

# THEMATIC SESSION 1C

## PPP for Government-Market Synergy

🕒 10:30-12:00, 25 September 2024, Wednesday

📍 Beijing International Convention Center, Room 201#-D

To further deepening the reform of the infrastructure investment and financing system, it is essential to promote the synergy of the government and market. The Public and Private Partnership (PPP) model is one of the effective measures to promote high-quality development of water conservancy projects by "working on both fronts". In November 2023, the "Guiding Opinions on Regulating the Implementation of the New Mechanism for Public and Private Partnership" was issued, pointing out a new direction for the development of the PPP model. The main features of the new mechanism include focusing on user payment projects, giving priority to private enterprises to participate, and adopting the franchise model for all projects. How to make good use of the new PPP mechanism in the water conservancy field requires in-depth research and discussion.

**SUB-THEME:** Innovative Strategies and Policies

**ORGANIZER(S):** Development Research Center, Ministry of Water Resources of China

## PROGRAM
