The ocean is facing challenges from both climate change and increasing impacts caused by anthropogenic activities. This calls for breakthrough solutions to address the challenges for a shared sustainable ocean future. Digital twins of the ocean (DTOs) are digital representation of the ocean that help to answer 'what if' questions. Thus, they are intended to provide science-based decision support systems for global as well as regional marine management.

Endorsed by the UN Decade of Ocean Science for Sustainable Development (2021-2030), the Digital Twins of the Ocean (DITTO) programme was launched in 2021. The vision of the DITTO Programme is to build a world where digital twins of the ocean (DTOs) are used to support ocean protection, ocean governance, and a sustainable Blue Economy.
