用 TPPA 进行复检，而 S/CO 值>9.0 的样本则无需用 TPPA 进一步确证，可直接发阳性报告。年龄>60 岁的患者因其有较高的假阳性率，故发阳性报告时需更加慎重。

PU-1416

化学发光免疫分析技术相对常规检查技术的优势研究

赵倩雯
山东大学第二医院

目的 研究生化免疫检验中化学发光免疫分析技术的应用价值在甲状腺肿瘤患者生化免疫检验中的应用价值。
方法 将本院某一年内收治的疑似甲状腺肿瘤患者作为研究对象,随机地平均分为两组。对两组患者样本均进行血液生化免疫检验,首先进行少量的空腹采血,取其中一份血液标本进行常规免疫检查（放射免疫测定技术）,另一份血液标本进行化学发光免疫分析技术检查。以术后病理检查为金标准,对比使用两种不同检查方法的甲状腺肿瘤患者的特异度、灵敏度、符合率,球蛋白、游离三碘甲状腺原氨酸及甲状腺球蛋白水平。
结果 根据术后病理检查结果可知,检验结果为恶性的肿瘤略多于检查结果为良性的肿瘤。并且通过数据分析，得出化学发光免疫分析技术检查的特异度、灵敏度、符合率均高于 90%,而常规免疫检查的特异度、灵敏度、符合率最高的一项也仅有 80%,化学发光免疫分析技术相比常规免疫检查技术具有明显优势。此外，化学发光免疫分析技术检查的球蛋白、游离三碘甲状腺原氨酸、甲状腺球蛋白水平也明显高于放射免疫测定技术的球蛋白、游离三碘甲状腺原氨酸、甲状腺球蛋白水平,更加印证了化学发光免疫分析技术的实用性、有效性是更高的。
结论 在临床上，对甲状腺肿瘤患者除了要进行常规的影像学检查，还需要进行生化免疫检验，两者结合后可以较好地降低疑似甲状腺肿瘤患者的误诊率。相比常规免疫检查技术，化学发光免疫测定技术的特异度、灵敏度、符合率较高,球蛋白、游离三碘甲状腺原氨酸、甲状腺球蛋白水平也相对较高。该技术对甲状腺肿瘤的诊断具有指导意义,可以在临床中进行推广。

PU-1417

M 蛋白轻链定量、β2 微球蛋白在不同分期分型的多发性骨髓瘤患者血液和尿液中的变化

霍茜瑜、朱国庆、王艳生 、任彦松、付雪、王守磊
中国医学科学院血液病医院

目的 分析多发性骨髓瘤（multiple myeloma，MM）患者血液和尿液中的 M 蛋白轻链定量和 β2-微球蛋白（beta-2 microglobulin ，β2-MG）在不同的 DS 分期和不同亚型之间的变化，为 MM 患者的病情判断、疗效观察提供依据。
方法 收集 2020 年就诊于中国医学科学院血液病医院（中国医学科学院血液学研究所）MM 患者的血液和尿液中 M 蛋白轻链定量和 β2-MG 检验的结果，分别以患者的临床 DS 分期和 M 蛋白重轻链分型作为分组的依据，对收集的数据进行差异性分析。
结果 排除移植后复发、严重并发症等情况的患者后，共收集患者样本数据 155 例，其中 DS Ⅰ期 19 例、Ⅱ期 38 例、Ⅲ期 98 例。MM 患者血、尿 β2-MG 随分期进展升高，血 β2-MG 升高存在统计学差异（$p<0.05$）。κ 亚型 MM 患者血 κ 轻链定量随分期升高（$p<0.05$），尿 κ 轻链定量随分期变化不大。λ 亚型 MM 患者血、尿 λ 轻链定量均随分期升高，但无明显统计学意义。不同分型的

MM 患者中，轻链型患者尿 β2-MG 升高较明显（p＜0.05）。重链类型为 IgG 型的血轻链定量结果更高（p＜0.05），尿轻链定量结果在不同亚型之间均无明显变化。
结论 MM 患者血、尿 β2-MG 随分期进展升高。血 β2-MG、轻链定量结果升高更有助于对 MM 患者的病情监控。轻链型患者尿 β2-MG 升高较其他亚型患者更明显，轻链 M 蛋白对肾脏损伤更重。

PU-1418

Correlation analysis of CD4+ T lymphocyte count and viral load in 199 newly diagnosed HIV-infected patients

Tongxin Dai
The Eighth Hospital of Xi'an

Objective To analyze the correlation between the first CD4+ T lymphocyte count and viral load of newly diagnosed HIV-infected patients, and to achieve a preliminary estimation of the patient's viral load through the CD4+T lymphocyte count in areas where viral load testing cannot be carried out.
Methods BD FACS Calibur flow cytometry was used to detect T lymphocyte subsets of 199 HIV-infected patients for the first time. At the same time, Roche COBAS TaqMan real-time fluorescent PCR analyzer was used to detect the viral load of the patients, and SPSS 19.0 was used to compare the data. Analyze the correlation and linear regression relationship between CD4+ T lymphocyte count and viral load.
Results The first CD4+T lymph count of 199 HIV-infected patients was less than 200 cells/μl, accounting for 105 cases (53.8%); CD4+T lymph count was between 200 and 349/μl, accounting for 27 cases (13.6%); CD4+T lymph count was between 350 and 500/μl, accounting for r 34 cases (16.9%); 31 cases (15.1%) with CD4+ T lymphocytes greater than 500/μl. The median distribution of viral load in 199 patients was 7.37x104cps/ml, 10 cases (5.0%)of HIV patients with a viral load of less than 103cps/ml; a total of 102 cases (51.3%) with a viral load of 103-105cps/ml; a total of 87 cases (43.7%) with a viral load of greater than 105cps/ml. CD4+T lymphocyte count was negatively correlated with viral load (r=-0.362, P<0.05), linear regression relationship Y (Lg(RNA))=5.099-0.001X (CD4) (F=17.232, P<0.05). The CD4/CD8 ratio and viral load were also negatively correlated (r=-0.453, P<0.05).
Conclusion About half of newly diagnosed HIV-infected patients have entered the AIDS stage, so early diagnosis of HIV should be strengthened. The viral load of newly diagnosed HIV-infected patients is at a medium-to-high level, and antiretroviral therapy should be carried out in time to reduce the viral content of the patient and enable the patient to obtain a better outcome. CD4+ T lymphocyte count and CD4/CD8 ratio are negatively correlated with viral load. CD4+T lymphatic count can be used to roughly estimate the viral load level in patients without antiviral treatment, and analyze the patient's immune status and disease progression.

PU-1419

肾功能不全对血清人附睾蛋白 4 水平的影响

张晋
中国医科大学附属盛京医院

目的 通过分析肾脏功能损伤对于血清人附睾蛋白 4（human epididymis protein 4, HE4）水平的影响，探讨利用血清 HE4 对卵巢恶性肿瘤进行诊疗时，如何判断伴肾功能不全的患者的血清 HE4 水平与肿瘤之间的关系。

方法 健康对照组（Ⅰ组）50 例，良性疾病组（Ⅱ组）92 例，良性疾病合并肾功能不全组（Ⅲ组）48 例，卵巢癌组（Ⅳ组）78 例，卵巢癌合并肾功能不全组（Ⅴ组）54 例。分别采用电化学发光法、酶法、颗粒增强型免疫透射比浊检测法检测血清 HE4/CA125、血清肌酐/尿素、血清胱抑素 C 水平，比较各组血清 HE4 水平，分析各组 HE4 异常检出率，分析伴有肾功能不全的良性疾病组血清 HE4 水平与肾功能指标肌酐、胱抑素 C 和尿素水平的相关性，分析合并肾功能不全的良性疾病组与合并肾功能不全的卵巢癌组的罗马指数是否存在差异。

结果 良性疾病合并肾功能不全组（Ⅲ组）血清 HE4 水平明显高于良性疾病组（Ⅱ组）和健康对照组（Ⅰ组）（P<0.01），卵巢癌组（Ⅳ组）血清 HE4 水平明也显高于良性疾病组（Ⅱ组）和健康对照组（Ⅰ组）（P<0.01），但良性疾病合并肾功能不全组（Ⅲ组）与卵巢癌组（Ⅳ组）HE4 水平比较差异无统计学意义（P=1.00），良性疾病组（Ⅱ组）与健康对照组（Ⅰ组）血清 HE4 水平比较差异也无统计学意义（P=0.73），卵巢癌合并肾功能不全组（Ⅴ组）血清 HE4 水平显著高于其他组（P<0.01）。血清 HE4 水平与肌酐、胱抑素 C、尿素均呈正相关（P<0.05）。卵巢癌合并肾功能不全组（Ⅴ组）罗马指数高于良性疾病合并肾功能不全组（Ⅲ组）（P<0.05）。

结论 肾功能不全会影响血清 HE4 水平，利用绝经前后罗马指数可有助于鉴别卵巢肿瘤的良恶性。利用血清 HE4 对卵巢恶性肿瘤进行诊疗时，结合肾功能相关指标的检测结果，有助于我们排除肾功能不全导致的血清 HE4 水平升高。

PU-1420

不同类型慢性 HBV 感染者外周血 CD3+、CD8+T 淋巴细胞检测的临床价值

张旭强、李彩东、雷志萍、田鹏飞、陈俏丽
兰州市第二人民医院

目的 分析慢性 HBV 患者外周血 $CD3^+$、$CD8^+$T 淋巴细胞与 HBV DNA 载量、HBV-M 水平和性别等的相关性，探讨 $CD3^+$、$CD8^+$T 淋巴细胞在不同类型慢性 HBV 感染者中的临床价值。

方法 收集甘肃地区 200 例慢性 HBV 感染者，包括乙肝病毒携带者组(ASC)59 例、慢性乙型肝炎组(CHB)51 例、乙肝肝硬化组(LC)31 例、原发性肝癌组(HCC)32 例及健康对照组(Control)27 例。采用 BD FACSCantotM II 流式细胞仪检测 $CD3^+$、$CD8^+$T 细胞水平；采用雅培 i-2000SR 检测 HBV-M 水平；采用荧光定量 PCR 技术检测 HBV DNA 载量。

结果 慢性 HBV 感染者 $CD3^+$水平从 ASC、CHB、LC、HCC 组逐渐降低，与 Control 组相比差异有统计学意义(t_{HCC}=2.106，P=0.044<0.05；t_{LC}=2.003，P=0.049<0.05)，且 HCC 组患者最低；LC 组外周血 CD3+CD8+水平最低，较其他组相比差异有统计学意义($t_{Control}$=2.168，P=0.040<0.05；t_{ASC}=3.019，P=0.005<0.01；t_{CHB}=3.966，P=0.000<0.01；t_{HCC}=2.005，P=0.049<0.05)。与女性患者相比，男性患者有更高的 $CD3^+$水平(t_{CD3}+=2.964，P=0.004<0.01)。HBV DNA 水平与 $CD3^+$、$CD3^+CD8^+$呈负相关(r=-0.232，P=0.012<0.05；r=-0.220，P=0.018<0.05)。各组 HBeAg(+)患者和 HBeAg(-)患者 T 淋巴细胞亚群水平相比，差异无统计学意义(P>0.05)。

结论 随着 HBV 的病程进展，$CD3^+$、$CD8^+$细胞免疫功能均表现为衰竭状态；男性患者感染 HBV 后有更强的 T 细胞免疫应答，推测男性 HBV 感染者更易出现免疫性肝损害，其乙型肝炎进展更快且更易发展为严重肝病；临床可通过持续检测患者的 HBV DNA 载量来推测患者 T 细胞亚群表达情况，进而通过分析患者免疫应答情况来指导抗病毒药物的使用。

PU-1421

IL-35 在慢性乙肝病毒感染中的作用机制研究

徐学静
南京大学医学院附属鼓楼医院

乙型肝炎病毒（Hepatitis B virus, HBV）感染是全球性的公共卫生问题，全球约 20 亿人曾感染过 HBV，其中 3.5～4 亿人为慢性 HBV 携带者。我国 HBV 人群感染率高，2006 年全国乙型肝炎血清流行病学调查显示，人群乙型肝炎表面抗原（HBsAg）阳性率高达 7.18%，推算乙肝表面抗原携带者约 9300 万人。HBV 感染所致的慢性肝炎给患者、家庭和社会造成沉重的经济负担，是我国现阶段最突出的公共卫生问题之一。HBV 感染是一个复杂的免疫调节过程，其中多种细胞因子在 HBV 感染后疾病的发展、转归和治疗反应过程中发挥着重要的作用。白介素 35(IL-35)是近年来新发现的负性免疫调节细胞因子，主要由调节性 T 细胞(Treg)或调节性 B 细胞(Breg)产生。IL-35 可能在 HBV 感染的防治中具有潜在价值。IL-35 可能是在急性 HBV 感染过程具有潜在的抗炎特性对于开发新的乙型肝炎治疗方法可能至关重要。本研究主要探索负性免疫调节细胞因子 IL-35 在 HBV 感染及持续感染时疾病发生、发展过程中的变化规律及其抗 HBV 治疗中的作用和意义；重点分析 HBeAg 阴性和阳性慢性患者中的 IL-35 水平及与 Treg 和 Breg 的关系；以 Treg 和 Breg 为切入点，寻找 IL-35 的来源及可能导致的效应，从细胞因子及相关细胞亚群的变化格局分析可能导致的效应，探索其作用机制。通过以上工作，阐明 IL-35 在 HBV 感染的预防及疾病转归过程中的意义和作用机制，并有望为进一步提高慢性 HBV 感染的防治水平提供新思路，可能具有重要的理论意义和临床价值。

PU-1422

CD64 指数在部分感染性疾病中的诊断价值

朱杰、王娇、吴京学、田瑶
大连医科大学附属第二医院

目的 分析讨论中性粒细胞 CD64 指数在部分感染性疾病中的临床表现和诊断价值。
方法 对我院的 118 例确诊感染患者进行回顾性研究，按照病原学和免疫学诊断进一步分为布氏杆菌病、伤寒、结核、EB 病毒感染、流行性出血热、发热伴血小板减少 6 组，检测患者 CD64 指数、降钙素原和 C 反应蛋白，计算各组数据的阳性率与增长幅度及阳性似然比和阴性似然比，进行比较和讨论。
结果 患者各指标与对照组之间存在统计学差异（$P<0.05$），CD64 指数的阳性率在伤寒（100%）、布氏杆菌（79.49%）、结核（78.95%）及 EB 病毒感染（75.76%）上表达较好，且阳性似然比及阴性似然比均为最优，在流行性出血热（88.89%）与其他指标相比表现一般，在发热伴血小板减少综合征（57.14%，3.12）中无太大参考价值。
结论 CD64 指数在病毒感染和细菌感染上表现有一定差异，在鉴别诊断细菌性感染和病毒性感染上有一定的临床价值，在布氏杆菌、结核及 EB 病毒感染中有一定的诊断价值，在伤寒中表达最高，有较高的诊断价值。

老年男性血液系统损伤红斑狼疮一例

杨美兰、张秀琴、冯磊、白雪晶
玉溪市人民医院医学检验科（昆明医科大学第六附属医院医学检验科）

SLE 是一种由自身免疫介导的累及多脏器多系统的自身免疫性疾病，以多系统受累为主要临床特点。初期多无系统性损伤，仅为单一系统受累，容易误诊漏诊，误诊率达 50-60%，确诊时间 1.7-8 年不等。本病例以血液系统受累为首发症状的系统性红斑狼疮，其原因为老年人造血系统功能逐渐衰退，代偿能力减弱，骨髓长期遭受自身抗体攻击，改变了造血微环境的平衡状态，导致血细胞生成障碍，破坏过多所致。

PU-1424

Overexpression of SCCA in poorly differentiated gastric adenocarcinoma: a case report

Mengyao Yu
Jiangsu Province Hospital

BACKGROUND Squamous cell carcinoma antigen (SCCA) is regarded as a specific indicator of epithelial malignancies and is widely used in the diagnosis of squamous cell carcinoma (SCC). However, the expression of SCCA in gastric adenocarcinoma has not been studied in detail.
CASE SUMMARY A 52-year-old man was admitted to our hospital for a 2.5 cm × 2.5 cm ulcer at the antrum-body junction with dull pain and fullness in the upper abdomen for 2 mo. His pre-surgery serological testing results showed 0.51 ng/mL SCCA (reference interval, < 1.5 ng/mL) and 9.9 ng/mL carcinoembryonic antigen (reference range, < 4.7 ng/mL). He underwent radical distal gastrectomy and Roux-en Y anastomosis and was diagnosed with poorly differentiated mucinous adenocarcinoma (Lauren classification: Diffuse) by pathological examination of the resected lesion. Immunohistochemistry showed that SCCA was highly expressed in the cytoplasm of cancer cells. After surgery, the patient received an S-1 adjuvant chemotherapy regimen for six cycles containing tegafur, gimeracil, and oteracil potassium. He showed no sign of recurrence or metastasis within 24-mo follow-up.
CONCLUSION This is a frontal report of SCCA overexpression in poorly differentiated adenocarcinoma of the stomach.

特发性炎性肌病自身抗体谱检测在临床应用中的价值

晏颂欣
中国医学科学院北京协和医院

特发性炎性肌病(IIM)是一组以近端对称性肌无力和多器官（如皮肤，关节，肺，胃肠道和心脏）受累为特征的异质性疾病，统称为肌炎。IIM 主要包括多发性肌炎、皮肌炎、包涵体肌炎等临床亚型，其发病机制尚不明确，但肌炎自身抗体被证实在疾病的发展和诊断中发挥着一定的作用。肌炎自身抗体可被分为肌炎特异性自身抗体（MSA）或肌炎相关性自身抗体（MAA）。本文就近年来在肌炎自身抗体领域的进展进行全面的总结和概括，期望能进一步展现肌炎自身抗体的临床价值，促进肌炎自身抗体在临床的应用。

Trust 与 TPPA 联合检测对梅毒初筛的临床意义研究

杨佳新
吉林金域医学检验所有限公司

目的 梅毒，是一种由梅毒螺旋体 TP 所引起的全身各器官的性传播疾病，其传染力强危害性大，能够导致自身性流产或死产甚至是胎传梅毒，大多数是通过性传播途径传。梅毒感染者呈上升趋势，所以梅毒检测已被列为住院的常规检查项目。本文探讨了 TPPA 和 Trust 联合检测对初筛梅毒阳性的诊断及临床诊断意义。
方法 选取 2020 年 1 月至 2020 年 12 月送检我公司的梅毒样本 2000 例，同一时间段分别用 Trust 和 TPPA 两种方法检测，Trust 试剂是上海荣盛生产的试剂，TPPA 是用由富盛生产的试剂，质控为临检中心提供的血清样本，所有的样本均严格按全国临床检验操作规程与试剂说明书上的要求进行，结果为阳性，复查结果仍为阳性，判断为 TP 抗体初筛阳性，再结合临床资料最后确诊为梅毒。
结果 实验表明，2000 例样本中，Trust 和 TPPA 结果如下：Trust 阳性 40 例，TPPA 阳性 106 例，两种方法联合检测阳性 39 例，临床确诊为梅毒 39 例。Trust 与 TPPA 两种方法检测的结果的阳性率分别为 5.30％ 和 2.00％，特异性分别为 96.70％和 98.00％，敏度均为 100％。
结论 人体感染梅毒螺旋体后，体内会产生两种抗体，特异性抗梅毒螺旋体抗体中 IgM 持续时间短 IgG 持续时间长，非特异性抗心磷脂抗体又称反应素。由于 TPPA 抗体治疗后仍可长期存在，因此 TPPA 单独阳性只能说明感染或曾经感染，不能判断是否感染梅毒。Trust 所用的抗原主要是用来检测血清中的反应素，对早期梅毒的辅助诊断能力差。此法操作简便容易判读，但其影响因素也比较多，易受一些生理或病理状态的影响，而出现假阴性或假阳性。在我们的研究中，TPPA 阳性率高于 Trust 的阳性率，这说明一些梅毒患者通过治疗已经痊愈。所以，Trust 和 TPPA 在梅毒临床诊断中的互补作用很强，二者的联合检测，并结合临床进行综合分析，可避免梅毒的误诊与漏诊。

PU-1428

自身免疫疾病或自身抗体作为 PD-1/PDL1 治疗癌症患者的危险因素：一项系统综述和荟萃分析

晏颂欣
中国医学科学院北京协和医院

背景 程序性死亡-1（PD-1）和程序性死亡配体-1（PD-L1）阻断已成为治疗多种癌症的有效方法。越来越需要弄清楚 PD-1/PD-L1 抑制剂在自身免疫性疾病（AID）癌症患者中的安全性和有效性。

虽然 PD-1/PD-L1 抑制剂在 AID 治疗的非小细胞肺癌（NSCLC）患者中通常是安全的，但是需要更大规模的试验来确定这种免疫检查点抑制剂（ICIs）治疗明显自身免疫性患者的风险。
目标 本系统综述的目的是评估抗 PD-1/PD-L1 抗体在癌症患者 AID 治疗中的安全性和有效性。
方法 在 PubMed、科学网和 Cochrane 图书馆的同行评审期刊上系统地搜索相关研究。共获得文献 1049 篇，发表论文 8 篇。
结果 有 AID 的癌症患者和无 AID 的癌症患者的不良事件（耀斑或 IRAE）发生率分别为 57%和 37%。癌症患者接受 AID 治疗的有效率为 33%，而没有 AID 治疗的癌症患者的有效率为 32.7%。
结论 尽管自身免疫性疾病患者发生不良事件的风险较高，但在良好的临床管理条件下，PD-1/PDL1 治疗仍应被视为一种良好的肿瘤治疗选择。

PU-1429

炎症因素在自身免疫性疾病与动脉粥样硬化发病机制中的关联性研究进展

毕千叶、冯磊、马琦欣、邵聪、骆贝贝
玉溪市人民医院医学检验科（昆明医科大学第六附属医院医学检验科）

动脉粥样硬化是许多重要的血管不良事件的基础，严重威胁着人类健康，近年来，炎症及免疫调节因素在动脉粥样硬化发生发展中的作用越来越为人们所重视，人们已经注意到自身免疫性疾病患者心血管病变的风险较常人显著提高，推测自身免疫性疾病与心血管疾病的致病机制之间可能存在交叉。因此本文通过检索国内外相关文献，对自身免疫性疾病与动脉粥样硬化的相关机制做一综述，以期为防治自身免疫性疾病并发心血管疾病提供新思路。

同种异体主动脉移植模型中以 NADPH 氧化酶表达和新生血管形成为特征的早期外膜激活

季健
山东大学齐鲁医院

目的 探讨同种异体主动脉移植模型中 NADPH 氧化酶表达和外膜血管生成反应的动态变化。
方法 将 Fischer 344 大鼠胸主动脉移植至 Lewis 大鼠腹主动脉。分别于第 0.5、3、7、14 天采集移植物标本，进行形态测定、免疫组化、免疫荧光染色和定量 PCR 检测。
结果 移植后第 3 天即发现外膜增厚，第 7 天即发现新生内膜。与正常外膜组织相比，NADPH 氧化酶亚单位 gp91phox 和 p47phox 在移植物外膜中的表达水平从第 3 天开始升高，并在第 14 天进一步升高。免疫组化染色显示，浸润的巨噬细胞可能是 NADPH 氧化酶表达的主要来源。移植物外膜成纤维细胞中 NADPH 氧化酶的表达增加，p47phox 基因沉默显著抑制了移植物成纤维细胞的增殖和迁移。外膜增厚伴随着外膜新生血管的增加，移植后第 14 天外膜微血管密度与新生内膜厚度呈正相关。
结论 移植损伤诱导早期移植物外膜 NADPH 氧化酶的表达和外膜新生血管的形成，提示激活的外膜可能是预防移植血管病变的新靶点。

PU-1431

乙肝病毒 Pre-S 1 抗原测定在乙肝诊治中的应用

邹建文
山东第一医科大学附属省立医院

收集我院门诊就诊及住院的慢性乙型肝炎患者及病毒携带者 355 例(男 247,女 108)，空腹静脉采血进行 Pre-S1、HBV-M、ALT 及 HBV-DNA 检测，结果发现：HBeAg 和 HBV DNA、Pre-S1 高度相关，Pre-S1 同样可以作为 HBV 复制的一个指标。我们还发现,Pre-S1 阳性组 HBV DNA 阳性率 95. 9%，HBeAg 阳性率 77.2%，肝功能异常 46.8%，均明显高于 Pre-S1 阴性组，说明 Pre-S1 阳性组病毒复制较活跃，引起肝功能持续受损。所以在乙肝的诊断、治疗过程中，HBV 五项标志物、HBV DNA 和 Pre-S1 抗原等指标不能互相取代，应联合检测，综合分析，才能对乙肝病情的进展有一个正确认识。

PU-1432

热休克蛋白 90α 在膀胱癌中的表达和意义

季健
山东大学齐鲁医院

目的 研究热休克蛋白 90α（HSP90α）在膀胱癌中的表达和意义。
方法 收集血浆标本侵袭性膀胱癌组 55 例，非侵袭性膀胱癌组 52 例及健康对照组 64 例，应用荧光实时定量 RT-PCR 法检测血浆 HSP90α 的 mRNA 表达量，并应用酶联免疫吸附法（ELISA）检测血浆 HSP90α 表达量；收集侵袭性膀胱癌组织 32 例、非侵袭性膀胱癌组织 25 例及正常膀胱粘膜组织 20 例，应用免疫组织化学技术检测 HSP90α 的表达。
结果 荧光实时定量 RT-PCR 法显示膀胱癌组血浆 HSP90α 的 mRNA 表达量显著高于健康对照组（P<0.01）,并且与膀胱癌浸润程度密切相关（侵袭性膀胱癌组 vs. 非侵袭性膀胱癌组 P<0.01）。ELISA 检测示膀胱癌组血浆 HSP90α 表达量显著高于健康对照组（P<0.01）,但与膀胱癌浸润程度无明显相关（侵袭性膀胱癌组 vs. 非侵袭性膀胱癌组 P>0.05）。免疫组织化学检查显示 HSP90α 在膀胱癌组织及正常膀胱粘膜组织中均表达，但膀胱癌组织阳性细胞百分率显著高于正常膀胱粘膜组织（P<0.01），而侵袭性膀胱癌组织与非侵袭性膀胱癌组织间无显著差异（P>0.05）。
结论 HSP90α 在膀胱癌中高表达，提示其在膀胱癌的发生发展过程中起重要作用，可作为膀胱癌靶向治疗的分子靶标。

PU-1433

外周髓系细胞中的 GSDMD 蛋白促进多发性硬化中神经炎症的发生

吴昱青[1]、李晟[1]、杨冬雪[1]、吴春燕[1]、马春梅[1]、刘雪[1]、Paul N. Moynagh[2]、王冰微[3]、胡刚[3]、杨硕[1]
1. 南京医科大学
2. 爱尔兰梅尔努斯大学
3. 南京中医药大学

目的 NLRP3 炎症小体在 EAE 发病机制中起着关键作用，然而，新近发现的 NLRP3 炎症小体下游的细胞焦亡执行蛋白——GSDMD 在 EAE 中的作用尚未明确。
方法 我们将采用流式细胞检测、免疫荧光、免疫组化等方法探究 GSDMD 在 EAE 发病中的角色和作用机制。

结果 我们观察到在 EAE 小鼠的中枢神经系统中 GSDMD 蛋白的水平显著增强，特别是在血管周围区域。EAE 的发病机制需要 GSDMD，外周血髓系细胞 GSDMD 缺乏可抑制免疫细胞向中枢神经系统的浸润，从而抑制神经炎症和脱髓鞘病变。此外，GSDMD 的丢失降低了 EAE 促发淋巴器官 T 细胞的活化和分化，阻止了 T 细胞向中枢神经系统的浸润。
结论 总的来说，这些发现提供了在 EAE 发病过程中外周髓样细胞驱动神经炎症的 GSDMD 的首次证明。

PU-1434

两种不同流式细胞仪方法学的研究及探讨

沈超飞、刘寒、吴佳莺、张延、王晓鸣、王欣
上海市第一人民医院嘉定分院

目的 流式细胞仪在生命科学领域发挥着至关重要的作用，它可以快速测量、存贮、显示悬浮在液体中的分散细胞的一系列重要的生物物理、生物化学方面的特征参量。起步较早的 BD 生物科技公司通过各项专利技术，在机器、试剂和耗材方面逐步形成了垄断地位，成为行业领域的金标准。然而 BD 流式细胞仪的国产化率非常低，甚至不能在国内进行组装。而国内组装的安捷伦流式细胞仪其性能参数也并不逊色于 BD 公司，于是我们分别在两家公司的仪器上进行常规免疫分析，并且捕获数据分析，从而探讨两种流式细胞仪优劣势及两种仪器的检测结果是否一样可靠。
方法 我们详细对比两家公司高配仪器性能参数的同时，收集了三位志愿者的体检血液，取 50ul 进行流式染色、裂红，并分别在两家公司的流式细胞仪上跑样，通过流式分析软件（flowjo），对数据进行逐级降为解析，以此获得实验结果。
结果 通过对志愿者血液的跑样，显示两者在参数性能上相差无几，基于 Flowjo 软件的数据展示，BD 仪器获得数据更有表现力，但是两者在统计上面没有显著差异。同时我们发现，两种仪器的绝对计数相差无几，从统计学意义上来说两者没有显著性差异。
结论 在绝对计数方面，BD 公司的流式细胞仪需要依赖计数微球，而安捷伦的流式细胞仪不依赖计数微球也可以实现，这是一项重大突破。从后续维修保养来看，安捷伦公司的流式细胞仪国产化程度更高，在国内组装的机器比纯进口的机器更有优势，这也是 BD 流式细胞仪的一大短板。同时实验结果也证明，两种仪器对于细胞成分的测定没有显著性差异，因此，BD LSRFortessa 和 Agilent NovoCyte Advanteon 有着相似的流式细胞术测定能力。

PU-1435

甲状腺功能状态与心血管疾病的相关性

崔洁
宁夏医科大学附属医院

甲状腺功能检查包含甲状腺素：T4、T3、fT 4、fT 3 及促甲状腺素（TSH）检查，TSH 的作用为促进甲状腺滤泡细胞合成及释放甲状腺素，故当甲状腺素升高时，TSH 为降低或检测不到的状态；当甲状腺素降低时，TSH 为升高状态。临床发放化验单过程中，发现部分心血管疾病患者甲状腺素为升高状态，TSH 也为升高状态，与规定不符，故研究特殊模式下甲状腺功能与心血管疾病的相关性，探讨特殊模式甲状腺功能的成因，为临床更清楚的了解疾病做一定的帮助。

PU-1436

不同国产检测系统之间及与 i2000SR 检测系统之间抗 HCV 抗体灰区样本检测结果的一致性分析

陆银华
上海市临床检验中心

目的 探讨 4 种国产检测系统与 ARCHITECT i2000SR 全自动免疫分析仪及配套试剂组成的检测系统（简称 i2000SR 检测系统）检测抗丙型肝炎病毒（HCV）抗体灰区样本的一致性和相关性。
方法 分别使用 4 种国产检测系统（2 种使用酶联免疫吸附试验、1 种使用时间分辨荧光免疫分析法、1 种使用化学发光法）测定不同浓度的抗 HCV 抗体标准品，评价各检测系统的线性关系及不精密度[变异系数（CV）]。分别采用 4 种国产检测系统和 i2000SR 检测系统测定 120 例经重组免疫印迹法（RIBA）确认为阳性的抗 HCV 抗体灰区样本，评价各检测系统的相关性和一致性。
结果 4 种国产检测系统检测不同浓度的标准品，批内 CV 分别为 17.6%～25.1%、0.8%～26.7%、7.8%～36.2%和 0.7%～20.2%，总 CV 分别为 15.9%～25.3%、1.0%～23.5%，7.7%～34.8%和 3.4%～18.9%，线性相关方程分别为 Y=0.634X+0.973、Y=2.495X+0.010、Y=1.348X+0.896、Y=2.510X－0.214。对于 S/CO 值为 1.0～3.0 的样本，4 种国产检测系统与 i2000SR 检测系统符合率为 34.2%～55.2%；对于 S/CO 值为 3.01～6.0 的样本，检测符合率为 57.5%～80.0%；对于 S/CO 值 6.01～9.0 的样本，4 种国产检测系统检测符合率均>90%。4 种国产检测系统均阴性的样本数为 23 份（19.2%），S/CO 值的 ±3s 为 2.80±4.35；4 种国产检测系统均阳性的样本数为 71 份（59.1%），S/CO 值的±3s 为 5.13±7.84。4 种国产检测系统两两之间的 r 值分别为 0.712 5、0.760 0、0.837 0、0.702 2、0.769 4、0.736 4，两两之间的 Kappa 值分别为 0.666 3、0.598 5、0.742 6、0.759 3、0.879 0、0.664 8。
结论 对于灰区（S/CO 值为 1.0～9.41）样本，建议应至少使用 2 种检测系统或使用高特异性的检测系统进行复检。对于低浓度样本或临界值样本，应充分考虑不同检测系统之间可能出现的结果不一致现象，制定合理的灰区范围。

PU-1437

一例 HIV 抗体假阳性的思考

罗宇程
柳州市妇幼保健院

目的 探究 HIV 抗体假阳性的应对方法及分析思路。
方法 实验室所用 HIV 抗体检测酶联免疫法试剂为英科新创（第三代试剂）， 化学发光法试剂为深圳迈瑞（第四代试剂，可同时检测 HIV 抗原抗 体），对弱阳性标本加做化学发光法，可进一步排除一些干扰因素， 最后送疾控中心进行确证实验，最终结果以疾控中心确证报告为准。
结果 我院接诊的某孕产妇进行常规入院筛查，HIV 抗体结果显示弱 阳性（**结果** S/CO 值为 1.34，阳性判断标准为 S/CO 值>1）， 次日进 行酶联免疫法双孔复查，结果仍为弱阳性。标本加做 HIV 抗体化学 发光法，结果为 0.74（>1 判为阳性），外送疾控中心进行检测。疾 控中心确证实验回报为阴性。HIV 抗体结果为阳性，本实验室**结果** 统一发布“HIV 感染待确定”，如果临床回报患者为 HIV 确诊者，报 告单上会备注上“患者已确诊”。针对此类弱阳性结果，实验室**结果** 同样为“HIV 感染待确定”，并及时与临床沟通实验室检验结果，做 好结果解释，虽然有很大可能为假阳性，但最终的结果以疾控中心 的确证报告为准。
结论 孕产妇为特殊人群，出现 HIV 抗体假阳性时， 等待疾控中心的确证报告需要一定的时间，对临床医生的诊断是一 种挑战。新创 HIV 三代酶联试剂产生非特异性反应的原因可能是：1、 样本中含有较多的免疫球蛋白易带来试剂假阳结果；2、样本中含自 身抗体、嗜异性抗体、类风湿因子、

溶菌酶等也易造成假阳结果；3、 一些特殊人群如老人、孕妇、小孩等，由于体内含自身抗体或激素 较多，在免疫测定中也容易产生假阳反应。现代试剂的制备工艺日 趋成熟，这些影响因素在试剂研究过程中也已充分考虑并消除，但 因为人血清成分比较复杂，个体差异较大，总会存在有某些影响特 别强的因素或其他未知的影响因素的样本，造成检验结果的假阳性。 这就需要我们检验人员充分发挥主观能动性，积极联系临床医生与 试剂厂家，及时排查分析原因，为患者提供优质的服务。

PU-1438

慢性乙型肝炎患者病毒复制与肝纤维化五项联合检测的临床应用

熊娟
汉川市人民医院

目的 探讨慢性乙型肝炎患者乙型肝炎病毒（HBV）DNA 复制与肝纤维化五项指标：透明质酸（HA）、Ⅲ型前胶原 N 端肽（PⅢPN）、Ⅳ型胶原（CⅣ）、层粘连蛋白（LN）、甘胆酸（CG）联合检测的临床意义。
方法 选取 109 例慢性乙型肝炎患者为研究对象，选取 40 例健康体检者为对照组，分别检测 HBV DNA 和肝纤维化五项，采用 SPSS19.0 软件对数据进行统计分析。
结果 低载量组和中载量组肝纤五项检测结果与对照组比较，差异无统计学意义（P＞0.05）；高载量组肝纤五项检测结果与对照组比较，差异有统计学意义（P＜0.05）。随着 HBV DNA 载量的增加，肝纤五项各检测指标的数值也在增加。肝纤五项（HA、PⅢPN、CⅣ、LN、CG）的 ROC 曲线下面积（AUC）分别为 0.556、0.763、0.742、0.420、0.695，其中 PⅢPN 的 AUC 最大，表明 PⅢPN 比其他指标对肝脏疾病的诊断准确率最高；LN 的 AUC 最小，小于 0.5，表明其单独诊断的准确率低。
结论 HBV DNA 载量与血清肝纤维化五项指标联合检测是慢性乙型肝炎患者病情监测的一个良好指标，临床应及时关注慢性乙型肝炎患者病毒复制与肝纤维化水平，延缓肝硬化的发生。

PU-1439

前列腺癌与 TAMs

凡慧慧[1]、曾方银[2]
1. 永州市中心医院
2. 南方医科大学第五附属医院

前列腺癌（prostate cancer； PCa） 是指发生在前列腺的上皮性恶性肿瘤，在全球范围内十分常见。近年来，我国前列腺癌的发病率明显上升，且围绕前列腺癌的发生、发展、诊断和治疗进行了大量的研究。前列腺癌治疗手段主要根据患者年龄、肿瘤分期分级等具体情况而定，目前主要是手术切除治疗、放射治疗以及雄激素阻断治疗。但是由于前列腺癌高发的二次转移概率，使得前列腺癌患者总体预后效果不佳。因此，探究更有效的前列腺癌治疗策略，并寻求新的治疗靶点和思路，成为目前前列腺癌的研究热点。近年来，肿瘤免疫治疗备受关注，是肿瘤治疗领域的焦点，同靶向治疗一起有望成为继手术、化疗、 放疗后肿瘤治领域的一场革新。

巨噬细胞是肿瘤微环境中浸润最丰富的炎症细胞，被称为肿瘤相关巨噬细胞（tumor associated macrophages， TAMs）。在原发性肿瘤中，肿瘤细胞分泌细胞因子促进巨噬细胞的募集和增殖； 反过来，巨噬细胞可以刺激新生血管的形成并提高肿瘤细胞的侵袭性、迁移性和血管内渗性；同时巨噬细胞还具有免疫抑制性，保护肿瘤细胞逃避自然杀伤细胞和 T 细胞的攻击。因此，肿瘤的发生发展与肿瘤相关巨噬细胞的作用密切相关。

PU-1440

儿童结核感染 T 细胞 γ 干扰素释放试验的结果分析

吴思宇、张潇钰
中南大学湘雅医院

目的 针对我院儿童可疑结核患者或需排除结核感染患者的结核感染 T 细胞 γ 干扰素释放实验（IGRAs）的结果进行回顾分析，并探讨儿童不确定结果产生与疾病的相关性。
方法 回顾分析 2020 年 4 月-2020 年 12 月中南大学湘雅医院 862 例儿童疑似结核或需排除结核患者的 IGRAs 检测结果，并与此期间 14356 例成人患者 IGRAs 检测结果进行比较分析，同时收集儿童基本资料，运用 SPSS 统计学软件进行数据分析。
结果 862 例儿童检测样本中 IGRAs 检测结果阳性率为 6.3 %，大大低于成人患者阳性率（41.2 %），差异有统计学意义（c2=235.130，P=0.000）；儿童不确定结果发生率为 5.6 %，高于成人不确定结果发生率 3.2 %，差异有统计学意义（c2=24.910，P=0.000）。儿童组中男、女患者 IGRAs 不确定结果发生率为 4.6 %，9.0 %，差异有统计学意义（c2=6.551，P=0.010）；成人组中男女患者不确定结果发生率分别为 2.9 %，3.6 %，差异有统计学意义（c2=6.005，P=0.014）。儿童血液系统恶性肿瘤、感染性疾病、自身免疫性疾病、慢性肝脏疾病、过敏性疾病患者其不确定结果发生率与确定结果（阴性/阳性）发生率的差异具有统计学意义（P＜0.05）。
结论 儿童不确定结果发生与年龄性别因素密切相关，还与患者免疫状态密切相关。

PU-1441

新型冠状病毒疫情前后呼吸道病原体感染情况比较

凡慧慧
永州市中心医院

目的 回顾性分析永州市中心医院 2019 年和 2020 年住院患儿 9 种呼吸道病原体（嗜肺军团菌、肺炎支原体、Q 热立克次体、肺炎衣原体、腺病毒、呼吸道合胞病毒、甲型流感病毒、乙型流感病毒、副流感病毒 1、2 和 3 型）感染的分布差异，了解新冠疫情防控下呼吸道病原体的感染和传播情况，为临床诊疗提供依据。
方法 采用间接免疫荧光法检测患儿血清中 9 种呼吸道病原体 IgM 抗体。
结果 2019 年度检测患儿 3936 例，阳性率 30.6%，2020 年度检测患儿 1176 例，阳性率 17.7%，有统计学意义（P<0.05）；2019 年度和 2020 年度各病原体阳性率分布有显著差异（P<0.05），且有季节差异（P<0.05）。
结论 新冠肺炎疫情常规的防控手段对 9 种呼吸道病原体的感染与传播有明显的阻碍作用，尤其是流感病毒、腺病毒、呼吸道合胞病毒等。

TROCH 筛查的现状

曾静
南方医科大学珠江医院

TORCH 是一个缩写，代表一组病原体，包括弓形虫(TOX)、风疹病毒(RV)、巨细胞病毒(CMV)和单纯疱疹病毒(HSV)，可引起围产期感染，具有类似症状[1]。TORCH 作为优生优育的指标之一，TORCH 特异性抗体筛查可以降低先天性疾病发生率。本文总结 TROCH 筛查的应用现状，指导临床正确合理地使用 TORCH。

PU-1443

CMIA 法与 TPPA 法检测梅毒特异性抗体相关性分析

肖伟利
内蒙古自治区人民医院

目的 对化学发光法检测梅毒特异性抗体（CMIA）与金标准梅毒密螺旋体血凝试验（TPPA）进行比较分析，评价 CMIA 符合率及合理复检范围。
方法 选取 2020 年 6 月至 2021 年 5 月内蒙古自治区人民医院 TPPA 测定梅毒特异性抗体阳性 1355 例为研究对象，同时采用化学发光法（雅培 Ci16200）检测梅毒特异性抗体。以 TPHA 试验为金标准,对 CMIA 诊断梅毒特异性抗体的灵敏度、特异度和准确度进行计算,并采用一致性检验对 CMIA 和 TPPA 的一致性进行分析。根据实验结果探讨 CMIA 检测梅毒特异性抗体复查的合理限度。
结果 1355 例 TPPA 阳性标本用 CMIA 检测，阳性限度为 S/CO≥1 时,阳性 1098 例,阴性 257 例。CMIA 与 TPPA 法的 Kappa 一致性系数为 0.81,灵敏度为 58.35%；准确度为 91.32%；特异度为 95.15%。S/CO 值在>1.0～≤3.5 之间的结果不一致比率为 83.38%，S/CO 值>9.0 时，两者符合率达 100%。
结论 梅毒 CMIA 法用于梅毒特异性抗体检测的灵敏度、准确度高，特异度好，可以用于梅毒筛查检验。同时，鉴于 CMIA 检出限底、灵敏度高，当 S/CO 值<9.0 时必须用确诊方法复检，当两种方法结果明显不一致时，建议定期复查，避免误诊或漏诊。

PU-1444

The Diagnostic Performance of SARS-CoV-2 Antibody Tests for COVID-19: A Systematic Review and Meta-Analysis

Haolong Li
Department of Clinical Laboratory, Peking Union Medical College Hospital, Peking Union Medical College and Chinese Academy of Medical Sciences, Beijing, China

Objective The aim was to systematically evaluate the diagnostic performance of SARS-CoV-2 antibody test for COVID-19 according to officially published data.
Methods Four electronic databases were searched for relevant studies published by 5 May 2020, including PubMed, Web of Science, Embase, and CNKI. The bivariate mixed-effects model was used to calculate the diagnostic indexes from primary data of eligible studies. We evaluated IgM, IgG, either IgM or IgG (at least a positive result detected by IgM and IgG), and total antibody (Ab) tests based on Enzyme-linked immunosorbent assay, Chemiluminescence Enzyme Immunoassays, gold immunochromatographic assay and Fluorescence Immunoassays. The included articles were assessed with the Quality Assessment of Diagnostic Accuracy Studies 2 tool. Subgroup analysis, meta-regression, and publication bias were also performed.
Results Twenty-five articles that met inclusion criteria were performed meta-analysis, there were a total of 2,342 COVID-19 patients and 2979 control participants. Either IgM or IgG and Ab test has the highest sensitivity, as followed by IgG and IgM test. All tests showed high specificity reaching levels above 98%. Meta-regression indicated that the method of antibody detection and the target antigen of antibody detection kits might be the source of heterogeneity for IgM, while no other significant sources of heterogeneity were detected for IgG, either IgM or IgG. In subgroup analysis, we found the heterogeneity could obviously change in some subgroup of IgM, IgG, and either IgM or IgG test. No publication bias was detected in all tests.
Conclusion Antibody test is a reliable supplementary diagnostic tool to identify the suspected COVID-19 patients, simultaneous detection of IgM and IgG is more sensitive than testing one type of antibody.

PU-1445

维生素 D 受体基因多态性在自身免疫性疾病中的研究进展

李昊隆
中国医学科学院北京协和医院

目的 对维生素 D 受体（VDR）基因多态性与多种 AID 易感性之间的相关研究进展进行综述。
方法 检索 PubMed、Web of Science、Scopus、Embase 中已发表的 VDR 基因多态性与多种 AID 易感性之间的相关文献，对已发表的文献进行总结。
结果 VDR 基因在人体多种组织中进行表达，其转录产物 VDR 是介导 1,25(OH)2D3 发挥多种生物学效应的受体，VDR 基因多态性的产生可能影响 1,25(OH)2D3 对机体正常的免疫调节功能。VDR 基因多态性与类风湿关节炎、系统性红斑狼疮、原发性干燥综合征等自身免疫病密切相关。
结论 VDR 基因多态性可能在 AID 的发病过程中扮演某种重要角色，其多态性有望成为诊断 AID 的遗传标志物。目前，国内外研究尚且停留在其多态性表型在疾病分布中的表达情况，还需更多研究去探索多态性分布与疾病临床特点的相关研究。

PU-1446

血液学指标对强直性脊柱炎患者髋关节受累风险的评估价值

Sihui Li、xi li、wei zhou、yanting jiang、min jin、jian wang
The Value of Hematological Indexes in Evaluating the Risk of Hip Involvement in Patients with Ankylosing Spondylitis

Objective To analyze the laboratory data of ankylosing spondylitis (AS) patients with hip involvement, and explore the value of neutrophil to lymphocyte ratio (NLR) and monocyte to lymphocyte ratio (MLR) in evaluating the risk of hip involvement in patients with AS.
Methods Retrospective analysis was performed on a total of 188 patients with AS. According to BASRI score, 84 AS patients with hip radiology score ≥2 were selected as hip involvement group, and 104 AS patients with hip radiology score<2 as non-hip involvement group. During the same period, 173 patients with osteoarthritis (OA) and 181 healthy people by age and sex were selected. The characteristics of hematological indexes of the three groups were compared, and the levels of NLR and MLR in hip involvement group and non-hip involvement group were observed.
Results The values of NLR and MLR in AS group were significantly higher than those in OA group and healthy controls (each P<0.05). The values of NLR and MLR in hip joint involvement group were significantly higher than those in non-hip involvement group (P<0.05). The diagnostic efficiency of combined detection of NLR and MLR in AS-hip involvement group was significantly higher than that in AS-non-hip involvement group and OA group (AUC-AS-hip involvement group=0.863, P<0.001; AUC-AS-non-hip involvement group=0.746, P<0.001; AUC-OA group=0.669, P<0.001).
Conclusion NLR and MLR have certain value in the evaluation of AS patients with hip involvement, and the combined diagnosis of them has higher value.

PU-1447

神经元特异性烯醇化酶对蛛网膜下腔出血早期预后的临床价值

卢英
江苏省人民医院（南京医科大学第一附属医院）

目的 探讨与炎症相关的生物学标志物和神经元特异性烯醇化酶与动脉瘤性蛛网膜下腔出血患者早期预后的相关分析。
方法 将动脉瘤性蛛网膜下腔出血患者临床表现和患者的 CT 检查结果进行比对，根据评分将患者分为预后良好和预后不良组，对比分析两组的临床资料。
结果 预后不良组入院时白细胞计数(WBC)、中性粒细胞计数(N)、C 反应蛋白(CRP)、神经元特异性烯醇化酶(NSE)较预后良好组显著增高，P<0.05，logistics 回归分析表明 WBC、N、 CRP、NSE 与动脉瘤性蛛网膜下腔出血预后不良呈正相关，为其危险因素。当 NSE 升高超过 1000 ng/ml 时，患者预后不良死亡率极高。
结论 入院时 WBC、N、CRP、NSE 的升高是预测动脉瘤性蛛网膜下腔出血预后不良的独立生物学标志。根据患者的病情发展关注 NSE 的变化，判断脑损伤的程度，有利于治疗方案的选择，减少 CT 检查的次数。

PU-1448

系统性红斑狼疮患者血清同型半胱氨酸水平与疾病活动度及血脂异常的相关性

陈希
中国人民解放军北部战区总医院

目的 探究系统性红斑狼疮患者血脂异常发生情况，分析血清同型半胱氨酸与 SLE 活动度以及心血管疾病危险因素的关系。
方法 回顾性分析确诊为系统性红斑狼疮患者 76 例、健康对照组 57 例，用全自动生化分析仪检测 Hcy，总胆固醇（total cholesterol，TC）、甘油三脂（triacylglyceride，TG）、高密度脂蛋白胆固醇（High density liptein cholesterol，HDL-C）、低密度脂蛋白胆固醇（Low-Density Lipoprotein Cholesterol，LDL-C），并检测其抗双链 DNA（anti-double-stranded DNA antibody，anti-dsDNA）抗体与补体 C3、C4 水平，以评估 SLE 患者 SLEDAI 积分。最后采用统计学方法分析 SLE 患者血清 Hcy 水平与疾病活动度及血脂异常的相关性。
结果 SLE 患者血清 Hcy、TC、TG、Hcy 水平均高于健康对照组（P<0.05），血清 HDL-C 水平明显低于对照组（P<0.05）。在 SLE 患者中，伴有血脂异常患者的血清 Hcy 水平明显高于血脂正常的 SLE 患者（P<0.05），高于健康对照组（P<0.05）。SLE 患者血清 Hcy 的水平和 TC 与 TG 水平呈正相关（P<0.05），与 SLEDAI 评分呈显著正相关（P<0.01），伴有血脂异常的 SLE 患者表现出更高的 SLEDAI 评分。Hcy 水平与血脂异常之间存在显著且独立的关联。
结论 血清 Hcy 水平在 SLE 血脂异常患者中明显升高，检测血清 Hcy 水平变化对评估 SLE 患者疾病活动度及预测心血管并发症有重要的临床意义，SLE 患者血清标志物变化的早期识别有助于制定干预策略，从而降低并发心血管疾病的风险。

PU-1449

血清神经元特异性烯醇化酶(NSE)水平和急性心肌梗死患者心功能分级的关系

吴志奇
江苏省人民医院（南京医科大学第一附属医院）

目的 探讨急性心肌梗死(acute myocardial infarction，AMI) 患者的血清神经元特异性烯醇化酶(NSE)水平与心功能分级的关系。
方法 入选 2013 年 12 月 1 日至 2015 年 11 月 31 日入院的冠心病患者，其中 154 名 AMI 患者。由病历收集患者的基本信息、血清 NSE、心电图及血液生化检查资料。依据心功能 Killip 分级分为 Killip 低分级组和 Killip 高分级组。应用 t 检验或 Mann-Whitney U 检验比较不同 Killip 分级组患者血清 NSE 水平的差异。
结果 与 Killip 低分级组相比，Killip 高分级组患者年龄(69 岁 vs 65 岁，P ＜ 0. 05) 和糖尿病患者比例均显著较高(55% vs 25%，P ＜ 0. 05) ，总胆固醇和低密度脂蛋白水平则明显偏低(P ＜ 0. 05) 。Killip 高分级组患者的血清 NSE 水平显著高于 Killip 低分级组患者(19.24 mg /dl vs 17.01 mg /dl，P ＜ 0. 05) 。按疾病史分层分析显示，在非糖尿病(19.45 mg /dl vs 17.02 mg /dl) 或非血脂异常(19.33 mg /dl vs 16.95 mg /dl) 患者中，Killip 高分级组患者的血清 NSE 水平显著性高于低分级组(P ＜ 0. 05) 。
结论 AMI 患者 NSE 水平与 Killip 分级相关，NSE 水平越高，患者 Killip 分级越高。血清 NSE 水平可能是 AMI 患者心功能 Killip 分级的良好预测指标，尤其对于无糖尿病和无血脂异常的患者。

PU-1450

铁蛋白指数作为成人噬血细胞淋巴组织细胞增生症的新型预后标志物

周军、吴志奇、周菁、徐华国
江苏省人民医院（南京医科大学第一附属医院）

目的 先前的研究已经评估了成人噬血细胞性淋巴组织细胞增生症 (HLH) 中铁蛋白水平与存活率之间的关系。然而，从未评估成年 HLH 患者入院至出院时铁蛋白降低百分比（称为铁蛋白指数）水平来预测 6 个月的生存率。
方法 我们收集 102 名新诊断成人 HLH 患者的人口统计学、实验室和临床信息。分析回归分析、接受者操作曲线和 Kaplan-Meier 曲线以探索铁蛋白水平的表现。
结果 存活组和非存活组的铁蛋白指数和铁蛋白水平有显着差异（均 p <0.001）。铁蛋白指数具有最高的预测生存曲线下面积 (AUC) (AUC = 0.802, p < 0.001)，其次是出院铁蛋白 (AUC = 0.746, p < 0.001)。 Kaplan-Meier 分析显示，根据铁蛋白的最佳临界值，存活率存在显着差异指数≥10.19% (p < 0.001) 或出院铁蛋白≤1056.1 μg/L (P < 0.001)。多变量分析证实，铁蛋白指数和出院铁蛋白是 6 个月生存率的独立预测因子（铁蛋白指数：优势比 (HR) 6.237，95% 置信区间 (CI) 2.075-18.774，p = 0.001；出院铁蛋白：HR 6.024, 95 % CI 1.894-19.231，p = 0.002）。此外，铁蛋白指数≥10.19% 和出院铁蛋白≤1056.1 μg/L 的组合具有显着更高的 6 个月生存率（P < 0.001）。
结论 对于成人 HLH 患者，铁蛋白指数比入院和出院时铁蛋白水平更能预测 6 个月生存率。

PU-1451

丁型肝炎：真实流行率和实验室诊断面临的挑战

陈林媛、徐华国
江苏省人民医院（南京医科大学第一附属医院）

丁型肝炎病毒 (HDV) 是一种有缺陷的单负链 RNA 病毒，因为其包膜蛋白的合成依赖于乙型肝炎病毒 (HBV)。研究一致表明，HBV 和 HDV 的共感染是最严重的病毒性肝炎形式，会加速发展为肝硬化甚至肝细胞癌。全世界约有 7400 万 HBV 表面抗原 (HBsAg) 阳性患者也同时感染 HDV。此外，静脉吸毒和高危性行为的患者感染 HDV 的风险更高。 HDV 的治疗方案是有限的，并且在用聚乙二醇化干扰素 α 治疗后已经观察到 HDV 的复发。为减少 HDV 的传播，应对所有 HBV 感染者进行 HDV 筛查。目前，多种血清学和分子检测方法广泛用于 HDV 的诊断。但由于缺乏国际标准的不同实验室的诊断结果往往没有可比性。因此，HDV 的真实患病率仍不清楚。在此，我们分析了影响 HDV 流行率估计的各种因素。我们还讨论了目前可用的 HDV 实验室诊断方法的优缺点，以期为改进 HDV 检测提供一些思路。

Role of cell free microRNA-19a and microRNA-19b in gestational diabetes mellitus patients.

Fang Wang
The Second Hospital of Shandong University

Gestational diabetes mellitus (GDM) is associated with adverse pregnancy outcomes in pregnant women and it’s prevalence is increasing worldwide. A total 100 cases of GDM and 100 healthy controls were included in a study and blood samples were collected in plain vials from all study participant. Difference among several variables which included BMI, glycemia, insulinaemia, HbA1c, total cholesterol, triglycerides, urinary albumin were compared between GDM cases and controls and were found to be statistically significant ($p < 0.0001$). Additionally, GDM cases showed 4.0 fold increase in miRNA-19a and 4.7 mean increase in miRNA-19b expression compared to healthy control individuals. A positive correlation was observed between miRNA-19a and miRNA-19b among GDM cases. However the correlation coefficient was 0.13 between miRNA-19a and miRNA-19b. This suggested that with the increase in miRNA-19a, miRNA-19b also increased. The findings of this study concludes that an increase in microRNA-19a and microRNA-19b is observed in GDM cases and could be linked with increased risk factor for worsening of the disease. MicroRNA-19a and 19b have been linked to alcoholism and smoking and could also be the factors in GDM.

PU-1453

山东地区儿童对 7 种食物不耐受的情况

王芳
山东大学第二医院

目的 调查山东地区儿童对 7 种食物不耐受的情况。
方法 用免疫荧光法(IF)检测 2017 年 1 月至 2020 年 12 月期间山东大学第二医院儿科门诊和住院 1523 例 0—15 岁儿童血清 7 种食物特异性 IgG 抗体浓度。
结果 1523 例儿童中有 1235 例检出食物不耐受,血清食物特异性 IgG 抗体阳性率为 81.09%;7 种食物特异性 IgG 抗体总的阳性比例分别为牛奶 63.2．O%、鸡蛋 65.3%、西红柿 11.4%、大豆 9.6%、

鳕鱼 8.2%、大米 4.36%、牛肉 2.2%、虾 1.2%；男孩 7 种食物的阳性比例均高于女孩。对 1～3 种食物不耐受的男孩和女孩分别占 70.3%和 65.9%。儿童对其中五种食物的不耐受强度存在统计学差异（P〈0．05），其中对牛奶、鸡蛋以重度不耐受为主，对西红柿、大豆、鳕鱼、大米、牛肉以轻度不耐受为主。

结论 所检测儿童群体的食物不耐受以鸡蛋、牛奶等为主，且重度不耐受的比例高；男孩食物不耐受的比例高于女孩；且多数儿童同时对 1～3 种食物不耐受。

PU-1454

降钙素原和 C 反应蛋白，谁更具有指导意义？

孙甜甜
山东第一医科大学第一附属医院（山东省千佛山医院）

目的 分析降钙素原与 C 反应蛋白在感染性疾病临床诊断中的应用效果。降钙素原和 C 反应蛋白在临床上都是反应感染的指标，谁更具有指导意义。

方法 选取所在医院 2019 年 11 月-2019 年 11 月收治的感染性疾病患者 90 例为研究对象,按照随机数字表法分为对照组与观察组两组。对照组采取降钙素原(PCT)诊断方法,观察组采取 C 反应蛋白(CRP)诊断方法,比较分析两组临床诊断效果与患者满意度。

结果 观察组总有效率为 97.78%,对照组为 88.89%,差异有统计学意义(P0.05);观察组患者满意度 100%,对照组为 91.11%,差异有统计学意义(P0.05)。

结论 CRP 作为一种急性时相蛋白，机体炎症反应均可引起 CRP 的升高，故单靠这一指标很难区分是否为感染性疾病，需结合临床表现及其他相关辅助检查进行综合全面考虑机体免疫功能及防御机制。而 PCT 作为一种新的炎症指标，表达水平不受非感染因素影响，因此 PCT 对细菌感染性疾病的诊断价值明显优于白细胞计数及 CRP，是一项灵敏度高、特异性强的指标。而且已被公认为是目前最敏感的脓毒血症诊断指标，其对感染前期的诊断，鉴别感染类型和感染程度，指导抗生素应用等方面有很高的价值，在临床上有很高的指导意义。

PU-1455

抗核抗体和 A3 抗体谱对干燥综合征的临床应用价值

张 凡
滨州医学院烟台附属医院

目的 通过抗核抗体 ANA 和 A3 抗体谱的检测，来诊断研究其与干燥综合征的相互联系。

方法 选取 2019 年 1 月至２０20 年 1 月在本医院就诊疑似干燥综合征的患者，确诊后将其分为干燥综合征（ss）组 150 例和其他疾病组 150 例，分别进行抗核抗体谱 A3 和抗核抗体 ANA 检测，A3 谱分为线粒体 M2 抗体、核糖体Ｐ蛋白（RIB）、组蛋白（HI）、核小体(NUC)、双链ＤＮＡ抗体（ DsＤＮＡ）、ＰＣＮＡ抗体、着丝点Ｂ蛋白（ ＣＢ）、Ｊｏ － １抗体、ＰＭ－Ｓｃｌ抗体、Ｓｃｌ － ７０抗体、ＳＳＢ抗体、Ｒｏ － ５２抗体、ＳＳＡ抗体、Ｓｍ 抗体[1]、抗 U1－nRNP 抗体指标，ANA 分为核型（ANA－X）和抗核抗体（ANA）两项指标。将患者的抗体及核型检测结果与最终确诊疾病类型进行对比研究。

结果 150 例ＳＳ患者中抗核抗体 A3 各项指标表现出特异性变化，相应指标呈现出较高的数值结果，与对照组形成明显对比，差异有统计学意义（ Ｐ ＜０．０５）；其中ＳＳＡ、ＳＳＢ的结果数据分析，表明其与干燥综合征的联系最为密切，Ｐ ＜０．００１，其次抗 U1-ｎＲＮＰ抗体、Ｒｏ － ５２的联系性次之，Ｐ 值＜０．０５，其余相关抗核抗体同样就具有参考价值，Ｐ＜０．０５，特异性表现不如其他抗体。ANA 核型分布以颗粒型、均质型最为广泛。

结论 ANA 核型分布有助于判定其与抗体相互关联性，进而更加精确诊断疾病，判断其阳性率。

PU-1456

黄热病毒 NS1 蛋白在蚊虫监测中的运用

林亚英
南方医科大学珠江医院

目的 检测感染蚊虫中黄热病毒（Yellow Fever virus, YFV）非结构蛋白 1（Nonstructural Protein 1,NS1），评估其在蚊虫黄热病毒感染中预警。
方法 采用含黄热病毒疫苗株人造感染血感染白纹伊蚊（广州株）约 300 只，蚊虫血餐后 7 天，随机 5 只蚊虫一组，研磨后同时采用定量 PCR 方法和前期建立的检测 YFV NS1 的双抗夹心法检测 YFV 17D 疫苗株感染蚊虫研磨上清中病毒 RNA 和 YFV NS1 蛋白。
结果 60 组蚊虫样品中 55 个样品 YFV RNA 阳性，对应 YFV NS1 蛋白也为阳性。5 组 YFV RNA 阴性样品中 YFV NS1 蛋白结果也为阴性。
结论 在感染 YFV 蚊虫中可检测到 YFV NS1 蛋白，提示该 YFV NS1 蛋白可作为 YFV 感染蚊虫监测中检测靶标，用于虫媒传播 YFV 预警监测。

PU-1457

血管内皮生长因子在肿瘤治疗中的应用进展

王青青
滨州医学院烟台附属医院

目的 比较血管内皮生长因子在不同肿瘤和年龄中的表达情况。
方法 采用免疫发光法检测 VEGF 的含量；以 62 岁为年龄的中位数将所有检测为阳性的标本分为低年龄组（<62 岁）和高年龄组（≧ 62 岁）两组对 VEGF 的含量进行比较；所以阳性标本进行癌症分类并比较 VEGF 的表达情况。
结果 510 个检测标本中 VEGF 的阳性率为 17.25%（88/510）, 去掉重复检测后的阳性率为 16.87%（84/498）;在总体检测标本中，VEGF 的表达量与年龄呈正相关（p<0.05,r=0.137）,在阳性标本中 VEGF 表达量与年龄不相关（p=0.0725）；VEGF 的含量在高年龄组和女性中的含量相对较多,（p<0.05）具有统计学意义；VEGF 在各种癌症中的含量比较为肺癌>胃癌>混合型>乳腺癌>肝癌。
结论 VEGF 在恶性肿瘤中含量较多，尤其是在肺癌和胃癌患者体内，且与性别有一定的相关系。

PU-1458

早发性克罗恩病基因多态性及实验室诊断价值分析

詹富国、张泽钦
福建医科大学附属第一医院

目的 探讨 IL-10RA 基因 c.301C>T 和 c.537G>A 位点单核苷酸多态性（SNP）与福建地区早发性克罗恩病（EO-CD）的发病关系；分析几种常见实验室指标在 EO-CD 诊断中的应用价值。
方法 收集 2020 年 10 月至 2021 年 3 月在福建医科大学附属第一医院确诊的 EO-CD 67 例，成人发病 CD 148 例；桑格测序法对 EO-CD 组目的基因进行 SNP 检测；收集并完善入组病例的 EB-DNA 等实验室检测结果、内镜、病理结果进行回顾性研究。
结果 基因检测结果显示 67 例 EO-CD 均无 IL-10RA 基因 c.301C>T 和 c.537G>A 位点突变； EO-CD 组的抗酿酒酵母抗体（ASCA）、抗胰腺腺泡抗体（PAB）、EB-DNA 阳性率明显高于成人发病 CD 组和阴性对照组，差异有统计学意义（P＜0.05）。EO-CD 组的抗小肠杯状细胞抗体（GAB）、粪便钙卫蛋白阳性率明显高于阴性对照组，差异有统计学意义（P＜0.05）；CD 患者

合并 EB-DNA 阳性较 EB-DNA 阴性内镜下更多出现特征性的孤立性深溃疡和浅层弥漫小溃疡，病理出现特征性的上皮淋巴细胞增多和裂隙溃疡，代表病情严重程度的 CDAI 评分明显升高（P＜0.05）。

结论 福建人群 IL-10RA 基因 c.301C>T 和 c.537G>A 位点 SNP 与 EO-CD 发病尚不明确；EB-DNA 阳性可能加重 CD 病情，且在 EO-CD 中表现得更为显著；ASCA 和 PAB 是诊断 CD 的特异性指标；粪便钙卫蛋白可作为 CD 初筛指标和病情监测指标。

PU-1459

血清 IgG4 及 IgG4/IgG 比值对 IgG4 相关疾病的诊断性能评价

魏彬
四川大学华西医院

目的及背景 IgG4 相关疾病(IgG4 related disease, IgG4-RD)是一种可累及多器官的慢性进行性自身免疫性疾病，该病难于诊断，目前缺乏血清 IgG4 及 IgG4/IgG 比值诊断 IgG4-RD 统一标准，本研究旨在评价血清 IgG4 和 IgG4/IgG 比值对 IgG4-RD 的诊断价值，以辅助诊断 IgG4-RD。

方法 纳入 2014 年 4 月-2020 年 12 月我院首次确诊的 IgG4-RD 患者共 226 例，收集其实验室检测及临床信息，同时纳入 1510 例非 IgG4-RD 患者作为对照组，采用受试者工作特征曲线（ROC）评估血清 IgG4 和 IgG4/IgG 比值诊断 IgG4-RD 的最佳 cut-off 值。

结果 IgG4-RD 组患者血清 IgG4 浓度和 IgG4/IgG 比值的中位数分别为 5.89（3.25,13.90）g/L 和 0.29（0.16,0.76），而对照组血清 IgG4 浓度和 IgG4/IgG 比值的中位数分别为 0.53（0.25,1.08）g/L 和 0.038（0.02,0.07）。在鉴别 IgG4-RD 与非 IgG4-RD 时，IgG4 值和 IgG4/IgG 值的最佳 cut-off 值分别为 2.31g/L 和 0.10，相应曲线下面积(AUC)分别为 0.969 和 0.959。受试者工作特性曲线的比较显示这些 AUC 值之间有显著差异(p<0.05)。IgG4 最佳临界值的敏感度、特异度、阳性预测值(PPV)和阴性预测值(NPV)分别为 89.18%、92.24%、62.97%和 98.10%；IgG4/IgG 比值最佳临界值的敏感度、特异度、阳性预测值(PPV)和阴性预测值(NPV)分别为 92.78%、84.42%、43.57%和 98.76%。

结论 血清 IgG4 浓度和 IgG4/IgG 比值升高对 IgG4-RD 的诊断有重要价值。

PU-1460

间接法建立中国西南地区 T 淋巴细胞亚群参考区间

魏彬
四川大学华西医院

目的 采用间接法建立中国西南地区 T 细胞亚群的参考区间，并与厂商提供的参考区间进行比较，验证间接法可靠性。

方法 选取 2018 年 6 月至 2020 年 10 月四川大学华西医院健康体检人群 T 淋巴细胞亚群检测数据共 53822 例，通过偏度-峰度检验分析数据的正态性，非正态数据通过 Box-Cox 转换转变成近似正态，转换后的数据采用 Tukey 法剔除离群值，采用非参数法评估不同年龄段和性别 T 淋巴细胞亚群 P2.5-P97.5 参考区间，选取 2020 年 11 月至 2021 年 2 月的 6116 例健康体检人群对所建立的参考区间进行验证。

结果 男女性之间以及 14-30 岁、31-45 岁、46-60 岁、61-75 岁、76-100 岁年龄段 T 淋巴细胞亚群参考区间均有明显差异（P<0.01）。随着年龄增加，男性和女性人群中各 T 淋巴细胞亚群百分率以及 T 淋巴细胞绝对计数 P2.5-P97.5 参考区间上下限均呈明显下降趋势（具体见表 1）。验证人群各指标在所建立参考区间范围外的比例均小于 5%，符合标准，此次建立的参考区间与厂商提供的参考区间有明显差异。

结论 T 淋巴细胞亚群参考区间与年龄、性别有明显的相关性，间接法建立参考区间结果可靠、应推广应用于不同地区临床实验室各指标参考范围的建立。

PU-1461

两种肺炎支原体抗体检测方法对天津地区不同人群肺炎支原体感染诊断的临床价值

王居鹏、朱黎娜、马明坤、温学红
天津中医药大学第二附属医院

目的 分析两种肺炎支原体抗体检测方法天津地区成人及儿童不同时期肺炎支原体感染检出情况，为临床治疗和预防提供依据。
方法 回顾性研究 2017 年 9 月至 2021 年 5 月，天津中医药大学第二附属医院的呼吸道感染患者经被动凝集法检测肺炎支原体总抗体（IgM、IgG、IgA）和血清间接免疫荧光法（IFA）检测肺炎支原体 IgM 抗体，按成人、儿童不同年龄阶段进行分组比较，分析它们在呼吸道感染性疾病中的检出情况及临床意义。
结果 5666 例呼吸道感染患者肺炎支原体总抗体检测阳性率为 40.13%，成人组阳性率为 19.92%，儿童组阳性率为 77.30%，成人组与儿童组之间有统计学差异（P<0.05）；男性阳性率为 37.89%，女性阳性率为 42.40%，差异有统计学意义（P<0.05）。5746 例呼吸道感染患者肺炎支原体 IgM 抗体检测阳性率为 28.56%，成人组阳性率为 10.37%，儿童组阳性率为 36.82%，成人组与儿童组之间有统计学差异（P<0.05）；男性阳性率为 24.56%，女性阳性率为 33.38%，差异有统计学意义（P<0.05）。秋季为肺炎支原体总抗体和 IgM 抗体阳性率最高的季节。1975 例同时经两种方法检测 MP 抗体的患者中，当肺炎支原体 IgM 抗体阳性时，有 26.71%的患者总抗体为阴性，8.63%的患者滴度在 1：40-1：80 间；而当与肺炎支原体 IgM 抗体阴性时，有 34.94%的患者总抗体滴度≥1：160。
结论 肺炎支原体是引起呼吸道感染的主要病原体，儿童和女性阳性检出率更高，秋季为支原体肺炎告高发季节，应加强筛检。

PU-1462

巨细胞病毒抗原血症检测方法的建立

白敏凤、尹利民
昆明市第一人民医院检验科

巨细胞病毒（ Cytomegalovirus，CMV）属疱疹病毒 β 亚科，成熟的病毒颗粒直径为 150-200 nm，为具有包膜的双链线性 DNA 病毒，基因组全长为 225-240 kb，其翻译后的产物超过 200 种蛋白质。这种病原体的感染在全世界范围内具有很高的流行率。CMV 在有免疫能力的宿主中感染通常是无害的，但在免疫功能低下（如 HIV 感染或接受移植）的病人中感染会有很高的发病率和死亡率[1]。因此，早期检测巨细胞病毒对于指导临床早期治疗至关重要。检测 CMV 的实验室方法包括分子测定、抗原血症检测、组织病理学、病毒培养和血清学检测等。目前临床上常规的巨细胞病毒（cytomegalovirus，CMV）检测目前多数都是通过酶联免疫法（enzymelinked immunosorbent assay,ELISA） 或免疫荧光法（immunofluores cence assay,IFA）检测血清中的 IgG、IgM 抗体以及实时荧光定量 PCR 的方法来检测移植后巨细胞病毒的感染。但对于器官移植人群，对活动性感染或疾病的有效治疗以及采取先发制人的策略都需要准确，早期的诊断才能获得更好的结果，因此需要快速且准确的诊断方法。早在 1988 年，van der 等人就建立了葡聚糖沉淀分离白细胞、固定、间接免疫过氧化物酶染色的直接检测外周血白细胞中 CMV pp65 抗原的方法。研究表明，pp65 抗原血症在指导先发治疗，快速敏感地诊断 CMV 疾病以及指导治疗反应方面可与 CMV 定量核酸检

测相媲美。但目前国内尚无 CMV pp65 抗原血症检测的标准试剂盒，而国外试剂盒价格昂贵。本研究旨在建立免疫荧光法检测 CMV pp65 抗原血症检测的方法，为临床预防指导治疗提供参考。

PU-1463

抗中性粒细胞胞浆抗体检测及相关实验室指标在肺间质纤维化患者中的应用探讨

朱黎娜、王居鹏、马明坤、温学红
天津中医药大学第二附属医院

目的 探讨华北地区肺间质纤维化患者抗中性粒细胞胞浆抗体的发生率以及核型和靶抗原的阳性率，并对常见临床检验指标特征进行分析。
方法 收集 2017 年 8 月至 2020 月 12 月在天津中医药大学第二附属医院呼吸科诊断明确为肺纤维化的住院患者且同时经 ANCA 检测的共 347 例患者资料。其中 77 例 ANCA 阳性且明确诊断为 AAV 并表现为肺纤维化的患者，作为 ANCA 阳性 PF 组，从 ANCA 阴性的 PF 患者中随机选择 78 例作为 ANCA 阴性 PF 组，28 例以非呼吸症状为主的不伴肺纤维化改变的 ANCA 阳性的患者作为 ANCA 阳性非 PF 组、20 例健康体检者作为健康对照组，分析上述患者详细的实验室指标。
结果 ANCA 阳性 PF 组患者更容易表现为 pANCA，对应的靶抗原主要是 MPO。ANCA 阳性 PF 组 CRP、IGM 较 ANCA 阴性 PF 组显著升高，C3 显著降低，差异有统计学意义（P<0.05）；ANCA 阳性 PF 组和 ANCA 阴性 PF 组、ANCA 阳性非 PF 组的 ESR、CRP、d-dimer、PCT、FIB 较健康对照组显著升高，差异有统计学意义（P<0.05）；ANCA 阳性 PF 组的 IgG、IGM 较健康对照组显著升高，C3 显著降低，差异有统计学意义（P<0.05）；ANCA 阳性非 PF 组的 Cr 较 ANCA 阳性 PF 组和健康对照组均显著升高，差异有统计学意义（P<0.05）。16.8%的患者（13 例）在入院后被诊断为中性粒细胞胞浆抗体相关血管炎。
结论 对于肺纤维化患者，诊断时应考虑抗中性粒细胞胞浆抗体相关血管炎的可能，同时应重视患者的 ESR、CRP、d-dimer、PCT、FIB、IgM 和 C3 等检验指标变化。

PU-1464

抗 CCP 抗体及 RF 检测在类风湿性关节炎中的临床价值

屈恩帅
天津医科大学朱宪彝纪念医院
天津市天津医医院

目的 探讨抗环瓜氨酸肽（CCP）抗体和类风湿因子（RF）检测在类风湿性关节炎(RA)中的诊断价值。并探讨两种抗体对判断 RA 活动性和预后价值。
方法 ①研究对象：选择 60 例 RA 患者组成 RA 组。疾病对照组 50 例患者。健康对照组由 50 名体检健康者组成。②检测各组的抗 CCP 抗体及 RF 水平。评价抗 CCP 抗体及 RF 对 RA 的诊断性能。③RA 患者抗 CCP 抗体和 RF 与 X 线分期的相关性，与疾病活动性指标的相关性是通过 Spearman 秩相关来分析的。
结果 ①RA 组抗 CCP 抗体及 RF 的阳性率均明显高于其他两组，差异具有统计学意义（均 P<0.01）。②抗 CCP 抗体的敏感性和特异性分别为 86.67%和 95.00%，RF 的敏感性和特异性分别为 83.33%和 80.00%，两种抗体联合检测的敏感性为 95.00%。③RA 组患者抗 CCP 抗体和 RF 与 X 线分期呈正相关（均 P<0.01）。两种抗体与疾病活动性指标均无相关性（P>0.05）。

结论 ①抗 CCP 抗体在 RA 的诊断中具有较高的诊断价值。②抗 CCP 抗体及 RF 对 RA 均具有预后价值。③抗 CCP 抗体及 RF 两者联合检测可提高 RA 诊断的敏感性。

PU-1465

血清 PCT、CRP 及 IL-6 联合检测诊断细菌性血流感染的临床价值分析

王禺
西安市第一医院

目的 探讨血清降钙素原(PCT)、C 反应蛋白(CRP)及白介素-6(IL-6)联合检测诊断细菌性血流感染(BSI)的临床价值。
方法 选取我院 2015 年 8 月到 2016 年 10 月收治的疑似细菌性 BSI 患者 216 例，入院后均送检血培养，根据培养结果将其分为阳性组(102 例)和阴性组(114 例)。统计细菌性 BSI 阳性率、革兰阳性菌感染率和革兰阴性菌感染率；检测血清 PCT、CRP、IL-6 水平，并比较两组患者的差异，同时绘制 ROC 曲线并计算出各指标及联合检测的灵敏度、特异度、阳性预测值、阴性预测值及约登指数值。
结果 所有疑似 BSI 患者的细菌阳性检出率为 47.22%，革兰阳性菌感染率与革兰阴性菌感染率对比无差异(P＞0.05)；阳性组的血清 PCT、CRP、IL-6 水平均明显高于阴性组(P<0.05)；血清 IL-6 的 AUC 明显大于 PCT 和 CRP(P<0.05)；PCT、CRP 及 IL-6 联合检测的灵敏度、特异度、阳性预测值、阴性预测值及约登指数均明显高于单项检测(P<0.05)。
结论 血清 PCT、CRP 及 IL-6 对于 BSI 均有着一定诊断价值，而各指标联合检测诊断 BSI 的临床价值更高。

PU-1466

血清 IL-6、IL-8、IgM 抗体及 T 细胞亚群水平对新生儿先天性梅毒的诊断价值

李秀娥
西安市第一医院

目的 探讨血清白介素-6(IL-6)、白介素-8(IL-8)、IgM 抗体及 T 细胞亚群对先天性梅毒新生儿的诊断价值。
方法 选择 2015 年 5 月至 2017 年 5 月在我院进行临床治疗的先天性梅毒新生儿 81 例为观察组，另选同期来我院进行健康体检 81 例新生儿为对照组。比较两组患者血清 IL-6、IL-8、T 细胞亚群中 CD3+、CD4+、CD8+、CD4+/CD8+细胞及 IgM 抗体的阳性率。
结果 治疗后，观察组血清 IL-6、IL-8 水平均明显高于对照组(P<0.05)，T 细胞亚群中 CD3+、CD4+、CD4+/CD8+明显低于对照组，而 CD8+ T 细胞比例高于对照组(P<0.05)。19S-IgM-TP ELISA 法检测出 IgM 的阳性率 92.59%，明显高于 TRUST 法(74.07%)及 TP-ELSA 法(70.37%)(P<0.05)。ROC 曲线中，血清 IL-8 特异度为 88.34%明显高于血清 IL-6 特异度 81.48%、IgM 抗体特异度 60.13%、T 细胞亚群特异度 65.34%；IgM 抗体的曲线面积 88.91cm2 明显大于 IL-6 的曲线面积 45.09 cm2、IL-8 的曲线面积 76.19 cm2、T 细胞亚群的曲线面积 77.35 cm2；T 细胞亚群准备性 67.89%明显高于 IL-6 准确性 60.39%、IL-8 准确性 51.09%、IgM 抗体准确性 50.12；IgM 抗体的灵敏度 60.13%高于 IL-6 灵敏度 59.19%、IL-8 灵敏度 42.35%、T 细胞亚群灵敏度 59.37%。具有比较意义(P<0.05)。

结论 血清 IL-6、IL-8 水平、T 细胞亚群中 CD3+、CD4+、CD8+、CD4+/CD8+及 IgM 抗体阳性率是诊断先天性梅毒新生儿的重要指标。

PU-1467

ANA 检测在血细胞减少患者诊疗的应用价值分析

朱敏、姜波
昆明医科大学第一附属医院

目的 探讨抗核抗体（ANA）检测对血细胞减少患者诊疗的应用价值。
方法 采用间接免疫荧光法（IIF）检测血清 ANA，采用流式点阵免疫荧光法检测血清抗可溶性抗原（ENA）抗体，采用日本希森美康 XE-2100 全自动血细胞分析仪检测外周血白细胞（WBC）、红细胞（RBC）、血红蛋白（HGB）、血小板（PLT）等。
结果 血细胞减少患者 ANA 阳性检出率高于血细胞正常组，差异有统计学意义（P<0.05），其中 WBC 减少组共 96 例，ANA 阳性检出 10 例(10.42%)；PLT 减少组共 152 例，ANA 阳性检出 39 例(25.66%)；HGB 减少组共 128 例，ANA 阳性检出 22 例(17.19%)；两系或三系减少统称全血细胞减少组共 124 例，ANA 阳性检出 17 例 (13.71%)。血细胞减少患者 ENA 阳性检出率与血细胞正常组相比，差异无统计学意义（P>0.05）。
结论 自身抗体可导致血液系统损伤，进而引起血细胞减少，ANA 检测对于血细胞减少患者的病因诊断及治疗有一定的应用价值。

PU-1468

血清细胞因子检测在肾移植受者移植物功能延迟恢复中的临床价值初探

黄熙哲[1]、李鸿钏[2]、刘婷婷[3]、罗俐梅[1]、邹远高[1]、徐欢[1]、白杨娟[1]、安云飞[1]、蔡蓓[1]
1. 四川大学华西医院
2. 成都市郫都区中医医院检验科
3. 遂宁市第一人民医院检验科

背景及目的 移植物功能延迟恢复（delayed graft function,DGF）常见于肾移植术后，是移植肾早期急性损伤，可影响移植肾长期存活。免疫炎症反应是导致 DGF 的主要原因。本研究旨在探讨机体炎症因子动态检测对肾移植受者 DGF 的临床评价意义。
方法 本研究回顾性分析我院肾移植受者 97 例，其中发生 DGF 患者 7 例，受者分别进行术前、术后 1-3 天、术后 4-7 天和术后 8-14 天对血清细胞因子的动态分析。应用微粒体化学发光发分析血清细胞因子 IL-1β、可溶性 IL-2R、IL-6、IL-8、IL-10 和 TNF-α 水平，采用 SPSS19.0 统计软件分析数据。
结果 ①发生 DGF 的肾移植受者中女性占比 71.4%显著高于男性占比，女性肾移植患者中发生 DGF 的比例占 17.2%，男性发生 DGF 比例仅为 2.9%（P=0.039）。②动态分析发现，未发生 DGF 受者血清细胞因子可溶性 IL-2R 和 TNF-α 水平在肾移植后逐渐降低（P<0.05），且术前水平>术后 1-3 天水平>术后 4-7 天和术后 8-14 天水平；发生 DGF 受者表现为术后 1-3 天血清可溶性 IL-2R、IL-10、IL-8 和 TNF-α 水平显著增高（P>0.05）；③ 与未发生 DGF 受者相比，发生 DGF 受者表现为术前 IL-6、IL-10 和 IL-8 水平增高（P 均>0.05），可溶性 IL-2R 水平降低（P=0.042）和 TNF-α 水平降低（P>0.05）；术后 1-3 天细胞因子 IL-10、可溶性 IL-2R、IL-6、IL-8 和 TNF-α 水平明显增高，但仅 IL-10 和 IL-8 的增加有统计学差异（P 均<0.05）。

结论 肾移植受者体内细胞因子可能参与 DGF 发生，受者术后一周血清细胞因子的动态检测，尤其是术后 1-3 天血清 IL-10 和 IL-8 检测可作为临床辅助判断 DGF 发生的实验室指标。

PU-1469

血清 IgG4 水平、IgG4/IgG 比值、IgG4/IgG1 比值在鉴别诊断 IgG4 相关性疾病和其它自身免疫性疾病中的价值

任亚萍
中南大学湘雅二医院检验科

目的 探讨血清 IgG4 水平、IgG4/IgG 比值、IgG4/IgG1 比值在 IgG4 相关性疾病和其它自身免疫性疾病鉴别诊断中的应用价值。
方法 收集 2016 年 1 月至 2019 年 12 月 就诊于中南大学湘雅二医院的 36 例 IgG4-RD 患者、146 例自身免疫性疾病患者，40 例体检健康者作为对照组。采用速率散射比浊法检测血清中 IgG 亚型的水平；应用 ROC 曲线，确定最佳临界值及曲线下面积。
结果 与健康对照组相比，IgG4 -RD 组的 IgG4、IgG4/IgG 比值、IgG4/IgG1 比值水平明显增高。与其它自身免疫性疾病组相比，IgG4 -RD 组的 IgG4、IgG4/IgG 比值、IgG4/IgG1 比值水平明显增高。ROC 曲线分析显示血清 IgG4、IgG4/IgG 比值、IgG4/IgG1 比值诊断 IgG4 相关性疾病时，其曲线下面积分别为 0.957，0.976，0.981。与血清 IgG4 的曲线下面积相比，血清 IgG4/IgG 比值和 IgG4/IgG1 比值的曲线下面积更大（P 分别为 0.024 和 0.037)。血清 IgG4/IgG 比值和 IgG4/IgG1 比值的曲线下面积差异无统计学意义（P=0.165）。IgG4 比值诊断 IgG4 相关性疾病的最佳 cut off 值为 2.15g /L,其诊断性能为敏感性为 94.5%，特异性为 94.8%。22 例 IgG4-RD 随访患者中，治疗前患者血清中 IgG4 中位数为 5.72(2.83，9.61) ，治疗 2 个月后血清 IgG4 水平中位数为 3.32(2.15，4.37)，差异有统计学意义（P=0.013）。
结论 IgG4/IgG 比值、IgG4/IgG1 比值鉴别诊断 IgG4 相关性疾病和其它自身免疫性疾病的诊断性能优于 IgG4；IgG4 可以作为对激素治疗后的疗效判断的指标。

PU-1470

粪便钙卫蛋白在炎性肠病的临床应用回顾分析

王梅华[1]、郭智浩[2]、刘锦[1]
1. 福建医科大学附属协和医院
2. 福建医科大学医学技术与工程学院检验系实习生

目的 探讨粪便钙卫蛋白检测在炎症性肠病中的临床应用效果。
方法 收集福建医科大学附属协和医院 2018 年 6 月至 2020 年 12 月，确诊炎性肠病患者的临床检验结果，包括粪便钙卫蛋白、白介素 6、C 反应蛋白以及抗酿酒酵母抗体检验结果。比较粪便钙卫蛋白与血清标志物体之间检测结果的差异性。并跟踪分析粪便钙卫蛋白对炎性肠病患者病程进展的敏感性。
结果 对于 78 例炎性肠病患者的自身免疫性抗体，粪便钙卫蛋白，血清降钙素原，C 反应蛋白结果进行分析，其中 78 例自身免疫性抗体阳性率分别为，ASCA IgA 16.6%、ASCA IgG 20.5%、IGA IGA 1.3%、IGA IgG 34.6%、pANCA 11.5%、pANCA IgA 6.4%、pANCA IgG 0%。其中有 50 例检测粪便钙卫蛋白，36 例阳性，阳性率 69.0%；73 例检测 C 反应蛋白，37 例阳性，阳性率 67.3%；26 例检测血清降钙素原，21 例阳性，阳性率 80.8%，统计学分析粪便钙卫蛋白阳性率显著高于自身免疫性抗体。同时，对 3 例有进行粪便钙卫蛋白，以及 C 反应蛋白复查的炎性肠病患者比较发现粪便钙卫蛋白半定量检测结果与病程变化具有一定相关性。

结论 在本次研究中粪便钙卫蛋白阳性率高于自身免疫性抗体，并且存在粪便钙卫蛋白半定量结果随着病程改变而发生改变现象。

PU-1471

HIV Duo 试剂在艾滋病初筛试验中的价值探讨

任亚萍
中南大学湘雅二医院检验科

目的 评估 HIV Duo 试剂在艾滋病初筛试验中的性能，为更早期检测出 HIV 感染者、减少检测的窗口期提供参考和依据。
方法 通过对 2019 年 10 月-2020 年 9 月就诊于中南大学湘雅二医院进行 HIV 初筛试验的样本进行分析，筛选 HIV 初筛实验阳性的血清标本并使用 HIV Duo 试剂再检测，比较 HIV Duo 与初筛试验的检测结果，同时结合湖南省疾病预防控制中心（CDC）做确证试验结果，综合探讨 HIV Duo 试剂的检测性能。
结果 2019 年 10 月-2020 年 9 月我院共检测 80279 例 HIV 初筛试验样本，218 例呈 HIV 初筛试验阳性，初筛阳性率 0.27%；81 例送检至湖南省 CDC 做确证试验，其中回报阳性 29 例，回报阴性 49 例，回报抗体不确定 3 例，CDC 回报阳性率 35.8%；HIV Duo 试剂检测 81 例有 CDC 回报结果标本，其结果与使用 HIV Combi PT 做初筛试验的 COI 值有高度相关性(r=0.915)，但两者对能否准确反映 CDC 结果有一定差异； HIV Duo 试剂检测灵敏度为 100%，与 CDC 回报结果的符合率为 72.8%。
结论 HIV Duo 试剂有良好的检测性能，利用其检测提供的 HIV p24 抗原、抗 HIV 抗体的综合结果和子结果，能缩短检测窗口期，为优化艾滋病检测流程提供一定依据。

PU-1472

不同类型糖尿病患者 21 羟化酶抗体的分布研究

杨一芬
中南大学湘雅二医院检验科

目的 研究不同类型糖尿病患者胰岛自身抗体和 21 羟化酶抗体（21-OHA）分布情况，为筛查自身免疫性原发性肾上腺皮质功能减退症（Addison 病）提供依据。
方法 收集 2016 年至 2018 年间中南大学湘雅二医院门诊或住院病人，其中 1 型糖尿病（T1DM）患者 179 例，2 型糖尿病（T2DM）患者 198 例，妊娠糖尿病（GDM）患者 154 例以及健康对照 200 例。采用国际标准放射配体法检测 21-OHA 以及谷氨酸脱羧酶抗体（GADA）、蛋白酪氨酸磷酸酶抗体（IA-2A）和锌转运体 8 自身抗体（ZnT8A）等胰岛自身抗体，研究其相互关联以及与临床特征的关系。
结果 ① T1DM 组 GADA、IA-2A、ZnT8A 和 21-OHA 的阳性率分别为 63.7%（114/179）、37.4%（67/179）、33.5%（60/179）和 3.9%（7/179），显著高于健康对照组的 0.6%（1/200）、0、0 和 0（P 值分别为 0.0000、0.0000、0.0000 和 0.005），同时也显著高于 T2DM 组的 6.1%（12/198）、2.0%（4/198）、2.0%（4/198）和 0（P 值分别为 0.0000、0.0000、0.0000 和 0.005），以及高于 GDM 组的 3.2%（5/154）、0.6%（1/154）、0.6%（1/154）和 0（P 值分别为 0.0000、0.0000、0.0000 和 0.013）。② 7 例 21-OHA 阳性的 T1DM 患者中，4 例存在于双胰岛自身抗体阳性组，1 例存在于单胰岛自身抗体阳性组，差异无统计学意义。③ 综合肾上腺皮质功能检查以及其他临床指证，7 例 21-OHA 阳性的 T1DM 患者中，1 例考虑为合并自身免疫性 Addison 病。

结论 T1DM 患者易合并 21-OHA 阳性，对于特别是多抗体阳性的 T1DM 患者，筛查 21-OHA 对于及早识别自身免疫性 Addison 病有着重要的临床意义。

PU-1473

IL-22 在儿童及成人乙肝炎症中的比较研究

董慧、吴万通
天津市东丽医院

目的 探讨乙型病毒性肝病(HB)儿童及成人患者血清 IL-22 水平变化规律，为其诊断及治疗提供依据。
方法 取 55 例乙肝患者静脉血分离血清，其 中包括 13 例大人 CHB，15 例小儿 CHB,13 例大人 LC,14 例小儿 LC.采用 ELISA 方法检测 IL-22 水平，采用 SPSS 软件分析 IL-22 水平。
结果 与健康组(9 例查体健者) 比较，乙肝患者血清 IL-22 水平明显升高，(P＜0．05);大人及儿童随肝损害的程度加重， IL-22 表达水平增高(P＜0．05)。这四组的 IL-22 均与 DNA，ALT,性别无显著相关性。
结论 IL-22 在乙肝的发生、发展中起重要作用，尤其在儿童的乙肝进程中，这可能是儿童本身对乙肝病毒的一种抵抗能力，其水平变化在乙肝临床诊断、病情 分析及预后判断中均具有重要价值。深入研究 IL-22 等细胞因子通路与肝脏损伤机理，可为儿童乙肝免疫干预治疗提供新的靶点，从而减慢乙肝发展进程，减缓炎症及纤维化速度。

PU-1474

Association of Circulating Vascular Endothelial Growth Factor Levels With Autoimmune Diseases: A Systematic Review and Meta-Analysis

Haoting Zhan
Department of Clinical Laboratory, Peking Union Medical College Hospital, Graduate School, Peking Union Medical College, Chinese Academy of Medical Sciences, Beijing 100730, China

Background Autoimmune diseases (ADs) are characterized by immune-mediated tissue damage, in which angiogenesis is a prominent pathogenic mechanism. Vascular endothelial growth factor (VEGF), an angiogenesis modulator, is significantly elevated in several ADs including rheumatoid arthritis (RA), systemic sclerosis (SSc), and systemic lupus erythematosus (SLE). We determined whether circulating VEGF levels were associated with ADs based on pooled evidence.
Methods The analyses included 165 studies from the PubMed, EMBASE, Cochrane Library, and Web of Science databases and fulfilled the study criteria. Comparisons of circulating VEGF levels between patients with ADs and healthy controls were performed by determining pooled standard mean differences (SMDs) with 95% confidence intervals (CIs) in a random-effect model using STATA 16.0. Subgroup, sensitivity, and metaregression analyses were performed to determine heterogeneity and to test robustness.
Results Compared with healthy subjects, circulating VEGF levels were significantly higher in patients with SLE (SMD 0.84, 95% CI 0.25–1.44, P = 0.0056), RA (SMD 1.48, 95% CI 0.82–2.15, P = 0.0000), SSc (SMD 0.56, 95% CI 0.36–0.75, P = 0.0000), Behcet's disease (SMD 1.65, 95% CI 0.88–2.41, P = 0.0000), Kawasaki disease (SMD 2.41, 95% CI 0.10–4.72, P = 0.0406), ankylosing spondylitis (SMD 0.78, 95% CI 0.23–1.33, P = 0.0052), inflammatory bowel disease (SMD 0.57, 95% CI 0.43–0.71, P = 0.0000), psoriasis (SMD 0.98, 95% CI 0.62–1.34, P = 0.0000), and Graves disease (SMD 0.69, 95% CI 0.20–1.19, P = 0.0056). Circulating VEGF levels correlated with disease activity and hematological parameters in ADs.

Conclusion Circulating VEGF levels were associated with ADs and could predict disease manifestations, severity and activity in patients with ADs.

PU-1475

Diagnostic value of D-dimer in COVID-19: a meta-analysis and meta-regression

Haoting Zhan
Department of Clinical Laboratory, Peking Union Medical College Hospital, Graduate School, Peking Union Medical College, Chinese Academy of Medical Sciences, Beijing 100730, China

The prognostic role of hypercoagulability in COVID-19 patients is ambiguous. D-dimer, may be regarded as a global marker of hemostasis activation in COVID-19. Our study was to assess the predictive value of D-dimer for the severity, mortality and incidence of venous thromboembolism (VTE) events in COVID-19 patients. PubMed, EMBASE, Cochrane Library and Web of Science databases were searched. The pooled diagnostic value (95% confidence interval [CI]) of D-dimer was evaluated with a bivariate mixed-effects binary regression modeling framework. Sensitivity analysis and meta regression were used to determine heterogeneity and test robustness. A Spearman rank correlation tested threshold effect caused by different cut offs and units in D-dimer reports. The pooled sensitivity of the prognostic performance of D-dimer for the severity, mortality and VTE in COVID-19 were 77% (95% CI: 73-80%), 75% (95% CI: 65-82%) and 90% (95% CI: 90-90%) respectively, and the specificity were 71% (95% CI: 64-77%), 83% (95% CI: 77-87%) and 60% (95% CI: 60-60%). D-dimer can predict severe and fatal cases of COVID-19 with moderate accuracy. It also shows high sensitivity but relatively low specificity for detecting COVID-19-related VTE events, indicating that it can be used to screen for patients with VTE.

PU-1476

肿瘤相关自身抗体临床应用现状与研究进展

詹皓婷
中国医学科学院北京协和医院

肿瘤相关自身抗体是由肿瘤相关抗原的异常暴露或呈递促进自身免疫反应而产生。该抗体可提前数月或数年于癌症患者体内水平升高，参与肿瘤恶性转化的发生与发展。近年来，肿瘤相关自身抗体的研究和应用为肿瘤的早期预警、危险评估、诊断、预后及治疗效果判断提供了重要的参考依据。本文主要从肿瘤相关自身抗体产生机制、结缔组织病合并肿瘤和恶性肿瘤相关自身抗体的临床应用现状与研究进展展开综述。

PU-1477

特发性肺纤维化生物标志物临床应用进展

詹皓婷
中国医学科学院北京协和医院

特发性肺纤维化（IPF）是临床常见的弥漫性纤维化肺实质疾病，临床表现为组织病理学和/或放射学上的普通型间质性肺炎（UIP）。该病发病机制尚未阐明，且缺乏有效的疾病进展与活动的诊断监测指标，因此在临床管理方面存在一定困难。近年来，蛋白与基因标志物的应用为 IPF 的诊

断、治疗、进展监测及预后评估等提供了重要的参考依据。本文主要对蛋白与基因标志物在 IPF 的临床应用研究展开综述。

PU-1478

系统性红斑狼疮生物标志物临床应用进展

詹皓婷
中国医学科学院北京协和医院

系统性红斑狼疮（SLE）是一种临床常见的累及多系统、多器官的全身结缔组织疾病，临床并发症以狼疮性肾炎、神经精神狼疮、SLE 相关心血管事件为主，确切的发病机制尚未阐明。早期诊断对判断 SLE 严重程度、评估疾病活动度、预测疾病进展、监测治疗效果和改善预后具有重要意义。本文主要对以往在 SLE 患者血清中发现的 SLE 自身抗体及近年发现新型生物标志物的临床应用研究进展展开综述。

69 例特征性神经元抗体阳性患者临床特点及实验室指标分析

彭涣锲、唐浩能
中南大学湘雅二医院

目的 研究特征性神经元抗体阳性人群总体特征，分析神经系统副肿瘤综合征(PNS)发病 的独立相关因素。
方法 回顾性收集 2019 年 1 月至 2021 年 1 月在中南大学湘雅二医院特征性神经元抗体筛查阳性患者 69 例，分析该类人群的总体临床特征；进一步依据 Graus(2004)诊断标准排除 7 例非 PNS 患者后，剩余患者分为 PNS 确证组（31 例），PNS 疑似组（31 例），对比分析两组人群的主要临床特征并分析 PNS 确诊患者发病的独立相关因素。
结果 特征性神经元抗体抗体检测阳性率 8.6%，阳性率最高的特征性抗体是抗-Amphiphysin(44.93%)和抗-CV2(36.32%)；阳性人群大多为中老年人，其中 50.7%表现乏力，26.1%表现精神行为异常；66.7%的患者存在低白蛋白血症，25.0%的患者 D-二聚体升高。PNS 确证组和 PNS 疑似组间除纤维蛋白原和平均红细胞血红蛋白具有显著差异外(P＜0.05)，其余未见显著差异的实验室指标；多变量二元 logistic 回归分析显示纤维蛋白原升高和血钙降低可能与 PNS 发病独立相关(P＜0.05)。
结论 特征性神经元抗体阳性的 PNS 综合征确证患者和疑似患者的实验室指标无特征性的实验室指标特异，血浆纤维蛋白原与血钙水平可能与 PNS 发病相关。

PU-1480

84 例自身免疫性脑炎患者临床特征及实验室指标的回顾性分析

钟健、唐浩能
中南大学湘雅二医院

目的 分析自身免疫性脑炎疑似与确诊患者的临床资料，为临床自身免疫性脑炎早期鉴别诊断寻找联合预测指标。
方法 回顾性收集 2016 年 3 月至 2021 年 3 月在湘雅二医院入院拟诊为自身免疫性脑炎的病例，根据是否满足 Graus 诊断标准划分为确诊组（38 例）和疑似组（46 例），比较两组患者临床特征与

入院首次实验室检查结果，进一步通过多因素二元 Logistic 回归分析自身免疫性脑炎发病的独立影响因素，进一步运用 ROC 曲线评估相关指标对自身免疫性脑炎发病的预测诊断价值。
结果 1、84 名患者就诊时具有相似的临床表现。精神行为异常、言语障碍和口面部或肢体不自主抖动常见于自身免疫性脑炎患者（p 均＜0.05）。2、确诊组患者全血白细胞、中性粒细胞数、中性粒细胞与淋巴细胞比值、总蛋白、肌酸激酶、抗凝血酶 III 活性、D 二聚体和纤维蛋白原降解产物都显著高于疑似组。3、二元 logistic 回归分析显示全血白细胞计数（OR:1.437, 95% CI:1.079-1.914, P=0.013）、发病年龄（OR:0.933, 95% CI: 0.887-0.981, P=0.007）、精神行为异常（OR:5.564, 95% CI: 1.283-24.126, P=0.022）、言语障碍（OR:36.696, 95% CI: 1.889-712.869, P=0.017）时自身免疫性脑炎发病的独立相关因素；4、全血白细胞、发病年龄与精神行为异常多因素联合预测自身免疫性脑炎患病的价值高（AUC=0.860，敏感度为 0.816，特异度为 0.8，约登指数为 0.616）。
结论 自身免疫性脑炎疑似患者和确诊患者入院临床特征缺乏特异性，而实验室指标存在一定差异。综合全血白细胞计数、发病年龄与是否精神行为异常对联合预测自身免疫性脑炎患病具有一定价值。

PU-1481

外周血淋巴细胞亚群、细胞因子与不明原因复发性流产的相关性研究

冯一民
山东大学第二医院

目的 探讨外周血淋巴细胞亚群、细胞因子与不明原因复发性流产(URSA)的相关性.
方法 淋巴细胞亚群和细胞因子检测采用流式细胞术。选取 2020 年 6 月至 2021 年 3 月在山东大学第二医院生殖医学科就诊的 120 例不明原因复发性流产女性患者为 URSA 病例组,选择近半年有健康分娩史的 50 例妇女为正常对照组.分别检测两组人群外周血淋巴细胞亚群的比例和绝对计数、细胞因子(IL-2,IL-4,IL-6 和 IL-10，TNF-α,IFN-γ 和 IL7A)的含量,采用 SPSS 进行统计学分析。
结果（1）URSA 病例组外周血的 CD3+CD4+细胞、CD4+/CD8+、B 细胞以及 NK 细胞比例和绝对值计数结果均高于正常对照组,差异有统计学意义(P＜0.05)；
（2）URSA 病例组外周血中 IL-6、TNF-α、IFN-γ 和 IL-7A 均高于正常对照组,差异有统计学意义(P＜0.05)
结论 URSA 患者外周血的淋巴细胞亚群比例和数量的异常以及细胞因子的失衡可能是导致不明原因流产的重要因素,其发病机制可能与患者体内免疫功能发生了紊乱，导致淋巴细胞和细胞因子的异常增高有关.

IgA 肾炎免疫应答相关生物标志物的研究进展综述

张黎蕾
南京大学医学院附属鼓楼医院

IgA 肾炎（IgA glomerulonephritis）是全球最常见的原发性肾小球肾炎。 它是慢性肾脏疾病的主要原因，在确诊 20 年内，约 30％至 40％患者发展为终末期肾脏疾病。迄今为止，IgA 肾炎诊断金标准是肾穿刺活检病理分型，这种创伤性方法并不适用于长期观察。目前临床常用的长期监测病情指标包括：尿总蛋白、尿微量白蛋白、尿素氮、肌酐、肾小球滤过率，但是他们都代表了肾小球系膜因为发生超敏反应使基底膜损伤后漏出物质，并不能代表肾小球当前所遭受的免疫反应程度。从病原学角度讲，检测免疫相关的生物标志物更加有利于了解疾病的本质，从而得到根本的治疗。但这并没有得到临床普遍的重视。全球肾脏病研究者一直在探索 IgA 肾炎的发病机制，但是本病的

发病机理并未阐明。患者的肾小球系膜区有颗粒状 IgA 和 C3 沉积，提示其发病机理。现在的研究围绕着 IgA 的来源、抗原通过粘膜能力、粘膜屏障是否存在缺陷、免疫调节是否存在缺陷等方面展开。在这篇综述中，我们回顾了这十年基于 IgA 肾炎免疫应答生物标志物的最新进展，以期望结合疾病病原学的研究来更好的了解 IgA 肾炎，这些免疫应答生物标志物将在疾病的预后和治疗方面的有着潜在的巨大作用。

肝素结合蛋白在临床中的应用

杨萌
南方医科大学珠江医院

目的 肝素结合蛋白是由中性粒细胞分泌释放的一种颗粒蛋白，由 Shafer 教授在 1984 年发现并分离成功。由于当时测得的相对分子质量为 37000，因此将其命名为 CAP37。后来学者又从嗜苯胺蓝颗粒中分离出具有杀菌活性的嗜苯胺蓝蛋白，命名为 Azurocidin，即天青杀素。再后来发现其具有极强的肝素结合能力，因此命名为肝素结合蛋白。它能够激活巨噬细胞和单核细胞，有着较强的抗菌活性、趋化及调节炎症反应的作用。本篇文章将系统性阐述肝素结合蛋白的结构、生理特点及其在各系统疾病中的应用。
方法 通过 pubmed、万方、知网等数据库，检索肝素结合蛋白的相关研究，以综合阐述肝素结合蛋白对疾病诊断的价值。
结果 HBP 可通过增加血管通透性、激活单核细胞、调节细胞凋亡的三种途径促进炎症反应，常被用于各个系统疾病中脓毒症相关器官功能障碍的早期预测指标。在呼吸系统疾病中，HBP 比 PCT 和 CRP 以及 WBC 有着更好的诊断效能，特别是在鉴别细菌与非细菌感染时，HBP 的诊断效能最佳。在循环系统疾病中，HBP 可作为预测急性主动脉夹层的敏感指标，并对这些患者的预后评价具有重要意义。神经系统中，细菌性脑膜炎的 HBP 水平高于病毒性，从而可更好的发现术后细菌感染，及时使用抗生素，保证手术效果及患者预后。泌尿系统疾病中，尿肝素结合蛋白可用于预测上尿路感染性结石，指导术前抗生素使用，预防或减少经皮肾镜术后脓毒症的发生。其他系统疾病中，HBP 亦被广泛应用，如，肝硬化腹水继发的自发性腹膜炎、重症胰腺炎继发的细菌感染、脓毒症、脓毒性休克等。
结论 肝素结合蛋白作为蛋白酶样丝氨酸蛋白酶家族之一，可影响炎症反应。在细菌感染的疾病中，肝素结合蛋白明显升高，可作为脓毒症早期诊断的最优指标，并以广泛应用于临床。

PU-1484

农村养老院促甲状腺激素的现状调查

刘建森、向敏、吴国林、马小东、林峰、王丽萍、张莹、叶慧倩
雅安市第四人民医院

目的 了解雅安地区农村养老院老人甲状腺功能现状与异常情况，提高相关养老机构对老年人甲状腺健康的关注。
方法 在养老院人群中随机抽样 329 个为研究对象，按照年龄分为两组：≥70 岁为 A 组（n=126），＜70 岁为 B 组（n=203），分析年龄与 TSH 异常升高的阳性率差异以及年龄与 TSH 水平值的相关性；以性别分组，分为男性组（n=305）和女性组（n=24），比较性别与 TSH 异常升高的阳性率差异；按照甲功状况分 C 组（正常甲功，n=253）和 D 组（亚临床甲功，n=72），分别比较两组异常血糖的阳性率。采用罗氏 Cobas e 411 电化学发光仪和贝克曼 AU680 全自动生化分析仪，检测血清样本甲功和血糖。

结果 本次共检测出亚临床甲减 72 例，占比 21.88%（72/329），甲亢 1 例，占比 0.30%（1/329），亚临床甲亢 3 例，占比 0.91（3/329）；A 组 TSH 异常升高的检出率为 30.16（38/126），明显高于 B 组的 16.74%（34/203），（χ2=8.178，P<0.05）统计学有意义；A 组（n=126，4.59±5.84）TSH 总体水平明显个高于 B 组（n=203，3.00±3.66），p＜0.05，统计学有差异；男性组 TSH 异常升高的阳性检出率为 21.96%（67/305），女性组为 20.83%（5/24），（χ2=0.017，p＞0.05）统计学无明显差异；C 组异常血糖的阳性检出率为 14.23%（36/253），D 组为 18.06%（13/73），（χ2=0.641，p＞0.05）统计学无明显差异。
结论 雅安地区农村养老院老人亚临床甲减发病率远高于甲亢与亚甲亢的发病率，且 TSH 异常升高的阳性率和 TSH 水平与年龄成正相关关系。

PU-1485

CA125、CA199、CEA 检测鉴别结核性浆膜腔积液的诊断价值

王绪山
灌云县人民医院

目的 研究血清肿瘤标记物检测鉴别结核性浆膜腔积液的诊断价值及患者胸腔积液病因分布特点的临床研究。
方法 2018 年 9 月-2020 年 9 月经我院确诊并在我院进行治疗的结核性浆膜腔积液患者纳入 400 例；并检测所有患者血清 CA125、CA199、CEA 的水平和腔液积水。
结果 纳入 400 例浆膜腔积液患者良性组 233 例，其中结核主要占 61.8%（144/233）、肺炎占 16.7%（39/233）、脓胸占 4.7%（11/233）、心功能不全占 8.2（19/233）、其他占 8.5%（20/233）；恶性胸液组占 39%为 156 例，乳腺癌占 3.8%（6/156）、其他恶性肿瘤占 12.1%（19/156）、原发性支气管肺癌占 84%（131/156）、不明原因占 2.7%（11/156）；恶性胸液患者年龄为 41-59 岁占该组 42.3%；浆膜腔积液肿瘤标记物显示 CA125、CA199、CEA 的平均水平显示良性组水平低于恶性组，差异具有统计学意义（P<0.01）。
结论 肿瘤与结核是引起浆膜腔积液的主要原因，可有效鉴别两者是否影响后续患者治疗及临床预后；联合检测 CA125、CA199、CEA 三项指标，可提高特异度、敏感度及准确度从而提高临床诊断价值。

PU-1486

新生儿白细胞介素 6（IL-6）显著升高预后探索

周自城
雅安市人民医院

目的 研究新生儿白细胞介素 6（IL-6）显著升高（>200pg/ml）预后结果。
方法 对我院 2020 年 3 月至 2020 年 11 月收治的 40 例 IL-6 显著升高（>200pg/ml）新生儿患者进行回顾性分析。
结果 治愈出院 26 例；病情不稳定家属主动要求出院 7 例；病情未好转转上级医院 1 例；病情恶化放弃治疗 4 例；死亡 2 例。
结论 新生儿白细胞介素 6（IL-6）显著升高（>200pg/ml）与新生儿预后不良关系密切，加强 IL-6 在新生儿感染事件中的监测。

PU-1487

血清总 IgE 检测在儿童慢性荨麻疹中的诊断价值

逯思显[1]、林婧[2]
1. 呼和浩特金域检验所有限公司
2. 广州金域医学检验中心有限公司

目的 研究血清总 IgE 水平与儿童慢性荨麻疹的关系，为儿童慢性荨麻疹的诊断以及预后提供判断依据。
方法 选取某儿童医院 2018-2019 年荨麻疹患儿 150 名以及健康儿童 90 名，分为 1-5 岁、6-9 岁和 10-18 岁三个年龄段，每个年龄段分为实验组和正常对照组，实验组为慢性荨麻疹确诊患儿 50 名，对照组为健康儿童 30 名，收集各组患儿血清，采用免疫比浊检测各组血清总 IgE 水平。
结果 各年龄段实验组的血清总 IgE 水平均显著高于健康对照组（P<0.05）。
结论 各年龄段慢性荨麻疹患儿血清总 IgE 水平较健康对照组均显著增高，提示血清总 IgE 水平与儿童慢性荨麻疹的发病密切相关，且与年龄无关。提示检测慢性荨麻疹患儿血清总 IgE 水平对于慢性荨麻疹的诊断和预后具有一定的临床意义。

PU-1488

血清 IgG、IgM、IgA 水平与儿童肺炎支原体感染的关系

逯思显、王耀东、杨叶
呼和浩特金域检验所有限公司

肺炎支原体(Mycoplasma pneumoniae，MP) 是引起人类非典型肺炎和其他许多呼吸道感染的主要病原体之一，其易感人群为儿童和青少年，且以秋冬季节多见。近年来，MP 感染发病率呈逐年上升趋势，对儿童以及青少年的生长发育以及生活质量存在较大的影响。MP 具体的致病机制尚未完全明确，但普遍认为其可通过直接损伤及免疫介导等方式致病。因儿童感染 MP 后，机体的免疫功能会受到不同程度的损伤，本文为分析免疫球蛋白指标在肺炎支原体肺炎患儿中的水平变化作一综述，旨在为支原体肺炎感染患儿病情的辅助诊断及治疗提供参考依据。

PU-1489

HIV-1 感染者 HAART 治疗后血清 IL-2、IFN-γ、IL-6 的变化及其临床意义分析

刘洋
内蒙古自治区人民医院

目的 探讨 HIV-1（人类免疫缺陷病毒-1）感染者 HAART（高效抗逆转录病毒）治疗后血清 IL-2（白介素-）、IFN-γ（γ-干扰素）、IL-6（白介素-6）的变化及其临床意义。
方法 现选取 2014 年 3 月-2019 年 3 月经我院确认为 HIV-1 病毒感染的患者 145 例，根据有无接受 HAART 治疗，分为两组，75 例接受治疗为 A 组，70 例未接受治疗为 B 组，选取同时期健康体检者 145 例作为对照组，对比 A 组与对照组、B 组与对照组的血清 IL-2、IFN-γ、IL-6 水平，分析 A 组合 B 组患者 CD4+及 CD8+T 淋巴细胞计数情况。
结果 相比治疗前，治疗后 3 个月-1 年，A 组患者 IL-6 水平逐渐降低，IL-2 和 IFN-γ 水平逐渐上升，A 组患者在治疗前及治疗后 3 个月-1 年的 IL-6 水平都高于对照组，而 IL-2、 IFN-γ 水平都低于对照组（P<0.05）；相比治疗前，治疗后 3 个月-1 年，B 组患者 IL-6 水平逐渐上升，IL-2 和 IFN-γ 水平逐渐下降，B 组患者在治疗前及治疗后 3 个月-1 年的 IL-6 水平都高于对照组，而 IL-2、 IFN-γ 水

平都低于对照组（P<0.05）；随治疗时间增加，A 组患者 CD4+T 细胞数量逐渐上升，CD8+T 细胞数量逐渐降低，CD4+/CD8+水平逐渐上升；随治疗时间增加，B 组患者 CD4+T 细胞数量逐渐减少，CD8+T 细胞数量逐渐增加，CD4+/CD8+水平逐渐降低。
结论 在 HIV-1 感染者接受 HAART 治疗的过程中，血清 IL-2、IFN-γ、IL-6 因子发挥着重要作用，有可能参与免疫重建。

PU-1490

HE4 in comparison with CYFRA 21-1, Pro-gastrin-releasing peptide,neuron-specific enolase, carcinoembryonic antigen and CA125 in the differential diagnosis of lung cancer

guangrong wang、qiang Wang、qin Du、guoyuan Zhang、xiaolan Guo、Xiaolan Lu
Affiliate hospital of north sichuan medical college

Background Conventional biomarkers for lung cancer cannot meet the need of clinical diagnosis. We aimed to assess the the clinical value of human epididymis secretory protein 4 (HE4) for the diagnosis of lung cancer and compare it with other biomarkers.
Methods 242 cases of lung cancer (175 adenocarcinoma, 37 squamous carcinoma, and 30 small cell lung cancer) , 99 cases of benign lung disease and 60 cases of health physical examination were selected. The levels of serum HE4, CYFRA 21-1,proGRP, NSE, CEA and CA125 were detected by chemiluminescence method. The performance of each biomarker in discriminating adenocarcinoma, squamous cell carcinoma and small cell lung cancer (SCLC) from benign lung disease and healthy control were assayed by receiver operating characteristic curve analysis.
Results The serum levels of HE4, CYFRA21-1,proGRP and CEA in lung cancer group were significantly higher than those in benign lung disease group (P<0.05), and the levels of HE4, CYFRA21-1，proGRP, NSE, CEA and CA125 in lung cancer group were significantly higher than those in healthy control group (P<0.05).The serum levels of HE4, proGRP and NSE in patients with SCLC were significantly higher than those in patients with non-small cell lung cancer (NSCLC) (P<0.05),and the serum levels of HE4, CYFRA21-1 and CA125 in patients with squamous carcinoma (SC) were significantly higher than those in patients with adenocarcinoma (AC) (P<0.05). With health physical examination group as normal controls, in comparison to CYFRA 21-1,proGRP, NSE, CEA and CA 125, HE4 was one of the biomarkers with the largest AUC(0.839) for lung cancer diagnosis. In terms of histological results, HE4 was the best biomarker both in AC and SC with AUC of 0.790 and 0.968, and proGRP was the best in SCLC with AUC of 0.974. While with benign lung disease group as normal controls,CEA was one of the biomarkers with the largest AUC(0.679) for lung cancer diagnosis. In terms of histological results, CYFRA21-1was the best biomarker both in AC and SC with AUC of 0.697 and 0.862, and serum proGRP was still the best in SCLC with AUC of 0.949.
Conclusions HE4 is more suitable in distinguishing between lung cancer patients and normal population. HE4 combined with NSE can increase the sensitivity and specificity of screening. In the differential diagnosis of lung cancer and benign lung diseases, CEA, CYFRA21-1 and proGRP are more sensitive and specific than HE4.The combined detection of HE4, CYFRA21-1 and proGRP is helpful to the pathological classification of patients with lung cancer.

PU-1491

乙型肝炎病毒定量新技术的性能验证

魏莘林
雅安市人民医院

目的 对湖南圣湘科技有限公司开发的“一步法”乙型肝炎病毒的检测新技术的性能进行验证
方法 实验性能验证，包含重复性、功能灵敏度、线性、准确性，从志愿参加研究的 2000 名乙肝病毒患者采取血液标本，采用 PCR-荧光探针法检测 HBV DNA 100-5×109 IU/ml 范围内的阳性标本进行相关分析。采取线性回归方程、Spearman 检验、Bland-Altman 分析来统计分析
结果 湖南圣湘对 2000 人份标本检测，有 1724 人份标本含有乙型肝炎病毒，其中有 17 人份病毒含量高于 108IU/mL，有 486 人份病毒含量低于 1000IU/mL ，30 人份病毒含量低于 100IU/mL，罗氏对 2000 人份标本检测，有 1727 人份标本含有乙型肝炎病毒，其中有 16 人份病毒含量高于 108IU/mL，489 人份病毒含量低于 1000IU/mL，33 人份病毒含量低于 100IU/mL。（低于 100IU/mL 已不在试剂盒规定的线性范围，可证实试剂盒所给定的线性范围）
结论 结果在误差范围内，湖南圣湘科技有限公司的“一步法”新技术结果准确，操作简单。

PU-1492

Elevated exhaustion levels and reduced functional diversity of T cells in peripheral blood may predict severe progression in COVID-19 patients

Mi Zhang 、cuixian Yang、xingqi dong
Yunnan Infectious Diseases Hospital

To provide direct evidence on leukocyte homeostasis, we studied the immunological characteristics of peripheral blood leukocytes from 16 patients admitted to the Yunnan Provincial Hospital of Infectious Diseases, Kunming, China. Among them, 10 were mild cases, 6 were severe cases; 7 were ≥50 years old, 11were younger; and 6 had baseline diabetes, hypertension, or coronary atherosclerosis. COVID-19 patients, especially those with severe infection, showed increased levels of regulatory molecules and decreased levels of multiple cytokines in peripheral blood T cells. a Heat maps comparing peripheral blood leukocyte subset concentrations in healthy (n = 6), mild (n = 10), and severe (n = 6) patients. Rainbow-colored squares represent mean values of each group. Red-black-green squares represent log 10 P values, and white asterisk indicates P ≤ 0.05 by post hoc ANOVA test. Comparisons of IL-6, TNF-α, and sCD14 plasma concentrations in healthy, mild, and severe groups. n.s., P > 0.05, *, P ≤ 0.05, by Kruskal–Wallis test. Comparisons of expression levels of activation-, regulation-, and function-related molecules in CD4+ and CD8+ T cells among groups. Rainbow-colored squares represent mean positive cell rate for each group. Comparisons of cell expression modules of exhaustion-related (CTLA-4, PD-1, and TIGIT) and function-related (IFN-γ, TNFα, and IL-2) molecules in CD4+ or CD8+ T cells among groups. “Single” indicates that cell only expresses one of the three molecules, “Multi” indicates that cell expresses at least two of the three molecules, “Non” indicates that cell expresses none of the three molecules. Red-yellow-blue squares indicate average cell expression rates of different modules of three groups, respectively. Correlation network analysis of markers with significant differences among groups. Nodes are colored based on cell type for three groups. Node size indicates relative strength value according to centrality analysis. Thicker lines indicate more correlated genes. Green lines represent significantly positive Spearman’s correlation coefficients ≥0.40; red lines represent significantly negative Spearman’s correlation coefficients ≤-0.40. Hierarchical clustering of participants based on all immunological risk indicators

PU-1493

回顾性分析孕中期唐氏筛查的影响因素

卫仙洪
雅安市人民医院

目的 分析不同因素，包括年龄、体重和标本来源对孕中期唐氏筛查结果的影响，并探讨唐氏筛查在产前诊断中的应用 价值，提高产前筛查的准确率。
方法 对 2018 年 4 月至 2020 年 12 月在我院进行唐氏综合征四联筛查的 7799 例妊娠 15～20+6 周的孕妇采取知情同意原则，进行血清甲胎蛋白（AFP）、总 β－人绒毛膜促性腺激素（Tβ-HCG）游离雌三醇（UE3）和抑制素 A(InhA)水平检测，结合孕妇年龄 、体重 、孕周（孕周计算参照胎儿 BPD）、孕产史、吸烟史、糖尿病史等指标 ，利用配套软件计算胎儿患唐氏综合征、18 三体综合征和开放性神经管缺陷的风险。根据孕妇年龄、体重和标本来源统计分析高危例数和阳性率。
结果 7799 例孕妇中唐氏综合征（DS）高危 182 例（2.33%）；18-三体综合 征（ET）高危 7 例（0.09％）；神经管缺陷（ONTD 高危 70 例（0.90%）。年龄、体重与唐氏综合症筛查阳性率呈正相关，标本来源与唐氏综合症筛查阳性率无关。
结论 年龄和体重对唐氏筛查结果影响较大，应确保相关指标书写规范和准确，提高产前筛查的准确率。

PU-1494

不同离心力对乙肝表面抗原感染标志物定量检测结果的影响

孟静
山东大学第二医院

目的 探讨不同离心力处理后的标本对化学发光微粒子免疫检测检测乙肝表面抗原感染标志物检测结果的影响，以降低乙肝表面抗原假阳性率。
方法 回顾性分析。选取 60 例乙肝表面抗原浓度＞0.05 IU/m 且<1.00 IU/mL 的标本，运用化学发光微粒子免疫分析法在雅培 ARCHITECT i2000 检测平台上定量检测乙肝表面抗原感染标志物。常规离心力为 4000rpm 离心 5 分钟，高速离心力为 10000g 离心 10 分钟。常规离心后乙肝表面抗原阳性的标本进一步进行高速离心，上机检测，比较两种离心力乙肝表面抗原定量结果的变化。
结果 对 60 例乙肝表面抗原浓度＞0.05 IU/m 且<1.00 IU/mL 的标本高速离心后检测， 46 例检测结果<0.05 IU/mL（cutoff 值 0.05 IU/mL），比例为 76.7%；14 例标本前后检测结果保持一致，比例为 23.3%。
结论 化学发光微粒子免疫检测乙肝表面抗原阳性的标本前处理需满足离心条件 10000g 离心 10 分钟，以降低乙肝表面抗原假阳性率。

PU-1495

2020 年医院就诊者 HBsAg 携带率调查分析

李佳
雅安市人民医院

目的 总结和分析医院就诊人群乙型肝炎表面抗原携带情况,为乙型肝炎的预防提供科学的指导。
方法 调取 2020 年在雅安市人民医院就诊人群进行血清乙型肝炎表面抗原（HBsAg）检测，进行不同性别、年龄、类别、科室间率的比较分析。

结果 29542 例携带有 2651 例 HBsAg 携带者，携带率为 8.97%。男性携带率高于女性；高年龄组携带率高于低年龄组；门诊组高于体检组和住院组；在科室分布中，最高为感染科占 60.26%，次为肿瘤科科占 13.95%。
结论 对患者或健康体检者进行感染性标志物检测很有必要的，加强公众乙肝防治知识的普及和宣传，增强公众自我保护识，阻止传染病的传播

PU-1496

高尔基体蛋白、甲胎蛋白、甲胎蛋白异质体 L3 三项肿瘤指标的联合检测对原发性肝癌（PHC）的诊断意义

高晓玉
雅安市人民医院检验科

目的 通过联合检测血清甲胎蛋白（AFP）、甲胎蛋白异质体（AFP-L3）、高尔基体蛋白（GP73）在原发性肝癌患者(PHC)体内的表达水平，探讨其对原发性肝癌的诊断价值。
方法 选取 120 例肝癌、103 例肝炎肝硬化以及健康对照者 100 名，取其空腹血清，用放射免疫定量法检测 AFP，酶联免疫吸附法（ELISA）检测 GP73、AFP-L3。对三组研究对象的 AFP、AFP-L3、GP73 在体内的表达水平进行分组比较。观察 AFP、AFP-L3、GP73 对原发性肝癌的特异性及敏感性。
结果 PHC 患者组三项指标均高于非癌性肝病组（NHC）和正常对照组 （P<0.01）；三项指标联合检测诊断 PHC 的阳性检出率为 95.8%，明显高于单项指标的阳性检出率。
结论 血清 AFP、AFP-L3、GP73 联合检测可以提高原发性肝癌的敏感性，有助于 PHC 的筛查与早期诊断。

PU-1497

脂肪血对 DxI800 化学发光分析仪检测超敏肌钙蛋白 I 结果的影响

麻国芳
青海省人民医院

目的 探讨脂肪血对化学发光免疫分析法检测超敏肌钙蛋白 I（hs-cTnI）结果的影响。
方法 将已知浓度的 cTnI 血清标本与不同浓度的脂肪血标本按 1：9 比例混合，使 cTnI 最终浓度为 40.0pg/mL，甘油三酯（TG）最终浓度分别为 0、1.02、5.27、10.55、13.18、15.82 mmol/L；使用 DxI800 化学发光免疫分析仪检测混合后标本中 cTnI 的浓度，评价脂肪血对 cTnI 检测结果所造成的干扰。
结果 cTnI 基础浓度为 48.46 pg/mL 时，当 TG 浓度为 10.55mmol/L 时，cTnI 结果的偏差为 8.85%，结果可接受；当 TG 浓度为 13.18mmol/L 时，cTnI 结果的偏差为 16.16%，超出可接受范围，同时也小于说明书所给的 33.87mmol/L 的声明。
结论 用 DxI800 化学发光免疫分析仪检测 hs-cTnI 时，TG 浓度≥13.18mmol/L 时，cTnI 结果的偏差＞10%，所以，为了保证检测结果的可靠性，应尽量避免脂肪血所造成的干扰。

PU-1498

CA153、CA125 和 CA199 联合检测对乳腺癌诊断的价值

欧阳健
中国人民解放军联勤保障部队第九二一医院

目的 比较 CA153、CA125、CA199 单项检测和三项联合检测的敏感性、特异性、准确度和阳性预测值差异，以确定三项联合检测是否对检测筛查乳腺癌有更高的价值。
方法 采用回顾性分析法，收集联勤保障部队第 921 医院 2015-2021 年乳腺癌患者标本 100 例，体检健康者 100 例。样本均用罗氏 6000 全自动生化分析仪进行电化学发光法进行检测。
结果 CA153、CA125、CA199 的敏感性分别是 48%、41%、27%；特异性分别是 100%、97%、98%；准确性分别是 0.74、0.69、0.63；阳性预测值分别是 100%、93%、93%。CA153、CA125、CA199 三项联合检测的敏感性、特异性、准确性和阳性预测值分别是 66%、96%、0.81、100%。
结论 1.单项肿瘤标志物检测中 CA153 相比于 CA125、CA199 对于乳腺癌的诊断更有价值 2.CA153、CA125、CA199 三项联合检测对于乳腺癌诊断的敏感性明显高于 CA153、CA125、CA199 各单项检测的敏感性（P<0.05)。三项联合检测的敏感性价值更高，更有利于乳腺癌的筛查。

PU-1499

lincRNA-p21 在病毒性肝炎和肝硬化患者血清中的表达

王顺
山东大学第二医院

目的 lincRNA-p21 参与许多人类疾病的发生和发展。本研究旨在探讨 lincRNA-p21 在在病毒性肝炎和肝硬化患者血清中的表达。
方法 本研究选择 2015 年 1 月至 2017 年 12 月在山东大学第二医院就诊的原发性肝病患者（慢性 HBV 感染患者 80 例、慢性 HCV 感染患者 80 例、乙型肝炎病毒相关肝硬化患者 80 例、乙型肝炎病毒相关 HCC 患者 42 例作为研究对象。采用健康体检者 50 例作为对照，用 RT-qPCR 测定血清中的 lincRNA-p21 水平。并采集患者的临床病理特征。
结果 慢性 HBV 感染患者、慢性 HCV 感染患者、乙型肝炎肝硬化患者、乙型肝炎病毒相关性肝癌患者血清中的 lincRNA-p21 水平均高于对照组（P＜0.001，P＜0.001，P=0.005，P=0.003）。在肝病患者中，lincRNA-p21 水平与 HBV DNA（P=0.03）、ALT（P=0.03）和 AST（P=0.04）呈负相关，但与性别（P=0.35）、年龄（P=0.25）和 AFP（P=0.66）无相关性。
结论 血清 lincRNA-p21 可作为肝炎病毒感染、乙型肝炎肝硬化、HBV 相关 HCC 患者肝细胞损伤的潜在生物标志物。

PU-1500

两种 CA242 检测系统测定结果的一致性分析

李玲[1]、卢小岚[2]、杜鹃[2]、汪光蓉[2]、王强[2]
1. 雅安市人民医院检验科
2. 川北医学院医学检验系

目的 比较 Bioscience 与 Snibe 两种全自动化学发光检测系统测定 CA242 结果的一致性，为临床选择 CA242 检测方法提供依据。

方法 依据 EP5-A2、EP6-A 标准分别对 Bioscience 检测系统测定 CA242 进行重复性和稀释线性分析验证；同时收集 41 例结直肠癌患者、45 例健康体检者血清；分别采用 Bioscience 和 Snibe 检测系统对血清 CA242 含量水平进行检测，并对结果进行一致性分析。
结果 Bioscience 检测系统测定 CA242 的重复性、稀释线性的性能验证合格；Bioscience 检测系统测定健康对照组、结直肠癌组患者血清 CA242 的结果与 Snibe 检测系统测定结果不存在差异(Z=-1.130，-1.664；p=0.327，0.180)(p>0.05)，且两种检测系统测定结果存在显著的线性关系(F=1625.018.000，p<0.0001)，一元线性回归方程为：y=1.018*x + 1.883，R2= 0.9736。
结论 Bioscience 与 Snibe 两种全自动化学发光检测系统测定 CA242 结果具有较高的一致性。

PU-1501

miR-328-3p, a predictor of stroke, aggravates the cerebral ischemia-reperfusion injury

Shun Wang
Department of Clinical Laboratory, the Second Hospital, Cheeloo College of Medicine, Shandong University

Background In the present study, we aimed to identify microRNAs (miRNAs) that affected the prognosis of stroke and assess their biological effects.
Materials and Methods A high-throughput sequencing (HTS) analysis was performed to screen distinctive miRNAs in serum exosomes of stroke patients, and these miRNAs were subsequently validated using individual quantitative real-time polymerase chain reaction (qRT-PCR) in a cohort consisting of 39 stroke patients and 20 normal controls. Briefly, miR-328-3p agomir or agomir NC was injected into rats before ischemia and reperfusion (I/R) injury. Zea-Longa score, neurological severity score (mNSS), triphenyltetrazolium chloride (TTC) staining, terminal deoxynucleotidyl transferase dUTP nick end labeling (TUNEL) assay, transmission electron microscopy, and hematoxylin and eosin (H&E) staining were used to examine the brain injury. Immunohistochemistry was utilized to determine the expressions of TNF-α and IL-6.
Results The expression of serum exosomal miR-328-3p was significantly reduced in patients with an infarct volume >=10 cm3 (P=0.01). Serum exosomal miR-328-3p was associated with the short-term prognosis (P=0.02), and the level of miR-328-3p was an independent relative factor for short-term prognosis (OR 5.276, P=0.02). The sensitivity of miR-328-3p level higher than 1.24 to predict the severity of the patient's 1-week prognosis was 70%, and the specificity was 83% (AUC=0.74, P=0.02). The mNSS was higher in the miR-328-3p agomir group compared with the agomir NC group (P=0.03). Neutrophil infiltration was more serious in the miR-328-3p agomir group.
Conclusions Our study indicated that miR-328-3p played a critical predictive role in the short-term prognosis of stroke, and up-regulation of miR-328-3p aggravated cerebral I/R injury.

PU-1502

ELISA 法联合免疫印迹法检测抗双链 DNA 抗体应用于 SLE 诊断价值分析

朱文波
南京大学医学院附属鼓楼医院

目的 探讨 ELISA 法联合免疫印迹法检测抗双链 DNA 抗体在诊断 SLE 中的价值。
方法 回顾性分析 2018 年 12 月至 2019 年 3 月在本院就诊的患者送检的 7930 例标本，分别采用间接免疫荧光法检测抗核抗体（ANA）、线性免疫印迹法检测抗核抗体谱，以及酶联免疫吸附法检测

抗 ds-DNA 抗体，统计免疫印迹法与 ELISA 法任意一种检测出抗 ds-DNA 抗体阳性的标本信息，分析抗体阳性的病种分布，同时评估抗 ds-DNA 抗体不同检测方法学应用于 SLE 的诊断效能。
结果 检测抗 dsDNA 抗体-IgG 的 7930 份标本中，抗 dsDNA 抗体-IgG 检测结果阳性标本共 179 例。其中，ELISA 法检测阳性标本为 138 例，阳性率为 1.79%；免疫印迹法检测阳性标本 102 例，阳性率为 1.32%。两种方法均为阳性的标本 61 例，占阳性标本的 34.1%；仅 ELISA 法检测结果阳性的标本有 77 例，占阳性标本的 43.0%；仅免疫印迹法检测结果阳性的标本有 41 例，占阳性标本的 29.9%。阳性标本的诊断疾病中分别有系统性红斑狼疮 37.43%（67/179），干燥综合症 17.32%（32/179）、关节疼痛 15.08%（27/179）、混合结缔组织病 4.47%（8/179）、以及其他自身免疫性疾病 25.70%（45/179）。在诊断为 SLE 的 87 例标本中，其中两种方法都是阳性的有 31 例，只有 ELISA 阳性的有 31 例，免疫印迹法阳性的有 5 例，两种方法都阴性的有 20 例。ELISA 法的灵敏度和特异度分别为 71.26%和 99.03%，免疫印迹法的灵敏度和特异度分别为 41.38%和 99.14%。两种方法做卡方检验，P<0.05,具有统计学意义。两种方进行同时检测用于诊断 SLE 的灵敏度为 77.01%，特异度为 98.70%。
结论 ELISA 法检测抗 ds-DNA 抗体的方法优于免疫印迹法，两种方法同时检测时有助于提高系统性红斑狼疮的诊断效能。

PU-1503

联合检测 C1q、IL6、Cys C 在狼疮性肾炎中的诊断意义

李丽
中国人民解放军北部战区总医院

目的 狼疮性肾炎（Lupus nephritis，LN）诊断的金标准肾活检因其创性难以重复进行，现联合检测补体组分 1q（C1q）、白介素-6（IL6）、和胱抑素 C（Cys C），评估其在 LN 不同肾脏损害程度中的诊断意义。
方法 回顾性分析系统性红斑狼疮的患者 410 例，其中病变未累及肾脏者 231 例（SLE 组），狼疮性肾炎活动期患者 100 例（LNA 组），狼疮性肾炎非活动期患者 79 例（LNI 组），再选取 230 例健康体检者（HC 组）。同时测定 C1q、Cys C、和 IL6 以及 Urea、Creat 水平，并计算 eGFRCysC 和 c-aGFR，分析联合检测的 3 种指标与不同程度肾损害的狼疮性肾炎关系。
结果 HC 组、SLE 组、LNA 组和 LNA 组间，指标 C1q、Cys C、和 IL6 的差异均有统计学意义（P<0.05）。且 C1q、Cys C、和 IL6 值与 LN 的活动指数呈正相关（r=0.484，P<0.05; r=0.426，P<0.05; r=0.385，P<0.05）。Logistic 回归分析结果显示 C1q、Cys C、和 IL6 为 LN 发病的危险因素。受试者工作特征（ROC）曲线分析结果显示，各项观察指标单独对 LN 的诊断性能曲线下面积（area under curve，AUC）以 Cys C（0.870）为最大，其后依次为 C1q（0.764）、IL6（0.550），C1q+CysC+IL6 联合检测诊断性能（AUC=0.922），其敏感度为 87.2%，特异度为 91.2%。C1q+Cys C 联合检测也可达到相近于最优的诊断性能。
结论 Cys C 对 LN 有较好的诊断效能。联合检测 C1q、Cys C、和 IL6 可作为评估 LN 疾病活动性和肾功能损伤程度的标志物。

PU-1504

CA125 及 NT-pro-BNP 在中老年心衰患者中的临床诊断价值

李淑璇
中国人民解放军联勤保障部队第九二一医院

目的 分析 CA125 及 NT-pro-BNP 在中老年心衰患者中的临床诊断价值。

方法 收集中国人民解放军联勤保障部队第 921 医院 2016 年 1 月至 2021 年 1 月确诊的慢性心力衰竭患者 104 例，将其中的 71 例按照美国纽约心脏病（NYHA）心功能分级分为 I 级 20 例，II 级 5 例，III 级 25 例，IV 级 21 例、并且选取 97 例慢性心力衰竭患者，查询其急性发作期和好转期数据。收集急性心力衰竭患者 104 例。比较不同组之间血清 NT-pro-BNP 和 CA125 含量。
结果 急性心衰患者急性发作期血清 NT-pro-BNP 含量高于慢性心衰患者，慢性心衰患者急性心衰发作期血清 NT-pro-BNP 含量高于好转期，慢性心衰患者的 NT-pro-BNP 水平与心功能分级有关联，以上结果均具有统计学意义（P<0.05）。
结论 血清 NT-pro-BNP 含量可以体现急性心衰和慢性心衰的差异；也可以利用其在患者急性心衰发作期和好转期两个不同时期进行鉴别；NT-pro-BNP 也可以辅助诊断患者心功能水平。血清 CA125 在急性心衰患者和慢性心衰患者中，以及患者急性心衰发作期和好转期中无明显差异；CA125 和心功能分级无明显相关性。

PU-1505

肝纤四项与生化指标检测在肝硬化诊治中的临床意义

廖家铃
中国人民解放军联勤保障部队第九二一医院

目的 探讨肝纤四项与生化指标联合检测在肝硬化诊断中的运用，为肝硬化诊治提供相关的依据。
方法 选择 2015 年 6 月至 2020 年 12 月在中国人民解放军联勤保障部队第 921 医院的 100 例肝硬化患者作为肝硬化组，分为代偿期肝硬化组和失代偿期肝硬化组两组，每组各 50 例；体检健康者 50 例作为对照组。比较肝硬化组和对照组检测结果及肝硬化组中不同分组间的指标检测结果。
结果 肝硬化组肝纤四项、TBIL、TBA、ALT 和 AST 水平均显著高于对照组，TP、ALB 水平均显著低于对照组；肝硬化失代偿期患者肝纤四项、TBIL、TBA、ALT 和 AST 水平均显著高于肝硬化代偿期患者，TP、ALB 水平均显著低于肝硬化失代偿期患者；联合检测的灵敏度、特异度和曲线下面积均明显高于各单项指标检测。
结论 肝纤四项与生化指标检测对肝硬化的诊断有一定的辅助价值；肝纤四项与生化指标检测可有利于判断肝细胞的损伤程度；肝纤四项和生化指标联合检测可提高肝硬化的诊断效能。

PU-1506

胸苷激酶 1 - 细胞增殖标志物

巫仕霞、黄献中、陈志坚
广州金域医学检验中心有限公司

探讨胸苷激酶 1 作为一种新型细胞增殖标志物，是目前首个血清学细胞增殖标志物，可以监测细胞异常增殖的速度。细胞的异常增殖贯穿于慢性增殖性疾病病情进展、肿瘤发生发展的全过程，这样一种新型癌前病变风险指标在临床上的运用。通过检测血清中的胸苷激酶 1 即可在肿瘤未发生之前就进行全身早早期肿瘤的风险预警，适用于体检和癌前病变评估等；同样也可监测肿瘤患者在进行治疗过程中的细胞增值情况，为临床医生提供患者肿瘤细胞的动态变化和肿瘤细胞的增长速率，来可以预估患者的预后生存率、预测复发风险率、评估癌变进程的风险度等。

PU-1507

SAA 联合 CRP 对小儿感染性疾病的早期鉴别诊断价值

彭剑桥
湖南省人民医院

目的 研究联合 SAA 以及 CRP 的检测在儿童呼吸道感染性疾病的早期诊断中的临床应用价值。
方法 收集湖南省人民医院 2020 年 8 月-2020 年 12 月期间收治的 120 例符合早期呼吸道感染诊断的患病儿童，其中包含病毒感染的患病儿童 80 例，细菌感染的患病儿童 40 例，同时收集同一时期在本院区进行体检的 40 名健康儿童设为对照组，对所有儿童的外周血 SAA 和 CRP 含量进行联合检测分析。根据 ROC 曲线对 SAA、CRP 诊断小儿呼吸道感染为病毒感染或者细菌感染的能力。
结果 SAA 和 CRP 在感染早期都会发生相应的变化，细菌感染早期的外周血 SAA 和 CRP 的含量都会上升，而且其外周血 SAA 和 CRP 的升高的幅度都会大于病毒感染升高的幅度；而病毒感染的前期外周血 SAA 含量会出现上升，但是 CRP 水平不会有太大的变化。通过同时检测 SAA 和 CRP，根据两种感染的这两种指标的特点不同，能够提高细菌感染和病毒感染的鉴别能力。
结论 对于小儿呼吸道感染的早期鉴别诊断，SAA 联合 CRP 的检测具有非常显著的临床意义，可以在早期帮助临床鉴别诊断为病毒感染还是细菌感染。

PU-1508

血清 RF、抗 CCP 抗体及免疫球蛋白联合检测对 RA 的诊断价值分析

谭苑生
中国人民解放军联勤保障部队第九二一医院

目的 探讨分析检测血清类风湿因子（RF）、抗环瓜氨酸肽抗体（抗 CCP 抗体）和免疫球蛋白的含量对类风湿性关节炎（RA）的诊断价值。
方法 选取 2017 年 1 月至 2021 年 1 月在本院确诊的 32 例 RA 患者作为病例组，同期 42 例非 RA 的自身免疫性疾病患者资料为病例对照组，31 例体检健康者资料作为健康对照组，统计分析三种诊断指标及联合检测对 RA 的诊断价值。
结果 RA 组患者血清中 RF、抗 CCP 抗体和 IgM 水平明显高于非 RA 组与健康对照组，组间差异具有统计学意义（P<0.05）；而 IgG 与 IgA 水平的组间差异无统计学。RA 组患者的 RF、抗 CCP 抗体和免疫球蛋白阳性率均显著高于其他两组，差异具有统计学意义（P<0.05）。灵敏度为 RF>抗 CCP 抗体>免疫球蛋白（84.3%>75.0%>40.6%）；特异性为免疫球蛋白>RF=抗 CCP 抗体（90.4%>87.7%=87.7%）；RF+抗 CCP 抗体联合检测的灵敏度为 96.9%，特异度为 79.4%，三项并联检测的灵敏度高达 100.0%，尤登指数最高的是 RF+抗 CCP 抗体联合检测，为 0.76。
结论 RF 与抗 CCP 抗体单独检测也具有较好的灵敏度和特异度，免疫球蛋白则具有高特异度；联合检测有更高的灵敏度和阴性预测值，可辅助临床诊断 RA。

PU-1509

口腔扁平苔藓患者外周血 T 淋巴细胞亚群、免疫球蛋白及补体的水平变化分析

李海波[2]、师志云[1]
1. 宁夏医科大学总医院
2. 宁夏医科大学

目的 研究口腔扁平苔藓（OLP）患者外周血 T 淋巴细胞亚群、免疫球蛋白及补体的变化情况，探讨免疫因素与口腔扁平苔藓的关系及其临床意义。
方法 收集 2019 年 10 月至 2020 年 9 月宁夏某口腔医院就诊的口腔扁平苔藓患者 100 例为实验组，同期体检的健康人群 100 例为对照组。采用流式细胞术检测细胞免疫（淋巴细胞亚群 CD3+、CD3+CD4+T 细胞、CD3+CD8+T 细胞、CD3-CD16+56+NK 细胞、CD3-CD19+B 细胞、CD4+/CD8+）水平，采用免疫散射比浊法检测体液免疫（免疫球蛋白 IgG、IgA、IgM 及补体 C3、C4）水平。应用 SPSS20.0 统计软件对数据进行处理和统计学分析，P<0.05 有统计学意义。
结果 OLP 组与对照组 CD3+T 细胞、CD3+CD4+T 细胞、CD3+CD8+T 细胞、CD3-CD16+56+NK 细胞、CD3-CD19+B 细胞与 CD4+/ CD8+水平虽有差异，但均无统计学差异（p>0.05）；OLP 组免疫球蛋白 IgM 水平相比于对照组有所降低，且差异有统计学意义（p<0.05）。
结论 口腔扁平苔藓患者的免疫功能存在某些方面的失衡。

PU-1510

白癜风的免疫机制

秦玲
西安医学院第一附属医院

白癜风是一种常见的后天性色素脱失性皮肤黏膜疾病。白癜风发病的发病病因是多种多样的，目前来说白癜风的病因及发病机制尚未完全明确, 可能与遗传、氧化应激、自身免疫异常等有关。细胞及体液免疫参与白癜风的发病及病情进展, T 淋巴细胞、单核-巨噬细胞、细胞因子等均在白癜风的发病中有一定作用。本文就以上因素综述了近些年白癜风免疫学机制的研究进展。

PU-1511

鼻咽癌患者血清 Rta-IgG、VCA-IgA、EA-IgA 抗体水平放疗前后变化分析

张扬南、彭玉凤、代国知
郴州市第一人民医院

目的 研究鼻咽癌患者血清 EB 病毒 Rta-IgG、VCA-IgA、EA-IgA 抗体水平放疗前后的变化情况。
材料和方法 本次研究选取在郴州市第一人民医院经病理首次确诊鼻咽癌患者 58 例作为鼻咽癌组，选取同期门诊鼻咽部炎症患者 100 例和健康体检者 100 例分别作为炎症、健康对照组。所有鼻咽癌患者均行根治性放疗，并分别于放疗前、放疗 3 个月、放疗 6 个月检测血清 EB 病毒 Rta-IgG、VCA-IgA、EA-IgA 抗体及全血 EB 病毒核酸载量；对照组检测血清 EB 病毒 Rta-IgG、VCA-IgA、EA-IgA 抗体。
结果 1．鼻咽癌患者放疗前血清 Rta-IgG、VCA-IgA、EA-IgA 抗体阳性率分别为 74.1%(43/58)、62.1%(36/58)、72.4%(42/58)，均高于炎症对照组（阳性率：10.0%、12.0%、18.0%)，健康对照

组（阳性率：2.0%、8.0%、5.0%)（P<0.05）。2．鼻咽癌患者血清 Rta-IgG 抗体的阳性率随放疗时间持续下降，但无显著差异（P>0.05）；血清 VCA-IgA、EA-IgA 抗体的阳性率放疗 3 个月无变化，放疗 6 个月阳性率升高，但均无显著差异（P>0.05）。3．鼻咽癌患者全血 EB 病毒核酸的阳性率放疗前、放疗 3 个月、放疗 6 个月分别为 41.4%、19.0%、12.1%，随放疗时间明显下降，具有显著性差异（P<0.05）。4．EB 病毒载量阳性组 Rta-IgG 的抗体水平放疗前和放疗后均高于阴性组，差异有统计学意义（P<0.05）；5．58 例鼻咽癌患者中放疗后 1 年发生 2 例死亡，1 年存活率为 96.6%（56/58），2 例发生远处转移，1 例发生复发。
结论 1．鼻咽癌患者血清 Rta-IgG、VCA-IgA、EA-IgA 抗体显著升高，可作为鼻咽癌早期筛查、辅助诊断指标。2．鼻咽癌患者放疗后血清 Rta-IgG 抗体明显下降，有望作为鼻咽癌疗效判断的指标。

PU-1512

M1 样巨噬细胞诱导肝癌细胞高表达免疫抑制分子 PD-L1 的机制研究

李娜
山东大学第二医院

目的 本研究证明肿瘤细胞 PD-L1 的过表达是否受 M1 样或 M2 样巨噬细胞的调控。通过体外细胞实验探究巨噬细胞是通过什么机制上调肿瘤细胞 PD-L1 的表达，将小鼠 T 淋巴细胞与肝癌细胞共培养，证明巨噬细胞引起的肿瘤细胞 PD-L1 的过量表达能否抑制 T 淋巴细胞的功能。
方法 1 人肝癌组织中巨噬细胞活化类型免疫组织化学分析以及免疫组织化学染色显示 PD-L1 表达呈异质性，且与 M1 浸润的数量相关。2 小鼠 RAW264.7 来源的 M1 促进了小鼠肝癌细胞 PD-L1 的表达。3 小鼠骨髓来源的 M1 促进了小鼠肝癌细胞 PD-L1 的表达。4 人 THP-1 来源的 M1 样巨噬细胞促进了人肝癌细胞 PD-L1 的表达。5 小鼠 M1 样巨噬细胞通过 MEK/ERK 信号通路促进了小鼠肝癌细胞 PD-L1 表达。6 小鼠 M1 样巨噬细胞通过分泌细胞因子 TNF-α 促进了小鼠 Hepa1-6 PD-L1 的表达。7 人 M1 样巨噬细胞通过 JAK/STAT 信号通路促进了人肝癌细胞 PD-L1 的表达。8M1 样巨噬细胞上清刺激的小鼠肝癌细胞促进了 CD8+T 淋巴细胞的凋亡。
结果 1 PD-L1 在肝癌组织中呈异质性表达，并且肝癌组织 PD-L1 分子的表达与 M1 浸润的数量有关系。2M1 可以上调肝癌细胞免疫抑制分子的表达。3M1 通过不同的信号通路促进了 PD-L1 分子在人和小鼠的肝癌细胞中的表达。4M1 刺激的肝癌细胞促进了 CD8+T 淋巴细胞的凋亡。
结论 本研究揭示了肿瘤微环境中 M1 通过相应的信号通路促进了 PD-L1 的上调表达，拓展了人们对 PD-L1 表达调控的新认识，为靶向 PD-L1 的肿瘤免疫治疗带来了新的思考，提示人们可以针对 PD-L1 分子表达调控关键通路中的分子为靶点，设计小分子药物来阻断 PD-L1 的过量表达，进而提高肿瘤的治疗效果。

PU-1513

A20 抑制肝癌细胞迁移的机制

李娜
山东大学第二医院

目的 肝癌恶性程度高病死率高而且手术后依然具有较高的转移率，癌细胞的转移是一个多步骤多因素的复杂过程，在这过程中，有一些分子发挥着重要作用，比如 A20 分子，A20 是一种重要的免疫负调控分子，因此，我们推测 A20 是否可以抑制肝癌细胞的运动能力以及通过怎样的机制抑制肝癌细胞的运动能力。
方法 首先，选取肝癌病人的组织切片，运用免疫组化技术检测 A20 在癌和癌旁组织的表达是否有区别。再通过转染质粒使肝癌细胞高表达 A20 或底表达 A20，运用 transwell 小室方法进行细胞迁

移和侵袭实验，观察 A20 是否可以抑制肝癌细胞的运动能力。然后再采用 PCR 和 Western-blot 方法检测 A20 对肝癌细胞 EMT 相关分子的影响。再进一步运用 Western-blot 和小干扰的方法检测 A20 通过怎样的机制影响 EMT 相关分子的变化。
结果 免疫组化结果显示癌旁组织中 A20 的表达明显高于癌组织。体外实验结果显示，在 TNF-α 刺激下，当 A20 表达高时，能抑制肝癌细胞的迁移和侵袭能力。当干扰 A20 表达后，肝癌细胞的迁移和侵袭能力增强，未刺激组无论 A20 表达高低与否，对于肝癌细胞的运动能力没有影响。A20 能抑制 TNF-α 诱导的肝癌细胞 EMT 进程，即在蛋白和 RNA 水平均能上调 E-cad,下调 N-cad，随后阻断 NF-KB 信号通路，发现 A20 抑制 EMT 相关分子的现象消失。
结论 A20 与肝癌细胞的转移具有相关性。A20 能抑制 TNF- -α 诱导的肝癌细胞的侵袭和迁移。A20 主要通过 NF-κB 信号通路影响肝癌细胞的侵袭和迁移。

PU-1514

基于免疫荧光层析的产气荚膜梭菌快速检测

段春梅、蒋栋能
陆军军医大学第二附属医院（新桥医院）

目的 产气荚膜梭菌感染在地震等自然灾害时经常发生，对其进行现场快速检测对挽救患者生命十分重要。本研究拟利用表面等离子共振技术和荧光定量免疫层析技术，设计快速检测产气荚膜梭菌的方法，研究其反应特性，以期能用于产气荚膜梭菌的快速检测。
方法 采用柠檬酸三钠还原法制备纳米银溶液，用产气荚膜梭菌抗体标记荧光微球，制备出产气荚膜梭菌荧光免疫检测卡，并对其灵敏度及线性范围、重复性、抗干扰能力作出评价。
结果 该检测方法对产气荚膜梭菌的最低检测限为 1x10^2CFU/ml，灵敏度比较高；线性范围为 10^2~10^7CFU/ml，可以基本满足临床对产气荚膜梭菌检测的要求。本检测卡同板批内重复性较好，CV 值为 1.80%。检测还发现，轻中度溶血、脂血、黄疸对本检测影响不大。
结论 该实验设计出了针对产气荚膜梭菌的快速免疫检测卡，该检测卡灵敏度高，线性范围较宽，能够用于产气荚膜梭菌的快速检测。另还需要进一步改进制作工艺，以减少检测卡间的误差和提高检测卡的抗干扰能力。

PU-1515

过敏原检测及临床类型分析

张芷嘉、蒋栋能
陆军军医大学第二附属医院（新桥医院）

目的 过敏原的检测是临床上常用于诊断过敏性疾病的方法之一, 对找出患者过敏原因, 预防和治疗过敏反应具有十分重要的意义。本实验拟统计分析各类过敏原的分布规律，为临床过敏反应防治提供依据。
方法 收集陆军军医大学第二附属医院皮肤科 2018 年 1 月到 2021 年 1 月间所检测的临床病例, 其中正常对照组 100 例，过敏反应组 300 例, 组间用卡方检验进行差异性分析。
结果 在过敏反应组中，由食物性引发过敏反应的主要因素是虾、蟹有 85 例（28.3%）; 花生过敏 71 例（23.7%）,由呼吸道吸入导致过敏反应的病例包括：屋尘过敏为 91 例（30.73）%;尘螨组合(屋尘螨/粉尘螨)有 77 例（25.7%）, 以上过敏病例经统计学卡方检验,和对照组比较有显著性差异(p <0. 01)。
结论 食入性过敏反应主要是虾、蟹、花生所引起的 I 型过敏反应，与本地区的饮食生活习惯和遗传因素有关。吸入性过敏反应中,常见性过敏原尘螨组合(屋尘螨/ 粉尘螨),这与环境污染、空气质量、

人们的生活卫生习惯有关。通过对变过敏原的类型分析,对患者的诊断、治疗和规避过敏反应有重要的临床指导意义。

PU-1516

一种唾液幽门螺杆菌磁性免疫层析试纸条的研制

韩兴
上海交通大学医学院附属仁济医院(东院)

背景 幽门螺杆菌是世界范围内感染率较高的细菌类型，在中国达 50%以上。研究显示，幽门螺杆菌的感染与胃炎、胃溃疡等疾病有直接关联。目前采用的检测方法都有共同的局限：需要专业仪器、专业技术人员和操作程序复杂。
目的 建立基于纳米磁性免疫层析技术的唾液幽门螺杆菌抗原试纸条检测体系，以达到高效、无创、快速、易操作地筛查幽门螺杆菌感染。
方法 1. 制备幽门螺杆菌抗原（HPS）单克隆抗体，纯化后使用超顺磁性纳米微球颗粒偶联。
2. 针对可能影响试纸条检测表现的因素，对试纸条各组分进行选择和优化。
3. 通过磁信号检测仪记录层析反应过程中信号强度的变化，以确定最佳的反应时间。
4. 用创建的唾液 HPS 试纸条检测体系和唾液 HPS 胶体金试纸条、临床常用的 ^{13}C-UBT 法进行比对，采集 185 例相关症状患者唾液标本，以验证其性能和临床检测的可行性。
结果 1. 构建磁性免疫层析试纸条使用的最佳磁性纳米颗粒粒径大小为 50nm。检测线和质控线磁力强度与抗原浓度呈正相关，最佳反应时间为 15 分钟。
2. 纳米磁性免疫层析法 HPS 试纸条最低的检测限为 1：1000，胶体金试纸条对幽门螺杆菌抗原最低的检测限为 1：100。
3. 创建的试纸条检测体系灵敏度为 93.33%，特异度为 46.25%，阳性预测值为 69.50%，阴性预测值为 84.09%。ROC 分析幽门螺杆菌抗原的 ROC 曲线下面积 AUC=0.634±0.027。
结论 本研究以超顺磁性纳米微球为标记物，代替传统纳米金胶为标记物的免疫层析技术，研制了 HPS 检测试纸条。检测结果明显优于市场在售的 HPS 胶体金试纸条，其灵敏度符合预期，但对于呼气试验的诊断符合率较差，假阳性率较高。其可能原因为唾液中酶类与口腔正常菌群对反应过程的干扰。下一步将对样品垫处理液中添加表面活性剂，对结合垫缓冲液成分进行调整，以期降低假阳性率，提高诊断价值。

PU-1517

不同自动化免疫分析系统对肾移植受者他克莫司和环孢霉素 A 药物浓度检测结果的比对分析

白杨娟、戴鑫华、安云飞、徐欢、万正利、邹远高
四川大学华西医院

目的 评价罗氏®电化学发光免疫分析系统（ECLIA）和西门子®均相酶免疫放大分析系统（EMIT）对肾移植受者 TAC 和 CsA 全血浓度检测结果的一致性。
方法 收集四川大学华西医院就诊的肾移植受者外周血样本（TAC134 份；CsA138 份），同步使用罗氏® Cobase801 和西门子®Viva-E 自动化分析仪及配套试剂盒、严格按照说明书进行外周血 TAC 和 CsA 全血浓度检测。对两个检测系统的检测结果进行相关性和 Bland-Altman 分析。
结果 Cobase801 和 Viva-E 检测系统 TAC 和 CsA 全血浓度结果范围分别为:2.81-10.9&2.9-9.7ng/mL 和 36.9-969&40.1-782.8ng/mL，不同检测系统 TAC 和 CsA 浓度检测结果具有较好相关性(P<0.05)，相关系数分别为 0.92 和 0.93。两个平台上的 TAC 和 CsA 检测结果存在差异:大部分样本（TAC 82.09%；CsA 74.64%）在 Cobas e801 的检测结果高于 Viva-E 的检测结果，TAC 和

CsA 浓度检测结果的平均偏差分别为 14.07%(-39.24%-46.89%)和 13.64%（-40.98-60.76%)，两个检测系统间检测结果差异的大小与样本绝对浓度无相关关系(P>0.05)，两个检测系统 95%一致性界限分别为：TAC 浓度 -16.00%-44.13%；CsA 浓度-21.95%-49.24%。使用不同剂型他克莫司的肾移植受者样本在 Cobas e801 和 Viva-E 的 TAC 浓度检测结果的平均偏差分别为 18.38%（普乐可复®）和 15.73%（新普乐可复®）(P>0.05)。

结论 Cobas e 801 和 Viva-E 自动化分析系统对他克莫司和环孢霉素 A 全血浓度检测结果存在差异，在相关报告解读及实验室拟进行检测平台转换时应做好临床沟通，避免对肾移植受者的临床处置造成不良影响。

PU-1518

Association between complement 4 copy number variation and systemic lupus erythematosus: a meta-analysis

Ziyan Wu
Peking Union Medical College Hospital

Systemic lupus erythematosus (SLE) is a chronic autoimmune disease characterized by multiple genetic mutations. Complement 4 (C4) copy number variation (CNV) is a target-of-interest located on chromosome 6. C4 encodes for either of the two C4 paralogs, C4A or C4B, and low C4 levels have been associated with SLE activity. In this study, we conducted a meta-analysis to comprehensively understand the role of C4 CNV in SLE. Three databases (PubMed, Embase, and Web of Science) were searched for relevant studies. Two investigators independently extracted and evaluated data from eligible studies. Associations between C4 CNV and SLE were estimated by odds ratios (OR) and 95% confidence intervals (95% CI). Further analysis was conducted using the STATA 12.0 software. A total of eight case-control studies were included in the analysis with 4107 SLE patients and 5889 healthy controls. Six studies used TaqMan real-time PCR to genotype C4 CNV, with 1 study used paralog ratio test and other one used multiplex ligation-dependent probe amplification (MLPA). Lower total C4 CNV and C4A CNV were associated with SLE in the overall analysis (pooled OR: 1.55, 95% CI: 1.23-1.95; pooled OR: 1.86, 95% CI: 1.51-2.29). The subgroup analysis found that total C4 CNV and lower C4A CNV were significantly associated with SLE in Caucasians (pooled OR: 1.84, 95% CI: 1.60-2.12; pooled OR: 2.23, 95% CI:1.92-2.59). However, the association was not detected in East Asians. Lastly, SLE was not associated with C4B CNV, long C4 CNV, or short C4 CNV. The meta-analysis confirmed that lower total C4 CNV and lower C4A CNV are associated with SLE in certain populations. Future studies should consider other ethnic groups to further investigate the relationship between the C4 gene and SLE.

PU-1519

早期胃癌筛查生物标志物特征性分析

陈佳琦
丽水市人民医院

目的 研究胃蛋白酶原 I (pepsinogen I，PGI)，胃蛋白酶原 II(pepsinogen II，PGII), PGI/II 比值，胃泌素 17（gastrin-17，G-17）和幽门螺旋杆菌抗体(helicobacter pylori antibody，HP)作为新型胃癌循环生物标志物，对于胃部疾病的评估及在早期胃癌筛查中的价值。

方法 选取 2017 年 6 月至 2019 年 6 月行胃镜检查的门诊及住院患者共 400 例，根据胃镜检查和病理结果分为 5 组，其中非萎缩性胃炎组 80 例，萎缩性胃炎/肠上皮化生组 80 例，上皮内瘤变（异型增生）组 80 例和胃癌组 80 例和同期健康体检组 80 例，及行胃癌根治术组。利用酶联免疫吸附

试验定量检测血清 PGⅠ、PGⅡ和 G-17 水平，并计算 PGI/II 比值,用斑点法检测 HP 现症感染蛋白。**结果** 各组间的 PGⅠ、PGⅡ、G-17、PGI/II 比值及 HP 感染率详见表 1。5 个生物标志物(尤其是 PGⅠ、PGI/II 比值和 G-17)与胃癌前病变及胃癌明显相关，对照组与实验各组间有显著性差异。PGⅡ在实验各组间差异不明显。实行胃癌根治术后 PGⅠ、PGI/II 比值和 G-17 与胃癌对照组有显著性差异。
结论 由五种新型胃癌循环生物标志物组成的血清学活检可以确定高危个体，为进一步胃镜检查，并对其病程诊断进行分层，从而指导靶向筛选和精确预防。

Coagulopathy and Antiphospholipid Antibodies in Patients with Covid-19

Shulan Zhang
Peking Union Medical College Hospital

BackgroundThe authors describe a 69-year-old man with Covid-
19 diagnosed in January 2020 in Wuhan, China, along with two other critically ill patients with Cov id-
19 who were also seen in the same intensive care unit. Coagulopathy and antiphospholipid antib odies were seen in all three patients.
Methods
This department is managed by a multidisciplinary team of Peking Union Medical College Hospita l from the Sino-French Xincheng Branch of Tongji Hospital in Wuhan, China. During the COVID-
19 outbreak, patients with severe disease were treated on the basis of emergency treatment.All p atients were diagnosed with SARS-CoV-
2 infection by either reverse transcription polymerase chain reaction (RT-
PCR) or serological testing.
Results Antiphospholipid antibodies abnormally target phospholipid proteins, and the presence of these antibodies is essential for the diagnosis of antiphospholipid syndrome.However, these anti bodies can also appear briefly in patients with critically ill diseases and a variety of infections.
Conclusions In critically ill patients, the presence of these antibodies may rarely lead to thrombot ic events that are difficult to distinguish from other causes of multifocal thrombosis, such as disse minated intravascular coagulation, heparin-
induced thrombocytopenia, and thrombotic microangiopathy.

PU-1521

IP-10 and MCP-1 as biomarkers associated with disease severity of COVID-19

Yu Chen
Peking Union Medical College Hospital

Background COVID-19 is a viral respiratory disease caused by the severe acute respiratory syndrome-Coronavirus type 2 (SARS-CoV-2). Patients with this disease may be more prone to venous or arterial thrombosis because of the activation of many factors involved in it, including inflammation, platelet activation and endothelial dysfunction. Interferon gamma inducible protein-10 (IP-10), monocyte chemoattractant protein-1 (MCP-1) and macrophage inflammatory protein 1-alpha (MIP1α) are cytokines related to thrombosis. Therefore, this study focused on these three

indicators in COVID-19, with the hope to find biomarkers that are associated with patients' outcome.
Methods This is a retrospective single-center study involving 74 severe and critically ill COVID-19 patients recruited from the ICU department of the Tongji Hospital in Wuhan, China. The patients were divided into two groups: severe patients and critically ill patients. The serum IP-10, MCP-1 and MIP1α level in both groups was detected using the enzyme-linked immunosorbent assay (ELISA) kit. The clinical symptoms, laboratory test results, and the outcome of COVID-19 patients were retrospectively analyzed.
Results The serum IP-10 and MCP-1 level in critically ill patients was significantly higher than that in severe patients ($P < 0.001$). However, no statistical difference in MIP1α between the two groups was found. The analysis of dynamic changes showed that these indicators remarkably increased in patients with poor prognosis. Since the selected patients were severe or critically ill, no significant difference was observed between survival and death.
Conclusions IP-10 and MCP-1 are biomarkers associated with the severity of COVID-19 disease and can be related to the risk of death in COVID-19 patients.

PU-1522

2538 例体检人群 PGⅠ、PGⅡ、G-17 的研究

傅锦芳
中南大学湘雅医院

目的 通过检测长沙市体检人群中血清胃蛋白酶原(PG)、胃泌素-17(G-17)水平及幽门螺杆菌抗体（HP）感染情况，以评估该地区人群中胃功能的整体水平，并为胃部疾病的研究提供流行病学资料。

方法 采用酶联免疫法测定血清中胃蛋白酶原Ⅰ、Ⅱ及胃泌素-17 的含量，按性别、年龄等方式进行分组分析；幽门螺杆菌抗体检测使用胶体金方法测定。

结果（1）2538 例体检者的总异常率为 42.9%，PGⅠ的异常率为 22.18%，PGⅡ异常率为 18.56%，G-17 的异常率为 20.06%，长沙地区的胃功能总异常率处于较高水平。（2）将 2538 例体检人群分为≤30 岁、30-60 岁、≥60 岁三组，30-60 岁组和≥60 岁组的 PGⅠ和 PGⅡ水平高于≤30 岁组；其值有随着年龄增加而升高的趋势。（3）男性组和女性组比较，PGⅠ和 PGⅡ水平无统计学意义，男性组 G-17 低于女性组。（4）将同时做了胃功能检测和 HP 抗体检测的 325 例进行分析，HP 阳性组 PGⅠ、PGⅡ和 PGR 的异常率均高于阴性组。

结论 长沙市 2538 例健康体检者总异常率为 42.9%，处于较高水平；随年龄增加 PGⅠ、PGⅡ、G-17 值升高；HP 抗体阳性的人群 PGⅠ、PGⅡ和 PGR 的异常率也比较高。

PU-1523

快速检测具核梭杆菌的荧光定量 PCR 方法的建立及临床应用

陈颖玮、赵冉、王雪亮、黄维纲
上海市临床检验中心

目的 建立一种快速检测具核梭杆菌的荧光定量 PCR 方法，并探讨其应用于结直肠癌筛查的可行性，为结直肠癌非入侵性的检测提供新的选择。

方法 以具核梭杆菌 nusG 基因作为目的基因，对其保守区域设计特异性的引物及探针，同时根据细菌 16S rDNA 序列保守区域设计简并引物作为内参。通过正交试验优化 PCR 反应体系中的引物探

针比，完善反应条件，建立具核梭杆菌快速定量检测方法，并对方法进行性能验证。收集 100 对结直肠癌患者的癌组织和癌旁组织的临床样本，应用建立的 PCR 方法检测具核梭杆菌在结肠癌组织和癌旁组织中的相对含量。
结果 该方法的最低检测限为 50copies/ml。具核梭杆菌在 5×101-5×108 copies/mL 浓度范围内扩增曲线呈线性，得到的扩增曲线线性方程斜率为−2.8312，R2 值为 0.9952。制备的不同浓度的定量参考样品，检测结果的批内变异系数为 0.57%～2.96%，批间变异系数为 0.82%～1.32%。100 对结直肠癌患者癌组织和癌旁组织样本的检测结果显示具有统计学差异，具核梭杆菌在结肠癌组织内的含量明显高于癌旁组织，配对 t test 的 p 值为 0.02（p<0.05）。
结论 本项研究建立的具核梭杆菌 DNA 定量检测方法具有较高灵敏度及特异性。该方法可以有效的检测临床样本中的具核梭杆菌，具有潜在的结直肠癌筛查的临床应用价值。

PU-1524

三种常用方法检测梅毒螺旋体抗体不确定样本的性能评价

刘蓉、滕文友
郴州市第一人民医院

目的 评价 TRFIA、ELISA 和胶体金法检测梅毒螺旋体抗体不确定样本性能。
方法 以 TP-TRFIA 筛选 1.0≤S/CO 值≤9.9 范围内的梅毒螺旋体抗体不确定标本，同时用 TPPA、TP-ELISA 和胶体金法检测，以 TPPA 为确认方法，比较 TP-TRFIA、TP-ELISA 和胶体金法的灵敏度、特异性、符合率、约登指数、似然比和 ROC 曲线下面积。
结果 与 TPPA 比较，TP-TRFIA、TP-ELISA 和胶体金法的灵敏度分别为 100%、88.57%和 51.43%，特异性分别为 0、96.26%和 85.05%，符合率分别为 24.65%、94.37%和 76.76%，约登指数分别为 0、0.85 和 0.36，阳性似然比分别为 1.00、23.69 和 3.44，阴性似然比分别为 0、0.12 和 0.57，ROC 曲线下面积分别为 0.50、0.92 和 0.68。
结论 TRFIA 灵敏度高，可用于梅毒血清学筛查，ELISA 的灵敏度、特异性和符合率均高，可用于梅毒血清学筛查和诊断，胶体金法的灵敏度低，不宜用于梅毒血清学筛查。检测灰区的梅毒抗体不确定标本需用 TPPA 复查，以减少误诊。

PU-1525

14574 例四川省呼吸道感染病原体 IgM 抗体结果分析

马丽萍、孙思琪
四川金域医学检验中心有限公司

目的 统计四川省 14574 例呼吸道感染的九种常见病原体 IgM 抗体的检出阳性率，分析检出阳性率与年龄、季节之间的关系，为临床的诊断与治疗提供相关的参考性依据。
方法 统计 2020 年共 14574 例患者检测数据，使用 VIRCELL,S.L.的九项呼吸道感染病原体 IgM 抗体检测试剂盒（间接免疫荧光法）检测 Leg-IgM、MP-IgM、CB-IgM、RSV-IgM、ADV-IgM、CP-IgM、IAV-IgM、IBV-IgM、PIVs-IgM。分析不同病原体在不同年龄患者及季节的流行趋势。
结果 九项病原体以 MP-IgM 感染构成比最高，为 3263 例(22.39%)；第二是 PIVs-IgM，为 412 例（2.83%）；第三是 IBV-IgM，为 317 例（2.18%）。从季节来看，春季以 MP-IgM 感染构成比最高，为 494 例(16.27%)；夏季以 MP-IgM 感染构成比最高，为 667 例(25.93%)；秋季以 MP-IgM 感染构成比最高，为 1289 例(27.17%)；冬季以 MP-IgM 感染构成比最高，为 813 例(19.26%)。从年龄来看，≤17 岁组有 2813 例病原体阳性（2813 /68130，4.13%），以 MP-IgM 感染构成比最高，为 2272 例(3.33%)；18~65 岁组有 858 例病原体阳性（858/29619，2.90%），以 MP-IgM 感染构成比最高，为 591 例(2.00%)；66~79 岁组有 395 例病原体阳性（395/20025，1.97%），以 MP-

IgM 感染构成比最高，为 277 例(1.38%)；≥80 岁组有 171 例病原体阳性（171/9639，1.77%），以 MP-IgM 感染构成比最高，为 110 例(1.14%)。

结论 MP-IgM 是四川省各季节呼吸道感染者中检出的主要病原体,其中在秋季 MP-IgM 检出率最高。在四川各年龄段呼吸道感染者中≤17 岁年龄组的 MP-IgM 检出率最高。

PU-1526

HBeAg 阴性慢性乙肝患者转氨酶水平与肝脏功能相关性分析

周觅
山东大学第二医院

目的 分析不同 Child-Pugh 分级 HBeAg 阴性慢性乙肝患者两种转氨酶水平以及 HBV-DNA 的差异,探讨肝脏储备功能与乙肝病毒活动力的相关性。

方法 收集慢性乙肝患者 258 例,按照 Child-Pugh 分级分组,比较各组中谷草转氨酶和谷丙转氨酶水平以及病毒复制能力反应指标 HBV 免疫标志物和 HBV-DNA 的差异,分析病毒复制能力与肝脏储备功能的相关性。

结果 HBeAg 阴性慢性乙肝患者按照 Child-Pugh 分级发现,不同分级的患者 HBV-DNA 表达水平差异有统计学意义(P<0．05),相关性调查发现病毒复制水平与 Child-Pugh 分级呈现明显负相关(r=-0．49,P=0．00)。转氨酶水平与分级水平和 HBV-DNA 并没有统计意义的相关性（R=0.642）,HBeAg 阴性慢性乙肝不同 Child-Pugh 分级的患者免疫血清标志物表现明显不同,差异有统计学意义(P<0．05)；进一步对不同标志物分析发现, HbsAg 和 anti-HBs 表达与 Child-Pugh 分级评分存在相关性。

结论 HBeAg 阴性慢性乙肝患者病毒活动力与患者肝脏储备功能存在相关性,这种相关性的发现有利于乙肝患者病程发展中的药物有效性以及机体耐受力的全面评估,以便乙肝患者的抗病毒治疗正确方案的确定提供可靠的实验室检测数据。

PU-1527

500 例儿童食入物过敏原 IgG 检测结果分析

孙肖涵
山东第一医科大学第一附属医院（山东省千佛山医院）

目的 通过分析特异性过敏 IgG 的检测结果，对儿童食入物过敏性疾病预防和治疗提供理论支持。

方法 采用酶联免疫吸附法对我科 2021 年 1 月～2021 年 6 月 500 例儿童保健门诊、儿科门诊和住院患儿食入物过敏原特异性 IgG，进行统计分析。

结果 在 500 例患儿中检出总阳性率 78.55%.蛋清/蛋黄阳性率最高 12.85%，牛奶次之 9.33%，一份血清标本可出现多种食入物过敏原存在。

结论 食物过敏原中蛋清/蛋黄和牛奶是最主要食入性过敏原，采取有效的预防措施，可以有效降低食入物导致过敏疾病的发生。

PU-1528

1846 例体检者幽门螺杆菌抗体检测结果分析

张法
山东第一医科大学第一附属医院（山东省千佛山医院）

目的 了解济南地区健康体检人群胃幽门螺杆菌（Hp）在不同性别、年龄的感染状况。
方法 选取 2018 年 1 月~2019 年 12 月在我院进行 Hp 检测的 1846 例体检者为研究对象，以性别和年龄进行分组，应用幽门螺杆菌尿素酶抗体检测试剂盒（胶体金法）快速检测体检人群中 Hp 感染情况，并对检测结果进行统计学分析。
结果 1846 例体检者 Hp 总感染率为 48.21%（890/1846），其中男性为 47.49%（718/1512），女性为 51.50%(172/334),女性高于男性但(P>0.05)没有统计学意义;将体检者按年龄分为青年组（18~39）、中年组（40~59）、老年组（60~83），其 Hp 感染率分别为 36.98%（321/868）、42.93%（322/750）、54.82%（125/228）,不同年龄组在 Hp 感染率差异上具有统计学意义（P<0.05）。
结论 健康体检人群中 Hp 阳性率较高，与性别无关，与年龄成正相关。应加强中老年 Hp 诊疗管理，普及 Hp 感染预防知识，从而更有效地预防 Hp 感染疾病的发生。

PU-1529

过敏性鼻炎患者血清 IgE 及 sIgE 结果分析

刘晓丹
中国医科大学附属盛京医院

目的 研究沈阳地区过敏性鼻炎患者血清总免疫球蛋白 E(IgE) 及特异性 IgE (sIgE) 水平检测结果，总结该地区主要过敏原种类，及主要的过敏原随季节的变化情况，为沈阳地区过敏性鼻炎患者的预防、诊断及治疗提供依据。
方法 选取 2019 年 1 月至 2020 年 12 月于中国医科大学附属盛京医院耳鼻咽喉科就诊的过敏性鼻炎患者病例 372 例，采用瑞典 Phadia AB 公司生产的 Phadia 250 全自动体外荧光免疫分析系统，检测过敏性鼻炎患者血清中总 IgE 和过敏原特异性 IgE 水平。
结果 372 例过敏性鼻炎患者中男性 241 例(64.78%) 、女性 131 例(35.22%)，患者年龄高峰为 1-10 岁，波动在 1～ 55 岁之间，其中总 IgE 阳性患者 315 例(85.13%) ，常见吸入性过敏原中，杂草花粉、尘螨、毛屑混合和树木组合为主要的吸入性过敏原。食入性过敏原中，海鲜组合、牛奶蛋白组合及花生芝麻组合为主要食入性过敏原.沈阳地区过敏性鼻炎患者发病高峰期为 7-10 月。在主要的吸入性过敏原中，常年性变应原(尘螨和毛屑混合) 血清特异性 IgE 水平均值随月份变化情况较为相似，季节性变应原(杂草花粉和树木组合) 血清特异性 IgE 水平平均值随月份变化情况与各自的开花季节相同。
结论 沈阳地区过敏性鼻炎患者以幼儿为主。杂草花粉、尘螨、毛屑混合和树木组合为主要的吸入性过敏原，牛奶蛋白组合和花生芝麻组合为主要食入性变应原。在沈阳的每年的 7-10 月，艾蒿及一些常见植物和树木组合的开花季节过敏性鼻炎的发病率最高，过敏性鼻炎患者要注意提前防护自身。

PU-1530

血清核心岩藻糖基化 IgG 与系统性红斑狼疮疾病的关系的研究

李志
大连市中心医院

目的 探讨血清核心岩藻糖基化修饰 IgG 对系统性红斑狼疮疾病（SLE）的诊断价值及其临床意义。
方法 收集 2017 年 3 月到 2019 年 6 月大连市中心医院的 30 例确诊为 SLE 患者的血清样品，采用凝集素印迹方法（Lectin Blot）检测患者血清蛋白核心岩藻糖基化水平；利用高效液相色谱对患者以及野生型小鼠（Fut8+/+）和基因敲除小鼠（Fut8-/-）CD4+T 中核心岩藻糖基转移酶（Fut8）酶活性进行检测；ELISPOT 实验检测 Fut8+/+和 Fut8-/-脾细胞产生抗体的能力。
结果 与正常人相比，SLE 患者血清蛋白核心岩藻糖基化水平显著升高，差异有统计学意义（$p<0.001$）；SLE 患者 CD4+T 细胞中 Fut8 酶的活性显著增强（$p<0.05$）；Fut8-/-小鼠淋巴细胞抗体的含量及产生能力显著下降（$p<0.05$）。
结论 SLE 患者血清蛋白表现出高水平核心岩藻糖基化，提示 Fut8 活性与抗体的活性有关，糖基化在 SLE 的发生发展中起着重要的作用，为 SLE 诊断和治疗提供了新视角。

PU-1531

流式细胞术法检测中性粒细胞 CD64 指数的性能评价及其影响因素探讨

李文敏[1]、周茂华[1]、慕静静[2]、魏晓宁[2]
1. 广东省人民医院
2. 碧迪医疗器械（上海）有限公司

目的 基于 ISO 15189：2012 要求，对中性粒细胞 CD64 指数的性能参数进行评价并探究其影响因素。
方法 应用 BD FACSCanto 流式细胞仪检测来自广东省人民医院住院及体检人群外周血进行外周血中性粒细胞 CD64 指数检测，探究样本血保存时间、样本制备后放置时间、上机检测速度、细胞获取总数等因素对检测结果的影响，并依据《医学实验室质量和能力认可准则》相关文件对该项目的重复性、日间精密度和日内精密度进行评价，建立本实验室正常人群参考范围。
结果 样本血保存时间、样本制备后放置时间、上机检测速度、细胞获取总数等因素对检测结果的影响差异无统计意义（$p>0.05$）。感染组和体检组样本制备重复性分别为 1.84%和 2.95%，样本血重复制备日间精密度实验显示外周血采集 16h 检测结果 CV%＜15%。制备后检测管日内精密度实验显示制备后 6h 内检测结果 CV%＜15%。本实验室检测条件下正常人参考范围为 0-2.02。
结论 中性粒细胞 CD64 指数项目性能能满足临床检测需求，但样本血需在采集后 16h 内进行制备，制备后检测管需在 6h 内进行检测。

PU-1532

Prealbumin as a predictor of prognosis in patients with coronavirus disease 2019

Ying Luo、Feng Wang、Ziyong Sun
Department of Laboratory Medicine, Tongji Hospital, Tongji Medical College, Huazhong University of Science and Technology, Wuhan, China

Background The predictive value of prealbumin for the prognosis of coronavirus disease 2019 (COVID-19) was rarely investigated.
Methods A total of 1,115 patients with laboratory-confirmed COVID-19 were enrolled at Tongji hospital from February to April 2020, and classified into fatal (n=129) and recovered (n=986) group according to the patient's outcome. Prealbumin and other routine laboratory indicators were measured simultaneously.
Results The level of prealbumin on admission was significantly lower in fatal patients than in recovered patients. For predicting the prognosis of COVID-19, the performance of prealbumin was better than most routine laboratory indicators, such as albumin, lymphocyte count, neutrophil count, hypersensitive C-reactive protein, d-dimer, lactate dehydrogenase, creatinine and hypersensitive cardiac troponin I. When the threshold of 126 mg/L was used, the sensitivity and specificity of prealbumin were respectively 78.29% and 90.06% in discriminating between fatal and recovered patients. Furthermore, a model based on the combination of nine indexes showed an improved performance in predicting the death of patients with COVID-19. Using the cut-off value of 0.19, the prediction model was able to distinguish between fatal and recovered individuals with a sensitivity of 86.82% and a specificity of 90.37%.
Conclusions A lower level of prealbumin on admission may indicate a worse outcome of COVID-19. Immune and nutritional status may be vital factors for predicting disease progression in the early stage of COVID-19.

PU-1533

Activation phenotype of Mycobacterium tuberculosis-specific CD4+ T cells promoting the discrimination between active tuberculosis and latent tuberculosis infection

Ying Luo、Feng Wang、Ziyong Sun
Department of Laboratory Medicine, Tongji Hospital, Tongji Medical College, Huazhong University of Science and Technology, Wuhan, China

Background Rapid and effective discrimination between active tuberculosis (ATB) and latent tuberculosis infection (LTBI) remains a challenge. There is an urgent need for developing practical and affordable approaches targeting this issue.
Methods Participants with ATB and LTBI was recruited at Tongji Hospital (Qiaokou cohort) and Sino-French New City Hospital (Caidian cohort) based on positive T-SPOT results from June 2020 to January 2021. The expression of activation markers including HLA-DR, CD38, CD69, and CD25 were examined on Mycobacterium tuberculosis (MTB)-specific CD4+ T cells defined by IFN-γ, TNF-α, and IL-2 expression upon MTB antigen stimulation.
Results A total of 90 (40 ATB and 50 LTBI) and another 64 (29 ATB and 35 LTBI) subjects were recruited from Qiaokou cohort and Caidian cohort, respectively. The expression pattern of Th1 cytokines including IFN-γ, TNF-α, and IL-2 upon MTB antigen stimulation could not differentiate ATB patients from LTBI individuals well. However, both HLA-DR and CD38 on MTB-specific cells showed discriminatory value in distinguishing between ATB patients and LTBI individuals. As for

developing a single candidate indicator, HLA-DR had the advantage over CD38. Moreover, HLA-DR on TNF-α+ or IL-2+ cells had superiority over that on IFN-γ+ cells in differentiating ATB patients from LTBI individuals. Besides, HLA-DR on MTB-specific cells defined by multiple cytokine co-expression had a higher ability to discriminate patients with ATB from LTBI individuals than that on MTB-specific cells defined by one kind of cytokine expression. Specially, HLA-DR on TNF-α+IL-2+ cells produced an AUC of 0.901 (95% CI, 0.833-0.969), with a sensitivity of 93.75% (95% CI, 79.85%-98.27%) and specificity of 72.97% (95% CI, 57.02%-84.60%) as a threshold of 44% was used. Furthermore, the performance of HLA-DR on TNF-α+IL-2+ cells for differential diagnosis was obtained with validation cohort data: 90.91% (95% CI, 72.19%-97.47%) sensitivity and 68.97% (95% CI, 50.77%-82.73%) specificity.
Conclusions We demonstrated that HLA-DR on MTB-specific cells was a potentially useful biomarker for accurate discrimination between ATB and LTBI.

PU-1534

Lymphocyte-related immunological indicators for stratifying Mycobacterium tuberculosis infection

Ying Luo、Feng Wang、Ziyong Sun
Department of Laboratory Medicine, Tongji Hospital, Tongji Medical College, Huazhong University of Science and Technology, Wuhan, China

Background Easily accessible tools that reliably stratify Mycobacterium tuberculosis (MTB) infection are needed to facilitate the improvement of clinical management. The current study attempts to reveal lymphocyte-related immune characteristics of active tuberculosis (ATB) patients and establish immunodiagnostic model for discriminating ATB from latent tuberculosis infection (LTBI) and healthy controls (HC).
Methods A total of 180 subjects consists of 60 ATB, 60 LTBI, and 60 HC were consecutively recruited at Tongji hospital from January 2019 to January 2021. All participants were tested for lymphocyte subsets, phenotype, and function. Other examination including T-SPOT and microbiological detection for MTB were performed simultaneously.
Results Compared with LTBI and HC, ATB patients exhibited significantly lower number and function of lymphocytes including CD4+ T cells, CD8+ T cells and NK cells, and significantly higher T cell activation represented by HLA-DR and proportion of immunosuppressive cells represented by Treg. An immunodiagnostic model based on the combination of NK cell number, HLA-DR+CD3+ T cells, Treg, CD4+ T cell function, and NK cell function was built using logistic regression. Based on receiver operating characteristic curve analysis, the area under the curve (AUC) of the diagnostic model was 0.918 (95% CI, 0.866-0.970) in distinguishing ATB from LTBI, while the cut-off value of 0.674 produced a sensitivity of 80.00% (95% CI, 68.22%-88.17%) and specificity of 91.67% (95% CI, 81.93%-96.39%). Meanwhile, AUC analysis between ATB and HC according to the diagnostic model was 0.918 (95% CI, 0.865-0.971), with a sensitivity of 80.00% (95% CI, 68.22%-88.17%) and a specificity of 90.00% (95% CI, 79.85%-95.34%).
Conclusions Our study demonstrated that the immunodiagnostic model established by the combination of lymphocyte-related indicators could facilitate the status differentiation of MTB infection.

PU-1535

Lymphocyte non-specific function detection facilitating the stratification of Mycobacterium tuberculosis infection

Ying Luo、Feng Wang、Ziyong Sun
Department of Laboratory Medicine, Tongji Hospital, Tongji Medical College, Huazhong University of Science and Technology, Wuhan, China

Background Inadequate tuberculosis (TB) diagnostics, especially for discrimination between active TB (ATB) and latent TB infection (LTBI), are major hurdle in the reduction of the disease burden. The present study aims to investigate the role of lymphocyte non-specific function detection for TB diagnosis in clinical practice.
Methods A total of 208 participants including 49 ATB patients, 64 LTBI individuals, and 95 healthy controls were recruited at Tongji hospital from January 2019 to October 2020.All subjects were tested with lymphocyte non-specific function detection and T-SPOT assay.
Results Significantly positive correlation existed between lymphocyte non-specific function and phytohemagglutinin (PHA) spot number. CD4+ T cell non-specific function showed the potential for differentiating patients with negative T-SPOT results from those with positive T-SPOT results with an area under the curve (AUC) of 0.732 (95% CI, 0.572-0.893). The non-specific function of CD4+ T cells, CD8+ T cells, and NK cells was found significantly lower in ATB patients than in LTBI individuals. The AUCs presented by CD4+ T cell non-specific function, CD8+ T cell non-specific function, and NK cell non-specific function for discriminating ATB patients from LTBI individuals were 0.845 (95% CI, 0.767-0.925), 0.770 (95% CI, 0.683-0.857), and 0.691 (95% CI, 0.593-0.789), respectively. Application of multivariable logistic regression resulted in the combination of CD4+ T cell non-specific function, NK cell non-specific function, and culture filtrate protein-10 (CFP-10) spot number as the optimally diagnostic model for differentiating ATB from LTBI. The AUC of the model in distinguishing between ATB and LTBI was 0.939 (95% CI, 0.898-0.981). The sensitivity and specificity were 83.67% (95% CI, 70.96%-91.49%) and 90.63% (95% CI, 81.02%-95.63%) with the threshold as 0.57. Our established model showed superior performance to TB-specific antigen (TBAg)/PHA ratio in stratifying TB infection status.
Conclusions Lymphocyte non-specific function detection offers an attractive alternative to facilitate TB diagnosis. The three-index diagnostic model was proved to be a potent tool for the identification of different events involved in TB infection, which is helpful for the treatment and management of patients.

PU-1536

Combination of prealbumin and tuberculosis-specific antigen/phytohemagglutinin ratio for discriminating active tuberculosis from latent tuberculosis infection

Ying Luo、Feng Wang、Ziyong Sun
Department of Laboratory Medicine, Tongji hospital, Tongji Medical College, Huazhong University of Science and Technology, Wuhan, China

Background Given that there is no rapid and effective method for distinguishing active tuberculosis (ATB) from latent tuberculosis infection (LTBI), the discrimination between these two statuses remains challenging. This study sought to investigate the value of nutritional indexes and tuberculosis-specific antigen/phytohemagglutinin ratio (TBAg/PHA ratio) for distinguishing ATB from LTBI.
Methods Participants were consecutively recruited based on positive T-SPOT.TB results between January 2018 and January 2020. ATB was diagnosed by positive mycobacterial culture and/or positive GeneXpert MTB/RIF, with clinical symptoms and radiological characteristics

suggestive of ATB. Individuals with positive T-SPOT.TB but without the evidence of ATB were defined as LTBI. Patients younger than 17 years and undergoing anti-TB treatment were excluded.
Results A total of 709 (312 ATB and 397 LTBI) and another 309 (120 ATB and 189 LTBI) subjects were respectively recruited from Tongji Hospital (Qiaokou cohort) and Sino-French New City Hospital (Caidian cohort). The level of prealbumin was significantly lower in ATB than in LTBI. With a cut-off value of 139 mg/L, the sensitivity and specificity of prealbumin in distinguishing ATB from LTBI were 50.96% (45.41%-56.51%) and 91.69% (88.97%-94.40%). Meanwhile, TBAg/PHA ratio was found statistically higher in ATB compared with LTBI. If using the threshold of 0.29, the sensitivity and specificity of TBAg/PHA ratio were 65.71% (60.44%-70.97%) and 90.93% (88.11%-93.76%), respectively. Moreover, the combination of prealbumin and TBAg/PHA ratio (obtaining by diagnostic model) yielded better specificity (90.18%,[87.25%-93.10%]) and sensitivity (87.18%,[83.47%-90.89%]), while the clinical utility index (CUI) positive and CUI negative were respectively 0.76 and 0.81. After anti-TB treatment, TBAg/PHA ratio was declined while the level of prealbumin was restored (Wilcoxon test,P<0.001). Furthermore, the performance of diagnostic model obtained in Qiaokou cohort was confirmed in Caidian cohort.
Conclusions The diagnostic model based on combination of prealbumin and TBAg/PHA ratio is a rapid and accurate tool for discriminating ATB from LTBI.

PU-1537

铜绿假单胞菌感染肺部疾病的细胞免疫表现

罗燕飞、蓝名伟
广东省人民医院

目的 了解慢性阻塞性肺气肿、慢性支气管炎合并铜绿假单胞菌感染患者的免疫细胞 T、B、NK 水平变化。
方法 通过比较健康人群（对照组），慢阻肺、慢支患者未合并铜绿假单胞菌（No-PA）感染组；慢阻肺、慢支患者合并铜绿假单胞菌（PA）感染组患者外周血免疫细胞。
结果 1.（1）慢阻肺合并 PA 感染患者与正常健康人比较，CD3+增多、CD3+CD4+/CD3+CD8+比值明显降低，B 细胞、NK 细胞减少，分别 P<0.05，差异具有统计学意义（P<0.05）；（2）慢阻肺未合并 PA 感染患者与正常健康人比较，CD3+减少、CD3+CD4+/CD3+CD8+比值明显降低，NK 细胞增多，分别 P<0.05，差异具有统计学意义（P<0.05），B 细胞是没有大太变化（P>0.05）；（3）慢阻肺合并 PA 感染与慢阻肺未合并 PA 感染患者比较，CD3+相对增多、CD3+CD4+/CD3+CD8+比值明显降低 P<0.05，差异具有统计学意义； NK 细胞相对减少，差异具有统计学意义（P<0.05），B 细胞是没有大太变化。2.（1）慢支合并 PA 感染与正常健康人比较，CD3 相对增多，CD3+CD4+/CD3+CD8+比值是明显下降；CD3-CD16+CD56+水平明显降低，差异具有统计学意义（P<0.05）。B 细胞无显著差异（P>0.05）；（2）慢支未合并 PA 感染与正常健康人比较， CD3、B 细胞水平相对减少，CD3+CD4+/CD3+CD8+比值是明显下降；NK 细胞是相对增多，分别 P<0.05，差异具有统计学意义（P<0.05）。（3）慢支合并 PA 感染与未合并 PA 感染患者比较，CD3、B 细胞水相对增多，NK 细胞相对减少，分别 P<0.05，有显著差异（P>0.05）。
结论 慢阻肺、慢支的患者，感染铜绿假单胞菌时进一步打击了体内细胞免疫系统，引起细胞免疫紊乱及免疫功能障碍。

PU-1538

IL-10 与慢乙肝不同血清学标志物模式的相关性研究

延娅娅
西安医学院第一附属医院

目的 探讨 IL-10 与慢性乙肝病毒感染者不同血清学模式的相关性，为慢性乙肝治疗提供指导和实验依据。
方法 随机选取男性乙肝五项检查病例 83 例，其中血清学模式为 135 阳性模式组 20 例，145 阳性模式 21 例，245 阳性模式 22 例，25 阳性模式 20 例。同时，随机选取年健康体检者 24 例作为正常对照组。
结果 慢乙肝不同血清学标志物模式间 IL-10 水平有差异，具有统计学意义（P<0.05）。
结论 血清 IL-10 水平升高，有利于慢性乙肝患者血清学模式由 135、145 阳性模式向 245、25 阳性模式转换。

PU-1539

血清中 PLA2R 抗体、IgG 和 C3 在特发性膜性肾病诊断中的应用价值研究

陈柳勤
广东省人民医院

目的 探讨血清学指标抗磷脂酶 A2 受体抗体（PLA2R 抗体）、IgG 和补体 C3 在特发性膜性肾病中的诊断价值。
方法 回顾性分析广东省人民医院 2019 年 8 月~2021 年 1 月 77 例特发性膜性肾病作为特发性膜性肾病（IMN）组，145 例其他肾病：包含 7 例继发性膜性肾病、59 例糖尿病肾病、60 例 IgA 肾病、10 例狼疮性肾炎、4 例胡桃夹综合征、2 例高血压肾病、2 例尿酸性肾病和 1 例薄基底膜肾病作为其他肾病组，49 例非肾病患者作为对照组，膜性肾病的患者均经临床检查与肾活检病理结果确诊。
结果 IMN 患者血清 PLA2R 抗体阳性率显著高于其他肾病组和对照组（P<0.05）；IMN 组血清 IgG 水平明显低于其他肾病组和对照组（P<0.05）；血清 C3 水平 IMN 组略高于其他肾病组，差异有统计学意义（P<0.05）。IMN 组与其他肾病组中的 IgA 组、糖尿病肾病组比较：PLA2R 抗体、IgG 差异均具有统计学意义（P<0.05），IMN 组与糖尿病肾病组的血清 C3 水平相比差异均具有统计学意义（P<0.05）。IMN 组不同病理分期的实验室指标进行比较：“I+II 期 IMN 组”和“III+IV 期 IMN 组”在血清 PLA2R 抗体、IgG 和 C3 水平上差异均无统计学意义（P>0.05）。
结论 血清 PLA2R 抗体在特发性膜性肾病中的阳性率显著高于其他肾病组和对照组，是一个良好的辅助诊断性指标；血清 IgG、C3 检测有助于临床特发性膜性肾病的判别。

PU-1540

乙肝病毒感染与抗平滑肌抗体相关性分析

马跃飞、贺勤、刘灿、林锦骠、刘晓峰、王炳龙、杨滨、欧启水
福建医科大学附属第一医院

目的 探讨 HBV 感染者病毒活动情况、疾病进程与血清抗平滑肌抗体(ASMA) 产生的相关性。
方法 回顾性分析我院 2014 年 6 月至 2018 年 6 月间慢性乙型病毒性肝炎（CHB）患者的肝病自身抗体检测结果。筛选 51 例合并 ASMA 阳性患者的临床资料和实验室数据进行分析，以自身抗体检

测阴性的 50 例 CHB 患者作为比较。分析两组的临床表现、肝功能、乙肝病毒活动情况和疾病进程的差异。
结果 抗核抗体（ANA）、ASMA、抗线粒体抗体（AMA）和抗肝肾微粒体抗体（LKM-1）在 CHB 受检者中阳性率分别为 13.46%、5.01%、0.60%和 0.07%。ASMA 阳性组和自身抗体阴性组患者的年龄、性别构成、HBsAg 感染年限、HBsAg、HBeAg 和 HBV-DNA 对数值，以及 CHB 的疾病进程的差异无统计学意义。ASMA 阳性组的首发症状多见黄疸，部分合并肝外自身免疫性疾病表现（P<0.05）。ASMA 阳性组 TBIL、ALP、TBA、PT 高于自身抗体阴性组，ALB 低于自身抗体阴性组，差异均有统计学意义（P<0.05）。ASMA 阳性组中肝炎、肝硬化和肝癌患者的 ASMA 滴度差异无统计学意义。
结论 ASMA 与乙肝病毒复制活动性和疾病病程无相关性。

PU-1541

低体重、极低体重早产儿甲甲状腺功能减退的诊断标准探讨 及临床价值分析

叶庭菠、梁河涛
成都市第三人民医院

目的 探讨低体重、极低体重早产儿甲状腺功能低下的筛查切值，及早产儿出生时的胎龄、体重、性别等对甲状腺功能的影响。
方法 收集 2017 年 12 月-2020 年 4 月在我院新生儿科住院的低体重、极低体重早产儿的临床资料，在其出生后 2-4 周采集患儿血清使用雅培 Abbott i2000 化学发光分析仪检测血清中 TT3、TT4、TSH、FT3、FT4 激素水平，分析判断患儿甲状腺激素缺乏状况；同时按出生胎龄＜32 周、或≥32 周、及出生时体重≤1.5KG（极低体重）、或≥1.5KG 而≤2.5KG（低体重）以及性别分组，探讨出生时胎龄、体重、性别因素所致的早产儿甲状腺功能低下的患病率状况。
结果 215 例早产的低体重、极低体重患儿在本院的诊断标准中提高了接受甲状腺素替代治疗比例。在不同胎龄、体重和性别分组中，胎龄<32 周的早产儿甲状腺功能减退患病率明显高于胎龄≥32 周的早产儿（P<0.05），极低体重早产儿的甲状腺功能减退患病率明显高于低体重早产儿（P<0.05），而低体重、极低体重患儿中男婴和女婴甲状腺功能减退患病率无统计学差异。
结论 对早产儿应做甲状腺激素的普查，特别对低胎龄、极低体重早产儿的甲状腺激素更应进行重点筛查，尽早及时的干预治疗不仅可促进早产儿各器官的成熟和发育又可预防或减少呆小症及脑瘫的发病率。

PU-1542

抗磷脂酶 A2 受体抗体在膜性肾病诊断中的价值

黎村艳[1]、王人柯[2]
1. 湖南省人民医院
2. 湖南师范大学医学院

目的 探讨抗磷脂酶 A2 受体抗体（PLA2R 抗体）在膜性肾病诊断中的价值。
方法 选取湖南省人民医院 2020 年 1 月至 2020 年 12 月份膜性肾病患者 50 人（其中特发性膜性肾病 40 人，继发性膜性肾病 10 人）、其他肾病患者 20 人以及健康体检患者 20 人。分为特发性膜性肾病组（A 组）、继发性膜性肾病组（B 组）、其他肾病患者组（C 组）以及健康组（D 组）。比较各组 PLA2R 抗体表达水平以及白蛋白（ALB）、肌酐（Cr）、24h 尿蛋白定量（24h UP）水平。以及选取 A 组中的病例分析其病情不同阶段时 PLA2R 抗体表达水平及肾功能指标（CREA、ALB、24h UP）变化。

结果 A 组 PLA2R 抗体水平高于 B、C、D 组，差异具有统计学意义（P<0.05）。膜性肾病 PLA2R 抗体检测阳性率为 58.3%，特发性膜性肾病 PLA2R 抗体检测阳性率为 82.5%；A、B 组抗 PLA2R 抗体水平高于 C、D 两组，差异具有统计学意义（P<0.05）。A 组抗 PLA2R 抗体水平高于 B 组，差异具有统计学意义（P<0.05）。A 组 Cr、ALB、24h UP 水平与 B、C 组比较，差异无统计学意义（P>0.05）;D 组健康体检者 CREA、ALB 与 A、B、C 3 组比较，ALB 高于其他 3 组，CREA 低于其他 3 组，差异具有统计学意义（P<0.05）。二十四小时尿蛋白、 PLA2R 两项联合检测 ROC 曲线下面积为 0.930 大于 PLA2R 单独检测 ROC 曲线下面积 0.882。从 IMN 患者中收集到 8 例使用免疫抑制剂治疗前后 2-3 个月内病情缓解的患者，治疗前抗 PLA2R 抗体水平为 267.68（190.22，450.87），治疗后抗 PLA2R 抗体水平为 128.61（35.66,351.09），与治疗前相比有明显降低（Z=-2.197,P<0.05）。

结论 抗 PLA2R 抗体在特发性膜性肾病诊断中是一项具有较高诊断效能、可用于联合诊断的指标。

PU-1543

乙肝病毒 P 区耐药突变与患者 T 淋巴细胞表达的相关性研究

杨莉、侯军良
河北省石家庄市第五医院

目的 探讨慢性乙型肝炎患者出现 P 区耐药突变前后不同治疗方案、不同病情及不同突变位点个数 CD3+、CD4+、CD8+ T 淋巴细胞的表达量，为减缓或阻止耐药性出现寻找新的治疗靶点。

方法 选择 2015 年 10 月-2019 年 3 月就诊于石家庄市第五医院的 67 例慢性乙肝患者；在发生耐药突变前后采用流式细胞术检测患者外周血中 CD3+、CD4+、CD8+的表达量，并采用荧光定量 PCR 技术及基因测序法检测所感染的病毒分型、病毒载量及病毒基因 P 区耐药基因位点的变化。

结果 单位点与多位点突变 CD3+/CD4+/CD8+ T 淋巴细胞表达量均明显低于正常水平（P＜0.05），且多位点组有降低趋势，HBV DNA 载量有升高趋势；乙肝患者耐药突变后 CD3+、CD4+ 表达量与突变前相比均明显降低（P＜0.05），CD8+表达量无显著性差异；不同治疗方案的乙肝患者耐药突变后 CD3+、CD4+ 表达量与突变前相比降低(P＜0.05) ，CD8+表达量无显著性差异（P＞0.05）；不同病情 CD3+、CD4+ 表达量随病情加重不断降低（P＜0.05），CD8+表达量无显著性差异（P＞0.05）。

结论 突变位点增多，病毒复制变活跃，患者机体免疫功能受损加重；不同治疗方案下，CHB 患者发生耐药突变后 CD3+、CD4+ T 淋巴细胞功能均受损严重，且随病情加重，CD3+、CD4+ T 淋巴细胞的免疫功能受损加重，临床抗病毒治疗时应重点监测。

PU-1544

石家庄市 2018-2020 年 HIV 抗体筛查及确证结果分析

杨莉、刘腾飞
河北省石家庄市第五医院

目的 比较石家庄地区不同艾滋病病毒（HIV）初筛试剂的筛查阳性结果与确证试验结果的符合率；计算不同 HIV 初筛试剂的特殊阈值；对石家庄地区的 HIV 确证阳性患者进行流行病学调查。

方法 对 1596 例 HIV 初筛阳性样本的初筛检测结果与确证试验结果进行比对分析；制作不同厂家 HIV 初筛试剂的受试者工作特征曲线（ROC），根据曲线得出该试剂的特殊阈值；分析 582 例石家庄地区 HIV 确证阳性病例的基本资料。使用 SPSS 22.0 软件进行 c2 检验和 ROC 曲线的制作与特定阈值的计算。

结果 三种 HIV 初筛方法的确证阳性率有显著性差异，化学发光最低，快速检测最高。ROC 曲线显示罗氏诊断与迈瑞医疗有较好的判断准确度。石家庄地区 2018-2020 年的确证 HIV 阳性病例中，男女比例为 5.9：1；年龄以 20～59 岁（81.62%）为主；人群多分布于石家庄市区。
结论 石家庄地区的 HIV 初筛检测以化学发光法为主，使用化学发光法的罗氏诊断与迈瑞医疗这两种试剂的特定阈值能较好地鉴别出 HIV 感染者。石家庄地区 HIV 防控仍以市区为主，而文化程度较低的、从事农业或服务业的男性中青年人群是宣传 HIV 感染的相关知识及防控的重点人群，同时关于女性的防控今后也应加强重视。

PU-1545

未成熟粒细胞对 ARDS 的临床价值分析

谭超超
湖南省人民医院

目的 探讨未成熟粒细胞百分率（IG%）与急性呼吸窘迫综合症(ARDS)的关系。
资料与方法 统计学分析湖南省人民医院住院治疗 ARDS 患者共 178 例，就诊健康体检人员 51 例。利用血细胞分析仪，血气分析仪,特种蛋白分析仪所得结果收集研究数据 WBC,N%,IG%,CRP,根据柏林定义将 ARDS 患者分轻，中，重三组。使用 ROC 曲线分析评估未成熟粒细胞百分率对 ARDS 的诊断价值。
结果 对于 ARDS 患者，严重组 IG%水平明显高于轻度组(4.72 vs1.80;P＜0.05)和中度组(4.72vs2.55;P ＜0.05)，IG%的升高反映了 ARDS 的发生率和严重程度有明显的上升趋势，IG%的 ROC 曲线下面积 0.885（95%CI：0.815-0.914）明显优于 WBC0.659（95%CI：0.593-0.762）、N%0.795（95%CI：0.727-0.863）曲线下面积，IG%对诊断 ARDS 的诊断价值最大。
结论 IG%可作为急性呼吸窘迫综合征(ARDS)的一种早期生物标志物，也可用于区分 ARDS 患者的严重程度，能够促进对急性呼吸窘迫综合征(ARDS)早期高危人群的及时、有效识别。

PU-1546

乙肝原发性肝癌患者外周血中 CD4+和 CD8+T 淋巴细胞的表达研究

许怡、郭云、黄颖、赵晓霞、张海丛、杨莉
石家庄市第五医院

目的 观察乙肝并原发性肝癌患者外周血中 T 淋巴细胞亚群表达水平的变化，为临床肝癌的诊断及治疗提供理论依据。
方法 收集 167 例乙肝患者、151 例乙肝并原发性肝癌患者以及 30 例健康者抗凝血；根据病程将乙肝病毒感染者进一步分为慢性乙肝组、肝硬化组、肝癌组；根据 BCLC 分期将乙肝肝癌患者分为 A 期组、B 期组、C 期组、D 期组；根据 HBV 载量将乙肝并肝癌患者分为低复制组、中复制组、高复制组，采用流式细胞术对以上各组研究对象外周血中 CD3+、CD4+、CD8+T 淋巴细胞表达量进行检测。
结果 肝癌组患者 CD3+、CD4+、CD8+T 淋巴细胞表达量均明显低于正常水平（P＜0.05）；乙肝病毒感染者中，肝癌组 CD8+表达量明显低于肝炎组、肝硬化组（P＜0.05）；在肝癌的各期患者的 T 淋巴细胞的表达量研究中，D 期患者 CD3+、CD8+表达量较 A、B、C 期明显降低（P＜0.05）；在肝癌不同 HBV 载量患者的 T 淋巴细胞的表达量研究中，中、高复制组 CD4+表达量较低复制组明显降低（P＜0.05）。
结论 乙肝并肝癌患者 CD8+T 淋巴细胞亚群表达水平均明显降低；乙肝病毒感染导致的 CD8+T 淋巴细胞功能受损可能是 HBV 病毒感染患者易诱发肝癌的机制之一；治疗乙肝肝癌的适宜时期为 A、

B 及 C 期；在临床上，当乙肝并肝癌患者体内乙肝病毒开始复制时，应及早采取措施进行抗病毒治疗。

PU-1547

NSG1 在食管鳞状细胞癌的表达及作用机制探讨

林晓青[1]、章良铭[1]、涂铭书[1]、殷晓庆[2]、蔡丽清[1]、张松高[1]、余丽丽[1]、潘小杰[3]、黄毅[1]
1. 福建医科大学省立临床医学院
2. 福建中医药大学中西医结合学院
3. 福建省立医院胸外科

目的 神经元特异性基因家族成员 1（NSG1）是一种神经元细胞特异性表达、分子量 21KDa 的核内体蛋白，目前对 NSG1 的研究主要集中在对神经发育与调控的方面，而对其与肿瘤发生发展的相关性少见关注；我们的前期研究表明食管鳞状细胞癌（ESCC）患者体内存在针对 NSG1 的强烈体液免疫反应，为此，我们拟探讨 NSG1 在 ESCC 的表达及其相关的作用机制。
方法 通过免疫组织化学法检测 20 例 ESCC 患者癌组织和配对癌旁组织 NSG1 蛋白的表达；构建 NSG1 高表达慢病毒转染 NSG1 相对低表达的 KYSE-150 细胞，使 NSG1 过表达；将靶向 NSG1 的 siRNA 转染 NSG1 相对高表达的 TE-1 细胞，敲低 NSG1 表达。分别采用 cck8 法、划痕实验和 transwell 法、transwell 法、流式细胞术检测 NSG1 过表达/敲低 ESCC 细胞活力、细胞迁移、细胞侵袭、细胞周期的变化；western blot 法检测 NSG1 过表达/敲低 ESCC 细胞 MEK/ERK 通路 p-MEK、p-ERK 和 EMT 相关分子标志物表达水平的变化。
结果 NSG1 蛋白在 ESCC 癌组织异常高表达，而在配对癌旁组织中弱表达或不表达。与阴性对照组相比，NSG1 过表达 KYSE-150 细胞活力、侵袭、迁移能力显著增强，G0/G1 期细胞比例明显下降，S 期细胞比例明显升高，MEK/ERK 通路 p-ERK、p-MEK 水平明显升高，EMT 相关转录因子 snail、slug 与间质标志物 Vimentin 表达明显上调，上皮标记物 E-cadherin 表达明显下调；NSG1 敲低 TE-1 细胞的改变则相反。
结论 NSG1 可能在 ESCC 疾病发生发展进程中发挥潜在的致癌作用；NSG1 表达可通过激活 MEK/ERK 通路促进 ESCC 细胞的 EMT。

PU-1548

水通道蛋白 1 与小胶质细胞极化关系的研究进展

李博慧[1]、刘春梅[2]
1. 大庆市第三医院
2. 江苏省苏北人民医院

目的 水通道蛋白 1（AQP1）的主要功能是调节水的运输，它可能参与调节细胞的炎症激活。小胶质细胞是脑中的巨噬细胞，是中枢神经系统的第一道炎症免疫防线，其中，小胶质细胞的极化在神经系统炎症损伤及修复中起到中心调控的作用。本研究的目的是探讨 AQP1 在小胶质细胞中的分布及作用，并对两者关系进行综述。
方法 使用中国知网、PubMed、Embase、Web of Science 网站进行检索，关键词设置为“水通道蛋白 1”和“小胶质细胞极化”、“Aquaporin ”and“Microglia polarization”
结果 共检索出中文文章 4 篇、英文文章 35 篇。
结论 近年来，国外学者对于 AQP 在组织和细胞炎症免疫应答中的作用进行了研究。AQP1 表达降低能够使小胶质细胞从形态和功能上向 M2 型小胶质细胞极化，并且增加小胶质细胞的迁移能力。目前，国内外已有通过调节小胶质细胞的极化治疗缺血性脑卒中、阿尔兹海默病、术后认知障碍及神经胶质瘤的相关研究，而通过 AQP1 调节小胶质细胞极化的作用及机制需要进一步的研究。

PU-1549

低危人群不同梅毒筛查策略的比较

井发红
西安医学院第一附属医院

目的 通过对低危人群梅毒螺旋体不同血清学检测方法试验结果分析，探讨不同筛查策略对梅毒诊断结果的影响，为临床诊断和治疗提供可靠依据。
方法 所有患者，均采用传统筛查方案(TSA) 和逆向筛查方案(RSA)，TSA 即先采用甲苯胺红不加热血清试验（TRUST）检测梅毒螺旋体，若阳性再进行梅毒螺旋体颗粒凝集试验（TPPA）；RSA 则相反，先采用化学发光微粒子免疫分析法（CMIA）进行梅毒血清学初筛试验，阳性标本再进行 TPPA 和 TRUST 试验，CMIA 与 TPPA 结果不相符或 TPPA 弱阳性时采用梅毒螺旋体抗体吸收试验（FTA-ABS）进行验证。
结果 17604 份血清标本中，TSA 检出 148 份（0.84%）TRUST 阳性标本，其中 9 份（6.1%）TPPA 和 CMIA 均为阴性，提示存在生物学假阳性，139 份（93.9%）TPPA 和 CMIA 均为阳性，9 份（6.1%）和 CMIA 阳性而 TPPA 阴性。RSA 经 CMIA 初筛阳性 230 份(1.30%) ，CMIA S/CO 值中位数(25 分位数，75 分位数)为 7.31 (2.12，20.33)，230 份初筛阳性标本中，TPPA 复检仅 200 份(占 86.95%) 阳性，TRUST 148 份(占 64.34%) 阳性。30 份 CMIA 阳性而 TPPA 阴性的标本中，FTA-ABS 验证结果显示，IgM 类抗体均为阴性，其中 3 份标本 IgG 类抗体阳性。当 CMIA S/CO≥1 时进行 TPPA 法复检，TPPA 复检阳性者判断为梅毒感染血清学阳性时，假阴性率为 10% (3 /30) ，假阳性率为 0% 。当 S/CO 界值为 1.07 时 ROC 曲线下面积最大为 0.882。
结论 RSA 比 TSA 能检测出更多阳性血清标本，适合大规模筛查，但 CMIA 法梅毒血清学筛查存在假阳性问题，应依据 TPPA 检测结果综合分析，并确保定期复查。

PU-1550

免疫相关 LncRNA 构建风险模型预测肺腺癌患者生存预后

郭会、顾锦、陈艳
常州市第一人民医院

肺腺癌（LUAD）如今已成为严重威胁人类健康的恶性肿瘤，其 5 年生存率很低，鉴于此我们迫切需要建立新的方法来预测肺腺癌患者生存预后。而在本研究中，我们首先检索了肺腺癌患者原始转录组数据，并通过共表达分析识别免疫相关的非编码 RNA（irlncRNA），其次通过单因素分析和改良的 Lasso 回归鉴定出有效的差异表达的 irlncRNA(DEirlncRNA)对。第三，我们计算并绘制 DEirlncRNA 对的 5 年受试者工作特征曲线（ROC）下的面积（AUC），再通过计算 AIC 值识别最大拐点作为 Cut-off 值以据此建立区分高危或低危 LUAD 患者的最佳模型。最后，利用我们建立的风险模型评估了 LUAD 患者的生存率、肿瘤突变负荷、肿瘤浸润免疫细胞、抗肿瘤药物的耐药情况，以及对高风险和低风险组差异表达基因进行了基因 GO 富集分析和 KEGG 富集分析等。在我们本篇研究中，共鉴定出 28 对 DEirlncRNA，将其纳入 Cox 回归模型分析后，生存分析和和 ROC（AUC）曲线证明该风险模型具有良好的预测效果，低风险组的生存年限要明显高于高风险组。GO 富集分析表明，高风险组和低风险组差异表达基因主要参与的生物学途径为染色质分离和核分裂；主要发挥的生物学功能为细胞粘附与分子结合。KEGG 富集分析表明，高风险组和低风险组之间差异表达的基因主要参与细胞周期、病毒感染病以及钙离子信号通路。肿瘤突变负荷表明，高风险组发生基因突变的几率高于低风险组，且其肿瘤突变负荷（TMB）值也明显高于低风险组。而其他结果表明高风险组浸润的免疫细胞如 NK、CD4+T、CD8+T 降低，且具有较低的半数最大抑制浓度（IC50）。总之，通过我们根据 DEirlncRNA 对而建立的风险模型将有助于 LUAD 患者的预后预测，并为其提供个性化的治疗方案。

PU-1551

血小板计数、NT-proBNP 浓度及降钙素原水平对于血流感染预后的意义

李卫滨[1]、刘星宇[2]
1. 中国人民解放军联勤保障部队第 900 医院(原福州总医院)
2. 联勤保障部队第九〇〇医院

目的 了解血小板计数，NT-proBNP 及降钙素原三项指标对于血流感染性疾病预后的意义。
方法 统计 2016 年 4 月至 2021 年 4 月收治入院的住院患者共计 51 例血流感染患者，以初次入院检测血培养结果阳性并辅助以临床症状、体征、实验室检查等多项检查结果做为判断患者患有血流感染的初始时间。收集患者入院后第 1、3、5、7 天血小板计数、NT-proBNP 浓度及降钙素原水平数据。利用 SPSS20.0 软件进行统计学数据分析。
结果 通过对入院后第 1、3、5、7 天的血小板计数、NT-proBNP、降钙素原分析发现，随着脓毒症症状的加重，血小板下降趋势明显，呈现负相关性；NT-proBNP，降钙素原上升趋势明显，呈现正相关性。随着病程时间的延长，脓毒症死亡患者的血小板水平逐渐减低，而好转患者的血小板水平逐渐回升并有趋于正常值的趋势；同时脓毒症死亡患者的 NT-proBNP 浓度及降钙素原水平始终保持较高水平并有上升趋势，而好转患者的 NT-proBNP 浓度及降钙素原水平不断下降并有趋于正常值的趋势。
结论 血小板计数，NT-proBNP 及降钙素原三项指标可做为临床辅助诊断脓毒症病情严重程度及判断预后疗效的有效指标。

C60@PCN-224 长程有序体系的构建及其光电性能研究

孙倩[1]、杨二利[1]、沈艳飞[1,2,3]
1. 东南大学医学院
2. 东南大学附属中大医院临床检验医学中心
3. 东南大学江苏省重症医学重点实验室

近年来，C_{60} 材料因具有优异的吸电子特性和离域共轭结构而受到研究者们的广泛关注。然而，单一的电子受体特性限制了其在光电领域的应用，构建系统的电子供-受体系对其具有重要意义。金属-有机框架（MOF）具有丰富可调的有机配体、规则的多孔结构和较高的比表面积，不仅可以用于封装小分子材料从而构成主体-客体纳米复合物并且电子性质灵活可控。因此，我们将 C_{60} 与电子互补的卟啉基金属-有机框架（PCN-224）通过 π-π 相互作用进行非共价偶联，形成一个长程有序 C_{60}@PCN-224 供体受体系统，该系统的光电流表现相较于单组分提高了 10 倍左右。C_{60}@PCN-224 供体受体系统具有如此优异的光电性能主要是因为 C_{60} 与 PCN-224 卟啉配体之间的长程有序 D-A 相互作用可以加快光致电子转移和抑制光生载流子的快速复合，实现光生载流子的有效分离，大大提升光捕获效率。本工作为具有较高光电转换效率的 C_{60} 基光电电极的发展提供了一条新的思路。

基于 MOF-Nb 的光电化学免疫传感及其在人附睾蛋白 4 检测中的应用研究

孙倩[1]、沈艳飞[1,2,3]
1. 东南大学医学院
2. 东南大学附属中大医院临床检验医学中心
3. 东南大学江苏省重症医学重点实验室

卵巢癌的早期诊断困难是其致死率居高不下的主要原因之一。人附睾蛋白 4（HE4）被认为是一种新的卵巢癌血清生物标志物。因此，对 HE4 的高效灵敏检测在卵巢癌早期诊断中具有至关重要的意义。金属-有机框架（MOF）作为一种新兴的功能材料，具有高度有序的多孔结构和较大的比表面积，已广泛应用于生物传感领域。然而，这一类材料在光电化学（PEC）生物分析领域的系统研究相对较少，尤其是构建 MOF 基光敏元件用于 PEC 免疫传感器的工作，亟待进一步探究。基于以上背景，我们合成了以羧基官能化卟啉为配体的 MOF 纳米球（nPCN-224）并以此为 PEC 探针，成功构建出用于 HE4 检测的“signal-on”型 PEC 免疫传感器。此外，借助纳米抗体与 nPCN-224 的耦合作用，使用纳米抗体作为识别单元进一步提高了免疫传感器的灵敏度。该传感器可实现 1.00 pg·mL^{-1} 到 10.0 ng·mL^{-1} 的较宽范围的灵敏检测，检测限低至 0.560 pg·mL^{-1}，优于以往报道的大多数方法。更重要的是，该传感器通过检测血清中 HE4 的含量可以对不同患病阶段的卵巢癌患者及健康人群实现有效区分。本工作将为构建具有高灵敏度和准确性的光电化学免疫传感器用于临床诊断和临床疗效评估开辟一条新途径。

PU-1554

甲状腺功能与 2 型糖尿病肾病患者临床分期的关联性研究

李汉秋、冯奕习
东莞市中医院

目的 探讨糖尿病肾病患者的甲状腺功能。
方法 本回顾性病例对照研究选取 2021 年 1 月至 2021 年 2 月的研究对象。25 名健康志愿者、25 名单纯 T2DM 患者和 50 名糖尿病肾病患者纳入本研究。测量研究对象的身高、体重、血压以及实验室的生物标志物如肾功能、甲状腺功能和糖化血红蛋白等指标。
结果 与单纯糖尿病患者相比，糖尿病肾病患者促甲状腺激素 (TSH) 水平更高，游离三碘甲状腺原氨酸 (FT3) 水平更低 (P 值均<0.05)。 Spearman 相关分析显示 TSH 与血清肌酐（r = 0.37，P= 0.004）、尿白蛋白肌酐比（r = 0.36，P= 0.011）；FT3 与估算的肾小球滤过率（eGFR）（r = 0.56，P < 0.001）均呈正相关关系，其差异具有统计学意义。
结论 在糖尿病肾病患者中可观察到高水平的 TSH 和低水平的 FT3。 未来需要前瞻性研究来证实亚临床甲状腺功能减退症与糖尿病肾病之间的关联。

PU-1555

RA-CP 诊断类风湿性关节炎的临床意义

廖军
广州市第一人民医院

目的 探究全新类风湿性关节炎诊断标志物（RA-CP）对于类风湿性关节炎（RA）诊断的临床意义。
方法 现收集广州市第一人民医院 2020 年 9 月至 2021 年 3 月风湿免疫科住院患者和风湿免疫门诊

病人共 158 例，分成两组（RA 组 72 例，非 RA 组 87 例），采用双抗体夹心酶联免疫吸附（ELISA）法检测 RA-CP，并检测类风湿因子（RF）、C 反应蛋白（CRP）和抗环瓜氨酸肽（CCP）抗体。
结果 RA-CP 的灵敏度和阴性预测值（77.78%、81.82%）均高于抗 CCP 抗体（61.11%、73.08%）和 RF（68.06%、 81.11%），特异度和阳性预测值分别为 82.76%、78.87%。RA-CP 的诊断准确度为 80.50%。RA-CP 可检出抗 CCP 抗体（-）或 RF（-）的 RA 患者，阳性率分别为 60.71%、43.49%。11 例抗 CCP 抗体和 RF 双阴性的 RA 患者中有 3 例 RA-CP 阳性。
结论 RA-CP 是一类瓜氨酸化蛋白，用于诊断 RA 的全新抗原类标志物，较其他用于诊断 RA 的抗体如抗 CCP、RF 等具有更高的诊断效能。RA-CP 能够较好地鉴别诊断 RA 。

PU-1556

免疫比浊法检测尿液 λ 轻链的功能灵敏度建立

刘政
吉林大学第一医院

目的 应用 Bio Systems BA400 检测平台，对免疫比浊法尿液 λ 轻链检测的功能灵敏度进行建立和评估。
方法 参考美国临床实验室标准委员会(NCCLS)发布的 EP17-A 文件，对 Bio Systems BA400 检测平台测定尿液 λ 轻链的空白样本和一系列低水平样本，确定该方法的空白限(LOB)、生物检测限（BLD）和功能灵敏度(FS)。
结果 Bio Systems BA400 检测平台检测出的尿液 λ 轻链的 LOB 为 6.725mg/L，BLD 为 15.985 mg/L，FS 为 16.46 mg/L。
结论 实验室应建立本实验室的空白限、生物检测限和功能灵敏度。对于低浓度尿液 λ 轻链检测结果评价具有重要的临床意义。

PU-1557

基于局域表面等离子体共振的金纳米棒在肺癌诊断中的应用研究

陈轶
中南大学湘雅三医院医学检验系

目的 免疫组化是临床上常用的对组织细胞内蛋白质或者多肽进行定位、定性检测技术，但其操作繁琐费时费力。本课题基于金纳米棒其局部等离子共振（LSPR）特性具有的较高的光吸收和散射能力，拟制备不同波长的金纳米棒，选取光信号值最佳的偶连特异性抗体，原位检测组织细胞中抗原，建立一种简单、快速和价廉的方法。
方法 （1）选取氯金酸为原料，通过硫化钠终止法制备具有不同 LSPR 波长的金纳米棒，确定可用于偏光显微镜成像的最佳材料；然后通过巯基十一烷酸修饰金纳米棒，利用 EDC/NHS 活化羧基后加入 RAD21 抗体制备抗体-金纳米棒复合物（2）比较抗体-金纳米棒对 A549 肺癌细胞和其他癌细胞的特异性识别能力，进一步检测抗体-金纳米棒对宫颈癌、乳腺癌、结肠癌、胃癌、肺癌组织切片的检出效果（3）收集临床肺癌病理组织切片 18 例，采用免疫组化和抗体-金纳米棒同时检测比较两者检测效果。
结果 成功制备了 LSPR 在 600-800nm 范围的金纳米棒，在偏光显微镜下发现 LSPR 处于 650nm 处时，金纳米棒的长度 88.2 nm，宽度 37.8 nm 呈现出最强的光学信号。RAD21 抗体-金纳米棒溶液与不同细胞孵育后，在偏光显微镜下观察发现 A549 肺癌细胞呈现高亮红色，而其他细胞没有变化。此外，我们将抗体-金纳米棒用于多种癌组织切片的检测发现，宫颈癌、乳腺癌、结肠癌、胃

癌组织切片在偏光下均没有明显信号，而肺癌组织切片呈现明显的红色。通过对 18 例临床肺癌标本检测发现，抗体-金纳米棒的检出效果和免疫组化一致，差异无统计学意义。
结论 本研究通过硫化钠终止生长反应法实现了金纳米棒 LSPR 的准确调控，得到了偏光成像效果最佳的金纳米棒。将金纳米棒与肺癌抗体 RAD21 偶联后，可用于肺癌细胞和肺癌组织病理切片的有效识别诊断。本文中开发的检测方法是在医学检测诊断中探索的一种新思路，比传统的免疫组化检测操作简单、耗费时间更短，所需成本更低。

PU-1558

免疫荧光法在上呼吸道感染微生物快速检验中的应用分析

王成浩
安徽医科大学第二附属医院

目的 探讨分析免疫荧光法在上呼吸道感染微生物快速检验中的应用效果。
方法 选取我院在 2019 年 5 月-2020 年 5 月确诊并治疗的 220 例上呼吸道感染患儿，采集所有患儿的分泌物样本，并使用免疫荧光法来进行微生物快速检测。观察所有患儿的病毒抗原阳性情况及病毒类型分布；观察阳性患儿在不同年龄段当中的分布情况。
结果 所有 220 例患儿当中，共检测出 190 例（86.4%）病毒抗原阳性。其中，呼吸道合胞病毒：110 例，流感病毒 A 型：22 例，腺病毒：32 例，3 型副流感病毒：10 例，2 型副流感病毒：4 例，B 型流感病毒：4 例，混合型：8 例。不同年龄段患儿占比之间差异显著（P＜0.05），其中阳性占比最高的为 1 个月~6 个月。
结论 在临床微生物快速检验当中免疫荧光法不断完善，且持续跟临当中的其他相关先进技术互相结合，其优点为快捷、高效，可以在给予上呼吸道感染进行微生物检测时广泛性的应用。

PU-1559

两种方法检测乙肝表面抗原结果对比分析

齐莹莹
吉林金域医学检验所有限公司

目的 人感染乙肝病毒后，血液内常有大量的表面抗原剩余下来，形成表面抗原血症。目前最常用的、便捷快速检测乙肝表面抗原方法为胶体金法和酶联免疫法。本文通过酶联免疫法和胶体金法两种方法的检测对乙肝病毒表面抗原的检测结果进行对比，为临床提供参考依据。
方法 选取本实验室 2021 年 1 月～2021 年 5 月收取的血液标本 500 例，分别使用胶体金法与酶联免疫法对标本进行乙肝病毒表面抗原进行检测，并对其结果进行对比分析，比较酶联免疫法和胶体金法检测乙肝表面抗原的阳性率。
结果 其中酶联免疫法检测乙肝表面抗原的阳性率为 17.90%，胶体金法检测乙肝表面抗原的阳性率为 16.40%。两种方法的检测结果相比较没有明显的差异（P>0.05）。
结论 酶联免疫法和胶体金法对乙肝表面抗原均有比较高的阳性检测率,两种方法都是检测乙肝表面抗原的比较可靠的方法。其中胶体金法检测方法具有简便、直观、方便携带、结果更加快捷等特点,并且不需要特殊的仪器设备,适用于紧急状态下患者的检测或者感染者初筛等情况。酶联免疫法具有更高的敏感度,仍然是现今检测乙肝表面抗原的主要方法,适合于对少数胶体金法检测结果呈阳性的患者进行再次筛检,从而很大程度的提高检测结果的准确率。乙肝表面抗原本身不是完整的乙肝病毒，而是乙肝病毒的外壳，它本身没有传染性但有抗原性，它只是乙肝病毒感染的标志之一。它可以表示过去感染过乙肝病毒，或者目前正在受到乙肝病毒的感染。因此，加强对乙肝病毒表面抗原的检测，对于保护自己和身边人的健康有着十分重要的意义。

PU-1560

急性心衰患者心衰标志物检测及预后相关性的研究

刘航
山东第一医科大学第一附属医院

目的 通过对急性心衰患者血清及血浆中心衰标志物的检查筛选对患者预后及心衰等级相关的指标，指导临床对急性心衰患者的诊断及治疗。
方法 建立急性心衰筛选标准，对急性心力衰竭患者测定其外周血 NT-proBNP 、心梗三联、cTnT、心肌酶谱等其他相关心功能参数及患者治疗前后结果的改变对患者的治疗及预后进行评估。
结果 1、NT-proBNP 、心梗三联、cTnT 与患者病情呈正相关；2、NT-proBNP 、心梗三联、cTnT 与心功能有密切相关。3、急性期患者心肌酶谱有改变，但相关性较 NT-proBNP 、心梗三联、cTnT 弱。
结论 1、急性心衰患者的预后与 NT-proBNP 、心梗三联、cTnT 有密切相关性；2、心肌酶谱早期的改变程度与患者预后密切相关。

PU-1561

一例新冠疫苗接种后 TPPA 检测梅毒抗体结果分析

李齐光
清远市人民医院

患者女，24 岁，入职体检，行梅毒螺旋体颗粒凝集试验（TPPA）检测梅毒抗体，结果为“颗粒光滑集聚覆盖孔底，周围有一明显颗粒环”，报告为“阳性”。7 天后前往本院皮肤科就诊，行梅毒特异性抗体化学发光微粒子免疫测定（CMIA）和甲苯胺红不加热血清试验（TRUST）,结果均为阴性。10 天后前往本院体检中心进行 TPPA 复检，结果为“颗粒沉集孔底，中央形成一小点”，判断为“可疑阳性”。鉴于该患者在本院用 2 种不同方法检测梅毒特异性抗体结果的不一致，我们将该患者在本院检查的 3 次血标本送往广东省中医院进行 TPPA 检测，同时在省中医也对该患者再次抽血进行了梅毒相关指标的检测，最终省中医的 TPPA 复测结果与我院的检测结果完全一致，即 TPPA 检测结果凝集中心环随时间推移呈逐渐缩小趋势，而该患者三次不同时间血样新型冠状病毒特异性抗体 IgG 浓度随时间先后其浓度逐渐降低，故我们认为该患者的首次 TPPA 检测梅毒抗体结果为假阳性，且与新冠疫苗接种有关。

PU-1562

精子相关抗原 SPAG9 在肿瘤中的作用机制研究进展

黄强
郴州市第一人民医院

精子相关抗原 SPAG9 是近年新发现的癌睾丸抗原，是 JNK 相互作用蛋白（JIP）家族的新成员。SPAG9 主要表达于人类正常睾丸组织中，研究发现，在肿瘤形成过程中，SPAG9 可异常表达于多种癌组织，并且与肿瘤的发生发展存在密切联系，有望成为潜在的肿瘤标志物和治疗靶点。本文通过对 SPAG9 简要介绍，重点综述 SPAG9 促进肿瘤发生发展的作用机制，为临床诊断和治疗提供新思路。

血清封闭孵育时间对免疫组化染色结果的影响

李志春、刘静、任娟丽、段孟真、吴雨珊
新疆金域医学检验所有限公司

目的 对于免疫组化的每一个步骤以及环节，都会影响到染色的最终后果。本文探讨血清封闭孵育时间长短对免疫组化染色结果的影响，以便分析影响免疫组化染色质量的因素之一,总结提高染色质量的方法。
方法 收集 2021 年 3-5 月送检至新疆金域医学检验所有限公司的手术切除的乳腺癌、肠癌、胃癌、宫颈癌等组织标本共计 210 例，对其中存在明显病变问题的 90 例患者标本进行免疫组化染色。选取常用的正常山羊血清，选用抗体 CK、CK7、CK20、Villin、CK19、CDX2、CEA、HER2、P63、TTF-1 、EMA、P53、LCA、Ki67、p16、MLH1、MSH2、MSH6、PMS2、ER、PR 等试剂盒，对每种组织抗体分别采用 6 分钟、8 分钟、10 分钟、12 分钟以及 15 分钟的孵育时间，按照试剂盒说明书步骤进行染色，DAB 显色，苏木精衬染，中性树胶封固，最后镜检。比较不同的血清封闭孵育时间长短对病变组织免疫组化染色结果的影响。
结果 血清封闭孵育时间的长短对免疫组化染色结果影响较大，其中血清封闭孵育时间≤10 分钟的染色结果较差，血清封闭孵育时间≥10 分钟的染色结果明显较好，孵育 12min 时候染色效果最佳，细胞核 DAB 着色鲜艳，背景清晰，极少出现非特异性背景染色和假阳性反应。
结论 本文通过对临床几种常用抗体在不同的血清封闭孵育时间对免疫组化染色下的表达进行研究表明，血清封闭孵育≥10 分钟的染色结果明显较好。本实验研究血清封闭孵育时间对染色效果的影响进行了较详细、客观的观察分析，对于免疫组化染色效果的好坏，提出了主要的应对措施以及科学合理的建议，供病理同行们在工作中参考。关键字：免疫组化 染色时间 染色效果

PU-1564

新疆喀什地区维吾尔族静脉血栓栓塞症形成的危险因素分析

邝辉、米日姑·依沙木丁、迪力夏提·依明、张媛、努尔比耶·普拉提、麦迪娜·阿迪力、依明江·塞帕尔、尚娟、阿迪莱·买买提明
喀什地区第二人民医院

目的 探讨新疆喀什地区维吾尔族静脉血栓栓塞症（VTE）形成的危险因素及实验室指标变化特点。
方法 回顾性分析维吾尔族 142 例静脉血栓组和 100 例健康对照组的临床资料及实验室指标，对可能导致 VTE 形成的相关因素从年龄、合并症、肿瘤、BMI（kg/m2）指数、凝血四项、D 二聚体（D-D）、同型半胱氨酸(Hcy)、脂蛋白 Lp（a）的数据进行比较，并对其相关因素进行 Logistic 多元回归分析，确定喀什地区维吾尔族 VTE 形成的危险因素。
结果 单因素分析显示，年龄＞50 岁、有肿瘤、有合并症、凝血四项至少 2 项以上异常、D-D＞0.55mg/L、Hcy＞15μmol/L 是维吾尔族 VTE 形成的危险因素(P＜0.05)。多元回归分析显示，年龄＞50 岁(OR= 1.025)、有合并症(OR= 2.354) 、有肿瘤 (OR= 2.436)、D-D＞0.55 mg /L（OR= 0.574）、Hcy＞15μumol/L（OR=1.673）是维吾尔族 VTE 形成的独立危险因素(P＜0.05)。
结论 喀什地区维吾尔族 VTE 形成的危险因素与患者年龄、有肿瘤和合并症、凝血四项异常、D-D＞0.55mg/L 有密切相关性，与 Hcy＞15μmol/L 有相关性，而与 BMI＞28kg/m2 和 Lp（a）＞300mg/L 无相关性。

孕前优生检测对孕前优生保健及婴儿出生缺陷的预防作用

黄肖孝、蒋丽华、戴钰
柳州市妇幼保健院

目的 分析柳州市自愿进行孕前优生检查患者的各项孕前优生检测实验室结果,探讨免费孕前优生检测项目对孕前优生保健及婴儿出生缺陷的预防作用。

方法 回顾性分析 2018-2020 年柳州市自愿接受国家免费孕前优生健康检查的育龄夫妇的实验室检查数据,进行孕前优生检查的妊娠风险评估。男女双方共同享有的免费孕前检测项目包括：血、尿常规,肝肾功能,乙肝两对半(HbsAg、HbsAb、HbeAg、HbeAb、HBcAb)、人类免疫缺陷病毒（HIV），梅毒；女方单独检查项目为孕前优生检测(风疹病毒 IgG、巨细胞病毒 IgG/IgM 及弓形体 IgG/IgM)、促甲状腺激素(TSH)、血糖及分泌物检查(白带常规、淋球菌、沙眼衣原体)。其中梅毒检测采用的是梅毒甲苯胺红不加热实验检测（TRUST）、乙肝两对半、HIV 及孕前优生检测采用酶联免疫吸附试验(ELISA)法；TSH 检测采用电化学发光法,参考范围根据试剂说明书的范围。肝功能检测(谷丙转氨酶)、肾功能检测(肌酐)及空腹血糖测定使用全自动生化分析仪日立 7600,谷丙转氨酶和肌酐检测结果需结合病史,排除干扰因素,若对象复检或其他相关检查均提示异常,则可判为肝肾功能异常；血常规使用全自动血液分析仪检测。检测方法和结果判定均符合《孕前及孕期优生筛查手册》，要求进行一切实验做好质量控制。

结果 得出 HIV,梅毒及乙肝大、小三阳的患病率、好发人群及男女患病比例情况；得出不同年份的各项孕前优生的发病情况；得出育龄妇女患病情况与血色素的相关性。

结论 孕前进行孕前优生健康检查可为不良妊娠结局的预防及干预、提高本市整体出生人口的素质提供理论依据。

PU-1566

不孕患者数睡眠质量对卵巢功能的影响

黄肖孝、戴钰、蒋丽华
柳州市妇幼保健院

目的 了解不孕患者的睡眠质量、婚姻情况及工作环境等因素与其卵巢储备功能指标的相关性，为患者提供有效的个性化治疗方案，达到提高体外受精-胚胎移植的成功率。

方法 采用 2020 年 1 月至 2020 年 12 月在本院行体外受精-胚胎移植(IVF-ET)治疗的不孕患者作为研究对象，根据患者获卵数分成三个组，低反应组（<5 个），正常反应组（5-15 个）和高反应组（>15 个）。实验室检测各组患者血清抗苗勒氏激素(AMH)水平，同时超声测量双侧卵巢内基础窦状卵泡数(AFC)，采用化学免疫发光法检测测患者月经 2-4 天的基础卵泡刺激素(FSH)、黄体生成素(LH)及雌二醇(E2)。经得研究对象的同意后，由专业的调查人员对研究对象进行睡眠质量、婚姻情况及工作环境等的问卷调查。采用 t 检验比较 3 组间各个观察指标的差异；。制定受试者的工作特征（ROC）曲线，以 Youden 指数最大点作为指标的最佳截断值（cut-off 值）。采用 Spearman 相关分析法分析睡眠质量、婚姻情况及工作环境等相关指标与 AMH、AFC、FSH、LH、E2 等卵巢功能指标的相关性。P＜0.05 为差异具有统计学意义。

结果 得出 AMH、AFC、FSH、LH、E2 水平能反映卵巢储备功能并可评估卵巢的反应性；可得出 AMH、AFC、FSH、LH、E2 预测卵巢反应性的程度；得出各项指标得出睡眠质量、婚姻情况及工作环境等相关指标会影响不孕患者的卵巢储备功能指标的分泌水平。

结论 可通过改善患者的睡眠质量、婚姻状况及工作环境提高患者的卵巢储备功能，提高 IVF-ET 的妊娠率，为人类生殖健康事业做贡献。

幽门螺旋杆菌分型在消化系统疾病中的比例分析和临床意义

李一凡、罗迪贤、龚慧、胡庆林、费繁荣
华中科技大学协和深圳医院

目的 了解我院检测幽门螺杆菌(H.pylori)抗体 cagA、vacA 和 iceA 基因亚型分型项目患者的临床诊断类型，并探讨各基因亚型与胃十二指肠疾病类型之间的关系。
方法 对临床患者血清样本幽门螺旋杆菌 CagA, VacA, UreB, UreA IgG 抗体进行检测，并对数据进行统计学分析。
结果 通过统计体检组、慢性胃炎组、胃溃疡组、消化道出血组、十二指肠溃疡组等组别血清标本中幽门螺旋杆菌 IgG 抗体的表达情况，结果显示十二指肠溃疡患者 HP 的 I 型(CagA、VacA)阳性率达 72%，II 型阳性率 21%。慢性胃炎和侵袭性损害（包括十二指肠溃疡、消化道出血、胃溃疡）HP 感染 IgG 抗体偏高，其中以侵袭性损害（十二指肠溃疡、消化道出血、胃溃疡）感染率为最高。胃十二指肠疾病人群男性明显多于女性，临床消化道出血患者占据近一半的比例。I 型(CagA)主要出现在上消化道出血、消化道出血的临床诊断患者中。十二指肠溃疡患者多数为 I 型(CagA、VacA)阳性。通过统计体检组、慢性胃炎组、胃-十二指肠侵袭性损害组(该组合并了胃溃疡组、消化道出血组、十二指肠溃疡组三组患者)等组别血清标本中幽门螺旋杆菌 IgG 抗体的表达情况，结果显示胃-十二指肠侵袭性损害组患者 HP 的 I 型(CagA、VacA)阳性率达 72%，II 型阳性率 21%。
结论 本研究显示，深圳地区各种炎症和出血性消化系统疾病中 HP 感染的比例比对照组高，其免疫分型在在不同年龄和性别中有一定差异。本研究将有助于了解深圳地区幽门螺旋杆菌感染感染率和分型情况，为幽门螺旋杆菌的流行病学研究和防治提供依据。

血蓝蛋白对体外培养 T 细胞的影响

陈聪
南华大学附属第一医院检验科

背景 庆大霉素是一种广谱抗生素广泛用于 T 细胞体外培养，但前期研究表明，庆大霉素显著影响 T 细胞活性。此外，课题组研究证实凡纳滨对虾(L. vannamei)血蓝蛋白具有光谱抗菌性。
目的 探索血蓝蛋白对体外培养 T 细胞活性的影响。
方法 本项目选用 0.05、0.1、0.2μg/ml 三个血蓝蛋白浓度梯度，通过光学显微镜和细胞计数仪分析 T 细胞数量，采用流式细胞技术分析 T 细胞亚型及细胞周期，运用 MTT 实验分析血蓝蛋白对 HepG2 细胞毒性。
结果 相比其他两个血蓝蛋白浓度，细胞计数分析发现，0.2μg/ml 血蓝蛋白显著提高 T 细胞数量；流式细胞分析发现，0.2μg/ml 血蓝蛋白显著上调 CD3 + CD4 +和 CD4+CD25+ T 细胞，且显著下调 G0/G1 期 T 细胞；MTT 分析表明，0.2μg/ml 血蓝蛋白处理显著增加 T 细胞对 HepG2 细胞的细胞毒性。
结论 0.2μg/ml 血蓝蛋白能增加 T 细胞的增殖活性和细胞毒性，此结果说明血蓝蛋白可作为 T 细胞体外培养的潜在抗生素替代品。

PU-1569

YY1 regulated by miR-124-3p promotes Th17 cell pathogenicity through interacting with T-bet in rheumatoid arthritis

Jinpiao Lin、Qishui Ou
the First Affiliated Hospital of Fujian Medical University

Th17 cells are key players in rheumatoid arthritis (RA). Our previous studies have revealed that transcription factor YY1 played an important role in the pathogenesis of RA. However, whether YY1 has any role in Th17 cell pathogenicity and the regulatory mechanism of YY1 in RA remain unclear. Here, we found the proportion of pathogenic Th17 (pTh17) cells was significantly higher in RA than that in osteoarthritis (OA) and health controls. YY1 expression was increased in pTh17, and the pTh17 differentiation was hampered by YY1 knockdown. Mechanistically, YY1 could bind to the promoter region of transcription factor T-bet and interact with T-bet protein to positively regulate the pathogenicity of Th17 cells. Moreover, we found that miR-124-3p negatively correlated with YY1 in RA patients, and it could bind to 3'-UTR regions of YY1 to inhibit the posttranscriptional translation of YY1. Furthermore, knockdown of YY1 decreased the proportion of pTh17 cells and attenuated joint inflammation in CIA mice. These findings indicate that YY1 regulated by miR-124-3p promotes Th17 cell pathogenicity in part through interacting with T-bet, which present promising therapeutic targets in RA.

PU-1570

新疆地区某三级医院妊娠期甲状腺激素水平参考范围的考察及差异性分析

单蕾、李晟彬、刘洁、刘伊宁、吴雄
新疆维吾尔自治区第三人民医院

目的 根据 2019 年由中华医学会内分泌分会和中华医学会围产医学分会联合发布《妊娠和产后甲状腺疾病诊治指南》（第 2 版）的要求，考察本单位检测系统妊娠期（早、中、晚期）特异的血清甲状腺功能指标参考范围，比较不同年龄阶段孕早、中、晚期女性甲状腺激素水平，为妊娠期健康监护提供理论依据。

方法 回顾性分析 2018 年 6 月至 2020 年 6 月本院正常妊娠期女性的甲状腺水平，分析比较不同孕期、不同年龄阶段女性甲状腺水平。

结果 孕早、中、晚期的 FT3 参考范围为 4.45(3.38-5.67)pmol/L、4.08 (3.26-5.308) pmol/L、3.94(3.242-5.012) pmol/L；孕早、中、晚期的 FT415.46 (12.494-20.815) pmol/L、13.66(12.071-18.842)pmol/L、13.27(12.062-16.541)pmol/L；孕早、中、晚期的 TSH 参考范围为 2.14(0.485-3.971) mIU/L、2.11(0.523-3.941)mIU/L 和 2.12(0.611-3.961)mIU/L；TPO 全阶段孕期 TPOAb 参考范围为 2.46(5.562-30.182) IU/Ml。

结论 不同孕期女性的 FT3、FT4、TSH 水平具有显著性差异（P<0.05）,TPO 水平无显著性差异（P>0.05）,不同孕期女性的 FT4 水平分别在四组年龄阶段中（≤25 岁、>25-30 岁、>30-35 岁、>35 岁）均具有显著性差异（P<0.05）。本研究通过对不同年龄阶段的孕早、中、晚期女性甲状腺激素水平的分析发现，孕妇 FT4 在不同年龄阶段存在显著差异，并且在孕早期随着年龄增长，呈逐渐下降的趋势，而在各年龄阶段 FT3、TSH 无明显差异。这可能提示 FT4 在不同年龄阶段孕妇中反馈性抑制更明显，水平波动更大，孕期应加强监测 FT4 水平。

小细胞肺癌患者肺泡灌洗液中 IL-10+CD206+CD14+ m2 样巨噬细胞增多

胡欣彤[1]、谷月[1]、赵崧辰[2]、华树成[1]、姜艳芳[1]
1. 吉林大学第一医院
2. 同济大学

The differences of macrophage distribution and its associated function between SCLC and NSCLC are not fully investigated. Our study showed that the frequency of CD14+, CD206+CD14+ and IL-10+CD206+CD14+M2-like macrophages were significantly increased, with simultaneously elevated IL-10 in BALF of SCLC patients, as compared to those in BALF of NSCLC patients. The increased frequency of IL-10+CD206+CD14+M2-like macrophages and elevated level of IL-10 in BALF of SCLC patients were positively correlated with advanced tumor stage, but negatively correlated with their survival time. Increased IL-10+CD206+CD14+M2-like macrophages were an important feature of SCLC, rather than NSCLC, and it is associated with development of SCLC.

PU-1572

淋巴细胞亚群检验项目自动审核系统的建立及应用

石珏、王盼、张子宁
中国医科大学附属第一医院

目的 建立淋巴细胞亚群检验项目自动审核系统，通过审核流程的标准化与智能化，提高检验结果的准确性和工作效率，为临床诊断和治疗提供更多参考。
方法 收集 2018 年 1 月至 2020 年 8 月 80427 份淋巴细胞亚群检测结果用于建立限值规则，其中有 15000 份来自艾滋病（AIDS）门诊的结果，用于单独设置该门诊检验结果的限值规则。对 2020 年 9 月至 2021 年 3 月中 13975 份结果进行验证，通过对比人工审核与自动审核，验证自动审核系统的有效性。
结果 对 2020 年 9 月至 2021 年 1 月淋巴细胞亚群检测结果进行历史结果验证，自动审核通过率为 70.24%（7000/9966）。通过优化规则后，2021 年 2 月至 3 月在线验证，自动审核通过率提高到 72.69%（2914/4009），其中有 11 个真阳性样本，2703 个真阴性样本，1295 个假阳性样本和 0 个假阴性样本。样本周转时间从 228 分钟减少到 167 分钟。总结了处理触犯自动审核规则结果的指南，基于这些指南，有助于检验人员发现异常淋巴细胞亚群的存在，为临床提供更多诊断信息。
结论 基于流式细胞术检测的淋巴细胞亚群项目，人工操作步骤较多且复杂，应不断完善、优化及验证其自动审核系统，以提高工作效率及报告的准确性，为临床提供更过参考信息。

PU-1573

铁皮石斛多糖对砷中毒大鼠肝损伤的干预作用及氧化应激机制研究

李亚山、李德璇、杜波、张贝基、李虹娟、胡杨丽、赵隽
云南省第三人民医院

目的 观察无急性中毒剂量的砷所造成的 SD 大鼠肝损伤，探讨铁皮石斛多糖对肝氧化损伤的保护作用机制。

方法 在前期建立动物模型的实验数据和文献报道的基础上，进行如下分组:将 50 只健康雄性 SD 大鼠随机分为 5 组，每组 10 只，即正常对照组，每日只饮纯水;砷暴露组，每日饮含亚砷酸钠(NaAsO2)30mg/L 的水溶液; 铁皮石斛多糖干预组（1～3 组），分别以 150mg/kg，300mg/kg.d，450mg/kg.d 的剂量每日灌胃。4 个月实验期结束，末次染毒后次日，大鼠称重，然后乙醚麻醉，抽取心脏血，制备血清样本，检测谷丙转氨酶(ALT)、谷草转氨酶(AST)和白蛋白的活性，作肝功能分析;切除肝脏，计算肝脏系数，肝组织切片染色，观察肝组织细胞形态；制备肝组织匀浆样本，检测谷胱甘肽(GSH)、谷胱甘肽过氧化物酶(GSH-Px)、超氧化物歧化酶(SOD)的活性、检测组织 ROS 的水平以及脂质过氧化水平。采用统计软件 SPSS12.0，对所得数据采用单因素方差分析，各组间的比较采用 SNK-q 检验，检验水准定为 0.05。

结果 与对照组相比，砷暴露组的肝脏系数升高(q=19.53，P＜0.05);ALT 和 AST 水平升高，白蛋白水平降低（q 值分别为 39.56，26.23，13.16，P 均＜0.05），肝功能明显受损;GSH、SOD 和 GSH-Px 的活性降低（q 值分别为 86.74，72.55，36.68，P 均＜0.05），组织中 ROS 与 MDA 水平升高（q 值分别为 38.26，49.54，P 均＜0.05）;而与砷暴露组相比，铁皮石斛多糖联合干预组的各项指标包括肝组织细胞结构均得到明显改善。

结论 (1)慢性砷暴露可以促使肝脏中 ROS 和脂质过氧化产物的增多以及抗氧化酶活性的减弱，致氧化性应激反应增强而引起肝损伤。(2)铁皮石斛多糖可改善慢性砷暴露所引起的大鼠的氧化应激及肝损伤。

PU-1574

自身免疫性疾病患者外周血淋巴细胞亚群表达的临床分析

王莹
吉林大学第二医院

目的 检测自身免疫性疾病（AID）患者外周血的淋巴细胞亚群的表达，探讨 AID 患者外周血淋巴细胞亚群的变化；并分析这种变化与补体 C3、C4 和血沉(ESR)的相关性。

方法 采用流式细胞术分析 72 例 AID 患者及 35 例健康人外周血中淋巴细胞亚群的表达，及 AID 患者外周血 C3、C4 和 ESR 的水平，检测 AID 患者外周血中淋巴细胞亚群的改变，并分析相关参数与补体 C3、C4 和 ESR 的相关性。统计学采用 SPSS16.0 统计软件进行分析，显著性检验标准为 P 值<0.05。

结果 AID 组 CD3+（%）、CD3+CD4+、CD4+/CD8+ 、CD56+和 DNT（%）均明显低于健康对照（Control）组（P<0.05）， CD3+CD8+占淋巴细胞比率（%）高于 Control 组（P<0.05）。系统性红斑狼疮（SLE）组、ANCA 相关性血管炎（AAV）组和干燥综合征（SS）组 CD4+/CD8+比率和 DNT（%）均明显低于 Control 组，有显著性差异（P<0.01）, AAV 组、SLE 组和 SS 组外周血 CD4+ /CD8+比值分别与血清 C3 之间存在明显正相关（r=0.832, P<0.01; r=0.599, P<0.01; r=0.749, P<0.01）；与 C4 和 ESR 均无明显相关性。AAV 组、SLE 组和 SS 组外周血 DNT%与 C3、C4 和 ESR 均无相性关性。

结论 AID 患者体内存在淋巴细胞亚群的多重失衡，且 AAV 组、SLE 组和 SS 组外周血 CD4+/CD8+与补体 C3 存在明显的相关性。分析该类疾病的淋巴细胞亚群的表达尤其 CD4+/CD8+比值对 AID 患者病情严重程度的评估及建立个体免疫治疗方案及判断预后有重要的临床意义。

PU-1575

低 T3 综合征结果分析

周志瑞
昆明市中医医院

目的 探讨低 T3 综合征(low T3 syndrome，LT3S)又称正常甲状腺病态综合征(euthyroid sick syndrome，ESS)的临床情况。
方法 回顾性分析本院住院 2020 年 8 月～2020 年 11 月低 T 3 患者 200 例，同时选择到本院体检中心健康体检者 200 例作为对照组。进行统计分析临床情况 、病因。
结果 住院组在全身性疾病、严重的心肺疾病 、禁食、精神创伤、恶性肿瘤、重症感染及术后多种应激状态下各原发疾病类型患者的 T 3 水平明显低于体检对照组，差异具有统计学意义（ P ＜ 0.05）；
结论 低 T 3 综合征临床住院患者发病率高 ,与多种疾病存在一定相关性，尤以危重症出现的一种综合征。

PU-1576

ENA 多肽抗体谱和抗核抗体在临床上对自身免疫性疾病的应用

周万彩
昆明市中医医院

自身免疫性疾病(autoimmune diseases,AID)是指由于机体的自身细胞和体液对自身产生反应，主要表现为血清中多种自身抗体的形成及全身多脏器损伤的疾病。而多种抗体联合检测项目在临床上对自身免疫性疾病筛查与诊断工作中起到了很好的辅助作用，有效提高了 AID 的确诊效率。

PU-1577

血清抗线粒体抗体 M2 亚型检测的回顾性分析

张兴保
昆明市中医医院

目的 研究抗线粒体 M2 亚型抗体的实验室检测指标的回顾性分析及在临床诊疗中的意义。
方法 选取 2019-2020 年医院就诊的 30 例抗线粒体抗体 M2 亚型阳性患者作为 AMA-M2（+）组，另随机选取 30 例年龄阶段一致、身体健康、AMA-M2（-）患者作为 AMA-M2（-）组，就两组患者的性别、年龄、生化指标碱性磷酸酶、γ-谷氨酰转肽酶指标进行研究，并对结果进行统计学分析。
结果 抗线粒体 M2 亚型抗体阳性患者性别男女比例为 1:1.5，其中以中老年人患者阳性居多，平均 62（30,86）岁，阳性率高于 AMA-M2（-）组。抗线粒体抗体 M2 亚型阳性患者的生化指标碱性磷酸酶、γ-谷氨酰转肽酶均明显升高，差异有统计学意义（P<0.05）。
结论 抗线粒体 M2 亚型阳性患者以中老年女性为主，出现血清碱性磷酸酶、γ-谷氨酰转肽酶升高，联合检测对疾病的诊断及鉴别诊断有重要意义。

PU-1578

降钙素原(PCT),C 反应蛋白((CRP)、白介素 6 联合测定在老年急性感染疾病中的诊断价值

苏斌斌
昆明市中医医院

目的 评价 PCT、IL-6、CRP 联合检测在老年急性感染疾病中的诊断价值，帮助临床医生对其所患疾病进行鉴别诊断。
方法 对我院 2019 年 10 月—2020 年 10 月诊断 60 例急性感染老年患者的临床资料进行回顾性分析，根据其致病原因分为细菌组（30 例）、病毒组（30 例），再选取同期健康体检的 30 例老年人为对照组，检测 3 组血清 PCT、IL-6、CRP 水平，对比其水平差异。
结果 细菌组 PCT、IL-6、CRP 水平均高于病毒组，病毒组 PCT、IL-6、CRP 水平均高于对照组，三组之间对比差异有统计学意义（$p<0.05$）），细菌组 PCT、IL-6、CRP 的阳性率比病毒组高，病毒组 PCT、IL-6、CRP 的阳性率比对照组对高，三组之间对比差异有统计学意义（$p<0.05$））。
结论 血清 PCT、IL-6、CRP 联合测定对老年急性感染疾病有较高鉴别诊断价值，对指导临床用药有重要意义。

PU-1579

肺炎支原体抗体检测的两种方法学比较

李田妹
云南省中医药大学第三附属医院-昆明市中医医院

目的 比较间接免疫荧光法(IFA)和免疫胶体金法(GIA)在肺炎支原体感染早期检测中的应用价值。
方法 选取我院 2020 年 3 月～2020 年 11 月可疑肺炎支原体感染的患者 467 例，分别采用间接免疫荧光法和免疫胶体法检测患者血清中的肺炎支原体抗体，比较这两种检测方法阳性检出率的差异，以协助临床早期诊断肺炎支原体感染。
结果 间接免疫荧光法 MP-IgM 阳性检出率为 35.12%，免疫胶体金法 MP-IgM 阳性检出率为 36.40%，2 种检测方法阳性检出率无显著差异（$P>0.05$）。
结论 两种方法检验肺炎支原体，均有一定临床使用价值，探索联合检验，可提高肺炎支原体感染早期检出率。

PU-1580

丙肝抗体阳性与 HCV RNA 的检测分析

李少萍
昆明市中医医院

目的 探讨丙肝抗体阳性者血清中 HCV—RNA 的阳性率及丙型肝炎病毒抗体与 RNA 对于丙型肝炎的诊断及治疗具有重要的实用价值和临床意义。
方法 用 ELISA 法检测我院住 2019 年 5 月 一 2019 年 11 月住院及门诊患者血清中的丙型肝炎抗体，同时丙肝抗体阳性患者血清进行了 HCV—RNA 检测。
结果 22 例 HCV 抗体阳性的患者 HCV-RNA 阳性 12 列，阳性率为 54.54%。
结论 抗-HCV 和 HCV-RNA 的联合检测 ，对丙型肝炎的临床诊断和治疗有一定的意义和价值.

PU-1581

两种不同免疫检验方法对乙肝病毒感染血清标志物的临床效果观察

王菁、金亚莉、张涛、张志平、刘家云
空军军医大学西京医院

目的 评估乙肝病毒感染患者实施两种不同免疫检验方法的临床效果。
方法 对 72 例本医院实施治疗的乙肝病毒感染予以项目研究，选于 2019 年 12 月至 2020 年 12 月，全部患者均应用酶联免疫吸附法检验、电化学发光法检验，分析两组方案的检验结果、血清标志物情况。
结果 （1）疑似乙肝病毒感染患者确诊结果阳比 77.78%；阴性比 22.22%。酶联免疫吸附法检验阳性比 73.61%；阴性比 26.39%。电化学发光法检验阳性比 76.39%；阴性比 23.61%。（2）疑似乙肝病毒感染患者乙肝病毒表面抗体、乙肝病毒核心抗体结果具有一致性，P>0.05 说明其差异相对较低。实验组的疑似乙肝病毒感染患者经由检验后，与参照组的患者检验后进行对比，其乙肝病毒表面抗原、乙肝病毒 E 抗原、乙肝病毒 E 抗体比例较高，P<0.05 说明其差异相对较高。
结论 乙肝病毒感染患者行电化学发光法进行血清标志物检验的准确性较高。

PU-1582

Preconditioning with a TLR2 ligand-Pam3CSK4 enhances methicillin-resistant Staphylococcus aureus presentation of dendritic Cells to Tcell

Yiguo Chen
Medical Laboratory, Jiangxi Provincial People's Hospital Affiliated to Nanchang University

Our previous studies showed pretreatment with TLR2 agonist Pam3CSK4 attenuated the sepsis-induced cytokine burst and protected mice from MRSA pneumonia, suggesting that ligands of TLR2 enhance immune responses against bacteria. Pretreatment of Pam3CSK4 also reduced bacteremia and mortality in mouse models of polymicrobial peritonitis, colitis , inflammatory responses . However, few studies have examined the effects of Pam3CSK4 pretreatment on Dendritic cells and T cell immunity against MRSA, Toll-like receptor 2 (TLR2), a pattern recognition receptor, is an essential component in host innate defense system against S. aureus infection. However, little is known about the adaptive immune response, specifically TLR2 activation, against MRSA infection. In the present study we have examined the effects of Pam3CSK4 pretreatment on Dendritic cells and T cell immunity against MRSA. We found that Phenotypies of these BM-DCs is affected by TLR2 agonists Pam3CSK4 or LTA, and BM-DCs pretreated with Pam3Csk4 express a lower level of CD40 and CD86 not CD80, and those BM-DCs pretreated with Pam3CSK4 for 24h, 48h significantly enhanced their phagocytic ability towards HK-MRSA; Mixed leukocyte reaction (MLR) showed that Pam3CSK4 treated BM-DCs increased CD69 express on surfer of naïve T-cell in time-dependent manner, and induced significently proliferation of CD4 T cell and CD8 T cell in a time-dependent manner but LTA. Conclusion, Pam3CSK4 activate T immunity to Staphylococcus aureus by sensitizing BM-DCs pretreatment with Pam3CSK4 .

PU-1583

CEA、CA125 和 CA19-9 及其联合检测在胰腺肿瘤诊断中的价值及其临床应用

韦莉
江苏省人民医院（南京医科大学第一附属医院）

目的 研究血清学肿瘤标志物 CEA、CA125、CA19-9 及其联合检测在胰腺肿瘤诊断中的价值及其临床应用。
方法 收集 2017 年 5 月至 2018 年 1 月南京医科大学第一附属医院胰腺中心收治并经病理确诊的 172 例胰腺肿瘤患者和 73 例健康体检者，其中胰腺肿瘤患者按照 WHO 消化道肿瘤分为良性肿瘤组、癌前病变组和胰腺癌组。采用电化学发光法检测血清 CEA、CA125 和 CA19-9 并进行各组间的分析；采用受试者工作曲线（ROC）分析其在胰腺癌中的诊断价值。
结果 胰腺癌组血清 CEA、CA125 及 CA19-9 水平均明显高于健康对照组、良性肿瘤组和恶性前病变组，差异均有统计学意义（P<0.05）；并且血清 CA19-9 水平在恶性前病变组明显高于健康对照组，差异有统计学意义（P<0.05）。ROC 曲线显示，血清 CA199 的 AUC 高于其他单项指标，灵敏度和特异性分别 76.0%和 89.7%，三项联合检测效能均优于单项检测，其灵敏度和特异性分别为 81.4%和 92.2%。
结论 血清学肿瘤标志物联合检测可提高胰腺肿瘤早期诊断的检测效率。

PU-1584

25-羟基维生素 D 在斑秃患者外周血的表达及临床意义探讨

张晓洁、夏晓红
江苏省人民医院（南京医科大学第一附属医院）

目的 通过检测斑秃患者外周血中 25-羟基维生素 D[25-Hydroxy VitaminD, 25(OH)D] 的表达量，初步探讨其与斑秃的相关性，探索斑秃的发病机制，为斑秃治疗提供新的靶点。
方法 选取 2019 年 1 月-2020 年 1 月在南京医科大学第一附属医院皮肤科门诊初诊的斑秃患者 83 例为观察组，并选取同期体检中心健康对照者 80 例为对照组，回顾性分析其临床资料, 分析斑秃与血清 25-羟基维生素 D 水平之间的关系。
结果 共纳入斑秃患者 83 例，健康对照 80 例。结果显示，观察组患者的血清 25(OH)D 水平为（49.81±18.74）nmol/L，对照组为（56.96±19.81）nmol/L，两组比较差异有统计学意义（P＜0.05）。83 例斑秃患者中 25(OH)D 严重缺乏 4 例(4.82%)，缺乏 40 例（48.20 %），不足 29 例（34.94 %），充足 10 例（12.05%）；80 例正常对照组中 25(OH)D 严重缺乏 2 例(2.50%)，缺乏 20 例（25.00 %），不足 42 例（52.50 %），充足 16 例（20.00%），两组血清 25(OH)D 分布比较差异有统计学意义（P<0.05）。组内分析显示，斑秃组和正常对照组男性和女性血清 25(OH)D 的水平及分布比较差异均具有统计学意义（P<0.05）。
结论 斑秃患者的血清 25(OH)D 水平和分布与正常人相比差异均有统计学意义。斑秃组和正常对照组男性和女性的血清 25(OH)D 水平和分布同样存在显著性差异。

PU-1585

血清 FSH、LH、TSTO 检测在多囊卵巢综合征患者诊断中的临床价值探讨

张晓洁、张立涛、黎青
江苏省人民医院（南京医科大学第一附属医院）

目的 为了提高临床对多囊卵巢综合征(PCOS)的诊断和治疗，分析和研究性激素水平变化和多囊卵巢综合征发生的相关性。
方法 从就诊的多囊卵巢综合征患者中按照随机原则选取 70 例作为试验组研究对象，应用同样方法从 2019 年 1 月-2021 年 1 月在我院进行健康查体者中选取 70 例作为对照组研究对象，采用化学发光法分别检测两组患者血清的黄体生成素(LH)、卵泡刺激素(FSH)及睾酮(TSTO)含量并进行对比分析。
结果 经过研究发现，试验组中共发现 37 例患者出现 FSH、LH、TSTO 含量异常，发生率为 52.90％。对照组受检者 LH 阳性 2 例 TESTO 阳性者 0 例，发生率为 2.86%。试验组患者的 FSH 水平和对照组相比差异不具有统计学意义(P＞0.05)，试验组患者的 LH、TSTO 含量和对照组相比明显升高，两组比较差异具有统计学意义(P＜0.05)。
结论 多囊卵巢综合征患者多伴有性激素含量异常，FSH 水平偏低或正常，以黄体生成素(LH)、睾酮(TSTO)水平异常最为显著，具有较高的临床诊断价值。故而临床发现育龄女性体内 LH 和 TESTO 的含量升高情况应当及时予以全面诊断，为患者提供针对性治疗，以预防罹患 PCOS 风险。

PU-1586

乙型肝炎表面抗原阴性/核心抗体阳性患者 HBV DNA 阳性率及临床意义

蔡婧瑶、吴伟民、吴佳丽、陈芷阳、吴紫薇、唐亚梅、胡敏
中南大学湘雅二医院

目的 本研究将估算出 HBsAg 阴性/HBcAb 阳性患者的 HBV DNA 阳性检出率，探讨 HBV DNA 阳性样本的病毒载量与乙肝病毒血清学标志物、肝功能和凝血功能指标的相关性。同时，分析免疫抑制治疗是否影响 DNA 复制。
方法 选取 2019 年 1 月至 12 月在中南大学湘雅二医院就诊的 HBsAg 阴性/HBcAb 阳性患者 2013 例。观察其血清学标志物、HBV DNA 病毒载量、肝功能和凝血功能指标以及免疫功能状态。
结果 HBsAg 阴性/HBcAb 阳性患者的 DNA 阳性率为 5.4％，并且随着 HBV 血清学特征不同 DNA 阳性率和病毒载量也有明显差异。在 DNA 阳性患者中，DNA 载量与谷丙转氨酶和谷草转氨酶的活性呈正相关，而与抗凝血酶Ⅲ活性呈负相关。并且在接受免疫抑制治疗的患者中，血清 ALT 与 AST 水平均高于未接受免疫抑制治疗的患者；HBeAb 阳性组患者血清 ALT 与 AST 水平明显高于 HBeAb 阴性组。
结论 对 HBsAg 阴性/HBcAb 阳性患者，临床医生应关注患者免疫功能状态，如果不能及时检测 HBV-DNA，也可观察 ALT、AST 以及 ATⅢ的水平变化，推测病毒复制情况，从而减少该类患者 HBV 的发病风险和传播风险。

PU-1587

Vertical transmission rate of hepatitis C in China：A systematic review and meta-analysis

Hongyan Li 、Li He、Yongjun Wang
Second Xiangya Hospital of Central South University

Vertical transmission is one of the main transmission routes of hepatitis C virus infection.The main purpose of this paper is to explore the vertical transmission rate of Chinese mainland hepatitis C virus (HCV) infection in recent decades by meta analysis, which has a certain reference value for controlling HCV mother-to-child transmission and improving the public health system.

Methods PubMed, CNKI, WanFangData, SinoMed, EMBASE and VIP were searched and 17 articles were included.the literatures about Chinese mainland HCV mother-to-infant transmission published from between 1 January 1994 and 30 December 2019 were collected . Subgroup analysis and Meta regression analysis were used to identify potential sources of heterogeneity among the included studies, and sensitivity analysis was used to explore the effect of a single study on the combined effect.

Results Among the 17 studies included, the vertical transmission rate of HCV was between 1.1% and 86.7%, and there was significant heterogeneity among the studies (I^2=86.2%,P<0.001). The combined vertical transmission rate of Chinese mainland HCV based on random effect model was 17.38% [95%CI(9.60,26.88)]. Subgroup analysis showed that the vertical transmission rate of HCV was the highest in intrauterine infection (31.49%). The vertical transmission rate of HCV in pregnant women with other infections was significantly higher than that in the south. In Chinese mainland area, the mother-to-infant transmission rate of HCV in the north was higher than that in the south.

Conclusion The rate of vertical transmission of HCV in Chinese mainland area is relatively high, suggesting that more attention should be paid to mother-to-child transmission of hepatitis C, and case identification and prevention strategies should be expanded and strengthened to detect and monitor HCV infected women and children, so as to reduce the risk of mother-to-child transmission of hepatitis C.

PU-1588

丙肝病毒感染相关检测技术及筛查诊断策略新进展

李红燕、贺理、王勇军
中南大学湘雅二医院

高效抗病毒药物（DAAs）可以治愈 95%以上的丙肝病毒感染者，世卫组织（WHO）新的战略目标是将丙肝病毒感染率、死亡率分别减少 90%和 65%。目前，丙肝病毒（HCV）感染的筛查和诊断主要是基于抗 HCV 抗体和/或 HCV RNA 检测，但其检测时间长、价格昂贵且有部分隐匿性 HCV 感染者血清 HCV 抗体、HCV RNA 检测均阴性。因此，采用简单快速、高灵敏度、高特异性的检测方法来简化 HCV 的筛查、诊断，对实现 2030 年消灭丙肝病毒性肝炎的目标至关重要。本文对丙肝病毒的抗体、核心抗原、RNA 的相关检测技术及国内外丙肝筛查诊断策略进展进行了综述并对简化 HCV 筛查和诊断作出思考和展望。

PU-1589

基于 BAS 化学发光技术中一种全自动化抗生物素干扰方法及性能评价

刘栋[1,2]、王晓琴[2]、周莉莉[1]、胡健[2]、张宁[2]、陈斌[1]、仝慧[1]
1. 铜川市人民医院
2. 西安交通大学第一附属医院

目的 在采用生物素-链霉亲和素的化学发光技术中，建立和评价一种可实现全自动化的抗生物素干扰方法。
方法 筛选适宜的链霉亲和素磁微粒（M）浓度，在全自动仪器中对加入一定浓度的生物素样品进行检测，评价该方法的精密度、正确度和检出限。
结果 （1）M 浓度越高，抗生物素干扰能力越强；但 M 浓度越高，对光信号的屏蔽作用也越强。（2）在夹心法项目人绒毛膜促性腺激素 β 亚基（β-HCG）和竞争法项目孕酮（Prog）中，当 M 浓度为 2.16 mg/ml（M6）时，至少可抵抗 500 ng/ml 的外源性生物素干扰，且对光信号的屏蔽作用相对较小；（3）应用 M6 进行抗生物素干扰时，尽管该方法的空白限（LOB）、检出限（LOD）和定量检出限（LOQ）均较原倍 M（0.72mg/ml）有一定增大，但总不精密度<1/3 允许总误差、正确度<1/2 允许总误差，能满足实际需要。
结论 在全自动仪器中使用 M6 是一种经济、便捷、有效、准确的抗生物素干扰方法。

PU-1590

宝鸡地区 2 型糖尿病患者亚临床甲状腺功能减退及骨密度异常发生率分析

葛君琍
宝鸡高新人民医院

目的 分析 2 型糖尿病患者亚临床甲状腺功能减退及骨密度减低的相关性。
方法 选择我院诊断为 2 型糖尿病者 2986 例，其中男性 1763 例女性 1223 例。体检中心健康体检人群 1200 例，其中男性 600 例，女性 600 例。采用美国雅培全自动化学发光免疫分析仪，罗氏全自动生化分析仪检测分别检测血清 T3、T4、FT3、FT4、TSH，空腹血糖、糖化血红蛋白含量。双能 X 线吸收法测定骨密度。
结果 糖尿病组甲状腺功能异常、骨量减少、骨质疏松检出率均高于对照组 P＜0.001；2 型糖尿病组显示，各年龄段亚临床甲状腺功能减退、骨量减少及骨质疏松发生率，均高于对照组，并且随着年龄增长而发生率升高，青年老年组＞中年组＞青年组。
结论 2 型糖尿病患者亚临床甲状腺功能减退与骨密度减低发生率高于普通人群。建议对糖尿病患者定期进行甲状腺功能及骨密度检测筛查。做到早期预防及早期诊断，便于临床针对性的采用治疗措施，提高糖尿病患者的生活质量。

PU-1591

矮小儿童生长激素治疗后 IGF-1 和甲状腺功能的变化研究

张志平
空军军医大学西京医院

目的 探讨矮小儿童经基因重组人生长激素治疗前后甲状腺功能和胰岛素样生长因子-1（IGF-1）的变化。
方法 选取 2017 年 5 月至 2019 年 5 月期间在西京医院就诊的 60 例矮小症的患儿（全部为甲状腺功能正常患儿），采用基因重组人生长激素(rhGH)治疗 2 年。比较患儿治疗前后的生长发育情况、甲状腺功能指标，分别于治疗前 、治疗 3 个月、治疗 6 个月，取患儿清晨空腹血 ，测定游离三碘甲状腺原氨酸（fT3）、游离甲状腺素（fT4）及促甲状腺素（TSH）水平分以及胰岛素样生长因子 1（IGF-1），分析比较几个点测量指标的均数以及两组治疗前后生长参数。
结果 在 rhGH 治疗后身高的标准差计数 、生长速度均有所改善 。提示经人生长激素治疗后甲状腺功能差异无统计学意义，IGF-1 差异有统计学意义。
结论 治疗前甲状腺功能正常的矮身材患儿治疗后对甲状腺功能影响不大，IGF-1 增长与儿童生长指数成正比，可作为监测疗效的安全指标。

PU-1592

炎症性肠病与肠易激综合征的鉴别诊断

葛秋霞
江苏省人民医院（南京医科大学第一附属医院）

目的 探讨粪便中钙卫蛋白(calprotectin，CPT)在炎症性肠病(Inflammatory bowel disease，IBD)及肠易激综合征鉴别诊断中的临床应用。
方法 选择 2018 年 5 月至 11 月在我院初诊为 IBD 的住院患者 221 例，其中溃疡性结肠炎(Ulcerative colitis, UC)57 例，克罗恩病(Crohn's disease, CD)164 例，肠易激综合征（irritable bowel disease，IBS-D）30 例，收集患者内镜检查前的粪便及对应外周血，检测各组粪便 CPT 水平和血常规相关指标。
结果 CD 组、UC 组粪便 CPT 阳性率均显著高于 IBS 组（P<0.05），CPT 水平也显著高于 IBS 组（P<0.01），且 UC 组显著高于 CD 组（P<0.05）。当按肠道炎症严重程度分组时，UC 轻度者明显高于 CD 轻度者（P<0.05），UC 中、重度者与 CD 中、重度者之间无明显差异（P>0.05）。CD 组、UC 组 WBC、N、PLT 均较 IBS 组显著升高（P<0.05），其中 UC 组 WBC 和 N 较 CD 组更高（P<0.05），UC 组 RBC 显著低于 CD 组和 IBS 组（P<0.05）。CPT+WBC+N+PLT+RBC 联合的敏感性在 CD、UC 为 92.4%、94.5%，特异性分别达 97.7%,、98.4%。
结论 粪便中 CPT 水平可作为 IBD 活动性强弱的评估并且与血常规指标联合可提高诊断即鉴别诊断的敏感性和特异性。

PU-1593

血清脂肪因子 Vaspin 与 Adropin 蛋白水平联合检测在冠心病临床诊断中的应用

陈峻
武汉市第一医院

目的 探讨血清脂肪因子 Vaspin 与 Adropin 蛋白水平联合检测对冠心病临床诊断的意义。
方法 选取 2020 年 8 月至 2021 年 2 月在我院诊治的老年冠心病患者 100 例为观察组，及同期我院健康老年体检者 100 例为对照组。采用酶联免疫吸附(ELISA)法检测各组血清脂肪因子 Vaspin 和 Adropin 蛋白表达水平，绘制 ROC 曲线，分别计算 Vaspin、Adropin 用于诊断冠心病的曲线下面积（AUC）。评价各项指标联合检测时对冠心病患者临床诊断的意义。
结果 与对照组相比，观察组患者 Vaspin 和 Adropin 水平均显著降低（$p<0.05$）。Vaspin 诊断冠心病的 AUC 为 0.898，Adropin 诊断冠心病的 AUC 为 0.883，Vaspin 和 Adropin 联合诊断冠心病的 AUC 为 0.955；Vaspin 和 Adropin 联合检测用于冠心病诊断的敏感度、特异度及准确度均显著增加（$p<0.05$）。
结论 血清脂肪因子 Vaspin 与 Adropin 蛋白水平联合检测可改善冠心病的预后，明确诊断。

PU-1594

甲状腺功能五项在甲状腺功能亢进中的诊断价值

汪旭
吉林金域医学检验所有限公司

目的 甲状腺激素对人体有着十分重要的作用，几乎作用于所有组织。本文分析了甲状腺功能五项检测结果，探讨其在甲状腺功能亢进诊断中的应用价值，为临床提供参考依据。
方法 选取 2020 年 8 月份到 2021 年 3 月份送检样本 100 例，其中 60 例为已知晓为甲状腺功能亢进患者作为 A 组，其余 40 例为甲状腺功能正常的患者作为 B 组，对这两组患者都进行甲状腺功能五项检测,对这两组患者检测结果进行比较分析,对游离三碘甲状腺原氨酸(FT-3)、游离甲状腺素(FT-4)、促甲状腺激素(TSH)、甲状腺过氧化物酶抗体(TPO)、抗甲状腺球蛋白抗体(TGAb)抗体含量进行对比与评定，对比这两组甲状腺功能的阳性检出率与阴性检出率。
结果 A 组患者 TSH 水平明显低于 B 组且部分小于下限($P<0.05$),A 组的 FT-3、FT-4、TPO、TGAb 水平明显高于 B 组且部分高于上限($P<0.05$),A 组阳性检出率明显高于 B 组,A 组阴性检出率明显低于 B 组($P<0.05$)。
结论 人体的生长发育、能量代谢甚至于生殖系统都不同程度上受甲状腺激素的影响。其中促进生长发育是甲状腺激素对人体最为显著的作用。因此甲状腺功能的检测对诊断成年人的甲亢所致的多汗、消瘦、易怒和儿童甲低所致的生长发育迟缓型呆小症都有重要的临床意义。实验表明，甲状腺功能五项指标对甲状腺功能亢进有明显的检出作用,有助于帮助患者明确病症,为临床治疗提供参考,甲状腺功能五项指标检测法可作为临床医学检验甲状腺功能亢进的主要手段。

PU-1595

串联液滴微流控芯片化学发光免疫分析系统

刘大渔
广州市第一人民医院

目的 发展一种基于串联液滴微流控芯片的化学发光免疫分析方法，可用于现场条件下的生物标志物快速检测。
方法 研究设计并加工了一种包含串联液滴微流控芯片与相关分析仪器的化学发光免疫分析系统。仪器的结构紧凑，其内包含了温度控制、磁力控制、机械运动以及光学检测模块，可配合微芯片实现“样本进，结果出”的自动化分析。芯片的主要结构是通过狭缝串联的一系列反应微池，其内预储存了含有不同试剂的油包水型液滴。通过外部磁力控制，可使磁珠在微液滴之间程序性转移，并依次完成抗原抗体反应、磁珠洗涤以及酶促化学发光反应，而最终产生的化学发光信号将通过仪器内集成的光电倍增管来读出。
结果 为了验证串联液滴微流控芯片免疫化学发光系统的检测性能，研究建立了基于该系统的降钙素原（PCT）检测方法。在优化了各项实验条件的基础上，该系统能够以自动化的形式在 15 分钟以内对 PCT 进行高度灵敏、特异以及定量准确的检测，其检出限为 0.044 ng·ml-1。研究分析了 105 份感染性疾病患者的临床样本，所测得的 PCT 浓度与临床所用 Cobas E602 电化学发光免疫分析仪的检测结果呈现出了良好的线性相关性（R2=0.98）
结论 研究发展的串联液滴微流控芯片化学发光免疫分析方法具有检测快速灵敏，定量准确以及自动化分析的特点和优势，有望用于解决现场环境下的生物标志物快速检测问题。

PU-1596

补体 C5b-9 在系膜增生型 IgA 肾病中的作用机制及其临床应用初探

谢梦晓
江苏省人民医院（南京医科大学第一附属医院）

目的 探讨补体终末复合物 C5b-9 在系膜增生型 IgA 肾病病变中的作用及其调控机制，并初步评估其在 IgA 肾病中的应用价值。
方法 1）复制大鼠 Thy-1 肾炎（Thy-1N）模型，或利用 C5b-9 刺激大鼠肾小球系膜细胞（GMC）。2）RNA、抗体芯片以及 IB 等进行分析并验证。3）CCK-8 及报告基因等分析相应基因或蛋白对 GMC 增殖的影响与调控机制。4）免疫共沉淀及质谱等分析相应蛋白激酶磷酸化修饰转录因子对 GMC 增殖及其转录调控的作用。5）采用慢病毒肾动脉灌注的方式沉默上述基因以观察 Thy-1N 大鼠病变的改善。6）免疫组化以及 ELISA 检查在 IgA 肾病患者及对照的肾组织或血清中 C5b-9 以及相应蛋白的表达水平。
结果 1）成功复制 Thy-1N 的动物与细胞模型。2）转录因子 SOX9 以及细胞周期蛋白 Cyclin D1 表达上调，而 ERK1/2 激酶磷酸化水平显著升高。3）ERK1/2、SOX9 和 Cyclin D1 均能增强 GMC 的增殖，ERK1/2 和 SOX9 均能上调 Cyclin D1 的表达，SOX9 能够直接结合于 Cyclin D1 启动子区域，而该过程受 ERK1/2 影响。4）ERK1/2 磷酸化 SOX9 丝氨酸 64 和 181 位点是促进其调控 GMC 增殖以及 Cyclin D1 表达的关键位点。5）沉默上述基因能显著改善 Thy-1N 大鼠病变。6）C5b-9、p-ERK1/2、p-SOX9、SOX9 或 Cyclin D1 在系膜增生型 IgA 患者肾组织或血清中的表达水平显著升高。
结论 C5b-9 能通过调控 ERK1/2 磷酸化修饰 SOX9 促进 Cyclin D1 表达，进而导致 GMC 增殖并引起系膜增生型 IgA 肾病患者病变。C5b-9、p-ERK1/2、p-SOX9、SOX9 和 Cyclin D1 的表达在系膜增生型 IgA 患者的肾组织或血清中显著升高，提示其在该疾病的诊断中具有潜在的应用价值。

PU-1597

CXCL7 在肺癌外泌体中的表达及其临床意义

陈良远、赵秋荣、杨国溜、陈发林
福建省立医院

目的 探讨趋化因子 7（CXCL7）在外泌体中的表达对肺腺癌的早期诊断的重要意义。
方法 选取 2020 年 10 月至 2021 年 2 月于福建省立医院确诊的肺腺癌患者例和健康体检正常人标本，采集其外周血样 1ml,取血清标本进行外泌体的提取，用裂解液破坏外泌体得到蛋白，再用 ELISA 方法检测 CXCL7 的含量。数据用 SPSS 20.0 软件进行分析，最后采用受试者工作曲线（ROC）曲线，分析 CXCL7 早期诊断肺腺癌的灵敏度和特异度，以及与健康人比较是否具有统计学意义。
结果 趋化因子 7（CXCL7）的表达水平在肺腺癌患者的外泌体中较健康人表达显著增加(P 值＜0.001)，差异有统计学意义，ROC 曲线所得的结果为：Cut-of 值：433.6pg/ml SN:72.0% SP:86.67% AUC:86.53%。
结论 CXCL7 在外泌体中的表达对肺腺癌的早期诊断有一定的意义。

PU-1598

血清白细胞介素（IL-6）和 C 反应蛋白（CRP）在胰腺癌中的应用

吴文冰、沈菁、徐如梅、陈发林
福建省立医院

目的 检测胰腺癌患者手术前后血清中的 IL-6 和 CRP 水平，同时与健康体检者和胰腺炎患者进行比较，探讨 IL-6 和 CRP 在胰腺癌诊断中的价值。
方法 收集标本，将其分为三组• 健康对照；,胰腺炎组；*f* 胰腺癌组；记录相关的临床资料。将标本分别保存到-20℃。用免疫比浊法和化学发光法分别检测三组标本中 IL-6 和 CRP 水平。
结果 胰腺癌患者血清白介素-6 和 C-反应蛋白水平高于健康受试者，低于急性胰腺炎患者。
结论 血清白介素-6 和 C-反应蛋白在胰腺癌和急性胰腺炎的诊断鉴别有重要意义。

PU-1599

抗 CCP 抗体和 RF 联合检测在类风湿性关节炎诊断中的应用进展

逯思显、胡文霞、杨叶
呼和浩特金域检验所有限公司

类风湿性关节炎(rheumatoid arthritis,RA)是医学当中比较常见的疾病,也是一种临床表现比较隐匿且复杂的多发病。如今，RA 成为了越来越多现代都市人的健康威胁，而此类疾病的诊断手段并没有十分显著的特性，以及临床治疗的不规范，可能造成病情容易发展为关节强直及畸形，严重的话，将会导致残疾。目前临床上对于 RA 早期诊断,有两个重要指标。一是类风湿因子(rheumatoid factor,RF),常被用作诊断 RA 的指标。二是环瓜氨酸肽(cyclic citrullinated peptide,CCP),RA 患者血清中常见的抗体，它与 RF 相比,在 RA 诊断中，敏感度相似但特异度更高。本文综述了近年来抗 CCP 抗体和 RF 在 RA 诊断中的应用进展。

PU-1600

多重微珠流式免疫荧光法检测系统性红斑狼疮患者自身抗体的临床应用

肖倩
广东省中医院

目的 分析多重微珠流式免疫荧光法检测系统性红斑狼疮患者自身抗体的结果和临床应用。
方法 选取确诊系统性红斑狼疮患者 46 例，健康体检者 30 例，利用多重微珠流式免疫荧光法和免疫印迹法检测各组自身抗体，进行两种方法的结果分析。
结果 试验组采用多重微珠流式免疫荧光法和免疫印迹法检测 ANAs 阳性率分别为 73.9%和 80.4%，差异无统计学意义（p>0.05）。多重微珠流式免疫荧光法检测抗 Sm 抗体、抗 SSA、抗 dsDNA 灵敏度分别为 28.2%、34.7%、23.9%，检验效能分别为 56.5%、60.5%、53.9%。利用多重微珠流式免疫荧光法检测两组 ANAs，除抗 Jo-1 抗体、抗着丝点抗体外 7 种常用自身抗体水平差异具有统计学意义（p＜0.05）。
结论 多重微珠流式免疫荧光法是一种检测新方法，定量，快速，可以一次性同时进行多种自身抗体的联合检测，可为临床提供良好指标。

PU-1601

血清 CEACAM1 对结直肠癌诊断的临床价值分析

黄晨蕾、王莹莹、刘小岑、李小宁、陶绍能
皖南医学院弋矶山医院

目的 检测血清癌胚抗原相关细胞粘附分子 1 (CEACAM1)在结直肠癌患者血清中 的水平，以探讨其在结直肠癌中的诊断价值并分析其与临床病理资料之间的关系。
方法 采 用 ELISA 法测定了 50 例结直肠癌患者、30 例结直肠良性疾病患者和 30 例健康对照血清 CEACAM1 水平，并进一步分析其与临床病理特征的相关性及诊断效能。
结果 结直肠癌 组 CEACAM1 血清浓度[469.1（258.1～637.5）pg/mL]明显较结直肠良性疾病组[246.8（206.9～ 311.3）pg/mL]和健康对照组[245.2（207.1～287.9）pg/mL]升高（P＜0.05）；Ⅲ/Ⅳ期结直肠 癌患者血清 CEACAM1 浓度明显高于Ⅰ/Ⅱ期患者（P＜0.01）。有淋巴结转移与远处转移的 结直肠癌患者血清 CEACAM1 浓度均明显升高，差异有统计学意义（P＜0.05）。ROC 曲线 分析表明，血清 CEACAM1 是筛选结直肠癌患者的一种潜在生物标志物(AUC 为 0.749，54.0%)。CEACAM1 对结直肠癌的诊断特异度（96.7%）略高于 CEA（86.7%）；CEACAM1 与 CEA 联合检测效能（AUC=0.822）和灵敏度（76.0%）略提高。
结论 血清 CEACAM1 可能是结直肠癌的一种潜在生物标志物。与 CEA 联合检测可略提高结直肠癌的诊断效能并 与结直肠癌的分期、转移相关。

时间与溶血因素对孕中期产前筛查项目 AFP 和 Free-β-HCG 的影响探讨

王玉萍、武其文、付夏、余冬黎
皖南医学院弋矶山医院

目的 探讨时间与溶血因素对孕中期产前筛查项目血清甲胎蛋白(AFP)和游离绒毛膜促性腺激素(Free-β-HCG)的影响。

方法 收集 50 例孕 14-21 周之间孕妇血清，一份 1 小时内分离血清，一份室温 22－26℃放置 3 小时分离血清，一份为溶血标本，1 小时内分离血清，放置-20℃冰箱中保存，若一周无法测定，则放置-75℃冰箱保存，同样条件进行测定。

结果 原始数据 AFP46.225±17.403, Free-β-HCG20.914±18.279，3 小时为 AFP47.899±19.424，Free-β-HCG24.759±18.145，溶血标本为 AFP54.522±41.174，Free-β-HCG24.049±17.774，室温放置 3 小时与溶血标本 AFP 和 Free-β-HCG 与原始标本 AFP 和 Free-β-HCG 相比较 P>0.5，差异无显著性。

结论 孕中期产前筛查标本室温放置 3 小时及溶血标本对检测结果无影响。

PU-1603

炎症性肠病与肠易激综合征鉴别诊断中相关炎症指标的临床应用

娄鉴芳、葛秋霞
江苏省人民医院（南京医科大学第一附属医院）

目的 探讨粪便中钙卫蛋白(calprotectin，CPT)在炎症性肠病(Inflammatory bowel disease，IBD)及肠易激综合征鉴别诊断中的临床应用。

方法 选择 2018 年 5 月至 2019 年 7 月在我院初诊为 IBD 的住院患者 175 例，其中溃疡性结肠炎(Ulcerative colitis, UC)88 例，克罗恩病(Crohn's disease, CD)87 例，肠易激综合征（irritable bowel disease，IBS-D）30 例，收集患者内镜检查前的粪便及对应外周血，检测各组粪便 CPT 水平和血常规相关指标。

结果 CD 组、UC 组粪便 CPT 阳性率均显著高于 IBS 组（P<0.05），CPT 水平也显著高于 IBS 组（P<0.01），且 UC 组显著高于 CD 组（P<0.05）。当按肠道炎症严重程度分组时，UC 轻度者明显高于 CD 轻度者（P<0.05），UC 中、重度者与 CD 中、重度者之间无明显差异（P>0.05）。CD 组、UC 组 WBC、N、PLT 均较 IBS 组显著升高（P<0.05），其中 UC 组 WBC 和 N 较 CD 组更高（P<0.05），UC 组 RBC、Hb、Hct 在 UC 显著低于 CD 组和 IBS 组（P<0.05）。CPT+WBC+N+PLT+RBC 联合检测的敏感性在 CD、UC 分别为 92.4%、94.5%，特异性分别达 97.7%、98.4%。

结论 粪便中 CPT 水平可作为 IBD 活动性强弱的评估并且与血常规指标联合可提高诊断及鉴别诊断的敏感性和特异性。

PU-1604

川东北地区耐头孢哌酮/舒巴坦鲍曼不动杆菌耐药基因检测

刘亮华、刘海波、林芳、胡娟、赵明才
遂宁中心医院

目的 通过聚合酶链式反应（PCR）检测 β-内酰胺酶相关耐药基因，探讨耐头孢哌酮/舒巴坦鲍曼不动杆菌 β-内酰胺酶基因分布特点。
方法 收集 2018 年 1 月至 2019 年 6 月我院微生物室采用 VITEK 2 Compact 全自动微生物系统鉴定的醋酸钙-鲍曼不动杆菌复合群共 157 株，聚合酶链式反应检测 β-内酰胺酶相关耐药基因，包括 A 类（ESBLs 类）GES、TEM，B 类（金属酶类）IMP、VIM、DNM，D 类（苯唑西林酶类）OXA-51、OXA-23、OXA-24、OXA-58；利用基质辅助激光解吸电离飞行时间质谱（MALDI-TOF MS）对耐药基因 OXA-51、TEM 和 OXA-23 共表达型进行聚类分析。
结果 药敏分析发现对头孢哌酮/舒巴坦耐药的鲍曼不动杆菌对临床多种药物耐药，亚胺培南、头孢他啶耐药率 99.4%，阿米卡星、庆大霉素、妥布霉素耐药率超过 70%，米诺环素耐药率 45.2%。替加环素较为敏感，耐药率仅为 5.7%。β-内酰胺酶基因检出率：OXA-51 100%、TEM 98.7%、OXA-23 93.6%、GES 53.5%、VIM 47.8%、IMP 17.8%、OXA-58 16.6%，未检出 NDM、OXA-24 基因。共有 11 种耐药基因组合型，其中以耐药基因组合 A 为主，OXA-51、TEM 和 OXA-23 共表达（n=62，39.74%）。随机选取 14 株 OXA-51、TEM 和 OXA-23 共表达菌株，聚类分析成同一簇分布。
结论 β-内酰胺酶基因 OXA-51、TEM 和 OXA-23 共表达模式是我院耐头孢哌酮/舒巴坦鲍曼不动杆菌的主要耐药机制之一；MALDI-TOF MS 技术有望成为分子流行病学研究新型手段。

PU-1605

肿瘤住院患者输血前传染性指标检测结果分析

贺元
电子科技大学附属医院•四川省人民医院临床医学检验中心

目的 探讨肿瘤住院患者的常见输血传染性疾病的感染状况及其与年龄大小和肿瘤类别的相关性。
方法 对本院 2016 年 1 月～2019 年 12 月期间，输血前传染性标志物(乙型肝炎表面抗原（HBsAg）、丙型肝炎病毒抗体（抗-HCV）、人类免疫缺陷病毒抗体（抗-HIV1/2）、梅毒螺旋体抗体（抗-TP）)阳性肿瘤住院患者的检验结果进行回顾性统计分析。
结果 在 59370 例患者中共发现 HBsAg 阳性 7820 例、抗-HCV 阳性 269 例、抗-TP 阳性 1041 例、抗 HIV 阳性 82 例，总阳性率分别为 13.17%、0.45%、1.75%、0.14%。输血前各传染性标志物感染者在各个年龄段均有分布，主要集中在 41~70 岁，占总阳性率的 60%以上。输血前传染性标志物感染者几乎于医院各个病种均有发现，检出率较高（20%左右），疾病谱较宽。
结论 通过统计分析发现 HBsAg、抗-HCV、抗-HIV 的阳性率无明显变化处于平衡发病状态，抗-TP 在 2016 年至 2019 年有增加趋势但 2019 年又无明显变化也趋于平衡。感染者在各个年龄段均有分布，主要集中在 41~70 岁。HBsAg 阳性的以肝癌为主；抗-HCV 阳性的以肝癌的检出率最高，其次以宫颈癌和乳腺癌；抗-TP 阳性的患者检出率较高的为宫颈癌，其次为卵巢癌患者；HIV 阳性患者则以头颈部肿瘤所占构成比较高，其次为占位性病变。

PU-1606

ProGRP 在小细胞肺癌诊断中的价值

朱波
宜宾市第一人民医院

目的 探讨胃泌素释放肽前体（ProGRP）检测在小细胞肺癌 (small-cell lung cancer，SCLC)中的价值；
方法 选取我院 2018 年 12 月一 2019 年 9 月呼吸科、肿瘤科 SCLC 患者 96 例，非小细胞肺癌(non-small-cell lung cancer，NSCLC)患者 48 例，肺部良性疾病患者 42 例，健康体检者 60 例，分别进行 ProGRP 和神经元特异性烯醇化酶(NSE)的检测并对结果进行统计分析；ProGRP 采用微粒子化学发光法，用美国雅培 ARCHITECT i2000SR 全自动化学发光仪进行定量检测，NSE 采用安图全自动免疫仪作定量测定；
结果 SCLC 组血清 ProGRP、NSE 水平均显著高于 NSCLC 组、肺良性疾病组和正常对照组，差异有统计学意义(P<0.05)；ProGRP、NSE 对诊断 SCLC 的灵敏度分别为：81.25%、67.71%、特异性为 94.67%、81.33%；
结论 对 SCLC 的诊断，血清 ProGRP 比 NSE 拥有更高的灵敏度和特异性，具有重要的临床应用价值，值得大力推广。

PU-1607

子宫内膜癌中 PDCD5 的下调表达及临床意义

高梦
山东大学第二医院

目的 子宫内膜癌是女性生殖系统最常见的恶性肿瘤之一。程序性细胞死亡 5 (PDCD5)是新近发现的与细胞凋亡相关的基因，在一些人类肿瘤的发生发展中发挥着重要作用。然而，PDCD5 在子宫内膜癌中的表达及临床意义尚未被研究。
方法 我们通过 qRT-PCR、western blot 和免疫组化技术研究了 PDCD5 在子宫内膜样癌及正常对照子宫内膜中的表达，并分析了 PDCD5 表达与患者临床病理参数的关系。此外，我们通过免疫细胞化学方法检测了正常子宫内膜腺上皮细胞和子宫内膜样子宫内膜癌来源细胞株 KLE 中 PDCD5 的表达。
结果 PDCD5 蛋白主要表达于腺上皮细胞和子宫内膜癌细胞的细胞质中，且子宫内膜癌标本中 PDCD5 蛋白水平明显低于对照子宫内膜。PDCD5 表达降低与肿瘤分化程度相关。中、低分化子宫内膜癌中 PDCD5 蛋白表达低于正常子宫内膜癌和高分化子宫内膜癌。而正常子宫内膜增殖期与分泌期、高分化子宫内膜癌与正常对照间 PDCD5 表达无显著差异。免疫细胞化学在对照腺上皮细胞和 KLE 细胞中验证了这一结果。
结论 PDCD5 可能在子宫内膜癌的发病机制中发挥关键作用，可能成为诊断和治疗子宫内膜癌的新靶点。

一种适用于移液器的清洗消毒装置

程孟浩
西安金域医学检验所有限公司

目的 本实用新型属于医学仪器清洁技术领域，具体涉及一种适用于移液器的清洗与消毒。

方法 上述发明柜体内底部被第一隔离板分成左清洗箱和右消毒箱，左清洗箱和右消毒箱的上部设置有移动机构,移动机构上安装有升降机构,升降机构底端安装有用于夹紧移液器的夹紧机构，左清洗箱顶部安装有用于限定枪管伸入的弹性限位垫，左清洗箱内设置有搅拌装置和清洗刷能够快速干净清洁移液器枪管，右消毒箱内安装有超声波雾化喷头和电磁微波装置。本装置能够自动彻底清洗移液器的枪管,并且通过电磁微波装置，产生的电磁微波能够加热超声波雾化喷头喷 出的水分子，也能够加热病毒细菌内的水分子，使消毒液在较高温下快递杀灭细菌，从而保证移液器干净安全。
结果 本装置结构设计合理，解决了针对移液器枪管清洗的难题,不仅可以彻底清洗枪 管内外部,还可以对移液器本体进行彻底消毒，有助于提高实验的精度。
结论 研究所设计装置申请了使用新型专利并取得授权，专利号：CN 210995650 U

抗缪勒氏管激素与 FSH、LH 检测的相关性研究及临床应用

严湘红[1]、黄新媛[2]、吴菲[1]
1. 长沙市中心医院
2. 湖南医药学院

目的 探讨抗缪勒氏管激素（AMH）与卵泡刺激素（FSH）及黄体生成素（LH）的相关性，进一步分析三种激素水平检测的临床应用。
方法 选择 2019 年 8 月-2020 年 5 月，在长沙市中心医院检验科进行了 AMH 和性激素六项检测的健康女性标本 218 例，按年龄分为育龄组、超育龄组及围经组，进一步选取其中健康女性 44 例作为正常组，并选取同期妇科门诊及住院部年龄 34~42 岁之间患有子宫肌瘤的患者共 15 例和患有卵巢囊肿的患者共 12 例作为患病组。
结果 在不同年龄组中，血清 AMH 水平随着年龄的增长呈现逐渐下降趋势，育龄组、超育龄组及围经组 3 组间比较差异有统计学意义（P<0.05）；Pearson 相关分析显示，AMH 与 FSH 间呈线性相关，与 LH 间非线性相关，在卵巢囊肿辅助诊断中，FSH 水平检测与正常组相比具有差异（P<0.05）。
结论 育龄组、超育龄组及围经组女性随年龄增长，AMH 水平逐渐下降，AMH 与 FSH 检测水平呈负相关，FSH 在卵巢囊肿辅助诊断中要优于 AMH、LH，有利于辅助临床判断卵巢囊肿对女性患者卵巢功能的影响程度。

肺炎支原体抗体不同测定方法在儿童肺炎支原体肺炎诊断中的应用评价

穆原[1]、高岭[2]
1. 江苏省人民医院（南京医科大学第一附属医院）
2. 南京市儿童医院

目的 比较肺炎支原体（Mycoplasma pneumoniae，MP）抗体两种检测方法对儿童肺炎支原体肺炎（Mycoplasma pneumoniae pneumonia，MPP）诊断的应用价值。
方法 回顾性收集南京市儿童医院呼吸科于 2019 年 6 月至 2019 年 7 月收治入院的疑似 MP 感染患儿共 80 例。采集病例临床与实验室检查资料，依诊断标准分别归入非 MPP 组、普通 MPP 组、RMPP 组。MP 抗体检测同时采用明胶被动凝集法（PA）与直接化学发光免疫测定法（CLIA）。采用 Shapiro-Wilk 正态性检验考察计量资料的分布情况，偏态资料以中位数（四分位间距）[M(P25，P75)]表示，多组间比较采用 Kruskal-Wallis 秩和检验，率的比较采用卡方检验，等级相关采用 Spearman 秩相关分析，指标诊断性能评价采用非参数 ROC 分析。

结果 非 MPP、普通 MPP 与 RMPP 三组患儿在男女比、热程、热峰温度、GGT、ALB 与 PLT 间的差异无统计学意义（*P* 均> 0.05），而在年龄、住院天数、咳嗽天数、CHE、A/G、IgA、IgM 与 IgG 间存在显著差异（*P* 均< 0.05）。ROC 分析显示 PA 法与 CLIA 法 MP-IgM 联合检测，用于 MPP 诊断的 AUC 为 0.862，其效能高于单一方法检测。
结论 MPP 患儿年龄显著大于非 MPP 组，PA 法与 CLIA 法 MP-IgM 联合检测可提高对 MPP 的诊断效能。

巨噬细胞自噬在动脉粥样硬化中的作用

彭琪、关秀茹
哈尔滨医科大学附属第一医院

动脉粥样硬化（atherosclerosis，AS）的基本病理机制为炎症反应，巨噬细胞在炎症反应中起关键作用。自噬是一种进化保守的亚细胞过程，参与溶酶体内蛋白质的降解和细胞器的损伤是维持细胞内稳态的关键，自噬在抑制炎性反应和细胞凋亡以及促进胆固醇流出方面起着重要作用。而巨噬细胞的自噬可促进脂质代谢,减少泡沫细胞的形成,减弱炎性反应信号,进而抑制动脉粥样硬化。而自噬失调已被认为与包括动脉粥样硬化在内的多种疾病有关，诱导巨噬细胞自噬可能在治疗动脉粥样硬化上具有深远的意义。本文就巨噬细胞自噬在 AS 中的作用作一综述。

PU-1612

应用酶联免疫系统与胶体金检测艾滋抗体的检测效果

邵贝贝
山东省千佛山医院

目的 讨论分析应用酶联免疫法与胶体金法检测艾滋抗体的检测效果
方法 选取我院 2019 年 6 月至 10 月的就诊患者为对象，将患者随机分为的对照组和研究组 105 例对照组患者采用酶联免疫法进行检测，105 例研究组采用胶体金法进行检测，对两组患者的检测效果进行分析。
结果 研究组采用的酶联免疫法检测率为 4.3%，与对照组采用的胶体金法检测率相比无明显差异（P>0.05）。
结论 应用酶联免疫法与胶体金法两种方法对艾滋抗进行检测均具有良好的效果能直观的对艾滋病毒进行检测，值得在临床上进一步用推广。

PU-1613

孕妇葡萄糖耐量及血清胰岛素、C-肽释放水平检测的特点

任丽芬
空军军医大学西京医院

妊娠糖尿病（Gestational diabetes mellitus ,GDM）是妊娠期最常见的并发症之一，其发病率呈明显升高趋势。GDM 对母婴的健康及生命安全都会有一定的威胁，因此为保证母婴健康，应及时发现并接受治疗。为保证临床诊断的准确性，在妊娠糖尿病的筛查诊治中，糖耐量、胰岛素、C 肽释放是常用检测项目。对血中 C 肽、胰岛素浓度进行检测， 能够了解胰岛 β 细胞贮备功能。 同时由于 C 肽的抗干扰性和稳定性， 还能弥补测定胰岛素的不足。本次研究回顾性分析我院门诊

420 例孕妇的临床资料，分析葡萄糖耐量（ oral glucose tolerance test，OGTT）、胰岛素、C-肽释放曲线特点，探讨其对妊娠糖尿病的诊断价值。

呼吸道感染致免疫性血小板减少性紫癜 1 例

吕路路
空军军医大学西京医院

女 16 岁，因皮肤瘀点瘀斑伴牙龈出血 4 天入院。平素身体健康，无过敏史及血液病家族史。2 周前有呼吸道感染史。入院检查：体温正常，全身浅表淋巴结未见明显肿大，全身皮肤可见密集针尖大小淤点和散在融合的瘀斑，呈暗紫色，压之不褪色，微痛。可见牙龈粘膜渗血，咽部充血，扁桃体轻度肿大。心肺听诊正常，肝脾肋下未触及，双肾未见叩击痛。神经系统检查未见异常。实验室检查:血常规白细胞 5.3×1012/L，血红蛋白 125g/L，血小板 11×109L。

PU-1615

雅培 i2000SR 化学发光法测血浆 HBsAg 出现假阳性结果的分析及处理

吕路路
空军军医大学西京医院

目的 探讨雅培 i2000SR 全自动化学发光仪检测血浆 HBsAg 出现假阳性结果的原因及相应处理。
方法 对 2020 年 9 月至 11 月我院门诊患者，i2000SR 检测血浆中 HBsAg 结果在 0.05-0.3IU/ml 的标本分别进行原标本原机复查、金标法复查、ELISA 法复查等，同时重新抽取对应患者标本用其血清复查。
结果 共复测 HBsAg 结果≥0.05IU/ml 标本 167 例（排除仪器、质控、试剂等原因后，确定为假阳性），其中 18 例原机复查结果仍≥0.05IU/ml，金标复查均阴性，16 例 ELISA 法复查阴性，2 例弱阳性。18 例患者原管高速离心后 5 例弱阳性。18 例患者重新抽黄色促凝管离心（10000 g RCF,10 min），分离血清后复查 HBsAg 结果均<0.05IU/ml。
结论 检验前标本质量对结果准确性至关重要，选用患者血浆或者血清，以及两者分离是否完全，离心质量等均有可能影响实验结果的准确性，导致出现假阳性结果，因此，对 HBsAg 弱阳性标本，应进行多方法复查，以保证实验结果的准确性。

肾移植患者不同诊断切点下的高同型半胱氨酸血症的肾损伤研究

刘杨、张志平、彭道荣、邢瑞青
空军军医大学西京医院

探讨肾移植患者不同诊断切点下的高同型半胱氨酸（homocysteine，Hcy）血症对早期肾功能损伤的影响。
方法 收集 2016 年至 2019 年空军军医大学第一附属医院行肾移植术的患者 64 例为肾移植组，同期健康体检查 44 例为健康对照组，所有研究对象测定血 Hcy，肌酐（Cr），半胱氨酸蛋白酶抑制剂 C（Cys C），尿素（BU）及尿酸（UA），采用中国人改良 MDRD 计算肾小球滤过率（eGFR）,当 eGFR<60ml/min.1.73m2 认为肾移植患者有早期肾功能损伤。肾移植组以血 Hcy 水

平的四分位点分为四个亚组，各组间的肾功能指标比较采用方差分析；影响因素采用多元线性回归分析；以 10umol/L、12umol/L 及 15umol/L 三个不同高 Hcy 血症诊断点，校正性别、年龄、移植年限、FK506 的影响，用多元 Logistic 回归模型评估不同诊断点高 Hcy 血症对早期肾功能损伤的影响。

结果 与健康对照组比较，肾移植组四个亚组的血 Cr，CysC，UA、BU 及 eGFR 差异均有统计学意义（P<0.001）

DA-DRD5 信号调节结肠巨噬细胞极化影响结肠炎发生的研究

吴昱青[2]、刘璐[2]、王冰微[3]、姜玉莹[2]、林琳[1]、李晓曦[2]、杨硕[2]
1. 南京医科大学第一附属医院（江苏省人民医院）
2. 南京医科大学
3. 南京中医药大学

目的 多巴胺（Dopamine，DA）是一种重要的儿茶酚胺类神经递质，其水平的降低与炎症性肠病（Inflammatory bowel disease，IBD）的发展密切相关，然而 DA 对 IBD 发生的作用和潜在的机制目前仍不清楚，本研究旨在探索 DA 调节结肠炎的免疫相关作用机制，为临床炎症性肠病的诊治提供新的线索。

方法 1、 采用 DSS 诱导的小鼠结肠炎模型，对分笼或合笼饲养的野生型及 DRD5 敲除小鼠进行造模研究，分析 DRD5 对结肠炎发生的影响；

2、 体外运用 qPCR、western blot、流式细胞术以及 RNA 测序分析检测 DA-DRD5 信号影响结肠炎的具体分子机制；

3、体内实验验证 DA-DRD5 信号影响结肠炎的具体机制以及激活 DRD5 后对 DSS 诱导的结肠炎有何作用。

结果 1、 DSS 结肠炎模型研究显示 DRD5 在结肠炎发生过程中有保护作用，野生型和 DRD5 敲除鼠合笼实验及菌群测序结果表明 DRD5 在 DSS 诱导的结肠炎中的保护作用与菌群关联性不大；

2、 运用 RNA-seq 结果分析表明 DA-DRD5 信号能够通过抑制 NF-κB 通路进而抑制 M1 型巨噬细胞的极化以及通过提高 CREB 信号通路来促进 M2 型巨噬细胞的极化；

3、 体内实验表明 DA-DRD5 信号能够调节巨噬细胞的极化进而影响结肠炎的发生发展。

结论 本项研究发现 DA-DRD5 信号能够通过负调节 NF-κB 信号传导抑制 M1 巨噬细胞的极化，并通过激活 CREB 途径促进 M2 巨噬细胞极化，最终在小鼠结肠炎的发生发展中起到保护作用。

Exosomal KRAS mutation promotes the formation of tumor-associated neutrophil extracellular traps and causes deterioration of colorectal cancer by inducing IL-8 expression

Anquan Shang 、Dong Li
Tongji Hospital of Tongji University

Background Colorectal cancer (CRC) remains one of the leading causes of cancer-related death. The current study aimed to elucidate the mechanism by which exosomes carrying KRAS mutant contribute to neutrophil recruitment as well as the formation of the neutrophil extracellular trap (NET) in CRC.

Methods APC-WT and APC-KRASG12D mouse models were initially developed. Peripheral blood, spleen, bone marrow (BM) and mesenteric lymph nodes (mLN) were isolated to detect neutrophil content. Then, APC-WT and APC-KRASG12D mice were injected with exosomes isolated from APC-WT and APC-KRASG12D mice. The ratio of neutrophils, NETs formation and IL-8 protein content were subsequently quantified in colon tissues. DKs-8 (wild type) and DKO-1 (KRAS mutant) cells were employed for in vitro experimentation. Then, DKs-8 cells were cultured with exosome-treated PMA stimulated neutrophil-forming NETs culture medium, with cell viability, invasion, migration, and adhesion evaluated.
Results Compared with APC-WT mice, the numbers of polyps and neutrophils in the peripheral blood, spleen and mLNs were increased in APC-KRASG12D mice, accompanied with increased NET formation, IL-8 expression and exosomes. Meanwhile, IL-8 upregulation, neutrophil recruitment and NET formation were observed in the mice injected with exosomes derived from APC-KRASG12D. The in vitro investigation results revealed that more NETs were formed in the presence of DKO-1-Exos, which were inhibited by DNAse. In addition, DKs-8- and DKO-1 cells-derived exosomes could adhere to NETs under static conditions in vitro. Exosomal KRAS mutants were noted to exert stimulatory effects on the IL-8 production and NET formation to promote the growth of CRC cells.
Conclusion The results provide evidence suggesting that exosomes may transfer mutant KRAS to recipient cells and trigger increases in IL-8 production, neutrophil recruitment and formation of NETs, eventually leading to the deterioration of CRC.

PU-1619

外周血 Th9,Th22,Treg 细胞及细胞因子在变应性鼻炎中的研究

李志、杨婷婷
大连市中心医院

目的 检测过敏性鼻炎患者外周血辅助 T 细胞 9（Th9）、辅助 T 细胞 22（Th22）、调节性 T 细胞（Treg）的比例及血清中白细胞介素-9（IL-9）、白细胞介素-22（IL-22）、转化生长因子 β（TGF-β）和总 IgE 的表达水平，讨论其与过敏性鼻炎的关系以及临床意义。
方法 选择 48 例过敏性鼻炎患者为患者组，40 例健康成人作为对照组，采用流式细胞术检测外周血单个核细胞（PBMCs）中 Th9、Th22 和 Treg 细胞的比例；用酶联免疫吸附法（ELISA）检测血清中细胞因子 IL-9、IL-22 和 TGF-β 的含量；用速率散射比浊法检测血清中总 IgE 的水平。测得数据用 SPSS 24.0 统计软件进行分析，用 Pearson 相关分析进行相关性检验。
结果 同对照组相比，AR 患者组 Th9 细胞的百分比显著升高（P<0.0001），Treg 细胞的百分比显著降低（P<0.0001），Th22 细胞的百分比与健康对照组相比无显著差异（P=0.63）。与对照组相比，AR 患者组血清 IL-9、IL-22 和总 IgE 表达水平显著升高（P<0.0001），而 TGF-β 则呈现明显下降（P＜0.0001）。AR 患者血清 IL-9 与总 IgE 水平呈正相关（r=0.487, P<0.05），TGF-β 与总 IgE 水平呈负相关（r=-0.679, P<0.05）。
结论 外周血 Th9、Treg 细胞及细胞因子的分泌异常、比例失调在过敏性鼻炎的发病过程中起着重要作用，可作为病情诊断的重要参考指标，也可为临床病因的分析研究提供理论依据，而 Th22 细胞目前不明确，可能没有参与 AR 的发病机制。

PU-1620

依达拉奉通过抑制神经胶质细胞免疫炎性反应改善1-溴丙烷诱导神经毒性

索金宁[1]、赵秀兰[2]
1. 山东大学第二医院
2. 山东大学公共卫生学院

目的 观察 1-溴丙烷（1-BP）对运动神经元的损伤及自由基清除剂依达拉奉（EDV）的干预效果，探究小胶质细胞激活及 M1/M2 极化失衡在 1-BP 神经毒性中的作用。
方法 SPF 级雄性 Wistar 大鼠随机分为对照组、200、400、800 mg/kg·bw 1-BP 组、800 mg/kg·bw 1-BP+6 mg/kg·bw EDV 组、6 mg/ kg·bw EDV 组。分别按以上剂量给予相应组别动物 1-BP 和 EDV，持续 6 周，期间每周测定大鼠后肢抓力。实验结束后采用硫堇染色观察神经元形态，免疫组化观察小胶质细胞及星形胶质细胞激活、运动神经元丢失和凋亡情况。western blot 检测大脑皮层还原型硫氧还蛋白（Trx）、ASK1/MAPK 通路蛋白表达及蛋白硝基化水平。
结果 1-BP 暴露 6 周导致实验动物后肢抓力呈剂量依赖性下降，病理形态学观察到大脑运动皮质小胶质细胞及星形胶质细胞激活、伴随运动神经元丢失；同时，观察到 1-BP 染毒大鼠大脑皮层 nNOS 活性和 NO 水平明显升高，蛋白硝基化增强；Trx-ASK1-p38/MAPK 凋亡通路激活，表现为还原性 Trx 表达减少、ASK1 和 P38 磷酸化增强。动物染毒同时给予 EDV 干预可显著抑制小胶质细胞和星形胶质细胞活化、减轻运动神经元丢失，下调 Trx-ASK1-p38/MAPK 凋亡信号传导通路激活，有效改善 1-BP 染毒导致的后肢抓力下降。来自 1-BP 染毒大鼠大脑的外泌体可导致体外原代培养神经元轴突缩短、消失，给予 EDV 保护神经元损伤明显减轻。
结论 1-BP 暴露可导致实验动物大脑运动神经元损伤及运动功能障碍，与 Trx-ASK1-p38/MAPK 凋亡信号传导通路激活密切相关，清除自由基可有效减轻 1-BP 的神经毒性。

PU-1621

调节组蛋白乙酰化对肝癌细胞 IFI16 的诱导调控作用

赵霞
山东省千佛山医院

染色质核小体组蛋白 N 端的乙酰化、甲基化、磷酸化、泛素化修饰可影响组蛋白与 DNA 的亲和性而改变染色质的状态，对基因表达调控具有类似 DNA 遗传密码的作用。组蛋白乙酰化是一由组蛋白乙酰化酶(histone acetyl transferase,HAT)和脱乙酰化酶(histone deacetylase,HDAC)调控可逆的动态过程，。许多研究证实了组蛋白低乙酰化或 HDACs 的高表达与肿瘤的发生、发展密切相关。干扰素诱导蛋白 16（IFI16）属于 IFI200 蛋白家族，主要通过 JAK1-STAT 信号通路激活表达，在抑制肿瘤、促进细胞分化方面起重要的作用。研究表明 IFI16 蛋白表达减少或缺失与多种肿瘤的发生、发展密切关联，增加 IFI16 表达，会明显抑制细胞增殖周期、诱导细胞凋亡。选择 HepG2、BEL7402、SMMC7721 等肝癌细胞系应用 HDAC 抑制剂 VPA、TSA 进行干预，观察干预后细胞 IFI16 蛋白、mRNA 表达水平变化、细胞增殖、凋亡变化以确定 HDAC 抑制剂 VPA、TSA 对肝癌细胞 IFI16 的调控作用及其与细胞增殖变化的关系，以及调控作用是否与细胞表型相关。

PU-1622

代谢物柚皮素通过 TGF-β1 通路恢复 NK 细胞对 Tfh 样细胞抑制功能缓解类风湿性关节炎

王洪星
山东大学齐鲁医院

背景 类风湿关节炎(RA)是一种自身免疫性疾病。最近，研究者在 RA 的 ELSs 中发现一群特异的 Tfh 样细胞，被称为 Tph 细胞（Tph）。Tph 样细胞通过促进 B 细胞的活化促进 RA 的进展。然而，Tph 细胞参与 RA 进展的上游调控机制尚不清楚。
方法 本研究拟在体内、体外和临床三个方面，通过制备柚皮素纳米制剂，探究柚皮素对 RA 的作用及机制。
结果 代谢组学分析 RA 和 OA 患者滑液中代谢物的变化，OPLS-DA 显示 RA 和 OA 分群清晰。火山图和热图显示了 22 个差异代谢物，其中柚皮素在 RA 中降低。用 WGCNA 的方法分析了代谢物临床指标的关系，将 250 个代谢物分成了 7 个模块。其中 Brown 模块与 RA 患者 anti-CCP 抗体显著负相关（R=-0.59，p=0.006）与 CIA 组相比，NAR 组大鼠足趾炎症缓解，NAR 联合 TGF-β1 足趾炎症变化无统计学差异。NAR 组 NK 细胞比例升高，联合 TGF-β1 组 CD94 (bright) CD161 (bright) NK 细胞比例变化无差异。Tph 细胞与 NK 相反。收集 RA 患者的滑液，用 100ng/ml 的 NAR 纳米粒或联合 TGF-β1 处理 24h 后，流式检测 NK 细胞、Tph 细胞比例。与对照组相比，NAR 纳米粒组 NK 细胞比例升高，Tph 细胞比例降低。NAR 纳米粒组穿孔素升高。用靶向代谢组的方法测定了 OA 和 RA 患者滑液中 NAR 的表达，结果表明， NAR 在 RA 中的含量显著降低。NAR 与 RF 和 anti-CCP 抗体显著负相关，与 CD94 (bright) CD56 (bright) NK 细胞显著正相关。
结论 NAR 可能通过 TGF-β1/Smad3 通路恢复 CD94 (bright) CD56 (bright) NK 细胞对 Tph 细胞的抑制作用，缓解 RA 进展。

PU-1623

Oncostatin M inhibits HBV replication by promoting antiviral proteins and immune-regulatory factor expression

Yuchen Ye、Zhen Xun、Qishui Ou
The First Affiliated Hospital of Fujian Medical University, Fuzhou, China

Interferon-α (IFN-α) is an approved anti-HBV drug with higher rate of HBsAg seroconversion than nucleos(t)ide analogues. However, the efficacy of IFN treatment varies among individuals. It's urgent to find new therapy that can inhibit HBV replication and augment antiviral immunity, replacing IFN-α or in combination with IFN-α to improve the efficacy of curing. Recently, a research reveals that oncostatin M (OSM) enhances the anti-HAV and anti-HCV effect of type I Interferon by inducing a chain of antiviral genes. This study was designed to determine whether OSM could inhibit HBV replication and promote the expression of antiviral proteins and immunoregulatory factors, farther to rate the value of OSM in predicting the efficacy of IFN-α for CHB patients. In vitro, HepG2.2.15 cells were in the presence or absence of recombinant OSM. We found that different concentration OSM can significantly suppress the secretion of HBsAg and HBV DNA. In vivo, HBV-infected mice were subcutaneously injected with OSM. These studies confirmed that OSM can significantly inhibit HBV replication. Interestingly, OSM activated JAK-STAT signaling pathway and upregulated interferon-stimulated genes (such as IFITMs, TRIMs, GBPs and so on) expression in liver cells. Moreover, OSM promoted interleukin-7 and interlerkin-15 receptor alpha production, which were critical for the activation and expansion of CD8+ T cells in HBV-infected mice. Thus, our results elucidates that OSM shows strong

immune regulation function and inhibits HBV replication in vitro and in vivo that is promising to be a new therapy for CHB.

PU-1624

Downregulation of SUMO2 inhibits hepatocellular carcinoma cell proliferation, migration, and invasion

Jintu Chen、Zhishan Zhang
Department of Clinical Laboratory, Quanzhou First Hospital Affiliated to Fujian Medical University, Quanzhou, Fujian, China

This study aimed to evaluate the prognostic value and biological function of small ubiquitin-like modifier 2 (SUMO2) in hepatocellular carcinoma (HCC). SUMO2 expression in HCC tissues was markedly higher than that in normal liver tissues, and patients with high SUMO2 expression had significantly shorter median overall survival than those with low SUMO2 expression. Furthermore, SUMO2 expression was closely correlated with lymph node metastasis and vascular invasion and was a predictor of poor prognosis. The knockdown of SUMO2 in two HCC cell lines (SMMC-7721 and Bel-7404) dramatically suppressed their proliferation, migration, and invasion. Western blot analysis showed that the downregulation of SUMO2 significantly reduced the expression of Ki-67, matrix metalloproteinase-9 (MMP-9), and vascular endothelial growth factor (VEGF) in SMMC-7721 and Bel-7404 cells. Similarly, quantitative reverse transcription-polymerase chain reaction revealed consistently decreased expression of MMP-9 and VEGF. Our data suggest that SUMO2 promotes proliferation, migration, and invasion of HCC cells via mechanisms involving MMP-9 and VEGF. Therefore, SUMO2 may be a prognostic factor and a promising therapeutic target for patients with HCC.

PU-1625

RIG-I enhances interferon-α response by promoting antiviral protein expression in patients with chronic hepatitis B

Shu Wu、Qishui Ou
The First Affiliated Hospital of Fujian Medical University, Fuzhou, China

Background Interferon (IFN)-α is widely used for the treatment of chronic hepatitis B (CHB) infection due to the high rate of hepatitis B surface antigen (HBsAg) seroconversion. However, IFN-α treatment has a number of side effects. Thus, identification of molecular biomarkers to predict IFN-α therapeutic effect would be useful in the clinic. In this study, we aimed to investigate the role of retinoic acid-inducible gene-I (RIG-I) in prediction of IFN-α curative effect of CHB patients.
Methods A total of 65 CHB patients treated with pegylated IFN-α weekly for 48 weeks were enrolled. Real-time PCR was performed for detection of RIG-I and IFN-stimulated gene (ISG) expression. In vitro, the HepG2 cells were transfected with siRNA and levels of RIG-I and anti-HBV proteins were detected by western blot. The P-values were calculated in SPSS 18.0. The statistical significance level was accepted as $P<0.05$.
Results In this study, we found RIG-I expression in peripheral blood mononuclear cells was higher in responder than non-responder CHB patients treated with IFN-α therapy. In HBV-transfected HepG2 and Huh7 cells, RIG-I enhanced IFN-α response by promoting anti-HBV protein expression such as double-stranded RNA-dependent protein kinase (PKR), oligoadenylate synthetase (OAS), adenosine deaminase (ADAR1) and Mx protein. Knocking

down of RIG-I could downregulate the expression of these proteins. Inhibited RIG-I expression by RIG-I siRNA deceased STAT1 phosphorylation.
Conclusions Our results revealed RIG-I enhanced IFN-α response by promoting antiviral protein expression via the STAT1 pathway. RIG-I may be a new predictive factor for prediction of IFN-α efficacy in CHB patients.

PU-1626

抗磷脂抗体升高和住院患者院内血栓事件的相关性研究

史晓敏
北京大学第一医院

目的 针对抗磷脂抗体升高的住院患者，评估抗磷脂抗体对于血栓事件发生的判断价值。
方法 回顾性研究。以 2015 年 1 月至 2019 年 12 月于北京大学第一医院住院，并且抗磷脂抗体谱中任意一项检测结果为阳性的 385 例患者为研究对象。依据住院期间是否检测到血栓将所有受试者分为血栓组和非血栓组。记录患者的临床资料及实验室数据，包括 aCL-IgM/IgG、抗 β2GPI-IgM/IgG、LA。比较两组之间的年龄、性别、吸烟、肥胖、高血压、高血脂、糖尿病的发生率以及抗磷脂抗体中位数水平。通过 logistic 多因素回归分析判断血栓事件发生的危险因素。用 ROC 曲线评估 LA 判断血栓的最佳 cutoff 值。用 c2 趋势检验确立 aCL 的中高滴度数值。
结果 血栓组的年龄以及男性、吸烟、高血压、糖尿病的比率明显高于非血栓组。血栓组的抗 β2GPI- IgG、dRVVT 的阳性率明显高于非血栓组，dRVVT 的中位数水平也高于非血栓组，差异有统计学意义。aCL-IgM 的中位数水平，非血栓组高于血栓组。aCL-IgG 的阳性率，血栓组略高于非血栓组。logistic 多因素回归分析显示，男性、高血压、糖尿病、高龄、dRVVT 升高、抗 β2GPI-IgG 升高是血栓的高危因素。ROC 曲线显示，dRVVT 判断血栓的曲线下面积为 0.608（0.558~0.605），最佳诊断界值为 1.20。以 36 GPL 作为 aCL-IgG 的中高滴度数值，与 12 GPL 的临界值相比，血栓事件的 OR 值从 1.93 提高到 2.61。
结论 抗磷脂抗体谱中，DRVVT 方法检测的 LA 是对住院患者血栓事件最有价值的指标，其次是抗 β2GPI-IgG。aCL-IgG 的中高滴度数值设立在 36 GPL 合适。aCL-IgM 在非血栓性疾病显著升高。

抗心磷脂抗体和抗 β2GPI 抗体阈值的确立以及在相关疾病中的应用

史晓敏
北京大学第一医院

目的 确立抗心磷脂抗体和抗 β2 糖蛋白 I 抗体用于预测血栓的阈值。
方法 选取 2021 年 3 月～2021 年 4 月北京大学第一医院 197 份体检样本作为正常人群，采用 ELISA 法对其抗心磷脂抗体和抗 β2 糖蛋白 I 抗体进行检测，统计分析，计算第 99 百分位数。选取 2015 年 1 月～2021 年 5 月[1] 至少有一项 APL 阳性的 545 例患者，根据出院诊断是否为血栓分为血栓组和非血栓组，查阅临床资料得到抗心磷脂抗体和抗 β2 糖蛋白 I 抗体水平。分别计算以正常人群第 99 百分位数原倍、2 倍、3 倍数值作为阈值的情况下发生血栓的 OR 值，比较得出最适阈值。
结果 抗心磷脂抗体（ACL）-IgG/IgM、抗 β2 糖蛋白 I 抗体-IgG/IgM 正常人群的第 99 百分位数分别为 8.68GPL、14.25MPL、22.33RU/ml、19.09RU/ml，ACL-IgG 用于预测血栓的最适阈值为 17.36GPL，抗 β2 糖蛋白 I 抗体-IgG 用于预测血栓的阈值为 22.33RU/ml。ACL-IgM 和抗 β2 糖蛋白 I 抗体-IgM 无法确定阈值（OR<1）。

结论 确立了 ACL-IgG/IgM、抗 β2 糖蛋白 I 抗体-IgG/IgM 正常人群的第 99 百分位数；ACL-IgG 和抗 β2 糖蛋白 I 抗体-IgG 以最适阈值可以用于血栓的预测。

关键词：抗心磷脂抗体，抗 β2 糖蛋白 I 抗体，血栓

PU-1628

胃泌素释放肽前体、糖类抗原 19-9、神经元特异性烯醇化酶（NSE）联合检测对小细胞肺癌的诊断价值

王参军
东南大学附属中大医院

目的 探讨胃泌素释放肽前体（ProGRP）、糖类抗原 19-9（CA19-9）、神经元特异性烯醇化酶（NSE）联合检测对小细胞肺癌的诊断价值。

方法 选择 120 例小细胞肺癌患者、70 例肺部良性病变患者及 70 例健康体检者,分别作为小细胞肺癌组、肺部良性病变组及健康对照组,检测并比较 3 组研究对象的血清胃泌素释放肽前体（ProGRP）、糖类抗原 19-9（CA19-9）、神经元特异性烯醇化酶（NSE）水平,比较不同病理类型小细胞肺癌患者的血清胃泌素释放肽前体（ProGRP）、糖类抗原 19-9（CA19-9）、神经元特异性烯醇化酶（NSE）水平。绘制受试者工作特征（ROC）曲线,分析血清胃泌素释放肽前体（ProGRP）、糖类抗原 19-9（CA19-9）、神经元特异性烯醇化酶（NSE）单独及联合检测对小细胞肺癌的诊断效能。

结果 小细胞肺癌组患者的血清胃泌素释放肽前体（ProGRP）、糖类抗原 19-9（CA19-9）、神经元特异性烯醇化酶（NSE）水平均高于肺部良性病变组和健康对照组,差异均有统计学意义（$P < 0.05$）;肺部良性病变组和健康对照组的血清胃泌素释放肽前体（ProGRP）、糖类抗原 19-9（CA19-9）、神经元特异性烯醇化酶（NSE）水平比较,差异均无统计学意义（$P > 0.05$）;小细胞癌患者的血清 ProGRP 水平高于腺癌和鳞状细胞癌患者（$P < 0.05$）。ROC 曲线分析结果显示,血清胃泌素释放肽前体（ProGRP）、糖类抗原 19-9（CA19-9）、神经元特异性烯醇化酶（NSE）单独检测诊断小细胞肺癌的曲线下面积（AUC）分别为 0.913、0.942 及 0.976,均低于三者联合诊断的 0.997。

结论 血清胃泌素释放肽前体（ProGRP）、糖类抗原 19-9（CA19-9）、神经元特异性烯醇化酶（NSE）联合检测可提高小细胞肺癌的诊断效能,利于小细胞肺癌的早期筛查及诊疗。

Blocking of YY1 reduce neutrophil infiltration by inhibiting IL-8 production via the PI3K-Akt-mTOR signaling pathway in rheumatoid arthritis

Jinpiao Lin、Qishui Ou
the First Affiliated Hospital of Fujian Medical University

Our previous study revealed that Yin Yang 1(YY1) played an important part in promoting interleukin (IL)-6 production in rheumatoid arthritis (RA). However, whether YY1 has any role in regulation of IL-8 in RA remains unclear. YY1 and IL-8 expression in RA patients were analyzed by real-time polymerase chain reaction (PCR). Ingenuity pathway analysis (IPA) was used to analyze the signaling pathway involved in YY1-induced IL-8 production. The expression of YY1 and proteins involved in the pathway were detected by Western blot and enzyme-linked immunosorbent assay (ELISA). Migration of neutrophils was performed by chemotaxis assay. In this study, we found that high expression of IL-8 was positively associated with YY1 expression in

RA. Blocking YY1 expression by YY1-short hairpin (sh)RNA lentivirus reduced IL-8 production. Mechanistically, we showed YY1 activated IL-8 production via the phosphatidylinositol-3-kinase/Akt/mammalian target of rapamycin (PI3K/Akt/mTOR) signaling pathway. Further, using a co-culture system consisting of peripheral blood mononuclear cells (PBMC) and neutrophils, we found that migration of neutrophils would be inhibited by YY1 RNA interference. Finally, using the collagen-induced arthritis animal model, we showed that treatment with the YY1-shRNA lentivirus led to reduction of IL-8 levels and attenuation of inflammation and neutrophil infiltration in vivo. Our results reveal a role of YY1 involved in neutrophil infiltration in RA via the PI3K/Akt/mTOR/IL-8 signaling pathway. YY1 may be a new therapeutic target for treatment of RA.

PU-1630

血清标志物对桥本甲状腺炎的诊断价值

马庆海
山东省千佛山医院

目的 探讨桥本甲状腺炎患者自身抗体的变化对疾病的诊断价值及临床意义。
方法 选取 2020 年 6~10 月本院诊断为桥本氏甲状腺炎的患者 100 例作为研究组，同期选择本院体检健康人员 100 例作为对照组。两组人员标本分别行游离三碘甲状腺原氨酸（FT3）、游离甲状腺素（FT4）水平、促甲状腺激素（TSH）、甲状腺过氧化物酶抗体（anti-TPO）及甲状腺球蛋白抗体（anti-TG）检测并记录结果。
结果 研究组 FT3、FT4、anti-TPO 及 anti-TG 均高于对照组，差异有统计学意义（P<0.05）。
结论 临床诊断桥本甲状腺炎时，不应只检测甲功三项，应联合 anti-TPO 及 anti-TG 检测，可作为诊断的关键依据，对疾病诊断有重要意义。

Association of serum lipids with autoantibodies and inflammatory markers in rheumatoid arthritis patients

Longjie Gan、Qishui Ou
Department of Laboratory Medicine, the First Affiliated Hospital of Fujian Medical University

Background We studied the relationship between serum lipids and autoantibodies and inflammatory markers in rheumatoid arthritis (RA) patients to explore the effect of serum lipids on the diagnosis and judgment of disease activity in RA patients.
Methods Serum lipids including TCHO, TG, HDLC and LDLC and anti-CCP, RF, CRP, ESR of RA patients from May 2013 to August 2017 were retrospectively analyzed in the First Affiliated Hospital of Fujian Medical University.
Results With the dilution factor increased, the concentrations of serum lipids and anti-CCP, CRP and RF showed the same downward trend, indicating that the detection Methods of the above indicators were reasonable and would not be affected by hyperlipidemia. CRP and ESR levels were negatively correlated with HDLC concentration in male and female RA patients. However, the concentration of anti-CCP and RF were closely related to TG. In all the RA patients and female RA patients, the RF level was negatively correlated with the TG concentration. Moreover, with the TG concentration increased, the proportion of patients with high concentrations of anti-CCP levels decreased. In addition, in male RA patients, anti-CCP and ESR concentration increased with the increase of LDLC.
Conclusion The concentrations of HDLC, TG and LDLC were associated with the concentration of anti-CCP, RF, CRP and ESR in RA patients. Therefore, clinical diagnosis of RA and

determination of disease activity should consider the impact of the concentration of serum lipids in order to make a reasonable judgment on the diagnosis of the disease.

Alteration of the gut microbiota in tumor necrosis factor-α antagonist-treated collagen-induced arthritis mice.

Binglong Wang、Jinpiao Lin
the First Affiliated Hospital of Fujian Medical University

Aim Gut microbiota play an important role in rheumatoid arthritis (RA). Biological therapies targeting tumor necrosis factor-α (TNF-α) have been used for treatment in RA patients. However, whether TNF-α antagonist has some influence on gut microbiota is still unknown. This study aims to investigate the distribution of gut microbiota in collagen-induced arthritis (CIA) mice treated with the TNF-α antagonist etanercept.
Methods Collagen-induced arthritis mice were induced by type II collagen. Cytokine expression was detected by real-time polymerase chain reaction. 16S ribosomal RNA sequencing was performed to characterize the gut microbiota in CIA mice treated with vehicle or etanercept. Sequencing reads were processed by Microbial Ecology software program.
Results Compared with vehicle-treated mice, we showed that CIA mice treated with etanercept led to attenuation of inflammation and reduced expression of TNF-α, interferon (IFN)-γ, interleukin (IL)-6 and IL-21. Meanwhile, results showed operational taxonomic units, richness estimators and the diversity indices of gut microbiota in etanercept-treated mice were lower than that in vehicle-treated mice. Moreover, bacterial abundance analyses showed that genus Escherichia/Shigella was more abundant in etanercept-treated mice, and Lactobacillus, Clostridium XlVa, Tannerella were less abundant. The altered bacterial genus was correlated with TNF-α, IFN-γ, IL-6, IL-21 and IL-10.
Conclusion Our results revealed that TNF-α antagonist treatment can reduce the abundance and diversity of gut microbiota in CIA mice. Targeted gut microbiota may be a new therapeutic strategy for the treatment of RA.

PU-1633

A critical role of transcription factor YY1 in rheumatoid arthritis by regulation of interleukin-6

Jinpiao Lin、Qishui Ou
the First Affiliated Hospital of Fujian Medical University

Previous studies have revealed a critical role of YY1, a "Yin Yang" transcription factor, in cancer development and progression. However, whether YY1 has any role in rheumatoid arthritis (RA) remains unknown. This study aims to explore the potential role of YY1 in RA pathogenesis. In this study, we found that YY1 was over-expressed in RA patients and CIA mice. Blocking of YY1 action with YY1 shRNA lentivirus ameliorated disease progression in CIA mice. We further analyzed the signaling pathway involved by ingenuity pathway analysis (IPA), results showed IL-6 signaling and JAK/Stat signaling pathway was significantly inhibited by LV-YY1-shRNA treatment. Moreover, we observed that blocking of YY1 reduced IL-6 production and downregulated Th17 population. Finally, we showed YY1 positively regulated IL-6 transcription by binding to the promoter region of the IL-6 gene. In conclusion, YY1 plays a critical role in promoting IL-6 transcription in RA which contribute to the inflammation of RA via stimulation of Th17 differentiation. Thus, YY1 is likely a key molecule involved in the inflammation process of RA. Targeting of YY1 may be a novel therapeutic strategy for RA.

抗 CCP 抗体检测在类风湿性关节炎中的临床意义

陈永新
山东省千佛山医院

目的 通过收集抗 CCP 抗体的检测结果，分析抗 CCP 抗体检测在类风湿性关节炎患者中的临床意义。
方法 选取 2020 年 6 月~11 月在本院风湿免疫科确诊的类风湿性关节炎患者 100 例作为实验组，同期非类风湿性关节炎的自身免疫病患者 100 例作为对照 A 组，同期健康体检者 100 例作为对照 B 组，分别对 3 组标本进行抗 CCP 抗体检测，记录数据并分析比较。
结果 实验组分别与对照 A 组、对照 B 组比较，抗 CCP 抗体均有明显的升高，差异有统计学意义(P<0.05)。
结论 抗 CCP 抗体对 RA 诊断有着较高的特异性和敏感性，是 RA 早期诊断的一个高度特异指标，所以对 RA 的早期实验室检查诊断时，可以对患者进行抗 CCP 抗体单独检测。

PU-1635

骨髓基质细胞诱导分化中基因表达谱变化的研究

许苗
山东省千佛山医院

目的 利用基因表达谱芯片研究大鼠骨髓基质细胞向成骨细胞分化中基因表达谱的变化。
方法 分离、培养大鼠骨髓基质细胞，以地塞米松、β-甘油磷酸钠和维生素 C 诱导分化，抽提细胞 mRNA 并逆转录成 cDNA，用基因表达谱芯片检测相关基因的差异表达。
结果 经诱导后的细胞可见有钙化结节，与正常传代的细胞相比有 27.7%基因的差异表达超过了 3 倍，而参与转录、翻译、糖基化修饰和调节细胞外基质、信号分子形成及参与代谢的相关基因表达均有不同程度的上调。
结论 基因表达谱芯片技术可显示细胞在诱导分化中多基因的差异表达，这些差异表达基因是大鼠骨髓基质细胞在增殖和成骨分化诱导中所必需参与的基因。

CA-125 联合 BDNF 对老年急性心梗患者急性心衰的预测价值

汪雅婷
安徽医科大学第二附属医院

目的 探讨糖类抗原 125 联合脑源性神经营养因子（brain-derived neurotrophic factor，BDNF）在早期预测老年急性心肌梗死（AMI）患者发生急性心衰(AHF)的诊断价值；分析两者水平与急性心衰严重程度的相关性；
方法 医院心内科收治的急性心肌梗死（AMI）患者 144 例，收集所有患者入院时的临床资料，入院后抽取患者空腹静脉血，采用全自动免疫分析仪测定血清 CA-125 和 BDNF 水平，根据冠脉再灌注治疗后 1 周内是否发生急性心衰分为心衰组和对照组，对比两组患者临床资料，采用多因素 logistic 回归方程分析影响 AMI 患者发生 AHF 的独立危险因素；采用 Spearman 线性方程分析 CA-125、BDNF 水平和急性心衰患者心功能分级的相关性；绘制受试者工作特征曲线，分析 CA125 联合 BDNF 对老年急性心梗患者急性心衰的预测价值；

结果 144 例 AMI 患者共发生 42 例急性心衰，据此分组后对比两组患者临床资料显示，心衰组患者在肌钙蛋白（cTnI）、心房脑钠肽（BNP）、CA-125、BNDF 及病变支数方面与对照组比较存在统计学差异（P<0.05）；多因素 logistic 回归分析显示，BNP（OR=1.015）、CA-125(OR=23.228)、BNDF（OR=1.455）水平升高是导致 AMI 患者发生 AHF 的独立危险因素（P<0.05）；Spearman 线性方程显示，CA-125、BDNF 水平与心功能分级呈正相关（ρ=0.981,0.808,P<0.05）；ROC 曲线显示，CA-125 联合 BNDF 在早期预测 AMI 患者发生 AHF 的曲线下面积高于 CA-125 和 BDNF 单独预测，其诊断敏感度为 78.57%，特异度为 89.22%；
结论 通过监测血清 CA-125 和 BNDF 水平能够有效预测老年 AMI 患者发生 AHF 风险，并且水平高低与临床心功能严重程度相关。

PU-1637

Tim-3 对三阴性乳腺癌增殖、迁移、侵袭中的作用及机制研究

韩福燕
山东大学第二医院

目的 T 细胞免疫球蛋白及黏蛋白结构域分子-3（T cell immunoglobulin and mucin-domain containing molecule-3,Tim-3）是一种负性免疫调节分子，不但表达于免疫细胞上，也表达于肿瘤细胞上，在肿瘤免疫中发挥重要的功能。研究发现 Tim-3 在宫颈癌、黑色素瘤、肺癌细胞上的表达明显高于癌旁组织。本文我们研究 Tim-3 在三阴性乳腺癌细胞中的表达情况及对其增殖、迁移、侵袭和凋亡的影响。
方法 通过 Western 检测乳腺癌细胞株 Tim-3 的表达；利用 CCK-8、划痕、Transwell 及 Annexin V/FITC，检测 Tim-3 对乳腺癌细胞增殖、迁移、侵袭、凋亡的影响。
结果 运用 Western blotting 检测发现 Tim-3 在 MCF-7 中表达相对较高，在 MDA-MB-231 中表达相对较低。利用 CCK-8 检测发现 Tim3-siRNA 组细胞的增殖能力明显低于 NC 组；转染 ADV-Tim3 组细胞的增殖能力明显强于 Control 组（P<0.05）。划痕实验发现 Tim3-siRNA 组 24h 的迁移距离显著小于 NC 组，ADV-Tim3 组细胞的迁移距离显著大于 Control 组（P<0.05）。利用 Transwell 来验证 Tim-3 对侵袭能力的作用，我们发现 Tim3-siRNA 组穿过膜的细胞数量明显比 NC 组低，ADV-Tim3 组穿过膜的细胞个数显著高于 Control 组（P<0.05）。
结论 Tim-3 可表达乳腺癌细胞上。Tim-3 可促进三阴性乳腺癌细胞的增殖、迁移、侵袭能力及抑制其早期凋亡，为三阴性乳腺癌的防治提供新靶点。

PU-1638

miR-16-5p 对 HIV 感染者抗病毒治疗后 T 细胞功能影响的研究

吕俊楠、李佳琦、宋成博、蔡红娇、李思瑶、张子宁
中国医科大学附属第一医院

目的 我们的前期结果发现了 HIV 感染者 ART 治疗后免疫重建不良患者的血浆中 miR-16-5p 表达量较高，并且可作为疾病进展的预测标志物之一。因此我们拟探索 miR-16-5p 是否对 HIV 感染者 T 细胞增殖和凋亡情况产生影响，并进一步探索 miR-16-5p 影响 T 细胞功能的基因和功能调节机制，明确 miR-16-5p 对 HIV 感染者 ART 治疗后免疫恢复的影响作用。
方法 本研究选取了 31 例 ART 治疗 1 年以上的 HIV 感染者。通过在 T 细胞中转染 miR-16-5p mimics，采用流式细胞术观察过表达 miR-16-5p 的 CD4+、CD8+ T 细胞增殖和凋亡的变化情况。对 miR-16-5p 过表达的 HIV 感染者 T 细胞的基因表达情况进行转录组测序分析，并根据转录组分析结果，采用流式细胞术分析 miR-16-5p 对 CD4+、CD8+ T 细胞活化时钙离子内流的影响情况。
结果 过表达 miR-16-5p 的 CD4+和 CD8+ T 细胞在活化后 72 小时的增殖水平明显下降，而在活化

48 小时的凋亡情况无明显变化。过表达 miR-16-5p 的 T 细胞的差异表达基因显著富集于阳离子转运通路，并且 CACNB2 基因的表达明显降低。过表达 miR-16-5p 的 CD4+ T 细胞活化时细胞内钙离子内流与对照相比显著降低，而 CD8+ T 细胞活化时钙内流仅有下降趋势。
结论 通过观察 miR-16-5p 对 CD4+、CD8+ T 细胞增殖和凋亡变化的影响及深入探索，发现 miR-16-5p 通过影响细胞活化时钙内流过程进而影响 T 细胞增殖，对 HIV 感染者 ART 治疗后的免疫恢复产生抑制作用。

PU-1639

Study on the diagnostic value of three microRNAs in serum for gastric cancer

Xing Ke 、Xinyu Cai、Lisong Shen
Xinhua Hospital, Shanghai Jiao Tong University School of Medicine

Objective To explore the diagnostic values of combined detection of serum miRNA-181c, miRNA-99a and miRNA-27a for gastric cancer.
Methods The expressions of serum miRNA-181c, miRNA-99a and miRNA-27a were determined by fluorescence quantitative PCR in 44 gastric cancer patients and 36 healthy controls. The expressions of three miRNAs were compared to detect whether there are significant differences. The correlations between the three miRNAs levels in serum and clinicopathological characteristics of gastric cancer patients were analyzed. The receiver operating characteristic curve (ROC) is constructed to evaluate the diagnostic performance of each miRNA and combined detection of common tumor markers, including CEA, CA 19-9, CA 724, and CA 242 for gastric cancer, and to explore the best combined detection plan. A gastric cancer risk model was conducted via binary Logistic Regression, and the diagnostic efficacy of the model was detected by the ROC curve.
Results The expressions of serum miRNA-181c and miRNA-99a were low in gastric cancer patients, while the expression of serum miRNA-27a was high ($P<0.05$). The expression of serum miRNA-181c and miRNA-27a in gastric cancer was correlated with the degree of gastric cancer invasion, lymph node metastasis, and clinical stage ($P<0.05$). The area under the ROC curve (AUC) of serum miRNA-181c, miRNA-99a, and miRNA-27a were 0.803, 0.755 and 0.627, respectively. The diagnostic efficiency of three miRNAs was higher than that of commonly used tumor markers, including CEA, CA 19-9, CA 724 and CA 242 ($P=0.007$). The combined detection of three miRNAs and four antigens had high diagnostic efficiency (AUC=0.881). Using three miRNAs to diagnose gastric cancer with all negative tumor markers, the AUC values were 0.820, 0.813 and 0.558. The gastric cancer risk model is described by the following equations: probability of malignancy=ex/(1+ex), X=36.966 - (21.477×miRNA-181c) - (4.614×miRNA-99a) + (8.568×miRNA-27a) - (0.025×LYM%) - (2.016×LYM#) - (0.084×Hb) + (0.005×HCT) - (0.006×PLA) - (0.375×Alb) - (0.008×UA). A calculated cancer probability of ≥0.94 prompts a high risk of gastric cancer, and a probability of ≤0.52 denotes a low risk of gastric cancer.
Conclusion The combined detection of serum miRNA-181c, miRNA-99a and miRNA-27a has a high diagnostic value for gastric cancer and a certain effect on predicting the risk of gastric cancer, which can be promoted and applied in clinical practice.

PU-1640

HIV 不同亚型免疫活化与疾病进展的关系研究

熊旋
中国医科大学附属第一医院

目的 HIV 流行和传播过程中不断进化出新的亚型及重组亚型。不同 HIV 亚型感染后疾病进展速度不同，其中 CRF01AE 亚型感染者疾病进展速度较快。免疫活化因素在 HIV 感染疾病进展中发挥重要作用，其是否与 CRF01AE 亚型进展较快尚未阐明报道。本研究对 CRF01AE 亚型患者和 B/B′亚型患者之间免疫活化与疾病进展的关系进行研究，明确 CRF01AE 亚型是否通过影响免疫活化度而导致疾病进展速度不同，B′亚型及 B 亚型免疫状态是否存在差异，为解析不同亚型之间疾病进展不同的免疫机制等提供依据。
方法 选取 281 例来自中国辽宁、吉林和河南的未治疗汉族 HIV/AIDS 患者。根据近全长 HIV 基因组测序和病毒序列亚型鉴定结果将患者分为 CRF01AE 亚型组和 B/B′亚型组。使用流式细胞仪检测淋巴细胞计数、CD38 和 HLA-DR、浆细胞样与髓系 DC，使用 ELISA 检测趋化因子 RANTES，MIP-1α，MIP-1β 和 SDF-1 水平。
结果 1、B 亚型的活化指标 CD4+CD38+T 细胞、CD8+CD38+T 细胞高于 B′亚型，CD11c+DC 细胞低于 B′亚型；2、CRF01AE 亚型的活化指标 CD8+HLA-DR+T 细胞高于 B/B′亚型；CD8+T 细胞计数高于 B/B′亚型；而 MIP1α、MIP1β、CD123+DC 细胞、CD11c+DC 细胞均显著低于 B/B′亚型。3、活化指标 CD4+CD38+T 细胞与病毒载量显著相关（r=0.245，P<0.001）；CD4+HLA-DR+T 细胞、CD8+HLA-DR+T 细胞、CD8+CD38+T 细胞均与 CD4+T 细胞呈负相关，与病毒载量呈正相关；CD123+DC 细胞、CD11c+DC 细胞与 CD4+T 细胞均呈正相关，与病毒载量呈负相关。
结论 不同亚型的进展不同的内在机制可能与 T 细胞免疫活化、DC 细胞的保护作用的差异有关，为 HIV 不同亚型进展不同的内在免疫机制提供了新的依据。

PU-1641

High proportion of Circulating CD8+CD28− senescent T Cells is an Independent Predictor of Distant Metastasis in Nasopharyngeal Cancer after Radiotherapy

Xiaotian Xu、Lin Xiao、Wei Cui
National Clinical Research Center for Cancer/Cancer Hospital, Chinese Academy of Medical Sciences and Peking Union Medical College

Background Immunosenescent CD8+CD28− T cells are a unique subset of T cells that are increased in human peripheral blood with increasing age and declining immune function. CD8+CD28− T cells also have an antigen-non-specific immunoregulatory function. Therefore, CD8+CD28− T cells may profoundly influence tumor progression. To gain novel insights into the role of CD8+CD28− T cells in nasopharyngeal carcinoma (NPC), we investigated the proportion and clinical relevance of CD8+CD28− T cells in the peripheral blood of patients with NPC.
Methods Flow cytometry was performed to explore the frequency of peripheral CD8+CD28− T cells in 351 pretreatment patients with NPC, including a training (n = 123) and validation (n = 228) cohort. Statistical analyses were conducted to determine an association between the CD8+CD28− T cells proportion and clinical characteristics of the patients. After a 5-year follow-up period, progression-free survival (PFS) and distant metastasis-free survival (DMFS) analyses were performed with the Kaplan-Meier method.
Results The proportion of CD8+CD28− T cells in peripheral blood was significantly increased in patients with NPC and was unrelated to age, sex, plasma Epstein Barr virus (EBV)-DNA level, or clinical staging. High pretreatment levels of peripheral CD8+CD28− T cells were closely

associated with recurrence and distant metastasis after radiotherapy in both the training ($p < 0.0001$; hazard ratio [HR], 4.96; 95% confidence interval [CI], 2.20–9.96) and validation ($p = 0.0008$; HR, 2.20; 95% CI, 1.38–3.49) cohorts. After multivariable adjustment, the proportion of CD8+CD28− cells remained a strong independent prognostic factor for PFS and DMFS in both the training and validation cohorts.
Conclusions A high proportion of pretreatment CD8+CD28− T cells is an independent risk factor for recurrence and distant metastasis in patients with NPC after radiotherapy. The incorporation of circulating CD8+CD28− T cells can improve the prognostic value of plasma EBV-DNA and clinical staging.

PU-1642

潜在细胞因子 CCDC134 对免疫抑制性肿瘤微环境的调节作用及机制研究

肖琳、崔巍
中国医学科学院肿瘤医院

目的 肿瘤微环境（TME）对肿瘤的发生发展至关重要，它具有免疫抑制特性，使其中的细胞毒性 T 细胞（Tc）发生功能障碍，亟需寻求解除 TME 免疫抑制的分子机制，以建立 Tc 细胞长久有力的抗肿瘤免疫。已知 MAPK 通路在 TME 中异常激活，参与抑制性 TME 的形成。CCDC134 是 MAPK 通路抑制分子，我们首次报道它是 γ_c 家族新细胞因子，通过 Tc 细胞抑制肿瘤生长。然而，CCDC134 能否有效抵御 TME 对 Tc 细胞的免疫抑制，以及重塑 TME 免疫状态的机制尚不清楚。
方法 以原创发现的新细胞因子 CCDC134 为研究对象，以 TCGA 肿瘤数据分析为依据，通过肿瘤种植模型和 TCR 刺激模型，利用 CCDC134 重组蛋白和基因工程鼠，集中研究其重塑 TME 免疫特征的作用及机制。
结果 在深入研究中，申请人对 TCGA 数据库 33 种癌症近 2 万例患者的数据进行了分析，获得了重要的临床证据和线索提示。首先，在绝大多数癌种中，CCDC134 转录水平在 TME 中高于正常组织；更重要的是，在宫颈癌、乳腺浸润癌、胃癌、直肠癌、胸腺癌中，肿瘤组织 CCDC134 的转录水平与患者预后呈正相关，进一步证实了 CCDC134 有效的抑瘤效应。接下来，申请人重点分析了 CCDC134 在这五种癌症中的表达共性：1）与文献报道一致，CCDC134 mRNA 水平均与 ERK/MAPK 通路的活性成反比，提示 CCDC134 是 MAPK 通路的抑制分子。2）申请人重点分析了 AP-1 家族、免疫抑制性分子、调节免疫抑制性分子表达和降解的因子、调节 T 细胞耗竭过程的关键因子等近四十个基因与 CCDC134 转录水平的相关性，发现在所有受益癌种中，CCDC134 的表达水平均与 c-Jun、c-Fos 和 NR4A TFs 成反比，这些基因均参与免疫抑制性 TME 的形成，并均受 MAPK 通路调控。
结论 CCDC134 通过抑制 MAPK 通路解除 TME 对 Tc 细胞的免疫抑制，进而促进其介导的肿瘤免疫。

PU-1643

肝素结合蛋白在髓系白血病中的应用价值研究

杨涛[2]、方莉[1]
1. 川北医学院附属医院
2. 三台县人民医院

目的 探讨 HBP 在髓系白血病患者中的应用价值，对 HBP 的应用领域进行有效的补充和完善。
方法 检测 122 髓系白血病患者（其中白血病合并感染患者 16 例，非感染患者 106 例）、32 例非恶性血液病的白细胞缺乏患者、33 例门诊急性上呼吸道细菌感染患者和 29 例健康体检肝素结合蛋

白（HBP）、白细胞（WBC）、中性粒细胞百分比（N%）、降钙素原（PCT）和 C 反应蛋白（CRP）水平，根据结果进行统计学分析。
结果 1.经差异性检验显示 HBP 在感染组与其他组之间均具有统计学差异（均 P<0.001）。2.Spearman 相关分析显示在感染对照组中 HBP 仅与 PCT 呈正相关（P=0.035）；Logistic 回归显示 HBP 与急性上呼吸道感染密切相关(P=0.011）；所有受试者 ROC 分析显示 HBP 对患者感染状态具有筛查性能（AUC=0.625，P=0.004），由此说明 HBP 可作为感染性标志物。3.Spearman 相关分析显示在白血病组中 HBP 仅与 WBC 呈正相关（P<0.001）；多元线性回归偏相关分析显示白细胞缺乏和白血病患者 HBP 与 WBC 密切相关（均 P<0.05），由此证实 HBP 水平与 WBC 水平密切相关。4.采用 ROC 分析检测指标对白血病患感染状态的筛查性能发现，HBP、WBC 和 N%（均 P>0.05）对白血病患者感染状态无筛查性能，而 PCT（AUC=0.963）和 CRP（AUC=0.883）对白血病患者感染状态仍具有筛查性能。
结论 在髓系白血病患者以及非恶性白细胞缺乏症患者中，HBP 水平仅与 WBC 水平呈密切正相关，对于筛查髓系白血病患者是否发生感染方面，除了传统的标志物 PCT 和 CRP 可供使用外，HBP、WBC 和 N%均对不具备感染筛查能力，因此不建议使用 HBP 来诊断髓系白血病中的感染发生。

PU-1644

多囊卵巢综合征患者性激素结合球蛋白水平与糖脂代谢相关性

陈莉
南山区蛇口人民医院

目的 探讨多囊卵巢综合征(PCOS)患者性激素结合球蛋白(SHBG)水平与糖脂代谢相关性。
方法 选取本院接诊的 96 例 PCOS 患者(实验组)及同期体检的 80 例育龄女性(对照组)，实验组根据 SHBG 水平分为两个亚组，进行血清激素、胰岛素及血脂检测，分析 SHBG 与糖脂代谢的关系。
结果 低 SHBG 组的 FAI、FINS、TG、TC、ApoB 水平均高于 SHBG 正常组，HDL-C、ApoA 水平均低于 SHBG 正常组(P<0.05)，SHBG 正常组与对照组上述各指标比较无差异(P>0.05)。PCOS 患者的 SHBG 水平与 HDL-C、ApoA 有正相关关系，与 FAI、FINS、TG、TC、ApoB 均有负相关关系(P 均<0.05)。
结论 PCOS 患者 SHBG 与 FAI、FINS、及血脂指标关系密切，SHBG 水平的变化也可以作为 FINS 和血脂变化的提示指标。低 SHBG PCOS 患者更易发生血糖、血脂异常，SHBG 水平降低可能是患者发生血脂紊乱的危险因素。从而为临床提早诊断及及时治疗 PCOS 提供重要的参考依据。

PU-1645

弥漫大 B 细胞淋巴瘤患者免疫治疗期间外周血淋巴细胞亚群数量和活性的动态变化

侯红艳、汪峰、吴士及
华中科技大学同济医学院附属同济医院

目的 分析初诊弥漫大 B 细胞淋巴瘤（DLBCL）患者免疫治疗期间外周血淋巴细胞亚群数量和活性的动态变化。
方法 本研究共纳入 33 例 DLBCL 患者，使用流式细胞术检测其外周血淋巴细胞亚群数量、表型和功能，并对其中 18 例患者进行淋巴细胞的活性变化进行动态分析。
结果 初诊 DLBCL 患者的 CD3+ T、CD4+ T、CD8+ T 细胞和 NK 细胞数量低于健康对照组，特别是在国际预后指数（IPI）评分较高组。高风险组（IPI 评分 3-5）和低风险组（IPI 评分 0-2）患者的淋巴细胞数量无显著差异，但 CD4+ T 细胞表面 CD28 和 CD8+ T 细胞表面 HLA-DR 在高风险组的表达增高。高风险组患者调节性 T 细胞比例增高，且 CD4+ T 和 CD8+ T 细胞分泌 IFN-γ 的能力

降低，提示该组患者细胞免疫功能受损。该研究进一步分析了 R-CHOP 治疗期间淋巴细胞数量和功能的动态变化，由于化疗的细胞细胞毒性，CD3+ T, CD4+ T, CD8+ T 细胞和 NK 细胞数量进一步降低，6 周期 R-CHOP 治疗后逐渐恢复。CD4+ T 和 CD8+ T 细胞功能在 2 周期 R-CHOP 治疗后恢复，而 NK 细胞功能在整个病程中影响较小。结果表明 DLBCL 患者淋巴细胞数量和功能降低，特别是 CD4+ T 和 CD8+ T 细胞。

结论 DLBCL 患者 CD4+T 和 CD8+T 细胞数量和功能降低，有效治疗后逐渐恢复。因此，T 细胞数量和功能的联合检测在实施 DLBCL 的个体化治疗及探寻新的预后指标中具有重要临床价值。

PU-1646

Dynamic changes in peripheral blood lymphocyte subset counts and functions in patients with diffuse large B cell lymphoma during chemotherapy

Hongyan Hou 、Feng Wang、Shiji Wu
Tongji Hospital, Tongji Medical College, Huazhong University of Science and Technology

Background This study aimed to analyze the lymphocyte subsets, their activities and their dynamic changes during immunochemotherapy in patients newly diagnosed with diffuse large B cell lymphoma (DLBCL).

Methods Patients with DLBCL (n=33) were included in the present study. Their peripheral lymphocyte subsets, phenotypes and functions were detected using flow cytometry. The dynamic results of lymphocyte activities were available for 18 patients.

Results Compared with healthy controls (HCs), the counts of CD3+, CD4+, and CD8+ T cells as well as those NK cells decreased in patients newly diagnosed with DLBCL, mainly attributed to patients with high risk of prognosis assessed by International Prognostic Index (IPI) score. Lymphocyte counts didn't present significant difference between high risk (IPI scores 3-5) and low risk patients (IPI scores 0-2), but CD4+ T cells and CD8+ T cells expressed higher levels of CD28 and HLA-DR, respectively, in patients with IPI score ranging from 3 to 5. Patients at high risk harbored higher percentage of regulatory T cells (Tregs), and their CD4+ and CD8+ T cells produced lower levels of IFN-γ, reflecting an impaired cellular immune response. The dynamic changes of lymphocyte numbers and functions during treatment were further investigated. Total counts of CD3+, CD4+, CD8+ T and NK cells progressively decreased because of the cytotoxicity of chemotherapy and then gradually recovered after six cycles treatment (rituximab combined with cyclophosphamide, doxorubicin, vincristine and prednisone, R-CHOP). The functions of CD4+ and CD8+ T cells recovered by the end of two cycles R-CHOP treatment, although NK cell function was not significantly affected throughout treatment. These results suggest that the counts and functions of lymphocytes are significantly decreased in patients with DLBCL, particularly those of CD4+ and CD8+ T cells.

Conclusions The absolute counts and functions of CD4+, CD8+ T cells, which were significantly lower in patients with DLBCL, gradually recovered after effective treatment. Therefore, combined detection of T cell counts and functions are critically important for administering effective personalized immunotherapy as well as for identifying new prognostic markers or DLBCL.

PU-1647

胰岛素瘤手术中胰岛素、C-肽、血糖的动态观察及分析

李世蕊、王芃
中日友好医院

目的 评价胰岛素瘤患者手术治疗在术中进行胰岛素、C-肽、血糖动态监测的作用和意义

方法 在本院收治的一例胰岛素瘤患者，男性，69 岁，依据 Whipple 三联征症状及血糖、B 超等检测结果确诊后，入院实施腹腔镜手术治疗。在该患者手术前、后不同时间点采集血样，检测血清胰岛素、血清 C-肽、指尖血糖，确定肿瘤切除是否完全，与患者手术转归进行分析。
结果 该患者在手术麻醉前检测外周血胰岛素、血 C-肽、血糖分别为 18.55uIU/mL、1.98ng/mL、4.1mmol/L 腹腔镜切除肿瘤组织，在肿物切除后 1min、5min、10min、15min、30min、60min、90min 分别测定外周血胰岛素、C-肽及相应指尖血糖变化，结果显示外周血中胰岛素明显而迅速地降低，分别为 59.68uIU/mL、37.62uIU/mL、24.12uIU/mL、17.61uIU/mL、8.83uIU/mL、2.74uIU/mL、2.17uIU/mL，血 C-肽也明显降低，分别为 6.58ng/mL、5.87ng/mL、5.12ng/mL、4.71ng/mL、3.74ng/mL、3.65ng/mL、2.16ng/mL，血糖则相应有所恢复，分别为 3.7mmol/L、3.7mmol/L、4.2mmol/L、4.2mmol/L、3.6mmol/L、4.1mmol/L、4.9mmol/L。在术后 2 日的空腹的血胰岛素和 C-肽分别为 7.88 uIU/mL 和 1.70 ng/mL，均较术前显著降低，在正常范围之内。
结论 在胰岛素瘤切除术中,血胰岛素、血 C-肽和血糖的动态监测观察良好地反映了手术对肿瘤负荷是否清除及清除程度，并且血胰岛素的检测也为常规的血糖检测提供了交叉验证的方法和灵敏的确认性指标，因此是术中必要的检测手段和疗效预测指标。

PU-1648

血清 IFN-γ、IL-17 水平与耐多药肺结核患者化疗预后的相关性

张裕祥
新疆医科大学第六附属医院

目的 观察血清干扰素-γ（IFN-γ）、白细胞介素-17（IL-17）在耐多药肺结核（MDR-TB）患者中表达，并分析二者与 MDR-TB 化疗预后的关系。
方法 回顾分析，收集 2017 年 1 月-2018 年 10 月医院完成标准化疗 87 例 MDR-TB 患者病历资料，全部患者于化疗前、化疗 3 个月、化疗 6 个月时接受实验室指标检测，且检测结果资料完整；重点记录患者各时点血清 IFN-γ、IL-17 表达；根据 24 个月标准化化疗预后分为治愈组（57 例）、失败组（30 例），分析血清 IFN-γ、IL-17 与 MDR-TB 患者化疗预后关系。
结果 随着治疗时间延长，两组 IFN-γ 水平逐渐升高，IL-17、IL-10、超敏 C 反应蛋白（hs-CRP）水平逐渐降低，但失败组各时点 IFN-γ 水平低于治愈组，IL-17、IL-10、hs-CRP 水平均高于治愈组（P＜0.05）；相关性检验发现，MDR-TB 患者化疗预后情况与不同时点血清 IFN-γ 水平呈正相关（r＞0，P＜0.05），与 IL-17 水平呈负相关（r＜0，P＜0.05），且在化疗前相关系数 r 最大；化疗前血清 IFN-γ、IL-17 水平之间呈负相关（r=-0.922，P＜0.001）；绘制 ROC 曲线，化疗前血清 IFN-γ、IL-17 预测化疗失败的 AUC 均＞0.80，有一定预测价值，且当二者 cut-off 值分别取 14.583pg/ml、53.881ng/L 时，可获得最佳预测价值。
结论 MDR-TB 患者化疗前 IFN-γ 低表达、IL-17 过表达与化疗失败有一定联系，早期监测患者血清 IL-17、IFN-γ 水平，对预测 MDR-TB 患者化疗预后有一定价值。

PU-1649

血清 CTX-II 蛋白在股骨头坏死早期诊断及监测中的临床意义

黄俊远、周迎春
广州中医药大学第一附属医院

目的 探讨检测血清 CTX-II 蛋白在股骨头坏死早期诊断及病情监测中的应用价值。
方法 纳入符合标准的病例 132 例作为实验组，根据不同病因、不同分期将实验组再分组，纳入体检正常的健康人群 68 例作为对照组。采用 ELISA 法检测两组受试者血清 CTX-II 浓度（ng/mL）。

结果 实验组血清 CTX-II 浓度显著高于对照组（P<0.001）；不同病因患者血清 CTX-II 浓度无显著差异（P>0.05）；在不同 ARCO 分期，Ⅱ期患者血清 CTX-II 浓度与Ⅲ期、Ⅳ期分别比较，差异没有统计学意义（P>0.05），Ⅲ期与Ⅳ期比较，差异有统计学意义（P<0.05）；用 ROC 曲线分析实验组和对照组的血清 CTX-II 浓度，曲线下面积为 0.7554，P<0.0001；实验组血清 CTX-II 浓度与 ARCO 分期之间的相关系数为 0.293，该相关具有统计学意义（P<0.05）。
结论 血清 CTX-II 在诊断 ONFH 时有一定的灵敏度和特异性，ONFH 患者血清 CTX-II 浓度会随着股骨头坏死程度的加重而升高。在 ONFH 的诊断和病情监测中,血清 CTX-II 表现出一定的临床应用价值，可作为临床诊断和病情监测的参考指标之一。

Construction and application of tolerant dendritic cells modified with NF-κ B oligodeoxynucleotides decoy in rat of collagen-induced arthritis

Lichang Ning
The First Affiliated Hospital of Nanhua University

Objective In rheumatoid arthritis (RA)，dendritic cells (DCs) play a crucial role in the initiation of autoimmunity ; therefore, we explored the construction of stable, tolerant DCs from the spleen of collagen-induced arthritis (CIA) rats by the NF-κB oligodeoxynucleotide (ODN) decoy strategy.The CIA rat-derived DC-loaded bovine collagen type II (BIIC) was injected into the self-CIA rats for in vivo intervention test, and the intervention effect was observed,which seeks new targets and strategies for the treatment of RA.
Methods In vitro cell experiments, mononuclear cells derived from the spleen of CIA rats were induced to DCs by the cytokines GM-CSF and IL-4. DCs were treated with NF-κB ODN decoy for morphological observation, viability evaluation, phenotypic identification and tolerance assessment.In an in vivo rat experiment, DCs derived from the spleen of CIA rats were induced by ODN decoy and loaded with BIIC, and then infused into self-CIA rats via the tail vein for intervention in the course of disease. That is, on the 20th day of the primary immunization of the bovine type II collagen, the CIA has already occurred in the rat.The degree of joint swelling in each group of rats was observed every day, and then the arthritis index was calculated. On the 42nd day, rats in each group were treated to detect the pathological changes of synovial tissue and the contents of cytokines IFN-γ and IL-10 in serum..
Results In vitro cell experiments, the spleen-derived DCs of CIA rats were treated with ODN Decoy, and the expression of surface co-stimulatory molecules CD80 and CD86 and mean fluorescence intensity were decreased. In the mixed lymphocyte co-culture, the ability of DCs treated with ODN Decoy to stimulate lymphocyte proliferation was decreased; lymphocytes were in a state of low secretion of IFN-γ and high secretion of IL-10.This indicates that CIA rat-derived DCs have the characteristics of immature DCs induced by NF-κB ODN Decoy, and the immature characteristics after stimulation with LPS are unchanged.In the in vivo rat experiment, the arthritis index of CIA rats was significantly increased; the pathological changes of joint synovial tissue were obvious, and the secretion of inflammatory factors IFN-γ and IL-10 in serum was imbalanced. After returning BIIC-Decoy DC to CIA rats on the 20th day, the arthritis index and the synovial tissue pathological score were significantly reduced, and the serum inflammatory factors IFN-γ and IL-10 were balanced.
Conclusion The spleen-derived DCs of CIA rats successfully constructed morphological, phenotypic and functionally stable tolerant DCs by NF-κB ODN Decoy strategy, which effectively reduced the arthritic symptoms and histopathological damage of CIA rats during the course of disease.This research indicates that, according to the actual clinical situation, it is possible to prepare a specific tolerant DC from the patient who has already developed RA, and then inject

the tolerant DC into the patient for therapeutic intervention. This is a very feasible method for treating patients who have developed rheumatoid arthritis.

PU-1651

CIA 大鼠经耐受性 DC 干预后血清中 IL-4、TGF-β、IFN-γ 及 IL-17 水平变化

宁丽常
南华大学附属第一医院

目的 探讨 NF-κ B 寡脱氧核苷酸诱骗剂(NF-κB ODN decoy)构建的耐受性树突状细胞(DC)对胶原诱导性关节炎(CIA)大鼠血清 IL-4、TGF-β、IFN-γ 和 IL-17 表达水平的影响。

方法 以 SD 雌性大鼠为实验动物，分为空白对照组、CIA 模型组、BⅡC-Decoy DC 实验组和 BⅡC-Decoy DC 对照组，共四个组。CIA 模型组在大鼠左足注射牛Ⅱ型胶原(BⅡC)，空白对照组注射生理盐水，BⅡC-Decoy DC 实验组在 CIA 模型组的基础上在初次免疫第 20 天尾静脉注射耐受性 DC。从建模开始，每周观察各组大鼠各关节肿胀程度，计算关节炎指数(AI)，用酶联免疫吸附法(ELISA)检测各组大鼠血清 IL-4、TGF-β、IFN-γ 和 IL-17 水平。

结果 与 CIA 模型组相比，BⅡC-Decoy DC 实验组大鼠较少出现关节肿胀和关节畸形等情况，关节炎指数评分明显降低（p＜0.05）；BⅡC-Decoy DC 实验组大鼠血清 IL-4、TGF-β 水平显著升高，IFN-γ、IL-17 水平显著降低（p<0.05）。

结论 耐受性 DC 通过纠正 CIA 大鼠血清中 IL-4、TGF-β、IFN-γ 和 IL-17 水平失衡来减轻大鼠关节炎症状。

PU-1652

新型冠状病毒肺炎流行前后成都地区健康体检者体液免疫指标分析

邓君
四川省医学科学院·四川省人民医院

目的 了解新型冠状病毒肺炎流行前后成都地区健康体检者体液免疫状况，探讨新型冠状病毒肺炎流行期是否对普通人群的身体免疫力存在影响。

方法 2019 年 3-4 月和 2020 年 3-4 月，对来自四川省人民医院体检中心健康体检者的体液免疫－免疫球蛋白 A（IgA）、免疫球蛋白 G（IgG）、免疫球蛋白 E（IgE）和免疫球蛋白 M（IgM）数据进行分析统计，其中 2019 年 482 例（男性 252 例，女性 230 例），2020 年 427 例（男性 215 例，女性 212 例）。

结果（1）与 2019 年相比，女性 2020 年的 IgE 和 IgM 降低（P<0.05），IgG 和 IgA 无显著性差异（P>0.05）；

（2）与 2019 年相比，男性 2020 年的 IgE 降低（P<0.05），IgG、IgM 和 IgA 无显著性差异（P>0.05）；

（3）2020 年，女性 IgE 高于男性（P<0.05），男性 IgM 高于女性（P<0.05），IgG 和 IgA 则无显著性差异（P>0.05）。

（4）2020 年 40 岁以上女性的 IgM 低于 40 岁以下女性（P<0.05），IgG、IgE 和 IgA 无显著性差异（P>0.05）；

（5）2019 年 40 岁以上女性的 IgM、IgG、IgM 和 IgA 与 40 岁以下女性无显著性差异（P>0.05）；

（6）2019 年和 2020 年 40 岁以上男性的 IgM、IgG、IgM 和 IgA 与 40 岁以下男性无显著性差异（P>0.05）。

结论（1）疫情期间，男女体液免疫水平产生差异，特别是 40 岁以上的女性，免疫能力可能有所下降，这和疫情期间宅在家中，缺乏锻炼和饮食等可能有关系；

（2）COVID-19 已经构成世界大流行，严重威胁全人类的生命健康，造成重大的经济损失，虽然目前在我国已得到有效控制，我们更应该大力加强健康管理、积极主动锻炼身体提高免疫力、完善营养膳食、倡导良好生活方式以及融入心理健康辅导,加强自我保健,预防疾病发生,提高全民健康水平。

PU-1653

Characteristics and diagnostic significance of the repertoire features of peripheral blood T cell receptor in patients with lung indeterminate nodules

Huaichao Luo
Sichuan Cancer Hospital & Institute, Sichuan Cancer Center, School of Medicine, University of Electronic Science and Technology of China

Background The T-cell receptor (TCR), located on the surface of T cells, is responsible for the recognition of the antigen-major histocompatibility complex, leading to the initiation of an inflammatory response. Analysing the TCR repertoire may help to gain a better understanding of the immune system features and of the aetiology and progression of diseases, in particular those with unknown antigenic triggers. Current clinical management of patients with pulmonary nodules involves either repeated LDCT/CT scans or invasive procedures yet causes significant patient misclassification. An accurate non-invasive test is needed to identify malignant nodules and reduce unnecessary invasive tests . The aim of this study was to determine the basic characteristics and diagnostic significance of the peripheral blood T-cell receptor (TCR) repertoire in patients with indeterminate nodules;

Method Multiplex PCR amplification of CDR3 of the TCR β chain (TRB) was conducted including PCR1 and PCR2, inclusively and semi-quantitatively.To amplify all possible V(D)J combinations, a set of 32 V forward and 13 J reverse primers was used to perform multiplex PCR1 assays as follows: 1 cycle at 95 _x0001_C for 15 min, 10 cycles of denaturation at 94 _x0001_C for 30 s, and 10 cycles of annealing at 60 _x0001_C for 90 s and extension at 72 _x0001_C for 30 s. In the second round, PCR2 was performed using universal primers. Sequencing libraries were loaded onto the Illumina XTen System, and reads of 151-bp fragments were obtained. The CDR3 sequence was defined as the amino acids between the second cysteine of the V region and the conserved phenylalanine of the J region, according to the ImMunoGeneTics (IMGT) V, D, and J gene references. Then, high throughput sequencing was used to identify hypervariable rearrangements of complementarity determining region 3 (CDR3) of the TCR β chain in peripheral blood samples.Shannon’s entropy was calculated on the clonal abundance of all productive TCR sequences. The normalized Shannon’s entropy (Shannon index) was determined by dividing Shannon’s entropy by the natural logarithm of the number of unique productive TCR sequences prospectively 48 indeterminate nodules are determined as suspected malignant by thoracic doctors, which were divided into the training cohort and testing cohort randomly.Differences between groups were compared using the Mann–Whitney or Kruskal–Wallis tests. Correlations between variables were analyzed using Spearman’s rank test. Relationships between clinical benefit and the TCR repertoire were determined using Fisher’s exact test. All statistical analyses were calculated using R(V3.4.4).

Results We found that the TCR repertoire differed substantially between stage I and benign group in terms of CDR3 clonotype, diversity, V/J segment usage, and sequence. Specifically, baseline diversity correlated with several clinical characteristics. Interestingly, we construct one model base one Shannon Index and two CT features, which is robust for discriminating the

indeterminate nodules, even whose size is less than 20mm. In training group, receiver operating characteristic (ROC) value is 0.92, and in the test group the receiver operating characteristic (ROC) value is 0.82.
Conclusions In conclusion, TCR repertoire analysis served as a useful indicator of indeterminate nodules diagnosis, moreover, model based on TCR repertoire analysis in indeterminate nodules may be utilized to direct indeterminate nodules screening. This study suggests that the TCR repertoire analysis model may provide a better test for classifying pulmonary nodules, which could help facilitate the accurate diagnosis of early-stage lung cancer from pulmonary nodule patients and guide clinical decisions.

丙肝抗体阳性患者血清中丙肝 RNA 数量和肝功能损伤程度指标和糖蛋白的关系

张小颖
西安医学院第一附属医院

目的 探讨丙肝患者血清中丙肝抗原和丙肝核糖核酸（HCV-RNA）载量与其肝功能指标 AST、ALT 以及糖蛋白甲胎蛋白的关系。
方法 分别用化学发光法、实时荧光定量 PCR 法、全自动生化仪对本院 2017 年 1 月至 2019 年 12 月的 146 例丙肝抗体阳性患者血清进行 HCVRNA 载量及肝功能相关指标进行检测。
结果 146 例丙肝抗体阳性患者中有 120 例丙肝 RNA 阳性，占总比例的 82%，丙肝 RNA 与丙肝抗体阳性有相关性。对丙肝 RNA 含量与 ALT、AST、AFP 相关性进行分析发现丙肝在载量的高低与 ALT、AST、AFP 呈相关性（$P<0.05$）
结论 综合检测 HCV 抗体和 HCVRNA 载量可以明确诊断慢性丙肝感染及判断病毒复制情况。病毒复制可造成肝脏炎症，在一定程度上肝功能指标和糖蛋白 AFP 可反映丙肝病毒复制载量，因此在有条件的情况下可联合 ALT、AST、AFP 为指导临床诊断和鉴别诊断肝炎相关疾病。

Identification of potential biomarkers associated with immune infiltration in the esophageal carcinoma tumor microenvironment

Zhicheng Wang、Wenling Zhang
Xiangya third hospital of central south university

Tumor immune cell infiltration was significantly correlated with the progression and the effect of immunotherapy in cancers including esophageal carcinoma (ESCA). However, nobiomarkers were identified which were associated with immune infiltration in ESCA. In thepresent study, a total of 128 common differentially expressed genes (DEGs) were identifiedbetween esophageal squamous cell carcinomas (ESCC) and esophageal adenocarcinomas(EAC). The results of gene ontology (GO) enrichment and Reactome pathway analysis displayed that the up-regulated DEGs were mainly involved in the regulation of extracellularmatrix (ECM), while the down-regulated DEGs were mainly involved in the regulation ofcornification and keratinocyte differentiation. The most significant module of up-regulatedDEGs was selected by Molecular Complex Detection (MCODE). Top ten similar genes ofCOL1A2 were explored, then validation and the prognostic analysis of these genes displayed that COL1A2, COL1A1, COL3A1, ZNF469 and Periostin (POSTN) had the prognostic value which were up-regulated in ESCA. The expressions of COL1A2 and its four similargenes were mainly correlated with infiltrating levels of macrophages and dendritic cells (DCs)and showed strong correlations with diverse immune marker sets in ESCA. To summarize,COL1A2 and its four similar genes were identified as the potential biomarkers associatedwith immune infiltration in ESCA. These genes might be applied to immunotherapy for ESCA.

PU-1657

Vitamin D deficiency and risk factors in patients with Crohn's disease

Ruixia Yang
Jiangsu Province Hospital （The First Affiliated Hospital of Nanjing Medical University）

Background To explore vitamin D(VD) levels in patients with Crohn’s disease, and the correlation between VD levels and seasons, disease activity, lesion region, hormone therapy. To find the risk factors of VD deficiency and the role of VD in the pathogenesis and treatment of Crohn’s disease.
Methods Between March 2018 and December 2019, 86 patients diagnosed with CD at the First Affiliated Hospital of Nanjing Medical University were identified, and 86 healthy people were selected as the control group at the same time. VD, counts of white blood cells (WBC), hemoglobin (Hb), counts of platelet(PLT), C-reactive protein (CRP), erythrocyte sedimentation rate (ESR), albumin (ALB) levels were recorded at the same time of colonoscopy. Logistic regression analysis of the relationship between disease activity, lesion region, hormone therapy and vitamin D deficiency in patients with Crohn’s disease, and analyze possible risk factors.
Results The levels of VD in patients with CD was significantly lower than that in the healthy controls (35.10 nmol/L vs 67.60 nmol/L), the difference was statistically significant (Z= -10.527, P<0.001).The summer autumn group was significantly higher than the winter spring group (z = -2.215, P = 0. 027). Patients with ileum lesions have a higher proportion of vitamin D deficiency than patients with non-ileum lesions. vitamin D deficiency rate of patients in activity stage is higher than that of patients in remission stage. With the increase of the degree of inflammation, the level of vitamin D decreased. Logistic regression analysis shows that platelet count > 250 ×

10^9 /L, CRP ≥ 8 mg / L, ALB < 30 g/L and hormone therapywere risk factors for vitamin D deficiency(P<0.05).
Conclusions Patients with CD have low levels of VD, which is related to seasons. platelet count > 250 × 109 /L, CRP ≥ 8 mg / L, ALB < 30 g/L, and hormone therapy were risk factors for V D deficiency in patient with CD.

PU-1658

ELISA 检测梅毒螺旋体抗体的最佳临界值和可疑区间

沈玲英
福州市第一医院

目的 探讨酶联免疫法（ELISA）检测梅毒螺旋体抗体（TP-Ab）诊断阳性的最佳临界值（Cut-off 值）和可疑区间，降低本实验室检测 TP-Ab 的假阳（阴）性率。
方法 选取在在联勤保障部队第九〇〇医院就诊的患者经 ELISA 初筛 TP-Ab 结果为阳性和 Cut-off 值附近（阴性）的血清标本（OD＝0.1～0.6）共 26 例，并采用梅毒螺旋体特异性抗体明胶凝集试验（TPPA）作为确认试验。通过软件 SPSS22.0 绘制受试者工作特征(receiver operating characteristic，ROC)曲线，取约登(Youden)指数最大时的吸光度值作为最佳 Cut-off 值，并进一步确定可疑区间。
结果 ELISA 检测 TP-Ab 诊断阳性的最佳 Cut-off 值为 0.3055，可疑区间为[0.168,0.351]。
结论 确定适合本实验室 ELISA 检测 TP-Ab 最佳 Cut-off 值和可疑区间能够有效降低其假阳（阴）性率，减少临床的漏诊率和误诊率，为临床诊断工作提供有力依据。

PU-1659

南京地区女性人群维生素 D 营养状况及其与血脂的相关性

杨瑞霞
江苏省人民医院

目的 了解南京地区女性人群维生素 D 的营养状况，并探讨其与血脂的关系。
方法 收集 2019 年 1 月至 2020 年 9 月在江苏省人民医院体检中心进行健康体检者 358 例，检测其 25-(OH)D 及血脂水平，分析其与血脂代谢指标的关系。
结果 358 例研究对象血清 25-(OH)D 水平为 44.05(19.10 - 98.80)nmol/L，其中 25-(OH)D 缺乏者 252 例，占 70.39%；25-(OH)D 不足者 99 例，占 27.65%；25-(OH)D 充足者 7 例，占 1.96%。随着年龄增长，25-(OH)D 水平呈下降趋势，差异有统计学意义(χ^2= 59.588，P= 0.000)。夏秋组 25-(OH)D 水平显著高于冬春组(z= -5.682，P= 0.000)。25-(OH)D 与 TG 呈负相关（r= -0.63，P=0.000），与 LDL 呈负相关（r= -0.411，P= 0.000）、与 TC 呈弱相关（r= -0.137，P= 0.010）、与 HDL 不相关（r= -0.007，P= 0.894），以 25-(OH)D 为应变量，其他各项指标为自变量，进行多元线性回归分析，TG、TC、LDL 与 25-(OH)D 独立相关。不同 25-(OH)D 营养状况下，TG、TC、LDL 水平有显著差异，25-(OH)D 缺乏组的 TG、TC、LDL 水平均显著高于 25-(OH)D 不足组（P 均<0.05），25-(OH)D 缺乏组的 TG、TC、LDL 水平均显著高于 25-(OH)D 充足组（P 均<0.05）
结论 南京地区女性人群普遍存在维生素 D 营养缺乏，25-(OH)D 水平与血脂指标存在相关性。

PU-1660

梅毒螺旋体特异性抗体快速稀释方法

王雍璇
西安金域

通过使用八通道加样枪，提高梅毒螺旋体特异抗体前处理加样速度。

取出梅毒螺旋体特异性抗体试剂，恢复室温 30min，取出配套的加样板，使用八通道加样枪分别给加样板第一列加入样本稀释液 100ul，第二列、第三列、第四列加入样本稀释液 25ul，第一列加入待测样本 25ul，然后使用八通道加样枪更换新的吸嘴调整加样量为 25ul，放入第一列加有待测样本的稀释液中开始轻柔捶打混匀左右两边各吹打 20 次左右，尽量避免气泡产生，吸液 25ul 至第二列轻柔吹打混匀以此类推倍比稀释至第四列，第四列吹打混匀后吸出 25ul 稀释后的样本弃去，依次给第三列、第四列板孔中加入稀释均匀后的未致敏粒子和致敏粒子，整板振荡混匀，放置暗盒反应 2 小时后判读结果。梅毒螺旋体特异性抗体半定量实验也可使用上述方法操作，倍比稀释至第 12 孔。

PU-1661

不同方法检测高血压五项相关性分析

王欣
吉林大学第一医院

目的 采用不同方法检测高血压五项：醛固酮(ALD)、肾素（REN）、血管紧张素Ⅱ(AⅡ)、皮质醇(COR)和促肾上腺皮质激素(ACTH)水平，并探讨用化学发光法检测高血压五项水平对原发性和继发性高血压分型诊断及治疗评估。

方法 选取本院 186 例 (收缩压≥140mmHg，舒张压>90mmHg)的高血压患者，清晨采静脉血。分别用索灵生物化学发光试剂盒和放射免疫试剂盒测定醛固酮、肾素浓度并计算其比值；分别用 ENZO 酶联免疫试剂盒和安图生物化学发光试剂盒测定 AⅡ浓度；分别用 ROCHE 全自动电化学发光测定仪及配套试剂和 BECKMAN 全自动化学发光测定仪及配套试剂检测 COR 及 ACTH 浓度。

结果 不同厂家试剂盒检测高血压五项存在一定的偏差，但相关性良好(相关系数 R>0．95)，化学发光的方法较放射免疫及酶联免疫法的灵敏性及特异性更强。

结论 化学发光法做为一种灵敏度高、特异性强、准确性高、检测便利的定量检测方法，定量检测高血压 5 项对原发性和继发性高血压分型诊断及治疗效果评估更具有优势。

PU-1662

滤泡性辅助 T 细胞通过 CD40/CD40L 轴介导微小病变型肾病（MCD）发病机制的探讨

李涛
山东大学齐鲁医院

目的 研究在微小病变型肾病发病过程中滤泡性辅助 T 细胞起到的功能作用及调节方式。

方法 选取微小病变型肾病（MCD）初发确诊患者 18 名，排除继发性肾病，肿瘤等干扰因素，另取 10 名健康体检患者作为对照组(HC)。收集所有参与者外周血抗凝标本进行流式细胞学分析，同时收集所有参与者临床肾功能损伤指标（24H 尿蛋白水平）留待进行统计学相关性分析。

结果 与正常健康对照组相比，所有微小病变型肾病 MCD 患者外周血单个核细胞(PBMC)分析 T 细胞亚群中：PD1+CXCR5+CD4+Tfh 细胞，CD40L+PD1+CXCR5+CD4+Tfh 细胞水平高表达(P 值>0.05)，其他 PD1+Tfh 细胞亚群未见显著性差异。B 细胞亚群中：CD38+CD19+浆细胞，活化的 CD40+CD38+CD19+浆细胞水平高表达(P 值>0.05)，其他浆 B 细胞亚群未见显著性差异。同时微小病变型肾病患者的尿蛋白水平显著高于正常对照组(P 值>0.05)。统计学相关性分析发现：PD1+CXCR5+CD4+Tfh 细胞与 CD38+CD19+B 细胞，CD40L+PD1+CXCR5+CD4+Tfh 细胞与 CD40+CD38+CD19+B 细胞具有显著性正相关(P 值>0.05)，且两者与肾功能损伤指标尿蛋白水平具有显著性正相关(P 值>0.05)。
结论 通过结果我们发现在微小病变型肾病（MCD）发病过程中存在 T/B 细胞免疫平衡失调，其中高表达的滤泡性辅助 T 细胞可能通过 CD40/CD40L 轴介导了浆 B 细胞的发展活化，诱导了大量异常免疫蛋白的产生，导致了微小病变型肾病（MCD）患者肾脏功能受损，蛋白尿表达。

PU-1663

肿瘤异常蛋白在肺癌中的诊断价值

朱梅、朱志军、童红芳
安徽医科大学附属巢湖医院

Objective To explore the application value of TAP on the diagnosis of lung cancer.
Methods All specimens were tested for TAP and tumor markers.
Results The serum levels of TAP, ProGRP, CEA, CYFRA21-1 and CA72-4 in the patients with lung cancer were significantly higher than those with benign lung diseases ($P < 0.05$), while the serum levels of NSE and SCC showed no difference between the two groups ($P > 0.05$). The sensitivity of TAP and CYFRA21-1 in the lung cancer group was significantly higher than that of the other detection indexes ($P < 0.01$). Of all the indexes, the accuracy of CYFRA21-1 was the highest, followed by TAP.
Conclusions TAP is suitable for lung cancer screening in normal population and high-risk population.

PU-1664

Treponema pallidum flagellar filament outer layer protein Tp0664 induce THP-1 cells to express IL-6 via TLR2 pathway

Yafeng Xie
The Second Affiliated Hospital of University of South China

Objective This study is to investigate the mechanisms by which Treponema pallidum flagellar filament outer layer protein Tp0664 induces proinflammatory cytokine IL-6 in human THP-1 cells.
Methods The tp0664 gene was amplified by polymerase chain reactions (PCR) and then subcloned into the prokaryotic expression vector pET28a. The recombinant protein Tp0664 was expressed in E. coli by the induction of IPTG and purified by Ni2+-NTA affinity chromotography. Protein concentration was determined by using a bicinchoninic acid protein assay kit. Polymixin B was used to remove the endotoxin in the recombinant protein. Human THP-1 cells were cultured for transient transfection with plasmids or siRNA of TLR2, TLR4, TLR5, TLR6 and MyD88, or pretreated with the ERK1/2 inhibitor PD98059、p38 inhibitor SB203580、NF-κB inhibitor BAY11-7082 and then stimulation with recombinant protein Tp0664 for indicative time intervals. After incubation with recombinant protein Tp0664, cells were collected and disrupted, before being

tested for the transcription of IL-6 mRNA, expression of IL-6, and the phosphorylation of several signaling molecule using RT-PCR, ELISA, and Western bloting, respectively.
Results Recombinant plasmid pET28a-Tp0664, confirmed by colony PCR and sequence, was successfully constructed. The recombinant protein was expressed as supernatant with a molecular weight of 34 kDa. After Ni-NTA affinity purification, the purity of the recombinant protein reached up to 95%. Western bloting showed the molecular weight was consistent with the predicated. After processed with polymixin B, the endotoxin in the recombinant protein was found to be less than 0.04 EU/mL. When THP-1 cells were stimulated by recombinant protein Tp0664 ranging from 0.1μg/mL to 10μg/mL, the transcription of IL-6 mRNA and the expression of IL-6 significantly increased. When THP-1 cells were pretreated with the inhibitors of ERK1/2, p38, and NF-κB, the transcription of IL-6 mRNA and the production of IL-6 decreased significantly. However, inhibition of JNK was insufficient to attenuate IL-6 mRNA transcription and IL-6 expression. Moreover, Tp0664-induced IL-6 mRNA transcription and IL-6 expression were also abrogated by transfection with dominant negative (DN) plasmid of TLR2 and TLR6. There are significant statistical differences between group transfected with dominant negative (DN) plasmid of TLR2 and control groups ($P<0.05$), but no statistical significance between group transfected with DN plasmid of TLR6 and control groups ($P>0.05$).
Conclusions Treponema pallidum flagellar filament outer layer protein Tp0664 could induce THP-1 cells to express interleukin-6 in which TLR2, ERK1/2, p38, NF-κB are involved.

PU-1665

多发性骨髓瘤病人血浆白介素-6 水平动态监测的研究

付笋笋
山东省千佛山医院

目的 探讨多发性骨髓瘤病人白细胞介素-6 在发病及治疗中的动态变化及预后，为临床治疗提供帮助。
方法 采用双抗体夹心酶联免疫吸附法检测 30 例多发性骨髓瘤患者血浆中 IL-6 的含量，观察其在治疗 4 个疗程后的水平变化并进行统计学分析。
结果 1、多发性骨髓瘤病人血浆 IL-6 水平均明显升高，与对照组相比差异有统计学意义；2、血清 IL-6 水平随着临床分期的增加及病情的严重程度呈现出相关性；3、治疗有效的患者其血浆 IL-6 的水平明显降低，治疗无效的患者其水平无明显变化。
结论 多发性骨髓瘤病人血浆 IL-6 水平明显升高，其血浆水平变化与疾病严重程度和化疗效果有关，检测病人血浆 IL-6 水平对评估病情变化和治疗效果有重要意义。

Tim-3 blockade elicits potent anti-multiple myeloma immunity of natural killer cells

Wen Jiang、Yun Luan、Jue Wang、Qian Xin
Second Hospital of Shandong University

Tim-3 is an immune checkpoint blocking molecule. Multiple myeloma (MM) is a plasma cell tumor that has not been cured to date. Natural killer (NK) cells are characterized by an efficient anti-tumor activity, and its activity has been exploited as the basis of cancer immunotherapy strategies. In the present study, in order to augment the efficiency of NK cell cytotoxicity to MM cells, we used anti-Tim-3 antibodies to block the Tim-3 pathway of the NK cells, to augment the efficiency of NK cell cytotoxicity to MM cells. We investigated the natural cytotoxicity of Tim-3 blocking NK cells against MM cells in vitro and in vivo. NK cells with Tim-3 blockade displayed a significantly stronger cytolytic activity against both human MM cell lines and primary MM cells compared to parental NK cells. The increased cytolytic activity of Tim-3 blocking NK cells was associated with upregulation of cytotoxicity-related moleculars, such as perforin, granzyme B, TNF-α and lFN-γ. Antibody blocking experiments confirmed that ligands combination blocking played more important roles in the system of NK cells cytotoxicit to MM cells. Encouragingly, NK cells with Tim-3 blockade could significantly inhibit MM tumor growth in a xenograft model and prolonged the survival of MM-bearing NOD/SCID mice. These results suggest that Tim-3 blocked NK cells could be suitable for the future development of cell-based immunotherapeutic strategies for MM.

PU-1668

呼吸道感染患儿九项病原体 IgM 抗体检测分析

梁友宝
蚌埠市第一人民医院

目的 对我院呼吸道感染患儿进行九项病原体 IgM 抗体检测，回顾性分析患儿感染情况。
方法 采用呼吸道九项病原体 IgM 抗体荧光检测方法，对 490 例呼吸道感染患儿血清标本进行检测。
结果 与其它病原体 IgM 抗体相比，肺炎支原体 IgM 抗体与副流感病毒 IgM 抗体阳性百分率明显增加，分别占 47.55%和 44.49%，差异有统计学意义（P<0.05）；单项病原体 IgM 抗体阳性率为 35.71%，混合病原体 IgM 抗体阳性率为 34.49%；在患儿感染单一病原体组，单一肺炎支原体 IgM 抗体阳性组和单一副流感病毒 IgM 抗体阳性组明显高于其它单一病原体阳性组，阳性率分别占 15.10%和 14.29%；在混合感染病原体中，肺炎支原体和副流感病毒 IgM 抗体同时阳性组明显高于其它混合感染组，阳性率占 16.94%；在不同年龄组中：0-1 岁，>1-3 岁，>3-6 岁，>6 岁，四个年龄组患儿肺炎支原体 IgM 抗体与副流感病毒 IgM 抗体阳性百分率明显高于其它病原体阳性率。
结论 呼吸道感染患儿九项病原体 IgM 抗体检测分析有利于疾病早期诊断，肺炎支原体和副流感病毒是常见感染病原体，应引起临床重视。

PU-1669

高危型 HPV 持续感染在宫颈癌发生中的研究进展

杨奕、汪琴诗、张平、冯同保
常州市第二人民医院

目的 宫颈癌是全世界仅次于乳腺癌导致妇女死亡的第二大恶性肿瘤，近年来其发病率逐年升高并有年轻化趋势。人乳头瘤病毒(human liapillomavirus, HPV)与宫颈癌的发生发展密切相关。本文主要研究 HPV 感染与宫颈炎症以及宫颈癌发生的关系以及临床意义。
方法 收集我院 HPV 检测阳性的感染患者纳入实验研究，其中体检患者 452 例，宫颈炎症患者 449 例，宫颈癌患者 132 例，对所有受检者均进行 TCT 检查、病理活检等，对不同类型的病例 HPV 检测阳性率进行分析比较。
结果 体检患者中单一基因高危险感染阳性率为(98/452, 21.68%); 多基因高危感染率为(75/452, 16.59%); 宫颈炎症患者中单一基因高危险感染阳性率为(185/449, 41.20%); 多基因高危感染率为(135/449, 30.06%); 宫颈癌患者中单一基因高危险感染阳性率为(70/132, 53.03%); 多基因高危感染率为(55/132, 41.67%)
结论 随着宫颈疾病的发生与进展，高危 HPV 单基因以及多重感染率显著增加，可通过 HPV 检测及早确定患者病情，也为 HPV 疫苗的临床应用提供实验基础。

尿源性干细胞对急性肾损伤的保护作用及机制研究进展

杨博鑫、杨硕、崔丽艳
北京大学第三医院

急性肾损伤（Acute Kidney Injury，AKI）是一种发病急，死亡率高并且预后差的疾病，目前除了透析和替代疗法外没有更加及时有效的治疗手段。尿源性干细胞（urine-derived stem cells，USCs）是从尿液中分离获得的一种多能干细胞，具有自我更新和多向分化的潜能，作为易于获得、无创且易体外培养的干细胞资源，与泌尿系统高度同源，通常不产生免疫排除反应，在膀胱组织再生、尿道重建中均具有较好的潜能，可以减少炎症和纤维化。同时 USCs 具有抗氧化、抗炎和抗凋亡的细胞保护作用，可以抑制组织损伤，在 AKI 的治疗中具有较好的应用前景。本文重点阐述 USCs 在 AKI 中的保护作用和相关机制研究进展，为 AKI 的临床防治、预后改善提供新的思路。

PU-1671

肿瘤的靶向自噬

蒋兵[1]、王涛[2,3]、苏海翔[2,3]
1. 甘肃中医药大学
2. 甘肃省肿瘤医院
3. 甘肃省医学科学研究院

目的 自噬是一个保守的自我降解系统，在应激状态下对维持细胞内稳态至关重要，本文对近年来肿瘤靶向自噬方面的研究进展做一综述。
方法 通过文献学习，综述自噬生物学的主要进展、靶向自噬研究方法以及自噬在肿瘤免疫中的潜在作用，了解具有临床潜力的下一代自噬抑制剂的最新进展。
结果 失调的自噬对健康和疾病都有影响，在肿瘤中，自噬通过抑制肿瘤发生、支持肿瘤进展起着双向作用。部分试验研究成果表明，抑制自噬可能是治疗晚期癌症的一种有希望的方法。

结论 自噬是肿瘤药物开发的一个较有前景的靶点。

PU-1672

金属基质蛋白酶 3 在类风湿关节炎早期诊断与治疗中的临床价值

杨平、沈瀚
南京大学医学院附属鼓楼医院

目的 探讨血清基质金属蛋白酶 3（matrix metalloproteinase 3，MMP-3）在类风湿关节炎（rheumatoid arthritis，RA）早期诊断与疗效观察中的应用评价。
方法 病例对照研究。选取 2020 年 5 月至 2021 年 4 月期间就诊于南京大学医学院附属鼓楼医院风湿免疫科，经确诊为 RA 的患者 130 例（男 24 例，女 106 例），年龄（52.98±13.24）岁，中位数 51 岁。同期南京大学医学院附属鼓楼医院体检中心的健康对照者 50 名（男 28 名，女 72 名），年龄（45.04±11.55）岁，中位数 44 岁，排除肿瘤、糖尿病、肝肾疾病、近期感染以及其他自身免疫性疾病。根据 ROC 曲线判断 MMP3 对 RA 的诊断效能。同时根据判断 RA 活动度的 ESR 和 CRP 水平进行分组，采用 Sperson 相关评判 MMP-3 与 RA 疾病活动的相关性。同时我们收集经甲氨蝶呤（MTX，Methotrexate）稳定剂量治疗的活动性类风湿关节炎患者各个时期的血样进行 MMP3 的检测，判断 MMP3 在 RA 疗效观察方面的价值。
结果 MMP-3 诊断 RA 患者的曲线下面积（AUC）为 0.76，敏感度为 73.1%，特异度为 93%。另外，血清 MMP-3 与 CRP、ESR、MCV、RF、CCP、ASO 相关（r 分别为 0.3762，0.5507，02324，0.4287，0.2737，0.1784），其中与 CRP 相关性最强（r=0.5507）。
结论 MMP-3 可以用于临床诊断 RA 的一个有价值的标志物，并且其水平的高低可以用于评估类风湿关节炎的病情活动程度。

PU-1673

CTC 簇与乳腺癌转移

王涛[1,2]、江秀娟[1,2]、苏海翔[1,2]
1. 甘肃省医学科学研究院
2. 甘肃省肿瘤医院

目的 循环肿瘤细胞（CTCs）是肿瘤远处转移的前体，本文综述 CTCs 技术在乳腺癌患者肿瘤细胞播散和转移机制研究中的应用。**方法** 通过文献学习，综述 CTC 簇在乳腺癌转移中的作用及 CTC 簇的起源，转移优势和临床意义。
结果 在肿瘤患者血液中，CTCs 可以是单个细胞，也可以是肿瘤细胞聚集体，称为 CTC 簇。CTC 簇具有不同的生物学特性，如提高生存率和转移潜能，在转移性肿瘤的预后评估、诊断和治疗方面有很大的应用前景。
结论 CTC 簇的分析为肿瘤转移机制的研究提供了新思路，可指导肿瘤转移的诊断和治疗策略的制定。由于发展了检测 CTC 和 CTC 集群的改进技术，目前这种分析已成为可能。但仍需要发展更有效的方法来解决有关 CTC 转移潜能和未来临床应用的重要问题。

PU-1674

血清正五聚蛋白 3 在类风湿关节炎诊断中的价值

葛贤、史兵伟、丁志祥
南京中医药大学附属常州市中医医院

目的 探讨血清正五聚蛋白 3 在类风湿关节炎诊断中的价值。
方法 应用 ELISA 法检测 30 例类风湿关节炎（rheumatoid arthritis，RA）、30 例骨关节炎（osteoarthritis，OA）和 30 例正常人血清正五聚蛋白 3（pentraxin-3，PTX3）的水平；应用单因素方差检验分析 PTX3 在三组间的差异，绘制 ROC 曲线分析 PTX3 对 RA 的诊断价值，应用 Pearson 相关分析评估 PTX3 与疾病活动指数（DAS28）之间的相关性。
结果 RA 患者血清 PTX3 水平显著高于 OA 患者和正常人（P < 0.001）；血清 PTX3 在关节炎患者中诊断 RA 的 ROC 曲线下面积为 0.857（95%CI：0.761-0.953），PTX3 的最佳临界值为 1.465 ng/mL，此时诊断敏感性 80.0%，特异性为 80.0%；RA 患者血清 PTX3 水平和疾病活动指数（DAS28）呈正相关（r = 0.484，P = 0.007）。
结论 PTX3 在 RA 患者血清中显著增高，可作为 RA 一个较好的诊断标志物。

PU-1675

血清白细胞介素-26 水平与肝功能指标相关指标对慢性丙型肝炎预后相关性

朱建光、周汉义、周俊豪
咸宁市中心医院

目的 通过检测慢性丙型肝炎患者血清中白细胞介素-26（IL-26）、C-反应蛋白（CRP）、总胆红素（TBIL）、谷丙转氨酶（ALT)、天冬氨酸氨基转移酶（AST）等水平，探讨血清 IL-26 与肝功能相关指标对慢性丙型肝炎预后的相关性和存在的潜在意义。
方法 选取 2018 年 1 月-2019 年 12 月于本院就诊的慢性丙型肝炎患者 140 例，其中高病毒载量慢性丙型肝炎患者 68 例（高病毒组），低病毒载量慢性丙型肝炎患者 72 例（低病毒组）；慢性丙型肝炎患者进展为肝硬化、失代偿肝硬化、肝衰竭或肝癌的患者 55 例为不良预后组，未发生进展的患者 85 例非不良预后组。另随机选取同期于本院进行体检的健康人群 140 例为对照组。采用全自动生化分析仪检测血清天冬氨酸氨基转移酶（AST）、丙氨酸转氨酶（ALT）及总胆红素（TBIL）水平；采用免疫比浊法测定 CRP 水平；采用酶联免疫吸附（ELISA）法检测血清 IL-26 水平；采用 Logistic 回归分析影响慢性丙型肝炎患者发生不良预后的危险因素。
结果 高病毒组与低病毒组慢性丙型肝炎患者血清 IL-26 水平均显著高于对照组，且高病毒组显著高于低病毒组（P＜0.05）；不良预后组血清 CRP、TBIL、ALT、AST 及 IL-26 水平均显著高于非不良预后组（P＜0.05）；Logistic 回归分析结果显示，血清 CRP、ALT、AST 及 IL-26 水平均是影响慢性丙型肝炎患者发生不良预后的独立危险因素（P＜0.05）。
结论 慢性丙型肝炎患者血清 IL-26 水平升高，且随患者病毒载量升高而升高，血清 CRP、ALT、AST 及 IL-26 均与患者预后存在一定相关性，可能是评估慢性丙型肝炎患者预后的潜在参考指标。

七项呼吸道病毒抗原检测试剂多中心评价

徐韫健
广州医科大学附属第一医院

目的 考核和信七项呼吸道病毒抗原检测试剂盒（免疫荧光法）与“金标准”病毒分离培养鉴定方法对检测甲型流感病毒、乙型流感病毒、呼吸道合胞病毒、腺病毒和副流感病毒 1/2/3 型的等效性。
方法 在广州医科大学附属第一医院、武汉市第三医院及湖北省疾病预防控制中心共计进行了 1710 例人鼻咽拭子样本的临床试验，评价试剂与对比方法同时对同一临床样本进行检测，记录结果，并对结果进行对比分析，计算评价试剂的灵敏度、特异性、总符合率及其 95%的置信区间和 Kappa 值，评价两者检测性能的等效性。
结果 评价试剂与“金标准”病毒分离培养检测结果不一致的样本共 28 例，七个项目的两种检测结果均高度一致；七种呼吸道病原体感染患者主要来自于 0～21 岁人群，其中以甲、乙型流感病毒的感染率最高（9.50%），尤以 5～≤21 岁为主，各年龄段合并感染率较低；呼吸道合胞病毒、甲型流感病毒、乙型流感病毒和副流感病毒 3 型在各年龄段的阳性率，差异均有统计学意义；把广州地区和湖北地区来源的标本呼吸道病毒的检出率进行比较，0～≤5 岁段，两个地区呼吸道合胞病毒、腺病毒检出率差异均有统计学意义；5～≤21 岁，两个地区甲型流感病毒、乙型流感病毒、腺病毒出率差异均有统计学意义。
结论 和信七项呼吸道病毒抗原检测试剂盒（免疫荧光法）与“金标准”-病毒分离培养鉴定方法在临床应用中对人鼻咽拭子样本中 7 种病毒的检测性能基本等效，且特异性好。

胃镜下病理改变与血清幽门螺杆菌抗体分型的关系分析

刘庆华、李真、张红
山东第一医科大学第二附属医院

目的 探讨血清幽门螺杆菌感染在该地区的流行状况及幽门螺杆菌抗体分型与胃镜下病理改变的关系。
方法 选取 2018 年 8 月到 2020 年 1 月在山东第一医科大学第二附属医院行胃镜检查并同期进行 H.pylori 抗体检测的患者 705 例，其中男性 389 例，女性 316 例，年龄 13 至 88 岁。采用免疫印迹法检测 H.pylori 的四种抗体，根据性别分组比较两组间幽门螺杆菌各基因型感染率； 根据研究对象的资料将其按年龄分为七组，并分别计算各组各抗体检测的阳性率及 H.pylori 感染Ⅰ型和Ⅱ型的感染率； 根据胃镜诊断结果将 705 例患者大体分为 6 组，浅表性胃炎组（195 例）、浅表性胃炎伴糜烂组（75 例）、胃溃疡组（245 例）、食管炎组（40 例）、胃癌组（25 例）、慢性萎缩性胃炎（125 例），比较各组间抗体检测的阳性率。
结果 血清幽门螺杆菌四种抗体分型感染率最高的是 CagA 抗体，且Ⅰ型 H.pylori 感染率高于Ⅱ型；不同性别分组间两组比较差异无统计学意义（P>0.05）；不同年龄组间血清幽门螺杆菌感染呈现极端分化，<20 岁年龄组和>70 岁年龄组感染人数最少，中间年龄段感染人数最多；胃镜下病理改变分组中，胃癌组 CagA 阳性率最高，食管炎组的 UrcA+UreB 抗体阳性的检出率高达 45%，VacA、UreA 和 UreB 抗体单独阳性率在各组都较低。
结论 血清幽门螺杆菌感染与胃部病理改变密切相关，是导致大部分胃部疾病的关键原因。

PU-1678

甘氨酸脱羧酶在 p53 突变 B 细胞淋巴瘤中的表达研究

李向东
山东省千佛山医院

目的 本研究旨在探讨甘氨酸脱羧酶（GLDC）与 p53 突变 B 细胞淋巴瘤的关系。
方法 采用 PCR-SSCP 方法检测人淋巴瘤细胞点突变。用定量实时 PCR（qRT-PCR）和免疫印迹法分别检测 SU-DHL-9 和 SU-DHL-1 细胞中 GLDC 含量。应用 siRNA 技术对 SU-DHL-1 细胞进行 GLDC 转染，westernblot 证实转染成功。建立的 SU-DHL-1 和 SU-DHL-9b 细胞淋巴瘤小鼠模型，检测 GLDC 基因（qRT-PCR）和蛋白（免疫印迹）表达水平。
结果 SU-DHL-9 无点突变，SU-DHL-1 和 SU-DHL-8 细胞各有一点突变。SU-DHL-1 细胞的 GLDC mRNA 和蛋白表达水平增加，与空白对照组和阴性对照组相比 SU-DHL -9 在 siRNA 组中 GLDDC 蛋白表达显著。动物实验显示，SU-DHL-1 诱导小鼠淋巴瘤 GLDC 基因和蛋白表达水平都较高。人 B 细胞淋巴瘤实验显示 P53 阳性组人 B 细胞淋巴瘤细胞 GLDC 蛋白含量高于 P53 阴性对照组。
结论 我们的研究表明 GLDC 表达与 p53 基因突变的 B 细胞淋巴瘤之间有直接关系，GLDC 的研究可能为治疗 B 细胞淋巴瘤提供新的靶点。

PU-1679

妊娠期甲状腺功能减退对妊娠结局的影响

江家红、张立涛
江苏省人民医院（南京医科大学第一附属医院）

目的 探讨妊娠期甲状腺功能减退(甲减)对妊娠结局的影响。
方法 选取 2019 年 12 月至 2020 年 12 月江苏省妇幼保健院产科门诊行产前检查及分娩的孕妇 682 例为研究对象，于孕期接受甲状腺功能筛查,发现妊娠期甲状腺功能减退者 63 例(甲减组)，其中及时发现并接受规范甲减治疗的孕妇 44 例(甲减治疗组),发现时已接近足月妊娠而未接受规范甲减治疗的孕妇 19 例(甲减未治疗组)，其余未发现甲减的 700 例孕妇归为对照组。比较甲减组与对照组各种不良妊娠结局的发生率，比较甲减治疗组与甲减未治疗组不良妊娠结局的发生率。
结果 (1)甲减组孕妇妊娠期高血压疾病、妊娠期糖尿病和自然流产发生率均高于对照组(17.20%:2.85% 、14.45%:3.26% 、13.14%:3.07%)，差异均有统计学意义($\chi 2$ =40.947、26.560、23.602,均 P<0.01)。(2)甲减治疗组孕妇妊娠期高血压疾病、妊娠期糖尿病和自然流产的发生率均低于甲减未治疗组(9.48%:35.33% 、8.18%:26.94% 、8.66%:23.93%),差异均有统计学意义($\chi 2$ =7.692、6.766、5.316,均 P<0.01)。
结论 妊娠期甲减对于妊娠结局具有不良影响，以妊娠期高血压疾病、妊娠期糖尿病和自然流产多见,通过补充外源性甲状腺素，可在一定程度上改善妊娠结局。

PU-1680

25-羟基维生素 D 在新生儿败血症中的水平以及影响因素分析

张立涛、江家红
江苏省人民医院（南京医科大学第一附属医院）

目的 新生儿败血症是因感染引起的全身炎症反应综合征（SIRS），是新生儿期死亡的重要原因，也是新生儿重症监护室（NICU）常见危重症之一，其发病率及病死率均较高。本研究通过测定新生儿败血症患儿的 25-羟基维生素 D 水平，并与同期无败血症新生儿做比较，了解本地区新生儿败

血症患儿中 25-羟基维生素 D 水平；研究分析 25-羟基维生素 D 在新生儿败血症中的水平以及影响水平的影响因素。
方法 采集 100 例新生儿静脉血，58 例新生儿败血症患儿为病例组，42 例无败血症新生儿为对照组，采用 ELISA 法检测两组新生儿 25-羟基维生素 D，分析两者的相关性，并分析新生儿 25-羟基维生素 D 影响因素。
结果 1.新生儿败血症患儿血清 25-羟基维生素 D 水平（7.70±4.17）ng/ml 明显低于对照组（13.02±6.27）ng/ml（P<0.05）。2.剔除感染因素后，单因素分析结果显示，民族、胎龄、出生体重、母亲年龄、母亲学历、孕期补充维生素 D 情况、出生季节与新生儿 25-羟基维生素 D 水平有关。3.通过多因素回归分析，25-羟基维生素 D 水平与出生季节、孕期补充维生素 D 情况、出生胎龄相关，差异有统计学意义（P<0.05）。
结论 1. 25-羟基维生素 D 水平与新生儿败血症相关，2.影响 25-羟基维生素 D 水平的因素有出生季节、孕期补充维生素 D 情况、出生胎龄。

PU-1681

呼吸道病原体抗体检测的干扰现象及其干扰因素回顾性研究

张铁
中日友好医院

目的 分析我院呼吸道病原体抗体阳性样本来源和阳性率分布情况，同时评估阳性样本与临床表现等相关性，分析是否存在干扰因素影响检测结果。
方法 回顾性统计分析 2017 年 1 月-2019 年 9 月在我院进行呼吸道病原体检测的不同科室就诊患者 EB 病毒衣壳抗原（EB VCA）Ig M、Ig A、Ig G 抗体与巨细胞病毒（CMV）IgM、IgG 抗体阳性率，进一步分析风湿免疫科发病率前四名疾病呼吸道病原体阳性率、及其与自身抗体结果等指标相关性。
结果 全院各科室 CMV IgM、CMV IgG 阳性率不同，差异有统计学意义（P<0.001）。风湿科与全院其他各科室的 CMV IgG 阳性率比较，差异有统计学意义（P<0.05）。不同科室 EB VCA IgM、EB VCA IgG、EB VCA IgA 阳性率不同，差异有统计学意义(P<0.001)。风湿科与儿科、消化科以及感染科的 EB VCA IgG 阳性率比较，差异有统计学意义(P<0.05)。风湿科内常见的类风湿关节炎、系统性红斑狼疮、肌炎、干燥综合征以及其他疾病的病原体 CMV IgM、CMV IgG、EB VCA IgA 的阳性率不同，差异有统计学意义（P<0.05）。抗核抗体阳性患者 CMV IgM、EB VCA IgA 的阳性率明显高于抗核抗体阴性者（P<0.001）类风湿因子阳性者 EB VCA IgM、EB VCA IgA 的阳性率高于阴性者（P<0.05），而类风湿因子阳性者病原体 EB VCA IgG 的阳性率低于阴性者（P<0.05）。抗核抗体类风湿因子双阳组 CMV IgM、EB VCA IgA 的阳性率高于单阳组（P<0.05）。
结论 全院各科室 CMV IgM、CMV IgG 阳性率有显著差异，而风湿免疫科的相关病原体阳性率均较高，风湿免疫科发病率前四名疾病病原体阳性率与 CMV IgM、CMV IgG、EB VCA IgA 阳性率相关。

PU-1682

2 型糖尿病患者血糖指标与骨转换标志物水平的相关性分析

冀承杰
简阳市人民医院

目的 探讨 2 型糖尿病患者体内骨转换标志物 β-胶原特殊序列(β-CTX)、25-羟基维生素 D(25(OH)D)、骨钙素(OC)、Ⅰ型胶原氨基末端延长肽（PⅠNP）的表达水平以及与空腹血糖、糖化血红蛋白 HbA1c 的相关性。

方法 选取 2 型糖尿病患者男性 39 例，女性 46 例设为实验组；非糖尿病患者男性 52 例，女性 44 例作为对照组。做病例对照研究，测定患者空腹血糖、糖化血红蛋白，同时测定两组四项骨转换标志物,比较两组的临床资料和体内标志物的差异并进行统计学分析。
结果（1）2 型糖尿病女性患者体内 β-CTX、骨钙素、25(OH)D、PⅠNP 水平低于非糖尿病患者；（2）2 型糖尿病男性患者体内 PⅠNP 高于非糖尿病患者，体内 25(OH)D 水平较低；（3）男性患者体内 25(OH)D 水平与空腹血糖以及糖化血红蛋白水平呈负相关；但女性患者 PⅠNP 与糖化血红蛋白 HbA1c 呈正相关，骨钙素与空腹血糖、糖化血红蛋白 HbA1c 呈正相关，而数据表明 25(OH)D 与糖化血红蛋白 HbA1c 呈负相关。
结论 2 型糖尿病与骨转换标志物水平之间存在着相关性，同时骨转换标志物水平与糖化血红蛋白、空腹血糖水平存在相关性。

PU-1683

MxA 蛋白对儿童呼吸道病毒感染的研究进展

邹悦[1]、叶辉铭[2]
1. 厦门大学
2. 厦门市妇幼保健院

目的 运用系统评价方法分析评价 MxA 蛋白在儿童呼吸道病毒感染诊断方面的临床应用进展。
方法 中英文数据库检索 MxA 蛋白抗呼吸病毒及在呼吸道感染中临床应用的文献，进行阅读归纳。
结果 呼吸道感染是儿童的常见病和多发病，目前临床应用的感染检测指标并不能很好地鉴别出病毒感染和细菌感染，均存在特异性和敏感性不高的问题。MxA 蛋白是 I 型干扰素诱导产生的一种广谱抗病毒蛋白，其表达严格依赖于干扰素 α/β 信号，而其他的细胞因子对 MxA 蛋白的表达水平无明显调节作用。研究表明，MxA 蛋白在病毒感染后迅速诱导，感染后 1-2 小时开始积累，16 小时达到峰值，且在外周血液中含量较高，可作为急性病毒感染良好的生物标志物，此外 MxA 蛋白广谱抗病毒作用可为临床治疗提供指导。该文介绍了 MxA 蛋白作为病毒感染检测标志物的机制及其目前主要的检测方式，着重介绍了 MxA 蛋白能识别的病毒种类以及在儿童呼吸道感染疾病中早期诊断病毒感染以及病毒感染和细菌感染的鉴别作用的研究进展。同时，也简要讨论了 MxA 蛋白与其他检测指标联用对呼吸道病毒感染和细菌感染的鉴别作用。
结论 MxA 蛋白在儿童早期呼吸道病毒感染的早期诊断有一定的临床价值，可结合其他生物标志物进行早期病原体识别，更好的应用于临床。

PU-1684

MxA 蛋白对呼吸道病毒感染诊断价值的 meta 分析

邹悦[1]、陈祺[2]、赵丽[2]、叶辉铭[3]
1. 厦门大学
2. 厦门大学医学院
3. 厦门市妇幼保健院，医学检验科

目的 运用诊断性试验 Meta 分析评价 MxA 蛋白对儿童呼吸道病毒感染的诊断价值。
方法 在 EMbase、PubMed 和 The Cochrane Library 英文数据库及中国知网、万方和维普中文数据库中检索至 2021 年 1 月的相关文献。两位研究者按照制定的文献纳入和排除标准进行文献初筛、二筛、三筛，最终筛选出文献用 QUADAS-2 量表进行文献质量评价，用 Revman 5.3 软件绘制偏倚风险图，用 Meta-Disc、STATA 15.0 软件进行灵敏度、特异度等数据分析。
结果 中英文数据库检索 1157 篇文献，排除重复文献 256 篇，通过阅读题目和摘要排除 880 篇，通过阅读全文排除 15 篇，最终共纳入 6 篇文献，其中包括 1 篇中文，5 篇英文文献。QUADAS-2

评价工具对选入的 6 篇文献质量进行评价，对每篇文献的病例选择、待评价试验、诊断金标准、病例流程及进展情况逐一评价，纳入的文献总体偏倚风险较低，适用性较好。分析结果为：MxA 异质性检验的灵敏度Q＝14.68，P=0.01，I2＝65.95%，特异度Q＝10.82，P=0.06，I2＝53.79%。合并灵敏度(Sen)=0.91[95%CI(0.85,0.94)]、合并特异度(Spe)=0.89[95%CI(0.81,0. 93)]、合并阳性似然比(PLR)=8.00[95%CI(4.90,13.10)]、合并阴性似然比(NLR)=0.11[95%CI(0.07,0.16)]、合并诊断比值比(DOR)=76.00[95%CI(43.00,135.00)]，SROC 曲线下面积 AUC=0.95[95% CI(0.93,0.97)]。Deeks 漏斗图显示，各研究的发表偏倚并无显著性差异（P＝0.91）。
结论 MxA 蛋白对儿童早期呼吸道病毒感染有一定的诊断价值。

PU-1685

乙型肝炎病毒表面抗原与乙型肝炎病毒外膜蛋白前 S1 抗原之间的相关性

孙文肖
广饶县人民医院

目的 探讨乙型肝炎病毒表面抗原与乙型肝炎病毒外膜蛋白前 S1 抗原在乙型肝炎携带者中相关性及乙型肝炎病毒外膜蛋白前 S1 抗原在临床中的应用。
方法 乙型肝炎病毒表面抗原与乙型肝炎病毒外膜蛋白前 S1 抗原都采取化学发光法。选择 2021 年 4 月到 5 月一个月的乙肝表面抗原同时做过前 S1 抗原的患者 562 例，两者数据对比。
结果 不同患者前 S1 抗原会随着表面抗原的升高而升高，其中表面抗原为阴性的患者中，乙型肝炎病毒外膜蛋白前 S1 抗原也为阴性。
结论 在乙型肝炎携带者中前 S1 抗原与表面抗原存在正相关性。在非乙肝携带者中两者都为阴性。在临床上前 S1 可以协助表面抗原的检测，可以进一步判断病人的病情。

PU-1686

蛋白芯片法在幽门螺杆菌感染中的应用研究

吴 峥
沈阳金域医学检验所有限公司

目的 研究幽门螺杆菌(（Helicobacter pylori，H.pylori)抗体在慢性胃炎、消化性溃疡、血小板减少性紫癜及其他消化道外疾病组血清中的阳性情况；探讨不同类型 H.pylori 感染与胃肠疾病发病的关系及蛋白芯片技术在幽门螺杆菌感染诊断中的应用价值。
方法 应用蛋白芯片法检测 1341 例血清标本中(包括消化性溃疡组、血小板减少性紫癜组、慢性胃炎组及对照组）细胞毒素相关基因蛋白(CagA)、空泡毒素(VacA)、尿素酶(Ure)抗体的表达情况，计算阳性率，用统计学方法比较各组的差异。
结果 在一定年龄范围内（5～15 岁）H.pylori 感染率随年龄的增长有升高趋势(P<0.01)溃疡组组、胃炎组三种抗体（CagA VacA Ure）阳性率明显高于正常对照组(P<0.01)。而消化道出血组抗体阳性率与对照组无明显变化。
结论 CagA 阳性的 H.pylori 感染是胃肠疾病发生和发展的关键因素。蛋白芯片法用于 H.pylori 感染的分型诊断以及治疗后的复查有其独特的优点，是一项简单易行、结果准确可靠的实验室方法，值得临床推广。

PU-1687

结核分枝杆菌检验及结果分析

王舒灏
沈阳金域医学检验所有限公司

目的 肺结核是由结核分枝杆菌引起的慢性传染性疾病，现对结核患者的结核分枝杆菌进行检验和分型，并对检验结果进行分析，以此为临床诊断及用药提供参考。
方法 筛选疾病控制中心的非重复肺结核痰标本 80 例，80 例痰液标本均来自各个医院收治的肺结核患者，且均经影像学检查诊断为肺结核。同时选取相同时间段非肺结核肺部疾病患者 80 例痰液标本作为健康对照组。而后进行检验，检验方法主要分为涂片法和培养法。涂片法：将 160 例标本直接涂片，进行抗酸染色，镜检。培养法：采用罗氏培养法进行培养，痰液进行碱处理后，在 30 分钟内完成接种。
结果 80 例肺结核患者培养法检验阳性率高于直接涂片法，80 例非肺结核肺部疾病患者两种检验均未出现阳性。直接涂片检验及罗氏培养检验均为阳性，相符率为 100%。
结论 肺结核患者主要有盗汗、乏力、低热、咳嗽、咯血、胸痛等临床表现，严重影响患者生活质量，潜伏者一般无明显症状，发病者多为慢性过程。一般临床对患者的痰液进行检验，用来与其他肺部疾病进行诊断，早期一般采用直接涂片染色、集菌等方法。临床发现，采用直接涂片法敏感性相对较低，阳性率较低，但罗氏培养检出率高，还可以再进一步做菌种鉴定、药敏试验等。本次研究结果显示罗氏培养法对于肺结核的诊断较为准确且高效。

PU-1688

CD4+T 细胞是影响 QFT-GIT 在矽肺合并肺结核患者中灵敏度下降的主要因素

黄丽娜
苏州市第五人民医院

目的 分析矽肺病与 QFT-GIT 试验的相关性，找出矽肺患者 QFT-GIT 灵敏度降低的主要因素，并探索提高灵敏度的方法。
材料与方法 收集结核杆菌培养阳性的矽肺病患者，QFT-GIT 试验、流式细胞计数、CD4+T 细胞富集实验。
结果 1.TB 和 TB＆SILs 组中外周血淋巴细胞亚群的比值和绝对值存在差异。与 TB 组相比，TB＆SILs 组患者外周血 B 细胞比例显著增加（P<0.05），但绝对值无统计学差异。2.TB＆SILs-N 组患者外周血 CD4+T 细胞比例（P<0.05）和绝对值（P<0.01）明显比 TB＆SILs-P 组低，且差异显著。3.矽肺病合并结核病的患者 QFT-GIT 试验灵敏度（60.0%）与单纯的肺结核患者（90.1%）相比明显降低，且其灵敏度与 CD4+T 细胞数量呈正相关（P<0.01），利用 CD4 细胞富集实验可以提高 QFT-GIT 灵敏度。
结论 IFN-γ 体外释放试验（TB-IGRA）是一种可早期诊断临床肺结核病的新检测方法，这种测试 IFN-γ 的体外释放量的检测方法可帮助诊断结核病或者查明机体是否存在结核分枝杆菌感染。现有研究已确认，TB-IGRA 是检测矽肺病合并肺结核患者的最灵敏的测试。本研究发现 TB＆SILs 组患者的 QFT-GIT 的诊断效率显著降低。进一步研究还发现，TB＆SILs-P 组患者外周血中 CD4+T 细胞的比率和数量明显高于 TB&SILs-N 组。增加 CD4+T 细胞可以提高 QFT-GIT 的灵敏度。以上结果表明，矽肺患者的免疫缺陷状态影响了 QFT-GIT 试验的检测效率，而 QFT-GIT 试验的检测效率可以通过增加 CD4+T 细胞的数量来进行恢复。这项研究为矽肺并发症的诊断及免疫疗法提供了理论上的依据，且对于临床诊断及治疗来说具有重要价值。

PU-1689

丁螺环酮与经颅电刺激对精神分裂症脑损伤治疗的变化

尹石华、崔吉俊
东营市胜利医院

目的 观察丁螺环酮联合经颅电刺激对精神分裂症患者的临床治疗效果，以及对患者 GFAP、S100、神经元烯醇化酶（NSE）含量变化、阴性症状和阳性症状的影响。
方法 选择精神分裂症患者 196 例为研究对象，首发 62 例，复发 134 例，随机分为观察组和对照组，每组 98 例。2 组患者均给予常规杭精神分裂症药物治疗，观察组(1.2)加用丁螺环酮联合经颅电刺激治疗。观察两组患者临床治疗效果，对患者的认知功能，生活质量进行评定比较，以及对四组患者 GFAP、S100、神经元烯醇化酶（NSE）含量进行分析对比。
结果 (1)观察组临床总有效率为 91.8 % (90 /98)，对照组为 75.5% (74/98)，差异有统计学意义(p<0.05);(2)治疗后观察组 MoCA 认知功能评分为(29. 1 士 1.36)分，对照组为(27. 89 士 1. 13)分，差异有统计学意义(p<0.05) ；(3)观察组患者阴性症状评分(87. 93 士 5. 87)分显著高于对照组评分(82. 37 士 4. 32)分，差异有统计学意义(p<0.05); 观察组患者阳性症状评分(78. 93 士 5. 87)分，显著低于对照组(89. 37 士 4. 32)分，差异有统计学意义(p<0.05); (4)治疗后观察组患者(GFAP 浓度(24.61 士 3. 89) ng/ml，显著低于对照组(31. 08 士 4. 87) ng/ml ，差异有统计学意义(p<0.05); S100/NSE. …。
结论 丁螺环酮联合经颅电刺激治疗精神分裂症患者的临床疗效较好，能改善患者的认知功能，提高患者的生活质量，抑制 GFAP 过度表达，S100/NSE.脑损伤指标降低，有较好的临床应用价值。

PU-1690

光激化学发光法与其他梅毒血清学检测方法的联合应用

尹石华、邓宽国
东营市胜利医院

目的 为了探讨光激化学发光（LICA）免疫分析技术在梅毒感染血清检测中的应用。
方法 用 LICA 免疫分析、梅毒螺旋体明胶颗粒凝集试验（TPPA）和快速血浆反应素环状卡片试验（RPR）对 LICA 梅毒螺旋体抗体初筛阳性标本进行进一步检测，并以 TPPA 为金标准，对 LICA 检测阳性的标本进行确认。
结果 19156 例血清标本经 LICA 检测梅毒螺旋体抗体阳性的 318 例，318 例梅毒螺旋体抗体阳性标本经 TPPA 复检阳性 231 例，阳性检出率为 72.6%；而 RPR 检测 78 例，阳性检出率为 24.5%。以 TPPA 为金标准，用 LICA 对 TPPA 检测阳性及阴性标本各 50 例进行复检，LICA 敏感性为 100%（50/50），特异性为 98%（49/50）。
结论 LICA 敏感性优于 TPPA 和 RPR，重复性好，操作简便，可自动化，宜用于梅毒的临床初筛，但梅毒螺旋体抗体 LICA 检测值在 1-5 区间为灰区，必须用 TPPA 试验进行确证。

PU-1691

肺结核与非结核分枝杆菌肺病淋巴细胞及因子分析

邓宽国、刘玉霞
东营市中医院

目的 通过淋巴细胞亚群和细胞因子的检测，结合影像学等其他检查尽快的诊断肺结核和非结核分枝杆菌肺病（NTM-PD）患者，指导临床及时选择合适的治疗方案。

方法 选择我院结核病防治所确诊肺结核患者 60 例，非结核分枝杆菌肺病患者 30 例，健康查体 30 例，三组试验者分别采血用流式细胞术检测血液中 CD3+、CD4+、CD8+、CD19+、CD16+CD56+淋巴细胞亚群的绝对数和百分数以及血浆中 IL-2、IL-4、IL-6、IL-10、TNF-α、IFN-γ 细胞因子水平，用 SPSS 统计软件分别两两比较三组试验者各指标的 P 值。
结果（1）肺结核组、NTM-PD 组及对照组 CD3+、CD4+、CD8+、CD19+淋巴细胞亚群的绝对数比较，差异有统计学意义（p<0.05），各组间两两比较，除 CD8+的 NTM-PD 组与对照组、CD19+的肺结核组与 NTM-PD 组差异无统计学意义（p>0.05）外，其余组间两两比较差异均有统计学意义（p<0.05）；三组试验者淋巴细胞亚群的百分数比较，除 CD19+在三组间有统计学意义（p<0.05）外，其余组间差异无统计学意义（p>0.05）； (2)肺结核组、NTM-PD 组及对照组 TNF-α、IFN-γ、IL-4 的细胞因子水平差异有统计学意义（p<0.05），各组间两两比较，除 IL-4 的肺结核组与 NTM-PD 组差异无统计学意义（p>0.05）外，其余各组间两两比较差异均有统计学意义（p<0.05）。
结论 对肺结核患者进行 CD3+、CD4+、CD8+、CD19+、CD16+CD56+淋巴细胞亚群以及 IL-2、IL-4、IL-6、IL-10、TNF-α、IFN-γ 细胞因子的检测，对及时判断肺结核和 NTM-PD 患者有重要意义。

PU-1692

乙肝表面抗体 ELISA 法的性能验证

杨厚禄
沈阳金域医学检验所有限公司

目的 对乙肝表面抗体（HBsAb）ELISA 法进行性能验证。
方法 精密度测定①重复性精密度：使用购买弱阳性康彻斯坦质控品（浓度为 30IU/ml），重复检测 20 次，计算结果 CV<15%为重复性精密度验证通过。②批间精密度： 使用购买弱阳性康彻斯坦质控品（浓度为 30IU/ml）每天重复检测 4 次，连续检测 5 天，共计 20 个数据，计算结果 CV<25%为批间精密度验证通过。检出限测定：使用购买弱阳性康彻斯坦质控品（浓度为 30IU/ml）进行倍比稀释，并检测稀释后样本结果。确定结果为阳性的最低浓度值。直接配置足够检测 20 次的该浓度的质控品，一次完成复测 20 次，且满足最多有一个结果不为阳性，即可确定此值即为乙肝表面抗体（HBsAb）的检出限。符合率:选择 20 例化学发光定量法乙肝表面抗体（HBsAb）阳性结果的样本，结果应分布在弱阳性、阳性结果范围内。使用乙肝表面抗体（HBsAb）ELISA 法检测留存的 20 例样本，检测结果≥80%为满意即符合率验证通过。
结果 重复性精密度验证结果为，4.45%，CV<15%；批间精密度验证结果为 14.52%，CV<25%,。检出限为 7.5mIU/ml，符合率结果为 95%，＞80%。
结论 乙肝表面抗体（HBsAb）ELISA 法的性能验证通过，符合项目开展要求。

PU-1693

肿瘤标志物联合检测对原发性肝癌的诊断价值

王乾曜
沈阳金域医学检验所有限公司

目的 本文拟通过探讨外周血中性粒细胞与淋巴细胞比值（NLR）以及联合血清甲胎蛋白（AFP）、高尔基体蛋白 73（GP73）、α-L-岩藻糖苷酶（AFU）、分泌蛋白 Dickkopf 同源物 1（DKK1）检测、异常凝血酶原（DCP）、碱性磷酸酶（ALP），为原发性肝癌的诊断提供依据，提高原发性肝癌的检出率。

方法 1.1AFP、DCP、高尔基体跨膜糖蛋白 73 的联合检测 1.2 AFP、DCP、DKK1 的联合检测 1.3 AFP、α-L-岩藻糖苷酶、碱性磷酸酶的联合检测
结果 1.1 AFP、DCP、高尔基体跨膜糖蛋白 73 的联合检测
联合检测阳性检出率最高，绝代诊断原发性肝癌特异度敏感度等方面更优势，表明较单独检测，联合检测的实践更能确保原发性肝癌诊断的准确性。
1.2 AFP、DCP、DKK1 的联合检测
86 例肝癌患者作为自己的研对象，分别检测其 AFP、DCP、DKK1 水平，分析相关数据得 出单独检测 AFP、DCP、DKK1 时其敏感度为 58.13%、74.42%、73.26%，特异度为 29.00%、30.00%、44.00%，联合检测时敏感度与特异度分别为 93.02%、78.00%。
1.3AFP、α-L-岩藻糖苷酶、碱性磷酸酶的联合检测
单独检测患者 AFP、AFU 和 ALP 水平，敏感度分别为 67.16%、73.13% 和 71.64%，3 项指标联合检测敏感度可达 88.06%。AFP、AFU 和 ALP 的联合检测可以明显提高单项检测的敏感度，这对于肝癌的诊断至关重要。
结论 肿瘤标志物的联合检测已经成为临床工作中的趋势，但在没有更好治疗方式被发掘时，通过联合检测这些标志物能在早期，甚至在更早期进行诊断肝癌，从而进行更早的干预，这对于提高患者的生存率、改善患者的预后有重要意义。

PU-1694

多种自身抗体在原发性胆汁性胆管炎中的临床意义

李齐光
广州医科大学附属第六医院/清远市人民医院

目的 探讨多种自身抗体在原发性胆汁性胆管炎(PBC)诊疗中的临床意义。
方法 收集 58 例原发性胆汁性胆管炎患者(PBC 组)、60 例病毒性肝炎组和 60 名正常对照组。应用间接免疫荧光法分别检测抗核抗体(ANA)、抗线粒体抗体(AMA),用线性免疫印迹法分别检测自免肝谱,分析各种自身抗体单独检测及并联检测在 PBC 诊断中的意义.
结果 PBC 组、病毒性肝炎组和正常对照组患者的 ANA 阳性率比较差异有统计学意义(P < 0.05),其中 PBC 组的 ANA 阳性率最高、正常对照组的 ANA 阳性率最低,组间两两比较差异均有统计学意义(P 均< 0.017).3 组的 ANA 阳性者中,PBC 组以中高滴度为主,中高滴度者比例均高于病毒性肝炎组及正常对照组(P 均< 0.017),低滴度(1 : 100)者比例低于病毒性肝炎组(P 均< 0.017).PBC 组 54 例 ANA 阳性患者中,ANA 荧光核型以胞浆颗粒型(43%)与着丝点型(20%)为主.PBC 组患者的 ANA、AMA、AMA-M2、抗 gp210、抗 sp100 及并联检测[ANA、AMA 等]的阳性率均高于病毒性肝炎组和正常对照组(P 均< 0.017),PBC 组中并联检测的阳性率高于单独检测抗 gp210 和抗 sp100(P 均< 0.05).ANA(1 : 320 及以上)、AMA、AMA-M2、抗 gp210 和抗 sp100 以及并联检测在 PBC 患者中的灵敏度分别为 88%、85%、78%、29%、16%和 90%;特异度分别为 92%、97%、98%、98%、100%和 92%;阳性预测值分别为 91%、96%、98%、94%、9/9 和 91%;阴性预测值分别为 89%、87%、82%、59%、55%和 90%。
结论 临床筛查 PBC 时,仅行 ANA 检测的患者出现中高滴度胞浆颗粒型结果时,应追加自身免疫肝抗体谱检测;并联检测自身抗体能够提高 PBC 的灵敏度,为临床提供更多诊断依据。

PU-1695

对磁条码免疫荧光发光法与流式免疫荧光法检测抗核抗体谱结果及检测时间之间的比较

李齐光
广州医科大学附属第六医院/清远市人民医院

目的 对磁条码免疫荧光发光技术(CILIA）和多重微球流式荧光免疫技术(MBFFI）检测抗核抗体谱结果以及所用检测时间进行比较。
方法 同时用磁条码免疫荧光技术和多重微球流式荧光免疫技术检测 93 例自身免疫病患者（其中 52 例系统性红斑狼疮（SLE）、16 例干燥综合征（SS）和 21 例其他自身免疫性疾病）和 50 例健康者血清的抗核抗体谱,进行结果的一致性比较,同时对两种方法在 SLE 诊断中的灵敏度、特异度、阳性预测值和阴性预测值进行比较。
结果 在自身免疫疾病组中，磁条码免疫荧光发光技术与 MBFFI 标本中抗核抗体谱各指标一致率在 86.02%-98.92%之间；在正常对照组[刘 1] 中，磁条码免疫荧光发光技术与 MBFFI 标本中抗核抗体谱一致率在 96.0%-100%之间；所有标本[刘 2] 一致率为在 90.90%-97.91%之间。两种不同检验方法检测各指标在诊断系统性红斑狼疮中的灵敏度、特异度、阳性预测值和阴性预测值，详见表二[刘 3]，两种方法检测抗核抗体谱项目总的灵敏度、特异度、阳性预测值和阴性预测值分别是 94.23%、90.38%，96.00%、98.00%，96.07%、97.91%，94.11%、90.74%，无统计学差异（P>0.05）；前者所用平均检测时间为 60±5min，后者为 180±30min，前者所用时间明显少于后者，具有统计学意义（P<0.01）。
结论 磁条码免疫荧光技术检测抗核抗体谱与多重微球流式荧光免疫技术相比，一致性较高，各指标之间灵敏度、特异度、阳性预测值和阴性预测值均无显著差异，可互相替代用于自身免疫性疾病诊疗，而且前者所用检测时间显著低于后者，其检测效率明显高于后者。

PU-1696

荧光免疫层析法检测 2019-nCoV 特异性抗体用于新冠病毒感染筛查价值探讨

李齐光
广州医科大学附属第六医院/清远市人民医院

目的 探讨荧光免疫层析法检测 2019-nCoV 特异性抗体 IgM 和 IgG 用于一般人群新冠病毒感染筛查价值。
方法 选取 2019 年 2 月至 2020 年 10 月某医院共 2 322 例诊疗患者,采用免疫荧光层析法对血清中 2019-nCoV 特异性抗体 IgM 和特异性抗体 IgG 分别进行检测。记录光免疫层析法 2019-nCoV 抗体检测结果,包括阳性率、疑似阳性率。观察 2019-nCov 特异性抗体 IgG 检测结果为阳性和疑似阳性的样本中年龄分布情况。
结果 在 2 322 例 2019-nCoV 特异性抗体检测中,荧光免疫层析法检测总阳性病例 28 例,即阳性检测率为 1.21%;特异性抗体 IgG 检测阳性率为 0.78%;特异性抗体 IgM 中,阳性率为 1.18%。2019-nCov 特异性抗体 IgG 检测结果为阳性和疑似阳性的样本中年龄>45 岁的比例为 61.54%（1 429/2 322）;2019-nCov 特异性抗体 IgM 检测结果为阳性和疑似阳性的样本中年龄>45 岁的比例为 72.00%（1 672/2 322）。
结论 荧光免疫层析法检测 2019-nCoV 血清抗体用于一般人群筛查假阳性率低,可作为核酸检测的补充手段,用于疑似人群初筛,节省医疗资源。

PU-1697

血清抗苗勒管激素与抑制素 A 在青春期多囊卵巢综合征诊断中的价值

李正秋
湖南省儿童医院

目的 探讨青春期多囊卵巢综合征患者血清抗苗勒管激素与抑制素的变化及其对诊断的价值。
方法 选取本院 2018 年 3 月-2019 年 5 月门诊确诊为 PCOS 青春期女性 39 例（PCOS 组）与同期接受体检的健康同龄女性 26 例（健康组）作为研究对象，检测血清性激素水平、胰岛素抵抗（HOMA-IR）、AMH、INH-A 与 INH-B 的浓度，比较两组血清指标的差异，并结合超声检查结果分析差异指标与卵巢体积之间的关系，采用 ROC 曲线分析差异指标对 PCOS 诊断的价值。
结果 PCOS 组促黄体生成素(LH)、睾丸酮 T、HOMA-IR、AMH 与 INH-A 均高于健康组（P＜0.05），两组卵泡刺激素(FSH)、雌二醇(E2)、催乳素(PRL)与 INH-B 水平没有显著差异（P＞0.05）；pearson 相关性分析显示：AMH 与 LH、INH-A 与 HOMA-IR 呈显著正相关（P＜0.05），INH-A 与 AMH、LH 与 HOMA-IR 呈显著正相关（P＜0.05），INH-B 水平与 BMI、FSH 与 HOMA-IR 呈显著正相关（P＜0.05）；AMH 与左卵巢体积呈现显著正相关关系（P＜0.05），INH-A 与右卵巢体积呈现显著正相关关系（P＜0.05）；ROC 曲线分析显示：AMH 预测 PCOS 的 AUC 为 0.885，以 6.38μg/L 为临界值时，其灵敏度、特异度与准确度分别为 0.821（32/39）、0.808（21/26）与 0.815（53/65），INH-A 预测 PCOS 的 AUC 为 0.865，以 17.52ng/L 为临界值时，其灵敏度、特异度与准确度分别为 0.897（35/39）、0.692（18/26）与 0.815（53/65）。
结论 AMH、INH-A 在青春期 PCOS 女性患者血清中显著升高，其对青春期 PCOS 有着较高的诊断价值。

肿瘤相关巨噬细胞:乳腺癌发展过程中的重要参与者

黄心群、曹劲松、申莹莹、祖旭宇
南华大学附属第一医院

乳腺癌是一种常见的女性恶性肿瘤,在肿瘤患者中死亡率位列第二。乳腺肿瘤微环境中,肿瘤相关巨噬细胞为含量最多的免疫细胞,通过多种方式参与和调节乳腺癌发展。在乳腺癌发展过程中，肿瘤相关巨噬细胞通过促进血管生成、癌细胞转移、诱导癌细胞干性、参与免疫抑制和能量代谢调节,为乳腺肿瘤生长提供支持。可塑性是肿瘤巨噬细胞的特性,将肿瘤相关巨噬细胞复极化为 M1 型巨噬细胞可发挥肿瘤杀伤作用。本文对肿瘤相关巨噬细胞在乳腺癌发展过程中的作用与机制进行综述,为肿瘤相关巨噬细胞作为乳腺癌有效的治疗靶点提供依据。

PU-1699

Th17 细胞/Treg 细胞及其相关炎性因子在川崎病冠脉损伤中的作用

周玉杰、袁华敏、彭艳华
湖南省职业病防治院

目的 分析辅助性 T 细胞 17(Th17)和调节性 T 细胞(Treg)及其相关炎症因子，探讨它们与川崎病的发生及其冠脉损伤的临床意义。

方法 选取 2018 年 1 月至 2018 年 12 月本院川崎病住院患者 40 例作为 KD 组，根据是否出现冠状动脉病变又划分为冠状动脉病变组（CALs），以及非冠状动脉病变组（NCALs），另选取健康体检者 40 例为健康对照组。在患儿发病的急性期以及健康对照组抽取外周静脉血，用流式细胞仪检测外周血中辅助性 T 细胞 17(Th17)和调节性 T 细胞(Treg)的百分含量，同时用酶联免疫吸附试验（ELISA）测出各细胞因子的含量，收集他们的基本临床信息，分析它们与川崎病的发生及其冠脉损伤的临床意义。
结论 1. Th17 细胞百分率、Treg 细胞百分率、Th17/Treg 与川崎病的发生发展相关。2.Th17 细胞、Treg 细胞、Th17/Treg 及其相关炎症因子对于冠状动脉损伤的预测及判断有一定的临床价值。

PU-1700

成人急、慢性荨麻疹血清过敏原特异性 IgE 的比较分析

杨术生
上海市东方医院南院检验科

目的 探讨成人急、慢性荨麻疹的发生与过敏原的关系。
方法 采用免疫印迹法对该院皮肤科门诊 2017 年 1 月—2020 年 11 月的急、慢性荨麻疹患者血清过敏原特异性 IgE（sIgE）抗体进行检测及分析。
结果 563 例荨麻疹患者以女性为主，女性荨麻疹例数占比（61.10%）显著高于男性（38.90%），差异有统计学意义（χ2=55.506，P=0.000）。共检出 sIgE 阳性病例 228 例（40.50%）；吸入性过敏原 sIgE 阳性率（30.91%）高于食入性过敏原 sIgE 阳性率（22.20%），差异有统计学意义（χ2=10.933，P=0.001）。急、慢性荨麻疹患者年龄构成、性别分布等差异均无统计学意义（P＞0.05）。急性荨麻疹患者较慢性荨麻疹患者猫毛、艾蒿 sIgE 阳性率更高，差异有统计学意义（χ2 分别为 6.156 和 7.843，P 分别为 0.013 和 0.005），慢性荨麻疹患者较急性荨麻疹患者鸡蛋白 sIgE 阳性率更高，差异有统计学意义（χ2=8.203，P=0.004）。
结论 急、慢性荨麻疹过敏原种类存在差异，可能与其发病机制、临床表现等有关，临床应重视过敏原种类的筛查以便更好地进行荨麻疹患者诊治和管理。

PU-1701

AFP-L3%、DCP 和 GALAD 模型在 AFP 低浓度 HCC 诊断中的作用

杨术生
上海市东方医院南院检验科

目的 探讨血清甲胎蛋白异质体比率（AFP-L3%）、异常凝血酶原（DCP）和 GALAD 模型对甲胎蛋白（AFP）低浓度肝细胞肝癌（HCC）中的应用价值。
方法 采用回顾性研究方法，纳入 2020 年 1 月至 2021 年 2 月上海市东方医院就诊的 120 例低浓度 AFP 的研究对象，根据诊断分为 HCC 组 47 例、非 HCC 组 73 例，测定血清中 AFP-L3%、DCP 浓度并进行统计分析。
结果 HCC 组血清 AFP、AFP-L3%和 DCP 水平以及 GALAD 模型评分均明显高于非 HCC 组，差异有统计学意义（P＜0.05）；联合检测 AFP、AFP-L3%和 DCP 的曲线下面积为 0.954，对应的诊断灵敏度为 89.4%、特异性为 97.3%，明显高于 AFP、AFP-L3%和 GALAD 模型（分别为 Z=3.418，P=0.001；Z=2.965，P=0.003 和 Z=3.184，P=0.002），但与 DCP 差异无统计学意义（Z=1.684，P=0.092）。

结论 AFP、AFP-L3%及 DCP 联合检测或有助于提高低浓度 AFP 肝癌的诊断效能，为 AFP 低浓度肝癌早期诊断提供可靠依据。

PU-1702

郑州部分地区健康成年人群血清促甲状腺激素受体抗体参考区间的调查研究

徐海娈
郑州安图生物工程股份有限公司

目的 调查郑州地区健康人群血清促甲状腺激素受体抗体（thyrotrophin receptor antibody，TRAb）水平分布，建立本地区 TRAb 的参考区间，以期为临床诊断、用药和预后提供可靠依据。
方法 收集从 2020 年 4 月至 2020 年 12 月于郑州唯爱康健康体检中心进行常规体检的人群，按照美国国家临床生化协会建议的正常成人入选标准进行严格筛选，将入组的 936 人按性别及年龄段分为两组：男性（18-40 岁 394 人和大于 40 岁 104 人），女性（18-40 岁 339 人和大于 40 岁 99 人），采用郑州市安图生物工程有限责任公司开发的磁微粒化学发光免疫试剂检测血清 TRAb 水平，对检测结果进行分析。
结果 936 名健康人血清 TRAb 呈偏态分布，男性与女性各年龄组血清 TRAb 之间水平差异均无统计学意义（P＞ 0.05），可建立统一参考区间（0.3-1.17 IU /L）。
结论 建立适合本地区健康人群的 TRAb 参考区间，为郑州地区医院临床实验室的应用提供了参考依据。

PU-1703

类风湿关节炎患者中性粒细胞/淋巴细胞比值和血小板/淋巴细胞比值对病情活动度的评估价值研究

张丽中
山西白求恩医院

目的 研究类风湿性关节炎患者中性粒细胞/淋巴细胞比值和血小板/淋巴细胞比值在评估病情活动度中的价值。
方法 收集 2019 年 12 月—2021 年 2 月山西白求恩医院类风湿性关节炎患者 150 名，同时随机抽取年龄、性别相匹配的健康体检者 81 名作为健康对照组。RA 患者按类风湿性关节炎疾病活动度 DAS28 进行评分，分为 RA 缓解期组（41 例）和 RA 活动期组（109 例），记录患者的临床资料（关节肿胀数，关节压痛数，患者自我感觉评分）和实验室指标（PLT，LYM，NEUT，WBC，CRP 等），计算 NLR，PLR 比值;比较健康对照组，RA 缓解期和活动期患者 NLR，PLR 的差异性，并进行相关性分析。符合正态分布的组间使用独立样本 t 检验，相关性分析采用 Spearman 检验，对 RA 病情进展的评估价值则用 ROC 曲线。
结果 健康对照组 PLT, WBC，NEUT，NLR，PLR 水平显著低于 RA 患者 PLT，WBC，NEUT，NLR，PLR；健康对照组 LYM 明显高于 RA 患者 LYM，差异有统计学意义（p<0.05）；缓解期 RA 患者 NLR，PLR 和 CRP 明显低于活动期 RA 患者 NLR，PLR 和 CRP 水平，差异有统计学意义(P<0.05)。RA 活动期患者 NLR，PLR 与 DAS28-CRP 呈显著正相关（r=0.297,r=0.381，P<0.05）。ROC 曲线表示，NLR，PLR 评估类风湿性关节炎疾病活动的曲线下面积（AUC）分别为 0.728 和 0.675，当 cut-off 值为 2.45 和 161.0（即检测量值为 2.45 和 161.0 时），NLR，PLR 诊断 RA 的敏感性为 0.572 和 0.527 特异度为 0.877 和 0.827。

结论 RA 的病情活动与 NLR，PLR 存在正相关关系，NLR，PLR 对评估类风湿性关节炎进入活动期具有较高的价值。

PU-1704

GrpE Immunization Protects Against Ureaplasma urealyticum Infection in BALB/C Mice.

Guozhi Dai[2]、Yanhong Tang[1]、Fangyi Guo[2]
1. 广州医科大学呼吸疾病国家重点实验室
2. 郴州市第一人民医院

Nucleotide exchange factor (GrpE), a highly conserved antigen, is rapidly expressed and upregulated when *Ureaplasma urealyticum* infects a host, which could act as a candidative vaccine if it can induce an anti-*U. urealyticum* immune reaction. Here, we evaluated the vaccine potential of recombinant GrpE protein adjuvanted by Freund's adjuvant (FA), to protect against *U. urealyticum* genital tract infection in a mouse model. After booster immunization in mice with FA, the GrpE can induced both humoral and cellular immune response after intramuscular injection into BALB/c mice. A strong humoral immune response was detected in the GrpE-immunized mice characterized by production of high titers of antigen-specific serum IgG (IgG1, IgG2a, and IgG3) antibodies. At the same time, the GrpE also induced a Th1-biased cytokine spectrum with high levels of IFN-γ and TNF-α after re-stimulation with immunogen GrpE in vitro, suggesting that GrpE could trigger the Th1 response when used for vaccination in the presence of FA. Although GrpE vaccination in the presence of a Th1-type adjuvant-induced had readily detectable Th1 responses, there wasn't increase inflammation in response to the infection. More importantly, the robust immune responses in mice after immunization with GrpE showed a significantly reduced *U. urealyticum* burden in cervical tissues. Histopathological analysis confirmed that tissues of GrpE-immunized BALB/c mice were protected against the pathological effects of *U. urealyticum* infection. In conclusion, this study preliminarily reveals GrpE protein as a promising new candidate vaccine for preventing *U. urealyticum* reproductive tract infection.

PU-1705

血清 NSE、S-100 和 CRP 水平在脑损伤中的变化及意义

凌芸、束梅燕、钱香、臧晓陵
江苏省人民医院（南京医科大学第一附属医院）

目的 评估血清中神经元特异性烯醇化酶（NSE）、中枢神经特异蛋白（S-100）、和 C 反应蛋白（CRP）水平与脑损伤的关系，探讨其与患者病情严重程度及结局的关系。
方法 选取 203 例脑损伤患者作为观察组，另选取同期 200 例健康体检者作为对照组，比较两组血清中 NSE、S-100、和 CRP 水平，并分别比较观察组不同结局患者血清中的水平。
结果 观察组血清中 NSE、S-100 和 CRP 水平均明显高于对照组，差异具有统计学意义($P<0.05$)。不良结局组患者血清中 NSE、S-100、和 CRP 水平均明显高于良好结局组，差异均有统计学意义($P<0.05$)。
结论 血清中 NSE、S-100、和 CRP 水平与脑损伤病情严重程度及结局存在关联，检测三者水平有助于病情评估和结局判断，对临床治疗有积极意义。

PU-1706

浓缩清洗缓冲液浓度对乙肝表面抗原定量结果的影响

郑欢欢
吉林金域检验所有限公司

目的 探讨浓缩清洗缓冲液浓度对乙肝表面抗原定量结果的影响
方法 选取 2020 年 1 月至 2020 年 3 月之间送检我公司的健康体检项目为乙肝表面抗原检测的标本 100 例，将标本平均分为 2 份，分别为 A、B 两组。A 组 100 例体检患者为实验组，将浓缩 Bffer 液用纯水以 1:9 的稀释倍数进行稀释；B 组 100 例体检患者为对照组，用纯水对浓缩 Bffer 液以 1:9.5 的稀释倍数进行稀释，将所有样本进行高速离心后，A、B 组均采用雅培 i2000ISR 进行乙型肝炎病毒表面抗原检测，检测试剂为乙型肝炎病毒表面抗原检测试剂盒，检测方法为化学发光微粒子免疫检测法，均使用配套试剂进行检测。对实验组（1:9 倍雅培 Buffer 液进与纯水稀释）与对照组（1:9.5 倍的雅培 Buffer 液与纯水稀释）的乙型肝炎病毒表面抗原检测结果进行分析。
结果 根据乙型肝炎病毒表面抗原检测标准，浓度＜0.05IU/ml 的样本视为非反应性（阴性）；浓度≥0.05IU/ml 的样本则视为反应性（阳性）。一般情况下健康人的乙型肝炎病毒表面抗原浓度很低(多为 0.00-0.01）。实验组乙肝表面抗原定量（HBSAg）1:9 倍雅培浓缩清洗液结果为 0.00-0.01(IU/ml)；对照组乙肝表面抗原定量（HBSAg）1:9.5 倍雅培浓缩清洗液结果为 0.03-0.04(IU/ml)，表面抗原结果高于正常值。
结论 结果表明浓缩清洗缓冲液浓度为 1:9 时，结果更准确。雅培浓缩清洗液浓度过低会导致吖啶脂标记的乙肝表面抗原抗体结合反应混合物冲洗不干净，从而导致表面抗原结果有差异。乙型肝炎病毒表面抗原通常用于辅助诊断疑似乙型肝病（HBV）感染的患者并对抗病毒治疗效果和感染者的状态进行检测，如果表面抗原结果不准确，可能会耽误病情的检测或者疾病的诊断，我们要严格按照厂家提供的稀释倍数进行配比，消除可能因清洗液浓度过低对乙肝表面抗原的影响。

PU-1707

血清 GPC-3 在肝细胞癌诊断中的应用

崔俊华、杨静、周佳烨、王蓓丽、郭玮
复旦大学附属中山医院

目的 研究血清 GPC-3 在肝细胞癌诊疗中的应用。
方法 围绕 GPC-3 生物学特征、血清 GPC-3 检测手段及其在肝细胞癌诊断中的应用作一综述。
结果 据世界卫生组织数据统计，HCC 是全球第五大常见肿瘤，第二大癌症致死病因。HCC 的早期发现和治疗与良性肝病灶或正常肝相比，大多数 HCC 中 GPC-3 信使 RNA（mRNA）显着增加，同时免疫组织化学研究表明，GPC-3 在 HCC 中会有表达，而在正常肝脏和良性肝脏疾病的肝细胞中则无法检测到。与此相符的是，在健康人群和肝炎患者的血清中未检测到 GPC-3。
结论 通过检测血清 GPC-3，并结合甲胎蛋白、异常凝血酶原等其它血清标志物可辅助肝细胞癌的诊断。

PU-1708

新疆地区某三甲医院呼吸道病原体感染情况分析

王玲玲、庞秀慧、黄睿
新疆维吾尔自治区人民医院

目的 分析研究新疆地区某三甲医院呼吸道病原体的感染率及季节分布情况。

方法 回顾性分析该院 2020 年 4 月至 2021 年 3 月进行呼吸道病原体 IgM 抗体检测的 7231 例住院患者的结果，采用间接免疫荧光法检测 8 种呼吸道感染病原体 IgM 抗体（包括腺病毒、肺炎衣原体、甲型流感病毒、乙型流感病毒、副流感病毒、嗜肺军团菌、肺炎支原体、呼吸道合胞病毒），对感染阳性率及感染的季节分布进行分析。
结果 7231 例患者中，呼吸道感染病原体 IgM 抗体阳性检出率 28.34%（2049/7231），主要以肺炎支原体感染为主，阳性率为 6.47%（468/7231）；混合感染以甲型流感病毒+乙型流感病毒为主，阳性率为 1.31%（392/7231）。呼吸道感染以秋季（9-11 月）最高，7.79%（563/7231）；春季（3-5 月）次之，7.23%（523/7231）。
结论 新疆地区呼吸道病原体感染主要以肺炎支原体为主，混合感染以甲型流感病毒+乙型流感病毒为主，秋季发病率最高。

PU-1709

Interleukin-18 is a prognostic marker and plays a tumor suppressive role in colon cancer

Xiaodong Feng、Xiaodong Feng
The Affiliated Hospital of Qingdao University

Interleukin-18 (IL-18) belongs to the IL-1 family, and is an essential proinflammatory and immune regulatory cytokine. The present study was designed to investigate the expression and function of the IL-18 in colon cancer. In clinical analyses, mRNA and protein expression of IL-18 were decreased in tissues of colon cancer patients. This decreased expression of IL-18 was significantly correlated with the tumor size (P=0.001) and American Joint Committee on Cancer (AJCC) stage (P=0.013). Patients with IL-18 positive tumors had a better survival than patients with IL-18 negative tumors. Moreover, up-regulation of IL-18 inhibited colon cancer cells proliferation. Our data suggest that the decreased expression of IL-18 in colon cancer was associated with prognosis and tumor proliferation. IL-18 may be considered as a novel tumor suppressor and a potential therapeutic target for colon cancer patients.

PU-1710

南京地区妊娠女性甲状腺功能指标参考区间的建立

王参军
东南大学附属中大医院

目的 检测南京地区健康妊娠女性不同孕期的甲状腺功能指标水平,建立该地区孕早、中、晚期女性的甲状腺功能指标参考区间。
方法 选取 2019 年 1 月至 2020 年 12 月在该院建档、产检的孕妇 160 例,并选择 160 例育龄期健康非妊娠女性作为健康对照,采用罗氏全自动化学发光分析仪检测 120 例妊娠女性在孕早、中、晚期的血清游离甲状腺素（FT4）、促甲状腺激素（TSH）水平,并对检测结果进行分析,建立该地区妊娠女性 FT4、TSH 的参考区间。
结果（1）孕早、中、晚期 FT4 水平分别为（13.97±1.51）、（11.36±0.87）、（11.47±1.09）pmol/L,TSH 水平分别为 1.253（0.081,2.639）、1.573（0.517,3.42）、1.563（0.515,3.168）mIU/L。（2）孕早期女性与孕中期、孕晚期女性的 FT4、TSH 水平比较,差异均有统计学意义（P<0.05）,但孕中期、孕晚期女性的 FT4、TSH 水平比较,差异无统计学意义（P>0.05）。（3）TSH 在孕早期较低,之后逐渐上升,孕早期女性 TSH 水平与健康非妊娠女性比较,差异有统计学意义（P<0.05）。FT4 在孕早期较高,之后逐渐下降,孕早、中、晚期女性与健康非妊娠女性 FT4 水平比较,差异均有统计学意义（P<0.05）。

结论 妊娠期女性较健康非妊娠女性甲状腺功能指标水平有明显变化,孕早期、孕中期、孕晚期也有差别,应建立该地区孕早、中、晚期女性的甲状腺功能指标参考区间。

PU-1711

梅毒螺旋体 Hsp40 蛋白的表达、纯化及免疫学活性分析

伍仙
湖南中医药高等专科学校附属第一医院（湖南省直中医医院）

目的 表达梅毒螺旋体（Tp）Hsp40 蛋白并分析其免疫学活性。
方法 利用软件预测 TpHsp40 蛋白的 B 细胞表位，构建重组质粒 pET28a-TpHsp40，转化大肠埃希菌 BL21 star（DE3），培养后利用 IPTG 诱导重组 TpHsp40 蛋白的表达。收集菌体，破碎、离心后用 Ni2+层析柱进行纯化。收集 80、120 和 200 mmol/L 咪唑洗脱蛋白，经脱盐、去内毒素后取纯度良好的一组 TpHsp40 蛋白免疫小鼠，制备抗血清，采用 ELISA 检测抗体效价并分型。取小鼠脾脏，制成脾细胞悬液，采用 CCK-8 法检测淋巴细胞增殖情况，ELISA 法测定淋巴细胞分泌的细胞因子水平。
结果 生物信息学分析 TpHsp40 含有多个 B 细胞表位。构建的重组质粒转染 DE3 后经 IPTG 诱导表达分子质量单位约为 42.4 ku 的重组 TpHsp40 蛋白，经亲和层析纯化后免疫小鼠，能够刺激产生高滴度（105log10）的血清抗体。且能够诱导小鼠淋巴细胞增殖(SI 值为 2.41)和 IFN-γ、TNF-α 高表达，但不能够诱导 Th2 型细胞因子表达。
结论 重组表达的梅毒螺旋体 TpHsp40 蛋白能够诱导小鼠产生 Th1 型应答，有望成为 Tp 疫苗的新靶点。

PU-1712

自动光激化学发光检测仪 LiCA500 的性能验证

李恒[1]、陈煌炜[2]、杨宏伟[1]
1. 天津市天津医院
2. 天津医科大学 医学检验学院

目的 验证医院新引进的 LICA500 自动光激化学发光检测仪系统性能。
方法 根据 CNAS-GL038: 2019《临床免疫学定性检验程序性能验证指南》的要求，对 LICA 500 自动光激化学发光检测仪检测乙肝表面抗原（HBsAg）、乙肝表面抗体（Anti-HBs）、乙肝 e 抗原（HBeAg）、乙肝 e 抗体（Anti-HBe）、乙肝核心抗体（Anti-HBc）、丙肝抗体(Anti-HCV)和梅毒螺旋体抗体(Anti-TP)7 个项目的符合率、精密度、检出限、临界值、线性范围进行性能验证及评价。
结果 检测 7 个项目的方法符合率均为 100%，批内变异系数 CV%为 0.16%~8.61%，批间变异系数 CV%为 0.17%~13.93%，线性范围斜率为 1.0038~1.0074，r2 在 0.9999~1.0000，满足相关文件要求；检出限阳性结果次数、最低检测限以及临界值均满足厂家要求，在其规定的范围之内。
结论 自动光激化学发光检测仪 LiCA500 检测系统检测 7 个项目的符合率、精密度、检出限、临界值、线性范围验证通过，可满足临床需要并投入使用。

PU-1713

发热和呼吸困难患者九联检 IgM 抗体检测结果分析

杨耀永、唐满玲、蒋最明、何聪玲、吴莹
株洲市中心医院

目的 了解本地区发热和呼吸困难患儿的病原谱, 为临床抗感染及病原体检测提供依据。
方法 收集 1033 例临床症状表现为发热和呼吸困难患儿的血清标本, 采用间接免疫荧光法检测其中 9 种常见病原体的 IgM 抗体。
结果 1033 例患儿中肺炎支原体抗体阳性 495 例,春季、夏季和秋季都是肺炎支原体高发期。
结论 湖南株洲地区引起儿童发热和呼吸困难的主要病原体是肺炎支原体，并且春季、夏季和秋季感染率都很高。

PU-1714

建立基于 HCC 相关特异性血清标志物的诊断模型

刘晓文、周佳烨、朱晶、邵文琦、王蓓丽、郭玮
复旦大学附属中山医院

目的 本研究旨在探讨肝癌诊疗中应用的血清标志物之间的联系和关系，期望能建立相应的诊断模型探讨肝癌（Hepatic Cell Carcinoma，HCC）患者的预后情况。
方法 选取影像学诊断或是病理诊断为 HCC 的患者 227 例数，依据其治疗前后（术前、术后；化疗前、化疗后）的样本检测 HCC 相关特异性血清标志物（AFP、AFU、PIVKA、AFP-L3）等，在随访患者一定时间后，依据其终点事件（复发、死亡、肿块大小、肝功能分级情况）与血清标志物的关系，模拟出含有血清标志物的诊断模型（可以用 logistics 回归，逐步进入计算风险相关系数）。
结果 根据特异性的血清标志物，对入组患者进行回顾性的研究，提出相应血清标志物的诊断模型。
结论 通过 HCC 相关特异性血清标志物的检测结果，分析 HCC 患者治疗前后的预后情况，得出能用以推断 HCC 患者预后情况的模型或是指导治疗的潜在诊断模型。

PU-1715

金属离子稳定剂对神经元特异性烯醇化酶样本稳定性提升影响

郑迪文
郑州安图生物工程股份有限公司

目的 肺癌是最常见的恶性肿瘤之一，且由于在发病早期症状和体征不明显，约 60%-80%的患者在确诊时已发展为中晚期，5 年生存率不到 10%。肿瘤标志物 NSE、ProGRP、SCC、Cyfra21-1、CEA 对于肺癌的早发现、早确诊具有明确指导意义，其中 NSE 是小细胞肺癌的首选肿瘤标志物，但是由于 NSE 抗原本身的不稳定性对临床检验工作的复检及留样考核带来较大困难。本文主要对金属离子稳定剂是否能延长 NSE 样本保存时间进行研究。
方法 选择经规范采血及处理得到的血清样本 38 例，取上清并分成 2 部分。实验组：按照 5%（质量体积比）的比例在其中 1 份样本中添加金属离子稳定性；对照组：按照 5%的比例在另外 1 份样本中添加 PB 缓冲；分别混匀后再次将实验组及对照组样本各分成 2 份，一份放置室温，一份放置 2-8℃。检测时间点：处理后 0 小时/4 小时/1 天/3 天/7 天/14 天。本次检测使用磁微粒化学发光法在安图 AutoLumo A2000 Plus 全自动化学发光测定仪上进行，比较实验组与对照组样本保存时间是否具有差异。

结果 添加金属离子稳定性的实验组在室温条件下可保存 3 天，样本与 0 小时比较检测偏差在 8.33%以内，明显优于对照组（室温条件下可保存 1 天）；实验组在 2-8℃条件下样本可稳定保存 7 天（与 0 小时比较检测偏差在 8.33%以内），明显优于对照组（2-8℃条件下可保存 3 天）。
结论 金属离子稳定剂的添加有利于神经元特异性烯醇化酶样本稳定性的提升，在进行一些需要样本短期保存的实验时，可使用并提升样本保存时间。另外可用于体外诊断试剂研发用样本添加以延长样本使用时效。

PU-1716

甲状腺刺激性免疫球蛋白临床效能应用评估

徐世骥、吴群、邵文琦、朱晶、王蓓丽、郭玮
复旦大学附属中山医院

目的 研究 TSI 在监测甲亢治疗疗效中的作用；通过间接法获得 TSI 参考范围。
方法 选取 2020 年 7 月至 12 月门诊及住院患者 TSI 检测数据，使用偏度-峰度值检验分析数据正态性，非正态分布数据通过 BOX-COX 变换转变为近似正态分布，采用四分位间距法剔除离群值，最后使用 Hoffman 法得出参考区间，并与直接法得到的行业标准参考区间比较，以参考变化值（reference change value，RCV）作为标准。通过比较甲亢组、肝病组、肾病组之间 TSI 水平差异，研究 TSI 与甲亢相关性。通过比较甲亢患者药物治疗或放射性治疗前后 TSI 水平变化，研究 TSI 在监测甲亢治疗疗效中的作用。
结果 TSI 间接法参考范围为 0-0.55；甲亢组中 TSI 水平显著高于肝病组和肾病组，$p<0.005$；肝病组和肾病组之间 TSI 水平无显著差异。甲亢患者经药物治疗后病情得到控制的患者中 TSI 水平下降。甲亢患者经放射性治疗后病情得到控制的患者中 TSI 水平下降。
结论 TSI 是甲亢的显著相关指标，并对监测甲亢疗效具有良好相关性。

PU-1717

罗氏 e602 全自动免疫分析仪性能验证及评价

邱美菊、杨丽红、胡道波、施立超
杭州迪安医院检验中心

目的 在仪器投入使用前，为了能够保证临床检验结果的准确性，提高临床检验的检测质量，有效的提高服务质量，现对罗氏 e602 全自动免疫分析仪进行验证及评价。
方法 根据 ISO15189 的要求，现对在该全自动免疫分析仪上检测的甲胎蛋白（AFP）、癌胚抗原（CEA）、糖类抗原 125（CA12-5）、糖类抗原 153(CA15-3)、糖类抗原 199(CA19-9)、糖类抗原 724(CA72-4)、铁蛋白(Ferr)、非小细胞肺癌相关抗原 21-1(CYFRA21-1)、总前列腺特异性抗原（PSA）、游离前列腺特异性抗原（fPSA）、神经元特异性烯醇化酶（NSE）共 11 个项目的精密度、正确度、分析测量范围、参考区间、临床可报告范围进行性能的验证与评价。
结果 批内精密度均小于 1/4CLIA’88（6.25%），批间精密度均小于 1/3CLIA’88（8.33%）；正确度允许误差均小于 1/2CLIA’88（12.5%）；分析测量范围的实际偏倚均小于允许偏倚（12.5%）；健康人群的 20 例样本进行验证，应不超过 2 例（10%）在验证区间外，若超过 2 例在参考区间外，则需要重复检测另外一组 20 例标本，参考区间的 20 例样本均不超过 2 例（10%）在验证区间外，验证通过；可报告范围的高限，至少选用 3 个高浓度样本，稀释倍数应为方法性能标明的最大稀释倍数并适当增加或减小稀释比例，每个高值样本重复测定 3 次，其相对偏倚均在允许范围（8.33%）之内。
结论 通过对罗氏 e602 全自动免疫分析仪进行验证及评价后，其分析性能符合质量目标和要求，能够保证临床检验结果的真实性、准确性和可靠性，能够更好的满足和服务于临床。

PU-1718

两种检测肺炎支原体 IgM 抗体的方法学比较

杨琴
胜利油田中心医院

目的 支原体肺炎是肺炎支原体引起的急性呼吸道感染伴肺炎，过去称为“原发性非典型肺炎”的病原体中，肺炎支原体最为常见。可引起流行，约占各种肺炎的 10%，严重的支原体肺炎也可导致死亡。肺炎支原体抗体分为 IgG 抗体和 IgM 抗体两种，因为肺炎支原体感染的潜伏期为 2 周-3 周，当患者出现症状而就诊时，IgM 抗体已达到相当高的水平，因此，IgM 抗体阳性可作为急性期感染的诊断指标。如 IgM 抗体阴性，也不能否定肺炎支原体感染，还需检测 IgG 抗体。IgG 较 IgM 出现晚，需动态观察。本文将对两种检测肺炎支原体 IgM 抗体的方法学进行比较。
方法 采用欧蒙间接免疫荧光法定性检测、亚辉龙化学发光法定量检测
检测人群： 202101-2021-04 我院住院及门诊就医患者，临床上有呼吸系统症状，以检测肺炎支原体 IgM 抗体来排除是否有其感染。年龄为 1M-94 岁之间，不区分性别，平行用这两种方法进行检测。
结果 定性按照弱阳性、阳性、阴性来判定，弱阳性和阳性均在阳性率统计范围内。定量按照无反应性 0-0.9；灰区：0.9-1.1；有反应性>0.9，结果在 0.9 以上均在阳性率统计范围内。
在 725 例患者中，肺炎支原体 IgM 抗体用间接免疫荧光法定性检测：阳性+弱阳性，230 例，阳性率为 31.72%；化学发光法定量检测：大于 0.9，138 例，阳性率为 19%。
结论 肺炎支原体 IgM 抗体结果在临床上的应用较为重要，因检测方法学不同，敏感性也不同，通过以上比较，采用欧蒙间接免疫荧光法检测比亚辉龙化学发光法检测更为敏感。

PU-1719

临床免疫检验报告自动审核系统的规范化建立和验证

朱晶、周佳烨、邵文琦、王蓓丽、潘柏申、郭玮
复旦大学附属中山医院

目的 探讨临床免疫乙肝两对半、甲状腺功能和肿瘤标志物结果（共 30 个检测项目）自动审核系统的规范化建立和验证。
方法 复旦大学附属中山医院检验科的免疫报告自动审核系统自 2018 年建立并应用至今，将所有自动审核规则建立于实验室信息系统（Laboratory information system，LIS)，采用仪器报警信息、复检规则、各检测项目的审核范围、Delta check，以及检测项目之间的逻辑关系共 5 部分审核规则。通过人工审核与自动审核相互比对，验证自动审核系统的有效性。
结果 临床免疫报告自动审核的灵敏度和特异性分别为 89.6%和 65.0%，阳性预期值和阴性预期值分别为 78.9%和 88.2%。自动审核系统与两位实验室高年报告审核人员判断的一致性达到 99.78%。自动审核系统的报告总通过率为 85.06%。统计 kappa 分析结果为 0.99（P<0.001）。
结论 实施临床免疫报告自动审核系统可降低 TAT，大大减少需要人工审核的工作量，使工作人员有更多的时间关注在疑难报告上。有效提高分析后环节的工作效率，进一步确保检验报告的准确性。

PU-1720

COVID-19 住院患者抗体 IgM、IgG 产生时效性和量化标准

段丽、林国跃*、李远达、秦莹、蔺志强、王泉、刘艳、史长音、杨振萍、何雪、贾婷、木尼热·库尔班
新疆医科大学第八附属医院（新疆新冠肺炎医疗救治定点医院）

目的 探讨新冠肺炎患者不同时间阶段自然产生的抗体 IgM、IgG 含量变化及 CT 值与浓度量化对应关系，为病情判断评估提供依据。
方法 收集 200 例 COVID-19 患者临床特征信息资料，应用磁微粒化学发光法多次检测新冠住院患者抗体 IgG 和 IgM 含量，统计并方差分析。
结果 COVID-19 患者随着病情变化住院时间延长体内 IgG 和 IgM 含量逐步增加，第 1-5d 产生浓度较低，第 6-10d 和第 11-20d 大幅度快速上升，在第 21-30d 内达到最高峰，第 31-40d 仍在高峰期并处于稳定状态，第 41-50d 后开始下降，几乎呈正态分布。恢复期较发病早期明显的高（P＜0.05）。不同年龄、性别、民族和临床分型的患者产生的 IgG 抗体含量随着病情进展天数延长是逐步增加的，到第 31-40 天仍保持较高浓度，但以 51-60 岁患者抗体 IgG 增加幅度最大，但早期第 1-5 天抗体 51-60 岁以上患者较年轻人产生明显的低、速度慢，而 IgM 抗体在早中期是逐步增加，到第 31-40 天后却是逐步减少的。女性 IgG 抗体增加明显高于男性（P＜0.05），IgM 抗体无明显差异（P＞0.05）。汉族第 10-20 天和第 21-30 天患者 IgG 和 IgM 抗体含量均明显高于维族（P＜0.05），而早期与后期其基本一致。IgG 和 IgM 抗体含量重型较轻型患者显著增高（P＜0.05），且重型患者抗体浓度变化较大不稳定，仅 IgM 抗体在第 31-40 天后明显下降。抗体 ct 值与浓度量化关系：1.61-7 之间为 1:2 浓度，8-15 为 1:4 浓度，16-25 为 1:8 浓度，17-35 为 1：16,36-80 为 1:32,81-115 为 1:64,116-350 为 1:128，351 以上为 1:256。
结论 COVID-19 患者在自然免疫状态下体内产生抗体 IgM、IgG 含量与年龄、性别、病程轻重有密切关系，其含量大小有提示患者清除病毒能力和预示病情转归的重要作用。

PU-1721

基于 CD169 表达量对小鼠脾红髓巨噬细胞进行的分型研究

杨施琪
上海交通大学医学院附属第九人民医院

目的 基于小鼠脾中红髓巨噬细胞唾液酸黏附蛋白（sialoadhesin, Sn，CD169）分子的表达水平，研究 CD169+和 CD169-红髓巨噬细胞亚群的基因表达谱差异。
方法 采用流式细胞术和免疫荧光法，检测 C57BL/6J 野生型（WT）小鼠脾中红髓巨噬细胞中 CD169 的表达，以 CD169 敲除（CD169 KO）小鼠为阴性对照。富集 F4/80+的脾红髓巨噬细胞并分选出 CD169+和 CD169- 2 个亚群，对它们进行 RNA 测序。利用 DESeq2 软件在 P <0.05 &|log2FC|≥ 1 时筛选出差异基因，通过京都基因与基因组数据库（Kyoto Encyclopedia of Genes and Genomes, KEGG）富集功能分析，将差异基因按照参与的通路或功能进行分类。通过实时荧光定量 PCR（quantitative real-time PCR, qPCR）验证部分差异基因。
结果 流式细胞术和免疫荧光法证实部分红髓巨噬细胞表达 CD169。CD169+和 CD169- 亚群拥有 485 个差异表达基因，其中有众多与介导炎症相关的基因在 CD169-群中高表达，提示这 2 个亚群有不同的功能。
结论 CD169+ 和 CD169- 红髓巨噬细胞有不同的转录谱，CD169- 红髓巨噬细胞亚群具有更多 M1 型巨噬细胞的特征。

PU-1722

血清肿瘤标志物联合检测在宫颈癌中的应用价值

杨军[1]、冯悦爽[2]
1. 天津市天津医院
2. 天津医科大学 临床医学院

目的 探讨新的肿瘤标志物热休克蛋白 90α（Hsp90α）与传统肿瘤标志物糖类抗原 125(CA125)，癌胚抗原(CEA)在宫颈癌中的应用价值。
方法 回顾性检测分析 2018 年 5 月—2020 年 3 月于天津市天津医院、和田地区人民医院妇科初诊的宫颈癌患者 70 例（宫颈癌组），平均年龄为 (46±15) 岁，选择同期体检中心 50 例女性健康体检者（对照组），平均年龄为 (51±24) 岁。均无心肝肾等系统疾病，检测期间未使用过任何药物。所有研究对象均于入院后未治疗前取静脉血，采用 ELISA 双对数拟合曲线法行 Hsp90α 检测，传统肿瘤标志物 CA125，CEA 的检测采用化学发光法，所有检测结果均采用 SPSS 19.0 统计学软件进行统计学分析，计量数据用均数±标准差表示；采用 t 检验分别比较不同组间各检测指标水平的差异，以 P<0.05 为差异有统计学意义；宫颈癌组 Hsp90α 与传统肿瘤标志物的相关性采用 person 相关性分析，以 P<0.05 为具有相关性。
结果 宫颈癌组患者外周血 Hsp90α、CA125、CEA 检测水平均高于健康对照组，两组经比较差异均具有统计学意义 （P 均<0.05)。经 person 相关性分析，在宫颈癌患者中 Hsp90α 与 CA125、CEA 之间没有相关性，P 均>0.05。
结论 本研究结果显示 Hsp90α 与传统肿瘤标志物在早期初诊未经治疗的宫颈癌患者外周血中均高表达，具有临床早期检测价值。Hsp90α 对宫颈癌具有独立的早期检测意义。

PU-1723

茯苓多糖联合 CD47 免疫检查点抑制剂增强巨噬细胞抗肺癌作用

龙婷婷、张春莹、江虹
四川大学华西医院

目的 明确茯苓多糖免疫调节抗肺癌作用及与 CD47 抗体联用增强巨噬细胞吞噬肺癌细胞、达到协同抗癌的疗效。
方法 经茯苓多糖处理 Lewis 肺癌细胞及 Lewis 肺癌荷瘤小鼠，分别检测茯苓多糖对 Lewis 细胞的抑制率及对荷瘤小鼠的抑瘤率、脏器指数、血清细胞因子水平的影响。利用流式和免疫荧光技术检测肺癌细胞系和肺癌组织中 CD47 的表达，以及肿瘤相关巨噬细胞表面 SIRPα 的表达情况。构建巨噬细胞与肺癌细胞的混合培养体系，检测 CD47 抗体阻断 CD47-SIRPα 信号通路后巨噬细胞对肺癌细胞吞噬活性的影响。最后利用茯苓多糖与 CD47 抗体联合作用于巨噬细胞和肺癌细胞的共培养体系及肺癌荷瘤小鼠模型，比较二者联用较单一用药的体内外疗效差异。
结果 茯苓多糖可抑制 Lewis 肺癌细胞体外培养活性，提高荷瘤小鼠的抑瘤率及胸腺、脾脏指数，促进免疫细胞因子的分泌，达到体内外免疫调节抗肺癌作用。CD47 抗体可有效阻断肺癌细胞上高表达的 CD47 与巨噬细胞上的 SIRPα 结合，打开吞噬信号通路，促进巨噬细胞吞噬肿瘤细胞过程。茯苓多糖与 CD47 抗体联用，体外可增强巨噬细胞对肺癌细胞的吞噬功能，体内可增强抑瘤作用、减缓癌细胞扩散速度、增强免疫器官脏器指数、提高生存率等。
结论 茯苓多糖可激活巨噬细胞的吞噬活性，CD47 抗体阻断抑制吞噬的信号通路实现巨噬细胞吞噬肿瘤细胞过程，二者联用可促进巨噬细胞的免疫调节功能，发挥协同抗肺癌作用。

COVID-19 infection induces readily detectable morphologic and inflammation-related phenotypic changes in peripheral blood monocytes

Rui Guo
Xi,an Eight Hospital

Objective To explore the value of morphological and phenotypic changes of peripheral blood mononuclear cells in the early recognition of COVID-19 infection and inflammation
Method Peripheral blood samples of 34 COVID-19 patients were detected by flow cytometry
Results The monocytes of COVID-19 patients in the intensive care unit (ICU) are larger than normal, and they are easier to identify on the forward scatter (FSC). Then we perform side scatter analysis by conventional flow cytometry and find that the FSC is high. Compared with the normal control group, these CD14+CD16+, FSC-high monocytes showed the characteristics of mixed M1/M2 macrophage polarization. Compared with other monocytes with low FSC, CD80+ and CD206+ The expression is higher and it secretes higher levels of IL6, IL-10 and TNF-α.
Conclusion Detection and continuous monitoring of this subpopulation of inflammatory monocytes may guide the prognosis and treatment of COVID-19 patients, and deserves further evaluation.

PU-1725

中国西南地区高血压患者 24h 尿儿茶酚胺及其代谢物参考区间的建立

戴鑫华、安云飞、邹远高、万正利、白杨娟
四川大学华西医院

目的 在探究中国西南地区非嗜铬细胞瘤的高血压患者 24h 尿液中儿茶酚胺及其代谢物的水平分布，建立中国西南地区的生物水平参考区间。
方法 收集 2020 年 10 月至 2021 年 3 月四川大学华西医院的 526 例高血压患者 24 h 尿液儿茶酚胺及其代谢物的检测数据，其中男性 277 例，女性 249 例，排除诊断为嗜铬细胞瘤的病例。尿液采集送检前均加入 10 mL 浓盐酸抗氧化，通过超高效液相色谱-串联质谱（UPLC-MS/MS）对尿液儿茶酚胺及其代谢物进行检测。所有数据采用偏度-峰度值检验数据的正态性，非正态分布数据采用 U 检验和 Z 检验对参考区间是否需要以性别分组进行验证，并通过非参数方法建立 2.5%-97.5%的参考区间及其 90%置信区间。
结果 E、NE、DA、MN、NMN、3-MT、HVA、VMA 水平均表现为男性高于女性，其差异具有统计学意义（$p<0.05$），且 Z 检验提示需要根据性别进行参考区间分组；HVA 在性别组间的差异无统计学意义（$p=0.178$）且不需要根据性别进行参考区间分组。HVA 参考区间为：1.21~11.37mg/24h；男性 E、NE、DA、MN、NMN、3-MT、VMA 参考区间分别为：0.26~18.67、3.03~102.63、36.29~483.62、2.10~46.29、1.60~51.53、4.51~70.87μg/24h、1.09~8.46mg/24h；女性 E、NE、DA、MN、NMN、3-MT、VMA 参考区间分别为：0.26~15.51、4.82~89.24、36.22~369.58、2.49~33.86、2.88~43.28、6.35~57.22μg/24h、1.06~7.44mg/24h。
结论 本研究建立了非嗜铬细胞瘤高血压患者 24h 尿液儿茶酚胺及其代谢物的生物水平参考区间，为中国西南地区实验室提供参考，有助于高血压患者的病因筛查、诊断及预后评估。

PU-1726

超高效液相色谱-串联质谱法检测血浆中马钱子碱和士的宁的方法学研究

戴鑫华、安云飞、邹远高、万正利、白杨娟
四川大学华西医院

目的 利用超高效液相色谱-串联质谱（UPLC-MS/MS）建立马钱子碱和士的宁的检测方法，同时检测血浆中马钱子碱和士的宁的浓度。
方法 取 200 μL 血浆，依次加入内标（200 ng/mL 乌头碱）50 μL 和 10%氢氧化钠溶液 50 μL，使用 1 mL 混合溶剂正己烷-二氯甲烷（2:1）萃取，涡旋振荡后离心取上清液，于 40℃氮气流下挥干，残渣用 200 μL 流动相复溶。液相色谱采用 PC HILIC（2.0 mm I.D × 150 mm，3μm）色谱柱，流动相 A 相为 10mmol/L 甲酸铵+0.1%甲酸，流动相 B 相为乙腈，设置梯度洗脱程序，流速 0.3 mL/min，进样量 5 μL。质谱采用电喷雾离子源（ESI），在正离子多反应监测模式下检测血浆中马钱子碱和士的宁。定量分析离子对分别为马钱子碱 m/z 395.20→244.20、士的宁 m/z 335.20→184.00、乌头碱 m/z 646.50→586.40（内标）。对方法的专属性、线性、检出限、精密度、提取回收率和基质效应进行验证。
结果 UPLC-MS/MS 检测血浆中马钱子碱和士的宁的专属性良好。马钱子碱在 1-500 ng/mL 范围内线性良好，最低检测限为 0.5 ng/mL，日内精密度（RSD）为 3.2-9.6%，日间精密度（RSD）为 3.9-11.5%，提取回收率为 79.4%-108.2%，基质效应为 90.6%-97.4%。士的宁在 0.5-200 ng/mL 范围内线性良好，最低检测限均为 0.2 ng/mL，日内精密度（RSD）为 2.8-7.6%，日间精密度（RSD）为 4.2-12.1%，提取回收率为 92.3%-105.1%，基质效应为 92.2%-98.1%。
结论 本研究成功建立了同时检测马钱子碱和士的宁的 UPLC-MS/MS 检测方法，方法操作简便、快捷，在准确性、精密度和提取效果中能够满足临床对马钱子中毒检测的需求。

PU-1727

1630 例患者伏立康唑血药浓度监测结果分析

戴鑫华[1]、陈思宇[2]、白杨娟[1]、安云飞[1]、万正利[1]、邹远高[1]
1. 四川大学华西医院
2. 成都市双流区第一人民医院-四川大学华西空港医院

目的 探究多种因素对伏立康唑（VRC）血药浓度的影响，为临床合理使用伏立康唑提供参考。
方法 对 2017 年 1 月-2020 年 10 月在四川大学华西医院行伏立康唑治疗性药物监测（TDM）的 1630 例住院患者的监测结果及相关病例资料进行回顾性分析，比较性别、年龄和使用科室等不同因素对伏立康唑血药谷浓度的影响。
结果 本研究纳入了 1630 例住院患者共计 3758 例次伏立康唑血药浓度监测结果，其中男性 1098 名，女性 532 名，平均年龄为 50.14±16.42 岁。从整体检测结果分析，伏立康唑血药谷浓度具有较大的个体间差异，平均血药谷浓度为 3.47±4.01mg/L，其中 2605 例次（69.32%）在推荐浓度（0.5-5.0mg/L）范围内。不同年龄组的伏立康唑血药谷浓度具有统计学差异，与患者的年龄呈显著的正相关性，随患者年龄的增加药物浓度逐渐增加；男性与女性的伏立康唑血药谷浓度具有统计学差异，表现为男性高于女性。
结论 伏立康唑血药浓度受性别、年龄、肝肾功能等多种因素影响，个体差异较大，在进行个体化治疗时需进行血药浓度监测，以保障患者用药安全和有效。

PU-1728

UCH-L1 在脑出血性疾病中的诊断价值研究

王虹霏、史清海
新疆军区总医院

目的 脑出血是一种起病急，发展迅速，能够导致高死亡率、高致残率的严重疾病。泛素羧基末端水解酶 L1(UCH-L1)在神经细胞中高度特异性表达。本研究旨在通过分析脑出血患者血清中 UCH-L1 的浓度变化，研究其诊断及评估脑出血疾病病情和预后的临床意义。
方法 收集 60 例经头颅 CT 确诊的高血压性脑出血患者发病后 12 小时内和入院后 1 至 10 天内及出院时的静脉血作为待测样本，采用酶联免疫吸附法进行分析血清中 UCH-L1 的浓度。用格拉斯哥昏迷评分对患者临床状况进行评估，同时分析患者的年纪，入院时的瞳孔变化，血压，体重，不同发病部位的颅内压对病情预后的影响。
结果 脑出血患者与健康体检者相比，血清中 UCH-L1 水平明显升高，诊断疾病的最佳截止值为 0.3ng/ml，[ROC 分析曲线下面积 0.925 (95% CI，(0.766 - 1)，p＜0.001],入院时精神表现正常患者（格拉斯哥昏迷评分 15 分）与健康体检者相比，UCH-L1 诊断精神表现正常患者的价值并不确定,(ROC 分析曲线下面积 0.598,p=0.467）,发病 12 小时内患者血清中 UCH-L1 的浓度与格拉斯哥昏迷评分相比，有显著相关性（相关系数 0.694，p=0.002),患者的年纪，瞳孔变化和 UCH-L1 都是影响患者死亡相关。
结论 UCH-L1 可以作为诊断脑出血疾病特异性的生物标志物，也可以作为评估脑出血患者预后的有价值的指标。

PU-1729

维持性血液透析患者血浆心肌酶学、NT-proBNP 和血肌酐水平变化与心功能衰竭的相关性分析

漆星
四川大学华西医院资阳医院·资阳市第一人民医院

目的 分析维持性血液透析（MHD）患者血浆心肌酶学、氨基末端脑钠肽前体（NT-proBNP）和血肌酐（SCr）水平变化与心功能衰竭的相关性。
方法 选取 2019 年 7 月～2020 年 7 月资阳市第一人民医院收治的行 MHD 治疗患者 100 例，根据是否并发心力衰竭（HF）将其分为 MHD 并发 HF 组 33 例、MHD 未并发 HF 组 67 例。检测患者血浆肌酸激酶同工酶（creatine kinase-MB，CK-MB）、NT-proBNP 和 SCr 水平；检测患者心脏每搏量（SV）、左室射血分数（LVEF）等心功能指标，计算左心室心肌质量指数（LVMI）。采用 Pearson 相关性分析 CK-MB、NT-proBNP 及 SCr 水平与心功能之间的相关性，采用受试者工作特征（receiver operating characteristic，ROC）曲线评估各项指标在 HF 预测中的应用价值。
结果 MHD 并发 HF 组患者的 CK-MB、NT-proBNP、Scr 指标均明显高于 MHD 未并发 HF 组（P＜0.05）。MHD 并发 HF 组患者的 SV、LVEF 指标均明显低于 MHD 未并发 HF 组（P＜0.05），LVMI 则明显高于 MHD 未并发 HF 组（P＜0.05）。Pearson 相关性分析结果显示，CK-MB、NT-proBNP 及 SCr 水平均与 SV、LVEF 指标呈负相关关系，而与 LVMI 指标呈正相关关系，相关系数有统计学意义（P＜0.05）。ROC 结果显示，CK-MB、NT-proBNP 及 SCr 用于预测 MHD 患者伴发 HF 的 AUC 分别为 0.802、0.878、0.740，NT-proBNP 的 AUC 值显著高于 SCr（P＜0.05）。
结论 MHD 并发 HF 患者的血浆 CK-MB、NT-proBNP 及 SCr 水平均明显升高，且与患者的心功能指标关系密切，检测上述指标对于预测 MHD 患者并发 HF 具有积极意义。

PU-1730

广东省成人血清 25-羟基维生素 D 水平调查分析

李云珍、张玲、李玲、姚少濠、洪卓凡
广州金域医学检验中心

目的 了解广东省成人血清 25-羟基维生素[25（OH）D]的水平状态，为成人合理补充维生素 D（VD）提供科学依据。

方法 选取 2019 年 1 月~2020 年 12 月送检本检验中心常规体检的成人 31309 例，其中男性 10984 例，女性 20325 例，通过采集静脉血进行血清 25（OH）D 检测。

结果 （1）31309 例成人血清 25（OH）D 水平均值为（23.01±9.01）ng/mL，男性明显高于女性（P<0.01），分别为（25.03±9.65）和（21.92±8.45）ng/mL 。25（OH）D 缺乏及不足率高达 81.04%，充足率为 18.93%，过量为 0.03%。（2）青年组、中青年组、中年组、中老年组和老年组血清 25（OH）D 水平均值分别为（21.64±8.62）ng/mL、（22.26±8.14）ng/mL、（22.51±8.50）ng/mL、（24.29±9.14）ng/mL 和（25.14±10.53）ng/mL，青年组＜中青年组＜中年组＜中老年组＜老年组，各组比较差异均有统计学意义（均为 P<0.01），25（OH）D 平均水平随着年龄增大而升高。（3）25（OH）D 水平比较，夏季高于其他三季有统计学意义（P＞0.05），其他三季组间比较无差异（P<0.05）。不同季节间 25（OH）D 不足及缺乏率比较，冬季（82.84%）＞秋季（81.63%）＞春季（81.54%）＞夏季（79.00%），冬季不足及缺乏率最高。

结论 广东省成人 VD 平均水平总体呈现不足，VD 水平随着年龄增长而升高，青年组水平最低，男性 VD 平均水平明显女性高。VD 总体不足及缺乏率较高。夏季不足及缺乏率低于其他三季。

PU-1731

桂林临桂区 15867 例急性呼吸道感染病原体流行性分析

冷俊[1]、王迪[2]、向晓华[1]、李宁[1]、韦传东[2]
1. 桂林医学院
2. 桂林医学院第二附属医院

目的 通过分析桂林临桂区各年龄段急性呼吸道感染患者所感染的病原体流行特点，为临床科室诊疗计划提供依据。

方法 收集 2017 年 3 月－2020 年 2 月于桂林医学院第二附属医院 15867 例拟诊为急性呼吸道感染患者血清，用间接免疫荧光法检测 9 种常见呼吸道感染病原体的血清 IgM 抗体，并且进行统计学分析。

结果 15867 例患者中，IgM 抗体呈阳性的占 5469 例，阳性率 34.5%，以肺炎支原体（MP）检出率最高，占 23.9%。女性患者检出率明显高于男性，差异存在统计学意义。儿童组、青壮年组、中老年组病原体阳性率依次为 46.3%、31.4%、24.5%，不同年龄段阳性率差异有统计学意义。MP、FluB、PIV、RSV、ADV 在不同年龄段检出率差异有统计学意义。636 例患者存在混合感染（2 种及 2 种以上），检出率为 4.0%。其中 MP+FluB 的混合感染最多，共 169 例，检出率为 1.07%，其次是 MP+FluB+PIV，共 117 例，检出率为 0.74%。儿童组中 MP 检出率全年均高，以春、夏、冬季明显，FluB、RSV、FluA 在春、冬季多发，PIV 在冬季多发，ADV 在春季多发，LP、CP 及 COX 均偶有散发。

结论 桂林临桂区呼吸道感染病原体以 MP 和 Flu B 为主，不同性别、不同年龄、不同季节的感染阳性率均存在差异，混合感染主要为 MP+FluB 模式。

PU-1732

中国上消化道或结直肠癌患者中 p53 抗体升高的患病率

王敏、谢素红、卢仁泉、郭林
复旦大学附属肿瘤医院

背景 包括 p53 抗体在内的肿瘤标志物已用于癌症治疗。
目的 我们旨在描述中国人群中新诊断或复发的上消化道癌（GI）或结直肠癌（CRC）患者中 p53 抗体和其他肿瘤标志物升高的患病率，并评估对已确立的肿瘤标志物阴性的患者，增加 p53 抗体检测是否会提高癌症检出率。
方法 招募 187 名健康人，169 名 GI 患者和 217 名 CRC 患者。所有受试者均需提供最多 10 毫升的血液。对每个纳入的受试者测量以下生物标志物：p53 抗体，CEA，CA19-9，CA125，CA15-3，CA72-4，CYFRA 21-1，HE4，ProGRP 和 SCC。
结果 在 0.02μg/ml 的临界值下，中国人群中上消化道癌和 CRC 的 p53 抗体敏感性较低（分别为 9.47％和 25.93％）。在该临界值时，健康人群中 p53 抗体的特异性非常高，为 98.4％。通过在其他肿瘤标记物中添加 p53 抗体，检测 CRC 的敏感性提高 18-26％，检测上 GI 的敏感性提高 8-10％，特异性降低 1-2％。
讨论 目前的研究表明，p53 抗体在上消化道和结直肠的患病率较低，但在健康对照中的特异性很高（98.4％，95％CI，95.38-99.67）。在健康对照的基础上，在肿瘤标志物中添加 p53 抗体可以提高检测癌症的敏感性，同时特异性的损失却最小。在大肠癌患者中，敏感性的改善最大，而在上消化道癌的肿瘤标志物中添加 p53 抗体的获益较小。 总之，使用 p53 抗体的多标记分析可以提高对大肠癌患者的诊断价值。但是，有必要进行进一步的研究以验证 p53 抗体自身抗体在中国的临床应用。这些研究应在具有适当良性疾病对照的多中心环境中评估 p53 抗体和结直肠癌标志物。

PU-1733

肝癌肿瘤标志物在肝癌高危人群预防治疗中的应用研究

冉盼盼、渠文涛、史小芹
郑州安图生物工程股份有限公司

目的 肝癌肿瘤标志物在肝癌高危人群预防治疗中的应用研究。
方法 将影像学尚不能明确为肝癌的乙型肝炎患者 30 例，将 30 例患者按照年龄和性别均匀的分配两组。分别是中药治疗组 15 例，对照组 15 例，其中对照组采用一般消炎、抗病毒、抗纤维化等中西医结合对症治疗法；中药治疗组采用“肝复安”(主要成分:茯苓、党参、白术、苡仁、冤丝子、桑寄生、川断、灵芝等),每日 2 剂；随症加减：脘腹饱胀：加枳壳、鸡内金；鼻蛆齿血：加生蒲黄、牛膝；肝区胀痛：加旋复花、茜草根；另全蝎、蜈蚣、参三七、贝母共研细末，每日 8g；人参鳖甲煎丸每日 6g 吞服。治疗期间，每日记录临床症状、体征，每月检测以下项目：（1）肝癌标志物 AFP(磁微粒化学发光法)、AFP-L3(磁微粒化学发光法)、PIVKA-Ⅱ(磁微粒化学发光法)；(2)肝脏生化指标(按医院常规方法进行)，定期进行 B 超、CT 检查。
结果 中药治疗组患者 AFP-L3 和 PIVKA-Ⅱ转阴率分别为 83%(5/6)和 86%(6/7)，对照组无一例转阴；肝癌发病例数中药组 1 例，对照组 10 例，呈显著差异（表格见附件）。
结论 ①中药（肝复安）能有效降低肝癌高危患者肿瘤标志物水平，并能延缓或阻止肝癌的发生；②肝癌肿瘤标志物在肝癌高危人群治疗中能够预测肝癌的发生。

PU-1734

HE4 在女性卵巢癌的应用研究

俞晓晨[1]、孙妍[2]
1. 哈尔滨医科大学附属第一医院
2. 黑龙江省哈尔滨市医科大学附属第一医院

目的 探讨 HE4（人附睾蛋白 4）在女性卵巢癌中的研究新进展
方法 分析 HE4 在早期卵巢癌，在鉴别卵巢良恶性疾病中的应用。
结果 1 正常卵巢组织不表达 HE4，而在卵巢癌中高表达 HE4，特异性高。
2 HE4 在卵巢癌早期和晚期表达均可升高。
3 HE4 可以监测卵巢癌患者的预后。
4 HE4 与 CA125 联合应用可以辅助鉴别卵巢的良恶性疾病。
5 HE4 不受女性月经周期及激素的影响，比较稳定
结论 HE4 是卵巢癌检测的良好标志物，与 CA125 联合应用可以提高卵巢癌检测的敏感性和特异性。

PU-1735

两种方法检测抗中性粒细胞胞浆抗体的结果分析

姜茜
中国医科大学附属盛京医院

目的 通过对抗中性粒细胞胞浆抗体（anti-neutrophil cytoplasmic antibody，ANCA）检测结果的分析，了解 ANCA 在就诊患者中的检出率及其分布特征。
方法 采用化学发光免疫分析法（Chemiluminescent assays，CLIA）和间接免疫荧光法（indirect immunofluorescence，IIF）联合检测 25822 例血清样本，比较两种检测方法的一致性，分析 ANCA 阳性率、荧光核型、靶抗原的分布。
结果 两种检测方法总符合率为 98.03%，一致性较好；25822 例样本中，ANCA 阳性率为 4.09%，其中男性为 3.67%，女性为 4.38%，两组差异有统计学意义（P＜0.05）。60 岁以上年龄组阳性检出率高于其他年龄组（P＜0.01）；1056 例阳性样本中，荧光核型以 pANCA 阳性率最高（51.14%），靶抗原以 MPO 为主（37.03%），不同靶抗原的分布有统计学差异（P＜0.01），男性与女性的年龄构成差异有统计学意义（P＜0.05）；靶抗原 MPO 的含量在不同年龄组中有统计学差异（P＜0.05）。
结论 CLIA 法和 IIF 法联合检测 ANCA 的效果更佳，更有助于了解 ANCA 的阳性率及分布特征。

PU-1736

血液中 ANGPTL7 蛋白水平与 2 型糖尿病肾病病程进展的关系研究

刘影[1]、张宏毅[2]、张诗田[1]、王雅茹[1]、刘霖霖[1]、牛文彦[1]
1. 天津医科大学朱宪彝纪念医院
2. 天津医科大学

目的 研究 ANGPTL7 在单纯 2 型糖尿病和 2 型糖尿病肾病患者中的表达差异，以及 ANGPTL7 的表达量与 2 型糖尿病肾病病程进展的相关性。
方法 将 130 例 2 型糖尿病患者按 2 型糖尿病发生进程分为单纯 2 型糖尿病（T2DM）组（35 例）、糖尿病肾病微量蛋白尿(尿蛋白：30-300mg/24h)组（45 例）、糖尿病肾病大量蛋白尿(尿蛋

白：>300mg/24h)组（50 例）。三组分别采用酶联免疫法检测各组血清中 ANGPTL7 的含量，比较三组标本血清中 ANGPTL7 表达量的差异。检测三组标本中 FPG、HbA1c、Cre、BUN、GFR、mALB、UTP、TG、TC、LDL 、HDL 的含量，分析以上各指标在各组中的差异，以及 ANGPTL7 表达与以上指标含量的相关性。

结果 三组中 ANGPTL7 的水平随着 2 型糖尿病肾病的发生进程有升高的趋势，但无显著性差异。糖尿病肾病大量蛋白尿组的 mALB、UTP、Cre、GFR、BUN、TG、TC、LDL 水平均显著高于糖尿病肾病微量蛋白尿组和单纯 T2DM 组，糖尿病肾病大量蛋白尿组和糖尿病肾病微量蛋白尿组的 HbA1c 水平均高于单纯 T2DM 组。ANGPTL7 水平与 FPG、HbA1c、Cre、BUN、TG 均呈正相关，与 GFR 呈负相关。与 mALB、UTP、TC、HDL、LDL 不相关。

结论 ANGPTL7 的表达水平随着 2 型糖尿病肾病的发生发展有逐渐上升的趋势，ANGPTL7 的表达与肾功能指标存在相关性，但是能否作为监测、预测 2 型糖尿病肾病发展的指标还需要进一步研究。

PU-1737

血红蛋白与转铁蛋白联合检测对消化道出血的临床诊断价值

兰丽媛
吉林金域医学检验所有限公司

目的 评价便潜血两项，同时检测血红蛋白（Hb）和转铁蛋白（Tf）粪便隐血实验在消化系统肿瘤筛查检测中的临床诊断价值。

方法 收集住院患者的粪便标本 253 例以及健康对照者的粪便标本 100 例，受试者标本均采用单纯血红蛋白定量诊断试剂和血红蛋白和转铁蛋白双指标定量检测试剂盒两种检测方法进行粪便隐血检测实验。

结果 血红蛋白和转铁蛋白双指标定量检测试剂盒联合试剂检测上消化道出血的阳性率为 46.4%,检测下消化道的阳性率为 58.7%.检测健康组阳性率为 8.7%。单纯血红蛋白定量诊断试剂检测上消化道出血的阳性率为 41.4%.检测下消化道出血的阳性率为 54.7%.检测健康组阳性率为 2.1%。

结论 粪便隐血检测中的血红蛋白和转铁蛋白双指标定量检测试剂盒联合检测可大大提高消化道出血及结直肠癌肿瘤的阳性检出率， 单纯血红蛋白定量诊断试剂检测在消化道出血中有较高的检出率，一般情况下具有很高的检测灵敏度，但是游离血红蛋白容易被消化道的胃酸、酶及共生菌等分解，易出现假阴性结果。转铁蛋白其稳定性好，活性持 续时间长，具有很强的耐胃酸和耐肠道细菌分解能力，血红蛋白和转铁蛋白联合检测可以在检测中起到相互补充的作用，对提高恶性肿瘤患者伴发消化道出血的检出率具有重要的临床指导价值。

PU-1738

联合检测血清 GADA、ICA、IAA 在糖尿病分型的临床意义

兰丽媛
吉林金域医学检验所有限公司

目的 通过联合检测血清中谷氨酸脱羧酶抗体（GAD)、胰岛素自身抗体（IAA)、胰岛细胞抗体（ICA)在糖尿病鉴别 1 型、2 型诊断中的价值。**方法** 将 2019 年 1 月至 2020 年 12 月在我检验所检测并确诊为糖尿病的患者 100 例作为观察组,同一时期在我检验所进行员工健康体检的无糖尿病的体检者 100 例作为对照组。均同时进行糖尿病自身免疫抗体三项化学发光法联合检测，对患者的血清中谷氨酸脱羧酶抗体（GAD)、胰岛素自身抗体（IAA)、胰岛细胞抗体（ICA)进行单项及联合检测,分析阳性率,并分析这些指标对不同在糖尿病分型中的阳性占比。

结果 糖尿病患者的谷氨酸脱羧酶抗体（GAD)、胰岛素自身抗体（IAA)、胰岛细胞抗体（ICA)阳性率明显高于正常对照组（P<0. 05)，其中 1 型糖尿病患者的谷氨酸脱羧酶抗体（GAD)、胰岛素自

身抗体（IAA)、胰岛细胞抗体（ICA)阳性率分别为 54. 94%、30. 11%和 27. 57%,明显高于 2 型糖尿病组（P<0. 05).谷氨酸脱羧酶抗体（GAD)、胰岛素自身抗体（IAA)、胰岛细胞抗体（ICA)三项抗体联合检测结果，阳性率显著提高。

结论 联合检测有助于提高青少年 T1DM 早期的检出率和诊断率，1 型糖尿病患者可能存在胰岛功能损伤，可以提高诊断患者敏感性，并且对鉴别 1 型糖尿病与 2 型糖尿病有着重要价值。

PU-1739

粪便钙卫蛋白联合血液指标在诊断及评估溃疡性结肠炎活动度中的临床价值

丁红梅
江苏省人民医院（南京医科大学第一附属医院）

目的 探讨粪便钙卫蛋白（FC）联合血液指标在诊断及评估溃疡性结肠炎（UC）活动度中的临床价值。

方法 将 2017 年 12 月至 2020 年 10 月在江苏省人民医院诊断为 UC 的 100 例患者进行回顾性分析，并选择同期在我院诊断为功能性胃肠病的 100 例患者作为对照组，分别检测 FC 含量，比较两组 FC。再根据 UCEIS 将 100 例 UC 患者分为缓解组、镜下活动轻度组、镜下活动中度组、镜下活动重度组，分别检测各组血液指标（CRP、ESR、WBC、NLR、Hb、Alb）。比较不同 UC 组患者 FC 及相关血液指标，并绘制 ROC 曲线分析 FC 联合血液指标对判断 UC 内镜下是否活动的诊断效能。

结果 UC 患者 FC 浓度明显高于对照组，活动期各组 UC 患者 FC 水平亦高于对照组(P<0.05)。FC 分别联合血液指标作 ROC 曲线，发现单 FC 在评估 UC 是否活动中已具有较高的诊断价值，同时 FC 联合血液指标评估价值更优于 FC 单一指标。

结论 FC 是一种判断 UC 患者病情活动程度的较好评估指标,其可作为临床上 UC 患者进行病情活动评估辅助指标。

PU-1740

Usefulness of Mean Platelet Volume for Differential Diagnosis of Rheumatoid Arthritis and Osteoarthritis

Fengfeng Zhao
Department of Clinical Laboratory of Zhongda Hospital, Southeast University

Objective The clinical manifestations and pathological changes of in osteoarthritis (OA) are similar to in rheumatoid arthritis(RA) , such as joint swelling, pain, morning stiffness, and so on, which may lead to joint dysfunction with the development of the disease. OA is easy to be confused with RA in clinic. The expression of mean platelet volume (MPV), hypersensitive C-reactive protein (hsCRP) and rheumatoid factor (RF) in RA, OA and normal human serum were compared. The difference of sensitivity and specificity and the application value of the three indexes in differential diagnosis of RA and OA were evaluated by using the receiver operating characteristic curve. It provides reference for the diagnosis and differential diagnosis of RA and OA.

Method From June 2017 to August 2018, we collected 159 patients with RA who were hospitalized in the Department of Rheumatology, affiliated Hospital of Chinese University of Southeast University, as RA group and 91 patients with OA as OA group. At the same time, 100 cases who passed the physical examination in our hospital were set as the normal control group.SPSS 18.0 statistical software was used for analysis.

Results 1. There were significant differences in MVP, RF and hsCRP among RA group, OA group and normal control group (all P < 0 05). The levels of serum RF and hsCRP in RA group were higher than those in OA group and normal control group (P < 0. 05), MVP), which were lower than those in OA group and normal control group (all P < 0. 05). The serum levels of MVP, RF and hsCRP in OA group were higher than those in normal control group (all P < 0 05). 2. According to the ROC curve, the area under the ROC curve of RA diagnosed by MVP was 0.825 (95%CI = 0.733~0.812, P < 0.000), taking non-RA patients as reference. The AUC of RA diagnosed by hsCRP was 0.726 (95%CI = 0.804 ~ 0.894), and the AU of RA diagnosed by); RF was 0.781 (95%CI = 0.893 to 0.964, P = 0.000). The AUC of RA diagnosed by MVP+hsCRP was 0.906 (95%CI = 0.840 ~ 0.918, P < 0.000), and the AUC of RA diagnosed by MVP+RF was 0.939 (95%CI = 0.910 ~ 0.968, P = 0.000). The AUC of RA diagnosed by hsCRP+RF was 0.830 (95%CI = 0.865-0.925, P = 0.000).
Conclusion MVP, hsCRP and RF can be used as effective reference indexes for differential diagnosis of RA and OA, and the combined detection of these indexes can improve the accuracy of RA diagnosis. Therefore, the clinical diagnosis of large joint as OA patients, should pay active attention to MVP and RF indicators, in order to distinguish the possibility of RA, reduce missed diagnosis, misdiagnosis.

PU-1741

Combined with serum pro-gastrin releasing peptide(Pro-GRP) and CA72-4 in diagnosis of colorectal cancer

Fengfeng Zhao
Department of Clinical Laboratory of Zhongda Hospital, Southeast University

Objective Colorectal cancer (Colorectal cancer, CRC) is one of the common malignant tumors of digestive tract. In recent years, the incidence and death of colorectal cancer in China are on the rise, the incidence and mortality are higher than the world average level, which seriously endangers the health of Chinese residents and places a heavy burden on the social economy. Therefore, it is of great significance to find serum tumor markers which can assist in the diagnosis of colorectal cancer. With the deepening of the study of colorectal cancer, we found that Pro-GRP and CA72-4 increased in some patients with colorectal cancer, but the related content has not been reported in the literature. In this study, Pro-GRP and CA72-4 in patients with colorectal cancer were evaluated to evaluate the clinical value of combined detection of these two tumor markers in the auxiliary diagnosis of colorectal cancer.
Method From October 2017 to April 2019, 82 patients with diagnosed colorectal cancer were selected as colorectal cancer group, and 100 healthy patients were selected as control group.Serum Pro-GRP and CA72-4 were detected by electrochemical luminous method in 82 patients with colorectal cancer and 100 healthy people. SPSS 19 was used for data processing.
Results The levels of serum Pro-GRP and CA72-4 in patients with colorectal cancer were significantly higher than those in healthy subjects (P < 0.05). The sensitivity and specificity of single detection of Pro-GRP in the diagnosis of colorectal cancer were 47.0% and 51.6%, CA72-4 was 43.8% and 58.8%, and the combined detection of Pro-GRP and CA72-4 was 61.4% and 73.6%, respectively.
Conclusion The levels of serum tumor markers Pro-GRP and CA72-4 in patients with colorectal cancer are abnormally increased. Combined detection of Pro-GRP and CA72-4 can effectively improve the sensitivity and specificity of diagnosis, and has certain clinical value in the diagnosis and early screening of colorectal cancer.Pro-GRP not only has obvious clinical value in the diagnosis of small cell lung cancer, but also has certain clinical significance in the diagnosis of colorectal cancer.

PU-1742

NLR、RDW 联合血清肿瘤标志物在乳腺癌鉴别诊断中的价值及与病理特征的关联

邹红
福建医科大学附属协和医院

目的 探究中性粒细胞与淋巴细胞比值（NLR）、红细胞分布宽度（RDW）和血清肿瘤标志物在乳腺癌（BC）与乳腺纤维腺瘤（FA）鉴别诊断中的价值以及与 BC 患者组织病理学指标和分子分型之间的关联。
方法 收集整理 653 例 BC 患者与 100 例 FA 患者的病理资料和常规临床检验指标。比较 BC 与 FA 组间上述常规临床检验指标的水平差异，统计学分析检验指标做 ROC 曲线，探讨二分类 Logistic 回归和 ROC 曲线综合分析有差异指标联合模式在鉴别诊断 BC 与 FA 中的价值。运用有序多分类 Logistic 回归分析 BC 患者的常规临床检验指标与 BC 病理特征，包括 TNM 分期、组织学分级与分子分型等指标间的相关性。
结果 CEA、NLR 和 CA19-9 等三项指标水平在 BC 组与 FA 组间有显著性差异（P<0.05），它们将 FA 患者与 BC 患者相鉴别的 ROC 曲线下的面积（AUC）分别为 0.799、0.747 和 0.711，其最佳 cutoff 值分别为 1.35ng/mL、1.58 与 8.55U/mL。二分类 Logistic 回归和 ROC 曲线综合分析结果显示，CEA、NLR 和 CA19-9 这三项临床检验指标对鉴别诊断 BC 与 FA 有一定效能，其中诊断效能最高的单项指标为 CEA，两项指标联合优于单项指标，三项指标联合效能最佳；三项指标联合时的 AUC 为 0.886。敏感度和特异度分别为 76.5%和 88.9%。有序多分类 Logistic 回归分析结果显示，NLR、CEA 和 CA15-3 均与 BC 的 TNM 分期呈正相关，RDW 与 BC 组织学分级呈负相关，RDW、CA15-3 和 CA125 均与 BC 分子分型关联明显（P<0.05）。
结论 CEA、NLR 和 CA19-9 这三项指标联合对鉴别诊断 BC 与 FA 有一定效能。NLR、CEA 和 CA15-3 等三项指标与 BC 的 TNM 分期、RDW 与 BC 组织学分级以及 RDW、CA15-3 和 CA125 等三项指标与 BC 分子分型等具有关联。

PU-1743

被嫌弃的“牛奶血”患者

王梅华、石安然、陈莺
福建医科大学附属协和医院

综合性大医院门诊大楼每天门庭若市，患者和医护人员都很不容易，大家都知道医患沟通很重要，真正要做到提高病人满意度很是艰难，我们门诊服务中心是个不错的沟通缓冲区，这位患者在门诊服务中心得到联系检验人员的渠道，检验者也能通过服务中心联系到临床相应科室的医生护士。招人嫌弃的“牛奶血”标本不能一退了之，如果能明确患者是真正的空腹 12 小时，并排除患者输注脂乳等的用药干扰，应采取相应对策加以解决，尽快帮病人检验标本。

PU-1744

糖化白蛋白酶法测定的初步评价及其与糖化血红蛋白相关性研究

黄鋆
福建医科大学附属协和医院

目的 应用 EP10-A3 文件对酶法检测糖化白蛋白（GA）的临床应用性能进行初步评价，并对糖尿病患者糖化血红蛋白(HbA1c)和糖化白蛋白（GA）的一致性、相关性及阳性率进行分析，评价其临床应用价值。
方法 使用酶法测定 GA 浓度，采用美国临床实验室标准化委员会(CLSI)颁布的《定量临床检验方法的初步评价；批准指南 EP10－A3》文件中规定的方法对其总不精密度、非线性、偏差、互染率、斜率、漂移等指标进行评价。并通过测定 90 例糖尿病患者的 HbA1c 和 GA 浓度，对两者相关性、一致性以及阳性率进行分析。
结果 低，中，高 GA 样本浓度偏差分别为-0.61,-0.28,0.34μmol/L。总不精密度分别为 1.48%，1.37%，0.84%。斜率、互染率、非线性、漂移（t 值分别为 1.38,0.097，-1,37,0.013）差异均无统计学意义（P>0.01）。GA 与 HbA1c 回归分析方程为 Y = 2.8048X-0.2681（r2= 0.7141）。GA 与 HbA1c 一致性采用 Kappa 检验，Kappa 值为 0.655，说明两者一致性较好。HbA1c 检测结果阳性率与 GA 检测结果阳性率，两者差异无统计学意义（P>0.05）。
结论 糖化白蛋白试剂盒准确度、精密度良好，均在允许范围内，线性良好，携带污染率低，稳定性较好，性能指标符合临床应用要求。GA 可作为糖尿病诊断的补充指标，并用于临床糖尿病疗效监测

PU-1745

肺炎支原体检测的三种方法学比较

范玲芳
福建医科大学附属协和医院

目的 比较被动凝集法（PPA）、酶联免疫吸附法（ELISA）、间接免疫荧光法（IIF）在检测肺炎支原体（mycoplasma pneumoniae,MP）感染时的差异性与一致性，探讨如何更好的进行方法间的组合与利用。
方法 收集疑似 MP 感染的患者血清，采用 PPA、ELISA、IIF 等三种血清学方法检测 MP 抗体,采用统计学的方法对检验结果的差异性与一致性进行分析。
结果 三种方法间的比较均存在统计学差异（P<0.05）,三种方法的一致性均不好,其中 PPA 与 ELISA 法的一致性相对其他两组较好。
结论 PPA 与 ELISA 法联合检测可提高肺炎支原体病原体诊断的速度及敏感性，为临床及时准确的诊断提供依据。

PU-1746

异常凝血酶原与甲胎蛋白在肝癌疗效监测中的比较

陈思妍
福建医科大学附属协和医院

目的 探讨血清异常凝血酶原（PIVKA-Ⅱ）和甲胎蛋白（AFP）在肝癌中的诊断以及疗效监测中的价值。

方法 选取 2018 年 1 月至 2019 年 4 月 24 日期间就诊于福建医科大学附属协和医院的 2109 例患者血清的 PIVKA-Ⅱ和 AFP 的检测结果，分析 PIVKA-Ⅱ和 AFP 对诊断肝癌的敏感度和特异度。回顾性分析 175 例肝癌患者治疗前后血清 PIVKA-Ⅱ和 AFP 的实验室检查结果，比较 PIVKA-Ⅱ和 AFP 在手术治疗前后的血清学水平变化。

结果 血清 PIVKA-Ⅱ在肝癌患者手术治疗前后水平降低（或阴转）率 88（154/175）%高于血清 AFP42.8（75/175）%，差异具有统计学意义（P<0.05）。在 1125 例肝癌患者中，血清 PIVKA-Ⅱ阳性率为 68.4（769/1125）%；血清 AFP 阳性率为 50.7（570/1125）%，差异具有统计学意义（P<0.05）。肝癌组血清 PIVKA-Ⅱ和 AFP 阳性率均高于其他各组，差异具有统计学意义（P<0.05）。血清 PIVKA-Ⅱ和 AFP 检测对肝癌的诊断的敏感度分别为 68.4%和 50.7%，特异度分别为 81.9%和 87.7%，PIVKA-Ⅱ、 AFP、
PIVKA-Ⅱ联合 AFP 诊断肝癌的 ROC 曲线下面积分别为 0.786、0.736、0.835，PIVKA-Ⅱ联合 AFP 诊断肝癌的 ROC 曲线下面积大于 PIVKA-Ⅱ及 AFP。

结论 血清 PIVKA-Ⅱ的检测有助于提高肝癌的诊断价值，与 AFP 联合检测可提高肝癌的检出率。肝癌患者术后血清 PIVKA-Ⅱ水平监测有助于判断肝癌手术疗效，并对预后判断有一定的参考价值。

PU-1747

TB-IGRA 在诊断结核感染中的应用分析

林光华
福建医科大学附属协和医院检验科

目的 研究 γ-干扰素释放试验（TB-IGRA）与传统检测方法在临床诊断结核分枝杆菌感染的应用价值。

方法 对我院 1127 例受检者的 TB-IGRA 试验与痰涂片找抗酸杆菌，血清检测结核抗体，结核菌 DNA 检测结果进行回顾性比较分析。并分析 1127 例受检者的人群年龄分布情况。

结果 1127 例受检者分为结核组和非结核组，TB-IGRA 灵敏度 74.7%，特异度 79.9%，ROC 曲线下面积 0.821。497 例 TB-IGRA 与痰涂片找抗酸杆菌比较，灵敏度分别为 77.4%与 9.3%，特异度分别为 92.3%和 99%。721 例 TB-IGRA 与血清检测结核抗体比较，灵敏度分别为 75.4%和 32%，特异度分别为 95.1%和 78.3%。191 例 TB-IGRA 和痰结核菌 DNA 比较，灵敏度分别为 77.1%和 27.1%，特异度分别为 92.1%和 97.4%。老年人人群结核分枝杆菌感染率高于年轻人群。

结论 TB-IGRA 作为临床诊断结核分枝杆菌感染的辅助诊断方法之一，相比痰涂片找抗酸杆菌，血清检测结核抗体，结核菌 DNA 检测等方法，有更高的灵敏度和特异性。老年人结核分枝杆菌感染率较高，TB-IGRA 作为筛查手段可助于结核病的诊断及预防。TB-IGRA 对于鉴别现症病人还是既往感染人群的能力较差。

PU-1748

联合检测 HIF-1α 和 HIF-2α 在肾癌诊断中的意义

李蓉、袁改玲
新疆生产建设兵团第五师医院

目的 探讨联合检测 HIF-1α 和 HIF-2α 在肾癌诊断中的临床意义。

方法 选取 2019 年 4 月至 2021 年 4 月在新疆生产建设兵团第五师医院及下属医院就诊并确诊为肾癌的患者，分为肾癌组 1（肾癌 II 期及以上，25 名），肾癌组 2（肾癌 I 期及癌前病变，31 名）及

健康对照组（60 名），采用实时荧光定量 PCR（q RT-PCR）定量检测患者外周血清 HIF-1α 和 HIF-2α 水平。

结果 对于 HIF-1α，肾癌组 1 患者水平[(984.41±121.04)pg/mL]明显高于健康对照组[(315.87±64.52)pg/mL]及肾癌组 2[(572.33±51.42)pg/mL]，差异均有统计学意义(P<0.05)，对于 HIF-2α，肾癌组 2 患者水平[(433.98±65.81)pg/mL]高于健康对照组[(123.63±12.14)pg/m L]及肾癌组 1[(224.51±42.24)pg/mL]，差异存在统计学意义(P<0.05)；对现存的病理切片进行 HIF-1α 及 HIF-2α 免疫组织化学染色，其结果与血清结果具有一致性。

结论 HIF-1α 与恶性程度更高的肾癌有关，相反，HIF-2α 与侵袭性较低或低度肾癌相关度更高，联合检测 HIF-1α 和 HIF-2α 可以用于辅助评估肾癌患者肿瘤的恶性程度。

PU-1749

探究血清游离轻链对初诊多发性骨髓瘤患者预后生存的影响及临床意义

陶安福、谭宛昀、任丽
天津医科大学肿瘤医院

目的 分析多发性骨髓瘤患者血清游离轻链（serum free light chain，sFLC）比值对初诊多发性骨髓瘤患者预后生存的影响及临床意义。

方法 选取并回顾性分析 2017 年 1 月至 2018 年 12 月我院收治的 49 例初诊 MM 且有行 sFLC 检查的患者临床资料，将血清游离轻链等可能影响预后的因素进行分析，通过 Kaplan-Meier 生存分析探讨 sFLC 在初诊 MM 患者预后中的作用及临床意义。

结果 在长达 1017 天的随访中我们发现 49 例患者中有 19 例出现终末死亡结局事件，患者中位随访时间 359（120-1017）天。生存组的 κ 值和 κ/λ 比值明显高于死亡组（P=0.040，P=0.024），而死亡组的 λ 值水平高于生存组（P=0.032）。我们进一步进行 Kaplan-Meier 生存分析，发现 κ/λ 比值高的患者预后生存明显好于 κ/λ 比值低的患者（P=0.023），这是预测游离轻链影响初诊 MM 患者预后好坏的有力证据。

结论 初诊 MM 患者预后生存与 sFLC 检测结果密切相关，κ 值水平和 sFLC 的 κ/λ 比值越高，患者的预后生存结局越好。

PU-1750

幽门螺杆菌抗体分型在东营地区老年体检人群中的结果分析

杨琴
胜利油田中心医院

目的 幽门螺杆菌病在世界卫生组织国际癌症研究机构公布的致癌物清单初步整理参考，幽门螺杆菌感染在一类致癌物清单中。当体内出现了免疫原性的一种反应，因为菌体的刺激而导致抗体的产生。这一类抗体对身体是没有保护性的，仅代表患者曾经感染过幽门螺杆菌或如今正处于幽门螺杆菌的感染期。幽门螺杆菌抗体分型可分为高毒型和无毒型两种。统计东营地区 2021 年 3-4 月份老年体检人群幽门螺杆菌抗体分型在老年体检人群中的结果情况。

方法 采用蛋白芯片法将幽门螺杆菌抗体分为细胞毒素抗体 CagAb、空泡毒素抗体 VacAb、尿素酶抗体 UreAb。

检测人群：2021 年 3-4 月份老年体检人群，年龄大于 60 岁，不分性别。

结果 1400 例老年体检人群中，CagA 抗体阳性 690 例，VacA 抗体阳性 752 例，单一 Ure 抗体阳性 414 例。

按照：CagAb、VacAb 任一项阳性则患者感染为Ⅰ型有毒株。UreAb 单一阳性为Ⅱ型无毒株。各项指标全部阴性：无 Hp 感染或者根除治疗成功后较长一段时间。

综合分析：Ⅰ型为 752 例，Ⅱ型为 414 例，全阴性为 234 例。东营地区 60 岁以上老年体检人群的幽门螺杆菌抗体分型的情况如下：Ⅰ型幽门螺杆菌占人群：53.71%，Ⅱ型幽门螺杆菌占人群：29.57%，无幽门螺杆菌感染者占人群：16.71%。

结论 Ⅰ型为高毒力菌株：毒性较强,和消化性溃疡、胃癌等密切相关，应该引起医生及病人高度重视。Ⅱ型为无毒力菌株毒性较小，致病力弱，一般表现为轻微消化不良或者无临床症状。体检人群若感染为无毒株，可不必盲目选择根除治疗。

幽门螺杆菌抗体分型检测有助于了解Ｈｐ感染患者体液免疫反应状态；通过体检筛查按照结果分型，可到临床就医根据分型检测结果，结合临床症状选择性进行抗生素治疗，避免抗生素过度使用，减少细菌耐药性的产生，实现精准诊断。

PU-1751

丙型肝炎患者中 HCVRNA 和肝功能联合检测意义

牛登冉
山东省立医院

目的 探讨丙肝患者超敏丙肝病毒核糖核酸 HCVRNA 与 AST、ALT 和 AFU 的相关性及其临床应用价值。

方法 实时荧光定量 PCR 法检测 904 例丙肝患者的超敏丙肝病毒核糖核酸（HS-HCVRNA）、全自动生化分析仪检测 AST、ALT 和 α-L-岩藻糖苷酶（α-L-fucosidase，AFU）。

结果 HS-HCVRNA 阳性率女性明显高于男性（χ2=28.165，P＜0.05）；HS-HCVRNA 病毒载量不同分组间 AST、ALT 和 AFU 的水平有显著性差异（P＜0.05）；异常率最高的是 AST（41.58%）；肝功能单项检测 AUC 最高是 AST（0.747），联合检测的 AUC 为 0.894；ALT 的特异度最高（80.15%）；AST 检测的灵敏度最高（76.65%）；联合检测的灵敏度和特异度高于单项检测。

结论 肝功能单项检测与联合检测均有诊断价值，可以全面了解患者病情进程，为患者和临床治疗提供可靠的依据。

PU-1752

血清胃蛋白酶原、胃泌素-17 与幽门螺杆菌抗体分型检测临床分析

张培莉
山东省立医院

目的 检测体检人群幽门螺杆菌（Helicobacter Pylori，HP）感染情况，以及血清中胃蛋白酶原Ⅰ(PGI)、胃蛋白酶原Ⅱ（PGII）和胃泌素-17(G-17)的含量，探讨其与 HP 感染发生的相关性。

方法 选择 2017 年 2 月至 4 月到本院体检中心体检的 781 例人群，分别用幽门螺杆菌抗体分型试剂盒和酶联免疫吸附试验检测此人群的血清 HP 抗体分型、PGI、PGII、G-17 水平。运用用 SPSS22.0 分析系统，对该人群 HP 感染率，HP 感染者与非感染者间及不同分型感染者间 PGI、PGII、PGI/PGII（PGR）、G-17 水平差异进行分析，并对不同年龄不同性别体检者感染率及各水平差异进行分析。

结果 HP 阳性感染者占 49.81%，不同年龄组间有显著性差异（P<0.05）。HP 阳性与阴性者比较，血清中 PGI、PGII、PGR、G-17 水平有显著性差异（P<0.05）。将感染者按 HPI 型和 HPII 型分组比较，PGII、PGR 水平有显著性差异（P<0.05）。不同性别不同年龄组血清中 PGI、PGII 水平

均有显著性差异（P<0.05），PGI、PGII 水平男性较女性偏高；随年龄升高，PGI、PGII、G-17 有升高趋势，而 PGR 呈下降趋势。
结论 该地区体检人群中，血清 PG 水平与性别、年龄、HP 是否感染有关，且与 HP 感染分型密切相关。将 HP 抗体分型及血清 PG、G-17 水平联合作为胃功能常规检测，对早期胃部疾病的评估和筛查有重要的意义。

PU-1753

甲状腺功能五项指标联合检测评价甲状腺功能的临床意义

高俊杰、李严
郑州安图生物工程股份有限公司

目的 探讨促甲状腺激素（TSH）、总三碘甲状腺原氨酸（T3）、总甲状腺素（T4）、游离三碘甲状腺原氨酸（FT3）、游离甲状腺素（FT4）联合检测评价甲状腺功能临床意义。
方法 选择 2019 年 5 月~7 月来本院的体检人群 1346 例，其中，男 801 例，女 545 例，按照不同年龄分为 5 组，使用安图 AutoLumo A2000 plus 化学发光检测仪进行甲状腺功能五项指标的检测，并对检测结果进行统计分析。
结果 1346 例体检人群中，甲状腺功能异常在体检人群中的总检出率为 6.98%，其中其中亚临床甲减检出率最高（4.01%），甲减检出率最低（0.30%），亚临床甲状腺疾病的检出率明显高于临床甲状腺疾病的检出率，差异有统计学意义（c2＝34.569，P＜0.05）；甲状腺功能异常的发病率女性明显高于男性(男性 4.49%，女性 10.64%)，在性别差异上具有显著统计学意义（c2=18.871，P＜0.05）；不同年龄段发病率也均存在差异，甲减、亚临床甲减、亚临床甲亢均以 60 岁以上年龄段女性发病率最高，甲亢以 41~50 年龄段发病率最高；随着年龄的增加，无论男性群体还是女性群体，亚临床甲状腺疾病均呈现出增加的趋势。
结论 TSH、FT3、FT4、T3 和 T4 联合检测，对甲状腺功能异常的鉴别、诊断和判断预后具有重要作用，值得在临床进行推广应用。

PU-1754

广东地区老年呼吸道疾病患者呼吸道病原体 IgM 抗体检测结果分析

李云珍、姚少濠、李玲、苏坤华
广州金域医学检验中心

目的 探讨广东地区老年人呼吸道疾病患者的病原学流行特征，为临床诊疗提供病原学依据。
方法 采用间接免疫荧光法检测患者血清是否存在嗜肺军团菌血清 1 型(LP1) 、肺炎支原体(MP) 、Q 热立克次体（CB）、肺炎衣原体(CP) 、腺病毒(ADV) 、呼吸道合胞病毒(RSV) 、甲型流感病毒(INFA) 、乙型流感病毒(INFB) 和副流感病毒（1、2 和 3 型 PIVs）9 种呼吸道病原体的 IgM 抗体，根据不同性别、不同年龄和不同季节的病原体阳性率以及合并感染情况进行统计分析。
结果 （1）3192 例患者中有 368 例阳性，阳性率为 11.53%，女性阳性率 13.29%高于男性阳性率 10.48%，差异有统计学意义（p<0.05）；（2）不同年龄组感染阳性率无差异（P＞0.05）；（3）阳性患者中，93.75%为单一一种病原体感染，6.25%为两种病原体同时感染，以 MP 最常见，其次是 INFB 和 CB，最常见的混合感染模式为 MP+INFB；（4）病原体流行的时间段为春夏两季，MP、CB、ADV 和 PIVs 好发于春季和夏季，其他 5 种病原体感染未见明显季节性变化。
结论 该地区老年人呼吸道疾病发病率高，女性较男性易感，感染病原体以 MP 最高，其次为 INFB 和 CB。呼吸道病原体不同季节流行情况不同，采用 9 项病原体 IgM 抗体联检可快速检测出病原体，为当地老年人呼吸道疾病的早期诊疗提供科学依据。

PU-1755

血清学指标在甲状腺髓样癌诊断中的应用

韩筱点、卢仁泉、胡昊昀
复旦大学附属肿瘤医院

目的 探索肿瘤标志物降钙素（CT）、癌胚抗原（CEA）、神经元特异性烯醇化酶（NSE）、胃泌素释放肽前体（Pro-GRP）和嗜铬粒蛋白 A (CgA) 在鉴别甲状腺髓样癌（Medullary thyroid carcinoma, MTC）中的价值。
方法 本回顾性研究选取 2017 年 2 月至 2019 年 8 月复旦大学附属肿瘤医院检验科检测的 105 例甲状腺髓样癌，65 例非髓样癌的甲状腺恶性肿瘤，50 例甲状腺良性疾病，30 例非甲状腺恶性肿瘤以及 50 例健康对照血清 CT 含量。选取其中 79 例 MTC，30 例非 MTC 的甲状腺恶性肿瘤及 30 例健康对照者，检测血清 CEA、NSE、Pro-GRP 和 CgA 含量。利用受试者工作曲线明确各指标区分不同组之间的曲线下面积（AUC）、敏感性和特异性。
结果 MTC 患者 CT 含量显著高于甲状腺其他病变、非甲状腺恶性肿瘤和健康对照。CT 区别 MTC vs 非 MTC 患者的敏感性为 96.2%，特异性为 99.3%，AUC 为 0.99。MTC 结节最大直径（>1cm, P=0.001, OR=15.74）与 MTC 结节个数（>1 个, P = 0.04, OR=3.4）是 CT 升高的两个独立危险因素。CEA（AUC=0.94）、NSE（AUC=0.65）、Pro-GRP（AUC=0.94）以及 CgA (AUC=0.83) 均能够区分 MTC vs 非 MTC 的甲状腺恶性肿瘤。联合 CT、CEA、NSE、Pro-GRP 和 CgA 区分 MTC vs 非 MTC 的甲状腺恶性肿瘤的的 AUC 为 1，敏感性 100%，特异性 100%。
结论 CT、CEA、NSE、Pro-GRP 和 CgA 对于 MTC 的辅助诊断具有重要的意义。联合这些指标诊断 MTC 具有很高的敏感性和特异性。

PU-1756

A randomized controlled trial about Evaluation of plasma Epstein-Barr virus biomarker for early diagnosis in patients with nasopharyngeal carcinoma

Minjie Mao
Department of Clinical Laboratory, Sun Yat-sen University Cancer Center, State Key Laboratory of Oncology in South China, Collaborative Innovation Center for Cancer Medicine

Introduction Early diagnosis of nasopharyngeal carcinoma (NPC) still remains a major problem in Southern China. Epstein-Barr virus (EBV) biomarkers have been widely used in NPC screening. This study aims to evaluate the early diagnostic performances of individual EBV biomarker in NPC.
Methods The levels of EBV biomarkers: IgA antibodies against EBV nuclear antigen 1 (EBNA1-IgA), EBV capsid antigen (VCA-IgA), EBV early antigen (EA-IgA), EBV BZLF1 transcription activator protein (Zta-IgA) and IgG antibodies against EBV BRLF1 transcription activator protein (Rta-IgG) from 106 NPC patients (stage I and II) and 150 normal subjects were measured. VCA-IgA and EA-IgA were detected by immunofluorescence assay (IFA), EBNA1-IgA, Rta-IgG and Zta-IgA were measure by enzyme-linked immunosorbent assay (ELISA), and EBV DNA was detected by qPCR. Statistical analyses of single index were conducted to evaluate the significance in NPC early diagnosis and TNM classification.
Results The level of EBNA1-IgA, EBV DNA, VCA-IgA, EA-IgA, Rta-IgG, Zta-IgA in early-stage NPC was significantly higher than healthy controls (all $P < 0.001$). EBNA1-IgA yielded the biggest area under the curve (AUC) of 0.962 in distinguishing early-stage NPC patients from the normal, with a sensitivity of 91.5% and a specificity of 98.7%. However, EBV biomarkers levels were not associated with tumor size (all $P > 0.050$). Whereas, four biomarkers levels (EBNA1-IgA, EBV DNA, VCA-IgA, EA-IgA) were related to the lymph node metastasis (N0 and N1-2),

among which EBNA1-IgA and EBV DNA showed pretty good performance. Finally, high correlation was found between VCA-IgA and EA-IgA ($r > 0.800$).
Conclusion A single EBNA1-IgA exhibits excellent discrimination performance in early diagnosis of NPC and could become a promising marker for NPC screening.

PU-1757

我国多地区孕妇与孕前育龄妇女间 ToRCH 感染率的案例配对比较

夏玲芝
南京金域医学检验所有限公司

目的 了解孕妇与孕前育龄妇女间 ToRCH 感染率的差异。
方法 收集 10 年来（2009.01 -2019.12）在国内杂志上发表的各地有关 ToRCH 抗体筛查结果的论文，从中筛选出同一实验室在同一时期内用相同方法和试剂盒分别对本地区孕妇和孕前育龄妇女进行 ToRCH 筛查的文献，归类总结其数据，并对多实验室的案例配对数据采用 GraphPad Prism 5 软件进行配对 t 检验，分析两组间的每种 ToRCH-IgM 阳性率的差异，$p<0.05$ 为有显著差异；同时对这些数据进行非配对 t 检验和 Metal 分析，观察其合并效应量。
结果 双向配对 t 检验显示 TOX-IgM 和 RV-IgM 在孕妇群体中的阳性率高于孕前育龄妇女群体，统计有显著性差异（$P = 0.0299$; $P = 0.0499$）；Metal 分析显示无论是单种 ToRCH-IgM 阳性率，还是 4 种 ToRCH 病原体的总阳性率，在两个群体中都呈现有效差异，OR 值均小于 1。从 I2 值和发表偏差看，只有 TOX-IgM 和 RV-IgM 阳性率的合并效应分析较为可信，I2 值均为 0%，漏斗图正常。尽管其他三项的 OR 值也小于 1，但 I2 值均较大（81% - 90%），漏斗图显明显偏倚。但是，非配对 t 检验显示 4 种病原体的 IgM 抗体阳性率在两个群体间均无显著性差异。
结论 经配对 t 检验和 Metal 分析，我国孕妇群体的刚地弓形虫和风疹病毒感染率显著高于孕前育龄妇女群体，而巨细胞病毒和单纯疱疹病毒在两个群体间的感染率差异无统计学意义。

PU-1758

2017.8-2020.7 年江苏地区 γ-干扰素检测结果分析

任雪芳、白文丽、袁杭
南京金域医学检验所有限公司

目的 分析 2017 年-2020 年间江苏地区 γ-干扰素检测结果，为结核病诊断及防治提供理论依据。
方法 统计南京金域近三年来送检的疑似结核病人标本，采用 QFT-GIT 和 CLIA 法检测 γ-干扰素结果，统计分析时间趋势，地区分布，性别比例，年龄层分布及检测方法学对 γ-干扰素检测阳性率的比较，用 $\chi 2$ 检验进行统计分析。
结果 2017.8-2020.7 江苏地区结核病就诊人群及阳性结果逐年上升，而就诊人群分布为苏南苏中无差异，均大于苏北，阳性结果苏中大于苏北大于苏南；阳性结果的男女性别比例约为 2:1，男性明显多于女性；阳性结果主要集中在 50 岁以上人群，占比 71.12%；化学发光法的检出率明细高于酶免法。
结论 江苏地区近年来对结核的识别和诊断意识逐年增加，检测手段更加便捷，同时反映出结核病疫情逐年上升，结核病防控形势不容乐观，应加强中老年结核病患者的防控工作。

PU-1759

上海宝山区九项呼吸道病原体 IgM 抗体检出率分析

刘灵燕、钟政荣、王萍、许蓓妮、喻成飞、郭竹英
上海交通大学医学院附属第九人民医院

目的 分析上海宝山区 9 项呼吸道病原体 IgM 抗体的检出情况。
方法 收集我院 2017 年 1 713 例呼吸道感染患者的血清标本，采用间接免疫荧光法检测 Lp1 、MP 、COX 、 CP、 ADV 、 RSV 、IFA 、IFB 和 PIV (1、2 和 3 型) 这 9 项病原体的 IgM 抗体，从年龄、季节和性别等方面分析其检出情况。
结果 1 713 例患者中总阳性率为 19． 61% (336 /1 713) ; 其中 COX 和 IFA 未检出; 单一病原体阳性率 15． 29% (262 /1713) ; 混合病原体阳性率 4． 32% (74 /1 713) ，主要是两种病原体的混合感染，以 MP 合并其他病原体感染为主。9 项病原体的阳性率以 MP 最高，其次是 PIV(1、2 和 3 型) ，再次是 IFB，其阳性率分别为 16． 64% 、3． 44% 和 2． 16% 。从季节来看，春、夏、秋、冬季 9 项病原体检出率分别为 17． 15% 、21． 05% 、22． 31% 和 18． 85% ，各季节之间检出率无差异。从年龄来看，0 ～ 12 岁组的检出率高于 13 ～ 59 岁组，而 13 ～59 岁组的检出率高于 60 ～岁组，三组的检出率依次为 38． 49% 、15． 07% 和 8． 86% 。从性别来看，男性检出率为 16． 25% ，女性为 24． 30% ，女性高于男性(P ＜ 0． 001) 。
结论 MP 是上海宝山区不同季节和人群呼吸道感染者中检出率最高的病原体，呼吸道病原体的感染与年龄和性别相关，提示针对性的防范具有临床意义。9 项呼吸道病原体联合检测快速、简便、检测范围广，有利于非典型病原体的早期诊断和治疗。

抗 Yo 抗体阳性的帕金森综合征 1 例分析及文献复习

时丽丽、王金玲、刘霞、吴艳艳、王培昌
首都医科大学宣武医院

神经系统副肿瘤神经综合征（paraneopstic neurological syndrome，PNS）是一类与肿瘤相关的影响中枢神经系统和外周神经肌肉系统的综合征。包括抗 Hu 抗体、抗 Yo 抗体、抗 Ri 抗体、抗脑衰蛋白反应介导蛋白（collapsin response mediator protein，CRMP5）抗体、抗 Aamphiphysin 抗体在内的特异性抗体检测可辅助诊断副肿瘤综合征[1]。副肿瘤性小脑变性（paraneopstic cerebellar degeneration，PCD）是一种罕见的神经系统副肿瘤神经综合征，与抗 Yo 抗体阳性相关，其患者大多数为患宫颈内膜癌和乳腺癌的女性患者[2-3]。PCD 的临床表现为眼球震颤、构音障碍以及躯干和肢体共济失调。抗 Yo 抗体阳性在男性中极为罕见，本研究报道 1 例抗 Yo 抗体阳性男性患者。

南京地区腹泻患儿艰难梭菌感染情况分析

岳玉林
南京市儿童医院（南京医科大学附属儿童医院）

目的 了解南京地区不同原因腹泻患儿艰难梭菌(Clostridium difficile,CD)感染情况及其感染特征，为腹泻患儿 CD 感染的预防和治疗提供帮助。

方法 选取 2018 年 1 月～2020 年 12 月在南京医科大学附属儿童医院就诊的腹泻患儿 2 957 例作为研究对象，通过酶联免疫层析方法检测患儿和健康体检儿童粪便标本中艰难梭菌抗原和毒素 A、毒素 B，并结合临床资料进行回顾性分析。
结果 南京地区腹泻患儿和健康体检儿童 CD 的总感染率分别为 23.31%(689/2 957)和 6.67%(4/60)；2018 年、2019 年、2020 年感染率分别为 23.44%(117/499)、27.04%(318/1 176)、19.81%(254/1 282)；各年龄组 CD 感染有所不同，学龄前为 25.25%(558/2 210)，学龄后 17.53%(131/747)；男童为 23.96%(460/1 920)，女童为 22.08%(229/1037)；城区和农村儿童 CD 感染率为别为 23.00%(490/2 130)、24.06%(199/827)；抗生素相关性腹泻组 CD 感染率为 32.77%(176/537)明显高于健康体检儿童，质子泵抑制剂组、肝损害组 CD 感染率分别为 28.91%(198/685)、28.12%(115/409)，与健康体检组比较差异差异具有统计学意义(P 均<0.05)；急性肠炎组和肠易激综合征组感染率分别为 15.04%(119/791)和 15.14%(81/535)，与健康体检组比较差异无统计学意义(P 均>0.05)。
结论 腹泻患儿感染艰难梭菌风险较大，抗生素相关腹泻的艰难梭菌感染率最高，在治疗腹泻患儿过程中艰难梭菌感染情况应引起重视。

T 细胞斑点实验与培养液腺苷脱氨酶联合检测在结核快速诊断中的价值

李秀玉、刘文娜、刘畅、郭在广、王红彦、王培昌
首都医科大学宣武医院

目的 使用 T 细胞斑点实验（T-SPOT）配合淋巴细胞培养液中腺苷脱氨酶（ADA）的检测，研究二者联合应用对结核菌感染快速检测的价值。
方法 随机选取原发性肺结核、结核性胸膜炎、儿童肺结核和中枢神经系统结核患者，进行 T-SPOT、淋巴细胞培养液 ADA、血清 ADA、胸水 ADA 及脑脊液 ADA 等检测。
结果 原发性肺结核等结核组患者组的血清 ADA、胸水 ADA 和 20 h 培养液 ADA 均显著高于对照组（P<0.05），但疾病组间差异无统计学意义（P>0.05）。在相应时间点检测淋巴细胞培养液 ADA 可有效诊断原发性肺结核、结核性胸膜炎、儿童肺结核及神经系统结核。培养液 ADA 检测能将结核性胸膜炎和儿童肺结核的诊断时间由单纯 T-SPOT 的 20 h 缩短至 8 h。
结论 在进行 T-SPOT 试验的同时进行淋巴细胞培养液的 ADA 检测能帮助提高检测的时效性，二者联合应用能有效提高对结核病的诊断效能。

PU-1763

乳腺癌患者腋窝淋巴结 CD8+T 细胞功能及其表面 PD-1 表达的研究

毛敏静、史册、王剑飚
上海交通大学医学院附属瑞金医院

目的 分析乳腺癌患者腋窝淋巴结洗脱液标本中 CD8+T 细胞表面 PD-1 及胞内因子表达，为评估机体免疫应答状态提供依据，并探索评估乳腺癌患者疾病严重程度的新指标。
方法 采用流式细胞术分析患者转移淋巴结组和阴性淋巴结组穿刺液洗脱液中 CD8+T 细胞的比例、亚群分布、细胞表面 PD-1 及胞内 IFN-γ、TNF-α 和 Granzyme B 的表达，以反映不同类型淋巴结中 CD8+T 细胞的亚群格局和功能；通过分析转移淋巴结中 CD8+T 细胞表面 PD-1 表达与乳腺癌患

者病理参数之间的关系，探讨在转移淋巴结穿刺洗脱液中 PD-1 作为参考指标评估乳腺癌严重程度的可能性。
结果 与阴性淋巴结组相比，乳腺癌患者腋窝转移淋巴结组 CD8+T 细胞中初始 T 细胞（TNaive）比例降低，效应记忆 T 细胞（TEM）比例升高，中央记忆 T 细胞（TCM）和 CD45RA+效应记忆 T 细胞（TEMRA）比例无明显变化。与阴性淋巴结组相比，转移淋巴结组 CD8+T 细胞表面 PD-1 表达增高，胞内 IFN-γ 和 TNF-α 表达增强；但 PD-1+CD8+T 细胞内 IFN-γ、TNF-α、Granzyme B 的表达降低，而 PD-1－CD8+T 细胞内上述因子表达增高。转移淋巴结中 CD8+T 细胞表面 PD-1 表达与乳腺癌 TNM 分期及淋巴结转移数量呈正相关。
结论 我们发现 US-FNAC 洗脱液是一种新颖的标本来源，利用流式细胞仪对乳腺癌腋窝淋巴结洗脱液中淋巴细胞进行分析，在揭示转移淋巴结中 CD8+T 细胞抗肿瘤能力的变化的同时，发现 CD8+T 细胞表面 PD-1 表达的比例可以作为参考指标评估乳腺癌患者疾病严重程度。

PU-1764

Knockout 血清替代品联合生长因子对小鼠胚胎干细胞向神经细胞分化的影响

王贝
东南大学附属中大医院

目的 探讨 Knockout 血清替代品（KSR）对小鼠胚胎干细胞（mESCs）向神经细胞分化过程中的影响。
方法 2%、10%、15%KSR 分别与碱性成纤维细胞生长因子（bFGF）、血小板衍化生长因子（PDGF-AA）为主要成分的复合诱导液诱导 mESCs 向神经细胞方向分化，第 28 天行 NFH、O4 以及 GFAP 免疫细胞化学染色鉴定诱导后的神经细胞，观察不同浓度 KSR 对 mESCs 分化的影响。
结果 2%KSR 组仅强阳性表达 O4；10%KSR 组和 15%KSR 组仅强阳性表达 NFH，组间无差异；三组均无 GFAP 表达。
结论 KSR 影响 mESCs 分化为神经元和神经胶质细胞的方向，并与 KSR 的浓度有一定的关系。

PU-1765

辛伐他汀对慢性阻塞性肺疾病稳定期患者肺功能及血清 IL-13、IL-4 等指标的影响

田文君、王光海
山东第一医科大学第一附属医院

目的 研究辛伐他汀对于稳定期慢性阻塞性肺疾病(COPD)患者肺功能和血清白细胞介素-13(IL-13)、白细胞介素-4(IL-4)等指标的影响。
方法 将 2020 年 5–12 月共 158 例在山东第一医科大学第一附属医院呼吸与危重医学科住院治疗的 COPD 患者以随机抽样法分成常规组(79 例)及辛伐他汀药物组(79 例)。常规组实施常规疗法，辛伐他汀药物组则另加服辛伐他汀;同时选取 79 例健康体检者作为对照组。测定患者及健康体检者血清 IL-13、IL-4 等检验指标与肺功能指标,进行对比分析。
结果 辛伐他汀药物组临床疗效显著优于常规组,差异有统计学意义(P<0.05)。相比于治疗前，辛伐他汀药物组患者治疗后的 IL-4、第一秒用力呼气量(FEV1)及用力肺活量(FVC)的比值、FEV1 占预计值的百分比(FEV1/预计值,FEV1%)等水平明显上升(P<0.05);而 IL-13 等指标水平均明显下降(P<0.05)。相比于常规组治疗后，辛伐他汀药物组患者治疗后的血沉(ESR)、红细胞压积(HCT)、血

浆纤维蛋白原(FIB)、IL-13 均下降,但 IL-4、FEV1%、FEV1/FVC 等水平明显上升,差异均有统计学意义(P<0.05)。
结论 辛伐他汀药物组治疗稳定期 COPD 患者具有较好的临床疗效,值得临床推荐。

PU-1766

中孕期血清学产前筛查两联法和四联法对唐氏综合征假阳性分析

张力
雁江区妇幼保健计划生育服务中心

目的 血清学产前筛查根据使用的筛查指标数量不同分别两联法、四联法等[1]，了解两种方法在唐氏综合征假阳性方面的差异，以便选用更好的筛查策略。
方法 是从我院开展血清学产前筛查起所获得的两联法和四联法数据进行分析。
结果 从分析结果来看采用四联法进行血清学产前筛查唐氏综合征假阳性率明显低于两联法[2]。
结论 我院开展的四联法能显著降低中孕期血清学产前筛查唐氏综合征的假阳性率，减少假阳性所致的介入性产前诊断额外支出和胎儿丢失风险。

Clinical Significance of an IgM and IgG Test for Diagnosis of Highly Suspected COVID-19

Xingwang Jia[3]、Pengjun Zhang[4]、Yaping Tian[5]、Junli Wang[2]、Huadong Zeng[2]、Jun Wang[2]、Jiao Liu[1]、Zeyan Chen[1]、Lijun Zhang[1]、Haihong He[1]、Kunlun He[6]、Yajie Liu[7]
1. Department of Clinical Laboratory Medicine Center, Shenzhen Hospital, Southern Medical University, Shenzhen, China.
2. Department of Respiratory and Critical Care Medicine, Shenzhen Hospital, Southern Medical University, Shenzhen, China.
3. Department of Clinical Laboratory Medicine Center, Shenzhen Hospital, Southern Medical University, Shenzhen, China.
4. Key Laboratory of Carcinogenesis and Translational Research (Ministry of Education/Beijing), Interventional Therapy Department, Peking University Cancer Hospital & Institute, Beijing, China.
5. Department of Translational Medicine, Chinese PLA General Hospital, Beijing, China.
6. Key Laboratory of Ministry of Industry and Information Technology of Biomedical Engineering and Translational Medicine, Chinese PLA General Hospital, Beijing, China.
7. Department of Neurology, Shenzhen Hospital, Southern Medical University, Shenzhen, China.

Background Nucleic acid detection and CT scanning have been reported in COVID-19 diagnosis. Here, we aimed to investigate the clinical significance of IgM and IgG testing for diagnosis of highly suspected COVID-19.
Methods A total of 63 patients with suspected COVID-19 were observed, 57 of whom were enrolled (24 males and 33 females). The selection was based on the diagnosis and treatment protocol for COVID-19 (trial Sixth Edition) released by the National Health Commission of the People's Republic of China. Patients were divided into positive and negative groups according the first nucleic acid results from pharyngeal swab tests. Routine blood tests were detected on the second day after each patient was hospitalized. The remaining serum samples were used for detection of novel coronavirus-specific IgM/IgG antibodies.
Results The rate of COVID-19 nucleic acid positivity was 42.10%. The positive detection rates with a combination of IgM and IgG testing for patients with COVID-19 negative and positive nucleic acid test results were 72.73% and 87.50%, respectively.
Conclusions We report a rapid, simple, accurate detection method for patients with suspected COVID-19 and for on-site screening for close contacts within the population. IgM and IgG antibody detection can identify COVID-19 after a negative nucleic acid test. Diagnostic accuracy

of COVID-19 might be improved by nucleic acid testing in patients with a history of epidemic disease or with clinical symptoms, as well as CT scans when necessary, and serum-specific IgM and IgG antibody testing after the window period.

湘南地区健康体检人群与生殖中心患者维生素 D 水平分析

贺安
郴州市第一人民医院

目的 对湘南地区 25-羟基维生素 D [25(OH)D] 检测结果进行分析，了解各类人群体内 25(OH)D 水平及状况，以及健康体检人群与生殖中心患者体内 25(OH)D 水平及状况有无不同。
方法 使用化学发光法测定 2020 年 7 月至 2021 年 1 月 2709 例健康体检人群与 2122 例生殖中心患者体内 25(OH)D 水平，使用统计学软件对两组进行性别及年龄分析。
结果 2709 例体检者血清 25(OH)D 的平均水平为 27.31ng/mL，正常率为 88.70%，不足率为 11.07%，缺乏率为 0.22%；2122 例生殖中心患者的平均水平为 29.56ng/mL，正常率为 92.93%，不足率为 6.83%，缺乏率为 0.24%。健康体检人群男性 25(OH)D 平均水平为 27.72ng/mL，正常率为 91.07%，不足率为 8.75%，缺乏率为 0.19%；健康体检人群女性 25(OH)D 平均水平为 26.71ng/mL，正常率为 85.23%，不足率为 14.50%，缺乏率为 0.27%；生殖中心患者中男性 25(OH)D 平均水平为 30.71ng/mL，总体正常率为 94.07%，不足率为 5.55%，缺乏率为 0.38%；生殖中心患者中女性 25(OH)D 平均水平为 28.84ng/mL，正常率为 92.25%，不足率为 7.60%，缺乏率为 0.15%。
结论 湘南地区人群 25(OH)D 正常率较高，健康体检人群正常率低于生殖中心患者，且女性正常率率明显低于男性。

TRAb 检测对甲状腺疾病诊断意义

李秀
新疆维吾尔自治区人民医院

目的 探讨促甲状腺激素受体抗体（TRAb）对甲状腺疾病诊断价值。
方法 用电化学发光法检测甲状腺疾病组和健康体检组 TRAb；
结果 观察组 TRAb 阳性率达 32.7%，TRAb 检测值 14.61±3.08，两者均高于健康组，且 P<0.05 有统计学意义。
结论 TRAb 可作为诊断甲状腺疾病重要指标。

PU-1770

人类白细胞抗原 HLA-G5 过表达慢病毒载体的构建以及 JAR-HLA-G5 稳转细胞株的建立

曹维维
德阳市人民医院

目的 构建过表达 HLA-G5 慢病毒载体，筛选建立稳定表达 HLA-G5 的 JAR 细胞株。

方法 根据 HLA-G5 基因序列设计合成引物并使用 PCR 扩增目的基因片段。将目的基因定向接入经 BamHI/AgeI 酶切的载体质粒 GV492 中构建重组慢病毒质粒 GV492-HLA-G5。经 PCR 筛选阳性克隆和测序鉴定后，使用三质粒系统包装将含有目的基因的重组质粒 GV492-HLA-G5 和辅助包装质粒共转染至 293T 细胞进行病毒包装并测定慢病毒滴度。设置对照 (NC)组和实验(OE)组，在感染复数（MOI）为 20 的条件下感染 JAR 细胞。用荧光显微镜观察各组 GFP 表达情况。采用 2μg/mL 嘌呤霉素筛选出稳定表达 HLA-G5 的 JAR 细胞株。Real-time PCR 检测 JAR 细胞内 HLA-G5mRNA 的表达水平。Westernblotting 法检测 JAR 细胞内和上清液中 HLA-G5 蛋白表达水平。
结果 经 PCR 及测序鉴定证明，序列与设计合成序列一致，成功构建重组慢病毒载体。GV492-HLA-G5 慢病毒滴度为：2x108TU/ml，阴性对照组滴度为 4X108。RT-PCR 显示实验组 JAR 细胞中的 HLA-G5mRNA（108.690±4.249）表达水平较对照组（1.002±0.760）明显增高（P<0.01）。Westernblotting 表明实验组 JAR 细胞中的 HLA-G5 蛋白表达(65.844±14.11)水平较对照组(1.350±0.366)明显升高（P<0.01）。在上清液中 OE 组（）的的 HLA-G5 蛋白表达水平较 NC 组显著增高。
结论 成功构建 HLA-G5 慢病毒载体并建立 HLA-G5-JAR 稳转细胞株，且 HLA-G5-JAR 稳转株中 HLA-G5 的 mRNA 和蛋白水平明显上升。且 HLA-G5 可分泌至细胞外。为进一步探讨 HLA-G5 对类风湿性关节炎潜在的调控机制提供细胞模型。

PU-1771

NK 细胞在癌症中的作用机制及免疫治疗应用的进展研究

袁成良、曹维维
德阳市人民医院

NK 细胞是机体固有免疫系统的重要组成部分,以非特异性的方式对靶细胞发挥细胞毒性作用，还可诱导效应性 T、B 淋巴细胞的反应性从而增强适应性免疫功能。NK 细胞的功能受一系列种系编码的激活型受体和抑制性受体的信号平衡调节，可对异常细胞中相应配体的表达变化进行快速行识别和应答，在机体抵抗病毒感染、癌症等免疫过程中发挥重要的防御作用。本文将从 NK 细胞的分化、成熟、抗肿瘤作用机制及其在免疫治疗应用方面的进展进行综述。

PU-1772

Bioinformatics analysis of DNA methylation profile in rheumatoid arthritis

weiwei cao
People's hospital of deyang city

Objective To analyze the expression profile of DNA methylation chip by bioinformatics method, and to explore the relationship between DNA methylation and the mechanism of occurrence and development of rheumatoid arthritis (Rheumatoid arthritis RA) from an epigenetic perspective.
Method Download the raw data of DNA methylation chip GSE42861 from GEO database, which contains DNA methylation data of peripheral blood lymphocytes in 354 RA patients and 337 control groups. After the original data was processed by quality control, the differential methylation sites and differential methylation regions were screened and the differential methylation regions were annotated. Kyoto Encyclopedia of Genes and Genomes KEGG pathway enrichment analysis and Gene Ontology GO functional enrichment analysis were performed on abnormally expressed methylated genes.
Results There were 159076 methylation sites with significant difference between RA patients and normal control group (Q <0.05, | Δβ |> 1), of which 159076 were high methylation sites and 146449 were low methylation sites. 192953 differentially methylated regions were obtained (Q

<0.05). 141 differentially methylated genes were annotated to the differentially methylated region. KEGG and GO analysis showed (P <0.05): 20 signaling pathways involvedherpesvirus type Ⅰ infection, Th17 cell differentiation, Th1 / Th2 cell differentiation, systemic lupus erythematosus, etc. Mainly involves the processing and presentation of antigens and immune response regulating cell surface receptor signaling pathways, negative regulation of immune system processes, γ-interferon-mediated signaling pathways and other biochemical processes as well as antigen peptide binding, transmembrane transport activity, ubiquitin Various molecular functions such as protein ligase binding.

Conclusion Abnormal DNA methylation may be an important epigenetic mechanism leading to the occurrence and development of RA, and provide new diagnostic ideas for the follow-up analysis of RA-related biomarkers and targeted therapy of diseases.

Keywords: rheumatoid arthritis; methylation; bioinformatics analysis

Rheumatoid arthritis (RA) is a kind of autoimmune disease characterized by joint damage and destruction as well as inflammation and proliferation of synovium tissue. It often involves articular cartilage, resulting in joint deformity and rigidity, thus causing joint dysfunction. The global prevalence is about 0.5% ~ 1% [1]. At present, the main clinical treatment is to delay the disease and improve the joint function, but because of its long course and high disability rate, the prevention and treatment of RA has important public health significance. The research shows that the pathogenesis of RA is complex, mainly involving genetic susceptibility, virus infection, environment and lifestyle and other factors.

The epigenetic mechanism synthesizes the environmental and genetic factors of RA, and has been paid more and more attention in recent years [2]. Epigenetics mainly involves the regulatory mechanisms of histone methylation, DNA methylation and noncoding RNA [3-5]. DNA methylation, as the most widely studied epigenetic modification, refers to the reaction of modifying cytosine to 5-methylcytosine with S-adenosylmethionine as the methyl donor under the catalysis of DNA methyltransferase [6]. It is characterized by direct mutation and complementation of DNA sequence to regulate gene expression and cell function without changing DNA sequence, through covalent modification of DNA base and other potential changes in chromatin structure, thus affecting the development of disease.

In recent years, the research of DNA abnormal methylation is mostly focused on cancer and other fields, and there are few reports on autoimmune diseases such as RA. In this study, geo database is used to mine chip data, and bioinformatics analysis method is used to analyze methylation sites, regions and related pathways of abnormal differential expression, so as to further clarify the epigenetic mechanism of DNA methylation in RA and provide new ideas for subsequent analysis of biomarkers and targeted treatment of diseases.

Bioinformatic prediction of immunodominant regions in spike protein for early diagnosis of the severe acute respiratory syndrome coronavirus 2（SARS-CoV-2）

Siqi Zhuang
the second xaingya hospital of CSU

Background To contain the pandemics caused by SARS-CoV-2, early detection approaches with high accuracy and accessibility are critical. Generating an antigen-capture based detection system would be an ideal strategy complementing the current Methods based on nucleic acids and antibody detection. The spike protein is found on the outside of virus particle and appropriate for antigen detection.

Methods In this study, we utilized bioinformatics approaches to explore the immunodominant fragments on spike protein of SARS-CoV-2.

Results The S1 subunit of spike protein was identified with higher sequence specificity. Additionally, glycosylation sites and high-frequency mutation sites on spike protein were circumvented in the antigen design. Three immunodominant fragments, Spike56-94, Spike199-264, and Spike577-612, located at the S1 subunit were finally selected via bioinformatics analysis. All these fragments present qualified antigenicity, hydrophilicity, and surface accessibility. A recombinant antigen with a length of 194 amino acids (aa) consisting of the selected immunodominant fragments as well as a universal Th epitope was finally constructed.
Conclusion The recombinant peptide encoded by the construct contains multiple immunodominant epitopes, which could stimulate strong immune response in mice and generate qualified antibodies for SARS-CoV-2 detection.

肝纤四项与肝功的联合诊断对慢性乙肝肝硬化的影响研究

郑欢欢
吉林金域检验所有限公司

目的 探讨肝纤四项与肝功能指标联合检测对慢性乙肝肝纤维化诊断中的诊断价值。
方法 回顾性分析 2020 年 6 月 1 日至 2020 年 12 月 30 日送检的 100 例慢性乙肝患者及 40 例健康患者的肝纤四项[透明质酸（HA）、层粘连蛋白（LN）、Ⅲ型前胶原（PC-Ⅲ）、Ⅳ型胶原（Ⅳ-C）]及肝功能[天门冬氨酸氨基转移酶（AST）、丙氨酸氨基转移酶（ALT）和 AST/ALT 比值]检查结果，分为两组，100 例慢性乙肝患者为乙肝组，40 例健康患者为对照组。肝纤四项使用安图全自动免疫分析仪，检测方法为磁微粒法。肝功能指标检测采用罗氏 c702 全自动生化分析仪进行检测，检测方法为速率法。均使用配套试剂进行检测。并对乙肝组和对照组的肝纤四项及肝功能检测结果进行对比分析。
结果 乙肝组透明质酸（HA）、层粘连蛋白（LN）、Ⅲ型前胶原（PC-Ⅲ）、Ⅳ型胶原（Ⅳ-C）、天门冬氨酸氨基转移酶（AST）、丙氨酸氨基转移酶（ALT）和 AST/ALT 比值水平均高于对照组血清测定结果，差异具有统计学意义（P＜0.05），肝纤四项与肝功联合检测阳性率高于肝纤四项及肝功阳性检出率，差异具有统计学意义（P＜0.05）。
结论 肝纤四项与肝功联合检测在慢性乙肝肝纤维化诊断中临床效果显著，优于单纯检测肝纤四项或肝功的检测。肝纤维化较为常见，如不及时治疗，则多数患者将进展至肝硬化，进而发生肝功能衰竭、门静脉高压等。积极有效的干预则有望延缓或阻止肝纤维化病情进展，延长患者生存期，提高患者的生活质量。

PU-1775

Artemisinin Ameliorates Intestinal Inflammation by Skewing Macrophages to the M2 Phenotype and inhibiting epithelial–mesenchymal transition

Junxiang Zeng
Xinhua hospital, School of Medicine, Shanghai Jiaotong University Shanghai, China

Background Inflammatory bowel disease (IBD) is a self-destructive intestinal diseasewhose etiology is unclear but complex and the effective treatment is deficient. Increasing evidences have indicated that immune dysfunction and epithelial–mesenchymal transition (EMT)-related intestinal mucosal barrier impaired hold critical position in the pathogenesis of IBD. Artemisinin (ART) is a sesquiterpenoid compound extracted from Chinese herbal medicine which has good immunomodulatory effects. Studies have shown that artemisinin and its analogues have

therapeutic effects on a variety of tumors and immune-related disorders. The purpose of current study was to research the effect and mechanism about artemisinin induced macrophage polarization to M2 phenotype and inhibiting the process of EMT.
Methods In vitro, the anti-inflammatory effect of artemisinin is mainly verified by RAW264.7 cells and tissue (colon tissue and PBMC) from CD patients with active intestinal inflammation. RAW264.7 cells stimulated with LPS to induce inflammatory state and ART were used as therapeutic treatment in different concentration. Then the expression levels of pro-inflammatory factors, macrophage polarization and ERK pathway were analyzed. Colon tissue and PBMC from CD patients were treated with ART in different concentrations and macrophage polarization, pro-inflammatory factors expression, EMT-related protein were analyzed. In vivo, DSS-induced colitis mice were treated by ART for seven days. The DAI score was calculated and the colons andspleens were harvested after the animals were sacrificed. The expression of macrophage markers and EMT-related markers in the intestines of mice in each group were monitored by qPCR and western blot.
Result ART treatment could decrease thelevels of pro-inflammatory coefficient expressed in theRAW264.7 cells and human PBMC. Moreover, ART could ameliorate the intestinal inflammation in vivo through down-regulating the expression of pro-inflammatory factors, promoting macrophagepolarization to M2 phenotype and inhibiting the process of EMT.
Conclusion Taken together, our findings demonstrated that artemisinin might ameliorate inflammation by inducing macrophage polarization to M2 phenotype and inhibiting the process of EMT, suggesting that ART may be applied to the rehabilitation of IBD in the future.

Development and validation of a novel noninvasive index based on Chitinase-3-like protein 1 for predicting significant fibrosis in patients with chronic hepatitis B

chuanshang zhuo、Xu-Jiang Lu、Hui-Juan Feng、Hui-Lin Mo、Zhi Ye、Li-Ping Zheng、Jun-Ping Ke、Li-Juan Liu
Mengchao Hepatobiliary Hospital of Fujian Medical University

Backgrounds Identification of significant liver fibrosis plays an important role in the management of patients with chronic hepatitis B. However, most existent indices remains unsatisfied in the diagnosis of significant fibrosis in CHB patients. This study try to develop a noninvasive index based on Chitinase-3-like protein 1 (CHI3L1) and other laboratory parameters for predicting significant fibrosis in patients with chronic hepatitis B (CHB) with a better performance.
Methods A cohort of 279 consecutive subjects undergoing percutaneous biopsy was enrolled and randomly divided into training and validation groups. The Scheuer's score was introduced as the reference for fibrosis staging and significant fibrosis was defined as the Scheuer's stages ≥S2. A novel index of multivariate binary (stepwise) logistic regression analysis was developed and compared to APRI, FIB-4, and GPR.
Results Multivariate analysis showed that CHI3L1, Laminin, international normalized ratio (INR), and platelet were the independent predictors of significant fibrosis, and then a new index called CLIP was suggested. The area under the receiver-operating characteristic curve (AUC) of the latest CLIP index for predicting significant fibrosis was 0.842 (95% CI 0.773-0.897), higher than those of APRI (0.679, 95% CI 0.601-0.751), FIB-4 (0.764, 95% CI 0.690-0.827) and GPR (0.738, 95% CI 0.663-0.804) in the training group. The CLIP's AUCs in the validation group, the overall CHB population, CHB patients with normal ALT, and CHB patients with elevated ALT were 0.841, 0.838, 0.807, and 0.875, respectively, higher than those of APRI, FIB-4, and GPR. The optimum cutoff value for CLIP for diagnosing significant fibrosis in CHB was >0.04 with a sensitivity of 76.54% and specificity of 79.10% in the training group.

Conclusions The new index CLIP has a better diagnostic performance than APRI, FIB-4, and GPR in diagnosing significant fibrosis in CHB patients, and its application may reduce the need for liver biopsy among CHB patients.

PU-1777

Dense fine speckled immunofluorescence pattern in a Chinese population: Prevalence and clinical association

Keyi Zhang、Zhuochun Huang、Bin Yang
West China Hospital of Sichuan University

Objective To provide information on prevalence and possible clinical association in a Chinese population for medical practice of the dense fine speckled pattern (DFS pattern).
Methods A retrospective study was conducted with patients who had the DFS pattern from June 2018 to December 2019 in West China Hospital.
Results A total of 469 patients (1.27% of patients with positive ANA IIF test results) revealed the DFS pattern, of which 92.96% had isolated DFS pattern and 23.67% had titers above/equal to 1:320. The average age of patients with the DFS pattern was 43.45 years, and females accounted for 76.97% of them. Ten different kinds of diseases made up the vast majority of the disease spectrum, in which inflammatory or infectious diseases (46.11%), mental diseases (21.45%) and systemic auto-immune rheumatic diseases (SARDs) (18.23%) ranked in the top three. The most common SARDs were rheumatoid arthritis (RA), undifferentiated connective tissue disease (UCTD) and systemic lupus erythematosus (SLE). Forty-six patients (10.55%) had positive or suspicious ENA antibodies test Results Patients with positive ENA antibodies test results had a higher risk of suffering from SARDs, however, we discovered that not all SARDs patients had positive/suspicious ENA antibodies test Results If negative ENA antibodies test result was considered as exclusion criterion of SARDs, 47 patients would be missed.
Conclusions The DFS pattern is basically isolated and with low titer. Middle-aged individuals and females are the majority of patients with DFS pattern and deserve attention. Auto-immune diseases related antibodies such as ENA antibodies, clinical information of patients and long term follow-up are of great importance to avoid missed or delayed diagnosis of SARDs, not just because of the existence of the DFS pattern.

Breast cancer cells regulate macrophages toward the M2 activation status by recruiting peripheral blood monocytes

Yu Liu
West China Hospital，Sichuan University

Macrophages play a major role in monitoring the tumor microenvironment (TME), especially M2 macrophages, considered correlated with poor prognosis and therapy resistance. In breast cancer patients, tumor microenvironment can attract peripheral blood monocytes by secreting IL-4,IL-10 and IL-12 rather than TNF-αand subsequently regulate the transformation of macrophages to M2.Flow cytometric analysis found that CD206+ macrophage strongly increased, while MHC-II+ macrophage reduced comparatively. The secretion of cytokines could activate the IL-10- associated pathway via stat1 inhibition and stat3 activation. the breast cancer patients with high expression of M2 macrophage showed recurrence and related complications more common, suggesting a poorer prognosis. It provides a new therapeutic strategy and potential target for the treatment of breast cancer patients.

免疫检查点 CD47 分子表达与自身免疫性甲状腺炎相关性研究

何雪
中国医科大学附属第一医院

目的 免疫检查点 CD47 能够抑制巨噬细胞吞噬，参与自身免疫性胰岛炎、狼疮肾炎等自身免疫性疾病发病。前期研究发现自身免疫性甲状腺炎小鼠体内存在巨噬细胞吞噬能力异常，目前巨噬细胞功能和 CD47 在自身免疫性甲状腺炎患者中障碍机制和表达水平尚不明晰。本研究旨在探究自身免疫性甲状腺炎患者 CD47 表达及其与疾病相关性。
方法 收集因甲状腺结节而手术的甲炎患者（AIT 组）和年龄、性别匹配的非甲炎患者（CON 组），采集病理证实的桥本甲状腺炎组织、正常甲状腺组织以及患者血清。ELISA 检测 CON 组（n＝26）和 AIT 组（n＝29）血清中 CD47 分泌情况；免疫组化实验比较甲状腺组织 CD47 蛋白表达情况。
结果 AIT 组患者血清中 CD47 表达显著增高，差异有统计学意义（p<0.05）。且血清 CD47 水平与 TPOAb 存在相关性。免疫组化实验比较甲状腺组织 CD47 蛋白表达情况，与 CON 组比较，AIT 患者甲状腺组织内 CD47 表达明显增加；炎症浸润中心区域，CD47 表达未明显改变，炎症浸润区域周围的甲状腺滤泡上皮细胞细胞膜 CD47 表达增加明显，暂未受炎症累及区域 CD47 表达增加不明显。
结论 免疫检查点 CD47 分子在自身免疫性甲状腺炎患者中高表达，可能为自身免疫性甲状腺炎的预防和治疗策略提供新的靶点。

PU-1780

应用自身抗体对抗凝脂综合征继发肾损伤进行诊断的初步研究

王子霞[1]、范立民[2]、孟玥[1]、陈晓忠[1]、陆慧琼[1]、廖建枫[1]、侯铁英[1]
1. 广东省人民医院
2. 广州医科大学

目的 探讨抗 β2 糖蛋白-1IgG 抗体（β2GP1-IgG）、抗 β-2 糖蛋白-1IgM 抗体（β2GP1-IgM）、抗心磷脂抗体（ACL）等多种抗体检测在抗磷脂综合征继发肾损伤（APSN）诊断中的应用价值。
方法 采用 ELISA 检测方法，检测抗磷脂综合征（APS）患者的抗 β-2 糖蛋白-1IgG 抗体（β2GP1-IgG）、抗 β-2 糖蛋白-1IgM 抗体（β2GP1-IgM）、抗心磷脂抗体（ACL）的抗体水平，以蛋白尿、血尿为尿沉渣阳性，统计尿沉渣阳性组与尿沉渣阴性组之间的抗体水平是否有统计学差异。
结果 APS 患者中 53 例尿沉渣阳性组的 β2GP1-IgM 的抗体水平明显高于 31 例尿沉渣阴性组的抗体水平（P<0.05）；53 例尿沉渣阳性组的 β2GP1-IgG 的抗体水平高于 31 例尿沉渣阴性组的抗体水平（P>0.05）。53 例尿沉渣阳性组中 ACL-IgM 阴性率为 54.72%，ACL-IgM 阳性率为 45.28%；31 例尿沉渣阳性组中 ACL-IgM 阴性率为 70.97%，ACL-IgM 阳性率为 29.03%（P>0.05）。而 53 例尿沉渣阳性组中 ACL-IgG 阴性率为 88.68%，ACL-IgM 阳性率为 11.32%；31 例尿沉渣阴性组中 ACL-IgM 阴性率为 90.32%，ACL-IgM 阴性率为 9.68%(P>0.05)。
结论 尿沉渣阳性组的 β2GP1IgM 的抗体水平明显高于尿沉渣阴性组的抗体水平，APS 患者出现肾损伤时 β2GP1IgM 的抗体水平会升高。

PU-1781

利妥昔单抗对不同疾病患者外周血 B 淋巴细胞计数的影响

严琳、冯伟华
四川大学华西医院

目的 探讨视神经脊髓炎、天疱疮、膜性肾病三种自身免疫性疾病患者以及肾移植受者，使用利妥昔单抗治疗后，外周血 B 淋巴细胞计数的变化。
方法 本研究纳入视神经脊髓炎患者 10 例、天疱疮患者 29 例、膜性肾病患者 37 例、肾移植受者 24 例，根据疾病类型分为四个组：视神经脊髓炎组、天疱疮组、膜性肾病组、肾移植组。比较四组疾病的 B 淋巴细胞计数的基线水平，并分析在使用利妥昔单抗治疗后四类患者外周血 B 淋巴细胞计数的变化情况。
结果 视神经脊髓炎、天疱疮、膜性肾病、肾移植受者在年龄 (44.0 vs 46.3 vs 47.7 vs 30.4，P<0.0001) 和男女比例 (男性占比：0% vs 31.0% vs 64.9% vs 66.7%，P<0.0001) 上均有统计学差异。在使用利妥昔单抗治疗前，四组患者 B 淋巴细胞计数的基线水平有显著差异 (269 个/ul vs 404 个/ul vs 245 个/ul vs 190 个/ul，P=0.002)。使用利妥昔单抗治疗后，四组患者的 B 淋巴细胞计数均显著减少 (P<0.05)，且在治疗后 6 个月内维持与治疗初期相同的低水平，从治疗后第 9 个月开始逐渐回升。
结论 虽然视神经脊髓炎患者、天疱疮患者、膜性肾病患者以及肾移植受者基线 B 细胞计数水平不同，但是利妥昔单抗对四类患者的 B 淋巴细胞计数的影响趋势一致。B 淋巴细胞计数可作为使用利妥昔单抗治疗后的有效的免疫监测指标，监测周期建议每月一次。

PU-1782

Characterization of anti-Neutrophil cytoplasmic antibodies and their clinical associations

Yang Wen
Department of Laboratory Medicine, West China Hospital, Sichuan University,

Background anti-Neutrophil cytoplasmic Antibodies (ANCA) are frequently tested by indirect immunofluorescence method. They can present different fluorescent patterns, whose diagnostic value for diseases is still obscure. Through researching the clinical and laboratory characteristics of them, we aimed at providing reference for the diagnosis of diseases associated with ANCA.
Method We collected the diagnosis, clinical features and laboratory tests data of ANCA-positive patients in West China Hospital in the last two years. Stratified analysis of diseases distribution and laboratory tests results were performed according to different fluorescent models.
Results In 652 ANCA-positive patients, pANCA accounted for 76.4%, cANCA were 12.4%, and aANCA were 11.2%. pANCA mainly related to ANCA-associated vasculitis(68.22%), lupus nephritis(12.46%),and connective tissue diseases(9.35%). As for cANCA, they were ANCA-associated vasculitis(90.90%), osteoarthritis(9.09%), and ANCA-associated nephritis(9.09%). In pANCA and cANCA-positive patients, the lungs and kidneys were most involved. (The total proportion of these two was more than 50%). Procalcitonin(PCT) and C-reactive protein which reflect the inflammatory status were significantly increased(p=0.00), while the anemia indicators: HGB and RBC decreased(p=0.00). CYS-C, eGFR and CREA, representing the renal function, were obviously abnormal(p=0.00).
Conclusion ANCA-positive patients mainly suffered from vasculitis, and their lungs and kidneys were often affected. We should pay attention to their anemia status and susceptible organs, trying to prevent the progression of the diseases and improve the quality of life of these patients.

PU-1783

术前 DNLR 评估经肝切除术后的Ⅰ期肝细胞癌患者预后价值-基于 nomogram 模型

杜琴
川北医学院附属医院

目的 探讨术前中性粒细胞/（白细胞计数-中性粒细胞计数）评估Ⅰ期肝细胞癌（HCC）患者在 肿瘤切除术后死亡的价值。

方法 2009 年 1 月至 2015 年 12 月诊治的Ⅰ期 HCC 患者 129 例，均接受肝癌切除术。绘制受试者工作特征(ROC)曲线，由最高约登指数确定 DNLR 的截断点，比较不同 DNLR 组患者临床和病理学特征。应用 COX 回归分析影响 HCC 术后死亡的危险因素。基于危险因素建立 nomogram 模型，运用 C 指数、内部验证的校准曲线、临床决策曲线对模型准确性进行评估。

结果 术前 DNLR 选取 1.77 为最佳截点，低 DNLR(<1.77)组与高 DNLR (≥1.77)组年龄、性别、吸烟、饮酒、肝切缘、肿瘤数量、门脉高压、BCLC 分期、胸腔积液等均无统计学意义（P＞0.05）。DNLR(≥1.77)、术后胸腔积液是 HCCⅠ期患者 OS 较短的独立危险因素。基于 DNLR 及术后胸腔积液构建了 nomogram 模型，C 指数是 0.629(95%CI: 0.54 -0.718)。校准曲线、临床决策曲线也表明模型的准确性。

结论 高 DNLR 及术后胸腔积液 对预测 Ⅰ期 HCC 患者术后死亡具有潜在的应用价值。

PU-1784

全血 miR-499 作为 RA 疾病生物标志物的评价分析

黄卓春、谭慧玲、王雪安、张丽静、杨滨
四川大学华西医院

目的 类风湿关节炎（RA）是一种多基因自身免疫性疾病，其特征是全身性炎症伴关节进行性损伤。MicroRNA（miRNA）是小的非编码 RNA 分子。 最近的研究表明，不同 miRNA 表达水平的改变可能与自身免疫性疾病的发生发展相关。在本研究中，我们拟评估 RA 患者与健康对照之间 5 种 miRNA 的表达差异，并评估它们作为 RA 生物标志物的潜力。

方法 纳入 19 例新诊断的 RA 患者和 21 例性别年龄匹配的健康对照者，结合我们课题组的前期研究结果和文献报道，选择 miR-499，miR-146a，miR-15a，miR-149a-3p 和 miR-155-5p 作为候选 miRNA，采用实时定量 PCR（qRT-PCR）检测 miRNA 的表达，并评估这 5 种 miRNA 作为 RA 潜在生物标志物的性能。

结果 MiR-146a（p = 0.107），miR-15a（p = 0.935），miR-149a-3p（p = 0.560）和 miR-155-5p（p = 0.136）的表达在 RA 患者组和健康对照组间未见显著性差异。与健康对照相比，RA 患者外周血 miR-499 的表达显著高于健康对照组（p <0.05）。受试者研究曲线（ROC）分析提示 miR-499 对 RA 具有较好的诊断价值（AUC = 0.688，95％CI = 0.52-0.83，灵敏度= 0.79，特异性 = 0.57）。结合 ESR，CRP 和 RF，可以进一步提高 miRNA-499 对 RA 的诊断价值（结合 ESR 的 AUC = 0.971，结合 CRP 的 0.865，结合 RF 的 0.931）。

结论 本研究结果提示，miR-499 可能是中国人群 RA 疾病诊断相关的新的潜在的非侵入性诊断生物标志物。

PU-1785

肺癌血清肿瘤标志物联合检测诊断模型的建立与性能验证

龙天娣
南方医科大学珠江医院

目的 比较分析癌胚抗原（CEA）、细胞角蛋白 19 片段（CYFRA21-1）、神经元特异性烯醇化酶（NSE）、糖类抗原 125(CA125）、糖类抗原 153（CA153）等五种血清肿瘤标志物检测在肺癌诊断中的价值，建立肺癌的诊断模型，并验证其性能。
方法 采用电化学发光法（CLIA）检测血清肿瘤标志物 CEA、CYFRA21-1、NSE、CA125、CA153 的水平。采用 SPSS19.0 软件对所得数据进行统计分析，计量资料用中位数(四分位数间距)表示，采用 kruskall-wallis 检验，阳性率的比较采用卡方检验；以肺癌确诊情况为因变量(Y=0,1)，五个血清肿瘤标志物为自变量，采用逐步回归法建立二项分类 Logistic 回归模型；以回归方程产生的 Logistic(P)为新变量，作 ROC 曲线分析；比较新变量与单个参数的 ROC 曲线，并求出最佳诊断界值；用新的临床病例分析模型预测的符合率，验证回归模型应用性能。以 P<0.05 为差异有统计学意义。
结果 肺癌组 CEA、CYFRA21-1、NSE、和 CA153 的表达水平明显高于健康对照组和肺良性疾病组，差异有统计学意义(P<0.01)，肺癌组和肺良性疾病组 CA125 水平均高于健康对照组(P<0.01)，肺癌组和肺良性疾病组 CA125 水平差异无统计学意义(P>0.05）；将血清肿瘤标志物的临床检测数据代入 Logistic 回归模型中，求出 P 值，以 P 值>0.579 判断为肺癌，应用 Logistic 回归模型预测的符合率为 83%。
结论 血清肿瘤标志物联合检测诊断肺癌的灵敏度和准确度均优于单项检测，对鉴别肺癌具有一定临床价值。Logistic 回归模型代表了预测肺癌发生的综合概率，预测肺癌的价值高于单一参数，是肺癌筛查的新的可靠方法。

PU-1786

探讨检测孕中期血清 β-HCG、ACA 和孕后期尿酸浓度对先兆子痫的预测价值

张懿
南方医科大学珠江医院

目的 通过比较先兆子痫患者和正常孕妇孕中期 β-HCG、抗心磷抗体 ACA 和孕后期尿酸的浓度变化，探讨这三项指标对该疾病的预测价值。
方法 回顾性分析 2012.1-2016.8 在南方医科大学珠江医院接受孕中期筛查并成功随访直至分娩的 65 例单胎妊娠孕妇，其中 30 例经诊断为子痫前期患者，对照组有 35 例血压正常的孕妇。比较两组孕妇的 BMI 指数，孕中期（15-20 周）血清的 β-HCG 浓度，β-HCG MoM 值和抗心磷脂抗体 ACA 水平，以及孕妇孕后期（20 周以后）尿酸浓度，分析这些指标与孕妇发生子痫前期的相关性。
结果 （1）子痫前期组孕妇 BMI 指数、β-HCG MoM 值、尿酸均显著高于正常对照组(P<0．05)。(2)多因素 Logistic 回归分析显示 BMI 指数、血清尿酸浓度都是子痫前期的预测指标，其中尿酸水平的预测能力最强 ,BMI 次之。
结论 抗心磷脂抗体 ACA 对孕妇患子痫前期的预测意义不明显，先兆子痫患者组的 BMI 值、尿酸水平均显著高于正常对照组，与疾病具有一定的相关性。子痫前期患者孕中期的 β-HCG 水平显著升高，可作为预测子痫前期的一个指标，经修正的 β-HCG MoM 值诊断效能更强。

PU-1787

肝细胞癌患者诊断时血清异常凝血酶原水平对肿瘤生物学特性与预后的预测价值分析

罗俐梅、苏真珍、袁宇珊、张可依、蔡蓓、李立新
四川大学华西医院

目的 探讨肝细胞癌（HCC）患者在诊断时血清异常凝血酶原（PIVKA-Ⅱ）水平对肿瘤生物学特性的预测价值。
方法 回顾性纳入 2017 年 6 月-2018 年 12 月在四川大学华西医院经病理确诊的 HCC 患者 478 例，获取患者在确诊时 PIVKA-II 的血清学浓度，并以 40 mAU/mL 作为截断值将 HCC 患者分为 PIVKA-II 阴性组（≤40 mAU/mL）与 PIVKA-II 阳性组（>40 mAU/mL），分析 PIVKA-II 水平与肿瘤生物学特性（肿瘤大小、肿瘤数目、肿瘤细胞分化程度、有无微血管浸润、有无远处转移、有无门静脉癌栓等）以及复发之间的相关性。
结果 与 PIVKA-II 阴性组相比，PIVKA-II 阳性组 HCC 患者更容易发生微血管浸润（39.4% vs 13.9%，$\chi2$=15.839，P<0.001），更容易形成门静脉癌栓（17.0% vs 5.6%，$\chi2$=10.164，P=0.001），肿瘤直径≥5cm 更常见（83.4% vs 16.6%，$\chi2$=21.599，P<0.001），具有更高的 TNM 分期（34.1% vs 17.5%，$\chi2$=12.289，P<0.001），更高的 BCLC 分期（38.6% vs 21.7%，$\chi2$=10.956，P=0.001），且更容易术后复发（47.8% vs 32.3%，$\chi2$=4.643，P=0.031）。
结论 HCC 患者在诊断时高 PIVKA-II 水平与肿瘤的不良生物学特性相关，且更容易复发。检测 HCC 患者 PIVKA-II 水平可对临床预后判断提供一定依据。

PU-1788

Immunosuppression has long-lasting effects on circulating follicular regulatory T cells in kidney transplant recipients

Qian Niu[1]、Aleixandra Mendoza Rojas[2]、Marjolein Dieterich[2]、Dave L. Roelen[3]、Marian C. Clahsen van Groningen[2]、Lanlan Wang[1]、Teun van Gelder[2]、Dennis A. Hesselink[2]、Nicole M. van Besouw[2]、Carla C. Baan[2]
1. Department of Laboratory Medicine, Wset China Hospital, Sichuan University
2. Erasmus MC, University Medical Center Rotterdam
3. Leiden University Medical Center

Background FoxP3+ follicular regulatory T cells (Tfr) have been identified as the cell population controlling T follicular helper (Tfh) cells and B cells which, are both involved in effector immune responses against transplanted tissue.
Methods To understand the biology of Tfr cells in kidney transplant patients treated with tacrolimus and mycophenolate mofetil (MMF) combination immunosuppression, we measured circulating (c)Tfh and cTfr cells in peripheral blood by flow cytometry in n = 211 kidney transplant recipients. At the time of measurement patients were 5–7 years after transplantation. Of this cohort of patients, 23.2% (49/211) had been previously treated for rejection. Median time after anti-rejection therapy was 4.9 years (range 0.4–7 years). Age and gender matched healthy individuals served as controls.
Results While the absolute numbers of cTfh cells were comparable between kidney transplant recipients and healthy controls, the numbers of cTfr cells were 46% lower in immunosuppressed recipients (P<0.001). More importantly, in transplanted patients, the ratio of cTfr to cTfh was decreased (median; 0.10 vs. 0.06), indicating a disruption of the balance between cTfr and cTfh cells. This shifted balance was observed for both non-rejectors and rejectors. Previous pulse methylprednisolone or combined pulse methylprednisolone + intravenous immunoglobulin anti-rejection therapy led to a non-significant 30.6% (median) and 51.2% (median) drop in cTfr cells, respectively when compared to cTfr cell numbers in transplant patients who did not receive anti-

rejection therapy. A history of alemtuzumab therapy did lead to a significant decrease in cTfr cells of 85.8% (median) compared with patients not treated with anti-rejection therapy (P<0.0001). No association with tacrolimus or MMF pre-dose concentrations was found.
Conclusions This cross-sectional study reveals that anti-rejection therapy with alemtuzumab significantly lowers the number of cTfr cells in kidney transplant recipients. The observed profound effects by these agents might dysregulate cTfr functions.

PU-1789

类风湿关节炎患者血清骨转换标志物的水平分析

牛倩[1]、谢中华[2]、苗强[1]、徐欢[1]、万正利[1]、蔡蓓[1]、张君龙[1]
1. 四川大学华西医院
2. 内江市东兴区人民医院

目的 探讨类风湿关节炎（RA）患者血清骨转换标志物水平的变化及其与炎性因子水平的关系。
方法 纳入 2020 年 10 月~12 月符合 2010 年美国风湿病学会/欧洲抗风湿病联盟（ACR/EULAR）修订的 RA 诊断标准的患者 58 例作为疾病组，性别、年龄匹配的健康体检者 49 例作为对照组，采用电化学发光法检测血清 β-I 型胶原羧基端交联肽（β-CTx）、总 I 型胶原氨基端延长肽（tPINP）、骨钙素 N 端中分子片段（N-MID）、抗环瓜氨酸肽抗体（ACPA）和白介素 6（IL-6）水平，化学发光法检测血清骨型碱性磷酸酶（BALP）和可溶性白介素 2 受体（sIL-2R）水平，速率散射比浊法检测血清 C 反应蛋白（CRP）水平。分析骨转换标志物 β-CTx、tPINP、N-MID 和 BALP 在疾病组与对照组间的表达差异，及其与炎性指标 CRP、IL-6 和 sIL-2R 的相关性。
结果 与健康对照组相比，RA 患者组血清 β-CTx、CRP、IL-6 和 sIL-2R 的水平明显升高（P<0.05），tPINP、N-MID 和 BALP 的水平轻微升高但差异无统计学意义（P>0.05）。ACPA>500 U/mL 的 RA 患者其血清 β-CTx 水平明显高于健康对照者（P<0.05），但与 ACPA<500 U/mL 的患者相比差异无统计学意义（P>0.05）。Spearman 相关性分析显示，RA 患者血清 β-CTx 水平与其病程、CRP 和 sIL-2R 水平呈正相关关系（P<0.05）。
结论 RA 患者表现出以骨吸收活性明显增强为特征的高骨转换过程，其骨吸收活性与病程的长短和炎症反应的强度有关；骨标志物 β-CTx 在评价 RA 患者骨质破坏中具有潜在价值。

PU-1790

Elevated soluble Tim-3 correlates with disease activity of systemic lupus erythematosus

赵地
山东大学齐鲁医院

Tim-3 has been found to play important roles in systemic lupus erythematosus (SLE), but whether sTim-3 is involved in development of SLE remains unknown. In this study, we firstly observed an increased expression of plasma sTim-3 in SLE patients, especially active SLE patients. The plasma sTim-3 levels were positively correlated with anti-dsDNA, SLEDAI score, ESR, and urine albumin. The plasma sTim-3 levels were negatively correlated with C3 and C4. The AUC values indicated that the plasma sTim-3 level was significantly discriminative of early active SLE from stable SLE and HC with high sensitivity and specificity. The present results suggest that sTim-3 might serve as a potential biomarker for promising the disease activity of SLE.

PU-1791

抗 Chrom 抗体和抗 dsDNA 抗体阳性 SLE 患者实验室及临床特点研究

张帆[1,2,3,4]、刘微芬[1]、崔晓花[2,3,4]、钟敏[2,3,4]
1. 曲靖市第一人民医院
2. 昆明医科大学第一附属医院
3. 云南省实验诊断研究所
4. 云南省检验医学重点实验室

目的 研究系统性红斑狼疮（SLE）患者抗核染色质（Chrom）抗体和抗双链 DNA（dsDNA）抗体阳性实验室指标和临床特点的差异。
方法 选择 2020 年昆明医科大学第一附属医院收治并检测抗 Chrom 抗体和抗 dsDNA 抗体的 156 例 SLE 患者相关信息，分为抗 Chrom 抗体阳性组（C 组 50 例）、抗 dsDNA 抗体阳性组（D 组 46 例）和双抗体阳性组（CD 组 60 例），分析 3 组患者实验室指标和临床特点的差异。
结果 C 组年龄高于 D 组（P<0.05）。C 组累及血液系统阳性率高于 D 组（P<0.05）；D 组累及肾脏阳性率高于 C 组（P<0.05）；CD 组累及浆膜腔阳性率高于其他两组（P<0.05）。C 组以核颗粒型为主，D 组以核颗粒型及核均质型为主；CD 组以核均质型为主（P<0.05）。C 组和 C+D 组中抗 Sm 抗体和抗 SmRNP 抗体阳性率高于 D 组（P<0.05）；C 组和 CD 组中抗 RNP 抗体、抗 RNP-A 抗体阳性率高于 D 组（P<0.05）。C 组 PLT 水平低于 CD 组（P<0.05）；C 组和 D 组 C3 水平均高于 CD 组（P<0.05）。
结论 抗 Chrom 抗体阳性 SLE 患者发生血液系统疾病风险较高，抗 dsDNA 抗体阳性组患者发生肾脏疾病风险较高，当两种抗体同时存在时，应密切关注浆膜腔积液症状出现，应重视 SLE 患者诊疗中相关指标变化，做到早预防、早干预。

重度抑郁症患者血浆前列腺素 E 含量水平的检

蒋娅玲
江门市第三人民医院

检测前列腺素 E 在重度抑郁症患者血浆中的改变情况。方法选取江门市第三人民医院精神科门诊 2018 年 1 月—2019 年 12 月治疗的 80 例重度抑郁症患，根据治疗方式的分成研究组和对照组，采用高效液相色谱在 40 例重症抑郁症患者作为研究组和 40 例健康患者作为对照组，在队列中检测血浆中 PGE1 和 PGE2 的含量。

PU-1793

血清 HE4、CA125 和 ROMA 指数对卵巢肿瘤良恶性评价及疗效判断的初步分析

暴旭广
南方医科大学珠江医院

目的 探讨血清人附睾上皮分泌蛋白 4（HE4）、CA125 和卵巢癌风险预测值（ROMA 指数）卵巢肿瘤良恶性评价及对卵巢癌患者预后疗效判断的临床意义。

方法 收集珠江医院 2015 年 1 月~2016 年 3 月经手术病理学确诊为卵巢肿瘤的患者 91 例，其中卵巢癌患者 31 例，良性肿瘤患者 60 例,另外收集 30 例健康体检者，测定其血清 HE4、CA125 及 ROMA 指数值。
结果 卵巢癌组血清 HE4、CA125 及 ROMA 指数值明显高于良性肿瘤组（P<0.01）；卵巢癌患者组治疗后血清 HE4、CA125 及 ROMA 指数值化疗后均低于术前（P<0.05）；复发或转移后，患者血清 HE4、CA125 及 ROMA 指数值均不同程度升高，结果有统计学差异（P<0.05）。
结论 联合检测血清 HE4、CA125 及 ROMA 指数来评价卵巢肿瘤的良恶性以及卵巢癌治疗后的评估方面具有重要的临床意义，血清 HE4、CA125 及 ROMA 指数在卵巢癌患者复发或转移中有监测意义。

PU-1794

6 岁以下儿童布鲁菌病患者的流行病学及临床特点分析

何晶晶
黑龙江省农垦总局总医院

目的 了解学龄前布鲁菌病（简称布病）患儿的流行病学和临床特点，以提高对儿童布鲁菌病的认识及诊断水平。
方法 收集 2016 年 12 月至 2018 年 11 月黑龙江省农垦总局总医院收治确诊的学龄前布病患儿，回顾分析患儿的流行病学特征、临床症状、实验室检查、治疗和转归情况。
结果 共纳入 45 例学龄前布病患儿，其中男性 29 例，女性 16 例，年龄（3.7±1.6）岁，范围 6 月 ～ 6 岁，主要集中在 > 3 ～ 6 岁（64.44%，29/45）；居住地以农村为主（97.78%，44/45）；发病时间主要集中在 3 – 6 月（46.67%，21/45）。临床症状以发热、关节痛居多，分别占 97.78%（44/45）、57.78%（26/45）；淋巴结及肝脾肿大较多见，分别占 42.22%（19/45）和 35.56%（16/45）。患儿治疗前、后 ALT、AST、CK-MB、HBDH 及 LDH 比较，差异有统计学意义（t = 4.774、2.970、2.229、5.664、5.805，P 均 < 0.01 或 < 0.05）。血标本培养布鲁菌阳性 36 例（80.0%），治疗后均转为阴性。
结论 学龄前儿童布病流行病学和临床特点不典型。在布病流行区域及多发季节，对于不明原因发热的患儿，临床医生应详细询问其流行病史并结合临床特征，考虑布病的可能，争取早诊早治。

TROCH 筛查的应用现状

曾静
南方医科大学珠江医院

TORCH 是一个缩写，代表一组病原体，包括弓形虫(TOX)、风疹病毒(RV)、巨细胞病毒(CMV)和单纯疱疹病毒(HSV)，可引起围产期感染，具有类似症状[1]。TORCH 作为优生优育的指标之一，TORCH 特异性抗体筛查可以降低先天性疾病发生率。本文总结 TROCH 筛查的应用现状，指导临床正确合理地使用 TORCH。

PU-1796

桥本甲状腺炎患者血液中炎症因子水平的研究

何春燕
苏州大学附属第二医院

目的 探讨桥本甲状腺炎（Hashimoto's thyroiditis，HT）患者的肾功能指标与疾病的关系，为防止临床误诊提供依据，同时我们研究了 HT 患者血清中的炎症因子，为探索 HT 的发病机制提供了依据。
方法 回顾性分析 1270 例桥本甲状腺炎门诊及住院患者的甲状腺功能指标和肾功能指标，将患者按 TSH 水平分为正常和升高组，分析两组病人 IgA、IgG、IgM、C3、C4、Cr、尿素、尿酸、尿隐血指标之间是否有差异，并进行相关性分析。采用竞争 ELISA 方法检测 53 例 HT 患者血清中的细胞因子如白介素，干扰素、共刺激分子如 B7-H3 和肿瘤抗原如 CEA 等指标，探讨它们与 HT 发病的关系。
结果 HT 患者体内的 IL-2、IL-6、IFN-γ 的水平明显高于正常对照组 IL-2(3.814.07vs.1.92±0.68)，IL-6(3.34±2.06vs.2.12±1.59)，IFN-γ(2.85±3.98 Vs. 1.53±0.82)而 IL-10 的水平明显低于正常对照组(1.61±0.53 Vs.2.25±1.18)。HT 患者体内的 CEA 水平高于正常对照，可溶性 B7-H3 水平明显低于健康对照者。TSH 水平升高组肌酐、尿酸、IgG、IgM 较 TSH 水平正常组明显增高（P<0.05），TSH 水平升高组 C3、C4 与较正常组明显降低（p<0.05），TGAb、TPOAb、TSH 与肾功能、补体以及免疫球蛋白指标之间存在相关性。其中血清肌酐（Cr）水平与 TSH 呈正相关。IgG、IgM 与 TPOAb、TGAb、TSH 呈正相关，C3 与 TPOAb、TSH 呈负相关。C4 与 TPOAb 呈负相关。
结论 HT 患者体内存在 Th1/Th2 失衡，分泌的细胞因子以 Th1 型为主；HT 患者与甲状腺癌的发生有一定的相关性；HT 患者的肾功能和甲状腺功能存在相关性，甲状腺功能的异常可以导致肾功能的异常。

PU-1797

Analysis of PD-1 expression in different monocyte subsets and serum soluble PD-1 from patients with sepsis

Yang Fu、Shuang Wang、Qi Zhang、Binwu Ying
West China Hospital, Sichuan University

Objective Negative costimulatory molecule programmed death-1 (PD-1) play an important role in dysregulation of immune responses of sepsis. We aimed to investigate the PD-1 expression in monocyte subsets and serum soluble PD-1 level in sepsis patients with different degrees of severity.
Materials and Methods The observational clinical study on the different expression of PD-1 in peripheral blood monocytes from patients with sepsis was conducted in West China Hospital of Sichuan University. This study included 42 sepsis patients and 16 healthy controls (HCs) with matched age and sex. PD-1 expression was determined on the monocyte subsets (classical, intermediate, non-classical) by flow cytometry. Monocytes in different groups were stained by anti-human CD45 per-cp, anti-human CD16 FITC, anti-human CD14 APC, anti-human CD279 (PD-1) PE. In addition，serum soluble PD-1 was examined by Luminex MagPix.
Results Monocytes in peripheral blood can be divided into three subsets according to the CD14 and CD16 expression: $CD14^{+}CD16^{-}$(classical monocyte, CL Mo), $CD14^{+}CD16^{+}$ (intermediate monocyte, IM Mo) and $CD14^{low}CD16^{+}$ (non-classical monocyte, NC Mo). The results showed that the percentage of CL Mo in septic shock group were significantly decreased and the percentage of IM Mo in sepsis and septic shock group were significantly increased when compared to HC group. Moreover, the expressions of PD-1 on IM Mo were significantly higher in both sepsis and

septic shock patients than HCs. Further analysis of serum PD-1 in sepsis patients showed that serum PD-1 level was decreased in sepsis patients compared with HCs.
Conclusions Our results suggested that the difference of PD-1 expression in peripheral blood monocyte subsets were associated with the severity of sepsis.

PU-1798

自身免疫性肝病中多种自身抗体的检测及应用进展

郑燕妮
南方医科大学珠江医院

自身免疫性肝病(AILD)是由于机体异常的免疫反应攻击自身的肝脏而引起的以肝脏组织损害和肝脏功能异常为主要表现一组自身免疫性疾病。主要包括自身免疫性肝炎(AIH)、原发性胆汁性胆管炎(PBC)、原发性硬化性胆管炎(PSC)。该病在我国其确切发病率和患病率尚不清楚，但国内文献报道的病例数呈明显上升趋势。大多数病人表现为慢性肝炎，也有部分患者无任何症状，仅因发现肝功异常而就诊。自身免疫性肝病患者血清中存在特异性自身抗体，自身抗体的检测已成为 AILD 诊断和鉴别的重要工具。本文主要对 AILD 相关血清自身抗体的研究进展作一概述, 以有助于临床对自身抗体意义的解读。

PU-1799

肝素结合蛋白联合降钙素原与中性粒细胞计数在全身及消化系统局部炎症疾病中的临床价值

何仁栋[1,2,3]、李婕妤[1,2,3]、何莉萍[1,2,3]、谢宁[1,2,3]、王强[1,2,3]、郭晓兰[1,2,3]、郭斌[1,2,3]
1. 川北医学院附属医院检验科
2. 川北医学院医学检验系
3. 川北医学院转化医学研究中心

目的 评估肝素结合蛋白（HBP）、降钙素原（PCT）、中性粒细胞计数在消化系统局部炎症疾病和全身炎症疾病中的鉴别及联合诊断价值
方法 选取 58 例急性胆囊炎患者作为消化系统局部炎症疾病组，62 例细菌感染引起的脓毒症患者作为全身炎症疾病组，以同期 30 例健康体检者为对照组。采用免疫荧光干式定量法测定 HBP 水平，全自动化学发光免疫分析仪和全自动血细胞分析仪分别测定 PCT 和中性粒细胞水平。正态分布的定量资料采用单因素方差分析，非正态分布定量资料采用 Mann-Whitney U 检验，定性资料采用 χ2 检验，两变量间相关性采用 Spearman 相关分析，建立受试者工作特征(ROC) 曲线评估各指标诊断效能。
结果 全身炎症疾病患者 HBP、PCT 和中性粒细胞水平较消化系统局部炎症疾病患者以及健康体检者明显增高（p 均=0.000），而消化系统局部炎症疾病患者仅 HBP 较健康体检者明显增高（p=0.000），PCT 和中性粒细胞均无明显差异（p 均＞0.05）。全身炎症疾病患者 HBP 与 PCT 呈正相关（p=0.006，r=0.344），消化系统局部炎症疾病患者 HBP 升高率高于 PCT 升高率（χ2=16.06，p=0.000）。消化系统局部炎症疾病患者，当中性粒细胞绝对值小于 7.5×109/L 时，HBP 和中性粒细胞水平呈正相关（p=0.012，r=0.305），而全身炎症疾病中两者无相关性。HBP 用于消化系统局部炎症疾病诊断时曲线下面积（AUC）为 0.750；HBP 用于鉴别诊断全身炎症疾病和消化系统局部炎症疾病时 AUC 为 0.783；HBP、PCT 和中性粒细胞联合诊断全身炎症疾病时 AUC 为 0.994
结论 HBP 可用于鉴别全身炎症疾病和消化系统局部炎症疾病。更为重要的是 HBP、PCT 和中性粒细胞计数三指标联合诊断炎症疾病时具有更优的临床价值。

PU-1800

化学发光法检测抗双链 DNA 抗体

晋晶
南方医科大学珠江医院

目的 评价两种全自动、定量和随机上样化学发光法(CLIA) 检测抗双链 DNA 抗体的临床应用价值，为临床检测方法的选择提供参考。
方法 对 40 例 SLE 患者及 31 例非自身免疫病患者的血清样本分别应用重庆科斯迈 SMART6500 磁微粒全自动化学发光仪、苏州浩欧博自身抗体检测试剂和美国 INOVA 公司 BIO-FLASH 全自动化学发光检测系统采用 CLIA 平行检测抗双链 DNA 抗体，与传统的间接免疫荧光法(IFA) 检测抗双链 DNA 抗体结果进行比较与数据分析。
结果 两种 CLIA 检测系统与 IFA 针对抗双链 DNA 抗体的检测表现出良好的符合率，其中，浩欧博检测系统与 IFA 总符合率为 88.7%，阳性符合率 85.7%，阴性符合率 90%。BIO-FLASH 全自动化学发光检测系统与 IFA 总符合率为 87.3%，阳性符合率 100%，阴性符合率 82%。
结论 与 IFA 比较，两种 CLIA 检测试剂在检测抗双链 DNA 抗体均具有良好的符合率。CLIA 检测方法不仅提供了客观的检测数据，同时具有较高的检测通量，实现了自动化。建议实验室开展检测方法选择时，应同时结合样本临床信息以及方法学自身特点、实验室自身条件等因素进行判断和评价。

PU-1801

探讨标本保存条件对高血压五项结果的影响

汪旭
吉林金域医学检验所有限公司

目的 探讨不同温度保存条件对高血压五项检测结果的影响
方法 收集 2020 年 8 月到 2021 年 1 月期间送检的 60 例高血压五项患者样本。把检测结果记录，作为对照组；检测后的样本分成两份，分别保存在室温和－20℃冷冻冰箱内。24h 后，将室温样本和冷冻样本（需充分复融）上机检测，得到两组数据，室温样本检测结果为 A 组，冷冻样本检测结果为 B 组。比较对照组、A 组、B 组的高血压五项检测结果。
结果 A 组的 Renin 浓度与对照组相比在 24h 内呈下降趋势且部分小于线性下限，而 B 组 Renin 浓度与对照组相比在 24h 内呈上升且稳定。A 组的 ACTH 浓度与对照组相比在 24h 内大幅度下降且部分小于线性下限，而 B 组的 ACTH 浓度与对照组相比在 24h 内基本稳定。A 组和 B 组的 ALD 和 Cortisol 浓度与对照组相比变化影响较小。A 组 AII 浓度与对照组相比在 24h 内大幅度下降且大部分小于线性下限，B 组 AII 浓度与对照组相比在 24h 内基本稳定且部分下降。
结论 检测高血压五项时，应在收到样本后尽快检测，如果不能尽快检测，需要把离心好的样本冷冻保存，并尽快检测完毕，本次研究为高血压五项提供了样本保存条件的依据。

PU-1802

IgA 类抗磷脂抗体对抗磷脂综合征的诊断价值研究

杨滨[1]、谭慧玲[1]、胡朝军[2]
1. 四川大学华西医院
2. 中国医学科学院北京协和医院

目的 分析多种抗磷脂抗体（aPL）亚型在健康人群与抗磷脂综合征（APS）患者中的分布情况，并探讨 IgA-aPL 检测在 APS 诊断中的临床应用价值。

方法 依据 2006 年悉尼国际 APS 分类标准，连续纳入 2019 年 7 月至 12 月就诊于北京协和医院或四川大学华西医院的 APS 患者共计 218 人，其中原发性 APS 患者 148 人，继发性 APS 患者 70 人，并同期 1：1 收集年龄、性别匹配的健康对照。以化学发光免疫分析法检测研究对象血清样本中 IgA/IgG/IgM 型抗心磷脂抗体（aCL）及抗 β2 糖蛋白Ⅰ抗体（aβ2GPI）。以独立样本 t 检验、χ2 检验、受试者工作曲线（ROC）和 logistic 回归进行统计学分析。
结果 APS 患者中，IgA-aCL、IgA-aβ2GPI 的阳性率分别为 20.6%、15.6%，而二者各自的独立阳性率仅为 2.3%、0.9%。IgA-aCL、IgA-aβ2GPI 独立阳性不能用于有效识别 APS 患者（P 值分别为 0.216，1）。联合 IgG/IgM-aCL 的诊断效能明显优于 IgG-aCL（P<0.001），而加入 IgA-aCL 并不能进一步提升对 APS 的诊断价值（P=0.287）。对 aβ2GPI 而言，联合 IgG/IgM 或 IgA/IgG/IgM 型抗体的诊断效能与 IgG-aβ2GPI 单独使用时相较，均无显著差异（P 均>0.05）。此外，IgA-aPL 阳性 APS 患者更易发生心脏瓣膜损伤（P=0.044）及血小板减少症（P=0.014）。
结论 在已有的狼疮抗凝物、IgG/IgM 型 aCL 和 aβ2GPI 等血清学标志物基础上，增加 IgA-aCL 与 IgA-aβ2GPI 并不能进一步提升实验室检查对 APS 的预测价值，但 IgA-aPL 与心脏瓣膜损伤及血小板减少症等临床症状相关。

PU-1803

评价肿瘤标志物 CA199、CEA、CA125 在胰腺癌临床诊断及分期中的作用

王晓瑞
河南省漯河医学高等专科学校第三附属医院

目的 分析肿瘤标志物 CA199、CEA、CA125 在胰腺癌临床诊断及分期中的作用。
方法 选定本院 2018 年 6 月至 2019 年 6 月收治的 228 例胰腺癌患者作为实验组，以及同期门诊体检的 228 例健康人员作为参照组，检测并对比两组血清 CA199、CEA、CA125 水平，对比不同 TNM 分期组血清 CA199、CEA、CA125 水平，对比复发和未复发组血清 CA199、CEA、CA125 水平。
结果 实验组血清 CA199、CEA、CA125 水平均比参照组高，III-IV 期组血清 CA199、CEA、CA125 水平均比 I-II 期组，复发组血清 CA199、CEA、CA125 水平均比未复发组高，P<0.05（差异均具有统计学意义）。
结论 血清 CA199、CEA、CA125 水平与胰腺癌患者 TNM 分期及复发情况呈正相关性，值得借鉴。

PU-1804

不同检测系统检测 SCC 结果对比分析及探究

肖含、李姗姗、崔思洋
吉林金域检验医学检验所有限公司

目的 比较雅培化学发光检测 SCC 和博奥赛斯化学发光法检测 SCC 结果的是否具有可比性,两种不同的检测方法进行对比分析，探讨不同的系统间检测 SCC 结果的相关性。
方法 依据美国临床实验室标准化委员会 EP9-A 文件要求, 使用雅培化学发光仪 i2000SR 和博奥赛斯全自动化学发光仪 Axceed 260，每天测定 8 例临床样本，每样本各测定 1 次，连续测定 5 天，共 40 例样本，样本浓度覆盖试剂检测范围。进行数据统计，计算线性回归方程，计算 R^2。
结果 使用雅培化学发光仪 i2000SR 和博奥赛斯全自动化学发光仪 Axceed 260 两台仪器检测 SCC 的回归方程为 Y=0.836X+0.1892。R^2=0.9934。具有良好的相关性。

结论 两种检测系统测定 SCC 的结果是具有可比性的，两种不同方法学的差异对检测结果没有明显影响。可以根据临床需要选择不同的检测系统，从而更好的满足临床的需要，为临床服务。

PU-1805

输卵管卵巢脓肿患者血清 ACTA、INHB 和 FSH 检测及临床意义

林花、冯颖
吉林大学第一医院

目的 探讨血清激活素 A(ActivinA，ACTA)、抑制素 B（InbibinB，INHB）和卵泡刺激素（Follicle-stimulatng hormone，FSH）在输卵管卵巢脓肿（Tubo-Ovarian abscess,TOA）发病机制中的作用。
方法 采用酶联免疫（ELISA）法和放射免疫（RIA）法检测 55 例 TOA 患者及 20 例正常对照组的血清 ACTA、INHB 和 FSH 水平。
结果 TOA 患者血清 ACTA 和 INHB 水平明显高于对照组（P<0.01），FSH 水平明显低于对照组（P<0.01）。
结论 ACTA、INHB 和 FSH 可能均参与了疾病的发生，联合检测三项指标，对指导治疗及病情评估具有实际意义。

PU-1806

肺泡灌洗液肝素结合蛋白在肺内感染诊断与鉴别诊断中的临床价值

毕惠娟[1]、沈继录[1]、方文浩[2]、吴珊[1]、尹丽娜[2]、徐倩[2]、薛莹[2]、柯晨阳[1]
1. 安徽医科大学第四附属医院
2. 安徽医科大学第四附属医院检验科

目的 探讨肺泡灌洗液肝素结合蛋白（Heparin binding protein, HBP）在肺内感染诊断与鉴别诊断中的临床价值。
方法 选取 2019 年 1 月—2020 年 6 月安徽医科大学第四附属医院呼吸科收治的 80 例肺内感染患者，其中细菌性肺内感染 44 例，非细菌性肺内感染 36 例，另选取同期 40 例非肺部感染性疾病患者为对照组，检测各组患者肺泡灌洗液中 HBP、PCT、IL-6 水平，并分析上述各指标鉴别细菌性和非细菌性肺内感染的临床效能。
结果 细菌性肺内感染患者肺泡灌洗液 HBP、PCT、IL-6 水平均较非细菌性肺内感染及对照组明显升高，差异有统计学意义（P<0.05）。ROC 曲线结果显示 HBP、PCT 及 IL-6 可有效辅助诊断细菌性肺内感染，AUC 分别为 0.923、0.774、0.884，HBP cut-off 值为 16.88ng/ml 时，灵敏度为 77.3%，特异度为 92.5%。HBP、IL-6 可有效辅助细菌性与非细菌性肺内感染的鉴别诊断，AUC 分别为 0.778、0.696，灵敏度分别为 63.6%、54.5%，特异度分别为 88.9%、77.8%。
结论 肺泡灌洗液 HBP 在细菌性肺内感染的诊断及鉴别诊断中，具有较 PCT、IL-6 更优的临床价值。

PU-1807

CD3+T, CD4+T, CD8+T, CD4+T/CD8+T ratio, expression of γδT cells in peripheral blood of HIV-infected/AIDS patients and its clinical significance

Nange Zhao[1]、Keqiang Wang[2]
1. Xianyang Central Hospital of Shaanxi Province
2. 山东第一医科大学第二附属医院

To investigate the expression of CD4+T, CD4+T, CD8+T and γδT cells in peripheral blood of HIV-infected /AIDS patients, and to explore the possible role of CD4/CD8 ratio and γδT cells in the progression of HIV /AIDS, so as to provide evidence for the diagnosis and treatment of AIDS. According to different T cell antigen receptors (TCR), T cells are divided into αβT cells and γδT cells. The latter is composed of γ chains and δ chains, and the number is relatively small, accounting for 0.5%-5% of healthy adult lymphocytes. γδT cells originate from the thymus, but mature in peripheral tissues and organs. Most of γδ T cells are CD4- and CD8- cells, and a few are CD4+ and CD8+ cells. In this study, by detecting the peripheral blood CD3+T, CD4+T, CD8+T, γδT cells of HIV-infected/AIDS patients, the number of γδT cells, CD4+T, CD8+T cells and HIV infection in HIV-infected/AIDS patients The relationship with disease progression provides a basis for adoptive immunotherapy and other treatment Methods for AIDS.

BioSystems BA400 全自动特定蛋白分析仪尿轻链生物参考区间建立

连丽丽
吉林大学第一医院

目的 分析 BioSystems BA400 全自动特定蛋白分析仪与 SIEMENS BNⅡ全自动蛋白分析仪的尿 k 轻链、λ 轻链检测结果线性回归分布规律，由已通过确认的 SIEMENS BNⅡ检测系统尿轻链生物参考区间建立本实验室 BioSystems BA400 检测系统尿 k 轻链、λ 轻链生物参考区间。
方法 分析 2020 年 11 月在吉林大学第一医院就诊的 210 例住院及门诊检测尿 k 轻链、λ 轻链的患者样本检测结果。其浓度分布整个线性范围，不使用超出线性范围的标本。分别用 BioSystems BA400 全自动特定蛋白分析仪与 SIEMENS BNⅡ全自动蛋白分析仪检测 220 份样本各 1 次，收集检测数据，设 SIEMENS BNⅡ全自动蛋白分析仪测定结果为 x 值（比较方法），BioSystems BA400 全自动特定蛋白分析仪测定结果为 y 值（实验方法）。对检测数据进行离群值检验，若有显著离群值应予剔除。经剔除离群值，筛选出 192 例成对的尿 k 轻链、199 例成对的尿 λ 轻链的检测数据。对两个检测系统的成对测定数据进行一元线性回归分析，制作实验方法对比较方法散点图，得到回归方程 y=bx+a，其中 a、b 分别为回归直线的截距和斜率。对该直线进行相关性检验，若 r≥0.975 或 r2≥0.95，则认为该线性拟合满意。如果 r2＜0.95,则必须分析更多的样品以扩大数据浓度分布范围，然后再重新分析全部数据。对回归方程的进行方差分析，判断回归方程是否成立。根据线性回归分析计算 x 为本室 SIEMENS BNⅡ检测系统尿 k 轻链、λ 轻链参考值时的 y 值，即为通过线性回归分析建立的 BioSystems BA400 检测系统尿 k 轻链、λ 轻链参考值结果尿 k 轻链项目回归方程 y=1.084x-3.760，r2＝0.989。线性拟合满意。对回归方程的方差分析结果，F=3225.179，P=0.000，差异有统计学意义，该回归方程成立。x 为本室 SIEMENS BNⅡ检测系统尿 k 轻链参考值＜7.19 mg/L 与＜14.20 mg/24h 时，y 值为＜6.62 mg/L 与＜14.48 mg/24h。尿 λ 轻链项目回归

方程 y=1.083x+1.099，r2＝0.992。线性拟合满意。对回归方程的方差分析结果，F=8345.163，P=0.000，差异有统计学意义，该回归方程成立。x 为本室 SIEMENS BNⅡ检测系统尿 λ 轻链参考值＜3.90 mg/L 与＜7.80 mg/24h 时，y 值为＜5.32 mg/L 与＜9.55 mg/24h。由此建立本室 BioSystems BA400 检测系统生物参考区间为尿 k 轻链＜6.62 mg/L 或＜14.48 mg/24h，尿 λ 轻链＜5.32 mg/L 或＜9.55 mg/24h。经验证该参考区间适用于本实验室。

结论 BioSystems BA400 全自动特定蛋白分析仪与 SIEMENS BNⅡ全自动蛋白分析仪的尿 k 轻链、λ 轻链检测结果一元线性回归方程成立，线性拟合满意。由此建立 BioSystems BA400 检测系统尿 k 轻链、λ 轻链参考区间可向临床提供参考。

PU-1809

抗磷脂抗体升高和住院患者院内血栓的相关性研究

史晓敏
北京大学第一医院

针对抗磷脂抗体升高的住院患者，评估抗磷脂抗体和院内血栓事件之间的相关性，比较不同种类的抗磷脂抗体对于血栓的意义大小。

方法 回顾性研究。以 2015 年 1 月至 2019 年 12 月于北京大学第一医院住院，并且抗磷脂抗体谱中任意一项检测结果为阳性的 385 例患者为研究对象。依据住院期间是否检测到血栓将所有受试者分为血栓组和非血栓组。记录患者的临床资料及实验室数据，包括 aCL-IgM/IgG、抗 β2GPI-IgM/IgG、LA。比较两组之间的年龄、性别、吸烟、肥胖、高血压、高血脂、糖尿病的发生率以及抗磷脂抗体中位数水平。通过 logistic 多因素回归分析判断血栓事件发生的危险因素。用 c2 趋势检验确立 aCL 的中高滴度数值，并用 logistic 回归验证。

结果 血栓组的年龄以及男性、吸烟、高血压、糖尿病的比率明显高于非血栓组。血栓组的抗 β2GPI- IgG、dRVVT 的阳性率明显高于非血栓组，dRVVT 的中位数水平也高于非血栓组，差异有统计学意义。aCL-IgM 的中位数水平，非血栓组高于血栓组。aCL-IgG 的阳性率，血栓组略高于非血栓组。logistic 多因素回归分析显示，男性、高血压、糖尿病、高龄、dRVVT 升高、抗 β2GPI-IgG 升高是血栓的高危因素。以 36 GPL 作为 aCL-IgG 的中高滴度数值，血栓风险增加 2.45 倍。

结论 抗磷脂抗体谱中，DRVVT 方法检测的 LA 和抗 β2GPI-IgG、aCL-IgG 是对住院患者院内血栓事件最有价值的实验室指标。aCL-IgG 的中高滴度数值设立在 36 GPL 可以很好地区分血栓风险。aCL-IgM 在非血栓性疾病显著升高。

PU-1810

ALDH2 在类风湿关节炎滑膜的表达及临床意义

王洪星
山东大学齐鲁医院

目的 观察类风湿关节炎(rheumatoid arthritis, RA)患者膝关节滑膜组织中乙醛脱氢酶 2（aldehyde dehydrogenase, ALDH2）蛋白表达情况，并分析其临床意义。

方法 选取在我院进行膝关节置换术的 RA 患者为实验组（n=24），选取同期进行关节镜手术的半月板损伤患者为对照组（n=12），收集滑膜组织 WB 检测 ALDH2 蛋白表达水平，实验组患者检测抗环瓜氨酸多肽抗体（抗 CCP 抗体），类风湿因子水平（RF），采用 DAS28 评分评估 RA 疾病活动度，采用 Pearson 相关性分析 RA 患者滑膜组织 ALDH2 表达水平与其临床检验指标间的相关性。

结果 RA 实验组 ALDH2 表达水平高于对照组；RA 实验组 ALDH2 表达水平与抗 CCP 抗体呈正相关(r=0.71, P=0.04)，与 DAS28 评分和 RF 无相关性(P>0.05)。

结论 RA 患者膝关节滑膜组织中 ALDH2 表达增高，并可能与 RA 疾病进展正相关。

PU-1811

分析糖化血红蛋白、血脂检测应用于诊断 2 型糖尿病的临床价值

张兴红
安岳县人民医院

目的 对 2 型糖尿病患者予以糖化血红蛋白、血脂检测，对其检测效果予以探究。
方法 68 例糖尿病患者及 68 例健康检查者选自 2018 年 4 月-2019 年 4 月期间，将糖尿病患者设为 A 组，健康检查者设为 B 组。 2 组采取糖化血红蛋白、血脂检测，对比 2 组指标（FBG、HbA1c、TC、TG、HDL-C、LDL-C）。
结果 A 组指标：FBG（7.35±0.43）mmol/L、HbA1c（8.68±4.21）%、 TC（6.78±0.23）mmol/L、TG （2.56±0.31）mmol/L、HDL-C（0.93±0.43）mmol/L、LDL-C（3.57±0.46）mmol/L。B 组指标： FBG （ 4.92±0.35 ） mmol/L 、 HbA1c （ 5.31±0.36 ） % 、 TC （ 4.47±0.38 ） mmol/L 、 TG （2.17±0.24）mmol/L、HDL-C（1.25±0.26）mmol/L、LDL-C（2.34±0.36）mmol/L。A 组 FBG、HbA1c 指标高于 B 组，对比差异具备统计学含义 P<0.05，A 组 TC、TG、LDL-C 高于 B 组，其 HDL-C 指标低于 B 组，对比具备统计学含义 P<0.05。
结论 本次研究对 2 型糖尿病予以进行糖化血红蛋白、血脂检测，可作为 2 型糖尿病有效诊断指标，该方法可推广应用。

PU-1812

探究 CA125、HE4 水平在临床卵巢癌诊断中的意义

武诗曼
沈阳金域医学检验所有限公司

目的 探究 CA125、HE4 水平在临床卵巢癌诊断中的意义。
方法 使用电化学发光分析法对恶性组、良性组、健康对照组的三组实验对象的血清进行 CA125 和 HE4 检测，分析其单项、联合检测水平、阳性率、敏感度及特异性。并采用受试者工作特征（ROC）曲线，评价 CA125、HE4 水平及联合检测水平对卵巢癌的诊断价值。
结果 恶性组中 CA125、HE4 的单项、联合检测水平及其阳性率均显著高于其他两组，组间差异具有统计学意义（P<0.05），其中 CA125 的灵敏度为 81.7%，但是其特异性为 73.6%明显低于 HE4 95.9%。ROC 曲线分析结果显示：CA125、HE4 对卵巢癌均具有良好的诊断价值（P<0.05），并且其联合检测水平准确性高于单项指标检测，差异有统计学意义（P<0.05）。
结论 血清 CA125、HE4 在卵巢癌患者中高表达,随病程进展而提高,联合检测 CA125、HE4 能够提高卵巢癌诊断的正确率，具有较高的诊断价值。

PU-1813

抗 PDL1 纳米抗体展示文库的构建与筛选

王清
青岛大学附属医院

目的 利用噬菌体展示技术进行纳米抗体库的构建和筛选，获得抗程序性死亡配体 1(PDL1)的高亲和力、强特异性纳米抗体，为建立血清外泌体 PD-L1 化学发光免疫检测方法的应用奠定基础。

方法 使用重组 PDL1 抗原免疫羊驼，分离免疫后羊驼的外周血淋巴细胞，提取总 RNA 后通过 RT-PCR 技术扩增羊驼重链抗体可变区（VHH）片段，构建纳米抗体文库。采用噬菌体展示技术和固相淘选方法，筛选得到强阳性克隆，经大肠杆菌表达和镍离子亲和层析获得纳米抗体，最终利用 Biacore 分析其亲和力和特异性。
结果 通过 3 轮的淘选，获得一株纳米抗体亲和力达到 1.4 x 10-10 mol·L-1，对其他免疫检查点蛋白 PD1、VEGFC、CTLA4、HER2 及 VEGFR3 均无交叉反应性。
结论 利用噬菌体展示技术成功获得了程序性死亡配体 1(PDL1)的高亲和力、强特异性纳米抗体，可用于后续癌症治疗疗效监控和评价。

PU-1814

四种 POC 仪器检测 PCT 与罗氏仪器电化学发光法分析性能比较

黎春宝、黄亚萍
上海金域医学检验所有限公司

目的 通过对四种平台 POC 法检测 PCT 与罗氏电化学发光法的性能比较，了解各平台 POC 方法性能参数比对情况。
方法 以 Cobas e602 仪器为参考仪器，其余四台仪器检测结果与参考仪器进行比对，分别对正确度、精密度、线性和一致性进行数据统计。
结果 血浆中的精密度高于全血中的精密度。AQT90 平台无论是血浆样本还是全血样本均表现出很好的重复性；Getein 1100 平台仅在血浆高浓度表现出较好的重复性，而 mLabs 平台仅在血浆低浓度的重复性验证达标；Finecare 平台仅血浆高浓度重复性验证不通过。在正确度验证中，AQT90 和 Getein 1100 与参考方法表现出较好的相关性，四个 POC 平台与罗氏平台检测结果比对相对偏倚均小于 1/2 最大允许误差。比对所有 4 种 POC 分析都有很好的线性。我们还发现这些方法之间存在着较好的一致性。
结论 在用于检测 PCT 的四种 POC 方法中，与 Cobas e602 相比，AQT90 有较高的精密度和正确度。

PD-1 抗体的临床疗效分析

高骞
中南大学湘雅医院

目的 探讨 PD-1 抗体在肺癌、结肠癌的单药治疗以及联合化疗的临床疗效，为免疫治疗用于癌症的临床应用提供参考。
方法 选取 2018 年 7 月至 2019 年 11 月就诊于中南大学湘雅医院确诊的肺癌、结肠癌的患者，并从中选取使用过 PD-1 抗体治疗的 90 例患者。同时跟踪这 90 例患者，了解其临床信息，动态监测其各种检验、影像学指标。
结果 PD-1 对肺癌、结肠癌的治疗有一定的效果，联合治疗效果要优于单药治疗。

PU-1816

血清 sST2 与 NT-proBNP 在 DKD 合并心衰患者中的应用价值

浦春[1,2]、胡蝶[2]、国慧敏[1]、张艳珍[2]、朱 萍[2]、张博超[2]、路 勇[1]
1. 皖南医学院检验学院
2. 皖南医学院第一附属医院

目的 探讨可溶性生长刺激表达基因 2 蛋白（sST2）、血清 N 末端 B 型脑钠肽前体（NT-proBNP））的水平在 DKD 合并心衰患者中的临床价值。
方法 收集单纯糖尿病（DM）患者 41 例、DKD 患者 119 例（DKD 早期 28 例，DKD 中期 47 例，DKD 晚期 44 例）；同期选择 32 例健康体检者作为对照组。检测全部研究对象的血清中 sST2、NT-proBNP 和 IL-33 的水平。
结果 对照组、DM 组和 DKD 组患者的性别、CHOL、HDL、AST、TG 和 LDL 的组间差异均无统计学意义（P＞0.05）；年龄、BUN 和 Cr 的差异有统计学意义（P＜0.05）。与对照组、DM 组相比，DKD 患者的血清中 sST2、NT-proBNP 水平显著升高（P＜0.05），对照组与 DM 组之间 sST2 水平差异无统计学意义（P＞0.05）。DKD 病变程度不同的患者血清 NT-proBNP 水平随 DKD 病变的严重程度的加重而升高（P＜0.05），而血清中 sST2 水平的差异无统计学意义（P＞0.05）；sST2、NT-proBNP 水平在心衰患者和无心衰患者的血清中的差异有统计学意义（P＜0.05）。统计分析提示，血清 sST2 水平是预测 DKD 合并心衰的独立危险因素（OR=1.034，P=0.005）。单独检测 DKD 合并心衰患者的血清 sST2、NT-proBNP 的曲线下面积（AUC）分别为（0.827、0.887）；ROC 曲线显示 sST2 与 NT-proBNP 联合检测的 AUC 为 0.903。
结论 在 DKD 患者中，sST2 和 NT-proBNP 水平均与心功能衰竭有关，但血清 sST2 水平不受肾功能的影响，有望作为预测 DKD 合并心衰的独立危险因素之一，与 NT-proBNP 联合检测可在一定程度上提高两指标单独检测的特异度，提高诊断效能。

PU-1817

生化检测在高血压的诊断和管理中的意义

卞林翠
合肥金域医学检验实验室有限公司

高血压是心血管疾病的一个重要的可治疗的危险因素，在普通人群中发病率很高。原发性高血压病因复杂，多为遗传及环境等因素相互作用导致；而目前继发性发高血压的研究及诊断仍存在不足。高血压被称为“无形杀手”，通常无明显症状。患者血压越高，患心血管、脑血管、周围血管和肾病的风险越大。常规和专门的生化检测对于评估高血压患者状况及其后续处理都是至关重要的。常规生化检测可基于高血压常见并发症，如血糖异常、血脂异常、肾脏损伤或靶器官损伤等确定高风险的高血压患者，并对患者进行风险分层，有助于后续开展针对性管理和治疗。专门的生化检测包括肾素-血管紧张素-醛固酮系统(RAAS)和肾上腺素能标记物的检测，有助于识别具有特定和可治疗的高血压病因。生化检测在高血压患者评估中是复杂的，但其结果的分析能够为临床医生提供患者血压分型、临床表现及混杂因素（如药物或方法干扰）等临床证据。因此临床检验实验室与临床专家及临床生化研究科学家之间的相互合作是至关重要的；以期达到对患者进行生化检查的标准化方法，以确保患者血压的最佳管理。

PU-1818

高血压患者血小板活化标志物及血小板参数与颈动脉内膜中层厚度的相关性

胡传玺
上海交通大学医学院附属第九人民医院

目的 探讨高血压患者血小板活化标志物尿 11-脱氢-血栓素 B2（11-DH-TXB2）及其参数与颈动脉内膜中层厚度（CIMT）的相关性。
方法 依据颈动脉内膜中层厚度，选取上海市虹口区四川北路街道社区卫生服务中心的高血压患者并分为：无病变组（CIMT<0.9 mm）74 例，斑块组（CIMT≥1.3 mm）155 例，共计 229 名。测量两组高血压患者尿液 11-DH-TXB2 含量及血小板数量（PLT）、平均血小板体积（MPV）、血小板分布宽度（PDW）、血小板容积（PCT）、大血小板比率（P-LCR）、同型半胱氨酸（Hcy）等指标，并进行统计学分析。
结果（1）斑块组患者 HCY、11-DH-TXB2、P-LCR、MPV、PDW 水平比无病变组高（P＜0．05）；（2）Spearman 相关分析表明 CIMT 与尿 11-DH-TXB2、P-LCR、MPV、PDW 及 HCY 呈正相关。
结论 高血压患者血小板活化标志物（尿 11-DH-TXB2）及其参数（P-LCR、MPV、PDW）与颈动脉内膜中层厚度具有相关性。

PU-1819

SAA、D-dimer、Cys-c 与慢性心力衰竭患者病情程度相关性分析

宋娟、马明坤、韩敬华、赵立杰、温学红
天津中医药大学第二附属医院

目的 研究 SAA、D-dimer、Cys-c 与慢性心力衰竭患者病情程度之间的关系。
方法 以我院心内科病区 2020 年 4 月至 2021 年 4 月收治的 117 例慢性心力衰竭患者作为研究对象，按照 NYHA 心功能分级分成心功能Ⅱ级组 30 例、Ⅲ级组 54 例、Ⅳ级 33 例。另选取本院非冠心病心衰患者 30 例作为对照组，分析不同组间 SAA、D-dimer、Cys-c 表达差异，以及与病情程度的相关性。
结果 Cys-c 随心功能级别升高而升高，组间两两比较差异有统计学意义（<0．05)，SAA 在对照组和心功能 II 级组、II 级组和 III 级组之间无明显差异，对照组、心功能 III 级组、Ⅳ级组之间比较差异有统计学意义，随着心功能的级别升高其值相应升高。D-dimmer 随着心功能恶化有逐渐升高的趋势，但在 II 级组和 III 级组、II 级组和Ⅳ级组之间差异无统计学意义。SAA、D-dimer、Cys-c 水平与心功能分级和 NT-proBNP 水平呈正相关。
结论 SAA、D-dimer、Cys-c 与慢性心衰患者病变程度间呈正相关，SAA 和 Cys-c 是诊断和评估心衰患者病情的较好指标，值得临床探索应用。

PU-1820

25-(OH)D 检测在妇科生殖疾病中的应用

张莹、胡玉皎、胡娟娟、冯玉洁、王昊、刘家云
空军军医大学西京医院

目的 探索 25-(OH)D 在妇科生殖疾病患者体内的含量及临床应用的重要性。
方法 使用液相色谱串联质谱技术，分析 2020 年妇科生殖中心 1976 例病例、健康对照组 551 例，评估 25-(OH)D 在妇科生殖中心患者和对照组间的差异，男性和女性组间差异，以及不同 25-(OH)D 水平在不同组别中的分布情况。
结果 妇科生殖中心患者 25-(OH)D 含量 19.52±8.85，健康对照组 25-(OH)D 含量 19.70±10.11，两组间差异无统计学意义（P=0.290>0.05）。妇科生殖中心男女患者间 25-(OH)D 结果分别为 21.40±8.75、15.83±8.02，差异有统计学意义（P=0.000<0.05）；健康对照组男女组间 25-(OH)D 结果分别为 21.69±10.21、18.69±9.93，差异有统计学意义（P=0.001<0.05）；妇科生殖中心患者与健康对照组男性组间 25-(OH)D 结果差异没有统计学意义（P=0.724>0.05），女性组间 25-(OH)D 结果差异有统计学意义（P=0.000<0.05）。

PU-1821

新生儿脐血与母血血脂水平的相关性研究

堵一乔[1]、徐刚[2]、钮静[1]、杨叶怡[2]、杨卫华[1]、董玲娣[1]、陈允钦[3]、王文惠[1]、杨振华[1]
1. 上海市宝山区中西医结合医院
2. 上海交通大学附属仁济医院宝山分院
3. 复旦大学附属中山医院心内科

目的 分析新生儿脐血与母血血脂水平的相关性。
方法 选取 2020 年 10 至 2021 年 4 月在上海市宝山区中西医结合医院住院的孕 37～41 周的临产孕母 100 例(孕母组)，自然分娩胎儿娩出时采集新生儿脐血 100 例（脐血组），同期在本院体检的健康育龄期未妊娠妇女 100 例(对照组)。采集孕母组产前清晨空腹静脉血，新生儿娩出后近脐端脐静脉血，对照组清晨空腹静脉血，采血后 2 小时内分离血清。采用 BECKMAN AU5800 自动生化分析仪检测 3 组对象血清总胆固醇(TC)、甘油三酯(TG)、高密度脂蛋白胆固醇(HDL-C)、低密度脂蛋白胆固醇(LDL-C)、载脂蛋白 A1 (ApoA1)、载脂蛋白 B(ApoB)和脂蛋白 a（LPa）水平。
结果 3 组对象血清 TC、TG、HDL-C、LDL-C、ApoA1、ApoB、LP（a）水平比较，差异有统计学意义(P＜0.05)；孕母组高于对照组和脐血组，对照组高于脐血组，差异有统计学意义(P＜0.05)。脐血组 TC（1.8553±0.5503）mmol/L，TG（0.32±0.1）mmol/L、HDL-C（0.932±0.264）mmol/L、LDL-C（0.908±0.306）mmol/L、 ApoA1（0.8628±0.1711）g/L、ApoB（0.218±0.057）g/L、LP(a)（16.8±14.2）mg/L，各项血脂指标均低于孕母组和对照组，差异有统计学意义(P＜0.05)；单变量相关性分析显示，新生儿性别、母亲分娩年龄，对新生儿脐血 TC、TG、HDL-C、LDL-C、ApoA1、ApoB、LP(a)水平的影响差异无统计学意义(P＞0.05)。双变量相关性分析显示，母血血脂水平、新生儿出生时体质量与脐血血脂水平无相关性(P＞0.05)。
结论 妊娠期间，母体血脂水平生理性升高，脐血血脂与母血血脂水平不相关。

PU-1822

上海地区健康成人 VITROS 干化学法血清胆红素参考区间的建立及其与湿化学检测结果的比对

宋晓冬、陆美娟
复旦大学附属华山医院

目的 目前国内干化学法测定胆红素尚无标准参考区间（RI），本研究通过使用奥森多医疗（Ortho Clinical Diagnostics）VIRTOS5600 全自动生化免疫分析仪及配套胆红素测试试剂，旨在建立上海地区健康人群的干化学法胆红素各成份参考区间。同时本研究使用罗氏湿化学分析仪同步测试，对两种方法测得的参考区间进行比较，以分析二者的一致性。

方法 经问卷调查，体格检查和实验室筛查，共计筛选出健康人群 256255 例（男 121 例，女 135134 例）建立 RI。在 VITROS5600 全自动生化免疫分析仪进行总胆红素（TBIL）、非结合胆红素（BU）及结合胆红素（BC）检测，在对照湿化学 Roche Cobas 检测平台上，进行 TBIL、直接胆红素（DBIL）和间接胆红素（IBIL）（计算值）分析。经过统计学分析后，得到 RI 及胆红素各组分干湿化学法间相关性评估结果。

结果 我们为健康人群建立了性别特异的干化学参考区间，包括 TBIL 5~17.7 μmol/L（男）、4.5~14.3 μmol/L（女）；BU 3.1~15.6 μmol/L（男）、2.9~13.3 μmol/L（女）；δB 0.4~3.2μmol/L（男）、0~3.1μmol/L（女）；所有 BC 测定值均为 0。除此之外，由于干湿化学两种方法均采用重氮法测定 TBIL，所以两种方法间具有良好一致性，其相关系数为 0.970。与之相对，由于干化学 BU 和湿化学 IBIL 检测原理不同，如同预期，二者检测结果之间平均差异超过 50%，不具一致性。

结论 本课题组成功建立了男女特异的干化学法血清胆红素各成份 BU、BC 及 δB 的参考区间，可为临床医师和检验人员提供参考。另一方面，我们认为干湿化学法测定的 TBIL 具有一致性，BU 和 IBIL 不具一致性。因此本课题组建议应该正确理解干、湿生化胆红素各组分（BC≠DBIL，BU≠IBIL），以避免临床混淆。

Center of Clinical Laboratory, Zhongshan Hospital, School of Medicine, Xiamen University, Xiamen, China

huilin zhang
Center of Clinical Laboratory, Zhongshan Hospital, School of Medicine, Xiamen University, Xiamen, China

The aim of the study was to assess the analytical performance of the HISCL NT-proBNP assay, a newly developed chemiluminescence immunoassay, for the detection of NT-proBNP.

The within-run and total imprecision of the NT-proBNP assay were determined with HISCL cardiac marker controls. Two hundred serum samples were evaluated to compare the HISCL NT-proBNP and Elecsys NT-proBNP assays. Five additional high NT-proBNP concentrations serum samples were evaluated to assess if there was high-dose hook effect in the HISCL NT-proBNP assay.

The total and within-run imprecision values of the HISCL NT-proBNP assay were 5.85%, 0.81%, 2.56% and 0.54% and 6.07%, 0.73%, 2.61% and 0.59% at 6.1, 129.83, 3732.84and39737.33 pg/ml, respectively. The
assay was verified to be linear for NT-proBNP levels ranging between 6.1 and 39737.33 pg/ml.

The HISCL NT-proBNP chemiluminescence immunoassay showed good analytical and diagnostic performance for the detection of NT-proBNP and could be used in routine clinical practice.

PU-1824

上海市月浦社区老年 2 型糖尿病患者视网膜病变与糖化血红蛋白等检测指标的相关性研究

李超男、吴成志、董成林、徐灵、程材
上海中冶医院

目的 探讨 2 型糖尿病患者（type 2 diabetes mellitus，T2DM）视网膜病变（diabetic retinopathy，DR）与糖化血红蛋白（HbA1c ）和空腹血糖（FPG）、尿微量白蛋白（MA）水平的关系。
方法 选择共 245 例月浦社区老年体检患者为研究对象，通过眼底检查结果，根据是否发生糖尿病视网膜病变将收集资料患者分为糖尿病视网膜病变（DR）组 116 例，和正常眼底无视网膜病变（NDR）对照组 129 例。收集患者一般临床资料和化验指标，包括 HbA1c 、FPG、MA 等资料进行回顾性分析。
结果 DR 组与 NDR 组之间性别、年龄比较差异无统计学意义(P＞0.05)；DR 组患者的 HbA1c、FPG、MA/ UCRE 明显高于 NDR 组，差异具有显著统计学意义(P＜0.01)，同时 DR 组 MA 水平增高，差异具有统计学意义（P＜0.05）；进一步 Binary logistic 回归分析结果显示，高水平的 HbA1c 是糖尿病视网膜病变发生的独立危险因素(P＜0.05）。
结论 1，DR 患者视网膜病变与 HbA1c 存在关联。 2，临床应积极关注糖尿病患者的 HbA1c 和 FPG、MA、MA / UCRE 比值水平，注意视网膜病变的早期筛查并积极干预，可降低 DR 的发生。

PU-1825

Comparison of electrolyte and glucose levels measured by a blood gas analyzer and an automated biochemistry analyzer among hospitalized patients

Yong Lin
Zhongshan Hospital, Xiamen University

Blood gas analyzers are capable of delivering results on electrolytes and metabolites within a few minutes and facilitate clinical decision-making.
In total, arterial and matched venous blood samples were collected from 200 hospitalized patients. Arterial blood samples were evaluated using a RAPIDPOINT 500 to test electrolyte and glucose levels, then the samples were cen_x0002_trifuged and the same parameters were measured with an AU5800.

Paired t tests showed that all parameters tested were significantly differ_x0002_ent between the two analyzers except chloride. The biases calculated indicated that blood gas analyzers tend to underestimate the parameters, and the linear regression showed a strong correlation between the two analyzers.

The significant reduction in parameter estimation and diagnostic perfor_x0002_mance we observed suggested that clinicians should interpret results from blood gas analyzers more cautiously. The reference interval of blood gas analyzers should be adjusted accordingly, given that values are underestimated.

血清钙磷比值在原发性甲状旁腺功能亢进的诊断效能研究

银梦婷[1]、李贵星[2]
1. 四川大学
2. 四川大学华西医院

目的 研究血清钙磷比值在原发性甲状旁腺功能亢进症中的诊断效能。
方法 收集 2015 年 1 月至 2020 年 12 月四川大学华西医院收治的诊断为原发性甲状旁腺功能亢进症并行甲状旁腺切除术患者 155 例和对照组 153 例，将实验组按照血钙水平，分为高血钙 A 组和血钙正常 B 组，比较各组患者的血钙、血磷、甲状旁腺激素、25 羟维生素 D 水平。通过 ROC 曲线，确定血清钙磷比值在诊断原发性甲状旁腺功能亢进中的诊断效能。通过斯皮尔曼相关，性分析探讨钙磷比值与 PTH 的关系。
结果 实验组血清钙磷比值高于对照组（P＜0.001）。钙磷比值用于诊断原发性甲状旁腺功能亢进症的最佳临界值为 2.94（AUC:0.993， 95%CI：0.976-0.998），敏感度和特异度分别为 95.5%（90.9-98.2）和 98.7%（95.4-99.8）。
结论 当钙磷比值＞2.94 时，我们可以很好的诊断原发性甲状旁腺功能亢进症。这一指标对于一些缺乏甲状旁腺激素检测的基层医院非常有帮助。

PU-1827

血浆纤维蛋白原水平与锁骨骨折术后骨不连的相关性研究

李明[1]、赵洁[2]、王蓉蓉[1]、范卫华[1]、董振芳[1]、张庆晨[1]、王大伟[1]、唐琪[1]、白晓卉[1]、卢志明[1]
1. 山东省立医院
2. 济南市中心医院

目的 锁骨骨折是一种常见的骨损伤类型，约占成人骨折的 5%，容易出现骨不连等并发症。血浆纤维蛋白原检查是一种评估手术安全性的常规术前检查。在本研究中，我们旨在评估锁骨骨折病人在接受切开复位内固定术后血浆纤维蛋白原水平与骨不连之间的关系。
方法 对 2010 年 1 月至 2019 年 5 月在山东第一医科大学附属省立医院创伤骨科收治并接受切开复位内固定术后的锁骨骨折患者的基线数据，包括性别、年龄、从受伤到手术的时间(Time from Injury to Surgery，TIS)、吸烟史、酗酒史、骨折原因、活动能力、是否畸形和美国麻醉师协会(American Society of Anesthesiologists，ASA 美国麻醉师协会)分级，以及实验室标记物（血浆纤维蛋白原水平、d -二聚体、凝血酶原时间、活化部分凝血酶时间）进行了回顾性分析。根据严格的诊断标准，患者根据随访结果分为两组：正常愈合组和骨不连组。对所有变量都进行了单变量分析。排除对血浆纤维蛋白原水平可能产生影响的混杂因素后开展多变量 Logistic 回归分析。构建平滑拟合曲线，以确定血浆纤维蛋白原水平和锁骨术后骨不连之间的相关性。
结果 研究共纳入锁骨骨折患者 251 例（男性 180 例，女性 71 例），其中正常愈合组 237 例，骨不连组 14 例。单变量分析表明，TIS（OR=1.21）和纤维蛋白原水平（OR=1.82）与骨不连的发生率显著相关（P<0.05）。多变量 Logistic 回归分析和平滑拟合曲线表明，无论有无混杂因素（患者年龄和 TIS），纤维蛋白原水平与骨不连（患者年龄和 TIS）发生显著正相关（OR>1）。
结论 血浆纤维蛋白原水平与锁骨骨折术后骨不连显著相关。

PU-1828

胱抑素 C 联合尿蛋白标志物检测在儿童过敏性紫癜早期肾损害辅助诊断中的价值探讨

毕婧
丹东市第一医院

目的 探讨血清胱抑素 C(Cys-C)联合尿蛋白标志物检测在过敏性紫癜（HSP）患儿早期肾损害诊断中的应用价值。
方法 对本院儿科门诊及住院 2018 年 9 月至 20120 年 9 月收治首次发作的 142 例 HSP 患儿[（按有无肾脏损害分为紫癜性肾炎组(HSPN 组，69 例）和 HSP 组,73 例）]和 70 例同期在本院健康体检的儿童（对照组）的血液样本和随机晨尿样本进行血清 Cys-C、尿视黄醇结合蛋白（URBP）、尿转铁蛋白（TRF)和尿 α1-微球蛋白（Uα1-MG）检测，采用 Minitab 17 统计学软件分析检测结果的差异。
结果 HSP 组 Cys-C、URBP、TRF 和 Uα1-MG 检测结果均高于对照组，组间比较差异有统计学意义（p＜0.05）；HSPN 组 Cys-C、URBP、TRF 和 Uα1-MG 检测结果显著高于 HSP 组，组间比较差异有高度统计学意义（p＜0.01）。Cys-C 检测水平与 URBP、TRF 和 Uα1-MG 检测水平呈正相关（r 值分别为 0.728，0.512,0.603，p 均＜0.05）。HSP 组和 HSPN 组联合检测的阳性检出率均高于各组单项检测的阳性检出率，比较差异有统计学意义（p＜0.05）；HSPN 组四项指标单项检测和联合检测阳性检出率均高于 HSP 组，比较差异有统计学意义（p＜0.05）.
结论 Cys-C、URBP、TRF 和 Uα1-MG 可作为判断儿童 HSP 早期肾损害重要的检测指标，通过血尿指标联检能明显提高 HSP 患儿肾损害的早期诊断阳性率和临床诊断准确性，为 HSP 的早期诊治、病情判断、预后等方面提供参考依据。

血清脂蛋白(a)检测在肾脏疾病诊断中的应用价值

孙昱
德州市陵城区人民医院检验科

目的 分析血清脂蛋白(a)检测在肾脏疾病诊断中的应用价值。
方法 选取自 2018 年 1 月至 2020 年 11 月在我院住院的患者。其中肾早期损害组 40 例，肾病综合征组 30 例，尿毒症组 32 例作为研究对象，另选 50 例健康体检者作为对照组。采用免疫透射比浊法检测血清脂蛋白(a)水平，分析其水平变化与肾病病变程度之间的关系及在临床中的应用价值。结果与健康对照组相比,肾早期损害组,肾病综合征组和尿毒症组 LP(a)水平升高,差异有统计学意义(P< 0.05);肾病综合征组与尿毒症组 LP(a)明显高于肾早期损害组，差异有统计学意义(P< 0.05)。
结论 血清 LP(a)在监测肾脏疾病患者病程进展上有重要意义,可作为肾脏疾病病变程度判断的一项有效指标。

PU-1830

两种不同样本急诊生化项目检测结果一致性及临床应用分析

张兴宗、林云、张清文、邹映东
云南省中医医院（云南中医药大学第一附属医院）

目的 探讨采用肝素抗凝血浆替代血清，在罗氏 Cobas c702 全自动生化分析仪上用于急诊生化项目检测，为临床更快速的提供检验报告，利于挽救患者生命。

方法 对门诊及住院急诊患者 125 例,采用常规方法采集静脉血 3ml 于未加抗凝剂的血清管中，作为对照组进行血清分离(血清样本组) ，采集静脉血 3ml 于含有肝素抗凝剂的血浆管中分离血浆作为试验组(血浆样本组)，应用罗氏 Cobas c702 全自动生化分析仪对两组样本的 18 项急诊生化项目进行检测及结果比较分析。

结果 两组样本检测结果显示：18 项急诊生化检测项目中，除了钾（K+）试验组低于对照组，差异有统计学意义(P＜0.05)外，其余 17 项生化急诊项目检测**结果** 天门冬氨酸氨基转移酶(AST)、肌酸激酶（CK）、肌酸激酶同工酶 MB(CK-MB)、乳酸脱氢酶(LDH)、肌钙蛋白 I（cTnI）、尿素氮(BUN)、肌酐（Cr）、尿酸（UA）、血糖（GLU）、 钠（Na+）、氯（Cl-）、钙（Ca）、磷（P）、镁（Mg）、二氧化碳（CO2）、超敏 C 反应蛋白（Hs-CRP）及淀粉酶（AMY)，结果比较差异均无统计学意义(P＞0.05) ,两组急诊生化项目检测结果间的相关系数和回归方程显示二者间存在较好的相关性。虽然试验组 K+低于对照组，差异有统计学意义(P＜0.05)，但 K+相关系数 r=0.942，具有较好的相关性，通过对检测结果一致性分析，18 项检测结果均在临床可接受范围内，表明检测结果具有一致性，可为临床提供准确的检验结果。

结论 肝素抗凝血浆在急诊生化检验中，其结果与血清检测结果具有一致性，抗凝血浆采样后可及时离心分离血浆，及时上机检测，快速为急诊患者提供准确可靠的检验报告，为临床医师在抢救、诊断、治疗过程中提供了宝贵时间，利于挽救患者生命。

PU-1831

血清 β-羟基丁酸检测在糖尿病酮症酸中毒临床诊断中的应用

陈涌泉
厦门弘爱医院

目的 探讨血清 β-羟基丁酸和血糖水平检测在糖尿病酮症酸中毒（diabetic ketoacidosis，DKA）临床诊断中的应用价值。

方法 纳入 2018 年 9 月至 2021 年 3 月就诊于我院的 I 型糖尿病患者 42 例、II 型糖尿病患者 50 例和健康对照人群 50 例作为研究对象；采集血液样本进行血清 β-羟基丁酸和血糖水平检测，同时记录糖尿病患者 DKA 发病情况；分析 I 型糖尿病患者和 II 型糖尿病患者、DKA 患者和非 DKA 患者血清 β-羟基丁酸和血糖水平差异，同时对糖尿病患者血清 β-羟基丁酸与血糖水平的相关性进行分析。

结果 经 Kruskal-Wallis 秩和检验，I 型糖尿病组血清 β-羟基丁酸和血糖水平均高于健康对照组和 II 型糖尿病组（P<0.05），II 型糖尿病组血清 β-羟基丁酸和血糖水平均高于健康对照组（P<0.05）；经卡方检验，I 型糖尿病患者 DKA 发病率高于 II 型糖尿病患者（P<0.001）；经 Kruskal-Wallis 秩和检验，I 型糖尿病和 II 型糖尿病中 DKA 患者血清 β-羟基丁酸和血糖水平均高于非 DKA 患者（P<0.05）；相关性结果显示 I 型糖尿病和 II 型糖尿病患者血清 β-羟基丁酸水平与血糖水平均存在明显的相关性（tI 型=0.740，PI 型<0.001，R2I 型=0.547；tII 型=0.575，PII 型<0.001，R2II 型=0.331）。

结论 I 型糖尿病患者血清 β-羟基丁酸和血糖水平升高幅度、DKA 发病率均高于 II 型糖尿病患者；I 型糖尿病和 II 型糖尿病 DKA 患者血清 β-羟基丁酸和血糖水平均高于非 DKA 患者；I 型糖尿病和 II 型糖尿病患者血清 β-羟基丁酸水平随血糖水平升高而升高。

PU-1832

运用功效函数图法设计部分生化项目的室内质控方案

张真铭
昆明医科大学第一附属医院

目的 结合昆明医科大学第一附属医院临床化学检验室的情况，利用功效函数图，选择合适的质控规则和质控测定个数，要求质控方案经济高效。
方法 确定本实验室生化检测项目的临床允许总误差（TEa），项目测定方法的不精密度（CV）和不准确度（Bias），计算临界系统误差（ΔSEc）并利用功效函数图，选择合适的质控规则和质控测定个数。
结果 不同生化检测项目的质控规则和质控测定个数不相同。
结论 根据实验室生化检测项目的临界系统误差，利用功效函数图选择最佳质控方案，即满足临床质量要求，达到期望的误差检出率且控制假失控概率，提高质控效率。

PU-1833

双相情感障碍抑郁相患者血清 CD38 和 TRPM2 浓度变化

唐亚梅[1]、周乐[2]
1. 中南大学湘雅二医院
2. 中南大学湘雅医学院检验专业

目的 研究双相情感障碍抑郁相患者血清 CD38 和 TRPM2 蛋白水平及铁代谢相关指标血清 TRF、NGAL、Fe 和 TIBC 的浓度变化，探讨上述指标与双相情感障碍抑郁相发生的关系及其临床意义。
方法 收集 2020 年 10 月至 2021 年 4 月于湘雅二医院精神科门诊就诊的 27 例双相情感障碍抑郁相患者的血清和汉密尔顿量表资料；同时收集 20 例于湘雅二医院体检中心体检的正常人血清，采用 ELISA 法测定血清样本中的 CD38 和 TRPM2 水平，应用 IMMAGE800 和 HITACHI7600-DDP 仪器检测血清转铁蛋白（TRF）、NGAL、铁（Fe）和 TIBC 的水平。
结果 双相情感障碍抑郁相患者血清 CD38（1006.57±118.06ng/ml）和 TRPM2（116.38±29.15 ng/ml）浓度较健康对照组（812.99±188.57ng/ml）和（49.78±18.62 ng/ml）均显著升高（P＜0.01），差异有统计学意义；NGAL（121.51±52.38 ng/mL）和 TIBC（54.89±7.90）较对照组（154.31±62.98 ng/mL）和（60.14±6.20）显著降低（P＜0.05），差异有统计学意义；Pearson 相关分析显示 TRF 与 HAMD 量表总分相关（P<0.05）。
结论 双相情感障碍抑郁相患者血清 CD38 、TRPM2 和 NGAL 水平及 TIBC 比值存在异常，上述指标与双相情感障碍抑郁相的发生有关。

PU-1834

免疫比浊法检测血液透析患者的血清白蛋白水平及白蛋白检测的干扰因素研究

黄文婷、赖婉婷、倪艳丽、蔡桂君、彭永正
南方医科大学珠江医院

目的 低白蛋白水平是影响进行血液透析的慢性肾脏病（CKD）患者预后的的重要因素之一。我们研究了免疫比浊法和溴甲酚绿法（BCG 法）检测此类患者血清白蛋白水平的差异情况，并对比了在血液透析前或透析后采集的血清标本的白蛋白结果，以确定合适的采集时间。

方法 收集 104 位 CKD 患者血液透析前和透析后的剩余血清标本，分别用免疫比浊法和 BCG 法进行白蛋白测定，并分析各种球蛋白对这两种血清白蛋白检测方法的影响，将结果绘制散点图、柱状图，进行配对 t 检验分析。
结果 免疫比浊法与 BCG 法检测的血清白蛋白结果呈线性相关。我们发现两种方法的差异随白蛋白浓度的变化而变化，血清白蛋白水平接近 37-38g/L 时，差异较小；白蛋白水平偏高或偏低时，两者差异逐渐？增大。两种方法检测的血液透析患者透析前或透析后白蛋白结果之间都有明显统计学差异（P＜0.0001）。免疫比浊法测定的透析前后血清白蛋白平均差值为 5.7g/L；BCG 法测定的平均差值为 4.7 g/L。本实验中两种方法测定透析后-透析前最大差值分别为 18.2 g/L（免疫比浊法）、14.9 g/L（BCG 法）。不同球蛋白组分对白蛋白检测结果的影响不同，不添加球蛋白时，两种方法的检测结果都与靶值一致；存在球蛋白时，两种检测方法的偏差都随着白蛋白浓度的升高而减小；球蛋白对免疫比浊法检测的干扰小于 BCG 法。
结论 对于低血清白蛋白的血液透析 CKD 患者，BCG 法检测的结果较免疫比浊法有明显偏差，而血清中的球蛋白是干扰因素之一，使用免疫比浊法检测的结果更准确。血液透析前与透析后白蛋白检测结果有显著差异，透析后血清白蛋白水平更适合用于血液透析 CKD 患者的营养评估。

PU-1835

山东地区 744 例儿童全血微量元素检测结果分析

徐艳秋
山东第一医科大学附属省立医院临床医学检验部

目的 了解山东地区儿童全血元素镁（Mg）、钙(Ca)、铁(Fe)、铜(Cu)、锌(Zn)的含量，为山东地区儿童生长发育情况进行评估及科学合理补充微量元素提供依据。
方法 对本院儿科 744 例儿童全血采用电感耦合等离子体质谱法（ＩＣＰ －ＭＳ）对进行 Mg、Ca、Fe、Cu、Zn 元素的检测，将受检儿童根据年龄不同分组分为三组：幼儿组（<3 岁，300 例)，其中男童 174 例，女童 126 例；学龄前组（<6 岁,252 例)，其中男童 163 例，女童 89 例；学龄组（<13 岁,192 例)，其中男童 142 例，女童 50 例。应用 SPSS19.0 统计学软件对检测结果按年龄和性别分别进行统计分析 。
结果 山东地区儿童各年龄组全血元素 Mg、Ca、Fe、Cu、Zn 的含量均值水平均在参考值范围内 ，但各组间均值水平的差异具有统计学意义(P＜ 0 .05) 。 微量元素 Mg、Ca、Fe、Cu、Zn 缺乏普遍存在，锌缺乏率最高，铁缺乏率第二，钙缺乏率次之，铜和镁水平异常率很低,年龄段越小 ,锌和铁缺乏率越高 ,各年龄组间锌和铁缺乏率的差异具有统计学意义(P＜ 0 .05)， 男女儿童之间缺乏率的差异无统计学意义(P＞ 0 .05)。
结论 山东地区儿童锌 、铁元素缺乏率较高 ,应加大对儿童微量元素的监测力度，大力加强儿童保健，均衡儿童营养，平衡膳食 ，做到及时合理的补充微量元素，保证儿童健康成长。

PU-1836

河南省孕期妇女同型半胱氨酸的水平以及同型半胱氨酸检测重要性

陈明
郑州金域临床检验中心有限公司

Hcy 是一种含巯基的氨基酸，主要来源于饮食摄取的蛋氨酸，是蛋氨酸和半胱氨酸代谢过程中一个重要的中间产物，其本身并不参加蛋白质的合成。Hcy 水平与心血管疾病密切相关。是心血管疾病发病的一个重要危险因子。血液中增高的 Hcy 因为刺激血管壁引起动脉血管的损伤，导致炎症和管壁的斑块形成，最终引起心脏血流受阻。高同型半胱氨酸尿症患者，由于严重遗传缺陷影响

Hcy 代谢，造成高 Hcy 血症。轻微的遗传曲线或 B 族维生素营养缺乏会伴随中度或轻度的 Hcy 升高，也会增加心脏病的危险。Hcy 升高还可引起神经管畸形及先天畸形等出生缺陷类疾病。

PU-1837

妊娠期糖尿病患者妊娠中期维生素 D 组分水平与妊娠中期及分娩前肾功能指标的相关性

冯跃
绵阳市中心医院

目的 有研究指出，25(OH)D 或 25(OH)D3 水平可能与肾功能相关，妊娠早期此二者水平也可能与妊娠期糖尿病(gestational diabetes mellitus, GDM)相关。然而，妊娠中期 25(OH)D 或 25(OH)D3 水平与 GDM 相关性以及其肾功能变化的相关性少有报道。本研究的目的旨在探究妊娠中期维生素 D 组分 25(OH)D2、25(OH)D3、25(OH)D、25(OH)D2 与 25(OH)D3 的比值 D2/D3 与 GDM 的相关性，以及与 GDM 患者妊娠中期与分娩前的肾功能指标的相关性。
材料与方法 招募 GDM 患者与同期健康妊娠者(healthy pregnant, HP)(两组均为单胎妊娠)，于妊娠中期用液相色谱-串联质谱(liquid chromatography-tandem mass spectrometry, LC-MS/MS)的方法检测其血清维生素 D 组分水平，并检测第一次血清肾功能指标尿酸 Urea、 尿肌酐 Creat、 血糖 GLU、 尿酸 UA、胱抑素 C(cys C)、肾小球滤过率 GFR，于产前入院时检测其第二次血清肾功指标。维生素 D 状态根据 25(OH)D 水平分为三组(A 组,充足: 25(OH)D≥30ng/ml; B 组,不足: 20≤25(OH)D<30ng/ml; C 组, 缺乏:25(OH)D<20ng/ml)。
结果 本研究共纳入 GMD 组 77 例，HP 组 121 例。两组的年龄、妊娠中期采样时孕周、总孕周均无显著性差异(Table 1)。孕中期 GDM 组 25(OH)D2、GLU 水平显著高于 HP 组(p=0.008)，但 25(OH)D3、25(OH)D、D2/D3、Urea、 Creat、 UA、cysC、GFR 水平在两组间无显著性差异(Table 1)。此外，HP 组维生素 D 不足的比例显著高于 GDM 组（p=0.037）(Table 1)。除 Urea 外，分娩前 GDM 组与 HP 组的肾功能各指标水平无显著性差异(Table 2)。分娩前与妊娠中期相比，GDM 组与 HC 组均有 Urea、 Creat、 UA、cysC 显著升高，GFR 显著性降低（all p<0.05）(Table 2)。
结论 妊娠中期 GDM 患者 25(OH)D2 水平显著高于健康妊娠者，但 25(OH)D3、25(OH)D、D2/D3 水平两组无显著差异。两组妊娠晚期肾功能指标较妊娠中期均显著降低，但在两组间无显著性差异(Urea 除外)。结果表明，妊娠中期 25(OH)D2 可能与 GDM 相关。妊娠中期 25(OH)D2 与 GDM 可能均不是影响妊娠中期及晚期肾功能的显著因素。

PU-1838

HCPT 对肿瘤细胞增殖、细胞凋亡、细胞周期影响及作用机制的研究

胡洪华
四川省医学科学院·四川省人民医院

目的 观察羟基喜树碱对肿瘤细胞周期、细胞增殖及细胞凋亡的影响；选择多种既有不同特征的肿瘤细胞为研究对象；探讨 HCPT 对 Bcl-2 家族基因表达水平的影响，研究 HCPT 对肿瘤细胞凋亡的分子机制。
方法 羟基喜树碱处理 A549 细胞后用 CCK-8 法检测 HCPT 对细胞增殖，吖啶橙/溴化乙锭（AO/EB）染色观察细胞形态学变化，琼脂糖凝胶检测 DNA 片段化，用流式细胞仪测定其对细胞周期影响。利用 Annexin V-FITC/PI 检测细胞凋亡，RT-PCR 检测凋亡相关基因 Bcl-2 的表达变化。

结果 CCK-8 结果表明不同浓度的 HCPT 对肿瘤细胞的生长抑制作用不同;HCPT 对不同肿瘤细胞的抑制细胞增殖效应不相同。HCPT 处理的 pc12 细胞和 A549 细胞的琼脂糖凝胶电泳可见调亡细胞 DNA 的梯状条带,荧光显微镜下观察到经 AO/EB 染色的典型凋亡细胞，FCM 提示这种抑制作用可能与细胞周期与细胞凋亡有关;HCPT 对 H22 细胞的抑制效果不明显。
结论 HCPT 对肿瘤细胞有生长抑制作用有选择性,对不同的肿瘤细胞的抑制机制也不相同；HCPT 可抑制 pc12 和 A549 细胞增殖，诱导细胞凋亡,其细胞凋亡与细胞周期分布有关;HCPT 对 H22 细胞无生长抑制作用,无凋亡作用,未见其干扰细胞分裂周期作用;HCPT 对肿瘤细胞的抑制作用存在细胞特异性。

PU-1839

联合检测尿微量白蛋白与尿肌酐比值和血胱抑素 C 的必要性

邱洪
电子科技大学附属医院•四川省人民医院临床医学检验中心

目的 探讨评价肾功能损伤时,联合检测 UmAlb/UCr 与 Scys-C 值的必要性。
方法 分别收集符合条件的病人尿液和对应的血清标本,散射比浊法测定出病人尿液标本 UmAlb 值,肌氨酸氧化酶法测出 UCr 值,参考美国糖尿病联合会（ADA）的糖尿病临床指南,将病人血清标本按照尿 mAlb/UCr 比值进行粗略分组，乳胶散射增强免疫比浊法测出各血清胱抑素 C（Scys-C）值。应用 SPSS19.0 统计学软件作 t 检验等统计学方法分析各组间血胱抑素 C（Scys-C）值间差异有无统计学意义,并对各组中所得的尿 mAlb/UCr 比值和血胱抑素 C（Scys-C）作 Spearman 相关性检验分析其相关性,探究在评价肾功能损伤时,联合检测 UmAlb/UCr 与 Scys-C 值的必要性。
结果 各组间血胱抑素 C（Scys-C）值间差异有统计学意义,各组中所得的尿 mAlb/UCr 比值和血胱抑素 C（Scys-C）没有相关性。
结论 在评价肾功能损伤时,联合检测 UmAlb/UCr 与 Scys-C 值有很大的必要性。

PU-1840

血清高敏肌钙蛋白 I、心肌酶及白介素-6 联合检测在慢性心衰患者心功能评价中的应用价值

吉永、杜如佳
昆明市延安医院

目的 探讨血清高敏肌钙蛋白 I（cTnI）、心肌酶及白介素-6（IL-6）联合检测在慢性心衰患者心功能评价中的应用价值。
方法 选择 2021 年 2 月至 2021 年 5 月在昆明市延安医院心内二科 33 例慢性心衰患者作为研究组，根据心功能分级分为心功能 I 级、II 级、III 级、IV 级共四组，另选择同期在该院排除慢性心衰等疾病的门诊病人 10 例作为对照组，分别对五组进行 cTnI、心肌酶及 IL-6 等指标进行联合检测，分析上述指标与 NYHA 心功能分级的相关性，同时分析联合检测的特异性和敏感性，为慢性心衰的诊断提供依据。
结果 研究组 BNP 水平均明显高于对照组，差异有统计学意义（P<0.05）；研究组 cTnI、心肌酶和 IL-6 水平均明显高于对照组，差异有统计学意义（P<0.05）。研究组 cTnI 与心功能分级呈正相关关系（r>0）；心肌酶、IL-6 与心功能分级差异有统计学意义（P<0.05），呈正相关关系（r>0），其中 CK、IL-6 与心功能分级呈低度相关(0.3<r<0.5)，CK-MB、AST、LDH 与心功能分级呈中度相关（0.5<r<0.8）。cTnI、IL-6 对慢性心衰诊断价值较低（0.5<AUC<0.7），心肌酶对慢性心衰无诊断价值（AUC<0.5），差异均无统计学意义（P>0.05）。

结论 慢性心衰患者 cTnI、心肌酶及 IL-6 水平明显高于正常健康人群，联合检测上述指标，其水平随慢性心衰患者心功能分级严重程度而升高，联合检测可提示心功能受损程度，但对 CHF 无诊断价值。

PU-1841

血清可溶性 PD-1 在预测急性胰腺炎感染并发症中的临床价值

杨海燕
江苏连云港市第一人民医院新海院区

目的 临床急性胰腺炎(AP)患者中约有 15%-20%发展为严重急性胰腺炎(SAP)或中度急性胰腺炎(MSAP)伴局部或全身并发症，在中、重度患者中，感染并发症(ICS)高达 40%-70%，导致死亡率明显升高。因此，早期鉴别 ICS 具有重要的临床价值。许多研究表明，血清可溶性程序性细胞死亡蛋白(sPD - 1)或程序性细胞死亡 1 配体 sPD-L1 含量变化在严重脓毒症患者中可以预测死亡的能力。然而，血清 sPD-1/sPD-L1 在 AP 中是否有同样的的作用尚不清楚，本研究旨探讨血清 sPD-1/sPD-L1 是否可以预测 AP 患者发生 ICS 死亡率。
研究方法 研究对象为本院临床确诊的 65 例 MSAP 和 SAP 患者，其中男 35 例，女 30 例，年龄 52.21±14.51 岁；同时选择 31 例健康体检自愿者作为对照组。应用 ELISA 法检测血清 sPD-1 和 sPD-L1。对危险因素进行单因素和多因素回归分析，并于 APACHE II 评分进行比较。
结果 AP 患者在术后第 1、3 和 10 天的血清 SPD-1 水平与对照组比较显著升高（P<0.01）。AP 合并 ICS 患者血清 SPD-1 水平高显著高于无 ICS 的 AP（266.03 ± 130.37 185.17 ± 78.79，P<0.01）。而 AP 血清中的 SPD-L1 水平与健康对照组比较，P>0.05。ROC 曲线下面积为 0.826。单因素和多因素回归分析均显示升高的血清 SPD-1 水平是 AP 中 ICS 的独立危险因素。
结论 在 AP 患者中，血清 SPD-1 水平可能是一个独立危险因素，在预测 AP 患者 ICS 发生具有一定的临床价值。

PU-1842

化学发光微粒免疫分析法检测 PIVKA-II 的性能评价

杨佳
四川省医学科学院·四川省人民医院

目的 用化学发光微粒免疫分析法（CMIA）测定血清维生素 K 缺乏或拮抗剂Ⅱ诱导的蛋白质（PIVKA-II）从而了解其检测性能。
方法 用雅培公司的 ARCHITECT 系统 i2000SR 化学发光分析仪,使用配套的试剂、校准品和质控品，参照美国临床和实验室标准化研究院（CLSI）推荐的相关文件要求对该项目检测方法的精密度、准确度、线性范围、携带污染率、灵敏度等进行评价，并验证其参考值区间[1]；
结果 (1)CMIA 法测定 PIVKA-II 的批内和批间精密度，三水平的批内及批间精密度的 CV 值均小于 5.0%；(2) PIVKA-II 的准确度测定值与靶值的偏倚在 0.88%～5.60%之间；(3) PIVKA-II 的线性范围在 0～5000pg/ml 间呈良好的线性关系，$R^2 = 0.998$ ；(4)携带污染率实验中，PIVKA-II 表现出良好的抗污染能力；(5) PIVKA-II 检测的分析灵敏度（最低检测限）在厂家提供的范围之内；（6）PIVKA-II 的参考值区间的验证，均符合厂家提供的参考范围。
结论 CMIA 法测定 PIVKA-II 的结果评价其精密度和准确度、线性、抗干扰能力、携带污染率、灵敏度，均表现出良好的性能结果，满足临床要求。

PU-1843

围绝经期女性 25（OH）D3 水平与血脂、血糖的相关性研究

潘俊希
昆明医科大学第一附属医院检验科
云南省检验医学重点实验室
云南省实验诊断研究所

目的 探究围绝经期女性 25（OH）D3 水平与血脂、血糖的关系，为女性围绝经期管理提供科学理论依据。
方法 收集到本院体检的围绝经期女性 295 例,记录其年龄、身高、体重、收缩压（SBP）、舒张压（DBP）,饮食及运动情况,月经情况及改良 Kupperman 评分表等。测定 25（OH）D3、血糖（FPG）、甘油三酯（TG）、总胆固醇（TC）、高密度脂蛋白胆固醇（HDL-C）、低密度脂蛋白胆固醇（LDL-C）、维生素 A（VA）、红细胞（RBC）、尿酸指标（UA）。
结果 维生素 D3 水平缺乏 74 例（25.1%）,不足 115 例（39.0%）,正常 106 例（35.9%）;TG、LDL-C、FPG 水平呈负相关。25（OH）D3 不足组血脂异常患病危险是适宜组的 1.6 倍（95% CI:1.05-2.6）,25（OH）D3 缺乏组血脂异常的患病危险是适宜组的 2.3 倍（95%CI:1.52-3.3）。
结论 围绝经期女性 25（OH）D3 不足组与缺乏组 TG 异常和 HDL-C 异常率均高于适宜组，25（OH）D3 水平与 TG、LDL-C 水平相关,且 25（OH）D3 缺乏组血脂异常患病的独立危险因素。

PU-1844

二型糖尿病引发的骨相关疾病的诊断

高乐
湘西土家族苗族自治州人民医院

随着大众的生活水平逐渐提高，对于饮食追求呈现新的特点：糖与脂肪的摄入日益升高，现在已普遍出现摄入过量现象，而由此引发以二型糖尿病、高脂血症等相关疾病。根据之前的大量研究表明，二型糖尿病与心脑血管疾病和骨相关疾病都息息相关，其中对于骨骼危害极大。糖类摄入过多会通过以下方式影响骨代谢：首先，糖类物质可通过氧化应激干扰骨代谢，先前的研究表明，二型糖尿病患者中的糖基化终产物 (AGEs)和同型半胱氨酸水平都异常升高由此造成骨细胞和成骨细胞不同程度的的功能障碍，并且其中可能与 AMP 依赖的蛋白激酶（Adenosine 5‘-monophosphate (AMP)-activated protein kinase，AMPK）有关， AMPK 作为生物体内一种重要的能量代谢感受器，受血糖波动影响较大，并会通过一些氧化应激反应影响骨代谢，从而导致骨关节炎、骨质疏松症等骨相关疾病，因此 AMPK 作为糖与骨代谢的至关枢纽，在机体内的糖代谢中发挥着重要作用。其次，胰岛素也会影响骨代谢。二型糖尿病的影响因素之一就是胰岛素抵抗，胰岛素作为一种降低血糖的重要激素，也会通过一系列的信号通路调节骨形成和骨吸收，而最近的研究表明，生物体内的骨骼和胰岛素抵抗之间似乎存在一种双边关系，当机体内血糖浓度过高时，胰岛 β 细胞会分泌大量的胰岛素来降低血糖，同时激活相关细胞通路对骨骼产生一定影响。而在一些骨质疏松症和骨关节炎患者的体内，又能发现胰岛素样生长因子 (IGF)的相对增高，而 IGF1 的生理作用是促进生长和发育以及刺激细胞增殖，骨骼和胰岛素之间的这种双边关系对于骨平衡也维持着一定作用。最后，糖代谢与脂代谢。机体摄入过度的糖类物质后，胰岛素会通过将其转换为其他物质来降低血糖，其中一类主要物质就是脂肪。骨细胞是由骨髓间充质干细胞分化而来，而骨髓间充质干细胞作为一种具有多项分化潜能的干细胞，也能分化为脂肪细胞、神经细胞、破骨细胞等，而有研究表明，当小鼠持续高糖饮食后，就可能会引起体内成骨分化减弱、成脂分化增强，导致骨细胞数量减少，骨合成过程减弱，另一方面，破骨细胞的大量分化也会破坏骨平衡，使破骨过程大于成骨过程，从而出现骨密度降低、骨脆性增加等一些列骨质疏松等症状，同时还会引发二型糖尿病。综上所述，这些

研究都表明了糖类物质可通过各种途径对骨代谢和骨平衡造成不同程度的影响和破坏，而现有诊断二型糖尿病的检测手段与方法都已经不适合现代的待诊人群，应该将氧化应激水平、胰岛素抵抗相关指标以及成骨成脂分化相关因子结合起来，并与骨相关疾病的生化指标与影像学结果联结，为二型糖尿病引发的骨相关疾病提供新的联合诊断思路和模式。

PU-1845

潍坊地区孕期妇女碘营养状况监测分析

于北凯
潍坊市中医院

目的 了解 2019 年潍坊地区孕期妇女碘营养情况，为指导优生优育提供依据。
方法 以 2019 年 1 月至 2019 年 12 月来我院进行产前检查的孕期妇女为研究对象，检测其尿碘浓度，并对结果进行分析。
结果 共收集到符合条件的尿液标本 2510 份，尿碘浓度均值为 179.7 ug/L，中位数为 181.0ug/L，其中尿碘浓度<150 ug/L 的占 33.35%，150~249 ug/L 的占 54.22%，≥250 ug/L 的占 12.43%；群体年龄分布 19~44 岁，各年龄组间尿碘值无统计学差异；孕早期群体尿碘中位数为 199.0 ug/L，孕中期为 185.0 ug/L，孕晚期为 162.0 ug/L，随着孕期进展，尿碘水平呈降低趋势。
结论 潍坊地区孕期妇女总体碘营养状况尚可，但仍存在较大比例的碘缺乏群体，需要加大宣传力度，采取有效措施，保证孕妇特别是孕晚期妇女的碘营养充足。

PU-1846

探讨 CKMB(活性法)/CK 在感染轮状病毒患儿中诊断心肌损伤的应用价值

赵丽娜
潍坊市中医院

目的 探讨 CKMB/CK 在感染轮状病毒患儿中诊断心肌损伤的应用价值，从而减少轮状病毒患儿心肌损伤的过度诊断。
方法 选取本院 2021 年 1 月到 2021 年 5 月腹泻患儿 40 例，采集新鲜大便，用胶体金法检测轮状病毒，其中轮状病毒阳性者 20 例为观察组，轮状病毒阴性者 20 例为对照组。分别于早晨空腹抽血，避免标本溶血，检测 CKMB、CK，计算 CKMB 与 CK 比值，并进行统计分析。
结果 CKMB/CK 在轮状病毒阳性组和阴性组差异有统计学意义。
结论 CKMB/CK 在感染轮状病毒患儿中诊断心肌损伤有临床价值，通过 CKMB/CK 的检测可以减少轮状病毒患儿心肌损伤的过度诊断。

PU-1847

血气分析仪 ABL800 检测电解质、乳酸与 生化分析仪 Cobas702 检测结果的相关性和差异性分析

杨武发、杨文秀、崔华、蔡冬竹
贵州医科大学附属医院

目的 由于血气分析仪 ABL800 检测项目和生化分析仪 CobasC702 在电解质和乳酸项目上是相同的，但一直存在差异，本次回顾性分析旨在比对两者检测结果的相关性和差异性。为临床报告解读提供可靠实验室数据。
方法 回顾性分析本院住院患者 33 例，每个患者皆进行血气分析（ABL800）和生化电解质和乳酸(Cobas702)的检测。包括钠离子（Na+）、钾离子（K+）、氯离子（CL-）、乳酸（Lac）、碳酸氢根离子（HCO3-）检测，依据其检测结果随机分为低值、中值、高值三个组，每个组 11 例。参照临床实验室标准化协会 EP9-A2 文件，进行 pearson 相关性分析和配对样本 T 检验。
结果 两种检测仪器的差异性分析 雷度 ABL800 与罗氏 Cobas702 检测结果如下：A 组 K+、CL-、Lac、HCO3-结果比较，差异均有统计学意义（ P＜0.05）。B 组 Lac 结果比较,差异具有统计学意义（P＜0.05）。C 组 Na+、CL-结果比较差异均有统计学意义（P＜0.05）。相关性分析 雷度 ABL800 与罗氏 Cobas702 检测结果的回归相关分析显示，A 组 K+、CL-、Lac、HCO3-结果比较差异均有统计学意义（P＜0.05）。 B 组 Na+、HCO3-结果比较差异均有统计学意义（P＜0.05）。C 组 Na+、K+、CL-、Lac、HCO3-结果比较差异均有统计学意义（P＜0.05）。
结论 血气分析仪和生化分析仪在电解质和乳酸检测上，两者的相关性和差异性并不那么显著。在电解质检测中，当两者结果出现很大差异时，检测结果应以生化分析仪结果为准，血气分析仪结果作为参考。乳酸检测中，当检测结果低值和高值时，血气分析仪检测更加准确及时。

PU-1848

羟基喜树碱对肺癌 A549 细胞抑制作用的初步研究

胡洪华
四川省医学科学院·四川省人民医院

目的 研究羟基喜树碱对肺癌 A549 细胞生长抑制、细胞周期和细胞凋亡的影响。
方法 用 CCK-8 试剂盒(cell counting kit - 8)法测定羟基喜树碱对肿瘤细胞的生长抑制作用，吖啶橙/溴化乙锭(AO/EB)染色观察细胞形态变化情况，琼脂糖凝腔电泳验证细胞调亡的特征性 DNA 条带，用流式细胞仪测定一定浓度下不同作用时间抗癌药物羟基喜树碱对细胞凋亡和细胞周期的影响。
结果 不同浓度的羟基喜树碱对肿瘤细胞的生长抑制作用不同，羟基喜树碱可明显抑制 A549 细胞的生长，琼脂糖凝胶电泳可见调亡细胞 DNA 的梯状条带，经 AO/EB 染色，荧光显微镜下观察到早期凋亡细胞细胞核被染成绿色，呈碎片状，晚期凋亡细胞核染色质为橘红色并呈固缩状或圆珠状，细胞周期 S 期由 20%升高到 60%。经 1μmol/L 羟基喜树碱处理 24 h 后，流式细胞术显示 A549 细胞的凋亡率为 18.11%，明显高于对照组细胞凋亡率（0.09%， P<0.05）。
结论 羟基喜树碱对 A549 细胞有生长抑制作用，可诱导 A549 细胞细胞凋亡，其细胞凋亡与细胞周期分布有关。

PU-1849

高血脂对临床生化检验结果的影响与解决方法

郭群
南京鼓楼医院

目的 分析和探究高血脂对临床生化检验结果的干扰及消除方法。
方法 选择我院 2020 年 9 月～2020 年 10 月临床生化检验的 70 例高脂血症患者 (设为实验组) 以及同期 80 例血脂正常人员 (设为对照组) 作为研究对象, 比较两组受试人员血清标本经乙醚提纯前后送检的检验结果。
结果 实验组血清标本经乙醚提纯前后送检的检验结果显示， 生化检验项目中的 ALT、AST、Cr、TP、TB 水平对比具有明显差异 (P<0.05) ，且提纯前明显偏高，GGT、CK 水平对比无显着差异 (P>0.05) ；对照组血清标本经乙醚提纯前后送检的检验结果显示，生化检验项目中的 ALT、AST、Cr、TP、TB、GGT、CK 水平对比均无显着差异 (P>0.05) 。
结论 对照组血清标本经乙醚提纯前后, 各生化检验结果无显着变化，说明血清标本经乙醚提纯后不影响以上生化检验结果。实验组血清标本经乙醚提纯前多项生化检验结果受高血脂干扰而偏高，而经乙醚提纯后, 各生化结果均有明显下降, 说明了乙醚提纯能够有效消除脂血对临床生化检验项目造成的干扰。

血清胰岛素样生长因子-1（IGF-1）的动态监测对心梗患者经皮冠状动脉介入治疗（PCI）后的临床意义

沈东海
潍坊市中医院

目的 分析心肌梗塞（AMI）患者经皮冠状动脉介入治疗(PCI)后，血清中胰岛素样生长因子（IGF-1）的变化水平，为临床检测心梗患者术后恢复状况提供新的生物学标志物。
方法 前瞻性研究，连续入选 2021 年 7 月至 2022 年 1 月潍坊市中医院心血管病科心梗患者 80 例作为实验组，同期入选无心梗患者 30 例为对照组。在患者入院时采集血样标本，送至医学检验科采用全自动化学发光法检测肌红蛋白、肌酸激酶、肌酸激酶同工酶、肌钙蛋白 I 和肌钙蛋白 T 等血清学指标；同时对患者的进行心脏血管造影或心脏彩超等影像学诊断作为患者心肌梗塞的临床指征。我们采用全自动化学发光法检测心梗患者和对照组患者血清中胰岛素样生长因子（IGF-1）的水平。80 例心梗患者中我们收集采取经皮冠状动脉介入治疗(PCI)后的心梗患者的血清，检测肌红蛋白、肌酸激酶、肌酸激酶同工酶、肌钙蛋白 I 和肌钙蛋白 T 等血清学指标以及监测患者心脏彩超等影像学指标作为心梗患者经皮冠状动脉介入治疗(PCI)后恢复的临床指征，同时继续检测患者血清中胰岛素样生长因子（IGF-1）的水平。
预期**结果** 在入院时，心梗患者与无心梗患者的血清中 IGF-1 的水平存在明显差异。心梗患者经皮冠状动脉介入治疗(PCI)后，血清中 IGF-1 的水平较未采取 PCI 治疗的心梗患者存在显著差异。
结论 血清胰岛素样生长因子（IGF-1）可作为评估心梗患者经皮冠状动脉介入治疗(PCI)后恢复的生物学标志。

PU-1851

利用尿碘评价孕期妇女碘营养状况的研究进展

于北凯
潍坊市中医院

甲状腺激素参与机体多种代谢过程的调节，是人体内的重要激素，其合成需要碘元素的参与，碘缺乏或碘过量均会引起甲状腺激素水平异常进而影响身体健康。妊娠期作为一个特殊时期，机体的激素水平和碘营养需求在此期会发生变化。加强关于孕妇碘营养的研究对优生优育至关重要，目前，评价孕妇碘营养状况的指标主要有孕妇尿碘检测、孕妇血清甲状腺功能指标检测、孕妇甲状腺体积测量以及新生儿足跟血促甲状腺激素测定等，其中以孕妇尿碘检测应用最为广泛。

本文将针对利用尿碘评价孕妇碘营养状况的研究，从判断标准、尿液留取和检测方式、检测方法学等方面进行综述。

PU-1852

女性高尿酸血症与血脂血糖的相关性研究

潘俊希
昆明医科大学第一附属医院检验科
云南省检验医学重点实验室
云南省实验诊断研究所

目的 通过了解体检人群生化指标、糖代谢相关指标，调查女性高尿酸血症患病率，探讨女性高尿酸血症的危险因素，以及血尿酸升高与糖、脂代谢异常的相互关系。
方法 收集 2019 年间我院体检人群的资料，包括基本资料、既往病史、饮食情况和用药史等，采集静脉血后全自动生化分析仪检测血尿酸、血脂、血糖等指标。采用统计分析软件 SPSS 22.0 进行统计分析。
结果 共检出女性高尿酸血症 243 例，检出率为 2.3%，女性高尿酸的患病率随着年龄的增加呈上升趋势（18～29、30～39、40～49、50～59、60～69 和≥70 岁组的 HUA 患病率分别为 0.6%、0.7%、1.1%、2.9%、3.5%和 5.8%）。高尿酸血症组中高胆固醇血症、高甘油三酯血症、空腹血糖升高的检出率均高于血尿酸正常组，差异有统计学意义（P＜0.05）。多重线性回归分析，TG、TC、空腹血糖均与血尿酸水平呈正线性相关。
结论 女性血脂异常和血糖代谢紊乱与高尿酸血症密切相关，高脂血症、血糖代谢紊乱是高尿酸血症的危险因素。女性尿酸血症检出率随年龄增加而升高，应针对性的开展宣传教育，倡导合理饮食，积极锻炼，养成良好的生活习惯，以期能有效控制高尿酸血症的患病率。

PU-1853

标本放置时间对血糖检测的影响

赵苓旭
川北医学院附属医院

目的 探讨标本放置时间对血糖检测结果的影响；
方法 将肝素抗凝全血与同一健康体检者的肝素抗凝血浆设为对照（共 21 组检测标本），分别测定标本在放置 30min、1h、2h、3h 后的血糖值；
结果 （1）血浆组：30min 后的测量结果与 2h 的测量结果无明显差异，与 3h 的测量结果有差异(p〈0.05)；（2）全血组：30min 后的测量结果与 1h 的测量结果有差异（p〈0.05），与 2h 的测量结果有差异（p〈0.001）；

结论 血糖检测结果随标本放置时间增加而降低，2h 后血糖含量开始下降，放置 3h 后血糖检测结果显著降低，提示血糖检测标本至少应在 3h 内完成测定，以保证检测结果的可靠性。

Estimation of 24 hour urine protein excretion using urine creatinine/albumin ratio

Xin Liu [1]、Yonghong Zhao[2]、Daqing Hong[1]、Yunlin Feng[1]
1. Department of Laboratory Medicine, Sichuan Provincial People's Hospital, University of Electronic Science and Technology of China, Chengdu, China
2. 四川大学

Purpose To study the correlation between 24 hour urine protein excretion (24h UPE) and urine creatinine/albumin ratio (ACR) and develop a prediction model for 24h UPE.
Methods All individuals with paired urine ACR and 24h UPE tested on the same day in Sichuan Provincial People's Hospital during September 1st, 2018 to December 31st, 2019 were enrolled. Correlation and agreement between urine ACR and 24h UPE were evaluated. A prediction model of 24h UPE was further developed and validated.
Results 671 subjects were identified. Urine ACR had a good correlation with 24h UPE in general population (Spearman's coefficient = 0.939; p<0.001) but the agreement between these two measurements was not consistently good (overall ICC = 0.870; 95% CI: 0.849-0.888; p<0.001). Our multivariable transform model of 24h UPE had good performance (R2=0.829) and validated high accuracy (RMSE=0.0227, rRSME=3.1%).
Conclusions Urine ACR has a good correlation with 24h UPE in general population but is not a reliable surrogate for 24h UPE. Our prediction model is a useful tool for estimating 24h UPE, however, 24h UPE is still mandatory in situations when accurate quantification of proteinuria is required.

PU-1855

孕妇糖化血红蛋白水平对新生儿低血糖发病风险的影响

杨富强
襄樊市第一人民医院

目的 探讨孕妇糖化血红蛋白（HbA1c）水平对新生儿低血糖及阈值低血糖发病风险的影响。
方法 选取 2016 年 12 月至 2018 年 10 月该院收治的 375 例孕妇作为研究对象，根据血清 HbA1c 水平分为 3 组，A 组 HbA1c 为＜5.5％，317 例；B 组 HbA1c 为 5.5％～6.5％，49 例；C 组 HbA1c 为＞6.5％，9 例。观察并记录新生儿出生 1、4、8h 血糖值，分析新生儿低血糖及阈值低血糖发生率。
结果 C 组与 B 组新生儿出生后 1h 低血糖发生率明显高于 A 组，差异有统计学意义（P＜0.05）；C 组新生儿出生后 4、8h 低血糖发生率明显高于 A 组与 B 组，差异具有统计学意义（P＜0.05）。A 组与 B 组新生儿出生后 1、4、8h 低血糖发生率随时间延长逐渐下降，差异有统计学意义（P＜0.05）。C 组与 B 组新生儿出生后 1、4、8h 阈值低血糖发生率明显高于 A 组，差异具有统计学意义（P＜0.05）。A 组新生儿出生后 1h 阈值低血糖发生率明显高于 4、8h，差异有统计学意义（P＜0.05）；B 组新生儿出生后 1、4h 阈值低血糖发生率明显高于 8h，差异有统计学意义（P＜0.05）。
结论 妊娠期孕妇 HbA1c 水平升高会增加新生儿低血糖及阈值低血糖发病风险。

PU-1856

TEG 和 CCTs 在急性胰腺炎患者病情评估中的价值

杨林飞[1]、陆珊[2]
1. 湖南省人民医院
2. 湖南师范大学医学院

目的 分析血栓弹力图联合凝血四项常规指标在急性胰腺炎患者病情评估中的价值。
方法 选取湖南省人民医院 2020 年 8 月～2021 年 4 月诊治入院的急性胰腺炎患者 84 例为研究对象。根据临床诊断的病情严重程度分为轻症急性胰腺炎组 44 例与重症急性胰腺炎组 40 例，另外选取同期体检的健康志愿者 18 例作为对照组。检测所有研究对象的血清 C 反应蛋白，生化指标脂肪酶，血栓弹力图指标血块成型时间(K)、血凝时间(R)、血块强度(MA)、血凝块形成起始点至描记图最大曲线弧度做切线与水平线所成夹角（α 角）及凝血常规四项指标活化部分凝血活酶时间(APTT) 、凝血酶时间(TT) 、纤维蛋白原(Fib) 及凝血酶原时间(PT)。
结果 轻症急性胰腺炎组、重症急性胰腺炎组生化指标脂肪酶、血清 C 反应蛋白、血凝时间(R)、血块成型时间(K)较健康对照组高，血块强度（MA）、α 角较健康对照组低，且重症急性胰腺炎组生化指标脂肪酶、血清 C 反应蛋白、血凝时间(R)、血块成型时间(K)较轻症急性胰腺炎组高，血块强度（MA）、α 角较轻症急性胰腺炎组低（P＜0.05）；轻症急性胰腺炎组、重症急性胰腺炎组纤维蛋白原（FIB）、凝血酶原时间(PT)、凝血酶时间(TT)、活化部分凝血酶原时间（APTT）均较健康对照组高，且重症急性胰腺炎组纤维蛋白原、凝血酶原时间、凝血酶时间、活化部分凝血酶原时间较轻症急性胰腺炎组高（P＜0.05）。
结论 临床可根据生化指标脂肪酶、血清 C 反应蛋白、血栓弹力图、凝血四项指标检测结果评估急性胰腺炎患者病情程度，初步对 AP 患者炎症浸润程度和微循环障碍情况进行了解，以期对 AP 的病情严重程度进行判断以及把握病情的演变，对早期预防和治疗 SAP 提供依据。

PU-1857

奇怪的胎儿血红蛋白峰：胎母输血综合征 2 例报告

卢妮娜、叶雅丽、杨再兴、阮荣华
台州市第一人民医院

目的 探讨应用 Tosoh HLC-723 G8 糖化仪检测产妇血中胎儿血红蛋白(fetal hemoglobin,HBF)的浓度联合甲胎蛋白以快速辅助诊断胎母输血综合征(fetomaternal hemorrhage syndrome, FMH)的可行性。
方法 收集临床怀疑 FMH 的新生儿 2 例，采用 Tosoh HLC-723 G8 糖化仪高效液相色谱法（HPLC）来检测患者母血术前、产后第 5 天、第 10 天的 HBF 以及血清甲胎蛋白，同时收集手术当天五位剖宫产出后血红蛋白≥170g/L 的新生儿作为正常对照，检测其母血的 HBF 值以及甲胎蛋白。
结果 HPLC 图谱示病例 1 母血术前有较高 HBF 峰，HBF 为 5.1%，甲胎蛋白(AFP)为 1600.36ng/ml，产后第 5 天，第 10 天测得 HBF 分别下降至 4.8%和 4.5%；病例 2 母血术前 HBF 为 2.8%，甲胎蛋白(AFP)为 2747.69ng/ml，产后第 5 天，第 10 天测得 HBF 分别下降至 1.7%和 0.7%。患者母血的 HbF 值比正常妊娠者明显升高，排除 HBF 遗传性增高，结合临床症状以及 AFP 结果，可以诊断为 FMH。
结论 Tosoh HLC-723 G8 糖化仪检测的 HBF 联合甲胎蛋白是可供选择的快速辅助诊断 FMH 的方法。

PU-1858

A noninvasive diagnostic model for significant liver fibrosis in patients with chronic hepatitis B based on CHI3L1 and routine clinical indicators

Qingyong Huang、Jianhua Wu、Chunse Huang、Xiuli Wang、Zhenxing Xu
Xiamen Hospital of Traditional Chinese Medicine

Background In consideration of the limitations of liver biopsy, the past years have seen a great advance in the application of noninvasive indices in assessing liver fibrosis. However, the accuracies of the existing indices to determine liver fibrosis in patients with chronic hepatitis B (CHB) are still unsatisfactory. Here, we established a noninvasive diagnostic model for assessing significant liver fibrosis (SLF) in CHB patients based on serum chitinase 3-like 1 (CHI3L1) and routine clinical indicators.

Methods A total of 537 CHB patients who had received a liver biopsy at Xiamen Hospital of Traditional Chinese Medicine from December 1, 2019, to September 30, 2020 enrolled in this study. Overall, 173 patients were excluded base on exclusion criteria, 27 patients were excluded due to insufficient data; 337 patients were included as the eventual participants in this cross-sectional study. All the included cases were randomly divided into a training cohort (n=270) and a validation cohort (n=67). The training cohort was further divided into a non-significant liver fibrosis (NSLF) group (stages S0–S1; n=189; used as the control group) and an SLF group (stage S2–S4; n=81) based on the Scheuer scoring system. Univariate and multivariate logistic regression analyses were performed to screen for independent predictors of SLF in CHB patients and to establish a diagnostic model.

Results The results of univariate and multivariate logistic regression analysis showed that CHI3L1, AFP and PLT were independent predictors of SLF in CHB patients, and the diagnostic model was established as follows: CHI3L1/AFP/PLT (CAP) = 0.600 × CHI3L1/upper limit of normal (ULN) + 0.252 × AFP/ULN– 1.424 × PLT/lower limit of normal (LLN) – 1.223. The area under the receiver operating characteristic (AUROC) of this model for the diagnosis of SLF in the training cohort and the validation cohort was 0.805 and 0.819, respectively, showing no statistically significant difference (P>0.05), and the AUROC for the diagnosis of SLF in the whole cohort was significantly higher than those of other noninvasive markers including aspartate transaminase to platelet ratio index (APRI), fibrosis 4 score (FIB-4) and CHI3L1 (all P<0.05). CAP was further applied to the staging of liver fibrosis. The Jonckheere-Terpstra trend test revealed that the CAP value tended to increase gradually with the severity of liver fibrosis (Ptrend<0.001) and had a good correlation (Spearman correlation coefficient: 0.486). Dunn's test for paired comparisons showed CAP had good performance in distinguishing S2–S4 from S0–S1; however, the difference in CAP among S2, S3, and S4 was not statistically significant. The efficacy of CAP in diagnosing SLF (S2–S4) was also analyzed in subgroups with different ALT levels and HBeAg statuses. It was found that the AUROCs of CAP in diagnosing SLF were not significantly different among the 3 ALT subgroups [≤ULN, (1–2) × ULN, and >2×ULN] and between the HBeAg-positive and HBeAg-negative subgroups.

Conclusions The newly established model has a good diagnostic efficacy for SLF in CHB patients and is superior to other noninvasive markers including APRI, FIB-4, and CHI3L1. Thus, it can be used as a noninvasive diagnostic index for liver fibrosis in CHB patients.

PU-1859

四川某大型三甲医院体检人群异常空腹血糖分析

廖凤慧
电子科技大学附属医院 四川省人民医院临床医学检验中心

目的 分析体检人群中异常空腹血糖的检出情况，为人群血糖异常的防治提供一定的思路。
方法 收集 2020 年 1 月 1 日到 2020 年 12 月 31 日于四川省人民医院体检中心行空腹血糖检测的体检者的血糖结果。
结果 共收到 14366 名体检者的空腹血糖测定结果，其中女 6568 名，男 7798 名。14366 名体检者中，低血糖阳性率为 1.10%，其中男女分别为 1.20%和 1.03%；空腹血糖受损患者阳性率为 4.88%，其中男女分别为 5.80%和 3.19%；糖尿病的阳性率为 4.50%，其中男女分别为 6.19%和 2.41%；其中，春季（3 月,4 月和 5 月）空腹血糖受损阳性率（5.12%）和糖尿病阳性率（5.65%）明显高于其他三季（3.93%、4.86%和 4.55%，4.34%、4.76%和 4.93%）。随着年龄的增加，低血糖的阳性率逐渐降低，且男女的差距逐渐增大；而空腹血糖受损和糖尿病的随着年龄的增大，阳性率逐渐增加，男性明显多于女性。
结论 对于各个年龄阶段的人群，筛查空腹血糖都具有重要意义。对于青年人群，低血糖的发生不容忽视，而对于中年和老年人群，尤其是对男性，空腹血糖受损和糖尿病是关注的重点。春季空腹血糖受损阳性率和糖尿病阳性率相对较高可能与春节饮食有关。

Trimethylamine N-oxide and its nutrient precursors are differently associated with cardiovascular risk factors and kidney function

Yan Song、Jie Zhang、Li Zhao
Renji Hospital affiliated to Shanghai jiaotong university school of medicine

Objective We analyzed the association of plasma trimethylamine N-oxide (TMAO) and its nutrient precursors with cardiovascular risk factors and kidney function in humans.
Method A total of 318 individuals were included in our study. Plasma concentrations of free TMAO, choline, L-carnitine, and betaine were measured with the use of liquid chromatography–tandem mass spectrometry (LC-MS/MS). Plasma crea, urea and uric levels were assessed with the use of Hitachi 7600. Multiple linear regression and spearman correlation test were used to analyze the associations of plasma concentrations of TMAO and TMAO-related compounds with kidney function.
Results Participants were 59% male with an average age of 44±10. Older age was significantly associated with high concentrations of carnitine, choline, TMAO and betaine (ρ=0.222, P<0.001; ρ=0.246, P<0.001; ρ=0.139, P=0.013; ρ=0.179, P=0.001; respectively). Being male was significantly associated with high levels of carnitine, choline, and betaine (ρ=0.359, P<0.001; ρ=0.283, P<0.001; ρ=0.241, P<0.001; respectively). The difference in plasma TMAO levels between men and women was NS (ρ=0.359, P=0.438). The Higher concentrations of Carnitine and choline were correlated with characteristics of both an unfavorable cardiovascular risk-factor profile (lower HDL cholesterol, and higher triglycerides and NHDL) and kidney markers (higher urea, crea and uric). Moreover, TMAO was significantly positively associated with triglycerides, urea, crea and uric.
Conclusion TMAO and its dietary precursors choline and carnitine have differential associations with cardiovascular risk factors and kidney markers.

绝经相关的宫颈癌差异甲基化位点的筛选及关联基因的初步分析

王蓉、杨金豪、张文帆
天津医科大学医学检验学院

目的 筛选与绝经相关的宫颈癌差异甲基化位点，并分析其关联基因的功能。
方法 从 TCGA 数据库提取 307 例宫颈癌患者的 450k 甲基化芯片数据和临床信息；采用 R 软件处理分析数据，对甲基化位点 β 值采用 Wilcoxon 秩和检验，筛选未绝经组和绝经组异常的甲基化位点，对其差异位点基因采用 GO、KEGG、STRING 数据库分析其功能和信号通路。
结果 共检出未绝经组、绝经组的差异明显甲基化位点 7 个(P.adjust<0.05)，分别位于 5 个基因(KAZN、AC069368.1、SEMA6A-AS2、SUSD1、miR-99a)。GO 和 KEGG 分析，上述基因有蛋白质结合，钙离子结合分子功能，参与 miRNA 沉默基因通路，负向调控白介素-6 介导的信号通路和负向调控 STAT 级联通路等。STRING 分析发现差异基因编码的蛋白之间没有相互作用，KAZN 的作用蛋白是 PPL、EVPL、PKP1，AC069368.1 的作用蛋白是 MED10，SUSD1 的作用蛋白是 MFSD2B、TMEM245、KIAA0368、ZNF462、ZNF483。
结论 未绝经和绝经的宫颈癌患者存在差异甲基化位点和基因，它们的主要功能与蛋白结合，信号通路有关。结合 TCGA 数据库和 R 语言可用于绝经相关的差异甲基化位点的初步筛选。

超氧化物歧化酶在甲状腺癌和结节性甲状腺肿外周血中的意义

徐艳秋
山东第一医科大学附属省立医院临床医学检验部

目的 研究超氧化物歧化酶(superoxide dismutase,SOD)在甲状腺癌和结节性甲状腺肿外周血中的活性水平。
方法 收集甲状腺癌患者 84 例、结节性甲状腺肿患者 21 例和正常人对照组 63 例，酶法检测外周血清中 SOD 活性，电化学发光法检测游离甲状腺原氨酸（FT3）、游离甲状腺素（FT4）、促甲状腺激素（TSH）水平，分析各组 SOD 活性差异及 SOD 活性与甲状腺激素相关性。
结果 甲状腺癌组 SOD 活性（164.536±18.095 U/ml）、结节性甲状腺肿组 SOD 活性（157.667±15.189 U/ml）和正常人对照组 SOD 活性（179.529±11.625 U/ml），甲状腺癌组和结节性甲状腺肿组 SOD 活性分别低于正常人对照组，差别有统计学意义（$p<0.05$）。甲状腺癌组 FT3、FT4 水平与 SOD 活性成呈正相关（$r=0.346$ $p<0.05$，$r=0.3278$ $p<0.05$），正常人对照组 FT3 水平与 SOD 活性成呈负相关（$r=-0.5522$ $p<0.05$）。
结论 甲状腺发生结节和肿瘤后 SOD 活性降低，观察 SOD 活性变化可了解甲状腺组织损伤的情况并作为甲状腺肿瘤发生辅助指标。

PU-1863

在甲状腺功能亢进和甲状腺功能低下外周血中超氧化物歧化酶的意义

徐艳秋
山东第一医科大学附属省立医院临床医学检验部

目的 研究超氧化物歧化酶(superoxide dismutase,SOD)在甲状腺功能亢进和甲状腺功能低下外周血中的意义。

方法 收集甲状腺功能亢进患者 75 例、甲状腺功能低下患者 56 例和正常人对照组 63 例，酶法检测外周血清中 SOD 活性，电化学发光法检测游离甲状腺原氨酸（FT3）、游离甲状腺素（FT4）、促甲状腺激素（TSH）水平，分析各组 SOD 活性差异及 SOD 活性与甲状腺激素相关性。
结果 甲状腺功能亢进症组 SOD 活性（173.376±15.942 U/ml）、甲状腺功能低下症组 SOD 活性（174.827±19.895 U/ml）和正常人对照组 SOD 活性（179.529±11.625 U/ml），甲状腺功能亢进组与甲状腺功能低下组、甲状腺功能亢进组与正常人对照组、甲状腺功能低下组与正常人对照组之间 SOD 活性差别均无统计学意义（$p>0.05$）。正常人对照组 FT3 水平与 SOD 活性成呈负相关（$r=-0.5522$ $p<0.05$）。
结论 通过本研究我们发现当甲状腺功能亢进和甲状腺功能低下时 SOD 活性变化不大。

PU-1864

BECKMAN AU5800 型全自动生化分析仪检测免疫球蛋白的性能评价

徐艳秋
山东第一医科大学附属省立医院临床医学检验部

目的 评价 BECKMAN AU5800 型全自动生化分析仪检测血清免疫球蛋白的性能评价。
方法 评估 AU5800 生化仪检测血清免疫球蛋白的性能评价的正确度、精密度、线性范围、可报告范围、参考区间。
结果 AU5800 型全自动生化分析仪检测血清免疫球蛋白的性能评价的正确度取室间质评的样本进行比对，结果 SDI≤2 符合要求；依据卫生部室间质量评价标准批内精密度小于允许总误差 CV 的 1/4、批间精密度小于允许总误差 CV 的 1/3，结果均符合要求；线性范围采用线性回归分析线性方程 $Y=Ax+b$，a 值在 0.97-1.03 范围内，相关系数 $r2>0.95$,则线性范围符合要求；可报告范围以 80%≤R≤120%为可接受限，对应的稀释倍数为最高稀释倍数；参考区间依据中华人民共和国卫生行业标准“临床实验室项目参考区间的制定”（WS/T402-2012）文件要求，R≥90%符合要求。
结论 德赛诊断试剂在 AU5800 型全自动生化分析仪上的检测性能均可接受，符合要求。具有检测快、准确性高、可靠性好，可满足本实验室要求，适用于临床需求。

PU-1865

过敏性紫癜患儿尿蛋白/肌酐比值与 24 小时尿蛋白定量关系及其临床应用的研究

司文
山东省立医院

目的 研究过敏性紫癜患儿随机尿蛋白/肌酐比值与 24 小时尿蛋白之间的定量关系，探讨过敏性紫癜患儿随机尿蛋白/肌酐比值的临床应用价值
方法 测定测定 104 例过敏性紫癜患儿的 24 小时尿蛋白总量,随机尿样本中尿蛋白肌酐含量,计算尿蛋白肌酐比。收集患儿相关数据,分析 24h 尿蛋白总量与尿蛋白肌酐比之间的相关性。
结果 随机尿蛋白/肌酐比值与 24 小时尿蛋白定量之间有良好
的相关性，24h 尿蛋白总量与尿蛋白肌酐比的相关系数 $r=0.65$($P<0.01$),随机尿蛋白/肌酐比值作为反映过敏性紫癜患儿蛋白质的排泄情况，效果良好。
结论 随机尿蛋白/肌酐比值能够反映过敏性紫癜患儿蛋白质的排泄情况，可以替代 24 小时尿蛋白测定应用于临床。

PU-1866

乙肝病毒 DNA 与两对半及血清 ALT 之间关系的探讨

兰星宇、李霞
新疆兵团第一师医院

目的 研究乙肝病毒 DNA 与两对半及血清 ALT 之间关系，并且通过对其数据结果进行分析，从而可以找到最佳的治疗方案。
方法 选取 2018 年 7 月至 2019 年 7 月来我院就诊的乙肝病毒患者为研究对象，通过问卷调查并筛选后选取 130 例乙肝病毒患者为研究对象，对病毒的 DNA 定量与两对半及血清中的 ALT 进行检测，并根据相应的指标对结果进行分析。
结果 通过检测结果得出，其中经过两对半检测结果为大三阳、小三阳的患者，HBV DNA 定量检测的阳性率为 55.38%，97.25%，数据差异明显，具有统计学意义（P<0.05）。
结论 通过上述对比分析研究，其中乙肝病毒 DNA 定量与两对半及血清 ALT 之间有密切的关系，在今后的临床治疗中可以联合的治疗使用。

PU-1867

维生素 C 对临床化学检测项目的干扰分析

张华、李燕、赵红光、孙艳、兰星宇
新疆兵团第一师医院

目的 研究分析维生素 C 对 ADA、ALP、AST、CR、FMN、GGT、Mg 7 个临床化学检测项目的干扰。
方法 将 40 例新鲜的血清标本，混合成 ADA、ALP、AST、CR、FMN、GGT 和 Mg 的高、低两个浓度标本。参考 EP7-A2 文件制备干扰物维生素 C 贮存液，通过“配对差异”试验对维生素 C 影响 ADA、ALP、AST、CR、FMN、GGT 和 Mg 项目检测结果进行筛查确认。对 ADA、CR、FMN 干扰确定时, 则进一步采用“剂量关系 ”试验分析维生素 C 干扰物浓度与对 ADA、CR、FMN 干扰情况二者间关系。
结果 50mg / d L 维生素 C 对 ADA、CR 高、低浓度干扰效应点估计值大于 cut off 值（dobs>dc），50mg / d L 维生素 C 对 FMN 高、低两个浓度干扰效应点估计大于值 cut off 值（dobs>dc）。维生素 C 对 ADA 测定呈线性负干扰，对肌酐（Cr）测定呈线性负干扰，对 FMN 测定呈线性正干扰。
结论 维生素 C 对 ADA、CR 测定存在负干扰，对 FMN 测定存在正干扰，而且与维生素 C 干扰物质浓度呈线性关系，所以在临床诊断和治疗过程中需关注病人服用维生素 C 情况

PU-1868

利用基于拉曼光谱的无标记血清检测诊断和分级胶质瘤

张晨曦
首都医科大学附属北京天坛医院

胶质瘤是中枢神经系统最常见的恶性肿瘤可导致严重的死亡和发病,相对准确无创地诊断胶质瘤诊断具有重要意义

在这项研究中，我们使用拉曼光谱学鉴别神经胶质瘤患者与健康人群。

血清样本采自 86 名健康个体，脑胶质瘤[高级别胶质瘤(HGG) n = 75，低级别胶质瘤(LGG) n = 60]。用 785nm 波长的激光采集了所有的光谱/n 射程 400-1800 立方厘米-1/n。每个样本共录得三个光谱每个频谱被积分 12 秒，平均超过 5 秒积累主成分分析和线性判别分析结合模型对不同基

团的拉曼光谱进行了分类。正常组、hGG 组和 LGG 组的正确分类率分别为 95.35% 、93.33% 、93.34% ,总准确率为 94.12%。鉴别 HGG 组和正常组的敏感性，特异性和准确性分别为 96.00% 、96.51% 和 96.27%，曲线下面及未 0.997。鉴别 LGG 组与正常对照组的敏感性、特异性、准确性分别为 96.67% 、98.84% 、98.84%，97.95% ，曲线下面积为 0.999。我们的研究提出基于拉曼光谱的主成分分析和线性判别分析，可以快速无创对早期胶质瘤进行诊断

PU-1869

新型冠状肺炎患者实验室生化指标检测结果的评价

邢小平
安徽省铜陵市人民医院

目的 探讨感染新型冠状肺炎患者肝功能和肾功能的变化。
方法 整理 2020 年元月-2020 年 2 月收治住院的确诊新型冠状肺炎和一般肺炎患者肝功能和肾功能资料，比较两类肺炎患者导致肝功能和肾功能的变化与区别。
结果 在肝功能指标上，新型冠状肺炎患者的总胆红素（TBIL）、直接胆红素（DBIL）、总蛋白（TP）、白蛋白（ALB）、谷丙转氨酶（ALT）、谷草转氨酶（AST）、碱性磷酸酶（ALP）与一般肺炎患者存在显著差异（P＜0.05），但是两类肺炎患者的 r-谷氨酰转肽酶（r-GT）差异并不显著（P＞0.05）。在炎症指标上，新型冠状肺炎患者的 C-反应蛋白（CRP）与一般肺炎患者存在显著差异（P＜0.05），但是两类肺炎患者的肾功能指标差异并不显著。
结论 新型冠状肺炎会对患者的肝脏造成一定的影响并引起相关炎症。

PU-1870

24h 尿蛋白定量与随机尿 ALB/CR 一致性分析

张鹏[1]、李志豪[2]
1. 南方医科大学南方医院
2. 南方医科大学检验与生物技术学院

目的 探究 24h 尿蛋白定量（24hUTP）与随机尿白蛋白肌酐比（Alb/Cr）一致性。
方法 选取南方医院 2020 年 11 月至 2021 年 4 月的患者 164 例，收集所有患者的 24 小时尿及近一两天内的某一次随机尿测定 24hUTP 和随机尿 ALB/CR，使用 GraphPad Prism 5 软件进行统计分析，对患者的 24hUTP 和随机尿 ALB/CR 的进行 spearman 相关性分析并进行回归分析得出随机尿 Alb/Cr 预测 24hUTP 的预测方程，采用 ROC 曲线分析法得出在不同尿蛋白水平下随机尿 Alb/Cr 预测 24UTP 的最佳临界点。
结果 24hUTP 和随机尿 Alb/Cr 的 spearman 相关系数 r=0.8216（P＜0.0001），存在显著相关关系，且按照申请科室分组其相关性也显著。根据散点图构建随机尿 Alb/Cr 预测 24hUTP 的预测方程 lg（24hUTP）=1.2143lg(Alb/Cr)+1.3273。根据正常临界值及 KDIGO 指南定义 24 小时尿蛋白定量的三个临界点，即 24hUTP＞0.14g/24h、＞0.5g/24h、＞1g/24h、＞3.5g/24h，做 ROC 曲线分析得随机尿 Alb/Cr 得最佳诊断临界值为＞ 2.735mg/mmol 、＞ 11.16 mg/mmol 、＞ 19.96 mg/mmol、＞38.20 mg/mmol。
结论 24hUTP 和随机尿 Alb/Cr 的相关性良好，可用随机尿 Alb/Cr 预测 24hUTP。重点分析的内分泌科糖尿病患者中，可用随机尿 Alb/Cr 替代 24hUTP 作为门诊病患的随访及定期筛查。而对于产科子痫前期的患者，其相关性受多种关系影响而低于整体，但也可应用随机尿 Alb/Cr 代替 24hUTP 作为紧急情况下如用于早发型重型子痫前期病人以提供及时快速的诊断帮助临床。

PU-1871

血清 CD5L 水平在肝纤维化进展中的临床价值研究

杨澜
中国人民解放军空军军医大学第二附属医院

目的 探讨巨噬细胞凋亡抑制因子-CD5L 作为新型血清生物标志物在肝纤维化中的变化，及其鉴别诊断价值。
方法 本研究纳入 41 例慢性肝炎、21 例肝硬化、171 例肝硬化失代偿、69 例肝癌（HCC）、23 例自身免疫性肝炎（AILD）患者和 136 例健康对照（HC）。采用 ELISA 方法测定血清 CD5L 水平。利用全自动生化分析仪测定血清肝功指标总蛋白（TP）、白蛋白（ALB）、球蛋白（GLO）、白球比（A/G）、总胆红素（T-BIL）、直接胆红素（D-BIL）、间接胆红素（I-BIL）、谷丙转氨酶（ALT）、谷草转氨酶(AST)、碱性磷酸酶(ALP)、总胆汁酸（TBA）水平。并测定了血小板（PLT）、国际标准化比值（INR）的水平。同时采用 Spearman 相关性分析对 CD5L 和以上指标进行分析。
结果 肝硬化患者血清 CD5L 水平（52.79(IQR 32.22-140.7)ng/ml）明显低于健康对照组（208.85(IQR 141.22-326.72)ng/ml）（p<0.0001）、肝炎患者（89.65(IQR 52.65-304.6)ng/ml）(p=0.0268)和肝癌患者（112.22(IQR 46.02-306.87)ng/ml）(p=0.0331)。相关性分析结果显示：在肝炎患者中，CD5L 与 PLT（r=0.45,p=0.01）,T-BIL(r=0.37,p=0.02),D-BIL（r=0.39,p=0.01）and I-BIL(r=0.35,p=0.02) 显著相关，但与其他指标无明显相关。肝硬化患者中，CD5L 与 TP（r=0.51,p=0.02）显著相关，与其他指标无明显相关。肝癌患者中，CD5L 与 ALP（r=0.66,p<0.0001）强相关。
结论 与健康对照和肝炎患者相比，CD5L 在肝硬化患者中显著降低，可作为一种新型血清生物标志物鉴别诊断肝纤维化。

PU-1872

心肌标志物在 COVID-19 患者风险分级和管理中的意义

张静、夏欣一
中国人民解放军东部战区总医院

目的 发现敏感且可靠的 COVID-19 患者的早期预警生物标志物，以优化管理和改善预后。
方法 选取 2954 例 2 月 4 日至 4 月 10 日在武汉火神山医院就诊的 COVID-19 患者。入院后测定血清心肌标志物。记录冠状动脉疾病诊断及生存情况。对不同分类的非 COVID-19 患者进行单细胞 RNA 测序，分析 SARS-CoV-2 受体表达情况。
结果 2954 例 COVID-19 患者的年龄中位数为 60 岁（50-68 岁），其中重症/危重症 1515 例（51.3%）。与轻症/中症患者（1439 例，48.7%）相比，重症/危重症患者入院 1 周内血清心肌标志物水平明显升高。在这些病人中，血清 BNP（42[24.6%] vs 7 [1.1%]）,hs-TNI（38[48.1%] vs 6[1. 0%]）,α- HBDH（55[10.4%] vs 2[0.2%]）,CK-MB（45[36.3%] vs 12[0.9%]）,和 LDH（56 [12.5%] vs 1[0.1%]）水平异常的患者死亡率明显高于这些指标正常的患者。ICU 入院率也有相同的趋势。患有冠状动脉疾病（CAD）的重症/危重症患者（165/1155 [10.9%]）相比那些没有 CAD 的患者更有可能有异常指标：BNP（52 [46.5%] vs 119 [16.5%]）, hs-TNI（24[26.7%] vs55（9.6%）,α- HBDH（86[55.5%] vs 443 [34.4%]）,水平（27 [17.4%] vs 97[7.5%]）,和 LDH（65[41.9%] vs 382 [29.7%]）。CAD 患者 SARS-CoV-2 受体表达较健康对照组增强。回归分析显示，有 5 项心肌指标升高的患者有更高的死亡风险（危险比 3.4 [95% CI 2.4-4.8]）。
结论 既往有 CAD 的 COVID-19 患者心脏标志物的异常百分比较高，死亡率和 ICU 入院率较高。值得注意的是，未患冠心病且心脏标志物水平异常的 COVID-19 患者的死亡率也很高。BNP 与 hs-TNI、α-HBDH、CK-MB 和 LDH 联合可作为第 1 周高死亡风险早期预警的预后生物标志物，因为

入院后第 1 周及住院期间心脏标志物水平异常的患者可能预示病情恶化或进展。(本文部分内容已发表于 Crit Care， IF=6.407)

PU-1873

叶酸水平与脑卒中的相关性研究

张云芳
昆明市延安医院医学检验科

目的 探讨血清叶酸（folate）水平与脑卒中发生的相关性，为脑卒中的预防、筛查、病情变化、预后提供更多的监测指标。
方法 选择脑卒中患者 40 例作为卒中组，46 例健康体检人群作为对照组。所有检测项目均质控在控。叶酸（folate）使用化学发光法进行测定，血脂中总胆固醇(totalcholesterol，TC)、甘油三酯（total triglyceride,TG）采用氧化酶法测定，高密度脂蛋白胆固醇(highdensity lipoproptein,HDL-C)采用抗体阻碍均相法测定，低密度脂蛋白胆固醇(lowdensity lipoproptein,LDL-C)采用表面活性剂清除法测定。检测结果用统计学软件 spss23.0 进行 t 检验、线性回归分析及 ROC 曲线分析。
结果 卒中组血清叶酸（8.11±3.92）μg/L 较对照组血清叶酸（11.79±5.68)μg/L 明显降低，差异具有统计学意义(P<0.05)。卒中组血清 TG(1.56±1.03) mmol.L-1 浓度较对照组 TG(1.11±0.26) mmol.L-1 浓度高，卒中组 HDL-C(1.13±0.36)mmol.L-1 较对照组 HDL-C(1.51±0.34) mmol.L-1 降低，差异具有统计学意义(P<0.05)。卒中组 TC（4.24±1.07）mmol.L-1、LDL-C（2.56±0.96）mmol.L-1 浓度较对照组 TC（4.52±0.37）mmol.L-1、LDL-C（2.61±0.37）mmol.L-1 变化不明显，差异无统计学意义(P>0.05)。卒中组的血清叶酸水平与年龄、性别、血脂（TG、TC、HDL-C、LDL-C）指标均无显著相关(P>0.05)。
结论 脑卒中患者血清叶酸（folate）水平低于健康人，叶酸的低水平与脑卒中的发生相关。

PU-1874

肝损伤对 COVID-19 患者疾病进展和临床结局的影响

吴秋月、夏欣一
中国人民解放军东部战区总医院

目的 SARS-CoV-2 感染与肝功能障碍和肝脏损伤密切有关。本研究旨在评估肝损伤对 COVID-19 患者疾病进展及临床结局的影响。
方法 共纳入武汉市火神山医院 COVID-19 重症或危重症患者 1520 例，包括 127 例慢性肝病患者，其中 64 例乙肝患者，20 例丙肝患者，37 例脂肪肝患者和 6 例肝硬化患者。收集这些患者的年龄、性别、基础疾病、肝功检验结果、临床治疗及预后等数据进行统计分析。利用 scRNA-seq 数据和大量基因表达谱数据识别不同类型患者肝脏组织中与 SARS-CoV-2 病毒结合的受体靶标 ACE2 和 TMPRSS2 的表达差异。收集实验室指标建立了风险评分系统，预测住院期间肝损伤的风险和严重程度。
结果 10.98% 的重症或危重症 COVID-19 患者在入院后出现肝损伤，并有较高的死亡率（21.74%，p<0.001）和 ICU 入住率（26.71%，p< 0.001）。既往携带有慢性肝病的 COVID-19 患者并未有更高风险的病死率和疾病严重程度。相反，脂肪肝和肝硬化 COVID-19 患者疾病进展更严重，这一结果被 scRNA-seq 数据和大量基因表达谱数据所证实，这些患者肝脏组织中携带有更多与 SARS-CoV-2 结合的受体靶标 TMPRSS2+ 细胞，更易于被 SARS-CoV-2 感染。根据入院后 3 天内进行的 22 项常规实验室检查建立了风险评分系统，成功预测住院期间肝损伤的风险[AUC：95%CI；0.85（0.83-0.88）]和严重程度[AUC：95%CI；0.92（0.89-0.95）]。

结论 治疗过程中发生肝损伤及既往有脂肪肝和肝硬化基础病的 COVID-19 患者，具有更高的疾病严重程度和病死率。基于 ALT、AST、LDH 和 CRP 等指标建立的一个风险评分模型，可以预测 COVID-19 患者在住院期间是否发生肝损伤或进入高风险阶段。（本文部分内容已发表于 Hepatol Int，IF=5.102）

PU-1875

不同保养方案对贝克曼 AU5821 全自动生化分析仪电解质

胡帅、何仁栋
川北医学院附属医院

目的 探讨两种不同保养方案对贝克曼 AU5821 全自动生化分析仪电解质分析紧密度以及电极稳定性和使用寿命的影响。
方法 采用两个不同方案对贝克曼 AU5821 全自动生化分析仪电解质模块进行日常维护保养，收集不同浓度血浆样本重复测定，评估批内及批间紧密度，同时观察电极的稳定性和使用寿命。
结果 本研究发现采用维护保养方案一的情况下，钾、钠和氯三个项目的批内及批间紧密度分别为 0.789，0.677，0.664 和 0.800，0.684，0.674，均优于方案二（0.791，0.681，0.671 和 0.84，0.718，0.724）。同时采用维护保养方案一的情况下，钾、钠和氯三个项目校准结果的均数和变异系数分别为 56.49，54.34，52.36 和 0.50，0.50，0.67，均优于方案二（51.46，50.63，48.64 和 1.36，1.07，1.70）。并且电极使用寿命（方案一：10 个月左右，方案二：6 个月左右）。
结论 在实际使用贝克曼 AU5821 全自动生化分析仪的过程中，应当根据实验室具体情况建立最佳的日常维护保养方案从而保障检验过程的高效，保证检验结果的精确。

PU-1876

家兔急性肠系膜缺血模型血清髓过氧化物酶活性变化

雷燕、唐伟、胡帅、王黎、郭斌
川北医学院附属医院

目的 观察家兔急性肠系膜缺血(Acute mesenteric ischemia，AMI)模型血清中髓过氧化物酶(myeloperoxidase，MPO) 活性变化与 AMI 组织病理学和影像学评分之间的相关性，探讨 MPO 活性在 AMI 疾病病程中作为实验室诊断指标的可能性。
方法 选用 3 个月左右月龄新西兰兔 21 只，随机分为对照组、假手术组、缺血 0.5h 组、1h 组、2h、4h 和 6h。采用手术结扎肠系膜上动脉根部制备 AMI 模型，小肠和盲肠放回腹腔，按标准程序缝合手术切口。在各规定时间点进行 CT 扫描、采血及切取肠组织，分别进 AMI 的影像学评分、HE 染色病理组织学 Park/Chiu 评分，检测血清 MPO 活性。
结果 与对照组和假手术组比较，兔 AMI 模型组各时相血清中 MPO 活性逐渐升高(P<0.05); 缺血组血浆 MPO 值与肠组织缺血损伤的病理学评分呈正相关（相关系数 R 为 0.76，P<0.05）；缺血组血浆 MPO 值与与肠道缺血损伤的 CT 影像学评分呈正相关（相关系数 R 为 0.79, P<0.05）。
结论 随着 AMI 兔模型缺血时间延长和缺血损伤的肠组织 Park/Chiu 评分和影像学评分增加，血清中 MPO 活性也逐渐增加，血清 MPO 活性的检测可以作为一个早期的 AMI 疾病的实验室诊断标志物之一。

PU-1877

尿 NGAL 与血 CysC 在系统性红斑狼疮肾损伤中的诊断价值

李海英
湖南中医药大学第一附属医院

目的 探讨尿中性粒细胞明胶酶相关脂质运载蛋白（uNGAL）和血清胱抑素 C（CysC）对系统性红斑狼疮肾脏病变的早期诊断价值及临床意义。
方法 收集 103 例 SLE 患者，据尿白蛋白/肌酐比（ACR）分成 3 组，正常白蛋白尿组（NA）33 例，ACR<30mg/mg；微量白蛋白尿组（MA）36 例，ARC 30~300mg/mg；大量白蛋白尿组（CA）34 例，ACR≥300mg/mg。同时选取 30 例健康体检者作为健康对照组（NC）。留取血及尿液标本，用乳胶增强免疫比浊法测 uNGAL，用免疫比浊法测血清 CysC。
结果 SLE 患者的 uNGAL 和血清 CysC 水平，除 NA 组与 NC 组之间无差异（P>0.05），其他各组间两指标的差异均有统计学意义（P<0.01），且 CA 组的 uNGAL 和血清 CysC 均明显高于 MA 组（0.85±0.38 vs 0.47±0.29，P<0.01；2.54±1.59 vs 1.44±0.51， P<0.01）；诊断微量白蛋白尿 SLE 时，uNGAL 和血清 CysC 的 AUCROC 分别为 0.54、0.65，特异度和敏感度分别为 19.9%和 73.5%，39.1%和 100.0%；判断大量白蛋白尿 SLE 时，uNGAL 和血清 CysC 的 AUCROC 分别为 0.89、0.85，特异度和敏感度分别为 74.3%和 100.0%，60.4%和 90.9%。
结论 uNGAL 和血清 CysC 在 SLE 患者肾脏病变的早期诊断与病情监测中均具有重要意义。其中，CysC 对早期诊断更灵敏，而 NGAL 更利于病情监测。

甘胆酸检测试剂盒的性能验证

部小霞[1]、龚俊[2]
1. 中日友好医院
2. 北京九强生物技术有限公司

目的 验证北京九强生物技术股份有限公司甘胆酸检测试剂盒的性能。
方法 根据厂家的说明书和技术参数在 HITACHI 7180 上进行了重复性、室内总不精密度、线性、正确度（回收实验）、特异性等实验，并检测了 200 例体检样本以验证厂家的参考范围。
结果 该试剂重复性、室内总不精密度的测值在 5%左右。线性范围为 1.0-40 μg/ml。试剂对甘胆酸纯品的回收率为 90%-100%。特异性方面 ，甘氨脱氧胆酸和胆酸钠对九强试剂的干扰率分别为 18.60%和 61.17%。检测 200 例体检样本，九强试剂检测均值为 0.57 μg/ml，有 3 例样本测值大于参考范围 1.5 μg/ml。
结论 北京九强生物甘胆酸试剂盒性能与说明书一致，基本能满足临床检测需求

PU-1879

脑脊液外泌体中 miR-21 诊断神经胶质瘤的价值初探

朱迎星
徐州医科大学附属医院

目的 探讨脑脊液外泌体 miR-21 检测对神经胶质瘤的诊断价值。
方法 选择 2017 年 1 月至 2020 年 1 月本院收治的神经胶质瘤患者 60 例为观察组,选择同期于本院健康体检者 60 例为对照组. 使用 Exoquick 试剂盒提取新鲜脑脊液中的外泌体。通过透射电子显微镜（transmission electron microscope，TEM）、蛋白质印迹法对提取的外泌体进行形态学及蛋白

标志物鉴定。用 TRIZOL 法从外泌体中提取总 RNA，实时荧光定量 PCR 检测 miR-21 的表达水平并对结果进行统计分析。
结果 蛋白质印迹法检测到外泌体标志蛋白 CD63，CD81，TSG101，透射电子显微镜下见到多个直径为 40-120nm、内含低电子密度物的囊泡，表明 Exoquick 试剂盒成功提取到脑脊液外泌体。实时荧光定量 PCR 结果表明神经胶质瘤患者脑脊液外泌体中 miR-21 的相对表达量明显高于健康体检者(P＜0.05)，其诊断神经胶质瘤患者灵敏度为 83％,特异度为 87％。
结论 脑脊液外泌体 miR-21 在神经胶质瘤患者中的表达显著上调，有望为神经胶质瘤诊断的潜在的新的标志物。

PU-1880

STAT 对人胃癌细胞凋亡的影响

童书青
山东第一医科大学附属省立医院

目的 信号传导子与转录激活子 (Signal.transducers-and-activators-of transcription ,STAT)是一种存在于细胞浆中与酪氨酸磷酸化信号通道相偶联的双功能蛋白，并与肿瘤的增殖、凋亡、侵袭、转移、血管生成和免疫逃逸等密切相关，被看作是肿瘤治疗的潜在靶点。
本文章研究 siRNA 干扰 STAT 基因表达后对人胃癌细胞株凋亡的影响。
方法 1. 设计并合成两个 STAT-siRNA 片段，经脂质体介导分别转染胃癌细胞株。
2. Western blot 及流式细胞术检测 STAT-siRNA 对细胞凋亡的影响。
结果 1. Western blot 结果显示，RNA 干扰下调细胞中 STAT 表达后，影响凋亡相关因子的表达，与 si-NC 转染对照组相比差异有统计学意义。
2. 流式细胞术结果显示，RNA 干扰下调细胞中 STAT 表达后，凋亡率增加，与 si-NC 转染对照组相比差异有统计学意义。
结论 1. siRNA 干扰沉默 STAT 在胃癌细胞中的表达后可促进胃癌细胞的凋亡。
2. 提示 STAT 可能是胃癌治疗的潜在靶点之一。

PU-1881

线性和非线性定量在同位素稀释质谱法中应用的比较

马妍慧
上海交通大学医学院附属新华医院

目的 同位素稀释质谱法被越来越多的临床实验室用于高通量复杂成分的定量分析。多数时候采用具有线性响应函数用于制作校准和/或标准曲线，但同位素稀释方法有时候表现为非线性响应曲线。
方法 实验室建立的同位素稀释质谱法检测伊立替康及其三种主要代谢产物，血清样品制备包括蛋白质沉淀、氮吹后有机溶剂复溶。在 ABSciex API 3200 上进行分析，使用 C18 反相柱梯度洗脱，总运行时间为 9 分钟，正离子模式下的电喷雾电离和多反应监测用于质谱分析。稳定同位素标记内标为：CPT-11 D10、SN-38 D3、SN-38G D3 和 APC D3。目前大多数同位素稀释的校准，或通过使用具有显著不同分子量的内标来消除非线性，或经验性采用多项式拟合以提高准确度。在这里我们利用伊立替康及其代谢的同位素稀释定量结果作为数据，应用线性函数、二次函数、三次函数和新的线性最小二乘法 Padé [1,1]近似拟合分析，比较四种拟合方法对三种浓度 QC 样本结果的偏差。
结果 CPT-11，SN-38G 和 APC 在 4.6~4.7 分钟出现洗脱峰；SN-38 在~5.2 分钟时出现洗脱峰。此外，我们发现 CPT-11 D10 中存在低含量的 SN-38 杂质（在 SN-38 D3 中含量较低），这导致了低

浓度时分析物定量的问题。初步实验中没有发现关于残留效应、精度、准确性和基质效应的重大问题。
结论 结果适合线性标准曲线时，优先推荐应用线性；非线性校准曲线时，使用三参数有理函数，y = （a0 + a1x）/（1- a2x）此功能一定程度上可以消除同位素稀释分析中不必要的误差源。

PU-1882

西门子 BNII 特定蛋白分析仪测定 ASO 的分析性能验证与评价

代蓉蓉
昆明医科大学第一附属医院

目的 验证和评价西门子 BNII 特定蛋白分析仪测定抗链球菌溶血素 O(ASO)的分析性能。
方法 依据美国临床实验室标准化组织(CLSI) 文件和科室制定的相关文件的实验方案，分析西门子 BNII 特定蛋白分析仪测定 ASO 的精密度、正确度、携带污染率、线性及可报告范围,对结果与质量标准比较。
结果 批内精密度 CV 分别为 2.9% 、2.8% ，符合判断标准≤6.3% 。批间精密度 CV 分别为 3.94% 、2.70% ，符合判断标准≤8.3% 。正确度:平均偏倚为 4.03%,符合判断标准≤12.5% 。携带污染率为 0.24% 。线性: Y = 0.9834X －1.704 4，a = 0.9834，r2 = 0.99，实测线性范 52.8～1500 IU /ml。
结论 仪器分析性能验证是为保证检验结果的准确性。西门子 BNII 特定蛋白分析仪测定 ASO 的精密度、正确度、携带污染率、线性及可报告范围，结果与质量目标比较，均符合要求，可用于临床标本检测。

PU-1883

分析肿瘤标志物检测对高龄肝硬化患者的临床诊断价值

李玲
湖北省中西医结合医院

目的 分析肿瘤标志物检测对高龄旰硬化串者的临床诊断价值。
方法 选取 2019 年 6 月至 2020 年 6 月期间我院收治的 76 例高龄肝硬化患者作为研究组，另 76 例健康体检患者作为对照组。纳入标准:患者及患者家属均签署研究知情同意书;年龄均>60 岁。排除标准:年龄<60 岁;伴有合并心肝肾等重大疾病及其他恶性肿瘤。所有研究对象均在清晨进行空腹静脉采血 5ml，采用全门子 XP 全自动化学发光免疫分析仪，由日立 7600 全自动生化分析仪进行测量全部操作均严格按照操作规程流程执行。记录并对比两组串者血清中的 AEP、 CEA、CA125、CA199 水平和阳性检出率，按照肝功能分级，将研究组患者分为 A、B、C 三级，对比不同程度肝硬化患者血清中的 AEP、CEA、CA125、CA199 水平。
结果 研究组患者血清中的 AEP、CEA、CA125、CA199 水平及阳性检出率明显高于对照组，对比差异有统计学意义(P<0.05);按肝功能分级:B、C 级的肿瘤标志物水平均明显高于 A 级;C 级的 AEP、CA125、CA199 水平高于 B 级，以上比差异无统计学意义(P>0.05)。
结论 血清 AFP、CEA、CA125、CA199 联合检测高龄肝硬化有较高的敏感性和特异性，肿瘤标志物可作为肝硬化病情程度的诊断对高龄肝硬化串者具有较高的诊断价值，值得临床推广和应用。
关键词肿瘤标志物检测;肝硬化;高龄患者;临床诊断价值

PU-1884

不同因素及疾病与 Lp(a)的相关性分析

张文娟
中南大学湘雅二医院

目的 调查中南大学湘雅二医院住院患者血清脂蛋白（a）水平(Lp(a))，分析 Lp(a)与性别、年龄、吸烟、饮酒、不同疾病、其他血脂指标的相关性。
方法 从湘雅二医院住院患者中选取 2013-2020 年来院就诊的 7395 例患者，统计血脂 8 项数据及其它病历资料，使用 SSPS 24.0 软件统计分析患者 Lp（a）水平变化与临床指标的相关性。
结果 Lp（a）在各个年龄段的差异具有统计学意义（P＜0.05），青年组＜中年组＜老年组。吸烟组 Lp（a）高于不吸烟组，差异具有统计学意义（P＜0.05）。各疾病组数据比较显示，AS 组以及 AS 合并其它疾病的患者与对照组的比较，Lp（a）的差异均有统计学意义，发生心梗和脑卒中的患者与对照组的比较，差异均有统计学意义，糖尿病组、高血压组与对照组的差异无统计学意义。Lp(a)在血脂指标中与 ApoB、CHO、HDL-C、LDL-C 的相关性，相关系数（95%CI）分别为 0.179（0.130~0.227）、0.132（0.082~0.181）、0.143（0.094~0.192）、0.143（0.094~0.192）。线性回归分析显示校正年龄和性别后，Lp(a)水平与年龄（β=0.101，P＜0.001）、是否吸烟（β=0.042，P=0.001）、AS（β=0.086，P＜0.001）、心梗（β=0.119，P＜0.001）有相关性。与性别、饮酒、糖尿病、高血压、脑卒中无相关性。二元逻辑回归分析显示，AS 的影响因素包括 Lp(a)、性别、年龄、糖尿病、高血压和是否吸烟，χ2＝384.1，P＜0.001；心梗的影响因素为 Lp(a)、LDL-C、Apo-A1 、年龄、性别、高血压和糖尿病，χ2＝404.8，P＜0.001。
结论 Lp(a)与 APO-B、CHO、HDL-C、LDL-C 具有相关性。Lp(a)水平与 AS、心梗和 CKD 有相关。Lp(a)水平与年龄、吸烟具有相关性，需要进一步研究证实。

PU-1885

谷胱甘肽还原酶在早期肝损伤诊断中的应用价值

赵瑾超、杨进波
襄阳市第一人民医院

目的 研究检测血清谷胱甘肽还原酶（GR）水平在早期肝损伤诊断中的应用价值。
方法 选取 210 例各类急性病毒性肝炎的患者作为实验组,另选取体检中心健康者 280 例作为对照组,检测两组研究对象的血清丙氨酸氨基转移酶（ALT）、门冬氨酸氨基转移酶（AST）、碱性磷酸酶（ALP）、GR 以及总胆红素（TBIL）水平。采用组间比较和分层比较评估 GR 水平与早期肝损伤的相关性和诊断效能。
结果 实验组 ALT、AST、TBIL、ALP、GR 水平均显著高于对照组,差异具有统计学意义（P<0.05）。对 ALT、AST、TBIL、ALP 和 GR 进行受试者工作特征（ROC）曲线分析可知，血清 GR 活性水平对早期肝损伤的诊断界值为 61.5 U/L,曲线下面积（AUC）为 0.882[95%CI=（0.845, 0.919）, P<0.05],灵敏度为 78.6%,特异度为 89.3%。将实验组研究对象按 GR 活性水平四分位数间距（Q）进行分层:ALT、AST、TBIL、ALP 活性水平均随 GR 活性水平的升高而升高（P<0.05），且升高时间晚于 GR。
结论 血清 GR 活性水平升高与早期肝损伤显著相关,检测血清 GR 活性水平可作为辅助诊断、治疗各类肝病、评估肝损伤程度的方法。

PU-1886

肝硬化患者 IMA 与 CHE 浓度的改变及相关性研究

宋能
湖北省中西医结合医院（湖北省职业病医院）

目的 研究肝硬化患者 IMA 与 CHE 浓度的改变及相关性。
方法 以我院消化内科病历资料完整的乙肝肝硬化患者 46 例为研究对象，其中男性 25 例，女性 21 例，年龄 46.1±10.3 岁。选择同期健康体检者 35 例（无任何肿瘤既往史，无自身免疫性疾病、肝脏疾病、心脑血管疾病，无感染等）。两组静脉采血对比测试研究两组之间 IMA 与 CHE 血清浓度差异，再进一步验证 IMA 与 CHE 在肝硬化进程中的变化规律，通过相关性检验分析其相关关系。
结果 病例组与健康组两组人群在 CHE 与 IMA 的血清含量上有统计学差异，患者组的血清 CHE 值平均为（3.67±1.41）KU/L，明显低于健康对照组（5.64±1.13）KU/L，患者组的血清 IMA 值平均为（109.1 ±21.5）KU/L，明显低于健康对照组（54.9±11.4）KU/L（$p<0.05$）。患者血清中 CHE 含量（3.67±1.41）KU/L 与健康组（5.64±1.13）KU/L 比较患者组 CHE 值明显升高（$p<0.05$）。通过散点图可知，随着 CHE 水平降低，血清 IMA 水平逐渐升高，可见两者在肝硬化进程中 CHE 与 IMA 含量的改变呈负相关关系，经过相关分析可知 R2＝0.98。
结论 肝硬化患者血清 IMA 与 CHE 含量会随着疾病的发生发展而分别升高和降低，同时两者的升高和降低程线性负相关。

PU-1887

长沙地区健康人群血浆血氨水平变化及参考区间的建立

张文娟
中南大学湘雅二医院

目的 对湖南省长沙地区健康人群血氨水平进行调查，并初步建立参考区间。
方法 选取 2021 年 4-5 月在我院健康管理中心进行体检的健康者 228 例（男 111 例，女 117 例）。采用德国 Roche Diagnostics GmbH 公司生产的血氨检测试剂盒（比色法）在罗氏 cobas c702 全自动生化分析仪上进行检测。所得检测结果剔除离群值后，按照性别与年龄进行分组，采用 SPSS 26.0 软件对血氨检测结果进行统计学分析。
结果 各个检测时间的血氨水平差异有统计学意义（$P<0.05$），男性与女性的 1 小时、2 小时、3 小时血氨水平差异均有统计学意义（$P<0.05$），但各年龄段的血氨水平差异均无统计学意义（$P>0.05$）。各个检测时间、不同性别的血氨水平均呈正态分布，故需按照检测时间、性别，取双侧 95%（X±1.96S）的结果为参考区间，分别建立参考区间。长沙地区健康男性 1h 血氨参考区间为 15.8~47.5μmol/L，健康女性 1h 血氨参考区间为 12.4~39.6μmol/L，健康男性 2h 血氨参考区间为 22.3~56.5μmol/L，健康女性 2h 血氨参考区间为 19.1~48.0μmol/L，健康男性 3h 血氨参考区间为 27.9~65.7μmol/L，健康女性 3h 血氨参考区间为 24.6~56.7μmol/L。
结论 长沙地区不同检测时间男性与女性的血氨水平存在差异，应按照检测时间和性别初步建立适合该地区健康人群血氨的参考区间，为临床诊断提供更好的相关依据。

Adenosine deaminase activity associate with arthritis, new-rash and hypocomplementaemia symptoms in systemic lupus erythematosus

Zhao-wei Gao、Ke Dong
Tangdu hospital, Air Force Medical University

Aim Serum adenosine deaminase (ADA) activity was increased in SLE patients and positively correlated with SLE disease activity, which suggested that ADA might be involved in SLE development. In order to further clarify the clinical significance of ADA activity in SLE patients, we investigated the relationship between serum ADA activity and clinical characteristics of SLE patients.
Methods A total of 120 SLE patients were included. The relationship between serum ADA activity, laboratory indexes and 14 clinical symptoms were analyzed.
Results The results showed that serum ADA activity was significantly increased in SLE patients with arthritis, new-rash or hypocomplementaemia compared with patients without these symptoms ($p = 0.003$; $p = 0.016$; $p = 0.002$). In contrast, there were no significant differences between SLE patients with or without the other symptoms ($p > 0.05$). Based on Spearman's rank correlation analysis, serum ADA activity was significantly negative correlated with complement C3 and C4 ($p < 0.01$), while was not correlated with the other laboratory indexes in SLE patients.
Conclusion These findings suggested that ADA correlated with arthritis, new-rash and hypocomplementaemia in SLE patients, which suggested that ADA activity detection may act as laboratory markers for the clinical subtypes of SLE patients.

多功能介孔中空 ZrO2 包覆 NIR-PLNPs 用于磁-光双模态成像及近红外长余辉发光激活的化疗-光动力学协同肿瘤治疗

吴伯岳
天津医科大学

目的 发展一种基于空心二氧化锆基质的具有多模态成像能力的长余辉药物载体的构建针对肿瘤组织的活体多模态成像、可控药物释放以及化疗-光动力学联合治疗的肿瘤诊疗平台。
方法 通过层层自组装方式合成 NIR-PLNPs@ZrO2，并通过特异性共价结合、静电结合等方式最终合成 NIR-PLNPs@ZrO2-Ce6-Gd。随后评价材料的药物负载与释放能力、光动力学治疗能力、磁-光双模态成像能力、细胞负载能力、体内化疗/光动力学联合治疗效果以及材料生物毒性。
结果 在近红外区发光的上转换-长余辉纳米颗粒（NIR-PLNPs）基础上，制备以 NIR-PLNPs 为核心的中空二氧化锆纳米颗粒（NIR-PLNPs@ZrO2），并通过光致热效应，构建高载药量可控释放的纳米载药系统；在此基础上，在其表面修饰光敏剂 Ce6，实现化疗与光动力学治疗的联合。在 NIR-PLNPs@ZrO2-Ce6 基础上，进一步提高活体示踪的灵敏度和空间分辨率。通过结合优势互补的磁共振成像探针，构建长余辉发光/磁共振多模态成像纳米诊疗系统（NIR-PLNPs@ZrO2-Ce6-Gd），用于高灵敏度和空间分辨率的光学和磁共振成像示踪以及针对肿瘤的化疗/光动力学联合治疗。该体系的构建，旨在解决传统长余辉纳米颗粒不适于作为药物传输载体的缺陷，同时实现活体针对肿瘤组织的高灵敏度和空间分辨率的多模态成像示踪及靶向、可控药物传递。
结论 建立了以近红外长余辉纳米颗粒为核心并基于空心二氧化锆基质的具有多模态成像能力的药物载体的构建针对肿瘤组织的活体多模态成像、可控药物释放以及化疗-光动力学联合治疗的肿瘤诊疗平台。

PU-1890

人血清 CEA 发光免疫分析方法的建立及性能评价

杨进波
襄阳市第一人民医院

本研究建立了一种人血清 CEA 发光免疫分析方法并进行了性能评价。根据生物学上抗原与抗体会发生特异性反应的原理，将 CEA 捕获抗体包被在羧基磁珠表面，与血清中的 CEA 抗原以及吖啶酯标记的 CEA 抗体反应形成双抗夹心“三明治”免疫复合物，清洗复合物后，加入预激发液和激发液，用化学发光免疫分析仪检测反应过程中的光强，四参数方程拟合后计算出样本中 CEA 浓度，并对线性范围、准确度、精密度及与雅培试剂盒相关性进行了性能评估。本方法空白限为 0.2 ng/mL，线性范围为 0.4~1000 ng/mL，批内精密度为 5.12%~5.17%，批间精密度为 5.52%~5.60%，与雅培 CEA 检测试剂盒测定结果拟合方程为 Y=1.0046X+0.0734，相关系数 r=0.9949。本方法各项性能指标均能满足医院检验需求，与进口试剂相比有很好的相关性，可用于医院临床检验。

PU-1891

血清铁、铁蛋白和转铁蛋白与妊娠期糖尿病的相关性研究

黎青
江苏省人民医院（南京医科大学第一附属医院）

目的 探讨妊娠期糖尿病（GDM）患者与血清铁（serum iron，SI）、血清铁蛋白（serum ferritin，SF）和转铁蛋白（transferrin，TRF）水平变化的关系及临床意义。
方法 选择 2019 年 1 月～2019 年 8 月该院孕周为 24～28 周妊娠期糖尿病孕妇 145 例作为妊娠期糖尿病组（GDM 组），血糖正常孕妇 170 例作为对照组。分别测定两组孕妇 SI、SF、TRF、Hb、MCV、MCH 和 MCHC 水平并进行比较。
结果 与对照组孕妇相比，GDM 组孕妇 SI、SF、TRF 水平均显著升高（P<0.05），差异有统计学意义；而两组孕妇 Hb、MCV、MCH 和 MCHC 比较差异均无统计学意义（P>0.05）；SI、SF 及 TRF 与空腹血糖、1h 血糖、2h 血糖均呈正相关（P<0.05）；进行单因素 Logistic 回归分析，当显著性水平 α=0.05 时，SI、SF 和 TRF 水平与 GDM 的发生均有统计学意义（P<0.01）。
结论 孕妇体内铁储存水平的升高与妊娠期糖尿病的发生密切相关。

PU-1892

The prognostic value of serum high-density lipoprotein in adult hemophagocytic lymphohistiocytosis

军 周
First affiliated Hospital of Nanjing Medical University / Jiangsu Provincial people's Hospital

Objective To investigate the prognostic value of absolute lymphocyte count (ALC) in adult patients with hemophagocytic lymphohistiocytosis (HLH).
Methods The clinical and laboratory data of 171 newly diagnosed adult HLH patients from January 2012 to July 2018 were retrospectively analyzed. First, ROC curve was used to determine the optimal threshold of ALC. Second, the difference between the low ALC group (≤0.51×10^9/L) and the high ALC group (＞0.51×10^9/L) was analyzed; Third, univariate and multivariate analysis were conducted to verify ALC was an independent prognostic

factors. Finally, K-M survival curve was used to verify whether ALC was related to the survival time.

Results ①The optimal threshold of ALC was 0.51×10^9/L, the curve area was 0.740(0.668-0.804). Compared with the low ALC group; There is a significant difference between low ALC patients and high ALC patients in the levels of leukocyte, neutrophil, hemoglobin, platelet, urea nitrogen and creatinine (all P values <0.05). ②Multivariate analysis showed that ALC, platelets and urea nitrogen can be used as independent indicators to predict the prognosis of patients. ③ K-M curve showed that to patients with HLH and its subgroups, there is a significant difference in survival time between low ALC patients and high ALC patients.

Conclusion ALC is an independent prognostic factor for adult HLH patients.

降钙素原对细菌感染的临床意义研究

张翠英
吉林金域医学检验所有限公司

目的 感染是造成人类死亡的最重要因素。约占人类每年总死亡率的 25.5%，尽管临床监测感染手段众多，但仍缺乏敏感而特异的检测指标。而降钙素原克服了上述监测手段的缺点，近年在临床感染诊断、预后判断上应用越来越广泛，本文就降钙素原对细菌感染的临床意义进行研究，旨在为临床提供参考依据。

方法 通过查阅大量文献，及了解各大医疗机构及第三方医检机构对降钙素原的应用程度、频次及效果，分析降钙素原的临床意义。

结果 1.细菌感染的判断在细菌引起的全身性炎性反应时，血清 PCT 浓度会明显增高，但在病毒感染、自身免疫性疾病和器官移植排斥反应等炎性反应时，血清 PCT 浓度仅维持低水平，提示血清 PCT 浓度可以鉴别诊断细菌性或非细菌性炎症。

2.感染程度的判断 感染组织的范围和严重程度与血浆 PCT 浓度呈正相关。

3. 指导抗生素选择及调整

4.治疗效果的评定血 PCT 浓度是评定疗效的灵敏指标，严重细菌感染病人在抗菌治疗后，血 PCT 浓度迅速降低或恢复正常，临床症状明显好转。

结论 PCT 是临床应用价值很高的诊断感染状态的微生物学指标。虽然血细胞分析可反应患者细菌感染的情况，但在创伤、应激时也会升高；血菌培养只在大量细菌入血时才能获阳性结果；急性期反应蛋白在严重细菌感染时表现为血浆浓度明显升高，但手术、病毒感染、局部细菌感染及非感染因素下也升高，升高水平与感染严重程度不一致，受激素影响。因此，降钙素原可成为细菌感染的新的预防及诊断途径。

PU-1894

Differential Performance of Neutrophil Gelatinase-associated Lipocalin and Cystatin C to Predict Ischemic Stroke

Ling Peng
Departmant of Clinical Laboratory, Mianyang Central Hospital, School of Medicine, University of Electronic Science and Technology of China

Objectiv Both cystatin C (CysC) and neutrophil gelatinase-associated lipocalin (NGAL) are markers of kidney injury and may also be marker candidates for neuroinflammation. The aim of this article is to explore the relationship between kidney injury and ischemic stroke (IS).
Methods 498 IS patients were enrolled from March 2017 to October 2020, and 173 IS-related disease control (DC) patients and 293 healthy control (HC) subjects were randomly selected. We collected serum kidney function markers (including NGAL, Cre, Ure, CysC and eGFR)，analyzed the relationship between the levels of serum kidney function markers and the occurrence of IS.Then all IS patients were divided into IS patients with normal kidney function (NKF-IS, n=408) and IS patients with CKD (CKD-IS, n=90),observed the difference performanceof renal function markers between the NKF-IS and CKD-IS.
Results Except Ure ($\chi2=3.862$, $P=0.145$), there were statistical differences in the levels of Cre ($\chi2=36.695$, $P<0.001$), CysC ($\chi2=46.0304$, $P<0.001$), eGFR $\chi2=34.072$, $P<0.001$) and NGAL ($\chi2=153.953$, $P<0.001$) among those three groups.By multiple comparisons,the NGAL level of patients with first-onset IS when they were admitted to the hospital,was higher than that of both HC group ($z=5.964$, $P<0.001$) and DC ($z=12.191$, $P<0.001$); The level of CysC of them was higher than that of HC group ($z=5.762$, $P<0.001$), and was the similar with that of DC group ($z=1.663$, $P=0.289$). The partial correlation coefficient between NGAL and the occurrence of IS was the highest ($rp=0.341$, $P<0.001$) in IS patients with normal kidney function(NKF-IS), and significantly higher than the partial correlation coefficient of other indicators except coronary heart disease ($z=4.812$-7.622, all $P<0.001$). However, the partial correlation coefficient between CysC and IS was the highest ($rp=0.460$) , $P<0.001$) in IS patients with chronic kidney disease (CKD-IS), and significantly higher than the partial correlation coefficient of other indicators except eGFR ($z=3.504$-6.920, all $P<0.001$). When HC, DC, and no-IS were used as references, NGAL had the best predictive performance for IS, with AUC of 0.761 ($z=15.347$, $P<0.001$). 0.711 ($z=10.010$, $P<0.001$) and 0.749 ($z=14.821$, $P<0.001$), respectively, by ROC analysis. For patients with normal kidney function, only NGAL was a risk factor for IS [OR(95%CI)=6.54(3.75,11.41)], and had the certain predictive performance AUC=0.734($z=12.928$, $P<0.001$). However, for CKD patients, CysC has better predictive performance for IS occurrence AUC=0.835 ($z=11.343$, $P<0.001$) and risk assessment ability [OR(95%CI)=5.97(2.45, 14.56)] than NGAL.
Conclusion This study found that the level of NGAL in IS patients was higher than that of HC and DC, while the levels of the other four renal function markers were only higher than HC. It indicates that serum NGAL level may be increased in both kidney function impairment and IS occurrence. This may also indicate that the risk of IS in patients with kidney injury is extremely high, and the patients with IS may have renal function impairment for a long time.IS is related to kidney injury and neuroinflammation. NGAL and CysC are suitable for IS prediction in patients with normal kidney function and CKD,respectively.Researchers should pay attention to the changes of NGAL and CysC for the prevention and treatment of stroke in these two types of patients, respectively.

PU-1895

原发性肝癌患者血清中 AFP、DCP、AFP-L3%水平分析

袁丹[1]、田小军[2]
1. 四川省科学城医院
2. 绵阳市中心医院

目的 探讨原发性肝癌患者血清甲胎蛋白（AFP），异常凝血酶原（DCP）和甲胎蛋白异质体比率（AFP-L3%）的变化情况。
方法 测定 62 例健康体检者、28 例非肝癌肝脏疾病患者、36 例肝癌患者血清中 AFP、DCP 和 AFP-L3%的水平。
结果 肝癌患者血清 AFP(578.65±605.29,p=0.000),DCP(373.85～783.45, p=0.000) 和 AFP-L3%(7.68±2.62, p=0.000)水平均显著高于健康体检组和非肝癌患者组。ROC 曲线分析显示，AFP、DCP 和 AFP-L3%的最佳临界点分别为 30.90ng/ml、49.97ng/ml 和 5.05%，其 AUC 分别为 0.777、0.882 和 0.782。三项联合检测 AUC 为 0.956，灵敏度 97.2%，特异性 79.1%。
结论 单项检测 DCP 较 AFP 与 AFP-L3%更具有诊断敏感性，联合检测更有利于评估肝癌的诊断效能。

PU-1896

Cys-C 与尿 RBP 联合检测对糖尿病早期肾损伤的诊断价值研究

高科、李如飞
重庆市重钢总医院

目的 分析胱抑素 C（Cys-C）与尿视黄醇结合蛋白（RBP）联合检测在基层医院糖尿病患者早期肾损伤中的诊断价值。
方法 选择 120 例 2019 年 6 月-2020 年 12 月我院收治的糖尿病患者作为病例组，根据尿微量白蛋白排泄率（UAER）分为单纯糖尿病组（UAER<30mg/24h）65 例和糖尿病肾损伤组（30mg/24h≤UAER<300mg/24h）55 例；同时，选择同期健康体检者 60 例作为对照组。检测空腹血标本 Cys-C 和晨尿 RBP，比较各组 Cys-C、尿 RBP 表达水平，分析 Cys-C、尿 RBP 单一和联合检测的阳性率、灵敏度、特异性。Cys-C 阳性临界值为 1.5mg/L、RBP 阳性临界值为 3mg/L。采用 SPSS 17.0 软件对数据进行统计学处理。
结果 糖尿病肾损伤组 Cys-C 2.65±0.52mg/L，尿 RBP 1.65±0.35mg/L；单纯糖尿病组 Cys-C 0.98±0.15mg/L，尿 RBP 0.51±0.16mg/L；对照组 Cys-C 0.62±0.12mg/L，尿 RBP 0.22±0.11mg/L。糖尿病肾损伤组 Cys-C、尿 RBP 水平明显高于单纯糖尿病组，单纯糖尿病组明显高于对照组，差异均具有统计学意义（P<0.05）。糖尿病肾损伤组 Cys-C 阳性率 60%，灵敏度 58.25%，特异性 69.3%；尿 RBP 阳性率 63.64%，灵敏度 55.36%，特异性 68.5%；Cys-C 与尿 RBP 联合检测阳性率 94.55%，灵敏度 82.63%，特异性 90.16% 。Cys-C 与尿 RBP 联合指标的阳性率、灵敏度、特异性均高于单一指标，差异具有统计学意义（P<0.05），说明联合指标具有较高诊断价值。
结论 糖尿病肾病是糖尿病最主要的并发症之一，在糖尿病患者中发病率约占 40%。Cys-C 是一种反映肾小球滤过率变化的理想内源性标志物，能更早反应肾小球滤过功能，RBP 是反映肾小管重吸收功能最直接的指标，具有较理想的时效性。血 Cys-C 和尿 RBP 指标检测在中小型医院更易开展，可作为临床评估糖尿病早期肾损伤的理想指标。该研究结果显示，Cys-C 与 RBP 二者联合检测对中小型医院开展糖尿病患者早期肾损伤的预测具有重要的价值和临床意义。

PU-1897

补充维生素 D 对维生素 D 缺乏或不足的糖尿病及糖尿病前期患者糖稳态和胰岛功能的影响：系统综述和 Meta 分析

邹雨桐
中国医学科学院北京协和医院

目的 探讨补充维生素 D 对维生素 D 不足或缺乏的糖尿病和糖尿病前期患者糖稳态、胰岛功能及糖尿病进展的影响。
方法 采用 Medline、Embase、web of science、Cochrane 图书馆、OpenGrey、www.controlled-trials.com 等检索工具检索从最早的时间到 2020 年 5 月底的文献，辅以历史搜索的方式。纳入最初设计针对 25（OH）D<30 ng/mL 的糖尿病和糖尿病前期的随机对照试验。所有数据均根据 Cochrane 指南进行提取和分析，并根据 PRISMA 指南进行呈现。
结果 共有 27 篇文章（n=1932）纳入本研究，其质量参差不齐。在基线 25（OH）D<30 ng/mL 时，补充维生素 D 可显著改善糖尿病和糖尿病前期患者的 FBG、PPBG 和 QUICKI。影响大小分别为-3.36（-5.83，-0.89）、-14.72（-28.15，-1.29）和 0.02（0.01，0.03）。维生素 D 补充组从糖尿病前期到正常血糖状态的比例较高[1.60（1.19，2.17），p=0.002，n=564]，从糖尿病前期到糖尿病的比例较低[0.68（0.36，1.27），p=0.23，n=569]，且研究间异质性较低。补充维生素 D 对 BMI、腰围、HDL-C、LDL-C 和 CRP 也有积极影响。
结论 补充维生素 D 对 25（OH）D<30ng/mL 的糖尿病和糖尿病前期患者的短期糖稳态、胰岛素敏感性和疾病发展有一定改善，但仍需进一步研究以支持临床应用

PU-1898

西藏人群尿碘和血清碘状况评价：不再是缺碘地区

邹雨桐
中国医学科学院北京协和医院

背景 碘是合成甲状腺相关激素的一种重要微量元素，低碘或高碘状态均可导致甲状腺功能障碍。本研究旨在了解西藏人群碘营养状况。
方法 2016 年 9 月至 2018 年 8 月，选择西藏 3 个不同海拔地区 1499 名健康成人作为研究对象。采用电感耦合等离子体质谱法测定尿碘浓度（UICs）、校正 UICs 和血清碘浓度（SICs）。
结果 平均 UIC、校正 UIC 和 SIC 为 137.90μg/L，118.40μg/gCr 和 58.30μg/L。30.40%的受试者 UICs<100μg/L，63.00%的患者 UIC 在 100-300 之间 μg/L 和 9.60%的人 UICs>300μg/L。UIC、校正 UIC 与 SIC 的相关性良好（r>0.65，p<0.01）。SICs 较 UICs 稳定，与年龄、性别无关。临床甲状腺功能亢进、临床甲状腺功能减退、亚临床甲状腺功能亢进、亚临床甲状腺功能减退、TPO-Ab 阳性、Tg-Ab 阳性、二者均阳性的患病率分别为 0.50%、1.30%、1.70%和 17.90%、9.30%、6.50%、12.50%和 2.50%。几乎所有甲状腺疾病的患病率女性高于男性。
结论 根据世界卫生组织的标准，这项多中心横断面研究发现西藏成年人的碘状况是适量的。

PU-1899

维生素 D 和强直性脊柱炎相关性的研究

张萍
昆明市中医医院

目的 检测强直性脊柱炎（ankylosing spondylitis，AS）患者及健康对照组血清中 25(OH)D 水平，并与 AS 患者其他相关实验室指标进行相关性分析，探讨维生素 D 与强直性脊柱炎的相关性。
方法 收集浙江大学医学院附属邵逸夫医院 2013 年至 2017 年门诊或住院共 69 例血清 25(OH)D 数据，包括初诊 AS 患者 41 例，健康体检者 28 例，其他临床资料包括：年龄、性别、血沉（ESR）、C 反应蛋白（CRP）、类风湿因子（RF）、碱性磷酸酶（ALP）、Ca、P、HLA-B27 基因等指标。按年龄分组用 SPSS19.0 统计软件进行分析。
结果 AS 组和体检组的 25(OH)D 水平与性别和年龄均无显著差异（$p>0.05$）。AS 组和体检组的 25(OH)D 的分布情况具有显著差异（$Z=-4.167$，$p<0.001$），且 AS 组明显低于体检组。与体检组相比，AS 组的 25(OH)D 与 ESR，CRP，Ca，P，HLA-B27 基因均有显著差异（$p<0.05$），与 RF，ALP 无显著差异（$p>0.05$）。AS 组 HLA-B27 基因阳性率高达 63.4%，而健康体检者的 HLA-B27 基因阳性率为 3.5%。
结论 与体检组相比，AS 组 25(OH)D 水平显著降低，提示强直性脊柱炎可能与维生素 D 缺乏相关，但具体机制仍需进一步研究。我们研究也表明，除了 HLA-B27 基因外，强直性脊柱炎与 ESR，CRP 也有密切联系。

PU-1900

Logistic 回归模型在冠心病鉴别诊断中的临床价值

黄本林、王宁、朱星成
曲靖市第二人民医院

目的 探讨基于一般临床资料和常规实验室检查建立的 Logistic 回归模型在冠状动脉粥样硬化性心脏病鉴别诊断中的临床价值。
方法 选取 2019 年 3 月~2020 年 11 月以胸闷胸痛为主诉就诊的 253 例患者为研究对象，根据冠状动脉造影结果分为冠心病组和非冠心病组，回顾性分析这些患者的常规指标，建立诊断冠心病的 Logistic 回归模型，进一步探讨其在临床中的实际意义。
结果 多因素 Logistic 回归分析发现，体重指数、吸烟史、糖尿病史及高血压史是冠心病的独立危险因素。单核细胞/高密度脂蛋白胆固醇比值是预测冠心病的强烈独立危险因子。基于上述指标，建立预测冠心病的 Logistic 回归模型。受试者工作特征曲线和校准曲线显示模型具有较好的区分度（曲线下面积为 0.838[95%CI，0.790~0.857)]）和校准度(平均绝对误差为 0.017)。
结论 Logistic 回归模型在冠心病诊断中具有较好的鉴别和预测价值。

PU-1901

肌钙蛋白与非阻塞性冠状动脉疾病

赵若莲
昆明市中医医院

本文系统性总结了最新的非阻塞性冠状动脉疾病中肌钙蛋白增高的证据。通常肌钙蛋白的增高被认为表明出现了心肌损伤，在这一认识基础上而产生的一些未被证实的假说（例如肌钙蛋白仅来自于心肌）使我们要准确地解释肌钙蛋白增高变得困难。要全面理解心脏标志物的临床意义首先必

须了解心脏标志物释放入血的病理生理机制。我们尤其需要在病因学上区分影响心脏标志物合成与清除的各种心脏和非心脏混杂因素。心脏标志物的应用帮助我们更好地对患者进行危险分层及预后管理。临床中经常出现难以诊断的肌钙蛋白增高，我们的目标是进一步阐明其临床意义以有利于明确诊断和制定个体化治疗策略。

PU-1902

肺癌患者血清中肌酸激酶及 同工酶含量的分析

吴苑、吴琳露
中南大学湘雅三医院

目的 分析肺癌患者血清中肌酸激酶（CK)和肌酸激酶同工酶（CK-MB)的含量，为肺癌的辅助诊断和分型提供参考和帮助。
方法 收集 2021 年 1 月-4 月在中南大学湘雅三医院确诊为肺癌且未经抗肿瘤治疗的 124 例肺癌患者作为观察组，另选本院同期 20 例健康体检者作为对照组。采用活性法检测两组肌酸激酶（CK），采用活性法和质量法检测两组肌酸激酶同工酶（CK-MB)在血清中的含量。采用 Wilcoxn 秩和检验进行组间比较及不同病理类型间比较，采用 spearman 相关分析和回归分析评估活性法和质量法两种检测方法的相关性，计算不同检测项目灵敏度和特异度。
结果 1.活性法检测 CK 水平，观察组血清 CK 水平低于对照组，差异具有明显统计学意义（P<0.001）；活性法和质量法检测 CK-MB 水平，观察组和对照组差异无明显统计学意义。2.小细胞肺癌组、鳞癌组 CK 水平低于对照组，差异具有明显统计学意义（P<0.001），腺癌组和对照组差异无明显统计学意义。3.采用活性法和质量法检测 CK-MB 的相关系数为 0.9218，且在小细胞肺癌组中二者相关系数为 0.981，有很好的相关性，在鳞癌组、腺癌组中相关系数分别为 0.2288、0.0541，相关性低。
结论 肺癌患者血清 CK 明显降低，且与病理类型密切相关，肺癌患者 CK-MB 含量与健康者无明显差异，采用活性法检测时，鳞癌、腺癌患者血清中 CK-MB 的含量可能受到 CK-BB 的影响。

PU-1903

估算法和测量法在血清残余胆固醇评估中的比较分析

黄本林、王宁、朱星成
曲靖市第二人民医院

目的 探讨估算法与测量法检测血清残余胆固醇（RLP-C）的差异。
方法 表面活性剂清除法定量检测血清 RLP-C，再运用 Bland-Altman 法和 ICC 法评估 RLP-C 定量测定值与 Friedewald 方程估算值的一致性。
结果 Bland-Altman 法的结果显示：7.0%个体（70/996）位于 95%一致性界限外。相对于定量测定法，Friedewald 方程估算法的平均阳性偏倚为 0.2mmol/L [95%CI (0.18~0.23)]。ICC 法的结果显示，ICC=0.551 [95%CI，0.192~0.732)，P<0.001]。Friedewald 方程估算的 RLP-C 与 RLP-C 测量值存在正相关关系（r=0.4，P<0.001）。此外，随着 TG 及 RLP-Ce 浓度逐渐升高，估算值与测量值的差异越来越大，其平均阳性偏倚为 0.2mmol/L（P<0.001）。
结论 测量法与方程估算法一致性欠佳，在临床实践中能否替代使用有待进一步验证。

PU-1904

49 例 IgG4 相关性疾病的临床分析

郭利利
南京大学医学院附属鼓楼医院

目的 提高对 IgG4 相关性疾病(IgG4-related disease,IgG4-RD)的认识及诊治水平。
方法 分析就诊于南京鼓楼医院 49 例 IgG4-RLD 患者,收集并分析其基本临床特征、实验室检查、影像学检查、组织病理学检查、治疗与随访结果等资料。并使用 IgG4-RD 应答者指数评估疾病活动和损害。
结果 50 例患者中,男 36 例,女 23 例,平均年龄(59.1±9.12)岁,起病到诊断的中位时间为 10(1～120)个月。最常见的首发症状是颌下腺肿大 10 例(20.4%)、腹痛 9 例(18.4%)、眼睑肿物或水肿 9 例(18.4%)、黄疸 8 例(16.3%)。最常见的受累器官为颌下腺 30 例(61.2%),其次为淋巴结 23 例(46.9%)、泪腺 22 例(44.9%)、腮腺 20 例(44.9%)和胰腺 15 例(30.6%)。影像学主要表现为 2 个及 2 个以上受累器官增大和(或)占位,主要以唾液腺为主，其次是淋巴结、泪腺、胆道等。IgG4-RD 应答者指数为 7.13±3.25,与受累器官呈正相关(r=0.15,P<0.0001)。93.55%的患者血清 IgG4 升高,且与血清 IgG 呈正相关(r=0.54,P<0.01)。组织病理学检查 46 例(93.9%)可见淋巴细胞、浆细胞增多,26 例(53.1%)患者伴纤维组织增生。单药糖皮质激素治疗者 23 例(46.9%),糖皮质激素联合免疫抑制剂者 20 例(40.8%),手术治疗者 3 例(6.1%),病情较轻观察者 2 例(4.1%)。47 例(95.9%)患者对初始治疗反应良好。23 例糖皮质激素单药治疗组有 10 例(43.5%)复发,20 例糖皮质激素联合免疫抑制剂治疗组有 6 例(30.0%)复发,复发患者再次给予足量糖皮质激素联合免疫抑制剂治疗仍有效。
结论 IgG4-RD 是一种多器官受累的慢性炎症伴纤维硬化性改变的疾病, 唾液腺、淋巴结、泪腺及内脏器官肿大是常见的临床表现,血清 IgG4 水平升高,病理组织大量 IgG4 阳性浆细胞浸润, 是确诊的金标准。糖皮质激素和免疫抑制剂治疗有效,总体预后良好，但存在复发现象。

PU-1905

7473 例健康体检者血脂和血糖检测结果分析

王宁、李晓东、孙继芹
云南省曲靖市第二人民医院

目的 对健康体检者血脂中总胆固醇、甘油三酯、高密度脂蛋白、低密度脂蛋白、空腹血糖水平分布情况进行分析。
方法 将我院体检中心 2019 年 7473 例健康体检者按照年龄分为 7 组，并对总胆固醇、甘油三酯、高密度脂蛋白、低密度脂蛋白、空腹血糖检测结果进行统计分析。
结果 不同年龄组血脂、血糖比较有统计学差异，31-50 岁年龄组血脂不正常率较高，31-59 岁年龄组血糖不正常率较高。
结论 高脂血症、糖尿病的发生和人们的年龄增长、饮食习惯、生活水平有着密切关系；高血脂、高血糖的发病呈现年轻化趋势，重视健康体检者血脂、血糖筛查结果，倡导良好饮食习惯、生活方式，预防高血脂、高血糖疾病。

PU-1906

液相色谱串联质谱法分析血清中 17-α-羟孕酮、双氢睾酮、脱氢表雄酮、脱氢表雄酮硫酸酯的性能评价

郑东[2]、邱骏[1]
1. 苏州大学附属第一医院临床检测中心
2. 苏州大学附属第一医院临床检测中心

目的 建立液相色谱串联质谱法定量检测血清中 17-α-羟孕酮、双氢睾酮、脱氢表雄酮、脱氢表雄酮硫酸酯的方法，并对其进行性能分析评价。
方法 采用液相色谱串联质谱法定量检测血清中 17-α-羟孕酮、双氢睾酮、脱氢表雄酮、脱氢表雄酮硫酸酯的含量。根据《中国药典》（2015 年版）通则中 9012“生物样品定量分析方法验证指导原则”对所建方法的线性范围、检出限、精密度、样本稳定性、回收率和携带污染率等基本性能进行确认。
结果 液相色谱串联质谱法定量检测血清中 17-α-羟孕酮、双氢睾酮、脱氢表雄酮、脱氢表雄酮硫酸酯的线性范围分别为 0.16～40 ng/ml、32～8000 pg/ml、0.16～40 ng/ml、2～500 ug/dl，检出限分别为 0.008 mg/L、0.0032 mg/L、0.008 mg/L、1 mg/L，定量下限分别为 0.032 mg/L、0.0064 mg/L、0.016 mg/L、4 mg/L，批内变异系数（CV）和批间 CV 均小于 5 %，回收率分别为 89.79 %～101.23 %、91.79 %～101.10 %、90.01 %～94.30 %、86.35 %～108.35 %。
结论 建立的液相色谱串联质谱法基本性能符合评价标准，能够高灵敏且准确地检测血清中 17-α-羟孕酮、双氢睾酮、脱氢表雄酮和脱氢表雄酮硫酸酯含量。

PU-1907

惠中 MQ-8000 糖化血红蛋白分析仪性能评价

邵明希、曹文俊
复旦大学附属眼耳鼻喉科医院

目的 本研究将采用惠中 MQ-8000 全自动糖化血红蛋白分析仪（MQ-8000）对样本 HBA1c 水平进行检测，从而对 MQ-8000 的性能进行全面的评价。
方法 采用 MQ-8000 对 100 例样本的 HBA1c 水平进行检测，综合分析评价该仪器的重复性、精密度、携带污染、正确度、线性范围以及与 ArkrayADAMSTMA1c HA-8180 糖化血红蛋白分析仪(HA-8180)进行样本比对。
结果 MQ-8000 检测糖化血红蛋白（HbA1c）的重复性、室内不精密度（CV）均小于 1%，高值样本对低值样本的结果无明显携带污染（携带污染率为-1.69%）；线性范围为 2.9%-20.5%，覆盖范围广；采用美国国家糖化血红蛋白标准化计划溯源样本进行正确度验证，测得的偏离度（-1.02%、0.97%）＜3%，正确度验证通过。与 HA-8180 糖化血红蛋白检测仪样本比对结果呈正相关（r=0.9953），相对偏差为 1.36%，在医学决定水平 6.5%处的偏移＜1%，验证结果均符合国家及国际行业协会相关标准。
结论 MQ-8000 具有良好的重复性、精确度、线性和较低的携带污染率，表明该仪器性能良好，可满足临床检测诊断的应用需求。

PU-1908

高同型半胱氨酸高血压相关因素分析

周勇军
益阳市中心医院

目的 探讨血清同型半胱氨酸(Hcy) 与高血压病的和生活习惯的关系。
方法 采用整群随机抽样方法，随机选取 832 名中老年居民进行流行病学调查。
结果 高血压组血清 HCY 水平和 SBP、DBP 水平均显著高于对照组(P<0.01)；线性相关分析表明 SBP、DBP 水平与 HCY 水平呈明显正相关(r=0.563, 0.678，均 P<0.01)；危险因素单因素分析结果显示 HCY、BMI、冠心病家族史、糖尿病病史、高脂血症史、吸烟史和饮酒史等与高血压发病相关(P<0.05)，性别、年龄等与高血压发病无关(P>0.05)。Logistic 多因素分析结果显示 HCY、吸烟史和饮酒史是高血压发病的主要危险因素(P<0.05)(OR 值分别为 3.128、2.379 和 2.524)，
结论 HCY 水平和 SBP、DBP 水平在高血压发生发展过程中可能起重要作用，HCY、吸烟史和饮酒史可能是高血压的独立危险因素，对高血压发生有预测价值。

PU-1909

探讨肌酸激酶同工酶（CK-MB）活性高于肌酸激酶（CK）总活性的机制

高海翟
吉林大学第一医院

目的 分析血清肌酸激酶同工酶（CK-MB）活性高于肌酸激酶（CK）总活性的原因。
方法 使用贝克曼库尔特 AU 生化分析检测仪，回顾性分析 1 例 CK-MB 活性高于 CK 活性的患者。同时使用强生 5600 全自动生化分析仪检测 CK-MB 质量。
结果 本例为小儿心血管疾病患者，由于免疫抑制法的方法学原因导致 CK-MB 活性高于 CK 总活性。用 5600 生化分析仪检测 CK-MB 质量结果正常。表明 CK 中另一种亚型 CK-BB 升高，导致了免疫抑制法测量 CK-MB 结果高于总 CK。
结论 当 CK-MB 活性高于总 CK 活性时，要及时与临床沟通，考虑该患者是否有其他系统相关疾病，避免出现漏诊。

Malaria Detection in Blood based on Surface-enhanced Raman Spectroscopy of Gold Nano-structures

王伟[1]、董瑞玲[2]、何建安[2]、易品[1]、Jacky Fong-Chuen Loo[3]、郑磊[4]、王前[4]、顾大勇[1]
1. 深圳市第二人民医院
2. 深圳市国际旅行卫生保健中心
3. 香港中文大学
4. 南方医科大学南方医院

We have developed a simple diagnostic procedure based on Surface Enhanced Raman Spectroscopy (SERS) from a substrate with gold nano-structures (AuNS). Blood samples infected with P. falciparum and P. vivax. were dispersed on the AuNS and analyzed under a Raman microscope with a 532 nm laser as the excitation source. Raman peaks at 1370 cm^{-1}, 1570 cm^{-1}, 1627 cm^{-1} were evaluated as the fingerprint markers. The AuNS-SERS substrate provided 1,000-fold enhancement of Raman signals as compared to conventional Raman spectroscopy. From

our experiments, the limit of detection was 10^{-5} dilution, which corresponds to the minimum densities of infected red blood cells (iRBC) of $2x10^4$/L, $4x10^4$/L, and $4x10^4$/L respectively for the ring phase, trophozoite phase and schizont phase.This work has provided strong validation evidence in support of using AuNS-SERS as a practical tool for highly specific in-field identification of malaria infection due to P. falciparum and P. vivax in clinical blood samples.

冠心病患者血清脂质成分监测的临床价值分析

周允、魏利龙、张瑞苹、曹永彤
中日友好医院

目的 探讨血清中各脂质成分水平与冠心病患者发生急性心肌梗死（AMI）的关系。
方法 采用病例-对照的研究方法，选择 2017 年 8 月至 2018 年 2 月中日友好医院住院患者，其中心绞痛组 99 例，年龄（60.4±10.4）岁，AMI 组 105 例，年龄（61.7±14.3）岁；收集健康体检者 60 名为对照组，年龄（43.6±9.5）岁。利用全自动生化分析仪检测各脂质成分水平。Logistic 回归分析总胆固醇（TC）、低密度脂蛋白胆固醇（LDL-C）、非高密度脂蛋白胆固醇（non-HDL-C）与冠心病患者发生 AMI 的相关性。受试者工作特征（ROC）曲线分析各指标的诊断效能。
结果 AMI 组血清 TC 水平[（4.99±1.14）mmol/L 比（4.01±0.98）mmol/L]、LDL-C 水平[（2.92±0.90）mmol/L 比（2.32±0.71）mmol/L]及 non-HDL-C 水平[（3.94±1.13）mmol/L 比（3.00±1.00）mmol/L]均高于心绞痛组，差异有统计学意义（*P*<0.001）。在充分调整了协变量后，Logistic 回归显示血清 TC（*OR*=6.957，*95%CI* 2.672~18.109，*P*<0.001）、LDL-C（*OR*=5.857，*95%CI* 1.993~17.217，*P*=0.001）和 non-HDL-C（*OR*=6.485，*95%CI* 2.474~17.002，*P*<0.001）与 AMI 发病呈正相关。ROC 曲线分析表明，TC 诊断 AMI 的 AUC（*95%CI*）为 0.747（0.678~0.816），LDL-C 诊断 AMI 的 AUC（*95%CI*）为 0.711（0.639~0.782），non-HDL-C 诊断 AMI 的 AUC（*95%CI*）为 0.738（0.668~0.807）（*P* 均<0.001）。
结论 血清 TC、LDL-C 和 non-HDL-C 水平在 AMI 患者中存在异常表达，且均为冠心病患者发生 AMI 的相关因素，定期监测对 AMI 患者的风险评估和临床诊断具有重要的意义。

PU-1912

补体 Cq 与阻塞性冠心病相关

郭书忍
郑州大学第一附属医院

Background Complement C1q plays a dual role in the atherosclerosis. Previous studies showed inconsistent results about the association of serum C1q levels and Coronary artery disease (CAD).
Methods We enrolled 956 CAD patients and 677 controls to evaluate the associations of serum complement C1q activity to the presence and severity of obstructive CAD and Non-obstructive CAD.
Results Serum C1q activity in Obstructive CAD and Non-Obstructive CAD groups was significantly higher than the control group (195.52±48.31 kU/L and 195.42±51.25 kU/L vs. 183.44±31.75 kU/L, P<0.05). Greater C1q activity was significantly correlated with higher total cholesterol (TC) and triglyceride (TG) levels. C1q activity was associated with an increased Odds Ratio (OR) of CAD (OR=1.322, 95%CI 1.168-1.496, P<0.05) and 1-year restenosis after revascularization (the highest OR=1.571, 95% CI 1.281-2.802, P<0.05). Complement C1q activity was not correlated with Gensini score in the Obstructive CAD group after adjustment for confounders. C1q activity has low value in predicting the incidence of CAD.

PU-1913

The Correlation of the Blood Lipid Level and Breast Cancer

Jing Li
The Affiliated Hospital of Qingdao University

Objective To study the relationship between serum triglyceride（TG）, cholesterol（CH） and lipoprotein levels and the occurrence and metastasis of breast cancer, to improve the role of clinical routine biochemical tests in early diagnosis and treatment monitoring of breast cancer.
Method 25000 breast cancer patients aged 20-70 were selected from the Affiliated Hospital of Qingdao University from February 2014 to February 2018, whose results of serum total cholesterol (TC), triglyceride (TG), low density lipoprotein (LDL) and high density lipoprotein (HDL) were obtained by Beckman Kurt 5800 biochemical analyzer, and the results of the same tests of the same period and the corresponding healthy people were obtained. Arrange for every 10 years as one age group, and both the patients and the healthy were divided into 5 groups. R language was used to compare the difference of the 4 tests between the same age group of healthy persons and breast cancer, the 4 indexes of different treatment were compared and the correlation between the occurrence of breast cancer and the level of these 4 lipoproteins were analyzed.
Results (1) In the same age group, the levels of TC, TG and LDL were lower in healthy person than those in the breast cancer patients (P< 0.05), while the difference in HDL level was not statistically significant. (2) R scatter plot analysis showed that the levels of TC, TG and LDL were positively correlated with the occurrence of breast cancer, with the correlation coefficient R >0.9; But serum HDL level was not significantly correlated with the occurrence of breast cancer. (3) In the same age group, the level of serum TC, TG and LDL in breast cancer patients with better therapeutic effect and over 6 months of progression-free survival were significantly lower than those with no response or less than 3 months of progression-free survival(P< 0.05). The levels of TC, TG and LDL in metastatic breast cancer patients were significantly higher than those with good therapeutic effect or over 6 months of progression-free survival(P< 0.05). There was no significant difference in serum lipid levels between metastatic breast cancer patients and those with poor treatment response (P>0.05).
Conclusion Levels of serum total cholesterol, triglyceride and low density lipoprotein are closely related to the occurrence and metastasis of breast cancer, which can be considered as an indicator for early screening, warning and treatment of breast cancer.

PU-1914

H 型高血压患者血清学指标与颈动脉粥样硬化程度的相关性探讨

刘秀敏
吉林大学第二医院

目的 分析 H 型高血压患者血清学指标与颈动脉粥样硬化程度的相关性及探讨其临床应用。
方法 选取 2018 年 5 月-2021 年 5 月本院收治的 H 型高血压患者 225 例。所有患者进行颈动脉超声检查,并根据颈动脉内中膜厚度（carotid intima media thickness,cIMT）将其分为正常组（n=75）,增厚组（n=75）及斑块形成组（n=75）。比较三组基本资料、cIMT、及各血清学指标。分析血清学指标与 cIMT 的相关性。
结果 三组性别、尿素氮、肌酐（Scr）、低密度脂蛋白胆固醇（LDL-C）、甘油三酯（TG）及总胆固醇（TC）比较,差异均无统计学意义（P>0.05）。斑块形成组高密度脂蛋白胆固醇（HDL-C）低于正常组与增厚组,且增厚组 HDL-C 低于正常组（P<0.05）。斑块形成组 cIMT、Hcy、胱抑素 C（cys C）及尿酸（UA）均高于正常组与增厚组,且增厚组 cIMT、cys C 与 UA 均高于正常组

（P<0.05）。cIMT 与 Hcy、cys C、UA 均呈正相关性（P<0.05）,其中与 Hcy 关系最密切;cIMT 与 HDL-C 呈负相关性（P<0.05）。

结论 针对 H 型高血压患者的临床检查,对其血脂、颈动脉超声以及同型半胱氨酸等相关指标进行观察较为关键,医生需把握患者上述指标的情况。颈动脉粥样硬化与机体多项血清学指标存在明显联系,其中与 Hcy 关系最密切。

TTDA inhibited apoptosis by regulating the p53-Bax/Bcl2 axis in glioma

Huanlan Bai
Laboratory Medicine Center, Nanfang Hospital, Southern Medical University

The trichothiodystrophy group A protein (TTDA) functions in nucleotide excision repair and basal transcription. TTDA plays a role in cancers and serves as a prognostic and predictive factor in high-grade serous ovarian cancer; however, its role in human glioma remains unknown. Here, we found that TTDA was overexpressed in glioma tissues. In vitro experiments revealed that TTDA overexpression inhibited apoptosis of glioma cells and promoted cell growth, whereas knockdown of TTDA had the opposite effect. Increased TTDA expression significantly decreased the Bax/Bcl2 ratio and the level of cleaved-caspase3. TTDA interacted with the p53 gene at the -1,959 bp and -1,530 bp region and regulated its transcription, leading to inhibition of the p53-Bax/Bcl2 mitochondrial apoptosis pathway in glioma cells. These results indicate that TTDA is an upstream regulator of p53-mediated apoptosis and acts as an oncogene, suggesting its value as a potential molecular target for the diagnosis and treatment of glioma.

PU-1916

血清钾高临界值患者临床评估及其与血同型半胱氨酸关系分析

武婧
吉林大学第二医院

目的 严重的高血钾症可导致危及生命的心律失常、心脏骤停或死亡。本研究旨在探讨住院、门诊及急诊危重高钾血症（≥6.2mmol/l）的发生率及相关因素，并对其临床结果进行分析。

方法 所有在 2018 年 1 月至 2021 年 5 月来吉林大学第二医院就诊的被报告为危急值的高血清钾患者均被纳入研究。查阅病历回顾性分析该类患者的相关临床资料、共病，并对其生化数据进行收集。筛选 135 例高血钾患者被为关键实验室值，计算 Charlson 共病评分（CCS）和肾小球滤过率（eGFR）来评估共病负荷和肾功能。同时根据高血钾患者是否合并高血同型半胱氨酸血症将患者分为两组，对血清钾、血同型半胱氨酸（Hcy）及 eGFR 进行相关性分析。

结果 在 1832 例血清钾高临界值的患者中，男性患者 1034 例，平均年龄 57 岁；女性患者 798 例，平均年龄 59 岁。住院患者发病率最高（67.41%），就诊科室主要是肾病内科（49.62%），临床诊断主要是慢性肾脏病 5 期（37.88%），平均 eGFR 为 16ml/min。1832 例高血钾患者中符合后续研究标准的重点实验组共 135 例，根据 Hcy 是否增高（＞15μmol/l）分为两组，高 Hcy 组（n=99）与正常 Hcy 组（n=36）相比，CCS、血清钾明显升高，肾小球滤过率明显降低（p＜0.05）。Hcy 与 CCS 有一定的相关性（r=0.229 0, p＜0.01））。Hcy 与高临界值的血清钾呈显著正相关（p＜0.01），与 eGFR 水平均呈显著负相关（p＜0.01）。

结论 血清钾高临界值患者的特点是高共病率、eGFR 降低和高 hcy。血钾升高更易合并高血同型半胱氨酸血症，且 Hcy 是慢性肾脏病患者动脉硬化的重要危险因素，应重点关注慢性肾脏病患者与心脑血管疾病共病风险。

PU-1917

血脂、尿酸等检验指标与抑郁症的相关性研究

潘俊希
昆明医科大学第一附属医院医学检验科
云南省检验医学重点实验室
云南省实验诊断研究所

目的 探讨抑郁症患者血脂、尿酸、血糖等检验指标水平的改变，并探讨其作为抑郁症诊断标志物的可能。
方法 共收集抑郁症患者 192 例，健康对照 97 例，比较抑郁组组与对照组是否存在血脂、尿酸、空腹血糖、PLT、MPV 等检验指标差异，再将疾病组分为不同亚组，按(HDMA17 评分)分为重度抑郁组 77 例，轻中度抑郁组 115 例；按性别分为女性抑郁组，男性抑郁组，按年龄分为＜55 岁青中年组、≥56 岁老年组；按病程长短，分为病程＜2 年短病程组及病程＞2 年长病程组；在各亚组探讨上述检验指标的差异。
结果 抑郁组 TC、FC、TG、LDL、APOE、尿酸水平明显高于对照组，而 HDL 水平显著低于健康对照组（详见图 1）。空腹血糖、APOA1、APOB、LP(a)在两组间无显著差异。二元逻辑回归分析发现 UA、TG 、HDL 与抑郁症具有显著相关性，三指标联合进行 ROC 分析，其 AUC 值为 0.915（详见图 1）。在亚组分析中，女性总胆固醇、LDL、HDL 明显高于男性，而血尿酸水平比男性低，空腹血糖、TG 无差异。老年组空腹血糖、TC、FC、HD 显著高于青中年组，老年组血尿酸较青中年组低。重度抑郁组与轻中度抑郁组中，上述检验指标均无显著差异。
结论 抑郁症患者存在血脂及血尿酸水平异常，UA、TG 、HDL 三指标联合对抑郁症有较好的诊断效能。

PU-1918

全自动生化流水线常规检验中血清 CO2 检测方法的比较研究

苏看看、张洁心
江苏省人民医院（南京医科大学第一附属医院）

目的 首次在全自动生化流水线上比较循环酶法（CEM 法）和磷酸烯醇式丙酮酸羟化酶法定量检测血清二氧化碳（CO2）浓度的时间依赖性差异研究。
方法 统计 58 份门诊和住院标本在生化流水线线上开盖等待检测时长。在此基础上，收集 10 份不同患者来源的促凝血标本，经标准化前处理操作并开盖室温静置，在指定时间点（0h，1h，3h，6h）分别检测血清 CO2 浓度；计算每种方法在 1h、3h、6h 检测结果与 0h 初始结果的偏倚。
结果 58 份标本开盖等待检测时长中位数 107 分钟。标本放置 1h 和 3h 时，CEM 法检测血清 CO2 浓度结果偏倚 3.28%— -5.21%，而 PEPC 法检测结果偏倚较大（17.86%— -11.7%）；标本放置 6h 时，PEPC 法检测血清 CO2 浓度结果偏倚在 2.21%— -30.64%，但 CEM 法的偏倚仍保持在-2.38%— -13.07%。
结论 标本放置时间相同时，相比 PEPC 法，CEM 法检测血清 CO2 浓度较稳定，CEM 法更适用于大标本量实验室全自动生化流水线上 CO2 定量检测

PU-1919

Poly(ADP-Ribose) Polymerase Activity and Coronary Artery Disease in Type 2 Diabetes: An Observational and Bidirectional Mendelian Randomization Study

Xuebin Wang
Department of Clinical Laboratory, The First Affiliated Hospital of Zhengzhou University

Objective Experimental evidence suggests a close link between poly(ADP-ribose) polymerase (PARP) activation and diabetic endothelial dysfunction. Here, we tested whether PARP activity in circulating leukocytes was associated with coronary artery disease (CAD) among patients with type 2 diabetes mellitus (T2DM).
Approach and Results We performed observational and bidirectional Mendelian randomization studies of 3149 Chinese individuals with T2DM who underwent coronary angiography, with leukocyte PARP activity, 16 tag single nucleotide polymorphisms (SNPs) in PARP1 and PARP2, and 17 CAD risk SNPs analyzed. Of 3149 participants, 1180 who further received percutaneous coronary intervention (PCI) was prospectively followed for 1 year to track major adverse cardiovascular and cerebrovascular events (MACCEs). Overall, greater PARP activity was cross-sectionally associated with an odds ratio (OR) of 1.23 for obstructive CAD, and prospectively with a hazard ratio of 1.34 for 1-year MACCEs after PCI (both $P < 0.001$). Using a genetic score of 5 screened SNPs in PARP1 and PARP2 as the instrumental variable, genetically predicted elevation in PARP activity showed a causal association with obstructive CAD (OR = 1.35, $P < 0.001$). In contrast, the genetic risk of CAD had no significant effect on PARP activity. Ex vivo and in vitro cultures of human monocytes showed that rs747657, as the lead SNP strongly associated with PARP activity, caused the differential binding of transcription factor GATA2 to an intronic regulatory region in PARP1, thus modulating PARP1 expression and PARP activity.
Conclusion Greater PARP activity may have causal roles in the development of obstructive CAD among diabetic patients.

PU-1920

石墨烯量子点调控肿瘤放射增敏作用研究

王英、陈福祥、葛盛芳
上海交通大学医学院附属第九人民医院

目的 本研究采用具有良好生物相容性和丰富含氧基团的纳米材料石墨烯量子点（GQDs），探讨其对结直肠癌细胞的放射增敏作用，并对辐射增敏的机制进行初探，为纳米材料作为放射增敏剂在临床应用中奠定研究基础。
方法 制备 GQDs 并通过 CCK8 法筛选出 GQDs 的安全浓度；应用激光共聚焦显微镜观察 GQDs 在肿瘤细胞内的分布；采用 CCK8 和克隆形成实验检测 GQDs 与辐射共同处理后细胞活性和克隆的形成；采用流式细胞技术检测各处理组细胞凋亡率；利用透射电子显微镜观察细胞损伤情况以及 GQDs 亚细胞定位情况；采用流式细胞技术检测各处理组细胞周期阻滞；利用 DCFH-DA、MITOSOX Red 探针分别检测辐照后细胞内 ROS 和线粒体 ROS 的产生；采用蛋白免疫印迹技术检测照射后反映 DNA 损伤程度的 γH2AX 的表达。
结果 CCK8 实验筛选出 GQDs 的使用浓度为 50μg/mL；透射电镜和激光共聚焦显微镜结果显示 GQDs 分布在细胞质内；GQDs 可以协同辐照抑制 SW620 和 HCT116 细胞的增殖，并促进细胞凋亡发生，增加细胞的损伤；研究发现 GQDs 可协同射线产生活性氧, 引起 DNA 双链断裂，导致细胞发生 G2/M 期细胞周期阻滞。
结论 本研究在细胞水平证明了 GQDs 具有放射增敏作用，可以协同射线杀伤肿瘤细胞，最终达到抑制肿瘤生长的目的。提示 GQDs 可作为一种新型放射增敏剂。

PU-1921

降钙素原在细菌性血流感染不同致病菌中的预测价值

宋健梅、邓德耀
云南大学附属医院

目的 探讨降钙素原（Procalcitonin，PCT）在不同致病菌所致的细菌性血流感染中的预测价值。
方法 选取 2018 年至 2019 年两年某三甲医院收治的细菌性血流感染患者 339 例，按病原菌形态分为革兰阳性菌组 108 例，革兰阴性菌组 231 例，对两组致病菌 PCT 水平的测定结果进行统计分析。
结果 细菌中以大肠埃希菌最为常见，占总菌株的 40.4%。血清 PCT 水平测定结果最高的为肺炎克雷伯菌 28.29（3.82~55.17）ng/mL，其次为鲍曼不动杆菌 8.82（3.74~24.84）ng/mL、大肠埃希菌 6.28（1.20~34.31）ng/mL，革兰阴性菌 PCT 水平 6.93（1.70~38.63）ng/mL 明显高于革兰阳性菌 PCT 水平 1.03（0.30~4.54）ng/mL，差异具有统计学意义（P<0.05）；在革兰阳性菌中，各组间均无统计学差异。
结论 PCT 水平对革兰阳性菌和革兰阴性菌所致血流感染的不同菌种的鉴别具有一定临床应用价值，可为不同菌种所致的细菌性血流感染提供一定抗感染治疗的参考。

PU-1922

生化检验在肾上腺皮质疾病诊断中的准确性及临床价值研究

钟浩宇
四川省人民医院东院

目的 研究生化检验在肾上腺皮质疾病诊断中的准确性及临床价值。
方法 将 2020 年 1 月~2021 年 5 月期间本院确诊肾上腺皮质疾病患者共 39 例纳为研究对象，取分层随机化分组法划分组别后，对照组（n=20）行常规检验，观察组（n=19）行生化检验。对照组中男 7 例，女 13 例，年龄区间 19~48 岁，平均（33.51±2.09）岁；观察组中男 6 例，女 13 例，年龄区间 18~48 岁，平均（33.29±1.98）岁。基线资料组间对比结果无统计学差异，P＞0.05，研究结果可比。常规检验项目含血糖、血清甘油三酯、总胆红素、总胆固醇、尿酸、高密度脂蛋白胆固醇及微量元素等；生化检验项目含 24h 尿-17 羟皮质类固醇、尿酮固酮及血浆醛固酮。比较两组检验结果准确性及检验有效率。
结果 （1）检验准确性、有效率：观察组检验准确性（89.47%）及检验有效率（94.74%）均高于对照组，差异显著，P＜0.05。（2）诊断价值：观察组诊断符合率（89.74%）、诊断敏感度（89.74%）及阳性预测值（100.00%）均达 80%以上，且高于对照组，差异显著，P＜0.05。
结论 生化检验在肾上腺皮质疾病诊断中的应用可在常规检验指标基础上经分析受检者 24h 尿-17 羟皮质类固醇、尿酮固酮及血浆醛固酮后，提升患者疾病临床检出效果及准确性，诊断价值显著。

PU-1923

动态监测骨折患者术后血浆 D-二聚体和 FDP 水平的临床价值

朱爱民
娄底市中心医院

目的 通过动态监测骨折患者术后血浆 D-二聚体和纤维蛋白降解产物（FDP）浓度水平，研究其临床应用价值。
方法 采用胶乳免疫比浊法对 215 例骨折患者术后第 3 天、第 7 天及第 10 天进行血浆 D-二聚体和 FDP 的定量检测，观察浓度水平变化。

结果 215 例患者中有 13 例并发深静脉栓塞（DVT），并发 DVT 组术后血浆 D-二聚体和 FDP 浓度水平呈进行性增高，与未并发 DVT 组相比较，有显著性差异（P＜0.05）。
结论 动态监测骨折患者术后血浆 D-二聚体和 FDP 水平对并发深静脉栓塞具有早期诊断价值。

PU-1924

全血 CRP 对小儿败血症的诊断价值

梁巧、王玲
中南大学湘雅二医院

目的 探讨全血 CRP 在小儿败血症中的诊断价值。
方法 选取我院 2019 年 4 月至 2021 年 1 月儿科、新生儿科住院的败血症患儿为研究组，选取同期的肺炎患儿以及非炎症疾病患儿为疾病对照组和阴性对照组，检测各组全血 CRP、PCT、WBC 和 NLR，分析三组各指标之间的差异，绘制各指标的 ROC 曲线，分析其对小儿败血症的诊断以及鉴别诊断价值；并分析败血症组不同病原菌之间各指标的差异以及患儿各指标与其病情严重程度的相关性。
结果 败血症患儿的全血 CRP、PCT 高于疾病对照组和阴性对照组（P<0.05），NLR 高于疾病对照组（P<0.05），而三组的 WBC 不存在统计学差异；小儿败血症诊断的 ROC 曲线显示：全血 CRP、PCT、NLR、WBC 的 AUC 分别是 0.956、0.747、0.567 和 0.421；小儿败血症与肺炎鉴别诊断的 ROC 曲线表明：全血 CRP、PCT、NLR、WBC 的 AUC 是 0.915、0.779、0.648、0.490；全血 CRP 和 NLR 与 PITT 评分和住院时长呈正相关（r=0.303-0.375，P<0.05）；G^-杆菌感染患儿的全血 CRP、PCT 和 PITT 评分高于 G^+球菌感染患儿（P<0.05）。
结论 全血 CRP 可以用于小儿败血症的诊断、鉴别诊断以及病情严重程度的判断，并且还可用于初步判断败血症患儿感染的菌种类型。

PU-1925

血清同型半胱氨酸与脂蛋白 a 联合检测在诊断脑梗中的价值

杨婷
德州市人民医院

目的 研究同型半胱氨酸(Hcy)与脂蛋白（Lpa)联合检测在诊断脑梗中的临床价值。
方法 选择 2018 年 1 月至 2019 年 12 月期间我院收治的脑梗死住院患者 136 例按不同病情严重程度分为轻、中、重三组，选择同期体检正常人员 50 例作为对照组，采集静脉血浆检测 Hcy 和 Lpa 水平。
结果 脑梗患者血清 Hcy、Lpa 水平分别为 (14.25±4.10)μmol/L，(28.25±18.25)mg/dL 与正常对照组 (7.91±2.05)μmol/L、(18.50±9.28)mg/dL 相较均显著增高 (P<0.05)。三种不同严重程度的患者两两比较显示，重型患者血清 Hcy 水平显著高于中，轻型患者(P<0.05)；重型患者血清 Lpa 水平显著高于中、轻型(P<0.001)，且中型显著高于轻型(P<0.05)。
结论 血浆 Lpa 和 Hcy 水平与脑梗死的发生、发展密切相关，两项指标的联合监测对判断病情具有重要指导意义。

PU-1926

HPLC-FLD 法用于检测色氨酸代谢物的研究

吴妍茜
苏州市独墅湖医院（苏州大学附属独墅湖医院）

目的 探究血浆中吲哚类物质对 PCOS（polycystic ovary syndrome，多囊卵巢综合征）患者抑郁的影响。
方法 采用高效液相色谱-荧光检测(HPLC-FLD)方法同时测定血浆中吲哚类物质，包括吲哚基硫酸盐(3-INDS)、吲哚-3-乙酸(IAA)、吲哚-3-丙酸(IPA)、吲哚(IND)和 3-甲基吲哚(3-MI)。选用乙醚和乙酸乙酯作为萃取剂制备样品。色谱柱为 shimm - pack VP-ODS (4.6 × 150 mm i.d.，4.6μm，岛津)，流动相为 10 mmol/L 磷酸二氢钠/甲醇(40:60,v/v)。荧光检测的激发波长和发射波长分别为 280 nm 和 355 nm。
结果 3-INDS、IAA、IPA、IND 和 3-MI 在 1.56 ~ 400.00 μmol/L、312.50 ~ 1000.00 nmol/L、125.00 ~ 600.00 nmol/L、6.25 ~ 400.00 nmol/L 和 1.56 ~ 400.00 nmol/L 血浆中线性关系良好。日内和日间精密度的变异系数(cv)分别在 4.0%和 5.2%以内。加标回收率为 90.1% ~ 109.3%，CV 为 1.6% ~ 8.2%。该方法简便、灵敏、准确。使用该方法对 PCOS 伴抑郁和不伴抑郁患者的血浆吲哚进行分析。
结论 IND 是 PCOS 患者抑郁的一个危险因素，这为 PCOS 患者抑郁的病理生理学机制提供了思路。

PU-1927

抗 CCP 抗体在类风湿关节炎诊断中的临床价值

崔嘉玥
苏州市独墅湖医院（苏州大学附属独墅湖医院）

目的 研究类风湿关节炎(Rheumatic Arthritis，RA)患者血清中的抗环瓜氨酸肽抗体(ACPA)对 RA 诊断的敏感性和特异性及其在 RA 中的临床应用价值。
方法 选取 2018 年 2 月至 2020 年 1 月在北京 301 医院的 RA 患者（RA 组）、其他自身免疫性疾病患者（非 RA 组）及健康体检者（对照组）为研究对象，采用手工酶联免疫吸附法（ELISA）检测抗环瓜氨酸肽（CCP）抗体水平，采用速率散射比浊法检测类风湿因子（RF），采用日本 SYSMEX 全自动血液细胞分析仪检测超敏 C 反应蛋白（hs-CRP），采用 greiner bio-one 全自动血沉分析仪检测红细胞沉降率（ESR），所有收集得到的数据采用 SPSS20.0 软件包进行处理。
结果抗 CCP 抗体诊断 RA 的敏感性和特异性分别为 86.1%和 97.3%，与 RF（敏感性 87.5%，特异性 94.6%）相比，具有较高特异性；抗 CCP 抗体和 RF 两者联合检测，敏感性和特异性分别为 97.3%和 88.9%；受试者工作特征曲线（ROC）显示抗 CCP 抗体检测对 RA 诊断具有较高的特异性，抗 CCP 抗体和 RF 两者联合检测对 RA 诊断具有较高的敏感性。
结论 抗 CCP 抗体在类风湿关节炎早期的诊断中具有较高的特异性和敏感性，是理想的血清学指标，对类风湿关节炎的预测和诊断具有一定临床价值，值得在临床检验中推广应用。

PU-1928

MiR-495 Inhibits Fibroblast-Like Synoviocyte Proliferation and Inflammation in Rheumatoid Arthritis Rats via Wnt Signaling Pathway

hongmei yang
yantaishan hospital

As an immunological disease triggered by autoantigen, rheumatoid arthritis (RA) is manifested as redness, swelling and pain of joints, with the cardiovascular system, lungs and other organs beyond joints involved.1 Studies have shown that both inheritance and environment are risk factors of RA, but the mechanism needs an indepth exploration.1 Micro ribonucleic acids (miRNAs) are a kind of short and small non-coding RNAs.2 Increasingly more evidence has proved that miRNAs play a vital role in autoimmune diseases. In a study of Mallinson et al3 regarding response of RA patients to mesenchymal stem cell treatment, it was found that miR-495 expression is up-regulated in the response group, indicating that miR-495 is implicated in the pathogenesis of RA. The pathogenesis of RA involves multiple signaling pathways, among which the Wnt signaling pathway artificially promotes the fibroblast-like synoviocyte (FLS) proliferation in RA. Even though miR-495 has been verified to be related to RA, no report has pointed out whether miR-495 participates in the pathogenesis of RA via the Wnt signaling pathway. Given this, the rat model of RA was used to study the effects of miR-495 on the FLS proliferation, and its action mechanism was discussed.

PU-1929

全自动生化分析仪平台检测 CKMBmass 的临床应用评价

邓克廷、丁莹、徐小华、李斌
西安医学院第一附属医院

目的 探讨利用全自动生化分析仪平台检测 CKMBmass 的准确性及可靠性。采取随机抽样的方式以及检测临床标本中 CKMB（活性法）大于 CK 的样本，验证该测量程序与化学发光平台测定 CKMB(质量法)的一致性，再用超敏肌钙蛋白 I 阳性的样本验证该方法测量的准确性。
方法 使用 Beckman AU5800 全自动生化分析仪测定 CKMBmass, CKMB（活性法）； Beckman DXI800 化学发光分析仪检测 CKMB（质量法），超敏肌钙蛋白 I（hs-cTnI）。收集 40 例 CKMBmass 与 CK-MB 同时检测的倒置样本， 验证测量值一致性; 随机抽取 60 例 CKMBmass 与 CK-MB 同时检测的血清样本， 验证相关性; CKMBmass 与 hs-cTnI 同时测定心肌损伤组样本与非心肌损伤组样本， 使用 ROC 曲线进行分析， 验证 CKMBmass 准确性。
结果 40 例倒置样本， CKMBmass 测量值与 Beckman DXI800 CK-MB 测量值相同， 阴阳性一致; 60 例随机样本， CKMBmass 与 Beckman DXI800 CK-MB 测值的回归方程为 Y = 1．015X +0．185; 心肌损伤组与非心肌损伤组比较差异有统计学意义(P ＜ 0.05)。
结论 Beckman AU5800 全自动生化分析仪测定 CKMB mass 的准确性和可靠性能良好，抗干扰能力及相关性与化学发光法检测 CK-MB 一致， 满足临床诊疗需求。

PU-1930

NSE、SCC、Cyfra21-1、CEA 和 CK-19 联合检测对肺癌诊断价值的临床验证

陶亚、易斌
中南大学湘雅医院

目的 通过临床病例分析，验证神经元特异性烯醇化酶(NSE)、鳞状上皮抗原(SCC) 、细胞角蛋白 19 片段(Cyfra21-1)、癌胚抗原(CEA) 、角蛋白 19 (CK-19)五项血清肿瘤标志物联合检测对肺癌诊断、病理分型和临床分期的价值。
方法 回顾性分析从 2019 年 9 月至 2020 年 9 月中南大学湘雅医院 156 例确诊肺癌患者和 108 例良性肺病患者肺癌五项临床检验结果，血清 NSE、SCC、Cyfra21-1、CEA 和 CK-19 水平均采用化学发光法测定。
结果 肺癌组血清 NSE、Nsclc21-1、CEA 水平显著高于良性肺部疾病组 (P<0.05)，肺癌组血清 SCC、和 CK-19 水平良性肺部疾病组无明显差异(P＞0.05)；血清 NSE 水平在小细胞癌患者中明显升高(P<0.05)，血清 SCC、Cyfra21-1、CK-19 水平在肺鳞癌患者中明显升高(P<0.05)，血清 CEA 血清水平在肺腺癌患者中显著升高(P<0.05)，结合肺癌患者临床资料分析显示：男性患者血清 SCC、Cyfra21-1、CK-19 水平明显高于女性患者(P<0.05)；血清 Cyfra21-1 水平在大于 50 岁年龄组患者中明显升高 (P<0.05)；血清 NSE、Cyfra21-1、CEA、CK-19 水平与肿瘤大小成正相关(P<0.05)；血清 SCC、Cyfra21-1、CK-19 水平与淋巴结转移相关(P<0.05)；血清 CEA 水平与远处转移相关(P<0.05)；血清 NSE、Cyfra21-1、CEA、CK-19 水平与临床分期相关(P<0.05)。五项血清标志物联合检测敏感性为 71.53%，显著高于单项检测(P<0.05)，特异性为 90.21%，未显著下降(P>0.05)。
结论 1，NSE、Cyfra21-1、CEA 水平升高与肺癌发生密切相关，与文献报道相符，对肺癌早期诊断有重要的临床意义；2，NSE、SCC、Cyfra21-1、CEA、CK-19 在不同病理类型，TNM 分期，临床分期中各有特点，与文献报道相符，可为肺癌临床病理分型和临床进展提供依据；3，五项肿瘤标志物单项检测在肺癌诊断中敏感性较低，易漏检，但其联合检测可有效提高肺癌诊断准确率。

PU-1931

Effect of dry-heat inactivation on biochemical tests related to diagnosis and treatment of novel coronavirus in 2019

Tingting Ji
Nanfang Hospital, Southern Medical University

Background The World Health Organization (WHO) declared novel coronavirus disease as a pandemic disease. To reduce the risk of transmission in the laboratory and protect medical staff, dry-heat inactivation at 56 ℃ for 30 minutes for SARS-CoV-2 has been suggested. We evaluated the impact of venous blood heating on biochemical tests related to diagnosis and treatment of novel coronavirus.
Methods 150 intravenous serum specimens (of which 30 liver function tests, 30 renal function samples, 30 blood glucose samples, 30 inflammation tests and 30 myocardial injury tests) on Roche Cobas c8000 were obtained, and detected again after dry-heat treatment at 56 ℃ for 30 minutes on the day. The difference of the results before and after the inactivation was compared.
Results A total of 17 biochemical tests were assessed. Nine tests (C-reactive protein, amyloid A, albumin, total bilirubin, total carbon dioxide, uric acid, urea, lactate dehydrogenase and a hydroxybutyrate dehydrogenase were not significantly different affected by the heat treatment and accepted clinically. The differences of detection results of before and after inactivation for

aspartate aminotransferase, total protein, and creatinine was within 1/3TEA and clinically acceptable. Regression equation could correcte the detection of blood glucose, alanine aminotransferase, direct bilirubin, creatine kinase, and creatine kinase isoenzyme after inactivation to the pre-inactivation results and clinically interpreted.

Conclusion Dry-heat inactivation at 56 ℃ for 30 minutes causes no significant change in inflammation tests and renal function tests, but results in a obvious bias for many analytes. Statistical procedure could correct the affected results according to the relationship between before and after inactivation, accepted clinically. Dry-heat inactivation at 56 ℃ for 30 minutes should be recommended to reduce the risk of laboratory workers infecting novel coronavirus.

PU-1932

糖化血红蛋白与血糖相关性的研究现状分析

吴孟娜、冯磊、罗旋、邵聪
玉溪市人民医院医学检验科（昆明医科大学第六附属医院医学检验科）

了解糖化血红蛋白与血糖间相关性的研究现状，为临床更精准运用糖化血红蛋白提供参考依据。本文通过收集、整理国内外有关糖化血红蛋白与空腹血糖、餐后血糖、平均血糖间相关性文献，了解糖化血红蛋白与血糖间相关性的研究现状，并分析可能引起结果间差异的影响因素。通过分析发现糖化血红蛋白与血糖相关性的研究结果间仍存在争议，两者间线性关系或模型也存在问题，因此还需统一标本类型、检测方法等因素后，针对不同种族、不同患病类型的患者进行更大的流行病学研究。

PU-1933

Beckman Coulter AU5821 全自动生化分析仪检测 SAA 的性能验证分析及其在糖尿病肾病中的临床应用研究

陶亚
中南大学湘雅医院

目的 对血清淀粉样蛋白 A（SAA）试剂盒在 Beckman Coulter AU5821 全自动生化分析仪上的检测性能进行评价，并探讨其在糖尿病肾病中的应用价值。

方法 通过实验计算 AU5821 全自动生化分析仪检测 SAA 的正确度，精密度，最低检测限，线性范围，可报告范围，生物参考区间，与厂家说明书提供的参考值比较，评估 SAA 试剂在 AU5821 生化分析仪上的检测性能。选取临床明确诊断的单纯糖尿病患者 34 例、早期糖尿病肾病患者 21 例、临床糖尿病肾病患者 30 例，体检健康者（正常对照组）30 名，检测血清 SAA 水平。

结果 SAA 的高、低水平相对偏差分别为-4.78%和-4.25%，均≤10%，符合厂家试剂正确度要求；新鲜混合血清标本高、低水平的批内精密度的变异系数（CV）分别为 1.38%、1.85%，批间精密度的变异系数（CV）分别为 2.74%、4.41%，均满足厂家说明书的要求；最低检测限为 1.37mg/L，不高于 5mg/L，符合要求。SAA 线性回归方程 Y＝1.0248x-0.9715，决定系数（R2）＝0.998，斜率 b=1.0248（在 1.00±0.03 范围内），p>0.05，R2=0.998＞0.95，SAA 可接受线性范围为 3-175.82 mg/L。结合线性范围结果，得出该试剂临床可报告范围为 3.00- 2813.12mg/L。检测的 20 份体检标本中只有 1 例标本测定结果超出厂家该项目的参考值（≤10mg/L），厂家提供的参考值（≤10mg/L）可用。单纯糖尿病组血清 SAA 水平高于健康对照组 (P<0.01)，且随着肾病的加重而升高。

结论 SAA 试剂盒在 AU5821 生化分析仪上检测性能能满足厂家和卫生行业标准要求，且其正确度好、重复性好，结果可靠，能较好地满足临床工作。血清 SAA 水平升高是糖尿病肾病重要危险因素。

PU-1934

Exploring the correlation between glycosylated hemoglobin and fasting blood glucose based on chemical reaction theory

Lei Feng 、Shiyan Nian、Ying Li、Xuejing Bai、Xuan Luo、Mengna Wu、Zefeng Yan
Department of Laboratory, People's Hospital of Yuxi City (Department of Laboratory, The Sixth Affiliated Hospital of Kunming Medical University)

Objective To explore the correlation between HbA1c and fasting blood glucose (FPG) by analyzing the HbA1c formation process and its influence factors.
Methods Natural population consist of 14266 cases in Yuxi City,Yunnan Province were collected, aged from 18 to 93 years old, including 8832 males (45.87±13.16) and 5434 females (43.46±12.07), testing their HbA1c, FPG, red blood cell distribution width (RDW) and hemoglobin (Hb) levels. 1) Compare the level differences of HbA1c and FPG between distinct sexual group; 2) analyze the trend of each index along with age changing after age stratification ; 3) divide all the subjects into 5 groups, as FPG＜5.0mmol/L、5.0-5.9 mmol/L、6.0-6.9 mmol/L、7.0-11.0 mmol/L 和≥11.1 mmol/L, calculate the correlation between FPG and HbA1c in each group, then analyze the variation trend of correlation coefficient; 4) divide all the subjects into 4 groups, as HbA1c＜5.7%、5.7-6.4%、6.5-7.4%、≥7.5%, and also calculate the correlation between FPG and HbA1c in each group, then analyze the variation trend of correlation coefficient.
Results 1) This study found that gender differences existed in HbA1c and FPG levels. 2) HbA1c, FPG and RDW varied very sharply with age, while Hb level showed a narrower fluctuation; and the changing trend of these indexes in different gender differed either; 3) The correlation between FPG and HbA1c was lower within the group which FPG below 7.0mmol/L or HbA1c below 6.5%, but with the increasing of their respective levels,the correlation increased , and it turned out similar results in both male and female.
Conclusion The correlation between FPG and HbA1c are influenced by age and FPG level. HbA1c's representativeness of blood glucose vary under different conditions.

PU-1935

糖化血红蛋白异常峰图的临床应用

万雅芳
重庆市人民医院（重庆市临床检验中心）

目的 通过利用高效液相色谱法（HPLC）检测样本的糖化血红蛋白值，对其所出现的异常峰图进行分析，确定其与地中海贫血和（或）异常血红蛋白病是否存在相关性。
方法 采用高效液相色谱法对样本进行检测，测其糖化血红蛋白值，将所出现异常峰图的 39 例（包括 HbF>1.5 或者出现了 P00 峰）样本选出。采用 PCR+导流杂交的方法对样本进行检测，确定其是否为中国人中最常见的三种缺失型 α-地贫：--SEA,-α3.7，-α4.2 和三种突变型 α-地贫：CS,QS,WS 以及 17 个位点的 19 种突变型 β-地贫。若 α，β 地贫均为阴性，还需用测序仪用双脱氧链终止法(Sanger 法) 对血红蛋白基因测序。回顾性分析血常规，肝功，血红蛋白电泳等结果。利用统计学分析法对以上结果进行总结。

结论 通过对 39 例重庆地区糖化血红蛋白异常结果的进一步检测，其中已有 11 例确定为 α 或 β 地中海贫血，其余标本由于 HbF 值均为增高状态可通过对其他检测结果的分析以及对相关文献的研究可证实其余为地贫阴性的样本还有很大一部分是存在其他基因点突变，是可以通过双脱氧链终止法(Sanger 法)对血红蛋白基因测序，并确定其具体为哪种位点突变的异常血红蛋白病。

PU-1936

联合检测 ADA 和 PCT 在结核性胸膜炎诊断中的价值

王晓芳
丹东市第一医院

目的 研究并分析检验 ADA 与 PCT 在结核性胸膜炎诊断中的临床价值。
方法 选取我院在 2017 年 3 月-2017 年 10 月期间收治并确诊的结核性胸膜炎患者 30 例组成研究组，选取我院同期收治住院非结核性胸膜炎患者 30 例为对照组。两组患者均采用酶偶联谷氨酸脱氨酶反应连续监测法检测血清 ADA，再采用干式免疫荧光法对血清 PCT 进行检测，对比分析两组患者的血清 ADA 以及血清 PCT 的含量。
结果 研究组患者的胸水 ADA 值（51.34 ±3.19）U/L 显著高于对照组（20.31 ±1.34）U/L，而且研究组血清 ADA 值（23.31 ±3.14）U/L 也明显高于对照组（20.15 ±2.10）U/L；研究组中患者血清中 PCT 含量为（1.31±0.14）ng/ml，显著高于对照组（0.01±0.003）ng/ml（P＜0.05），差异具有统计学意义。
结论 ADA 以及 PCT 对于诊断结核性胸膜炎以及非结核性胸膜炎具有诊断性意义，临床应用价值较高。

生化免疫流水线使用初期平诊生化标本 TAT 延长的改进措施

卢婷
南京大学医学院附属鼓楼医院

通过分析生化免疫流水线（贝克曼公司，PowerProcessor）使用初期生化平诊标本检验结果汇报时间（turnaround time,TAT）延长的原因，制定改进措施，包括优化管理制度和工作流程、培训人员、维护仪器、更换真空采血管和改变离心时间、加强和临床的沟通、制定发生故障应急预案等措施，经过上述措施，使得平诊 TAT 时间符合科室的质量指标，以供准备引入和使用贝克曼生化免疫流水线的医院作为参考。

PU-1938

酒依赖患者血浆同型半胱氨酸含量的变化

董丽梅、李琳
哈尔滨医科大学附属第一医院

目的 探讨酒依赖患者血浆同型半胱氨酸(Ｈｃｙ)含量的变化，及Ｈｃｙ相关的某些因素。
研究与方法 酒依赖患者 20 人,对照组 20 人进行血Ｈｃｙ的测定,同时测定血叶酸(叶酸)、维生素Ｂ12(ＶｉｔＢ12)的浓度。
结果 ①酒依赖患者血Ｈｃｙ显著高于对照组(Ｐ<0.01)②酒依赖患者叶酸及ＶｉｔＢ12 水平低于对照组(Ｐ<0.05)。③Ｈｃｙ浓度与叶酸、ＶｉｔＢ12 水平之间存在相关性(Ｐ<0.05)。

结论 酒依赖患者Ｈｃｙ浓度明显升高,血清叶酸、ＶｉｔＢ12 水平降低，Ｈｃｙ浓度的升高可能与患者叶酸、ＶｉｔＢ12 代谢障碍有关。

PU-1939

探讨血清 CRP 和 CER 在肝癌和肝硬化鉴别诊断中的价值

蔡桂君
南方医科大学珠江医院

目的 比较肝硬化和肝癌患者的血清 CER,CRP 含量的差异，观察这些指标对疾病的诊断和鉴别诊断是否具有临床意义。
方法 选取标本来自 2016 年 10 月~12 月间门诊及住院的肝癌与肝硬化患者，对其进行超敏反应蛋白及铜蓝蛋白的检测。
结果 血清中铜蓝蛋白浓度的比较中肝癌组明显高于肝硬化组和健康对照组(P<0.05)，但肝硬化组和正常对照组之间无显著性差异（P=0.785）。血清中 C 反应蛋白浓度的比较中肝癌组和肝硬化组均明显高于正常对照组(P<0.05)而肝癌与肝硬化组之间则无显著差异(P=0.272)。其中两项指标同时增高中，肝癌组中比例为 73%，远大于肝硬化组 47%。只有 C 反应蛋白增高，铜蓝蛋白无明显增高的样本，肝硬化组占 22%。远大于肝癌组 4%。
结论 当两项指标均显著升高时，应该多考虑患肝癌的可能性，而只有 C 反应蛋白升高，铜蓝蛋白无明显升高时，则患肝硬化的几率增加。两项指标在肝癌和肝硬化中升高程度不同，有互补性。

PU-1940

PCT、SAA、hs-CRP 和 WBC 检测对婴幼儿感染性疾病的临床诊断价值分析

黄凯
江西省儿童医院

目的 探究血清降钙素原（PCT）、淀粉样蛋白 A(SAA）、超敏 C 反应蛋白（hs-CRP）、和白细胞计数（WBC）对婴幼儿感染性疾病的早期诊断价值。
方法 选取 2020 年 1-6 月在江西省儿童医院门、急诊就诊的 177 例婴幼儿感染性疾病患者作为研究对象，将其分为非细菌性感染组（87 例）和细菌性感染组（54 例）。另选取同期该院体检科 50 例健康体检者作为对照组。检测 3 组血清 PCT、SAA、hs-CRP 和 WBC 水平，并应用受试者工作曲线（ROC 曲线）评价临床诊断价值。
结果 细菌性感染组 PCT、SAA、hs-CRP、Neu%和 WBC 水平均高于非细菌感染组和对照组，差异均有统计学意义（P<0.05）；非细菌性感染组 PCT、SAA、hs-CRP 和 Neu%水平均高于对照组，但低于细菌性感染组，差异均有统计学意义（P <0.05）。PCT、SAA、hs-CRP 和 WBC 用于诊断细菌性感染疾病的 ROC 曲线下面积分别为 0.911、0.922、0.861、0.895、0.921。PCT、SAA、hs-CRP 和 WBC 用于诊断非细菌性感染疾病的 ROC 曲线下面积分别为 0.870、0.830、0.751、0.736、0.537。PCT、SAA、hs-CRP 和 WBC 用于鉴别诊断细菌性和非细菌性感染的 ROC 曲线下面积分别为 0.625、0.632、0.693、0.728、0.915。
结论 PCT、SAA、hs-CRP、Neu%和 WBC 检测对感染性疾病有相应的早期诊断价值，同时可用于感染性疾病的鉴别诊断，从而指导临床合理用药。

PU-1941

同型半胱氨酸和脂蛋白（a）联合检测与冠心病的相关性研究

刘家汝、关秀茹
哈尔滨医科大学附属第一医院

近年来，随着人们生活水平的提升，心脏病的发病率也越来越高。冠状动脉硬化性心脏病（冠心病） 作为临床常见的心血管疾病，其高发病率和死亡率已经严重威胁到人类的健康和生命安全[1]。若在临床中无法通过相关手段早期发现冠心病患者的症状进行并实施治疗，会对患者造成极其严重的影响[2]。随着医学领域对冠心病的研究日益深入，在冠心病的临床诊断方面取得了巨大的进展[3]。许多研究表明，血浆中同型半胱氨酸和脂蛋白的水平与冠心病患者的血管功能和动脉粥样硬化的发生与发展有着密切联系，对以上两项血清生化指标进行联合检测在冠心病的早期诊断中具有重要的意义。现从 Hcy、Lp(a)对冠心病病变的作用机制及其诊断的临床意义进行综述。

PU-1942

血清乳酸脱氢酶和 β2-微球蛋白检测在非霍奇金淋巴瘤中的应用

王加
江苏省人民医院（南京医科大学第一附属医院）

目的 探讨血清乳酸脱氢酶（LDH）及 β2-微球蛋白(β2-MG)水平在非霍奇金淋巴瘤(NHL)诊断、治疗中的变化及临床意义。
方法 回顾性分析非霍奇金淋巴瘤（NHL）患者在治疗前后血清 LDH、β2-MG 动态水平，并进行随访，判断血清 LDH、β2-MG 水平与 NHL 临床特征及治疗疗效之间的关系。
结果 NHL 患者血清 LDH、β2-MG 水平明显升高，Ⅲ-Ⅳ期患者 LDH、β2-MG 水平均显著高于Ⅰ-Ⅱ期（P<0.05）。治疗完全缓解组 LDH、β2-MG 水平均显著下降，并且 LDH 和 β2-MG 升高组的生存率低于正常组（P<0.05）。
结论 LDH 和 β2-MG 的联合检测可提高 NHL 检出率，并对评价 NHL 临床分期、治疗疗效及预后判断方面有重要的临床价值。

PU-1943

抑郁症与血浆同型半胱氨酸水平的相关性研究

付璐、李洁
哈尔滨医科大学附属第一医院

目的 探讨同型半胱氨酸(Homocysteine，Hcy)在抑郁症发病中的作用。
方法 收集 30 例抑郁症及 30 名健康者血液标本，采用高效液相层析法测定血浆 Hcy,比较两组间差异。
结果 抑郁症组血浆 Hcy 水平高于对照组[(20.31±5.9)umol/L 比(10.96±4.51)umol／1，P<0.01]。
结论 抑郁症患者的血浆 Hcy 水平升高，提示 Hcy 与抑郁症的发病具有相关性。

PU-1944

血氨检测在临床中的应用价值

赵宇、董莉芹
哈尔滨医科大学附属第一医院

氨对于人体是一种有害的物质，它主要的代谢场所在肝脏，正常人血内有少量游离氨存在。血液中氨的来源主要为体内蛋白质在代谢过程中产生的氨基酸，以及经脱氨作用分解而来的内源性氨；另一来源是蛋白质类食物在肠道内经细菌分解而成的外源性氨。在正常情况下，肝脏能将氨通过鸟氨酸循环的特殊酶系，鸟氨酸氨基甲酰转移酶，氨基甲酰磷酸合成酶等，合成尿素，再经过肾脏排出。此外，脑和肾脏等器官的氨与谷氨酸作用生成谷氨酰胺后被运输到肝脏，在肝脏转变成尿素或其它含氮化合物后由肾脏排出体外，或形成铵盐随尿排出。因此正常人血氨含量较低，这个过程不仅可以解毒，同时在此过程中消耗了 CO2，故在维持酸碱平衡中也具有重要作用。

PU-1945

LDH 与 α-HBDH 检测在评估消化道肿瘤患者病情中的临床价值

解秀梅
徐州医科大学附属医院

目的 探讨血清乳酸脱氢酶（LDH）与 α-羟丁酸脱氢酶（α-HBDH）检测在评估消化道肿瘤患者病情中的的临床价值。
方法 回顾性分析 2017.11~2018.4 本院肿瘤科收治的 282 例消化道肿瘤患者（食道癌、胃癌、结肠癌、直肠癌）的病历资料（已排除患有或疑似患有心脏疾病的患者）,其中肿瘤非转移组 158 例、肿瘤转移组 124 例，比较转移性与非转移性肿瘤、不同转移组织、不同肿瘤分期之间患者血清乳酸脱氢酶(LDH)与 α-羟丁酸脱氢酶（α-HBDH）的水平。
结果 消化道肿瘤转移组 LDH 水平升高者明显高于消化道肿瘤非转移组,且 LDH 升高的水平高于消化道肿瘤非转移组，差异有统计学意义(P<0.05);肺脏和肝脏等多处转移组的 LDH 水平明显高于腹膜和周围淋巴结转移组,差异有统计学意义(P<0.05)；消化道肿瘤转移组 α-HBDH 的平均水平高于消化道肿瘤非转移组, 但差异未达到统计学意义； 肺脏和肝脏等多处转移组的 α-HBDH 平均水平高于腹膜和周围淋巴结转组，但差异也未达到统计学意义。
结论 消化道肿瘤发生转移的患者血清 LDH 水平明显升高,且与肿瘤的转移情况相关,故，当患者血清 LDH 水平明显升高时多数预示者患者病情的恶化，为临床医生评估肿瘤患者病情及治疗提供重要的参考价值，而血清 α-HBDH 在这方面的价值较小。

PU-1946

EB 病毒抗体及异型淋巴细胞比例单独或联合检测在儿童传染性单核细胞增多症诊疗中的应用价值研究

黄亚光、秦诗睿
三峡大学附属仁和医院

目的 探讨血清 EB 病毒（EBV）抗体与外周血中异型淋巴细胞比例单独或联合检测在儿童传染性单核细胞增多症（IM）诊断治疗过程中的应用价值。
方法 选取 237 例于 2020 年 3 月至 2021 年 4 月之间在我院儿科门诊及住院就诊的儿童作为研究对象纳入实验研究。实验共分为两组，其中观察组 107 例，均为临床确诊为 IM 的儿童；对照组 130 例，均为同期在儿童保健科进行健康体检的正常儿童。分别对两组儿童血清中 EBV 抗体及外周血

中异型淋巴细胞的比例的实验结果进行统计分析，比较两者单独及联合检测时诊断结果的特异性及灵敏度。
结果 单项分析异型淋巴细胞比例时，观察组阳性为 69 例，即诊断灵敏度为 64.49%，对照组阴性 103 例，即诊断特异性为 79.23% ；EBV 抗体单项分析，其观察组阳性 88 例，诊断灵敏度为 82.24%；对照组阴性 118 例，即诊断特异性为 90.77%；而两者联合检测结果分析显示，阳性为 101 例，即诊断灵敏度可提高至 94.39%，且与两项目单项检测的灵敏度相比，差异具有统计学意义（P<0.05）。
结论 血清 EBV 抗体及外周血异型淋巴细胞比例联合检测比两者单独检测可大大提高儿童 IM 诊断的灵敏度，联合可以作为临床辅助诊断儿童 IM 较为快速可靠的实验室方法，在儿童 IM 鉴别诊断中具有重要的临床价值。

蛋白质组学技术在糖尿病肾病中的研究进展

张炎
郑州大学第一附属医院

随着糖尿病肾病发病率的增加，糖尿病肾病已成为慢性肾脏疾病的最常见病因，甚至成为终末期肾病的首要病因。早期识别和诊断糖尿病肾病成为临床关注重点，估计肾小球滤过率和尿白蛋白缺乏敏感性和特异性，复杂性较低、稳定性更好的尿液蛋白质组学技术成为肾脏标志物研究的重要技术。目前已识别出与糖尿病肾病相关的蛋白质组学标志物主要是尿液中的胶原片段、蛋白片段、多肽小分子等，将多种标志物联合生成高维分类器（如 CKD273 等）在疾病的早期诊断和进展预测方面发挥重要作用。

PU-1948

孕妇口服葡萄糖耐量结果分析

吴佳梅
资阳市第一人民医院

目的 通过统计分析我院孕妇口服葡萄糖耐量试验（OGTT）结果，为临床诊治 GDM 提供依据。
方法 回顾性统计我院 2018 年 12 月-2020 年 12 月共计 4383 例孕中期（24-30 周）口服葡萄糖耐量的结果，分析不同年龄组孕妇的口服葡萄糖耐量的试验结果。
结果 A 组（≤20 岁）和 B 组（21-25 岁）的空腹血糖比较 P 值为 0.208，D 组（31-35 岁）和 E 组（≥36 岁）的空腹血糖比较 P 值为 0.269，P>0.05，差异无统计学意义，其余组之间两两比较 P 值均小于 0.05，差异有统计学意义。
结论 随着年龄的增长，GDM 确诊率明显增加，及时进行规范的 OGTT 试验在 GDM 的筛查和诊治中起到很大的作用。

PU-1949

基于血清 CHE、PA、TBA 水平测定对肝硬化评估的临床价值研究

王华国
四川省资阳市第一人民医院

目的 基于生化检测中血清胆碱酯酶（CHE）、前白蛋白（PA）和总胆汁酸（TBA）水平测定探求对肝硬化评估及诊断的临床价值。
方法 收集 2020 年 4 月至 2021 年 4 月间四川大学华西医院资阳医院.资阳市第一人民医院肝硬化住院患者和体检中心进行健康查体的健康人的临床资料，筛选 195 例肝硬化患者为实验组，已通过肝功能 Child-Pugh 分级为 78 例 A 级、60 例 B 级和 57 例 C 级；65 例健康查体的健康人为对照组，对以上患者生化检验中血清胆碱酯酶（CHE）、前白蛋白（PA）和总胆汁酸（TBA）水平检测结果进行回顾性分析。
结果 与对照组做比，实验组的 A 级、B 级和 C 级中血清 TBA 检测结果均偏高，血清 CHE 和 PA 检测结果均偏低，比较差异存在统计学意义（P<0.05）。实验组中随着肝功能分级等级的递增，TBA 水平检测结果随之升高，CHE 和 PA 水平检测结果随之降低，比较差异存在统计学意义（P<0.05）。实验组按肝功能 Child-Pugh 分级即患者疾病严重程度与患者血清 CHE、PA 测定水平与实验组肝功能 Child-Pugh 分级呈现负性相关，与 TBA 测定水平呈现正性相关，且 PA 相关性最大，CHE 次之，TBA 最小。三项指标在实验组 A 级中，与对照组比较，单项检测和联合检测的阳性检出率均高；与单项检测指标比较，联合检测的阳性检出率高，比较差异存在统计学意义（P<0.05）。
结论 血清 CHE、PA、TBA 检测水平与肝脏肝细胞损害有紧密的相关性，可在一定程度上反映肝脏实质性损伤，是重要的生化指标，对肝硬化评估有积极的临床价值；提高早期肝硬化评估诊断的阳性检出率，可通过生化指标的联合检测来实现，值得临床推广应用。

PU-1950

2 型糖尿病视网膜病变患者 NLR、PLR 与病变程度及血脂的相关性研究

刘泽江
资阳市第一人民医院

目的 探讨中性粒细胞与淋巴细胞比值（Neutrophil-to- lymphocyte ratio,NLR）、血小板与淋巴细胞比值(Platelet-to- lymphocyte ratio,PLR)与 2 型糖尿病视网膜病变（DR）患者不同病变程度和血脂指标的相关性。
方法 选取 2 型糖尿病 DR 患者 200 例，根据病变程度分无明显 DR、轻度 NPDR、中度 NPDR、高度 NPDR、PDR 五组，各 40 例，组内根据是否合并高血压分为 DR 合并高血压和单纯性 DR。测定中性粒细胞计数、淋巴细胞计数、血小板计数、TC、TG、HDL-C、LDL-C、等指标水平并收集相关临床资料，对结果进行分析。
结果 NLR、PLR 变化方向与 DR 病变程度一致，无明显 DR 和轻度 NPDR 比较，差别无统计学意义。无明显 DR、轻度 NPDR<中度 NPDR<高度 NPDR<PDR,差别具有统计学意义（p<0.05）。组内比较 NLR、PLR，DR 合并高血压>单纯性 DR，差别具有统计学意义(P<0.05)。NLR、PLR 与糖尿病病程、BMI、TC、TG、TC/TG、LDL-C、HbA1c 成正相关，与 HDL-C、总胆红素、直接胆红素、间接胆红素成负相关。
结论 NLR、PLR 在 2 型糖尿病视网膜病变的进展有重要临床意义，可作为 DR 患者不同病变程度分级分期指标，对治疗有效性的评估需进一步验证。

PU-1951

评价分析常规检验与生化检验在临床糖尿病诊断中的价值

丁燕
武城县人民医院

目的 对常规检验与生化检验在临床糖尿病诊断中的价值进行评价分析。
方法 在我院选取 2020 年 1 月至 2021 年 1 月确诊的糖尿病人 120 例。随机均分为常规组和生化组，生化组采用生化检验，常规组使用常规检验，比较两组检验结果准确率。常规组患者进行常规检验：检测前保证常规组患者排空膀胱，在 30min 后，由检验人员取每位患者的 10ml 中段尿，收集后用干净容器承装，送至检验科，使用全自动尿液分析仪检验，检验内容为尿葡萄糖。使用时严格对照说明书。生化组患者进行生化检验：采血前一日，对生化组所有患者进行健康宣教，禁止饮酒，禁止饮用咖啡，浓茶等饮品，禁止使用任何有降血糖效果的药物，在保持空腹 8 小时后方可进行检验。清晨每位患者采集 3 至 5 毫升静脉血，置入 EDTA 抗凝管中，在 60min 内送至检验科，用全自动血液分析仪检测，使用时严格对照说明书。另外，对空腹血糖水平，使用氧化酶法检测；还原法检测果糖胺水平；亲和层分析法检测糖化血红蛋白，并在层析柱上增加测量水平[2]。检验完成后对各项指标进行记录。
结果 生化检验组检验结果准确率明显高于常规检验组。两组结果具有对比意义(P<0.05)。
结论 在临床糖尿病检验中，生化检验准确率更高，值得在临床检验中推广。

PU-1952

Quantified correlations between alanine aminotransferase and lipid levels in given interval ranges: A cross-sectional study

Lei Feng 、Shiyan Nian、Dan Ye、Chunting Zhang、Ying Zhu、Xuejing Bai、Mengna Wu、Zefeng Yan、Cong Shao、Qixin Ma、Qianye Bi
Department of Laboratory, People's Hospital of Yuxi City（Department of Laboratory, The Sixth Affiliated Hospital of Kunming Medical University）

Background & Aims To learn whether and how serum lipid levels are associated with alanine aminotransferase (ALT) levels in the general Chinese population.
Methods A cross-sectional study of 184,398 subjects with ALT≤40 IU/L and no medical history or treatment that affected lipid metabolism.
Results The HDL-C levels of 95.9% males and 92.1% females were ≤2.0 mmol/L. Under this classification, 60.7% of males and 63.2% of females were 2.0<LDL-C<4.5 and logarithm transformed VLDL-C (LnVLDL-C)≤0.1 mmol/L; HDL-C was negatively associated and LDL-C and LnVLDL-C was positively associated with ALT level in both genders. In addition, 11.1% of males and 20.9% of females were LDL-C≤2.0 and LnVLDL-C≤0.1 mmol/L; HDL-C and LDL-C were negatively associated and LnVLDL-C was positively associated with ALT levels in both genders. Furthermore, 17.6% of males and 5.9% of females were 2.0<LDL-C<4.5 and 0.1<LnVLDL-C<1.0 (0.5 for females) mmol/L; again, HDL-C was negatively associated and LDL-C and LnVLDL-C were positively associated with ALT level in both genders. Finally, 6.5% of males and 2.1% of females were LDL-C≤2.0 and 0.1<LnVLDL-C<1.0 mmol/L; HDL-C and LnVLDL-C were negatively and positively associated with ALT levels in both genders; LDL-C was positively associated with ALT levels only in females..
Conclusion ALT levels and lipid levels are extensively associated, with unique patterns in each given interval range of lipids; these interval-specific correlation modes might suggest differentiated pathophysiological roles of lipids in subclinical hepatocyte damage and protection in a given population.

PU-1953

一种新的可避免羟苯磺酸钙对肌酐检测负干扰的检测方法的试探

谌海兰
重庆医科大学附属第一医院

目的 探讨一种新的酶法肌酐检测试剂盒抵抗羟苯磺酸钙对肌酐检测负干扰的效果。
方法 收集 2019 年 10 月至 2020 年 7 月重庆医科大学附属第一医院收治的未服用羟苯磺酸钙患者的 12 个浓度范围的混合血清并配置成含不同浓度羟苯磺酸钙的标本，在 5 个检测系统上分别用配套系统自身酶法试剂、新的酶法试剂、苦味酸试剂进行体外干扰试验。
结果 当样本中含有不同浓度羟苯磺酸钙时，系统自身酶法试剂检测结果受到明显的负干扰，当羟苯磺酸钙浓度达到 16μg/mL 时偏倚可达到-10%，且随着干扰物浓度的增加，受到的负干扰增加。当样本中不含干扰物时，新酶法试剂与系统配套试剂检测结果的偏倚均在±12%，罗氏 cobas c701、贝克曼 AU5800、迈瑞 BS2000M 三种检测系统的偏倚控制在±4%，新酶法试剂与临床常用酶法试剂检测结果具有较高一致性。运用新酶法试剂时，除了当干扰物浓度在 32—64mg/L 且肌酐浓度较低时存在最大-16.7%的干扰，对于所有浓度范围的肌酐，在受到不同浓度羟苯磺酸钙干扰时，偏倚均维持在±4%，在临床可接受的偏倚范围内。
结论 新酶法试剂与临床在用肌酐检测试剂的检测结果符合率高，且能够有效抵抗羟苯磺酸钙对肌酐检测的负干扰，有望应用于临床实验室解决肌酐检测结果假性偏低的问题。

PU-1954

血清 GPI 在类风湿性关节炎诊断中的意义

康霜
资阳市第一人民医院

目的 探讨血清中葡萄糖-6-磷酸异构酶（ (Glucose-6-phosphate isomerase ,GPI)抗原升高对类风湿关节炎(rheumatoid arthritis，RA)患者的临床诊断价值。
方法 用酶联免疫吸附试验(ELISA)检测 72 例 RA 患者，47 例其他自身免疫性疾病患者和 30 例健康对照者血清中 GPI 抗原的浓度，同时还检测了类风湿因子(RF)，抗环瓜氨酸肽（CCP）抗体。
结果 72 例 RA 组的 GPI 浓度为（2.16±2.42 mg / L）和阳性率（80.6%）都显著高于 47 例非 RA 组 GPI 浓度为（0.23±0.41 mg / L 、21.3%）和 30 例健康对照组为（0.059±0.032 mg / L、0%）(P<0.05) ，RA 患者血清中 GPI 浓度显著高于其他自身免疫性疾病组和健康对照组(P <0.05)； GPI、抗 CCP 抗体及 RF 对 RA 诊断的灵敏度、特异度的卡方检验显示：GPI 与抗 CCP 抗体的灵敏度差异有统计学意义（P<0.05），GPI 与 RF 的灵敏度及特异度差异均无统计学意义（P>0．25）；这三个指标联合检测诊断 RA 的灵敏度为 95.8%，特异度为 97.4%；Spearman 等级相关分析显示单测检验 RA 患者 GPI 值与 RF、抗 CCP 抗体均具有显著相关性。
结论 GPI 升高对诊断类风湿关节炎有显著意义，与抗 CCP 抗体及 IgM-RF 联合检测可显著提高对 RA 的鉴别诊断价值。

PU-1955

胆红素水平对酶法测定总胆固醇结果的影响和校正

蒋叶
江苏省人民医院（南京医科大学第一附属医院）

目的 评价不同浓度胆红素水平对酶法测定总胆固醇（TC）的影响，并建立有效的校正方法。
方法 将胆红素标准品配制成系列浓度梯度的胆红素溶液，分别按 10%体积加入无黄疸患者血清中，检测各样本总胆红素（TB）和 TC 浓度，分析高胆红素水平对胆固醇检测结果的影响及二者的相关性。利用多元回归分析建立校正公式，用于临床黄疸患者标本的胆固醇测定值的数学纠正。
结果 高 TB 水平降低 TC 的酶法测定结果（$P<0.05$），两者呈负相关（$R^2=0.9894$）；以无黄疸血清标本的 TC 浓度为 Y，其对应人工黄疸标本的 TB 实测值为 X，TC 实测浓度为 Z，对变量 Z 与因变量 X、Y 进行回归分析，计算得多元回归式：Y = -0.01334+ 0.002353*X + 0.9730*Z+ 0.0003370*X*Z；经公式校正后 92.67%的黄疸标本 TC 浓度偏倚小于±10%。
结论 黄疸患者血清样本中高胆红素水平可导致其 TC 的检测结果偏低，偏倚大小与 TB 浓度以及初始 TC 浓度相关，运用纠正公式可有效校正黄疸对 TC 测定的干扰，符合临床要求。

PU-1956

血脂、Hcy、hs-CRP 及 CysC 在 ICP 中的水平变化研究

向满林
中南大学湘雅医院

目的 探究血脂、同型半胱氨酸（Hcy）、超敏 C 反应蛋白（hs-CRP）及胱抑素 C（CysC）在妊娠期肝内胆汁淤积症（Intrahepatic cholestasis of pregnancy，ICP）患者体内的代谢变化和其临床意义。
方法 选取某三甲医院产科收治的 30 例 ICP 患者血清作为实验组，另选取同期正常待产孕妇血清 30 例作为对照组，分别留取空腹血清 3ml，测定 TG、TC、LDL、HDL、NEFA、Apo-A1、Apo-B、Hcy、hs-CRP 及 CysC 等指标，分析各指标在 ICP 患者与正常孕妇之间表达情况。
结果 实验组与对照组基本情况（年龄、性别等）无明显差异；实验组 TG、TC、NEFA 与对照组差异均不明显（$p>0.05$）；LDL、HDL、HDL/TC、Apo-A1、Apo-B、Apo-A1/Apo-B、HDL/LDL、及 CysC 在两组中表达具有显著差异（$p<0.05$），且实验组 HDL/TC、Apo-A1/Apo-B、HDL/LDL 较对照组明显下降，LDL、Apo-B 及 CysC 较对照组升高；秩和检验结果显示两组 Hcy、hs-CRP 具有显著性差异（$p<0.05$）。
结论 ICP 患者存在血脂代谢异常，可能与高、低密度脂蛋白比例失衡有关；Hcy、hs-CRP 及 CysC 水平升高可能为监测和辅助诊断 ICP 提供新的参考依据。

PU-1957

高通量自动化液相色谱串联质谱法检测血清胰岛素样生长因子 1 的方法研究

赵蓓蓓[1,2]、赖丽嫦[1]、董衡[1,2]、禤学怡[1,2]、李鑫[1]、佘旭辉[1,2]、李卓阳[1,2]
1. 广州金域医学检验中心有限公司
2. 广州医科大学金域检验学院

目的 液相色谱串联质谱法（LC-MS/MS）检测血清胰岛素样生长因子 1（IGF-1）具有灵敏度更高、特异性更强、定量更准确、一致性更好、可同时监测 IGF-1 序列多态性信息的特色，较好地克服了

免疫学方法的不足。针对传统手工前处理方法存在过程复杂、处理周期长，工作效率低等问题，提出了基于质谱法的血清 IGF-1 自动化前处理平台整体设计方案，以提高检测效率，同时降低手工操作带来的质量风险。
方法 通过采用 QC STORY 适用判定和计划进度甘特图质量工具，对本研究进行了背景调研，现状数据分析，目标设定，原因和要因分析，对策制定及方案实施等一系列 PDCA 活动程序。平台以引入自动取样系统、自动化移液系统和高通量的在线固相萃取净化系统，对血清样品进行简单的净化处理后，进一步实现复杂基质样品的在线净化，并完成实时的液相色谱系统进样。此外，通过将液相系统升级为多通道液相系统的措施来达到检测效率的提升。
结果 与传统手工法比较，平台通过引入自动取样系统，取样步骤的检测效率可提升 64%；引入自动化移液系统和高通量的在线固相萃取净化系统，前处理步骤的检测效率可提升 83%；升级多通道液相系统，液相分离步骤的检测效率可提升 74%；总体检测效率提升约 71%。
结论 本研究通过使用质量管理工具，对 LC-MS/MS 检测血清 IGF-1 引入高通量自动化前处理平台，总体检测效率可提升约 71%，为 LC-MS/MS 检测方法的自动化探索提供了一种科学、有效的可行性方案。

微流控和细胞外囊泡：精准医学

巫杰、李智洋
南京市鼓楼医院

细胞外囊泡几乎在所有体液中都可见，如血液，尿液，乳汁等，是一种脂质双分子层囊泡，包含蛋白质，DNA、RNA、脂质等。细胞外囊泡可以将囊泡内的货物运送到目标细胞，免除其他物质的水解，因此已经成为细胞间通信的关键参与者。它们作为诊断和预后生物标志物或治疗性药物传递系统的潜力近年来引起了学者相当大的兴趣。然而，用于研究细胞外囊泡的传统方法仍然有显著的局限性，包括所需的时间长和低吞吐量技术，方法不够标准化等，因此对更好的细胞外囊泡研究工具的需求越来越强烈。在过去的几年中，基于微流控的技术逐渐出现，并在细胞外囊泡的分离中发挥了重要作用。这些技术具有几个优点，包括低成本、低样本量、高吞吐量和精度。本文综述了基于微流体的技术的最新进展，包括一体化的微流控分离，检测，分析细胞外囊泡内容物，并比较了基于传统和微流体的技术的优缺点，应用于临床护理点和临床实验室，有望促进精准医学进一步的发展。

PU-1959

液相色谱串联质谱法（LC-MS/MS）和化学发光法（CL）在测定 14 岁以下儿童血清 17-羟基孕酮的结果比较研究

赵蓓蓓[1,2]、陈秀如[1]、韦兰清[1]、董衡[1,2]、佘旭辉[1,2]、李卓阳[1,2]
1. 广州金域医学检验中心有限公司
2. 广州医科大学金域检验学院

目的 比较评价液相色谱串联质谱法（LC-MS/MS）和化学发光法（CL）测定 14 岁以下儿童血清 17-羟基孕酮（17OHP）的检测结果。
方法 收集 212 例临床送检儿童血清标本，其中新生儿（3d~1m）76 例，婴幼儿（1m~1y）83 例，儿童（1y~13y）53 例，分别使用 LC-MS/MS 法与 CL 法测定血清标本中的 17OHP 含量，并将两种方法的检测结果分别采用 Passing-Bablok 检验、Bland-Altman 和 Wilcoxon test 统计学方法进行结果比较分析。

结果 LC-MS/MS 法测定 212 例血清 17OHP 的均数为 35.80±107.26 nmol/L，CL 法测定的结果为 71.60±144.66 nmol/L。Passing-Bablok 回归分析结果显示，两种检测方法检测得到的血清 17OHP 结果之间线性相关性较差（Cusum test 显示 P<0.01)，表明两种检测方法间一致性较差。Bland-Altman 一致性分析显示，LC-MS/MS 法与 CL 法检测结果相比，差值的绝对值最大为 387.63 nmol/L，差值平均值为 35.80 nmol/L。Wilcoxon test 双尾配对检验结果显示，两种血清 17OHP 的检测结果存在显著性差异（P<0.0001）。使用各自方法学的参考区间回顾数据，LC-MS/MS 法与 CL 法测定新生儿标本异常检出率分别为 13.16%、38.16%；婴幼儿异常检出率分别为 14.46%、25.30%；儿童异常检出率分别为 45.28%、52.83%；CL 法结果异常检出率明显高于 LC-MS/MS 法。

结论 LC-MS/MS 和 CL 测定新生儿及婴幼儿血清 17OHP 的结果相关性差，但前者结果显著偏低，血清 17OHP 的准确定量对先天性肾上腺皮质增生症的筛查、确诊及分型诊断、治疗效果评估非常重要，使用 CL 测定 14 岁以下儿童血清 17-羟基孕酮可能存在异常检出率高估的风险，特别针对新生儿的检测。

PU-1960

体检人群中同型半胱氨酸与高脂血症的相关系分析

刘森
宁津县人民医院

在过去十年中，同型半胱氨酸（homocysteine, Hcy）被称为是心血管疾病的标志，并被美国心脏协会确定为中风和心脏病发作的危险因素。有文献报道，Hcy 可通过影响脂质代谢促进血管粥样斑块的形成 、导致心血管疾病的发生[14]。查阅大量文献发现 Hcy 可通过氧化应激、内质网应激、促进相关炎症因子释放促使高脂血症的发生，为探讨 Hcy 与高脂血症的相关性，本次试验选取 200 个体检人群标本，根据血脂指标将其分为两组，分别进行组内和组间分析。

PU-1961

Potential role of liver enzymes for predicting elevated blood glucose levels

Mengna Wu、Shiyan Nian、Lei Feng、Xuejing Bai、Dan Ye、Chunting Zhang、Zefeng Yan、Qixin Ma、Cong Shao、Qianye Bi、Beibei Luo
Department of Laboratory, People's Hospital of Yuxi City (Department of Laboratory, The Sixth Affiliated Hospital of Kunming Medical University)

Background This study was to explore the potential effect of different liver enzymes on elevated blood glucose with the use of a more detailed blood glucose grouping.
Methods This cross-sectional study enrolled 144,135 participants who had biochemical examinations from 2014-2018. Participants were classified by sex and different blood glucose levels (< 5.0 mmol/L, 5.0-5.5 mmol/L, 5.6-6.2 mmol/L, 6.3-6.9 mmol/L, and ≥ 7.0 mmol/L). The associations between liver function indicators and occurrence of type 2 diabetes (T2DM) were analyzed through multivariate linear regression and multiple logistic regression.
Results There was a significant difference among the biochemical indices between different blood glucose groups in males and females. Liver enzymes such as alanine aminotransferase (ALT), aspartate transaminase (AST), alkaline phosphatase (ALP), and γ-glutamyl transpeptidase (GGT) were independent risk factors for raised blood glucose, and there were gender differences in the predictive performance of each liver enzyme to elevated blood glucose levels. In men, GGT was the most appropriate to predict progressive elevation of blood glucose or T2DM risk, and ALT and ALP may only be applicable to the prediction of impaired fasting glucose (IFG). By

contrast, ALT and ALP were the most appropriate enzymes for the prediction of the risk of elevated blood glucose or T2DM in women, and AST and GGT may only be appropriate for the prediction of IFG.
Conclusions Liver enzymes were independent risk factors for elevated blood glucose. There were gender differences in the role of each liver enzyme for elevated blood glucose. GGT was more suitable as a predictor for dynastic elevated blood glucose in men, whereas for women, ALT and ALP were more suitable.

PU-1962

影响生化检验结果的分析和探讨

武雅茹
宁津县人民医院

目的 了解影响检验结果的相关因素，控制影响生化检验结果的因素，继而提高生化检验结果的精密度与准确性，从而帮助临床能及时有效的对患者的病情进行判断和治疗。
方法 利用调查统计的方法对影响生化检验质量的生理因素、检验前因素、检验中因素进行逐一的调查与分析，并提出相应的解决方案。
结果 影响生化检验结果的有各种因素，其中最重要的影响因素包括溶血，标本的采集方式，标本的处理和储存等因素，需要针对性的提出解决方案，制定有效的措施，减少检验结果的误差。
结论 影响生化检验结果的因素出现在检验过程中的各个环节中，且都会对检验结果产生重要影响，医务人员应积极控制各种影响因素，做好对生化检验的质量监控工作，提高责任意识，从而减少生化检验结果的错误率，提高检测结果的准确性。

PU-1963

宫颈癌患者联合检测血清糖类抗原 125、癌胚抗原的临床价值

陈春杰
宁津县人民医院

目的 探讨联合检测血清糖类抗原 125、癌胚抗原对于宫颈癌诊断的价值。
方法 选取我院 2017 年 4 月至 2019 年 6 月收治的 60 例宫颈癌患者设为宫颈癌组，同期选取 60 例健康体检者设为对照组，采用电化学发光法测定 CA125、CEA 水平，并对 CA125、CEA 阳性与宫颈癌病理类型的相关性进行分析。
结果 宫颈癌组 CA125、CEA 水平高于对照组，差异对比有统计学意义
结论 肿瘤标志物 CA125、CEA 检测可为宫颈癌的临床诊断及病理鉴别提供一定依据。

PU-1964

Liver Function Indicators may Outperform Lipids in Type 2 Diabetes Mellitus Prediction

Mengna Wu、Lei Feng、Shiyan Nian、Wenbo Xu、Dan Ye、Chunting Zhang、Yanjun Wan、Zefeng Yan、Qixin Ma、Cong Shao
Department of Laboratory, People's Hospital of Yuxi City (Department of laboratory, The Sixth Affiliated Hospital of Kunming Medical University)

Objective The aim of this study was to explore the potential role of serum liver function indicators in evaluating type 2 diabetes mellitus (T2DM) risk, and to compare them with traditional blood lipid indicators in predicting the risk of T2DM.
RESEARCH DESIGN AND METHODS This cross-sectional study enrolled 8076 patients with T2DM and 113164 controls who received biochemical examinations in 2014-2018. Participants were classified according to sex and age (<25, 35-34, 35-44, 45-54, 55-64, and ≥65 years). The associations between liver function indicators or lipid indicators and the occurrence of T2DM were analyzed through logistic regression, and their discriminatory capacity for T2DM was assessed with receiver operating characteristic (ROC) analysis. Comparison of the area under curve values between the ROC curves obtained by DeLong's method was used to assess T2DM risk predictive performance.
Results A significant difference among biochemical indexes was observed between T2DM and controls in both males and females. In different groups, observed differences in liver function and/or lipid variables were included in the logistic regression Results Alanine aminotransferase (ALT)/aspartate aminotransferase (AST) ratio and α-L-fucosidase (AFU) were independent risk factors for T2DM, and total bilirubin and the albumin to globulin ratio were independent protective factors, whereas the predictive effects of alkaline phosphatase (ALP) and gamma-glutamyltransferase (GGT) differed across sex and age groups. In all groups, liver function indicators and lipid indicators had ideal performance in T2DM prediction, but the liver function indicators performed better than lipid indicators. The predictive performance of the two combined indicators for T2DM was significantly better than that of either indicator alone (P<0.01).
Conclusions Adding liver function indicators to the traditional predictive model may further improve the predictive performance for T2DM. In the future, large sample case-control and prospective studies will be needed to further explore the T2DM predictive model to improve predictive performance for specific sex and age groups.

PU-1965

一种超灵敏的用于肿瘤 tsRNA 杂交链式反应扩增的 CRISPR-Cas12a 适配体传感器

巫杰、李智洋
南京市鼓楼医院

目的 tRNA-derived small RNAs（tsRNA）是近年来发现的、存在于多种生物体内的一类非编码小 RNA，来源于成熟 tRNA 或 tRNA 前体，其表达和修饰具有组织和细胞特异性。肿瘤来源的 tsRNA 生物标记物有助于癌症诊断和预后评估。然而，由于缺乏可靠、简便的定量方法，阻碍了 tsRNA 的临床应用。
方法 本实验在杂交链式反应(HCR)和成簇规则间隔短回文重复序列（Clustered regularly interspaced short palin-dromic repeats (CRISPR)/Cas12a 双重扩增的基础上，建立了直接高灵敏度检测 tsRNA 的 APTA-HCR-CRISPR 方法。用 HCR 扩增 tsRNA 靶向适配体，产生包含多个

CRISPR RNA(CrRNA)靶向条形码的长重复序列，并通过 CRISPR-Cas12a 侧枝切割活性进一步扩增信号，产生荧光信号。
结果 通过检测荧光信号的量，即为 tsRNA 的量，验证了所建立的策略，有较低的检测限，比其他方法更灵敏。同时揭示了 tsRNA 在癌症诊断中的潜在应用，以及在治疗监测中的潜在应用。
结论 该平台简单易行，可用于临床标本中 tsRNA 的高灵敏度和通用性检测，为癌症早期诊断提供非侵袭性、精准和智能的辅助诊断工具。

PU-1966

血清高敏肌钙蛋白 T 在糖尿病肾病中升高的临床价值分析

韩忠海
资阳市第一人民医院

目的 探讨心肌标志物血清高敏肌钙蛋白 T（hs-STAT）在糖尿病肾病中异常升高的临床价值。
方法 将符合要求的 2 型糖尿病（DM）患者 86 例按肾功能分级分为普通 2 型糖尿病组（DM 组）51 例和糖尿病肾病组（DN 组）35 例，分别检测两组患者血清中 hs-STAT 水平，并加以分析比较。
结果 DN 组患者中血清 hs-STAT 水平明显高于 DM 组患者。
结论 血清 hs-STAT 水平在糖尿病肾病患者中异常升高，不仅提示亚临床心肌损伤，还可以作为 2 型糖尿病进展为糖尿病肾病的早期诊断指标，有助于识别糖尿病肾病人群中肾功能显著恶化的高危患者，指导临床医生及早做出针对性决策。

PU-1967

血清胱抑素 C 对糖尿病肾病诊断的临床价值研究

王华国
四川省资阳市第一人民医院

目的 了解血清胱抑素 C（Cys C）在糖尿病肾病（DN）患者肾功能检测中的应用效果。
方法 选取资阳市第一人民医院 2017 年至 2021 年入院治疗的 II 型糖尿病（T2DM）病人 183 例，根据是否合并肾病分为单纯糖尿病组（T2DM 组，100 例）和糖尿病肾病组（DN 组，83 例），选择同期在资阳市第一人民医院行健康查体者 100 例作为对照组。3 组均进行血清 Cys C.血肌酐（Scr）及尿素氮（BUN）指标检测，比较 3 组研究对象的三项检测指标水平，对 DN 组各项指标的阳性检出率进行统计，并采用受试者工作特征曲线（ROC 曲线）分析血清 Cys C.BUN 和 Scr 对 DN 的诊断效能。
结果 DN 组和 T2DM 组患者的血清 Cys C.BUN 和 Scr 水平均显著高于对照组，并且 DN 组患者的三项检测指标水平均显著高于 T2DN 组水平，对比差异具有统计学意义（P<0.05）；DN 组三项检测指标阳性检出率对比，血清 Cys C 的检出率最高，均显著高于另外两项指标，对比差异存在统计学意义（P<0.05）；血清 Cys C.BUN 和 Scr 单独诊断 DN 的曲线下面积分别为 0.938、0.825 和 0.917，血清 Cys C 的诊断价值最高；BUN、Scr 与血清 Cys C 联合检测和三项指标联合检测的曲线下面积分别为 0.947、0.972 和 0.983，其中血清 Cys C.BUN、Scr 三项指标联合检测的诊断价值最高。
结论 血清 Cys C 是评价 DN 患者肾功能变化的有效指标，对于监测 DN 的发生和发展具有重要价值，临床可将其用于 DN 的辅助诊断和病情评估。

PU-1968

利用基因敲除技术研究 GABAB1 受体与抑郁症关系

李泽林
南方医科大学珠江医院

早期研究表明抑郁症与 GABA 系统关系密切，在药理上，人们发现给予小鼠 GABA B 受体拮抗剂能够降低小鼠在强迫游泳实验 中的不动时间；在基因水平上，GABA B1 敲除小鼠在强迫游泳实验中的不动时间也显著降低，然而小鼠哪些神经细胞上的 GABAB1 受体参与了抑郁样行为的调控，目前尚无定论。我们利用 cre-loxp 系统，特异性敲低小鼠海马星形胶质细胞、CAMKⅡ阳性的神经元和 GAD 阳性神经元，发现只有敲低星形胶质细胞细胞上的 GABAB1 受体，小鼠的强迫游泳时间才会降低，表明小鼠大脑海马星形胶质细胞 GABAB1 受体参与了小鼠抑郁样行为的调节。

PU-1969

探讨 α-L-岩藻糖苷酶（AFU）在 2 型糖尿病患者早期肾损害中的应用

蔡建
资阳市第一人民医院

目的 探讨 α-L-岩藻糖苷酶（AFU）在 2 型糖尿病患者早期肾损害中的应用。
方法 选取我院 2018 年至 2020 年诊断的 2 型糖尿病患者 150 例，根据尿蛋白排泄率(UAER)水平分为三组:A 组：单纯糖尿病组(SDM)50 例，24h 尿蛋白排泄率<30mg；B 组：早期糖尿病肾病组(EDKD)50 例，24h 尿蛋白排泄率 30-300mg；C 组：临床糖尿病肾病组(CDKD)50 例，24h 尿蛋白排泄率>300mg。分别测定三组患者血清 AFU 水平，并研究其与尿微量白蛋白的相关性。
结果 早期糖尿病肾病组与单纯糖尿病组及临床糖尿病肾病组比较，血清 AFU 水平显著升高(P＜0.05)，且尿微量白蛋白与 AFU 呈负相关(P＜0.05)。
结论 2 型糖尿病患者出现糖尿病早期肾损害时血清中 AFU 水平可出现不同程度的升高；血清 AFU 测定在预测糖尿病早期肾损害时有重要的临床价值。

PU-1970

血清 AFP、AFP/AFP-L3、PIVKA-Ⅱ联合检测在肝癌中的诊断价值研究

赵宗晨
山东第一医科大学附属省立医院

目的 探讨 AFP、AFP/AFP-L3、PIVKA-Ⅱ联合检测在肝癌中的诊断价值。
方法 选取 2016 年 9 月~2017 年 9 月于山东省立医院就诊的肝病患者 174 例，其中肝细胞肝癌的患者 89 例作为研究组，年龄为 35~81 岁，肝硬化未合并肝癌患者 85 例作为对照组，年龄为 30~77 岁。另外选取 80 例体检健康者作为健康对照组，年龄为 34~83 岁，三组分别进行 AFP、AFP/AFP-L3、PIVKA-Ⅱ及 GGT 的检测，分别比较四组 AFP、AFP/AFP-L3、PIVKA-Ⅱ的结果及与其他病理参数的关系。

结果 肝细胞肝癌患者外周血 AFP、AFP/AFP-L3、PIVKA-Ⅱ三项指标均高于肝硬化患者组及健康对照组， ROC 曲线分析 AFP、AFP/AFP-L3、PIVKA-Ⅱ曲线下面积（AUC）分别为：0.854、0.713、0.922、0.85。灵敏度分别为：73.25%、43.02%、82.56%、82.56%。特异度分别为：93.75%、98.75%、98.75%、71.25%。AFP 阳性患者与阴性患者在脉管内癌栓差异有统计学意义（P<0.05）,在性别、年龄、肿瘤直径、HBsAg 差异均无统计学意义（P>0.05）。AFP/AFP-L3 阳性患者与阴性患者在肿瘤直径、脉管内癌栓、HBsAg 差异有统计学意义（P<0.05），在性别、年龄差异均无统计学意义（P>0.05）。PIVKA-Ⅱ阳性患者与阴性患者在性别、肿瘤直径、脉管内癌栓、HBsAg 差异有统计学意义（P<0.05），与年龄无统计学意义（P>0.05）。

结论 联合检测 AFP、AFP/AFP-L3、PIVKA-Ⅱ可以明显提高肝脏肿瘤的诊断率。

PU-1971

精神分裂症患者血清同型半胱氯酸测定分析

张明华
资阳市精神病院

目的 分析精神分裂症患者前、治疗后 4 周测定同型半胱氨酸（Hcy）水平。

方法 对 100 例住院的精神分裂症患者（实验组）使用 Vit B12、叶酸治疗其高同型半胱氨酸血症前、治疗后 4 周分别测定血清同型半胱氨酸水平，并与未治疗高同型半胱氨酸血症对照组比较（对照组）。

结果 精神分裂症患者使用 Vit B12、叶酸治疗前、治疗后 4 周血清 Hcy 低于对照组（P<0.05）；患者组使用治疗前、治疗后 4 周血清 Hcy 比较有显著变化（P>0.05）。

结论 精神分裂症血清同型半胱氨酸明显升高。使用 Vit B12、叶酸治疗后同型半胱氨酸水平有所下降，说明精神分裂症患者血清 Hcy 水平下降对其预防心脑血管疾病有临床意义。

PU-1972

基于适配体和血红素/G-四聚体 DNA 酶的细胞传感器用于电化学、光学双重检测研究

谭婷婷
南京大学医学院附属鼓楼医院

目的 同时采取电化学、光学两种传感方法实现白血病细胞的灵敏检测。

方法 利用适配体的特异性靶向识别作用、血红素/G-四聚体 DNA 酶的类过氧化物酶催化作用、以及细胞的竞争性结合作用，选取 CCRF-CEM 急性白血病细胞作为模型细胞，构建基于适配体和血红素/G-四聚体 DNA 酶的竞争型细胞传感器。

结果 通过示差脉冲伏安法（DPV）对不同浓度的 CCRF-CEM 细胞进行电化学检测。由于 CCRF-CEM 细胞能与 cDNA 竞争而优先结合探针上的 aptamer，导致细胞被探针捕获、cDNA 从探针上解缔而释放出富 G 序列。CCRF-CEM 细胞的浓度越高，探针上释放出来的富 G 序列就越多，则形成具有类过氧化物酶催化活性的 hemin/G-四聚体 DNAzyme 就会越多，最终导致电极上催化 H2O2 氧化 TMB 所产生的还原峰电流信号就会越大。在 CCRF-CEM 细胞浓度为 1.0×102 至 1.0×107 cells mL–1 的范围内，峰电流与细胞浓度的对数值呈线性相关，其相关系数为 0.9993。采用比色法进一步验证本实验所构建传感器的检测性能。由于未被竞争下来的 cDNA 与探针保持的双螺旋结构可被限制性内切酶识别切割，从而导致富 G 序列从探针上脱落游离。CCRF-CEM 细胞的浓度越高，未被竞争下来的 cDNA 就会越少，则被切割而脱落游离的富 G 序列就会越少，于是

形成具有类过氧化物酶催化活性的 hemin/G-四聚体 DNAzyme 就会越少，最终导致酶催化 H2O2 氧化 TMB 所产生的显色反应越弱。被氧化的 TMB 在硫酸环境下呈黄色，随着 CCRF-CEM 细胞浓度的增大，反应溶液的颜色逐渐减弱。通过分光光度计检测可得出同样的**结果** 吸光度与细胞的浓度呈负相关。在最佳实验条件下，本实验的检测范围是 1.0×102-1.0×107 cells mL-1，检测限是 1.0×102 cells mL-1。

讨论 急性白血病的临床进展非常迅速，白血病细胞的早期快速准确鉴别和定量分析直接关系到白血病的确诊，并成为疾病治疗的基础和评估治疗效果的一种有效方式。我们成功构建新型基于适配体和 hemin/G-四聚体 DNAzyme 的竞争型细胞传感器，可同时采取电化学、光学两种传感方法实现白血病细胞的灵敏检测。该传感器结合了适配体的特异性靶向识别能力和 hemin/G-四聚体 DNAzyme 的类过氧化物酶催化能力，具有良好的特异性和灵敏度，将为白血病细胞的检测提供新的途径，为白血病的早期诊断和治疗提供有效帮助。

PU-1973

血糖检验和尿糖检验在糖尿病患者中的确诊率分析

张潇月
乐至县人民医院

目的 探讨血糖检验和尿糖检验在糖尿病患者中的确诊率分析。

方法 选取糖尿病患者 70 例，均为我院 2018 年 6 月至 2020 年 1 月收治，随机分组，对 78 例患者行以血糖检验和尿糖检验，对两项指标在血糖检验和尿糖检验中的价值进行分析研究。

结果 糖尿病患者的尿糖检验结果与其空腹血糖和餐后 2 小时血糖的诊断结果呈正相关，研究结果表明，糖尿病患者的尿糖检验结果、空腹血糖、餐后 2 小时血糖关系密切。尿糖检验结果阳性率为 81.4%，阴性率经检验呈 18.6%。本组 70 例患者尿糖检验结果和血糖检验结果呈正相关，即是在患者的尿糖含量提高同时，患者的空腹血糖水平以及餐后的 2 小时血糖水平均呈增高的趋势。

结论 糖尿病患者在血糖检验和尿糖检验两项指标的检验过程中呈正相关，尿糖检验可作为初次筛选的诊断之法，在进行明确的病情诊断时，仍需要结合血糖检验进行诊断，确保其有效诊断。

PU-1974

六种肿瘤标志物检测对结肠癌的诊断价值及其临床意义

赵宗晨
山东第一医科大学附属省立医院

目的 探讨血清癌胚抗原（CEA）、糖链抗原 125（CA125）、糖链抗原 199(CA199)、糖链抗原 724(CA724)、糖链抗原 211(CY211)和血清胃泌素释放肽前体（Pro-GRP）六种肿瘤标志物检测对结肠癌的诊断价值及其临床意义。

方法 选取 2016 年 6 月~2018 年 1 月于山东省立医院就诊的结肠患者 25 例（结肠癌组），45 例结肠息肉良性疾病患者（息肉组），70 例体检健康者（健康对照组）的上述指标及其对应的阳性检出率，分析 6 项指标单个检测的灵敏度和特异度。

结果 结肠癌组的血清 CEA、CA125、CA199、CA724、CY211 及 Pro-GRP 水平明显高于息肉组和健康对照组（P<0.05），ROC 曲线分析 CEA、CA125、CA199、CA724、CY211 及 Pro-GRP 曲线下面积（AUC）分别为：0.856、0.719、0.87、0.823、0.871、0.734。阳性检出率分别为：60%、28%、52%、44%、60%、48%。六种肿瘤标志物联合检测阳性率可达 84%。

结论 六种肿瘤标志物联合检测能为结肠癌的早期诊断提供有力的依据。

PU-1975

血清纤维蛋白原、C 反应蛋白与血常规联合检测在细菌性肺炎诊断中的价值

宋晓君
乐至县人民医院

目的 分析血清纤维蛋白原、C 反应蛋白与血常规联合检测在细菌性肺炎诊断中的价值。
方法 本次研究的对象为我院 2018 年 4 月至 2019 年 4 月间收治的疑似细菌性肺炎的患者 210 例，对其采取血清纤维蛋白原、C 反应蛋白以及血常规联合检测，分析不同检测方法的阳性检出率以及准确度、灵敏度与特异度。
结果 本次研究的 220 例受检人员中，经过病理诊断出细菌性肺炎者 192 例。血清纤维蛋白原检测阳性率为 69.52%（146/210）、C 反应蛋白检测阳性率为 64.76%（136/210）、血常规检测阳性率为 63.81%（134/210）、联合检测的阳性率为 87.62%（184/210）；血清纤维蛋白原、C 反应蛋白以及血常规检测的灵敏度、特异度以及准确度与联合检测相比，差异显著（p<0.05）。
结论 血清纤维蛋白原、C 反应蛋白以及血常规联合可有效检测出细菌性肺炎，并为临床诊断提供可靠依据。

PU-1976

血清 LDH、CK 在新生儿胆红素脑病中的表达和意义

陈阳
资阳市乐至县人民医院

目的 探讨血清 LDH、CK 在新生儿胆红素脑病中的表达以及临床意义。
方法 抽取 112 例患儿，均在 2019 年 10 月至 2020 年 10 月期间到我院接受治疗。通过对病情的诊断，将抽取的 112 例患儿分为对照组（非胆红素脑病，60 例）和观察组（胆红素脑病，52 例）。将纳入研究的患儿均进行血清检测，对其血清 LDH、CK 水平及相关性进行分析。
结果 经过对两组的观测，观察组患儿的血清 CK、LDH 的数值较对照组相比，呈现出更高的趋势（P<0.05）；在观测中，胆红素脑病患儿的血清 CK、LDH 水平与 TBIL、BAEP 的水平为正相关（P<0.001）。
结论 在对患儿的检测中，胆红素脑病患儿血清水平中 LDH 和 CK 指标有着明显的上升，为新生儿胆红素脑病的危险因素之一，可作为临床对疾病诊断的重要参考指标，为病情的诊断提供可靠的数据依据。

PU-1977

D-二聚体在胰腺癌诊断中的应用价值

赵宗晨
山东第一医科大学附属省立医院

目的 探讨 D-二聚体对胰腺癌的诊断价值。
方法 选取 2014 年 6 月~2018 年 1 月于山东省立医院就诊的胰腺癌患者 111 例作为研究组，年龄为 30~81 岁，同时随机选取 70 例健康体检者作为对照组，年龄为 28~80 岁。比较两组 D-二聚体、CEA、CA125 及 CA199 水平。并比较不同 D-二聚体水平患者肿瘤标志物（CEA、CA125、CA199）、性别、年龄、肿瘤直径、是否转移、分化程度。

结果 胰腺癌患者组的 CEA、CA125、CA199 及 D-二聚体均显著高于对照组，差异有统计学意义（均 P<0.05）。根据 D-二聚体水平的不同绘制 ROC 曲线，曲线下面积为：0.756，确定最佳截点后，将 111 例胰腺癌患者组分为低 D-二聚体组（≤395，52 例）和高 D-二聚体组（>395，59 例），高 D-二聚体组的 CEA、CA199 水平均高于低 D-二聚体组，差异有统计学意义[4.36(1.85,8.89)ng/ml 比 2.6（1.84,5.14）ng/ml、193(55.75,1000)u/ml 比 108.4（17.23,620.3）u/ml]（均 P<0.05）。高 D-二聚体组与低 D-二聚体组患者性别、年龄、肿瘤直径及是否转移差异有统计学意义（均 P<0.05）。在肿瘤分化程度差异无统计学意义（P>0.05）。
结论 胰腺癌 D-二聚体水平显著升高，为区分癌症和正常人提供了重要的参考价值，并且 D-二聚体还可作为胰腺癌患者病情评估的指标。

PU-1978

心肌肌钙蛋白 T、超敏 C 反应蛋白联合心脏型脂肪酸结合蛋白用于早期诊断心肌梗死的临床价值

刘可
乐至县人民医院

目的 探索心肌肌钙蛋白 T、超敏 C 反应蛋白联合心脏型脂肪酸结合蛋白用于早期诊断心肌梗死的临床价值。
方法 选择 100 例心肌梗死患者为试验对象（实验组），另选择同时间段的 100 例健康体检者（对照组），此次试验均在 2018 年 01 月至 2020 年 12 月期间完成；两组均接受心肌肌钙蛋白 T、超敏 C 反应蛋白联合心脏型脂肪酸结合蛋白检测方法，分析两组的临床价值。
结果 实验组的入院时各项指标均高于对照组（P＜0.05）；实验组的三项检测阳性预测值为 100.00%，特异性为 100.00%，敏感性为 98.00%，阳性预测值为 98.00%。
结论 诊断心肌梗死实施心肌肌钙蛋白 T、超敏 C 反应蛋白联合心脏型脂肪酸结合蛋白检测的早期诊断价值确切。

PU-1979

血尿胱抑素 C 水平在急性有机磷农药中毒患者中的变化及意义

宋丽婷、杜柏岩
哈尔滨医科大学附属第一医院

目的 研究急性有机磷农药中毒（AOPP）患者血、尿胱抑素 C（Cystatin C，Cys C）的变化及临床意义。
方法 对 41 例 AOPP 患者轻度 AOPP 组 12 例、中度 AOPP 组 18 例、重度 AOPP 组 11 例和对照组 50 例健康人做血、尿胱抑素 C（Cys C）、血尿素氮(BUN)、血肌酐(SCr)、尿蛋白半定量(PRO)的检测，并对照分析。
结果 轻度 AOPP 患者的血、尿 Cys C 含量高于对照组，差异有统计学意义(P<0.05)；中、重度 AOPP 患者的血、尿 Cys C、血 BUN、SCr 均高于对照组，差异有显著统计学意义(P<0.01)；41 例 AOPP 患者尿 Cys C 检测阳性率为 100%，尿蛋白半定量检测阳性率轻度 AOPP 患者为 16.7%、中度 AOPP 患者为 66.7%。
结论 血、尿 Cys C 可作为判断急性有机磷农药中毒肾小球和肾小管早期受损的指标，较血 BUN、SCr、尿蛋白半定量敏感。对 AOPP 早期肾损伤诊断及治疗有重要意义。

PU-1980

生化检验在肾上腺皮质疾病诊断中的应用效果分析

凌燕
资阳市乐至县人民医院

目的 分析在肾上腺皮质疾病诊断中采取生化检验的应用效果。
方法 本次研究共选取 88 例肾上腺皮质疾病患者作为观察对象，选取时间为 2017 年 9 月-2019 年 4 月间，并根据随机数字表法将其进行平均分组，给予其中 44 例患者常规检验，并将其设为对照组，给予其余 44 例患者生化检验，并将其设为实验组，分析这两组的总有效率。
结果 实验组 44 例肾上腺皮质疾病患者的检验总有效率为 95.45%，对照组 44 例肾上腺皮质疾病患者的检验总有效率为 77.27%，通过统计学处理后可得出结果，（$p<0.05$），证明差异对比具有统计学意义。
结论 对肾上腺皮质疾病患者采取生化检验进行诊断，可有效提高诊断准确率，并为临床治疗提供可靠依据，具有较高的临床应用价值。

PU-1981

浅谈进行生化检验对诊断小儿支原体肺炎合并肝损伤、心肌损伤的价值

周毅君
资阳市乐至县人民医院

目的 分析生化检验对诊断小儿支原体肺炎合并肝损伤、心肌损伤的价值。
方法 本次研究选取 2017 年 4 月-2019 年 4 月间在我院进行治疗的支原体肺炎合并肝损伤、心肌损伤的患儿 38 例作为观察组，再选择同期进行体检的 38 例健康儿童作为参照组，对所以参与研究的人员均采取生化检验，并分析生化检验的结果。
结果 观察组患儿的血沉水平、C 反应蛋白水平、α 羟丁酸脱氢酶指标、天门冬氨酸氨基转移酶指标以及总胆红素水平的检验结果均优于参照组，差异显著（$p<0.05$）。
结论 在诊断小儿支原体肺炎合并肝损伤、心肌损伤中采取生化检验具有较高的临床应用价值，可为临床治疗提供可靠依据。

PU-1982

临床血脂生化检验中采用分级检验对提高检验阳性率的价值

刘婉
资阳市乐至县人民医院

目的 讨论临床血脂生化检验中采用分级检验对提高检验阳性率的价值。
方法 将 160 例于 2019 年 6 月-2020 年 3 月期间在本院接受血脂生化检验的患者作为研究对象，以随机法分为对照组（拉网式检验）与研究组（分级检验）各 80 例，评判标准：血脂检验水平。
结果 研究组患者实施分级检验后的载脂蛋白 A 以及载脂蛋白 B 水平均明显高于对照组实施拉网式检验后载脂蛋白 A 以及载脂蛋白 B 水平，$P<0.05$；其余血脂指标水平在这两种血脂检验方式下并无明显差异，$P>0.05$。
结论 相对于拉网式检验，分级检验在血脂生化检验中的检验阳性率更高，值得推广。

PU-1983

临床检验生化指标在病毒性肝病患者诊断中的应用对提高肝功能指标阳性检出率的意义

陈静
资阳市乐至县人民医院

目的 研究临床生化指标检验运用在病毒性肝病患者诊断中对提高肝功能指标阳性检出率的意义。
方法 以 2019 年 1 月—2019 年 12 月在我院体检的 60 例健康者作为对照组，并以同期 60 例病毒性肝病患者为实验组，比较两组的生化指标、血常规指标、肝功能指标阳性检出率。
结果 （1）实验组白球比（A/G）、白蛋白（ALB）水平低于对照组，且总胆红素（TBIL）、谷丙转氨酶（ALT）水平高于对照组，P<0.05；（2）实验组中性粒细胞、血小板、白细胞（WBC）水平低于对照组，且淋巴细胞水平高于对照组，P<0.05；（3）实验组胆碱酯酶（CHE）、TBIL、谷草转氨酶（AST）、ALT 阳性率均高于对照组，P<0.05。
结论 为病毒性肝病患者实施生化指标检验，肝功能指标阳性检出率较高，可辅助临床诊疗，值得推广。

PU-1984

肝切除术后乳酸脱氢酶结果异常升高的原因分析

王连明、于文竹
哈尔滨医科大学附属第一医院

目的 本院收治一例因“右上腹隆起一周入院”，确定诊断“肝脓肿” 患儿。但首次手术后临床医生咨询检验科一个问题“术后乳酸脱氢酶异常增高的原因是什么？”即“哪个器官或组织引起的乳酸脱氢酶异常升高？”为了回答临床科室的这个疑问，我们通过分析乳酸脱氢酶以及其它检验指标的动态变化，分析手术可能产生的影响，比对了输血及有创操作可能引起的变化，最后为临床的治疗观察提供有价值的检验信息。
方法 收集患者门诊及住院期间的血常规、尿常规、凝血、生化等常用指标及肿瘤系列和降钙素原等诊断指标。收集患者手术前后的所有可能影响乳酸脱氢酶浓度变化的操作及治疗等，包括输血、有创操作、手术及抢救以及病情变化记录。以检验结果时间点及临床主要操作和病情变化进行动态分析。
结果 1.从 AST、ALT、LDH、CK 的动态变化比较及相关因子，排除了肝脏因素引起 LDH 增高；2.通过尿液分析和肾脏疾病的指标不支持肾脏损伤，排除肾脏导致 LDH 升高的可能；3.从 AST 与 CKMB 的相关系数（0.534）以及 CK 和 CKMB 的数值升高程度及比值变化也可以排除心机细胞损伤的原因；4.从两次手术及 4 次输血的时间点及 LDH 动态变化，确定输血也不是引起第一次术后 LDH 持续异常升高的主要原因。5.结合凝血指标变化及输注冷沉淀凝血因子后 LDH 的变化，确定 LDH 第一次术后显著增高是由于肝脏手术+术后的凝血因子减少引起的渗出所致。
结论 患者 LDH 第一次术后显著增高是由于肝脏手术+术后的凝血因子减少引起的（凝血因子未测定，表现为 PT 延长）渗出，输注冷沉淀凝血因子后得到明显改善可以证实此结论。

PU-1985

急诊检验血糖中快速血糖仪和常规生化仪两种方法的临床应用

陈义波
资阳市乐至县人民医院

目的 探究在急诊血糖的检验中采用快速血糖仪和常规生化仪的不同临床效果。
方法 随机抽取 2018 年 1 月～2019 年 1 月期间来我院进行血糖检测的 100 例患者，运用快速血糖仪和常规生化仪分别进行检测，并针对两组的血糖指标及检测时间进行统计分析。
结果 两组的血糖指标的检测结果并无显著性差异（P＞0.05）；快速血糖仪组的检测时间远低于常规生化仪组（P＜0.05），具有统计学意义。
结论 两组检测设备均能准确的实现血糖测量的有效目的，快速血糖仪相比常规生化仪拥有更为明显的测量优势，值得临床积极采纳。

PU-1986

肝功能生化检验用于肝炎肝硬化患者中的效果观察及检出率影响

刘芳芳
资阳市乐至县人民医院

目的 研究肝功能生化检验指标在肝炎肝硬化患者中的检验效果。
方法 筛选 2020 年 1 月~12 月在我院接受救治的肝炎肝硬化患者 90 例为甲组，同期体检健康对象 90 例为乙组，两组对象均接受肝功能生化检验，比较两组患者检验结果差异，统计甲组肝功能生化检验指标阳性检出率。
结果 甲组 ALB、CHE、CHO 水平均低于乙组，但甲组 TBA 水平高于乙组（P＜0.05）。肝功能等级为 A 级患者对 CHE 指标的阳性检出率为 100%，B 级患者对 CHE 指标的阳性检出率为 100%，C 级患者对 ALB 和 CHE 指标的阳性检出率最高，均为 92.50%。
结论 肝功能生化检验（ALB、CHE、CHO、TBA）对辅助肝炎肝硬化患者确诊具有积极效果。同时除 CHO 外，肝炎肝炎化患者对 ALB、CHE、TBA 均有较高的阳性检出率。

PU-1987

肝功能联合血糖、血脂检测用于非酒精性脂肪肝的诊断价值

刘可
乐至县人民医院

目的 探究肝功能联合血糖、血脂检测诊断非酒精性脂肪肝的效果。
方法 随机选取 2017 年 12 月至 2019 年 12 月本院接收非酒精性脂肪肝患者 50 例作为观察组，并择取同期前来本院体检的健康人士 50 例作为对照组。均行肝功能联合血糖、血脂检测。比较两组肝功能指标[谷丙转氨酶（ALT）、谷草转氨酶（AST）、谷酰转肽酶（GGT）]、血糖（FBG）、血脂[甘油三酯（TG）、总胆固醇（TC）、高密度脂蛋白（HDL-C）、低密度脂蛋白（LDL-C）]水平。
结果 观察组 ALT、AST、GGT 水平高于对照组（P<0.05）。观察组 FBG、TG、TC、LDL-C 水平高于对照组，HDL-C 水平低于对照组（P<0.05）。
结论 在非酒精性脂肪肝患者诊断中，应用肝功能联合血糖、血脂检测效果显著，可有效反映患者紊乱的血脂、血糖、肝功能状态，为临床诊治提供依据。

PU-1988

肝功能检测对肝炎肝硬化的诊断价值评价

刘芳芳
资阳市乐至县人民医院

目的 分析肝功能检测对肝炎肝硬化的诊断价值。
方法 选取肝炎肝硬化患者 80 例作观察组，依据肝硬化 Child-Pugh 分级标准，将患者分为 A 级 30 例，B 级 31 例，C 级 19 例，选取时间 2018 年 1 月-2019 年 5 月，同时期选取于我院行健康体检的健康人员 80 例作参照组，对 2 组患者及观察组不同分级患者的清蛋白、总胆汁酸、血清胆碱酯酶、血清胆固醇水平进行比较。
结果 观察组的清蛋白、血清胆碱酯酶、血清胆固醇水平均低于参照组，总胆汁酸水平高于参照组，统计学差异均有意义（$p<0.05$）；A 级患者的清蛋白、血清胆碱酯酶、血清胆固醇水平高于 B、C 级，B 级高于 C 级；A 级患者的总胆汁酸水平低于 B、C 级，B 级低于 C 级，统计学差异均有意义（$p<0.05$）。
结论 肝功能检测对肝炎肝硬化的诊断价值较高，可提供准确的肝损伤程度参考依据给临床医师。

PU-1989

肝功能对肝炎肝硬化诊断的临床意义

宋晓君
乐至县人民医院

目的 探究肝功能检查对肝炎肝硬化诊断的价值。
方法 随机选取 2017 年 12 月至 2019 年 12 月本院接收肝炎肝硬化患者 60 例作为观察组，并择取同期前来本院体检的健康人士 60 例作为对照组，两组纳入对象均行肝功能检查，比较两组肝功能指标水平，并分析不同程度肝炎肝硬化患者肝功能指标水平差异。
结果 观察组患者血清胆固醇、白蛋白、血清胆碱酯酶水平低于对照组，总胆汁酸水平高于对照组（$P<0.05$）。Child A 级、Child B 级、Child C 级患者血清总胆固醇、白蛋白、血清胆碱酯酶呈递减态势，总胆汁酸呈递增态势（$P<0.05$）。
结论 对肝炎肝硬化患者应用肝功能检查诊断效果显著，可有效反映患者肝功能状态，鉴别病症严重程度，为临床诊治提供依据，值得推广。

PU-1990

病毒性肝炎诊断时采用血常规和生化检验项目的效果分析

熊杨
资阳市乐至县人民医院

目的 分析在病毒性肝炎诊断时采取血常规以及生化检验项目的效果。
方法 选取我院 2017 年 7 月-2019 年 3 月间收治的病毒性肝炎患者 40 例作为实验组，再将同一时间进行健康体检的 40 例人员作为参照组，同时对两组实施血常规与生化项目的检验，并对检查结果进行对比分析。
结果 实验组的中性粒细胞数量、血小板数量、白细胞计数等均低于参照组，差异显著；实验组患者的淋巴细胞、总胆红素以及谷丙转氨酶等均高于参照组，差异具体统计学意义，（$p<0.05$）。
结论 血常规以及生化检验的结果均可作为诊断病毒性肝炎的主要标准，可为临床诊断提供有效的参考建议，值得临床推广。

PU-1991

TP、GLU、24hUCFP、mALB 联合检测用于糖尿病肾损害诊断的临床价值

张潇月
乐至县人民医院

目的 探究 TP（血清总蛋白）、GLU（空腹血糖）、24hUCFP（24 小时尿液/脑脊液蛋白）、mALB（尿微量白蛋白）联合检测在糖尿病肾损害诊断中的临床价值。
方法 于我院 2019 年 10 月-2020 年 10 月收治的 39 例糖尿病肾损害患者为研究主体，将纳入研究组，选择我院同期健康体检的 39 例健康体检者为对照组，均给予两组 TP、GLU、24hUCFP、mALB 联合检测，记录并对比检查结果。
结果 对比研究结果显示，研究组 TP、GLU、24hUCFP、mALB 水平均显著高于对照组，P＜0.05。
结论 在糖尿病肾损害的临床诊断中，实施 TP、GLU、24hUCFP、mALB 联合检测可有效发现糖尿病肾病损害情况，可为疾病治疗提供重要的参考依据，具有应用价值。

PU-1992

无明显临床指征的单独 AST 异常增高：警惕巨-AST 存在

王连明、鲁平
哈尔滨医科大学附属第一医院

目的 患者无症状 AST 单独升高，证实活性增高的原因是患者维生素 B6(吡哆醛)缺乏还是巨-AST 存在。
方法 通过稀释试验初筛，利用比对试验和纠正试验验证是否为维生素 B6(吡哆醛)缺乏；利用聚乙二醇(PEG)沉淀活性测定和冷藏法确证巨-AST 的存在。
结果 试验证实在不同的检测系统，AST 存在明显差异，而且不同仪器上的测定结果显示含有磷酸吡哆醛的试剂 AST 的测定值较高，如西门子的 Dimension 和强生的 VITROS 5600，而不含磷酸吡哆醛的试剂其测定值则较低甚至在参考范围内。但纠正试验无法进行纠正。聚乙二醇(PEG)沉淀活性测定和冷藏法确证巨-AST 的存在。证实为室温不稳定的 IgG 型复合物形成。
结论 对于无任何器官/组织功能异常的临床及生物化学指征出现的高 AST 情况，应怀疑巨-AST 存在并进行证实，保证测定结果对临床的诊断意义。

PU-1993

小儿肺炎支原体感染全血 CRP 变化以及意义

康钦松
资阳市安岳县中医医院

目的 研究小儿肺炎支原体感染全血 CRP 的变化以及意义。
方法 安岳县中医医院儿科呼吸道感染患儿 510 例，采用肺炎支原体 IgM 抗体检测试剂盒检测肺炎支原体 IgM 抗体，全血 CRP 测定仪测定患儿全血 CRP 值。100 例肺炎支原体 IgM 抗体阳性与 100 例肺炎支原体 IgM 抗体阴性为实验组，其中 43 例确诊为细菌性肺炎。选取 50 例健康儿童为对照组，分别测定全血 CRP 值。
结果 510 例患儿全血 CRP 均值 9.60±9.85mg/l，肺炎支原体 IgM 抗体阳性组患儿全血 CRP 为 8.64±9.68mg/l，肺炎支原体 IgM 抗体阴性组患儿全血 CRP 为 12.96±9.89mg/l，13 例确证为细菌

性肺炎全血 CRP 为 20.23±14.25mg/l，对照组健康儿童全血 CRP 值为 1.37±0.67mg/l。三组比较，差异具有统计学意义（P<0.05）
结论 肺炎支原体 IgM 抗体阳性组全血 CRP 稍有增高，增高程度低于肺炎支原体 IgM 抗体阴性组。并且其全血 CRP 阳性率低于肺炎支原体 IgM 抗体阴性组，肺炎支原体感染检测全血 CRP 的值对于临床早起鉴别诊和指导用药有一定的意义

PU-1994

安岳地区健康人群尿素、肌酐、钙和总胆红素参考范围调查

王维
安岳县中医医院

目的 近年来，随着人们生活水平的提高，生活方式的有所改变，人体的各生化检测值也发生了一些变化。而环境及地理因素、不同地域人群的营养状况、生活习惯等的不同也是影响因素之一。为此，我们对本地区不同年龄、不同性别的健康人群进行了调查，建立安岳地区健康人群尿素（Urea）, 肌酐（Cr）, 钙（Ca）和总胆红素（TBIL）生化正常参考值范围。
方法 筛选在我院体检的健康人群共 143 人，其中成年男性 70 人,成年女性 73 人,年龄 20-70 岁.被调查人群选择条件为:B 超、心电图、胸透、内外科及其他化验结果均正常，试验前未服用过任何药物，非孕妇。按年龄段分为 20-30 岁 55 例，31-50 岁 55 例，51-70 岁 33 例；按性别分组为男性 70 例，女性 73 例。应用日立 7600 全自动生化分析仪对生化相关指标进行检测，剔除离群点后，采用 SPSS17 软件进行统计分析，建立其参考范围，并与本实验室现行相应参考范围比较，143 名献血员按性别、年龄分组，观察其差异。检测项目包括：Urea,Cr,Ca 和 TBIL。
结果（1）本调查结果 Urea 与本实验室现行参考值有较大差异；（2）按性别分组后，Cr 和 Ca 的性别差异有统计学意义 (P<0.01), 其结果分别为 :Cr(umol/L) 男： 76.82-110.72, 女： 64.25-93.89;Ca(mmol/L)男: 2.31-2.73,女: 2.31-2.63;(3)按年龄段分组后, Urea 和 Ca 在 51-70 岁和 20-30 岁,31-50 岁之间差异有统计学意义(P<0.05)。Urea 升高, Ca 降低。
结论 从本次试验所得的结果看来，不同地区，不同性别和不同年龄间的生化相关指标确实存在一定差异。这就要求我们在今后的工作中，对与生化检测相关疾病的诊断治疗中，应考虑到地区、性别和年龄的因素。因此，各个地区各实验室应该建立自己的参考范围。

PU-1995

血清肌红蛋白检验在急性心肌梗塞临床检验中的应用价值研究

邹航
安岳县人民医院

目的 急性心肌梗塞(AMI)是临床上较为常见的心血管疾病，该病的死亡率较高，影响患者的生活。该病是因冠状动脉粥样硬化导致患者血肌细胞缺血性坏死。症状体现为心力衰竭、休克以及心律失常等.本次研究对急性心肌梗塞患者予以血清肌红蛋白检验，对其在临床检验中的应用价值进行探究。
方法 41 例急性心肌梗塞患者以及 41 例健康受检者选自 2018 年 5 月-2019 年 5 月期间，急性心肌梗塞患者为实验组；健康受检者为参照组。
结果 实验组血清肌红蛋(124.83±35.78）；高敏 C 反应蛋白(17.32±2.87）；心肌肌钙蛋白(5.67±2.98）。参照组血清肌红蛋(68.94±12.24）；高敏 C 反应蛋白(5.82±2.43）；心肌肌钙蛋白(0.42±0.13）。实验组血清肌红蛋白、超敏 C 反应蛋白、心肌肌钙蛋白指标高于参照组，对比创意具备统计学含义 P<0.05。

结论 本次研究中对急性心肌梗塞患者予以血清肌红蛋白检验，可成为该疾病确诊的有利指标，该检测方法可在急性心肌梗塞临床检验中予以推广。

PU-1996

糖尿病及其并发症的临床检验研究

赵川岚
资阳市安岳县人民医院

目的 此次研究对糖尿病及其并发症进行临床检验，对其检验价值予以探究。
方法 68 例糖尿病患者及 68 例糖尿病并发症患者和 68 例 健康检查者选自 2018 年 3 月-2019 年 3 月期间，将糖尿病患者设为 A 组，并发症患者设为 B 组， 健康检查者设为 C 组。 3 组采取临床检验，对比各组空腹血糖（FBG）、糖化血红蛋白（HbA1c）、D-二聚体（ D-Dimer）、胰岛素（ Insulin）指标。
结果 FBG（7.67±0.57）mmol/L、HbA1c（8.43±4.32）%、 D-Dimer（0.43±0.07）mg/L、Insulin（3.27±0.86）μU/mL。B 组临床指标：FBG（14.67±1.25）mmol/L、HbA1c（9.68±1.32）%、D-Dimer（0.79±0.13）mg/L、Insulin （2.17±0.92）μU/mL。C 组临床指标：FBG（5.25±0.37）mmol/L、HbA1c（5.24±0.58）%、 D-Dimer（0.33±0.06）mg/L、Insulin （4.89±0.84）μU/mL。A 组在空腹血糖、糖化血红蛋白、D-二聚体、胰岛素指标与 B 组对比差异具备统计学含义 P<0.05，且 A、B 组与 C 组的空腹血糖、糖化血红蛋白、D-二聚体、胰岛素指标对比具备统计学含义 P<0.05。
结论 本次研究对糖尿病及其并发症进行临床检验，空腹血糖、糖化血红蛋白、D-二聚体、胰岛素指标可作为糖尿病及并发症的诊断指标，该方法可推广应用。

PU-1997

生化检验中标本溶血对结果准确性的影响

张兴红
安岳县人民医院

目的 本次研究中对生化检验中标本溶血对结果准确性的影响予以探究。
方法 在 2019 年 4 月-2020 年 4 月期间收治的 64 例患者为本次研究对象，将其分为实验 A 组（32 例）采取人工溶血处理；实验 B 组（32 例）采取常规自然分离处理。对 2 组检测结果予以分析研究。
结果 实验 A 组 天门冬氩酸氨基转移酶（AST）、谷丙转氨酶（ALT）、乳酸人脱氢酶（LDH）均高于实验 B 组（P<0.05），碱性磷酸酶（ALP）低于实验 B 组（P<0.05）。2 组数据分析后差异较为明显，具备统计学意义。实验 A 组血尿酸（BUN）、血尿酸（UA）血清肌酐（Cr）、甘油三酯（TG）与实验 B 组对比，数据输入到统计学软件中分析后差异较小（P＞0.05），不具备统计学意义。
结论 在本次研究中，采取人工溶血处理在生化检验中可具有显著的效果，可提高检验结果的准确性。

PU-1998

肾功能指标联合检测应用于诊断糖尿病肾病早期的价值分析

张兴红
安岳县人民医院

目的 研究肾功能指标联合检测应用于早期糖尿病肾病临床诊断价值。
方法 随机择选我院收治 72 例糖尿病患者作为 RCT 研究对象，根据有无发生早期肾脏病变划分为管理组和常规组。两组患者接受肾功能指标检测，比较两组患者肾功能指标水平和阳性检出率。
结果 管理组各项生化指标数值均高于常规组，（P＜0.05）；管理组 Cys-C、β2-MG、Hcy 以及 Cr 阳性检出率高于常规组，（P＜0.05）。
结论 糖尿病患者肾病早期临床诊断可根据 Cys-C、β2-MG、Hcy 以及 Cr 等指标进行临床诊断。

PU-1999

自建检测尿微量白蛋白钩状效应的确认方法

陈灿星[1]、张春凤[1]、郑骁云[1]、巫海婷[1]、姚少濠[1,2]、胡志峰[1,2]、李玲[1,2]、刘勇[1,2]、陶然[1,2]
1. 广州金域医学检验中心有限公司
2. 广州医科大学金域检验学院

目的 采用微米微量白蛋白（mALB）检测试剂盒在贝克曼库尔特 AU5800 全自动生化分析仪上进行尿微量白蛋白的测定，在通过性能验证后，建立检查钩状效应的方法及处理方法。
方法 采用微米微量白蛋白检测试剂盒在 AU5800 上进行线性验证。选取 5 例在厂家声明的线性浓度范围内的样本和 5 例超过厂家的线性浓度范围内的样本检测，绘制 Heidel-berger 曲线，吸光度-反应点曲线，观察曲线找出线性范围内最大吸光度（OD）值，将此 OD 值作为检测最后超线性 OD 值，并设为报警参数。通过已知浓度的 20 例线性范围内和 20 例超线性范围内的样本原倍和预稀释 4 倍上机检测，比观察反应曲线，及结果差异，验证最大 OD 值的正确。根据 CNAS-GL037《临床化学定量检验程序性能验证指南》的要求对微米微量白蛋白检测试剂检测下限和最大稀释倍数进行验证。
结果 微米微量白蛋白检测试剂盒在 AU5800 上浓度 5.0-200.0mg/L 线性验证通过，将 0.3226 作为作为线性范围内最大 OD 值，且经评估可成功识别超过分析测量范围的浓度。验证试剂检测下限 5mg/L 及最大稀释倍数为 25 倍。
结论 设置 OD 值 0.3226 作为超线性报警参数，有助于识别高浓度尿微量白蛋白引起的钩状效应。当遇到超过检测线性或者超过最大 OD 值的结果，则采用预稀释 25 倍再进行检测，满足临床预期需求。做自建分析体系的抗原抗体项目，实验室需进行钩状效应评估，并结合线性范围确定报警下的处理方法和临床报告方案。

PU-2000

同型半胱安酸(Hcy)、脂蛋白（a）、高敏 D-二聚体在高血压以及冠心病患者中相关性研究

何昊
安岳县人民医院

目的 此次研究中，探究同型半胱安酸(hcy)、脂蛋白（a）、高敏 D-二聚体在高血压以及冠心病患者中相关性。

方法 将 2019 年 4 月至 2020 年 4 月期间 100 例冠心病患者设为研究 A 组，100 例高血压患者为研究 B 组，将同期来我院进行健康体检的 100 例健康人群为对照组。观察 3 组的检测结果，比较 3 组同型半胱安酸（Hcy）、脂蛋白 a（Lp(A)）、高敏 D-二聚体（高敏 D-D）指标。
结果 研究 A 组 Hcy、Lp(A)、高敏 D-D 指标均高于研究 B 组和对照组（P<0.05），3 组数据输入到统计学软件中分析后差异明显，具备统计学意义。
结论 本次研究得知，血清中 Hcy、Lp(a)、高敏 D-D 对高血压以及冠心病的预测有着重要的意义。

PU-2001

POCT 血糖仪与全自动生化分析仪血糖测定结果对比分析

李燕、黄茜北、杨小美、马琳琳
新疆生产建设兵团第四师医院

目的 评价 POCT 血糖仪与全自动生化分析仪血糖测定结果并进行分析。
方法 选取就诊于本院体检中心患者 40 例，进行血液样本采集，分别采用护士手持 POCT 血糖仪和贝克曼 DXC800 全自动生化分析仪进行血糖检测，并比较分析两种方法检测结果的一致性。
结果 POCT 血糖仪的结果为 9.7±3.2mmol/L，全自动生化分析仪对血糖检测的结果为 9.0±3.1mmol/L 差异无统计学意义（P>0.05）。
结论 POCT 血糖仪与全自动生化分析仪在临床上具有极高的血糖检测准确性，在已确诊的糖尿病患者的血糖测定中具有极高的选择性，值得推广。

PU-2002

新生儿低血糖症的病因分析

李燕、黄茜北、李新霞、马琳琳
新疆生产建设兵团第四师医院

目的 分析引起新生儿出现低血糖症的影响因素，为临床治疗和预防新生儿低血糖提供理论依据。
方法 选取本院 2018 年 3 月~2021 年 3 月有新生儿低血糖高风险患儿 286 例，进行血糖等项目的检测，分析出现低血糖症状患儿的临床资料并进行数据统计。
结果 150 例新生儿低血糖患儿中，胎龄为 27-36 周的患儿出现低血糖者为 25 例，低血糖的发生率为 44.6%；胎龄为 37-41 周的患儿出现低血糖者为 27 例，低血糖的发生率为 30.0%；胎龄为>42 周的患儿出现低血糖者为 5 例，低血糖的发生率为 33.4%。新生儿低血糖患儿中体重为<2500g 的患儿出现低血糖者为 19 例，低血糖的发生率为 46.3%；体重为 2500g-4000g 的患儿出现低血糖者为 23 例，低血糖的发生率为 22.0%；体重为>4000g 的患儿出现低血糖者为 1 例，低血糖的发生率为 25.0%。新生儿低血糖患儿中治愈为 100%，有效为 100%，无效率为 0%。其中早产儿、低体重儿、围产期缺氧、母妊高症、母妊娠期糖尿病、喂养困难等因素是新生儿出现低血糖症的高危因素。
结论 导致新生儿出现低血糖发生的高危因素较多，对出现低血糖症状的新生儿需要密切观察血糖水平变化，及时进行治疗，降低低血糖对患儿中枢神经伤害，提高患儿生存质量。

PU-2003

2 型糖尿病病人 HbA1c 与颈动脉增厚和斑块形成的相关性

刘运双
绵阳市中心医院

目的 探讨 2 型糖尿病病人 HbA1c 与颈动脉增厚和斑块形成的相关性。
方法 回顾性分析纳入观察对象 1460 例（41～88 岁，男性 690 例，女性 770 例）。高效液相色谱法测定 HbA1c，B 型超声仪评估颈动脉增厚和斑块形成。依据 HbA1c 水平将观察对象分为非糖尿病组（HbA1c≤5.6%，630 例）、糖尿病前期组（6.5%＞HbA1c＞5.6%,512 例）和糖尿病组（HbA1c≥6.5%，318 例）。比较各组颈动脉增厚率和斑块阳性率，使用相关性分析（Spearman 相关系数）和二元 Logistic 回归分析评价 HbA1c 水平与颈动脉增厚和斑块形成的相关性。
结果 糖尿病组的颈动脉增厚率（57.2%）、斑块阳性率（69.2）高于非糖尿病组（43.5%，60.9%）和糖尿病前期组（45.7%，67.2%），差异有统计学意义（P<0.017）。糖尿病病人 HbA1c 水平与颈动脉增厚(r=0.105, P=0.008)、斑块形成（r=0.106, P=0.008）和斑块数量（r=0.143, P=<0.001）具有相关性。校正性别、年龄、吸烟、饮酒、血压、血糖、三酰甘油、总胆固醇、高密度脂蛋白胆固醇、低密度脂蛋白胆固醇和同型半胱氨酸后，糖尿病病人 HbA1c 水平升高是颈动脉增厚（OR=2.210; 95%CI 1.178～4.146; P=0.014）、斑块形成（OR=1.071; 95%CI 0.943～1.216; P=0.004）和斑块数量超过 1 个（OR=2.722; 95% CI 1.130～6.559; P= 0.026）的独立危险因素。
结论 2 型糖尿病病人 HbA1c 升高与颈动脉增厚、斑块形成和斑块数量相关。

PU-2004

LIS 双向通讯技术在临床自动生化分析仪中的应用

陈亚秀
资阳市雁江区妇幼保健院

目的 将双向通讯技术与 LIS 信息系统结合，运用于临床自动生化分析仪检验中，缩短检验时间，提高检验质量。
方法 在临床生化检验工作中，运用双向通讯技术和 LIS 信息系统，简化工作流程完成标本检测。
结果 简化了工作流程，缩短检验时间，有效地提高了工作效率，减少了分析误差，提高了医院医疗服务水平和检验工作，保证了检验质量。
结论 使用 LIS 双向通讯技术，代替了传统工作流程，实现临床生化检验的自动化，避免不必要的人为差错，提高了检验工作效率和质量管理水平。

PU-2005

溶血对临床生化检验影响及对策

朱洁
资阳市雁江区中医医院

目的 分析溶血对临床生化检验结果的影响及预防对策。
方法 抽取 2019 年 1 月至 12 月间在我院进行体检的健康体检者 44 例作为此次的观察对象，并采集其血液标本 2 份进行分析，其中 44 份接受常规护理的血液标本设为对照组，另外 44 份接受溶血处理的血液标本设为研究组，并对这两组的相关指标进行对比分析。

结果 研究组的总胆固醇、钾离子、门冬氨酸氨基转移酶、丙氨酸氨基转移酶以及乳酸脱氢酶水平均高于对照组，对比结果（p<0.05），差异具有统计学意义；而研究组的碱性磷酸酶水平则较低，与对照组相比差异明显（p<0.05）。
结论 在生化检验中，部分检验结果与溶血密切相关，因此，临床检验应重视溶血情况。

PU-2006

两种方法检测尿蛋白的结果对比分析

张明亮[1]、王波[1]、刘小凤[2]
1. 合肥金域医学检验实验室有限公司
2. 宣城华信健康体检中心

目的 对比分析优利特 500B 全自动尿液分析仪检测尿蛋白性能，提高尿液检验结果质量。
方法 采用优利特 500B 全自动尿液分析仪及磺基水杨酸法检测 1500 例来院体检正常人群尿蛋白，对两种检测方法检测尿蛋白结果进行比较。
结果 优利特 500B 全自动尿液分析仪与磺基水杨酸法检测阳性率分别为 88%与 83%，两者间结果比较差异无统计学意义（p>0.05），两种法法联合检测的阳性率为 98%。
结论 两种检测方法其方法学不同导致检验结果存在差异，应联合应用，以提供检验结果德准确性与可靠性。

PU-2007

合肥地区体检人群糖化血红蛋白结果分析

王波、张明亮
合肥金域医学检验实验室有限公司

目的 分析合肥地区糖化血红蛋白检测结果，为该地区糖尿病早期诊断提供多方面依据。
方法 对 2019 年 4 月~2019 年 5 月合肥地区送检 1470 例糖化血红蛋白标本，标本检测采用东曹 HLC-723G8 糖化血红蛋白分析仪检测 HbA1c（%）分别按性别、年龄等对检测结果进行统计学分析。
结果 糖化血红蛋白（HbA1c）在男女之间的差异均具有统计学意义（p<0.01）；1470 例标本中糖化血红蛋白总体水平男性高于女性，且伴随年龄上升有明显增长趋势。
结论 定期进行糖化血红蛋白检测，可为糖尿病早期诊断提供依据。

PU-2008

安徽地区正常孕妇不同孕期甘胆酸参考值研究

张明亮、王波
合肥金域医学检验实验室有限公司

目的 分析安徽地区正常孕妇甘胆酸（CG）结果水平，为该地区甘胆酸建立医学参考值。
方法 选取 2020 年 1 月~2020 年 12 月送检合肥金域医学检验实验室有限公司正常孕妇甘胆酸样本 928 例，采用 Beckman Coulter AU5800 全自动生化分析仪检测（该项目参加卫生部及安徽省临床检验中心室间质评，成绩为优秀）。分析 928 例正常孕妇甘胆酸（CG）检测结果情况，建立其医学参考值。参考值范围用（P50）及双侧限值（P2.5，P7.5）表示。
结果 928 例正常孕妇甘胆酸检测结果具有统计学意义（p<0.05），孕期参考值为：（0.00-4.60）μg/mL。

结论 本次回顾性分析初步研究 CG 医学参考值水平，建立本省甘胆酸（CG）参考值水平能更好的辅助临床疾病诊疗工作。

PU-2009

血清蛋白电泳组分定量参考范围的建立及临床应用

殷杏、童妙春、吴炯
上海嘉会国际医院有限公司

目的 血清蛋白电泳技术是临床筛查单克隆免疫球蛋白血症最常用的方法之一。传统的血清蛋白电泳报告结果为蛋白组分百分比，未纳入总蛋白定量结果的考量，故可能存在筛查漏检。本研究通过纳入总蛋白定量结果，统计健康人群中血清蛋白组分定量结果，建立定量的血清蛋白电泳组分参考范围，并研究其在多发性骨髓瘤诊断中的意义。
方法 收集表观健康人群，检测血清蛋白电泳及总蛋白定量结果，建立血清蛋白电泳组分定量参考范围；分别建立多发性骨髓瘤疾病及正常对照组，使用并比较血清蛋白电泳组分定量参考范围的临床适用性。
结果 共收集表观健康人群 196 名，其中男性 101 名，女性 95 名。以百分位数法（P2.5～P97.5）建立表观健康成人血清蛋白电泳组分定量的参考范围，ALB：38.61~48.56 g/L；α1：1.79~2.90 g/L；α2：4.08~7.08 g/L；β：5.69~16.07 g/L；γ：7.77~16.07 g/L。收集多发性骨髓瘤患者 113 名及正常对照组 122 名，使用定量参考范围进行判断（任意组分定量结果高于参考范围即为异常），正常对照组异常率为 8.20%，疾病组人群异常率为 58.41%。多发性骨髓瘤患者通过 M 蛋白定量进行分级，M 蛋白浓度越高，血清蛋白电泳组分定量结果异常率越高（M 蛋白<1g/l，阳性率 36.67%；M 蛋白 1~10g/l，阳性率 54.10%；M 蛋白 10~30g/l，阳性率 100%；M 蛋白>30g/l，阳性率 100%）。
结论 本研究通过引入总蛋白定量结果，建立成人血清蛋白电泳组分定量参考范围。此定量参考范围可为多发性骨髓瘤及“前骨髓瘤”过渡期患者进行疾病早期筛查提供了可靠的实验室诊断依据。

PU-2010

液质联用检测血及 24 小时尿儿茶酚胺及其代谢物助力精准诊断异位嗜铬细胞瘤一例

栾芳
山东第一医科大学附属省立医院

患者，女，29 岁，主诉“不规则阴道流血 1+月”，门诊以“血管内平滑肌瘤、高血压病”收入院入住山东第一医科大学附属省立医院妇科。入院后化验及影像学检查结果肾素:32.05 pg/ml、醛固酮:138.70 pg/ml、醛固酮/肾素浓度比值:4.33;血管紧张素 II:113.43 pg/ml;2021-05-25 COR（8 点）皮质醇(8 点):504.00 nmol/L;肾动脉 CTA+肾上腺 CT 增强+成像（双源）示:右肾上腺 CT 扫描未见明显异常； 左侧肾上腺略显增粗； 肾动脉 CTA 未见明显异常； 腹腔肠系膜、腹膜后脂肪间隙稍浑浊。泌尿外科、心内科、内分泌科多科室会诊建议：1、先行妇科手术，泌尿外科随诊监测；2.复查血浆儿茶酚胺及其代谢产物、血糖、糖化血红蛋白；3.行腹主动脉旁、膀胱周围 B 超，完善心脏彩超、心动检测；4.继续监测血压，调整降压药物。可疑嗜铬细胞瘤？!患者随后因“1.异位嗜铬细胞瘤？ 2.高血压病（3 级 极高危）3.慢性盆腔炎”于气管插管全麻下行腹膜后病灶活检+盆腔粘连松解术，术中快速病理回示：（血管内平滑肌瘤）送检组织内见小圆细胞团增生，细胞形态温和，较一致，可疑神经内分泌源性肿瘤。结合病史结合病史、术中所见及病理考虑异位嗜铬细胞瘤可能性大，转入泌尿外科进行治疗。留取 24 小时尿和血浆检测儿茶酚胺及其代谢物：尿游离肾上腺素 676.7μg/24h，尿甲氧基去甲肾上腺素 2701.95μg/24h，尿香草扁桃酸 20.91μg/24h；血游离肾上

腺素 7070pg/ml，血多巴胺 108pg/ml，三甲氧基酪胺 28.6pg/ml，甲氧基去甲肾上腺素 2600pg/ml，定性确诊为异位嗜铬细胞瘤。进一步择日手术治疗。

PU-2011

心肌酶谱组套中 α-羟丁酸脱氢酶存在的必要性探讨

倪军
南京大学医学院附属鼓楼医院

目的 评价 α-羟丁酸脱氢酶（α-HBDH）在心肌酶谱组套内存在的必要性，配合临床路径及单病种付费政策推进，避免检验项目过度使用，降低医疗成本。
方法 按照正常体检（乳酸脱氢酶正常）组、疾病组、肝脏病组、心脏病组、心肌梗塞（心梗）组、肌钙蛋白 T（TNT）升高组分组，回顾我院实验室信息系统（LIS）中历史数据，分析 α-HBDH、乳酸脱氢酶(LDH)在不同病种中的变化趋势，并用单因素方差分析比较不同病种间两者比值差异；用正常体检（LDH 正常）对照者及心梗患者的 α-HBDH 与 LDH 比值描绘接受者操作特性曲线（receiver operating characteristic curve，ROC 曲线）并分析其结果。
结果 正常体检（乳酸脱氢酶正常）组、疾病组、肝脏病组、心脏病组、心梗组、肌钙蛋白 T（TNT）升高组中 α-HBDH 与 LDH 的线性相关斜率分别为：0.76、0.79、0.60、0.90、0.98、0.83。 各组线性相关 R 值分别为：0.90、0.98、0.93、0.98、0.98、0.97。各组 α-HBDH 与 LDH 比值为 0.80、0.79、0.75、0.80、0.83、0.82。用正常体检（LDH 正常）对照者及心梗患者的 α-HBDH 与 LDH 比值描绘的 ROC 曲线下面积为 0.61($p<0.05$)
结论 各分组中 α-HBDH 与 LDH 均呈现较好线性相关；除肝脏病组外，其他各组 α-HBDH 与 LDH 比值无差异；ROC 曲线结果显示 α-HBDH 诊断心梗的效果差，在心肌酶谱组套中无不可替代的价值，建议从该检验套餐中剔除。

PU-2012

等离子体质谱仪 7900 检测血铅的性能测定

栾芳
山东第一医科大学附属省立医院

目的 等离子体质谱仪 7900（以下简称“ICP-MS 7900”）检测血铅的性能。
方法 评估 ICP-MS 7900 检测血液标本中铅的准确度、精密度、线性范围、临床可报告范围、参考范围、携带污染率，评价血铅试剂在 ICP-MS 7900 上的分析性能。
结果 ICP-MS 7900 测定血液标本中铅的浓度，通过卫生部临检中心室间质评验证准确度，偏倚为 <5%；批内精密度为 3.3%（低值）、3.7%（高值），批间精密度为 1.7%（低值）、4.2%（高值）；线性范围为 0-800μg/L；LOD 为 0.03μg/L，LOQ 为 0.13μg/L；最大稀释倍数为 50 倍，可报告范围为 0.13~41000.0 μg/L；参考范围是<100.00μg/L；携带污染率为 0.03%，符合仪器要求。
结论 ICP-MS 7900 测定血液标本中重金属铅的准确度高、重复性好，线性范围能满足临床所需，携带污染率极低，检测快速方便，结果可靠，特别适用于中毒与职业病科、小儿科等对早期铅中毒的筛查，是临床测定血铅的理想分析仪器。

PU-2013

肌酸激酶同工酶 CKMB 免疫抑制法与质量法在标本检测中的应用及与临床疾病关系分析

徐伟
泰安市中心医院

目的 通过肌酸激酶同工酶 CKMB 免疫抑制法与质量法在心肌损伤、恶性肿瘤、神经损伤相关疾病中的检测，探讨 CKMB 结果出现假性升高的影响因素及分析与相关疾病的关系。
方法 选取 2021 年 1 月——2021 年 5 月随机选取标本为入院诊断心肌损伤、恶性肿瘤、神经损伤的标本各 30 例，以临床诊断存在心肌损伤为观察组，恶性肿瘤、神经损伤为对照组。分析 CKMB 免疫抑制法和质量法检测结果，根据参考区间确定阳性标本，使用 ROC 曲线进行分析。
结果 观察组 CKMB 两种方法线性相关性较好（R2=0.88）;对照组 CKMB 两种方法线性相关性较差，ROC 曲线分析质量法在检测心肌损伤灵敏性和特异性上均优于免疫抑制法。
结论 肌酸激酶同工酶 CKMB 在心肌损伤的检测中具有重要意义，有高度的特异性，且受到临床的广泛关注。目前，肌酸激酶同工酶 CKMB 的检测方法有免疫抑制法、电泳法、质量法等。其中免疫抑制法最为常用，但由于生理性、病理性等因素的影响，常使 CKMB 出现活性假性增高或 CK/CKMB 结果的倒置，干扰临床对心肌损伤的诊断；质量法是建立在单克隆抗体直接识别 CKMB 抗体的实验原理上的，抗体的特异性不受 CKMM、CKBB、巨 CK 的干扰，降低了心肌损害诊断的假阳性率。但有研究表明，CKMB 的免疫抑制法诊断疾病已经不局限于心肌损伤或者心肌梗死疾患上了，通过免疫抑制法检测 CK/CKMB 倒置大于 50%可以为恶性肿瘤诊断提供帮助，CKMB 质量法检测可作为心肌炎特异和可靠的诊断依据。

PU-2014

大理地区儿童 25 羟基维生素 D 水平分析

王晓君
大理州人民医院

目的 了解大理地区健康体检儿童维生素 D 状况,为临床合理补充维生素 D 提供理论依据。
方法 回顾性分析 2019 年 11 月 1 日-2020 年 10 月 31 日在大理州人民医院体检并进行常规血清 25 羟基维生素 D 检测的儿童,采用 sysmens ADVIA2400 生化分析仪以方法分析不同年龄、性别及不同民族健康体检儿童的血清 25 基生素 D 水平。结果本次调查共计 1012 名儿童 25 羟基维生素 D 水平进入研究，平均水平为（27.69±8.56）mmol/L,其中 36 名儿童缺乏（7.52±1.34）mmol/L，610 名儿童不足（21.94±4.51）mmol/L，366 名儿童充足（38.79±6.12）mmol/L；446 名女童，平均水平为（26.06±8.2）mmol/L,其中 18 名儿童缺乏（7.61±1.5）mmol/L，294 名儿童不足（21.52±4.7）mmol/L，134 名儿童充足（38.5±6.25）mmol/L；566 名男童，平均水平为（28.98±8.82）mmol/L,其中 18 名儿童缺乏（7.44±1.21）mmol/L，316 名儿童不足（22.33±4.26）mmol/L，232 名儿童充足（38.95±6.05）mmol/L。不同年龄儿童的 25 羟基维生素 D 缺乏率随着年龄的增加而增加，<1 岁龄儿童 25 羟基维生素 D 不足、缺乏率最低,>6 岁儿童 25 羟基维生素 D 不足、缺乏率最高,差异有统计学意义(P<0.05)，不同性别，相同年龄生素 D 不足、缺乏无差异无统计学意义(P>0.05) ,不同民族，相同年龄生素 D 不足、缺乏无差异无统计学意义(P>0.05),建议家长、学校都提高相关的意识，医务工作者做好科普宣传及指导用药工作，合理补充维生素 D,促进青少年儿童健康发育。

PU-2015

四川地区非高密度脂蛋白胆固醇（Non-HDL-C）水平分析

蒙立业[1]、张禾[2]、干伟[1]、贺勇[2]
1. 四川大学华西医院实验医学科
2. 四川大学华西医院实验医学科

目的 研究四川地区表观正常健康人群中非高密度脂蛋白胆固醇（Non-CHOL-C）水平的情况，探讨其与血脂等冠心病高风险因素的相关关系。
方法 收集 2021 年 1 月至 2021 年 4 月四川大学华西医院健康体检人群血脂实验室检测结果。非高密度脂蛋白胆固醇计算方法为：Non-CHOL-C=总胆固醇（CHOL） -高密度脂蛋白胆固醇（HDL-C）。分析纳入人群血脂实验室检测的数据分布情况，分析各年龄段、性别之间血脂水平的差异。
结果 总计纳入 4417 名健康体检者，男性 3423 名，女性 994 名。男性组年龄 41（33~52）岁；甘油三酯（TG）浓度 1.10（0.84~1.39）mmol/L；总胆固醇(CHOL)浓度为 4.60（4.14~5.05）mmol/L；高密度脂蛋白胆固醇(HDL-C)浓度 1.27（1.12~1.45）mmol/L；低密度脂蛋白胆固醇(LDL-C)浓度为 2.86（2.45~3.28）mmol/L；非高密度脂蛋白胆固醇(Non-CHOL-C)浓度 3.28（2.84~3.73）mmol/L。女性组年龄 45（34~55）岁；甘油三酯（TG）浓度 0.99（0.74~1.28）mmol/L；总胆固醇(CHOL)浓度为 4.75（4.26~5.19）mmol/L；高密度脂蛋白胆固醇(HDL-C)浓度 1.55（1.34~1.79）mmol/L；低密度脂蛋白胆固醇(LDL-C)浓度为 2.75（2.30~3.18）mmol/L；非高密度脂蛋白胆固醇(Non-CHOL-C)浓度 3.13（2.63~3.60）mmol/L。单因素方差分析显示男女性别之间存在统计学差异（P<0.001,F=55.38）。Pearson 相关性分析结果显示 Non-CHOL-C 与 CHOL 和 LDL-C 具有较好的相关性，相关性系数分别为 0.885 和 0.971，P 值均小于 0.001；与 TG 和 HDL-C 具有较弱相关性，相关性系数分别为 0.443 和-0.255，P 值均小于 0.001。
结论 四川地区健康人群中非高密度脂蛋白胆固醇存在性别和年龄段的分布差异，可根据性别和年龄建立相应的参考范围。

PU-2016

化学发光免疫分析技术及放射免疫测定的临床价值对比研究

赵倩雯
山东大学第二医院

目的 通过数据对比分析研究化学发光免疫分析技术与放射免疫测定对甲状腺肿瘤的诊断效果，探讨其科研价值与临床应用价值。
方法 选取某一时间段内本院所有的甲状腺肿瘤患者作为试验组，然后选取相同人数的健康人士作为对照组。对两组样本使用化学发光免疫分析，通过对照，分析该技术的误诊率。除此之外，还要对所有的甲状腺肿瘤患者（试验组）进行放射免疫测定，对比两种检验技术，分析使用不同检验技术的甲状腺肿瘤的误诊率，从而得出哪一种方法更适用于诊断甲状腺肿瘤。研究过程应尽量减小样本其他身体因素对于试验结果的影响，如样本的性别、体型、年龄、是否患有其他疾病等等。
结果 在进行化学发光免疫分析后，发现试验组与对照组的两组样本的误诊率均低于 5%，且两组间的差异很小。具体指标方面，试验组样本的游离三碘甲状腺原氨酸、血清游离甲状腺素、甘油三酯明显高于对照组样本，促甲状腺激素明显低于对照组，化学发光免疫分析技术与放射免疫测定技术对于试验组样本的误诊率存在明显差异。
结论 根据临床研究可知，甲状腺肿瘤患者有着十分明显的临床症状，通过影像学检查，可以较为容易地确定病灶位置。影像检查后，还需要对患者进行生化检验（免疫测定），结合测定结果与影像学结果对患者进行最终确诊。研究结果表明，生化免疫检验的误诊率很低，并且化学发光免疫分析技术对于确诊甲状腺肿瘤来说是优于放射免疫测定法的，因此，在临床上对于疑似患有甲状腺肿瘤的患者，除了进行影像学检查，最好还要进行化学发光免疫分析，保证不误诊患者。

PU-2017

甲状旁腺激素检测方法的优化研究

罗永彬
昆明市第一人民医院

甲状旁腺激素是甲状腺细胞分泌的一种含有 84 个氨基酸的多肽，由甲状旁腺产生、肝脏代谢、肾脏排出，半衰期大约 4min。PTH 分泌入血液循环后，迅速降解为氨基端和羧基端片段，PTH 的所有分子形式在肾脏进一步降解，排出体外，这也是羧基端片段排出体内的唯一已知途径，因此在循环中羧基端片段的浓度远超过整分子。第二代全段甲状旁腺素检测试剂盒可以检测到非全段 PTH（如 7-84），并且这些片段的半衰期更长。在肾功能异常的特别是肾移植患者中，不能仅依据全段 PTH 的检测结果制定治疗方案。第三代 PTH 检测试剂盒仍然无法区分第 8 和 18 位的亮氨酸是否被氧化。本课题探索 PTH 的前处理不同稀释液对 PTH 检测结果的影响，结果表明生理盐水、去离子水稀释对结果有明显影响，应采用复合稀释液稀释。在-20℃、4℃、室温保存对 PTH 的稳定向无明显差异。在 EDTA-K2 抗凝剂条件下保存最稳定，在促凝剂条件下、肝素抗凝条件下保存较不稳定。

PU-2018

急性冠脉综合征患者血清 hs-CRP、sST2、IL-6 的表达及其意义

相莲
西安医学院第一附属医院

目的 观察血清超敏 C 反应蛋白（hs-CRP）、可溶性生长刺激表达基因 2 蛋白（sST2）、白介素-6（IL-6）在急性综合征中（ACS）的表达水平及临床意义。
方法 选取 2018 年 7 月至 2020 年 6 月于本院就诊的 78 例 ACS 患者为研究对象。根据患者冠状动脉造影结果、病史及临床表现分为不稳定型心绞痛（UAP 组 25 例）、急性心肌梗死（AMI 组 28 例）、稳定型心绞痛（SAP 组 25 例）。同时选取健康体检者 24 例为对照组。采用酶联免疫法（ELISA）检测 IL-6 水平。采用自动生化分析仪检测 hs-CRP、sST2 水平。对比各组 hs-CRP、sST2、IL-6 表达水平。
结果 AMI 组、UAP 组、SAP 组患者血清 hs-CRP、IL-6、sST2 水平显著高于对照组（P<0.05），AMI 组、UAP 组 hs-CRP、IL-6、sST2 水平较高于 SAP 组，差异具有统计学意义（P<0.05），AMI 组血清 sST2、hs-CRP、IL-6 水平显著高于 UAP 组（P<0.05）；3 支病变组的 hs-CRP、IL-6、sST2 水平显著高于单支病变、双支病变组（P<0.05）。
结论 hs-CRP、IL-6、sST2 水平在 AMI 组患者中显著上升，可能参与了 AMI 的病理过程，hs-CRP、IL-6、sST2 水平会随着病情加重而上升。

PU-2019

糖化白蛋白在终末期糖尿病肾病患者血糖监测中的应用价值

黄勤烽
联勤保障部队第九〇〇医院

目的 探究糖化白蛋白在终末期糖尿病肾病患者血糖筛查中的应用价值。

方法 本次研究共选取 131 例糖尿病患者，其中 100 例为单纯糖尿病患者，31 例为终末期糖尿病肾病伴贫血患者，所有对象均检测 FPG，Alb，Hb，HbA1c，GA，并对结果进行统计学分析。
结果 1.终末期糖尿病肾病伴贫血组的 HbA1c 明显低于单纯糖尿病组（6.91±1.68、8.08±1.96，P<0.001）。2.终末期糖尿病肾病组中 64.51%的患者存在低蛋白血症（Alb＜35g/L）。在单纯糖尿病组中 Alb（g/L）与 GA（mmol/L）无显著性差异，终末期糖尿病肾病组低蛋白血症的患者中 Alb（g/L）与 GA（mmol/L）呈线性相关（R=0.501，P<0.05）。而 Alb（g/L）与 GA（%）无显著性差异（P=0.75>0.05）。3.各组 FPG 均与 HbA1c 呈线性相关（单纯糖尿病肾病组:R=0.701；终末期糖尿病肾病组:R=0.613）；各组 FPG 均与 GA 呈线性相关（单纯糖尿病组:R=0.668；终末期糖尿病肾病组:R=0.539）。4.单纯糖尿病组和终末期糖尿病肾病组的 HbA1c 与 GA 均显著相关（单纯糖尿病组:R=0.813；终末期糖尿病肾病组:R=0.736）。
结论 1.低蛋白血症会使 GA 的含量被低估，而以 GA/Alb 来表示 GA（%）能显著降低这种影响。2.与同期单纯糖尿病患者相比，在终末期糖尿病肾病患者中，HbA1c 会被显著低估，GA 能更准确地反应患者近期的血糖平均水平。3.HbA1c，GA 在终末期糖尿病肾病患者中与 FPG 的相关性均比单纯糖尿病患者低。

PU-2020

液体活检在肺癌诊断中的研究进展

夏艳艳
南京大学医学院附属鼓楼医院

肺癌仍是世界范围内发病率和致死率最高的疾病之一。早期诊断对提高肺癌生存率，改善预后至关重要。液体活检作为一种新型的生物标志物已成为近年来临床关注的热点。液体活检的研究内容包括循环肿瘤细胞（Circulating Tumor Cell, CTC）、循环肿瘤 DNA（circulating tumour DNA, ctDNA）和外泌体，具有操作方便快捷、能反复获取、易于实时监控等优点。全文就以上标志物在肺癌早期诊断中的应用价值以及存在的优势和局限性进行综述，以期为肺癌患者早期诊断提供新方法。

PU-2021

尿胱抑素 C、尿 β2-微球蛋白单项及其联合检测对慢性肾脏疾病肾损伤的诊断价值

韩敬华[1]、马笑也[2]、赵立杰[1]、温学红[1]
1. 天津中医药大学第二附属医院
2. 天津医科大学

目的 分析尿胱抑素 C、尿 β2-微球蛋白单项及它们联合检测对慢性肾脏疾病肾损伤的诊断价值。
方法 选取天津市某医院 2020 年 11 月-2021 年 1 月收治的慢性肾病患者 90 例，按血清肌酐浓度分组，分为慢性肾病一组（正常检测值上限＜血清肌酐≤133μmol/L）30 例，慢性肾病二组（133μmol/L＜血清肌酐≤442μmol/L）30 例，慢性肾病三组（血清肌酐＞442μmol/L）30 例。另选取同一时间段健康体检者 30 例作为健康对照组。对比尿胱抑素 C、尿 β2-微球蛋白的单项及它们的联合检测诊断对每组慢性肾病患者的敏感度的差异。
结果 慢性肾脏疾病的各组尿胱抑素 C、尿 β2-微球蛋白的水平比对照组水平高，肾病组与对照组两两进行对比，存在一定统计学意义；尿胱抑素 C、尿 β2-微球蛋白在尿中的含量水平会随着肾损害加重而升高；慢性肾病一组、二组、三组之间两两进行对比，尿胱抑素 C 的临床检测结果水平存在显著的差异，有统计学意义；慢性肾病一组与慢性肾病二组相比，尿 β2-微球蛋白水平呈明显的差异，有统计学意义；慢性肾病二组与慢性肾病三组相比，尿 β2-微球蛋白水平无显著性差异，无统

计学意义；尿胱抑素 C 和尿 β2-微球蛋白的两个指标联合检测的 ROC 曲线下的面积最大，面积是 0.924，对于慢性肾脏疾病患者的临床诊断，尿胱抑素 C 和尿 β2-微球蛋白的两个指标的联合检测的诊断价值最大。
结论 尿胱抑素 C、尿 β2-微球蛋白可作为临床早期诊断慢性肾脏疾病的重要指标，通过对尿胱抑素 C 和 β2-微生物的综合分析，即可提高对慢性肾脏疾病早期临床诊断的灵敏度。

PU-2022

在不同系统间进行糖化结果比对的评估

黄树华
玉溪市人民医院医学检验科（昆明医科大学第六附属医院医学检验科）

目的 探讨不同糖化检测系统间结果的可比性和临床可接受性。
方法 运用 NCCLS 的 EP9-A 方案，采用临床患者新鲜标本，与本地区同级医院已通过 NGSP 认证的罗氏 C501 自动生化分析仪进行比对。将罗氏 C501 作为标准检测系统，我科国产 MQ-2000PT 糖化血红蛋白分析仪作为待检测系统。用罗氏 C501 和 MQ-2000PT 同时测定 HbA1c，进行室间比对并采用配对 t 检验和回归分析的方法进行检测结果的方法比对及偏倚评估。
结果 MQ-2000PT 的仪器根据回归方程系数经校准和调整，结果偏倚可接受，基本能得到具有一致临床意义的检测结果。
结论 实验室比对可以对检测能力进行有效的质量监控。

PU-2023

心型脂肪酸结合蛋白定量试剂盒分析性能的验证

徐文波、丁怡文、毛星星、叶丹、张春婷、黄奕然、陈剑
玉溪市人民医院医学检验科（昆明医科大学第六附属医院医学检验科）

目的 验证心型脂肪酸结合蛋白定量试剂盒的主要分析性能。
方法 依据《临床实验室对商品定量试剂盒》WS/T 420-2013 的性能验证方案[1]，对心型脂肪酸结合蛋白试剂盒进行精密度、正确度、线性范围、临床可报告范围、生物参考区间进行验证。
结果 心型脂肪酸结合蛋白试剂盒的批内、批间精密度 CV 值分别为 3.55% -2.35%、2.92% -4.42% 最大允许误差≤1/3 CLIA'88 规定的允许误差；正确度验证，高值偏倚 0.15%，低值偏倚 7.69%；项目的可报告范围试验测定值结果与预测值接近，相关系数 r ＞ 0.975，线性理想(斜率 b 接近 1) 。
结论 心型脂肪酸结合蛋白商品定量试剂盒的精密度、正确度和线性范围、临床可报告范围、参考区间性能验证均达到了临床应用的实验要求。

PU-2024

可溶性 ST2 和 ProBNP、TNT-HS 在冠状动脉粥样硬化引起的心力衰竭患者的诊断及价值

陈晓忠
广东省人民医院

目的 测定由于冠状动脉粥样硬化导致的心力衰竭（heart failure,HF）患者和其他因素导致的心力衰竭患者血清可溶性生长刺激表达基因 2 蛋白（soluble growth stimulating express 2,ST2）、血浆

中脑利钠肽前体（ProBNP）和高敏肌钙蛋白 T（TNT-HS）的水平，分析其在各种 HF 的患者中的诊断及治疗价值。
方法 连续收集 2019 年 1 月到 12 月期间在广东省人民医院心血管研究所住院的 HF 患者 244 例，诊断为由于冠状动脉硬化引起的 HF 组 118 例和其他原因引起的 HF 组 126 例。收集同时期的由于冠状动脉粥样硬化心脏病的患者 115 例为疾病对照组，健康人群 73 名为健康对照组。比较冠状动脉粥样硬化引起的 HF 组和其他原因引起的 HF 组的资料及不同射血分数分组中的血清可溶性 ST2 和血浆 ProBNP、TNT-HS 水平。可溶性 ST2 采用酶联免疫法测定，ProBNP 和 TNT-HS 采用电发光测定。采用非参数检验及 Spearman 相关性分析等统计方法进行分析。采用受试者工作曲线（ROC）分析 ST2、ProBNP 和 TNT-HS 在两组 HF 中的诊断价值。
结果 HF 患者的血清可溶性 ST2 水平［50.2(40-60)］ng/ml。高于疾病对照组［24（10.2-30.5）］和健康对照组［16.3（6.2-25.3）］ng/ml（P < 0.001）。冠状动脉粥样硬化导致的 HF 组和其他原因引起的 HF 组血清的可溶性 ST2 水平和 ProBNP 水平无统计学差异，TNT-HS 水平有统计学差异。Spearman 相关性分析，HF 组可溶性 ST2 与 ProBNP、TNT-HS 呈正相关（r>0,P<0.05）。可溶性 ST2 诊断冠状动脉粥样硬化导致 HF 的 ROC 曲线下面积（AUC）为 0.852，（95%CI：0.795~0.945，P<0.001），最佳临界值为 45.23ng/mL 在此临界值下的敏感度为 80.4%，特异度为 89.6%。可溶性 ST2 诊断其他因素导致 HF 的 ROC 的 AUC 为 0.725（95%CI：0.670~0.851，P<0.001），最佳临界值为 33.24ng/mL，在此临界值下的敏感度为 75.4%，特异度为 87.5%。ProBNP 和可溶性 ST2 在鉴别诊断冠状动脉粥样硬化导致的 HF 和其他原因导致的 HF 的 ROC 的 AUC 分别为 0.714、0.799，可溶性 ST2 高于 ProBNP。
结论 HF 组的可溶性 ST2 和 ProBNP 水平明显高于疾病对照组和健康对照组。在鉴别诊断冠状动脉粥样硬化导致的 HF 和其他原因导致的 HF 时可溶性 ST2 价值高于 ProBNP

PU-2025

痛风与高尿酸血症关联的分析

马骋赟
山东省立医院

目的 痛风是一种古老的疾病，近些年来随着生活水平的提高，我国高尿酸血症的患病率已高达 13.3%，患者规模达 1.8 亿，痛风患者人群也悄然超过 1500 万，但他们对疾病的认识仍然存在不足，此研究主要探讨痛风和高尿酸血症之间的关系，以期助力痛风的防治。
方法 选择在山东省立医院 2019 年 1 月至 2021 年 6 月门诊及住院 300 例病人结果进行分析。根据尿酸的高低分为 2 类， 按本院尿酸参考范围空腹状态下男 420umol/L、女 360umo1/L 为界，分为大于正常值和小于正常值进行比较分析看是否符合作为临界参考、年龄性别对其影响的意义，在选择正常对照组 100 例来自随机抽样的体检健康志愿者。分两组尿酸等进行比较分析。
结果 总体进行分析发现，经过统计来看尿酸高于正常值时，患者有患有高尿酸血症，但只有 10%会患有痛风症，且有 5%发生痛风症的患者其尿酸值处于正常值范围内，差异之间有统计学意义（P<0.05）。Logistic 回归分析尿酸值与痛风的发生率呈负相关。
结论 一般来讲，高尿酸血症的人中约有 10%会发生痛风，可以肯定，没有高尿酸血症就没有痛风，但高尿酸并不一定出现痛风。痛风时血尿酸水平不一定升高。虽然痛风是在高尿酸血症的基础上，但在痛风急性发作时，大量尿酸从血液中析出，中性粒细胞会对尿酸结晶进行吞噬，相比来说，此时血中尿酸含量反而降低，若此时检测血尿酸水平，多低于平常水平。但体内整体尿酸含量并没有减少。

PU-2026

急性心肌梗死预警中行心型脂肪酸结合蛋白、微小 RNA-499 检测的价值分析

郑川
成都市双流区第一人民医院（四川大学华西空港医院）

目的 探究急性心肌梗死预警中行心型脂肪酸结合蛋白、微小 RNA-499 联合检测价值。
方法 筛选我院 2018 年 1 月~2020 年 10 月收治的 150 例因胸痛急性发作来院就诊的急性心肌梗死疑似患者，所有患者在胸痛发作后 3 小时内入院，其中确诊 65 例急性心肌梗死，85 例非急性心肌梗死，入院后、4h、8h、12h 检测心型脂肪酸结合蛋白、微小 RNA-499 含量，比较单独检测和联合检测灵敏度和特异度。
结果 （1）心型脂肪酸结合蛋白含量和微小 RNA-499 含量于 4~8h 开始升高，于 8~12h 达到峰值后逐渐回落，两项指标均在 12h 后回归下降。（2）AMI 的心型脂肪酸结合蛋白、微小 RNA-499 单独检测灵敏度分别是：69.23%、69.23%，联合检测的灵敏度是 76.92%。（3）对比心型脂肪酸结合蛋白、miRNA-499 的检验结果来看，相较于单独检测，联合检测的敏感度明显更高，P＜0.05。
结论 在急性心肌梗死的早期诊断中采用血清脂肪酸结合蛋白、微小 RNA-499 联合检查，可充分提高诊断的灵敏度。

血清淀粉样蛋白 A 的临床运用新进展

槐以啟、年士艳
玉溪市人民医院重症医学科（昆明医科大学第六附属医院重症医学科）

血清淀粉样蛋白 A(Serum Amyloid A，SAA)是一种参与机体多种炎症反应的急性期蛋白，在炎症反应早期即可高度表达。由于其具有极高的敏感性，使得他作为炎症标志物而得到广泛运用。SAA 参与多种临床疾病的发生与发展，最近的研究发现 SAA 在指导临床疾病的诊断、动态监测疗效、预后评估等方面具有较高的研究价值。本文通过阅读相关的国内外文献，总结 SAA 与临床有关疾病的最新研究成果，为 SAA 在临床疾病的诊治及预后判断等方面提供理论参考。

PU-2028

使用临床实验室现有真实数据建立老年人肾功能干化学相关指标参考区间的可行性分析

吴佳莺
上海市第一人民医院嘉定分院

目的 参考区间的研究很多都是通过实验室现有数据进行回顾性研究及分析建立的。然而，临床实验室建立老年人肾功能尿素（Urea）、肌酐（Crea）、尿酸（UA）干化学参考区间用这种方法的可行性尚未评估。因此，本研究旨在评估仅使用来自临床实验室的现有真实数据建立老年人肾功能干化学的参考区间，并提供根据年龄、性别因素调整后建立参考区间的理论依据。
方法 使用强生 VITROS 4600 全自动干式生化分析仪，根据性别、年龄组段进行分组。建立两个衍生数据库：衍生数据库 A 和衍生数据库 B。使用严格的排除标准选择衍生数据库 A 中的参考个体，并将数据库建立的参考区间作为标准参考区间。衍生数据库 B 中的个体为直接从实验室信息系统（LIS）中导出的体检人群的数据，并对该数据库基于数据挖掘方法建立的参考区间进行评估。采

用比较置信区间（CI）的方法同时利用基于外部数据库的决策结果的一致性来比较 A 组参考区间和 B 组参考区间。
结果 老年人肾功能干化学的 B 组参考区间与 A 组参考区间结果相似。大多数肾功能干化学的参考区间上限和下限的 90%置信区间在 A 组与 B 组之间存在重叠，并且 B 组的限值在 A 组的 90%置信区间内。老年人肾功能干化学参考区间 A 组和 B 组的一致性大于 0.95。
结论 采用适当的方法剔除离群值后，利用临床实验室现有的数据建立老年人肾功能干化学参考区间是可行的。

PU-2029

肺癌患者血清乳酸脱氢酶水平及临床意义

赵欣然
中国医科大学附属盛京医院

目的 探讨肺癌患者血清乳酸脱氢酶同工酶水平变化及临床意义
方法 2019 年 1 月-2020 年 1 月收治肺癌患者 200 例作为实验组，同时选取同期体检健康者 200 例作为对照组。检测两组血清 LDH 水平，并进行分析。
结果 肺癌患者血清 LDH 水平显著高于健康人，差异有统计学意义(P<0.05)。各种病理类型非小细胞癌患者血清 LDH 水平比较，差异无统计学意义(P>0.05)。
结论 连续监测患者血清 LDH 水平对肺癌患者临床诊断有一定意义。

冠心病患者发病机制及不同性别危险因素概述

李琼、冯磊
玉溪市人民医院医学检验科（昆明医科大学第六附属医院医学检验科）

冠状动脉粥样硬化性心脏病(CHD)是由于心脏冠状动脉存在粥样硬化斑块,导致冠状动脉管腔狭窄，进而引起心肌缺血缺氧的临床症状。不同性别 CHD 患者的危险因素可能存在差异，早期识别并积极防治，对二级预防至关重要。本研究旨在阐述 CHD 发病机制及不同性别之间危险因素的差异性，为 CHD 患者的防治措施提供重要的理论依据。

PU-2031

ACS 患者髓过氧化物酶 MPO 水平变化与病变程度的相关性

徐文青
山西省心血管病医院

目的 探讨急性冠状动脉综合征(acute coronary syndrome,ACS)患者血清中髓过氧化物酶(myeloperoxidase,MPO)水平变化同其病变程度之间的相关性。
方法 选取本院 2020 年 12 月至 2021 年 2 月收治的 130 例患者按冠脉造影结果和临床诊断分为 ACS 患者 50 例(ACS 组)、稳定型心绞痛患者 50 例(SAP 组)和健康者 30 例(对照组)同期冠状动脉造影阴性作为观察对象,分别对其血浆 MPO、高敏 C 反应蛋白(hs-CRP)、高敏肌钙蛋白 I（hs-cTnI）水平进行测定,通过冠状动脉造影检查对患者冠脉狭窄程度和病变血管支数进行回顾性分析。
结果 ACS 组 MPO 2.50±0.84 ng/ml, hs-cTnI 35.5±1.28 ng/ml, hs-CRP 10.01±1.25 mg/L；SAP 组 MPO 0.95±0.14 ng/ml, hs-cTnI 5.08±1.08 ng/ml, hs-CRP 1.08±0.25 mg/L.对照组 MPO 0.60±0.44 ng/ml, hs-cTnI 0.18±0.03 ng/ml, hs-CRP 0.58±0.15 mg/L。ACS 患者的血浆 MPO、hs-cTnI、hs-

CRP 均明显高于 SAP 组和对照组,SAP 组患者血浆 MPO、hs-cTnI、hs-CRP 水平明显高于对照组,差异有显著性(P<0.05);采用血管造影对三组受检者冠状动脉狭窄程度进行检测，不同冠脉狭窄支数的 MPO 水平差异无显著性(P>0.05);重度冠脉狭窄患者血浆 MPO 浓度明显高于中度、轻度患者,从高到低依次为重度、中度、轻度,差异有显著性(P<0.05)。

结论 血浆中 MPO 的表达水平同急性冠状动脉综合征患者的病情进展之间存在明显相关性,其中随着患者冠状动脉斑块稳定性的变差及冠状动脉阻塞程度的增加,其血浆 MPO 浓度显著上升,提示血浆 MPO 可作为急性冠状动脉综合征患者病情评估的有效生化检验指标。

PU-2032

磷脂酶 A2 与肿瘤疾病相关性的研究

周广飞、冯强
泰安市中心医院

肿瘤是机体细胞在各种内外致瘤因素长期协同作用下导致基因水平的突变和功能调控的异常，从而促使细胞持续过度增殖并导致发生转化而形成的新生物。病理和影像学的检查并辅以特异性肿瘤标志物检测是目前诊断其的金标准。但是往往要到肿瘤晚期才能有明显的指征，然而对最近肿瘤的相关性论文的研究回顾中磷脂酶 a2 作为一种新型的肿瘤相关性指标越来越受到研究者的重视。他可以在肿瘤早期起到极好的预警作用。人血浆脂蛋白相关磷脂酶 A2 是一类具有磷脂分解活性的超家族酶类。由血管内膜中的巨噬细胞、 T 细胞和肥大细胞分泌，它广泛的存在于动物的细胞和体液中，可以催化水解磷酸甘油脂 sn-2 位置的脂键，产生游离脂肪酸和溶血磷脂，参与细胞内外信号的传递、炎症及炎症相关疾病等病理反应。主要分为四大类：分泌型 PLA2（secretory PLA2，SPLA2）、胞浆型 PLA2（cytosolic PLA2，cPLA2）、钙离子非依赖型（Ca2+-independent PLA2，iPLA2 ）和脂蛋白 PLA2（Lipoprotein-associated PLA2，Lp-PLA2）.近几年肿瘤疾病与磷脂酶 a2 相关性论文研究发现，大部分选取本院住院患者的实验室免疫组织化学法或者血清学检测血清中磷脂酶 a2 的水平资料，根据不同肿瘤的组织学分级和 TNM 分期，用统计学的方法分析不同类型肿瘤磷脂酶 a2 结果异常程度的相关性和差异性。对照组为正常人群或健康查体人群。本文对磷脂酶 a2 的作用机理和对肿瘤相关疾病的影响及研究方法进行总结分析，希望对后续不同肿瘤中磷脂酶 a2 的表达水平研究提供参考。

PU-2033

西宁地区缺铁和缺铁性贫血对 HbA1c 结果的影响

马继登[1]、阿祥仁[2]、李子安[2]、刘兰民[2]、李德琴[2]
1. 青海省人民医院检验科
2. 青海省人民医院检验科

目的 研究西宁地区糖尿病和非糖尿病人群缺铁和缺铁性贫血时，对 HbA1c 检测值的影响。

方法 纳入 2018 年 1 月 1 日到 2020 年 8 月 25 日来青海省人民医院就诊的患有缺铁性贫血和潜在缺铁的患者，以及与 IDA 组年龄和性别相匹配的健康体检患者。在医院的 LIS 中采集铁蛋白(FER)、Fe(血清铁)、HbAlc、RBC（红细胞）、血红蛋白（Hb）、平均红细胞体积（MCV）、MCH（平均血红蛋白含量）、MCHC（平均血红蛋白浓度）、C 反应蛋白（CRP）、肌酐（CREA）、空腹血糖（FPG）、餐后血糖、果糖胺（FMN）等实验室数据。将非糖尿病人群分为缺铁性贫血非糖尿病组 63 例、潜在缺铁非糖尿病组 95 例、非糖尿病对照组 126 例，将糖尿病患者分为缺铁性贫血糖尿病组 22 例、潜在缺铁糖尿病组 34 例、糖尿病对照组 44 例。并对两类人群的数据分别进行方差分析。

结果 非糖尿病人群中，NDM-IDA 组、NDM-ID 组、NDM-CON 组 3 组的平均年龄、FPG、FMN 水平比较，差异无统计学意义（P>0.05）。3 组间 Fe、FER、RBC、Hb、MCV、MCH、MCHC、HbAlc 比较,差异均有统计学意义（P<0.05）。NDM-CON 组的 HbA1c 水平与 NDM-IDA 组、NDM-ID 组比较，差异均有统计学意义（P<0.05）；NDM-IDA 组与 NDM-ID 组比较，差异无统计学意义（P>0.05）。糖尿病人群中，DM-IDA 组、DM-ID 组、DM-CON 组 3 组的平均年龄、FPG、FMN 水平差异无统计学意义（P>0.05）。3 组间 Fe、FER、RBC、Hb、MCV、MCH、MCHC、HbAlc 比较,差异均有统计学意义（P<0.05）。DM-CON 组的 HbA1c 水平与 DM-IDA 组比较，差异均有统计学意义（P<0.05）；DM-ID 组与 DM-CON 组、DM-IDA 组比较，差异均无统计学意义（P>0.05）。

结论 西宁地区的非糖尿病患者，在潜在缺铁和缺铁性贫血时 HbAlc 水平都会假性升高。西宁地区的糖尿病患者若同时患缺铁性贫血时，HbAlc 水平会假性升高。

PU-2034

肌酐、甘油三酯、空腹血糖与糖化血红蛋白的关系研究

缪林君
上海市第一人民医院嘉定分院

目的 探究糖化血红蛋白与空腹血糖及肌酐 Cr、总甘油三酯 TG、高密度胆固醇 HDL 的相关性。

方法 将 2020 年 8 月-2021 年 4 月收治的确诊 2 型糖尿病患者 56 例，分为糖化血红蛋白理想范围组（<7%）52 例，糖化血红蛋白控制欠佳组（＞7%范围）4 例。以 72 例健康体检者为对照组。对比其空腹血糖、肌酐、甘油三酯，观察其差异性。结果与糖化血红蛋控制欠佳组相比，糖化血红蛋白理想范围组空腹血糖明显下降（P＜0.05），甘油三酯明显升高（P＜0.05），肌酐明显升高（P＜0.05）。与对照组相比，糖化血红蛋白理想范围组及糖化血红蛋白控制欠佳组的空腹血糖、TG、Cr 明显升高，HDL 降低（P＜0.05）。

结论 糖化血红蛋白可作为糖尿病的诊断和监控指标。糖尿病患者血脂和肾功能水平与血糖控制相关，应加强对血糖与血脂和肾功能的管理。

PU-2035

高血压检测中容易被忽略的血管紧张素 II

王慧、杨国青
贵州金域医学检验中心有限公司

目的 为了让医生更好认识血管紧张素 II 的作用机理，以及参照血管紧张素 II 的检验结果，给临床提供用药指导。

方法 ①结合血管紧张素 II 在贵州金域医学检验中心项目检测标准操作规程，阐述血管紧张素 II 在高血压乃至内分泌性疾病中的检测必要性。 ②统计分析贵州金域医学检验中心有限公司自 2018 年 05 月至 2021 年 04 月送检样本情况。

结果 ①血管紧张素 II 是由肾素作用于血管紧张素原形成的血管紧张 I 在血管紧张素转换酶的作用下形成的，是一种能够收缩血管升高血压的 8 肽。它在肾素-血管紧张素-醛固酮系统中具有重要作用。首先，血管紧张素 II 能引起小动脉血管收缩，引发血压升高；其次，血管紧张素 II 能刺激肾上腺皮质分泌醛固酮，使钠重吸收增强，从而影响人体内电解质的平衡；第三，血管紧张素 II 可以使儿茶芬胺上升，从而引起去甲肾上腺素增加，促使血管内皮细胞的增生，亦可使用血管紧张素 II 的受体拮抗剂阻断反应，来治疗高血压及肾脏疾病。

②贵州金域医学检验中心有限公司自 2018 年 05 月至 2021 年 04 月送检样本情况如下：2018 年 05 月至 2019 年 04 月间血管紧张素 II 占送检高血压总样本数的 14.97%；2019 年 05 月至 2020 年 04 月间血管紧张素 II 占送检高血压总样本数的 21.32%；2020 年 05 月至 2021 年 04 月间血管紧张素 II 占送检高血压总样本数的 30.16%。

结论 ①从贵州金域医学检验中心有限公司接收的送检样本情况分析，目前血管紧张素 II 的检验占比逐年递增，说明临床对血管紧张素 II 结果对高血压结果的综合判读逐渐增强，但仍然有很大的缺口。②根据血管紧张素 II 具有强烈收缩血管的能力，可协助医生判断是否需要进行肾动脉的影像学研究。③根据血管紧张素 II 检验结果，结合醛固酮检测结果及影像学 CT，可对高血压及肾脏疾病进行分型。④根据血管紧张素 II 在肾素-血管紧张素-醛固酮系统中的作用，可指导临床使用拮抗剂对高血压疾病进行治疗，并评估治疗效果。

PU-2036

深圳市罗湖地区女性不同年龄段 CA125、CEA 和 CA125/CEA 参考区间的建立和验证

吕康琪、陈大洋、李敏、姚恒、郭非凡、承宝贵、张秀明
深圳市罗湖医院集团医学检验实验室

目的 间接法建立深圳罗湖地区健康成年女性人群血清 CA125、CEA 和 CA125/CEA 水平的参考区间，并进行验证。

方法 对 2019 年 7 月至 2020 年 7 月健康体检人群数据分析，通过偏度-峰度值检验数据正态性，对非正态数据使用 BOX-COX 转换，四分位间距法剔除离群值后计算 95%百分位获得参考区间；分析 2020 年 8 月的健康体检成年女性数据对参考区间进行验证。

结果 深圳罗湖地区健康成年女性按年龄组分为 A 组（20-29 岁），B 组（30-39 岁），C 组（40-49 岁），D 组（50-59 岁），E 组（≧60 岁）；CA125：AB 组参考上限是 32U/mL，C 组 31.09U/mL，DE 组 20.58U/mL；CEA：A 组参考区间上限是 2.58pmol/ml、B 组 2.60pmol/ml、C 组 3.22pmol/ml、D 组 3.96pmol/ml、E 组 5.76pmol/ml；CA125/CEA：AB 组参考上限为 43.30，C 组 34.51、D 组 18.70、E 组 13.72。经验证检测结果 90.03%以上符合新建参考区间，验证均通过。

结论 间接法建立参考区间适用于临床实验室。CA125 和 CEA 参考区间存在年龄组差异，为临床不同年龄的妇科疾病诊断提供参考依据。

PU-2037

添加抗人线粒体型 CK 单克隆抗体的试剂检测肌酸激酶同工酶 MB 的临床应用评价

李振国[1]、张龙英[1]、杨银凤[2]
1. 大连医科大学附属第二医院
2. 大连医科大学

目的 研究新型免疫抑制法 CK-MB 检测试剂在检测中的临床应用。

方法 对新试剂（添加抗人线粒体型 CK 单克隆抗体的试剂）的纠正结果进行分析，并验证其抗溶血干扰能力。收集本医院 CK-MB 检测结果为阳性且非心肌损伤患者的血清样本，分别用传统试剂（未添加抗人线粒体型 CK 单克隆抗体的试剂）和新型试剂重新测定后记录结果。先初筛一周内

95 例样本计算纠正率，初步得到新试剂的总体纠正效果。再对 3 个月内收集的样本按照不同疾病分类分析，计算新检测试剂对不同疾病假阳性样本的纠正率，计算每个样本用两种方法检测的结果与对应检测方法参考范围上限的差值并做图。随机选择 50 例疑似假阳性样本测定其质量作为参照，计算新试剂检测结果与质量法检测结果的符合率。从 CK-MB 酶活性正常的样本中随机选取 8 例进行溶血，计算溶血后与溶血前酶活性比值。

结果 初筛 95 例样本的纠正率为 74.73%。不同疾病的纠正率分别为：急性白血病 83.3%；再生障碍性贫血 88.8%；扁桃体炎 90%；支气管炎 88.8%；肺癌 86.6%；胃癌 90%。50 例假性样本与质量法相比较的符合率为 78%。在溶血样本中，溶血前后传统试剂测定的 CK-MB 酶活性变化幅度显著高于新试剂。

结论 新试剂对每种所研究疾病的假阳性样本的纠正率均在 80%以上，且阴性结果与质量法的符合率为 100%，抗溶血干扰能力较强。因此新试剂测定 CK-MB 酶活性的部分性能优于传统试剂。

PU-2038

淄博地区健康人群肌酐参考区间建立的研究

类承斌、张文
淄博市中心医院

目的 调查淄博地区健康人群血清肌酐的正常参考范围，建立该地区血清肌酐的参考区间。

方法 采用酶法及贝克曼 AU5831 自动生化分析仪对该地区 1500 例健康成年人（年龄范围 18-72，其中男 676 例，女 824 例）进行血清肌酐的测定，并按性别和年龄组分别比较。

结果 男性体检者的肌酐浓度明显高于女性（P<0.001），其 95％参考区间为 56.3～91.0μmol/L（18～30 岁）、56.2～95.6μmol/L（＞30～70 岁）、60.1～112.7μmol/L（＞70 岁）；女性体检者肌酐的 95％参考区间为：41.0～65.4μmol/L（≤60 岁）、44.7～86.1μmol/L（＞60 岁）。

结论以酶法建立了淄博地区健康人群血清肌酐的参考区间供检验人员参考。

PU-2039

传统肿瘤标志物联合新兴标志物检测在乳腺癌诊断中的意义与应用

赵志红
天津医科大学肿瘤医院检验科

目的 探讨传统肿瘤标志物糖类抗原 153（CA153），糖类抗原 125(CA125)，癌胚抗原（CEA），神经元特异性烯醇化酶（NSE），糖类抗原 242（CA242）联合新兴肿瘤标志物细胞角蛋白 19 片段抗原（Cyfra21-1），肿瘤特异性生长因子 (TSGF)，鳞状上皮抗原（SCC）对乳腺癌的临床诊断价值。

方法 用电化学发光法和酶化学发光法对乳腺癌组，乳腺良性疾病组和健康对照组的临床资料进行分析。

结果 乳腺癌组八种肿瘤标志物含量明显高于对照组，单独检测 CA153，CA125，CEA, NSE ，CA242，Cyfra21-1,TSGF,SCC 阳性率分别为 44.1%，25.3%，35.6%，39.2%,38.5%，35.3%，39.0%,35.7%,联合检测率达到 71.5%。

结论 此八种肿瘤标志物联合检测可明显提高乳腺癌诊断的阳性率，弥补单项检测的缺陷和不足，有重要的临床应用价值。

PU-2040

ICP-MS 法测定全血中 15 种微量元素的方法学建立

廖倩、余羊羊
重庆金域医学检验所有限公司

目的 采用电感耦合等离子体质谱（ICP - MS）建立快速测定全血中 15 种微量元素的方法。
方法 采用 0.1％Triton X-100+0.1％HNO3 对全血样品稀释 20 倍后直接用 ICP - MS 分析，对镁、锰、铁、铜、锌、铅、钙、钒、铬、钴、镍、硒、钼、镉、铷的检测低限、精密度和正确度（加标回收）进行验证。
结果 测定全血质控品，检测值均在可接受范围，其标准曲线的相关系数均＞0.995，方法检出限的测定铜、镍等 10 种微量元素为 0.00-0.15 ug/L，锌、钙等 5 种常量元素为 0.01-1.50mg/L，重复精密度均＜6.20%，中间精密度均＜6.09%，15 种元素的加标回收率在 86.59%-113.30%。
结论 用 ICP - MS 同时测定稀释后全血中 15 种元素的方法学性能满意，结果可靠，可满足日常大量标本的快速检测要求。

PU-2041

同型半胱氨酸测定对妊娠期糖尿病意义的探讨

谢婷彦、钟白云
中南大学湘雅医院

目的 研究妊娠期糖尿病（GDM）患者中血清同型半胱氨酸（Hcy）的水平及其与妊娠结局的关系，探讨同型半胱氨酸的测定对妊娠期糖尿病的意义。
方法 选取中南大学湘雅医院 2016 年 4 月-2017 年 4 月期间收治入院的孕妇 70 例，其中 35 例妊娠期糖尿病患者纳为病例组，35 例血糖正常者纳为对照组。检测两组孕妇血清同型半胱氨酸的水平，追踪并收集两组孕妇的妊娠结局，进行比较分析。
结果 GDM 组血清同型半胱氨酸水平（7.36±1.60）较正常对照组 （6.58±1.36）升高，差异具有统计学意义（P<0.05）；GDM 组妊娠不良结局的发生率明显高于对照组（P<0.05）； 且两组妊娠不良结局的同型半胱氨酸水平较正常分娩组水平均有升高。
结论 血清同型半胱氨酸水平可能与妊娠期糖尿病的发生发展和妊娠结局相关，监测 GDM 患者的血清 Hcy 水平，对患者妊娠结局有一定的预判作用。

PU-2042

胱抑素 C 同位素稀释质谱法检测条件的优化

王建新[1]、李亚男[2]
1. 南通大学附属医院
2. 南通市第一人民医院（南通大学第二附属医院）

目的 优化胱抑素 C 蛋白同位素稀释液相色谱串联质谱法检测条件，为精准测量奠定基础。
方法 研究胱抑素 C 纯蛋白酸水解条件、色谱及质谱条件，建立同位素稀释质谱法测量蛋白水解产物亮氨酸（ Leu）、脯氨酸（Pro）、缬氨酸（Val）和苯丙氨酸（Phe）四种氨基酸。再换算出胱抑素 C 的含量，并对纯蛋白不确定度进行评定。
结果 胱抑素 C 纯蛋白在 8 M 盐酸、130℃高温下 4 h 完全水解为氨基酸；添加保护剂苯可以防止氨基酸氧化、降解，提高检测灵敏度。本法回收率 95.75%～105.60%，不精密度为 1.02%，符合 FDA 生物样本分析方法导则标准。 CysC 含量（1.29±0.07）mg/g（k=2）。

结论 建立同位素稀释液相色谱串联质谱法定量 CysC 的方法，本法无需衍生化，操作简单、结果准确，可溯源至 SI 单位。根据 GUM 原则进行各分量不确定度分析，合理评估扩展不确定度，检测结果可信。

PU-2043

不同高密度脂蛋白水平与心血管疾病终点事件的研究

钱净
昆明市第一人民医院

目的 调查不同 HDL 水平与心血管疾病终点事件。
方法 选取我院 2018 年 1 月至 4 月 1036 名具有心血管事件疾病的患者，收集所有研究对象 HDL-C、TG、CH、LDL-C 以及患者血压，饮酒史，吸烟史。比较不同 HDL-C 水平下心血管事件的发生情况。
结果 所有研究对象年龄、饮酒史、CH、TG 统计差异均无统计学意义（P>0.05）；性别、吸烟史、收缩压、舒张压、HDL-C、LDL-C 统计差异均具有统计学意义（P<0.05）；HDL-C<1.0mmol/L 下心血管事件发生率中急性心肌梗死、冠心病、急性冠脉综合征、高血压、脑梗死、短暂性脑缺血、心力衰竭分别为 14.47%、 4.68%、 7.23%、42.98%、23.83%、0%、 6.80%；HDL-C1.0-1.49mmol/L 下分别为 14.21%、6.14%、17.87%49.76%、17.45%、0.8%、4.85%；HDL-C1.5-1.99mmol/L 分别为 7.28%、 3.94%、 3.31%、52.98%、 21.19%、 0.6%、10.6%；HDL≥2.0mmol/L 冠心病、急性冠脉综合征、高血压、脑梗死、心力衰竭 0%、9.6%、3.22%、70.97%、 9.68%、0%、 6.45%；HDL-C <1.0mmol/L 下，急性心肌梗死，脑梗死，心力衰竭相关危险度＞1； HDL-C 1.5-1.99mmol/L 下，高血压，脑梗死，心力衰竭相关危险度＞1；HDL≥2.0mmol/L 下，冠心病，高血压，心力衰竭相关危险度＞1
结论 1.不同 HDL-C 水平下不同心血管疾病之间的发生情况是不同的；2.低 HDL-C 下更容易发生急性心肌梗死、脑梗死、心力衰竭；高 HDL-C 下更容易发生高血压、脑梗死、心力衰竭；极高 HDL-C 下更容易发生冠心病、高血压、心力衰竭。

PU-2044

幽门螺杆菌检测方法及应用进展

张炳峰、毕礼鑫
江苏省人民医院（南京医科大学第一附属医院）

幽门螺杆菌（H.pylor）是一种微需氧螺旋形革兰阴性螺杆菌，因其致病性和致癌性备受关注。其临床实验室检测方法多种多样，并且各有其优劣性，主要分为侵入性和非侵入性检测方法。侵入性检测方法均需先进行内镜检查，有一定的创伤性，方法有：分离培养和涂片、组织学染色和组化染色、特殊染色、快速尿素酶试验；非侵入方法无创快捷，但准确性差异较大，方法有：尿素呼气试验(UBT)、胶体金法、环介导等温扩增方法(LAMP)、酶联免疫吸附试验(ELISA)及胶乳免疫比浊法。在临床检测时，应根据相应的目的等因素选择合适的方法，特别是要考虑到 Hp 在各地的流行菌株的不同，各种检测技术方法的优缺点及其试验的可操作性。

PU-2045

血清高值肌酸激酶(CK)测定计算法与稀释法结果的比较分析

张炳峰、蒋叶、颜承靖
江苏省人民医院（南京医科大学第一附属医院）

目的 为了解决标本抽血量少而需要复检的样本，探讨血清高值肌酸激酶(CK)测定中的计算法与稀释法的差异。
方法 选择 20 例超出检测线性范围高值肌酸激酶(CK)血清标本，用稀释法和反应进程曲线计算法得出 CK 活性值。
结果 20 例高值（无结果显示） CK 通过反应进程曲线计算结果与标本稀释后测定的结果无显著差异（$P > 0.05$）。
结论 在高值血清肌酸激酶检测时，反应进程曲线计算方法可代替稀释法。

PU-2046

临床生化定量检测项目自动审核规则的建立应用

蔡永梅
宁夏医科大学总医院

目的 基于本实验室患者人群特点，建立适合自身需求的临床生化定量检测项目自动审核规则，如差异判断（Delta Check Severity DS）、结果与判断范围（Normal Range Severity NS）、临床信息（Clinical information Severity CS）、样本状态（Sample Status Severity SS）、仪器状态 Instrument Status Severity IS）、逻辑判断（Logical Judgement Severity LS）、报告与申请医嘱一致性检查等（Other Severity OS）规则实现自动审核，保证自动审核通过率有效稳定。
方法 1 依据 CNAS-CL02《医学实验室通过质量和能力认可准则》（ISO 15189：2012，IDT））、CLSI AUTO15《临床实验室特定专业领域检测结果自动审核》、CLSI AUTO-10A《临床实验室检测结果自动审核-批准指南》和中华人民共和国卫生行业标准《临床实验室定量检验结果的自动审核》（WS/T 616-2018）等标准，结合本实验室特点和要求，建立和设置项目的个性化自动审核规则并验证。设置的规则主要有固定规则、个性化规则等；将建立好的规则设置在西门子 APTIO 流水线中间体软件 Cetralink 上，验证所有规则的有效性，再通过 1 万个样本验证规则的适宜性和可行性。2 统计分析各项目自动审核不通过时违反 NS 和 DS 所占比率。
结果 1 共计 40 个生化检测项目建立、设置 400 多条有效规则。2 各项目检测结果自动审核不通过违反规则主要是 DS 和 NS，占设置规则的 95%以上。优化 DS、NS 规则后，自动审核通过率由 58%提高到 66%。
结论 NS 和 DS 规则是自动审核通过率稳定及自动审核结果准确可靠主要规则，其设置既要有科学性又要有可行性和适宜性。

PU-2047

血清淀粉样蛋白 A 和载脂蛋白 B/载脂蛋白 A1 比值在糖尿病足中的变化及意义

陈键
湖南省人民医院马王堆院区

目的 分析血清淀粉样蛋白 A（SAA）和载脂蛋白 B/载脂蛋白 A1 比值（ApoB / ApoA1）在糖尿病足（DF）中的变化及意义。

方法 选取 262 例 2 型糖尿病（DM）患者作为研究对象，按是否并发 DF 分为 DF 组（n=128）和 DM 组（n=134），另选取同期体检并无高血脂、肥胖等 DM 高危因素的健康者作为对照组（n=135），比较三组受试者周血 SAA 和 ApoB/ApoA1 指标的变化，分析 SAA 和 ApoB/ApoA1 与 DM 病程、HbA1c、FGB 等指标是否是 DF 发生的独立危险因素，并探讨 SAA 和 ApoB/ApoA1 间相关性及其对 DF 发生的预测价值。
结果 DF 组 DM 病程明显长于 DM 组，两组间比较具有统计学意义（P<0.05）；DF 组外周血 ApoB、FBG、HbA1c、SAA 和 ApoB/ApoA1 水平明显高于 DM 组和对照组，三组间比较具有统计学差异（P<0.05）。Logistic 线性回归分析：病程、FBG、HbA1c、SAA 和 ApoB/ApoA1 是 DF 发生的独立危险因素。Pearson 直线相关性分析结果显示：SAA 与 ApoB/ApoA1 呈正相关（r=0.486，P<0.001）。外周血 SAA 和 ApoB/ApoA1 二者联合对 DF 的预测敏感性（85.52%）和特异性（89.30%）高于 SAA 或 ApoB/ApoA1 单独预测效能（P<0.05）。
结论 外周血 SAA 和 ApoB/ApoA1 水平是 DF 发生的独立危险因素，对 DF 具有较好的预测价值，值得临床推广应用。

PU-2048

血液透析对尿毒症患者生化指标的影响

陈灿星[1]、姚少濠[1,2]、胡志峰[1,2]、张玲[1,2]、刘勇[1,2]、谭天畅[1]、吴嘉濠[1]、劳康文[1]、陶然[1,2]
1. 广州金域医学检验中心有限公司
2. .广州医科大学金域检验学院

目的 研究尿毒症患者经血液透析治疗后各项生化指标水平的变化，及时发现及治疗透析后并发症。
方法 400 例在独立血透中心进行透析治疗并采血送检中心实验室检测的患者作为研究对象，开展回顾性分析。统计生化指标包括二氧化碳结合力（CO2-CP）、肌酐（CREA）、甲状旁腺激素（PTH）、尿素（UREA）、尿酸（UA），血钾（K）、血钠（NA）、血氯（CL）、血磷（P）、血总钙（CA）水平，比较血液透析前后的各生化指标的变化。
结果 透析后的 CREA（409±163）μmol/L、PTH（90.72±98.41）pmol/L、UREA（8.27±3.88）mmol/L、UA（138±67）μmol/L、K（3.68±0.59）mmol/L、P（0.87±0.30）mmol/L、CA（2.41±0.22）mmol/L，与透析前 CO2-CP（17.08±3.66）mmol/L、CREA（1059±274）μmol/L、PTH（45.10±51.30）pmol/L、UREA（25.57±7.54）mmol/L、UA（502±117）μmol/L、K（5.06±0.74）mmol/L、P（2.34±0.72）mmol/L、CA（2.23±0.27）mmol/L，差异有统计学意义（P＜0.05）。透析后的 NA（137.4±2.83）mmol/L、CL（97.31±2.75）mmol/L，与透析前 NA（138.13±3.52）mmol/L、CL（97.62±4.32）mmol/L 差异无统计学意义（P＞0.05）。透析后出现低钙血症的患者较透析前的 36.7%下降到 8.6%，出现高钾血症的患者较透析前的 39.2%下降到 1.9%，但是 40.2%的人出现低钾血症。
讨论 对尿毒症患者给予血液透析治疗可改善患者的各项生化指标水平，且关注透后 PTH、CA、K 等重要指标，及时对症处理，提高患者透后的生存质量。

PU-2049

血清维生素 B12 水平与精子质量的相关性研究

刘俊鹏、宋金莉
中国医科大学附属盛京医院

目的 探讨男性血清中维生素 B12 水平对精子活动力，精子浓度的影响。

方法 根据纳入标准选择研究对象，测出研究对象的血清维生素 B12 水平和相关精子参数，将研究对象分为少弱精子症病例组和对照组，分析两组之间的血清维生素 B12 水平是否有统计学差异。分析血清维生素 B12 水平与精子前向运动力（PR），精子总活力(PR+NP)，精子浓度的相关性。
结果 少弱精子症病例组和健康对照组的血清维生素水平存在显著性差异（p<0.05）,少弱精子症病例组的血清维生素 B12 水平明显低于对照组;血清维生素水平与精子前向运动力存在正相关（r=0.519,p<0.05）;血清维生素 B12 水平与精子总活力存在正相关（r=0.531,p<0.05）;血清维生素 B12 水平与精子浓度存在正相关（r=0.491,p<0.05）。
结论 血清维生素 B12 水平对精子前向运动力，精子总活力，精子浓度有影响，血清维生素 B12 水平低的男性精子质量差。

PU-2050

血清小而密低密度脂蛋白胆固醇与短暂性脑缺血发作及再发卒中风险的相关性研究

王冬梅
滨州医学院烟台附属医院

目的 研究血清当中小而密低密度脂蛋白胆固醇(sdLDL-C)的含量与短暂性脑缺血发作及再发卒中风险的相关性。
方法 选取滨州医学院附属医院 2019 年 6 月到 12 月的 38 名因短暂性脑缺血发作来院救治患者作为患病组，同时选取相同时间的 44 名体检健康人群作为健康对照组，应用相关仪器分别测量两组人群与血脂相关的指标,并展开比较，分析其相关性。
结果 检测结果如下，患病组的总胆固醇，甘油三脂，脂蛋白 α，低密度脂蛋白胆固醇，小而密低密度脂蛋白胆固醇的浓度与健康对照组相比呈明显的升高状态；而高密度脂蛋白的浓度是降低的，并且以 P<0.05 差异有统计学意义。实验过程中，经过使用 ABCD3-Ⅰ评分方法，发现患病组 38 名患者中,有 18 例低危组患者，13 例中危组患者以及 7 例高危组患者。将 3 组相关血脂指标进行比较,发现除 sdLDL-C 的水平以外,其他血脂指标差异均无统计学意义(P>0.05),其中高危组 sdLDL-C 水平最高，与另外两组相比差异有统计学意义(P<0.05)； 并且还发现 sdLDL-C 与 TC、TG、LDL-C、Lpα 及 ABCD3-Ⅰ水平呈明显正相关(P<0.05)。
结论血清小而密低密度脂蛋白胆固醇水平与短暂性脑缺血发作具有相关性，且小而密低密度脂蛋白胆固醇水平与再发卒中风险呈正相关。

PU-2051

BNP/NT-proBNP 及心肌酶谱联合检测在新生儿肺炎诊断中的价值研究

许子贤[1]、王丹[2]、侯敏[1]
1. 天津市胸科医院
2. 陕西省延安市中医医院

目的 探究脑利钠肽（brain natriuretic peptide，BNP）/N 末端 B 型利钠肽原（N-terminal pro-B-type natriuretic peptide，NT-ProBNP）及心肌酶谱联合检测在新生儿肺炎（neonatal pneumonia，NP）诊断中的价值。
方法 选取 2019 年 6 月~2020 年 6 月出生于我院的 141 例 NP 患儿，根据感染类型分为细菌组 60 例、病毒组 51 例和其他组 30 例，另选取同期出生于我院的 30 例健康新生儿作为对照组。检测并

比较各组 BNP/NT-proBNP、心肌酶谱水平；受试者工作特征（receiver operating characteristic，ROC）曲线分析 BNP/NT-proBNP 及心肌酶谱联合检测对 NP 的诊断和鉴别价值。
结果 与对照组比较，NP 患儿 BNP/NT-proBNP 显著降低，细菌组 BNP/NT-proBNP 显著低于病毒组、其他组，病毒组显著低于其他组；NP 患儿心肌酶谱水平显著升高，病毒组显著高于细菌组、其他组，细菌组显著高于其他组，差异有统计学意义（P<0.05）。BNP/NT-proBNP 对 NP 细菌感染的诊断效能较高；心肌酶谱对 NP 病毒感染的诊断效能较高；BNP/NT-proBNP 及心肌酶谱联合检测诊断 NP 的灵敏度、特异性、准确度、阳性预测值、阴性预测值、ROC 曲线下面积（area under curve，AUC）显著高于单一指标检测的值，差异有统计学意义（P<0.05）。
结论 BNP/NT-proBNP 及心肌酶谱联合检测能够有效诊断 NP 及指导临床合理使用抗菌药物，值得临床参考。

PU-2052

尿微量白蛋白和胱抑素 C 联合检测在 2 型糖尿病肾病早期诊断中的临床意义

李江博
西安市第一医院

目的 探讨血清胱抑素 C(Cystatin C，CysC)及尿微量白蛋白(microalbu-minuria,mALB)联合检测在 2 型糖尿病患者(Diabetes，DM)早期肾损伤中的意义。
方法 以 59 例 2 型糖尿病肾病患者为糖尿病肾病组，62 例 2 型糖尿病患者为糖尿病组,64 例健康体检者为对照组，采用免疫散射比浊法检测尿液中 mALB,两点终点法测定 CysC，观察 3 组 CysC 和 mALB 变化，及两者的联合检测。
结果 糖尿病组患者的血清 CysC 及尿 mALB 高于对照组,糖尿病肾病组患者的血清 CysC 及尿 mALB 比对照组和糖尿病组患者的血清 CysC 及尿 mALB 升高更明显，差异具有统计学意义(P<O.05)。
结论 在患者出现大量蛋白尿之前，血清 CysC 和尿 mALB 可作为早期诊断糖尿病肾病较敏感的指标；联合检测能大大提高检测阳性率，对于监测早期糖尿病肾病的发生和病情发展程度有重要意义。

PU-2053

肝功能指标联合肝纤四项在肝硬化 Child-Pugh 分级中的应用

刘琼
湖南省人民医院

目的 探讨肝功能指标 CHE、TBA、ALT、AST、PA、ALP、GGT 和肝纤四项 HA、LN、PCIII 和 IV-C 在肝硬化 Child-Pugh 分级中的应用。
方法 收集 289 例 Child-Pugh A 级、B 级和 C 级肝硬化患者和 50 例健康者血清，检测 CHE、TBA、ALT、AST、PA、ALP、GGT、HA、LN、PCIII 和 IV-C 的含量，分析以上指标在肝硬化 Child-Pugh 分级中的应用价值。
结果 11 项指标整体比较均有差异，成对比较 TBA、AST、CHE、PA、LN 和 IV-C 四组间均有差异；ALT、GGT 和 ALP Child-Pugh A 级、B 级和 C 级肝硬化与对照组比较有差异；ALP C 级和 A 级比较有差异；HA 除了 A 级和对照组，余均有差异；PCIII 除了 A 级和对照组、B 级和 A 级比较外，余均有差异。有序 logistic 回归显示 ALP、CHE、PA、LN 和 IV-C 对肝硬化的 Child-Pugh 分级有意义，模型的预测准确率为 64%。
结论 联合检测 ALP、CHE、PA、LN 和 IV-C 对于肝硬化 Child-Pugh 分级的诊断有一定的参考价值。

PU-2054

UniCel DxI800 全自动化学发光免疫分析仪

暴旭广
南方医科大学珠江医院

目的 研究 UniCel DxI800 全自动免疫分析仪缓冲液国产化的课题，以代替昂贵的进口原装缓冲液。
方法 用进口随机缓冲液和国产缓冲液在 UniCel DxI800 全自动免疫分析仪上对收集的临床血清标本进行准确度分析及精密度分析。测得数据由 SPSS 10.0 统计软件进行配对 t 检验和相关分析比较。
结果 两种缓冲液分别检测 T3、fT3、fT4、PRL、FSH、LH、Testo 共 7 个项目各 30 份血清，检测重复性较好（CV<3%），结果均具有高度的线性相关性（r>0.95）。项目 T3、fT3、FSH 由两种试剂测得的结果差异无统计学意义（P>0.05）。而项目 fT4、PRL、LH、Testo 测得的结果差异有统计学意义（P<0.05）。
结论 在 UniCel DxI800 全自动免疫分析仪上，国产缓冲液不可以代替贝克曼原装缓冲液进行检测。

PU-2055

Cys C 与 NT-proBNP 的测定在慢性心力衰竭中的临床价值

王乐乐
西安市第一医院

目的 探讨血清胱抑素 C(Cystatin C，Cys C)与 N 端脑钠肽前体（NT-proBNP）水平的变化对慢性心力衰竭(CHF)患者的诊断价值。
方法 选取 CHF 组 90 例，健康体检正常者(对照组)36 名。心力衰竭程度按美国纽约心脏病学会心功能分级标准(NYHA)分为Ⅱ、Ⅲ、Ⅳ级，分别测定 CysC、NT-proBNP 等指标，并进行相关性分析。
结果 CHF 组 CysC、NT-proBNP 水平与对照组比较差异有统计学意义(P< 0.05)。CHF 组患者中血清 CysC 与 NT-proBNP 水平显著高于对照组(P< 0.05)，且随着心功能分级的增高，血清 CysC 与 NT-proBNP 水平也逐渐升高(P< 0.05)。
结论 慢性心力衰竭患者血清 CysC 与 NT-proBNP 水平明显高于非心力衰竭者；血清 CysC 与 NT-proBNP 水平随慢性心力衰竭患者心功能分级的升高而升高；血清 CysC 与 NT-proBNP 水平呈正相关，二者的联合测定有利于慢性心力衰竭的诊断，且 CysC 和 NT-proBNP 对于评价 CHF 患者临床心功能变化具有一定意义。

PU-2056

消化道恶性肿瘤患者血清 P-cadherin 变化及预测价值

宋佳音、贾丽、董冬、任丽
天津医科大学肿瘤医院

目的 探讨 P-cadherin 在消化道恶性肿瘤发生发展过程中的作用，并分析该蛋白与临床治疗的相关性从而预测患者的疗效。
方法 研究 141 消化道恶性肿瘤患者血清标本 P-cadherin 的表达。探讨其表达与消化道恶性肿瘤患者的临床病理特征是否存在关联，分析其表达水平在晚期消化道恶性肿瘤患者的治疗监测中的临床价值。
结果 ELISA 结果显示晚期消化道恶性肿瘤患者血清 P-cadherin 表达水平相对于早期消化道恶性肿瘤患者血清表达水平有显著差异（P=0.000）。54 例结直肠癌患者血清 P-Cadherin 表达水平与

CA199（r = 0.18,P = 0.19）、CA724（r = 0.39，P = 0.0045）、CA242（r = 0.12，P = 0.42）、CEA（r = 0.45，P = 0.0007）表达水平均呈正相关。43 例食管癌患者血清 P-Cadherin 表达水平与 CA724（r = 0.08，P = 0.63）表达水平呈正相关，而与 CA199（r = -0.16，P = 0.35）、CEA（r = -0.02，P = 0.91）表达水平呈负相关。44 例胃癌患者血清 P-Cadherin 表达水平与 CA199（r = 0.35，P = 0.02）、CA724（r = 0.002，P = 0.98）、CA242（r = 0.02，P = 0.88）、CEA（r = 0.12，P = 0.94）表达水平呈正相关。在消化道恶性肿瘤患者化疗疗效监测中发现患者血清 P-Cadherin 与其他肿瘤标志物水平变化一致率无明显差异，平均变化率与 CA199、CA242、CEA 存在明显差异。

结论 本研究显示血清 P-Cadherin 在消化道恶性肿瘤的发生发展过程中起到重要作用，同时 P-Cadherin 可能作为消化道恶性肿瘤一个新的肿瘤标志物并且与可以作为消化道恶性肿瘤化疗监测的指标。

PU-2057

首发抑郁症患者血清 TRPM2 与 CD38 的浓度变化

唐亚梅[1]、康涛[2]
1. 中南大学湘雅二医院
2. 中南大学湘雅医学院检验专业

目的 研究首发抑郁症患者血清中的 TRPM2 与 CD38 的浓度及铁代谢相关指标血清 TRF、NGAL、Fe 和 HCY 的水平变化，探讨上述指标与抑郁症发生的关系及在抑郁症诊疗中的临床意义。

方法 收集 2020 年 10 月至 2021 年 4 月于湘雅二医院精神科门诊就诊的 40 例首发抑郁症患者的血清和汉密尔顿量表资料；同时收集 20 例于湘雅二医院体检中心体检的正常人血清，采用 ELISA 法测定血清样本中的 TRPM2 和 CD38 水平，应用 IMMAGE800 和 HITACHI7600-DDP 仪器检测血清转铁蛋白（TRF）、NGAL、铁（Fe）和 HCY 的水平。

结果 抑郁症患者血清 TRPM2（134.27±27.56ng/ml）和 CD38（1044.88±90.41 ng/ml）浓度较健康对照组（49.78±18.62ng/ml）和（812.99±188.57 ng/ml）均显著升高（P＜0.01），差异有统计学意义；抑郁症患者 NGAL（106.96±39.66 ng/mL）水平较对照组（154.31±62.98 ng/mL）显著降低（P＜0.01），差异有统计学意义；Pearson 相关分析显示汉密尔顿量表总分与各项指标均无相关性（P>0.05）。

结论 首发抑郁症患者血清 TRPM2、CD38 和 NGAL 水平异常，三者与抑郁症的发生有关，可能涉及共同的氧化应激机制。

PU-2058

血清 KL-6 水平在间质性肺疾病中的辅助诊断价值

任亚萍
中南大学湘雅二医院检验科

目的 探讨血清涎液化糖链抗原（KL-6）水平在间质性肺疾病中的辅助诊断价值。

方法 回顾性分析 2019 年 12 月～2020 年 12 月中南大学湘雅二医院收治的 277 例间质性肺疾病患者为实验组，选取同期该院收治的 263 例非间质性肺疾病患者为疾病对照组，140 例体检健康者作为健康对照组。用化学发光法检测三组研究对象的血清 KL-6，LDH 水平；分析血清 KL-6，LDH 水平与性别，年龄，吸烟史及肺功能的相关性；比较血清 KL-6,LDH 对于间质性肺疾病的诊断价值。

结果 实验组血清 KL-6 水平[（815.700(412.450，1824.900)U/ml）]高于非肺间质疾病组[（209.300(152.700，311.300)U/ml）]和阴性对照组[（145.900(122.600，176.725)U/ml）],P 均＜0.05。KL-6 辅助诊断 ILD 的 ROC 曲线下面积（0.902，95%CI:0.878-0.926）优于 LDH(0.763，

95%CI: 0.728-0.799)；两者联合诊断间质性肺疾病的 ROC 曲线下面积为 0.902（95%CI: 0.879-0.926）。KL-6 的 cut-off 值为 305.15U/ml,敏感性和特异性分别为 84.8%和 83.1%。血清 KL-6，LDH 水平与吸烟史呈正相关（r=43.499 和 1.233，P 均<0.05）；血清 KL-6 水平与肺部弥散功能，通气功能严重程度呈负相关（r=-0.01 和-0.006，P 均<0.05）。
结论 血清 KL-6 可辅助诊断间质性肺疾病，且诊断价值高于 LDH。

PU-2059

HBV 感染患者血清 CG、ALT、AST 检测的临床意义

张春娇
连云港市中医院

目的 探讨血清甘胆酸（CG）、丙氨酸氨基转移酶（ALT）、天门冬氨酸氨基转移酶（AST）水平检测对 HBV 感染患者的临床意义，并比较甘胆酸相对于常规肝功能的优越性。
方法 搜集连云港市中医院 2018 年 5 月 1 日至 2018 年 9 月 30 日 HBsAg 阳性标本 289 例，根据 PCR 结果分为 HBV-DNA 阳性（HBV-DNA 含量>1.0E+2IU/ML）组 142 例和 HBV-DNA 阴性（HBV-DNA 含量<1.0E+2IU/ML）组 147 例，同时选取 150 名健康人作为对照组。采用酶法测定丙氨酸氨基转移酶（ALT）、天门冬氨酸氨基转移酶（AST）,均相酶免疫法测定甘胆酸（CG）。比较 HBV-DNA 阳性组与对照组及 HBV-DNA 阴性组与对照组间各指标有无统计学意义。
结果 HBV-DNA 阳性组 CG、ALT、AST 水平均明显高于对照组 CG、ALT、AST 水平，差异有统计学意义（P<0.05）；HBV-DNA 阴性组 CG 水平高于对照组 CG 水平，差异具有统计学意义（P<0.05），ALT、AST 水平和对照组无统计学意义（P>0.05）,HBV-DNA 阳性组各指标水平均高于 HBV-DNA 阴性组。
讨论 中国是 HBV 感染的高发地区，HBV-DNA 是乙肝病毒在体内复制的最直接指标，HBV-DNA 阳性患者肝细胞在病毒复制的过程中都有不同程度的炎症和损伤，ALT、AST 等酶学可较好地反映肝细胞的病理状态。但我国大多数是慢性无临床症状和体征的感染者，此类感染者虽然 HBV-DNA 阴性，可能是由于病毒含量低于检测限，也可能由于病毒在肝细胞内复制，其实肝细胞的超微结构已发生了变化,这些改变不能被常规肝功能所测出，但 CG 的水平高于对照组，表明 CG 能敏感地反映肝细胞早期受损的变化。因此对于 HBV 感染者，在测定常规肝功能的同时检测 CG,更能早期、敏感地反映乙肝患者的肝细胞的损害程度,在临床应用中更具有实用性。

PU-2060

血清小而密低密度脂蛋白胆固醇与妊娠期糖尿病患者胰岛素抵抗的相关性分析

殷雪瑞
成都市双流区第一人民医院

目的 探讨小而密低密度脂蛋白胆固醇与妊娠期糖尿病患者脂代谢情况及胰岛素抵抗的相关性。
方法 选取 2019 年 1 月-2020 年 6 月我院收治的 103 例处于孕中期的妊娠期糖尿病患者为试验组，同期匹配 61 名健康妊娠妇女为对照组，分别测定两组研究对象的总胆固醇（TC）、甘油三酯（TG）、sdLDL-C、LDL-C、HDL-C、HbA1c、空腹血糖（FBG）、空腹胰岛素（FINS），并计算胰岛素抵抗指数（HOMA-IR），比较两组研究对象的上述各指标水平，并分析 sdLDL-C 与糖脂代谢的相关性。
结果 试验组 TC、TG、LDL-C、sdLDL-C、HbA1c、FBG、FINS 以及 HOMA-IR 明显高于对照组，而 HDL-C 水平明显低于对照组（P<0.05）；sdLDL-C 与 TG、LDL-C、FBG、HbA1c 及 HOMA-

IR 呈正相关（r 分别为 0.322、0.531、0.604、0.577、0.582，P<0.05）；HOMA-IR 与 TG 呈正相关（r=0.336，P=0.023）。
结论 妊娠期糖尿病患者血清 sdLDL-C 升高与胰岛素抵抗及脂代谢异常有关，应重视 sdLDL-C 在妊娠期糖尿病中的作用。

PU-2061

C 反应蛋白与血清淀粉样蛋白 A 在急性主动脉夹层临床诊断中的临床价值

史清梅、孟繁君、岳晋巍、王利新
宁夏医科大学总医院

目的 探讨 C-反应蛋白(CRP)和血清淀粉样蛋白 A (SAA)在急性主动脉夹层(AAD)患者临床诊断中的临床价值。
方法 采用回顾性分析方法，选取 2018 年 1 月到 2020 年 6 月在宁夏医科大学总医院入院治疗的 175 例 AAD 患者、160 例急性冠脉综合征患者（疾病对照组）和同期健康体检的 148 名健康者（健康对照组）作为研究对象，采用胶乳增强免疫比浊法和胶乳免疫比浊法测定所有对象的血清 SAA 和 CRP 水平，并收集、分析相关临床资料。采用单因素及多因素 logistic 回归分析其独立危险因素，通过受试者工作特征 (ROC) 曲线分析 SAA 和 CRP 对急性主动脉夹层的诊断价值。
结果 AAD 患者组 SAA 和 CRP 水平[(165.7±7.4)mg/L、(76.0±4.0)mg/L]明显高于健康对照组和疾病对照组，差异均有统计学意义(均 P<0.05)；年龄超过 60 岁的 AAD 患者的 SAA 和 CRP 降低[(150.6±12.7)mg/L、(73.9±7.3)mg/L]，差异均有统计学意义(均 P<0.05)；具有超过 6 h 的高危疼痛特征的 AAD 患者的 SAA 水平升高，差异有统计学意义(P<0.05)； SAA 与 CRP 呈正相关(r=0.0534，P<0.05)，ROC 分析提示 SAA 和 CRP 水平与 AAD 风险独立相关(P=0.001)，其中 SAA 诊断 AAD 疾病的 ROC 曲线显示 TAAD 和 TBAD 的 AUC 分别为 0.997 和 0.995 (均 P<0.001)；CRP 诊断 AAD 疾病的 ROC 曲线显示 TAAD 和 TBAD 的 AUC 分别为 0.998 和 0.991 (均 P<0.001)。 SAA 和 CRP 的最佳临界值分别为 175.17 mg/L 和 72.96 mg/L。
结论 SAA 和 CRP 水平升高对 AAD 具有较高的预测价值，SAA 联合 CRP 有望作为辅助诊断 AAD 的实验室检测指标。

PU-2062

首发精神分裂症与抗 NMDAR 脑炎血液学指标的比较

唐亚梅
中南大学湘雅二医院

目的 首发精神分裂症(FES)和抗 NMDAR 脑炎两种疾病具有相似的精神症状，且两者与炎症系统关系密切。在本研究中，我们比较了 FES、抗 NMDAR 脑炎和健康对照组相关血液学指标和炎症指标，探索其涉及可能的机制。
方法 我们纳入来自中南大学湘雅二医院的 106 例患者(53 例 FES 患者和 53 例抗 NMDAR 脑炎患者)和健康体检中心的 59 例健康对照。采用中性粒细胞-淋巴细胞比值(NLR)、血小板-淋巴细胞比值(PLR)、单核细胞-淋巴细胞比值(MLR)、全身免疫-炎症指数(SII)评价炎症评分。其他血液学指标，如白细胞(WBC)、血小板(PLT)、尿酸(UA)和总胆红素(TBIL)、总胆汁酸(TBA)和血清白蛋白也用于比较两种疾病之间的炎症评分。
结果 FES、抗 NMDAR 及健康对照组中 SII、NLR、PLR、MLR、白蛋白差异均有统计学意义(p<0.05)。其中，抗 NMDAR 脑炎组 SII、NLR、PLR 和 MLR 值显著高于 FES 组(p<0.05)，且两种疾病组 SII、NLR、PLR 和 MLR 值均高于健康对照组(p<0.05)。抗 NMDAR 脑炎组血清白蛋白水

平明显低于 FES 组(p<0.05)。两组 WBC、中性粒细胞、淋巴细胞和单核细胞计数显著升高(p<0.05)。其他指标如 TBA、TBIL、UA 组间无差异。

结论 这是一项比较新的研究，通过比较 FES 和抗 NMDAR 脑炎两种疾病的血液炎症标志物与临床精神病性症状的关系。这两种疾病在炎症指标上呈现相同的上升趋势，但两者之间的变化幅度具有统计学差异。作者认为这两种疾病都与功能低下的 NMDAR 有关，但 SCZ 的机制似乎比抗 NMDAR 脑炎复杂得多；这两种疾病都与炎症系统和氧化应激有关，这可能证明 NMDAR 功能低下与精神病性症状有关。此外，NLR、PLR、MLR 和血清白蛋白可能会作为鉴别两种疾病的生物标志物。

PU-2063

结肠腺癌中 RNA 结合蛋白的预后模型的开发和验证

朱丹丹、陈杰荣、张喜钦
广东省人民医院

以前的研究报告指出，RNA 结合蛋白（RBPs）的失调与癌症的发展有明显的关系。然而，到目前为止，关于 RBPs 在结肠腺癌（COAD）中的作用的研究还很少。从 The Cancer Genome Atlas（TCGA）数据库中下载了 COAD 患者的 RNA 测序和临床数据，以确定 COAD 组织和正常结肠组织之间差异表达（DE）的 RBPs，然后通过系统的生物信息学分析详细研究这些 RBPs 的表达和预后意义。通过一系列的回归分析，7 个 RBPs（RPL10L、ERI1、POP1、CAPRIN2、TDRD7、SNIP1 和 PPARGC1A）被确定为与预后相关的枢纽基因；然后被用来构建预后模型。基于该模型的进一步分析表明，高危组的总生存期（OS）低于低危组。在这个预后模型中，TCGA 队列的时间依赖性接受者特征（ROC）曲线下面积为 0.697，GSE17538 队列为 0.581，表明该模型具有良好的预测能力。我们还根据 TCGA 队列中的 7 个 RBPs 建立了一个提名图，该模型对 COAD 显示出良好的鉴别能力。

PU-2064

非糖尿病学龄前儿童糖化白蛋白的调查及分析

何谦、常倩楠
西安交通大学第二附属医院

目的 通过测定 700 例非糖尿病学龄前儿童糖化白蛋白数值（glycated albumin,GA），探究学龄前儿童在不同年龄段糖化白蛋白的水平。

方法 利用全自动生化分析仪检测自 2019 年 1 月 1 日至 2021 年 4 月 1 日来西安交通大学第二附属医院就诊或体检符合研究标准的 700 名非糖尿病学龄前儿童的糖化白蛋白。

结果 婴儿组的 GA 参考范围为 5.103%-12.837%，幼儿组为 8.130%-13.890%，学龄前组为 9.550%-14.830%，各组间相互比较发现，非糖尿病学龄前儿童在不同年龄段的糖化白蛋白的组间差异具有显著统计学意义（P 值均＜0.01）。按性别分组得到学龄前男童组与女童组的参考范围分别为 6.209%-13.891%、6.210%-14.162%，两组相互比较发现，组间差异无统计学意义（P=0.466＞0.05）。

结论 婴儿组、幼儿组、学龄前组的糖化白蛋白宜分别采用不同的参考范围，学龄前儿童参考范围值与性别无关。

PU-2065

常规血脂检验诊断冠心病的临床意义分析

郑家辉
滨州医学院烟台附属医院

目的 分析在临床工作中，常规血脂检验对诊断冠心病的意义。
方法 以在院住院的 50 例冠心病患者作为观察组，以同期在查体中心进行健康查体的 50 例人员作为参照组，两组研究对象共计 100 例同时实施常规血清脂质检测。对两组检验结果进行统计、回顾性分析。
结果 检测结果如下:观察组的血清脂质检测指标(LDL-C、TG 和 TC)的数值明显高于参照组（P<0.05）；而观察组的 HDL-C 水平明显低于参照组（P<0.05）；观察组患者的高 TC 血症、高 TG 血症、高 LDL-C 血症和低 HDL-C 血症所占的比例均明显高于参照组（P<0.05）。
结论 血脂水平异常可导致冠心病发作。分析患者血脂检验指标，了解其血脂水平的变化，对冠心病的早期预防和后续确诊后的治疗具有非常重要的指导意义。

PU-2066

分离胶真空采血管样本保存时间对血糖测定结果的影响

孙学伟
滨州医学院烟台附属医院

目的讨论分离胶真空采血管原管保存样本加盖与否对其血糖检测后果的变动能否在临床容许误差范围内。
方法分离胶真空采血管原管保留血清 (3500 rpm· min-1 离心 10min)原管上机测定血清葡萄糖(葡萄糖氧化酶法), 加盖或不加盖 2 ~ 8℃冰箱冷藏保存, 各自于 2、 4、8、 24、48、72 h 反复检测血清葡萄糖程度。
结果 未加盖原管血清保存时间不同血糖测定结果不同，变化率在-2.4%~7.9%之间，血糖值与未加盖样本放置时间无相关性(P>0.05)；加盖原管血清保存时间不同血糖测定结果有高有低，变化率在-1.5%~0.6%之间，血糖值与加盖样本放置时间无相关性(P>0.05)。加盖与否,4d 内原管保存样本其血糖检测结果的变动均无统计学意义(P>0.05)且在临床允许误差领域之内<10%。
结论在不加盖保存的情况下，分离胶原管内保留 3d 内的样本可以用于血糖的检测。

PU-2067

临床生化检验项目危急值的建立与应用

苗田田
滨州医学院烟台附属医院

目的 分析并比较患者的致命死亡率和致命死亡率之间的差异。
方法 选择某院 2017 年 5 月至 2019 年 5 月接受治疗的 100 例已达危急值的患者，计算具有致命价值的患者的死亡人数，并对危急值项目的死亡率差异进行比较分析。
结果 100 例危重患者中有 12 例死亡，男女死亡比为 7：5，60 岁以上的患者高于 60 岁以下的患者。生化危急值患者死亡率与电解质危急值、血气分析危急值者之间无统计学差异(P>0.05);血气分析危急值患者死亡率高于电解质危急值者。

结论 建立危急值对提高医院的诊疗水平非常重要，能够迅速抢救患者的生命，对提高医院的治疗水平和社会形象有重要作用。 我们将努力对重要价值的管理进行标准化，信息化和综合化。

PU-2068

妊娠期糖尿病血清唾液酸的相关研究

蒋雨晴
滨州医学院烟台附属医院

目的 探寻血清唾液酸（SA）在妊娠期糖尿病患者及血糖正常孕妇体内的变化。
方法 选取 2019 年 5 月至 8 月本院就诊的 35 岁以上妊娠期糖尿病患者 30 例以及 35 岁以下妊娠期糖尿病患者 30 例为观察组；35 岁以上以及 35 岁以下血糖正常孕妇各 30 例为对照组，测定其血清唾液酸（SA）、空腹血糖值和口服糖耐量试验 1h 及 2h 血糖值。
结果 35 岁以上妊娠期糖尿病患者血清唾液酸水平为(673.33±86.42)mg/L, 35 岁以上血糖正常孕妇血清唾液酸水平为(662.03±82.04)mg/L， 35 岁以下妊娠期糖尿病患者血清唾液酸水平为(651.40±86.02)mg/L， 35 岁以下血糖正常孕妇血清唾液酸水平为(651.13±64.42)mg/L 。
结论 妊娠期糖尿病孕妇血清唾液酸水平与血糖正常孕妇无显著差异。

PU-2069

原发性肾病综合征高脂血症患者与肾功能指标的检查分析

李钊
滨州医学院烟台附属医院

目的 调查研究原发性肾病综合征（PNS)患者高脂血症与肾功能指标的关联。
方法 比较 PNS 组与其他肾病对照组,健康对照组的血脂水平，以及甘油三酯，高密度脂蛋白，低密度脂蛋白，载脂蛋白等。 线性分析 PNS 组内各项血脂指标与肾功能指标的关系。
结果 显示 PNS 患者组各项血脂指标明显高于疾病对照组和健康对照组，有统计学有意义（P<0.05);发现 ALB,eGFR,SCr 与血脂指标存在相关性
结论 PNS 患者血脂指标存在差异，且存在血脂指标与肾功能指标相互促进关系。

PU-2070

Consistency evaluation of elements in human whole blood between two ICP-MS systems

Xiang Ji、Yue Li、Xiaowen Dou、Dan Xiong、Xiuming Zhang
Shen Zhen Luohu Hospital Group

Elementals are essential to maintain the body’s metabolism and support a variety of biological functions. It is wildly accepted that imbalance of elements may serve as an indicator of illness，and increasing research interests of understanding their biological functions have arisen. Inductively coupled plasma mass spectrometry (ICP-MS) is commonly accessible in most research institutes; however its application in routine clinical analysis is still in development, as the CFDA approved instrument and reagent was not available. In the past few months, although several CFDA approved ICP-MS have been launched, their capability in blood sample analysis has not been systematically compared. In this work, the analytical performance of a novel CFDA

approved ICP-MS and a research instrument were compared to evaluate their consistency of analyzing 6 elements in human whole blood quantitatively.

PU-2071

多项生化检测指标对早期糖尿病肾病的诊断分析

刘立轩
南京医科大学第一附属医院（江苏省人民医院）

目的 评价早期糖尿病肾病使用多项生化检测指标的诊断价值。
方法 选择我院 2019 年 2 月至 2020 年 3 月期间接诊的 53 例糖尿病肾病患者作为观察组，选择同时期我院接诊的 53 例健康体检者作为对照组，两组均接受多项生化检测指标，比较两组的数据差异性。
结果 观察组的 CRP、Cys-c、HbAlc、FFA、Hcy、β2-MG、UA、PRO、Cr、BUN、RBP 均高于对照组，（P＜0.05）具有统计学意义。
结论 早期糖尿病肾病的诊断中应用多项生化检验指标可以为患者的早期诊断与治疗提供有效依据。

PU-2072

唐氏筛查中假阳性率相关因素分析

王玲
山东大学第二医院

目的 探讨母体血清中 HCG 指标在中期妊娠中的变化规律，及在唐氏筛查中假阳性率的相关性。
方法 检测 500 例唐氏筛查母体血清 AFP、HCG、uE3 水平，结合年龄、体重，用相应软件对唐氏风险度进行评估，根据结果进行统计学分析。
结果 正常血清 AFP、uE3 随孕周增加而增加，血清 HCG 随孕周增加而降低，血清 HCG 同孕周中阳性组明显高于阴性组，差异有统计学意义(P<0.01)，且假阳性率随血清 HCG、年龄及体重的增加而增加。
结论 唐氏筛查在临床检验过程中发现存在许多假阳性结果，对孕妇及家人带来很大的心里负担，国内外学者一直致力于研究导致假阳性率的相关因素，以降低产前筛查假阳性率，但目前仍没有定论。在本研究中，发现在唐氏筛查中，孕中期妇女血清 HCG 高值、高龄、肥胖者，会导致假阳性率的增加。

PU-2073

CA125 在伪膜性肠炎中的临床诊断价值

王玲
山东大学第二医院

目的 CA125 作为最重要的卵巢癌肿瘤标志物，广泛应用于临床，指导临床诊治，本研究旨在分析 CA125 在伪膜性肠炎中的临床诊断价值
方法 收集本院伪膜性肠炎病例，对其 CA125 阳性率进行分析
结果 收集的 109 例患者中 CA125 的阳性率为 80.7%，且阳性值大都<300U/mL。
结论 CA125 在良恶性肿瘤病变、非肿瘤性病变及生理性情况中，均有不同程度升高。本研究在分析临床案例中发现 CA125 在伪膜性肠炎中的阳性率很高，具有较高的诊断价值，但其具体机制有待进一步深入研究。

PU-2074

糖化血红蛋白 A1c 诊断妊娠糖尿病标准的初步探讨

徐志晔
南京大学医学院附属鼓楼医院

目的 初步评估使用糖化血红蛋白 A1c（HbA1c）诊断妊娠糖尿病的最佳切点。
方法 2019 年 6 月-2019 年 10 月在南京鼓楼医院门诊进行妊娠糖耐量筛查的妊娠者，同时测定其 HbA1c。以世界卫生组织（WHO）的标准诊断妊娠糖尿病，用受试者工作特征曲线（ROC）分析 HbA1c 诊断 DM 的能力。
结果 以非 DM 组为对照组，用 HbA1c 来诊断妊娠糖尿病，ROC 曲线下面积（AUCROC）为 0.931，最佳切点为 6.1%，敏感性为 90.6%，特异性为 88.9%。当切点为 5.9%时，敏感性下降为 81.8%，特异性为 93.7%。
结论 本次研究中 HbA1c 诊断妊娠糖尿病的最佳切点为 6.1%，但本次调查人群范围较小，诊断标准仍有待大范围调查后确定。

PU-2075

探讨迈瑞 CL-2000i 化学发光免疫分析法和罗氏 cobas E602 电化学发光免疫分析法检测甲胎蛋白与前列腺特异抗原结

俞欢欢
中国人民解放军北部战区总医院

目的 探讨迈瑞 CL-2000i 化学发光分析仪与罗氏 cobas E602 电化学发光分析仪两个检测统检测甲胎蛋白（AFP）和前列腺特异抗原（TPSA）结果的相关性。
方法 选取 2019 年 1 月--2019 年 2 月来本院就诊的门诊及体检患者的新鲜标本，其浓度范围涵盖低、中、高值,并且尽可能分布均匀，以罗氏 cobas 602 为目标检测系统，迈瑞 CL-2000i 为实验检测系统，选用伯乐第三方三个水平的质控物，同时检测血清样本中甲胎蛋白（AFP）、前列腺特异抗原（TPSA）血清浓度，并对数据进行相关统计学分析。
结果 两个系统检测 AFP、TPSA 质控物显示日间精密度、准确度符合临床要求，检测结果差距无统计学意义 （P＞0.05），实验组与目标组数据存在良好的线性关系 （r2＝0.9975 ＞0.99），迈瑞检测系统与罗氏检测系统的相关回归方程和相关系数为：TPSA (y=1.3083x -1.4526,r=0.9843），AFP(y=1.0748x - 0.8004,r=0.9924,)。预期偏倚和相对偏倚均可接受。
结论 迈瑞 CL-2000i 全自动化学发光免疫分析系统与罗氏 cobas E602 电化学发光系统检测中 AFP、TPSA 相关性良好。

PU-2076

假性高血钾原因简析

曹雅威
雅安市人民医院检验科

钾是机体不可缺少的电解质之一，对维持细胞新陈代谢、调节渗透压与酸碱平衡、维持神经肌肉的兴奋性具有重要的生理作用。在生理状态下，98％的钾分布于细胞内，2％分布于细胞外液，其中血钾仅占 0.3％；人体血钾浓度为 3.3-3.5mmol/L。当血清钾浓度 >5.5mmol/L 时，称之为高血钾症。①高血钾症是一种常见的电解质紊乱，严重时危及生命，早期发现并及时给予降钾治疗可以

避免发生不良临床后果。临床上钾离子紊乱可表现为高血钾症和低血钾症。假性高血钾症是一种检测血钾浓度时发生的体外现象，常由于钾离子外溢引起。检验科应该在注意滋生实验室质量控制的同时，及时排除假性高血钾，避免给临床医生造成困惑，从而怀疑检验室的诊断水平。因此，本文结合近些年国内外报道的假性高血钾症的病例，总结发生假性高血钾症的原因，提出早期识别假性高血钾症的建议，从而避免不必要的降钾危险治疗。

PU-2077

2 型糖尿病视网膜病变合并高尿酸血症的危险因素分析

程静茹
武汉大学人民医院

目的 探究 2 型糖尿病视网膜病变合并高尿酸血症的危险因素。
方法 选取 2018 年 1 月至 2018 年 12 月武汉大学人民医院收治的 2 型糖尿病视网膜病变患者 120 例为研究对象,根据患者尿酸水平分为 2 型糖尿病视网膜病变组和 2 型糖尿病视网膜病变合并高尿酸血症组,每组各 60 例。比较两组患者基本资料、生化指标。
结果 合并高尿酸血症组患者体重指数、收缩压、舒张压显著高于 2 型糖尿病视网膜病变组（P<0.05）,总胆固醇、甘油三酯、低密度脂蛋白胆固醇值显著高于 2 型糖尿病视网膜病变组（P<0.05）,高密度脂蛋白胆固醇、血清肌酐、血尿素氮值低于 2 型糖尿病视网膜病变组（P<0.05）。
结论 2 型糖尿病视网膜病变合并高尿酸血症的患者肥胖、高血压发生率高，且伴有代谢紊乱可导致病情进一步发展。

PU-2078

重症新冠肺炎患者的临床指标特点

刘静
中国人民解放军北部战区总医院

目的 探讨新型冠状病毒肺炎患者实验室检测指标在普通型和重症型中的差异性，从而提供更完善的诊疗依据。
研究方法 根据患者病情严重程度，连续纳入 2020 年 1 月至 3 月武汉市医院收治的普通型和重症型新冠肺炎患者共 234 例，其中普通型 142 例，重症型 92 例。收集所有患者的基本信息，临床症状，生化指标（Ca 离子，白蛋白，球蛋白，白球比，谷草转氨酶，谷丙转氨酶，肌酸激酶及其同工酶，C 反应蛋白）血细胞分析指标（中性粒细胞百分比，淋巴细胞百分比，中性粒细胞/淋巴细胞比值，血小板，红细胞分布宽度，红细胞分布宽度/血小板比值，血小板/淋巴细胞比值）等资料进行对比分析。另将患者出现的发热、咳嗽、咳痰、等症状分别赋值为 1 分，即分值越高症状越重，从而研究血分指标与其严重程度的相关性。
结果 与普通型相比，重症组患者白球比、AST、ALT、CK、NEUT、NLR、RDW、PLT/LYM 水平较高，RBC、HGB、Ca 离子、ALB、Ur、LYM、RDW/PLT 水平较低，差异均有统计学意义（均 P＜0.05）。
结论 普通型与重症型对比发现该病毒对心脏，肝脏，肺部等器官损害严重，实验室相关指标为靶向治疗，预后评估提供可靠依据。

PU-2079

吉林省 0~＜18 岁健康儿童淀粉酶及脂肪酶参考区间的建立

徐攀洋、何冰、许建成
吉林大学第一医院

目的 我国目前所使用的参考区间大多来自行业手册、教科书，制造商或试剂说明书等，而这些参考区间往往会有一些局限性。研究发现，同一检验项目，由于检测系统或检测人群的性别、年龄、种族、地域、饮食、生活习惯等情况不同，参考区间可能存在差异。例如在某项研究中发现发现，儿童的血清碱性磷酸酶浓度比成人高得多，而且这些浓度与骨生长速度有关。碱性磷酸酶(ALP)水平在生命的前 3 个月相对于成人水平略有升高，在青春期增加 2-3 倍，并在 1 到 2 年内保持在成人水平以上。同时发现在儿童的不同年龄组之间也存在显著差异，这表明，建立适宜的儿科参考区间是十分必要的。本研究的目的是采用直接取样方法，建立血清淀粉酶和脂肪酶的年龄和性别特异性儿科参考区间。目前并没有关于此方面的报道。
方法 经父母知情同意，在吉林省五个行政区的社区和学校共招募了 6466 名 1m~＜18y 的健康汉族儿童。 在 VITROS 5600 生化分析仪上测定血清淀粉酶(AMY)和脂肪酶(LPS)水平。 年龄和性别特异性参考区间采用 Harris 和 Boyd 检验或非参数 Mann-Whitney U 检验进行划分，为避免假阳性采用 Bonferroni 法校正 P 值，然后采用非参数秩法计算参考区间，用 Lambda-Mu-Sigma(LMS)方法评价参考区间的动态变化。
结果 淀粉酶的参考区间分为 4 个分区，1~＜5 岁之间迅速上升，5~＜12 岁之间略呈下降趋势，12~＜18 岁缓慢上升。脂肪酶水平在 1 岁之后表现出性别差异，无论男女均呈上升趋势，且女性脂肪酶水平高于男性。
结论 本研究结果建立了中国健康儿童淀粉酶及脂肪酶的参考区间，为临床儿科疾病的诊断和预后评估提供了更准确的解释。

PU-2080

血清 HCY、CysC 与中老年冠心病的相关性及临床价值

方林兰
中国人民解放军联勤保障部队第九二一医院

目的 分析血清同型半胱氨酸（HCY）、胱抑素 C（CysC）联合检测对中老年冠心病的临床意义。
方法 回顾性分析 100 例中老年冠心病患者临床资料作为研究组，另取 100 例健康体检者为对照组。比较各组 HCY、CysC 水平，比较联合检测结果与单项检测结果的敏感度、特异度和准确度。
结果 研究组血清 HCY 和 CysC 水平明显高于对照组，差异均有统计学意义（P<0.05）；联合检测的敏感度、特异度和准确度明显高于单项检测，且差异具有统计学意义（P<0.05）。
结论 联合检测血液中的 HCY 与 CysC 能提高冠心病检查的准确率，具有较高临床价值。

PU-2081

SAA，CRP，PCT 在呼吸道病毒感染的临床诊断中的应用

赵宇佳
中国人民解放军联勤保障部队第九二一医院

目的 分析血清淀粉样蛋白 A（SAA）、C-反应蛋白（CRP）、降钙素原（PCT）在呼吸道病毒感染的临床诊断中的应用。

方法 选取 2020 年 7 月-2020 年 12 月于联勤保障部队第 921 医院诊断为呼吸道病毒感染阳性患者血清 30 例和正常人血清 20 例分为感染组及未感染组，并检测其 SAA、CRP、PCT。
结果 未感染组 SAA（6.012±1.487）mg/L，CRP（4.034±1.977）mg/L，PCT（0.102±0.055）μg/L；感染组 SAA（13.770±1.389）mg/L，CRP（4.898±1.366）mg/L，PCT（0.168±0.088）μg/L。未感染组 PCT 与感染组 PCT 差异无统计学意义（p>0.05）。诊断呼吸道病毒感染时血清 SAA、CRP、PCT 的 AUG 分别为 0.822、0.752、0.589，检测临界值分别为 5.71mg/L、1.18mg/L、0.052μg/L。
结论 SAA、CRP 和 PCT 均能为临床呼吸道病毒感染提供一定的诊断参考，但 SAA 的效能最佳。

PU-2082

RBP、Cys-C 及 hs-CRP 联合检测在Ⅱ型糖尿病肾病早期诊断中的临床价值

张雅涵
中国人民解放军联勤保障部队第九二一医院

目的 研究视黄醇结合蛋白（RBP）、胱抑素 C（Cys-C）及超敏 C 反应蛋白（hs-CRP）联合检测对糖尿病肾病患者早期诊断的临床价值。
方法 收集中国人民解放军联勤保障部队第九二一医院神经内科、肾病内科等科室 2017 年 12 月至 2020 年 12 月收治的 100 例Ⅱ型糖尿病确诊患者为研究对象，根据患者尿白蛋白肌酐比值（UACR）将患者分为单纯糖尿病组和早期糖尿病肾病组，另收集同时期排除Ⅱ型糖尿病的健康体检者 50 例为健康对照组，记录三组对象 RBP、Cys-C 及 hs-CRP 三项指标水平，采用 SPSS20.0 软件对数据进行分析处理。
结果 早期糖尿病肾病组 RBP、Cys-C 及 hs-CRP 检测值均高于单纯糖尿病组，差异具有统计学意义，P<0.05。较年轻糖尿病肾病患者 RBP、Cys-C 及 hs-CRP 检测值均低于较老年患者，差异具有统计学意义，P<0.05。RBP、Cys-C 及 hs-CRP 联合检测对早期糖尿病肾病敏感度为 92.1%，特异度为 84.24%，显著高于单项指标单独检测。
结论 血清 RBP、Cys-C 及 hs-CRP 联合检测可显著提高对Ⅱ型糖尿病肾病患者早期诊断的灵敏度。

PU-2083

不同年龄段孕妇体重、孕周因素对唐氏筛查的影响探究

甘慧泉
广东省人民医院
广东省医学科学院

目的 研究不同年龄段孕妇孕早期和孕中期唐氏筛查阳性率与其体重和孕周的关系，为临床诊疗提供更加细化的指导建议。
方法 回顾性分析广东省人民医院 2017 年 1 月至 2018 年 12 月进行孕早期和孕中期产前筛查孕妇共 7338 例。根据筛查结果，采用方差分析和调节效应分析统计数据。
结果 孕早期和孕中期唐氏筛查阳性率和年龄呈正相关。年龄 30 周岁以上和 30 周岁以下各组的孕妇，唐氏综合征筛查阳性率存在统计学差异。对不同年龄段孕妇，在孕早期和孕中期，孕周与年龄的交互作用对唐氏筛查阳性结果的影响都是显著的。但是孕周对不同年龄段孕妇的唐氏筛查阳性不起调节作用；体重与年龄的交互作用对唐氏筛查阳性结果的影响不显著，但是体重在孕中期对不同

年龄段的唐氏筛查起调节作用。单就孕周因素而言，孕早期和孕中期唐氏筛查阳性率与孕周均不存在相关关系；单就体重因素而言，孕早期和孕中期唐氏筛查阳性与体重均呈正相关。
结论 对于唐氏综合征的筛查结果，年龄，体重，孕周等因素都有影响。对于孕周和体重的调节效应，孕早期和孕中期孕妇年龄和孕周的交互作用对唐氏筛查阳性的作用是显著的；和体重的交互作用对唐氏筛查阳性的作用是不显著的。孕早期和孕中期唐氏筛查阳性率与体重均呈正相关。

PU-2084

老年高血压合并冠心病患者经氨氯地平联合阿托伐他汀钙片治疗后小而密低密度脂蛋白的变化及临床意义

杨晓东、杨华、饶丽华
三峡大学附属仁和医院

目的 探讨老年高血压合并冠心病患者经氨氯地平联合阿托伐他汀钙片治疗后血清小而密低密脂蛋白胆固醇（sdLDL-C）的变化及临床意义。
方法 选择 2019 年 1 月至 12 月在本院就诊的 150 例老年高血压合并冠心病患者，采用随机数字表法平均分成 2 组。其中对照组 75 例给予氨氯地平口服治疗，观察组 75 例在此基础上联合阿托伐他汀钙片口服。治疗后，比较两组患者的临床疗效，同时比较 2 组患者治疗前后血脂相关指标，分析比较 sdLDL-C 水平和 sdLDL-C/LDL-C 比值的变化。
结果 观察组 DBP、SBP、TC、TG、LDL-C、sdLDL-C 水平低于对照组，HDL-C 水平高于对照组，差异均有统计学意义（P<0.05）；观察组 sdLDL-C 水平低于对照组，且 sdLDL-C/LDL-C 比值高于对照组，差异均有统计学意义（P<0.05）
结论 老年高血压合并冠心病患者经氨氯地平联合阿托伐他汀钙片治疗后血清小而密低密脂蛋白胆固醇降低，sdLDL-C/LDL-C 比值升高，从而避免动脉粥样硬化的风险。

PU-2085

尿轻链比值结合免疫固定电泳初步筛查以肾脏损伤为首发症状的老年多发性骨髓瘤患者的研究

衣鲁江
江苏省人民医院（南京医科大学第一附属医院）

目的 近年来老年人中 MM 发病率逐渐升高，由于 MM 早期无明显体征，早期症状常以肾损伤形式体现，为能早期明确诊断，探索用尿轻链比值结合免疫固定电泳初步筛查以肾脏损伤为首发症状的老年 MM 患者。
方法 回顾性分析我院 2017 年 1 月至 2019 年 2 月门诊初诊为“肾脏疾病”的老年患者共 981 例，根据免疫固定电泳结果分为 M 蛋白组和非 M 蛋白组，分析各组相关实验室检测数据。
