

THEMATIC SESSION 6A

Water education for the youth

🕒 10:30-12:00, 25 September 2024, Wednesday

📍 Beijing International Convention Center, Room 308#

Under the theme “Enhancing our future water security” of the 3rd AIWW, water education is regarded as one of the important Asian Water Issues. With the severe condition of water shortages around the world, China has made great efforts and contributions on promoting the Sustainable Development Goals, particularly clean water and sanitation (SDG 6) and quality education (SDG 4). Education on water can instill the awareness of water conservation and care in the minds of young people, which is an effective way to deal with today’s water challenges. In order to help young people in Asian areas and other places in the world get better understanding of the importance of water, share China’s successful experience in water protection and conservation with youth worldwide, deliver China’s willingness to work with the international community for the achievement of water-related issues, promote the professional capacities and strengthen practical skills of youth in the field of water, and enable more youth to understand the water goals of the United Nations for sustainable development by 2030 as well as the potential challenges.
